The Campaign element that was not as successful in FY 06-07 was the Watershed Watch website. Though the website continues to be visited by residents, average website views are down 34% compared to FY 05-06. Some reasons for a decline in page visits could relate to having mercury pollution prevention ads direct residents to the County HHW website rather than the Watershed Watch website; and not offering more incentives to visit the website (e.g., take a quiz online to win a prize, or download the discount card to save money etc.). In FY 07-08, the messages will be evaluated and changed, as needed, to increase website visits.

The Watershed Watchers Program at the Don Edwards San Francisco Bay Wildlife Refuge, Alviso ("Wildlife Refuge")

The Wildlife Refuge Environmental Education Center (EEC) offers trails and access to wildlife viewing for the public to gain first-hand knowledge of the value of Bay habitats. Visitors to the EEC can view a storm drain model and receive copies of Program materials, including the Watershed Watch kits and pesticide reduction brochures and fact sheets.

Evaluation of Effectiveness

As part of their "Watershed Watchers" Program, EEC staff conducted 77 programs that attracted 3,289 participants. Topics discussed at the workshops included watershed protection, wildlife in the watershed, gardening without chemicals, and the public's role in urban runoff pollution. The EEC's Fourth Quarter Report, including a summary of FY 06-07 accomplishments, is provided in Appendix B-7.

For several reasons, the number of programs and participants was lower this year (105 program were conducted in FY 05-06, attracting 6,856 participants). NASA/Ames Research Center did not conduct one of its programs this year. As a result, 1,000 less school children visited the Refuge. In addition, the Interpretative Specialist Position became vacant in March. Other Refuge staff filled the position temporarily until it was filled in May. The new Interpretive Specialist spent May and most of June being trained.

Pesticide User Outreach

A detailed FY 06-07 Pesticide User Outreach Work Plan was developed by Program staff and approved by the Pesticide User Outreach Work Group on October 12, 2006. The Pesticide User Outreach Work Plan included the following tasks:

- IPM store partnership program
- Media advertising
- IPM outreach events
- Outreach to restaurants

The accomplishments of this project are described below:

Integrated Pest Management (IPM) Store Partnership Program

Background

The IPM Store Partnership Program, also known as the Our Water Our World (OWOW) program, was in its ninth year in FY 06-07. The goal of the OWOW program is to reduce toxicity caused by pesticides in stormwater, creeks and the Bay by:

- Developing partnerships with retailers who can educate the general public about water quality problems related to residential pesticide use while promoting the sales and use of less toxic alternatives; and
- Through the partnerships with retailers, educate the public about effective less-toxic pest control strategies, the value of the IPM approach to home and garden pest control and safe use and disposal of pesticides.

The Program contributes funding to and participates in the Regional IPM (OWOW) program, which is administered through BASMAA. The Regional Program, with input from IPM experts and participating stormwater programs, has developed fact sheets, promotional materials, training sessions, display materials for stores and an alternative products list. The Program and Co-permittees are responsible for recruiting stores, arranging training sessions for store employees, in-store display set-up, display maintenance and on-going contact with participating stores.

FY 06-07 Activities

During FY 06-07, the Program continued to support participating stores within the Program's jurisdiction. Program staff visited all the participating 29 stores at regular intervals and updated the display racks and shelf talkers, as needed.

Outreach material purchased for the Stores Partnership Program included IPM fact sheets, shelf talkers and literature rack material (side decals, headers and property tags).

The Program also continued to use the services of Ms. Annie Joseph, an experienced IPM consultant, to provide training to store employees on selling less-toxic products.
Past Program experience with training stores indicated that employees were not amenable to attending off-site trainings. In FY 06-07, the Program continued to offer trainings as in-the-aisle trainings during working hours or on-site after-hour trainings. Approximately 150 employees representing 12 stores were trained this year. Employees were also requested to fill out evaluations. The list of participating stores, their training status and a summary of evaluations received are provided within Appendix B-8.

In addition, Ms. Joseph worked with three participating stores, SummerWinds (Campbell), Ace Hardware (Palo Alto) and Payless Nursery (San Jose) to implement the "Increasing Shelf Space for Less-Toxic Products" projects. Her work included: 1) meeting with pesticide buyers at stores; 2) motivating them to increase the store's inventory of less-toxic products; and 3) building endcaps showcasing these products.

Evaluation of Effectiveness

The IPM Store Partnership (OWOW) program continued to be a success in FY 06-07. The store managers and employees were enthusiastic about the program and extremely receptive to having the OWOW display in stores. Feedback on the trainings was also very positive, as indicated in the evaluation summary included in Appendix B-8. A few highlights of the evaluation are:

- 87% of the respondents agreed that the training information was useful;
- 69% agreed that the information changed their attitude about pesticides;
- 84% agreed that the information will help them sell less-toxic products; and
- 96% agreed that they would recommend the training to co-workers.

The following indicate the success of the "Increasing Less-Toxic Shelf Space" project:

- The stores participating in the "Increasing Shelf Space" project have added several less-toxic products to their inventory;
- The participating stores continued to showcase the less-toxic displays through the season (January –July).
- SummerWinds and Ace Hardware have run some ads that focus exclusively on less-toxic and organic pesticides. Payless Nursery has started including less-toxic products in their regular ads.

More details on this project are included in Appendix B-8.

Media Advertising

The Program's Watershed Watch Campaign used the "Watch Out for Toxic Pesticides" radio and print ads. The print ads promoted the OWOW logo to encourage residents to buy less-toxic products. The radio ads talked about IPM and provided tips on using less-toxic pest solutions. Copies of all advertisements are included in Appendix B-4.

Evaluation of Effectiveness

The IPM outreach media campaign, which included free promotional print and radio ads, received a large number of gross impressions. Additional details are included in the FY 06-07 detailed Watershed Watch Campaign and Media Report within Appendix B-3.

IPM Outreach to Restaurants

The Program continued to provide copies of the "Don't Set a Table for Pests" poster to County Health inspectors for distribution to food facilities. This poster has been incorporated into the "Final Construction" packet of information that is distributed to new and remodeled food facilities. In addition, these posters were also provided to Co-permittees for distribution during routine stormwater inspections. The Program will consider printing more posters in FY 07-08.

Evaluation of Effectiveness

During FY 06-07, County Health inspectors distributed 422 posters and will continue to distribute posters to restaurants during FY 07-08.

IPM Outreach Events

Program staff and Co-permittees staffed five events at which IPM outreach was conducted. To reduce staffing requirements, five events were coordinated with Watershed Watch outreach. Outreach events in FY 06-07 included:

- Pumpkins in the Park – October 14, 2006;
- Happy Hollow Park & Zoo Halloween Event – October 30, 2006;
- San Jose Spring Home and Garden Show, San Jose Convention Center, San Jose – April 27-29;
- Spring in Guadalupe Gardens, April 28, 2007; and
- Health and Wellness Fair, Santa Clara County Parks and Recreation, June 24, 2007.

In addition to talking to the general public about less-toxic pest control methods, event staff distributed fact sheets; "Grow It" guides, "Backyard Bugs" brochures, "Pests Bugging You" brochures and other IPM related brochures and giveaways. The beanbag game for children was also used at most of the events.

Evaluation of Effectiveness

Overall, the five outreach events were successful in providing opportunities for educating the public about less-toxic pest control methods. Event staff distributed more than 4,000 total IPM fact sheets, brochures and giveaways (e.g., pencils, activity books, magnets, flyswatters, notepads, etc.).

The Program also provided support for promotion of the Going Native Garden Tour held on April 29, 2007. Approximately 3,000 people attended the tour. The tour featured 45 gardens that demonstrated environmentally sensitive gardening practices which include the use of native plants, water conservation, landscaping to prevent urban runoff, reducing pesticide and fertilizer use, etc. The final report for the Going Native Garden Tour is included in Appendix B-9.

Mercury Pollution Prevention Outreach Project

In FY 06-07, the Santa Clara County Household Hazardous Waste Program (County HHW Program) partnered with approximately 40 retail stores to provide free fluorescent bulb drop-off locations for residents. The Program's outreach focused on promoting these drop-off locations and educating people about mercury pollution.

The Program's Mercury Outreach Pollution Prevention Work Plan included the following tasks:

Implementation of a Media Campaign –The Watershed Watch Campaign developed new "Watch Out for Mercury Pollution" advertisements to educate people on the proper disposal of hazardous wastes (e.g., fluorescent lamps). The advertising campaign ran from January 2006 to April 2006. The Program provided funding for radio and print advertising. The Santa Clara County Integrated Waste Management Division provided funding for transit advertising.

Newsletter Article – A newsletter article aimed at informing Conditionally Exempt Small Quantity Generators (CESQGs) about proper disposal of fluorescent light bulbs was developed and sent to various business publications. It was published in the May 2007 issue of the Building Owners and Manufacturers Association (BOMA).

Copies of mercury outreach materials are included in Appendix B-4 and Appendix B-10.

Evaluation of Effectiveness

The mercury outreach media campaign included free promotional print and radio ads as described in Appendix B-3.

During FY 06-07, the CoHHW Program collected 353,694 feet (88,423 pounds[1]) of fluorescent bulbs at 30 retail drop-off locations within Santa Clara County[2] .This is a significant increase from FY 05-06. In FY 05-06, the CoHHW Program collected 277,000 feet (67,943 pounds) of fluorescent bulbs.

It is estimated that approximately 1.025 kilograms of total mercury was diverted (i.e., discharge to the environment was avoided) to recycling from fluorescent lamps collected by the CoHHW Program[3] in FY 06-07. In addition, the HHW Program also collected 1,193 mercury-containing thermometers, 1,170 pounds of elemental mercury (includes thermostats, thermometer and other products) and 65,860 pounds of household batteries during FY 06-07.

Schools and Youth Education Outreach

The following tasks were accomplished under this project:

General Outreach to Schools

The Program and its Co-permittees conduct various school outreach programs individually and through the Program. These activities are described in detail in the tables provided in Appendix B-11.

Outreach to Elementary Schools

Each year, the Program's Schools and Youth Education and Outreach Work Group provide a list of schools for ZunZun to contact. In addition to schools with high Hispanic populations, the Work Group continued to extend outreach to schools with high Asian/Pacific Islander populations. The Program's Schools and Youth Outreach Work Group researched demographics of Santa Clara County and generated a list of 103 schools for ZunZun to contact. The ZunZun performances use physical comedy, audience participation and musical instruments to educated teachers and children about watersheds and stormwater pollution prevention. ZunZun continued to distribute the two vocabulary lists (one for grades K-2 and the other for grades 3-6) of terms used in the presentation. These lists were mailed to every school prior to the presentation.

[1] Since fluorescent light bulbs come in different sizes, quantities are reported in terms of the total length (feet) of tubes collected.
[2] Information regarding the collection of mercury containing products (e.g., fluorescent bulbs, thermostats, thermometers and other products) during FY 05-06 obtained from a memorandum *entitled Fiscal Year 2006/2007 HHW Program Update* (dated July 20, 2007). This memorandum was prepared by Wendy Fong, Management Analyst, Santa Clara County Hazardous Materials Program.
[3] Based on a 1999 National Electrical Manufacturers Association survey entitled *Environmental Impact Analysis: Spent Mercury-Containing Lamps, January, 2000 (Fourth Edition)*, the average four-foot fluorescent lamp contains about 11.6 milligrams (mg) of mercury. For the sake of estimating the amount of mercury sent for recycling, approximately 88,423 four-foot fluorescent lamps were collected. As a result, 1.025 kilograms of total mercury diverted (i.e., discharge to the environment was avoided) to recycling is a rough estimate.

Evaluation of Effectiveness

During FY 06-07, ZunZun conducted 47 assemblies at 25 elementary schools in seven cities, reaching approximately 11,652 students in grades K-5. Assemblies were evaluated using postage-paid evaluation cards that were distributed to all teachers present at the performances. The Program received completed evaluation cards from 138 teachers. Overall, the feedback has been very positive and indicates an increase in the students' knowledge about watersheds and pollution prevention. A few highlights of the evaluation are:

- Thirty-one teachers (out of the 138 that sent completed evaluation cards) indicated that 50 percent of their students know what a watershed is; 51 teachers indicated that 75 percent of their students know what a watershed is and 19 teachers indicated that 100 percent of their students know what a watershed is.
- Eight teachers indicated that 50 percent of their students could name a way to prevent pollution in the watershed; 38 teachers indicated that 75 percent of their students can name a way to prevent pollution in the watershed; and 74 teachers indicate that 100 percent of their students can name a way to prevent pollution in the watershed.

Overall, teachers had positive comments on the presentation.

ZunZun's Final Report and the Teachers' Evaluation Report are included in Appendix B-12. Highlights of the teachers' evaluations are presented on page 3 of the Teachers' Evaluation Report.

<u>Outreach to Middle Schools</u>

In response to a request by Water Board staff, the Program conducted a gap analysis study in FY 03-04 to identify gaps in school outreach conducted by the Program and its Co-permittees.

The objective of the study was to conduct a detailed review and analysis of the data to guide further school outreach. Data collected from Co-permittees was analyzed and GIS maps were developed to present the data. The final Schools Outreach Gap Analysis Report was submitted to the Water Board within the FY 03-04 Annual Report. The study identified some geographic gaps in outreach and gaps at the middle school level, and recommended that the Program and Co-permittees develop Program-wide outreach that targets the middle/intermediate school level. In addition, it was recommended that outreach increase to underserved and underrepresented communities.

The Work Group evaluated various methods for targeting outreach to this grade level and identified a teachers training program as the best means of maximizing outreach with limited resources. After considering several options, the work group decided to use the City of San Jose's South Bay Water Connections "Wacky Watersheds" teachers training workshop. Currently, the workshop is structured as a full-day Saturday workshop offered to all teachers within the San Jose POTW service area. In FY 03-04, the Work Group selected three Project WET lessons plans on watershed education at the middle school level for inclusion in the "Wacky Watershed" binder, and contracted with an educator to correlate the lesson plans to California State Standards.

In July 2005, the Work Group purchased tote bags for teachers for packaging the workshop materials (binder, video tapes and a map). The Work Group also recommended that teachers should be offered stipends as incentives to increase attendance at the workshop. Teachers will

receive the stipend only after the Work Group receives documented completion of their proposed watershed project. In FY 06-07, the Wacky Watersheds workshop staff held two workshops and trained forty teachers. In FY 06-07 three teachers applied for and received the Wacky Watersheds stipend.

Work group members are also trying to coordinate with their school districts so this workshop can be made available to middle school teachers at their "in-service" training days. Currently, this workshop is available only a few times a year on Saturdays.

Other Program PI/P Support Activities

Program's Toll-Free Telephone Numbers

The Program maintained two toll free telephone numbers, the Program's information number (800-794-2482) and the Watershed Watch hotline (866-WATERSHED), for calls from the general public and requests for information. Program staff responded to about 14 calls during FY 06-07. Program and consultant staff also responded to 32 requests for Watershed Watch kits and 31 requests for information on the Watershed Watch website.

PI/P Material Reprints and Supplies

The Program purchased and coordinated Co-permittee orders for reprinting the following materials:

- OWOW fact sheets;
- OWOW pocket guides; and
- "Blue Print for a Clean Bay" booklets.

ONGOING PI/P PROJECTS

Creek Clean-ups

In FY 06-07, the Creek Connection Action Group sponsored two creek clean-up events: Coastal Clean-up Day on September 16, 2006 and National Rivers Clean-up Day on May 19, 2007. The Program provided financial support for one of the events (National Rivers Clean-up Day). A total of 1,631 volunteers participated in cleaning 44 sites and removed approximately 67,461 pounds of trash from the creeks during the two events.

Results by clean-up event for FY 06-07 are as follows:

	Coastal Clean-up Day Sept. 16, 2006	**National Rivers Clean-up Day May 19, 2007**	**Total**
Number of sites	22	22	44
Number of volunteers	1,078	553	1631
Pounds of recyclables	5,503	9,891	15,394
Pounds of trash	22,464	29,603	52,067
Pounds of material (trash plus recyclables)	27,967	39,494	67,461

Evaluation of Effectiveness

To evaluate the effectiveness of the two annual creek clean-up events, data from the past nine years of events were compiled and reviewed. The table below presents the total numbers of sites, numbers of volunteers, and pounds of materials collected each year.

Summary Results of Creek Clean-up Events[4], September 1998 – May 2007

	FY 98-99	FY 99-00	FY 00-01	FY 01-02	FY 02-03	FY 03-04	FY 04-05	FY 05-06	FY 06-07	Annual Average	Total
No. of sites	35	35	41	37	48	56	61	55	44	46	412
No. of volunteers	1,877	1,586	1,745	1,742	2,091	1,943	1,618	1,458	1,631	1,743	15,691
Lbs. of recyclables				13,750	8,071	6,537	7,890	4,110	15,394	9,292	55,752
Lbs. of trash	84,582	43,475	58,108	59,340	44,883	36,718	39,730	29,248	52,067	49,795	448,151
Total lbs. collected	84,582	43,475	58,108	73,090	52,954	43,255	47,620	33,358	67,461	55,989	503,903

Beginning in FY 01-02, some site managers implemented a procedure for separating out recyclable materials from trash prior to weighing it. Thus, the total pounds of material collected are the sum of the recyclables and trash quantities. According to the Santa Clara Valley Water District, this procedure is done more frequently at Coastal Clean-up Event sites than at National Rivers Day sites. Since this procedure is not done at all sites, it is more appropriate to compare the total quantities of materials collected rather than the individual components.

The total amount of trash and recyclables collected during the two creek cleanup events each year are plotted in the figure below:

[4] The data presented in this table represent the total quantities from the two major creek cleanup events in Santa Clara County. The data do not include quantities of trash that may have been collected by the Santa Clara Valley Water District (SCVWD) or by other volunteer groups during other times of the year. The SCVWD has an "Adopt-a-Creek" program in which community groups (e.g., scout troops and schools) agree to care for a certain section of creek. Care includes trash pickup at least twice during the year. These groups are not required to report the amount of trash they collect. A section of creek that is regularly cleaned may not be included as one of the sites involved in the two major creek cleanup events.

From the data in the table and figure, it can be concluded that the total amount of trash and recyclables collected shows a decreasing trend over the previous eight years. However, the amount of trash collected during FY 06-07 increased. This may be due to the addition of several new sites (including some known trash problem areas) in the events this year, and having an additional 173 people involved in the events.

Restaurant BMP Materials

In FY 99-00, a work group comprised of Program staff, representatives of the California Restaurant Association and Santa Clara County Department of Environmental Health (DEH), and Co-permittee stormwater inspectors developed a strategy of targeting food handling facility personnel with one simple message and continuously reinforcing the message over a three-year period. The focus for the first three-year period is on the improper discharge of wash water.

In FY 00-01, a restaurant wash water BMPs kit (letter, list of BMPs and a poster) was created for County Health Inspectors to hand out to restaurant managers during inspections (see FY 00-01 Annual Report). The Santa Clara County Department of Environmental Health inspectors (Consumer Protection Division) have been distributing this kit to every newly constructed and remodeled food facility in the County. In FY 02-03, one of the signatories of the cover letter was changed. The letter was updated for distribution in FY 03-04. In FY 04-05, the BMP list was updated and signatories changed. In FY 06-07, the kit was distributed to 422 food facilities.

REGIONAL COLLABORATION

Bay Area Stormwater Management Agencies Association (BASMAA) PI/P Committee

The BASMAA PI/P Committee has not met for some time, due to the Committee's interest in focusing its efforts on three active work groups: Media Relations, Regional IPM Store Partnership Program and Regional Advertising Campaign. Program staff participated in these Work Groups, and the Program benefited from regional PI/P activities, as described below.

Media Relations Campaign

Program staff participated in the development and implementation of the seventh year of the joint Media Relations effort supported by BASMAA and the Bay Area Clean Water Association (BACWA). The primary goals of the campaign are to develop long-term relationships with the media and to generate media coverage that would encourage individuals to adopt behavior changes to prevent water pollution. The Program contributed funding (approximately $9,000) to the campaign as part of its baseline budget contribution to BASMAA.

A copy of the BASMAA/BACWA Regional Media Relations Campaign Final Report is included in Appendix B-13. Campaign accomplishments included the following:

- During FY 06-07, the media covered 37 calendar listings, articles, broadcast and on-line stories, including 2 print articles, 15 radio stories, 14 web stories and 6 letters to the editor placements (including hard copy and web placements).
- Media coverage was received on four pitches: pesticides; FOG (fats, oils and grease); mercury fever thermometer exchanges; and less-toxic lawn care.
- The total value of the coverage is estimated at $69,200. The total value of this year's coverage represents a decrease from last year, but the actual number of placements is

comparable. The decrease in value is directly attributable to two factors: the lack of television coverage because television-oriented pitches were delayed due to timing considerations outside the control of this campaign; and efforts put into developing pitches that, though planned for FY 06-07, could not be used. These pitches will be used in FY 07-08.

Regional IPM Work Group

The IPM Store Partnership Program, also known as the Our Water Our World (OWOW) program, completed its ninth year in FY 06-07. The Program contributed funds and participated in the Regional Program, which is administered through BASMAA (the Program's contribution for FY 06-07 was approximately $5,000). The Regional Program, with input from IPM experts and participating stormwater programs, provides fact sheets, promotional materials, training sessions, display materials for stores, and an alternative products list. The Program and Co-permittees are responsible for recruiting stores, arranging training sessions for store employees, in-store display set-up, display maintenance, and on-going contact with participating stores.

In FY 05-06, the OWOW Program completed the translation of all fact sheets into Spanish. In FY 06-07, a regional print run of Spanish fact sheets was conducted.

The customer intercept survey conducted in FY 04-05 indicated a very low awareness among residents about the OWOW program. To increase awareness, the OWOW program began an advertising campaign in FY 05-06. Details of the FY 06-07 advertising campaign is below:

Orchard Supply Hardware –OSH is continuing to use the Our Water, Our World program logo next to less-toxic products in most of their weekly ads this year.

Sunset magazine – The OWOW advertisements were placed in three issues of Sunset magazine. The OWOW Program is also listed in their Resources section: http://www.sunset.com/sunset/marketplace/article/0,20633,919812,00.html.

Bay Nature magazine –This is a quarterly San Francisco Bay Area publication (baynature.com). Although the readership is only about 15,000, it is a high-value publication that is used by schools and others as a reference. The OWOW ad was placed in all four issues of this magazine.

A copy of the advertisement is included in Appendix B- 14

BASMAA Regional Ad Campaign

In FY 03-04, the Program's WEO AHTG recommended participating in the Regional Ad Campaign for FY 04-05. During FY 02-03, FY 03-04, the Regional Ad Campaign (RAC) Committee implemented the "Beautiful Watersheds" advertising campaigns for increasing the public's awareness about watersheds. In FY 04-05, a new ad focusing on problems caused due to littering was developed and used. The Program contributed $50,000 to the RAC in FY 06-07. However, due to contractual difficulties, advertising could not be conducted in FY 06-07. The contract problems were resolved and planning initiated in FY 06-07. The advertising campaign will be conducted in FY 07-08. The campaign will focus on two pollutants: pesticides and litter. The objective of the pesticide campaign will be to brand the OWOW logo and shelf talkers. The strategy for implementing the litter campaign is being developed by the RAC consultants.

Caltrans "Don't Trash California Campaign"

In FY 05-06, as part of its anti-littering outreach campaign, Caltrans developed television Public Service Announcements (PSAs) in English and Spanish. Many Co-permittees obtained copies of these PSAs for airing on their local public cable access television stations. The following table includes the number of times the PSAs were aired in Program cities in FY 06-07.

Name of Community	Name of TV Station	Area Served	Number of Airings
Cupertino	The City Channel	Cupertino	English - 200
Palo Alto	The Media Center Channels 27, 28 and 30	Palo Alto, East Palo Alto, Atherton, Menlo Park, Stanford	English – 520 Spanish - 250
Santa Clara	City of Santa Clara Cable Channel 15	Santa Clara	English -900

Program Information Fact Sheets

In FY 05-06, Program staff developed fact sheets describing several Program elements. The fact sheets aim to provide a brief non-technical overview of Program activities. Fact sheets on the following topics were developed and distributed:

- Water Quality Monitoring and Watershed Assessment;
- Sediment Impact and Management Practice Assessments;
- Watershed Education and Outreach;
- General Program; and
- Trash Evaluation and Management.

In FY 06-07, Program staff developed and distributed fact sheets on the following topics:

- Training Municipal Development Review Staff;
- Water Quality Monitoring and Watershed Assessment (2nd Edition);
- Sediment Impact and Management Practice Assessments (2nd Edition); and
- Dioxin Control Program.

All fact sheets have been posted on the Program's website at www.scvurppp.org. They are also included in Appendix B-15.

Other External Coordination

Program staff tracked PI/P activities and attended meetings (as needed) conducted by the following local and regional programs in FY 06-07:

- California Stormwater Quality Association, PIPP Forum
- Santa Clara County Household Hazardous Waste Program
- Bay Area Pollution Prevention Group
- Watershed Management Initiative's Outreach Subgroup

- Urban Pesticide Committee.

Continuous Improvement

The status of PI/P continuous improvement tasks, identified during the evaluation of projects in previous years, is presented in Table 2-4 of Section 2. There were no PI/P continuous improvement tasks identified in FY 06-07.

Future Tasks

Section 3 of the Program's FY 07-08 Work Plan (submitted March 1, 2007) describes the PI/P activities planned for FY 07-08.

Table 3-1
Evaluation of PI/P Projects Conducted During FY 06-07 (New and Ongoing)

Project Title	Project Description[1]	Type of Outreach[2]	Summary of Evaluation of Effectiveness[3]
Watershed Education and Outreach Campaign	This project included funding for conducting year eight of the Watershed Watch Campaign, ZunZun Schools Assemblies and the Watershed Watchers Program at the Alviso Education Center (San Francisco Bay Wildlife Refuge), and educational assemblies at elementary schools by the musical group ZunZun	G,T,P,C	**Watershed Watch Campaign** **Effective**- Some measures of the success of the FY 06-07 Watershed Watch Campaign include: the number of new campaign partners (**4**); value-added resources from partners (**$233,202**.); Watershed Watch events (**5**); and gross impressions from advertising (**21,544,500**). The average Watershed Watch website views dropped by 34% in FY 06-07. Some reasons for a decline in page visits could relate to having mercury pollution prevention ads direct residents to the County HHW website rather than the Watershed Watch website; and not offering more incentives to visit the website (e.g., take a quiz online to win a prize, or download the discount card to save money etc.). In FY 07-08, the messages will be evaluated and changed, as needed, to increase website visits. Additional information is provided in Section 3 and Appendix B-3. **Alviso Ed Center** **Effective** - 77 programs were conducted and 3,289 people participated. **ZunZun Assemblies** **Effective** - ZunZun conducted 47 assemblies at 25 schools reaching 11,652 students and their teachers

[1] For detailed project descriptions, see FY 01-02 Annual Report, Section 3, and FY 02-03 Work Plan, Section 3.
[2] Type of outreach codes: G = General, T = Targeted, P = Public Education, C = Citizen Participation
[3] Please refer to text in Section 3 for more detailed effectiveness evaluations and recommendations for improvement.

Table 3-1
Evaluation of PI/P Projects Conducted During FY 06-07 (New and Ongoing)

Project Title	Project Description[1]	Type of Outreach[2]	Summary of Evaluation of Effectiveness[3]
Pesticide User Outreach – "Household Chemical Management" and "Local IPM Store Partnership Program"	Implementation of the following tasks: • Conduct media advertising on less-toxic pest control methods • Implement the local store partnership program • Conduct IPM outreach at events • Conduct IPM workshops • Conduct IPM outreach to businesses • Other outreach as needed	G,T,P,C	**Effective** • The Watershed Watch Campaign advertising used the "Watch Out for Toxic Pesticides" print and radio ads. The ads ran from July 2006 through September 2006; and April 2007 through June 2007. • The local IPM Store Partnership Program continued to be a success in FY 06-07. Ms. Annie Joseph was contracted to provide training on selling less-toxic products to store employees. Ms. Joseph trained approximately 150 employees representing 12 stores. Program staff maintained all 29 participating stores (set-up, restocking of fact sheets, etc.) during FY 06-07. This ensured regular maintenance of stores and helped build an ongoing relationship with the stores. • IPM outreach was conducted at five events. Event staff distributed more than 4,000 IPM fact sheets, brochures and giveaways (pencils, activity books, magnets, tattoos etc.). • The Program continued to provide copies of the "Don't Set a Table for Pests" poster to County Health Inspectors for distribution to newly constructed or remodeled food facilities. County Health inspectors distributed 422 posters during FY 06-07. • The Program contributed funds for promoting the Going Native Garden Tour 2006. The tour

Table 3-1
Evaluation of PI/P Projects Conducted During FY 06-07 (New and Ongoing)

Project Title	Project Description[1]	Type of Outreach[2]	Summary of Evaluation of Effectiveness[3]
			was held on April 29, 2007 and attracted approximately 3,000 people. The tour featured 45 gardens. Featured gardens demonstrate environmentally sensitive gardening practices that include the use of native plants, water conservation, landscaping to prevent urban runoff, reducing pesticide and fertilizer use, etc.
Mercury Pollution Prevention Outreach Project	The Program worked closely with the Santa Clara County Household Hazardous Waste Program in developing the outreach plan. Outreach activities implemented during FY 05-06 include the following: • Implementation of Media Campaign – The Watershed Watch Campaign advertising used the "Watch Out for Mercury Pollution" print and radio ads. The ads ran from October 2006 through March 2007. • Newsletter Article – A newsletter article aimed at informing Conditionally Exempt Small Quantity Generators (CESQGs) about proper disposal of fluorescent light bulbs was developed and sent to various business publications.		**Effective** The CoHHW Program collected 353,694 feet (88,423 pounds[4]) of fluorescent bulbs at 30 retail drop-off locations within Santa Clara County[5]. This is a significant increase from FY 05-06. In FY 05-06, the CoHHW Program collected 277,000 feet (67,943 pounds) of fluorescent bulbs. It is estimated that approximately 1.025 kilograms of total mercury was diverted (i.e., discharge to the environment was avoided) to recycling from fluorescent lamps collected by the CoHHW Program[6] in FY 06-07. In addition, the HHW Program also collected 1,193 mercury-containing thermometers, 1,170 pounds of elemental mercury (includes thermostats, thermometer and other products) and 65,860 pounds of household

[1] Since fluorescent light bulbs come in different sizes, quantities are reported in terms of the total length (feet) of tubes collected.
[5] Information regarding the collection of mercury containing products (e.g., fluorescent bulbs, thermostats, thermometers and other products) during FY 06-07 obtained from a memorandum *entitled Fiscal Year 2006/2007 HHW Program Update* (dated July 20, 2007). This memorandum was prepared by Wendy Fong, Management Analyst, Santa Clara County Hazardous Materials Program.
[6] Based on a 1999 National Electrical Manufacturers Association survey entitled *Environmental Impact Analysis: Spent Mercury-Containing Lamps, January, 2000 (Fourth Edition)*, the average four-foot fluorescent lamp contains about 11.6 milligrams (mg) of mercury. For the sake of estimating the amount of mercury sent for recycling, approximately 88,423 four-foot fluorescent lamps were collected. As a result, 1.025 kilograms of total mercury diverted (i.e., discharge to the environment was avoided) to recycling is a rough estimate.

Table 3-1
Evaluation of PI/P Projects Conducted During FY 06-07 (New and Ongoing)

Project Title	Project Description[1]	Type of Outreach[2]	Summary of Evaluation of Effectiveness[3]
			batteries during FY 06-07. The newsletter article was published in the May 2007 issue of the Building Owners and Manufacturers Association (BOMA) newsletter.
Schools and Youth Outreach Work Group	In FY 02-03, the Watershed Action Fund was reformed as the Schools and Youth Outreach Work Group. The group aimed to accomplish the following tasks: • Provide input for conducting 50 ZunZun school assemblies and report on activities conducted individually by Co-permittees. • Identify a program for increasing outreach to middle schools	T,P,C	**Effective**-During FY 06-07, ZunZun performed at 25 schools reaching 11,652 children. The teacher evaluations of the performances indicate they were successful in increasing the children's knowledge about watersheds and pollution prevention activities (see Appendix B-12). In FY 02-03, the Work Group collected data on outreach (conducted in FY 01-02) from all Co-permittees and completed the gap analysis study. The study indicated that 47 percent of all schools in Santa Clara Valley receive outreach from the Program and/or Co-permittees. The study identified a gap in outreach at the middle school level and recommended targeting outreach to this level. In FY 03-04, the Work Group identified an existing teachers training program, "Wacky Watersheds" at the City of San Jose for addressing gaps in outreach. To include additional information on watersheds, the Work Group identified three lesson plans for this program. In FY 04-05, the Work Group purchased tote bags for teachers for packaging the workshop materials (binder, video tapes and a map). The Work Group also recommended that to increase attendance at the workshop, teachers should be offered stipends as incentives. In FY 06-07, three teachers received

Table 3-1
Evaluation of PI/P Projects Conducted During FY 06-07 (New and Ongoing)

Project Title	Project Description[1]	Type of Outreach[2]	Summary of Evaluation of Effectiveness[3]
			the Wacky Watersheds stipend from SCVURPPP.
Program Supplies	Conduct reprints of materials for Program use and order supplies as necessary.	G,T,P,C	**Effective**- The Program Supplies budget was used toward printing OWOW fact sheets and pocket guides, "Blue Print for a Clean Bay" booklets, and purchasing plaques for the EPA and NAEP awards.
Program Toll Free Number	Answer the Program's toll free number (1-800-794-2482) and the Watershed Watch Campaign's toll free number, 1-866-WATERSHED, and respond to requests for information.	G,P	**Effective**- Both phone numbers are being used to contact the Program and request materials. Phones are answered and messages are checked daily. During, FY 06-07, Program staff responded to approximately 14 calls.
Creek Cleanup Events	Work with Creek Connections Action Group to organize and fund two creek cleanup events per year.	G,C	**Effective**- Provided support for advertising for one event. A total of 1,631 volunteers participated in cleaning 44 sites and removed nearly 67,461pounds of trash.
Restaurant BMP	Distribute a restaurant wash water BMP packet for County Health Inspectors to hand out to restaurant managers via County Health Inspectors at the time of their inspections	T,P	**Effective** - In FY 06-07, County Health inspectors distributed the wash water BMPs and the poster to 422 newly constructed and remodeled food facilities in the County.

Table 3-1
Evaluation of PI/P Projects Conducted During FY 06-07 (New and Ongoing)

Project Title	Project Description[1]	Type of Outreach[2]	Summary of Evaluation of Effectiveness[3]
Regional Collaboration	Participate in the following BASMAA PI/P work groups and tasks of regional benefit. Attend meetings as needed, participate in review of products, and obtain input from Co-permittee representatives. • Media Relations Work Group • Regional IPM Store Partnership Program Work Group • Pesticide Distributors Outreach Project • Regional Ad Campaign	 G,P G,P G,P T	**Effective**- See Media Relations Campaign Final Report in Appendix B-13. **Effective**- Contributions to BASMAA helped fund IPM fact sheet reprints, translation of remaining fact sheets into Spanish and implementation of the OWOW advertising campaign. The Program budgeted $40,000 for the Regional Ad Campaign (RAC) in FY 06-07. BASMAA did not conduct the RAC in FY 06-07. It will be conducted in FY 07-08. Co-permittees obtained copies of the Caltrans "Don't Trash California" Public Service Announcements (PSAs) for airing on local cable access television. The PSAs were aired by the following cities: City of Palo Alto – 520 times (English), 250 times (Spanish) City of Santa Clara – 900 times (English) City of Cupertino – 200 times (English)

SECTION 4

MONITORING ACTIVITIES

4. MONITORING ACTIVITIES

INTRODUCTION

During FY 06-07, a considerable amount of water quality data and information were gathered and/or assessed by the Program through the direct implementation of and active participation in monitoring-related activities in the San Francisco Bay Area. The Program's monitoring resources were primarily spent preparing permit-required submittals, continuing to implement the Program's Revised Multi-Year Receiving Waters Monitoring Plan (Revised Multi-Year Plan), participating in regional monitoring-related programs, conducting special studies and implementing pollutant-specific control programs.

This section provides a brief background of the Program's monitoring and assessment program and summarizes significant monitoring-related activities conducted during FY 06-07. The activities described in this section are consistent with Provisions C.7 and C.9 of the Program's NPDES Permit. Each summary includes the following information, to the extent possible:

1) A description of the relationship to NPDES Permit requirement(s) and management question(s) the study was designed to address;
2) A brief description of subtasks and status of project/activity;
3) A brief description of the results;
4) A summary of findings to-date and recommendations (where feasible); and
5) A description of lessons learned and planned/recommended follow-up activities.

In addition, summaries of management activities conducted through the implementation of the Program's Pollutant of Concern (POC) Control Plans are provided for those POCs that do not have separate Annual Report sections (e.g., PCBs, Copper/Nickel and Dioxins). An effectiveness assessment of current monitoring activities is also provided at the end of the chapter.

The findings of many technical reports are briefly described within this section. To ensure public access to completed reports, work products and environmental data, the Program has placed the majority of its reports and work products on its website (www.scvurppp.org). The website is continually updated to include the latest reports and work products, data inventory sets and other pertinent Program information. When viewing the website, a large majority of the reports and work products are linked to downloadable documents. Reports and work products not available through the website may be obtained by submitting a web-based request form to Program staff.

BACKGROUND

Multi-Year Receiving Waters Monitoring Plan

Consistent with Provision C.7.b and C.9 of the Permit, the Program developed (and submitted to the Water Board), a Multi-Year Receiving Waters Monitoring Plan (Multi-Year Plan) on March 1, 2002 that identifies Program monitoring activities in Santa Clara Basin Watersheds over an eight-year period. As new monitoring priorities were established, the Multi-Year Plan was revised in FY 03-04 (Revised Multi-Year Plan). This Revised Multi-Year Plan can be found

under the Environmental Monitoring and Assessment Measures link on the Program's website (www.scvurppp.org).

The Revised Multi-Year Plan contains the following information: watershed location (prioritized based on SCBWMI and Program assessment priorities), data type (chemical, biological and physical), number and frequency of sampling events, fiscal years (eight years starting with FY 02-03 through FY09-10), rationale and lead agency. The information on data type uses a tiered monitoring approach discussed by the Water Board staff in its Regional Monitoring and Assessment Strategy (RMAS) memo (Draft Monitoring Design in Water Board-lead Pilot Watersheds, spring 2001) dated February 8, 2001. The following monitoring categories were included within the memorandum: screening level, detailed investigation, and status and trends. The field and analytical methods used in the Revised Multi-Year Plan are described in the Program's Draft Quality Assurance Project Plan (QAPP), which is consistent with the Water Board's Surface Waters Ambient Monitoring Program (SWAMP) Quality Assurance Project Plan.

The Revised Multi-Year Plan incorporates specific data needs that have been identified in Program activities relevant to watershed assessment and monitoring. For example, the Revised Multi-Year Plan incorporates future monitoring activities that will be implemented for sediment-related studies in Stevens and Upper Penitencia Creek watersheds. Tasks associated with these monitoring activities are identified in the Program's Work Plan entitled *Workplan for Conducting Watershed Analysis and Management Practice Assessment in Other Creeks Potentially Impaired by Sediment from Anthropogenic Activities* (dated August 30, 2002). A clear identification of the specific monitoring activities planned for each year is included as part of the Program's Annual Monitoring Plan submitted to the Water Board every March 1.

Annual Monitoring and Watershed Management Measures Work Plans

During FY 05-06, the Program developed the *FY 06-07 Annual Monitoring and Watershed Management Measures Work Plan* (FY 06-07 Monitoring Plan), which was included in the Program's *FY 06-07 Draft Work Plan* (submitted March 1, 2006). The FY 06-07 Monitoring Plan identified monitoring and watershed assessment activities for six sites in the Permanente Creek watershed, nine sites in Stevens Creek watershed, and ten sites in the Coyote Creek (mainstem) watershed. The selection of these watersheds is consistent with the Program's *Watershed Management and Urban Runoff Management Integration Report* (dated June 29, 2001). The data type and sampling frequency were identified for each sampling site and accompanied by maps showing proposed sampling locations. The monitoring schedule is consistent with the sampling design presented in the Revised Multi-Year Plan (i.e., two sampling events per year representing different hydrological cycles). Information collected during implementation of the FY 06-07 Monitoring Plan is described in this Annual Report.

In preparation for Program-led receiving waters monitoring in FY 07-08, the Program developed the *FY 07-08 Annual Monitoring and Watershed Management Measures Work Plan* (FY 07-08 Monitoring Plan) in FY 06-07 and submitted it to the Water Board on March 1, 2007 as part of the Program's *FY 07-08 Draft Work Plan*. Similar to past annual monitoring plans, the FY 07-08 Monitoring Plan describes planned monitoring that will be conducted during FY 07-08 in Coyote Creek mainstem, Upper Penitencia Creek, Lower Silver/Thompson Creek, and Lower Penitencia Creek.

SUMMARIES OF FY 06-07 MONITORING AND ASSESSMENT ACTIVITIES

A summary of FY 06-07 monitoring and assessment activities is provided within Appendix C-1 and Table 4-1. Appendix C-1 provides a historical summary of all monitoring and assessment activities conducted by the Program. The following summaries highlight the objectives, results and conclusions of specific monitoring-related projects conducted during FY 06-07. Monitoring activities were generally aimed at developing and implementing programs/projects designed to assess the condition of water bodies using practical, implementable indicators and protocols. The implementation of these indicators and protocols are a necessary step toward establishing a sound regulatory basis for locally based watershed management.

Monitoring activities presented within this section, involve multiple tasks, subtasks, or coordinated activities that may take place over multiple years and at varying geographical scales (i.e., regional or sub-watershed). In addition, it is important to note that monitoring and assessment activities described within this section are not entirely independent from activities described in Section 5 – Watershed Management Measures. Information gained from conducting studies and implementing activities/measures described in both sections have been used (and will continue to be used) in concert to meet objectives outlined in Permit Provisions C.7, C.9, and C.10, which include; (1) characterizing watersheds and stormwater discharges; (2) assessing existing or potential adverse impacts to beneficial uses; (3) identifying potential sources of pollutants of concern; (4) aiding in developing and implementing strategies for controlling adverse impacts on beneficial uses; and (5) assessing the effectiveness of pollutant prevention/control measures.

SCVURPPP Receiving Waters Monitoring and Assessment

Santa Clara Basin Creek Monitoring (2002-2007)

In accordance with Provision C.10 (b), the Program developed a *Watershed Monitoring and Assessment Summary Report* (Summary Assessment Report) that summarizes the results and analyses of baseline data collected to-date during the implementation of the Program's Multi-Year Monitoring Plan (2002-2007). The Summary Assessment Report provides information on possible beneficial use impacts to the extent possible (based on the study design and available data) and suggests next steps for monitoring/assessments and developing strategies to control potential impacts. Data are summarized for the following watersheds:

- Permanente Creek;
- Stevens Creek;
- Matadero/Barron Creeks;
- Calabazas Creek;
- Sunnyvale East/West Channels;
- Lower Penitencia Creek;
- Lower Silver/Thompson Creek;
- Upper Penitencia Creek;
- Adobe Creek; and,
- San Tomas/Saratoga Creek.

The following paragraphs provide a brief synopsis of the information found within the Summary Assessment Report that is included in its entirety within Appendix C-2.

In years 2002 and 2003, water samples were collected during three seasonal time periods, including dry season (June-October) hydrological cycle, wet season (January-March) hydrological cycle, and spring/decreasing hydrograph season (April–May). During the subsequent four years of monitoring, water samples were collected only during the dry and wet season. Water samples were analyzed for physio-chemical, chemical (i.e., metals, nutrients and anions, and organophosphate pesticides), acute and chronic toxicity and pathogen indicators.

Sediment samples were collected during the first two monitoring years in the dry season and were analyzed for metals, organochlorine pesticides, PCBs and PAHs. Benthic macroinvertebrate (BMI) bioassessments and physical habitat assessments (PHAB) were conducted during the spring/decreasing hydrograph season (April/May). Fish bioassessments were conducted during the dry season (October). Watersheds were generally monitored for two consecutive years. Bioassessments were generally conducted at all sampling locations, with the exception of water bodies with highly modified channels and low elevation sites with concrete-lined channels.

The results of the water quality sampling were compared to the Water Quality Objectives identified in the San Francisco Bay Regional Water Quality Control Board 1995 Basin Plan (Basin Plan) and the California Toxics Rule (CTR), which identifies numeric criteria for priority pollutants in the State of California. Nutrient concentrations were evaluated using Recommended USEPA criteria. Diazinon concentrations were evaluated using TMDL targets for San Francisco Bay urban creeks. BMI bioassessments results were evaluated using a preliminary Benthic Index for Biological Integrity (B-IBI) for creeks in Santa Clara County. Ranges of B-IBI scores were assigned to five condition categories: very good, good, fair, marginal and poor.

Results were analyzed and interpreted on a countywide and watershed basis. Based on preliminary Benthic Index of Biotic Integrity (B-IBI) scores, benthic macroinvertebrate (BMI) assemblages indicate that aquatic life in sites located in the upper reaches of Stevens, Permanente and Adobe Creek watersheds and Upper Penitencia Creek and Saratoga Creek subwatersheds are in fair to very good condition, compared to all sites assessed in the Santa Clara Basin. These sites generally had optimal physical habitat assessment (PHAB) scores and received drainage from undeveloped or minimally developed lands within County or City Parks and Open Space Districts. Many of creek these reaches also support a cold water fish community (i.e., rainbow trout/steelhead). Of all watersheds sampled, Saratoga Creek had the greatest number of sites rated in the fair to very good condition category (n=5), and two of these sites were located in urbanized areas.

B-IBI scores generally decreased with elevation, suggesting that the effects of urbanization have likely impacted BMI communities overtime. Poor physical habitat condition and greater human disturbance to riparian corridor characterizes sites in the lower and middle reaches that occur along the Santa Clara Valley floor. Despite low B-IBI scores in some creek reaches, however, warm water fish communities were observed in some watersheds (e.g., Stevens, Saratoga, Adobe and Matadero Creeks).

Natural variation in B-IBI scores was observed in two ways. First, B-IBI scores were lowest at sites located in smaller-sized watersheds characterized as having intermittent stream flow (e.g., Adobe, Calabazas, Matadero and Thompson Creeks), with the exception of uppermost site on Adobe Creek. This finding suggests that intermittent creeks may naturally have lower B-IBI scores, and thus may not be comparable to sites with perennial flow. Secondly, B-IBI scores varied from year to year at individual sites, likely indicating natural biological responses to variations in precipitation, hydrology and temperature. Average B-IBI scores were used to estimate site condition over a two year period, however, additional year(s) of monitoring will likely increase the accuracy of B-IBI scoring.

Water quality data results indicate that numeric water quality objectives (WQOs), criteria and TMDL targets for metals and organic compounds were generally met in all creeks sampled. Specifically, over 90% of samples met WQOs/criteria for metals and there were no

exceedences of TMDL targets for diazinon. For physio-chemical measurements, 93% of all sampling events met WQOs for dissolved oxygen concentrations for cold water habitat and 82% of all sampling events met WQOs for pH. Acute toxicity of water flea and/or minnow only occurred in 2% and 10% of sampling events, respectively. Water and sediment quality results to-date do not show significant correlations with B-IBI scores.

Sediment Quality Pilot Study

In addition to water quality monitoring conducted in receiving waters, the Program conducted a pilot study in FY 06-07 to assess the utility and challenges of implementing a sediment quality triad approach in Santa Clara Valley creeks. The following is paragraphs provide a brief summary of the information found within the *Pilot Sediment Quality Triad (SQT)* report that is included in its entirety within Appendix C-3.

In an effort to increase its ability to understand the condition of aquatic life in creeks, the Santa Clara Valley Urban Runoff Program conducted a pilot test of the Sediment Quality Triad (SQT) in Coyote Creek. The SQT combines multiple lines of evidence: stressor exposure variables (sediment chemistry), measures of toxicity (laboratory bioassay experiments), and studies of biological response of the resident communities (assessments of resident biological communities). Benthic macroinvertebrate (BMI) communities were collected from 10 sites in Coyote Creek in May 2007 using the updated rapid bioassessment protocol for wadeable streams developed for the California State Water Resources Control Board Surface Water Ambient Monitoring Program (SWAMP). Physical habitat (PHAB) quality was assessed at each BMI monitoring site using the U.S. Environmental Protection Agency (EPA) Rapid Bioassessment Protocol. Sediment toxicity was evaluated at six sites in Coyote Creek by exposing the amphipod, *Hyalella azteca,* to collected sediments in a standard ten day survival test. Sediment chemistry, including metals and pyrethroid pesticides were collected in Fall 2006 and Spring 2007 from eight sites. The measured sediment chemistry values were compared to existing consensus-based Sediment Quality Guidelines. The Sediment Quality Guideline values were used to develop a mean Probable Effect Concentration Quotient (the measured value divided by the Sediment Quality Guideline concentration above which one would expect to observe toxic response, averaged across all contaminants).

Total B-IBI scores for sites in Coyote Creek ranged from 2 – 19 (resulting in a “poor” or “marginal” category), while PHAB scores for Coyote Creek sites ranged from 13 – 47 (out of a total possible 60). Both B-IBI and PHAB generally decreased in a downstream direction. Total recoverable metals in sediment collected in May and September were above reporting limits in the vast majority of sites sampled. Additionally, concentrations sediment contaminants exhibited a seasonal pattern. Specifically, the concentrations of contaminants in sediment samples were generally lower than the corresponding PECs, with the exception of nickel, chromium and Permethrin in samples collected in May 2007, and no samples collected in September exceeded PECs. This resulted in mean sediment quality guideline quotients below 1.0 for all sites in September 2006 and in five of eight sites in May 2007. Pyrethroid pesticides were generally not detected above laboratory reporting limits in spring or fall samples, with the exception of Permethrin, which was detected above the published LC50 in nearly all samples collected in May 2007. In contrast, significant toxicity was observed in five of six fall season samples, and only one sample in the spring. This suggests that the relationship between contaminants in sediment and toxicity are not well understood.

When pooled together into the SQT, the lines of evidence indicate a dichotomous pattern where downstream, low elevation sites had poor B-IBI scores, marginal to fair PHAB scores, good to

fair sediment chemistry and some indications of toxicity. While upstream sites had higher B-IBI and PHAB scores, similar toxicity, and higher concentrations of contaminants. The results of the SQT indicate that sampling toxicity and sediment chemistry at a greater frequency during the wet weather season may help inform the selection of future sampling timeframes and evaluate the ability of bedded sediment to detect change overtime.

City of Palo Alto Creek Monitoring

San Francisquito Creek Long Term Monitoring and Assessment Plan (LTMAP)

In addition to environmental monitoring conducted by the Program, the City of Palo Alto operates a sampling station at Newell Road on San Francisquito Creek as part of the LTMAP. The Newell Road sampling station captures nearly all of the water flowing from the San Francisquito watershed, including most of the urbanized portion of the watershed. At the Newell Road location, flows are intermittent, with flow beginning in the rainy season and tapering off in the late spring or early summer. During each water year, five to six rainfall events are sampled. Samples are analyzed for metals (including low level mercury, dissolved mercury, and methylmercury), nutrients, pesticides (organochlorine, organophosphate, and pyrethroids), and suspended solids. One sample each year is analyzed for dioxins. Stanford University, Stanford Linear Accelerator Center, and Jasper Ridge Biological Preserve operate three additional LTMAP sampling stations in the upper watershed. Additional information on the LTMAP and data can be found at www.city.palo-alto.ca.us/cleanbay/creeks/index.html.

Volunteer Creek Monitoring Program

The City of Palo Alto's volunteer creek monitoring program was developed after a fish die-off that occurred in November 2002 within the Palo Alto Flood Control Basin. Since April 2003, approximately six volunteers and Regional Water Quality Control Plant (RWQCP) staff monitor 21 sites on Adobe, Barron, and Matadero Creeks, as well as the Palo Alto Flood Control Basin, twice each month. A YSI multi-meter probe is used to take measurements of temperature, conductivity, dissolved oxygen, and pH. The volunteer program has collected three years of data that allow evaluation of trends in water quality within the creeks and the flood basin. This data is useful in making policy decisions with respect to managing the Flood Control Basin to maintain adequate dissolved oxygen levels.

Matadero Creek Metals/Cyanide Monitoring

The City of Palo Alto's NPDES permit for wastewater discharge requires monthly monitoring of Matadero Creek for metals and cyanide. These samples are collected as grab samples at Greer Road and Oregon Expressway. The Renzel Marsh Pond, a freshwater pond enhancement initiated and managed by Palo Alto, discharges to Matadero Creek downstream of the sampling location.

Regional Collaborative Monitoring Activities

Regional Monitoring Program for Water Quality (RMP)

The Regional Monitoring Program for Water Quality in the San Francisco Estuary (RMP) is a collaborative effort between the San Francisco Estuary Institute (SFEI), the Water Board and the regulated discharger community (including SCVURPPP). The RMP's goal is to collect scientifically valid information that allows movement towards understanding contaminant impacts on beneficial uses of the Bay. The RMP focuses on determining spatial patterns and

long term trends through sampling of water, sediment, bivalves, and fish; effects on sensitive organisms; and chemical loading to the Bay. To provide the most complete assessment possible of chemical contamination in the Bay, the RMP seeks to synthesize RMP data with data from other sources.

The RMP is based on management questions and program objectives that are updated by the Water Board, RMP staff, RMP Technical Review Committee (TRC) and RMP Steering Committee (SC) every five years. The RMP recently updated its management questions and objectives in January 2005 (www.sfei.org/rmp/RMPproginfo.htm). The current RMP objectives are:

1. Describe the distribution and trends of pollutant concentrations in the Estuary;
2. Project future contaminant status and trends using best understanding of ecosystem processes and human activities;
3. Describe sources, pathways, and loading of pollutants entering the Estuary;
4. Measure pollution exposure and effects on selected parts of the Estuary ecosystem (including humans);
5. Compare monitoring information to relevant benchmarks, such as TMDL targets, tissue screening levels, water quality objectives, and sediment quality objectives; and,
6. Effectively communicate information from a range of sources to present a more complete picture of the sources, distribution, fate, and effects of pollutants and beneficial use attainment or impairment in the Estuary ecosystem.

The Program actively participated and contributed approximately $168,480 to SFEI for FY 06-07 expenditures on the RMP. This funding to SFEI is in addition to funding provided by the three south Bay public owned treatment works (POTWs), which are also Co-permittees. In addition, Program staff actively participated on a variety of RMP committees and work groups that included the RMP Steering Committee; Technical Review Committee; Sources, Pathways and Loadings Work Group (SPLWG); and, Contaminant Fate Workgroup. In addition, a City of San Jose staff member currently serves as the chair of the RMP TRC. In FY 07-08, the Program will continue to provide financial support for the RMP and actively participate in committees and workgroups.

The RMP budget is generally broken into two monitoring programs: Status and Trends; and Special and Pilot Studies. The following paragraphs provide a brief overview of these programs.

Status and Trends Monitoring Program

The Status and Trends Monitoring Program is the long-term contaminant-monitoring component of the RMP that was initiated as a pilot study in 1989. The Status and Trends Monitoring Program is comprised of four program elements that collect data to address the RMP objectives:

1. The *Status and Trends Monitoring Program* consists of long-term contaminant monitoring to characterize the status and trends for contaminants in water, sediment and biota (bivalves) in the Estuary (Objectives 1,3, and 4);
2. The *Sport Fish Contamination Study* is a triennial screening of fish tissue for contaminants of concern to human health (Objectives 1,3, and 4);
3. The *Episodic Toxicity Monitoring* component investigates potential toxic effects in Estuary tributaries (Objectives 1 and 2); and,

4. The *USGS* conducts two long-term monitoring efforts partially funded by the RMP, including monthly water quality measurements in the deep channels of the Estuary (from the Lower South Bay to the confluence of the Sacramento and San Joaquin Rivers), and sediment transport monitoring and modeling in the northern Estuary.

The RMP summaries provided within this section focus on the latest information available from the Status and Trends Monitoring Program (i.e., 2005). The 2005 information was the fourth year that the Status and Trends Monitoring Program collected water and sediment samples using EPA's Environmental Monitoring Program (EMAP) Generalized Random Tessellation Stratified (GRTS) sample design. This type of design is appropriate for addressing the RMP objective (Objective 1) to describe the spatial and temporal patterns of contamination in the Estuary. Monitoring data are available for downloading via the RMP website using the *Status and Trends Monitoring Data Access Tool* at www.sfei.org/rmp/data.htm.

Pilot and Special Studies

The RMP also conducts Pilot and Special Studies. Pilot Studies usually are designed to investigate and develop new monitoring measures related to anthropogenic contamination or contaminant effects on biota in the Estuary. Special Studies address specific scientific issues that the TRC, SC, or Water Board identify for further study. These additional studies are developed through an open application process, which starts with an applicant submitting a study idea to the RMP Program Manager for discussion at a TRC quarterly meeting.

Summaries of the most pertinent Pilot and Special Studies conducted in FY 06-07 are provided under each summary of pollutant-specific monitoring activities within this section. A summary of past Pilot and Special Studies conducted by the RMP is available on the RMP website (www.sfei.org/rmp/). In addition to providing funding for these studies, Program and Co-permittee staff provided in-kind support on the development, analysis of results and conclusions of each study summarized.

Clean Estuary Partnership

On August 6, 2001, a Memorandum of Understanding (MOU) regarding development of: 1) a Water Quality Attainment Strategy for San Francisco Bay-Delta and Tributaries; and 2) TMDLs for 303(d) pollutants (including mercury) was entered into by the Water Board, Bay Area Clean Water Agencies (BACWA) and Bay Area Stormwater Management Agencies Association (BASMAA). This group is referred to as the Clean Estuary Partnership (CEP).

The mission of the Clean Estuary Partnership (CEP) is to use sound science, adaptive management, and public collaboration to develop and implement technically valid and cost-effective strategies (including TMDLs) that result in identifiable, sustainable water quality improvements for San Francisco Bay. In addition, Program staff participated in CEP Executive Management Board (EMB) meetings, CEP Technical Committee (TC) meetings, pollutant-specific workgroup meetings and CEP Risk Reduction Work Group meetings. A City of San Jose staff member also serves as chair of the CEP TC.

FY 06-07 accomplishments included (but were not limited to) the development of a variety of technical reports and projects. Summaries of information collected during these studies are included under each summary of pollutant-specific monitoring activities provided below. In addition to the SCVURPPP providing funding for these studies, Program and Co-permittee staff provided in-kind support on the design, analysis of results and development of conclusions for each study summarized.

Program participation is tentative for FY 07-08, as the CEP is currently undergoing review and redesign.

BASMAA Monitoring Committee

The purpose of the BASMAA Monitoring Committee (MC) is to discuss and coordinate monitoring activities conducted by the Bay area urban runoff management programs. In FY 06-07, the main emphasis for BASMAA MC representatives, including Program and Co-permittee staff, was to participate in development of the monitoring and pollutant of concern-related sections of the Municipal Regional Permit (MRP). The MRP is anticipated to replace the Program's NPDES permit and other Bay Area Phase I municipal stormwater permits. During FY 07-08, the Program will continue to actively participate in the BASMAA MC.

Mercury Monitoring Activities (Provision C.9.c)

Permit Provision C.9.c. requires the Program to develop and implement a mercury pollution prevention plan. In response, the Program developed a Mercury Pollution Prevention Plan (Mercury Plan) consistent with the Provision. The Mercury Plan was submitted to the Water Board on March 1, 2002 as part of the Program's *FY 02-03 Work Plan*. The Mercury Plan identifies actions that will be implemented at the Program level, municipality level, or both; and provides the schedule for initiation and/or completion of Program-level actions. The details of municipality actions and schedules are included in the individual Co-permittee Work Plans and/or Annual Reports, as appropriate.

During FY 06-07, a variety of mercury-related monitoring activities occurred including sampling and analysis of total and methylmercury in water, sediment, and biota in the Estuary and the Zone 4-Line A (Hayward) watershed; and water quality monitoring conducted by the Program in accordance with the Revised Multi-Year Plan. In addition, a Biosentinel Fish Study began though the RMP. The following summaries briefly describe the results and conclusions of these efforts. A more detailed description of FY 06-07 accomplishments and the prominent mercury pollution prevention activities planned for FY 07-08 are provided within Section 7 - Mercury Pollution Prevention Activities.

Santa Clara Valley Creek Monitoring

In FY 06-07, the Program continued to analyze water samples collected in Santa Clara creeks through the implementation of its Revised Multi-Year Plan. Water samples were collected as screening level indicators of water quality at a variety of creek sites draining urban and rural land use areas. As described in the Program's Revised Multi-Year Plan, grab samples were collected during two seasons (wet and dry).

Mercury concentrations detected in Santa Clara creeks in FY 06-07 ranged between 3.2 ng/L and 14.0 ng/L, below the four-day average mercury water quality objective (25 ng/L) for freshwater bodies in the San Francisco Bay region. A full description of methods, results and conclusions are presented in the Summary Assessment Report (see Appendix C-2).

Regional Stormwater Monitoring and Urban BMP Evaluation (Proposition 13)

As a direct result of the TMDLs for Mercury (Hg) and PCBs, significant load reductions (>50%) are required of Bay Area urban runoff programs. This is a difficult prospect for given there is limited quantitative information on where high concentrations of Hg and PCBs occur in urban

areas. In addition there is little knowledge or experience on how source and treatment control BMPs or maintenance activities that have been designed and are routinely implemented to control other substances may or may not work for Hg and PCBs. In recognition of these information needs, with support from Water Board and BASMAA, SFEI applied for and received a grant from the Proposition 13 Coastal Non-point-Source Pollution Control Program and work began in 2005. The purpose of the grant is to assist BASMAA and the Water Board to implement the Hg and PCB TMDLs through the development of a science-driven consensus on where and how to apply limited resources to meet the TMDL goals.

From 2005 through 2007, Program staff and additional BASMAA representatives have actively participated in the development and provided oversight on the following tasks designed to provide pertinent information in pursuit of the purpose:

1. Mapping Storm Drains: At the completion of the project storm drains from Richmond to San Jose on the east Bay up to San Francisco on the Peninsula will have been mapped.

2. A Geographic Information System: A GIS of land use, watershed/stormwater catchment boundaries, historic industrial areas, PG&E facilities, auto wrecking facilities, 1950s railway lines, crematoriums, known PCB and Hg spill and industrial accident sites, pump stations, wastewater treatment facilities, and rainfall is being used to help design sampling programs, and to estimate discharge from stormwater catchments.

3. Estimates of Sediment Loads: We have developed a conceptual understanding of the supply and magnitude of sediment that passes through stormwater conveyances. This will be used along with the GIS to help determine where contaminated bed sediments occur.

4. Mercury and PCBs White Paper: This 150 page document provides a thorough review of all that is known about Hg and PCBs in urban areas, the potential of commonly applied BMPs and pollution prevention to remove mass, and an analysis of data gaps.

5. BMPs Desktop Evaluation: This report describes the development and outcomes of a spreadsheet model of the application of a combination of feasible and commonly applied BMPs to address the TMDL goals. Preliminary findings suggest the potential to meet the PCB load reduction goals but only limited possibility to meet the Hg TMDL goals. The model will be updated using data collected during the period of this study.

6. Soil/Sediment Sampling: Based on previous products and oversight from BASMAA/Water Board, sample collection is being focused in older industrial areas in Richmond, San Leandro, Hayward, San Jose, Sunnyvale, San Carlos, South San Francisco, San Bruno, Daly City, and Brisbane. The objectives are to better understand the distribution of Hg and PCBs in urban areas and to determine how release occurs (i.e. runoff, wind, wheel tracking, and grain size distribution).

7. Base Flow and Storm Sampling: Based on previous products and oversight from BASMAA/Water Board, sample collection is being focused in older industrial areas in Richmond, Oakland, Hayward, San Jose, and San Carlos. The objective of this sampling is to characterize the distribution of Hg and PCBs is 3 particles sizes (<25, 25-75, and >75 microns) and determine the potential of control of either urban dry-weather flow or early season storm flow for addressing TMDLs goals.

8. Street Sweeping/ Washing Studies and Catch Basin Cleaning: Data will be collected this fall to determine the potential mass removed by these maintenance practices.

9. Pollution Prevention Status Reports: A series of 5 page Status 2007 reports will be written on 1. Instruments containing Hg recycling, 2. Switches/ thermostat recycling, 3. Fluorescent bulb recycling, 4. Battery recycling, 5. Auto / white-good recycling, 6. Compact fluorescent bulb recycling / buyback, 7. Crematoriums / hospitals, 8. building demolition / remodeling, 9.Voluntary PCB in-use reporting and phase-out / PCB equipment I.D. inspection and removal, 10. PG&E PCB change out/ phase out implementation, 11. Small capacitor / light ballast change out, and 12. Auto recycling / shredder waste.

10. Recommended Implementation Activities: Based on a series of meetings with BASMAA reps and Water Board TMDL staff and the scientific information generated in through this project including collation of data from other BASMAA studies, Hg and PCB implementation plans will be written for guidance to BASMAA on how to cost effectively address the TMDL goals. Guidance will include where PCB and Hg are likely to occur in urban areas, what kinds of BMPs and combinations have the best probability to be effective, how existing programs could be focused or enhanced to improve effectiveness, methods for sampling during site evaluations, implementation, and effectiveness monitoring, specific sample preprocessing and lab methods that will yield reliable data, and estimates of implementation costs where information is applicable or available.

The grant is scheduled from completion in FY 07-08. Though in-kind support, Program staff will continue to actively participate and provide oversight to SFEI staff during the completion of this project.

Small Tributaries Loading Study (Watershed #2)

Since 2000, the RMP's Sources Pathways and Loadings Workgroup (SPLWG) has supported the establishment of a "Regional Network of Observation Watersheds". The SPLWG suggested that the RMP:

- Choose watersheds that represent different urban landscapes, different hydrological, climatological, and geological type;
- Provide a testing grounds for development of improved monitoring and modeling techniques;
- Enable a testing ground for management actions and strategies to detect the effect of management actions on long-term trends in loads; and,
- Extrapolate data to other watersheds in each region that are sampled less intensively.

In 2002, the CEP and RMP began jointly funding a mercury and PCBs loading study on the Guadalupe River. Based on the success of this study, the SPLWG proposed adding a second loading study in 2006. After much discussion, a small industrialized watershed in Hayward named Zone 4-Line A was chosen for sampling, which began in October 2006.

Results from this study were not yet available at the time this Annual Report was completed, but information can be found at RMP at http://www.sfei.org/rmp/index.html and an update will be provided in the Programs FY 07-08 Annual Report.

Mercury in Biosentinel Fish in the San Francisco Bay

The Regional Monitoring Program for Water Quality in San Francisco Bay (RMP) funded a three-year pilot study to develop baseline data on mercury concentrations in small fish in San Francisco Bay. The study includes annual monitoring of fixed monitoring stations in 2005 through 2008. The ultimate objective is to develop a monitoring program to evaluate long-term change in Hg bioavailability in the Estuary, including response to wetland modifications and other management actions. The following paragraphs summarize findings from the first year of monitoring in this study.

Eight nearshore locations in San Francisco Bay were sampled with beach seines from November through December of 2005. Multiple composite samples of five to ten individuals each were collected at each sampling location, weighed, measured, and analyzed for whole-body total Hg concentration. Seven small fish species representing a range of vagility and salinity tolerance were captured. Of 97 composite samples analyzed, 39 (40%) had Hg concentrations higher than a proposed 0.03 µg/g (wet-weight) TMDL target threshold. The average wet-weight mercury concentration of the samples was 0.049 µg/g. Mississippi silverside (*Menidia audens*) had higher Hg concentration than other species tested, and bay goby (*Lepidogobius lepidus*) had lower concentrations. For cheekspot goby (*Ilypnus gilberti*), concentrations were significantly higher at Alviso Slough than stations farther north. For Mississippi silverside, concentrations were significantly higher at four South Bay sites than at China Camp or Benicia State Park.

Guadalupe River TMDL for Mercury

The Santa Clara Basin Watershed Management Initiative (SCBWMI) is serving as the stakeholder forum for the development of the Guadalupe River TMDL Report for Mercury. The Guadalupe River Watershed encompasses parts of San Jose, Los Gatos, Campbell, Monte Sereno and the unincorporated Santa Clara County. The Program is a stakeholder in the Guadalupe River TMDL. The Santa Clara Valley Water District (SCVWD) is taking a lead role in the TMDL development process by funding a $900,000 study of mercury sources, fate and transport, and is participating as Co-Chair of the TMDL Work Group and Stakeholder Group. Program staff is also participating in the TMDL process. In addition, the SCVWD entered into a Memorandum of Understanding (MOU) with the Water Board for Phase I and Phase II studies which were funded by the SCVWD.

Since FY 02-03, Program staff, along with other Co-permittee staff, have attended Work Group meetings and reviewed draft technical memoranda developed by the consultant (i.e., Tetra Tech). During July and August 2003, a synoptic survey and preliminary field sampling effort was conducted. The results of the synoptic survey were incorporated into the *Draft Conceptual Model Report* (Tetra Tech, October 2, 2003). Based on the information collected for the conceptual model, a *Data Collection Plan* (Tetra Tech, February 20, 2004) was developed. Sampling in the Guadalupe River watershed, which began in February 2004, included an element to compare total and methyl mercury in creeks draining urban watersheds unaffected by mining (Ross, Canoas and Los Gatos Creeks) to those affected by mining (Alamitos, Guadalupe, Arroyo Calero, Canoas, Randol Creeks and Guadalupe River). Under a contract with the Water Board, the consultant has incorporated the data collection results into the *Final Conceptual Model Report* (Tetra Tech, May 22, 2005). A summary of the findings in this report were provided in the Program's *FY 04-05 Annual Report*.

Building on the information presented in the conceptual model report, Water Board staff released a TMDL Project Report in January 2006 that describes the estimated loads from source categories, TMDL targets and load and wasteload allocations, and preliminary implementation actions. Program, City of San Jose and SCVWD staff presented oral comments to Water Board staff during the SCBWMI TMDL Stakeholder Workgroup meeting on May 14, 2006. The purpose of the meeting was to obtain Workgroup input on the TMDL Implementation Plan.

Public notice of the release of the Basin Plan Amendment (BPA) package is currently scheduled for FY 2007/08, with Water Board hearings tentatively scheduled for the Fall/Winter of 2007. Program and Co-permittee staff will continue to participate in the development of the Guadalupe River Watershed TMDL for mercury by attending meetings and reviewing/commenting on future TMDL reports.

Pesticide Monitoring Activities (Provision C.9.d)

In response to Provision C.9.d of the Program's NPDES Permit, the SCVURPPP developed a Pesticide Management Plan consistent with the Provision. The Pesticide Management Plan, which has many components, is described in Section 6 of the Annual Report. Pesticide-related monitoring activities conducted during FY 06-07 are described below.

Santa Clara Valley Creek Monitoring

During FY 06-07, the Program analyzed water and bedded sediment samples collected in Santa Clara creeks through the implementation of its Revised Multi-Year Plan. Water and sediment samples were collected as screening level indicators of water/sediment quality at a variety of creek sites draining urban and rural land use areas. Specific to pesticides, creek water was analyzed for organophosphate pesticide concentrations and aquatic toxicity (acute and chronic endpoints), while sediment was analyzed for pyrethroid pesticides and sediment toxicity (acute and chronic endpoints). As described in the Program's Revised Multi-Year Plan, water grab samples were collected during two seasons (wet and dry). Sediment samples were collected in September 2006 and May 2007.

Organophosphate pesticides were not detected in the four samples collected from two creeks (i.e., Stevens and Permanente) in the Santa Clara Valley in FY 06-07. Results from three species aquatic toxicity testing also indicated very few problems in Santa Clara Valley creeks. Two sites were sampled two times (wet and dry seasons) during FY 06-07. No significant acute toxic effects (i.e., reduced survival) were observed in the four samples. Growth/Reproduction (i.e., chronic effects) of the test organism *Ceriodaphnia dubia* was inhibited in two of the four samples analyzed.

Sediment samples were collected from 8 sites in FY 06-07. Pyrethroid pesticides *Permethrin* and *Bifenthrin* were detected in 8 of 8 and 2 of 8 sites, respectively. All pesticide detections were observed in samples collected in May 2007. Permethrin concentrations (normalized to total organic carbon) in 7 of 8 samples were above published toxic concentrations (i.e., LC50s), while concentrations of Bifenthrin were below LC50s. In contrast to pyrethroid results, acute sediment toxicity was almost entirely observed in samples collected in September 2006, as opposed to May 2007. In September, 5 of 6 sites exhibited significant sediment toxicity, while only 1 of 5 sites had toxic sediments in May. A full description of methods, results and conclusions are presented in the Summary Assessment Report (see Appendix C-2) and the Pilot Sediment Quality Triad (SQT) Report (see Appendix C-3).

In future years, the Program will continue to coordinate pesticide and toxicity monitoring activities with regional monitoring efforts (e.g., BASMAA and RMP) to ensure that useful and adequate information is being collected. This information should assist the Program in determining the impacts of pesticides on local water bodies.

Copper and Nickel Control Measures (Provisions C.9.a and b)

Management Activities

Copper Action Plan and Nickel Action Plan Reviews

In FY 05-06, Program staff, in consultation with Water Board staff, decided that the SCBWMI Bay Modeling and Monitoring (BMM) Subgroup did not need to conduct semi-annual reviews of the Copper Action Plan (CAP) and Nickel Action Plan (NAP) due to the pending related activities of the Clean Estuary Partnership (CEP) and Water Board regarding the Municipal Regional Permit (MRP).

Limited discussions about how the transition would likely occur to a bay-wide Copper Management Strategy (CMS) occurred within the MRP Work Groups. MRP development related activities were considered higher priority by Water Board staff than CAP/NAP activities during most of FY 2005-2006. Ambient monitoring and trigger criteria were revisited to move towards a consistent and equivalent level of effort expended North and South of the Dumbarton Bridge. The proposed approach North of the Dumbarton Bridge is to rely on RMP data that is collected once per year versus the monthly dry season data collected south of the Dumbarton Bridge. The City of San Jose prepared a report entitled *Re-evaluation of San Francisco Bay Triggers fro Copper and Nickel* (dated April 2006) that evaluated alternative strategies for a consistent bay-wide approach. The report results were presented to Water Board and SFEI staff. The City of Palo Alto continued to offer to convert its Copper Indicators Report to a model for a bay-wide indicators report, if provided the necessary information. New funding mechanisms will need to be identified for on-going implementation of these bay-wide CMS components (stormwater and POTW annual reporting, indicators reporting and ambient monitoring).

The Basin Plan Amendment adopting the North of Dumbarton Bridge Copper site-specific water quality objectives (SSOs), translators, and the CMS was approved by the RWB in June 2007. The Bay-wide CMS will replace what was adopted in the Basin Plan in 2002 as part of the South San Francisco Bay copper and nickel SSO project. The copper control measures and monitoring program has a Bay-wide scope so the majority of existing Basin Plan language pertaining to the implementation of copper and nickel objectives in South San Francisco Bay will be replaced. Chapter 7 of the Basin Plan contains a lengthy, narrative discussion of the project history for developing copper and nickel SSOs in South San Francisco Bay, the associated monitoring program, and the implementation plan for the SSOs. Nearly all of this text is unnecessary, non-regulatory language and is being deleted.

Because SSOs and translators were the only regulatory elements from the South San Francisco Bay project (SFBRWQCB 2002), the only regulatory element from the existing text in Chapter 7 is the specification of copper and nickel translators that apply to wastewater discharges to South San Francisco Bay, so this element will be retained. The South San Francisco Bay copper and nickel SSOs are likewise retained in Chapter 3. The deleted non-regulatory language in Chapter 7 is replaced with more efficient language describing the Bay-wide implementation strategy for copper. There is no Bay-wide implementation strategy for nickel because nickel SSOs have only been adopted for South San Francisco Bay. Chapter 4 of the

Basin Plan states the implementation measures necessary to implement the South Bay nickel SSOs are in the form of numeric nickel effluent limits for South Bay wastewater facilities.

The replacement Basin Plan Amendment language in Section 7.2.2.1 regarding Control Measures for Urban Runoff Management Agencies is as follows:

- *The NPDES permits for urban runoff management agencies shall require the implementation of best management practices and copper control measures designed to prevent urban runoff discharges from causing or contributing to exceedances of copper water quality objectives. Requirements in each permit issued or reissued and applicable for the term of the permit shall be based on an updated assessment of control measures intended to reduce copper in stormwater runoff to the maximum extent practicable. Urban runoff management agencies must implement control measures targeting: vehicle brake pads, architectural copper, copper pesticides, and industrial copper use. Additionally, these permits shall contain requirements to conduct or cause to be conducted: monitoring of copper loading to the Bay at locations and frequency sufficient to track loading trends; and technical studies to investigate possible copper sediment toxicity and sublethal effects on salmonids.*

- *If an ambient trigger concentration in any San Francisco Bay segment (see Basin Plan Section 7.2.2.5) is exceeded, all urban runoff management agencies discharging to that segment shall submit a report to the Water Board that describes best management practices that are currently being implemented and additional measures, with a schedule, that will be implemented to prevent their copper discharges from causing or contributing to the exceedance.*

Implementation of CAP/NAP Baseline Activities

The majority of baseline actions are implemented at the Program level (except for those assigned to San Jose, Sunnyvale and Palo Alto), and are included in the Program's Annual Reports and Work Plans. In mid-2003, the Program identified the following copper control activities that were deemed appropriate to implement at the Co-permittee level:

- CB-1: Measures to reduce copper discharges from vehicle washing operations;
- CB-3: Measures to control copper in discharges of stormwater in targeted industrial sources;
- CB-6, 7: Measures to reduce traffic congestion/promote alternative transportation;
- CB-8: Measures to classify and assess watersheds and improve institutional arrangements for watershed protection;
- CB-11: Measures to improve street sweeping controls and stormwater system operation and Maintenance;
- CB-12: Measures to control copper discharges from pools and spas;
- CB-21: Measures to discourage architectural use of copper; and
- NB-1: Measures to control nickel discharges from construction sites (sediment).

The *FY 07-08 Copper/Nickel Work Plan* and summary of FY 06-07 accomplishments are provided within Appendix C-4. Currently, the Copper/Nickel Work Plan contains twenty-one copper and seven nickel baseline actions. During FY 06-07, some specific accomplishments included:

- The Program distributed approximately 715 Watershed Watch campaign brochures at public events, ZunZun assemblies and through website and hotline requests. In

addition, English and Spanish Watershed Watch (WW) campaign brochures that included outreach on car washing (aimed at reducing copper and nickel; and other pollutant inputs to stormwater) were distributed on request (CB-1).

- The Cities of San Jose and Sunnyvale conducted distributing stand alone vent BMP information to applicable facilities that may be potential sources of copper (CB-3);
- The City of Palo Alto prepared the sixth annual Copper Action Plan Report (CB-4.3);
- Continued to actively support the Brake Pad Partnership (BPP) (CB-5), providing resources to fund and advocate BPP through BASMAA, actively tracking activities of BPP and efforts under the Proposition 13 grant;
- Continued to work with and support the Land Use Subgroup (LUS). Tasks included conducting one workshop (December 2006) relating to impacts on water quality. CB-6 and CB-7);
- Implemented the five year of the Multi-Year Monitoring Plan (Included specific water quality and sediment sampling and analyses for all metals including copper and nickel.) (CB-8.4);
- Continued to implement Co-permittee street sweeping and catch basin cleaning programs consistent with performance standards (aimed at reducing discharges of pollutants, including copper and nickel, to storm drains and receiving waters). Summarized the amount of material collected and miles swept within the Program's jurisdiction (CB-11);
- Continued distributing the updated brochure entitled Keep Pool, Spa and Fountain Water Out of Storm Drains, Creeks, and the Bay (aimed at reducing discharges of pool water, which can contain copper and nickel, to storm drains and receiving waters.) (CB-12);
- Updated the copper "uncertainty studies" research tracking web portal to include additional studies. This web portal is available on the Program's website (www.scvurppp.org). A link to the web portal was also placed on the SFEI website (www.sfei.org)(CB-17(1).
- The City of San Jose continued to monitor dissolved copper and nickel during the dry season (in Lower South San Francisco Bay) as part of their ambient monitoring program (additional information provided below).

Lower South Bay Ambient Monitoring

In February 1997, the City of San Jose, on behalf of all local agencies in the South Bay, began sampling total and dissolved copper and nickel concentrations at ten stations in the Lower South San Francisco Bay (LSSB). In October 1997, two fresh water stations were added, one each in the lower reaches of Coyote Creek and the Guadalupe River, bringing the total number of stations to twelve (Figure 4-1). The sampling design from the CAP/NAP requires monthly compliance sampling. Ten locations in South San Francisco Bay have been monitored to compare mean dry season dissolved copper and nickel concentrations to respective trigger levels. Results from monthly monitoring at ten stations show ambient concentrations continuing to be well below the adopted SSOs of 6.9 ug/L and 11.9 ug/L for copper and nickel, respectively. Ambient concentrations have remained consistent (no upward or downward trend) and below the stringent Action Plan trigger values (established as NPDES permit requirements in 2000) of 4.0 ug/L and 6.0 ug/L for copper and nickel, respectively. The monitoring results are located on http://www.sanjoseca.gov/esd/pub_res.asp, the City of San Jose's Environmental Services Department website

Figure 4-1: Map of monitoring station locations in LSSB (City of San Jose)

The North of Dumbarton Copper SSO Basin Plan amendment (June 2007) deleted and replaced the above South Bay monitoring program with the following Bay-wide Ambient Monitoring Program (BPA Section 7.2.2.5).

- *The implementation plan establishes copper control measures in order to prevent increases in ambient dissolved copper concentrations. Ambient concentrations of copper in the Bay have remained essentially unchanged from 1993 through 2006 and are not expected to increase in the future. In order to determine systematically if ambient concentrations have increased, specific copper concentration triggers are compared to data collected through the Regional Monitoring Program for Trace Substances (RMP). This is accomplished by calculating every year the three-year rolling mean of RMP copper concentrations in segments of the Bay. These rolling mean concentrations will be compared to trigger concentration values for each segment. The trigger concentrations (shown in Table 7.3) were calculated in order to detect a change (from 2003 concentrations) in dissolved copper concentration of about 1 µg/L with a statistical power of 99%. If the trigger concentration is exceeded in any Bay segment, the Water Board will investigate causes of the exceedance and potential control options and require wastewater and urban runoff dischargers to that segment to investigate whether they have caused or contributed to the exceedance and, if so, to identify and submit a plan and schedule to implement controls to resolve their contribution to the exceedance.*

- *The Water Board will assess the continued appropriateness of the SSOs for San Francisco Bay should conditions change in Bay water quality. Dissolved organic carbon (DOC) will be used as a surrogate measure of the protective effect of Bay water against copper water column toxicity. An analysis and evaluation of trends in DOC data collected through the RMP will determine whether or not additional water column toxicity tests are needed to confirm that the SSOs are protective. In addition, the Water Board will evaluate sediment copper concentration and sediment toxicity data collected through the RMP to assess possible effects related to copper accumulation in Bay sediments. The need for a revaluation of the SSOs or other regulatory actions will be established through the triennial review of the Basin Plan.*

The new dissolved copper (µg/L) trigger concentrations at 99% statistical power for each Bay segment (or portion thereof) are as follows:

Suisun Bay 2.8 µg/L, San Pablo Bay 3.0 µg/L, Central San Francisco Bay and Lower San Francisco Bay (north Hayward Shoals) 2.2 µg/L, Lower San Francisco Bay (south of Hayward Shoals) 3.6 µg/L, and South San Francisco Bay (SSFB) 4.2 µg/L. The RMP will collect three dry season samples per year from each bay segment and five samples per year from SSFB to be used in calculating the 3-year moving average value for annual comparison to the triggers. When implemented, this will result in a significant reduction in SSFB Cu/Ni monitoring requirements.

Future CAP/NAP Approach

Since 2003, the BMM Subgroup determined that further efforts at fine-tuning the CAP baseline activities would likely be unproductive due to certain remaining inherent challenges with the original CAP/NAP language. To assist in the identification of key baseline copper control activities that are most effective in the removal of copper, the Program helped fund preparation of a Clean Estuary Partnership document entitled *Copper Sources in Urban Runoff and Shoreline Activities: Information Update*. This report was prepared as part of North of Dumbarton Cu/Ni SSOs project funded through the CEP and finalized in November 2004.

The CEP also funded a follow-up project to prepare a reporting template and guidance on how the top priority stormwater CMS activities should be implemented and how the effectiveness of those activities should be assessed. The first source assessed was architectural copper in the CEP report entitled *Copper Management Strategy Development Resources, Element 1: Architectural Copper.* The report was reviewed at a Work Group meeting in December 2005. The CEP funded a follow-up report entitled *Copper Management Strategy Development Resources, Version 1* that addressed brake pads, copper pesticides and marine antifouling compounds. Other sources of copper in urban runoff are proposed to be addressed through existing permit requirements and public outreach.

The above information was used in developing the Bay-wide CMS that was adopted in the North of Dumbarton Copper SSO Basin Plan amendment (BPA) that deleted and replaced the above CAP/NAP requirements in the Basin Plan. The BPA changes will not be fully effective until the BPA is approved by the SWB, Office of Administrative Law (OAL) and USEPA. Once this has happened, the corresponding requirements in the stormwater and POTW NPDES permits will also need to be amended to delete the outdated requirements and include the new BPA bay-wide CMS requirements. This will likely occur as part of the MRP issuance and reissuance of the POTW NPDES permits, rather than as permit amendments.

Monitoring Activities

Watershed Monitoring

During FY 06-07, the Program continued to analyze water samples collected in Santa Clara creeks through the implementation of its Revised Multi-Year Plan. Water samples were collected as screening level indicators of water quality at a variety of creek sites draining urban and rural land use areas and analyzed for total recoverable copper and dissolved copper concentrations. As described in the Program's Revised Multi-Year Plan, grab samples were collected during two seasons (wet and dry).

In FY 06-07, total recoverable copper concentrations ranged from 0.65 to 3.6 ug/L in four samples collected from two creeks in Santa Clara County. At the same sites, dissolved copper concentrations ranged from 0.46 – 1.1ug/L.

Dissolved copper concentrations were adjusted for hardness and compared to copper water quality standards for freshwater described in the California Toxics Rule (CTR). Analytical results indicated that only none of the four samples exceeded the Continuous Concentration Criterion (CCC) for copper. A full description of methods, results and conclusions are presented in the Watershed Monitoring and Assessment Summary Report within Appendix C-2.

Brake Pad Partnership

The Brake Pad Partnership (BPP) is a multi-stakeholder effort to understand the environmental impacts of automobile brake pad wear debris (which contains copper). Manufacturers, regulators, stormwater management agencies (e.g., SCVURPPP) and environmentalists are working together to understand these impacts. BPP efforts are aimed at developing an approach for evaluating potential impacts of copper (from brake pad debris) affecting water quality in the South San Francisco Bay. Brake pad manufacturers have committed to adding this evaluation approach (to existing practices) for designing products that are safe for the environment while meeting performance requirements.

To understand the fate and transport of copper from automobile brake pad wear debris, the Program (through BASMAA) continued to financially support the BPP in conducting a set of interlinked laboratory, environmental monitoring and environmental modeling studies. The BPP efforts include the following three environmental modeling studies:

- Air Deposition Modeling—To predict how much brake pad wear debris is released and deposited in the study watershed (Castro Valley);
- Watershed Modeling—To estimate how much copper from the deposited wear debris washes into the storm drainage system and eventually reaches the waters of the South San Francisco Bay; and.
- Bay Modeling—To determine whether and, if so, to what extent copper from brake pad wear debris affects short- and long-term concentrations of copper in the Bay.

In support of these modeling efforts, the BPP conducted additional studies to develop accurate input data for the models. An air deposition monitoring effort provided data necessary for comparison with the air deposition model results. Stormwater monitoring data was collected to help calibrate and validate the watershed modeling. In addition, the BPP is conducting physical and chemical characterization analyses to determine model parameters specific to brake pad wear debris.

In FY 06-07, the BPP completed much of its work on air deposition monitoring; generation and characterization of a representative sample of brake pad wear debris; estimating the amount of copper released to the watershed from brake and non-brake sources; water quality monitoring; and watershed modeling. Available results were presented at a BPP stakeholder meeting on July 31, 2007 in Oakland. The status and/or findings of each project can be found at http://www.suscon.org/brakepad/documents.asp

PCBs and Dioxin Compounds Control Program (Provision C.9.e)

Provision C.9.e. of the Program's NPDES permit requires development of a control program to reduce or eliminate discharges of polychlorinated biphenyls (PCBs) and dioxin-like compounds

from urban runoff conveyance systems from controllable sources (if any). As part of the PCBs/Dioxins Control Program, monitoring activities were conducted by the Program during FY 06-07. In addition, PCBs/Dioxins related management activities are described.

Polychlorinated Biphenyls (PCBs)

The Water Board has placed high priority on addressing PCBs in the Bay and is currently developing a PCBs TMDL. The Water Board released a PCB TMDL staff report and proposed Basin Plan amendment late in June 2007 (*Total Maximum Daily Load for PCBs in San Francisco Bay, Proposed Basin Plan Amendment and Staff Report*, *June 22, 2007*). Program staff are reviewing these documents and assisting BASMAA to develop a comment letter to submit to the Water Board.

The Program has provided leadership to Bay Area stormwater management agencies in their efforts to assist the Bay PCBs TMDL. This included leading a regional study that characterized the distribution of PCBs concentrations in storm water conveyance sediments in Bay Area watersheds. The Program also performed PCBs case studies in selected areas where elevated concentrations of PCBs were found during the regional study and coordinated similar case studies by other Bay Area storm water management agencies. The case studies were aimed at identifying PCBs sources and controls. The Program also prepared work plans for the above regional and local field studies. The work plans included a preliminary list of known sites where PCBs were used, stored and/or released in Santa Clara County. To facilitate regional coordination, the Program led a work group of representatives from BASMAA and Water Board staff and provided a staff to represent BASMAA on the CEP PCBs workgroup.

The Program also completed a report on efforts to develop methods of controlling discharges of PCBs from Bay Area urban runoff conveyances. The study describes 1) past, current and planned efforts to identify PCBs control options in the Bay Area, 2) management practices currently implemented by Bay Area storm water management agencies that may reduce discharges of PCBs from urban runoff conveyances, and 3) potential additional PCBs storm water control options and some of their advantages, limitations and cost factors.

During FY 06-07, the Program continued to work with other Bay Area dischargers and Water Board staff through BASMAA, the CEP and the RMP to coordinate and plan activities related to PCBs and other pollutants of concern. Efforts included providing funding to these organizations, participating in selected stakeholder meetings, committees and work groups and, as appropriate, reviewing and commenting on relevant documents prepared by the CEP, RMP and Water Board staff. Program staff continued to represent BASMAA on the RMP TRC, RMP SPLWG and RMP CFWG. Specific projects related to PCBs are summarized below.

Taking Action for Clean Water

In November 2006, the State Water Resources Control Board awarded the San Francisco Estuary Project (SFEP) a Proposition 50 Coastal Nonpoint Source Pollution grant (Taking Action for Clean Water) that includes several tasks to further implementation of Bay Area Total Maximum Daily Loads (TMDLs). One of these tasks involves PCBs used in historic building materials and aims to help reduce PCB stormwater loads to San Francisco Bay.

The CEP has evaluated available data on sources of PCBs in urban runoff and found that one such source is PCB-containing historic building materials, specifically uncontained materials like sealants, caulking and paint (*Larry Walker Associates, TDC Environmental, and Ann Blake, PCB TMDL Implementation Plan Development, Prepared for CEP, May 2006*). When the

building materials fail or buildings are remodeled or demolished, PCBs are released onto the ground and can be washed off by urban runoff.

The Taking Action for Clean Water project is partnering with the Bay Area Stormwater Management Agencies Association (BASMAA) and its member cities to develop Bay Area-specific Best Management Practices (BMPs) to prevent release of PCBs from building materials into urban runoff during renovation, maintenance and demolition of structures. SFEP will coordinate development of the BMPs by completing trial implementation projects in cooperation with BASMAA and local municipalities. The San Francisco Estuary Institute (SFEI) will obtain Bay Area-specific information about the presence of PCBs in building materials, so that management actions can be targeted specifically to the structures most likely to contain PCBs that threaten water quality. During FY 06-07, Program staff helped develop the scope for the grant application and represented BASMAA during all project activities. In the future Program staff will continue to represent BASMAA during all phases of the project.

Multibox Bay PCBs Fate and Transport Model and Sediment Coring Program
This project is a multi-year program, building on model development efforts already underway, to construct a mechanistic model that will advance our understanding of pollutant behavior in the Estuary and provide a new tool for water quality management. The project goals include: 1) developing a better tool for predicting future pollutant concentrations and testing potential management actions; 2) clarifying the uncertainty of existing model predictions; 3) identifying key areas where fieldwork can reduce uncertainties; and 4) conducting key fieldwork, including sediment coring in the Bay to improve estimates of the PCB inventory and historic loads and tracer experiments to quantify flushing. During FY 06-07, the PCBs multi-box model was independently tested by Tetra Tech and additional testing was conducted by SFEI. A final report on the model is currently being developed and should be released in early FY 07-08.

In concert with Multi-box model development, the RMP/CEP embarked on a joint study in 2006 to collect and analyze 17 sediment cores from the Bay and adjacent wetlands. The study has three objectives: (1) provide a more comprehensive characterization of contamination with depth that can be used to assess future changes, (2) verify the historic loading of pollutants to the Bay and how those loads have changed in the last several decades, and (3) provide valuable data for parameterization and evaluation of the multi-box or other Bay models. The cores were collected in 2006 and have been segmented for radiodating using thorium, cesium and lead. The radiodating process should be completed by early FY 07-08. Depending on the date of the segment, the segments will then be analyzed for pesticides, PCBs, PBDEs, and mercury.

Dioxins

All segments of San Francisco Bay were listed as impaired by certain dioxin compounds in the 1998 and 2002 Clean Water Act Section 303(d) lists. The Water Board opposed the 1998 listing of dioxins in the Bay but was overruled by the USEPA. The 2002 303(d) list designates the TMDL priority for dioxins in the Bay as low, and a schedule for performing a TMDL is not included. The Program understands that the Water Board does not plan to perform a TMDL for dioxins in the Bay. A recent report prepared by the CEP (*Dioxins in San Francisco Bay: Conceptual Model/Impairment Assessment, January 2005*) provides a comprehensive discussion of issues related to dioxins in San Francisco Bay.

The Program has developed and implemented three work plans related to dioxins. In March 2002, the Program submitted an initial work plan. This work plan specified reviewing readily

available data on methods used to characterize dioxins in storm water runoff and surface waters and concentrations typically found in the Bay Area and other areas. The completed review revealed that dioxins have been found in urban runoff in the Bay Area and other locations, and in sediments in the Bay and other estuaries. It was concluded that existing data are not sufficient to characterize the distribution in urban runoff among Bay Area land uses or calculate loadings to the Bay. The second work plan was completed in March 2004 and described the Program's collaboration with other Bay area storm water management agencies to develop an introductory report on dioxins. The completed report emphasized issues related to urban runoff in the Bay area, including regulatory context, impacts, sources, pathways, review of relevant Bay Area, national and international studies, and qualitative review of potential storm water controls. The third work plan was completed in March 2004. It specified that Program Staff will track regional, state and federal efforts to address dioxins and encourage Co-permittees to track, understand, and participate in these programs, as appropriate. A memorandum documenting the results of this tracking was completed in FY 04-05.

During FY 05-06, Program staff surveyed the Co-permittees regarding dioxins pollution prevention actions they currently implement and any related formal policies, resolutions or ordinances already adopted. The survey revealed that Co-permittees currently implement a wide range of activities that may help prevent formation of dioxins. In particular, the survey revealed most Co-permittees are taking measures that may help address what are the potentially the largest contemporary sources of dioxins in the Bay Area: residential wood burning, diesel exhaust and use of the pesticide 2,4-D. Program staff also continued to track regional, state and federal efforts to address dioxins.

Dioxins Control Program - FY 06-07 Activities

During FY 06-07, Program staff prepared a fact sheet on dioxins, which may be downloaded from the SCVURPPP's web site. The fact sheet describes dioxins and how they are produced, the Bay Area regulatory background, potential sources of dioxins to the environment and stormwater runoff, and the Program's accomplishments in addressing dioxins.

Sediment Control Program (Provision C.9.f)

San Francisquito Creek Sediment TMDL

In response to a listing of impairment by sediment under section 303(d) of the Clean Water Act and a need to provide information for a TMDL assessment, two separate (but coordinated) projects have been developed. These projects are the San Francisquito Creek Watershed Analysis and Sediment Reduction Plan (Plan), administered by the San Francisquito Creek Joint Powers Authority (JPA); and the Aquatic Habitat Assessment and Limiting Factors Analysis (AHALFA), managed by the Santa Clara Valley Water District (SCVWD). The Plan fulfills Permit Provisions C.9.f.i and C.9.f.ii of the Program's NPDES permit.

The primary issues driving the TMDL are flooding and degradation of habitat, impacting steelhead trout and other threatened aquatic species. The approach adopted by the JPA and SCVWD in these projects is to assess factors limiting the threatened aquatic species, including but not confined to those related to excessive sedimentation caused by human land use activities. Project products are intended to produce information that will assist the Water Board to confirm or reject the validity of the sediment impairment listing and help identify other causes of impairment to aquatic species and their habitats in San Francisquito Creek.

There were two main objectives for developing the Sediment Reduction Plan. The first objective was to understand the erosion, transport and deposition of sediment in the San Francisquito Creek watershed, focusing on human-related activities that modify hydrology, alter erosion rates or trap sediment. The second objective was to review existing sediment management policies and practices and recommend management measures to effectively reduce erosion and sediment transport in the watershed. The specific tasks for this project are:

1) *Historical Conditions Analysis:* Analyze historical conditions in the San Francisquito watershed, particularly sediment supply, transport, and deposition as they relate to stream and water character;
2) *Existing Conditions Analysis:* Analyze land use, biological resources, stream management and maintenance and designated beneficial uses;
3) *Watershed Sediment Analysis:* Develop a rapid sediment budget for the watershed, detailing sediment sources, sediment sizes, storage and sediment yield;
4) *Assessment of Existing Management Practices:* Assess existing policies and regulations that provide erosion control or channel protection, identified deficiencies and recommended improvements; and
5) *Watershed Analysis and Sediment Reduction Management Plan:* Incorporate all analyses completed in previous tasks and makes recommendations for measures to manage erosion of the identified human-related sediment sources and estimate reduction of sediment load from these measures.

The Watershed Analysis and Sediment Reduction Management Plan (Final Report) was completed in May 2004. The sediment study was funded under a Proposition 13 grant and administered by the JPA. This report can be found at www.cityofpaloalto.org/jpa/references.html.

The *Aquatic Habitat Assessment and Limiting Factors Analysis* (AHALFA) is intended to characterize channel and habitat conditions with respect to factors that limit the steelhead population in the San Francisquito Creek watershed. Information for this analysis came both from direct data collection and analysis and from studies that have already been performed. Data collection and analysis evaluated stressors that limit: (1) aquatic habitat, (2) steelhead (*Oncorhyncus mykiss*), and (3) development of individuals in specific steelhead life history stages within the lower San Francisquito Creek watershed. The study area includes the lower mainstem of San Francisquito Creek and the Los Trancos Creek subwatershed within Santa Clara County.

The AHALFA Final Report was released on June 12, 2006. The study concluded the following:

1. Suitable winter refuge in pools and other habitats is the key limiting factor limiting smolt production within the study area. The primary cause for lack of overwintering habitat appears to be disconnection of upstream sources of material and loss of material due to hydraulic simplification of the watershed. Existing evidence suggests that overwintering habitat was likely to be historically a limiting factor for steelhead in the lower San Francisquito Creek watershed.
2. Juvenile summer rearing and spawning habitat was determined to be degraded in the study area; however increases in quality and quantity of these habitat features would not likely increase smolt production with commensurate increases in winter rearing habitat.
3. Steelhead outmigration success is limited by seasonal drying of the channel, which may be exacerbated when habitat connectivity is interrupted by passage impediments.

4. Limited available water temperature data suggests that temperatures are generally suitable for steelhead in Los Trancos Creek and unsuitable during the summer months in the San Francisquito Creek mainstem.

The Final Report identified key information needs and future studies to extend the temporal and geographic data sources; and to increase the certainty of the analysis. Some of the key recommendations include:

1. Extend the analysis into the upper reaches of the watershed in San Mateo County, with emphasis on the San Francisquito Creek mainstem, Bear Creek subwatershed and Corte Madera Creek subwatershed.
2. Document the location and carrying capacity of critical steelhead habitat for the entire watershed.
3. Conduct smolt outmigrant trapping and determine the timing and magnitude of flows necessary for downstream passage by smolts.
4. Monitor juvenile steelhead populations in established reaches once (fall) or twice (fall and spring) annually.

Additionally, the Water Board released its Preliminary TMDL Project Report for the watershed in July 2007. During FY 07-08, the Program will continue to follow and participate in the sediment-related activities within the San Francisquito watershed.

Upper Penitencia Creek Sediment Management Practices and Source Assessments

The Program developed a *Work Plan for Conducting a Watershed Analysis and Management Practice Assessment in Other Creeks Potentially Impaired by Sediment from Anthropogenic Activities* (Work Plan) in fulfillment of Permit Provision C.9.f.iii paragraph 2. The Work Plan identifies a two-phased approach to assess watersheds previously identified by the Program as high priority for watershed analysis due to the potential for anthropogenic sediment impairment.

Phase I includes conducting a Limiting Factors Analysis (LFA) and sediment management practices assessment. Phase II includes conducting a rapid sediment budget, which will only be conducted when the Phase I study results indicate that excessive sediment from anthropogenic sources is impacting beneficial uses in the watershed.

The Upper Penitencia Creek watershed was identified as a high priority watershed to conduct a watershed analysis focused on sediment. An LFA was initiated in the Upper Penitencia Creek watershed in FY 04-05. The final Upper Penitencia Creek LFA report was included within Appendix C-5 of the Program's FY 05-06 Annual Report.

Based on the results, conclusions and recommended next steps presented in LFA report the Program began conducting two projects in FY 06-07, a sediment management practices assessment and a sediment source assessment. The Upper Penitencia Creek watershed sediment management practices assessment is intended to meet the following three objectives:

1. Document current sediment management practices in the watershed;
2. Assess the effectiveness of these practices in preventing excess sediment reaching Upper Penitencia Creek and its tributaries; and,
3. Recommend improvements to existing practices and/or recommend new practices that are within or outside of the Program's jurisdictional boundaries.

The Upper Penitencia Creek sediment source assessment is deigned to:

1. Identify and locate sediment sources in the upper part of the Upper Penitencia Creek basin using repeat large-scale aerial photographs and limited field reconnaissance, building on previous studies where possible;
2. Characterize the apparent influence of human activities on sediment sources in the watershed;
3. Identify priority concerns and locations for controlling sediment supply and deposition that may impact juvenile steelhead overwintering habitat, with a focus on sources associated with urban runoff (i.e. roads);
4. Recommend general management actions to reduce sediment supply from high priority locations; and,
5. Provide the foundation for future analyses of sediment production, delivery, and yield, which can more thoroughly describe and potentially address sediment-related management issues in an effective and process-oriented manner.

Both assessment reports will be finalized in early FY 07-08 and included in the Program's FY 07-08 Annual Report. Completion of both reports will be coordinated through the Program's Watershed Analysis AHTG.

Saratoga Creek Water Body Assessment

Following Upper Penitencia Creek, Saratoga Creek (upstream of the San Jose Water Company diversion) is the next highest priority creek scheduled for investigation of potential sediment impairment due to anthropogenic activities. In FY 05-06, Program staff began conducting a water body assessment in Saratoga Creek to:

- Evaluate potential sediment impacts to fish/habitat;
- Evaluate Beneficial Use attainment; and,
- Identify data gaps and additional monitoring needs.

In FYs 05-06 and 06-07, the Program used the Unified Stream Assessment (USA) method (developed by the Center for Watershed Protection) on Saratoga Creek to evaluate instream and riparian corridor conditions and associated stressors. In addition, fish population surveys were conducted in fall 2005, spring 2006 and fall 2006 to assess the current population of cold water fisheries within the watershed.

An assessment report that summarize results, findings and recommendations based on all the Program's survey data for Saratoga Creek is currently in draft form and being reviewed by the Program's Watershed Analysis AHTG and the Water Board. After finalizing the report, the AHTG will provide recommended next steps to the Program's Management Committee. Depending on the results, next steps may include conducting a sediment management practices assessment and/or a sediment source assessment in FY 07-08 similar to Upper Penitencia Creek.

Trash Characterization and Management Activities

On November 14, 2001, the Water Board released the document entitled *Proposed Revisions to Section 303(d) List of Priorities for Development of Total Maximum Daily Loads for the San Francisco Bay Region* Report. This report states that "between now and the next 303(d) listing cycle, municipalities will be expected to assess trash impairments in their jurisdiction …", Water

Board staff will review information concerning trash in the next listing cycle to determine whether specific water bodies warrant 303(d) listing. In a proactive response to the 303(d) Staff Report, the Program's Management Committee formed a Trash AHTG (first meeting on February 21, 2002). The Trash AHTG developed a Work Plan (submitted March 1, 2003) to identify a strategy for addressing trash problem areas that occur in or near urban streams and waterways of the Santa Clara Basin.

In Fiscal Years 03-04, 04-05 and 05-06, the Program assisted Co-permittees in completing the following Work Plan tasks: 1) document existing trash management practices implemented by municipalities and agencies within the Program's jurisdiction; 2) identify and map high priority trash problem areas and sources of trash in Santa Clara Basin watersheds; 3) develop a strategy to conduct trash evaluations in or near creeks; 4) sponsor a training workshop on how to use existing trash assessment tools (i.e., Water Board Rapid Trash Assessment Protocol and Keep America Beautiful (KAB) Litter Index); and 5) develop standardized reporting format for documenting and evaluating trash management and monitoring activities. Summaries of Program efforts to complete these tasks have been provided in previous Annual Reports.

Building on the existing Trash Work Plan, the SCVURPPP developed a *Trash Management and Effectiveness Assessment Strategy* in October 2006 that identifies three areas of focus:

1. Trash Problem Area and Source Identification;
2. Pilot Testing and Implementing Trash Control Measures; and,
3. Water Body and BMP Effectiveness Assessments.

The following paragraphs provide summaries of trash-related tasks conducted by the SCVURPPP in FY 06-07. Tasks are organized by the three focus areas listed above.

Trash Problem Area and Source Identification

This task is intended assist Co-permittees in identifying trash problem areas and sources that will allow the effective implementation of trash control measures. This task encompasses Program activities conducted in previous fiscal years and in FY 06-07.

Trash Problem Area Survey

Beginning on November 4, 2003, when Program staff distributed the memorandum entitled *Identification and Documentation of Known Trash Problem Areas*[1]. The memorandum requested that Co-permittees document and compile relevant information regarding known trash problem areas within their jurisdictions. Co-permittee survey responses were submitted to Program staff in late December 2003. Program staff then compiled the trash survey information and converted the location descriptions into spatial coordinates using a Geographic Information System (GIS).

In May 2004, the trash problem area survey results were finalized in a *Trash Problem Area Survey Results Memorandum*. The problem areas survey results memo contains data from 14 out of 15 Co-permittees[2], including the location, reported ownership, trash source, information resource and relevant comments for 195 potential trash problem areas within SCVURPPP's jurisdiction. Sixty-four sites are located in creeks or in close proximity to a creek (i.e., banks);

[1] All SCVURPPP products referenced in this letter are available at www.scvurppp.org.
[2] Given community characteristics, the City of Los Altos Hill s did not submit trash problem areas list.

and 131 sites are located in areas that were not in the creek (e.g., areas near dumpsters, freeway exit ramps, road sides, etc.). The Santa Clara Valley Water District reported 34 trash problem areas within its jurisdiction. The City of San Jose and Santa Clara County, Co-permittees with the largest jurisdictional areas, reported 30 and 24 trash problem areas, respectively. The highest number of trash problem areas was reported for the Guadalupe River and Coyote Creek watersheds with 41 and 35 sites, respectively. These watersheds also represent the largest watersheds in the Santa Clara Basin. Sunnyvale West, Baylands and San Francisquito Creek (within Santa Clara County) had the fewest number of sites with one, six and six, respectively.

Creek and Watershed Trash Assessments

During FY 04-05, Co-permittee staff and volunteers from watershed stakeholder groups conducted a total of 189 trash evaluations (146 using the KAB Litter Index and 43 trash using the Water Board Rapid Trash Assessment Protocol). A summary of the trash evaluation results was provided in the Program's *FY 04-05 Annual Report*.

In FY 05-06, the Program revised the Water Board's RTA Protocol (Version 7.0) to improve the effectiveness of the evaluation tool to better assess trash problem areas in urban streams. The revised Urban Rapid Trash Assessment (RTA) Protocol (Version 1.0) was implemented by Co-permittees for trash evaluations of creek sites. In FY 05-06, a total of 149 unique sites were assessed (128 KAB and 19 Urban RTA). In addition, the Program revised the format for reporting trash evaluation results to improve consistency of Co-permittee responses and to enhance the analysis of trash assessment data on a Program-wide basis.

In FY 06-07, Co-permittees conducted a total of 228 trash evaluations, including 168 trash evaluations using the KAB Litter Index (i.e., non-creek sites) and 60 trash evaluations using the Urban RTA Protocol (Version 1.0) (i.e., creek sites). *Table 1: Summary Results of FY 06-07 Trash Evaluations* (see Appendix C-5) provides scores (for both KAB and RTA trash evaluations) by watershed. A total of 164 unique sites were assessed. The KAB Litter Index was used at 114 sites and the Urban RTA Protocol at 39 sites. A combination of the KAB and Urban RTA Protocol was used at two sites.

Sixty-five sites were evaluated more than once (i.e., two to four times), typically during different seasonal time periods (i.e., late fall/winter and spring/ early summer). The re-assessed sites included 50 non-creek sites and 15 creek sites. Sixty-four percent of the trash evaluations were conducted in the Guadalupe River (n=57), San Tomas Aquino Creek (n=41), Calabazas Creek (n=23) and San Francisquito Creek (n=19) watersheds.

Evaluation scores are provided within the following tables provided with Appendix C-5:

- *Trash Problem Area Evaluations Results by Watershed*
- *Trash Problem Area Evaluations Results by Co-permittee and Watershed*
- *Trash Problem Area Evaluations Results by Assessment Tool*

The following results were observed during FY 06-07:

KAB Litter Index – Non-Creek Sites

The KAB Litter Index uses a four-point scoring system to estimate the presence of litter within a specific area. To ensure consistent KAB Litter Index scoring between Co-permittees, Co-permittee staff reviewed materials developed by Keep America Beautiful. These materials

included written descriptions (on how to score), photographs (which show conditions) and a training video (which detail how to conduct an evaluation). Several Co-permittees increased the resolution of the original KAB litter scale by assigning scores as fractions. The following describes the modified scoring system of the KAB Litter Index: 0 – 1.0 ("no litter"); 1.1 – 2.0 ("slightly littered"); 2.1 – 3.0 ("littered"); and 3.1 – 4.0 ("extremely littered").

- Eighty-five percent of the sites were scored as "no litter" or "slightly littered";
- Fifteen percent of the sites were scored as "littered". Less than one percent were scored as "extremely littered";
- Guadalupe River and San Tomas Aquino Creek watersheds had the greatest number of sites, thirty-six and twenty-nine respectively, that were scored as "no litter" or "slightly littered";
- Guadalupe River and San Tomas Aquino Creek watersheds had the greatest number of sites, eleven and five, respectively, that were scored as "littered"; and
- Only one site in the entire Program's jurisdiction was considered "extremely littered". It was observed in the Guadalupe River watershed. (**Note**: Guadalupe River is the second largest watershed in the Santa Clara Basin and contained the greatest number of sites (n=38) and evaluations (n=57) compared to all other watersheds. As a result, Guadalupe watershed exhibited a wide range of trash conditions).

The majority of trash problem areas in non-creek areas occurred adjacent to roadways (32%), commercial areas (24%) and residential homes (13%) and apartments (8%). Ninety-two percent of the most prevalent trash items reported by Co-permittees during KAB evaluations (n=313) were plastic/Styrofoam (64%) and biodegradeable/paper (28%). Approximately six percent of the remaining trash items observed during these evaluations were a combination of glass and miscellaneous items (includes cigarette butts) (**Note**: the actual number of trash items was not recorded). Sixty-eight percent of the suspected trash sources reported by Co-permittees during KAB evaluations (n=237) included litter from both vehicular traffic (42%) and pedestrians (26%). Approximately twenty-six percent of the remaining trash sources reported was from a combination of litter at commercial areas, illegal dumping, litter at restaurants and litter at schools.

During FY 06-07, a fewer number of trash evaluations were conducted in non-creek areas (n=168) compared to FY 05-06 (n=208). Trash scores were very similar for both years with seventy-eight (FY 05-06) and eighty-five percent (FY 06-07) of all sites scored as "no litter" or "slightly littered". Similar to FY 05-06, there was no consistent pattern in changes of trash condition over time at non-creek sites. In addition, KAB assessment results did not indicate any spatial relationships between littered non-creek sites and creek sites with poor/marginal trash condition. The KAB assessment results were not conclusive for identifying and prioritizing trash problem areas that are sources of litter in the creeks.

SCVURPPP Urban Rapid Trash Assessment (RTA) – Creek Sites

The Urban Rapid Trash Assessment consists of six assessment parameters (with narrative descriptions) that qualitatively rate the trash condition of each parameter on a scale of 0 – 120. The range of scores for each parameter is divided into four categories: "poor", "marginal", "suboptimal" and "optimal". The total site score represents the summation of the six individual parameter scores. For the purposes of this analysis, the total site score was divided into the same four categories: 0 – 30 ("poor"); 31 – 60 ("marginal"); 61-90 ("suboptimal"); and (91 – 120: "optimal").

- Seventy-two percent of the sites were scored as "optimal" (n=21) or "suboptimal" (n=22);
- Twenty-six percent of the sites were scored as "marginal" (n=16); two percent of the sites were scored as "poor" (n=1);

The majority of trash problem areas in creek areas occurred adjacent to roadways (25%), park/trail land uses (23%) and school (16%). Ninety-one percent of the most prevalent trash items reported by Co-permittees (n=146) during Urban RTA evaluations were plastic/Styrofoam (81%) and biodegradeable/paper (10%) (**Note:** trash items are classified and enumerated for a 100 foot section of stream). Over nine percent of the remaining trash items reported, in order of most frequent, were a combination of glass, toxic items, construction materials and metal. Over seventy-four percent of the suspected trash sources reported by Co-permittees (n=109) during Urban RTA evaluations included litter from pedestrians (27%); upstream/stormdrain catchment (19%); and litter from vehicular traffic (14%) and homeless encampments (14%). Approximately twenty-six percent of the remaining trash sources reported were from a combination of litter at schools, recreational areas, illegal dumping, and dumpsters.

During FY 06-07, a larger number of trash evaluations were conducted in creeks (n=60) compared to FY 05-06 (n=27). Overall trash scores for creek sites evaluated in FY 06-07 were generally lower than creek sites evaluated in FY 05-06. Seventy-two percent of the creek sites evaluated in FY 06-07 were scored "optimal" or suboptimal", while ninety-five percent of the creek sites evaluated in FY 05-06 were scored "optimal" or suboptimal". The lower overall scores in FY 06-07 may have been the result of fewer large storms resulting in reduced stream flows during winter and spring season of FY 06-07. This may have resulted in less flushing of litter and debris out of previously identified trash problem areas.

Conclusions

KAB trash evaluation results for non-creek sites indicate that a majority of the trash problem areas have no or limited amounts of litter (i.e., eighty-five percent). Preliminary analysis of sites evaluated more than once indicated that there was no consistent pattern in changes of trash condition over time. In addition, KAB site locations and assessment scores did not appear to have any spatial correlation with location and severity of trash problem areas in creeks. As a result, current implementation of the KAB assessment tool does not appear to be useful approach for identifying potential sources of litter in creeks.

Urban Rapid Trash Assessment evaluation results for creek sites indicate that the majority of the trash problem areas were scored as "optimal" or "suboptimal" (i.e., seventy-two percent). A majority of these sites occurred adjacent to roadways, park/trail land uses and school. These sites contained primarily plastic/Styrofoam and biodegradeable/paper, which are highly mobile litter easily transported by wind and water. Sources of trash were reported to be primarily from littering by pedestrians; upstream/stormdrain catchments, litter from vehicular traffic and homeless encampments. There were no apparent spatial patterns for trash conditions in creeks (i.e., optimal and suboptimal sites were located in upper, middle and lower reaches of watersheds). [

Trash Sources and Pathways Conceptual Model

To better define potential trash sources in urban creeks and transport processes, the SCVURPPP developed a simple conceptual model in FY 06-07. Source and pathway categories described are based on urban creek trash assessments in Santa Clara County and local agency staff knowledge of how trash is deposited and transported to local waterways. The conceptual model identifies four distinct source categories for trash to urban creeks: 1) Pedestrians, 2)

Vehicles, 3) Inadequate Waste Container Management, and 4) Illegal Dumping. Trash from source categories can potentially enter urban creeks by four major transport pathways: a) Stormwater Conveyance Systems, b) Wind Transport, c) Direct Disposal into a Creek, and 4) Downstream Transport. The conceptual model is presented in Appendix C-6.

Prioritizing Trash Source Areas

In addition to the Trash Problem Area Survey finalized in 2004 and the Conceptual Model completed in FY 06-07, the SCVURPPP began a process which may assist Co-permittees in prioritizing watershed areas based on the probability that they are sources of trash to creeks in the Santa Clara Basin. The process is intended to assist Co-permittees in identifying the location of optimal creek assessment sites to detect trends in trash impacts to creeks, and help identify optimal watershed areas where trash control measures could be optimized or implemented in the future. The initial approach selected variables and assigned associated criteria that could be modeled in a GIS. The output would be a map of stormwater catchments that are predicted to be sources of trash. Once specific catchments are identified, ground-truthing may occur to valid the model predictions or refine the parameters/criteria initially used. The project was still underway at the time this Annual Report was completed, so no data are included at this time. A project summary will be completed in FY 07-08 and submitted as part of the Program's FY 07-08 Annual Report.

Pilot Testing and Implementing Trash Control Measures

The second of the four main areas of focus included in the trash strategy is the selection and implementation of appropriate control measures at high priority problem areas. This includes developing a better understanding of potential trash control measures, and beginning the process of implementing structural treatment controls as part of a trash pilot demonstration project. The following are summaries of two tasks conducted in FY 06-07 - Trash Control Measures Toolbox and Pilot Demonstration Project.

Trash Control Measures Toolbox

To gain a better understanding of the best possible treatment and institutional BMPs, a thorough review of literature from government, academic, and commercial entities was conducted by Program staff in FY 06-07. This information was bolstered by discussions with municipal employees that operate trash control measures and with representatives who sell trash control devices. The results of the literature review are presented in 12 technical information sheets which makeup a large portion of the Trash Control Measures Toolbox.

The toolbox is intended to assist stormwater managers, municipal officials, and other stakeholders in understanding what options are available for controlling and capturing trash within the storm drain conveyance system and the urban landscape. Additional information on potential trash impacts on water quality and beneficial uses, and SCVURPPP creek assessments and characterizations is also provided.

Technical information sheets were developed for the following five categories of structural treatment control devices: 1) Catch Basin Inserts, 2) Netting Devices, 3) Hydrodynamic Separators, 4) Racks and Screens, and 5) Litter Booms. Each technical information sheet provides information related to the description/design, applicability/siting requirements, demonstrated performance and/or effectiveness, maintenance requirements, predicted or known costs (capital and operation and maintenance), and a brief overview of reported advantages and disadvantages.

The technical information sheets on institutional controls provide a broad overview of various practices/strategies that have been used to prevent trash to, or remove trash from water bodies. Sheets were developed for the following seven institutional controls: 1) Enhanced Street Sweeping, 2) Storm Drain Signage/Stenciling, 3) Education and Outreach, 4) Volunteer Cleanup Efforts, 5) Improved Trash Bin/Container Management, 6) Anti-littering/Dumping Enforcement, and 7) Source Control through Official Bans/Prohibitions and Legislation. Each technical information sheet provides information related to the description/design, performance and/or effectiveness, predicted or known costs (capital and operation and maintenance), and a brief overview of reported advantages and disadvantages.

The draft version of the toolbox is currently being reviewed by the Trash AHTG and will be publicly available in early FY 07-08 via the Program's website www.scvurppp.org .

Pilot Demonstration of Trash Treatment Controls

In accordance with the Program's FY 06-07 Work Plan, SCVURPPP CO-permittees began to implement pilot trash demonstration projects in FY 06-07. The demonstration projects focus on testing the effectiveness and evaluating the costs of implementing stormwater treatment controls designed to prevent trash from entering Santa Clara Basin creeks and Lower South San Francisco Bay. Co-permittees that have initially agreed to conducted demonstration projects include the City of San Jose, City of Sunnyvale, City of Palo Alto and the Santa Clara Valley Water District. Demonstration projects may include the implementation of catch basin inserts, litter booms in creeks, and pump station redesign elements beginning in Fall 2007. Study designs are currently in early development stages and are therefore not included in this Annual Report. Additional information will be available on the Program's website in FY 07-08 and included in the FY 07-08 Annual Report.

Water Body and BMP Effectiveness Assessments

Assessing the condition of urban creeks (as related to trash) and evaluating the effectiveness of control measure implementation over time is the third focus area identified in the trash strategy. This element is currently scheduled to be completed in FY 07-08 in concert with the implementation of pilot demonstration projects.

Polycyclic Aromatic Hydrocarbons (PAHs)

On July 20, 2006, the RMP held a workshop on the effects of PAHs in San Francisco Bay Sediments. The purpose of the meeting was to reach a common understanding of the state of knowledge regarding the concentration of PAH in sediments and potential effects to estuarine/marine fishes. The RMP invited scientists who address these issues nationally and locally to summarize the status of what we know about sources, fate, and effects of PAH and management strategies for their assessment and control. Finally, the RMP convened a panel of the same experts to address specific questions posed by the management and user community and suggest ways in which the existing assessment of PAH could be improved.

The expert panelists agreed that sediment testing using chemical and biological methods outlined in the USEPA/USACE national testing manuals allow scientists at the management agencies to assess the risk of sediments contaminated with PAH. The panelists also suggested ways in which managers could assess the overall status of the Bay in regards to these issues through the monitoring of the Bay conducted by the RMP.

In FY 2007-2008, there will be a follow-up to this meeting that will specifically allow for more discussion by any and all interested parties. This workshop should be seen as a first step in that process.

Summary of Co-Permittee Street Sweeping Results

A summary of street sweeping activities conducted by Co-permittees is provided within the table entitled *Summary of Co-permittee Street Sweeping Activities- FY 2006-2007* (see Appendix C-7). During FY 06-07, Co-permittees swept approximately 193,110 miles of paved streets and removed approximately 95,066 yd^3 or 61,745 tons of material[3]. Approximately 8,229 yd^3 of leaf litter was removed[4] by Co-permittees who have leaf removal programs other than routine street sweeping. In addition, approximately 133,020 tons of yard waste (which includes large amounts of leaves) was routinely collected by Co-permittees. As a result, yard waste pick-up programs are keeping large amounts of leaves out of Co-permittee storm drain systems.

Evaluation of Effectiveness

One way to measure street sweeping effectiveness is to determine what solids and associated pollutants are collected within street sweeping debris. A typical unit of measure is the total volume of the pollutant removed by the sweeper relative to the curb length swept (e.g., yd^3/curb mile). This unit is typically referred as the removal rate. During FY 06-07, the average Co-permittee removal rate was 0.49 yd^3/curb mile (see Appendix C-7). The Co-permittee removal rate ranged from 0.21 yd^3/curb mile (City of Los Altos) to 0.73 yd^3/curb mile (City of Palo Alto). During FY 05-06, the average Co-permittee removal rate was 0.41 yd^3/curb mile. The effectiveness of street sweeping depends upon a number of factors including accumulation rates of pollutants, the relationship between rainfall and sweeping frequencies, particle size, pavement condition and automobile parking controls[5].

Many studies have shown that street sweeping removes significant quantities of dirt and debris from street surfaces[6]. However, results also demonstrate that the coefficient of variation of copper values and other metals (e.g., lead and zinc) in street sweeping debris is quite high[7]. To illustrate the effectiveness of street sweeping activities for pollutant removal, Program staff estimated the mean pollutant reduction for the following four metals: copper, nickel, lead and zinc. These estimates are provided within the tables entitled *Summary of Co-permittee Street Sweeping Activities and estimated Mean Pollutant Load Reduction for Copper and Nickel- FY 2006- 2007* and *Summary of Co-permittee Street Sweeping Activities and estimated Mean Pollutant Load Reduction for Lead and Zinc- FY 2006- 2007*. Both tables are provided within Appendix C-7. To determine the estimated pollutant load reduction (in pounds), the volume of

[3] To determine the total volume of material removed in tons, it is necessary to convert cubic yards to tons. It is estimated that the average density of street sweeping material is 1,299 pounds per cubic yard (0.6495 tons per cubic yard) (Source: EOA, Inc., October 1996, Estimation of Copper Collected Through Street Sweeping Efforts. Prepared for San Mateo Countywide Stormwater Pollution Prevention Program). A value of 61,745 tons is calculated when 95,066 cubic yards is converted over to tons (95,066 cubic yards* .6495 tons/cubic yard= 61,745 tons).

[4] An additional 1,957 tons of leaf litter was collected by the City of Palo Alto. However, this figure is a combined figure that included the weight of the material collected from street sweeping plus the leaves collected by our autumn leaf pushing and pickup program. Since all of the material (both street sweeping debris and leaves gathered by leaf pusher trucks) is combined and hauled to the landfill in garbage compactor trucks, there is no way to provide a separate figure for leaf removal.

[5] Source: Woodward Clyde Consultants, December 1994. *Street Sweeping Literature Review/Storm Inlet Modification*, Prepared for Alameda County Urban Runoff Clean Water Program.

[6] Source: Sartor, J. and G. Boyd, 1972. *Water Pollution Aspects of Street Surface Contaminants*. Prepared for United States Environmental Protection Agency, Washington, DC.

[7] Source: EOA, Inc, October 1996. *Estimation of Copper Collected Through Street Sweeping Efforts*: Final Report. Prepared for San Mateo Countywide Stormwater Pollution Prevention Program.

material collected (in cubic yards) for each Co-permittee land use type (i.e., residential, commercial and industrial) was determined. This value was then multiplied by the mean concentration of trace metal content for street sweeping samples collected in the study entitled *Chemical and Physical Characteristics of Street Sweeping Sediments in Tampa, Florida, May 1999* and converted over to pounds of pollutant removed. These mean concentration values and the algorithm used to calculate the pounds of pollutant removed are provided within the tables. The estimated mean pollutant load reduction values for each land use type were summed. During FY 06-07, it is estimated that Co-permittees street sweeping activities resulted in the following pollutant load reductions for copper, nickel, lead and zinc:

Land Use Type	**Estimated Mean Pollutant Load Reduction (Pounds)**			
	Copper	Nickel	Lead	Zinc
Residential	1361	2690	2536	3413
Commercial	512	1014	2447	1734
Industrial	308	60	289	237
Total	**2181**	**3764**	**5271**	**5384**

It is important to note that there is uncertainty with these estimates since certain assumptions were made regarding the exact volume of material collected from a particular land use type.

EVALUATION OF EFFECTIVENESS

The success (i.e., effectiveness) of a stormwater management program can be measured using many different assessment methods. Effectiveness assessment is defined as the process that managers use to evaluate whether their programs are resulting in desired outcomes, and whether these outcomes are being achieved efficiently and cost-effectively. The specific approach to be used in assessing effectiveness depends on a variety of factors including the type of program element or activity being evaluated and the stage of program development (i.e., planning, implementation, completion). Effectiveness assessments fall into two general categories:

- Implementation Assessment - Provides managers feedback on the effectiveness of their programs in achieving targeted objectives. This type of assessment is essential in determining whether priority sources of pollution are being effectively addressed. Implementation assessment may include any of three levels of analysis: the overall program, the elements that comprise the program (construction sources, municipal sources, etc.), or the specific activities that are conducted within these program elements. These may range in complexity from simple activities (e.g., verifying the completion of activities) to more sophisticated techniques (e.g., assessing the probable or actual locations of these activities and the significance of their spatial distribution).

- Water Quality Assessment - is the use of sampling data and related information to evaluate the condition of non-stormwater or stormwater discharges and the water bodies that receive these discharges. This can include a variety of chemical, biological, and

physical parameters or outcomes. In instances where water quality assessment is used to draw conclusions about overall program effectiveness, results are usually very general and require extended periods of analysis.

Ideally, the two types of assessments should be linked together to create an integrated assessment, which is process of evaluating whether program implementation is resulting in the protection or improvement of water quality. In this process, relationships between program activities and water quality improvements are explored and refined. Due to the number and variety of BMPs and control programs being implemented at any given time, and because data are limited, establishing these relationships is difficult. Efforts to date often include speculative or hypothetical exercises aimed at better understanding likely program outcomes and potential relationships to water quality. Although costly and difficult to develop, quantitative "cause and effect" relationships will increasingly be sought in the future.

Over time, correlating water quality improvement to programmatic results will assist the Program in identifying the most expedient and cost-effective approaches to planning and assessing their programs. In the interim, the effectiveness of Program monitoring and assessment activities will continue to be assessed using an implementation assessment approach (i.e., were project/program objectives met). In concert with implementation assessments, the collection of data from receiving water bodies continues to inform us about the condition of water bodies in the Santa Clara Valley and allows resources to be focused on the most pressing problems. Conducting both implementation and water quality assessments are necessary steps toward establishing a sound regulatory basis for locally based watershed management described in Section 5.

Effectiveness of FY 06-07 Monitoring and Assessment Activities

In FY 06-07, the Program effectively conducted all tasks stated in its FY 06-07 Monitoring Program and Watershed Management Measures Work Plan. Monitoring and assessment activities were implemented through a variety of programs and projects which include the following: 1) baseline water quality monitoring described in the Program's Annual Monitoring Plan and Watershed Management Measures Work Plan; 2) regional collaborative efforts (e.g. RMP); and 3) active participation in TMDL development. In addition, the Program continued to address the following monitoring program objectives (as stated in the Program's NPDES Permit): (1) characterization of representative drainage areas and stormwater discharges; (2) assessment of existing or potential adverse impacts on beneficial uses caused by pollutants of concern in stormwater discharges; (3) identification of potential sources of pollutants of concern found in stormwater; and (4) evaluation of effectiveness of representative stormwater pollution prevention of control measures. The following paragraphs briefly describe the effectiveness of monitoring activities described in this Annual Report in addressing these objectives.

1) *Characterization of Representative Drainage Areas and Stormwater Discharges*

- *Prioritizing Trash Source Areas* - In FY 06-07, the SCVURPPP began a process which may assist Co-permittees in characterizing watershed areas based on the probability that they are sources of trash to creeks in the Santa Clara Basin. The process is intended to assist Co-permittees in identifying the location of optimal creek assessment sites to detect trends in trash impacts to creeks, and help identify optimal watershed areas where trash control measures could be optimized or implemented in the future.

- *Zone 4 – Line A Loading Study* – Through funding from the Program and other

dischargers, field work was conducted by RMP staff to estimate the loading of sediment-associated pollutants from this small industrialized watershed in Hayward. This data collection contributes to a long term data collection efforts equipped to assess trends in POC loads from local watersheds to San Francisco Bay. In FY 06-07, Program staff were heavily involved in the selection of site and reviewed and commented on the study design.

2) *Assessment of Existing or Potential Adverse Impacts on Beneficial Uses Caused by Pollutants of Concern in Stormwater Discharges*

- *Receiving Water Monitoring* – SCVURPPP water quality monitoring and assessments continue to yield baseline information on the condition of water bodies in the Santa Clara Basin. Potential impacts to beneficial uses are identified in the Summary Assessment Report (Appendix C-2) and the Pilot Sediment Quality Triad (Appendix C-3). Recommended next steps are also outlined to better define the potential issues or management actions that can be implemented.

- *Saratoga Creek Water Body Assessment* – The Program made progress in analyzing two years of screening level monitoring data collected during FY 04-05 and FY 05-06 in the Saratoga Creek watershed. SCVURPPP monitoring data was evaluated with other available data sources to evaluate the status and extent of aquatic life uses in the watershed. The study also assessed the potential effects of excessive sediment deposition on the existing trout population and aquatic habitat. It is scheduled for completion in FY 07-08.

- *Trash Assessment Activities* – During FY 05-06, Co-permittees conducted a third year of trash evaluations at a subset of trash problem areas to establish baseline levels of trash. During trash evaluations, Co-permittee staff, where feasible, identified potential management actions to address trash problem areas (e.g., educational outreach to businesses and schools). During FY 07-08, a trash effectiveness assessment plan will be developed. The plan will likely include water quality (creek evaluations conducted at selected locations) and implementation assessments that will be conducted over time to determine the effectiveness of both existing and planned trash management actions.

3) *Identification of Potential Sources of Pollutants of Concern Found in Stormwater*

- *Upper Penitencia Creek Sediment Source Assessment* – The Upper Penitencia Creek sediment source assessment successfully identified sediment sources in the upper part of the Upper Penitencia Creek basin, and recommended general management actions to reduce sediment supply from high priority locations. The assessment is currently in draft form and will be completed early FY 07-08. It is intended to provide the foundation for future analyses of sediment production, delivery, and yield, which can more thoroughly describe and potentially address sediment-related management issues in an effective and process-oriented manner.

- *Trash Sources and Pathways Conceptual Model* – Based on initial comments, the conceptual model was an effective way to illustrate and define distinct trash sources and pathways to creek. Additionally, it serves as an effective tool to: 1) develop consistent terminology for effective communication between Co-permittees, regulatory agencies and other stakeholders; 2) continue to build conceptual understanding of trash source types present in watersheds and how these sources enter creeks and waterways; and,

3) determine the most optimal and cost effective control points to implement institutional and/or treatment controls.

- *Urban Runoff BMP Evaluation for Pollutants of Concern* – In FY 04-05, SFEI was awarded a Proposition 13 grant to evaluate the effectiveness BMPs in reducing POCs in urban runoff. During FY 06-07, BASMAA member agencies (including SCVURPPP) played an active role in developing studies conducted under the project and participated in technical advisory committee meetings. Results from the project will likely assist the Program in further understanding sources for POCs in urban runoff, specifically mercury and PCBs.

4) Evaluation of Effectiveness of Stormwater Pollution Prevention and Control Measures

- *Urban Runoff BMP Evaluation for Pollutants of Concern* – In FY 04-05, SFEI was awarded a Proposition 13 grant to evaluate the effectiveness BMPs in reducing POCs in urban runoff. During FY 06-07, BASMAA member agencies (including SCVURPPP) played an active role in developing studies conducted under the project and participated in technical advisory committee meetings. Results from the project will likely assist the Program in further evaluation of the effectiveness of control measures for POCs, specifically mercury and PCBs.

- *Changes in Trash Evaluation Results* - Changes in Urban RTA scores at 24 creek sites assessed during multiple years were evaluated. Urban RTA scores indicate improvement in 67% (n=16), reduction in 29% (n=7), and no change in 4% (n=1) of sites assessed in multiple years. Seven sites had higher Urban RTA scores during the second assessment that resulted in changes in ranking from marginal to suboptimal or optimal, while only one site changed from marginal to poor. Trash removal conducted during the initial Urban RTAs and management actions put into place between assessments may have influenced the increase in Urban RTA scores (i.e., better condition) during subsequent evaluation. However, it is difficult to evaluate trends in site condition without more data since seasonal and interannual variability of trash levels for these sites is currently unknown.

[1] Projects reviewed and approved by Budget Ad Hoc Table Group for inclusion in Work Plan.
[2] Monitoring Priorities (updated at Monitoring AHTG meeting November 8, 1999):
1) New projects needed to implement the results, and achieve the goals, of current projects.
2) New projects that implement continuous improvement items identified through the annual review process.
3) Projects that support the Santa Clara Basin Watershed Management Initiative in one of the following ways:
a) Investigate Beneficial Uses and Causes of Impairment (including field work)
b) Review and Compile Environmental Data and Make it Accessible
c) Develop Strategies for Controlling Impacts of Land Use on Beneficial Uses
d) Facilitate and Support WMI Subgroups (including coordination with other agencies)
4) Projects identified through participation in regional monitoring collaborative efforts, including the Regional Monitoring Program and BASMAA

SECTION 5

WATERSHED MANAGEMENT MEASURES

5. WATERSHED MANAGEMENT MEASURES

INTRODUCTION

During FY 06-07, the Program conducted a variety of watershed-related management measures and activities. They included conducting watershed assessment activities and special studies, and participating in and coordinating with the Santa Clara Basin Watershed Management Initiative (SCBWMI) sub- and core groups. Activities described in this section are consistent with Provision C.10 (i.e., Watershed Management) of the Program's NPDES Permit.

The Program's watershed management strategy (pursuant to NPDES Permit Provision C.10) is to integrate its watershed management efforts with the SCBWMI. Activities that include implementing environmental monitoring and assessment measures are necessary components needed to fully integrate our efforts. Therefore, it is important to note that watershed management measures described in this section are not entirely independent from activities described in Section 4 – Monitoring Activities. Information gained from conducting studies and implementing activities/measures described in both sections have been used (and will continue to be used) in concert to meet objectives outlined in Permit Provisions C.7, C.9, and C.10. They include: (1) characterizing watersheds and stormwater discharges; (2) assessing existing or potential adverse impacts to beneficial uses; (3) identifying potential sources of pollutants of concern; (4) aiding in developing and implementing strategies for controlling adverse impacts on beneficial uses; and (5) assessing the effectiveness of pollutant prevention/control measures.

BACKGROUND

The Water Board encouraged starting the SCBWMI in 1996. The first meetings of the SCBWMI's Core Group and subgroups were held in 1997. During FY 98-99, SCBWMI stakeholders formally joined in a signatory document outlining the SCBWMI's mission, goals and objectives. The Santa Clara Valley Water District and the Cities of San Jose, Sunnyvale and Palo Alto committed additional funds and other resources to the SCBWMI. A Report Preparation Team (RPT) consisting of staff from these agencies developed a plan, schedule, and outline for a Watershed Assessment Report (WAR). The RPT and the SCBWMI subgroups began preparing sections of the WAR soon after.

In late 1999, the Program prepared *Watersheds 2000: A Vision of the Santa Clara Valley Urban Runoff Program's Role in Watershed Management and the Santa Clara Basin Watershed Management Initiative*. This document outlines the Program's long-term vision, roles and responsibilities with regard to the SCBWMI and provides a monitoring/continuous improvement and outreach strategy.

The Program's involvement in the SCBWMI is organized by the concept of continuous improvement, as described in the Program's Urban Runoff Management Plan (URMP). The SCBWMI identifies specific watershed issues and recommendations that are brought to the Program's Management Committee for consideration and action as appropriate. In addition, results from SCVURPPP studies related to watershed monitoring, assessment and management are frequently distributed, presented and discussed with SCBWMI subgroups. This approach creates an informed and coordinated partnership between the Program and SCBWMI.

FY 06-07 SCVURPPP ACCOMPLISHMENTS

1. Bay Area Macroinvertebrate Bioassessment Information Network (BAMBI)

The increased interest in bioassessment within the Bay Area spawned the formation of the Bay Area Macroinvertebrate Bioassessment Information Network (BAMBI) in February 2002. BAMBI is a network of scientists, watershed managers, regulators and community members interested in using biological communities as indicators (i.e., benthic macroinvertebrates) of stream health in the San Francisco Bay Area. The goal of BAMBI is to maximize the utility of aquatic bioassessment in the Bay Area by developing a programmatic and analytical framework for the collection, sharing, analysis and use of bioassessment data. Specific activities conducted by BAMBI in FY 05-06 are presented below. Additional information on BAMBI is provided at www.bayareabugs.org.

BAMBI 2007 Annual Meeting

Since 2002, Program staff has helped coordinate an Annual BAMBI meeting where bioassessment data and analyses can be presented from a local, regional or state perspective. On January 30, 2007, the fifth annual BAMBI meeting was held. Presentations included an update on the development of the Index of Biotic Integrity (IBI) for San Francisco Bay Area creeks, long-term variability of bioassessment data and the effects of urbanization on BMIs. Presenters included UC Berkeley PhD candidates and Program staff. The meeting agenda for the January 30 meeting and presentations by Program staff are included within Appendix D-1.

Index of Biotic Integrity (IBI) for San Francisco Bay Area Creeks

In collaboration with Alameda Countywide Clean Water Program and Water Board staff, Program staff developed a draft Work Plan to outline tasks that should be completed during the development of a Benthic Macroinvertebrate Index of Biotic Integrity (B-IBI) for creeks in the San Francisco Bay Area. An IBI serves as an easy-to-use scorecard for determining the condition of water quality and stream habitat (i.e., stream health) using biological communities. The IBI approach is designed to maximize detection of degradation by controlling for natural variation in biological communities. The San Francisco Bay Area IBI Work Plan was included in the Program's *FY 04-05 Annual Report*.

The Work Plan has six main tasks listed in sequential order:

1. Form Technical Advisory Group;
2. Compile Existing BMI Data from Participating Agencies/Organizations;
3. Standardize Datasets and Import into Database;
4. Develop Reference Conditions;
5. Select Metrics for the IBI; and
6. Develop, Validate and Refine IBI.

During FY 06-07, Program staff contributed substantial in-kind services towards the completion of tasks 1 through 4. The following are status summaries for these tasks:

Task 1: Technical Advisory Group (TAG) - A Technical Advisory Group (TAG) was formed in 2006. The TAG consists of Program, California Department of Fish and Game (CDFG) and USGS staff, UC Berkeley graduate students and other Bay Area municipal stormwater program staff. On June 21, 2006, the TAG met to discuss the initial steps in developing reference conditions for Bay Area creeks. A meeting agenda was included within Appendix D-1 of the

Program's *FY 05-06 Annual Report*. The TAG discussed the B-IBI at the January 30, 2007 BAMBI meeting and provided additional input.

Task 2 – Compile Existing Data – In FY 06-07, Program staff spent a substantial amount of time collecting and compiling existing benthic macroinvertebrate data from eight Bay Area counties. Data sources included the Water Board, municipal stormwater programs and volunteer monitoring programs. Data from approximately 400 sites have been compiled.

Task 3: Standardize Datasets and Import into Database – Datasets compiled in Task 2 were standardized into a format that could be imported to the California Ecological Data Application System (Cal EDAS), which is currently housed at SCVURPPP. All bioassessment data collected through Spring 2005 has been placed in Cal EDAS. In FY 06-07, Program staff began generating data outputs needed to complete Tasks 4-6.

Task 4: Develop Reference Conditions – The development of biological reference conditions for Bay Area creeks is an integral step in completing the B-IBI. Reference conditions provide a way for comparing biological data from a potentially impacted site to a "least disturbed" site. They are also used to determine the degree of impact of a site. On June 21, 2006, the TAG met to begin discussing reference conditions development. As a next step, supplemental physical habitat data is being compiled by Bay Area stormwater programs to objectively define reference condition attributes used to test and select appropriate biological metrics used to develop the B-IBI.

In FY 07-08, Program staff plans to continue supporting and actively participating in BAMBI activities, with specific objectives to complete a Draft Provisional B-IBI for San Francisco Bay Area creeks.

2. Stream Studies Inventory

The Watershed Assessment and Monitoring Subgroup (WAMS), an entity within the SCBWMI, has a mission to provide the SCBWMI with a solid scientific foundation for watershed planning. One of WAMS's tasks is to coordinate the SCBWMI's data collection and data management efforts with stream monitoring studies within the Basin. The *Inventory of Santa Clara Basin Stream Studies* (SSI) is a result of this task and was initially prepared by the Program in November 1998. The purpose of the SSI is to promote inter-agency awareness of environmental investigations within riparian corridors and to facilitate coordination of related data collection and management. It also describes stream-related multi-stakeholder studies and projects that were in-progress in the Santa Clara Basin. The SSI was updated, revised and reissued in February 2000 (Version 2.0), July 2001 (Version 3.0), August 2002 (Version 4.0), November 2003 (Version 5.0) and June 2005 (Version 6.0).

On September 15, 2006, the Program finalized the *Inventory of Santa Clara Basin Stream Studies (Updated Version 7.0)*. This version describes twenty-nine related multi-stakeholder studies and projects that recently started or are in-progress within the Santa Clara Basin. Information for seven new studies was added to the updated version and twenty-two ongoing projects were updated with current information. Eight projects listed in the SSI Version 6.0 Report were determined to be complete or discontinued. As a result, they are not included within the updated SSI Version 7.0. Information describing the completed studies was archived into the Program's metadata database.

In FY 07-08, the Program will develop a needs assessment and scope related to the SSI. The

intent is to assess the utility of the SSI in its current form and the cost and feasibility of making the SSI web-based.

3. Watershed Data Management

To comply with its NPDES permit, the Program compiles, develops and analyzes a variety of data sets and reports. Most of this data is collected and generated as part of the Program's environmental monitoring and assessment activities. A majority of the information collected and used by the Program originates from different municipalities and agencies that conduct studies within Program jurisdictional boundaries.

The Program developed a relational database as an initial task to systematically describe and document data used for its activities. The intent of the database is to demonstrate its usefulness of how to systematically and efficiently collect and document all of the relevant data used in the Program's activities. In addition, the database was designed to explore the feasibility of eventually expanding and coordinating its maintenance and use with other agencies and organizations in the Program.

The SCVURPPP metadata database currently stores information on watershed studies described in the updated SSI Version 7.0 as well as archived information from previous versions of the SSI. The database was also developed to produce a report listing current project information in a format similar to previous SSI Reports. The project summaries of the 2003 SSI report were produced from the database. In addition, the Program database provides querying capabilities for watershed information listed in both the SSI and SCBWMI's Metadata Database.

The SCVURPPP Metadata Database guidance manual entitled *SCVURPPP Metadata Database Program User Documentation* is also available. The manual describes software and hardware requirements, installation procedures, data entry procedures and querying techniques for watershed information listed in both the SSI and SCBWMI's Metadata Database. The *SCVURPPP Metadata Database Program User Documentation* can be found on the Program's website (www.scvurppp.org).

4. Develop Strategies for Controlling Impacts of Land Use on Beneficial Uses

During FY 06-07, the Program collaborated with the SCBWMI Land Use Subgroup on the following activities:

- On December 6, 2006, the Program, in collaboration with the Land Use Subgroup (LUS), planned and held the workshop entitled "Where San Jose Meets the Bay: Don Edwards National Refuge Walking Tour". Information provided during the tour included: the interactions between urban/suburban activities and natural habitats; how salt marshes help restore water quality; effects of freshwater discharges on the Bay; and how to landscape with native plants. The workshop attracted 33 participants. Evaluation forms showed that the vast majority of participants gave the workshop high remarks (see evaluation summary within Appendix A-5).
- Prepared and submitted two proposals for sessions at the 2007 California Chapter of the American Planning Association (CCAPA) Conference scheduled for 9/30/07- 10/03/07 in San Jose. Both proposals were accepted. One session will focus on how "smart growth" development can help improve water quality, including promoting alternate modes of transportation. The other session will be a mobile workshop in which attendees will visit

three sites to view existing post-construction stormwater controls, including pervious paving and vegetated swales used in parking lots.

- In Fall 2006, Program staff requested that Santa Clara Valley Water District staff attend a future LUS meeting to present recommendations from the Water District's Stewardship Plans that address the connections between land use, transportation, and water quality. District staff attended the March 2007 LUS meeting and made this presentation. The LUS is will continue to coordinate with District staff regarding stewardship plan implementation.
- At the July 11, 2007 LUS meeting, Program staff provided an update of San Mateo County's Sustainable, Green Streets and Parking Lots Program. This program, initiated to directly address the connection between motor vehicle transportation and water quality, is funded by motor vehicle registration fees. It is designed to generate support for the widespread use of stormwater pollution prevention; and treatment and flow control BMPs that are well suited for use within streets and parking lots.

Table 5-1
Status of FY 2006-2007 Watershed Management Measures Projects[1]

Title	Category/ Monitoring Priority (MP)[2]/ Permit Provision	Capsule Scope	Product(s)[3]	Status Schedule
FY 06-07 Rapid Bioassessments	Permit Provision C.7 and C.10	Evaluate water and physical habitat quality in Santa Clara Basin Watersheds.	*Watershed Monitoring and Assessment Summary Report: 2002-2007*[4a, b]	Complete-9/15/07
Bay Area Macroinvertebrate Bioassessment Information Network (BAMBI)	MP #4	Collaborate with other BASMAA member agencies to develop regional bioassessment tools necessary to provide context to bioassessment data collected in Santa Clara Basin creeks.	BAMBI – annual meeting agenda and three PowerPoint presentations[4a]	Completed-1/30/07

[1] Projects reviewed and approved for inclusion in Work Plan by Budget Ad Hoc Table Group.
[2] Monitoring Priorities (updated at Monitoring AHTG meeting November 8, 1999):
1) New projects needed to implement the results, and achieve the goals, of current projects.
2) New projects that implement continuous improvement items identified through the annual review process.
3) Projects that support the Santa Clara Basin Watershed Management Initiative in one of the following ways:
   a) Investigate Beneficial Uses and Causes of Impairment (including field work)
   b) Review and Compile Environmental Data and Make it Accessible
   c) Develop Strategies for Controlling Impacts of Land Use on Beneficial Uses
   d) Facilitate and Support WMI Subgroups (including coordination with other agencies)
4) Projects identified through participation in regional monitoring collaborative efforts, including the Regional Monitoring Program and BASMAA.
[3] Refer to Appendix C-1 for additional details.
[4] a) Provided within *FY 06-07 Annual Report*
b) Provided on Program's website (www.scvurppp.org)

Table 5-1
Status of FY 2006-2007 Watershed Management Measures Projects[1]

Title	Category/ Monitoring Priority (MP)[2]/ Permit Provision	Capsule Scope	Product(s)[3]	Status Schedule
Stream Studies Inventory	MP#3b	Promote inter-agency awareness of environmental investigations within riparian corridors and facilitate coordination of related data collection and management.	*Inventory of Santa Clara Basin Stream Studies (Version 7.0) Report* [4a,b]	Complete-9/15/06
Watershed Data Management	MP#3b	Develop a metadata database that is focused on description, documentation, and indexing of the data sets, sources, and reports	Updated Metadata Database	Ongoing
WMI Watershed Assessment and Monitoring Subgroup (WAMS)	MP#3d	Provide administrative support to WAMS.	Meeting summaries	Completed as needed
WMI Environmental Indicators Work Group (Work Group "I")	MP #3d	Provide comments on prototype environmental "score card" assessing the health of the Coyote Creek mainstem.	Comments on draft environmental "scorecard"	Completed 8/06
Support for Land Use Subgroup	WMI Subgroups MP# 1, 3c, 3d	Provide administrative support and leadership for the Land Use Subgroup. Maintain the subgroup mailing list; prepare and distribute agendas; chair meetings; edit and distribute meeting summaries; liaison to, and correspond with, the SCBWMI Core Group other subgroups as needed; update workplans; facilitate interaction between consultants and the subgroup; summarize, compile, and convey subgroup products.	Workshop agenda and evaluation summary – *"Where San Jose Meets the Bay: Don Edwards National Refuge Walking Tour"*	Completed 12/6/06

SECTION 6

PESTICIDE MANAGEMENT

6. PESTICIDE MANAGEMENT ACTIVITIES

INTRODUCTION

The goals and objectives of the Program's Urban Runoff Management Plan (URMP) include: effectively prohibiting non-storm water discharges to storm drains and watercourses; reducing pollutants in storm water discharges to the "maximum extent practicable" (MEP); and not causing or contributing to violations of water quality standards, as required by the Program's NPDES permit. The Program's approach to meeting these goals and objectives focuses on the use of best management practices (BMPs) for source control and pollution prevention.

The Program's approach to pesticide management has a similar focus on source control and pollution prevention. Program BMPs for pesticide management have included significant outreach efforts to residents, businesses, and municipal staff to provide education and achieve behavior changes relative to uses of pesticides and less toxic pest control methods. Outreach efforts have been supplemented by monitoring studies to define the problem; participation in regional monitoring and organizations to address pesticide issues; and development of performance standards and local pest management plans.

BACKGROUND

Diazinon and chlorpyrifos have been identified in recent studies as causing toxicity in local creeks and wastewater treatment plant effluent. In May 1999, the U.S. Environmental Protection Agency (USEPA) listed San Francisco Bay and 35 Bay Area urban creeks as impaired by diazinon under Section 303(d) of the Clean Water Act (CWA). The 303(d) listing triggered the need for USEPA and the State to develop Total Maximum Daily Loads (TMDLs) for the impaired waterbodies. The San Francisco Bay Regional Water Quality Control Board developed a draft TMDL work plan that calls for an urban creeks diazinon TMDL to be developed by June 2002, followed by an Implementation Plan by June 2003.

The Program's NPDES Permit Provision C.9.d. includes specific requirements for a pesticide control program. The Program and Co-permittees must develop and implement a pesticide control plan that addresses municipal uses of pesticides, including diazinon and other lower priority banned pesticides (e.g., chlordane, dieldrin, and DDT) and the use of these pesticides by others within municipal jurisdictions. The permit provision also requests that the Program continue to work with the Urban Pesticide Committee, BASMAA, and the California Stormwater Quality Association Pesticide Committee to assess impacts of pesticide use and encourage actions by other state and federal agencies.

As required by Permit Provision C.9.d., the Program developed a Pesticide Management Work Plan (Pesticide Plan) and submitted it to the Water Board on June 26, 2001. The submittal to the Water Board included a preliminary draft Pest Management Performance Standard and municipal pesticide use surveys completed by each Co-permittee. After receiving comments from Water Board staff, the final Pesticide Plan and Pest Management Performance Standard were provided in the Program's *FY 02-03 Work Plan* (dated March 1, 2002).

The purpose of the Pesticide Plan is to control pesticide-related toxicity in urban runoff, by minimizing pesticide use and reducing the amount of pesticides in storm water and landscape runoff to the maximum extent practicable. The Plan identifies the goals of each work plan element, actions, monitoring mechanisms and schedules. The Plan also identifies whether

actions will be implemented at the Program level, municipality level, or both. The details of municipality actions and schedules were provided in individual Co-permittee pest management plans submitted with the Co-permittees' FY 00-01 Annual Reports.

During FY 06-07, the Program continued to implement ongoing Pesticide Plan tasks. This Annual Report provides information on the progress of these ongoing tasks.

PAST PESTICIDE MANAGEMENT ACTIVITIES

The Program has, since its inception, actively participated in a number of activities aimed at understanding water quality problems in creeks and San Francisco Bay and reducing pollutants, including pesticides, to the MEP. The Program's earlier Work Plans and Annual Reports have presented the history of the Program's and Co-permittee's pesticide-related activities in the areas of monitoring and science, outreach and education, URMP implementation and correspondence with Water Board staff regarding these activities.

IMPLEMENTATION OF FY 06-07 PESTICIDE MANAGEMENT TASKS

Table 6-1 presents the status of the FY 06-07 ongoing pesticide management tasks. The table references tasks in the SCVURPPP Pesticide Plan (rev. 2/15/02) and the related performance standard and/or permit provision. More details on the accomplishments for and effectiveness of some of the key elements of the Pesticide Plan are provided below.

Outreach and Education

Highlights of Program PI/P activities specifically related to pesticide use that were accomplished in FY 06-07 include:

- IPM Store Partnership Program – The Program contributed funds to and participated in the Regional IPM Program and implemented the local IPM Partnership Program in 29 stores. The participating stores had in-store "Our Water Our World" displays and IPM fact sheets and stocked less-toxic products. Program staff routinely visited the participating stores for restocking literature racks and updating shelf-talkers. The Program contracted with Ms. Annie Joseph for store employee training. Ms. Joseph trained approximately 150 employees representing 12 stores. In addition, Ms. Joseph worked with three participating stores, SummerWinds (Campbell), Ace Hardware (Palo Alto) and Payless Nursery (San Jose) to implement the "Increasing Shelf Space for Less-Toxic Products" projects. Her work included: 1) meeting with pesticide buyers at stores; 2) motivating them to increase the store's inventory of less-toxic products; and 3) building endcaps showcasing these products. More details on this project are included in Appendix B-8.
- Media Advertising – Messages about less-toxic pest control were included within Watershed Watch advertising. A new advertisement entitled "Watch Out for Toxic Pesticides" was developed and used. Advertisements were placed in local community newspapers and radio stations. Additional details on the media campaign are included within Section 3 and Appendix B-3.
- Outreach at Events – Program, Co-permittee and Watershed Watch staff conducted IPM outreach at five events. More than 4,000 IPM fact sheets, brochures and giveaways (pencils, activity books, magnets, etc.) were distributed to the public.
- Going Native Garden Tour – The Program provided funding to support the Going Native Garden Tour held on April 29, 2007. Approximately 3,000 people attended the tour. The tour featured 45 gardens that demonstrated environmentally sensitive gardening practices.

- Outreach to Restaurants - The Program continued to provide copies of the "Don't Lay a Table for Pests" poster to County Health inspectors for distribution to food facilities

Monitoring and Science

Monitoring and TMDL-related activities that were accomplished in FY 06-07 include:

- Continued to fund the Regional Monitoring Program ($168,480) and participate in the Regional Monitoring Program (RMP) steering and technical committees to focus RMP resources on 303(d) problem pollutants (including pesticides);
- Attended the Urban Pesticide Committee meetings and participated in discussions on pesticide impacts on local water bodies;
- Supported actions by the California Stormwater Quality Association (CASQA) to comment on and assist with USEPA's pesticide risk assessments. The Program's dues helped fund the CASQA consultant contract covering comment letters on risk assessments and other pesticide-related tasks.
- Completed fifth year of sampling for the Program's Multi-Year Receiving Waters Monitoring Program. Conducted organophosphate pesticide analyses and three species aquatic toxicity testing of samples collected at two sites in the Stevens Creek watershed and two sites in the Permanente Creek watershed.
- Collected and analyzed bedded sediments for pyrethroid pesticides from eight sites, and conducted sediment toxicity testing (i.e., bioassays) on sediments from six sites in the Coyote Creek mainstem.

Additional information on monitoring and science activities, including results, is provided within Section 4 and the *Watershed Monitoring and Assessment Summary Report: 2002-2007* included within Appendix C-2.

URMP Implementation

Pest Management Performance Standard

The Program's 2004 Urban Runoff Management Plan (URMP) contains a model Pest Management Performance Standard (PMPS) approved by Water Board staff that: 1) limits the use of pesticides that are known to cause or contribute to impairment of receiving waters; 2) requires use of least-toxic pest control methods by municipal employees at municipally-owned facilities; and 3) meets other requirements of NPDES Permit Provision C.9.d. The PMPS includes guidance to Co-permittees on work plan tasks and legal authority needed to implement the standard, and BMPs for protecting water quality if pesticides must be used after implementing an IPM program. The Co-permittees have updated their local URMPs to include the PMPS and have been implementing the PMPS since FY 01-02.

Local Pest Management Plans

Co-permittees completed their local pest management work plans and submitted them as part of their FY 00-01 Annual Reports (September 15, 2001). Implementation of these Work Plan tasks began in FY 01-02. Efforts to date are described in Co-permittees FY 06-07 Annual Reports.

EVALUATION OF EFFECTIVENESS

Outreach and Education

Outreach and education tasks related to pesticide reduction are evaluated in Section 3 and Table 3-1.

Monitoring and Science

The Program and Co-permittee staff completed all environmental and programmatic monitoring tasks that were planned for FY 06-07. This included conducting, funding and/or participating in local and regional monitoring activities. A full description of these activities and an assessment of how effective these activities were in meeting monitoring program objectives are included in Section 4 – Monitoring Activities.

URMP Implementation

Program staff successfully worked with the Pest Management AHTG, Water Board staff and other interested parties to complete a revised version of the Pest Management Performance Standard (PMPS) that was acceptable to all parties involved. The Co-permittees are now in the process of implementing the PMPS. The Co-permittees have evaluated their local pest management efforts during FY 06-07 in their individual Annual Reports.

Table 6-1
Status of FY 06-07 Pesticide Management Tasks[1]

Task[1]	Updated Schedule	Status
I. Municipal Pesticide Use		
I.A.1 Develop and implement a process for tracking pesticide use on municipally owned property (PS#8). Include in the process reporting and justification for the use of OP pesticide and BMPs employed during OP pesticide use.	Annual Reporting	**Completed/Ongoing** – The Pest Management Performance Standard includes a suggested reporting process, which the Co-permittees implemented for the FY 01-02 Annual Report. The first year was focused on reporting use of organophosphate pesticides, particularly chlorpyrifos and diazinon. For the FY 02-03 Annual Report, Water Board staff requested Co-permittees to submit pesticide use summaries and not actual data. This practice was continued for the FY 06-07 Annual Report.
Monitoring Mechanism 1.A.1 Document completion of tasks in annual reports. Use pesticide-tracking process to document pesticide use.	Annually	**Completed/Ongoing** – Pesticide use summaries are included in Co-permittee FY 06-07 Annual Reports.
II. Public Education and Outreach		
II.A.1 Implement the Watershed Education & Outreach (WE&O) Campaign targeting the general public and include messages about less-toxic pest control and proper disposal. The Campaign will include extensive media campaign with South Bay English- and Spanish-language TV and radio stations.	Began development FY 00-01; Ongoing through 06-07.	**Completed/Ongoing** – New print and radio advertisements were developed and placed in community newspapers and broadcast on various radio stations. Advertisements ran from July 2006 through September 2006, and April 2007 through June 2007.

[1] The status of the complete set of Program Pesticide Plan tasks is presented in Table 6-1 of the Program's *FY 03-04 Annual Report*.

Table 6-1, continued
Status of FY 06-07 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
II.A.2 Develop simple, effective, targeted messages regarding proper pesticide use and disposal, effects on water quality, and IPM.	Ongoing as needed	**Completed/Ongoing** — A new ad "Watch Out for Toxic Pesticides" was developed and used. Additional details are included within Section 3 of this Annual Report.
II.A.3 Prepare appropriate outreach materials (e.g., fact sheets or a consumer guide regarding pest control services) to address target groups.	Ongoing as needed	**Completed/Ongoing** -- Developed through BASMAA participation. The Program continues to participate in BASMAA's Regional IPM Partnership and Media Relations efforts to develop new IPM fact sheets and press releases. The Program purchased and distributed large quantities of the fact sheets.
II.A.4 Identify and attend community events and distribute outreach materials. (Program will attend events strategic to the WE&O Campaign.)	Annually	**Completed/Ongoing** -- Program staff, Co-permittee representatives and Watershed Watch consultant staff conducted IPM outreach at five community events during FY 06-07. The IPM display was used at some events. OWOW fact sheets and brochures (e.g., "Grow It!" Guides,"Backyard Bugs" and "Pests Bugging You?") were distributed. (See Section 3 of this Annual Report for details).
II.A.6. Create, update, and publicize web sites to promote IPM and reduce pesticide use.	Completed 6/02; Update as needed.	**Completed/Ongoing** -- The Watershed Watch website was launched in September 2001 and is continually updated. The website directs browsers to call the toll-free number to the Program office for information on less-toxic pest control. A web page specifically for IPM was completed in June 2002 and is updated regularly. The web page also includes many pages in Spanish and links to other sites with information on IPM.
II.A.7 Coordinate with the Master Gardeners program and use their services to train residents. Provide IPM training	Ongoing as appropriate	**Completed/Ongoing** – Since FY 01-02, Program staff has worked with Master Gardeners and San

Table 6-1, continued
Status of FY 06-07 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
and information on water quality impacts of pesticide use to Master Gardeners as needed.		Jose Community Garden staff to conduct IPM training programs for community gardeners. From FY 02-03 to FY 04-05, the Program conducted community IPM workshops in coordination with Watershed Watch, United Neighborhoods, Guadalupe Gardens, the Santa Clara County Household Hazardous Waste Program and Master Gardeners.
II.A.8 Create and/or publicize existing IPM demonstration gardens (such as the garden at the San Francisco Bay Wildlife Refuge in Alviso).	Began FY 01-02; Ongoing	**Completed/Ongoing** – Since FY 01-02, the Watershed Watch Campaign has partnered with the Don Edwards San Francisco Bay Wildlife Refuge at Alviso. The Alviso site has a pesticide-free native plant demonstration garden. Workshops at this location are promoted on the Watershed Watch website. Since FY 03-04, the Program has been providing promotional support for the Going Native Garden Tour. In FY 06-07, approximately 3,000 people attended the tour which featured 45 gardens. Featured gardens demonstrate environmentally sensitive gardening practices which include the use of native plants, water conservation, landscaping to prevent urban runoff, reducing pesticide and fertilizer use, etc.
II.A.9 Continue to fund BASMAA Regional Media Relations Campaign featuring pitches to Bay Area media and responses to breaking news on pesticide-related topics.	Ongoing.	**Completed/Ongoing** – SCVURPPP funded this campaign as part of its BASMAA baseline dues for FY 06-07. Program staff participated in meetings of the work group and reviewed draft products. (See Section 3 of this Annual Report for additional details)

Table 6-1, continued
Status of FY 06-07 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
II.A.11 Identify consumer and business publications that could include articles about IPM or less toxic pest management, submit articles or letters to the editor, and encourage them to print them.	Ongoing	**Completed/Ongoing** -- An article describing impacts of pesticide use on water quality and containing hints for pesticide-free pest control was developed in December 2004 and sent to select publications. The article was included in the April 2005 issue of the *Tideline* magazine and was also placed on the Friends of Guadalupe Gardens website in October 2004. No articles were published in FY 06-07.
II.A.12 Implement a "Pesticide User Outreach" project targeting residential and commercial users.	FY 01-02 through FY 05-06	**Completed/ Ongoing** -- A Pesticide User Outreach Work Plan is developed and implemented each year, as Program budget allows. Tasks implemented include the media advertising campaign (as part of the Watershed Watch Campaign), local IPM Store Partnership Program, restaurant outreach, IPM workshop, IPM outreach at events, IPM outreach to special districts and development of an outreach article.
II.A.13 Provide information on less toxic pest control (e.g., IPM techniques, municipal IPM policies, model contract language, training opportunities, etc.) to neighboring special districts (e.g., Valley Transportation Authority, sanitary and utility districts, open space districts, vector control districts, and school districts) as appropriate.	FY 01-02 through FY 04-05	**Completed** – VTA, open space and vector control district staff were invited to the Program's IPM Workshop in March 2003 and provided copies of the Program's Pest Management Performance Standard. In January 2005, a letter explaining the impact of pesticide use on urban runoff was developed and mailed (along with IPM fact sheets) to all special districts within the Co-permittees' jurisdiction. The cover letter and list of special districts were included in the FY 04-05 Annual Report.
Monitoring Mechanism II.A.1. Document or estimate numbers of residents reached by outreach efforts, including events, web site promotion, municipal employee	Annually	**Completed/Ongoing** -- See Section 3 of this Annual Report.

Table 6-1, continued
Status of FY 06-07 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
outreach, and media advertising. Monitor responses to outreach efforts through documentation of calls to the Program's general and watershed campaign hotlines.		
Monitoring Mechanism II.A.2. Survey local public attitudes and behavior to evaluate the success of outreach efforts and the saturation of outreach messages. (Program will conduct countywide survey as part of evaluation of WE&O Campaign. Program may also conduct surveys to evaluate effectiveness of specific projects.)	FY 03-04 and FY 04-05	**Completed/Ongoing** – A Countywide survey was conducted to evaluate the success of the WE&O Campaign. The evaluation report was included in the Program's *FY 03-04 Annual Report*. Some of the survey questions tracked the publics' knowledge about various pollutants (including pesticides), which affect the water quality in San Francisco Bay. Nineteen percent of the respondents in 2003 say that pesticides affect the water quality of the Bay compared to seven percent in 1991. Approximately 23 percent of residents say that they use less-toxic ways to control pests in their home and garden. Details of the stores partnership program evaluation and IPM outreach events are described in Section 3. In October and November 2004, the BASMAA Regional IPM Committee conducted a customer intercept survey to evaluate the OWOW Store Partnership Project. The survey included interviewing 375 customers at 5 stores in Santa Clara County. The evaluation indicates that: • Overall, 31% of the people interviewed were aware of the Our Water Our World promotion. • The fact sheet garnered the highest recognition of the four items (16%), followed by the logo (15%). • Of the people who had identified at least one of the promotional items in Q3 (n=104), 82 percent

Table 6-1, continued
Status of FY 06-07 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
		said that these items helped them identify less-toxic products or methods. The detailed survey report was included in the FY04-05 Annual Report.
II.B.1 Continue to fund and participate in the BASMAA Regional IPM Partnership.	Ongoing	**Completed/Ongoing** -- SCVURPPP funded this program as part of its BASMAA baseline dues for FY 06-07. Program staff participated in meetings of the work group and reviewed draft products. See Section 3 for details.
II.B.2 Continue to implement cost-effective elements of the IPM Store Partnership Program, as identified in the work plan developed for Action Item II.A.12. Create and provide fact sheets and other materials to pesticide retailers to facilitate point-of-purchase outreach. Visit stores as necessary to ensure ongoing participation.	Ongoing	**Completed/Ongoing** – The Program continued to implement the IPM store partnership program in 29 stores in Santa Clara Valley. Training on selling less-toxic products was provided to 150 employees at twelve stores. A summary of evaluations received is included within Appendix B-9 of this Annual Report
II.B.3 Offer IPM training opportunities to pesticide retailer employees through coordination with Master Gardener-taught educational programs. (See Action II.A.7.)	Ongoing	**Completed/Ongoing** – The Program contracted with Ms. Annie Joseph to provide training on selling less-toxic products to store employees (See Tasks II.A.12 and Section 3).
Monitoring Mechanism II.B.1. Document number of participating stores, materials distributed and employees trained. Evaluate the cost-effectiveness of the IPM Store Partnership Program each year. Implement the evaluation component of the Pesticide User Outreach work plan each year.	Annually	**Completed/Ongoing** -- See Section 3 and Table 3-1 of this Annual Report.

Table 6-1, continued
Status of FY 06-07 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
III. Pest Control Operators (PCOs)		
III.B.1. Identify and work with PCO trade organizations to develop industry standards for BMPs to protect water quality, through participation in UPC and BASMAA.	Ongoing	**In Progress** – Program will work with the UPC and a consultant to accomplish this task.
IV. Commercial Businesses		
IV.A.1 Research reports and surveys of commercial business pesticide use and other stormwater programs' and POTWs' efforts to address this issue. Develop recommendations and a work plan (including an evaluation component) to provide outreach on less toxic pest control to target businesses in the South Bay, as appropriate and cost-effective.	FY 02-03 through FY 04-05	**Completed/Ongoing** – The SCVURPPP IPM Work Group decided to use San Francisco's "Setting a Table for Pests" poster for outreach to restaurants. This item was approved by the Santa Clara County Department of Environmental Health inspectors for inclusion in their new food facilities packet for distribution to new or remodeled food facilities during routine inspections. Copies of this poster are being provided to County Health Inspectors since FY 02-03.
IV.A.2 Develop and implement education programs that target commercial businesses, per recommendations from Action IV.A.1	Ongoing;	**Completed/Ongoing** – As described above, the Program is distributing the "Don't Lay a Table for Pests" poster to new or remodeled food facilities through County Health Inspectors. Beginning FY 03-04, the Program has also focused on educating employees at local hardware stores and nurseries on selling less-toxic products to consumers.
Monitoring Mechanism IV.A.1. Document outreach efforts targeting businesses, as recommended in the work plan to be developed by the Program. Implement the evaluation component of the work plan.	Ongoing	County Health Inspectors distributed approximately 422 copies of the "Don't Set a Table for Pests" poster during FY 06-07.

Table 6-1, continued
Status of FY 06-07 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
V. Household Hazardous Waste Collection		
V.A.3 Work with HHW collection agencies to support, enhance, and help publicize programs for proper pesticide disposal (PS #7).	Ongoing; began FY 00-01	**Ongoing** – In FY 06-07, the Watershed Watch Campaign continued to educate consumers on proper pesticide disposal through outreach events and distribution of educational material. The County HHW Program collected 1,250 pounds of dursban and diazinon in FY 06-07. In addition, the County HHW Program also managed over 210,900 pounds of other poisons. In FY 05-06, the Program contacted all participating stores to ensure that employees were aware of the stop-sale date for diazinon. This follow-up indicated that all stores were aware of the stop-sale date and had taken diazinon off their shelves for proper disposal.
Monitoring Mechanism V.A.1. Document that household hazardous waste collection programs adequately serve residents and businesses and that any exchange programs do not exchange organophosphate or banned pesticides.	Annually	County HHW -- No residents were turned away with the exception of those who brought munitions, explosives or radioactive waste. Collection facilities and events have expanded in number. The County does operate a material reuse program that allows residents to take usable items (e.g., paint, left by other residents). This program does not include banned pesticides exchange. Palo Alto – No Palo Alto residents were turned away. Palo Alto does not have an exchange for the items brought for disposal.

Table 6-1, continued
Status of FY 06-07 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
Monitoring Mechanism V.A.2. Document quantities of pesticide disposal at household hazardous waste collection facilities (only possible on a county-wide basis at present).	Annually	County HHW – Although the grant award to conduct public education on dursban and diazinon has ended, the County HHW Program collected 1,250 pounds of these two pesticides Palo Alto --62,988 pounds of pesticides were collected from residents during FY 06-07. This represents an increase from FY 05-06 (56,875 pounds were collected in FY 05-06).
VI. County Agricultural Commissioners – All Tasks Completed		
VII. New Development		
VII.A.4 Develop and propose enhanced reporting format for documenting use of pesticide reduction measures at development sites. (Draft Permit Provision C.3.n.)	Annual Reports	**Completed/Ongoing** -- A section for documenting pesticide reduction measures required of project applicants is included in the Program's model data collection form for collecting other development project data prior to implementing C.3. (i.e., impervious surface area). The reporting form included in the Planning Procedures Performance Standard for annual reporting of information on Group 1 projects allows Co-permittees to more specifically list the pesticide reduction measures required.

Table 6-1, continued
Status of FY 06-07 Pesticide Management Tasks

Task[2]	Updated Schedule	Status
VIII. Monitoring and Science		
VIII.A.1. Continue financial support of the Regional Monitoring Program (RMP). Continue to actively participate in the RMP advisory and technical committees to focus RMP resources on 303(d) problem pollutants, including OP pesticides.	Annually	**Completed/Ongoing** – The Program contributed $168,480 to the RMP in FY 06-07. Same amount has been budgeted for FY 07-08. Program staff attends the RMP Technical Review Committee meetings and prepare meeting summaries for Management Committee.
VIII.A.2. Work with Water Board staff to refine the problem statement for the diazinon TMDL and determine data needs, with assistance from the BASMAA Pesticide Work Group.	FY 01-02 and beyond	**In Progress** – Program staff attend the Urban Pesticide Committee meetings at which the diazinon TMDL has been discussed. Program staff is also working on the TMDL with Water Board staff as part of the Clean Estuary Program (CEP).
VIII.A.3. Participate in a coordinated regional plan to collect data for the diazinon TMDL, as defined in the RWQCB/BACWA/BASMAA MOU.	FY 01-02 and beyond	**Ongoing** – Program staff are participating in a regional data collection plan as SCVURPPP is a member of the CEP (formerly the TMDL MOU). The Program contributed $97,000 to the CEP in FY06-07 and will contribute the same amount in FY 07-08.
Monitoring Mechanism VIII.A.1. Submit monitoring data and reports to the Regional Water Quality Control Board and other interested parties (such as USEPA) per the reporting schedule in the Program's Multi-Year Receiving Waters Monitoring Program.	FY 02-03 and beyond	**Completed/Ongoing** – The Program completed and submitted its fourth Watershed Monitoring and Assessment Summary Report in September 2006 (See Appendix C-2 of the *FY 05-06 Annual Report*).

[2] The status of the complete set of Program Pesticide Plan tasks is presented in Table 6-1 of the Program's *FY 03-04 Annual Report*.

Table 6-1, continued
Status of FY 06-07 Pesticide Management Tasks

Task[3]	Updated Schedule	Status
IX. Regional, State, and Federal Coordination		
IX.A.1. Support actions by the California Stormwater Quality Task Force (now California Stormwater Quality Association) Pesticide Committee to comment on and assist with USEPA's pesticide risk assessments.	Ongoing	**Completed/Ongoing** – SCVURPPP provided funding to CASQA's consultant contract that funded Geoff Brosseau's and Kelly Moran's efforts to review risk assessments and provide comments on behalf of the CASQA member agencies.
IX.A.2. Through participation in the UPC and CASQA, work with the U.S.EPA, the California Department of Pesticide Regulation, and the pesticide industry to eliminate uses of pesticides likely to enter surface water from those listed on product labels.	Ongoing	**Ongoing** – Program staff regularly participates in the UPC and CASQA and support efforts to eliminate uses of pesticides that cause risk to water quality. The CASQA General Meeting in July 2005 focused on the topic of pesticide use, monitoring, and regulation, and the CASQA Pesticide Subcommittee provides regular updates to the CASQA members
Monitoring Mechanism IX.A.1. Document correspondence with U.S. EPA and the California Department of Pesticide Regulation and successes in achieving changes in registered uses and labeling that protect water quality.	Annually	**Completed/Ongoing** – Copies of correspondence sent by the CASQA Pesticide Committee, with support from SCVURPPP, are provided to the Management Committee and the Water Board. Successes related to protection of water quality were the banning of chlorpyrifos, limiting uses of diazinon and convincing EPA that its Offices of Pesticides and Water needed to coordinate their efforts.
IX.B.1. Participate in the activities of the Bay Area Stormwater Management Agencies Association, the California Storm Water Quality Association, and the Urban Pesticide Committee and communicate Program efforts.	Annually	**Completed/Ongoing** – Program staff regularly attended BASMAA, CASQA (General and Executive Committee) and UPC meetings to communicate Program efforts (see Appendix A-2 for list of meetings attended during FY 06-07).

[3] The status of the complete set of Program Pesticide Plan tasks is presented in Table 6-1 of the Program's *FY 03-04 Annual Report*.

Table 6-1, continued
Status of FY 06-07 Pesticide Management Tasks

Task[3]	Updated Schedule	Status
IX.B.2. Collaborate in technical studies to support TMDL development and implementation. (See Action VIII.A.3.)	As Needed.	**Completed/Ongoing** – Program staff are participating in a regional effort to develop TMDLs. SCVURPPP is a member of the CEP (formerly the TMDL MOU).
Monitoring Mechanism IX.B.1. Document attendance by Program staff at regional and statewide meetings and completion of regional and statewide efforts.	Annually	**Completed/Ongoing** – Appendix A-2 contains a list of meetings attended by Program staff during FY 06-07. Meeting summaries are provided within Management Committee packets.
X. Review and Revision of Work Plan		
X.A.1. Review and continuously improve the goals, actions, and monitoring mechanisms of the work plan considering results of self-evaluations, comments from Water Board staff and other interested parties, and results of local performance review meetings if any.	Annually- As Needed	**Completed/Ongoing** – The Pesticide Plan was revised twice in FY 01-02 based on comments from Water Board staff and interested parties (specifically RWQCB letters dated 8/15/01 and 12/21/01) and submitted to the Water Board on October 15, 2001 and March 1, 2002, respectively. The Plan will be updated at the beginning of the next permit cycle to correspond to the reissued permit requirements. Task evaluations are provided in Sections 3, 6, and 8 of this Annual Report.
Monitoring Mechanism IX.A.1. Complete revised work plan that incorporates continuous improvement items, and report on completion of work plan tasks.	Annually	**Completed/Ongoing** – See response to Action X.A.1. above and Section 6 of this Annual Report.

SECTION 7

MERCURY POLLUTION PREVENTION ACTIVITIES

7. MERCURY POLLUTION PREVENTION ACTIVITIES

INTRODUCTION

Mercury has been found in sediments in South San Francisco Bay and the Guadalupe River Watershed. Some types of fish caught in the Bay contain mercury and other pollutants at concentrations that may threaten the health of humans consuming those fish. In response, the California Office of Environmental Health and Hazard Assessment issued an interim fish consumption advisory. The U.S. Environmental Protection Agency (EPA) has listed the Bay and the Guadalupe River Watershed (including the Guadalupe River, Alamitos Creek, Guadalupe Creek, Calero Reservoir, and Guadalupe Reservoir) as impaired by mercury under Section 303(d) of the Clean Water Act. In accordance with Section 303(d), the Water Board is required to establish a Total Maximum Daily Load (TMDL) for mercury in the South San Francisco Bay and the Guadalupe River Watershed.

Permit Provision C.9.c. requires the Program to address the impairment by developing and implementing a mercury pollution prevention plan. The Program developed a Mercury Pollution Prevention Plan (Mercury Plan) consistent with this Provision. The Mercury Plan was submitted to the Water Board on March 1, 2002 as part of the Program's FY 02-03 Work Plan. This section describes and evaluates Mercury Plan tasks completed during FY 06-07.

MERCURY POLLUTION PREVENTION PLAN

The Mercury Plan is based on the premise that a Bay area-wide approach (and coordination) in addressing mercury pollution prevention will be most successful. For this reason, many of the actions identified in the Mercury Plan are for Program-level participation in regional efforts. These efforts are supplemented by countywide and local efforts.

The Mercury Pollution Prevention Plan addresses five general goals:

I. **Municipal Use of Mercury-Containing Products** – Eliminate all unnecessary municipal use of mercury-containing products and establish proper disposal methods for products that cannot be eliminated.

II. **Household Hazardous Waste Collection** – Provide mercury-containing product disposal services through household hazardous waste (HHW) collection programs for residents and small businesses, and encourage use of these programs.

III. **Monitoring and Science** – Participate in coordinated monitoring efforts to support mercury TMDL development and implementation, including assessment of air pollution sources of mercury and concentrations of mercury in sediment.

IV. **Regional, State, and Federal Coordination** – Actively participate in regional, state and federal coordination efforts to achieve a reduction in the amount of mercury in urban runoff and air emissions.

V. **Public Education and Outreach** –Increase awareness of proper disposal of mercury-containing products and available non-mercury containing alternatives.

The Mercury Plan identifies actions that will be implemented at the Program level, municipality level, or both; and provides the schedule for initiation and/or completion of Program-level actions. The details of municipality actions and schedules are included in the individual Co-permittee work plans and/or annual reports, as appropriate.

FY 06-07 MERCURY POLLUTION PREVENTION ACTIVITIES

The status of the Program's FY 06-07 Mercury Plan tasks is summarized in Table 7-1. Highlights of Program accomplishments, as developed and/or implemented by the Mercury Pollution Prevention Plan AHTG, PIP AHTG, Program staff and municipalities are provided below.

Guidelines for Reduction and Management of Mercury-Containing Products

During FY 02-03, the Mercury Pollution Prevention Plan AHTG and Program staff developed guidelines for the reduction and management of mercury-containing products identified for virtual elimination. The goals of the *Guidelines for Mercury-Containing Products Reduction and Management* are to work towards the virtual elimination of mercury from controllable sources that may affect urban runoff due to agency operations; and establish proper recycling and disposal methods for products that cannot be eliminated due to technological, safety or economic factors. Co-permittees continued implementing the *Guidelines for Mercury-Containing Products Reduction and Management* in FY 06-07.

Mercury Pollution Prevention Outreach Workgroup

In December 2002, Program staff established a new Work Group called the Mercury Pollution Prevention Outreach Work Group. This Work Group implements the Public Education and Outreach elements of the Mercury Plan by organizing a public education, outreach and participation program designed to reach residential and commercial users of mercury-containing products.

<u>FY 06-07 Tasks</u>

Since FY 03-04, the Program has been coordinating its mercury outreach with the County Household Hazardous Waste (HHW) Program. The Program provided funds to develop and conduct media advertising to meet the requirements of a $300,000, three-year California Integrated Waste Management Board (CIWMB) grant awarded to the County HHW Program. Under this grant, the County HHW Program developed partnerships with local hardware stores for collecting spent fluorescent lamps. The Grant ended in March 2006; however, the store partnership program continued.

The Program's FY 06-07 Mercury Pollution Prevention Outreach Work Plan included implementation of the following tasks:

- Outreach to businesses – A newsletter article informing Conditionally Exempt Small Quantity Generators (CESQGs) on proper disposal of fluorescent lamps was developed. This article was published in the May 2007 issue of the Building Owners and Managers Association (BOMA) newsletter.

- Media Advertising – The Program's Watershed Watch Campaign ran the "Watch Out for Mercury Pollution "advertisements to educate people on the proper disposal of fluorescent

bulbs, and to inform them of fluorescent bulb drop-off locations. The advertising campaign ran from January to April 2007. The Program provided funding for radio and print advertising. The Santa Clara County Integrated Waste Management Division and the City of Sunnyvale provided funding for transit advertising.

Details of the outreach campaign are described in the FY 06-07 detailed Watershed Watch Campaign and Media Report included within Appendix B-3. Copies of all outreach materials are included within Appendix B-4 and B-11.

Monitoring and Science

The Santa Clara Basin Watershed Management Initiative (SCBWMI) is serving as the stakeholder forum for the development of the Guadalupe River TMDL Report for Mercury. The Guadalupe River Watershed encompasses parts of San Jose, Los Gatos, Campbell, Monte Sereno and Santa Clara. The Program is a stakeholder in the Guadalupe River TMDL process. The Santa Clara Valley Water District (SCVWD) is taking the lead role in the TMDL development process by solely funding the $900,000 study and serving as Co-Chair of the TMDL Work Group and Stakeholder Group. Program staff is also participating in the TMDL process.

Water Board staff produced the Guadalupe River Watershed Mercury TMDL Project Report (January 2006). Program staff, along with other Co-permittee staff, have reviewed the report and attended work group meetings to discuss the draft report and implementation plan.

The Program continued to provide financial support to the Regional Monitoring Program (RMP). In addition, Program and Co-permittee staff actively participates in RMP Technical Review Committee (TRC) and Steering Committee (SC) meetings and provides meeting summaries to the Management Committee. Staff reviewed available draft reports, including the 2007 RMP Draft Monitoring Plan.

A Memorandum of Understanding (MOU) regarding development of a Water Quality Attainment Strategy for San Francisco Bay-Delta and Tributaries was entered into by the Water Board, Bay Area Clean Water Agencies (BACWA), and Bay Area Stormwater Management Agencies Association (BASMAA) on August 6, 2001, and includes the development of TMDLs for 303(d) pollutants including mercury. This group is referred to as the Clean Estuary Partnership (CEP). As a member agency of BASMAA, the Program is involved in the development and funding of potential projects for the San Francisco Bay mercury TMDL (mercury TMDL). Program staff has been participating in the CEP technical committee meetings, CEP Board meetings (as needed) and CEP Mercury Risk Reduction Work Group.

In addition, the Program's *Multi-Year Receiving Waters Monitoring Plan* includes collecting and analyzing receiving water samples for mercury. Refer to Section 4- Monitoring Activities for additional details regarding mercury monitoring activities.

Program staff is tracking the results of the "historic" meeting between the State Air Resources Board and State Water Quality Control Board in February 2006. During the meeting, the idea of cross media (water and air) coordination in the investigation of the aerial deposition of pollutants from air to land was discussed. Once deposited on land, pollutants can enter water bodies through stormwater runoff. The priorities of future work groups will be to identify an inventory of the original sources of various pollutants and develop an action plan to address those pollutants

at the source. Future Water Board-Air Board meetings are anticipated, however, none occurred in FY06-07.

U.S. Department of Energy (DOE) Office of Building Technology's Vision 2020 Lighting Technology Roadmap

Since the Mercury Plan's first year of implementation, Program staff has been tracking the progress made by the U.S. Department of Energy (DOE) office of Building Technology's Vision 2020 Lighting Technology Roadmap in accordance with Mercury Plan Action IV.F. DOE's Building Technologies Program continues to move forward on their Vision 2020 Roadmap. Progress includes seven strategies to address the challenges of transforming the lighting marketplace and developing new technologies that enhance lighting quality, efficiency and cost effectiveness. There are no significant updates or progress to report in FY 06-07.

EVALUATION OF PROGRAM EFFECTIVENESS AND NEXT STEPS FOR MERCURY PLAN

During FY 06-07, there was progress made on tasks outlined in the Mercury Plan, specifically related to public outreach and progress of regional partnerships. Significant outcomes from the FY 06-07 Work Plan and the primary mercury pollution prevention activities planned for FY 07-08 include:

Guidelines for Reduction and Management of Mercury-Containing Products: In FY 03-04, Co-permittees began strategizing on how to implement the Program's Guidelines for reducing and managing mercury-containing products identified for virtual elimination and began implementation in FY 04-05. Implementation will continue in FY 07-08.

Mercury Pollution Prevention Outreach:

The mercury outreach media campaign included free promotional print and radio ads as described in Appendix B-3.

During FY 06-07, the CoHHW Program collected 353,694 feet (88,423 pounds[1]) of fluorescent bulbs at 30 retail drop-off locations within Santa Clara County[2] .This is a significant increase from FY 05-06. In FY 05-06, the CoHHW Program collected 277,000 feet (67,943 pounds) of fluorescent bulbs.

It is estimated that approximately 1.025 kilograms of total mercury was diverted (i.e., discharge to the environment was avoided) to recycling from fluorescent lamps collected by the CoHHW Program[3] in FY 06-07. In addition, the HHW Program also collected 1,193 mercury-containing thermometers, 1,170 pounds of elemental mercury (includes thermostats, thermometer and other products) and 65,860 pounds of household batteries during FY 06-07.

[1] Since fluorescent light bulbs come in different sizes, quantities are reported in terms of the total length (feet) of tubes collected.
[2] Information regarding the collection of mercury containing products (e.g., fluorescent bulbs, thermostats, thermometers and other products) during FY 06-07 obtained from a memorandum *entitled Fiscal Year 2006/2007 HHW Program Update* (dated July 20, 2007). This memorandum was prepared by Wendy Fong, Management Analyst, Santa Clara County Hazardous Materials Program.
[3] Based on a 1999 National Electrical Manufacturers Association survey entitled *Environmental Impact Analysis: Spent Mercury-Containing Lamps, January, 2000 (Fourth Edition)*, the average four-foot fluorescent lamp contains about 11.6 milligrams (mg) of mercury. For the sake of estimating the amount of mercury sent for recycling, approximately 88,423 four-foot fluorescent lamps were collected. As a result, 1.025 kilograms of total mercury diverted (i.e., discharge to the environment was avoided) to recycling is a rough estimate.

In FY 07-08, the Program will continue to conduct advertising to promote the fluorescent bulbs drop-off locations, as municipal budgets/resources permit.

Coordination Efforts with Regional Organizations: The CEP, RMP Steering Committee and RMP Technical Review Committee meetings and Program staff review of several draft products are recent highlights of the Program's coordination efforts with local and regional organizations. Program staff will continue to attend CEP (Clean Estuary Partnership) TMDL meetings, Regional Monitoring Program (RMP) Steering Committee and Technical Review Committee meetings. In addition, Program staff will continue to track the progress of the State Water Board-Air Board meetings.

Table 7-1
Status of FY 06-07 Mercury Pollution Prevention Tasks[1]

Task	Status
I. Municipal Use of Mercury-Containing Products	
I.F. Implement guidelines developed under Action I.E.	**On-going -** Co-permittees began implementation in FY 03-04.
II. Household Hazardous Waste Collection	
II.A. Provide mercury-containing products disposal services for residents and small businesses.	**On-going** - Disposal services are provided by the County HHW Program, Palo Alto Regional Water Pollution Control Plant and the Sunnyvale Materials Recovery and Transfer (SMaRT®) Station.
II.C. Implement guidelines developed under Action II.B.	**On-going -** Co-permittees began implementation in FY 03-04.
II.F. Work with HHW collection agencies to develop and help publicize fluorescent light recycling program.[2]	**Completed/Ongoing –** Began effort in FY 02-03. The Mercury Pollution Prevention Outreach Workgroup collaborated with the Santa Clara CoHHW Program for implementing the outreach component in the Program's two-phase fluorescent light tube (FLT) recycling campaign. The first phase of the campaign, which was developed in FY 02-03, targeted residents. The second phase, completed in FY 03-04, targeted small businesses. The main objective of both phases was to show the negative health and environmental impacts of mercury and the methods available to the public for the proper disposal of FLTs. During FY 04-05, FY 05-06, and FY 06-07 the Program conducted outreach to promote the free fluorescent bulb drop off locations provided by the County HHW Program.
III. Monitoring and Science	
III.A. Continue financial support of the Regional Monitoring Program (RMP), including the Mercury Deposition Network Pilot Study and	**On-going** - Program and Co-permittee staffs actively participated in RMP TRC and SC meetings and provided meeting summaries to

[1] Completed Mercury Pollution Prevention Tasks are described in previous Annual Reports (Table 7-1).
[2] Action II.F. is being conducted in conjunction with Public Education and Outreach Actions.

Table 7-1
Status of FY 06-07 Mercury Pollution Prevention Tasks[1]

Task	Status
the Clean Estuary Partnership (CEP). Continue to actively participate in the RMP Steering Committee (SC) and Technical Review Committee (TRC).	Management Committee. Staff reviewed available reports and provided comments. Draft reports included *2007 Draft RMP Monitoring Plan.* Both Program and Co-permittee staff are actively involved with the CEP technical and management committees; and review of proposed Work Plans and study scopes. Program and Co-permittee staffs also participate in the CEP Mercury Work Group. In addition, the City of San Jose continues to chair the CEP technical committee.
• The City of San Jose will continue to provide in-kind services for the maintenance of the Mercury Deposition Network site near San Jose.	The City of San Jose continued this activity beyond the December 2005 compliance date and into FY 05-06. The City decided not to continue into FY 06-07.
III.B. Provide financial and staff support for a coordinated regional plan to collect data for the mercury TMDL, as defined in the CEP MOU.	**On-going -** The Program continued to participate in the CEP (see Section 4, Monitoring for a discussion of the CEP (formerly TMDL MOU) activities and accomplishments to date).
IV. Regional, State, and Federal Coordination	
IV.A. Participate in the activities of the Bay Area Stormwater Management Agencies Association, the California Storm Water Quality Task Force, and the San Francisco Estuary Institute and communicate Program efforts.	**On-going** - Program staff continue to attend BASMAA, CASQA and SFEI RMP meetings (See Internal and External Meetings FY 06-07 attached to the *Review of FY 06-07 Program Management Services* within Appendix A-2).
IV.B. Collaborate in technical studies to support TMDL development and implementation including the Santa Clara Basin WMI Guadalupe River Mercury TMDL Workgroup.	**On-going** - Program and Co-permittee staff actively participate in the Guadalupe Mercury TMDL Watershed Work Group and Stakeholder group. There were no additional reports or Water Board documents for review in FY06-07.
IV.E Support, participate in, and advocate increased regional collaborati	**Ongoing** - The Program will support the RWQCB in collaborating with the BAAQMD but will not directly work with the BAAQMD. The Program supports the RWQCB through participation in the CEP.

Table 7-1
Status of FY 06-07 Mercury Pollution Prevention Tasks[1]

Task	Status
	Mercury air deposition is being addressed regionally. Program staff will continue to track the progress of the State Water Board-Air Board meetings. The first meeting was held in February 2006.
IV.F. Support and track the progress of the U.S. Department of Energy (DOE) Office of Building Technology's Vision 2020 Lighting Technology Roadmap.[3]	**In Progress** - DOE's Building Technologies Program continues to move forward on their Vision 2020 Roadmap. Progress includes seven strategies to address the challenges of transforming the lighting marketplace and developing new technologies that enhance lighting quality, efficiency and cost effectiveness. There are no significant updates or progress to report in FY06-07.
V. Public Education and Outreach	
V.A. Develop various outreach programs to educate target audiences about proper disposal of mercury-containing products and alternative non-mercury containing products. Outreach programs will include, but may not be limited to, the following:	**Completed/Ongoing[4] -** In FY 06-07, the Mercury Pollution Prevention Outreach Work Group continued its mercury pollution prevention outreach.
• Develop and begin to implement a fluorescent light recycling outreach program to educate residential users and encourage proper disposal of fluorescent lights.	**Completed/Ongoing[4] -** Phase I outreach of the two year, two phase Work Plan was completed in FY 02-03. This phase focused on residential outreach. Additional annual outreach is continuing, as appropriate. The County HHW Program has continued to develop partnerships retail stores to provide free fluorescent lamps drop-off sites for

[3] DOE's Vision 2020 Lighting Technology Roadmap includes this goal for the year 2020, "Highly efficient, reduced-mercury fluorescent sources will come to market." Sustainable Conservation's September 27, 2000 report entitled *Reducing Mercury Releases from Fluorescent Lamps: Analysis of Voluntary Approaches* concluded that "we do not believe that starting a new collaborative approach with manufacturers to create mercury-free fluorescent lamps is the most effective use of resources at this time." Sustainable Conservation recommends focusing on voluntary recycling of mercury-containing lamps as an alternative approach.

[4] These tasks were marked as Completed and Ongoing since the specific public education and outreach task was completed but outreach is ongoing. Articles will continue to be posted and updated, as appropriate. The Program will continue to assist the CoHHW with public outreach activities as resources allow.

Table 7-1
Status of FY 06-07 Mercury Pollution Prevention Tasks[1]

Task	Status
	residents. The Program's Watershed Watch Campaign conducted media advertising to inform residents about these locations. (See Section 7 and Appendix B-4 of this Annual Report for additional details).
• Develop and begin to implement a fluorescent light recycling outreach program to educate small businesses and conditionally exempt small quantity generators and encourage proper disposal of fluorescent lights. (For example, the small business outreach program might include coordination with local chapters of the Building Owners and Managers Association [BOMA] or the National Association of Industrial and Office Properties [NAIOP].)	**Completed/Ongoing[4] -** In FY 03-04, the Work Group implemented Phase II of the two-year, two-phase Work Plan. Phase II outreach efforts were focused on small businesses and CESQGs. Additional annual outreach is continuing, as appropriate. An article informing Conditionally Exempt Small Quantity Generators (CESQGs) on proper disposal of fluorescent light bulbs was sent to various business organizations. It was included in the May 2007 issue of the Building Owners and Managers Association (BOMA) newsletter. A copy of the article is included in Appendix B-8 of this report.
• Coordinate with municipal inspectors to integrate mercury outreach to industrial businesses into their existing routine pretreatment, source control, and/or hazardous materials inspection processes	**Ongoing -** Co-permittees began coordination efforts in FY 03-04.
V.B. Develop or adapt existing mercury outreach materials, as needed, for outreach programs.	**Completed/Ongoing[4] -** As part of the Outreach Work Plan for Action V.A, development of materials began in FY 02-03. To date, the following outreach pieces have been developed by the Outreach Work Group: • Two fact sheets for the worldwide web (one for residents and one for businesses); • Two newsletter articles (one for residents and one for businesses); • One press release;

Table 7-1
Status of FY 06-07 Mercury Pollution Prevention Tasks[1]

Task	Status
	• One video public service announcement for broadcast on local city cable channels; • Four newspaper ads, three radio ads, two transit (bus poster) ad; and • Signage (posters and decals) for promoting the fluorescent drop-off locations. All outreach pieces aim to show the negative health and environmental impacts of mercury and the methods available to the public for the proper disposal of FLTs. Copies of all outreach materials developed during FY 06-07 are included within Appendix B-4 and Appendix B-11.
V.C. Attend community events and distribute outreach materials.	**Completed/Ongoing[4] -** As part of the Outreach Work Plan for Action V.A, distribution of outreach materials continued during FY 06-07.

SECTION 8

NEW AND REDEVELOPMENT CONTROL MEASURES

8. NEW AND REDEVELOPMENT CONTROL MEASURES

INTRODUCTION

This section describes the Program's efforts during FY 06-07 to assist Co-permittees to control the impacts of development on stormwater quality and flow through the development project planning, review and approval process. Tasks related to construction inspection are described under Section 2, Co-permittee Guidance, and Section 2, Performance Standards.

BACKGROUND

On October 17, 2001, the Water Board adopted Order 01-119 which amended the Program's Permit Provision C.3. (New and Redevelopment Requirements) to contain significant new requirements. These requirements include:

- Numeric design standards for sizing stormwater treatment controls;
- Limits on increases in peak stormwater discharge rates and/or durations from new or redevelopment sites ("hydromodification") that may result in increased potential for erosion or other adverse impacts in creeks;
- Requirements for operation and maintenance of stormwater controls;
- Requirements for site design and source control measures;
- Definition of a minimum project size, based on amount of impervious surface created, for which the design standards, control measures, peak flow limitations, and maintenance requirements apply;
- Requirements for changes to General Plans and environmental review processes to provide authority to implement the requirements; and
- Reporting requirements.

These requirements are now applicable to "Group 1" projects (those with one acre or more of impervious surface) and "Group 2" projects (those with 10,000 square feet or more of impervious surface).

To assist Co-permittees in completing and implementing these requirements, Program staff prepared the *Guidance for Work Plan Tasks Related to Implementation of Permit Provision C.3. (New and Redevelopment Requirements)*. This guidance identified proposed actions to meet the requirements of Provision C.3. and whether the actions would be implemented at the Program level, Co-permittee level or both. All of the Program and Co-permittee "start up" tasks have been completed, and Co-permittees are in the ongoing implementation phase.

In February 2003, the Water Board adopted and/or amended the stormwater permits for the Contra Costa, Alameda, and San Mateo countywide stormwater programs with different requirements than those in the Program's permit. The Water Board Executive Officer stated the Board's intention to make all of the permits consistent, and as a result, extended the deadlines for implementation of certain C.3. provisions[1]. In addition, the Program submitted a letter to the Water Board on September 22, 2003 proposing an alternative Group 1 and Group 2 project

[1] Letter to Beau Goldie, SCVURPPP Management Committee Chair, from Loretta K. Barsamian, Executive Officer, California Regional Water Quality Control Board, San Francisco Bay Region, Re: Extension of Specified Deadlines in Order 01-119, May 12, 2003.

definition consistent with the other stormwater programs' permits[2], which was accepted by the Water Board in a letter dated January 29, 2004[3]. On July 20, 2005, the Water Board adopted a Tentative Order[4] (which amended portions of Provision C.3. in Order 01-119) to further conform the permit language to that of the other permits in the region, amend the Group 2 requirements to include a revised alternative Group 2 definition, and incorporate key provisions in the Hydromodification Management Plan (HMP) Report.

The adopted Order No.R2-2005-0035 allows a phased implementation of C.3. at Group 2 projects based on land use and potential for pollution. Group 2A consists of projects under one acre and greater than 10,000 square feet of impervious surface that have one of the following land use categories: gas stations; auto wrecking yards; loading docks or parking lots greater than 10,000 square feet; and other industrial or commercial uses where potential pollutant loading cannot be mitigated by post-construction source control and site design practices. Implementation for Group 2A projects began on October 20, 2005. Group 2B consists of all other land uses in the same size category and implementation for Group 2B began on August 15, 2006.

Order R2-2005-0035 also adopted the key provisions of the Program's HMP Report. The key provisions, including management standard, performance criteria, and applicability criteria, are presented in Attachment A to the Order, and an applicability map is presented in Attachment B. The Order required Co-permittees to begin implementation of the HMP on October 20, 2005.

To summarize, on October 15, 2003, Co-permittees began implementing the C.3. requirements for Group 1 projects (i.e., those projects that included creation or replacement of one acre or more of impervious surface). On October 20, 2005, Co-permittees began implementing the HMP requirements and C.3. requirements for Group 2A, and on August 15, 2006, Co-permittees began (or continued) implementing C.3. requirements for all Group 2 projects.

IMPLEMENTATION OF FY 06-07 C.3. TASKS

During FY 06-07, Program efforts were focused on assistance to Co-permittees with C.3. and HMP implementation, conducting training workshops for municipal staff and the development community, and participation with Water Board staff on the development of the new and redevelopment requirements for the Municipal Regional Permit (MRP).

Table 8-1 presents the status of the Program's new and redevelopment (C.3.) tasks scheduled for completion or ongoing in FY 06-07. The table includes tasks outlined in the *FY 06-07 Work Plan*, including some remaining tasks from the original *C.3. Work Plan Guidance* (the numbered tasks) and some new tasks identified for FY 06-07.

Highlights of accomplishments and evaluation of effectiveness of some of the key tasks are provided below.

---

[2] Letter to Loretta Barsamian, Executive Officer, California Regional Water Quality Control Board, San Francisco Bay Region, from Beau Goldie, Chair, SCVURPPP Management Committee, Re: Revised Request for Regional Board Approval of an Alternative "Group 2 Project" Definition, September 22, 2003.

[3] Letter to Beau Goldie, SCVURPPP Management Committee Chair, from Bruce Wolfe, Executive Officer, California Regional Water Quality Control Board, San Francisco Bay Region, Re: Approval of the Proposed Alternate Group 2 Project Definition, January 29, 2004.

[4] Order No. R2-2005-0035, NPDES Permit No. CAS029718, Amendment Revising Order No. 01-119 (Provision C.3., New and Redevelopment Requirements), July 20, 2005.

Ad Hoc Task Group and Work Group Participation

In FY 01-02, the Program formed the C.3. Provision Oversight Ad Hoc Task Group (C3PO AHTG) to oversee, coordinate, and discuss Program guidance on implementation of C.3. tasks. During FY 06-07, the C3PO AHTG continued to meet approximately bimonthly and received updates on C.3. and HMP issues and projects; received updates on and discussed the proposed C.3. provisions in the draft Municipal Regional Permit (MRP); helped plan the annual workshop; and shared information on implementation of C.3. The C3PO AHTG provided valuable assistance to Program staff in development of the C.3. implementation tools and continues to be a useful forum for discussion of experience with implementing the C.3. requirements.

A number of work groups were formed to work on specific issues under C.3. The list of AHTG and work group members, and the missions of each group, are provided in Section 2, Table 2-2. During FY 06-07, two work groups were active: the HMP Implementation Phase Work Group and the BMP O&M Verification Work Group.

C.3. Implementation Products

In 2004, the Program completed a document entitled *Developments Protecting Water Quality: A Guidebook of Site Design Examples* (Guidebook) that provides information on local projects or areas where innovative design measures which protect water quality have been applied. In FY 05-06, Program staff collected information on approximately ten additional projects installed after the completion of the original Guidebook and completed the process of updating the Guidebook to include these examples in FY 06-07. The February 2007 version is available on the Program's website (www.scvurppp.org)

In 2006, the Program sponsored an awards program for exemplary site designs to protect water quality. This awards program recognizes Santa Clara Valley's public agency and private development community leaders who are solving site design challenges, reducing stormwater pollution and runoff quantity, and meeting the requirements of the NPDES permit. Applications for the awards program also helps provide information on additional site design examples for updating the Guidebook. Nominations were due on July 14, 2006, and an Awards Committee consisting of Program staff, a Co-permittee representative, a local consultant, and an environmental group representative met in August 2006 to review the submittals.

The 2006 award winners included:

- Exemplary Public Project (Large Site) – Tully Library, City of San Jose;
- Exemplary Public Project (Small Site) – Alum Rock Library, City of San Jose;
- Exemplary Private Project (Residential) – Willow Glen Reflections, DKB Homes and City of San Jose;
- Exemplary Private Project (Institutional) – Congregation Sinai Facility, Congregation Sinai and City of San Jose.

The award winners were recognized at an awards ceremony on October 30, 2006 (see Section 2 for additional details of the Program's award ceremony). The Program is continuing the awards program in 2007.

C.3. Workshops

During FY 06-07, the Program conducted one workshop to assist Co-permittees with implementation of Provision C.3. The workshop, entitled *Implementing Stormwater Requirements in New Development and Redevelopment Projects*, was held on June 14, 2007 and attracted 128 participants. The workshop was designed to address topics of interest to municipal and private planning/engineering staffs. The morning sessions presented case studies of implementation of C.3. on a variety of projects; an update on stormwater regulations; and an overview of the HMP cost estimating study (described later in this section). The afternoon sessions focused on design, construction, experience and planting guidelines for bioretention systems; use of structural soils for street trees; and vector control considerations for stormwater treatment devices The workshop also featured exhibits for five stormwater control measure vendors. The agenda and evaluation summary for the workshop are presented within Appendix A-6.

A second series of workshops was held in July 2007 to train Co-permittee staff and private consultants on the use of the Bay Area Hydrology Model. This is described later in this section.

Guidance for Treatment BMP Operation and Maintenance Verification Programs

Provision C.3.e of the Program's NPDES permit requires each Co-permittee to implement a stormwater treatment BMP Operation and Maintenance (O&M) Verification Program. To address Provision C.3.e, the BMP O & M Verification Work Group was formed (by the C3PO AHTG) to develop guidance for implementing an O&M verification program. In FY 02-03 and FY 03-04, Program staff and Work Group developed a total of eight guidance documents to assist Co-permittees in implementing a BMP O&M Verification Program. Information from these documents was included in Chapter VI of the *C.3. Stormwater Handbook*. In FY 04-05, the Program provided assistance to Co-permittees that were setting up verification programs, conducted a training workshop on O& M verification; and continued work on defining database and reporting requirements. Program staff and the Work Group also developed an approach to use standardized data fields to track treatment BMPs and relevant inspection results, ensured consistent data collection among Co-permittees, and began developing a data collection form which includes the standardized fields.

During FY 05-06, Program staff and the Work Group completed the "Standard Stormwater Treatment BMP Inspection Data Collection Form" and guidance on what inspection data should be included in future Annual Reports. Co-permittees are expected to use the form or a form with similar standardized fields while conducting BMP O&M verification inspections. The June 2006 C.3. Workshop featured a session for inspectors on how to use the standardized form.

During FY 06-07, Co-permittees began conducting BMP O&M inspections using the standardized inspection form. Inspection data was submitted to the Program using the Treatment BMP Inspection Activity Report form, for compilation. Appendix G-1 presents an example of this form containing all of the data submitted by the Co-permittees for FY 06-07. Appendix G-2 contains an Inspection Activity Summary Report of submitted data. A total of 26 inspections were conducted at approximately 13 sites. The Summary Report summarizes the information by Co-permittee, reason for inspection, project type, BMP type, inspection results and enforcement action.

The City of San Jose conducted a pilot BMP O&M verification inspection program during FY 06-07. Since all projects constructed to date were approved prior to numeric sizing requirements

and did not require inspection under the C.3. provisions, the pilot inspection program provided experience and training for City staff. During FY 06-07, twenty BMPs were inspected at twelve different sites using the Program's *Standard Stormwater Treatment BMP Inspection Data Collection Form*. BMPs were inspected on both public and private sites and include the following types: vegetated swale, porous pavement, exfiltration trench and extended detention basin. The City of San Jose learned that as numerically-sized BMPs are installed, additional resources and coordination among departments will be necessary to ensure appropriate installation, operation and maintenance, and overall functionality of BMPs.

The BMP O&M Verification Work Group continued to coordinate efforts and share information with the Santa Clara County Vector Control District. District staff regularly attends Work Group and C3PO AHTG meetings. The Program provides the Vector Control District a copy of the Annual Report tables that list the locations of BMPs. In addition, Co-permittee inspection staff is instructed to refer problem BMP sites (e.g., those with standing water) to the Vector Control District. The Standard Stormwater Treatment BMP Inspection Data Collection Form includes fields to indicate when the BMP being inspected appears to provide potential mosquito breeding habitat.

Hydromodification Management Plan

Background

Provision C.3.f. requires the Co-permittees to manage increases in runoff peak flows and volumes from Group 1 development projects through the implementation of a Hydromodification Management Plan (HMP). A detailed history of the Program's HMP development has been provided in previous annual reports. During the period FY 01-02 to FY 05-06, the Program and its consultants: developed a work plan; conducted a literature review; conducted watershed hydrologic and geomorphic assessments of three subwatersheds in Santa Clara Valley; produced six technical memoranda on key technical issues; completed four interim and draft HMP reports; conducted a series of public meetings; and completed the final report. All products are available on the Program's website (www.scvurppp.org)

The Final *Hydromodification Management Plan Report* was submitted to the Water Board on April 21, 2005 and the key provisions adopted as part of a Tentative Order by the Water Board on July 20, 2005. The Order requires Co-permittees to implement the HMP provisions within three months of adoption (by October 20, 2005). All Co-permittees have policies and/or ordinances in place requiring the implementation of the HMP, if applicable.

To assist Co-permittees with implementation of the approved HMP, the Program formed a HMP Implementation Phase (HIP) Work Group in FY 05-06. With direction and assistance from the HIP Work Group, Program staff has developed: 1) an HMP fact sheet; 2) Chapter V of the *C.3. Stormwater Handbook* that includes the key provisions of the HMP and implementation guidance; 3) and a list of qualified consulting firms that can design stormwater flow and treatment controls. In addition, Program staff began a series of "HMP 101" workshop for Co-permittee staff that covered the basic principles of hydromodification management.

FY 06-07 Accomplishments

During FY 06-07, Program staff efforts focused on support of the HIP Work Group, development of the Bay Area Hydrology Model, participation in the HMP Instream Projects Work Group and overseeing other HMP implementation studies.

HIP Work Group: The HMP Implementation Work Group has been meeting on a regular basis, and has been an effective forum to share experience with HMP implementation and obtain suggestions for additional HMP guidance. Members of the development community have also attended these meetings. During the six meetings in FY 06-07, the work group discussed the MRP and other Bay Area HMPs, development of the BAHM, HMP guidance and training, and the cost estimating methodology. At the request of the work group, a second "HMP 101" workshop covering the basic principles of hydromodification management was conducted for Co-permittee staff and the development community on October 25, 2006.

The work group also shared information on implementation of HMP requirements. The City of San Jose has begun implementation by requiring flow controls in the conceptual planning phases of large development projects. One project with a combination flow duration basin/park is under construction. Other Co-permittees have not had any projects for which the HMP was applicable.

Bay Area Hydrology Model (BAHM): The Program, along with the San Mateo and Alameda County stormwater programs, jointly funded the development of a tool for simulating pre- and post-project hydrology and automatically sizing flow control facilities to meet HMP requirements. Clear Creek Solutions (CCS), the consulting firm who developed the Western Washington Hydrology Model, was contracted to develop a Bay Area version, based on the HSPF watershed hydrology model. The Program contracted separately with CCS to perform local calibration of the model to two watersheds in Santa Clara Valley.

The BAHM was completed in July 2007 and a series of six trainings were conducted on July 17-19, 2007. Trainings were co-sponsored by the Alameda and San Mateo countywide stormwater programs. The training hosted by SCVURPPP in San Jose attracted 43 participants, including agency staff, consultants, and Water Board staff. The agenda, evaluation summary, and list of attendees are provided in Appendix A-7.

The BAHM has the ability to model common site design and treatment control measures and quantify the reduction in flow duration due to these measures. Additional testing will be conducted in FY 07-08 to fine tune and improve guidance on the use of the BAHM for this purpose.

HMP Instream Projects Work Group: The HMP Instream Projects Work Group, consisting of Santa Clara Valley Water District, City of San Jose and Program staff, was formed to explore the feasibility of allowing developers of projects requiring hydromodification controls to contribute to regional stream restoration and/or hydromodification control projects in lieu of installing controls on-site. The work group continues to meet regularly to review potential funding mechanisms, review lists of District projects, and discuss approaches for linking instream projects to potential development projects in the contributing watersheds.

HMP Implementation Studies: In FY 06-07, the Program contracted with GeoSyntec Consultants to do a comparison of flow basin sizing using the HEC-HMS and HSPF models. The results will provide guidance on model use and sizing procedures and assist development of the BAHM. The draft comparison report was completed and is under going review by Program staff. In addition, the Program also contracted with GeoSyntec to develop a methodology for estimating costs for the purpose of determining impracticability of hydromodification management measures (i.e., the 2% cost cap). This work is underway and a draft report will be completed by September 2007.

Next Steps

The Program's approach to hydromodification control will continue to be improved through lessons learned from implementation experiences, use of the BAHM, and review of approaches proposed by other Bay Area stormwater programs. Chapter 7 of the Final HMP Report, HMP Implementation Guidance, describes the anticipated next steps towards addressing remaining implementation issues, refining the guidance and coordinating with other Bay Area programs and Water Board staff in development of a consistent, regional approach. An updated list and schedule of next steps is provided in Table 8-2.

Other Tasks

Other tasks that Program staff accomplished during FY 06-07 include the following:

- Program staff continued to spend significant effort reviewing and commenting on the preliminary and administrative drafts of the C.3. and HMP sections of the MRP, and attending several meetings with BASMAA and Water Board staff on this topic.
- Program staff gave the following presentations on the permit requirements for new and redevelopment projects and other Program elements:
  - CASQA Conference, Sacramento, CA, presentation by Jill Bicknell entitled "Bay Area Hydrology Model – A Tool for Analyzing Hydromodification Effects on Development Projects and Sizing Solutions" (September 26, 2006);
  - San Diego Regional Stormwater Co-permittees Hydromodification Plan Workgroup Meeting, presentation by Jill Bicknell entitled "Hydromodification Management Plan for Santa Clara Valley" (December 6, 2006);
  - West Valley Clean Water Program MRP Meeting; presentation by Jill Bicknell entitled "Background on SCVURPPP and Permit Requirements for New and Redevelopment Projects" (December 19, 2006);
  - SCVWD Stream Protection, Restoration, and Erosive Forces Workshop; San Jose, CA, presentation by Jill Bicknell entitled "The Role of the Santa Clara Valley Urban Runoff Program in Stream Protection and Control of Erosive Forces" (January 31, 2007);
  - Sacramento Stormwater Quality Partnership Hydrograph Modification Management Workshop, Sacramento, CA, presentation by Kristin Kerr entitled "Hydromodification Management Plan for Santa Clara Valley" (February 22, 2007);
  - CASQA General Membership Meeting, San Jose, CA, presentation by Jill Bicknell and Kristy McCumby-Hyland (City of Sunnyvale) entitled "Conducting BMP Operation & Maintenance Verification Inspections: A County-wide Approach and Early Lessons Learned" (March 9, 2007);
  - City of San Jose Construction Management Training, San Jose, CA, presentation by Jill Bicknell entitled "The New Construction General Permit - How Will It Affect Your Next Project?" (March 28, 2007);
  - Santa Clara Valley Water District Board Meeting, San Jose, CA, presentation by Jill Bicknell entitled "The Role of the Santa Clara Valley Urban Runoff Program in Stream Protection and Control of Erosive Forces", Part of the Stream Protection, Restoration and Erosive Forces (SPREF) Presentation (April 10, 2007).
- Program staff reported on the Program's C.3. implementation progress at BASMAA New Development Committee meetings.
- Program staff continued to chair the BASMAA BMP Sizing Tools Work Group, a group overseeing a BASMAA Task of Regional Benefit to develop an automated, web-based BMP sizing tool. The Program is helping to fund the project and overseeing the

consultant contract. The BMPs selected for the tool include vegetated swale, pervious paving, infiltration trench, and bioretention area. The tool is under development and expected to be completed in September 2007.

Evaluation of Effectiveness

The process for working with the Co-permittees to implement C.3. has worked well. As mentioned above, the C3PO AHTG and its work groups have provided valuable assistance to Program staff in development of the C.3. implementation tools. In addition, the C3PO AHTG has also been a useful forum for discussion of development review processes used by the various Co-permittees and sharing of ideas and lessons learned about implementing C.3. requirements.

On July 18, 2007, the Program received comments from Water Board staff on the New and Redevelopment element of the FY 05-06 Annual Report (Program and Co-permittee sections). In the letter, Water Board staff commended the Program for its work and leadership in implementing the C.3. O&M requirements, particularly the "comprehensive, user-friendly Standard Stormwater Treatment BMP Inspection Data Collection Form." They also commended the Co-permittees for providing more detailed and comprehensive information in the New and Redevelopment reporting tables and for beginning to perform and report BMP O&M verification inspections. No responses to comments were required.

The evaluation summaries from the Program's C.3. workshop and BAHM training are provided within Appendices A-6 and A-7. Based on the evaluations, the workshops were successful overall and the expectations of most attendees were met. Comments on the evaluation forms will be used in planning subsequent workshops.

During FY 06-07, a significant amount of Program and Co-permittee staff time was expended working with Water Board staff on the development of the MRP, including participation in special BASMAA meetings and MRP stakeholder meetings. While this work was important and usually productive, this shifting of resources prevented the Program from making more progress on C.3. and HMP implementation tasks.

Program staff will continue to work with the Co-permittees and Water Board staff to evaluate the C.3. planning and implementation process and products during future C3PO AHTG meetings and C.3. workshops.

Table 8-1
Status of FY 06-07 C.3. Implementation Tasks

Task	Anticipated Completion Date	Status
C.3.c. Requirements for Group 1 and Group 2 Projects		
All original C.3. tasks have been completed. Other Tasks:		
Promote/facilitate regional roundtable meetings with SCVURPPP agency staff and other stormwater programs to share information about implementation strategies and experience.	Ongoing	**Completed/Ongoing** – Co-permittees shared information on implementation of C.3. on specific projects at internal meetings of the C.3. Provision Oversight (C3PO) Ad Hoc Task Group (AHTG) and the HMP Implementation Phase (HIP) Work Group. In addition, Program and some Co-permittee staff attended BASMAA New Development Committee meetings, and sessions at the CASQA conference related to new development.
Prepare guidance on implementing changes to Provision C.3. in the Regional Permit, and updates to the C.3. Handbook to reflect those changes.	6/08	**To Be Done –** This task was deferred until adoption of the MRP (expected late 2007/early 2008)**.**
Develop model standards and specifications for preferred BMPs.	6/08	**To Be Done –** This task was deferred to FY 07-08 due to staff time needed to review and comment on draft documents; and time for participation in work groups for the Municipal Regional Permit (MRP). Standards and specifications will be include in FY 07-08 updates to the C.3. Handbook.
Continue assistance with the C3PO AHTG meetings and action items.	Ongoing	**Completed/Ongoing** – Program staff conducted and prepared meeting summaries for five AHTG meetings in FY 06-07 (approximately bimonthly).
Conduct workshop on implementation and design of BMPs, (e.g., bioretention, planter boxes, green roofs, etc.).	6/07	**Completed –** The Program's annual C.3. workshop, held on June 14, 2007, featured presentations covering the design of bioretention systems, including plant selection and case studies of C.3. implementation on various projects.

Table 8-1, continued
Status of FY 06-07 C.3. Implementation Tasks

Task	Anticipated Completion Date	Status
Supervise BASMAA project for developing automated BMP sizing/design tool.	9/07	**In Progress** – During FY 05-06, Program staff chaired a BASMAA work group that selected a consultant to develop the sizing tool, worked with the consultant and work group to develop and approve a scope of work, and solicited funding. The BMPs selected for the tool included vegetated swales, pervious paving, infiltration trenches and bioretention areas. The tool is under development and expected to be completed in September 2007.
C.3.e. Operation and Maintenance of Treatment BMPs		
e.6. Assist Co-permittees to report on treatment BMPs O&M verification program in each annual report, including organizational structure, evaluation of effectiveness, and planned improvement to the program. Continue to provide assistance with Co-permittee implementation of BMP O&M verification programs and develop a Program-wide database.	Annually	**Completed/Ongoing** – Since the C.3. implementation start date was October 15, 2003, most Group 1 projects approved in FY 03-04 or later years are either not yet constructed or only recently constructed. In FY 06-07, Co-permittees began conducting BMP O&M verification inspections on recently constructed projects. Program staff provided an inspection data collection form and guidance for data collection. In addition, Program staff collected data which detailed BMP O&M inspections and compiled the results for the FY 06-07 Annual Report (see Appendix G-1 and G-2). *Guidance on O&M annual reporting assisted Co-permittee compliance with regulatory requirements in C.3.e. and C.3.n.*

Table 8-1, continued
Status of FY 06-07 C.3. Implementation Tasks

Task	Anticipated Completion Date	Status
C.3.f. Hydromodification Management Plan		
f.2. Develop guidance to the Co-permittees on implementation of the HMP as part of requirements for Group 1 projects that may cause increased erosion or other related impacts: • Conduct one or more workshops on HMP implementation; • Provide guidance on any changes to HMP requirements in the Regional Permit, and update the HMP and C.3. Stormwater Handbook to reflect these changes.	Report completed 4/05; additional guidance 6/06; workshops FY 05-06 and FY 06-07	**Completed/Ongoing** – Guidance on HMP implementation is provided within Chapter 7 of the HMP Report and Chapter V of the *C.3. Stormwater Handbook*. On October 25, 2006, a second "HMP 101" workshop covering the basic principles of hydromodification management was conducted for Co-permittee staff and the development community. **To Be Done –** This task was deferred until adoption of the MRP (expected late 2007/early 2008)**.** *Guidance on HMP implementation will assist Co-permittee compliance with regulatory requirements in C.3.f.*
f.3. Upon adoption by the Water Board, begin implementation of HMP requirements for Group 1 projects that may cause increased erosion or other related impacts.	Began implementation 10/05; Ongoing	**Completed/Ongoing** – On July 20, 2005, the Water Board adopted a Tentative Order approving key provisions of the HMP Report (Order R2-2005-0035). The Order requires implementation of HMP requirements by October 20, 2005. In order to implement the HMP, Co-permittees amended their ordinances and policies as needed. The City of San Jose has begun implementation by requiring flow controls in the conceptual planning phases of large development projects. One project with a combination flow duration basin/park is under construction. (Other Co-permittees have not had any projects for which the HMP was applicable.) Program staff have assisted with guidance on implementation (see Task f.2.) and reviewed several conceptual design submittals to meet HMP requirements for projects in San Jose. To develop a list of qualified firms for use by Co-permittees and developers, Program staff has also developed a Request for Qualifications for consulting firms that can design stormwater flow and treatment controls.

Table 8-1, continued
Status of FY 06-07 C.3. Implementation Tasks

Task	Anticipated Completion Date	Status
f.4. Provide assistance and input as needed to District study to evaluate potential regional treatment and/or flow control projects.	As needed	**Completed/Ongoing –** Program staff are continuing to review Water District products and participate in discussions with Water District and San Jose staffs and developers regarding requirements for the Evergreen Specific Plan Area, Coyote Valley Specific Plan and other major development projects. Program staff has also been participating with Water District and San Jose staff on an HMP In-Stream Projects Work Group, exploring technical feasibility and financing of in-stream projects to help meet HMP requirements.
Other Tasks:		
• Continue development of the Bay Area Hydrology Model (BAHM), both regional and local aspects.	7/07	**Completed/Ongoing** – The BAHM was completed in July 2007 and a series of six trainings were conducted on July 17-19, 2007. Trainings were co-sponsored by the Alameda and San Mateo countywide stormwater programs. The Program participated with these two other programs in the development of the regional component of the BAHM, and also contracted with the software developer, Clear Creek Solutions, to calibrate the model to two watersheds in the Santa Clara Valley. Local calibration was completed in May 2007.
• Continue to develop the approach for quantifying flow control benefits of site design and treatment control measures.		The BAHM includes the ability to model common site design and treatment control measures and quantify the reduction in flow duration due to these measures. Additional testing will be conducted in FY 07-08 to fine tune and improve guidance on the use of the BAHM for this purpose.

Table 8-1, continued
Status of FY 06-07 C.3. Implementation Tasks

Task	Anticipated Completion Date	Status
• Conduct additional implementation studies for example sites in Santa Clara Valley.	10/07	**In Progress** – In FY 06-07, the Program contracted with GeoSyntec Consultants to do a comparison of flow basin sizing using the HEC-HMS and HSPF models. The results will provide guidance on model use and sizing procedures and assist development of the BAHM. The draft comparison report was completed and is under going review by Program staff. In addition, the Program also contracted with GeoSyntec to develop a methodology for estimating costs for the purpose of determining impracticability of hydromodification management measures (i.e. the 2% cost cap). This work is underway and a draft report will be completed by September 2007.
• Collect data on HMP implementation at small sites and plan to re-evaluate the small site size threshold after two years of implementation (HMP Next Steps Task 9 – may be superseded by changes to the permit).	TBD	**To Be Done –**To date there have been no small sites required to implement HMP requirements. The MRP proposes to reduce the threshold for projects subject to HMP requirements to one acre of impervious surface. As a result, this task will be reevaluated following adoption of the MRP (late 2007/ early 2008).
• Conduct programmatic monitoring tasks identified in Section 7.8 of the HMP Report (tracking projects, documenting BMP design and inspection, self-evaluation).	Annually	**Completed/Ongoing –** As part of their annual reporting tasks, Co-permittees have been tracking and reporting information on projects subject to HMP requirements.
C.3.g. Waiver and Compensatory Mitigation Program		

Table 8-1, continued
Status of FY 06-07 C.3. Implementation Tasks

Task	Anticipated Completion Date	Status
g.3 Assist Co-permittees to track and report information on waivers granted, including project name, location, type, percent impervious surface, reasons for and terms of waiver, and the alternative benefit project and completion date.	Each Annual Report	**Completed/Ongoing** – Program staff developed a reporting form for projects granted a waiver and alternative compliance, which is included in Attachment 6 to the Planning Procedures Performance Standards and Attachment VII-3, Part 3 of the *C.3. Stormwater Handbook*. No projects to date have used the alternative compliance option. *Guidance on waiver reporting assisted Co-permittee compliance with regulatory requirements in C.3.g.*
C.3.j. Site Design Measures Guidance and Standards Development		
j.2. Assist Co-permittees to prepare and submit reports summarizing the status of review, revision, and implementation of local site design guidance and standards, as part of their annual reports.	Annually	**Completed/Ongoing –** On September 15, 2003, the Program submitted a compilation of the Co-permittees' "Site Design Standards and Guidance Review". This review contained recommendations for revisions to local site design standards. Each year, the Program's Annual Report preparation memorandum provides direction for submitting information on any revisions completed during the fiscal year. *Guidance on site design review reporting assisted Co-permittee compliance with regulatory requirements in C.3.j.*
C.3.n. Reporting Requirements		
n.1. Provide information described in Table 1 of Provision C.3. in annual reports (Program to provide guidance for each annual report).	Annually	**Completed/Ongoing** – Each June, Co-permittees are provides guidance (within the Program's Annual Report preparation guidance memorandum) on C.3. reporting. Reporting requirements are cross-referenced with Table 1 of Provision C.3. and any comments/direction provided by Water Board staff. Data is reported using Group 1 and 2 reporting forms in the PPPS and Attachment VII-3 of the *C.3. Stormwater Handbook*. *Guidance on annual reporting assisted Co-permittee compliance with regulatory requirements in C.3.n.*

Table 8-1, continued
Status of FY 06-07 C.3. Implementation Tasks

Task	Anticipated Completion Date	Status
n.2. Assist Co-permittees to collect information and summarize types of pesticide reduction measures required for development projects, and the percentage of projects for which pesticide reduction measures were required.	Annually	**Completed/Ongoing** – Program staff provided guidance for reporting within the memorandum entitled *FY 03-04 Annual Report Preparation Guidance*-dated June 11, 2004. (See Task n.1). This is reinforced in subsequent annual report guidance memoranda provided each June. Data can be recorded on C.3. Summary Data Forms and reported using Group 1 and 2 reporting forms (PPPS and Attachment VII-3 of *C.3. Stormwater Handbook*.) *Guidance assisted Co-permittee compliance with regulatory requirements in C.3.n. and C.9.d.ii.*

Table 8-2

SCVURPPP HMP - Summary of Next Steps (Updated 7/27/07)

Task[1]	Anticipated Completion Date[2]	Status
1. Develop the following: a. a funding mechanism[3] such that projects can utilize in-stream control options b. a methodology for determining developer contributions based on the stream changes expected to result from changes in project runoff conditions.	6/08 6/08	**In Progress** - The HMP Instream Projects Work Group, consisting of Water District, City of San Jose and Program staff, continues to meet regularly. In FY 06-07, the group met nine times to review potential funding mechanisms, review lists of Water District projects, and discuss approaches for linking instream projects to potential development projects in the contributing watersheds.
2. Work with City/County planning and public works departments and the Water District to determine the timing and method of notifying District staff during the development review process about HMP projects that may need in-stream controls, in a manner that does not unreasonably prolong the review process. Further, look at ways to improve method to provide early communication on Group 1 project reporting.	12/07	**In Progress** – This task was delayed pending decisions by the HMP Instream Projects Work Group. Some Co-permittees already have a process for involving Water District staff in development project review. Program staff will document current practices and develop guidance for other Co-permittees, in consultation with Water District staff.
3. Facilitate review of District's MDL analysis, both by the Co-permittees and the Expert Panel, and work with the Management Committee to determine the need to integrate some or all of the MDL analyses into implementation of the HMP.	TBD	**On Hold** – This task is on hold pending results of the analyses being done by the HMP Instream Projects Work Group and adoption of new HMP requirements in the Municipal Regional Permit (MRP). The Management Committee authorized budget for review by a member of the Expert Panel but the review is on hold.
4. Conduct additional studies of implementation of site design, integrated management practices, and/or basins at example development sites in Santa Clara Valley.	12/07	**In Progress** – In FY 06-07, the Program contracted with GeoSyntec Consultants to do a comparison of flow basin sizing using the HEC-HMS and HSPF models. The results will provide guidance on model use and sizing procedures and to assist development of the

[1] Tasks are from Chapter 7 of April 2005 HMP Report. *Tasks in italics have been added.*
[2] All dates depend on availability of resources and cooperation/collaboration of numerous staff from different agencies and may change because of circumstances beyond the control of the Program. The Program periodically updates the Management Committee regarding schedule changes and will transmit updates schedules to Water Board staff.
[3] The intent is to describe a mechanism agreeable to Co-permittees and next steps for implementation.

Table 8-2
SCVURPPP HMP - Summary of Next Steps (continued)

Task[1]	Anticipated Completion Date[2]	Status
		BAHM. The draft comparison report was completed and is under going review by Program staff. In addition, the Program also contracted with GeoSyntec to develop a methodology for estimating costs for the purpose of determining impracticability of hydromodification management measures (i.e. the 2% cost cap). This work is underway and a draft report will be completed by September 2007.
Bay Area Hydrology Model (BAHM) Development Project – Regional Model, Local Calibration, Training	Completed 7/07; Ongoing	**Completed/Ongoing** –The BAHM was completed in July 2007 and a series of six trainings were conducted on July 17-19, 2007. Trainings were co-sponsored by the Alameda and San Mateo countywide stormwater programs. The Program participated with these two other programs in the development of the regional component of the BAHM, and also contracted with the software developer, Clear Creek Solutions, to calibrate the model to two watersheds in Santa Clara Valley. Local calibration was completed in May 2007. The BAHM includes the ability to model common site design and treatment control measures and quantify the reduction in flow duration due to these measures. Additional testing will be conducted in FY 07-08 to fine tune and improve guidance on the use of the BAHM for this purpose.
5. During implementation of the HMP, obtain feedback/suggestions for further refinement and implementation guidance	As needed/ Ongoing	**Completed/Ongoing** – The HMP Implementation Work Group has been meeting on a regular basis, and has been an effective forum to share experience with HMP implementation and obtain suggestions for additional HMP guidance. Members of the development community have also attended these meetings. Program staff have reviewed several conceptual design submittals to meet HMP requirements for projects in San Jose and discussed these with the work group.

Table 8-2
SCVURPPP HMP - Summary of Next Steps (continued)

Task[1]	Anticipated Completion Date[2]	Status
		Additional guidance will be prepared on HMP implementation following adoption of new requirements in the MRP (expected late 2007/early 2008).
6. Coordinate with other Bay Area stormwater programs to work toward a consistent approach for the Bay Area (via participation in development of the Municipal Regional Permit (MRP).	Ongoing until completion of MRP	**In Progress** –The administrative draft MRP (May 1, 2007) contains consistent HMP requirements for all Permittees except those in Contra Costa County. During FY 07-08, Program staff will continue to work with other Bay Area programs and Water Board staff to address these differences.
7. Coordinate additional Co-permittee, Bay Area stormwater program, and Water Board staff review process and progress meetings, including: a. The development of a schedule for Bay Area-wide HMP implementation in the upcoming Municipal Regional Permit. *b. Public outreach – HMP updates, workshop* *c. HMP Work Group Meetings*	6/07 Ongoing Ongoing	**Completed** – Hydromodification management (HM) requirements for the San Mateo, Alameda and Fairfield-Suisun stormwater programs were adopted by the Water Board on March 14, 2007. Implementation began in June 2007. The Contra Costa program began implementation in October 2006. Under the MRP, these programs will continue implementation of their current requirements. SCVURPPP began implementation in October 2005. However, the MRP contains new requirements for SCVURPPP that will take effect 90 days after MRP adoption. **Completed/Ongoing** – In FY 06-07, Program staff conducted a second "HMP 101" workshop for Co-permittee staff covering basic principles of hydro-modification management. There were six meetings of the HMP Implementation Phase Work Group.
8. Collect data on the implementation of the HMP at small sites for a period of two years after the start of implementation, and plan to re-evaluate the small site size threshold and approach at that time. Conduct and document the reevaluation.	TBD	**On Hold** -- To date there have been no small sites required to implement HMP requirements. The MRP proposes to reduce the threshold for projects subject to HMP requirements to one acre of impervious surface. As a result, this task will be reevaluated following adoption of the MRP.

Table 8-2
SCVURPPP HMP - Summary of Next Steps (continued)

Task[1]	Anticipated Completion Date[2]	Status
9. Make additional refinements per: 1) lessons learned from implementation efforts based on the draft HMP; 2) the need for consistency with HMPs being developed by other Bay Area stormwater programs; and 3) development community, Co-permittee, and Water Board feedback.	Report in ARs beginning with FY 05-06 AR	**In Progress** – See Task 5. Additional refinements will be made pending completion of the BAHM, adoption of the MRP, and continuing input from Co-permittee staff and developers.

SECTION 9

CO-PERMITTEE IND AND IC/ID SUMMARY TABLES

9. CO-PERMITTEE IND AND IC/ID SUMMARY TABLES

INTRODUCTION

On September 7, 2001, the Industrial Inspection Ad Hoc Task Group (Industrial Inspection AHTG) recommended the adoption of Program-wide categories and enforcement actions developed by the Industrial Inspection AHTG. These categories and procedures are described in the *Continuous Improvement of Industrial Reporting Technical Memorandum* and *Continuous Improvement of Illicit Connection/Illegal Dumping Reporting Technical Memorandum.* The Management Committee approved both memoranda as the Program's strategy to implement IND and IC/ID reporting requirements (as required in Permit Provisions C.6.a.i. and ii). The memoranda were included as attachments within the Program's *FY 00-01 Annual Report* and submitted to the Water Board on September 17, 2001. Each Co-permittee began implementing these procedures immediately thereafter. Implementation of the enhanced reporting requirements by the Co-permittees has been very successful as shown in the past five Program annual reports.

In accordance with the Program's *FY 04-05 Work Plan* submitted to the Water Board on March 1, 2004, the Program committed to updating the Industrial/Commercial Discharger Control Program and Illicit Connection/Illegal Dumping Elimination Activities performance standards during FY 04-05. The updates were essentially administrative (e.g., incorporating enhanced reporting requirements and results of Co-permittee evaluations) and were directed at modifying the Program's model performance standards to reflect Management Committee direction and actual Co-permittee implementation. These administrative updates were provided to the Industrial Inspection AHTG for review during January 2005. The Management Committee approved final updated performance standards on February 17, 2005. Final updates were provided within Attachments 2-1 and 2-2 of the Program's *FY 05-06 Work Plan* (dated March 1, 2005) and hereby incorporated into the URMP.

IND and IC/ID summary tables, provided within Appendix H-1, were constructed by Program staff using data submitted from individual Co-permittees. The categories presented within the summary tables are consistent with the strategy provided in both performance dated February 17, 2005. In addition, summary tables represent incidents and/or inspections that occurred between July 1, 2006 and June 30, 2007. Pie charts and a bar graph showing pertinent information found within the IND and IC/ID summary tables are also included within this section. During FY 06-07, the Co-permittees conducted and/or responded to 8,211 IND inspections and IC/ID incidents. A summary of IND inspections and IC/ID incidents reported for individual Co-permittees is provided as Appendix H-2. The vast majority (93 percent) of IND inspections conducted during FY 06-07 resulted in no action or level 1 enforcement (verbal or written warnings). Appendix H-1 provides detailed inspection data relating to facility categories and enforcement actions. In addition, the two most common IC/ID incidents during FY 06-07 were miscellaneous incidents and vehicle & equipment leaking. Approximately 46 percent of the IC/ID incidents received verbal or written warnings. Other relevant IC/ID information relating to incident type, incident report source, incident source and enforcement action is also provided within Appendix H-1.

In accordance with the Water Board's letter, *Review of Program's Draft FY 2003-04 Work Plan* dated June 24, 2003, the Program informed the Co-permittees (see FY 02-03 Annual Report Preparation Guidance dated June 18, 2003) that each Co-permitee should independently

evaluate their individual IND and IC/ID inspection data and utilize the results of the analysis to set inspection priorities and gauge program effectiveness. Within the FY 02-03 Annual Report, Co-permittees provided an effectiveness evaluation or analysis of their IND and ICID programs and/or data. This step was performed to address the Water Board's concerns regarding IND reporting procedures.

WEST VALLEY CLEAN WATER PROGRAM

September 15, 2007

Mr. Bruce Wolfe
Regional Water Quality Control Board
San Francisco Bay Region
1515 Clay St., Suite 1400
Oakland, CA 94612

Subject: West Valley Communities Urban Runoff Management Program
FY 2006-2007 Annual Report

Dear Mr. Wolfe:

This report is submitted by the West Valley Cities of Campbell, Monte Sereno, Saratoga, and the Town of Los Gatos, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a. of the Program's reissued municipal storm water NPDES Permit (Order No. 01-024). The report summarizes activities performed during FY 2006-2007 in accordance with the West Valley Communities' Urban Runoff Management Plan (URMP) submitted to the Regional Board on September 1, 2004 and the performance standards contained therein.

Contents of Report

The goals of this Annual Report are to: 1) concisely document implementation of our URMP and FY 06-07 work plan during the past fiscal year; 2) evaluate program results for continuous improvement; 3) comply with permit requirements; and 4) share this information with other Co-permittees, municipal decision-makers, and the public. To accomplish these goals, the report contains the following sections:

I. Attachments:
   1. Table of Contents

11. Water Quality Monitoring and Watershed Management

Training Summaries are provided at the end of each element

PROGRAM HIGHLIGHTS AND ACCOMPLISHMENTS

During FY06-07, the West Valley Communities of Campbell, Los Gatos, Monte Sereno, and Saratoga continued efforts to implement their URMP to the maximum extent practicable. The activities that were implemented for each element of each Community's URMP are described in Chapter 14 of the Santa Clara Valley Urban Runoff Pollution Prevention Program's URMP. Highlights of the West Valley Communities accomplishments in various program elements are described below.

Preparation for the Municipal Regional Permit (MRP)

The proposed Municipal Regional Permit was the focus of a large amount of staff time for WVCWP and West Valley cities' municipal staff throughout FY 06-07. Numerous meetings, discussions and training related to the upcoming MRP took place. All staff endeavored to participate meaningfully during this important phase of MRP development. This included analysis of proposed requirements, discussion of feasibility of implementing those requirements within municipal budget limitations, and attempting to develop useful feedback to help move this process forward. In the May 2007 version of the Draft MRP, the WVCs were pleased to see some revisions which reflected the feedback that had been provided to Water Board staff.

Illicit Connection and Illegal Dumping Elimination Activities

The WVCWP Stormwater Discharge Inspector ("Inspector") coordinates all follow-up, reporting, and education related to illegal discharges to the storm drain system and responses to facility inspection referrals. To provide a better understanding of the WVCWP Inspector's role and to evaluate and confirm response procedures, the WVCWP Inspector and WVCWP Program Manager have held and attended meetings with Santa Clara County Dept of Environmental Health (regarding food facility inspections) and SCC Fire Dept (regarding industrial and commercial inspections) and municipal staff (regarding incident reports and construction inspections). The increase in communication has facilitated a system of referrals and follow-up that is working phenomenally well for the West Valley Cities. Every potential incident is investigated during resolution, and after compliance has been achieved. All facilities that were inspected for a potential violation and were subsequently brought into compliance are prioritized for at least one pro-active inspection the following year.

Public Agency Activities: Storm Drain Operation & Maintenance

The West Valley Sanitation District (WVSD) conducts inspections and cleaning of half of the West Valley Cities' storm drain system each year, except for Monte Sereno, where storm drain structures are inspected and cleaned annually. FY06-07 was the second year that WVSD

provided enhanced annual reports to the cities on their inspection and maintenance activities. The reports are generated from a database of numbered storm drain structures with corresponding street names. The number of pounds and types of debris removed during the inspection cycle is also reported.

In FY 06-07, the WV cities reviewed the second year's data, and were pleased to find that at least 65% of the structures in each city, where the system is inspected on a two-year cycle, were found to be free of debris such as leaves, paper, dirt, rocks, sand etc. and therefore, did not require any cleaning.

In Campbell, 584 out of 888 structures (66%) were clean and only 40 structures required a two-man cleaning crew. In Los Gatos 1,197 out of 1,575 structures (76%) were clean and only 49 structures required a two-man cleaning crew. In Monte Sereno 172 out of 365 structures (47%) were clean. Twenty-four structures required a two-man cleaning crew and of those, 19 were impacted by mud and dirt. Monte Sereno's storm drain system will remain, as it has been, on an annual inspection and cleaning program. In Saratoga 1,566 out of 2,182 structures (72%) were found clean and only 40 structures required a two-man cleaning crew.

The data shows that the biennial inspection cycle is more than adequate for most of West Valley's storm drain inlets and structures, as evidenced by the number of structures that are found clean on a 2-year cleaning cycle. It is therefore important to the West Valley cities to continue the current maintenance cycle in lieu of using limited resources on more frequent and unnecessary inspections. The information provided in the WVSD annual reports will facilitate the effective prioritization of appropriate locations and structures for more frequent annual inspections and cleaning. The WVSD reports were distributed at the annual Storm Drain workshop on 6-20-07 and will be reviewed by WV cities as they determine future management actions for stormdrain maintenance and for other activities such as trash management.

Planning Procedures & New Development

During FY 06-07, the West Valley communities devoted extensive time to reviewing and analyzing the proposed Municipal Regional Permit (MRP), especially regarding proposed C.3 revisions. These efforts led to an invitation to Water Board staff to attend one of the West Valley monthly meetings. The WVCs were pleased with the subsequent meeting on Dec. 19, 2006. WVCs were represented by decision-making staff (two Public Works Directors, one City Attorney) who appreciated the opportunity to speak directly with Water Board staff. In the spirit of reaching consensus, municipal decision-makers were able to inquire about the intent of proposed requirements, and to put forward ideas for feasible means of implementing the MRP, within the municipal framework. West Valley municipal staff came away with a greater understanding of the Water Board's objectives, and greater clarity on possible implementation of the related proposed requirements.

Public Information/ Participation

A broadened direction in PI/P this year involved partnering with a local non-profit environmental education program: Environmental Volunteers (EVs). The EV program trains docents to provide free environmental education activities in K-8 classrooms. WVCWP staff attended numerous trainings to become qualified EV docents. WV staff then led classroom presentations with other EV docents, and were able to incorporate new watershed-related messages into the educational activities. Overall, WVCWP staff reached 168 students directly through classroom presentations in FY 06-07.

Pesticide Management Activities

In FY 06-07, the WVCWP Manager, and other Co-permittees from SCVURPPP's IPM Ad Hoc Task Group, responded to a presentation and public outreach suggestion from Sunnyvale staff. The WVCWP manager invested time in evaluating and helping to lay the groundwork for instituting a new outreach program related to pesticide management. For the past several years, the Clean Water Program has been investigating ways to educate yard-maintenance workers. Finding a relevant means of contact has proven to be difficult, especially since many are not fluent in English. The "Green Gardener" program, offered in both Spanish and English, was developed to reach the small landscaping businesses, which are prevalent in the West Valley cities. The program (www.greengardener.org) has been successfully implemented in Santa Cruz and Santa Barbara counties. Via telephone conferences, the experienced agencies offered feedback and guidance to help the SCVURPPP set up a similar educational program in Santa Clara Valley. The curriculum, offered as adult education courses with hands-on training activities, teaches landscape maintenance practices that incorporate pollution prevention principles (IPM). At the end of FY06-07, the IPM AHTG held meetings to discuss applying for DPR grant money to set up a local program through Metropolitan Adult Education Program (MAEP).

Public Information/ Participation and Public Agency Activities

The Town of Los Gatos promoted a new outreach event to the public in May 2007. The "Public Works Week Corporation Yard Tour" drew in over **100** students, teachers and parents from local schools. The tour participants viewed Public Works and stormwater displays. Municipal staff demonstrated to the students the purpose and details of operation for the vehicles and machines, including the Town's new regenerative-air street-sweeper. Display tables were set up by spokespersons representative of a variety of agencies and departments, including the Street Sweeper, the Code Enforcement Officer, Park Service Officers and the Clean Water Program Manager. Visitors received a brief presentation about watersheds, viewed a model of a storm drain and learned where to recycle hazardous materials. Emphasis was placed on prevention of litter and illegal dumping. This event helped Los Gatos successfully generate support and understanding among residents for the Town's watershed protection issues.

These highlights help to demonstrate the West Valley Communities' commitment to implementing the requirements outlined in the Urban Runoff Management Plans.

Thank you for your review of this Annual Report. If you have any questions regarding the materials submitted, please contact me at 408.354.4734.

Very truly yours,

Cheryl C. Donnelly

Cheryl Donnelly

FY 2006-2007 ANNUAL REPORT

ILLICIT CONNECTION & ILLEGAL DUMPING ELIMINATION ACTIVITIES

FY 2006-2007 Work Plan Self Evaluation Matrix

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
2004 URMP Perf. Standard	Program	IC/ID Performance Standards Update municipal URMP to reflect revised SOPs and BMPs as changes occur based on effectiveness evaluation. Provide staff training on revisions.	The IC/ID Standard Operating procedures and contact information were updated in June 2007 to reflect changes in staff and/or slight modifications to procedures for emergency spill cleanup which is handled by Campbell Public Works staff.	Sr. Civil Engineer, WV Inspector and WVCWP staff
	URMP	Response Program Continue to implement IC/ID Stormwater Discharge Inspector response program and evaluate for continuous improvement.	During FY06-07, the Inspector conducted 57 IC/ID inspections. One half time IC/ID Inspector conducts a centralized incident response and proactive restaurant and vehicle shop inspection program for four West Valley communities. The Inspector follows up on the reports of all potential violations. This coordinated inspection program works very well and has increased the West Valley Communities' staff awareness of water pollution activities.	WV Inspector
	FY 06-07 Work Plan	Enhanced Reporting Report on incidents using categories consistent with SCVURPPP Program. Document follow-through to point of resolution or referral for enforcement action (penalty or fine).	The WVCWP Inspector keeps a standardized Microsoft Access database of all IC/ID response calls and incident follow-up through resolution. West Valley's annual data was provided to SCVURPPP for Program-wide analysis.	WV Inspector
	URMP	Education Distribute BMP materials during routine inspections. Distribute follow up education information for businesses cited for potential stormwater violations.	WVCWP Inspector distributed 119 informational materials and BMP brochures.	
	Continuous Improvement Item	Training Conduct training & evaluation meeting between Storm Water Discharge Inspector	Each year the WV Inspector visits a West Valley community to meet with municipal staff and explain the importance of reporting IC/ID incidents.	WV Inspector to co-ord with Public Works staff

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
		and City staff, as needed to improve procedures.	In order to provide a better understanding of the WVCWP Inspector's role within the City and to review response procedures, the WVCWP Inspector and WVCWP Mgr held a round table training meeting with Campbell Public Works and Building staff in FY 05-06. The meeting clarified IC/ID procedures. Typical challenges and possible improvements to the response program were discussed. In 06-07, the WVCWP Mgr and Inspector met with the Saratoga staff and new Los Gatos staff to discuss the same issues. The WV inspector attended various workshops in FY 06-07 related to illegal discharges (i.e. construction inspection/erosion control (12/5/06), SD & street sweeping (6-20-07) and O&M BMP inspections (6-14-07).

IC/ID Program Evaluation

IC/ID Training

The Inspector's training meetings and presentations at various West Valley workshops have been effective. Inspectors from Dept of Environmental Health and the Fire Dept have called to report potential urban runoff violations which were observed outside of their scheduled inspections. This is encouraging for West Valley staff who have tried to improve communication and provide relevant training sessions each year.

The West Valley IC/ID Inspector held a Campbell Public Works training meeting on Sept 21, 2005, which focused on encouraging staff to report even minor incidents in order to provide the Inspector with an opportunity to follow up at those sites with the appropriate educational & outreach material. One example of a seemingly innocuous but important incident type is pool water discharges. Campbell Public Works' staff reported one pool and spa discharge which is an indication that they are on the lookout for stormdrain issues.

Trend Analysis

In FY04-05 eighteen (18) reported incidents were investigated. Two (2) automotive related violations for vehicle and equipment leaking were found. Four (4) accidental spills accounted for the number one IC/ID incident type in Campbell for FY04-05. This was followed by three (3) complaints not found, two (2) non-incidents and one (1) construction site incident.

In FY05-06 the West Valley IC/ID inspector responded to thirty-two (32) reports of potential violations in Campbell. Additionally, he conducted follow up visits to five (5) of these sites to ensure on-going compliance. He continued to conduct proactive vehicle shop and restaurant inspections, particularly to those sites which have had violations in the past. Eight (8) incidents originated from Campbell's primary target, automotive facilities. Four (4) accidental spills were next in frequency. Three (3) of the accidental spills were the result of vehicular accidents. Additionally, one (1) reported incident was caused by a fire and one (1) incident was caused by vandalism. There was one (1) food facility violation caused by a leaking dumpster. There was one (1) construction site violation, which is the typical number for Campbell over the last four years. No noticeable trends were evident other than the need to stay on top of vehicle shops and car washes for continued compliance.

In FY06-07 the West Valley IC/ID inspector responded to fifty-seven (57) reports of potential violations in Campbell. Twenty-five (25) incidents originated from Campbell's primary target, automotive facilities. The next common incidents occurred at commercial facilities (19). There was only one (1) construction site violation, which is the typical number for Campbell over the last several years.

There was an increase in the number of reports (57) compared to FY 05-06, however, 14 of those were 'complaints not found' and 3 were 'allowable discharges'. The West Valley Inspector will continue to conduct proactive visits of vehicle shops and restaurants but they will be reported as Industrial Commercial Facility Inspections in the IND section of the annual report. Additionally, the WV Inspector will make efforts to provide outreach and educational materials at automotive and commercial facilities.

	URMP	a. Joint Inspections of Retail Food Facilities Continue joint inspection program w/ DEH. Approximate number of *food handling* facilities in Campbell is 242. All facilities will be inspected at a minimum once per year. WVCWP IC/ID Inspector will conduct follow-up and distribute BMP materials as needed per DEH referrals. Continue to evaluate data management and reporting for desirable improvements or updates.	In FY 06-07, all 242 food-handling facilities in Campbell were inspected; most of them were inspected 2 or 3 times by Santa Clara County Environmental Health Specialists (inspectors). A total of 735 food facility inspections or re-inspections were conducted by DEH in Campbell.	Insp'ns conducted by SCC DEH; Annual Mtg co-ord by WVCWP
	URMP	b. Training & Evaluation Conduct annual joint meeting/training w/ Cupertino and SCC DEH to evaluate Inspection Prgm and discuss improvements. Annual meeting per agreement scheduled for Spring. Provide outreach on proper disposal of fluorescent light bulbs and batteries to retail food facilities during inspections.	On April 30, 2007 the WV Cities, Cupertino and the County held their annual coordination training meeting.	WVCWP to co-ord. w/ Cupertino & DEH
	FY02-03 Annual Report, CI Item	c. WVCWP Restaurant Inspection Program Continue implementation of proactive inspection program targeting medium to large-scale restaurants. *Medium to large-scale* restaurants are defined as, restaurants with 6 or more employees and/or those with potential grease problems. There are approximately 48 of	Since the West Valley Restaurant Inspection Program's inception in 2002, the WVCWP Inspector has provided at least 263 pro-active inspections for approximately 127 targeted restaurants in the cities of Campbell, Los Gatos and Saratoga. Out of 58 restaurants targeted in Campbell, most have been visited more than one time and almost all are familiar with the West Valley Clean Water Program. In FY 06-07, twenty-eight (28) restaurants were inspected pro-	WV Inspector & DEH

		these in Campbell.	actively in Campbell. One (1) was a re-inspection of a restaurant with problems in previous year. All twenty-eight inspections revealed clean sites, free of urban runoff violations. Only one (1) violation was noted by DEH for a food facility in Campbell.	
	Restaurant Inspection Program – Continuous Improvement item	d. Support West Valley Sanitation District's Fats, Oils and Grease Program Expand scope of restaurant inspections to focus on grease trap maintenance. During pro-active visits, the WVCWP Inspector will look at grease trap cleaning records. Any food facility without records will be referred to the West Valley Sanitation District for follow up.	WVCWP manager and Inspectors met with DEH representatives to re-emphasize the importance of tracking grease maintenance records. WVCWP Inspector continued to alert restaurants about regularly maintaining grease interceptors and the need for record keeping.	Inspections conducted by SCC Fire
	URMP	e. Joint Inspections of Ind/Comm Facilities by Fire Dept. and WVCWP Continue joint inspection program. Approximate number of facilities in Campbell is 317. The inspection frequency goal for FY06-07 is 100%. The total number of facilities by business category inspected in FY06-07 will be included in the annual report.	In the City of Campbell, 253 commercial / industrial facilities were inspected by the Fire Dept (compared to 296 inspections conducted in FY 05-06). Of the facilities inspected, the Fire Dept found twelve (12) potential or actual violations and reported all twelve (12) of those to the WVCWP for follow up.	Inspections conducted by SCC Fire

	URMP	g. Training & Evaluation Conduct annual joint meeting/training w/ SCC Fire to evaluate inspection reporting and confirm distribution of materials. Determine training topics, if needed, on the re-negotiated West Valley Inspection Agreement dated June 2006.	The Fire Dept's annual facility inspection training pertaining to urban runoff requirements was provided to 183 inspectors from May 10th through July 6th 2007. The Inspectors noted that they have plenty of handout materials; West Valley businesses have received all of the educational material during prior inspections. The Fire Dept's Sr Haz Mat Specialist, who provides training to inspectors met with the West Valley Clean Water Prog Mgr and WV Inspector on 4/5/07 to evaluate current procedures. The new agreement and revised reporting form that is currently being used, is working well. Another training meeting between WVCWP Inspector and Fire Dept's Sr. Haz Mat Specialist was held on 1/19/07 to review differences in reporting data. All reporting issues were resolved. During FY 06-07, the WVCWP Inspector distributed thirty-one (31) IND brochures in Campbell, as part of his outreach and education program. The Fire Dept also distributes a stormwater compliance packet to new commercial /industrial business owners or management.	Annual Mtg arranged by WVCWP w/ Sr. Haz Mat Specialist
	URMP	h. NOI Filers Provide updated list of NOI Filers to SCC Fire.	The list of NOI sites (4 in Campbell) was sent electronically to the Fire Dept on 4-17-07.	WV Inspector
	FY02-03 Annual Report, CI Item	i. WVCWP Vehicle Shop Inspection Program Continue to inspect vehicle maintenance and car wash facilities as part of IC/ID pro-active inspection program. Suggest alternatives and promote improved car	In FY06-07 the West Valley Inspector conducted twenty-nine (29) pro-active inspections of vehicle shops in the City of Campbell. He also followed up on automotive shop referrals from the Fire Dept's facility inspections. The follow up inspections reported by the Fire Dept as potential violations have been moved to ICID (section 1) of this report.	SCC Fire; WV Inspector

Industrial/Commercial Program Evaluation

Fire Dept Inspections of Industrial / Commercial Facilities:

Of the 253 facilities inspected by the Fire Dept., twelve (12) potential or actual violations were found and all of those were reported to the WVCWP for follow up. The list of violations is provided to WVCWP at the end of each fiscal year. The West Valley Inspector will schedule a training meeting with the Fire Dept Haz Mat Specialist in FY 07-08 to discuss further inspections of sites with reported violations during FY 06-07. The sites with previous violations will be prioritized for inspections at the beginning of FY 07-08.

After a steady stream of improvements and more communication between Fire Dept and WVCWP staff, the inspection program is prepared for maximum efficiency for the West Valley Cities in FY 07-08. When Saratoga was added to the Fire Dept Inspection Agreement for Campbell and Los Gatos (7/1/02), all West Valley facility inspections were coordinated under one umbrella. Monte Sereno does not conduct IND inspections because it has NO industrial or commercial facilities. Since 2001, WVCWP staff has met with Fire Dept staff at least twice a year to discuss standardized reporting, documentation and follow-up.

The West Valley Inspector's pro-active vehicle shop inspection program is designed to supplement Fire Dept facility inspections. Shop owners are made to realize the City's responsibility for making sure that the sites are in compliance with water quality requirements. The Inspector has made a positive impact with his visits and the distribution of educational materials depicting the right way to keep equipment, vehicle parts, and service areas covered, and all vehicle wash water managed properly. In a few cases the Inspector's meetings with vehicle shop owners have led to the facility's purchase of a wastewater capture system (noted in previous annual reports).

Annual Food Facility Inspection Training Meeting

Of the 735 facilities inspected by the DEH, four (4) potential or actual violations were found and only one (1) of those were reported to the WVCWP for follow up. The Supervising Environmental Health Specialist at DEH had left and DEH was not always able to make the referrals to WVCWP due to staff shortage. However DEH has hired new staff and this will improve the coordination between DEH and WVCWP in FY 07-08.

On April 30, 2007, DEH representatives met with the WVCWP Manager and Inspector. The importance of reporting all potential West Valley stormwater violations to the West Valley inspector was re-emphasized. Other topics covered at this meeting were (1) Updated contact information (2) How to report urban runoff violations to municipal inspectors to ensure accurate tracking and follow up (3) Feedback on the effectiveness of outreach and educational handouts (4) Reminder to distribute pesticide reduction fact sheets called "Don't Set a Table for Pests" to restaurants.

During FY 06-07 the West Valley Inspector continued a more aggressive effort to alert restaurants to the need for regular grease interceptor maintenance and record keeping. The WVCWP Inspector and the West Valley Sanitation District's Director of Operations continue to have discussions regarding grease interceptor maintenance records and related issues. The Sanitation District is notified if the records are not available. At the April 30th meeting, the West Valley Inspector again suggested that Environmental Health Specialists look for grease trap maintenance records during their restaurant inspections.

Source	Task Source	FY06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
Storm Drain Operations and Maintenance				
	2004 URMP	Annual Storm Drain Cleaning Continue contract w/ WVSD. Continue schedule/cycle for inspection and cleaning of storm drain system (two year cycle for residential & one year cycle for commercial/industrial); Public Works staff will clean high leaf drop and other noted areas more frequently and as needed.	West Valley Sanitation District (WVSD) performs systematic storm drain cleaning and inspection annually. Each year half the City's storm drains in residential areas are cleaned and inspected. Arterials and commercial/ industrial areas are done annually. City staff performs additional pro-active cleaning of storm drain inlets and grates before storm season in high leaf drop areas. Engineered treatment BMPs on City parking lots are cleaned at least annually (e.g. storm drain filters at Community Center in June 2007).	Sr. Civil Engineer coord with WVSD per contract; Pub Works Supt coord in-field operations
	Trash Reduction Activities On-going	Trash Reduction WVSD and/or Public Works staff will provide additional cleanup in trash problem spots discovered by staff or reported by the public.	During inspection and cleaning of storm drain structures, WVSD staff notes catch basins that require additional cleaning. The data will be helpful in locating trash problem areas by storm drain location. Campbell's report included 4 structures that received additional cleaning due to excessive amounts (over 50 lbs) of leaves and paper.	Coordinate with WVSD, WVCWP and Public Works Supt
	2004 URMP	Training - Annual WVSD/ Oper. & Maint. Meeting Annual WVSD / Operations & Maintenance. Supervisors meeting: evaluate status of annual storm drain cleaning and provide training on maintenance issues. Rural public works BMPs & SOPs may be reviewed as part of the annual WVCWP Street Maintenance Supervisors meeting.	The annual WV Storm Drain Op & Maintenance Supervisor's workshop was held on June 20, 2007 at Campbell Community Center. Eight (8) Campbell staff attended, including the Public Works Superintendent, and streets maintenance workers. Staff from WVSD, WVCWP, and the other WV Communities also participated. Topics included: • WVSD Storm Drain structure cleaning & debris findings for each city (will be used to help identify	Mtg led by WVSD and WVCWP; Attended by: Pub Works Supt and 7 additional City staff

			additional trash problem areas) • Review of Emergency Response Procedures for SD overflow • Street sweeping for water quality including capture of fine particulate matter • Power Point Presentation on S/D cleaning and maintenance requirements and existing practices Round table discussion on all topics	
	C/I item -Source Control Measure	Storm Drain Stencils or Signage Continue to replace and/or upgrade storm drain stencils or signage on storm drains or catch basins, as needed. Stencils will be replaced with the type of stencil most appropriate for the location.	The City has approximately 1,096 SD inlets. The Public Works Supt is continuing to replace signage in the high-use and downtown areas with thermoplastic stencils due to a successful pilot in 2002 - 2004. Since thermoplastic stencils can not be applied to a vertical surface, painted stencils are the preferred method of storm drain signage in most catchment areas. The application of more durable metal plaques in 1999 and 2000 proved problematic.	Public Works Supt & Streets staff
Street Sweeping/ Pavement Management				
	URMP - Street Sweeping	a. Street Sweeping Program By contract – residential swept twice monthly; downtown every week; arterials and Commercial/industrial areas once weekly. High leaf drop and other noted areas cleaned more frequently and as needed (i.e., construction zones - swept by responsible party).	The City has two contractors performing sweeping services. A vacuum type sweeper is used for areas that are conducive to picking up fine particulates and a broom type sweeper is used in other areas. The corporation yard is swept on Fridays. Sweeping data includes both types of sweepers. In heavy leaf drop areas, a front-end loader/dump truck crew removes leaves prior to street sweeping. Residents and businesses are given large recycling receptacles for yard waste as part of the required solid waste service. Yard waste is not allowed in streets; yard waste bins are emptied weekly by the City's recycling contractor.	Public Works Supt and Parks Supervisor manage contracts

FY 2006-2007 ANNUAL REPORT

Source	Task Source	FY06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
	NPDES Permit	b. Street Sweeping Data Collection Collect and review street sweeping data and provide number of curb miles swept and cubic yards of debris to WVCWP for each Annual Report.	Street Sweeping data was collected and provided to the SCVURPPP at the end of the fiscal year. **See the three-year comparison table in the evaluation section (below),** for curb miles swept, debris collected and yard waste recycled.	Public Works Office Specialist collects data from contractors WVCWP provide annual totals to SCVURPPP
	FY06-07 Work Plan, RWQCB comments	c. Training As needed, provide training meetings on collection of street sweeping data to appropriate municipal staff.	Training for municipal staff on street sweeping data collection requirements and preferred sweeping methods, was provided at WVCWP's June 20, 2007, Storm Drain Operation and Maintenance workshop.	Public Works Supt/ and Street Maintenance staff attend - WVCWP hosts
Corporation Yard				
	URMP	a. SWPPP Review Sponsor a training meeting for Stormwater Reps and Public Works Maintenance staff to review and evaluate the municipal Storm Water Management Pollution Protection Plan (SWPPP).	Campbell's Pub Works Supt, met with other WV cities on 1/23/07 to evaluate corporation yard BMPs and discuss potential revisions to the Cities' Storm Water Pollution Prevention Plans (SWPPPs). WVCWP staff coordinated the revisions by cities and updated the text in electronic format. SWPPP revisions were completed in Feb. 2007.	WVCWP staff held the meeting - Public Works Supt provided content of SWPPP manual and feedback from City staff
	URMP	b. Staff Training Provide annual training on BMPs in Storm Water Pollution Prevention Plan w/ Corp-Yard walk-thru	Campbell's previous Corporation Yard Walk-thru was held on 4/26/06 with 29 Campbell staff. In FY06-07, the corporation yard training, normally held in the spring, was postponed to make time for other Public Works training sessions. FY 06-07 Corporation Yard training is scheduled for 8/30/07 and will be reported in the FY07-08 annual report. The PW Superintendent will provide the training.	Public Works Supt provides annual training for municipal staff

Yard Waste Recycled

FY04-05: An annual total of **6,782 tons** of yard waste was picked up by garbage collection service.

FY05-06: An annual total of **6,609 tons** of yard waste was picked up by garbage collection service.

FY06-07 Residents and businesses recycled 3,667 tons of yard waste using Waste Management garbage collection service from 7/06 to the end of 1/07. In March the West Valley Cities changed contractors; the total amount of yard waste recycled using West Valley Collection and Recycling from 3/1 to 6/30 2007 was reported as 1,920 tons for a combined **total of 5,587 tons.**

Campbell

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2006-2007 ANNUAL REPORT

Public Agency Activities: Operations and Maintenance Evaluation

Storm Drain Maintenance: In FY06-07, West Valley Sanitation District (WVSD) provided its second enhanced annual report to the cities on storm drain cleaning. Since June 2006 the reports have listed the structures that were inspected and cleaned with the maintenance crew's findings. A total of 848 structures were inspected. Of those inspected, 584 were found without any debris and were noted as "clean." Forty structures required additional cleaning and of the forty, thirty-seven contained leaves & paper. Crews noted the weight and type of debris removed. Descriptors for solids removed are: leaves/paper, mud/dirt, foreign object, rocks/stone, sand/gravel, oil/soap and roots etc. The reports are generated from a database of numbered storm drain locations with the street names. The WVSD reports were distributed at the annual Storm Drain workshop on 6-20-07 and will be reviewed by WV cities as they determine future management actions for trash problem areas.

In addition to the West Valley IC/ID inspector's incident response program and follow-through to resolution, Campbell Streets crews provided immediate response and cleanup for accidental spills and reports of illegal discharges to the storm drain as noted below:

5/07 Streets crew and other city staff performed an absorbent cleanup of oil substance resulting from a bus accident on Hamilton Ave and Winchester Blvd.

5/07 Street Supervisor stopped a contractor from power washing a building on Sunnyoaks Ave. Water and paint chips were contained and kept from the storm drain.

6/07 Streets crew responded with absorbent to an anti freeze spill resulting from a vehicle accident.

6/07 Streets crew responded to two separate calls for glass spill cleanup on roadway

Storm Drain Stencils: Campbell's decision to go back to using painted stencils for most applications, and using thermoplastic storm drain stencils in selected high-use and downtown areas, is working very well. Thermoplastic signage is more durable than painted stencils and holds its color. Staff have also noted that thermoplastic stencils have endured a few years of street sweeping passes. The best feature of the thermoplastic stencils is that they are visible at night. The downside of using thermoplastic stencils is the cost (about $250 per stencil, installed) and they must be applied to a horizontal surface, preventing their visibility from a distance. Santa Clara County staff asked the WVCs for a recommendation on where to purchase metal plaques similar to those previously installed by the West Valley Cities. West Valley reported that municipal staff have discontinued application of the metal plaques because the sharp edges have a potential to get caught in street sweepers and bend, creating possible injury to pedestrians or bicyclists. Replacing the plaques was also a problem. When plaques came loose or were removed, concrete chunks crumbled from the curb with the screws (used for attaching the plaques) making replacement in the same spot impossible.

Street Sweeping: The City of Campbell hired a new street sweeping contractor in July 2006 because the City was having problems with the results of their sweeping service. The previous contractor swept more curb miles because he needed to use two sweepers, at times, to get the job done satisfactorily. Campbell's new street sweeping contractor reported 1,843 cubic yards of debris collected in FY06-07, 478 cubic yards less than the amount of debris collected in FY05-06. However, the City's contractor also swept 1,455 less curb miles in FY06-07, which accounts for the decline in the amount of debris removed. Campbell's sweeping contractor provided year-end data rather than monthly data for FY06-07. For FY07-08, the contractor has been asked by Public Works to submit monthly totals for curb miles swept and debris collected so that the data can be evaluated at frequent intervals.

Campbell

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2006-2007 ANNUAL REPORT

In the previous fiscal year, the Town of Los Gatos provided training to all the West Valley Cities by presenting their new Street Sweeper at a WVCWP workshop in June 2006. The Town's PW Superintendent answered questions from other municipal staff about cost and maintenance and gave a brief talk on why this model of sweeper was selected. The regenerative air sweeper is certified to pick up more, and generate fewer, small particles, which account for 5% to 7% of the material on the average street but contain over 60% of the pollutants targeted by EPA under the Clean Water Act. (Statistics provided by Ranger Kidwell-Ross, speaker for World Sweeper.com at a street sweeping workshop 5-8-06 in San Jose).

Yard Waste - Curbside Collection and Recycling: The West Valley yard waste recycling program reduces the amount of debris that gets into the storm drain, since leaves are collected in oversized bins rather than being stored in the street. In FY06-07, the total yard waste collected was down sharply from the previous two years for all West Valley cities. The reason for the decrease is not apparent without reviewing the data collected for the previous years and the garbage collection companies' tracking methods. There are a few factors that would contribute to the drop. 1) The data for February 2007 was not reported for West Valley cities due to a change in service contractors; 2) There might be a significant difference in methods used by the two different contractors to collect data; 3) City crews provide some additional, unscheduled leaf and tree limb removal, which is not tracked. 4) The annual weather might be a consideration because yard waste collection is determined by the amount of debris residents generate from yard maintenance and tree trimming. Some years have stormier weather producing more fallout from trees and a greater need to dispose of branch material. The new garbage & recycling company will be asked about their methods of tracking yard waste collection. The cities may request monthly totals to see if more consistent year-end totals can be obtained.

Training Evaluation: The WVCWP Storm Drain Maintenance Workshop (6/20/07) drew more staff participation this year. Municipal staff evaluated the workshop as having "good information that needs to be presented to City Council." Another response noted that "City law enforcement needs to attend the workshops". It was also suggested that San Jose Water Company attend our trainings since the water company crews have been noticed using improper storm drain protection methods when working on their pipelines. Attendees wanted to know "how to educate the public to get them on our side?" It was evident that BMPs are being used by municipal staff but there was some frustration among street and park maintenance workers because they don't have enough authority to convince residents and private contractors to keep pollutants from reaching the storm drain system. The WVCWP Inspector offered his card to all attendees and requested that they report any incidents to him for immediate follow-up. One challenge is to catch the violator in the act of allowing pollutants into the storm drain system. By the time the incident, or the result of the incident, is seen it is often too late to stop it. The maintenance crews are generally called to clean up spills. Attendees requested continued updates on the MRP requirements for storm drain maintenance and street sweeping practices. Several of the attendees stayed after the workshop for additional discussion among the cities.

Corporation Yard SWPPPs: The City of Campbell along with the other West Valley communities, conducted a round-table review and discussion of West Valley municipal SWPPPs during FY06-07. The corporation yard SWPPP and standard operating procedures (SOPs) were evaluated; a few minor revisions and updates were made. The SWPPP updates were documented and transcribed to electronic format in February 2007. Staff and PW Superintendent reported that BMPs are working well.

PLANNING PROCEDURES

FY 2006-2007 Work Plan Self Evaluation Matrix

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
Planning Procedures				
	Provision C.3	Participate in Provision C.3 Oversight Ad Hoc Task Group (C3PO AHTG) to stay updated on current issues, respond to Program or RWQCB requests, and exchange questions, ideas or experiences, related to C.3 implementation with other Co-permittees.	WVCWP Manager participated in the C3PO AHTG meetings in order to present summarized information at West Valley monthly meetings and encourage feedback, as appropriate, from West Valley Co-permittee's.	Sr. Civil Engineer coordinate with WVCWP Mgr
	New Municipal Regional Permit	Provide input as requested, to help determine the requirements for the new Municipal Regional Permit.	On Dec, 19, 2006, Campbell's PW Director, the Community Development Director and the City's Sr. Civil Engineer attended an MRP West Valley meeting where a round table discussion was held with municipal decision makers and Water Board staff to address the challenges of the upcoming MRP requirements and explore revisions that would make the requirements feasible for implementation.	Public Works Director, Community Development Director and Sr. Civil Engineer to coordinate with WVCWP Mgr
C.3.c. Requirements for Group 1 and Group 2 Projects				
Group 2 Projects	C.3.c.	As needed, revise guidance documents, website, procedures, and/or conditions of approval to incorporate Group 2b project requirements for August 2006 implementation.	C.3 guidance for all WV cities was revised and posted prior to 8/15/06 to include Group 2b projects.	Sr. Civil Engineer
Training	C.3.c.	Provide training to staff on Group 2 requirements, as needed.	Campbell's Sr Civil Engineer/Stormwater Rep attended SCVURPPP's C.3 workshop on June 14, 2007. Public Works Staff also attended monthly West Valley training meetings on 8-1-06, 2-27-07, 11-28-07 and 12-19-07, where	Sr. Civil Engineer WVCWP to assist

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
			implementation of current and proposed C.3 requirements were reviewed and discussed. On 6/6/07, Campbell's Sr. Civil Engineer offered APWA webcast training on "Low-Impact Development and What it Means to Public Works". The City Engineer, three Engineering Dept staff and the WVCWP Mgr attended the webcast. See the Planning Procedures training summary at the end of this section for additional training.	
C.3.e Operation and Maintenance of Treatment BMPs				
BMP Inspection Program O&M Verification	Permit C.3.e.iii	Report on treatment BMP's O&M verification program. Note organizational responsibility, evaluation of effectiveness, and planned improvement to the program. Include a list or summary of treatment BMPs inspected during the year, inspection results, and any required follow-up and correction.	The City did not conduct any BMP O&M inspections during FY06-07. Two projects are scheduled for O&M inspections in August 2007. The City's Building or Public Works Department staff or an outside consultant will conduct the inspections. Location and the type of the BMP treatment to be inspected will determine which staff or consultant will perform these inspections.	Sr. Civil Engineer & Engineering and Building Inspectors
Training & Evaluation	Work Plan	Training & Evaluation Continue to provide training to inspectors and data managers on O&M verification program. Discuss evaluation of effectiveness and planned improvement to the program	On March 5, 2007, Campbell's Sr. Civil Engineer, the WVCWP Mgr and Stormwater Discharge Inspector attended SCVURPPP's BMP O&M meeting to review the co-permittee's use of standardized inspection forms and the collection of required information for the database. County Vector Control staff was present to discuss how agencies would provide immediate information on types and locations of built treatment measures so that Vector Control would be able to document and inspect potential problem areas to prevent the spread of West Nile Virus. Campbell's Sr. Civil Engineer/Stormwater Rep attended SCVURPPP's June 14, 2007 workshop which included training on conducting BMP O&M Inspections. Detailed	Sr. Civil Engineer WVCWP to assist

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
			aspects of the verification program were reviewed at WV's monthly meetings (8-1-06 & 3-27-07).	
C.3.f Hydromodification Management Plan				
HMP – Hydrograph Modification Mngmt Plan	C.3.f	Implement the HMP, as approved by the Water Board, as part of requirements for Group 1 projects that may cause increased erosion or other related impacts. (Incorporate the HMP Report's standards, in their final state as approved by the Water Board, into the City's project approval process.)	Campbell has required HMP implementation for applicable Group 1 projects since Oct 20, 2005. There were no qualifying projects for HMP in FY06-07. The City will continue to track regional implementation of the HMP.	Sr. Civil Engineer/ Sr. Planner
Training		Provide incremental training on HMP requirements to City staff via SCVURPPP workshops and/or in-house staff training.	The WVCWP Mgr participates in the C3PO AHTG meetings to track C3 implementation progress, including information on implementation of the HMP. Proposed revisions to the HMP were reviewed during the West Valley Communities' round table discussions regarding the administrative drafts of the MRP in November '06 and in June '07. .	SCVURPPP/ Sr. Civil Engineer Engineering, WVCWP assists with coordination of training
Reporting	C.3.f.viii	Provide development and implementation status and a summary of projects incorporating HMP measures in the Annual Report	Campbell has not had any projects which meet the criteria for required HMP implementation during FY06-07. Most of the parcels in the City of Campbell are well below the 50 acre HMP threshold, or will not meet the criteria for HMP requirements. Consequently, the City does not anticipate any projects in Campbell that will be regulated by the current HMP requirements.	Sr. Civil Engineer
C.3.g Waiver and Compensatory Mitigation Program				
Alternate Compliance	Permit C.3.g.	Provide information on any projects allowed to implement alternative compliance measures during FY06-07.	All Group 1 and Group 2 projects are required to implement C3 requirements. Currently, the City does not offer an alternate compliance option to developers.	Sr. Civil Engineer Per Regional Water Board's approval

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
C.3.h Alternate Certification				
Alternate Certification reporting	Permit C.3.h	List the projects certified by someone other than municipal staff and mechanism for ensuring that outside certifiers are qualified in the Annual Report.	All projects in the C.3 part 1 and part 2 annual report tables were certified by civil engineers. Campbell requires the developer to select from the City's list of qualified civil engineering consultants. The list is on the City's website at the following link. http://www.cityofcampbell.com/PublicWorks/Resources/List%20of%20Qualified%20Consultants%20to%20Certify%20Storm%20Water%20Management%20Plans.pdf	Sr. Civil Engineer
C.3.j Site Design Measures Guidance and Standards for Development				
Site Design Measures Guidance and Standards	(Permit C.3.j.)	As feasible, continue to review local site design standards and guidance for possible revisions that would reduce impacts to water quality. Summarize updated status, if any, in the Annual Report.	Campbell's Community Development Director was active in the SCVWD's Collaborative effort. The City Council will adopt the Guidelines and Standards developed by the Santa Clara Valley Water Resources Protection Collaborative before 2008. The City encourages site design measures for water quality benefit on all projects. Examples of Site Design measures are listed on the *C3 Data Form,* provided to all Group 1 and Group 2 project applicants. The Form is also on the City's website. See page 3 at the following link: http://www.cityofcampbell.com/PublicWorks/Resources/NPDES%20Permit%20Provisions%20C3%20Data%20Form.pdf	Community Development Director/ Sr. Planner &
C.3.k Source Control Measures				
Source Control Measures	Permit C.3.k.	Whenever practicable, stormwater pollutant source control measures are incorporated into all development projects.	The City encourages source control measures for water quality benefit on all projects. Examples of Source Control measures are listed on the *C3 Data Form,* provided to all Group 1 and Group 2 project applicants. The Form is also	Sr. Civil Engineer/ Sr. Planner &

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
			on the City's website. See page 3 at the following link: http://www.cityofcampbell.com/PublicWorks/Resources/NPDES%20Permit%20Provisions%20C3%20Data%20Form.pdf	
C.3.l General Plan Update				
General Plan	Permit C.3.l	Revise General Plan, at next planned update, to reflect principles and policies needed to address C.3 requirements.	The City of Campbell will begin work on General Plan revisions in 2008 for adoption tentatively in 2009.	Community Development Director and Sr. Planner
C.3.n Reporting Requirements				
C3 Project Reporting	Permit C.3.n.i. (C.3.c.)	Report on Group 1 and Group 2 projects that received final approval for construction during FY06-07. List project name, location, project type, size, and sq. footage of impervious surface area.	See the attached Part 1 table of Campbell's New and Redevelopment Projects Reporting Forms. Campbell did not approve any additional Group 1 or Group 2 projects in FY06-07, though five Group 1 and 2 Group 2 projects have been deemed complete and may be approved in FY07-08. One Group 1 project that was approved in FY05-06 was not reported last year and was therefore reported in FY06-07.	Sr. Civil Engineer/ Sr. Planner collect data
C3 Project Reporting	Permit C.3.n.ii.	For Group 1 and Group 2 projects, report type of treatment BMPs used, numeric sizing criteria used, O&M inspections, and any follow-up actions. Note site design and source control measures for each project.	See the attached Part 2 table of Campbell's New and Redevelopment Projects Reporting Forms. Campbell did not conduct any O&M inspections during FY06-07. Three O&M inspections are scheduled for August 2007.	Sr. Civil Engineer/ Sr. Planner collect data
Report Pesticide Reduction Measures	NPDES Permit Provision C.3.n.iii	For Group 1 and Group 2 projects, describe the types of pesticide reduction measures required. Give the percentage of new development and significant redevelopment projects for	The document, *Landscape Maintenance Techniques for Pest Reduction,* is reviewed with Group 1 and Group 2 project applicants and included in the application packet. Campbell also has the document on the City's website at: http://www.cityofcampbell.com/PublicWorks/Resources/Lan	Sr. Civil Engineer/ Sr. Planner collect data

		which pesticide reduction measures were required.	dscape%20Maintenance%20Tech%20for%20Pest%20Reduction.pdf	

Planning Procedures Evaluation

During FY06-07, Campbell Public Works Engineering staff worked closely with Community Development and the WVCWP to streamline the procedures for Group 1 and Group 2 project applications. Several of the City's C.3-related documents are on the City's website at http://www.cityofcampbell.com/PublicWorks/StormWater.htm

Evaluation of BMP O&M Inspection & Verification Program

The City's Sr. Civil Engineer/ Stormwater Rep attended the BMP O&M work group meeting on March 5, 2007 to provide input on the finalization of SCVURPP's BMP O&M inspection forms. The City has committed to using the finalized forms to facilitate the synthesis of county-wide data. The City's Civil Engineer also participated in WVCWP meetings (8-1-06 & 3-27-07) where three West Valley cities considered BMP inspection procedures (in addition to SCVURPPP-standardized inspection forms) which would facilitate implementation, e.g. procedures for reporting constructed treatment measures to County Vector Control and producing a single-page laminated list of information about BMPs for inspectors.

Although no BMP O&M Verification inspections have been required to date, two projects, including the Group 1 McGlincy project listed in project reporting table, are scheduled for inspection in August 2007. Staff in both the Public Works and Community Development Departments are continuing to evaluate how to improve the efficiency of the O & M Verification program. The Standard Operating Procedures in the City's URMP state that Public Works Engineering staff are available to conduct inspections of stormwater treatments at Group 1 and Group 2 sites. However, depending on the type and location of stormwater BMP treatment, Campbell is also prepared, if necessary, to hire an outside civil engineering consultant to perform this task.

Reporting Group 1 and Group 2 Projects

Of the three Group 1 projects reported last year, two are scheduled for an O&M inspection in August 2007. One project is still under construction as of June 30, 2007. Campbell has five Group 1 projects that have been deemed complete, but have not received final approval. The City also has two Group 2 projects that are deemed complete but not approved for construction. These projects will be reported if and when they are approved. Campbell failed to report one Group 1 project in FY05-06, the project on McGlincy Lane, which appears in FY06-07 project report tables. O&M inspections on the McGlincy Lane project are scheduled to begin on 8/22/2007. Campbell did not have any Group 1 or Group 2 projects that were approved for construction during FY06-07.

CITY OF CAMPBELL

CONSTRUCTION INSPECTIONS

FY 2006-2007 Work Plan Self Evaluation Matrix

Source	WP Task	Work Plan Tasks	Accomplishments	Responsible Party
	URMP	Staff Training Participate in and support SCVURPPP sponsored workshops/ info sessions on erosion control and construction BMPs; support distribution of related materials.	On December 5th Campbell's Sr Construction Inspector and Sr. Civil Engineer attended the SCVURPPP's Construction Site Management and Erosion Control Workshop. WVCWP's Stormwater Discharge Inspector and Manager also attended.	WVCWP to coordinate w/ SCVURPPP; attend by City inspectors, Sr. Civil Engineer
	URMP	Construction Inspections Continue construction site inspections for stormwater issues (i.e., dirt tracking, mat'l storage, housekeeping, etc.).	Campbell staff inspected all construction sites for stormwater issues. Problems related to stormwater requirements were addressed and verbal notices to comply were issued. Compliance was monitored by Staff. Large commercial projects were monitored monthly and were required to be certified by project Civil Engineers for compliance. During FY06-07 the City of Campbell issued permits for 3 new commercial buildings, 46 new residential units, 23 new non-habitable accessory units, 10 grading permits, 30 demolition permits, 214 residential remodel/additions, and 34 commercial tenant improvements. See attached spreadsheet. Any need to remind contractors about construction BMPs was handled successfully by the City's Building Inspectors. Additionally, two construction site-related, potential stormwater incidents were referred to the WVCWP Inspector by other agencies for follow-up. One potential paint-discharge violation was called in by a citizen. The attached spreadsheet provides incident details and resolution.	Bldg Official, City Inspectors and Sr. Civil Engineer

CAMPBELL

FY 2006-2007 ANNUAL REPORT

Construction Inspection Evaluation

Construction Site evaluation:

FY06-07		Previous Year - FY05-06	
Paint Discharge	2	Paint Discharge	1
Oil Discharge	1		
Total Number of Incidents	3		1

The number of incidents is the same as for the previous year. In FY06-07 three construction related incidents were reported to WVCWP; two were due to paint discharges. Last year the only construction related incident reported was a paint discharge. In FY06-07 one incident was reported by the Fire Dept outside of the Fire Dept staff's regular inspection time. This shows that training on stormwater issues for Fire Dept staff (who are also IND inspectors for WV communities) has been effective. The City's Construction Inspectors handle most of the incidents that can be easily and quickly resolved. This year the WVCWP Inspector and Program Manager met with Campbell Engineering Inspectors in May to discuss requirements for construction inspections and the importance of documenting violations even if the incident is immediately resolved. Campbell inspectors say that if there are construction site problems, they are resolved very quickly because contractors and project managers are quick to comply.

The number of reported incidents may increase when WVCWP's half-time Inspector has time for drive-by inspections to watch for minor remodeling jobs, which do not require a permit. Smaller home improvement jobs i.e. painting, landscaping, re-flooring, re-tiling and concrete replacement, etc. can go unnoticed, but do contribute to stormwater violations. In FY06-07 the WVCWP inspector spent most of his time responding to incident calls and conducting pro-active inspections of restaurants and vehicle maintenance facilities.

The Construction Inspection Program currently works well – During FY06-07 the WVCWP made it a priority to provide additional training on construction inspection requirements and to encourage self evaluations of municipal inspection programs. Several WV meetings and municipal training sessions were held to discuss BMPs, URMP requirements and documentation of inspection activities. It was determined that inspectors would benefit from a review of documentation requirements. An email notice to that effect was sent to building inspectors prior to the rainy season on 10-4-06. The Construction Inspection training table details the training sessions attended and conducted in FY06-07.

A. SCV PROGRAM - PROJECTS/SUPPORT				
	NPDES Permit, Provision C.4,	Watershed Education and Outreach Campaign Help to develop/implement the 2nd multi-year watershed education and outreach campaign. Participate in campaign development and special projects, e.g. community events. Campaign will include funding for educational programs at the Alviso Ed Center and funding for ZunZun performances in local schools.	WVCW Pgm Mgr assists via participation in the Watershed Education and Outreach Ad Hoc Task Group. WVC helped plan and implement the Watershed Watch campaign aimed at IPM and Mercury Pollution Prevention. These topics were chosen based on feedback from the March 2006 Focus Group. *Watershed Watch Media Campaign* The FY06-07 campaign featured ongoing IPM and Mercury ads in community newspapers. The WV communities, (along with 3 other cities and the County Integrated Waste Mgmt Division) contributed additional funds (totaling $17,535 in all) toward media buys. WVCWP regularly provide staff support for Program outreach events: *Pumpkins in the Park Event on Saturday October 14,2006* 2 WVCWP staff members worked the Watershed Watch booth at the Pumpkins in the Park event. This event was held on Oct 14 at Discovery Meadow in front of the Children's Discovery Museum. Guadalupe River Parks and Garden (GRPG) volunteers helped oversee the stormwater bean bag game which gives children an opportunity to choose appropriate methods for disposing	WVCWP staff

			commonly-generated waste. WVCWP staff spoke with residents and gave them recycled money pencils engraved with the WVCWP website address. *Home and Garden Show on Sunday 4/29/2007.* 3 WVCWP staff members worked two shifts at the San Jose Convention Center. In addition to distributing informational materials, WVCWP staff handed out gutter getters, *What You Don't Know About Mercury* brochures from HHW, "The Original Earth-Friendly Pest Control" flyswatters, pencils engraved with Household Hazardous Waste website and phone number and mercury-free thermometers, among other give-away-products. WVCWP spoke with at least **211** people. Attendees showed interest in less-toxic gardening methods. Some people were interested in controlling specific pest infestations. Other topics included safe fluorescent bulb disposal, and safe paint and pesticide disposal.	
	NPDES Permit, Provision C.4, C.9 & Pest Mgt Plan (PMP)	Pesticide User Outreach Project Continue to provide funding and to participate in Our Water Our World IPM Store Partnership. Project scope will include items in Program's Pesticide Management Plan based on provision c.9.d of the Permit for outreach to residents, commercial businesses, and pest control operators.	The WV Clean Water Program Manager participated in the SCVURPPP IPM Ad Hoc Task Group and provided staff for all of the Program's public outreach events. WVCWP also provided additional funding for the local IPM media campaign. The FY 06-07 WW Campaign adopted a top-of-mind-awareness or frequency-based approach to media, running ongoing consistent IPM ads in community newspapers *Summerwinds Garden Center* Campbell, March 19, 2007 WVCWP staff met with Summerwinds staff and provided **200 Grow it Guides** for distribution to Garden Center	WVCWP staff

			exchanged at the 06-07event.	
	WVCWP Public Service Event	*Public Outreach Event*	***Free** E-Waste Recycling Event April 28,2007* Recycling of TVs, monitors and all office electronics. The event was sponsored by the four West Valley Cities through the *Clean Water Program*. It was held at the City of Saratoga's North Campus, on Prospect Road in Saratoga. The event was for West Valley businesses, residents and schools. However, it was open to the general public (CA residents). A Banner and Flyers were created. WV staff **distributed 123 flyers** for posting at 67 businesses from April 10th to the 24th. **270 E-Waste Event flyers** were taken home by private-school students in Saratoga, where WVCWP staff gave two classroom presentations. The event was also advertised via notices on municipal web sites. **170 cars** brought E-waste for recycling. Staff greeted drivers and surveyed them on behaviors associated with improper E-waste disposal. Give-away-items were provided to encourage participants to use convenient drop-off locations at partnering hardware and home improvement stores.	WVCWP Staff coordinated with municipal staff

Public Information/Participation Program EVALUATION - *SCV Program Projects/Support*

Pesticide User Outreach - STORE PARTNERSHIP:

Managers of Summerwinds Garden Center in Campbell have shown their interest in less toxic products. In fall of 2006 Summerwinds' store management chose to participate in the IPM store partnership displays being introduced at two other gardening stores. A consultant representing SCVURPPP's Watershed Watch and OWOW campaigns worked with the Campbell store to increase shelf space and display exposure for the promotion of less-toxic products. Sales of less-toxic

products rose by a noticeable percentage in FY06-07 (exact figures are not given, as the store does not wish this information to be publicized).

Mercury Pollution Prevention Outreach – THERMOMETER EXCHANGE:

This regional thermometer event was organized by the Bay Area Pollution Prevention Group (BAPPG). The "Spring Thermometer Exchange" program was advertised on www.baywise.org . Twenty Bay Area agencies were supported with clear guidance and an extensive advertising campaign, including ads in the San Jose Mercury News and the San Francisco Chronicle. The WVCWP Manager previously considered holding an event but rejected the idea because of concerns that it might not be feasible with the limited staff resources for West Valley public outreach events. The Manager heard about the BAPPG event a little late, through discussion at a Watershed Watch ad-hoc task group meeting. The outcome was that a regionally organized thermometer exchange was relatively easy to staff and implement locally. Since FY06-07 was the first year of this specific partnership, some agencies, including WVCWP, ended up with events scheduled a few days prior to the commencement of the advertising campaign. The West Valley Clean Water Program is now a member of the BAPPG and on the regional BayWise website: http://www.baywise.info/index.cfm?fuseaction=links&categoryID=8F785744-40CA-38F9-55F3387AE0E4551C In the future the West Valley thermometer exchanges will be coordinated with BAPPG events to take advantage of regional exposure and advertising. The BAPPG event summary is attached at the end of this report section.

Mercury Outreach - E-WASTE RECYCLING EVENT:

WVCWP designated staff time and funds to organize a Free E-Waste Recycling Event for West Valley residents, businesses and schools, and to publicize safe and legal disposal of Mercury and Copper-containing items. As a follow-up to WV's very successful 2006 "TV and Monitor Collection Event", WVCWP responded to residents' requests and delivered a similar, broader **all-product E-Waste Event** in April 2007. The event was held at a centrally-located and easily-accessible site - City of Saratoga's North Campus.

The WV cities found that a free E-Waste recycling event provides a meaningful way to effect behavior change, while providing a platform for conducting community outreach and education on this topic. Outreach resulted in completed surveys from **170** drivers and discussion with each driver (and most passengers) about disposal of hazardous waste.

The WVCWP advertised the event by distributing flyers and painting a large banner for the site. The *Los Gatos Weekly*, the *Saratoga News,* and the *Campbell Reporter* also carried Calendar section notices about the event. A strong emphasis was placed on the use of a responsible recycling firm. By using a responsible recycler we help prevent export of our waste to foreign dumps where mercury leaches into the environment. The results of surveys taken during the event showed that the banner was probably the most effective form of outreach among the 4 different outreach techniques mentioned. Attendees learned about the event via:

62 via banner - 33 via flyer - 28 via websites – 13 via newspaper - 19 via "other", which in most cases was specifically stated as "my wife" (15 – no response). The "my wife" answer provides some insight as to which target audience may be a good catalyst for behavior change in the West Valley communities.

			community event banner, and written or email responses to public inquiries and calls.	
General	CI Item	WVCWP Website Revisions While promoting the website, continue to expand and update the site with new educational material and up-to-date topics for the public on HHW, pest management, and other pollutant reduction e.g. mercury, trash, & copper /nickel	WVCWP posts information about Trash Cleanups for National River Clean Up Day and Coastal Clean Up Day on the *Cleancreeks.org* Home page to announce these events. Mercury and Copper issues were featured prior to the April E-waste event. The "Take Action" page was revised to include links to the UC Davis IPM site for residents interested in less toxic pest control. In addition, the page now highlights the question of home and garden chemicals' safety, with links to sites on toxicity information. During FY06-07, WVCWP staff developed drafts for new versions of the "About Us" page, to feature NPDES and stormwater information, and the "Take Action" page, to offer a variety of ideas and links leading visitors to useful next-step information. Work on the new website pages is planned for FY 07-08, but is contingent upon the amount of staff time that will be available after negotiating and preparing for implementation of the new MRP requirements.	WVCWP Staff
CITIZEN PARTICIPATION				
Public Partici-pation	Trash Monitoring Work Plan	Creek Clean-ups Continue implementation of trash monitoring activity during Creek Clean-ups. Conduct a minimum of two clean-up events (i.e. on Coastal Clean-up Day and National Rivers Day).	**Trash Monitoring was conducted at 4 different Clean-up sites in FY 06-07.** See *Trash Management* (Section #10) for results. Two of the creek clean-ups were held at an established site: San Tomas Aquino Creek next to Westmont High School (which serves Campbell, Los Gatos, Monte Sereno	WVCWP Staff & WVCWP Staff to coordinate with Municipal Staff

West Valley Communities

Santa Clara Valley Urban Runoff Pollution Prevention Program

			and Saratoga students). WVCWP sponsored creek cleanup and trash monitoring events on 9-16-06 and 5-19-07. High school student volunteers have proven to be receptive to helping with Trash Monitoring. Students and other volunteers were trained to conduct trash monitoring and told why trash has become a pollutant of concern (POC) for the S.F. Bay area. **A third Clean-up was sponsored by WVCWP in partnership with Sacred Heart Elementary/Middle School** 4/18/07 Saratoga. The school is in Saratoga, but serves students from all WVCs. Students and parents participated in the Clean-up and Trash Monitoring. Prior to the event, 4th and 5th grades participated in Enviroscape watershed model demonstrations, where trash issues were discussed in great depth. **City of Campbell sponsored one Clean-up**. This event was held as part of the "Great American Pickup Day" (May 19, 2007). It was well promoted regionally and via the City's website and Public Works staff. About sixty volunteers participated and worked on a variety of sites, including sites along Los Gatos Creek Trail, the railroad tracks next to Winchester Blvd. and short Freeway stretches, picked up by volunteers under the supervision of Caltrans staff. Due to the scattered nature of the sites for this event, WVCWP used slightly simplified monitoring methods. Community volunteers were agreeable to tracking and estimating trash and filling out the forms.	

West Valley Communities

Santa Clara Valley Urban Runoff Pollution Prevention Program

			WVCWP conducted a survey with all participants to find out where they would dispose of fluorescent bulbs and gave everyone an HHW information booklet which lists places to "drop off" used hazardous items (including fluorescent bulbs). Also conducted a Mercury fever thermometer exchange, providing 26 digital solar thermometers to participants.	
TARGETED OUTREACH & SCHOOLS				
Targeted Schools	Expand Outreach to Teachers and Students	Schools Outreach: Watershed Ed. Curriculum Continue to build on 5th grade curriculum for WVCWP classroom watershed presentations, consistent with state required education standards. Expand outreach efforts by developing scripts based on state standards, or text books, for other grade levels in response to teacher interest. Evaluate effectiveness and appeal by soliciting teachers' & students' evaluations.	WVCWP staff made outreach presentations to two 5th grade classes, one 4th grade class, one 2nd-3rd grade class and 2 Kindergarten classes. Student's retention of stormdrain messages and recommended steps to protect their watershed was measured by developing a quiz for 4th and 5th grade students. The Science teacher administered the quiz three weeks after the classes participated in the watershed activity. Responses showed that sixty-five out of sixty-eight students were able to correctly list two actions that they would take to protect their local watersheds. Two sample quizzes with students' responses are included after the evaluation at the end of this report section. Development of an appropriate script for Kindergarten students was a focus of the 06-07 outreach efforts. The interactive presentations developed for the Kindergarten classes were well-received by teachers and students.	WVCWP Staff

Schools	feedback from Teachers and Students	classrooms Conduct water quality protection education or presentations in local schools, using *Enviroscape* and/or other methods to engage students in Watershed campaign messages.	students, parents and teachers. The hardcover book *"All The Way to The Ocean"* is presented to teachers who welcome WVCWP presentations into their classrooms. The book can be shared amongst teachers, and read to new classes each year or borrowed by parents to read to younger siblings, so that the message of stormdrains being linked to the Bay and the Ocean is shared with others. It is hoped that this permanent classroom resource will also remind teachers that stormwater presentations are available to their classes. Three "All The Way to the Ocean" books donated (1 Sacred Heart, 1 St Mary's, 1 Allen at Steinbeck) *Guadalupe Elementary, San Jose 10-23-07* **25 5th grade students** participated in a demonstration and activity. Using a simple model, WVCWP staff, working with Environmental Volunteers docents, demonstrated the role of watersheds and wetlands as a filter of sediments and pollutants and how wetlands act as a retainer for water and a refuge for many different organisms. Students built a model using interactive watershed and wetland kits. Students learned about protecting San Francisco Bay emphasizing runoff, wetlands, marshes, filter, absorption, and pollutants. *K.R. Smith Elementary, San Jose 12-12-06* WVCWP staff, working with Environmental Volunteer docents gave Twenty-one **2nd and 3rd grade students** an opportunity to participate in an interactive Water Cycle demonstration and related activities, to understand how we use and reuse water. WVCWP's Intern developed a	arrangement w/ Teachers

			song to help students remember the stages of the Water Cycle and the concept of Runoff. All students learned the words to the song with enthusiasm. The presentation emphasized evaporation, condensation, precipitation, transpiration, absorption, percolation, run-off, aquifer, groundwater, water table and the understanding that the amount of water on Earth now is the same amount there has always been and the same amount there always will be. After the presentation students were asked to place water words on the water cycle board in the correct location; **all students gave correct responses.** *Sacred Heart Private School, Saratoga* - Presentations *for* 4th and 5th grade Science classes on *3-28-07* **68 students** participated in Enviroscape watershed presentations to learn about reduction of pesticides, proper car washing, erosion control, litter prevention and trash cleanup, safe disposal of mercury products and using HHW for household hazardous waste. West Valley Staff customized curriculum to meet the Science teacher's needs (correlated to state standards for appropriate grade). Pencils engraved with the Clean Water Program's website and stormdrain slogans were distributed to students & teachers. Water vocabulary words (i.e. watershed, runoff, stormdrain, wetlands, pollutants and household hazardous waste) were written on the white board and emphasized throughout the presentation. Three weeks after the presentation sixty-eight students completed a watershed quiz developed by WVCWP staff. Sample quizzes with student responses are provided after the evaluation at the

			end of this section. *St. Mary's School, Los Gatos,* Kindergarten on *5-21-07* For this class of **30 Kindergartners**, the students were split into 2 groups. One group identified storm drains and used trash grabbers and gloves to pick up debris around the school yard. The second group participated in an Enviroscape activity whereby students added pollutants to the watershed, used sprayers to make rain and witnessed the effect that runoff has on the wildlife that live in and around the wetlands and the Bay. The Enviroscape watershed model activity showed children how daily behaviors can contribute to pollution in our local creeks and the Bay. Solutions to pollution were offered and reviewed during a wrap-up question period. West Valley staff built on last year's first-time experience presenting to a Kindergarten class, by redeveloping the script to make it more appropriate for kindergarteners. *Allen at Steinback School, San Jose 5-25-07* Kindergarten This class of **24 students** participated in the same activities as those described above for St. Mary's School.	
Targeted Schools	Expand Outreach to Teachers and Students	General Schools Outreach	**City of Campbell – Arbor Day Event** 4-26-07 This event was open to the general public. Arbor Day events were held at two schools with the intention of engaging teachers, students and parents. Campbell was honored for 25 years of Arbor Day events, and chose to celebrate via tree planting events at Capri Elementary and Rosemary Elementary.	City of Campbell PW staff

TARGETED OUTREACH				
Targeted Business	URMP	Mercury Pollution Prevention Plan Obtain or develop outreach material for distribution by IND Inspectors on Mercury Pollution Prevention and the proper disposal of fluorescent lights and batteries.	A new HHW information booklet, *What You Don't Know About Mercury May be Harmful to Your Health,* which lists places to "drop off" used hazardous items (including fluorescent bulbs) is being distributed. The IND inspectors said that businesses are very familiar with fluorescent bulb disposal requirements. WVCWP staff employed other public venues and events to distribute the information.	WVCWP w/ Sr. Haz Mat Specialist
Targeted Business	Permit Provision C.4	Education Distribute BMP materials during routine inspections of food facilities and automotive businesses. Discuss relevant educational material with businesses cited for potential stormwater violations.	During FY06-07, WVCWP supported West Valley Sanitation District (WVSD) staff by continuing an outreach strategy to report restaurants that have failed to use effective grease control BMPs. The WVCWP Inspector requests a copy of the restaurant's latest grease trap cleaning records. If the food facility does not have cleaning records or an invoice, the business is referred to the WV Sanitation District for follow up. The WVSD also provides an outreach poster to the business. This very effective poster emphasizes the importance of using BMPs and conducting good housekeeping and maintenance procedures.	SCC Fire; WV Inspector coordinate with WVSD
Reporting	NPDES Permit, Provision C.4	Evaluation/ Reporting Document or estimate (when possible) numbers of residents, students, municipal staff etc. reached by outreach efforts. Report number of calls, website hits and circulation or readership for newspapers or newsletters.	Events *September 16, 2006 Coastal Clean-up Day* – 40 student volunteers (via contact with staff at local high school) *April 18, 2007 Sacred Heart/ Wildcat Creek*– 42 students & parents *May 19, 2007, Nat'l River Clean-up Day* – 19 volunteers Families of over 1500 Westmont High School students	WVCWP Staff

Public Information/Participation Program EVALUATION – WVCWP PROJECTS				

Outreach – MATERIALS DISTRIBUTION:
The "Grow It Guide" (laminated, "fan-out" guide about less toxic controls for garden pests) has been one of the most popular outreach items among WVC's residents, both in general, and among the Garden Centers. However, WVCWP's supply of these items is running low. These are expensive to print, and are only reasonably priced when ordered in extremely large quantities. In FY 07-08, SCVURPPP intends to coordinate a bulk printing of Grow It Guides: this will facilitate increased distribution of this outreach piece at local West Valley events and venues.

Outreach – MEDIA BUYS FOR EVENT PUBLICITY:
In FY 05-06, WVCWP spent several thousand dollars to promote a free WVC E-Waste event; approximately 250 cars came through the event. Many of the drivers showed up with the news ad in hand. For FY 06-07, WVCWP chose to test less expensive methods of outreach and monitor the results. The 06-07 event was held at a different location, and three similar local events were offered by other agencies within the same month. Therefore, it's not possible to weigh the public response equally. However, the 06-07 E-Waste event did receive a respectable number of cars (170 drivers) even though no money had been spent on newspaper ads. According to the survey, the banner hanging at the site, prior to and during the event, was responsible for bringing in about 35% to 40% of the participants. WVCWP will continue to investigate reasonable and effective methods for advertising local events.

Outreach – PRESS RELEASE COVERAGE:
In the past, the WVC benefited from extensive media coverage in their local papers, which were delivered weekly to residents: the *Campbell Reporter*, the *Los Gatos Weekly Times* (also covered Monte Sereno), and the *Saratoga News*. All of these papers had been operating under the umbrella of "Silicon Valley Community Newspapers" (SVCN) and WVCWP staff had well-established contacts with SVCN staff. Unfortunately, a few of the reporters who enjoyed WVCWP's schools and outreach stories, and with whom WVCWP staff had developed a trusted working relationship, are no longer with the paper. During FY 06-07, all the SVCN papers were caught up in a process of acquisitions and mergers; this interfered with access to local reporters and coverage was limited for the WVCWP.

Targeted Outreach -- SCHOOLS: At Sacred Heart School, 68 students from a 4th grade and a 5th grade class participated in Enviroscape presentations. Emphasis was placed on relevant vocabulary. Three and a half weeks after the presentation, WVCWP Program Manager provided a watershed quiz for the teacher. Students completed the quiz as homework to evaluate their understanding and retention of watershed concepts. Students were asked to name two activities that they would do to help keep our creeks and Bay healthy. Sixty-eight students completed the watershed activity quiz. Sixty-five listed two activities that they would do to keep our local creeks and Bay healthy. Six students answered all eight questions correctly. Thirty-nine students said they would prevent litter or pick up trash. Six students will plant trees, plants, and flowers, (reduce impervious surface). One student would plant the "right kind" of plants (native plants). Three students would not wash cars in the driveway. Four students will pick up pet waste. Two students will put only water in the stormdrain. One

Alameda Countywide Clean Water Program

Project Summary

In May – July 2007, the Bay Area Pollution Prevention Group (BAPPG) coordinated a regional collection event for mercury thermometers and other mercury-containing devices. Together, 20 participating agencies and organizations collected **4,264** thermometers, 21 thermostats and 16 pounds of bottled elemental mercury at **30 one-day and ongoing events**. The BAPPG coordinated this regional effort, building capacity on how to conduct an exchange, organizing and developing regional advertising and outreach materials, developing a regional website and phone number with all event dates, hours and location.

The BAPPG coordinated with the Media Relations Committee of the Bay Area Clean Water Agencies and Bay Area Stormwater Agencies Association to develop press releases and a media kit. In addition, the BAPPG worked with the Media Relations consultant, O'Rorke for paid radio and newspaper advertising.

Follow up Questions from the

Classroom Watershed Activity

For questions 1- 5 please make a √ checkmark by the correct answer or answers.

1. A **Watershed** is

   a. A reservoir to store rainwater for use in times of dry weather or drought

   -1 b. All the creeks and streams that flow into the Bay or ocean

   c. All the land area that drains into a particular creek or body of water

2. **Runoff** is a word that describes

   a. The water that overflows from a clogged storm drain during heavy rains

   b. All of the rain, melting snow, and sprinkler water, that is not absorbed or infiltrated into the ground before it reaches the creeks or Bay

   c. Neither of the above

3. A **Storm Drain** helps to protect neighborhoods from flooding during heavy rains. In Santa Clara Valley the water that goes into a storm drain

   a. flows through a pipe system to a water treatment plant for removal of pollutants such as, pet waste, car oil, paint, exhaust particles, brake pad dust, car-wash water, pesticides, fertilizers and litter before it is released into the Bay

   b. flows directly into our local creeks and eventually into the San Francisco Bay

   c. can be found in a home in a bathtub, a kitchen sink, or in a toilet

-1 4. **Most water pollution is now caused by**

   a. industries or big manufacturing businesses

   b. some of people's every day activities

5. **Fluorescent bulbs** save energy and contain mercury. **When they burn out**

   a. put them carefully in the recycle bin

   b. Check (Santa Clara County Household Hazardous Waste) at www.hhw.org to find many safe, legal drop-off locations.

6. **Other than recycling, write down two more things that you will DO or NOT DO to help keep our creeks and Bay healthy for aquatic life and for people.**

   reduce toxic cemical use

   control pests naturaly

Thank you for keeping our Creeks clean!

All Correct

Follow up Questions from the

Classroom Watershed Activity

For questions 1- 5 please make a √ checkmark by the correct answer or answers.

1. A **Watershed** is
   a. A reservoir to store rainwater for use in times of dry weather or drought
   b. All the creeks and streams that flow into the Bay or ocean
   ✓ c. All the land area that drains into a particular creek or body of water
2. **Runoff** is a word that describes
   a. The water that overflows from a clogged storm drain during heavy rains
   ✓ b. All of the rain, melting snow, and sprinkler water, that is <u>not</u> absorbed or infiltrated into the ground before it reaches the creeks or Bay
   c. Neither of the above
3. A **Storm Drain** helps to protect neighborhoods from flooding during heavy rains. In Santa Clara Valley the water that goes into a storm drain
   a. flows through a pipe system to a water treatment plant for removal of pollutants such as, pet waste, car oil, paint, exhaust particles, brake pad dust, car-wash water, pesticides, fertilizers and litter before it is released into the Bay
   ✓ b. flows directly into our local creeks and eventually into the San Francisco Bay
   c. can be found in a home in a bathtub, a kitchen sink, or in a toilet
4. **Most water pollution is now caused by**
   a. industries or big manufacturing businesses
   ✓ b. some of people's every day activities
5. **Fluorescent bulbs** save energy and contain mercury. **When they burn out**
   ✓ a. put them carefully in the recycle bin
   ✓ b. Check (Santa Clara County <u>H</u>ousehold <u>H</u>azardous <u>W</u>aste) at <u>www.hhw.org</u> to find many safe, legal drop-off locations.
6. **Other than recycling, write down <u>two more things</u> that you will DO <u>or</u> NOT DO to help keep our creeks and Bay healthy for aquatic life and for people.**

To keep the bay healthy I will not wash my car in the driveway and pick up trash.

Thank you for keeping our Creeks clean!

FY 2006-2007 ANNUAL REPORT

Pesticide Management Activities Evaluation

PESTICIDE USAGE REDUCTION MEASURES – Pest Specific

CITY OF CAMPBELL

Campbell is implementing IPM in the following situations:

1) On-going - Yellowjackets:

- Campbell uses traps as the main means of control.
- Parks Maintenance staff tries to clean off picnic tables to prevent attracting wasps and ants.
- If a wasp nest in a tree requires treatment, the PCO uses a non-residual pesticide, and closes the hole in tree so wasps can't return to nest. Parks staff use home insulation spray foam to close the nest/hole; treatment has been successful in preventing return of wasps.
- Staff is evaluating new traps on an ongoing basis which use pheromone to attract wasps, dry fish to bring them into trap, and soap inside trap, which kills in 5-15 seconds

2) On-going - Weeds:

- Campbell uses a chipper to create mulch from green waste; this mulch is used for weed control wherever possible.
- Work Furlough labor hand hoes weeds where possible.
- Staff is investigating use of black plastic for 'solar control' of weeds on an ongoing basis, and determining spots where this would be feasible.
- Staff has been using the tractor with a boom mower for mowing weeds, instead of spraying roadsides and similar areas.

3) On going - Insects:

- In 02-03**,** Campbell controlled an Ash Whitefly infestation with a natural predator, a minute wasp. Since the wasps were ordered and released, they have continued to suppress the Whitefly population.
- Staff is identifying insects and utilizing IPM when appropriate instead of using insecticides. No new insects were identified in FY 06-07.

- Campbell has significantly reduced the spraying of pesticides for infestations of aphid and scale in the Urban forest by employing non-toxic horticultural oils and soaps.

Unfortunately, the City has certain species of street trees with aphid and scale infestations, and the less-toxic methods, including spraying with ultra-fine oil, have not had a noticeable impact on this pest population.

Despite the aphid and scale problem, the City has used NO organophosphate sprays to control the insects and **has implemented a program of injecting the infested trees with a systemic insecticide instead of a spray** (a spray might affect other areas than the targeted site; the systemic chemical stays within the tree). This is in keeping with the City of Campbell IPM Plan.

Staff will continue to investigate less-toxic control methods for aphids and scale insects on an ongoing basis.

3) Gopher Control: The City has implemented a policy of using mechanical traps for gophers instead of baits thus further reducing the use of pesticides.

4) IPM Solutions: City staff have participated in implementation of new County computerized "IPM Solutions Database Input/Response", which allows input of a pest problem and a response with IPM solutions. Staff refer to this database as needed.

RESULTS OF PESTICIDE USE REVIEW FY 06-07:

Campbell has taken a strong stance on pesticide use reduction in recent years, as evidenced by the extensive involvement in IPM training by City staff. The City's PW Superintendent and Parks Supervisor have actively been involved in regional IPM planning meetings and workshops.

Field Activities:

→ Through use of IPM practices Campbell was able to eliminate use of any OP pesticides for the past 5 years, (as compared to using 3.7 oz of diazinon for ant control in 01-02). Campbell has decreased its use of pesticides by using oils and soaps to control aphids and scale in the urban forest.

→ The City is making an effort to stress prevention (prevent weed growth, prevent pest infestations) where possible. Campbell is moving into use of IPM, mechanical and cultural controls, rather than chemical controls, as much as possible given budget and staff limitations.

→ Over the past several years, the Public Works Dept. has instituted improved methods of weed control in some parks and roadsides, such as using green waste to make wood chips, used as mulch to prevent weed growth. For the past 3 years, the City has been using its new specialized tractor with boom mower for mowing roadside & park weeds and to avoid spraying.

→ The City Public Works Dept. has instituted a policy of moving towards installation of more pest resistant trees and shrubs to minimize the need for pesticides; these efforts include removal of certain tree species (such as Tulip and Raywood Ash trees) from the City of Campbell's approved Street Tree List.

TOWN OF LOS GATOS

Los Gatos is implementing IPM in the following situations:

YELLOWJACKETS:

- Los Gatos uses traps as the main means of control.
- Parks staff uses steam cleaning on picnic tables to prevent attracting wasps & ants.

WEEDS:

- Los Gatos uses a chipper to create mulch from green waste; this mulch is used for weed control wherever possible.
- Los Gatos continues to arrange to receive free wood chippings from PG&E tree-trimming contractor. Mulch is used to reduce weed growth on roadsides, median islands, parking lot landscaping and in parks.
- Staff hand-pull weeds where feasible.
- Los Gatos purchased a flail mower to mow weeds in large areas.

RODENTS:

- Rats & mice are trapped by contractor (baits used as last resort).

INVASIVE SPECIES:

- Various species along Los Gatos Creek are hand-pulled by Native Plant Society volunteers.
- Scotch Broom is cut down by Parks staff and volunteers supervised by staff.

SCALE INFESTATION ON TULIP TREES

- Parks staff sprays trees with low concentration detergent & water

RESULTS OF PESTICIDE USE REVIEW FY 06-07:

→ Los Gatos staff has eliminated the use of any OP pesticides for the past 5 years (and in preceding years minimal OPs were used: such as .475 oz of diazinon for ant control in FY 01-02). Avoidance of OP use has been achieved through use of IPM practices and through seeking out less-toxic pesticides.

→ The Town is making an effort to stress prevention (prevent weed growth, prevent pest infestations) where possible. Los Gatos is moving into use of IPM and engineered, rather than chemical, controls as much as possible given budget and staff limitations.

→ In Town facilities, sanitation is being stressed as a means to prevent pest infestations (ants, mice, etc.) so that chemical controls will not be needed.

→ Over the past several years, the Public Works Dept. has instituted improved methods of weed control in some parks and roadsides, such as the arrangement for free wood chips which are used as mulch to prevent weed growth.

→ Los Gatos invested in purchase of a flail mower for staff to use in mowing weeds in large areas.

→ Volunteers work with the Public Works Dept. to trim back brush along the LG Creek Trail, and to remove invasive species.

CITY OF MONTE SERENO

The City of Monte Sereno has extremely limited City property – less than ¼ acre total of landscaped area. A landscaping contractor cares for City property, and is instructed to avoid use of pesticides. When gopher damage appears, the gophers are trapped. Weeds are hand-pulled.

CITY OF SARATOGA

Saratoga is implementing IPM in the following situations:

APHIDS:

2 trees with aphid problems were treated by injecting with a systemic pesticide to reduce to reduce environmental impact. The trees are located downtown with lots of foot traffic, where dripping was a problem, but the injections were able to manage the problem.

YELLOWJACKETS:

Saratoga uses traps as the main means of control.

Parks staff tries to clean off picnic tables every Monday to prevent attracting wasps & ants. The Parks Dept. purchased and installed 18 plastic tables (to replace existing wooden tables); the new tables are easier to keep clean and therefore attract fewer wasps.

No new nests were observed this year and NO Wasp Spray was used.

WEEDS:

Mulch spread last year has continued to be effective in FY 06-07 for weed control. *Last year Saratoga used free mulch from tree service contractor; this mulch is used for weed control wherever possible. Wood chips were dumped and spread as mulch on the unlandscaped medians on Fruitvale Ave (a major arterial)*. This action resulted in NO spraying on a half mile stretch of median which would otherwise be a problem area.

The Street Maintenance Dept. hired a landscape company to cut down roadside weeds twice this year instead of spraying; this cut pesticide applications from 4 to 2 for that task.

Hand hoeing/pulling of weeds is used where possible. Weekly walk-through with lots of hand weeding; Round-up is used when weeds begin to get out of control, such as springtime – the emphasis is on catching the problem early in an attempt to avoid having to spray larger areas later.

RODENTS:

A contractor is engaged to trap rodents in order to avoid poisonous baits; this is done when there is an outbreak of a number of rodents at once. A PCO was hired to use baits in areas where trapping failed. No pesticides were used within City Parks for mole / squirrel / gopher control. A Contractor (Ken Fuson) was hired to trap all reported invasions where turf or landscaping plants where threatened. The contractor sets up a cordoned off area using Macabee traps.

MEDIAN LANDSCAPING:

Policy is to install pest resistant shrubs and landscaping and avoid high-maintenance, low-pest resistance turf and greenery.

West Valley Communities

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2006-2007 ANNUAL REPORT

MICROSPRAY IRRIGATION:

Microspray irrigation systems have been installed in the Heritage Orchard and computerized irrigation systems are used in medians, to reduce any possible runoff which could carry pesticides. Installations are on-going as budget allows; 50% are now computerized. Main medians on major arterials have all been completed.

Two more Electronically Timed controllers were added to City landscaping to monitor water usage and avoid runoff. Nozzles continue to be modified to optimize spray.

RESULTS OF PESTICIDE USE REVIEW FY 06-07:

The City is making an effort to stress prevention (prevent weed growth, prevent pest infestations) where possible. Saratoga is using IPM and engineered, rather than chemical, controls as much as possible given budget and staff limitations.

Over the past several years, the Public Works Dept. has worked on landscape design and improved irrigation systems which will reduce need for pesticide/herbicide use, and reduce any potential runoff which could carry pesticides.

Natural insect controls include use of traps for wasp control, and soapy water for ant control.

Through these types of efforts, Saratoga is progressively reducing chemical pesticide use.

Pesticide Use by Contractors

City of Campbell FY 06-07

Campbell - Pesticides used by Killroy on City property July 1, 2006 thru June 30, 2007

Product Name	EPA #	Chemical Content	Total oz/CA	Target Pest
PT515 Wasp Freeze Aerosol N-active	499-153-ZA	.05% Pyrethrins, .12% Rotenone, .28% Cube Extracts, 2.8% Pine Oil, 11% Methylene Chloride, 13.75% Petroleum Distillates, 20% Freon 12, 20% Trichlorofluoromethane, 32% Tetrachloroethylene	17 oz	Wasps

EcoWise Certification Presentation Management Committee Meeting (Jan. 15, 2007) **PowerPoint Presentation from EcoWise Certification Program** Presented orally with PowerPoint printouts at WVCWP meeting (Feb. 27, 2007) **Topics:** Certified practitioners employ techniques to control pests while minimizing the need to use pesticides. EcoWise Certified professionals can manage ants, roaches, flies, spiders, rodents, stinging insects, bed bugs and many other pests. EcoWise Certification does not cover termites or other wood destroying organisms. **EcoWise Certification Program** **EcoWise Certification availability for interested Pest Control Contractors** **Using EcoWise contractors for municipal structural pest control** **Encouraging municipal Pest Control Contractors to attain EcoWise certification** **Finding EcoWise certified contractors** **Staff who viewed presentation later presented info to municipal Parks and Facilities Maintenance Supervisors.**	Jan. 15, 2007 & Feb 27, 2007	**WVCWP (1)** Program Manager **Campbell (1)** Senior Civil Engineer **Los Gatos (1)** Senior Engineering Technician **Saratoga (1)** Public Works Analyst

Mercury Pollution Prevention Activities

City of Campbell

Town of Los Gatos

City of Monte Sereno

City of Saratoga

CAMPBELL

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2006-2007 ANNUAL REPORT

MERCURY POLLUTION PREVENTION ACTIVITES

FY 2006-2007 Work Plan Self Evaluation Matrix

Source	WP Task	Work Plan Tasks	Accomplishments	Responsible Party
Mercury Plan (I.D.)	Mercury Policy	Continue Implementation of municipal mercury policy requiring the virtual elimination of mercury from controllable sources in urban runoff from agency operations.	Campbell adopted a mercury elimination policy during FY 03-04 and has continued to phase out mercury containing products, with the exception of fluorescent bulbs.	Sr. Civil Engineer/Public Works Supt/ Facilities Maintenance Mgr
Mercury Plan (I.E.)	Guidelines for Hg Containing Products Reduction	Continue implementing phase-out of mercury-containing products (MCPs). Phase-out will coincide with replacement of MCPs on an as needed basis. Provide municipal staff with a reminder notice.	Reduction of mercury-containing products is being implemented. Research on alternative products has been conducted through the WVCWP and non-mercury or low-mercury replacements are being used wherever feasible e.g., thermostats and fluorescent bulbs. West Valley Stormwater Reps review the mercury plan at least once a year during WVCWP meetings and coordinate follow up reminders with municipal staff.	Sr. Civil Engineer/Public Works Supt/ Facilities Maintenance Mgr
Mercury Plan (II.B.)	Disposal Services	Provide Mercury Containing Product Disposal Services to Residents and Small Businesses	Provided through funding and participation in County HHW program for residents and small businesses	Public Works Director and City Manager
Mercury Plan (II.C.)	Disposal of Mercury Containing Products	Track recycling, replacement, and reduction in use of mercury-containing products. If feasible, document quantities of fluorescent lamps (from City buildings and departments) which are disposed of at hazardous waste collection facilities in FY 06-07.	The City's used fluorescent bulbs were collected from Nov. 2004 – March 2006. The following numbers of bulbs were disposed of by the City's HHW contractor. (AERC Recycling Solutions of Hayward, CA): **133- U Shape and compact, 589- 4 foot and 17- 8 foot** The City collects mercury containing products on site until they have a truckload. AERC picks them up. All bulbs are kept in cardboard containers. Everything is categorized and logged in City records. Signal & Lighting Dept reports that Campbell disposed of 480 LPS and 250 HID lamps in Jan. In April 2007, the City disposed of an additional 150. All lamps have been sent to AERC for proper disposal. City	Public Works Supt & Facilities Maintenance Manager

CAMPBELL

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2006-2007 ANNUAL REPORT

Source	WP Task	Work Plan Tasks	Accomplishments	Responsible Party
			employees put used batteries in recycle bins located throughout city departments for pick up by HHW.	
Mercury Plan (II.F)	Fluorescent Light Recycling Program	Continue participation in the Mercury Ad Hoc Task Group and support on-going implementation of an outreach program to educate small businesses and conditionally exempt small quantity generators about recycling fluorescent lights.	The WVCWP Manager helped develop local campaigns and outreach messages through SCVURPPP's Mercury Ad Hoc Task Group. WVCWP staff helped publicize the partnership with stores that provide convenient fluorescent bulb drop-off sites for local residents and small businesses.	SCVURPPP & WVCWP to coordinate w/ HHW staff
Mercury Plan (II.F and V.C.)	Work with HHW Collection Agencies	Help publicize fluorescent light recycling program. Coordinate educational outreach with fluorescent light recycling events sponsored by HHW.	WVCWP staff distributed HHW drop-off information to Bay Area residents at several community events and surveyed local public attitudes and behavior to evaluate the success or need for outreach efforts. Disposal of fluorescent bulbs was covered in classroom presentations. PIP efforts are noted in the evaluation at the end of this section and in the Public Information & Participation section of this report.	WVCWP staff conducts public outreach and coordinates with WV Stormwater Rep

Mercury Pollution Prevention Activities Evaluation

On April 28, 2007 a Free Hazardous Waste Recycling Event and **Mercury Thermometer Exchange** was sponsored by the West Valley cities. WVCWP hired additional staff to help greet drivers and raise awareness in the local communities about the *Clean Water Program* and about proper disposal of mercury containing products. *What you Don't Know About Mercury* brochures, provided by HHW, relayed the message that mercury containing products such as fluorescent bulbs, batteries and fever thermometers can leach mercury (a neuron-toxin) into our landfill and ground water, and that by using a responsible drop-off location people can help keep mercury out of our creeks and the Bay. Recycled money pencils, printed with contact information for HHW were given to drivers as a gift for taking a survey. Most participants were interested and responded positively to receiving information with phone numbers and addresses of store partners that serve as collection sites.

Drivers of 170 cars brought their used electronics for recycling to the E-waste collection on 4-28-07. WVCWP and HHW representatives were there to greet the cars and survey the participants about how they would currently dispose of fluorescent bulbs. The survey showed that 59 drivers thought it was okay to throw fluorescent bulbs in the trash, 14 would put them in a recycle bin, 41 would either not use fluorescent bulbs or did not know the safest way to dispose of them, and 56 respondents were committed to the practice of taking fluorescent bulbs to a designated store or HHW drop-off location.

Copper Action Plan/ Nickel Action Plan

City of Campbell

Town of Los Gatos

City of Monte Sereno

City of Saratoga

WEST VALLEY COMMUNITIES

FY 2006-2007 ANNUAL COPPER (and NICKEL) ACTION PLAN REPORT

COPPER ACTION PLAN/NICKEL ACTION PLAN

FY 2006-2007 Work Plan Self Evaluation Matrix

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
Vehicle Washing Operations	CB-1	Continue to distribute outreach materials on proper vehicle/equipment washing at Municipal counters/Post Offices/Libraries and public events, and post on WVCWP website.	The WVCWP "Car Wash Kit" flyer is available on the WVCWP website as a PDF. The site's Home page, www.cleancreeks.org displays a car wash graphic which links to the PDF. The printable flyer includes information on harmful effects of copper: http://www.cleancreeks.org/imagesnew/carwashweb.pdf Los Gatos' website offers a stormwater page that gives car-washing advice and take-action-type tips for water quality: http://www.town.los-gatos.ca.us/index.asp?NID=922	WVWCP staff
Vehicle Washing Operations	CB-1	Discuss copper impacts; teach proper methods of Car Washing and Pool & Spa drainage through use of Enviroscape watershed model in classroom presentations.	WVCWP's classroom presentations are scripted to include hands-on activities so that students can watch pollutants such as copper, from car-washing activities flow directly to the habitat of aquatic life. In addition to recommending the use of commercial car-wash facilities, WVCWP encourages washing on a gravel or lawn area where wash water is captured and infiltrated. The Inspector talks to students about car wash fundraisers and offers to help them set up the WVCWP car-wash kit prior to the event.	WVWCP staff
Vehicle Washing Operations	CB-1	Provide Car Wash Kit & education to charity car wash organizers. Solicit feedback from participants.	The WVCWP Stormwater Discharge Inspector is available to provide guidance on use of the WVCWP car-wash kit for local fundraising events. He usually attends the events to offer guidance and to help publicize the *West Valley Clean Water Program*. The kit uses about 400 ft. of hose and 300 ft. of extension cord. The car wash kit works extremely well, but can be difficult to set up. Photos of the kit in action are used for	WVWCP staff

WEST VALLEY COMMUNITIES

FY 2006-2007 ANNUAL COPPER (and NICKEL) ACTION PLAN REPORT

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
			classroom presentations.	
Vehicle Washing Operations	CB-1	Within the Planning permit process, require source control measures at facilities that will conduct vehicle/ equipment washing and maintenance activities (consistent with Permit Provision C.3.k).	The WVC did not have any regulated projects in FY06-07 that would conduct vehicle/equipment washing and maintenance activities.	Community Dev Directors and Planners
Vehicle Washing	CB-1	Promote improved car washing methods at auto businesses during inspections. Provide info on alternative arrangements for auto businesses with possible compliance problems.	The Stormwater Discharge Inspector distributes vehicle washing outreach materials during pro-active inspections and in relation to any actual or suspected vehicle washing incident. The Inspector is able to answer questions and offer suggestions with the help of visuals. A WVCWP-created fact sheet provides information on wastewater capture systems for automotive facilities. The fact sheet was designed to provide small-scale automotive facilities (those that find installing a full-fledged wash rack cost-prohibitive) with examples of inexpensive treatment technologies and distributor information. This method of outreach has been very effective.	WVWCP ICID Inspector
Vehicle Washing Operations	CB-1	Maintain recommended source controls for vehicle washing at City corporation yard.	Municipal staff follow best management practices and continue to ensure that vehicle wash systems in the Corp Yards prevent wash water runoff.	Pub Works Staff
Vehicle Washing Operations	CB-1	City staff will be familiar with Mobile Surface Cleaning BMPs or review the training video offered by BASMAA.	Municipal staff viewed the training video in 2006. They are familiar with the BMPs. To accommodate new-hires the WVCWP will provide a showing of the BASMAA video in FY07-08.	WVWCP ICID Inspector / Pub Works Supt
Industrial Copper Control	CB-3	Continue Industrial Inspection program with Fire Dept., including NOI sites and other industrial sites such as plating and metal finishing facilities, vehicle service facilities,	The City has an agreement with the SCC Fire Dept to conduct urban runoff inspections for machine shops and metal manufacturing facilities. Annual meetings are held between the WVCWP Manager and Inspector and the Fire	SCVC Fire Dept./ WV ICID Inspector WVCWP Manager

WEST VALLEY COMMUNITIES

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
		and other permitted sites.	Dept Haz Mat Specialist to ensure excellent communication and prompt follow-up to potential and actual violations. See Industrial Inspection (Section #2) of this report.	
Reducing Traffic Congestion Promoting Alternative Transporta-tion	CB-6/7	Within the Planning permit process encourage and promote best practicable transportation-related design practices and alternative modes of transportation.	The West Valley communities encourage best design practices wherever practicable. These small communities tend not to have large developments conducive to requiring alternative transportation within the permitting process. However, the cities and the Town encourage alternative transportation through other means: **Campbell** now has 3 stations for Light Rail service linking the City to stops throughout Santa Clara Valley. The City Redevelopment Agency was actively involved in this project. Campbell also provides bicycles for employees to ride while at work. Furthermore, the City supported *Bike to Work Day* on 5-19-07 by sending an email to all employees encouraging them to take advantage of the opportunity to ride a bike to work and to stop off at energizer stations such as the one at Whole Foods in Campbell for free beverages, snacks and encouragement. **Los Gatos** approved a large development project (Netflix campus**)** that provided bike racks throughout the commercial campus and bike lockers and shower facilities for employees who will ride their bikes to work. (approx. **260** employees). A future light rail station is also planned adjacent to this site. **Saratoga** Planners and Engineers work with project owners during the permitting process to encourage them to designate a portion of their site, if feasible and appropriate, for open space and walking trails. The City website encourages biking through its *Trail and Bike* maps, showing where striped bike lanes exist, and classifying bike routes according to safety. Pedestrian/equestrian trail maps are	Municipal Planners, Community Development Directors and Civil Engineers

WEST VALLEY COMMUNITIES

FY 2006-2007 ANNUAL COPPER (and NICKEL) ACTION PLAN REPORT

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
			posted to encourage walking as an alternative means of transportation. Link to all maps: http://www.saratoga.ca.us/trail_and_bike_maps.html **Monte Sereno, Los Gatos and Saratoga** are working on a shared project to develop bike paths along Hwy 9. The paths will increase safety and encourage more bicyclists to travel between the main downtown areas of these cities. In addition, the second phase of the project has been initiated which includes a pedestrian path along Highway 9.	
Reducing Traffic Congestion	CB-6/7	Continue to incorporate and support "Best Practices for Integrating Transportation and Land Use" as documented in the VTA's 2003 Community Design & Transportation Manual.	These elements remain in the WVCs' General Plans and serve as guiding principles for their Land Use and Transportation development.	Traffic Engineer
Watershed assessment and protection	CB-8	Implement agreed-upon guidelines & standards developed by the Water Resources Protection Collaborative for watershed protection.	Campbell, Los Gatos and Saratoga have participated in, and invested significant staff time in, the Water Resources Protection Collaborative. Two of the West Valley cities, Los Gatos and Saratoga, adopted the "Guidelines and Standards" in FY06-07 and Campbell and Monte Sereno will adopt them in FY07-08.	Community Development Directors and City Managers
Street sweeping & stormdrain O&M	CB-11	See Street Sweeping tasks on data collection and evaluation.	The West Valley communities conduct street sweeping in residential areas and more frequent sweeping in commercial areas. Sweeping data is collected and noted in Public Agency Activities (Section # 3) of this report.	
Street sweeping & stormdrain O&M	CB-11	Implement (as appropriate) identified improvements to current street sweeping and storm drain system O&M programs (within available budgets). Meet with WVSD for stormdrain O&M evaluation.	Storm Drain Maintenance and Street Sweeping are evaluated in Public Agency Activities (Section #3) of this report.	Pub Works Supt. with WVCWP guidance

WEST VALLEY COMMUNITIES

FY 2006-2007 ANNUAL COPPER (and NICKEL) ACTION PLAN REPORT

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
Street sweeping /stormdrain O&M	CB-11	Ensure that contractor maintains effective street sweeping equipment.	The West Valley cities do not hesitate to change sweeping contractors if the equipment being used does not measure up to municipal standards. The Town of Los Gatos recently purchased a new regenerative air sweeper.	Pub Works Maintenance Superintendents and Supervisors and Director of Pub Works
Outreach on pool, spa maintenance	CB-12	Continue to distribute pool & spa maintenance brochure via agency department counters and public places. As time permits, update WVCWP website with current Pool & Spa maintenance info.	WVCs distributed an additional 500 Pool brochures at Planning & Bldg Dept counters during FY06-07.	WVCWP with Municipal Staff
Outreach on pool, spa maintenance	CB-12	Continue to distribute pool & spa brochures as part of ICID WVC inspections.	The Inspector provides Pool & Spa brochures to residents and pool and spa companies as part of his IC/ID Inspection Program.	WV Inspector
Use of architectural copper	CB-21	Within the Planning permit process, discourage use of copper roofing and gutters.	All WV cities discourage copper architecture with the exception of Los Gatos, which is drafting a Residential Design Guideline that will seek to discourage architects and homeowners from using copper by informing them of its environmental implications. The Guideline will be finalized during FY 07-08.	Planning Dir/ Sr. Planner
Green Building	CB-21	Distribute outreach or expand website to promote Green Building principles. Provide examples of Green Building principles that were implemented.	All WVCs encourage and adhere to Green Building practices. The Cities plan to continue emphasizing green building principals in FY07-08. Los Gatos' website provides Green Building suggestions: http://www.town.los-gatos.ca.us/index.asp?NID=1213 Saratoga's website lists Alternative Building Materials http://www.saratoga.ca.us/pdf/SD-21Alt.bldg.materials.pdf	Planning Dir/ Sr. Planner
E-Waste Disposal	Proper Disposal of items that contain copper	Develop, advertise & conduct West Valley E-Waste Recycling Event **Additional Task – Not in Workplan**	*April 28, 2007* ***Free*** *Hazardous Waste Recycling Event* - for used TVs, monitors and other electronics was sponsored by the West Valley Cities. Drivers of 170 vehicles brought used electronics for recycling. Campbell held a free E-waste event on 3-16-07 at Prune Yard Tower, Campbell.	WVCWP Staff

WEST VALLEY COMMUNITIES

FY 2006-2007 ANNUAL COPPER (and NICKEL) ACTION PLAN REPORT

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
Nickel Action Plan Tasks				
Control nickel discharge from construction sites	NB-1	Sediment Control: Continue to implement Construction Inspection Performance Standards (see Construction Inspection work plan section).	See Construction Inspection (Section #5) of this report.	Engineering and Building Inspectors WVCWP Inspector
Control nickel discharge from construction sites	NB-1	Training: Continue to have inspectors attend Regional Board/Program workshops on construction site management and learn latest erosion/sediment control techniques	See Construction Inspection Training (Section #5T) of this report.	Engineering and Building Inspectors WVCWP Inspector

Copper/Nickel Action Plan Evaluation

Car Wash Outreach Evaluation:

Car Washing has been highlighted on the WVCWP home page; the Car Wash Kit flyer was also sent to Fire Dept inspectors at their request. The Fire Dept inspects the West Valley Industrial and Commercial facilities, and reports incidents in residential areas if they notice violations while out in the field. WVCWP would like to have an all-inclusive, educational copper brochure, which would include car washing, architectural copper and pool draining in one piece. Staff have initiated a rough draft piece for this purpose. However, the WVCWP has not had the staff or funding to create an informative, attractive, finished piece that would be appropriate for mailing to residents and for distribution at events and municipal counters, etc.

Pool and Spa Maintenance:

The West Valley communities ordered 150 to 200 more brochures to give out at Planning counters and to new pool and spa owners. During FY06-07, The Town of Los Gatos' standard Conditions Of Approval for new homes with a pool were revised to require a sanitary sewer clean-out within 10 feet of the pool equipment, and a pervious landscaped area for pool filter washout.

Educational Outreach Evaluation:

The WVCWP will continue to provide outreach on car washing, vehicle maintenance, alternative transportation, and pool maintenance during in-class presentations and outreach at community events. WVCWP incorporated messages about activities that can prevent copper runoff as part of Kindergarten and 4th and 5th grade Enviroscape curriculum. These presentations have been successful in raising interest in proper car-washing and pool & spa maintenance methods. Staff have found that children seem especially receptive to the information about copper and car washing when they participate in the Enviroscape activity.

Street Sweeping:

The West Valley cities continued their street sweeping programs and submitted annual sweeping data to the Program. Los Gatos purchased a new PM-10

WEST VALLEY COMMUNITIES

FY 2006-2007 ANNUAL COPPER (and NICKEL) ACTION PLAN REPORT

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
regenerative street sweeper in FY05-06. The Town, by contract, used the new sweeper on Monte Sereno's streets. Campbell hired a new contractor for FY06-07 in order to employ effective, up-to-date equipment. In FY05-06, Campbell decided that the sweeping contractor did not have effective equipment, which required additional sweeping to get the job done effectively. The City is pleased with the results of the change in contractors. Saratoga's sweeping contractor uses two kinds of sweepers to address the different types of debris to be picked up. Saratoga is pleased with their contractor. Saratoga updated street sweeping maps to GIS street map format and posted them on the City's website in FY06-07. Street sweeping is very important to West Valley residents. If the streets are not swept on schedule City or Town staff receive phone calls to register complaints, even on holidays.				

Training Summary: Copper/ Nickel

Training Description	Date	Attendees
WVCWP Monthly Meeting – Copper Work Plan Guidance Discussion led by: WVCWP Program Manager **Topics:** ▪ Adopting Guidelines & Standards developed by Water Resources Protection Collaborative ▪ Providing outreach to Mobile Surface Cleaners ▪ Conducting and documenting street-sweeping in residential and industrial/commercial areas ▪ Providing outreach to residents on proper pool and spa maintenance ▪ Discouraging the use of copper roofs and architecture in development permit process ▪ Planning for an E-waste event	January 23, 2007	**WVCWP (3)** Program Manager Program Assistant Sormwater Inspector **Campbell** Senior Civil Engineer **Los Gatos (1)** Senior Engineering Technician **Saratoga (1)** Public Works Analyst
Street Sweeping Training Slide Presentation using information from Ranger Kidwell-Ross of Worldsweeper.com Training meeting held in Campbell Community Center **Topics**: • Running a streetsweeper at optimum speed for removal of debris and fine particles • Percent of pollutants and metals removed as fine particulates • Types of streetsweeping equipment used for different types of jobs • Street-sweeping as a BMP and a source control measure	**June 20, 2007**	**WVCWP (3)** Program Manager Stormwater Inspector Public Outreach Coordinator **Campbell (8)** Public Works Superintendent PW Supervisor **Los Gatos (6)** PW Superintendent Street Maintenance Worker Parks Lead Worker **Monte Sereno (1)** Assistant City Engineer **Saratoga (5)** Street Maintenance Supervisor Parks Maintenance Supervisor Lead Maint Worker & Maint Specialist Lead Parks Worker **WV Sanitation District (2)** Director of Engineering & Operations Operations Supervisor

TRASH INVENTORY & MANAGEMENT

FY 2006-2007 Work Plan Self Evaluation Matrix

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
Trash Work Plan	Strategy	Participate in Trash Ad Hoc Task Group and assist Program staff in developing an effective strategy for trash reduction in urban streams and waterways.	The West Valley Clean Water Program Mgr attended the Trash AHTG meetings and provided feedback from West Valley cities on implementation strategy and tools. Topics this year included discussion about the proposed content of a Trash Control Measures Tool Box and a Trash Sources and Pathways illustration.	WVCWP Mgr attends AHTG – WVCWP Mgr to lead follow-up discussions at West Valley monthly meetings
Trash Work Plan	Pilot Demonstration	Participate in Trash Ad Hoc Task Group and assist Program staff in implementing a Pilot Demonstration Project which focuses on documenting type and volume of trash potentially conveyed through a storm drain system.	The West Valley Clean Water Program Mgr attended the Trash AHTG meetings and provided input on behalf of West Valley cities regarding potential pilot demonstrations.	WVCWP Mgr with input from West Valley Municipal Stormwater Reps
Trash Work Plan	Identify and Prioritize Problem Areas	Continue to Identify and prioritize trash problem areas and other potential sources that may contribute to trash problems in urban streams and waterways. Revise problem area list, based on surveys & other relevant information.	West Valley's list of trash problem sites was revised after conducting assessments in FY06-07. WVCWP staff removed litter at several new locations where excessive litter was found near creeks or waterways. A review of the site list was conducted. This resulted in replacing several of the sites originally listed as West Valley's trash "problem areas" with sites that had a more direct connection to urban streams or waterways. A few sites were replaced because a few years of monitoring and cleanups demonstrated that trash there was less of an issue than originally believed; staff resources should be concentrated on other sites in order to be effective. Assessment also resulted in adding several new sites where trash appears to be more of an on-going problem.	WVCWP Staff to coordinate with municipal staff

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
Trash Work Plan	Evaluations	Continue to conduct trash evaluations in a subset of local trash problem areas using the using the Program's Urban Rapid Trash Assessment (RTA) protocol and/or the KAB Litter index.	WVCWP staff conducted **51 KAB** assessments at the identified sites and listed problem areas in West Valley communities. The number of assessments included: Campbell (23), Los Gatos (11), Monte Sereno (13), and Saratoga (4). Although KAB monitoring usually is limited to drive-by evaluations of a site, several KAB assessments were conducted simultaneously with removal of trash and debris by WVCWP staff. The *Trash Problem Area Activity* reports for each city are included at the end of this report section. WVCWP staff and citizen volunteers also conducted **10 urban rapid trash assessments (RTA)** at listed trash problem areas in Campbell (5), Los Gatos (2) and Saratoga (3). All RTA site assessments included removal of trash and debris by WVCWP staff and volunteers.	WVCWP Staff to coordinate with WV Municipal Staff and Citizen Volunteers
Trash Work Plan	Management Practices	Continue to identify and implement trash control measures, where practical and feasible, to reduce trash and debris.	To address litter and illegal dumping problems, WVCWP staff have incorporated a trash topic into every element of public education and outreach. West Valley inspectors for industrial / commercial and construction sites have been asked to be on the lookout for litter and illegal dumping. Inspectors have been told to consider an accumulation of debris at a site to be a violation of stormwater requirements and to refer such sites to the Stormwater Discharge Inspector. Other trash management activities conducted by West Valley communities include monitoring identified problem areas, holding volunteer cleanup events at problem sites, notifying Caltrans when exceptional litter or debris problems are noticed along highways or freeway ramps, conducting removal of trash and litter as needed at sites within municipal jurisdiction and removing trash at some sites in Caltrans' jurisdiction.	WVCWP Staff to coordinate with municipal staff

Campbell ♦ Los Gatos ♦ Monte Sereno ♦ Saratoga

FY 2006 - 2007 ANNUAL REPORT

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
See PI/P – Citizen Participation	Monitoring/Citizen Participation	Continue to promote citizen participation program to monitor trash in local creeks. Submit trash tally sheets to Program staff (element of Creek Keeper's Program).	WVCWP staff conducted three trash monitoring and cleanup events with student and citizen volunteers. The City of Campbell's Public Works Director, Public Works Superintendent and Mayor partnered with Caltrans, to hold a City-wide pick-up event on 5/19/07. Campbell's event included work on littered areas along railroad tracks and the freeway. Volunteers at all clean-up events were taught to categorize and tally (monitor) debris collected. Participants worked in groups using WVCWP trash tally forms to collect the data that helps identify trash sources and management actions. Summary sheets for these events are included at the end of this report section. Los Gatos held a cleanup event on Saturday (4-21-07). Fourteen volunteers spent several hours picking up roadside debris in downtown Los Gatos. They removed twelve bags of garbage from gutters, sidewalks, catch basins and planters. Most of the debris was leaves but other items included CDs, medicine bottles, lots of cigarette butts and egg cartons! Additionally, Los Gatos has "Adopt-a-Trail" volunteers who collected and monitored trash 6 times (every other month) alongside Los Gatos Creek Trail during FY06-07. A total of 16 bags of debris were collected, including plastic water bottles, power bar wrappers and pet waste bags.	WVCWP Staff to coordinate with municipal staff
Trash Work Plan	Report on Trash Mgmt Practices Implemented	Provide Program staff with specific information on trash management practices implemented within the city's jurisdiction using program-wide standardized format.	WVCWP staff used SCVURPPP's standardized reporting forms to provide data on trash monitoring and management activities at the listed problem sites. *Trash Problem Area Evaluation Results* for each West Valley city, as provided by the Program, are included at the end of this report section.	WVCWP Staff to coordinate with SCVURPPP
Trash Work Plan	Data Collection	Submit Urban RTA Survey forms, trash tally sheets and any other data collection tool to Program staff.	KAB and Urban RTA forms for WV cities were submitted to SCVURPPP in July 2007 for Program-wide analysis and reporting.	WVCWP staff

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
Citizen Participation	E-Waste Event	Safe Disposal of E-waste Provide an opportunity for citizens to participate in safe disposal of e-waste and mercury thermometers.	In response to last year's E-waste survey, local residents requested a second E-waste collection event for FY06-07. WVCWP staff partnered with United Datatech to collect electronic waste on 4-28-07. The community event was free and available to the general public. UDT guaranteed that all collected material would be recycled safely and would not be sent to foreign shores. The City of Saratoga provided the collection site. A total of 13,793 pounds of E-waste was collected and **170 drive-through participants** were served.	WVCWP staff and Municipal staff

Trash Inventory & Management Evaluation

Dumpster Area Inspections & Education for Local Businesses

The WVCWP Inspector checks the dumpster areas of the downtown restaurants in each of the West Valley communities for signs of illegal dumping or debris around open dumpsters. He provides urban runoff education as needed, including the importance of keeping dumpster lids closed, and locked if necessary. His method of informal visits and issuing *Notices To Comply* has helped to reduce the amount of trash-related dumpster violations over the past three years.

Educational Outreach to Students and Teachers in Local Schools

WVCWP staff responded to every opportunity to talk about trash and littering with students. The trash topic is always included in classroom Enviroscape presentations. This year a Saratoga private school (K-8) and parents partnered with WVCWP to hold a cleanup three weeks after WVCWP made presentations to 5th and 6th grade classes. In May and June, following WVCWP presentations, two local Kindergarten classes took a tour around their school to identify storm drains and to pick up any litter they could find.

Creek Keeper Events – Volunteer Participation - Trash Identification, Tallying & Pick-up

The WVCWP has been particularly successful from 2003 to 2007 recruiting student volunteers for creek cleanups and the task of trash tallying. Each event is opened with a brief talk on the trash problem affecting our creeks and Bay. Volunteers appear to be energized by the chance to make a difference. WVCWP talks include visual aids (enlarged photos of trash accumulation downstream, near the South Bay); these appear to make a major impression on volunteers. The WVCWP's trash tally form was designed to be easy for students to use. Categories on the form reflect the trash types that are most often found in West Valley locations. Trash summary forms which show tally sheets' totals for each cleanup event are included at the end of this report section.

Partnering with other Agencies to address the problems:

WVCWP's best chance for success in dealing with the trash problem is to partner with other agencies and work with a well-organized regional group. In January 2007, at the suggestion of Campbell's Public Works Director, WVCWP staff joined the Silicon Valley Anti-Litter Task Force (formerly called the Santa Clara County Litter Technical Advisory Committee). The meetings are led by SC County and the City of San Jose and have a large attendance. WVCWP staff participates in the Education Subcommittee meetings and Campbell's Public Works Director chairs the Finance Subcommittee. On May 19, 2007, the Silicon Valley Litter Campaign sponsored a well-publicized cleanup event called Great American Pick Up Day. WVCWP, on behalf of all West Valley cities, helped staff

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party

a site that was sponsored by the City of Campbell and joined volunteers that were supervised by Caltrans to collect freeway litter.

West Valley's Illegal dumping problem will be difficult to address without the help of law enforcement and other agencies. The City of San Jose has law enforcement staff that participates in the Silicon Valley Anti-Litter Task Force. The West Valley cities cannot afford Police or Sheriff Dept. staff time to enforce anti-litter laws. The environment around some WVC areas (quiet parking lots and sparsely populated roads which border creeks) appear to attract illegal dumpers from other cities, yet WVC law enforcement staff cannot continuously monitor these zones. For instance, the WVCWP Illegal Discharge Inspector responded to a call from a bicyclist who noticed several full trash bags dumped over the side of Prospect Road in Saratoga. When the Inspector visited the sparsely traveled site, he was forced to park the car on a narrow shoulder of road and could not descend the steep drop to where the trash had been tossed. Cleanup from this kind of dumping is too dangerous for WVCWP staff and municipal staff to address alone. Putting a stop to illegal dumping requires a regional and enforceable solution.

General Evaluation of Trash Management Activities

After several years of monitoring trash sites, WVCWP staff is familiar with the sites and the problems that need to be addressed. Two leading trash sources in West Valley communities are "Illegal dumping" and "vehicular litter" (found along highways, freeway-on-and-off-ramps, and smaller arterial roads). The type of litter that is retrieved is predominantly snack, food, beverage and other product packaging and cigarette butts. Several West Valley problem areas are in Caltrans' jurisdiction. In December 2006, the WVCWP Mgr called Caltrans about cleaning up 2 bags of trash dropped and scattered on Hwy 9 near a freeway ramp in Los Gatos. Caltrans responded that day.

Saratoga Creek at Big Basin Way and Sunnyvale-Saratoga Road is a heavily vegetated area that has been used for illegal dumping. It looks better than it did during FY05-06 because Saratoga's maintenance staff and Water District staff removed several illegally-dumped items including a gas water heater and large wrought iron fixtures from the creek banks. Last year the City's Code Enforcement Officer and the Sheriff's Dept agreed to keep an eye on the area. "No Dumping" signs have been posted in the parking lot area above the creek. The banks of the creek are very steep with litter lodged between trees and vegetation about 25 feet from the high-water line. WVCWP staff will continue to monitor and remove trash from the accessible areas at the edge of the downtown parking lot at least two times per year. This site remains one of Saratoga's prioritized problem areas.

While traveling to one of Los Gatos' listed problem sites, WV staff noticed another problem area near where Shannon Creek flows into Guadalupe Creek. Staff stopped to remove illegally-dumped items and collected several bags of debris from this rural setting along Hicks Road. A GIS map indicates that this area may not be within Town jurisdiction. However, the Town's maintenance crews said they would pick up debris if it is reported within Town limits and placed within the "right-of-way". This accumulation of dumped items along a rural road is an illegal dumping concern for all jurisdictions when the abandoned debris is hidden by natural vegetation and steep slopes and violators are not caught.

September 1, 2007

Mr. Bruce Wolfe, Executive Officer
Regional Water Quality Control Board
San Francisco Bay Region
1515 Clay St., Suite 1400
Oakland, CA 94612

Subject: City of Cupertino Urban Runoff Management Program
FY 2006-2007 Annual Report

Dear Mr. Wolfe:

This report is submitted by the City of Cupertino, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a.of the Program's reissued municipal storm water NPDES Permit (Order No. 01-024). The report summarizes activities performed during FY 2006-2007 in accordance with the City of Cupertino's Urban Runoff Management Plan (URMP) submitted to the Regional Board on September 1, 1997 and updated in October 2000 and September 2004, and the performance standards contained therein.

Contents of Report

The goals of this Annual Report are to: 1) concisely document implementation of our URMP and FY 06-07 work plan during the past fiscal year; 2) evaluate program results for continuous improvement; 3) comply with permit requirements; and 4) share this information with other Co-permittees, municipal decision-makers, and the public. To accomplish these goals, the report contains the following sections:

- A: - Certification Statement
- A1: - Performance Standard Certification Form
- B: - ICID Elimination
- C: - Industrial/Commercial Discharger Control Program
- D: - Public Agency
  - D - 1: Public Streets, Roads & Highways O & M and Rural Roads
  - D - 2: Storm Drain Operation and Maintenance
  - D - 3: Corporation Yards Operation and Maintenance
- E: Water Quality Monitoring
- F: Permit Reapplication Process
- G: Trash Inventory and Management
- H: Public Information & Participation
- I: New Development Planning Procedures
- J: Construction Inspection
- K: Pesticide Management
- L: Mercury Pollution Prevention
- M: Copper and Nickel Action Plan

- N: Staff Training Summary Table
- Appendix: Acronyms

There were no comments for Cupertino on the FY 05-06 Annual Report by the Regional Board Staff (letter dated July 18, 2007) that required a response.

Program Highlights and Accomplishments

Public Information and Participation:

Last fall, students from West Valley Elementary School (located in Sunnyvale) attended Cupertino's Creek education program at McClellan Ranch Park. The program, started in 1995 and open to all Cupertino Union School District 3rd and 4th grade classes (CUSD encompasses schools in Cupertino, Saratoga, Los Altos, Sunnyvale & Santa Clara), teaches students how important it is to keep the creeks and bay clean. The field trip made such an impression on the students that they assembled a scrapbook and sent it to the student council of a local high school requesting that they reconsider having carwashes as fundraisers. The students also suggested alternatives for other fund-raising activities. The high school printed an article in their newspaper on the front page with the headline "Third-graders say no to car washes". This is an excellent example of the effectiveness of this creek education program.

Website:

During FY 06-07, the City modified its web site as part of implementing Group 2B projects and HMP requirements. In addition, the city's web site includes links to SCVURPPP's updated C.3 Stormwater Handbook and the Our Water Our World public education web site.

Mercury:

The Countywide Household Hazardous Waste Program now has set up 30 retail stores to serve as fluorescent lamp drop-off centers, an increase of 12 stores over last year. This last year the Countywide Program collected 30% more feet in bulbs over the previous fiscal year.

New Development and Construction Controls (Planning Procedures Performance Standard):

During FY 06-07, the City of Cupertino approved its first two Group 1 projects. Through the development review process and the construction of these projects (which is on-going) staff in the Planning and Public Works Departments were able to gain firsthand experience applying C.3 requirements.

Thank you for your review of this Annual Report. If you have any questions regarding the materials submitted, please contact me at (408) 777-3242.

IC/ID Elimination Activities

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report: General Tasks
Cupertino

P.S. Id.	*Activity*	*FY06-07 Tasks*	*Status / Comments*	*Due Date*	*Responsible Party*
Illicit Connection & Illegal Dumping Elimination Activities					
ICID PS-2	Staff training	Hold annual training for urban runoff inspector and on-call staff.	The NPS Prgm Mgr met with the city's NPS inspector on several other occasions, informally. On-call staffs were trained as part of the overall corp yard training held 2/1/07.	1/ 07	Public Works Dept.
ICID PS-4	Field Investigations	NPS inspector annually walks the creeks, watching for evidence of any illegal dumping or illicit connections.	Throughout the Spring, the nonpoint source inspector walked the creeks in Cupertino. No evidence of homeless camps, broken sewer lines, or trash was found.	Ongoing	Public Works Dept.
ICID PS-6	Enhanced reporting requirements	Provide quarterly reports to Program.	Quarterly reports were submitted to Program staff as requested.	Quarterly	Public Works Dept.
ICID PS-7	Effectiveness Evaluation	Review and evaluate the effectiveness of city efforts.	City staff has examined the data and found a total of 29 incidents where all incidents required some type of enforcement action, and a majority of the actions were verbal notices. The most incidents in one category were 6, water line breaks. Over 40% of the reporting sources were from citizen complaints and 50% of the incidents took place in residential areas. This may indicate that our outreach is working; citizens recognize illegal discharges and know who to call when they see them. Tracking the information by computer allows city staff to easily identify repeat problem locations from year to year. Again this year, there doesn't appear to be any major pattern emerging in any one category. The inspector educates violators at the time of the incident and distributes educational materials. The city will continue to provide articles in the city newsletter on topics such as the proper way to discharge pool water, soapy carwash water and disposal of car fluids.	7/07	Public Works Dept.

Industrial/Commercial Discharger Control Program

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report: General Tasks
Cupertino

P.S. Id.	*Activity*	*FY06-07 Tasks*	*Status / Comments*	*Due Date*	*Responsible Party*
Industrial/Commercial Discharger Control Programs					
IND-PS-3	Coordination with Health Dept.	Continue to hold an annual overview of the restaurant inspection program with the Co. Health Dept.	Our annual meeting was held 4/30/07 with a County Health Dept. manager along with reps from the WV cities and County regarding restaurant inspection violations, inspection feedback, tracking, enforcement, data collection and public education materials.	4/07	Public Works Dept.
IND PS-3	Check for new industrial businesses.	In Spring '07 the city's Industrial Inspector will review applications for "Tenant Improvements" (TI) in the Building Dept. to determine if any of the businesses on our two light-Industrial streets had changed their operations and should be included in our routine Industrial inspections.	No improvements were found that would require industrial inspections.	Spring 07 Ongoing	Industrial inspector
IND PS-3	Commercial Inspections	Service station inspections take place bi-annually. None are scheduled for FY 06-07 since inspections were conducted in FY 05-06. The next round of service station inspections will occur in FY 07-08.	No inspections by city staff to report this year, service stations are inspected every other year. The County Health Dept. inspected 260 facilities in Cupertino for a total number of 787 inspections. Four warning notices were issued.	9/07	Industrial Inspector
IND PS-4	Staff training	Hold annual training for Industrial Inspector.	Since inspections were not conducted this year at gas stations, in-house training did not occur.	N/A	Public Works Dept.
IND PS-4	Enhanced reporting requirements	Continue to track all non-compliance, follow-up enforcement actions and final resolutions resulting from inspections. Submit data to the Program quarterly.	Completed data on restaurant inspections was submitted to the Program in 7/07.	Ongoing	Public Works Dept.
IND PS-4	Effectiveness Evaluation	Review and evaluate the effectiveness of city efforts.	County Health Dept. staff reported four violations during restaurant inspections related to urban runoff. City staff continues to meet with County Health Dept. staff annually to discuss any issues that may come up during the year. This practice has worked well for many years.	7/07	Public Works Dept.

CUPERTINO
Summary of Restaurant Inspection Violations
By Santa Clara County DEH
7/1/06 – 6/30/07

Date	Facility Name	Site Address	Description	Violation Description
9/20/06	Kentucky Fried Chicken	10520 S DE ANZA BL	Follow-up Inspection	Urban Runoff - Warning
4/13/07	Lincoln Elementary School	21710 McClellan Road	Routine Inspection	Urban Runoff - Garbage
6/05/07	Vallco 76 Station	19550 Stevens Creek Blvd.	Routine Inspection	Urban Runoff - Oil
6/21/07	Long's Drug Store	19750 Stevens Creek Blvd.	Routine Inspection	Urban Runoff - Warning

Public Streets, Roads, and Highways Operation and Maintenance and Rural Roads

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report: General Tasks
Cupertino

P.S. Id.	*Activity*	*FY06-07 Tasks*	*Status / Comments*	*Due Date*	*Responsible Party*
Public Streets, Roads, and Highways Operation and Maintenance and Rural Roads					
PSRH PS-3	Staff training	Hold annual training for public works, streets division staff and public works supervisors.	Annual training was held on 2/1/07 for the streets, parks maintenance, facilities and other corporation yard staff. There was an opportunity for staff to ask questions about storm water concerns in general and specific PW SOPs. Topics included corporation yard operations and maintenance including spill response, pesticide use & management, fuel dispensing areas, vehicle/equip washing, chemical use & storage and mercury disposal. A portion of the video entitled “Preventing Pollution – Guidelines for contractors and maintenance crews” was shown.	2/07	Public Works Dept.
PSRH PS-5	Effectiveness Evaluation	Review and evaluate the effectiveness of city efforts.	Many of the topics have been covered previously and the employees are very knowledgeable in those subjects. This year’s emphasis was placed on BMP’s regarding corporation yard activities (see previous box). There weren’t any particular concerns or issues raised during the training this year, most are already aware of the BMPs.	7/07	Public Works Dept.

Attachment D-2

Storm Drain Operation and Maintenance

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report: General Tasks
Cupertino

P.S. Id.	*Activity*	*FY06-07 Tasks*	*Status / Comments*	*Due Date*	*Responsible Party*
Storm Drain System Operation and Maintenance					
SD PS-1	Storm Drain Maintenance	All tasks are routine and on-going	The City's contractor vacuums all of the storm drain inlets on a 2-year rotating basis. Half of the storm drains are cleaned one year, and the remaining half the following year.	Ongoing	Public Works Dept.
SD PS - 2	Storm Drain Operation and Maintenance	Review and evaluate one BMP, with input from maintenance staff. Evaluate "hot spots" as appropriate.	While the corporation yard staff are not assigned the task of cleaning the storm drains routinely, it's apparent corp yard staff is well aware of the referral and follow-up process between them and the city's nonpoint source inspector when they do find something flowing into the storm drain. This process is reviewed in the training session. The nonpoint source inspector investigates any reported concerns. The city has not found any on-going hot spots; the overall storm drain system is working well.	2/07	Public Works dept.
SD-4	Annual training	Hold annual training for staff responsible for the maintenance of the stormdrain system.	Annual training was held on 2/1/07 for the streets, parks maintenance, facilities and other corporation yard staff. There was an opportunity for staff to ask questions about storm water concerns in general and specific PW SOPs. Topics included corporation yard operations and maintenance including spill response, pesticide use & management, fuel dispensing areas, vehicle/equip washing, chemical use & storage and mercury disposal. A portion of the video entitled "Preventing Pollution – Guidelines for contractors and maintenance crews" was shown.	2/07	Public Works dept.
SD PS-5	Effectiveness Evaluation	Review and evaluate the effectiveness of city efforts.	Storm drain vacuuming provides the benefit of preventing blockages in the storm drains as a result of a build-up of debris and prevents pollutants of all types that have settled into the drains from being flushed into creeks. It is particularly helpful in preventing flooding. This is an ongoing and routine task with little or no changes from year to year.	7/07	Public Works dept.

Trash Inventory and Management

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report: General Tasks
Cupertino

P.S. Id.	*Activity*	*FY06-07 Tasks*	*Status / Comments*	*Due Date*	*Responsible Party*
Trash Inventory and Management					
Trash Work Plan	Trash areas ID	Annually revise trash problem areas list on an as needed basis. Revisions should be based on trash problem area surveys and other relevant information.	Completed 12/03. There were no new "hot spots" identified in FY 06-07.	FY 06-07 Ongoing	Public Works Dept.
Trash Work Plan	Trash mgmt practices	Assist Program staff in developing an effective strategy for reducing trash in urban streams and waterways.	Completed in October '06 by Program staff and reviewed by the Trash AHTG. Remaining tasks within strategy are to be completed in FY 07-08 and FY 08-09.	FY 06-07	Public Works Dept.
Trash Work Plan	Trash mgmt practices	Assist Program in implementing a Pilot Demonstration Project which focuses on documenting type and volume of trash that can potentially be conveyed through the storm drain system.	To be completed in FY 07-08 with Program staff.	FY 07-08	Public Works Dept.
Trash Work Plan	Trash mgmt practices	Continue identifying and prioritizing trash problem areas in urban streams and waterways and other potential sources that may contribute trash to those areas.	No new "hot spots" were identified for trash assessments.	FY 06-07 Ongoing	Public Works Dept.
Trash Work Plan	Trash mgmt practices	Submit appropriate trash data collection tools, documentation regarding trash complaints/incidents and annual data summary reports to Program Staff.	The City's Code Enforcement department reported 11 calls for service related to unlawful dumping. This reflects June '06 through Jan. '07. Due to computer software problems, Code is unable to generate a report for the remainder of FY 06-07. All other data was submitted to Program staff in July '07.	FY 06-07 Ongoing	Public Works Dept.
Trash Work Plan	Street sweeping data	Continue to collect street sweeping data and provide data to Program for a street sweeping effectiveness evaluation.	Monthly street sweeping reports for July through June were submitted to the Program for compilation in July '07.	FY 06-07 Ongoing	Public Works Dept.
Trash Work Plan	Trash evaluations	Conduct trash evaluations using the Program's trash evaluation tools (i.e., Urban Rapid Trash Assessment protocol (Version 1.0) and/or the KAB Litter index) in a subset of trash problem areas.	Trash evaluations were conducted in October 06 and again in Feb '07. Reports were submitted to the Program for compilation in July '07 (see attached report).	FY 06-07 Ongoing	Public Works Dept.
Trash Work Plan	Trash mgmt practices	Identify and begin implementing trash control measures, where practical and feasible, to reduce trash.	The City's "hot spots" had little to no trash evident in both rounds of assessments. Most sites are City maintained and get cleaned on a	FY 06-07 Ongoing	Public Works Dept.

Cupertino

P.S. Id.	*Activity*	*FY06-07 Tasks*	*Status / Comments*	*Due Date*	*Responsible Party*
			regular basis. The site with the largest trash problem was on private property. In this instance, the City's code enforcement contacted the property manager and notified them to clean the area up.		
Trash Work Plan	Trash mgmt practices	Provide Co-permittee specific information on trash management practices implemented in their jurisdictions, using standardized reporting format (to be used for Program-wide reporting).	A report on all assessments and trash management activities was submitted to the Program in July '07.	FY 06-07 Ongoing	Public Works Dept.
Trash Work Plan (New)	Trash mgmt practices	Assist Program in developing Trash Fact Sheets, as appropriate.	Fact sheets were developed by Program staff and completed in April '06.	FY 05-06 Ongoing	Public Works Dept.
	WE&O Outreach	Participate in the WE&O outreach ad hoc group, and two of its subgroups: the Schools outreach group and the IPM group.	The City's environmental programs assistant participated routinely in these groups throughout the year.	Ongoing	Public Works Dept.
	WE&O Core Group	Review WMI meeting minutes and materials.	The MC is briefed on WMI meetings and meeting summaries. WMI meeting minutes and materials are distributed by the Program and reviewed by the City's Environmental Programs Manager.	Ongoing	Public Works Dept.

Trash Problem Area Activity Report
FY 06-07

ID	Date	Location	Assessment Score		Recent Cleanup[1]	Adjacent Land Use[2]		Trash Source[3]			Three Most Prevalent Trash Types[4]			Estimated Volume of Trash Removed (if any)	Existing Management Actions	Recommended Management Actions and/or Future Evaluations
			KAB	RTA		1	2	1	2	3	1	2	3			
CU01	10/10/2006	Tantau and Finch Avenues, vacant lot: private property	1		No	Commercial	Roadway	Illegal dumping	Litter – vehicular	Litter – commercial areas	Plastic/styrofoam	Biodegradable/paper	Miscellaneous	10 pieces, approximately 3 handfuls.	Not in a waterway. A follow up assessment will be done in February 2007 to determine if it should be removed from the list.	Site has been monitored for 3 years and is no longer a trash problem area. Recommend that the site be removed from list.
CU02	10/10/2006	Homestead and Mary Ave. adjacent to high school; private property	1		No	School	Residential – home	Litter – school/institution	Litter – pedestrian	Litter – vehicular	Biodegradable/paper	Plastic/styrofoam	Miscellaneous	3 plastic bags	Not in a waterway. Little to no trash observed at this location. Removed existing trash. This lot is monitored by the school janitor.	Site has been monitored for 3 years and is no longer a trash problem area. Recommend that the site be removed from list.
CU03	10/10/2006	Disney Lane near Miller adjacent to Hyde Jr. High; private property	1		No	School	Residential – home	Litter – school/institution	Litter – pedestrian	Litter – vehicular	Biodegradable/paper	Plastic/styrofoam	Miscellaneous	Very little litter observed.	Not in a waterway. Should be monitored to determine if it should remain on list.	Site has been monitored for 3 years and is no longer a trash problem area. Recommend that the site be removed from list.
CU04	10/11/2006	Ann Arbor and Ann Arbor Ct., close to City park; private property	1		Unknown	Park/Trail	Residential – home	Litter – pedestrian	Litter – recreational areas	Litter – vehicular				No trash observed.	Not in a waterway. No trash observed at this location.	Site has been monitored for 3 years and is no longer a trash problem area. Recommend that the site be removed from list.
CU05	10/11/2006	Somerset Park owned and maintained by City	1		Yes	Park/Trail	Residential – home	Litter – recreational areas	Litter – pedestrian	Litter – vehicular	Miscellaneous			2 cigarette butts	Not in a waterway. Little to no trash observed at this location. Removed existing trash. This is a City park maintained by City staff.	Site has been monitored for 3 years and is no longer a trash problem area. Recommend that the site be removed from list.
CU06	10/11/2006	Park Circle East & West, area behind apartments, private property	3		Unknown	Residential – apartments	Roadway	Illegal dumping	Litter – receptacles/ dumpsters	Litter – vehicular	Miscellaneous	Metal	Glass	Random pieces of broken furniture and miscellaneous items	Not in a waterway. A lot of illegal dumping from neighboring apartment complexes. This is private property, City Code Enforcement was notified.	Continue to have Code Enforcement work with landlords and property managers on illegal dumping issues.
CU01	2/5/2007	Tantau and Finch Avenues, vacant lot: private property	1		No	Commercial	Roadway	Illegal dumping	Litter – vehicular	Litter – commercial areas	Plastic/styrofoam	Biodegradable/paper	Miscellaneous	Found small quantities of paper and plastic litter in one area.	Not in a waterway. Found very small amount of trash.	Site has been monitored for 3 years and is no longer a trash problem area. Recommend that the site be removed from list.
CU02	2/5/2007	Homestead and Mary Ave. adjacent to high school; private property	1		No	School	Residential – home	Litter – school/institution	Litter – pedestrian	Litter – vehicular	Biodegradable/paper	Plastic/styrofoam	Miscellaneous	Very little litter observed.	Not in a waterway. Little to no trash observed at this location. Removed existing trash. This lot is monitored by the school janitor.	Site has been monitored for 3 years and is no longer a trash problem area. Recommend that the site be removed from list.
CU03	2/5/2007	Disney Lane near Miller adjacent to Hyde Jr. High; private property	1		No	School	Residential – home	Litter – school/institution	Litter – pedestrian	Litter – vehicular				No trash observed.	Not in a waterway. Should be monitored to determine if it should remain on list.	Site has been monitored for 3 years and is no longer a trash problem area. Recommend that the site be removed from list.
CU04	2/5/2007	Ann Arbor and Ann Arbor Ct., close to City park; private property	1		Unknown	Park/Trail	Residential – home	Litter – pedestrian	Litter – recreational areas	Litter – vehicular	Miscellaneous			1 piece of candy wrap observed.	Not in a waterway. Very little trash observed at this location.	Site has been monitored for 3 years and is no longer a trash problem area. Recommend that the site be removed from list.
CU05	2/5/2007	Somerset Park owned and maintained by City	1		Yes	Park/Trail	Residential – home	Litter – recreational areas	Litter – pedestrian	Litter – vehicular	Metal			1 beverage can observed.	Not in a waterway. Little trash observed at this location. Removed existing trash. This is a City park maintained by City staff.	Site has been monitored for 3 years and is no longer a trash problem area. Recommend that the site be removed from list.
CU06	2/5/2007	Park Circle East & West, area behind apartments, private property	3		Unknown	Residential – apartments	Roadway	Illegal dumping	Litter – receptacles/ dumpsters	Litter – vehicular	Miscellaneous	Metal	Biodegradable/paper	Various pieces of broken furniture, cardboard boxes and miscellaneous items	Not in a waterway. A lot of illegal dumping from neighboring apartment complexes. This is private property, City Code Enforcement was notified.	Continue to have Code Enforcement work with landlords and property managers on illegal dumping issues.

Cupertino

General Outreach

Activity	Level of Implementation	Evaluation
NPS literature distribution to the general public at city facilities: • Library • City Hall lobby • Quinlan Community Ctr. • Planning/ Building Dept. counter • Backyard Compost workshops	**NPS Prgm. literature:** *Pests Bugging You?, Home Maintenance Tips*, eight construction trifolds, *Blueprint For a Clean Bay* booklet, IPM pest-specific factsheets, pool water brochure, *A Vision For Our Watershed,* **HHW Prgm literature:** HHW brochure (for residents), small business hazardous waste brochure, Diazinon flyer, *Alternatives to Household Chemicals, Mercury and Universal Waste brochure (for residents and businesses)* **Valley Trans. Agency literature**: bus maps and schedules **Air District** and **Rideshare literature:** Spare-the-Air brochures; transportation-alternatives brochures	This material is easily obtained from the agencies or is copied by staff internally. The materials continue to be taken by the public at a pace where a weekly visit to each site is necessary.
Rideshare Week and Bike-to-Work Day: Encourage participation among city employees and the general public	E-mail messages: Email messages to employees in May for Bike-to-Work Day. Cupertino's Bicycle/Pedestrian Commission supports energizer stations at the Quinlan Community Center, Apple Computer, and Hewlett Packard sites. Articles in Scene newsletter: Articles were published in the May city newsletter, the Scene, for Bike-to-Work Day.	The email message, sent out April 30, 2007 serves to remind employees about this environmentally friendly form of transportation and the related activities occurring on Bike-to-Work Day. A few city staff members participate, but most drive as they have other activities or live too far from work. According to our Bicycle and Pedestrian Commission, 93 cyclists stopped by the Quinlan Community Center Energizer Station, 173 riders stopped by the Apple Computer Energizer Station, and 223 riders stopped at the Hewlett Packard site.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report: General Tasks
Cupertino

Activity	Level of Implementation	Evaluation
HHW display at Quinlan Community Center	General HHW display set up 2 wks prior to Cupertino HHW event on 8/26/06. Articles in July Scene newsletter. Articles and ads in the Cupertino Courier and San Jose Mercury News West Valley Section (Cupertino is included in this section)	The County now surveys the HHW customers about how they became aware of the program- and sorts the data by city. In the most recent data available, FY 06-07, residents found out about the program this way: • By calling the garbage company: 20% • By reading the city's newsletter: 37% • By reading the local newspaper: 22% • From a flyer: 12% • From the City's website: 4% • By calling the City: 4% • From Radio/TV Advertisement: 2% We can conclude that our city newsletter, the Scene, is a valuable outreach tool. We will continue to buy ads in the local paper and present a display of what typical HHW products can be taken to a HHW event just before our major August HHW event.
NPS literature distribution to residents at Cupertino HHW event	The County's HHW staff distributes the following pieces, at the events, on behalf of the City of Cupertino: Alternatives to Household Chemicals, Santa Clara County HHW brochure, Computer and TV Recycling, and Donation Agency List. An event was held in Cupertino on 8/26/06.	We are assuming that those users of the HHW event are environmentally conscious, and are probably the kind of people who are interested in stormwater related literature.
Audubon Fair; literature provided to Park and Rec staff to distribute at fair.	Alternatives To Household Chemicals, Home Maintenance Tips brochure, and various IPM fact sheets distributed on 10/21/06 at McClellan Ranch.	According to the City's naturalist, who staffed the event, approximately 500 attended. Brochures were available to those in attendance.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report: General Tasks
Cupertino

Activity	Level of Implementation	Evaluation
Website: Include NPS information in city's website, especially new IPM website links and new info on Mercury.	The City's environmental division website has a specific section on Pest Management and direct links to the Program's IPM website and new information on Mercury.	Ongoing As the public becomes more accustomed to using websites, this tool becomes a valuable and easy to use method of educating the public.
Watershed Education & Outreach Campaign: Conduct or participate in local activities that are coordinated with the Watershed Education & Outreach campaign. Evaluate the effectiveness of PI/P projects by direct or indirect means, as appropriate.	Staff attends WE&O campaign planning meetings and reviews and critiques work plans and campaign products. The City participated in staffing the Annual Home Show in conjunction with program consultants and staff from other jurisdictions. The City participated in staffing the Pumpkins in the Park event in October.	The Cities Environmental Program did not participate in this years' Annual Home Show, due to a position vacancy. However, the City did staff a 3-hour shift at the Pumpkins in the Park event in October. Outreach materials distributed included Home Maintenance Tips, County U-Waste Brochure, Safe Medicine Disposal Flyers, Creek Clean-Up Flyers, IPM fact sheets, pencils, Got Bugs Magnets, Activity Books, Kids Guide to Backyard Bugs, Grow It Guide, HHW brochure, and Pools and Spas Brochure.

Newsletter, newspaper articles, ads:

Cupertino Scene articles:

Approx. dates and subjects for submittal to monthly newsletter (mailed to all residents and businesses):

- 6/ 06: household haz. waste event; spare the air, computer recycling
- 9/06: recycling used motor oil, copper in brake pads
- 10/06: disposing fluorescent bulbs & thermometers
- 11/ 06: residents to keep storm drain grates & gutter clean/ city to vacuum storm drain system/warning about not dumping HHW, air pollution from home fireplaces, including gas rebate program
- 12/06: advice on burning wood properly to avoid pollution; computer recycling
- 2/07: batteries collection, computer recycling, HHW disposal, Green Business Program (program includes stormwater pollution prevention)
- 3/07: IPM specific fact sheets available; reduce traffic and air pollution
- 4/07: fluorescent lights, thermometer, and batteries disposal, electronic waste recycling event; pest management, Our Water Our World website; HHW program reminder for spring cleaning, curbside battery recycling
- 5/07: IPM pest specific fact sheets available; watch use of soap when washing cars; creek cleanup date set; bike-to-work day, HHW disposal, Spare the Air
- 6/07: draining pools, cars and water pollution, littering and watersheds

Evaluation: The Scene, the city's newsletter provides an easy way for staff to inform local residents and businesses about issues of civic concern. The Scene is mailed to 26,000 postal customers – all residences and businesses in the City.

Cupertino Courier articles:

City's renewal to continue computer recycling with Apple Inc. 6/27/07

Article on the countywide Household Hazardous Waste Program 8/26/06 disposal event in Cupertino (8/9/06)

Courier ads:

Household hazardous waste event ads before the August '06 HHW event (8/2/06,8/9/06, 8/16/06)

Ads on pesticides and mercury pollution are submitted by the Program and paid for jointly by the cities.

S.J. Mercury articles:

Articles and ads in the Mercury are usually submitted by the Program and paid for jointly by the cities.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report: General Tasks
Cupertino

Targeted Outreach

Activity	Level of Implementation	Evaluation
City staff: • Building inspectors • Public Works inspector and plan checker • Planning Dept. planners • NPS inspector (in Public Works) • Corp yard & street dept staff • Public Works staff managing golf course maintenance contract and managing structural pesticide spraying contract • City employees for general info on less-toxic alternatives for their own home use, and info on not using pesticides on the job, if unauthorized (detail in the Pesticide Workplan)	See Training Activities Table, for details about specific trainings. NPS literature distributed, as appropriate E-mails: • Sent 3/7/07 informing employees on how to dispose of batteries properly. • Sent 4/02/07 informing them of less toxic alternatives to pesticides and inviting them to get more info and see display. • Sent 4/30/07 informing them of Bike to Work Day • Approximately 19 Spare the Air emails sent to employees informing them of Spare the Air Days	**General remarks:** Trainings regularly provide an informal forum for staff to discuss any recent concerns about operations. The city believes that employees understand stormwater concerns as evidenced by the number of public incidents reported by staff, the types of informed questions asked by staff, and the tradition of on-going training for many years. **Building Dept:** Focus: performance standard, construction BMPs and source control BMPs, inspection notices. **PW and Planning Plan Checkers:** Focuses: C-3, Group 1, 2A & 2B, HMP Pesticide Control, website information, construction permit and MRP. **Corp Yard and Street Dept training:** Focus: Topics included corporation yard operations and maintenance, vehicle and equipment cleaning, dumping incidents, pest management, and universal waste recycling and disposal. In addition, building inspectors, planners, public works inspector and the city's storm water inspector attended Program-sponsored training events.

Activity	Level of Implementation	Evaluation
Creek cleanup volunteers	*Scene* articles	Article in May '07*Scene* newsletter
Nursery customers and staff: Pt-of-sale IPM campaign (2 stores: Yamagami's Nursery and Summer Winds Garden Ctr.)	IPM Partnership trainer. Program IPM factsheets	By EOA staff. Set up by EOA staff and Program contractor in the Spring. This is a very efficient way to be sure the nurseries get uniform and effective training, and up-to–date information on new products.
Auto Repair Shops	Education of shop mgrs. during bi-annual inspections by City Bldg. Dept staff; use Program lit, if necessary	Auto repair shop inspections are conducted bi-annually and were completed in FY 05-06.
Restaurant education	Restaurant posters are distributed at inspections by County health inspectors, or by city NPS inspector, if responding to problems. County health inspector routinely inspects all restaurants annually, and inspects on an "on-complaint" basis. Additionally, the city's inspector provides a copy of a restaurant worker tri-fold (available in either English, Spanish, Vietnamese, or Chinese) explaining proper restaurant cleaning behavior, as needed. Health Dept. inspectors are now also distributing the recently acquired "Don't Set a Table for Pests" brochure.	The County continues to distribute posters to new restaurants that don't have them. When the city's NPS inspector responds to spills or illegal discharge problems at restaurants, he provides verbal guidance, written violation notices, and often leaves a program brochure, cards or poster. The illustrations on the IC/ID cards are helpful for situations where there is a language barrier. The Chinese version of the tri-fold is helpful in our community, which has a high percentage of Chinese speaking people, and many Chinese restaurants.

Cupertino

Activity	Level of Implementation	Evaluation
Provide info on IPM workshop opportunities to school districts and sanitary district. (See Pesticide Workplan for details.)	IPM sheets. Info on IPM websites	Nareesh Duggal of Santa Clara County contacts these groups as trainings become available. A training conference was held on 11/14/06 at the San Jose convention center.
Outreach to local commercial businesses to encourage the use of pest-resistant plants in landscape. Included in Planning Dept. applicant packet (Pesticide Workplan for details.)	Pest-resistant plant list is distributed through the Planning Dept. application packet.	Ongoing

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report: General Tasks
Cupertino

Public Participation

Activity	Communication Vehicle	Goal
Participate in regional creek cleanup event (if creeks in Cupertino need cleaning). Publicize cleanup.	Article submitted to May '07 Scene City did not host a creek cleanup site.	The Water district bought ads in the Courier and mailed out reminders to last year's volunteers. A site is usually hosted at the Stevens Creek reservoir, adjacent to the city limits. That was not the case this year. City staff have not found any creeks in dire need of cleaning in Cupertino

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report: General Tasks
Cupertino

School/Education Outreach

Activity	Communication Vehicle	Goal
Creek Education project available to all 3rd and 3rd/4th teachers in School District: about 82 classes (half are in Cupertino; remaining schools in cities of San Jose, Sunnyvale, Santa Clara, Saratoga, Los Altos). Teachers are trained to teach the creek ed. unit to their own classes, and co-lead creek field trip for students.	Teachers are trained to teach the creek ed. unit to their own classes, and co-lead creek field trip for their students; City's Park & Rec naturalist teaches the teachers. City provides two docents for creek tours. 4-hr training workshops for teachers; 2-wk curriculum for students taught by teachers, w/ half-day creek field trip.	This program is very popular with our school district and the teachers. We started the program in 1995, and continue to refine as needed. During a half hour review of general NPS and creek concepts that precedes the actual creek walk, our docents have the opportunity to observe whether each teacher has, in fact, spent time in the classroom preparing the students for the field trip. Typically, almost all of the students are familiar with the concepts. This past year we had 1700 students participate and ~270 parent helpers.
Respond to school group requests for tours, workshop, field trips, as possible	The city's Park and Rec staff naturalist is now assisting the students of Monta Vista High School to regularly perform water quality monitoring and research in Stevens Creek (the city's principal creek, 2 blocks from the high school).	In general, creek and water quality studies have become more common in schools, without the intervention of the city. However our city's naturalist is well known among local teachers as a science resource, and is often informally drawn into school projects. Since she is the lead docent in our 3rd-grade creek program, she is already very aware of stormwater and watershed issues, and shares that info with the teachers and students.
Continue to encourage 6th -grade teachers in the Cupertino Union School District to attend the Wacky Watershed teacher-training workshops. (Trainings will assist teachers in including watershed curriculum in their science classes.	E-mails and phone calls to the District's science curriculum advisor.	The City's Park and Rec. Naturalist is contacted by the City of San Jose's Water Watershed Staff in regard to upcoming workshops. Cupertino hosted a workshop at McClellan Ranch in Oct. 06.

New Development Planning Procedures

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report: New and Redevelopment Requirements

Cupertino

Activity	*Permit Item Source*	*FY06-07 Tasks*	*Status / Comments*	*Due Date (mo/yr)*	*Responsible Party*
NEW DEVELOPMENT AND CONSTRUCTION CONTROLS – PLANNING PROCEDURES					
C.3.b Development Project Approval Process -- Planning Procedures					
Ordinance Revision	C.3.b.2	Modify existing review policies, procedures, and/or conditions of approval to incorporate C.3 requirements (based on results of tasks under C.3.c. through C.3.m.)	On September 20, 2005, the City Council adopted revisions to the Cupertino Stormwater Pollution Prevention and Watershed Protection ordinance (Chapter 9.18 of the Municipal Code). Changes were related to Group 2A projects and HMP requirements. On June 20, 2006, the City Council adopted further revisions to this ordinance related to Group 2B project **and HMP** requirements. A copy of the revised ordinance may be viewed by following the links to Chapter 9.18 at http://www.cupertino.org/leaving_cupertino/index.asp?Location=http%3A%2F%2Fwww.amlegal.com%2Fcupertino_ca%2F	Group 2 Ordinance Revision 6/06	Public Works
Staff Training	C.3.b.3	Continue to train Cupertino staff in planning, building, and engineering departments on the C.3. provisions.	On December 5, 2006, staff from Public Works Engineering attended a WMI-sponsored walking tour of the Don Edwards National Wildlife Refuge. On behalf of the Public Works Department, the City's Stormwater Quality Consultant attended a SCVURPPP-sponsored training on bio-retention techniques at the Sunnyvale Community Center on January 17, 2007. In-house training was given to Planning and Public Work staff on June 26, 2007 and April 5, 2007 respectively. Topics included Group 1, 2A, and 2B projects, the HMP, pesticide control measures, the status of the Municipal Regional Permit, and information contained in the	6/07	Public Works – Environmental Division

			stormwater quality pages of the City's website. On June 14, 2007 Public Works civil engineering staff responsible for land development review, Planning staff, and the City's Stormwater Quality Consultant attended the SCVURPPP-sponsored "Implementing Stormwater Requirements in New Development and Redevelopment Projects" training in Cupertino.		
C.3.c. Requirements for Group 1 and Group 2 Projects					
Guidance Manual	C.3.c.4	Review any changes to the SCVURPPP C.3 Guidance Manual.	In August and November 2006, Public Works staff used SCVURPPP C.3 guidance to update the Storm Water Quality Regulations area of the City's web site. Revisions were made to the Notice to Contractors and Developers, the Project Screening Tool, and the Impervious Surface Calculation Worksheet to incorporate Group 2B projects and HMP requirements. The City's web site also includes links to SCVURPPP's updated C.3 Stormwater Handbook. The City's Stormwater Pollution Prevention and Watershed Protection ordinance has been used by Public Works staff as a developer/designer guidance tool since October 2005. The ordinance, most recently revised in June 2006, includes definitions of the applicable projects; numeric sizing criteria; requirements for stormwater management plans and BMP O&M agreements	NA	Public Works Environmental Division
Guidance Manual Update	C.3.c.9	Update Guidance Manual and Performance Standard for Group 2 projects as needed.	Feedback on the SCVURPPP's revised C.3 Stormwater Handbook was submitted	6/07	Public Works Environmental

			through the Program's C3.PO workgroup, of which the City of Cupertino is an active member. Updating the Planning Procedures Performance Standard was deferred pending the outcome of the Municipal Regional Permit.		Division
C.3.e Operation and Maintenance of Treatment BMPs					
Data Form and Staff Training	C.3.e.1	Log information about treatment BMPs installed at approved Group 1 and 2 projects and maintain a list or database of properties, treatment BMPs, and responsible operators.	As of June 30, 2007, no Group 1, 2A, or 2B projects have been completed and accepted by the City. Two Group 1 projects were approved in Cupertino in FY '06-'07. However, these projects are still under construction and will not be included in the O&M Verification Program until FY '07-'08.	9/07 AR and ongoing	Public Works Environmental Division
BMP O&M Agreement Mechanism	C.3.e.2	Review use of City's BMP O&M and easement agreements and consider modifications, as needed.	In April 2007, City staff and its Stormwater Quality consultant reviewed both the BMP O&M and BMP easement agreements found them to be adequate for current development conditions.	9/07 AR and ongoing	Public Works, Planning, City Attorney
BMP Inspection Program	C.3.e.5	Develop local program for inspecting a subset of prioritized treatment BMPs to verify that the responsible party is performing proper O&M.	A copy of the Cupertino BMP O&M Verification Program section of the Planning Procedures performance standard is attached immediately following this section. This program is managed by the Public Works Construction Inspector. Project tracking is done using an Excel spreadsheet.	6/07	Public Works Engineering
Reporting	C.3.e.6	Report on the Cupertino treatment BMPs O&M verification program in each annual report, including organizational structure, evaluation of effectiveness, and planned improvement to the program. Include a list or summary of treatment BMPs inspected during the year, inspection results, and any required follow-up and correction.	No BMP O&M inspections have been conducted to date. See responses to Tasks C.3.e.1 and C.3.c.5, above.	9/07 AR and ongoing	Public Works Environmental and Engineering Divisions

FY 2006-2007 Annual Report: New and Redevelopment Requirements

Cupertino

Activity	*Permit Item Source*	*FY06-07 Tasks*	*Status / Comments*	*Due Date (mo/yr)*	*Responsible Party*
C.3.f Hydromodification Management Plan					
Staff training	C.3.f.3	Implement HMP as part of requirements for Group 1 projects that may cause increased erosion or other related impacts.	Planning and/or Public Works staff review every project for HMP applicability. During FY '06-'07, there were no projects regulated by HMP permit provisions. In-house training on HMP requirements was held on April 5 and June 26, 2007.	9/07 AR and ongoing	Public Works and Planning
C.3.h Alternative Certification					
Reporting	C.3.h.1	List projects certified by someone other than City staff.	There were no projects submitting Alternative Certification.	9/07 AR and ongoing	Public Works Environmental Division
C.3.k Source Control Measure					
Ordinance Revision	C.3.k.	Enhance source control requirements for new and redevelopment projects.	No revisions to the Source Control requirements of the City Code were made in FY '06-'07. These requirements are reviewed periodically to determine if changes are needed.	9/07 AR and ongoing	Public Works Environmental Division
Reporting	C.3.k.3	Implement source control measures requirements by including appropriate conditions of approval in Group 1 and 2 projects. Report status and provide examples of application of conditions in annual reports.	For the two Group 1 projects approved in FY '06-07, a general condition requiring site design, source controls, and stormwater treatment BMPs is included along with a condition relating to water conservation and pesticide reduction measures and covered trash enclosures.	9/07 AR and ongoing	Public Works Environmental Division

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report: New and Redevelopment Requirements

Cupertino

Activity	*Permit Item Source*	*FY06-07 Tasks*	*Status / Comments*	*Due Date (mo/yr)*	*Responsible Party*
C.3.l Update General Plans					
General Plan Review	C.3.l.1	Review current General Plan policies related to water quality and watershed protection and incorporate additional policies as needed to implement C.3.	The Cupertino City Council adopted the 2000-2020 General Plan on November 15, 2005. Sections related to urban runoff control are found in the Environmental Resources/Sustainability Chapter (Wildlife and Vegetation; Water Resources; Stormwater Runoff) and in the Hillside Protection portion of the Land Use/Community Design Chapter. The Plan may be viewed electronically at http://www.cupertino.org/city_government/departments_and_offices/planning_and_building/general_plan_update/index.asp. This item will be dropped from future Annual Reports until such time as additional General Plan changes are proposed.	9/07AR	Public Works Environmental Division and Planning
C.3.m Water Quality Review Processes					
CEQA Review	C.3.m.1	Review CEQA initial study checklists and other environmental review documents and modify documents as needed to include questions that sufficiently address water quality impacts of projects.	In FY '06-'07, no changes were made to the City's water quality review process. Any future changes would be reported in the applicable year's annual report.	9/07 AR and ongoing	Public Works Environmental Division and Planning

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report: New and Redevelopment Requirements

Cupertino

Activity	*Permit Item Source*	*FY06-07 Tasks*	*Status / Comments*	*Due Date (mo/yr)*	*Responsible Party*
C.3.n Reporting Requirements					
Reporting	C.3.n.1	Provide information described in Table 1 of Provision C.3. in annual reports.	There were two Group 1 projects approved in Cupertino during FY '06-'07. See the Table following this section.	9/07 AR and ongoing information collection	Public Works Environmental Division and Planning
Reporting	C.3.n.4	Collect and report the following for all projects that must implement treatment measures: BMPs, site design, and source control measures used, sizing criteria, O&M responsibility mechanism and responsible party.	There were two Group 1 projects approved in Cupertino during FY '06-'07. See Table following this section.	9/07 AR and ongoing	Planning and Public Works Engineering
Pesticide Control Measures	C.3.n.5	Collect information and report a summary of types of pesticide reduction measures required for development projects and the percentage of projects for which pesticide reduction measures were required.	All projects receive, as part of the application packet, a list of conditions related to reduction of pesticide use, Property Maintenance Fact Sheet, and a Pest Resistant Plant list. Planners were recently reminded in an in-house training to include a COA related to pesticide reduction measures to all Group 1 projects. This condition was included in the more recent of the two Group 1 projects for FY '06-'07.	9/07 AR and ongoing	Planning and Public Works Engineering
Evaluation					
Staff and developers worked together during the various stages of the project approval, including the conceptual submittal; the conditions of approval; BMP selection and review; and construction. Staff has noted that the phase-in of the requirements has been helpful, due to the learning curve required to understand and implement different elements of C.3 provisions. Staff has also noted that it can be challenging to have developers incorporate BMP selection and design into their initial site planning. Staff will strive to work with developers and city planners to ensure that this task is considered in the very early stages of project planning.					

City of Cupertino

Reporting Form for Planning Procedures Performance Standard

and Provision C.3.n.i. Reporting Requirements

Part 1

New Development and Significant Redevelopment Projects[1]

Approved During FY 06-07

Project Name	Project Type[2]	Site Size (ac. or s.f.)	New Impervious Surface (s.f.)[3]	Area of Land Disturbed (Ac.)[4]	Project Status (Dates Deemed Complete and Approved)	Storm Water Control Measures Included in Project
Private Projects						
Whole Foods Project (Stevens Creek /Stelling)	Significant Redevelopment	5.68 Acres	Replacement of impervious surface, but no change in area	5.68 Acres	Dec. 2005; Feb. 2007	Roof drains directed to bioswale; Existing site is a parking lot: new design will have increased landscape areas in common areas and more tree planting.
Any Mountain (10495 De Anza Blvd.)	Significant Redevelopment	1.65 Acres	Replacement of impervious surface, but no change in area	1.65 Acres	July, 2006; May 2007	Half of building roof & landscaped areas drain to swales; balance drains to Vortsentry unit.

[1] Prior to August 15, 2006, list all projects with new impervious surface area greater than 1 acre (43,560 s.f.) (Group 1).

After October 20, 2005, list all projects with new impervious surface area greater than 1acre (Group 1) and projects of certain land uses with new impervious surface greater than 10,000 s.f. (Group 2A) (see July 20, 2005 permit amendment).

After August 15, 2006, list all projects with new impervious surface area greater than 10,000 s.f. (Groups 1 and 2).

[2] Describe project type, as defined in Provision C.3.c.

[3] "New" is defined as impervious surface created, added or replaced.

[4] If the site is a "significant redevelopment", list the area of land disturbance, if information is readily available.

Public Projects						
No Projects to Report						

City of Cupertino
Reporting Form for Planning Procedures Performance Standard
and Provision C.3.n.ii. & iii. Reporting Requirements

Part 2

Stormwater Control Measures[5]

Approved During FY 06-07

Project Name	Treatment BMPs	Numeric Sizing Criteria Used	O&M Responsibility Mechanism and Responsible Party	Site Design Measures	Source Control Measures	Pesticide Reduction Measures
Private Projects						
Whole Foods Project (Stevens Creek /Stelling)	Grassy swales, detention basins	Sizing Flow Based Treatment Controls based on the factored flood approach (Q=CIA)	Whole Foods	Roof drains directed to landscape areas; bioswales along building & in parking lot; pavers in outdoor patio & walkway	Enclosed & covered areas for dumpsters & recycling containers; roof drains directed towards swales & drywell	Pesticide resistant plantings

[5] Prior to April 15, 2005, list all* projects with new impervious surface area greater than 43,560 s.f. (1 acre) (Group 1).

After October 20, 2005, list all projects with new impervious surface area greater than 1acre (Group 1) and projects of certain land uses with new impervious surface greater than 10,000 s.f. (Group 2A) (see July 20, 2005 permit amendment).

After August 15, 2006, list all projects with new impervious surface area greater than 10,000 s.f. (Groups 1 and 2).

See SCVURPP "C.3. Handbook: Guidance for Implementation of Stormwater Requirements for New and Redevelopment Projects".

*Projects that do not require stormwater treatment because they fall under the Alternative Compliance Program must be reported as per Provision C.3.g.v. (see Reporting Form Part 3).

Any Mountain (10495 De Anza Blvd.)	Proposed Vortsentry unit	Sizing Flow Based Treatment Controls based on the factored flood approach (Q=CIA)	Any Mountain	Roof drains directed to landscape areas; bioswales in landscape areas; decomposed granite walkways	Enclosed & covered areas for dumpsters & recycling containers; roof drains directed towards swales	Pesticide resistant plantings

Performance Standard and Supporting Documents for the
CITY OF CUPERTINO
Planning Procedures

Section 4
STANDARD OPERATING PROCEDURES

This section contains the City of Cupertino standard operating procedures (SOPs) related to managing the stormwater quality impacts of new and redevelopment projects. These SOPs demonstrate that urban runoff requirements related to development approval are incorporated into the development review processes of the Planning and Building Divisions and the Public Works Department. In addition, these SOPs describe how the City ensures continued operation and maintenance (O&M) of permanent BMPs at Group 1, 2A & 2B Projects.

Standard operating procedures are provided for the following stormwater quality review processes:

- Private Development Project Approval - Non-Discretionary Projects[4]
- Private Development Project Approval - Discretionary Projects
- Capital Improvement Project Design and Acceptance
- Encroachment Permit Issuance
- Annual Inspection of Group 1, 2A & 2B Private Development BMPs

[4] Definitions are provided at the end of this document.

Performance Standard and Supporting Documents for the
CITY OF CUPERTINO
Planning Procedures

STANDARD OPERATING PROCEDURES FOR CUPERTINO'S STORMWATER QUALITY REVIEW PROCESS FOR PRIVATE DEVELOPMENT PROJECTS

The following documents are included in Appendix 'C' of the Planning Procedures Performance Standard:

- CEQA Initial Study Checklist
- Written materials disseminated during the development approval process:
  - Cupertino Notice to Developers and Contractors-Stormwater Regulation Changes
  - Impervious Surface Calculation Worksheet (to determine if development could be a Group 1, 2A & 2B project)
  - Cupertino Permanent BMP matrix (selection by land use)
  - Pesticide Control Measures for Development Projects Hand-Out (based on SCVURPPP model conditions of approval)
  - Cupertino Stormwater Quality Guidelines for Development Projects (guidance on complying with C.3 provisions related to Group 1, 2A & 2B Projects)
  - Cupertino Blueprint for a Clean Bay Plan Sheet (construction BMPs)
- City of Cupertino Standard Conditions of Approval (includes misc. stormwater related items)
- Templates of BMP O&M and easement agreements

Performance Standard and Supporting Documents for the
CITY OF CUPERTINO
Planning Procedures

Non-Discretionary (Administrative) Private Development Projects

- Building Department plan checkers (in-house or consultants) review non-discretionary projects for the necessary construction and source control BMPs.
- Building Department counter staff attach a copy of the City's "Blueprint for a Clean Bay" sheet to all project plan sets at the time of building permit issuance.

Discretionary Private Development Projects

Preliminary Plans Consultation

The applicant presents the Planning Division with a preliminary project idea. The applicant receives an initial assessment of the idea, finds out which application forms would be necessary and the City's general concerns.

- The application packet includes the City's Notice to Developers and Contractors-Stormwater Regulation Changes (regarding Group 1, 2A & 2B Projects and the State NPDES Construction permit); a hand-out on pesticide control measures; and the City's Permanent BMP Selection Matrix (copies of each given in Appendix 'C').
- If the project is subject to CEQA, the Project Planner fills out the CEQA Initial Study checklist, which includes items related to stormwater concerns.
- As needed, the Planning Division will arrange for additional CEQA compliance documentation, including any environmental assessments and studies, which will be paid for by the developer.
- The Planning Division informs the applicant of any environmental studies that will be needed. City staff are guided at this point in the review process by the City's General Plan provisions that pertain to urban runoff concerns.
- Group 1, 2A & 2B Project applicants are advised to meet with engineers in the Public Works Department to discuss stormwater quality and other related issues, such as if a project will be built in an "unimproved" area (i.e., an area without curbs and gutters), in an area with drainage problems, on a hillside lot, on a lot with a dirt road needing street improvements, or if the ~~a~~ project will require significant grading.

Preliminary Meeting with Public Works

- If the proposed development could be a Group 1, 2A & 2B Project, Public Works Engineering staff give the applicant the City's *Impervious Surface Calculation Worksheet for Projects One Acre of Larger* and explains how to complete this form (copy of worksheet given in Appendix 'C'.
- Public Works staff may recommend design changes to reduce the amount of impervious surface so that the proposed development is not considered a Group 1, 2A & 2B Project.
- The Public Works staff will advise the applicant regarding construction and permanent stormwater BMP requirements.
- Applicants of Group 1, 2A & 2B projects receive a copy of the *City of Cupertino Stormwater Quality Guidelines for Development Projects.* This document includes additional information on selection

and design of permanent BMPs, the Stormwater Management Plan submittal and long-term BMP operation and maintenance requirements.

- Public Works Engineering staff tell the applicant if a grading permit and an interim erosion and sediment control plan will be necessary and if street improvements will be required.

Development Application Is Submitted

- An application is submitted to the Planning Division, including 6 copies of the application plan set (which includes the site plan, elevations, floor plans, and preliminary landscaping plan.
- A completed *Impervious Surface Calculation Worksheet for Projects One Acre or Larger* is submitted with the development application. This worksheet is forwarded to Public Works Engineering.
- Group 1, 2A & 2B Project applications must include a Stormwater Management Plan, which is reviewed by Public Works Engineering staff.
- If a grading permit will be necessary, the initial grading plan and the interim erosion and sediment control plan are submitted to the Public Works Department at the same time as the application.
- Staff from City's Public Works Department, the Building and Planning Divisions, the County Fire District and the Sanitary District will review the construction documents for their major concerns. Two weeks after the application is submitted, the applicant meets with staff from these agencies at the Pre-Hearing meeting.

Grading Permits and Erosion and Sediment Control Plans

- Public Works Engineering staff will review the grading plan and the interim erosion and sediment control plan submittals to verify that appropriate construction BMPs are incorporated.
- If street improvements are required, Public Works staff will review the construction plans for appropriate construction and permanent BMPs.
- If the developer's engineer is unclear about how to protect the streets and storm drains during construction, Public Works staff will provide the engineer with copies of specific BMPs from the *ABAG Manual of Standards for Erosion and Sediment Control Measures* or will suggest that the engineer buy a copy of the document.
- In accordance with City Code Section 9.18.120, no grading, or erosion and sediment control permit will be issued for a Group 1, 2A & 2B Project until the Stormwater Management Plan has been reviewed and approved by the Director of Public Works.

Pre-Hearing Meeting

At the Pre-Hearing Meeting, representatives of the Planning and Building Divisions, the Public Works Department, the County Fire District and the Sanitary District formally meet to give their general comments to the applicant.

Environmental Review Committee (ERC)

The ERC (a small review committee made up of key Department heads, a Planning Commissioner, and a City Council member) develop a recommendation, to be presented to the Planning Commission, on the significance of the project's environmental impacts.

Planning Commission Hearing

- The proposed project is presented to the Planning Commission, resulting in a Planning Commission Resolution of denial or approval with Conditions.
- The City's standard Conditions of Approval related to stormwater quality are given in Appendix 'C'. Additional conditions of approval may also be required, depending on the type, size, and location of the proposed development.
- In matters related to stormwater quality, the Planning Commission and Planning staff are generally guided by the city's General Plan, Environmental Resources/Sustainability Element, which contains numerous goals relating to urban runoff pollution control.
- Large, significant development proposals (including most Group 1, 2A & 2B projects) may also be presented for approval before the City Council.

Project "Deemed Complete"

- The Cupertino Planning Division provides the developer with a list of the requirements needed for planning application submittals. This list is the criteria for determining whether an application is complete and ready to be processed.
- The Project Planner will review applications within 30 days of submittal to determine if all required information has been provided and the application can be "deemed complete" and accepted.
- If the application submittal is incomplete, the Project Planner will send a letter to the applicant indicating that the application is "deemed incomplete" and lists the items needed to complete the application.
- If the Planning Division's written determination is not made within 30 days after receipt of the application, under State Law, the application is deemed "complete" and staff proceed with processing the application.
- Once an application is accepted as complete, the City cannot ask for new information, although it may require the applicant to clarify or add to the material provided in the application for clarification purposes.
- Proposed developments that would create or replace 10,000 square feet or more of impervious surface that are deemed complete prior to April 15, 2005 will not be subject to the Group 2 C.3 provisions of the City's Municipal NPDES Storm Water Discharge Permit.

Construction Drawings Submittal-

- Construction drawings for private development projects are submitted to the Building Department. The Building Department is responsible for monitoring all construction aspects of private projects with the exception of required street improvements and the on-site BMPs, which are monitored by the Public Works Engineering Division.

- Street improvement plans are submitted to the Public Works Department.
- At this point, Building Department counter staff provide the applicant with a copy of the City's "Blueprint for a Clean Bay" sheet. The applicant is required to attach a copy of the "Blueprint" sheet to all construction drawings submittals. The Building Department plan checker verifies that the "Blueprint" sheet is attached. If it is not, he/she will call for the sheet to be attached before the Building Department will sign off on the final plans.
- A set of the drawings is provided to the Planning staff responsible for the project to verify that the project continues to abide by the Planning Commission's Conditions of Approval.
- Building Division staff review the construction drawing for source control BMPs.
- Planning staff also review the plans for non-Group 1, 2A & 2B projects for site design BMPs.
- If the proposed development is a Group 1, 2A & 2B Project, Public Works engineering staff receive a set of construction documents and review them for C.3 compliance, including incorporation of treatment control BMPs designed to the required numeric sizing criteria and consistency with the project's Stormwater Management Plan.
- If landscape plans are required, Planning staff review these for BMPs related to pesticide control measures.
- Construction tri-fold brochures and a copy of "Blueprint for a Clean Bay" booklet are made available to contractors at the planning/building counter.

Final Plan Approval

- Prior to issuance of a building permit for a Group 1, 2A & 2B Project, Public Works Engineering staff will verify that the Stormwater Management Plan has been completed and signed by a Civil Engineer meeting the City's certification requirements, as specified in City Code Section 9.18.140.
- Prior to the issuance of a building permit for a Group 1, 2A & 2B Project, Public Works Engineering staff will verify that the owner(s) of the property have signed a Stormwater Management Facilities Operation and Maintenance Agreement and a Stormwater Management Facility Easement Agreement (copies of templates for these agreements are given in Appendix 'C').

Final Occupancy Certificate

As required by City Code Section 9.18.130, after construction of a Group 1, 2A & 2B Project and prior to the issuance of a building occupancy certificate, Public Works Engineering staff will require the developer's responsible registered civil engineer to inspect the stormwater management facilities, submit a complete set of as-built drawings, and certify on these drawings that:

- The stormwater management facilities were constructed in compliance with the approved plans.
- The Record Drawings show all pertinent constructed dimensions, elevations, shapes, and materials;
- All variations in construction from the approved design plan have been identified, including omissions to and additions from the approved plan; and
- Any changes are in conformance with local, state, or federal regulations.

STANDARD OPERATING PROCEDURES FOR CUPERTINO'S STORMWATER QUALITY REVIEW PROCESS FOR CAPITAL IMPROVEMENT PROJECTS

Project Design and Management

- Most of the City's non-maintenance capital improvement projects (CIPs) are designed using consultants.
- Public Works Department staff act as project managers and are responsible for reviewing plans and specifications and preparing the contract documents for bidding.
- The Public Works Department Project Manager will advise the consultant's design team of any stormwater quality issues at the project's design kick-off meeting.
- The Public Works Project Manager makes sure that the consultant's design team incorporates site design elements and source control measures into the project to avoid post-construction urban runoff problems. The City's Permanent BMP Selection Matrix, the SCVURPPP C.3 Compliance Manual, the "Start at the Source" Design Manual, and the California BMP Handbooks are used as guidance.
- If a CIP is a Group 1, 2A & 2B Project, it is required to meet the stormwater treatment requirements of the City's NPDES Permit, C.3 Provisions.
- Public Works staff attach a copy of the City's Blueprint for a Clean Bay" plan sheet to each set of project plans.
- There is standard stormwater quality compliance contract language for capital improvement projects (a copy of these provisions are included in Appendix 'D'.
- If the CIP is covered under the State NPDES Construction Permit, the Public Works Project Manager will file an NOI.
- If a SWPPP is required, it may be done by the Public Works Project Manager or, by prior arrangement, by the consultant, or, if included in the construction documents, by the CIP contractor.
- If a SWPPP is required, but is written by someone other than City staff (such as the contractor or the design consultant), the Public Works Project Manager reviews it prior to the start of construction.

Project "Deemed Complete"

Any proposed City CIP that would create or replace 10,000 square feet or more of impervious surface would not be subject to the Group 2 C.3 provisions of the City's Municipal NPDES Storm Water Discharge Permit if funding is committed and construction is scheduled by April 15, 2005.

Environmental Review

- Planning and Public Works staff have received training on stormwater issues related to CEQA and are aware of those public projects exempt from the Group 1, 2A & 2B requirements of the City's NPDES Permit, C.3 Provisions.
- If a CIP is not "Categorically Exempt" under CEQA and an Initial Study Checklist is needed, it is prepared by Planning Division staff.

- As needed, the CIP design consulting team would be responsible for preparing additional CEQA compliance documentation, including any environmental assessments and studies.

Project Certification

Upon completion of construction, the consultant's responsible registered civil engineer will inspect the stormwater management facilities, submit a complete set of as-built drawings, and certify on these drawings that:

- The stormwater management facilities were constructed in compliance with the approved plans.
- The Record Drawings show all pertinent constructed dimensions, elevations, shapes, and materials;
- All variations in construction from the approved design plan have been identified, including omissions to and additions from the approved plan; and
- Any changes are in conformance with local, state, or federal regulations.

STANDARD OPERATING PROCEDURES FOR CUPERTINO'S STORMWATER QUALITY REVIEW PROCESS FOR ENCROACHMENT PERMITS

- An encroachment permit is required for non-City construction work in the public right-of-way. The Cupertino Public Works Department issues these permits.
- Public Works Engineering staff review the encroachment permit request and attach the appropriate SCVURPPP construction trifold brochures.
- A copy of the City's "Blueprint for a Clean Bay" plan sheet is also attached to all encroachment permits.

STANDARD OPERATING PROCEDURES FOR CUPERTINO'S PERMANENT BMP OPERATION AND MAINTENANCE INSPECTION PROGRAM

The following are included in Appendix 'E' of the Planning Procedures Performance Standard:

- Permanent BMP Inspection tracking system format (Excel spreadsheet and/or Access database)
- Sample permanent BMP O&M inspection form
- Sample permanent BMP O&M Notice of Violation letter

Selection of Annual Permanent BMP O&M Inspection Sites

- Permanent BMPs at all Group 1, 2A & 2B Project properties will be inspected annually, in March.
- Beginning April 15th 2006, all Group 1, 2A & 2B Project properties will be inspected annually, in March.
- In the future, depending on the total number of Group 1, 2A & 2B properties in Cupertino, the City may develop criteria for inspecting a subset of these sites, as allowed under NPDES Permit Provision C.3.e.

Permanent BMP O&M Inspection Program Responsibilities

- Public Works Engineering Division staff perform development plan review for stormwater quality compliance
- Public Works Engineering Division staff will inform the Public Works Inspector of new Group 1, 2A & 2B Project sites as construction plans for these projects are approved.
- The Public Works Inspector maintains the tracking system for permanent BMP construction and BMP O&M inspection and enforcement for all Group 1, 2A & 2B Projects (using the database format given in Appendix 'E').
- Since the Public Works Inspector will inspect construction of the on-site permanent BMPs at Group Projects and will sign-off on final City-approval for site occupancy, he/she will note when the project is completed in the Access database.
- The Public Works Inspector will submit a Permanent BMP O&M Inspection report for the previous fiscal year using the Access database to the Environmental Programs Manager by July 15th of each year.
- The Environmental Programs Manager will include BMP O&M inspection data in the Annual Report.

Permanent BMP O&M Pre-Inspection Preparation

- The Public Works Inspector will review the Permanent BMP O&M Inspection database at least two weeks prior to beginning annual inspections.
- The Public Works Inspector or Public Works Administrative staff will contact each Group 1, 2A & 2B site owner/manager by telephone to arrange a mutually agreeable inspection appointment.
- Prior to each site inspection, the Public Works Inspector will review the site's Storm Water Management Plan, including any applicable as-built construction plans, for BMP information,

including BMP types and locations. At this time, the Inspector will also review the site's current BMP O&M self-certification report, any previous inspection reports, and any necessary special procedures (e.g., inspection forms, underground confined space entry).

- The Public Works Inspector will review the applicable CASQA or SCVURPPP BMP fact sheets and information on the City's BMP Inspection Program, which may be useful in addressing questions or comments raised by BMP owners or operators during the inspection.
- Prior to each site inspection, the Public Works Inspector will assemble the necessary equipment and supplies.

Permanent BMP O&M Inspection and Enforcement Procedures

- Upon arriving at the inspection site, the Public Works Inspector will contact the site manager/owner and explain the purpose of the visit.
- Permanent BMP O&M inspection by the City will be in accordance with the inspection checklist given in Appendix 'E'.
- Inspection results will be logged in writing using the permanent BMP O&M inspection checklist.
- If any deficiency is noted, the Public Works Inspector will document it in writing. The written Notice of Violation will include a copy of the BMP O&M inspection form, including a list of corrective actions needed and a compliance schedule. This Notice will be sent to the Group 1, 2A & 2B property owner/manager within ten working days of an inspection. A sample Notice of Violation is given in Appendix 'E'.
- The Public Works Inspector will enter the permanent BMP O&M inspection information, including any violations, into the Permanent BMP O&M Inspection Access database.
- The Public Works Inspector will notify the Environmental Programs Manager by e-mail of any Group 1, 2A & 2B property with a permanent BMP O&M violation, including information on location, the nature of violation and any needed follow-up.
- The property owner and, if applicable, the site manager, will be instructed to notify the Public Works Inspector within the time period indicated on the Notice of Violation so that the facilities can be reinspected. The inspector will complete a new inspection form, noting whether all recommended maintenance activities have been completed and if any other actions are needed to assure proper operation of the facility.
- If repairs are not undertaken or are not done properly within the time allocated in the compliance schedule, the City will begin enforcement proceedings as provided in City Code Section 9.18.
- Once all necessary repairs have been completed, the Public Works Inspector will note this in the Access database, including the date work was completed and any other pertinent information (such as if City intervention was required to complete corrective work).

STANDARD OPERATING PROCEDURES FOR CUPERTINO'S ANNUAL REPORTING

As required by Permit Provision C.3.n, Cupertino will provide the following information in its annual reports.

- The name or other identifier, type of project, site acreage or square footage, and square footage of new impervious surface on all new development and significant redevelopment projects which meet the Group 1, 2A & 2B definitions of C.3.c. For significant redevelopment projects, the square footage of land disturbance will be reported.

- The treatment BMPs used and numeric sizing criteria employed, the operation and maintenance responsibility mechanism including the responsible party, site design measures used, and source control measures required for projects that must implement treatment measures.

- A summary of the types of pesticide reduction measures required for those new development and significant redevelopment projects to be addressed under C.3.c and the percentage of such new development and significant redevelopment projects for which pesticide reduction measures were required.

Model reporting forms for this information are provided in Appendix 'F'.

Background Data for BMP Type

The *Standard Stormwater Treatment BMP Inspection Data Collection Form* (Inspection Form) lists twenty stormwater treatment BMP types (see Section III). Inspectors, data entry staff and others who use the Inspection Form can refer to the California Stormwater Quality Association (CASQA) and SCVURPPP Fact Sheets for background information. The CASQA Fact Sheets are numbered (see below) and are located in the CASQA *Stormwater BMP Handbook for New Development and Redevelopment,* as well as SCVURPPP's *C3. Stormwater Handbook*. The SCVURPPP Fact Sheets are also located in the *C3. Stormwater Handbook.* Both Handbooks are available online.

<u>CASQA Reference Number</u>
Bioretention TC-32
Drain Insert MP-52
Extended Detention Basin TC-22
Infiltration Basin TC-11
Infiltration Trench TC-10
Media Filter TC-40 and MP-40
Retention/Irrigation TC-12
Vegetated Buffer Strip TC-31
Vegetated Swale TC-30
Vortex Separator MP-51
Water Quality Inlet TC-50
Wet Pond TC-20
Wetland MP-20
Wet Vault MP-50

<u>SCVURPPP Fact Sheets</u> (no identification numbers)
Exfiltration Trench
Hydrodynamic Separator
Planter Boxes
Porous Pavement
Roof Gardens
Underground Detention Systems

Potential Inspection Results with Definitions

If mosquitoes or mosquito larvae are observed within a BMP, report condition to: Santa Clara County Vector Control District, 976 Lenzen Ave., San Jose, CA 95126; phone: 408-792-5010; fax: 408-298-6356; email: timothy.mulligan@deh.co.scl.ca.us; website: www.sccvector.org

ID	Inspection Results	Definitions
I. All BMP Types		
1	No Visible/Apparent Problems	No visible or apparent problems with BMP function. BMP appears to be well-maintained
2	Significant Engineering/Design Flaws	BMP observed to have significant engineering/design flaws which lessen its effectiveness as a stormwater treatment measure.
3	Unauthorized Modifications	Any modification that lessens the effectiveness of the BMP; any modification not authorized by the City, designated agency or other regulatory agency.
4	BMP Destroyed or Eliminated	BMP destroyed, removed or eliminated from property.
5	Trash/Debris Accumulation or Dumping	Trash & debris accumulates within and/or on BMP; trash & debris interferes with proper BMP function; visual evidence of trash/debris dumping.
6	Evidence of Contaminants & Pollution	Evidence or presence of oil, gasoline, contaminants or other pollutants.
7	BMP Access Obstructed	Access to BMP obstructed or limited.
8	Obnoxious Odors	Unpleasant odors within/from the BMP.
9	Fencing - Missing or Broken Bars	Any defect in or damage to the fence or gate that permits easy entry to a facility.
10	BMP Cannot Be Located	BMP cannot be located for inspection.
II. Biofiltration (Bioretention, Vegetated Buffer Strip, Vegetated Swale, Roof Gardens, Planter Boxes)		
	A. General	
11	Uneven or Clogged Flow Spreader	Flow spreader uneven or clogged so that flows are not uniformly distributed across the BMP.
12	Leaking or Malfunctioning Irrigation System	Irrigation system leaking or malfunctioning.
	B. Sediment and Erosion Problems	
13	Sediment Accumulation	Sediment depth exceeds 2 inches on more than 10% of the vegetated treatment area; or sediment interferes with BMP performance.
14	Erosion/Scouring	Eroded or scoured areas due to flow channelization, higher flows, wind or water.
	C. Vegetation Maintenance Issues	
15	Poor Vegetation Coverage	Planted vegetation is sparse or bare or eroded patches occur in more than 10 % of the BMP. Growth of planted vegetation is poor because sunlight does not reach swale.
16	Invasive/Nuisance Vegetation or Weeds	Planted vegetation is excessively tall; nuisance weeds, invasive or noxious vegetation are overgrown; vegetation reduces free movement of water through BMP.
17	Tree/Brush Growth	Growth does not allow maintenance access or interferes with maintenance activity.
	D. Drainage Problems	
18	Standing Water/Excessive Ponding/Soggy Soil	Water is observed within the BMP (between storms) and appears not to drain freely or soil is excessively soggy. Excessive ponding of water within vegetated swale or other BMP.
19	Mosquito Habitat	Suitable habitat exists for mosquito production (e.g., standing water for more than 72 hours in areas accessible to mosquitoes).
20	Clogged or Obstructed Inlets/Outlets	Inlet/outlet clogged or obstructed with sediment and/or debris.
21	Constant Baseflow/Damage	Small quantities of water flow through the vegetated swale, even when it has been dry for weeks, and an eroded, muddy channel has formed in the swale bottom; constant baseflow from irrigation runoff..
III. Detention and Infiltration (Extended Detention Basin, Wet Pond, Wetland, Exfiltration Trench, Infiltration Basin, Infiltration Trench, Retention/Irrigation)		
	A. Vegetation Maintenance Issues	
22	Invasive/Nuisance Vegetation or Weeds	Invasive, nuisance vegetation or weeds are present.
23	Tree/Brush Growth & Hazard Trees	Growth does not allow maintenance access or interferes with maintenance activity; dead, diseased or dying trees; tree growth on berms or emergency spillway >4 feet in height or covering more than 10 % of spillway.
	B. Sediment and Erosion Problems	
24	Sediment Accumulation	Detention BMPs- sediment on pool bottom preventing water flow in/out of the facility. Infiltration BMPs -Sediment in storage areas, rock filters, and pre-settling ponds and vaults preventing infiltration.
25	Erosion	Eroded damage over two inches deep; potential for continued erosion; any erosion on a compacted berm embankment; soil from adjacent areas washes into/on BMP; continued erosion is prevalent.
	C. Animal Pests	
26	Rodent Holes	If facility acts as a dam or berm, any evidence of rodent holes, or any evidence of water piping through dam or berm via rodent holes.
27	Insects (Wasps, Hornets, Bees)	Insects (wasps, hornets, bees) interfere with maintenance activities. Excessive or nuisance levels.
	D. Drainage Problems	
28	Standing Water/Excessive Ponding/Soggy Soil	Water is observed within the BMP (between storms) and appears not to drain freely or soil is excessively soggy. Excessive ponding of water within vegetated swale or other BMP.
29	Mosquito Habitat	Suitable habitat exists for mosquito production (e.g., standing water for more than 72 hours in areas accessible to mosquitoes).
30	Empty Cell	First cell of wet pond does not hold water.
31	Unlevel Berm Surface	Unlevel internal berm dividing wet pond cells

Potential Inspection Results with Definitions

ID	Inspection Results	Definitions
III. Detention and Infiltration (Extended Detention Basin, Wet Pond, Wetland, Exfiltration Trench, Infiltration Basin, Infiltration Trench, Retention/Irrigation) continued		
	E. Unique to Certain BMPs	
32	Uneven or Clogged Flow Spreader	Flow spreader uneven or clogged so that flows are not uniformly distributed across the BMP.
33	Oil Sheen on Water (Wet ponds)	Prevalent and visible oil sheen.
34	Damaged/Missing Bars (Debris Barriers)	Bars are missing, loose, bent out of shape, or deteriorating due to excessive rust.
35	Leaking or Malfunctioning Irrigation System	Irrigation system leaking or malfunctioning.
36	Embankment Settlement Lower Than Design Elevation	Embankment settlement four inches lower than the design elevation.

IV. Structural, Non-landscaped Based (Drain Insert, Hydrodynamic Separator, Media Filter, Porous Pavement, Vortex Separator, Wet Vault, Water Quality Inlet, Underground Detention Systems)		
	A. General	
37	Mosquito Habitat	Suitable habitat exists for mosquito production (e.g., standing water for more than 72 hours in areas accessible to mosquitoes).
38	Access Cover Damaged/Difficult to Remove/Not in Place	Cover cannot be opened, corrosion/deformation of cover; maintenance person cannot remove cover using normal lifting pressure; cover is missing or only partially in place.
39	Deteriorating Paint or Protective Coating	Part or parts that have a rusting or scaling condition and have affected structural adequacy.
40	Locking Mechanism Not Working	Mechanism cannot be opened by one maintenance person with proper tools. Bolts into frame have less than 1/2 inch of thread (may not apply to self-locking lids).
	B. Ineffective Filter Material, Liners and/or Membranes	
41	Sediment Accumulation	Sediment depth exceeds acceptable levels (varies between BMPs)
42	Ineffective Media Insert/Filter Media	Media inset/filter media ineffective in doing intended function and needs to be replaced; filter is beyond the typical average life of product.
43	Rock Lining Out of Place/Missing (Sand Filters)	Soil beneath the rock lining is visible.
44	Visible Liner with Holes or Damaged	Liner is visible and has more than three 1/4-inch holes in it or is damaged.
45	Compromised Membrane or Roof Structure	Membrane or roof structure is compromised by either roots and/or water discharge.
46	Short Circuiting	Flows do not properly enter filter cartridges (media filters); seepage/flows occur along the vault walls and corners (sand filters); Sand eroding near inflow area (sand filters); flows become concentrated over one section of the sand filter rather than disperse (sand filters).
	C. Pipe or Pipe Joint Problems	
47	Damaged Pipes	Any part of the piping that is crushed, deformed, damaged, in need of repair or any other failure to the piping; protective coating is damaged.
48	Missing Debris Barrier/Not Attached to Pipe	Entire barrier is missing or is not attached to pipe.
49	Sediment in Drain Pipes/Cleanouts	Drain pipes and/or cleanouts are full of sediment and/or debris.
50	Joints Between Tanks/Pipe Section	Any openings or voids allowing material to be transported into facility.
51	Tank Pipe Bent Out of Shape	Any part of tank/pipe is bent out of shape more than 10 % of its design shape.
	D. Underground Vaults/Containers, Chambers, Tanks Issues	
52	Sediment Accumulation	Sediment depth exceeds acceptable levels (varies between BMPs), 20 % of the diameter of the pipe/design depth or interferes with proper BMP function.
53	Vault Structure Damage	Vault structures which are observed to have cracks in walls, bottom damage to frame and/or top slab.
54	Damaged Baffles and/or Weir	Baffles which are corroded, cracked, warped and/or showing signs of failure as determined by maintenance person. Weir is observed to be damaged by maintenance person.
55	Access Ladder Damage	Ladder is corroded or deteriorated, not functioning properly, not securely attached to structural wall, missing rungs, has cracks and/or is misaligned.
56	Oil Accumulation (Water Quality Inlet, Vortex Separator)	Oil accumulations that exceed 1-inch at the surface of the water.
57	Blocked, Damaged or Plugged Air Vents	One-half of the cross section of a vent is blocked at any point or the vent is damaged.
	E. Unique to Certain BMPs	
58	Damaged Coalescing Plates (Water Quality Inlet)	Plate media broken, deformed, cracked and/or showing signs of failure.
59	Clogged Porous Pavement	By visual inspection, little or no water flows through pavement during heavy rain storms, usually causing ponding; clogging due to debris, organic matter and sediment.
60	Damaged Internal Walls (Sand Filter Media)	Internal walls are corroded, cracked, warped and/or showing signs of failure as determined by maintenance person.
61	Prolonged Flows (Sand Filter Media)	Sand is saturated for prolonged periods of time (several weeks) and does not dry out between storms due to continuous base flow or prolonged flows from detention facilities.

V. Other		
62	Other	Inspection results which are not defined by one of the listed fields.

Construction Inspection

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report: New and Redevelopment Requirements – Construction Inspection

Cupertino

Activity	Permit Item Source	FY06-07 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
New Development And Construction Controls – Construction Site Inspection					
Inspection Tracking	Const PS-5	City will include a summary of the year's written inspection notices and follow-up actions in each year's annual report.	The City uses a computer database to collect and track compliance activities. The inspection summaries for FY 06-07 are attached immediately following this section.	9/07 AR and ongoing	Public Works Engineering
Staff training	Const PS-6	Hold annual training for building dept. and public works staff.	On Dec. 5, 2006, Public Works Engineering and Building Inspection staff attended SCVURPPP & SMCSPPP training on construction site management. On February 13, 2007, in-house training was held for Building inspectors on the Construction Inspection Perf. Stand., construction BMPs, source control BMPs and inspection notices. On June 14, 2007, public works inspection staff attended the SCVURPPP workshop on Inspecting Stormwater Treatment BMPs.	11/07	Public Works Engineering
Effectiveness Evaluation	Const PS-8	Review and evaluate the effectiveness of city efforts.	All construction sites are inspected frequently during the construction process for BMP compliance. In 06-07 there were a total of 59 construction inspection incidents reported and recorded in the database. This is less than reported the previous year, which may indicate a better understanding of the use of BMPs among contractors and the inspectors. The current program is working well, as reported by inspectors during the annual training session.	9/07 AR and ongoing	Public Works Dept.

CUPERTINO
Summary of Construction Inspections
7/1/06 – 6/30/07

	Date	Inspector	Resolved	Facility Name	Address	Incident Reporting Source	Incident Type	Incident Source	Enforcement Action
1	8/31/2006	Gregory	Yes	Residence	827 September	Illicit Discharge Inspectors	Accidental Spills	Residential	Warning Notice
2	10/2/2006	Gregory	Yes	Residence	10816 Linda Vista	Illicit Discharge Inspectors	Landscaping Material Dumping	Construction Sites	Warning Notice
3	10/3/2006	Gregory	Yes	Residence	Acacia	Illicit Discharge Inspectors	Landscaping Material Dumping	Construction Sites	Verbal Notice

City of Cupertino

FY 06- 07 Annual Report

Attachment K

Pesticide Management Activities

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report—Pest Management

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
I. Municipal Pesticide Use				
Goal I.A. *Eliminate all unnecessary municipal pesticide use (particularly organophosphate (OP) pesticide use) and implement Integrated Pest Management (IPM) techniques.*				
I.A.1	Track pesticide use on municipally owned property. (PS #9). The results are reported in the AR.	City has collected information on pesticide use from four groups that apply pesticides on city property: • Streets Dept. (on medians) • Parks Dept. (In the parks) • Facilities maintenance (grounds surrounding city buildings) • Golf course All of these departments are submitting copies of the monthly County Ag reports as well as the use form that the city has prepared. This seems to be adequate at this time (with the additional information about the type of pest that is being controlled). No organophosphates pesticides are being used.	Ongoing	Corp Yard Supervisor & Director, Park & Rec
I.A.3	Continue to refine and implement SOPs and BMPs for implementing the IPM policy. (PS #3).	The city has developed pest-specific and location-specific SOPs for pest management operations at city facilities. Any updates take place on an ongoing basis.	Ongoing	Corp Yard Supervisor & Director, Park & Rec
I.A.4	Update URMP with Pest Mgmt. changes.	Minor updates were made to the SOPs.	Ongoing	Envt'l Div
I.A.5	Continue to ensure that any contractor employed to conduct pest control and pesticide application on municipal property engages in pest control methods consistent with the IPM policy adopted by the agency (PS #6).	The city employs two contractors for pest management: 1. RPM Complete Pest Service (for structural and building grounds control): The principal has completed the SOPs that he follows	Ongoing	Corp Yard Supervisor & Director, Park & Rec

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report - Pest Management

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
		when controlling ants, rats, and cockroaches. His work will continue to be monitored by the city's Facilities Supervisor. 2. Professional Turf Management (contractor for maintenance of the golf course grounds). Specific IPM requirements are called out in the contract. A City Parks and Recreation Supervisor monitors their work. Pest-specific SOPs have been jointly established by the contractor, the city's in-house Pest Control Advisor, city Environmental staff, and the city's Recreation Supervisor An overview of SOPs takes place during annual discussions/meetings between city staff and contractors and updates take place on an ongoing basis.		
I.A.6	Conduct annual, city facility search of chemical storage areas for pesticides no longer legal for application, and properly dispose of them. (PS #10)	City staff conducted their annual search and no illegal pesticides were found.	Annually in July	Corp Yard Supervisor & Director, Park & Rec
MM I.A.1.	Document completion of tasks in annual reports. Use pesticide-tracking process to document pesticide use.	A summary report on pesticide use is included, following this document. It compares use in FY 05-06 and FY 06-07.	In 06-07 AR, annually	Corp Yard Supervisor & Director, Park & Rec & Envt'l Div

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report - Pest Management

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
Goal I.B. *Raise awareness of all municipal employees and train employees who apply pesticides for the municipality about the municipality's IPM Policy and/or IPM techniques as appropriate.*				
I.B.1	Ensure that employees who apply pesticides for the agency obtain the appropriate County Ag and DPR- required training (PS #5a).	Included in "Pest Management Training FY 2006-2007," attached.	Spring 2007, annually	Corp Yard Supervisor & Dir., Park & Rec
I.B.2	Provide annual training on the IPM Policy, SOPs, and BMPs, and the latest IPM techniques to employees within departments responsible for pesticide application (PS #5b).	This was covered in the trainings/meetings held on 2/01/07, 3/30/07 and 5/30/07 with staff. Additionally, affected staff is trained individually by the city's PCA when specific pest problems occur. See "Attachment N" Staff Training Summary Table.	Spring, annually	Corp Yard Supervisor & Director, Park & Rec & Envt'l Div
I.B.3	Annually inform employees who are not authorized to apply pesticides, that they cannot use over-the-counter pesticides in the workplace (PS #5c)	This information was provided via a Citywide email 4/2/07.	4/07	Envt'l Div
MM I.B.1.	Document and evaluate effectiveness of annual staff training.	From discussions with the city PCA and contract PCA, the industry trend is definitely toward IPM, and this is what is discussed in their professional meetings and trainings. In meetings with staff and contractors, all are well aware of the city's IPM policy and have conveyed examples of IPM practices in the field such as baiting, mulching, and replacing plants with pest resistant plants. Staff continues to work with contractors to improve the flow of information for reporting and to ensure policies and SOPs are followed as	Annually in AR	Envt'l Div

Santa Clara Valley Urban Runoff Pollution Prevention Program

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
		written.		
II. Public Education and Outreach ***Goal II.A.*** *Increase awareness of IPM so target audiences recall less toxic pest management messages and adopt IPM behaviors. Target audiences include residential pesticide users, professional pest control businesses, customers of professional pest control businesses, pesticide retailers, school districts, and other special districts (PS # 7).*				
II.A.1	Assist with local implementation of the Watershed Education & Outreach (WE&O) Campaign, which will target the general public and include messages about less-toxic pest control and proper disposal.	City staff continues to participate in the WE&O group. The city's website has a link to the Our Water – Our World campaign website. The Program conducted advertising in 05-06. An RFP was released in July 05 for WE&O contract services beginning in FY 06-07. Carl and Manor Advertising were selected as the new consultant for the group and have begun putting together the FY 06-07 campaign.	Ongoing	Envt'l Div
II.A.2	Assist Prgm in developing simple, effective, targeted messages regarding proper pesticide use and disposal, effects on water quality, and IPM.	Staff continues to review new fact sheets and ads.	Ongoing	Envt'l Div
II.A.4	Identify and attend local community events and distribute outreach material. 1. Distribute literature at Backyard Compost workshops 2. Install an IPM-products and literature display in the Community Ctr. for 2 wks	Literature is stocked and available for compost teachers (5 workshops were scheduled to be held in Cupertino in 06-07). Staff continues to stock IPM fact sheets at the Community Ctr. and the city library, "Pest Bugging You?" Grow It Guides, and Bay Begins at City Hall.	1. At 5 workshops/yr 2. 4/07	Envt'l Div

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report - Pest Management

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
II.A.6	Review existing city web link, on the Cupertino city website, to any IPM website developed by the WE&O campaign.	The city website has a web link to the Our Water – Our World campaign website.	Review annually	Envt'l Div
II.A.9	Continue to fund BASMAA Regional Media Relations Campaign[1] featuring pitches to Bay Area media and responses to breaking news on pesticide-related topics.	The Program funds BASMAA baseline projects, including Regional Media Relations Campaign.	Ongoing	N.A.
II.A.10	City staff to provide IPM-related press releases to local media—using Program generated materials if they are developed.	An IPM-related article appeared in the city newsletter, the Scene about pest specific fact sheets available in the April and May issues.	Annually in Spring, as appropriate	Envt'l Div
II.A.12	Continue to assist with implementation of local components of a "Pesticide User Outreach" project targeting residential and commercial users	City staff will continue to provide support to Program staff for the retail nursery IPM outreach. Includes IPM store partnership; working with County HHW Prgm, and general support of SCVURPPP and BASMAA IPM-related outreach activities.	Ongoing Complete annually	Envt'l Div
II.A.13	Inform local elementary and high school districts, and local sanitary district, of any pertinent opportunities for IPM training.	Nareesh Duggal of Santa Clara County contacts these groups as trainings become available. A conference was held in November 2006.	As future workshops are announced	Envt'l Div
II.A.14	Internal outreach on IPM to encourage employees to use IPM techniques away from work: 1. Set up display of less-toxic products and IPM literature at Corporation Yard and City Hall. 2. Distribute IPM fact sheets electronically to city employees through e-mail.	This year, in lieu of the display, an email was sent to all employees about IPM techniques and a link provided to the IPM fact sheets on the Our Water – Our World website (4/2/07).	4/07	Envt'l Div
MM II.A.1.	Document or estimate numbers of residents reached by outreach efforts and media	Articles in the city's monthly newsletter (The Scene) are reportedly read by 87% of residential	Annually, in AR	Envt'l Div

[1] Funded by all Co-permittees each year.

	advertising	households, or about 16,677 households. (The city performs a telephone survey every 3 years). Three articles have been published in the newsletter in FY 06-07. It appears hundreds of each type of IPM fact sheets have been taken from our displays in the Community Center and the City library.		
Goal II.B. *Educate pesticide retailers and consumers about less toxic pest control products and promote the sale of such products.*				
II.B.1	Continue to fund and participate in the BASMAA Regional IPM Partnership	Program funds BASMAA baseline projects, including Regional IPM Partnership.	Ongoing	Envt'l Div
II.B.2	Continue to support the IPM Store Partnership Program.	Two nurseries participate in Cupertino. Nursery employee training provided by Program contractor, Annie Joseph. SCVURPPP staff provides re-stocking visits.	Annually	Envt'l Div
MM II.B.1.	Assist Program in documenting number of participating stores, materials distributed, employees trained, and cost-effectiveness of the IPM Store Partnership Program.	Will be evaluated by Program staff. Two stores participate in Cupertino; Summerwinds and Yamagami's. Training was conducted for Summerwinds employees 6/05/07. Training was conducted for Yamagami's employees on 5/02/07.	Annually	Envt'l Div

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
III. Pest Control Operators (PCOs)				
Goal III.A. *Minimize pesticide use by PCOs contracted for structural pest control and landscape maintenance.*				
III.A.4	Require PCOs contracted for municipal applications to use pest control methods consistent with the municipality's IPM policy (through contract specifications). Specifically, require contractors to: a) follow the agency's IPM policy, BMPs, and SOPs; b) provide evidence of current IPM training, when feasible; and c) provide documentation of pesticide use on agency property to the agency in a timely manner (PS#6).	IPM-specific specifications are included in the contract for our city's golf course maintenance contractor (as of Jan '02), An overview of the IPM policy, BMPs and SOPs takes place during annual discussions/meetings between city staff and contractors. The golf course contractor attended the Annual Regional IPM conference in Nov. 2006. Monthly pesticide use reports are submitted to Envir. Div.	Ongoing Ongoing Golf course employee training info submitted to the city annually.	Corp Yard Supervisor & Director, Parks & Rec & Envt'l Div
MM III.A.1.	Document pesticide use by PCOs on municipal property. City will strive, over time, to resolve difficulties associated with reporting use by contractors and leaseholders, and other data collection limitations.	Pesticide use forms have been submitted to the city's Environmental Div for consolidation. See pesticide use report summary, following this section.	In the Annual Report	Corp Yard Supervisor & Director, Park & Rec
Goal III.B. *Require all PCOs to implement Best Management Practices (BMPs).*				
III.B.2	Require PCOs contracted by municipalities to implement BMPs through contract specifications.	See III.A.4, above.	Ongoing	Corp Yard Supervisor & Director, Park & Rec
MM III.B.1.	Document efforts to complete the above actions.	See III.A.4, above.	In the Annual Report	Corp Yard Supervisor & Director, Park & Rec

Santa Clara Valley Urban Runoff Pollution Prevention Program

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
IV. Commercial Businesses				
Goal IV.A. *Determine the extent of commercial business employees' use of pesticides (i.e., pesticide applications not performed by a licensed PCO) and conduct appropriate outreach regarding less toxic pest management.*				
IV.A.2	Assist in implementation of education programs that target commercial businesses, per recommendations developed in Program work plan—with restaurant focus.	Commercial business IPM outreach currently includes: restaurants, retail nurseries, and new development: The Program has provided the County Health Dept. restaurant inspectors with copies of "Don't Set a Table for Pests" brochure that inspectors are distributing to new or remodeled food facilities throughout the County. In Cupertino, outreach to restaurants is performed by County Health inspectors (through an agreement between the City and the Health Dept.) The city's nonpoint source inspector also inspects restaurants as needed and distributes public information as necessary. The Program's retail IPM training contractor held trainings for Summerwinds and Yamagami's nurseries in Cupertino. Training was conducted for Summerwinds employees on 6/05/07. Training was conducted for Yamagami's employees on 5/02/07. The Program's Pest-Resistant Plant List is included in the City's development applicant information packet (as of July 2002). .	Ongoing	Envt'l Div

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report - Pest Management

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
MM IV.A.1.	Document outreach efforts targeting businesses.	The County Health inspectors visited 260 food facilities in Cupertino and conducted 787 inspections. By providing training, it's assumed the inspectors know to distribute outreach materials as needed.	In the Annual Report	Envt'l Div
V. Household Hazardous Waste Collection ***Goal V.A.*** *Provide pesticide disposal services through household hazardous waste (HHW) collection programs for all residents and small businesses, and encourage use of these programs.*				
V.A.1	Ensure that adequate pesticide disposal services exist for residents and conditionally exempt small quantity commercial generators.	Adequate services are available; the City participates in the Countywide HHW program.	Ongoing	Envt'l Div
V.A.3	Work with HHW collection agencies to support, enhance, and help publicize programs for proper pesticide disposal (PS #7).	The city is working with the County HHW program on developing and publicizing their programs. See PI/P outreach chart for specific complementary outreach.	Ongoing	Envt'l Div
V.A.5	Provide hazardous waste disposal information to residents, through 3-4 city newsletter articles, 3 ads in local newspaper, flyers at city library, community center, and City Hall.	City uses articles in the city's monthly newsletter, ads in the local newspaper, displays in the community center, and flyers in the library and community center, to advertise the HHW and small business hazardous waste disposal programs. See PI/P chart.	Periodically	Envt'l Div

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report - Pest Management

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
MM V.A.1.	Document that household hazardous waste collection programs adequately serve residents and businesses and that any exchange programs do not exchange organophosphate or banned pesticides.	The city currently provides enough funding to the County HHW program to service the disposal needs of over 1,000 households (or 6% of the residential households in the city). The county HHW program does not re-distribute any organophosphate or banned pesticides.	Annually	Envt'l Div
VII. New Development ***Goal VII.A*** *Minimize pesticide use at new and redevelopment sites.*				
VII.A.2	Consider pest-resistant landscaping and design features in the design, landscaping, and environmental reviews of proposed development projects. (C.9.d.ii.)	All applicants for a development permit are given information on pesticide-resistant plants. Starting in 6/04, each applicant is also given the SCVURPPP brochure, *Landscape Maintenance Techniques for Pest Reduction*, and the City's list of pesticide control measures (based on the SCVURPPP's model pesticide control conditions of approval) to be incorporated into the site design. City's Permanent BMP Selection Matrix includes reference to pest-resistant plantings.	Ongoing	Envt'l Div & Planning Dept.
VII.A.4	Collect information and report a summary of types of pesticide reduction measures required for development projects and the percentage of projects for which pesticide reduction measures were required. (C.3.n.5)	All projects (100%) are given a copy of the document "Pesticide Control Measures for Development Projects", listing six different control measures. Starting June, 2005 planners include a COA for all Group 1 projects requiring a landscaping plan to include pesticide reduction measures. Group 2A and 2B are now also included.	In the Annual Report	Envt'l Div & Planning Dept.

Santa Clara Valley Urban Runoff Pollution Prevention Program

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
VIII. Monitoring and Science ***Goal VII.A.*** *Participate in coordinated monitoring efforts to support pesticide TMDL development and implementation.*				
VIII.A.1	Continue financial support of the Regional Monitoring Program (RMP) through city contribution to Program budget.	The city continues to provide financial support through the annual assessment.	Annually	Envt'l Div
X. Review and Revision of Work Plan ***Goal X.A.*** *Implement a work plan that includes appropriate goals, actions, and monitoring mechanisms to reduce pesticide-related toxicity in urban runoff.*				
X.A.1.	Review and continuously improve the goals, actions, and monitoring mechanisms of the work plan considering results of self-evaluations, comments from Regional Board staff and other interested parties, and results of local performance review meetings, if any.	The Pesticide Work Plan has not been revised in FY 06-07 and there were no comments from Regional Board staff.	Annually	Envt'l Div
MM X.A.1.	Revise work plan to include any continuous improvement items. Report on completion of work plan tasks in Annual Report.	No continuous improvement items were identified by the RWQCB for Cupertino.	Annually; submit work plan updates in March. AR submitted in Sept.	Envt'l Div

FY 2006-2007 Annual Report
City of Cupertino

Pest Management Training

Cupertino employees:

Qualified Applicators Certified

The following Cupertino employees are Qualified Applicators Certified (they are members of the Pesticide Applicators Professional Association, who keeps track of the 20 hours of required training necessary in a two-year period.):
Bill Bridge, Shawn Tognetti, John Bisely, Karl Olsen, Mike Laitila, Chris Mertens, Brian Gathers, Cliff Mabutas, Gordon Jensen, John Hetland, Marc LaBrie, Mike Drake, Russ Polito, Mike Loomis, Cindy Martinez, Roger Winslow, Todd Hembree, Abe Cariaga, Ralph Garcia, Diane Mahan, Jesus Moreno, Peter Terada, Jonathan Ferrante.

These employees attended the Target Field Day Seminar @ Vasona Park on May 22, 2007.

Cupertino's Pest Control Advisor

The city's Pest Control Advisor, Diane Mahan attends trainings regularly to maintain her status as a PCA. The PCA is a member of the California Association of Pest Control Advisors, where tracking of the 40 hours of required training necessary in a two-year period is maintained.

City contractors:

The city's structural pest control contractor, Keith Reuter, of RPM, attends monthly meetings of the Pest Control Operators Association of CA where discussions of IPM take place. He also attends training to satisfy the Structural Pest Control Board training requirements to maintain his license.

The city's Golf Course maintenance and pest control contractor, Professional Turf Management, Don Naumann, PCA, who is required to have 40 hours of training in a two-year period.

Annual Regional IPM Conference:

This conference was held on 11/14/06 in San Jose and attended by the following persons:
Diane Mahan – City's PCA, City Streets Supervisor
John Bisely – City's Parks Supervisor
Don Naumann – City's Contractor for Golf Course, PCA
Keith Reuter – City's Contractor for Structural Pest Control

City of Cupertino

Pesticide Use Summary FY 06-07

IPM Policy:
On October 7, 2002 the City of Cupertino adopted an IPM policy that calls for city employees and city contractors to use reduced-risk Integrated Pest Management techniques, giving preference to reasonably available non-pesticide alternatives, and reduced-risk pesticides. Each Department, that is responsible for pest control, will develop a plan to ensure the long-term prevention or suppression of pest problems, while reducing or eliminating the need for chemical pest controls (to the maximum extent feasible), with minimum negative impact on human health, non-target organisms, and the environment.

Guidelines for Chemical Treatment:

- If corrective action is necessary, select non-chemical physical and biological treatments before choosing chemical treatments, wherever possible.
- Use products that are included in the City of San Francisco's "Reduced Risk Pesticide List", wherever possible. If a chemical product is not on that list, consult with the city's Pest Control Advisor to discuss its use.
- Favor the use of bait stations over sprayed or broadcasted pesticide applications.
- City staff and city contractors should avoid the use of Toxicity Category I pesticides (the label's signal word is "Danger").
- No products containing Clopyralid, Diazinon or Chlorpyrifos (Dursban) can be used by city staff or a city contractor on city property or property maintained by the city.

SOPs:
Pest-specific and site-specific Standard Operating Procedures have been established for all typical pest control situations.

Availability of data on pesticides used:
Stormwater staff consolidated the pesticide use data. A summary table follows this section.

Changes in city pesticide use:

- The City's Contractor for the golf course at Blackberry Farm reported using gopher traps instead of chemical controls.
- The City's streets department utilized natural biological controls to eradicate a whitefly infestation in Cupertino's Rancho Rinconada neighborhood. Parasite wasps and ladybugs were released into the infested area May '05 to August '06. No further problems have been reported since that time.
- The City's Contractor is removing diseased trees in lieu of treating with insecticides. This is an ongoing practice.
- In the winter, the City's Contractor is whipping greens to remove dew on days that mowing is not required in order to prevent diseases from forming.
- The City's Contractor is physically removing tulles in lakes instead of using chemicals.
- The City's Contractor is physically removing weeds on greens; no spraying is needed.
- The City's Contractor is fertilizing the fairways in order to strengthen the grass plants, which minimizes the amount of herbicides needed.

- The City's Contractor is using larger amounts of organic fertilizers to create a healthier plant and reduce dependency on fungicides.

Continued IPM practices:

- Chlorpyrifos, Clopyralid, and Diazinon are no longer used.
- City does not use copper algaecides in the pond at the golf course.
- The cities contractor is hand-pulling English Daisies on greens only. This practice has virtually eliminated English Daisy growth.
- City crews are using less herbicide on school property since installing drip irrigation systems. This practice is ongoing.
- Pentachloronitrobenzene (PCMB) (not on the SF list) use will be permitted on the golf course greens in the short-term for pink show mold control. This fungicide is specific to pink snow mold. We currently prefer its limited use to the use of a more broad-spectrum fungicide such as Heritage (on the SF list). Other alternatives will continue to be researched.
- Thiophanate-methyl (on the SF list) (in Scotts ProTurf Systemic Fungicide) may be used for fungus control on the golf course greens against Dollar Spot and works on pink snow mold.
- The Pentachloronitrobenzene and the Thiophanate-methyl are rotated to eliminate pesticide resistance.
- The golf course contractor will continue to use canola oil instead of petroleum oil as a pesticide sticker.
- Roundup (Glyphosate) (on the SF list) continues to be the pesticide used in the greatest quantity on city property.
- City crews are chipping tree limb trimmings and using for mulch to keep weeds down in parks on dirt areas. In these areas, spraying is not necessary. A new trail is maintained by using all chips from the site, none are disposed. This practice is ongoing.
- The City's Contractor for the golf course at Blackberry Farm reported culturally using organic fertilizers (less inorganic), vertically mowing to break up disease patterns, using less nitrogen so less disease and less watering.
- He is using bark chips and compost for weed control under trees instead of using pre-emergence herbicides as well as using compost with an organic fertilizer on the tees.
- City's Contractor has replaced many Monterey Pine trees on the golf course with native California redwood, because they are pest resistant.
- The City's Contractor reported killing weeds around the lake at the golf course by lowering the water level and using a weed eater and by physically hand removing.

City of Cupertino

Annual Product Use, City-wide
FY 06-07

The following table summarizes the use of specific pesticide products on city property in the fiscal years 05-06 and 06-07.

These totals combine data from all Divisions.

Active Ingredient	Target Pest	In SF list?	Locations	FY 05-06	FY 06-07
Chlorothalonil	Fungus	Yes	Golf		19.2 lbs
Cyfluthrin:	Ants	Yes	Facilities	.5 lbs	1.5 lbs
Digliocolamine	Weeds	Yes	Golf	1 lbs	0
Dithiopyr:	Weeds	No	Medians	.376 lbs	0
Fipronil:	Ants	Yes	Facilities	.438 lbs	4.0 oz
Flutonill	Fungus	Yes	Golf		2.10 lbs
Fluridone	Weeds	Yes	Golf	.5 lbs	0
Glyphosate	Weeds	Yes	Various	192.22 lbs	60.971 lbs
Halosulfuron-methyl	Weeds	No	Golf		.003 lbs
Ipridione	Fungus	Yes	Golf	2.36 lbs	12.290 lbs
Isoxaben	Weeds	No	Medians	19.375 lbs	13.260 lbs
Mancozeb	Fungus	Yes	Golf	9.6 lbs	0
Naphthaleneacetic	Tree Suckers	No	Parks	.012 lbs	0
Oryzalin (Surflan)	Weeds	No	Medians	136.59 lbs	65.421 lbs
Pendimethalin	Weeds	Yes	Parks		10.80 lbs
Pentachloronitrobenzene	Fungus	No	Golf	23.25 lbs	0
Propicon Azole	Fungus	Yes	Golf		.710 lbs
Triadimefon	Fungus	No	Golf		.760 lbs
Thiophanate-methyl	Pink snow mold	Yes	Golf	2.47 lbs	0
Triclopr	Weeds	Yes	Parks	14 lbs	3.00 lbs
Total:				***402.691 lbs***	***190.265 lbs***

FY 2006-2007 Annual Report: Mercury Control Program

Cupertino

Program Work Plan Task	Activity	CI Item Source[1]	FY06-07 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
Mercury Control Program						
I. Municipal Use of Mercury-Containing Products						
Goal I. Eliminate all unnecessary municipal use of mercury-containing products and establish proper disposal methods for products that cannot be eliminated.						
I.F	Implement guidelines for mercury reduction	C.9.c	City will continue to implement the Guidelines for mercury-containing products reduction and management and mercury virtual elimination policy.	Guidelines have been implemented (see next task).	Ongoing	Public Works
I.F.1	Train staff in Mercury spill cleanup	C.9.c	Train corporation yard staff and facilities maintenance staff in correct procedures to clean up: a. A broken fluorescent lamp b. A broken thermometer or thermostat	Annual training was held on 2/1/07 for the streets, parks maintenance, facilities and other corporation yard staff. This workshop covered proper handling of universal waste as well as recycling and disposal protocol.	Feb 07	
I.F.2	Annual survey of mercury-containing products used by city staff.	C.9.c	City staff to annually report on: a. The number of lamps recycled. b. Any other Hg-containing product that is used by city staff.	City staff has reported a total of 1048 fluorescent lamps recycled for FY 06-07. No other mercury containing products were reported.	Report in 06-07 AR	
MMI	Mercury control program	C.9.c	Document completion of tasks in annual reports. Use mercury-containing product reporting guidelines.	1. The city has submitted the "Mercury-Containing Product Survey" results. 2. Cupertino's City Council adopted a policy requiring the virtual elimination of mercury from controllable sources, affecting urban runoff from municipal operations in March 2004. 3. High priority mercury-containing products are no longer in use. The city stormwater staff has discovered city	Annually, In AR	Public Works

[1] Place where continuous improvement item identified, either Annual Report, URMP, Work Plan, Review, or Program (task approved by the Management Committee for all co-permittees, if applicable, such as performance standard revisions).

Cupertino

Program Work Plan Task	Activity	CI Item Source[1]	FY06-07 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
				maintenance staff is using only low- or no- mercury lamps. No mercury switches or relays are in use. 4. City maintenance staff has followed a specific protocol for disposal of fluorescent tubes. They are collected as universal waste and sent to a recycling facility for mercury recovery. 5. Corp yard staff trained on mercury policy and what to do when a fluorescent tube breaks. 6. Articles were placed in the city newsletter regarding proper disposal of fluorescent tubes and mercury thermometer exchange, October '06 and April '07. Brochures containing info on proper disposal of fluorescent tubes are distributed at city facilities. 7. Countywide HHW program distributes outreach materials re: mercury.		
II. Household Hazardous Waste Collection **Goal II.** Provide mercury-containing products disposal services through household hazardous waste (HHW) collection programs for residents and small businesses, and encourage use of these programs.						
II.B	Mercury control program	C.9.c	Provide mercury-containing products disposal services for residents and small businesses.	The city has provided adequate funding dedicated to provide hazardous waste disposal services for Cupertino residents since 1992. Over 1,000 customers, or 6% of all households are eligible to attend the HHW program. Residents can also drop-off spent fluorescent lamps and thermometers at a number of designated locations in the county.	Ongoing

FY 2006-2007 Annual Report: Mercury Control Program

Cupertino

Program Work Plan Task	Activity	CI Item Source	FY06-07 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
II.D	Document products disposed at HHW Program	C.9.c	Implement guidelines for documenting and reporting quantities of mercury-containing products disposed.	See Table 2.	Ongoing, AR	Public Works
III. Monitoring and Science **Goal III.** Participate in coordinated monitoring efforts to support mercury TMDL development and implementation, including assessment of air pollution sources of mercury and concentrations of mercury in sediment.						
III.A	Financial support for RMP.	C.9.c	Assist Prgm to continue to provide financial support for the Regional Monitoring Program (RMP). Support the Prgm's continued participation in the RMP steering committee and technical review committee.	The city supports the RMP and reviews meeting summaries through the Management Committee.	Ongoing	
III.B	Assist Prgm in support of regional monitoring plan	C.9.c	Assist Prgm to provide financial and staff support for a coordinated regional plan to collect data for the mercury TMDL, as defined in the RWQCB/BACWA/BASMAA MOU.	The city supports the mercury TMDL process, being handled at the regional level.	Ongoing

V. Public Education and Outreach **Goal V.** Increase awareness of proper disposal of mercury-containing products and available non-mercury containing alternatives. Target audiences include residential, commercial, and industrial users and municipal employees.						
V.A.	Mercury control program outreach activities:	C.9.c	Assist the Prgm in developing various outreach programs to educate target audiences about proper disposal of mercury-containing products and alternative non-mercury containing products. Outreach programs will include, but may not be limited to, the following subtasks:	Staff participated in the Work Group.	See below.	
V.A.1	Residential – Fluorescent light recycling outreach	C.9.c	Continue our fluorescent light recycling outreach program to educate residential users and encourage proper disposal of fluorescent lights. Primarily articles in the Scene, and fliers in Quinlan Ctr and the Library.	City staff participates in the review of outreach products associated with the Mercury Outreach group. Two articles were placed in the city newsletter regarding proper disposal of fluorescent tubes, October '06 and April '07. Brochures containing info on proper disposal of fluorescent tubes are distributed at city facilities. The Countywide Household Hazardous Waste Program continued the residential and small business fluorescent light-recycling program at a total of 30 hardware stores throughout the County. In 06-07 88,423 pounds of bulbs equaling a total of 353,694 feet were collected countywide. This is a 30% increase over the prior fiscal year.	Ongoing	
V.A.2	Small businesses—	C.9.c	Continue to assist the Prgm in implementing a fluorescent light recycling	The staff has participated in planning sessions about business disposal.	Ongoing	

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report: Mercury Control Program

Cupertino

Program Work Plan Task	Activity	CI Item Source	FY06-07 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
	Fluorescent light recycling outreach		outreach program to educate small businesses and CESQGs and encourage proper disposal of fluorescent lights. Publish articles in the Scene, and distribute fliers at the Planning/Building lobby, addressing Universal Waste exemption end dates for CESQGs.	Mercury Work Group participates in discussions regarding the implementation and expansion of the residential and small business fluorescent light-recycling program at various hardware stores throughout the County. Two articles were placed in the city newsletter regarding proper disposal of fluorescent tubes, October '06 and April '07. Brochures containing info on proper disposal of fluorescent tubes are distributed at city facilities.		
V.A 3	Auto shops outreach	C.9.c	Coordinate with city inspectors to integrate mercury outreach into their routine auto repair shop inspections.	Inspections take place bi-annually. Since auto shops were inspected in FY 05-06, no inspections took place in FY 06-07.	Ongoing	
V.A.4	City employees outreach	C.9.c	A. Train corporation yard staff and facilities maintenance staff in correct procedures to clean up mercury containing products: 1. A broken fluorescent lamp 2. A broken thermometer or thermostat B. Send e-mail notice to employees reminding them about spent battery collection bin in copier room.	Corp yard staff was trained on the mercury policy and how to handle the clean up and disposal of a broken fluorescent tube. Email sent to all employees on how to dispose of household batteries (3/7/07)	Ongoing	
V.B	Outreach materials	C.9.c	Assist Prgm to develop or adapt existing mercury outreach materials, as needed, for outreach programs. Submit article to Scene concerning any mercury information made available to city staff.	City staff reviews outreach products that are proposed by the Mercury Outreach AHTG.	Ongoing	
V.C	Community events	C.9.c	Hg outreach materials are distributed by the County HHW Prgm at HHW disposal events, on behalf of the city.	HHW disposal brochures (with fluorescent tubes, thermostats, and thermometers listed) are routinely distributed at the city's library, community center and city hall lobbies and at the countywide HHW events.	Ongoing

Cupertino

Program Work Plan Task	Activity	CI Item Source	FY06-07 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
MM V.B	Document and evaluate activities	C.9.c	**Monitoring Mechanism V.B.** In the Annual Report, document and evaluate each outreach activity, including the target audience and number of residents and/or businesses reached.	The countywide HHW program served 26,953 residents during 06-07 and 418 small businesses through 64 events held at permanent facilities and 10 events at temporary sites. Mercury-containing products collected for the county as follows: • Elemental Mercury- 1170 pounds (Includes thermostats, thermometers and other products) • Fluorescent Lights – 353,694 feet or 88,423 pounds of lights • 1,193 thermometers Countywide Public Outreach: Thermometer Exchanges – 7 separate Events. The countywide program participated in 22 community events. Countywide outreach includes the use of media, brochures, flyers and posters. City Outreach: Two articles were published in our city newsletter and are widely read by our residents and businesses (as discovered in city surveys).	Ongoing	
MM V.C	Evaluate success of outreach efforts	C.9.c	**Monitoring Mechanism V.C.** Assist Prgm to survey local public attitudes and behavior to evaluate the success of outreach efforts and the saturation of outreach messages (coordinate survey with Watershed Watch Campaign Survey).	Survey conducted by Program in cooperation with HHW Program in 2003 and final evaluation report was included in the Program's FY 03-04 Annual Report. Questions on Mercury pollution issues will be included in future surveys.	Completed	

City of Cupertino
Table 2: Reporting Format for Annual Report FY 06-07

	Management Option (MO) for Mercury-Containing Product				
HIGH PRIORITY MERCURY-CONTAINING PRODUCTS (not listed in any particular priority)	MO #1: Replace with an alternative product when the product is identified, if an alternative exists	MO #2: Replace upon failure, with an alternative product if an alternative exists.	MO #3: Reduce the use where possible.	MO #4: Recycle when no longer in use	MO #5: When appropriate, dispose of as hazardous waste
LAMPS:					
Compact Source Lamp	NF				
Spectral Lamp	NF				
Fluorescent Lamp *City uses low-merc Sylvania Eco brand*	I			I Collected as Universal wste

Copper Action Plan/Nickel Action Plan

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report: Copper/Nickel Control Program

Cupertino

Program Work Plan Task	Activity	FY06-07Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
CB-1. Vehicle Washing Operations					
Goal: Reduce copper discharges from vehicle washing operation.					
CB-1.1	Refer mobile cleaners to training	Refer mobile surface cleaners to SJ POTW service cleaning certification trainings, if any are held.	Referred upon request. No mobile surface cleaning certification trainings were held this last fiscal year in SJ. Mobile surface cleaners were referred to BASMAA online training and recognition program. Mobile surface cleaners who do not have access to web training are referred to a certified City of San Jose staff who will provide the program on an as needed basis.	Ongoing	Public Works
CB-1.2	Distribute list of trained cleaners	Distribute most recent list of trained mobile cleaners to interested parties, and to city staff who contract for cleaning services.	City staff are referred to BASMAA website for list of trained mobile surface cleaners.	Ongoing	Public Works
CB-1.3	Outreach materials	Continue to distribute Home Maintenance Tips brochure at city facilities and city events (contains general remarks on residential car washing).	See PIP section, General Outreach for distribution plan.	Ongoing	Public Works
CB-1.4	Website for outreach	Update information about copper brake pad dust to the stormwater section of our website, with a link to the SCVURPPP copper brake pad report as needed. Add general information about residential car washing to the city's website.	These changes were made in FY 06-07.	FY 06-07	Public Works
CB-1.5	Scene article	Add information about copper brake pad dust to the annual article on home car washing in the city's newsletter, the Scene.	Two articles about copper brake pad dust appeared in the city's newsletter in the months of Sept. '06 and June '07.	Sept, June '07 Scene	Public Works
CB-1.6	Non-profit car washes	City provides brochures to non-profits about how to properly conduct a car wash event.	City staff provides this brochure to non-profit organizations planning to have a car wash when requested and is available on the City's website.	Ongoing	Public Works
CB-1.7	City vehicles	Continue to maintain car wash systems for City vehicles at the corporation yard.	City vehicles are taken to a commercial car wash where the water discharges to the sanitary sewer. Equipment is cleaned in a recycled water, wash facility, on-site, with no storm drain discharge.	Ongoing	Public Works

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report: Copper/Nickel Control Program

Cupertino

Program Work Plan Task	Activity	FY06-07Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
CB-1.8	Gas station car washing	Verify that all gas stations/repair shops understand and comply with restrictions concerning washing cars on-site.	Inspections take place on a bi-annual basis; no inspections took place this year. Next reporting will be in Sept. 2008.	Ongoing, during normal inspection routine.	Industrial Inspector
CB-1.9	Auto sales car washing	Verify that all auto sale operations understand and comply with restrictions concerning washing cars on-site.	At this time, there are no auto sales businesses in Cupertino.	N/A	Industrial Inspector

Santa Clara Valley Urban Runoff Pollution Prevention Program

Cupertino

Program Work Plan Task	Activity	FY06-07 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
CB-3. Industrial Copper Control					
Goal: Control copper in discharges of stormwater from targeted industrial sources					
CB-3	Industrial inspection program	Continue industrial inspection of vehicle service facilities and other future permitted sites.	The City's inspects the vehicle service facilities once every two years (inspections took place last fiscal year).	Ongoing, during normal inspection routine.	Industrial Inspector
CB-6/7. Reducing Traffic Congestion/Promoting Alternative Transportation					
CB-6/7	Auto Pollution Display at Quinlan Community Center	Display featuring "Cars Pollute Water Too", Vehicles are the Largest Source of Pollution in the Bay Area", and "Keeping it All in Tune". Literature will be provided explaining impact of copper pollution from brake pads as well as general information regarding auto pollution.	Display set up at the City's Community Center for two weeks in January '07.	Winter 06-07	Public Works
CB-8. Incorporate watershed protection in planning procedures					
Goal: Classify and assess watersheds, and improve institutional arrangements for watershed protection					
CB-8.1	General Plan changes	Revise City's General Plan, as needed, based on recommendations from the *Development Policies Comparison Project* and Provision C.3.I.	The Cupertino City Council adopted the 2000-2020 General Plan on November 15, 2005. Sections related to urban runoff control are found in the Environmental Resources/Sustainability Chapter (Wildlife and Vegetation; Water Resources; Stormwater Runoff) and in the Hillside Protection portion of the Land Use/Community Design Chapter. The Plan may be viewed electronically at http://www.cupertino.org/city_government/departments_and_offices/planning_and_building/general_plan_update/index.asp No changes were made in FY 06-07.	AR	Planning Division

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report: Copper/Nickel Control Program

Cupertino

Program Work Plan Task	Activity	FY06-07 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
CB-8.2	CEQA changes	Review and implement guidance from SCVURPPP and San Jose on addressing water quality in the CEQA review process, as part of C.3.m implementation.	The City will continue to evaluate its CEQA review process. No changes were made in 06-07 since revisions were made in prior fiscal years. Any future changes will be reported in that year's annual reports.	AR and ongoing	
CB-11. Street sweeping controls & stormdrain system O&M *Goal: Improve street sweeping controls and stormdrain system O&M*					
CB-11.1	Street sweeping	Follow Program guidance regarding the collection and reporting of street sweeping data. Provide data for Annual Report.	Monthly street sweeping reports for 06-07 were submitted to the Program for compilation in July 2007.	Ongoing; Data in 9/07 AR	Public Works
CB-11.2	Evaluate Street sweeping and Stormdrain O&M	Evaluate need for improvement of current street sweeping and storm drain system O&M programs (within available budgets) in Annual Report.	Streets are swept twice a month, and all catch basins are cleaned on a two year rotating basis and during emergencies as needed. During the heavy leaf fall, certain areas of the city have extra sweeping and leaf pickup. There isn't a build-up of debris or flooding issues that would indicate the need for increased service. The schedule appears to be adequate and is within the city's budget.	9/07 AR	Public Works
CB-12. Pools and Spas *Goal: Control copper discharge from pools and spas*					
CB-12.2	Outreach	• Distribute outreach materials to the public at city facilities. • Place pool information on city stormwater website.	The city distributes the brochure at city facilities, upon request or during related illegal dumping incidents. The brochure is available on the city's website.	Ongoing	Public Works
CB-12.3	Newsletter article	Publish one article/yr. regarding disposal of pool water in city's newsletter.	An article was published in the city newsletter in June '07.	Ongoing in June	Public Works

Cupertino

Program Work Plan Task	Activity	FY06-07 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
CB-21. Architectural use of copper *Goal: Discourage architectural use of copper*					
CB-21.2	Staff Training	Conduct outreach to Comm. Dev. and Public Works staff on ban of copper roofs and gutters.	Annual staff training includes a reminder on the ordinance prohibiting architectural use of copper. This training for Planning and Public Works staff was held on June 26 and April 5, 2007.	6/07	Public Works
NB - 1 Nickel Action Plan Tasks					
NB-1	Measures to control nickel discharges from construction sites	• Continue to implement Construction Inspection Performance Standards • Continue to have inspectors attend Regional Board/Program workshops on construction site management and learn latest erosion/sediment control techniques • Continue to attend Program workshops on post-development stormwater BMPs (C.3.)	See Construction Inspection Annual Report section and Training Activities summary. A Public Works employee and two Building inspectors attended a workshop held by the SCVURPPP on 12/05/06, focusing on erosion and sediment problems and permanent treatment controls. The Environmental Programs Manager provided in-house training to Building Inspectors on 2/13/07. A workshop on inspecting stormwater treatment BMPs held on 6/14/07 was attended by several Public Works staff.	On-going On-going On-going	Pub Wrks/Bldg Public Works / Building Public Works

Staff Training Summary Table

City of Cupertino
Stormwater Pollution Prevention Program

FY '06-'07 Annual Report

Training Activities

Training Event	Date	Participants
Annual Regional IPM Conference: IPM principals and examples of applications relevant to local jurisdictions.	11/14/06	Diane Mahan, PW Streets supervisor and City's PCA; John Bisely, PW Grounds supervisor; Don Naumann, contractor for Blackberry Farm Golf Course; Keith Reuter, contract pest control operator.
Construction Inspectors: Construction Site Management Workshop	12/05/06	Kevin Rieden, Public Works; Jeff Greef and Rob Moreno, Building.
Public Works and Planning: Don Edwards National Wildlife Refuge Walking Tour (WMI Landuse Subgroup)	12/06/06	Jason Chou, Lavenia Millar, David Stillman, Public Works; Colin Jung, Planning.
Annual Pesticide Training – Dept. of Pesticide Regulation	1/24/07	Pesticide Handlers Safety training – training is required for handlers, 28 public works employees attended. (as Qualified Applicators Certified, these employees are required, by the State, to attend 20 hours of training in a 2-year period)
Corporation Yard/Streets staff: Annual in-house training for Public Works staff: Topics included corporation yard operations and maintenance including spill response, pesticide use & management, fuel dispensing areas, vehicle/equip washing, chemical use & storage and mercury disposal. A portion of the video entitled "Preventing Pollution – Guidelines for contractors and maintenance crews" was shown.	2/01/07	Public Works corp yard staff, including on-call staff, facilities, streets, grounds and vehicle maintenance personnel, and supervisors. Roxan Nasiri and Lavenia Millar, Environmental Division of PW.
Building inspectors: In-house training regarding performance standard, construction BMPs, source control BMPs and inspection notices.	2/13/07	Jerry Brager, Jeff Greef, Rob Moreno, Bob Sabich, Larry Squarcia, Gary Stream, building inspectors; Lavenia Millar, Public Works - trainer.
Park & Rec staff; Golf Course contractor: Mtg to review golf course SOPs, permitted pesticides, potential for less-toxic pesticide use, performance standards.	3/30/07	Don McCarthy, Park and Rec Dept.; Don Naumann (Spot Water Management), golf course contractor; Lavenia Millar, Public Works
Public Works Engineering: Annual in-house training regarding C.3 requirements: Group 1, 2A, 2B, HMP, website info, municipal regional permit, construction general permit.	4/05/07	Jason Chou, David Stillman, Lavenia Millar – trainer; Public Works
Co. Health Dept:	4/30/07	Humphrey Karioki, acting DEH Supervisor;

City of Cupertino
Stormwater Pollution Prevention Program
FY '05-'06 Annual Report
Training Activities

Annual meeting with Dept of Environmental Health, restaurant inspection program. Topics included violations, inspection procedures, referrals, pesticide mgmt., public education materials, and future training needs.		Cheri Donnelly and Jack Lovell, WV cities Program staff; Lavenia Millar, City of Cupertino stormwater staff; Steve Homan, Co of Santa Clara.
Public Works staff that apply pesticides: Target Field Day Seminar	5/22/07	15 public works employees attended. (part of 20 hr training - as Qualified Applicators Certified, these employees are required, by the State, to attend 20 hours of training in a 2-year period)
City's Streets and Grounds Supervisors: Annual in-house training to review pesticide performance standards, SOPs and pesticide use.	5/30/07	Diane Mahan, PW Streets supervisor and City's PCA, John Bisely, PW Grounds supervisor, Lavenia Millar, Public Works Environmental Division.
Public Works Engineering and Planning: Implementing Stormwater Requirements in New Development and Redevelopment Projects (SCVURPPP)	6/14/07	Jason Chou, Lavenia Millar, David Stillman, Public Works; Aki Snellling, Planning; Jenny Fire, consultant.
Planning staff: Annual in-house training regarding C.3 requirements (Group 1, 2A, 2B, HMP, pesticide control, site design, landscape review), website and municipal regional permit, lessons learned.	6/26/07	Ciddy Wordell, Gary Chao, Aki Honda, Vera Gil, Planning; Lavenia Millar, Public Works - trainer.
City's Pest Control Advisor: As a Pest Control Advisor, this supervisor is required, by the State, to attend 40 hrs. of PCA training in a two-year period.	On-going	Diane Mahan, PW Streets supervisor, and City's PCA, courses include IPM.
City's Golf Course Contractor, Pest Control Advisor: As a Pest Control Advisor, this contractor is required, by the State, to attend 40 hrs. of PCA training in a two-year period.	On-going	Don Naumann, contractor for Blackberry Farm Golf Course, courses include IPM.

Mr. Bruce H. Wolfe
REGIONAL WATER QUALITY CONTROL BOARD
San Francisco Bay Region
1515 Clay St., Suite 1400
Oakland, CA 94612

SUBJECT: CITY OF LOS ALTOS URBAN RUNOFF MANAGEMENT PROGRAM FY 2006-2007 ANNUAL REPORT

Dear Mr. Wolfe:

This report is submitted by the City of Los Altos, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a. of the Program's reissued municipal storm water National Pollutant Discharge Elimination System (NPDES) Permit (Order No. 01-024). The report summarizes activities performed during FY 2005-2006 in accordance with the City of Los Altos' Urban Runoff Management Plan (URMP) submitted to the Regional Board on September 1, 1997 and updated in October 2000 and September 2004, and the performance standards contained therein.

Contents of Report

The goals of this Annual Report are to: 1) concisely document implementation of our URMP and FY 06-07 work plan during the past fiscal year; 2) evaluate program results for continuous improvement; and 3) share this information with other Co-permittees, municipal decision-makers, and the public. To accomplish these goals, the City of Los Altos Annual Report contains the following sections:

I. Cover Letter

II. Certification Statement

III. Self-Evaluation and Work Plan Completion Matrix:

- IC/ID Elimination Activities
- Industrial/Commercial Discharger Control Program
- Public Agency Activities
  - i. Public Streets, Roads and Highways Operation and Maintenance
  - ii. Corporation Yard Operation and Maintenance
  - iii. Storm Drain System Operation and Maintenance
- New Development and Redevelopment Planning Procedures
- New Development and Redevelopment Construction Inspection
- Pest Management Activities
- Mercury Pollution Prevention Activities
- Other Water Quality and Watershed Management Requirements
  - i. Trash Management
  - ii. Copper Action Plan
  - iii. Nickel Action Plan
- Public Information/Participation
- Annual Report and Work Plan
- Staff Training
- Revised 04/05 Annual Report page pursuant to Board comment

Program Highlights and Accomplishments

During FY 2005-2006 the City of Los Altos continued to implement our Urban Runoff Management Plan (URMP) to the maximum extent practicable. The activities implemented for each element of the City's URMP are described in Chapter 6 of the Santa Clara Valley Urban Runoff Pollution Prevention Program's Urban Runoff Management Plan. Some brief highlights of our many accomplishments during FY 2006/2007 are described below.

The city has well over 300 major remodel/rebuilding project that were under construction during the last rainy season. The City sent a letter to each of the property owners and each of their contractors for these projects explaining the necessity of protecting their property from allowing contaminated storm runoff from their property. This letter included detailed suggestions to help prevent erosion of sediments from the site. Prior to the beginning of the rainy season, our inspector visited each one of these sites and reiterated to the contractors what the requirements that city will be expecting to see at their sites. Between mid-October to April, our inspector was

able to visit most all of these sites on a monthly basis, especially those with high priority for potential erosion. During this time, citations were issued for those that did not have proper controls in place. By the end of the rainy season, the City was able to witness properly maintained erosion controls at most all of private construction sites.

Earlier in the fiscal year the State Water Board as well as your Regional Board directed cities, which included Los Altos, to prepare a Sewer Management Plan. This Plan would be used by each city to properly maintain their sanitary sewer systems. The city is on schedule to have the Plan completed by the end of this calendar year, which will be a year ahead of schedule set up by your Board.

The City of Los Altos is pleased with its maintenance program and compliance with the control of sources of pollution. The City received an award for having 15 consecutive Clean Bay Business certifications for having its city corporation yard in complete compliance with all point source control. The city continues to follow an extensive training program for its staff dealing with the use of pesticides. The City staff always considers the use of safer type of pesticides including making every effort to use alternatives such as the use of mulches for weed control rather than herbicide.

The City has been one of the leaders in the Bay Area in source control at its development or redevelopment sites. The city continues to require the incorporation of site design source controls and treatment into all of its projects, regardless of size. For example, during the fiscal year the city required well over 100 new single family rebuilding projects to contain their drainage on site by having them make every attempt to incorporated site design measures to allow stormwater flow to infiltrate into the ground and then directed over landscaped area prior to discharge in the city's streets and not allow any connections to the city's storm drain system. This helped reduce the flow in the city's system as well as treat the storm water on site prior to any discharge.

Continuous Improvement Activities

The City continues to address challenges encountered in implementation of improvements to its Urban Runoff Management Plan with existing staff. Overall, staff believes that the program is being implemented consistently throughout the City and is effective in reducing pollution of the local creeks. The largest challenge facing the City in its effort to comply with the permit, as with other cities, is having minimal funding and few staff available for its programs. Also funding comes from our General Fund since Los Altos has no storm drain fees. But Los Altos has a very small sales tax base due to the lack of commercial and no industrial businesses in the city. This would appear to become more of a challenge with the eventual adoption of the proposed Regional Permit.

During the fiscal the year the city began implementation of its BMP verification inspection program. Some minor issues were encountered during the implementation for which the city has made adjustments. For example, at the end construction, the developer was more than willing to develop and record a maintenance agreement for the treatment BMPs. But it is found that those on the property that were actually responsible for implementing the maintenance process, was not aware of the agreement. The city will plan an early follow-up inspection at the property to explain the treatment system(s) and explain the maintenance agreement and the city eventual verification inspections to those occupants that would be responsible for the maintaining the system.

In summary, the City continues to be committed to the implementation of its Urban Runoff Management Plan. As with previous fiscal years, this has proven to be a challenge with limited staffing levels, minimal funding availability and increased work effort to comply with the Program. In the coming year the City will continue to strive to increase its level of effort dedicated to the Santa Clara Valley Urban Runoff Pollution Protection Program.

I welcome your review of this annual Report and any comments that you might have to offer that would help the City improve the managing of the program. If you have any questions regarding the materials submitted, please contact me at (650) 947-2624.

Very truly yours,

Larry Lind
Associate Civil Engineer

ILLICIT CONNECTION & ILLEGAL DUMPING ELIMINATION ACTIVITIES

FY 2006-2007 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
1	Continue to provide training as required on ICID activities	Los Altos will continue to provide information and training to Engineering, Planning, Building Inspection and Public Safety personnel with a focus on new personnel. Each Department holds regular meetings for which the subject of ICIDs is discussed. Staff will be encouraged to attend formal training as it becomes available.	The City of Los Altos continues to provide training to city staff ICID issues. For example, the city sent personnel to SCVURPPP training workshop, " Construction Site Management Workshops," in December at the Quinlan Center in Cupertino. City personnel learned what to look for during stormwater inspections of commercial and industrial facilities that are under construction.	Community Development & Public Works Department
2	Continue to evaluate and improve response and documentation of illegal dumping activities	Los Altos uses the police department to respond to reports of illegal dumping. Their response is also coordinated with the URP Coordinator. These responses would be documented by the officer's police report.	During the FY the city primarily used the police department to respond to reports of illegal dumping and the Engineering Department inspector or engineer as a backup. The police department maintains documentation of those incidents and the engineering department maintains a master list. During FY 06-07, PD recorded four responses that relate to potential illegal dumping. Each of the incidents was properly addressed. The sewer maintenance department continues to respond to sewer overflows. The city has a crew on standby 24 hours a day and therefore can respond to these quickly. During FY 06-07, city crews addressed seven sewer overflows, which were properly cleaned up before entering any storm drain systems. During the FY, the city also continued most all construction sites to assure they have proper BMPs installed and maintained	Public Works Department

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
3	Sanitary Sewer System	Los Altos has adopted a new Sewer System Master Plan and has begun the implementation to comply with the States SSMP and to help prevent system overflows	The Sanitary Sewer Master Plan was adopted on 1 August 2005. This Plan meets several of the requirements that are mandated by the San Francisco Regional Water Quality Control Board's requirement that each owner of a sewer collection system prepare a Sewer System Management Plan (SSMP) and also with the similar requirements by the State of California in their Water Discharge Requirements. The City plans to complete SSMP for both the Regional Board and the State versions by the end of calendar, which is over a year ahead of the deadline. The City has begun implementing the recommendation of the Master Plan. This including the issuing of a second Sewer Root Foaming contract in December 2006 and we have almost completed the televising of the entire sewer system. The City plans to begin the design on 8 new sewer Capital Improvement Projects next fiscal year in accordance with the schedule of the Master Plan. The City will continue to raise the rates to fulfill the recommendations of the Master Plan.	Public Works & Community Development Departments
4	Evaluate IC/ID activities in FY 2006-2007 and explore opportunities to increase program effectiveness.	Report results in the FY 2006-2007 Annual Report.	See "ICID Program Evaluation" and "ICID Report Data" below.	Public Works Department

Municipality: City of Los Altos ***Attachment B***

ICID Program Evaluation FY 2006/2007
Overall the program seems to be working very well. It would seem more and more people, as well as contractors, are becoming aware that no discharges, other than storm water, are allowed into the storm drain systems. With the addition of a full time inspector, the city was able to better police this issue, including an attempt to inspect over 300 single-family construction sites in Los Altos. This increase enforcement was apparent with the increase number of reported events, but is also a noticeable improvement in the number of contractors that automatically provide the proper BMPs and also maintain them. Even then many still need to be constantly reminded to maintain a properly controlled site. Though the city Police Department still respond to emergencies and address those responses according, most of enforcement responsibility was delegate last FY to the Engineering Department where the inspector is assigned. This seems to allow better follow-up to issues that develop to verify continued compliance and better record keeping and free up the Police to other, more pressing issues. The City of Los Altos continues to implement recommendations from this Sewer Master Plan to minimize overflows, which show a reduction from 12, that was reported in FY 05/06 to 7 in FY 06/07. This Master Plan has placed the city in advanced compliance with the State's recently adopted Waste Discharge Requirements (WDR) and the San Francisco Regional Water Quality Control Board's requirement for a Sewer System Management Plan. These mandates are required of every owner of sewer collection systems and the city's Master Plan has placed the city well ahead of the deadlines from each of these mandates. The city plans to comply well in advance the deadlines. Though the city believes it is capable of responding to any event, it continues to struggle with the documentation necessary for any of these incidents. Staff will continue to work with the police department in their documentation and follow-up actions on these incidents.

INDUSTRIAL/COMMERCIAL DISCHARGER CONTROL PROGRAMS

FY 2006-2007 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
1	Inspection of Vehicle Service Facilities	Los Altos will continue to coordinate and support the program conducted by the Palo Alto Regional Water Quality Treatment Plant. Palo Alto conducts annual inspections of all vehicle service facilities in Los Altos. The City will document and conduct follow-up on any storm water discharge violations identified in these inspections.	In August 2006 the City of Palo Alto inspected 14 vehicle service facilities in Los Altos. None were found with any violations and all facilities were given the Clean Bay Business award. During the year, there were no other reports on discharges from any of these facilities.	URP Coordinator

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
2	Inspection of Food Service Facilities	Los Altos will continue to coordinate and support the County of Santa Clara Department of Environmental Health's annual inspections of all 101 food service facilities in the City. The City will document and conduct follow-up on any storm water discharge violations identified in these annual inspections	During the year Santa Clara County Department of Environmental Health (DEH) conducted 383 individual inspections of 140 food services facilities in Los Altos. During inspections, DEH makes sure that the wastewater is being deposited in the mop sink. DEH reminds the facility of the importance of using the mop sink and instruct them to not put wastewater outside or to wash mats outside. They also inspect and report on the storage of oil, grease and garbage, which is usually exterior to the facility. They provide guidance and proper handling and cleanup of those areas. During the FY 06/07, DEH reported two areas of concern. . Follow-up visit showed that the situation had been corrected. During the year, the city issued a warning letter to three restaurants that had dumped or wash something in the back of their facility. Also the city cited a property for discharge from a restaurant on the property. Follow up inspections by the city continued at all these facilities.	URP Coordinator & Code Enforcement Officer
3	Inspection of Other Commercial Facilities	Los Altos has very limited Commercial Facilities (and no Industrial facilities), but is prepared to inspect any of these other listed categories of commercial facilities should a complaint be filed and take necessary action if required.	No violations or complaints were filed during the fiscal year.	URP Coordinator & Code Enforcement Officer

Industrial/Commercial Program Evaluation
FY 2006/2007

Only two were found during the FY 06/07 inspections, which were properly addressed. Based on this low number, it would appear that this program is working well. Biggest reason, obviously, is the lack of industrial/commercial facilities in the city. The city could further increase the frequency of the inspections, but it is difficult to justify since there are no reportable violations or potential violations.

Public Streets, Roads & Highway O&M Program Evaluation FY 2006/2007
Roads and streets operations follow BMPs for storm water protection. There have been no complaints or incidents of discharge to the storm system due to Street Division operations. Crews completed 49.5 hours in road shoulder work to ensure proper drainage and spent 282 hours during the fall leaf pickup program in support of the annual street sweeping program. Due to past shoulder activities, the level of effort to ensure proper drainage has decreased. They picked up over 251 cubic yards of leaves during this time, which reduced the load that would have entered the storm drain system. The city plans to continue these programs and will continue to evaluate means for improvements.

1	Storm Water Pollution Prevention Plan	Los Altos will evaluate and continue to improve the plan as necessary.	During FY 05-06, staff continued to ensure all elements of SWPPP were followed. Silt sacks were inspected quarterly and replaced as needed. Again there were no spills in the Municipal Service Center that required containment.	Public Works Department
2	Evaluate O&M activities in FY 2006-2007 and explore opportunities to increase program effectiveness	Report results in the FY 2006-2007 Annual Report.	See "Corporation Yard O&M Program Evaluation" section below.	URP Coordinator

Corporation Yard O&M Program Evaluation
FY 2006/2007

During FY 05-06, the Municipal Service Center was awarded its 14th Clean Bay Business Certificate and a plaque for 15 consecutive years of outstanding achievement in maintaining the corporation yard. Automotive and shop personnel also passed the Hazardous Material Program compliance inspection by the Santa Clara County Department of Environmental Health. Automotive personnel completed 2674 hours on vehicle maintenance and shop personnel spent 68 hours for regulatory compliance in handling petroleum products and hazardous materials. Crews continue fueling at local gas stations and do not maintain any fueling processes. The three-year-old wash pad has been successful in receiving wastewater and putting it into the sewer system after going through a separator. Regulatory compliance has been maintained in emptying the separator on a quarterly basis and crews continue to utilize of the wash pad for cleaning maintenance equipment. The City continues to exceed compliance with all environmental requirements within its corporation yard.

PUBLIC AGENCY ACTIVITIES
STORM DRAIN SYSTEM O & M
FY 2006-2007 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
1	Storm Drain O & M & Training	Los Altos will continue to train staff & implement and improve BMPs and SOP for the storm drain system operation and maintenance activities. Will evaluated its SOP for this maintenance task annually and update as deemed necessary.	Staff followed the guidance in the CASQA Handbook on Municipal Stormwater Best Management Practice for storm drain maintenance. Entire storm drain system was inspected and all catch basins were cleaned where needed. All material was disposed of properly. Maintenance Staff received annual training from the city's URPPP Coordinator. No updates were deemed necessary for the SOPs.	Public Works Department
2	Reporting of Observed ICID Evidence	Los Altos will continue to train and require staff to notify appropriate personnel when incidents or unusual contaminants are observed during routine maintenance. Eventually this information is forwarded to the Police Department where it will be documented and considered for enforcement.	The City of Los Altos continues to provide guidance and training to their staff personnel. For example, during routine maintenance staff training, field crews are instructed on what illegal discharges are and are told to report them to their supervisor or to the city's Code Enforcement Officer for follow-up action.	Public Works Department

3	Evaluate O&M activities in FY 2006-2007, including effectiveness of BMPs, explore opportunities to increase program effectiveness, and report the results in the Sept 2006 AR	Report results in the FY 2006-2007 Annual Report.	See "Storm Drain System O&M Program Evaluation" section below.	URP Coordinator

Storm Drain System O&M Program Evaluation
FY 2006/2007

O&M activities for storm drain maintenance were very successful this year. Crews were able to clean all of the storm drain system prior to the rainy season and we experienced very little storm drain problems during the rainy season. Staff continued to implement the method of cleaning and inspecting the storm drain system through the GIS quadrant system (63 quadrants) instead of our 10 maintenance zones. This method has improved the work schedule and completeness of this operation.

NEW DEVELOPMENT & REDEVELOPMENT PLANNING PROCEDURES (C.3)

FY 2006-2007 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
C.3.b Development Project Approval Process **Goal:** To modify Los Altos' development project approval processes, for both private and public development project, to incorporate the requirement of Provision C.3				
1	Continue to train Los Altos staff in planning, building, and engineering division on the latest developments of the C.3. provisions and goals	Los Altos staff has attended Program workshops as they become available.	Private Projects: Though project initially begin within the Planning Department, he Engineering Department has been assigned to work on most of the issues that deal with the City's NPDES permit. Most "large" projects for the city are primary just rebuilds of single-family residences. The Engineering Division reviewed approximately one hundred of these projects during the FY and comments were made to assure that the design provided property source control measures in accordance with the Permit. During the FY Planning Department approved one Group 1 but no Group 2 projects. Public Projects: As noted in the Staff Training Summary at the end of this Annual Report, Staff involved in the design and review of all Public Projects, as well as Private Projects, attended all Program sponsored training on C.3. During FY 2006/2007 there were no Group 1 or Group 2A public projects implemented by the City.	Community Development & Public Works Department

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
C.3.e. Operation and Maintenance of Treatment BMPs **Goal:** To develop and implement local agency operation and maintenance (O&M) verification programs to help ensure the proper maintenance of stormwater treatment measures on public and private property.				
1	Group 1 and 2 project BMPs.	Continue to evaluate procedure for logging information about treatment BMPs installed at any approved Group 1 and Group 2 projects, and for maintaining a list or database of properties, treatment BMPs, and responsible operators	The City of Los Altos has one Group 1 project that was completed in late 2006 and we have one more that was approved by Planning in early 2007 and is awaiting approval of the building plans. The Engineering Division continues to document the information necessary for these projects. This also includes all necessary inspections and annual reporting. For further information on the organization structure on the operation and maintenance verification program see pages 16 and 17 of the City of Los Altos 2003/2004 Annual Report.	Community Development & Public Works Department
2	O&M Agreement	Los Altos will review the procedures and document language and make improvements as deem necessary.	The City of Los Altos has one Group 1 project that was completed in late 2006. A Maintenance Agreement was developed and recorded for the project. This maintenance agreement seems to be working well, but it is very early in its implementation stage. The City of Los Altos will continue to evaluate the agreement and make improvements as determined necessary. It is anticipated that this agreement may be a model for which the city will utilize for any future Group 1 or Group 2 projects.	Community Development & URP Coordinator
3.	Group 1 and Group 2 project BMP O&M verification inspection.	Currently the City of Los Altos will conduct O&M verifications of treatment measures all Group 1 and Group 2 projects at least annually.	During FY 2006-2007 the City of Los Altos conducted a BMP verification inspection at its only Group 1 project. The result of that inspection is contained in the "Treatment BMP Activity Report FY 2006-2007" that follows.	

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
4	Evaluate and report on the City of Los Altos' Treatment BMPs Operation and Maintenance Verification program	Report on the evaluation of the treatment BMPs O&M verification program conducted during FY 2006-2007 in the Annual Report, including organizational structure, evaluation of effectiveness, and planned improvement to the program. Include a list or summary of treatment BMPs inspected during the year, inspection results, and any required follow-up and correction	For further information on the organization structure on the operation and maintenance verification program see pages 16 and 17 of the City of Los Altos 2003/2004 Annual Report. During FY 2006-2007 the City of Los Altos conducted a BMP verification inspection at its only Group 1 project. The result of that inspection is contained in the "Treatment BMP Activity Report FY 2006-2007" that follows. One lesson learned from this is the need to conduct a visit with the property owner/property occupant to educate them on the treatment BMPs and the need to provide proper maintenance.	Community Development & URP Coordinator

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
C.3.f. Hydromodification Management Plan **Goal:** To manage increases in runoff peak flow and volume for Group 1 projects, where such increases may cause increased erosion of creek beds and banks or related impact, through implementation of a hydromodification management plan (HMP)				
1	Hydromodification Management Plan (HMP)	Continue the implementation of HMP requirements for Group 1 and Group 2 as required.	In September 2005 the city of Los Altos adopted an ordinance that requires implementation of the HMP requirements in accordance the City's Permit. Based on the requirements established in the ordinance, the city no projects that must implement any hydromodification management.	URP Coordinator
C.3.g. Waiver and Compensatory Mitigation Program **Goal:** Establish a program under which a project proponent may request a waiver from treatment BMP requirements due to impracticability, with a provision to provide an equivalent water quality benefit to the same receiving water (that allows participation in regional solutions)				
1	Local waiver program.	Continue to evaluate the need for a local waiver program. Los Altos is not anticipating the need for any waiver requests.	The Program has not made substantive progress on waivers but the city is available to provide assistance as required.	URP Coordinator

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
C.3.h. Alternative Certification of Stormwater Treatment Measures **Goal:** Establish a procedure for a signed certification form a Civil Engineer or a Licensed Architect of Landscape Architect that project plans meet the requirement set forth in Provisions C.3.d and C.3.f.				
1	Alternative Certification of Stormwater Treatment Measures	In lieu of conducting a detailed review to verify the adequacy of the measures required pursuant to Provisions C.3.d and C.3.f, the City of Los Altos may elect to accept a signed certification from a Civil Engineer or a Licensed Architect or Landscape Architect registered in the State of California that the project plans meet the criteria established by the Permit.	After dealing with its first Group 1 project, the City of Los Altos has set up a process that requires a developer to submit a certification with the planning submittal. This certification meets Provision C.3.h and, in general, it states that the information provided on the planning submittal meets the city's NPDES permit. Then when the building plans are submitted, the City requires a submittal of what is called a Storm Water Management Plan stamped by a registered engineer. This Plan explains what BMPs, along with other control measures, that are being proposed in the design plans, why they are being proposed and all the necessary calculations to support the design. And when the project is complete, the City requires a certification from the design engineer that final construction meets the approved design plans.	Community Development & URP Coordinator
2	Certified Projects	Maintain a list of those projects certified by someone other that the City of Los Altos staff. Report results in the FY 2006-2006 Annual Report.	It is our intent to have all project certified and also to review the calculations.	URP Coordinator

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
C.3.k. Source Control Measures **Goal:** Require source control measures for new redevelopment projects to limit pollutant generation, discharge and runoff to the maximum extent practicable.				
1	Source Control Measures.	Los Altos will continue to implementation of source control measures. Los Altos will continue to implement source control regardless of the size of the project to the maximum extent practicable	Private Projects: The City of Los Altos continues to implement source control as delineated in its 2004 Urban Runoff Management Plan. Though the city is primarily a residential area, a few of the private projects involved rebuilding of commercial buildings. For example, there was a new commercial office building just completed in July 2007. Some examples of source control required by the city was a covered dumpster area that was located away from the building and it has a floor drain that flows to the sanitary sewer. This prevents contaminates from getting into the storm drain and also provides pest control. Additionally the storm flow from the parking lot is directed into a small infiltration basin in then landscaping area, which allows small flows to infiltrate into the ground because of the raised catch basin in the back of the basin. All roof drains discharge to landscape area. These are just a few examples from a typical private project. Public Projects: During the time frame between July 1, 2006 and June 30, 2007 the city of Los Altos awarded eight small construction projects. None of these projects fell under the definition of a Group 1 project. Other than construction BPMs that were applied, these projects did not allow any opportunity to apply such things as source control, etc. However, Los Altos will continue to evaluate Planning Procedures Performance Standard and will implement source control measures on public projects as necessary.	Community Development, Public Works Department & URP Coordinator

C.3.m. Water Quality Review Processes				
Goal: To ensure that water quality impacts and appropriate mitigation measures are identified as part of environmental review of proposed projects.				
1	CEQA checklists and other environmental review documents	Continue to review CEQA checklists and other environmental review documents and modify documents as needed.	The City of Los Altos' current checklist sufficiently addresses water quality impacts for Group 1 and Group 2 projects.	Community Development
C.3.n. Reporting Requirements				
Goal: To meet the Provision C.3. reporting requirements, and plan for anticipated data needs, and begin collecting and tracking required data on development projects as needed.				
1	Group 1 and Group 2 projects.	Continue to collect and report information on all Group 1 and Group 2 projects in accordance with the reporting forms parts 1 and 2 in the City of Los Altos Planning Procedures Performance Standard.	See "New Development-Planning Procedures Report Data" that follows.	URP Coordinator
2	Pesticide reduction measures for Group 1 and Group 2 projects in the City of Los Altos	Continue to collect and report (including percentage projects for which pesticide reduction measures were required) information on pesticide reduction measures required all Group 1 and Group 2 projects in the City of Los Altos	See "New Development-Planning Procedures Report Data" that follows.	Community Development, Public Works Department
3	Evaluate and record C.3 activities in FY 2006-2007 Annual Report.	Evaluate and record C.3 activities in FY 2006-2007 including all information recorded on Group 1 and 2 projects. Note opportunities to increase program	See "New Development-Planning Procedures Program Evaluation" that follows	Community Development, Public Works Department & URP Coordinator

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

New Development-Planning Procedures Program Evaluation
FY 2006/2007

Public Projects: During the time frame between July 1, 2006 and June 30, 2007 the city of Los Altos awarded eight small construction projects. None of these projects fell under the definition of a Group 1 or Group 2 projects. All projects dealt with some kind of repair to facilities. Other than construction BPMs that were applied, these projects did not allow any opportunity to apply such things as source control, etc. However, the City of Los Altos continues to review all public projects with respect to all C.3 requirements. Due to lack of large projects, the city is unable to really evaluate the program as it relates to public projects.

Private Projects: During the time frame between July 1, 2006 and June 30, 2007 the City of Los Altos had one Group 1 project that was completed in late 2006 and we have one more that was approved by Planning in early 2007 and is awaiting approval of the building plans. As in the past, the City of Los Altos continues to work with applicants to limit the amount of storm water runoff from private property. Most developers are familiar with these city requirements and the design to retain storm water on site for land disposal is now shown on most designs that are submitted for approval. Though this has been going on for some time, it is nearly impossible to measure the impact on the flows in the city storm drain system. In documenting the Group 1 and 2 projects, the city has struggled with listing pesticide control measures that are included in the projects. But since the city is largely built-out, any new projects are small and have very little landscaping. With the required storm water treatment, the city estimates that pesticides issues are very minimal.

Site Design Measures Guidance and Standards Development Action Summary			
Site Design Question	**Proposed Action (9/15/03)**	**Personnel Involved in the Discussion**	**Summary of Action Taken (6/30/07)**
Policies to Limit Site Impervious and Incorporate Post-Construction BMPs Into Development Projects			
1. Is the minimum sidewalk width allowed in the community 4 feet or less?	The City of Los Altos has very minimum sidewalks throughout the city. The City standard width is 4 feet unless it can be justified otherwise through usage calculations or to match existing adjacent walkways. Less width would affect ADA requirements. Since Los Altos is built out and will not have any large development, it is anticipated that there is no need to put this in writing.	Public Works (Engineering) & Community Development (Planning)	During FY 06/07 the City of Los Altos had only one 300 foot long, four foot wide new sidewalks installed. This is because the city is mainly built out and the residents are also resistant to their installation. Los Altos plans to continue to evaluate new sidewalks on a case-by-case basis and provide directions in the form of the conditions of approval. Los Altos has also document the minimum width in their Standard Plans and Specification, which is currently being developed by a consultant for the city.
2. Are sidewalks generally sloped so they drain to the front yard or park strip rather than the street?	The City of Los Altos will work with the Program as appropriate. Los Altos will require that sidewalks drain to a soil area on a case-to-case basis. Since Los Altos is built out, and will not have any large development, it is anticipated that most sidewalks will remain as currently constructed.	Public Works (Engineering) & Community Development (Planning)	During FY 06/07 the City of Los Altos had only one 300 foot long, four foot wide new sidewalks installed. Unfortunately there was no landscaping to drain this sidewalk to. Los Altos will continue to evaluate new sidewalks on a case-by-case basis for drainage and provide directions in the form of the conditions of approval
3. Are the use of benign roof materials promoted?	Through the design review process, the City reviews building materials, including roof materials, and encourages the use of benign roofing materials such as wood shake or tile. The City has required that project sponsors change roofing materials and/or colors to lessen impacts. During this FY the city will adopt an ordinance to prohibiting copper in roofing systems similar to Palo Alto's ordinance	Community Development (Planning) & Public Works (Engineering)	The City of Los Altos is still evaluating the need for an ordinance prohibiting copper roofing systems. Los Altos feels this can be done without an ordinance and will try and discourage applicants from using copper on their projects. With the cities policy of not allowing direct discharges to the storm drain system has minimize the impact of copper discharges.

Site Design Measures Guidance and Standards Development Action Summary (Cont.)			
Site Design Question	**Proposed Action (9/15/03)**	**Personnel Involved in the Discussion**	**Summary of Action Taken (6/30/07)**
4. Does the community encourage inclusion of turf play yards or courtyards that also serve as infiltration areas or overflow parking areas?	Yes, they are encouraged on a case-by-case basis, when large projects are proposed. City has copies of BASMAA's Start at the Source to help encourage such ideas. City of Los Altos will provide a link on local website to SCVURPPP and/ BASMAA website containing electronic copy of BASMAA's Start at the Source.	Public Works (Engineering) & Community Development (Planning)	The City of Los Altos continues to maintain a link on its website to SCVURPPP website containing electronic copy of BASMAA's Start at the Source
5. Is the minimum radius allowed for cul-de-sacs less than 35 feet?	Since Los Altos does not expect to have many, if any, new cul-de-sacs, Los Altos plans to take each on a case-by-case basis and provide the minimum radius agreed upon by the appropriate agencies. Los Altos will also continue to work with the program and other jurisdictions regarding this matter. Will review matter with the Santa Clara County Fire Department for their input	Public Works (Engineering)	During FY 06/07 the City of Los Altos did not have any new cul-de-sacs installed mainly because the city is built out. Los Altos will continue to evaluate any new cul-de-sac on a case-by-case basis for requiring a minimum radius as part of the conditions of approval.
6. Are there established design criteria or guidance for swales that can provide stormwater quality treatment (i.e., dry ponds, biofilters, or grass swales)?	City of Los Altos will consider revising the current version of its municipal code this FY by removing the prohibition for the use of reservoirs and simply stating that the device will be subject to approval by the City Engineer to insure flexibility. City of Los Altos will consider any treatment BMP presented in the handbooks on a case-by-case basis.	Public Works (Engineering)	City of Los Altos has not revised its municipal code, but still plans to do so.

FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

Site Design Measures Guidance and Standards Development Action Summary (Cont.)			
Site Design Question	**Proposed Action (9/15/03)**	**Personnel Involved in the Discussion**	**Summary of Action Taken (6/30/07)**
7. Are model shared parking agreements provided?	The City does not have a model shared parking agreement, but it currently has an existing parking agreement with a local restaurant. Also the City does have a mechanism to allow cooperatively operated parking facilities. The agreements are reviewed on a case-by-case basis by staff and the City Attorney. Also, the City has allowed a business to rent parking spaces in the public parking plaza during the evening to help satisfy their parking requirement.	Public Works (Engineering) & Community Development (Planning)	No further action was required. During FY 06/07 there were no cases where parking agreements became an issue.
8. If mass transit is provided nearby, is the parking ratio reduced?	All multi-family and mixed-use projects are required to provide affordable housing. The City grants development incentives for all projects with affordable housing. Incentives can include a reduction in the amount of parking. When considering a reduction in parking, proximity to mass transit would be a primary consideration	Community Development (Planning)	During FY 06/07 the city did not have any multi-family or mixed-use projects.
9. Is the minimum driveway width specified in the community 9 feet or less (one lane) or 18 feet (two lanes)?	The driveway widths in certain residential districts and commercially operated public parking facilities can be reduced subject to approval of an alternative design by the architectural and site control committee. The City prefers this approach rather than changing the standards because it allows flexibility and it allows the City to determine the appropriate width based on site conditions.	Community Development (Planning)	During FY 06/07 there were no cases where driveway width really became an issue.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report

Site Design Measures Guidance and Standards Development Action Summary (Cont.)			
Site Design Question	**Proposed Action (9/15/03)**	**Personnel Involved in the Discussion**	**Summary of Action Taken (6/30/07)**
Drainage Design Requirements			
1. Does the municipality promote limiting runoff to pre-development levels (e.g. through detention or retention, limits on impervious surface area, etc.)?	The City of Los Altos plans to adopt an ordinance to require developer to comply with Provision C.3 of the NPDES permit, which would limit runoff to pre-development level. As a matter of conditions of approval, Los Altos requires limiting runoff from single-family redevelopment not covered by the permit. It is anticipated that this ordinance will be enacted prior to the implementation of the C3 provisions in Oct 2003.	Public Works (Engineering) & Community Development (Planning)	The City of Los Altos has adopted an ordinance that requires developers to comply with Provision C.3 of the NPDES permit limiting runoff to pre-development levels. The City of Los Altos also continues to limit runoff on all of its projects, regardless of size.
2. Are there design criteria for stormwater best management practices?	Will review and implement procedures on a case by case basis for projects as they become available like implementing appropriate best management practices shown in the New Development and Redevelopment handbook by CSQA as a matter of conditions of approval.	Public Works (Engineering) & Community Development (Planning)	The City of Los Altos continues to use those BMPs that are defined in California Stormwater Quality Association *Stormwater Best Management Practice Handbook for New Development and Redevelopment*.
Natural Resource Protection/Restoration			
1. Is the minimum buffer width (from top of bank) 75 feet or more in a stream buffer ordinance/policy/guidelines?	The City works with the Santa Clara Valley Water District, and when necessary requires a biotic study, to determine the appropriate buffer for projects adjacent to a creek. Most of the lots in Los Altos adjacent to the creek are residential. Requiring a 75-foot buffer from top of bank is not practical in most cases, as it would render most lots unusable.	Community Development (Planning)	The City of Los Altos has adopted the provisions of the Water Resources Protection Collaborative and will issue permits based on the requirements of Santa Clara Valley Water District.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

Site Design Measures Guidance and Standards Development Action Summary (Cont.)			
Site Design Question	**Proposed Action (9/15/03)**	**Personnel Involved in the Discussion**	**Summary of Action Taken (6/30/07)**
2. Does the stream buffer ordinance specify enforcement and education mechanisms?	The City's Environmental Committee continues to discuss appropriate creek protection measures and ways to educate the public. Will obtain and include information from the Marin County Stormwater Pollution Prevention Program efforts on creek side approaches.	Community Development (Planning)	The City of Los Altos has adopted the provisions of the Water Resources Protection Collaborative and will issue permits based on the requirements of Santa Clara Valley Water District.
3. Is land conservation, impervious cover reduction, or other types of water quality protection a major goal or objective to the open space design guidance?	City staff understands the importance of water quality protection and makes sure impacts are evaluated and appropriate protection measures are included in project approvals as a long-standing city policy on source control. The City adopted a new General Plan in November 2002. This document and current development policies encourages the conservation of natural features	Community Development (Planning)	The City continues to follow its General Plan.
4. Are flexible site design criteria available for developers that preserve open space and utilize cluster design options (e.g., setbacks, road widths, lot sizes)?	The City's approach is to consider road width modifications on a case-by-case basis to determine the appropriate width for the specific site being developed. All new residential streets in the City of Los Altos will be 10 minimum lane widths.	Public Works (Engineering)	There were no new streets being proposed during FY 06/07.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

Site Design Measures Guidance and Standards Development Action Summary (Cont.)			
Site Design Question	**Proposed Action (9/15/03)**	**Personnel Involved in the Discussion**	**Summary of Action Taken (6/30/07)**
5. Are open space areas encouraged to be consolidated into larger units?	It is City policy to encourage protection of creeks, creek side area and riparian habitat in their natural state while ensuring public safety and preserving valuable natural resources. For example, the City has plans for a bike path along the Hetch-Hetchy right-of-way in conjunction with the development of the Resident Inn/Office Complex on El Camino Real.	Community Development (Planning)	City of Los Altos continues to follow its policy.
6. Does a minimum percentage of open space near sensitive areas have to be managed in a natural condition?	The City continues to work with the Santa Clara Valley Water District and other appropriate agencies to establish buffers near sensitive areas. The appropriate buffer varies based on site conditions. Based on the recommendation of the Santa Clara Valley Water District and a biotic assessment, the City recently required a 25 foot buffer as a condition of approval for a subdivision abutting a creek. The width of the buffer was based on the needs of the site. We prefer this approach to establishing a minimum percentage that may or may not be appropriate for a site. .	Community Development (Planning)	The City of Los Altos has adopted the provisions of the Water Resources Protection Collaborative and will issue permits based on the requirements of Santa Clara Valley Water District.
7. Does the community encourage minimization of impervious surface areas in recreational open space areas?	The newly adopted General Plan includes policy language that encourages the minimization of impervious surface areas. This policy and requirements in the conditions of approval works well for the City and at this time no additional guidance or policy language is deemed necessary. However, the City will continue to evaluate if addition policy language would be beneficial.	Community Development (Planning)	The City of Los Altos continues to enforce the policy from the General Plan.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

Site Design Measures Guidance and Standards Development Action Summary (Cont.)			
Site Design Question	**Proposed Action (9/15/03)**	**Personnel Involved in the Discussion**	**Summary of Action Taken (6/30/07)**
8. Does your municipality encourage distinct low-impervious buffers between cities (e.g., greenbelts, open space, wild land corridors, agricultural areas)?	Given the existing built out environment of the city and the continual housing needs pressure, this is not really practical to create low-impervious buffers between the cities. The westerly and southwesterly borders between Palo Alto, Los Altos Hills and the County is Adobe Creek, and on the easterly border with Sunnyvale is Steven Creek which in itself already serves as a pervious buffer.	Community Development (Planning)	No further action was required.
9. Is there flexibility to meet regulatory or conservation restrictions (density compensations, buffer averaging, transferable development rights, off-site mitigation) offered to developers?	The City recently updated the General Plan. The policies in the General Plan were evaluated and determined to be appropriate for Los Altos.	Community Development (Planning)	The City of Los Altos continues to enforce policies in the General Plan

Site Design Measures Guidance and Standards Development Action Summary (Cont.)			
Site Design Question	**Proposed Action (9/15/03)**	**Personnel Involved in the Discussion**	**Summary of Action Taken (6/30/07)**
Policies to Limit Auto Use/Promote Alternative Transportation			
1. Does the municipality promote comprehensive pedestrian and bike trail corridors through a well-connected network of streets and pathways?	The City of Los Altos completed a citywide Bicycle Transportation Plan in February 2002. The City meets monthly with its Bicycle/Pedestrian Advisory Committee (BPAC) to discuss means to pursue the goals of this Plan and also to improve pedestrian access within the City and into adjacent communities.	Public Works (Engineering)	The City of Los Altos continues to pursue the goals of the Plan with the BPAC, which is a subcommittee of the city's Traffic Commission that was established by City Council. For example, The BPAC is working on the feasibility study to connect the Stevens Creek Trail between Mountain View and Cupertino.
2. Does the municipality promote neighborhood greenbelts with walkways and bike paths?	The City continues to seek opportunities for bikeways and pathways. The City recently awarded a contract as part of the safe routes to school program to install bike improvements along Berry Avenue. Also, the city has obtained easements along the Hetch-Hetchy right-of-way to use the area for a bike path. As opportunities arise, the City will continue to obtain easements in order to complete this plan for the Hetch-Hetchy.	Public Works (Engineering) & Community Development (Planning)	The City continues to seek opportunities for bikeways and pathways. For example, during FY 06/07 the city awarded a feasibility study to connect the Stevens Creek Pedestrian/Bicycle Trail between Mountain View to Cupertino though Los Altos.
3. Do street standards promote street layouts that reduce overall impervious surface area and/or trip length?	The City Council was concerned that many of the streets in Los Altos that did not have curb and gutters were becoming too wide because the residence were allowed to paved their shoulders. Therefore in November 2001 they passed a shoulder paving policy that restricts the width of the street plus the paved shoulders not to exceed 19 feet from the street centerline and also requires new street trees in the shoulder area as part of any new work. It was hoped that this would promote landscaping further out toward the edge of the streets into the public right of way.	Public Works (Engineering) & Community Development (Planning)	The City of Los Altos continues to enforce the Shoulder Paving Policy established by City Council in November 2001.

Site Design Question	**Proposed Action (9/15/03)**	**Personnel Involved in the Discussion**	**Summary of Action Taken (6/30/07)**
Policies to Promote Regional/Watershed-based Planning and Zoning			
1. Are watershed-based zoning options (e.g. overlay districts, performance zoning, incentive zoning, imperviousness overlay zoning, or planned development zoning) available?	The City's PUD ordinance (Chapter 14.62) allows flexibility from development standards and can be used for this purpose	Community Development (Planning)	No further action was required.

NEW DEVELOPMENT & REDEVELOPMENT CONSTRUCTION INSPECTION

FY 2006-2007 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
1	Construction Site Inspections	Los Altos will continue to review and revise SOPs and the City's legal authority related to violations as required, as well as conduct construction site inspections, and identify continuous improvements. Public projects contain contractual provision requiring the use of BMPs. Los Altos will continue to enforce and improve these provisions.	Public Projects: During the time frame between July 1, 2006 and June 30, 2007 the city of Los Altos awarded eight small construction projects. Projects dealt with some kind of repair. Of these, only two were under construction during the raining season. Therefore the city had no problem assuring that all proper construction BMPs were in place and properly maintained. Private Projects: During FY 06/07 the city continued to inspect all construction projects, regardless of size even though this exceeds that required by the permit. Though if it impossible to visit all location on a regular basis, the city feels that due to the large number of rebuilds in the city that this equates to a rather large development and therefore they all should install and maintain some degree of construction BMPs.	Community Development & Public Works Department

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
2	Construction BMPs and Control Measures	Los Altos will continue to implement BMPs and other storm water requirements developed through the application process. For Public projects, the contract documents will include the necessary BMPs and control measures applicable for each specific project.	Public Projects: During the time frame between July 1, 2006 and June 30, 2007 the city of Los Altos awarded eight small construction projects. Projects dealt with some kind of repair. Of these, only two were under construction during the raining season. Therefore the city had no problem assuring that all proper construction BMPs were in place and properly maintained. The City of Los Altos feels that its current practice is sufficient, but will continue to review this process. Private Projects: Plans of major remodels and rebuilds submitted to the Community Development Department for permitting were reviewed by the Engineering Department. Though none of these project approved during FY 2006/2007 was determined to have the potential for significant erosion from construction activities, the City still assures that all applicable construction BMPs and Control Measures requirements are being included in the project plans. Prior to the rainy season, the property owners for each of the projects under construction in the city were sent a letter providing each with details of the primary BMPs that were expected to be installed at each location to protect erosion of sediments from their construction site and also informing them that city inspections would be conducted during the rainy systems to assure they are properly installed and maintained. This letter indicated that a citation would be issued for those construction sites that did not install and properly maintain these BMPs. City continued to inspect all construction projects, regardless of size even though this exceeds that required by the permit. Due to large number of these project	Community Development & Public Works Department

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
3	Rainy Season Construction Inspections	Los Altos will continue to conduct construction site inspections for adequacy of storm water quality control measures. The sites will be those that have an active permit from the building department and construction at public facilities. Continue to conduct monthly inspections at these sites during wet season. In addition, Los Altos will continue to inspect each site prior to the beginning of the wet season to assure all have adequate storm water quality control measures.	Public Projects: During the time frame between July 1, 2006 and June 30, 2007 the city of Los Altos awarded eight small construction projects. Projects dealt with some kind of repair. Of these, only two were under construction during the raining season. Therefore the city had no problem assuring that all proper construction BMPs were in place and properly maintained. Private Projects: The City of Los Altos developed a list of over 300 construction projects that had any kind of site work. Except for three, all projects were single-family major remodels or rebuilds. Though none of these project approved during FY 2006/2007 was determined to have the potential for significant erosion from construction activities, the City still assures that all applicable construction BMPs and Control Measures requirements are being included in the project plans. And prior to the rainy season, the property owner for each of the projects under construction in the city were sent a letter providing each with details of the primary BMPs that were expected to be installed at each location to protect erosion of sediments from their construction site and also informing them that city inspections would be conducted during the rainy systems to assure they are properly installed and maintained. This letter indicated that a citation would be issued for those construction sites that did not install and properly maintain these BMPs	Community Development & Public Works Department
4	Staff Training and Educational Material Library.	Los Altos will continue to require inspectors to attend annual workshops and training, as well as providing internal training prior to each rainy season.	Public/Private Projects: City design engineers and construction and maintenance inspectors attended the December 5, 2006 training at Cupertino on “Construction Site Management”	Community Development & Public Works Department

5	Construction Inspection	Evaluate Inspection activities conducted in FY 2006-2007 and explore opportunities to increase program effectiveness and report the results in the Annual Report	See "New Development-Construction Inspection Program Evaluation" section below.	Community Development & Public Works Department

New Development-Construction Inspection Program Evaluation FY 2006/2007

Private Projects: During FY 06/07, the Engineering Division conducted construction inspections of over 300 private projects, almost all being single family homes being rebuilt, to assure these project had and maintained construction BMPs. Thought each project could not be inspected monthly, all were inspected prior to the rainy season and most all were inspected two to three times during the year. Twelve citations were issued for not installing BMPs or for poorly maintained BMPs on site. In general, contractors installed and properly maintained their sites. But it was clear that without constant inspections, BMPs would not be properly maintenance at many sites, let alone even installed. The City plans to continue with this inspection process during FY 07/08.

Public projects: The city had only eight small construction contracts during the year. All were finished within 2-4 months and only two were under construction during the raining season. All construction inspectors are trained in the application of applicable BMPs. For example, catch basins near sites are protected with filter fabric to prevent debris for entering the storm drain system and fiber rolls are install around all sites. For public projects, the city has no problem with complying with its permit.

PEST MANAGEMENT
(Provision C.9.d of the Permit)

FY 2006-2007 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
Municipal Pesticide Use **Goal 1.A.** Eliminate all unnecessary municipal pesticide uses (particularly organophosphate (OP) pesticide use) and implement Integrated Pest Management (IMP) techniques.				
1	Pesticide Use on Municipally Owned	The City of Los Altos will continue to track pesticide use on municipally owned property, will continue to review IPM policy requiring the use of IPM techniques in the agency's operations, minimization of pesticide use, will continue to review standard operating procedures (SOPs) and best management practices (BMPs) for implementing the IPM policy, will continue to conduct a periodic agency-wide search of chemical storage areas for pesticides no longer legal for application per EPA, State, and/or local requirements, and properly dispose of any such pesticides pursuant to appropriate waste disposal regulations, and will Continue to conduct internal outreach on less toxic pest control to employees who do not necessarily purchase or apply pesticides during the course of their work (to	The City continued to record all pesticide application and submit this documentation on a monthly basis to the Santa Clara County Department of Pesticide Regulation. No pesticide violations or other related concerns were reported during the year.	URP Coordinator & Public Works Maintenance Department

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

		encourage employees to use IPM techniques away from work).		
2	Documentation	Los Altos will document municipal pesticide use and activities in the FY 2006/2007 Annual Report.	The city maintained a detailed record of all pesticide used by maintenance staff.	URP Coordinator
Goal 1.B. Raise awareness of all municipal employees and train employees who apply pesticides for the municipality about the municipality's IPM Policy and/or IPM techniques as appropriate.				
1	Pesticide Applicator Training	Los Altos will continue to ensure that employees who apply pesticides for the agency obtain the appropriate training as required by the County Agricultural Commissioner and the State Department of Pesticide Regulation (DPR). Los Altos employees are trained every January in order to maintain its operator ID number	All Parks Division employees involved with pesticide application received annual training, like the January training to maintain their operator ID number, in the proper use, handling, mixing, storage, and application of Roundup Pro and Surflan AS (the only two pesticide used by city staff). In January 2007, Parks Division passed Santa Clara County Department of Pesticide Regulation annual inspection including our training documentation.	Public Works Maintenance Department
2	Pesticide Applicator Training	Los Altos will continue to provide annual training on the appropriate portions of the IPM Policy, SOPs, and BMPs, and the latest IPM techniques to employees within departments responsible for pesticide application. Los Altos' IPM Policy states that the City will conduct training at least once a year on Pest Management.	12 Parks Division employees involved with pesticide spraying receive annual training conducted at the Municipal Service Center. Training was conducted by certified spray applicator regarding IPM Policy, BMP's, and SOP's. Training is summarized in the Staff Training list at the end of this Annual Report.	Public Works Maintenance Department

FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
3	Employee Training	Los Altos will continue annually to inform employees who are not authorized and trained to apply pesticides that they cannot use over-the-counter pesticides in or around the workplace, consistent with the IPM Policy. Los Altos' IMP Policy states that the City will conduct training at least once a year informing employees of the use of pesticides in the work place.	Staff was unable to conduct formal internal outreach to employees, but supervisor personnel are continually monitor the public spaces and there were unauthorized use of pesticides reported during the fiscal year	Public Works Maintenance Department
4	Documentation.	Los Altos is required to provide similar documentation to the Santa Clara County Department of Pesticide Regulations. Los Altos will provide the required information in the FY 2006/2007 AR.	Parks Division supervisor and staff attended one training seminar during the year that dealt with issues of the city's IPM program. Training is listed in the Staff Training list at the end of this Annual Report.	Public Works Maintenance Department

Public Education and Outreach **Goal II.A.** Increase awareness of IPM so target audiences recall less toxic pest management messages and adopt IPM behaviors. Target audiences include residential and commercial users, pesticide retailers, municipal employees, and special districts (PS #6)				
1	Watershed Education & Outreach (WE&O) Campaign	Continue to support the Watershed Education & Outreach (WE&O) Campaign, which will target the general public and include messages about less-toxic pest control and proper disposal. The Campaign will include extensive media campaign with South Bay English- and Spanish- language TV and radio stations.	As documented in the Public Information Participation section of this Annual Report, the City of Los Altos continues to support the Watershed Education & Outreach Campaign.	URP Coordinator
2	BASMAA Regional Media Relations Campaign	Continue to fund BASMAA Regional Media Relations Campaign featuring pitches to Bay Area media and responses to breaking news on pesticide-related topics. Los Altos will continue to fund the Program for BASMAA baseline projects, including Regional Media Relations Campaign.	The City of Los Altos continues to fund and support the efforts of the BASMAA Regional Media Relation Campaign through the Program.	URP Coordinator
3	Pesticide User Outreach	Continue to assist Program with implementation of local components of a "Pesticide User Outreach" project targeting residential and commercial users	The City of Los Altos continued to assist the Program with the implementation of public outreach. .	URP Coordinator

FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
4	IPM Outreach	Continue to provide information on less toxic pest control (e.g., IPM techniques, municipal IPM policies, model contract language, training opportunities, etc.) to neighboring special districts (e.g., open space districts, vector control districts, and school districts) as appropriate. Program to assist with materials. Los Altos will distribute applicable information as required	The only neighboring districts are the school district and the City of Los Altos did not provide them information on less toxic pest control. Los Altos would provide assistance to them if necessary.	URP Coordinator
5	Outreach Evaluation	Document or estimate numbers of residents reached by outreach efforts and media advertising. Los Altos will document this outreach effort in its FY 2006/2007 Annual Report	See "FY 06-07 Accomplishments" for Item No. 2 under "Public Information/Participation" section of this report for the accomplishment for this task. It is difficult to say exactly how many residents it reaches though most of the people seem to be interested in reducing the risk from pesticides.	URP Coordinator
Goal II.B. Educate pesticide retailers and consumers about less toxic pest control products and promote the sale of such projects.				
1	BASMAA Regional IPM Partnership	Los Altos will continue to fund and participate in the BASMAA Regional IPM Partnership. Program funds BASMAA baseline projects, including Regional IPM Partnership.	The City of Los Altos still continues to fund and participate, as necessary, in this program. As a benefit of this program, the city is able to receive updated and to replenishes its IPM fact sheets	URP Coordinator

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
2	IPM Store Partnership Program	Los Altos will continue to implement cost-effective elements of the IPM Store Partnership Program, as identified in the work plan developed by the Program. Create and provide fact sheets and other materials to pesticide retailers to facilitate point-of-purchase outreach. Visit stores as necessary to ensure ongoing participation. Los Altos will continue working with the City of Palo Alto on this program.	See "FY 06-07 Accomplishments" for Item No. 2 under "Public Information/Participation" section of this report for the accomplishment for this task.	URP Coordinator
3	IPM Store Partnership Program	Los Altos will continue to assist Program to document number of participating stores, materials distributed and employees trained. Los Altos will continue to assist Palo Alto and will documentation the cost evaluation as required.	The City of Los Altos was available to provide assistance as necessary.	URP Coordinator
Pest Control Operators (PCOs) **Goal III.A.** Minimize pesticide use by PCOs contracted for structural pest control and landscape maintenance.				
1	Municipal PCOs	Continue to have PCOs contracted for municipal applications to use pest control methods consistent with the municipality's IPM policy (through contract specifications).	All pesticide work was done through open purchase order. Parks Supervisor advised contractors of the City of Los Altos IPM program.	Public Works Maintenance Department
2.	Municipal PCOs	Document the pesticide use by the PCOs on municipal property in the FY 2006/2007 Annual Report, as necessary	The city maintained a detailed record of all pesticide used by maintenance staff.	URP Coordinator

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
Goal III.B. Require all PCOs to implement Best Management Practices (BMPs)				
3	Municipal PCO BMPs	Continue to require PCOs contracted by municipalities to implement BMPs through contract specifications.	All pesticide work is done through open purchase order. Contract language and city policy stipulates that the PCO utilities proper BMPs. Parks Supervisor advises contractors of the City of Los Altos IPM program.	Public Works Maintenance Department
4	Documentation.	Document efforts to complete the above actions in the FY 2006/2007 Annual Report.	The city maintained a detailed record of all pesticide used by maintenance staff.	URP Coordinator
Commercial Businesses **Goal IV.A.** Determine the extent of commercial business employees' use of pesticides (I.E., pesticide applications not performed by a licensed PCO) and conduct appropriate outreach regarding less toxic pest management.				
1	Commercial Business Outreach Work Plan.	Assist Program to provide outreach on less toxic pest control to target businesses in the South Bay, as appropriate and cost-effective.	The city of Los Altos continued to be available to assist the Program on outreach to the businesses in the South Bay.	URP Coordinator

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
Household Hazardous Waste Collection **Goal V.A.** Provide pesticide disposal services through household hazardous waste (HHW) collection programs for all residents and small businesses, and encourage use of these programs.				
1	Small Quantity Commercial Generators.	Continue to ensure that adequate pesticide disposal services exist for residents and conditionally exempt small quantity commercial generators.	The City of Los Altos residents have access to the household hazard waste collection services available through the County Household Hazardous Program. This program includes an appointment-based drop-off at various weekly events held throughout the county including one event held in the City of Los Altos at the Egan School on April 14, 2007. At this event, there were 221 participants from the City of Los Altos, 24 from the Town of Los Altos Hill and 272 from other locations in Santa Clara County	Public Works Department
2	Pesticide Disposal	Continue to work with HHW collection agencies to support, enhance, and help publicize programs for proper pesticide.	The City of Los Altos attends monthly meetings with the Technical Advisory Committee, which consists of cities in the Santa Clara County. Los Altos is also a member of the HHW subcommittee, which meets quarterly. In conjunction with this committee the city provide technical advice and funding to help support the Santa Clara County Household Hazardous Waste web site.	Public Works Department
3	Hazardous Waste Disposal Outreach	Continue to provide hazardous waste disposal information to residents, through distribution of materials (e.g., utility bill insert, city newsletter, community events, etc.) or advertising in local media	HHW collection is advertised in the annual mailer sent out to all solid waste customers of the Los Altos Garbage Company in October 2006 and thru telephone response to queries, and through the County's solid waste website at sscgov.org. The annual household hazardous waste pickup in Los Altos is advertised in the local paper, the Los Altos Town Crier. Universal waste was also discussed in the winter 2006 edition of the city's bulletin to all residents, the "Communiqué". The City's HHW and recycling programs are also advertised in a tabbed section of the SBC Yellow Pages, and advertised in the Countywide recycling website: Recyclestuff.org.	Public Works Department

FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
4	Documentation	Document that household hazardous waste collection programs adequately serve residents and businesses (conditionally exempt small quantity generators) in its FY 2006/2007 Annual Report	Based on customer feedback at local events, 70% of participants rate the HHW program as "Good" or "Excellent". 96.5% reported they received adequate information when they called the appointment line to schedule their HHW drop-off. Additionally, Los Altos Police Department had no reports of hazardous waste abandoned during the fiscal year. Communiqué feedback from residents also commends the efficiency of the HHW program.	URP Coordinator
New Development **Goal VI.A.** Minimize pesticide use at new and redevelopment sites.				
1	Pest-resistant Landscaping and Design Features	Los Altos will encourage developers and contractors to consider pest resistant landscaping and design features. Los Altos will report the percentage of new development and redevelopment project for which pesticide reduction measures were required in Annual Report	Private Projects: The City encouraged project applicants to use pest resistant landscaping and have information available for project sponsors to help them achieve this goal. The City of Los Altos had one Group 1 planning permit that was approved during the FY. All project were rebuilding or additions to single family residences. The limited commercial projects are typically remodels in the built-out areas of the city and therefore have very limited, if any, for landscaping. Public Projects: There were no public projects during FY 06/07 that fell in the category of a new development or redevelopment, but did complete the design for new landscaping along a portion of El Camino Real. For this project the plant material selection were disease-resistant and had low irrigation requirements once they are established. The city also chose plant material and planting schemes that required less maintenance. Pavers were selected for areas that plant material would not do well.	Community Development Department

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

Monitoring and Science **Goal VII.A.** Participate in coordinated monitoring efforts to support pesticide TMDL development and implementation.				
1	Regional Monitoring Program (RMP)	Assist in the financial support of the Regional Monitoring Program (RMP)	City of Los Altos provides their share of cost to the Program for this effort.	URP Coordinator
Review and Revision of Work Plan **Goal X.A**. Implement a Work Plan that includes appropriate goals, actions and monitoring mechanisms to reduce pesticide-related toxicity in urban runoff.				
1	Continuous Improvement	Revise work plan and add continuous improvement items.	The City of Los Altos believes that the current workplan submitted in March 2006 fulfills this requirement.	URP Coordinator

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

Pest Management Program Evaluation
FY 2006/2007

The City of Los Altos has a very small pesticide program and we believe we have good control to minimizing pesticides in urban runoff. Improvements could be made in the area of use of more pest resistant landscaping in private projects, but since the city is built out, this extra effort probably would not have much of an impact. The City still could use assistance/information on pest resistant landscaping since staff is not well trained on the development of this type of landscaping.

Staff continues to monitor and comply with Pest Management Program and utilizes IPM policy to determine best procedure for pest control. Through annual training of Maintenance Division personnel on Public Work's IPM policies and practices and following BMP's and SOP's in the safe use and application of pesticides. Public Works had no citations or complaints this year. All City pesticide applications are documented with Santa Clara County Department of Pesticide Regulation. All contract spraying was completed with a recommendation from a PCA who was advised of our IPM policy before making a recommendation. The city will continue to train Public Works personnel on Public Work's IPM policy

The Household Hazardous Waste program seems to work well. California's AB939 allows jurisdictions to set tipping fees at jurisdiction's landfill's to include a fee to support Household Hazardous Waste collection, and disposal or recycling. Santa Clara County has set this fee at $1.85 / ton of municipal waste. This generates enough revenue for Los Altos resident's HHW disposal costs of $39,160.45, or about 322 households. This funding level is intended to provide "free" disposal of HHW to 3% of the city's households. Actual participation by Los Altos is estimated at 9%, and the City provided augmentation of $82,000 from the Solid Waste Fund in 2006/2007 so that all residents of Los Altos who desire to use the HHW collection program can do so at no direct cost to the resident. The City rarely experiences abandoned waste incidents, and when it occurs, the Maintenance Division responds. There are areas that might need improvement, such as very limited participation by multi-family unit dwellers and families where English is not spoken in the home.

MERCURY POLLUTION PREVENTION PROGRAM
(Provision C.9.c of the Permit)

FY 2006-2007 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
Municipal Use of Mercury-Containing Products				
Goal I. Eliminate all unnecessary municipal use of mercury containing products and establish proper disposal methods for products that cannot be eliminated.				
1	Mercury Policy.	Los Altos will continue to implement its policy for mercury-containing product reduction and management.	The City of Los Altos does not have a written mercury policy policy, but has been managing its usage and disposal for some time. For example, when florescent lights are replaced, the old ones are collected and are periodically manifested to a proper disposal site. Last FY the City of Los Altos had 90 eight-foot tubes and 264 four-foot tubes picked up by a recycling contractor. New lights are low mercury florescent type. From a city operation standpoint these lights are probably the largest and about the only source of mercury.	URP Coordinator
2	Documentation on Mercury Policy	Los Altos will summarize effort in the FY 2005-2006 Annual Report including the quantities of mercury-containing products disposed from City building and departments at hazardous waste collection facilities.	Aside from the fluorescent lighting in most of the city buildings, the only other known mercury sources are mercury thermostats in 5 of 11 city buildings and mercury switches in the cities two sewer pump stations. When the lights burn out, these florescent light tubes are replaced with low mercury tubes. Last FY the City of Los Altos had 90 eight-foot tubes and 264 four-foot tubes picked up by a recycling contractor.	URP Coordinator

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
Household Hazardous Waste Collection **Goal Ii.** Provide mercury-containing products disposal services through household hazardous waste (HHW) collection programs for residents and small businesses, and encourage use of these programs.				
1	Disposal Services	Continue to provide mercury-containing products disposal services for residents and small businesses.	The City of Los Altos supports the County's HHW program which includes mercury collection and collection of "universal waste" i.e. florescent light tubes that contain mercury. This year is the second year of a program that added a free collection service for participating retailers who agreed to act as repositories for fluorescent lamps. The local hardware store participates, and additionally collects and holds alkaline batteries for turn in to the county-approved contractor for disposal (batteries) and recycling (fluorescent bulbs). The Regional Water Quality Control Plant managed a free thermometer exchange for residents desiring to obtain mercury-free thermometers to replace older thermometers. The HHW collection events also take mercury thermometers, fluorescents, and batteries.	Public Works
2	Fluorescent light recycling program	Los Altos will continue to assist the Program and also continue to work with local agencies to develop and publicize fluorescent light recycling program	Addressed in Disposal Services above. Also, a contract supplier, who provides on-call pickup of bulbs when enough are collected at the Municipal Services Center, recycles municipally generated fluorescents.	
3	Documenting and Reporting Guidelines	Continue documenting and reporting quantities of mercury-containing products disposed in Annual Reports.	The City is unable to report on the quantities from the city since it is collected and disposed of aggregately with other Santa Clara County cities by the county's HHW Program	Public Works

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
Monitoring and Science				
Goal Iii. Participate in coordinated monitoring efforts to support mercury TMDL development and implementation, including assessment of air pollution sources of mercury and concentrations of mercury in sediment.				
1	Regional Monitoring Program (RMP)	Continue financial support of the Regional Monitoring Program (RMP). Continue to support the RMP steering committee and technical review committee. Continue to support the coordinated regional plan to collect data for the mercury TMDL, as defined in the RWQCB/BACWA/BASMAA MOU.	The City of Los Altos continues to provide financial support for the Regional Monitoring Program. Also the City of Los Altos continues to provide comments as necessary for the program regarding the issue of mercury TMDL.	URP Coordinator

FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
Public Education and Outreach **Goal:** Increase awareness of proper disposal of mercury-containing products and available non-mercury containing alternatives. Target Audiences include residential, commercial and industrial users and municipal employees.				
1	Development of Outreach Material	Los Altos will continue to support the program in the development of outreach materials.	The city of Los Altos supported the Program efforts during the FY to develop partnerships with various retail stores to provide free fluorescent lamps drop-off sites for residents. The city has implemented the service in two of the city's hardware stores.	URP Coordinator
2	Distribution of outreach material	Los Altos will continue to distribute outreach material and document each activity in Annual Report	The City of Los Altos continued to support the program in the development and distribution of various fact sheets, newsletter articles, press releases, newspaper ads, etc.	URP Coordinator

Mercury Pollution Prevention Program Evaluation FY 2006/2007

Due to the limited amount of mercury products within the city buildings, it is difficult to provide a practical evaluation of this program. The largest and about the only source of mercury within the city's buildings is fluorescent light tubes. During FY 06/07 the City of Los Altos had approximately 300 tubes picked up by a recycling contractor. There is one hardware store in the city, and it collects fluorescents and batteries from residents. The City continues to review this program to areas of improvements

Trash Management				
6	Pilot Demonstration Project	City of Los Altos will assist the Program in implement a \pilot demonstration project which focuses on documenting type and volume of trash that can potentially be conveyed through the storm drain system.	The City of Los Altos is a member of the Trash AHTG working on assisting the Program in the development of this pilot project. The Program had not selected a project prior to the end of FY 06/07.	URP Coordinator
7	Trash Evaluation	City of Los Altos will continue to use Program guidance to develop a strategy to conduct trash evaluation with the city as applicable. This will include an evaluation in a subset of identified trash problems areas.	The City of Los Altos is a member of the Trash AHTG working on the development of the Trash Program. Through this task group, the City of Los Altos has assisted the Program during FY 06/07 to facilitate documentation and evaluation of existing task management practice. This includes discussions, reviews and approvals as this program continues.	URP Coordinator
8	Trash Problem Areas	City of Los Altos will continue the implementation or refinement of trash control measures, as appropriate to address trash problem areas within high priority areas.	During FY 06/07 the City of Los Altos inspected each of its eight identified hot spots once. Data is summarized at the end of this “Trash Management” section. The preliminary evaluation of the results of these inspections is summarized in the “Other Water Quality & Watershed Management Programs Evaluation”.	URP Coordinator
9	Strategy to Reduce Trash	The City of Los Altos will assist Program in developing an effective strategy for reducing trash in urban streams and waterways.	As a member of the Trash AHTG, the City of Los Altos assisted the Program in the development of an effective strategy for reducing trash. This is an ongoing activity and the city will continue to assist the Program	URP Coordinator
10	Trash Fact Sheets	Los Altos will work with the Program to review existing Fact Sheets relevant to trash management and identify potential revisions to document, as appropriate.	As a member of the Trash AHTG, the City of Los Altos assisted the Program in the development of Fact Sheets for trash management. This is an ongoing activity and the city will continue to assist the Program	URP Coordinator

FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
	Copper Action Plan Tasks			
9	Vehicle Washing Operations (CB-1)	• Continue to distribute outreach materials on proper vehicle/equipment washing at City department counters and public events, and post on City website.	Los Altos continues to dedicate counter space accessible to the public at City Hall for these various brochures like "The Bay Begins at Your Front Door". Los Altos also continues to provide for a link on its web page that the public can also use to access information.	URP Coordinator
		• Continue to submit data regarding vehicle washing outreach activities and effectiveness evaluation in annual reports.	This is difficult for Los Altos to quantify other than to say, from observation; there have been only rare incidents of vehicle washing both during construction operation and residential car washing.	URP Coordinator
		• Continue to require source control measures for Group 1 new development and redevelopment projects that will conduct vehicle/equipment washing and maintenance activities (consistent with Permit Provision C.3.k).	During the FY, Los Altos did not have new Group 1 or Group 2 projects, or any project, that involved vehicle/equipment washing and maintenance activities.	URP Coordinator
		• Continue to inspect industrial/ commercial facilities, which conduct vehicle/equipment washing activities on-site (this includes auto-related businesses). Ensure that BMPs for vehicle/equipment washing are implemented. Provide an effectiveness evaluation of inspection/compliance with BMPs	All fourteen auto businesses in Los Altos are formally inspected annually. During the year, city staff is aware that these discharges are not allowed and will report such incidents to the Code Enforcement Officer or the URP Coordinator.	URP Coordinator

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
9	Vehicle Washing Operations (CB-1) (cont.)	• Continue to inspect vehicle-washing facilities as part of stormwater inspections for industrial and commercial businesses.	Other than the auto businesses discussed above, Los Altos does not have any other vehicle washing facilities except the municipal wash rack which is included in the annual auto business inspects discussed above and the school corporation yard which is outside the city's jurisdiction and is not inspected.	URP Coordinator
		• Continue to maintain car wash systems for City vehicles at the corporation yard.	The City continues to wash their maintenance vehicles the vehicle wash rack at the corporation yard, which is connected to the sanitary sewer system. All staff vehicles are washed at commercial car washes.	URP Coordinator
		• Continue to encourage municipal staff to use certified mobile cleaners when contracting cleaning services.	Municipal staff are BASMAA certified for power washing techniques and follow all the required BMPs	URP Coordinator
		• Refer Mobile surface cleaners who desire BASMAA surface cleaning certification and recertification to the BASMAA website	The city of Los Altos continues to refer surface cleanings to the BASMAA certification as well as informing the downtown merchants of the need for employing certified surface cleaners.	URP Coordinator
10	Industrial Copper Control (CB-3)	Continue Industrial Inspection program for vehicle service facilities and any other related industrial facilities.	In August 2006 the City of Palo Alto inspected 14 vehicle service facilities in Los Altos. None were found with any violations and all facilities were given the Clean Bay Business award. During the year, there were no other reports on discharges from any of these facilities. The CB-3 of the Copper Action Plan was primarily directed toward such facilities as circuit board manufactures or similar facility, however there no such facilities in Los Altos	URP Coordinator

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
11	Watershed assessment and protection (CB-8)	• Continue to implement guidance from SCVURPPP and San Jose on addressing water quality in the CEQA review process, as part of C.3.m. implementation.	The Community Development department continue to believe that the current check list for CEQA issues are inclusive of the issues facing the city's Group 1 and Group 2 projects.	Community Development
		• Continue to participate in the Water Resources Protection Collaborative and recommend to council implementation of agreed upon guidelines and standards for watershed protection.	This City of Los Altos continues to participate in the meetings of the Collaborative.	Public Works & Community Development
12	Street sweeping and storm drain O&M (CB-11)	• Continue to follow Program guidance regarding the collection and reporting of street sweeping data. Provide data for Annual Report.	See "Street Sweeping Data Summary" at end of the Copper section	Public Works
		• Implement (as appropriate) any identified improvements of current street sweeping and storm drain system O&M programs (within available budgets). Provide effectiveness evaluation in FY 05-06 Annual Report.	See "Other Water Quality & Watershed Management Programs Evaluation" section below.	Public Works
13	Outreach on pool, spa maintenance (CB-12)	Continue to distribute outreach materials at local public events; brochures at agency department counters and public places; and placement on City website.	The City of Los Altos continues to make available the pool brochure at the counter in City Hall.	URP Coordinator

Other Water Quality & Watershed Management Programs Evaluation FY 2006/2007

Monitoring-The City of Los Altos continues to work with the Program on this task. Since the effort is by the Program, they have provided an evaluation of this task.
PCB-Dioxin- The City of Los Altos continues to work with the Program on this task. Since the effort is by the Program, they have provided an evaluation of this task.
Watershed Measures- The City of Los Altos continues to work with the Program on this task. Since the effort is by the Program, they have provided an evaluation of this task.
Sedimentation- The City of Los Altos continues to work with the Program on this task. Since the effort is by the Program, they have provided an evaluation of this task.
Trash Program-The City of Los Altos continues to work with the Program on this issue as a member of its Adhoc committee. The city continued to assess eight previously selected trash problem areas within the city. The city has a program to inspect these areas and conduct any necessary cleanup on at least a monthly basis. Even after this further assessment, it continues to appear that Los Altos may not have the same problems as other city. This may be due to the lack of industrial and commercial areas. Therefore the city would prefer to direct limited assessment resources to other areas, but the city will continue to be a member of the trash committee and continue to provide support to the Program to further comply with its permit.
Copper Action Plan-The city continues to address various tasks as defined by the Action Plan. Due to lack of industrial and commercial areas, this leaves most of the effort to residential areas and to schools. The city continues to discourage the use of exterior copper in their construction though most contractors continue to use copper in their construction projects. The city continues to have an aggressive street sweeping and storm drain cleaning programs. This may explain why there appears to be a lack of persistent trash problem areas throughout the city. The city continues to address inquiries from pool owners on their discharges. The city has room to improve alternate modes of transportation other than cars by improving its pedestrian access and its bicycle facilities. Both are included in the General Plan and future Capital Improvement Projects. The City of Los Altos also continues to work with the Program on this task.
Nickel Action Plan-The primary effort for the city under this Action Plan deals with discharges from construction sites. City inspectors aggressively assure that there is no or minimal discharges from any of its constructions sites. Though the inspectors attend various training sessions, very little, if any, addresses what the nickel sources are that might be coming from construction sites. The City of Los Altos also continues to work with the Program on this task

PUBLIC INFORMATION/PARTICIPATION
(Provision C.4)

FY 2006-2007 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
1	Distribution of all current Program BMPs and literature	Los Altos will continue to promote and maintain a request line for public information materials. Continue to distribute public information materials to the City libraries, Public Works Engineering help desk, building and planning department desks, at the Municipal Service Center and Chamber of Commerce. Keep records on the usage of this material	The City of Los Altos continued with the distribution of the public information within the various public buildings in the City of Los Altos that promotes the use of less toxic pesticides and other environmental issues include the proper draining of swimming pool water. Los Altos had to discontinue providing this information at its libraries due to the lack of available space. Los Altos also hosted a table at several of its weekly Farmers Market event held during the summer months and provided handouts that deal with environmental issues. The city continues to maintain information on its web page on how residents could help to reduce pollutants into the environment including how to prevent sewer overflows.	URP Coordinator

Santa Clara Valley Urban Runoff Pollution Prevention Program

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
2	IPM Store Partnership	Los Altos will continue participation in IPM Store Partnership Program with the City of Palo Alto by providing funding and participating to supply various outreach information to the two nurseries and the two hardware stores in the City of Los Altos. Monitor effort to realize the goals of this program	The Our Water, Our World (OWOW) program, a partnership between water quality agencies within the Palo Alto service region and local hardware and garden stores, encourages the use of less-toxic gardening techniques and products. Los Altos partner stores are Los Altos Garden Supply, Los Altos Nursery, and Rancho Hardware. During FY 06/07 IPM outreach more specific to Los Altos also included the following activities: • With the assistance of EOA staff, kept fact sheets stocked at City Hall and the partner stores; kept shelf talkers at stores updated. • With the assistance of Palo Alto, Los Altos partnered with the City of Los Altos Elephant Pharmacy store to collect and properly dispose of used pharmaceuticals on June 2, 2006. • Staffed Los Altos Farmers' Market with displays, including IPM issues and proper disposal of used pharmaceuticals, pesticides and other wastes • In July 2006 distributed copies of the *All the Way to the Ocean* by Joel Harper to Los Altos libraries. • Conducted three separate school outreach sessions for the schools in the City of Los Altos. Feedback from these presentation indicated that well over 90% of the students stated they had a better understanding of water pollution prevention and the difference between storm drain/sewer systems	URP Coordinator

FY 2006-2007 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
3	Watershed Education & Outreach Campaign.	Los Altos will continue to encourage municipal staff to participate in Watershed Education & Outreach campaign as the events are scheduled	The URP Coordinator continues to monitor the efforts of the Watershed Education & Outreach campaign and the information that they provide. During FY 06/07 this include SCVURPPP EPA Award event.	URP Coordinator
4	Evaluate the effectiveness of PIP projects	Los Altos will continue to review and will attempt to assess the effectiveness of all PIP projects at the local municipal staff level.	See "Public Information/Participation Program Evaluation" section below.	URP Coordinator
5	Web page	Los Altos will continue to maintain URP issues on its city web page.	The city continues to maintain a web page on stormwater issues including links to the SCVWD, BASMAA and SCVURPPP as well as information for the prevention of sewer overflows.	Community Development, Public Works Department
6	Articles in the Communiqué	Los Altos will continue prepare and contribute articles of interest to the City's publication called the Communiqué. The Communiqué is published up to three times annually.	The newsletter is published by the city three times a year and is mailed to every address in the city. Unfortunately this is a rather small newsletter, but the city provided small articles on urban storm water runoff issues. For example, the city published an article the proper disposal of universal waste.	URP Coordinator
7	Storm Drain Stenciling	Los Altos will continue to be point of contact with the City's schools and organization that are interested in stenciling storm drain catch basing. Provide support and materials for each event of which they are typically 3-4 per year	The city utilizes volunteers to install stencils on storm drain catch basins. Unfortunately during FY 06/07, the City of Los Altos had no volunteer groups who provided people that stenciled several storm drain catch basins. The City continued to promote this service, but plans to install permanent plastic stencils during FY 2007/2008.	URP Coordinator

Public Information/Participation Program Evaluation
FY 2006/2007

The City of Los Altos believes that distribution of material at Los Altos partner stores each year seems very positive. City stores such as the Los Altos Garden Supply and Los Altos Nursery continue to get more usage of the various facts sheets than those stocked at city hall. This is also true for such events as the city's Farmers Market. Primary reason is the exposure audience is more conducive to these fact sheets than the visitors to city hall.

The pharmaceutical drop off event that was held in June 2007 was very successful. Most people stated that were always looking for means to properly dispose of their used medications and most said that would throw it in the garbage or flush it down the toilet. This event allowed city staff to provide methods to properly dispose of medications including information on the proper location where they could take their medication to in the future.

A summary of the evaluation on the school outreach program in the Palo Alto service area which includes Los Altos showed by 78% of teachers returned a postage paid evaluation postcard, with a cumulative rating of 4.9 out of 5 in both quality of program and clarify of presenter. 94% of the teachers stated students' understanding of water pollution prevention and the difference storm drain/sewer system had increased.

ANNUAL REPORTS AND WORKPLANS
(Provision C.6)

FY 2006-2007 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
1	Annual Report (Provision C.6.a)	Los Altos will prepare an Annual Report documenting the results of each task that was delineated in the FY 05-06 Work Plan, provide update for work accomplished during the FY as necessary and indicate any areas needing improvements. Los Altos will address any comments on the FY 04-05 Annual Report if required.	The Annual Report for FY 05/06 was completed by the City of Los Altos and submitted on September 15, 2006. Comments from the Regional Board were received on the City of Los Altos' FY 04/05 Annual Report and were addressed in the applicable sections of that Annual Report.	Community Development, Public Works Department & URP Coordinator
2	Work Plan (Provision C.6.b)	Los Altos will prepare a FY 07-08 Work Plan that will list tasks as dictated by the City's Discharge Permit that will be accomplished between July 1, 2007 and June 30, 2008.	A draft Work Plan for FY 07/08 was completed by the City of Los Altos and submitted on March 1, 2007.	Community Development, Public Works Department & URP Coordinator
3	City of Los Altos Urban Runoff Management Plan	Los Altos will update its Urban Runoff Management Plan if required based on the proposed Regional Permit	The City of Los Altos updated is Urban Runoff Management Plan and submitted in on September 1 2004. Subsequent to that, no other updates were necessary pending the issuance of the MRP.	Community Development, Public Works Department & URP Coordinator

LOS ALTOS HILLS
CALIFORNIA

September 15, 2007

Mr. Bruce Wolfe
Regional Water Quality Control Board
San Francisco Bay Region
1515 Clay St., Suite 1400
Oakland, CA 94612

Subject: Town of Los Altos Hills Urban Runoff Management Program
FY 2006-2007 Annual Report

Dear Mr. Wolfe:

This report is submitted by Town of Los Altos Hills, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a. of the Program's reissued municipal storm water NPDES Permit (Order No. 01-024). The report summarizes activities performed during FY 2006-2007 in accordance with the Town of Los Altos Hills' Urban Runoff Management Plan (URMP) submitted to the Regional Board on September 1, 1997 and updated in October 2000 and September 2004, and the performance standards contained therein.

Contents of Report

The goals of this Annual Report are to: 1) concisely document implementation of our URMP and FY 06-07 work plan during the past fiscal year; 2) evaluate program results for continuous improvement; 3) comply with permit requirements; and 4) share this information with other Co-permittees, municipal decision-makers, and the public. To accomplish these goals, the report contains the following sections:

I. Contents of report;
II. Program highlights and accomplishments;
III. Summary of continuous improvement activities;
IV. Attachments:
   A. Acronyms/Abbreviations
   B. Certification Statement
   C. Self-Evaluation and Work Plan Completion Matrix
      - IC/ID Elimination Activities
      - Public Streets, Roads and Highways Operation and Maintenance
      - Corporation Yard Operation and Maintenance
      - Rural Public Works Activities
      - Storm Drain System Operation and Maintenance
      - New Development Planning Procedures
      - Construction Inspection

26379 Fremont Road

Fax 650/941-3160

- Pesticide Management Activities
- Mercury Pollution Prevention Activities
- Other Water Quality and Watershed Management Requirements
- Public Information/Participation
- Staff Training Summary Table

Program Highlights and Accomplishments

We feel that the Program continued to be effective in meeting our Program goals. Though there are only twenty full time staff in the Town of Los Altos Hills, the staff has been working with team effort to implement our URMP and FY 06-07 Work Plan to the maximum extent practicable.

In FY06-07 the Public Works staff has developed a Policy to Require the Virtual Elimination of Mercury in Municipal Operations for the Town of Los Altos Hills. The new Policy has been approved by the City Council in September 2006.

The Town of Los Altos Hills did not encounter any significant problems or incidents during the past year. The Town had 15 incidents of sanitary sewer overflow in FY06-07. Most of the sewer overflow happened on the street and the lands of private property. The surface of the overflow locations were cleaned immediately.

Continuous Improvement Activities

The Town of Los Altos Hills was able to accomplish several of the work plan goals in the past year and will continue to improve in outside staff training, public outreach and increased public awareness of Program goals.

This year, Public Works staff inspected 52 construction sites of private development and three public works projects. The pre-rainy season and rainy season inspections were effective in getting construction sites to install proper BMPs. The inspection coverage of the sites was adequate because it focused on the erosion/sediment controls. The Town of Los Altos Hills did not take any enforcement actions this year since the contractors followed the instructions or warning of the inspector. The inspector always inspected the sites after each verbal warning to make sure compliance was achieved. The contractors on Public Works projects have done a good job in erosion/sediment control.

Public Works staff has published an article in December 2006 issue of the Town Newsletter about disposal of fluorescent bulbs and used batteries. This is an effective way to reach property owners since all the property owners in the Town receive Town's newsletter by mail each quarter.

Thank you for your review of this Annual Report and we welcome any comments that you might have. If you have any questions regarding the materials submitted, please contact Richard Chen at (650) 947-2509.

Very truly yours,

Richard Chen, P.E.
Associate Engineer

FY 06-07 Annual Report

Municipality: Los Altos Hills

P.S. Id.	Activity	CI Item Source[1]	FY 06-07 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
			Review and evaluate effectiveness	Town's maintenance crew performed street curb, swale, and shoulder cleaning work prior to rainy season and picked up piles of leaves to keep the street drainage system clean. Crew also clean underground storm drain pipes.	On-going	Public Works
Rural Roads						
New	Rural Roads O&M Performance Standards	C.5	Implement the Performance Standards. Sweep streets according to the schedule mentioned in above section.	The Town has incorporated the Performance standards into URMPs.	Annually	Public Works
			Review and evaluate effectiveness	There was no new rural roads designed or constructed this year. The public works construction on rural sites have been inspected to make sure that erosion and sediment controls were maintained.	On-going	Public Works
Storm Drain System Operation and Maintenance						
SD	Storm Drain Maintenance	URMP	All tasks are routine and on-going.	All routine tasks have been conducted continually.	On-going	Public Works
SD	Reporting of Observed ICID Evidence	URMP	Report to Program for the ICID data annually.	Maintenance crews were trained to call Code Enforcement Officer to report ICIDs.	On-going	Public Works
	Storm Drain Maintenance	URMP	Evaluate and ensure that contractors use appropriate BMPs when conducting such activities as street painting, storm drain O&M, etc.	We have evaluated and ensured that contractors use appropriate BMPs when conducting such activities as street painting, storm drain O&M, etc.	On-going	Public Works

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 06-07 Annual Report

Municipality: Los Altos Hills

P.S. Id.	Activity	CI Item Source[1]	FY 06-07 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
			Review and evaluate effectiveness	Town's storm drain system was inspected and cleaned prior to and during the rainy season. This preventive measure reduced a lot of complaints or emergency calls during the rainy days. All material collected was disposed properly.	On-going	Public Works
Water Utility Operation and Maintenance						
	Not operated by the Town of Los Altos Hills					
Corporation Yards Operation and Maintenance						
	Staff Training	URMP	Conduct annual training for Public Works Maintenance staff.	The corporation yard in the Town of Los Altos Hills does not perform heavy vehicle and equipment maintenance. The yard has been inspected by the County's Environmental Health Department every two years for material storage.	On-going	Public Works
			Review and evaluate effectiveness	The yard only handle light maintenance for the small scale of the equipment and therefore there is no pollution problem.	On-going	Public Works
New Development and Construction Controls -- Planning Procedures (C.3)						
	C.3.c Requirements for Group 1 and Group 2 Projects					
New		C.3.c.9	Update performance standards for Group 2 projects as needed. Prepare to implement Group 2 starting August, 2006.	Town's ordinance covers Group 2 projects.	Continuous Improvement	Public Works.
	C.3.e Operation and Maintenance of Treatment BMPs					

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 06-07 Annual Report

Municipality: Los Altos Hills

P.S. Id.	Activity	CI Item Source[1]	FY 06-07 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
New	Reporting	C.3.e.6	Provide details of O&M verification program (organizational structure, evaluation, and proposed improvements), and a list of treatment BMPs inspection results.	We do not have any Group 1 project in the Town of Los Altos Hills. Group 2 single family homes are exempted. The Town has developed the Town's verification program for the projects requiring stormwater control measures. The staff in Public Works and Planning Departments has been implementing the program. They conducted pre-final and final inspections on site development projects to ensure that drainage, erosion control and landscaping work comply with the stormwater control measures.	N/A	Public Works
			Review and evaluate effectiveness	It is very effective to conduct pre-final and final inspections on site development projects to ensure that drainage, erosion control and landscaping work comply with the stormwater control measures.		Public Works
	C.3.f Hydrograph Modification Plan					
New	Reporting	C.3.f	Attend HMP training workshop conducted by the Program to train staff on HMP	We will not have any Group 1 project in the Town of Los Altos Hills. Group 2 single family homes are exempted.	N/A	Public Works
	C.3.j Site Design Measures Guidance and Standards Development					
New		C.3.j.4	Incorporate any revised standards and guidance into local project approval process and "fully implement" the revised standards and guidance. Town will prepare a detention basin design criteria and guideline for site drainage.	The Town has an ordinance to implement C.3. requirements since September 2005. The ordinance provides legal authority for the Town to implement C.3. requirements. Town is preparing a detention basin design criteria and guideline for site drainage.		Public Works

Municipality: Los Altos Hills

P.S. Id.	Activity	CI Item Source[1]	FY 06-07 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
Const -5		Program (Revised PS)	Inspect all construction sites before and during rainy season per Performance Standard. Los Altos Hills will include a summary of the year's written inspection notices (for sites with inadequate erosion/sediment controls) and follow-up actions in the FY 05-06 AR.	This year Public Works inspector inspected **52** construction sites of private development and **3** public works construction projects. **17** of the private construction sites appeared to have erosion/sediment control problems prior to the 1st or 2nd inspections.	ongoing	Public Works.
			Review and evaluate effectiveness	The typical problems were that site access roads were not covered by the crushed rocks and mud were tracked to the streets; the soil stockpiles were not covered by the plastic sheets; and fiber rolls were not installed. After 1st or 2nd inspections and the warnings given to the contractors, the problems on those sites were corrected. Construction inspection before and during rainy season is very effective to correct the inadequate erosion/sediment controls		Public Works
Pest Management Program						
I. Municipal Pesticide Use						
Goal I.A. Eliminate all unnecessary municipal pesticide use (particularly organophosphate (OP) pesticide use) and implement Integrated Pest Management (IPM) techniques.						
		MM I.A.1	Document completion of tasks in annual reports. Use pesticide tracking process to document pesticide use.	The contractors hired by the Town monitored and recorded all pesticide use on Town owned properties on a monthly basis.	Annually;	Public Works
Goal I.B. Raise awareness of all municipal employees and train employees who apply pesticides for the municipality about the municipality's IPM Policy and/or IPM techniques as appropriate.						

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 06-07 Annual Report

Municipality: Los Altos Hills

P.S. Id.	Activity	CI Item Source[1]	FY 06-07 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
		I.B.3	Periodically (at least annually) inform employees who are not authorized and trained to apply pesticides that they cannot use over-the-counter pesticides in or around the workplace, consistent with the IPM Policy (PS #4c).	The employees are informed annually.	At least Annually	Public Works
II. Public Education and Outreach						
Goal II.A. Increase awareness of IPM so target audiences recall less toxic pest management messages and adopt IPM behaviors. Target audiences include residential and commercial users, pesticide retailers, municipal employees, and special districts. (PS #6)						
		II.A.14	Conduct internal outreach on less toxic pest control to employees who do not necessarily purchase or apply pesticides during the course of their work (to encourage employees to use IPM techniques away from work).	Town has Environmental Design and Protection Committee and Open Space Committee who promote less toxic pest and weed control in the Town. An article on reducing pesticide use will be published in the September 2007 issue of Town Newsletter.	Annually	Public Works
III. Pest Control Operators (PCOs)						
Goal III.A. Minimize pesticide use by PCOs contracted for structural pest control and landscape maintenance.						
		III.A.4	Require PCOs contracted for municipal applications to use pest control methods consistent with the municipality's IPM policy (through contract specifications). Specifically, require contractors to: a) follow the agency's IPM policy, BMPs, and SOPs; b) provide evidence of current IPM training, when feasible; and c) provide documentation of pesticide use on agency property to the agency in a timely manner (PS#6).	Town required the Contractors, Clark Pest Control and Kilroy Pest Control, to follow the current IPM policy. They received current IPM training and provided documentation of pesticide use on Town property. The weed control service is designed using the IPM philosophy to suppress and control the most common weed species. The pesticide usage has not changed over the past year and past few years.	Ongoing	Public Works

Municipality: Los Altos Hills

P.S. Id.	Activity	CI Item Source[1]	FY 06-07 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
Goal III.B. Require all PCOs to implement Best Management Practices (BMPs).						
		III.B.2	Require PCOs contracted by municipalities to implement BMPs through contract specifications. (See Action III.A.4, above.) (PS #6)	The Town has notified Clark Pest Control and Kilroy Pest Control to implement BMPs in their contract work in the Town.	Annually	Public Works
		MM III.B.1	Document efforts to complete the above actions.		Annually	Public Works
IV. Commercial Businesses						
	None in Los Altos Hills.		.			
V. Household Hazardous Waste Collection						
Goal V.A. Provide pesticide disposal services through household hazardous waste (HHW) collection programs for all residents and small businesses, and encourage use of these programs.						
		V.A.5	Provide hazardous waste disposal information to residents, through distribution of materials (e.g., utility bill insert, city newsletter, community events, etc.) or advertising in local media	Los Altos Garbage company provided hazardous waste disposal information to residents through garbage bill inserts. Public Works staff attended County's HHW TAC monthly meetings from July 2006 to May 2007.	Periodically, at least annually	Public Works
VII. New Development						
Goal VII.A Minimize pesticide use at new and redevelopment sites.						
		VII.A.2	Consider pesticide reduction in the design and landscaping of proposed development projects. (C.9.d.ii.). Provide the Fact Sheet III-5 to the public during plan review process	**Public Works and Planning Departments will handout Fact Sheet III-5 to the public during plan review process.**	Annually	Public Works

WEST VALLEY CLEAN WATER PROGRAM

September 15, 2007

Mr. Bruce Wolfe
Regional Water Quality Control Board
San Francisco Bay Region
1515 Clay St., Suite 1400
Oakland, CA 94612

Subject: West Valley Communities Urban Runoff Management Program
FY 2006-2007 Annual Report

Dear Mr. Wolfe:

This report is submitted by the West Valley Cities of Campbell, Monte Sereno, Saratoga, and the Town of Los Gatos, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a. of the Program's reissued municipal storm water NPDES Permit (Order No. 01-024). The report summarizes activities performed during FY 2006-2007 in accordance with the West Valley Communities' Urban Runoff Management Plan (URMP) submitted to the Regional Board on September 1, 2004 and the performance standards contained therein.

Contents of Report

The goals of this Annual Report are to: 1) concisely document implementation of our URMP and FY 06-07 work plan during the past fiscal year; 2) evaluate program results for continuous improvement; 3) comply with permit requirements; and 4) share this information with other Co-permittees, municipal decision-makers, and the public. To accomplish these goals, the report contains the following sections:

10. Trash Inventory and Management
11. Water Quality Monitoring and Watershed Management

Training Summaries are provided at the end of each element

PROGRAM HIGHLIGHTS AND ACCOMPLISHMENTS

During FY06-07, the West Valley Communities of Campbell, Los Gatos, Monte Sereno, and Saratoga continued efforts to implement their URMP to the maximum extent practicable. The activities that were implemented for each element of each Community's URMP are described in Chapter 14 of the Santa Clara Valley Urban Runoff Pollution Prevention Program's URMP. Highlights of the West Valley Communities accomplishments in various program elements are described below.

Preparation for the Municipal Regional Permit (MRP)

The proposed Municipal Regional Permit was the focus of a large amount of staff time for WVCWP and West Valley cities' municipal staff throughout FY 06-07. Numerous meetings, discussions and training related to the upcoming MRP took place. All staff endeavored to participate meaningfully during this important phase of MRP development. This included analysis of proposed requirements, discussion of feasibility of implementing those requirements within municipal budget limitations, and attempting to develop useful feedback to help move this process forward. In the May 2007 version of the Draft MRP, the WVCs were pleased to see some revisions which reflected the feedback that had been provided to Water Board staff.

Illicit Connection and Illegal Dumping Elimination Activities

The WVCWP Stormwater Discharge Inspector ("Inspector") coordinates all follow-up, reporting, and education related to illegal discharges to the storm drain system and responses to facility inspection referrals. To provide a better understanding of the WVCWP Inspector's role and to evaluate and confirm response procedures, the WVCWP Inspector and WVCWP Program Manager have held and attended meetings with Santa Clara County Dept of Environmental Health (regarding food facility inspections) and SCC Fire Dept (regarding industrial and commercial inspections) and municipal staff (regarding incident reports and construction inspections). The increase in communication has facilitated a system of referrals and follow-up that is working phenomenally well for the West Valley Cities. Every potential incident is investigated during resolution, and after compliance has been achieved. All facilities that were inspected for a potential violation and were subsequently brought into compliance are prioritized for at least one pro-active inspection the following year.

Public Agency Activities: Storm Drain Operation & Maintenance

The West Valley Sanitation District (WVSD) conducts inspections and cleaning of half of the West Valley Cities' storm drain system each year, except for Monte Sereno, where storm drain structures are inspected and cleaned annually. FY06-07 was the second year that WVSD

provided enhanced annual reports to the cities on their inspection and maintenance activities. The reports are generated from a database of numbered storm drain structures with corresponding street names. The number of pounds and types of debris removed during the inspection cycle is also reported.

In FY 06-07, the WV cities reviewed the second year's data, and were pleased to find that at least 65% of the structures in each city, where the system is inspected on a two-year cycle, were found to be free of debris such as leaves, paper, dirt, rocks, sand etc. and therefore, did not require any cleaning.

In Campbell, 584 out of 888 structures (66%) were clean and only 40 structures required a two-man cleaning crew. In Los Gatos 1,197 out of 1,575 structures (76%) were clean and only 49 structures required a two-man cleaning crew. In Monte Sereno 172 out of 365 structures (47%) were clean. Twenty-four structures required a two-man cleaning crew and of those, 19 were impacted by mud and dirt. Monte Sereno's storm drain system will remain, as it has been, on an annual inspection and cleaning program. In Saratoga 1,566 out of 2,182 structures (72%) were found clean and only 40 structures required a two-man cleaning crew.

The data shows that the biennial inspection cycle is more than adequate for most of West Valley's storm drain inlets and structures, as evidenced by the number of structures that are found clean on a 2-year cleaning cycle. It is therefore important to the West Valley cities to continue the current maintenance cycle in lieu of using limited resources on more frequent and unnecessary inspections. The information provided in the WVSD annual reports will facilitate the effective prioritization of appropriate locations and structures for more frequent annual inspections and cleaning. The WVSD reports were distributed at the annual Storm Drain workshop on 6-20-07 and will be reviewed by WV cities as they determine future management actions for stormdrain maintenance and for other activities such as trash management.

Planning Procedures & New Development

During FY 06-07, the West Valley communities devoted extensive time to reviewing and analyzing the proposed Municipal Regional Permit (MRP), especially regarding proposed C.3 revisions. These efforts led to an invitation to Water Board staff to attend one of the West Valley monthly meetings. The WVCs were pleased with the subsequent meeting on Dec. 19, 2006. WVCs were represented by decision-making staff (two Public Works Directors, one City Attorney) who appreciated the opportunity to speak directly with Water Board staff. In the spirit of reaching consensus, municipal decision-makers were able to inquire about the intent of proposed requirements, and to put forward ideas for feasible means of implementing the MRP, within the municipal framework. West Valley municipal staff came away with a greater understanding of the Water Board's objectives, and greater clarity on possible implementation of the related proposed requirements.

Public Information/ Participation

A broadened direction in PI/P this year involved partnering with a local non-profit environmental education program: Environmental Volunteers (EVs). The EV program trains docents to provide free environmental education activities in K-8 classrooms. WVCWP staff attended numerous trainings to become qualified EV docents. WV staff then led classroom presentations with other EV docents, and were able to incorporate new watershed-related messages into the educational activities. Overall, WVCWP staff reached 168 students directly through classroom presentations in FY 06-07.

Pesticide Management Activities

In FY 06-07, the WVCWP Manager, and other Co-permittees from SCVURPPP's IPM Ad Hoc Task Group, responded to a presentation and public outreach suggestion from Sunnyvale staff. The WVCWP manager invested time in evaluating and helping to lay the groundwork for instituting a new outreach program related to pesticide management. For the past several years, the Clean Water Program has been investigating ways to educate yard-maintenance workers. Finding a relevant means of contact has proven to be difficult, especially since many are not fluent in English. The "Green Gardener" program, offered in both Spanish and English, was developed to reach the small landscaping businesses, which are prevalent in the West Valley cities. The program (www.greengardener.org) has been successfully implemented in Santa Cruz and Santa Barbara counties. Via telephone conferences, the experienced agencies offered feedback and guidance to help the SCVURPPP set up a similar educational program in Santa Clara Valley. The curriculum, offered as adult education courses with hands-on training activities, teaches landscape maintenance practices that incorporate pollution prevention principles (IPM). At the end of FY06-07, the IPM AHTG held meetings to discuss applying for DPR grant money to set up a local program through Metropolitan Adult Education Program (MAEP).

Public Information/ Participation and Public Agency Activities

The Town of Los Gatos promoted a new outreach event to the public in May 2007. The "Public Works Week Corporation Yard Tour" drew in over **100** students, teachers and parents from local schools. The tour participants viewed Public Works and stormwater displays. Municipal staff demonstrated to the students the purpose and details of operation for the vehicles and machines, including the Town's new regenerative-air street-sweeper. Display tables were set up by spokespersons representative of a variety of agencies and departments, including the Street Sweeper, the Code Enforcement Officer, Park Service Officers and the Clean Water Program Manager. Visitors received a brief presentation about watersheds, viewed a model of a storm drain and learned where to recycle hazardous materials. Emphasis was placed on prevention of litter and illegal dumping. This event helped Los Gatos successfully generate support and understanding among residents for the Town's watershed protection issues.

These highlights help to demonstrate the West Valley Communities' commitment to implementing the requirements outlined in the Urban Runoff Management Plans.

Thank you for your review of this Annual Report. If you have any questions regarding the materials submitted, please contact me at 408.354.4734.

Very truly yours,

Cheryl C. Donnelly

FY 2006-2007 Work Plan Self Evaluation Matrix

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
2004 URMP Perf. Standard	Program	IC/ID Performance Standards Update municipal URMP to reflect revised SOPs and BMPs as changes occur based on effectiveness evaluation. Provide staff training on revisions.	The IC/ID Standard Operating procedures and contact information were updated in June 2007 to reflect changes in staff and slight modifications to procedures for emergency spill cleanup which is handled by Los Gatos Street Maintenance staff (including on call staff).	WVCWP staff provides updates & Sr. Eng Tech and Street Maint. Superint. review updates
	URMP	Response Program Continue to implement IC/ID Stormwater Discharge Inspector response program and evaluate for continuous improvement.	During FY06-07, the Inspector conducted 26 IC/ID inspections. One Half time IC/ID Inspector conducts a centralized incident response and proactive restaurant and vehicle shop inspection program for four West Valley communities. The Inspector follows up on the reports of all potential violations. This coordinated inspection program works very well and increases the West Valley Communities' staff awareness of water pollution activities.	WV Inspector
	FY06-07 Work Plan	Enhanced Reporting Report on incidents using categories consistent with SCVURPP Program. Document follow-through to point of resolution or referral for enforcement action (penalty or fine).	The WVCWP Inspector keeps a standardized Microsoft Access database of all IC/ID response calls and incident follow-up through resolution. West Valley's annual data was provided to SCVURPPP for Program-wide analysis.	WV Inspector
	Training	Training Conduct training & evaluation meeting between Storm Water Discharge Inspector and municipal staff, as needed to improve procedures.	Each year the WV Inspector visits a West Valley community to meet with municipal staff and explain the importance of reporting IC/ID incidents. In order to provide a better understanding of the WVCWP Inspector's role within the City and to review response procedures, the WVCWP Inspector and WVCWP Mgr held a round table training meeting with Saratoga and new Los	WV Inspector to co-ord with Public Works staff

IC/ID Program Evaluation				

IC/ID Training

The Inspector's training meetings and presentations at various West Valley workshops have been effective. Inspectors from the County's Environmental Health and Fire Departments have called to report potential urban runoff violations observed outside of their scheduled inspections. This demonstrates that West Valley staff communication and relevant annual training sessions are successful.

Trend Analysis

In FY04-05 forty-eight (48) reported incidents were investigated; thirty-seven (37) were actual violations. The most common incident source was construction sites, which accounted for eleven (11) violations. Seven (7) landscape material dumping incidents accounted for the number one IC/ID incident type reported in Los Gatos in FY04-05. This was followed by six (6) grey water discharges (some categorized as miscellaneous incidents) and four (4) violations for vehicle washing. Three (3) food facility incidents, three (3) tracking soil incidents, and three (3) saw cutting slurry discharges were also reported. Construction related violations (especially if landscaping is included) are clearly the most prevalent type of IC/ID problem facing the Town. A close working relationship between Town staff and the West Valley Inspector accounts for more reporting of these incidents. Nevertheless, smaller construction projects are evident everywhere throughout the Town and most landscaping projects are not required to have permits so they bypass one opportunity the Town has to educate contractors. To achieve maximum compliance by contractors at small construction or landscaping project sites in Los Gatos, the West Valley Inspector continued to conduct drive-by observations and (where potential violations are noticed) inspections were conducted, accompanied by verbal notices and construction (educational) brochures.

In FY05-06 twenty-five (25) reported incidents were investigated; of which 15 were actual violations. Additionally, the Inspector conducted follow up visits to three (3) of these sites to ensure on-going compliance. Out of the 25 reports, Los Gatos Public Works staff initiated 11 referrals. The West Valley Inspector continued to conduct proactive vehicle shop and restaurant inspections, particularly at those sites which have had violations in the past. Six (6) reports originated from Los Gatos' primary incident source, construction sites. In addition, three (3) landscape material dumping violations were reported. Five (5) accidental spills and five (5) allowable discharges were the most commonly reported incident types, but neither of these types of incidents represents an intentional violation. Three (3) automotive facility violations represent one less vehicle related incident than was reported in the previous year. Three (3) food facility violations were also noted but two of the reports were for a grocery store (Safeway) rather than an actual restaurant. Other incident types were: one (1) report of PG & E cutting down a tree near a creek; one (1) underground storage tank release; and one (1) grey water discharge. The only notable trend was the need for continued outreach to contractors on smaller remodel projects as well as outreach and education for landscapers. The problems related to vehicle shops and restaurants have remained manageable at about three (3) violations each year, as long as the proactive inspection programs continue to provide an additional means of education.

In FY06-07 twenty-six (26) reported incidents were investigated; of which 23 were actual violations. A majority of the violations took place at food facilities (8), construction sites (7) and commercial places (4). Verbal notices were issued for 24 incidents, while 2 warning notices were issued to a restaurant. The West Valley Inspector continued to conduct proactive inspections at restaurants and vehicle shops, particularly at those sites which have had violations in the past. City staff conducts proactive inspections at construction sites. The other sources of reports were citizen complaints or referral by City staff and other agencies. Two (2) allowable discharges were reported, but these do not represent an intentional violation. The only notable trend is the need for continued outreach to workers at construction sites and food facilities. The WVCWP inspector will continue proactive inspection jointly with the Fire Department Inspectors and municipal staff to

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2006-2007 ANNUAL REPORT

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
provide education and outreach as appropriate. Overall, there was no decline in awareness; levels remain constant as seen by the total number of potential incidents that were about the same as they were for the last fiscal year. In fact, compliance is evident by the small number of each incident type, and the number of reports that are resolved. There has been no significant increase in the number of automotive violations from last FY. The West Valley Inspector will continue to conduct proactive visits of vehicle shops and food facilities in an effort to prevent potential violations.

	URMP	a. Joint Inspections of Retail Food Facilities Continue joint inspection program w/ DEH. Approximate number of *food handling* facilities in Los Gatos is 216. All facilities will be inspected at a minimum once per year. Report inspection results in Annual Report. WVCWP IC/ID Inspector will conduct follow-up and distribute BMP materials per DEH referrals. Continue to evaluate data management for improvements.	In FY 06-07, all 216 food-handling facilities in Los Gatos were inspected; most of them were inspected 2 or 3 times by Santa Clara County Environmental Health Specialists (inspectors). A total of 607 food facility inspections or re-inspections were conducted by DEH in Los Gatos.	Inspections conducted by SCC DEH
	URMP	b. Training & Evaluation Conduct annual joint meeting/training w/ Cupertino and SCC DEH to evaluate Inspection Prgm and make improvements. Meeting per agreement; scheduled for Spring. Consider providing outreach on proper disposal of fluorescent light bulbs and batteries to retail food facilities during inspections.	On April 30, 2007 the WV Cities, Cupertino and the County held their annual coordination training meeting.	Annual Meeting WVCWP to co-ord. w/ Cupertino & DEH
	FY02-03 Annual Report, CI Item	c. WVCWP Restaurant Inspection Program Continue implementation of proactive inspection program targeting medium to large-scale restaurants. *Medium to large-scale* restaurants are defined as, restaurants with 6 or more employees	Since the West Valley Restaurant Inspection Program's inception in 2002, the WVCWP Inspector has provided at least 263 pro-active inspections for 127 targeted restaurants in the cities of Campbell, Los Gatos and Saratoga. Out of 48 restaurants targeted in Los Gatos, most have been visited more than one time and almost all	WV Inspector & DEH

Source	Task Source	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
		and/or ones that routinely handle large quantities of grease (approx. 57 in Los Gatos).	are familiar with the West Valley Clean Water Program. In FY 06-07, seventeen (17) restaurants were inspected pro-actively in Los Gatos. DEH did not report any restaurant violations for FY06-07.	
	Restaurant Inspection Program – Continuous Improvem't item	d. Support West Valley Sanitation District's Fats, Oils and Grease Program Expand scope of restaurant inspections to focus on grease trap maintenance. During pro-active visits, the WVCWP Inspector will look at grease trap cleaning records. Any food facility without records will be referred to the West Valley Sanitation District for follow up.	WVCWP manager and Inspectors met with DEH representatives to re-emphasize the importance of tracking grease maintenance records. WVCWP Inspector continued to alert restaurants about regularly maintaining grease interceptors and the need for record keeping.	Inspections conducted by SCC Fire
	URMP	e. Joint Inspections of Ind/Comm Facilities Continue joint inspection program. Approximate number of inspected facilities in Los Gatos is 113. The inspection frequency goal for FY06-07 is 100%. The total number of facilities by business category inspected in FY06-07 will be included in the annual report.	In the Town of Los Gatos, 99 commercial / industrial facilities were inspected by the Fire Dept. Of the facilities inspected, the Fire Dept found no potential or actual violations.	Inspections conducted by SCC Fire
	URMP	f. Training & Evaluation Conduct annual joint meeting/training w/ SCC Fire to evaluate inspection reporting and confirm distribution of materials. Determine training topics, if needed, on the renegotiated West Valley Inspection Agreement dated June 2006.	The Fire Dept's annual facility inspection training pertaining to urban runoff requirements was provided to 183 inspectors from May 10th through July 6th 2007. The Inspectors noted that they have plenty of handout materials; West Valley businesses have received all of the educational material during prior inspections. The Fire Dept's Sr Haz Mat Specialist, who provides training to inspectors met with the West Valley Clean Water Prog Mgr and WV Inspector on 4/5/07 to evaluate current procedures. The new agreement and revised reporting	Annual Mtg w/ WVCWP & Sr. HazMat Specialist

Industrial/Commercial Program Evaluation

Fire Dept Inspections of Industrial / Commercial Facilities:

Of the 99 facilities inspected by the Fire Dept no potential or actual violations were found. The list of violations is provided to WVCWP at the end of each fiscal year. The West Valley Inspector will schedule a training meeting with the Fire Dept Haz Mat Specialist in FY 07-08 to discuss further inspections of sites with potential violation. The sites that have previous violations will be prioritized for inspections at the beginning of FY 07-08.

After a steady stream of improvements and more communication between Fire Dept and WVCWP staff, the inspection program is prepared for maximum efficiency for the West Valley Cities in FY07-08. When Saratoga was added to the Fire Dept Inspection Agreement for Campbell and Los Gatos (7/1/02) all West Valley facility inspections were coordinated under one umbrella. Monte Sereno does not conduct IND inspections because it has NO industrial or commercial facilities. Since 2001, WVCWP staff has met with Fire Dept staff at least twice a year to discuss standardized reporting, documentation and follow-up.

The West Valley Inspector's pro-active vehicle shop inspection program is designed to supplement Fire Dept facility inspections. Shop owners are made to realize the City's responsibility for making sure that the sites are in compliance with water quality requirements. The Inspector has made a positive impact with his visits and the distribution of educational materials depicting the right way to keep equipment, vehicle parts, and service areas covered, and all vehicle wash water managed properly. In a few cases the Inspector's meetings with vehicle shop owners have led to the facility's purchase of a wastewater capture system (noted in previous annual reports).

Annual Food Facility Inspection Training Meeting

On April 30, 2007, DEH representatives met with the WVCWP Manager and Inspector. The importance of reporting all potential West Valley stormwater violations to the West Valley inspector was re-emphasized. Other topics covered at this meeting were (1) Updated contact information (2) How to report urban runoff violations to municipal inspectors to ensure accurate tracking and follow up (3) Feedback on the effectiveness of outreach and educational handouts (4) Reminder to distribute pesticide reduction fact sheets called "Don't Set a Table for Pests" to restaurants.

During FY 06-07 the West Valley Inspector continued a more aggressive effort to alert restaurants to the need for regular grease interceptor maintenance and record keeping. The WVCWP Inspector and the West Valley Sanitation District's Director of Operations continue to have discussions regarding grease interceptor maintenance records and related issues. The Sanitation District is notified if the records are not available. At the April 30th meeting, the West Valley Inspector again suggested that Environmental Health Specialists look for grease trap maintenance records during their restaurant inspections.

Storm Drain Operations and Maintenance				
Annual Storm Drain Cleaning	2004 URMP	Annual Storm Drain Cleaning Continue contract w/ WVSD. Continue schedule/cycle for inspection and cleaning of storm drain system (two year cycle for residential & one year cycle for commercial/industrial); Public Works staff will clean high leaf drop and other noted areas more frequently and as needed.	West Valley Sanitation District (WVSD) performs systematic storm drain cleaning and inspection annually. Half the Town's storm drains are cleaned and inspected each year. Arterials and commercial/ industrial areas are done annually. Town maintenance staff provide additional cleaning in high leaf drop areas and to remove storm debris from all inlets and grates as needed.	Dir PW coordinates WVSD Agreement & Pub Works Maint. Supt coordinates in-field operations
Training - Annual WVSD/ Oper. & Maint. Meeting	2004 URMP	Training - Annual WVSD/ Oper. & Maint. Meeting Annual WVSD / Operations & Maint. Supervisors meeting - evaluate status of annual storm drain cleaning and provide training on maintenance issues. Rural public works BMPs and SOPs may be reviewed as part of the annual WVCWP Street Maintenance Supervisors meeting.	The annual WV Storm Drain Op & Maint. Supervisor's workshop was held on June 20, 2006. Six (6) Los Gatos staff attended, including the Streets Lead Worker, Street, Maintenance, Parks and Public Works staff. Staff from WVSD, WVCWP, and all other WV Communities also participated. Topics included: • WVSD Storm Drain structure cleaning & debris findings for each city (will be used to help identify additional trash problem areas) • Review of Emergency Response Procedures for SD overflow • Street sweeping for water quality including capture of fine particulate matter • Power Point Presentation on S/D cleaning and maintenance requirements and existing practices Round table discussion on all topics	Mtg lead by WVSD & WVCWP; Attended by PW Maint. staff

FY 2005-2006 ANNUAL REPORT

Activity	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
Storm Drain Stencils or Signage	C/I item -Source Control Measure	Storm Drain Stencils or Signage Continue to replace and/or upgrade storm drain stencils or signage on storm drains or catch basins, as needed. Stencils will be replaced with the type of stencil best suited for the location	The number of SD inlets in the Town is approximately 1,200. Signage is replaced if it becomes worn, (or bent if it is metal). Thermoplastic storm drain stencils are being applied selectively.	Maint Supt. coordinates field operations WVCWP to assist with purchase of SD stencils
Trash Reduction	Trash Reduction Activities	Trash Reduction Public Works Maintenance Division will provide additional cleanup in trash problem spots discovered by staff or reported by the public.	During inspection and cleaning of storm drain structures, WVSD staff notes catch basins that require additional cleaning. The data will be helpful in locating trash problem areas by storm drain location. Los Gatos' report included 6 structures that received additional cleaning due to excessive amounts of leaves and paper.	PW Analyst & Maint Superintendent coordinates in-field operations
Street Sweeping/ Pavement Management				
Street Sweeping Program	URMP	a. Street Sweeping Program Residential swept monthly; arterials and Commercial/industrial areas once weekly; commercial/ downtown at least once/week. High leaf drop and other noted areas cleaned more frequently and as needed (i.e., construction zones - swept by responsible party).	The Town has about 110 miles of curbed streets, which are swept on a three week schedule. All sweeping is conducted with the Town's equipment. In heavy leaf drop areas, a front-end loader/dump truck crew removes leaves prior to street sweeping. All residents and businesses are required to utilize large recycling bins for leaves and other yard waste as part of their trash collection service.	Street Sweeper Operator - Public Works Assistant tracks and reports data
Street Sweeping Data Collection	NPDES Permit	b. Street Sweeping Data Collection Collect and review street sweeping data and provide number of curb miles swept and cubic yards of debris to WVCWP for each Annual Report. Solicit feedback from Street Sweeping staff on effectiveness of the program.	Street Sweeping data was collected and provided to the SCVURPPP at the end of the fiscal year. See the three-year comparison table in the evaluation section (below), for curb miles swept, debris collected and yard waste recycled.	Street Sweeper Operator and Public Works Assistant, WVCWP assists with submittal of data

Yard Waste Recycled

FY04-05: An annual total of **7,735 tons** of yard waste was picked up by garbage collection service.

FY05-06: An annual total of **9,250.7 tons** of yard waste was picked up by garbage collection service.

FY06-07 Residents and businesses recycled 4,052.4 tons of yard waste using Waste Management garbage collection service from July ’06 to the end of January ’07. In March the West Valley Cities changed contractors; the total amount of yard waste recycled using West Valley Collection and Recycling from 3/1 to 6/30 2007 was reported as 2,046 tons for a combined **total of 6,098.4 tons.**

Los Gatos

FY 2005-2006 ANNUAL REPORT

Public Agency Activities: Operations and Maintenance Evaluation

Storm Drain Maintenance: In FY06-07, West Valley Sanitation District (WVSD) provided its second enhanced annual report to the cities on storm drain cleaning. Since June 2006 the reports have listed the structures that were inspected and cleaned with the maintenance crew's findings. A total of 1,575 structures were inspected. Of those, 1,197 or 76% did not have any debris and were noted as "clean." Forty nine structures required additional cleaning; of the forty-nine, twenty-six contained leaves & paper. Crews noted the weight and type of debris removed. Descriptors for solids removed are: leaves/paper, mud/dirt, foreign object, rocks/stone, sand/gravel, oil/soap and roots etc. The reports are generated from a database of numbered storm drain locations with the street names. The WVSD reports were distributed at the annual Storm Drain workshop on 6-20-07 and will be reviewed by WV cities as they determine future management actions for trash problem areas.

Storm Drain Stencils: The Town's decision to go back to using painted stencils for most applications, and using thermoplastic storm drain stencils in selected areas, is working very well. The Town decided to use thermoplastic stencils in selected areas because they are reflective, they adhere well to coarse and uneven surfaces and can withstand heavy traffic. The downside of using thermoplastic stencils is the cost (about $250 per stencil, installed) and they must be applied to a horizontal surface, preventing their visibility from a distance. Santa Clara County staff asked the WVCs for a recommendation on where to purchase metal plaques similar to those previously installed by the West Valley Cities. West Valley reported that municipal staff have discontinued application of the metal plaques because the sharp edges have a potential to get caught in street sweepers and bend, creating a potential to injure pedestrians or bicyclists. Replacing the plaques was also a problem. When plaques came loose or were removed, concrete chunks crumbled from the curb with the screws (used for attaching the plaques) making replacement in the same spot impossible.

Street Sweeping: The Town collected 5,005 cubic yards of debris in FY06-07, 867 cubic yards more than the amount of debris collected in FY05-06. This year the Town's number of residential miles swept was down by 980 from the previous year but up by 237 from two years ago. The Town generally sweeps the downtown commercial area weekly, and more often as needed. Therefore, the number of commercial curb miles swept will vary from year to year. The total number of miles swept is down from the previous year. However, each year since FY04-05, the cubic yards of debris collected has increased. The Town's a new regenerative air PM10 sweeper appears to collect more dirt and debris per mile swept than the old sweeper.

In the previous fiscal year, the Town of Los Gatos provided training to all the West Valley Cities by presenting their new Street Sweeper at a WVCWP workshop in June 2006. The Town's PW Superintendent answered questions from other municipal staff about cost and maintenance and gave a brief talk on why this model of sweeper was selected. The regenerative air sweeper is certified to pick up more, and generate fewer, small particles, which account for 5% to 7% of the material on the average street but contain over 60% of the pollutants targeted by EPA under the Clean Water Act. (Statistics were provided by Ranger Kidwell-Ross, speaker for World Sweeper.com at a street sweeping workshop held on 5-8-06 in San Jose).

Yard Waste - Curbside Collection and Recycling: The West Valley yard waste recycling program reduces the amount of debris that gets into the storm drain, since leaves are collected in oversized bins rather than being stored in the street. In FY06-07, the total yard waste collected was down sharply from the previous two years for all West Valley cities. The reason for the decrease is not apparent without reviewing the data collected for the previous years and the garbage collection companies' tracking methods. There are a few factors that would contribute to the drop. 1) The data for February 2007 was not reported for West Valley cities due to a change in service contractors; 2) There might be a significant difference in methods used by the two different contractors to collect data; 3) City crews provide some additional, unscheduled leaf and tree limb removal, which is not tracked. 4) The annual weather might be a consideration because yard waste collection is determined by the amount of debris residents generate from yard maintenance and tree trimming. Some years have stormier weather producing more fallout from trees and a greater need to dispose of branch material. The new garbage & recycling company will be asked about their methods of

tracking yard waste collection. The cities may request monthly totals to see if more consistent year-end totals can be obtained.

Training Evaluation: The WVCWP Storm Drain Maintenance Workshop (6/20/07) drew more staff participation this year. Municipal staff evaluated the workshop as having "good information that needs to be presented to City Council." Another response noted that "City law enforcement needs to attend the workshops". It was also suggested that San Jose Water Company attend our trainings since the water company crews have been noticed using improper storm drain protection methods when working on their pipelines. Attendees wanted to know "how to educate the public to get them on our side?" It was evident that BMPs are being used by municipal staff but there was some frustration among street and park maintenance workers because they don't have enough authority to convince residents and private contractors to keep pollutants from reaching the storm drain system. The WVCWP Inspector offered his card to all attendees and requested that they report any incidents to him for immediate follow-up. One challenge is to catch the violator in the act of allowing pollutants into the storm drain system. By the time the incident, or the result of the incident, is seen it is often too late to stop it. The maintenance crews are generally called to clean up spills. Attendees requested continued updates on the MRP requirements for storm drain maintenance and street sweeping practices. Several of the attendees stayed after the workshop for additional discussion among the cities.

Corporation Yard SWPPPs: The Town of Los Gatos along with the other West Valley communities held a round-table review and discussion of West Valley municipal SWPPPs on Jan 27, 2007. The corporation yard SWPPP and standard operating procedures (SOPs) were evaluated to determine if revisions or additions to the manuals were needed. On May 23, 2007, the Town proudly displayed its corporation yard to the public during open house tours. Fifth grade students, teachers and parent chaperones from two Los Gatos middle and elementary schools witnessed how municipal staff keep their maintenance yard in order and handle the machines and vehicles which service the community. WVCWP staff provided a storm drain display and briefly showed the difference between the sanitary sewer's connection to a water treatment plant and how the storm drains flow to local creeks. A booklet from Household hazardous waste was given to students and teachers to provide locations for proper disposal of fluorescent bulbs and batteries. Trash and carwash water were identified as the pollutants that could most easily be kept out of the storm drain system.

PLANNING PROCEDURES

FY 2006-2007 Work Plan Self Evaluation Matrix

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
Planning Procedures				
	Provision C.3	Participate in Provision C.3 Oversight Ad Hoc Task Group (C3PO AHTG) to stay updated on current issues, respond to Program or RWQCB requests, and exchange questions, ideas or experiences related to C.3 implementation with other Co-permittees.	WVCWP Manager participated in the C3PO AHTG meetings to present summarized information at West Valley monthly meetings and encourage feedback, as appropriate, from West Valley Co-permittee's. Los Gatos' Sr Engineering Technician and an Associate Planner attended C3PO meetings in FY06-07 to keep the Town's Community Development and Engineering staff informed about C.3 project implementation from the other Santa Clara co-permittees and to stay informed about any updates to planning procedures requirements.	Sr. Eng Tech, Assoc Planner, WVCWP Mgr
	New Municipal Regional Permit	Provide input as requested, to help determine the requirements for the new Municipal Regional Permit.	On Dec, 19, 2006, Los Gatos' Pub Works Director and the Town's Sr. Engineering Technician/ Stormwater Rep attended an MRP West Valley meeting/round table discussion with municipal decision makers and Water Board staff to address the challenges of the upcoming MRP requirements and explore revisions that would make the requirements feasible for implementation.	Sr. Eng Tech, PW Director, & WVCWP Mgr
C.3.c. Requirements for Group 1 and Group 2 Projects				
Group 2 Projects	C.3.c.	As needed, revise guidance documents, website, procedures, and/or conditions of approval to incorporate Group 2b project requirements for August 2006 implementation.	C.3 guidance for all WV cities was revised and posted prior to 8/15/06 to include Group 2b projects. The Town's Notice to Developers an Contractors may be viewed electronically at: http://www.town.los-gatos.ca.us/index.asp?NID=953	Sr Eng Tech

Los Gatos

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2006-2007 ANNUAL REPORT

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
Training	C.3.c.	Municipal staff will receive training and/or attend Program workshops on Provision C.3 requirements.	Los Gatos' Sr. Engineering Technician/ SW Rep attended SCVURPPP's C.3 workshop on June 14, 2007. She participated in a panel presentation on *Implementing C.3. Provisions on a Project from Start to Completion.* Her segment highlighted a small redevelopment project in the downtown area. Town Public Works Staff also attended monthly West Valley training meetings on 8-1-06, 2-27-07, 11-28-07 and 12-19-07. Implementation of current and proposed C.3 requirements were reviewed and discussed at the meetings.	WVCWP , Sr. Eng Tech & Assoc Planner
C.3.e Operation and Maintenance of Treatment BMPs				
BMP Inspection Program O&M Verification	Permit C.3.e.iii	Report on O&M verification program in each annual report. Note organizational responsibility, evaluation of effectiveness, and planned improvements. Include a list or summary of treatment BMPs inspected during the year, inspection results, and any required follow-up and correction.	The Town has not yet conducted any BMP O&M inspections. .Los Gatos has two regulated C.3 projects still under construction. After a project is completed, the Town Engineering Inspector will perform annual BMP inspections. Any enforcement issues will be referred to the Los Gatos Code Enforcement Officer for further action.	Public Works Engineering staff
	Work Plan	Training & Evaluation Continue to provide training to inspectors and data managers on O&M verification program. Discuss evaluation of effectiveness and planned improvement to the program.	On March 5, 2007, Los Gatos' Sr. Engineering Technician and the WVCWP Manager and Stormwater Discharge Inspector attended SCVURPPP's BMP O&M meeting to review the co-permittee's use of standardized inspection forms and the collection of required information for the database. County Vector Control staff attended to request agencies provide immediate information on types and locations of built treatment measures. Vector Control must document and inspect potential problem areas to prevent the spread of West Nile Virus. The agencies discussed reporting methods for newly constructed treatments. The Town's Sr. Engineering Technician attended	Sr Eng Tech, WVCWP

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
			SCVURPPP's June 14, 2007 workshop which included training on conducting BMP O&M Inspections. Detailed aspects of the verification program were reviewed at WV's monthly meetings (8-1-06 & 3-27-07).	
C.3.f Hydromodification Management Plan				
HMP – Hydrograph Modification Mngmt Plan	Permit Prov. C.3.f	Continue implementing the HMP as part of requirements for qualified Group 1 projects that may cause increased erosion or other related impacts.	The Town implemented the HMP for Group 1 projects on 10-20-05. There were no HMP-regulated projects in FY06-07. Due to the nature of expected developments, the Town does not expect many projects will be subject to these requirements over the next few years. However, Public Works staff will continue to track regional implementation of the HMP.	Sr Eng Tech, Eng staff & Assoc. Planner
Training		Provide incremental training on HMP requirements to Town staff via SCVURPPP workshops and/or in-house staff training.	To stay informed of the most recent HMP developments, Engineering staff attends SCVURPPP HMP trainings. The Sr. Eng Tech and Associate Planner were also kept up-to-date on the progress of HMP development by attending SCVURPPP's C3PO task group meetings. Proposed revisions to the HMP were reviewed during the West Valley Communities' round table discussions regarding the administrative drafts of the MRP in November '06 and in June '07.	SCVURPPP/ Eng Div / Plan. Div.--WVCWP to coordinate
HMP Reporting	C.3.f.viii	Provide development and implementation status and a summary of projects incorporating HMP measures to WVCWP staff for Annual Report.	There were no HMP-regulated projects in FY06-07.	Sr Eng Tech / Assoc Planner
C.3.g Waiver and Compensatory Mitigation Program				
Waiver Program or Alternate	Permit C.3.g.	Provide information on any projects allowed to implement alternative compliance measures during FY06-07.	All applicable projects must implement C3 requirements without using alternative or off-site compliance measures. The Town does not foresee using a Waiver Program.	Public Works Director

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
Compliance				
C.3.h Alternate Certification				
Alternate Certification reporting	Permit C.3.h	List the projects certified by someone other than municipal staff and mechanism for ensuring that outside certifiers are qualified in the Annual Report.	The Town does not certify C.3 compliance for private projects. The three projects listed in the project annual report tables, part 1 and part 2, were certified according to the following procedure: the project applicant is responsible for having all stormwater measures certified for adequacy, according to the requirements of Provisions C.3.d & C.3.f and C.3.h. Additionally, the Town uses the lists of qualified civil engineers approved by the City of Sunnyvale and BASMAA to determine who is allowed to certify C.3 compliance for private development projects.	Sr. Eng. Tech.
C.3.j Site Design Measures Guidance and Standards Development				
Site Design Measures Guidance and Standards Revision	(Permit C.3.j.)	Summarize the status of revision and implementation of site design standards and guidance related to watershed protection. Provide Summary to WVCWP for Annual Report	The Town's Sr. Eng Technician attended the final sub-group meetings of the Water Resources Collaborative during 06-07 to help develop the outcome product, "Guidelines and Standards" (for the protecting the riparian corridor). The Town Council adopted the Guidelines and Standards developed by the Santa Clara Valley Water Resources Protection Collaborative on February 20, 2007. The Town will continue to evaluate local site design standards to determine any necessary revisions.	Assoc Planner, Comm Dev Dir, Sr. Eng. Tech.
C.3.k Source Control Measures				
Source Control Measures	Permit C.3.k.	Incorporate stormwater pollutant source control measures on all development projects.	The Town continues to evaluate its source control BMP requirements to determine any necessary revisions. During FY06-07, standard conditions of approval for new homes	Assoc Planner, Sr. Eng. Tech.

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
			with a pool were revised to require a sanitary sewer clean-out within 10 feet of the pool equipment, and a pervious landscape area for pool filter washout.	
C.3.l General Plan Update				
General Plan	Permit C.3.l	Revise General Plan, at next planned update, to reflect principles and policies needed to address C.3 requirements.	The Town's General Plan was revised in 2000. The General Plan updates are scheduled every ten years. (2010)	Assoc Planner & Sr Eng Tech
C.3.n Reporting Requirements				
C3 Project Reporting	Permit C.3.n.i. (C.3.c.)	Report on Group 1 and Group 2 projects that received final approval for construction during FY06-07. List project name, location, project type, size, and sq. footage of impervious surface area.	See the attached table given in Part 1 of the Los Gatos New and Redevelopment Projects Reporting Forms.	Sr. Eng Tech provide data to WVCWP staff
C3 Project Reporting	Permit C.3.n.ii.	For Group 1 and Group 2 projects, report type of treatment BMPs used, numeric sizing criteria used, O&M inspections, and any follow-up actions. Note site design measures used, and source control measures required.	See the attached table, Part 2 of the Los Gatos New and Redevelopment Projects Reporting Forms.	Sr. Eng Tech provide data to WVCWP staff
Pesticide Control Measures Reporting	NPDES Permit Provision C.3.n.iii	For Group 1 and Group 2 projects, describe the types of pesticide reduction measures required. Give the percentage of new development and significant redevelopment projects for which pesticide reduction measures were required.	Los Gatos has an irrigation efficiency ordinance to promote use of less water and minimize runoff that can carry pesticides/fertilizers into local waterways. Town Code 26.40.030– encourages protection and preservation of native species, natural areas, and designs to minimize irrigation runoff. The Town's "Hillside Design Guidelines' limit the amount of non-native plants that can be used in new developments. A pesticide reduction fact sheet is given to all project applicants.	Sr Eng Tech, Assoc Plannr provide info to WVCWP staff

Planning Procedures Evaluation

Town Public Works staff continue to coordinate reviews with the Community Development Department to ensure that all development projects have written conditions to meet storm water quality requirements. In addition, Public Works staff assist developers and their design team members with C.3 technical and legal issues (specifically the BMP O&M agreement).

The Town's Public Works Director has followed the development of proposed MRP requirements with assistance and analysis by the Sr. Engineering Technician and the Public Works Analyst. Town staff, as part of West Valley monthly meetings, continues to examine and discuss feasible ways to implement some of the more challenging C.3 requirements proposed in the draft MRP.

LOS GATOS

FY 2006-2007 ANNUAL REPORT

The Construction Inspection Program currently works well due to coordinated efforts between the Town's engineering inspectors and the WVCWP Inspector. Potential incidents reported by other agencies or citizens, are inspected and re-inspected until resolution is achieved. This year the WVCWP Inspector responded to six (6) construction-related incident calls for the Town. Two incidents turned out to be outside of the Town's jurisdiction. One report was due to the tracking of wet material which looked like oil, by vehicles that traveled on a new road outside the Town. The tracking was noticed by a resident within the Town's limits. One incident in Santa Clara County's unincorporated area was addressed by providing the contractor with a verbal reminder to remove all asphalt when done. (The Construction Incidents Table is attached). One Town incident turned out to be an allowable discharge; another was due to an accident. Two construction-related incidents involved dirt tracking. Both of the dirt tracking sites will be revisited in FY-07-08. The number of incidents in Los Gatos has dropped from seventeen (17) in FY04-05 to seven (7) in FY05-06 and then to (4) in FY06-07 (within the Town's jurisdiction). Two incidents in FY06-07 were outside the Town's jurisdiction, totaling six incident calls for FY06-07. However, the number of reported incidents may increase when WVCWP's half-time Inspector has time for drive-by inspections to watch for minor remodeling jobs, which do not require a permit. Smaller home improvement jobs i.e. painting, landscaping, re-flooring, re-tiling and concrete replacement, etc. can go unnoticed, but do contribute to stormwater violations. In FY06-07 the WVCWP inspector spent most of his time responding to incident calls and conducting pro-active inspections of restaurants and vehicle maintenance facilities.

Construction Site & Erosion Control Training – Three of the Town's Public Works Engineering staff attended a WVCWP training meeting on June 27, 2007, which was planned for Saratoga construction inspection staff. Town staff asked to be included to ensure stormwater training for their new Engineering Inspector. During FY06-07 the WVCWP Mgr made it a priority to provide additional training on construction inspection requirements and to encourage self evaluations of municipal inspection programs. Several WV meetings and municipal training sessions were held to discuss BMPs, URMP requirements and documentation of inspection activities. Early in FY06-07 it was determined that inspectors would benefit from a review of documentation requirements. Continued public outreach efforts and further training and communication among municipal inspection staff and the WV Stormwater Inspector have served to develop a coordinated and effective construction inspection program in Los Gatos.

The Town plans to update the plan sheet, *Blueprint for a Clean Bay.* Due to Engineering Dept staff changes this did not happen in FY06-07. Additional staff time was spent reorganizing, hiring and training. With the new State General Permit expected in 2007, the update of *Blueprint for a Clean Bay* will be considered for FY07-08, but will be contingent upon the amount of staff time needed for review and implementation of the new MRP.

A. SCV PROGRAM - PROJECTS/SUPPORT				
	NPDES Permit, Provision C.4,	Watershed Education and Outreach Campaign Help to develop/implement the 2nd multi-year watershed education and outreach campaign. Participate in campaign development and special projects, e.g. community events. Campaign will include funding for educational programs at the Alviso Ed Center and funding for ZunZun performances in local schools.	WVCW Pgm Mgr assists via participation in the Watershed Education and Outreach Ad Hoc Task Group. WVC helped plan and implement the Watershed Watch campaign aimed at IPM and Mercury Pollution Prevention. These topics were chosen based on feedback from the March 2006 Focus Group. *Watershed Watch Media Campaign* The FY06-07 campaign featured ongoing IPM and Mercury ads in community newspapers. The WV communities, (along with 3 other cities and the County Integrated Waste Mgmt Division) contributed additional funds (totaling $17,535 in all) toward media buys. WVCWP regularly provide staff support for Program outreach events: *Pumpkins in the Park Event on Saturday October 14,2006* 2 WVCWP staff members worked the Watershed Watch booth at the Pumpkins in the Park event. This event was held on Oct 14 at Discovery Meadow in front of the Children's Discovery Museum. Guadalupe River Parks and Garden (GRPG) volunteers helped oversee the stormwater bean bag game which gives children an opportunity to choose appropriate methods for disposing	WVCWP staff

			commonly-generated waste. WVCWP staff spoke with residents and gave them recycled money pencils engraved with the WVCWP website address. *Home and Garden Show on Sunday 4/29/2007.* 3 WVCWP staff members worked two shifts at the San Jose Convention Center. In addition to distributing informational materials, WVCWP staff handed out gutter getters, *What You Don't Know About Mercury* brochures from HHW, "The Original Earth-Friendly Pest Control" flyswatters, pencils engraved with Household Hazardous Waste website and phone number and mercury-free thermometers, among other give-away-products. WVCWP spoke with at least **211** people. Attendees showed interest in less-toxic gardening methods. Some people were interested in controlling specific pest infestations. Other topics included safe fluorescent bulb disposal, and safe paint and pesticide disposal.	
	NPDES Permit, Provision C.4, C.9 & Pest Mgt Plan (PMP)	Pesticide User Outreach Project Continue to provide funding and to participate in Our Water Our World IPM Store Partnership. Project scope will include items in Program's Pesticide Management Plan based on provision c.9.d of the Permit for outreach to residents, commercial businesses, and pest control operators.	The WV Clean Water Program Manager participated in the SCVURPPP IPM Ad Hoc Task Group and provided staff for all of the Program's public outreach events. WVCWP also provided additional funding for the local IPM media campaign. The FY 06-07 WW Campaign adopted a top-of-mind-awareness or frequency-based approach to media, running ongoing consistent IPM ads in community newspapers *Summerwinds Garden Center* Campbell, March 19, 2007 WVCWP staff met with Summerwinds staff and provided **200 Grow it Guides** for distribution to Garden Center	WVCWP staff

			exchanged at the 06-07event.	
	WVCWP Public Service Event	*Public Outreach Event*	***Free** E-Waste Recycling Event April 28,2007* Recycling of TVs, monitors and all office electronics. The event was sponsored by the four West Valley Cities through the *Clean Water Program*. It was held at the City of Saratoga's North Campus, on Prospect Road in Saratoga. The event was for West Valley businesses, residents and schools. However, it was open to the general public (CA residents). A Banner and Flyers were created. WV staff **distributed 123 flyers** for posting at 67 businesses from April 10th to the 24th. **270 E-Waste Event flyers** were taken home by private-school students in Saratoga, where WVCWP staff gave two classroom presentations. The event was also advertised via notices on municipal web sites. **170 cars** brought E-waste for recycling. Staff greeted drivers and surveyed them on behaviors associated with improper E-waste disposal. Give-away-items were provided to encourage participants to use convenient drop-off locations at partnering hardware and home improvement stores.	WVCWP Staff coordinated with municipal staff

Public Information/Participation Program EVALUATION - *SCV Program Projects/Support*

Pesticide User Outreach - STORE PARTNERSHIP:

Managers of Summerwinds Garden Center in Campbell have shown their interest in less toxic products. In fall of 2006 Summerwinds' store management chose to participate in the IPM store partnership displays being introduced at two other gardening stores. A consultant representing SCVURPPP's Watershed Watch and OWOW campaigns worked with the Campbell store to increase shelf space and display exposure for the promotion of less-toxic products. Sales of less-toxic

products rose by a noticeable percentage in FY06-07 (exact figures are not given, as the store does not wish this information to be publicized).

Mercury Pollution Prevention Outreach – THERMOMETER EXCHANGE:

This regional thermometer event was organized by the Bay Area Pollution Prevention Group (BAPPG). The "Spring Thermometer Exchange" program was advertised on www.baywise.org . Twenty Bay Area agencies were supported with clear guidance and an extensive advertising campaign, including ads in the San Jose Mercury News and the San Francisco Chronicle. The WVCWP Manager previously considered holding an event but rejected the idea because of concerns that it might not be feasible with the limited staff resources for West Valley public outreach events. The Manager heard about the BAPPG event a little late, through discussion at a Watershed Watch ad-hoc task group meeting. The outcome was that a regionally organized thermometer exchange was relatively easy to staff and implement locally. Since FY06-07 was the first year of this specific partnership, some agencies, including WVCWP, ended up with events scheduled a few days prior to the commencement of the advertising campaign. The West Valley Clean Water Program is now a member of the BAPPG and on the regional BayWise website: http://www.baywise.info/index.cfm?fuseaction=links&categoryID=8F785744-40CA-38F9-55F3387AE0E4551C In the future the West Valley thermometer exchanges will be coordinated with BAPPG events to take advantage of regional exposure and advertising. The BAPPG event summary is attached at the end of this report section.

Mercury Outreach - E-WASTE RECYCLING EVENT:

WVCWP designated staff time and funds to organize a Free E-Waste Recycling Event for West Valley residents, businesses and schools, and to publicize safe and legal disposal of Mercury and Copper-containing items. As a follow-up to WV's very successful 2006 "TV and Monitor Collection Event", WVCWP responded to residents' requests and delivered a similar, broader **all-product E-Waste Event** in April 2007. The event was held at a centrally-located and easily-accessible site - City of Saratoga's North Campus.

The WV cities found that a free E-Waste recycling event provides a meaningful way to effect behavior change, while providing a platform for conducting community outreach and education on this topic. Outreach resulted in completed surveys from **170** drivers and discussion with each driver (and most passengers) about disposal of hazardous waste.

The WVCWP advertised the event by distributing flyers and painting a large banner for the site. The *Los Gatos Weekly*, the *Saratoga News,* and the *Campbell Reporter* also carried Calendar section notices about the event. A strong emphasis was placed on the use of a responsible recycling firm. By using a responsible recycler we help prevent export of our waste to foreign dumps where mercury leaches into the environment. The results of surveys taken during the event showed that the banner was probably the most effective form of outreach among the 4 different outreach techniques mentioned. Attendees learned about the event via:

62 via banner - 33 via flyer - 28 via websites – 13 via newspaper - 19 via "other", which in most cases was specifically stated as "my wife" (15 – no response). The "my wife" answer provides some insight as to which target audience may be a good catalyst for behavior change in the West Valley communities.

General	CI Item	WVCWP Website Revisions While promoting the website, continue to expand and update the site with new educational material and up-to-date topics for the public on HHW, pest management, and other pollutant reduction e.g. mercury, trash, & copper /nickel	WVCWP posts information about Trash Cleanups for National River Clean Up Day and Coastal Clean Up Day on the *Cleancreeks.org* Home page to announce these events. Mercury and Copper issues were featured prior to the April E-waste event. The "Take Action" page was revised to include links to the UC Davis IPM site for residents interested in less toxic pest control. In addition, the page now highlights the question of home and garden chemicals' safety, with links to sites on toxicity information. During FY06-07, WVCWP staff developed drafts for new versions of the "About Us" page, to feature NPDES and stormwater information, and the "Take Action" page, to offer a variety of ideas and links leading visitors to useful next-step information. Work on the new website pages is planned for FY 07-08, but is contingent upon the amount of staff time that will be available after negotiating and preparing for implementation of the new MRP requirements.	WVCWP Staff
CITIZEN PARTICIPATION				
Public Partici-pation	Trash Monitoring Work Plan	Creek Clean-ups Continue implementation of trash monitoring activity during Creek Clean-ups. Conduct a minimum of two clean-up events (i.e. on Coastal Clean-up Day and National Rivers Day).	**Trash Monitoring was conducted at 4 different Clean-up sites in FY 06-07.** See *Trash Management* (Section #10) for results. Two of the creek clean-ups were held at an established site: San Tomas Aquino Creek next to Westmont High School (which serves Campbell, Los Gatos, Monte Sereno	WVCWP Staff & WVCWP Staff to coordinate with Municipal Staff

West Valley Communities

Santa Clara Valley Urban Runoff Pollution Prevention Program

			and Saratoga students). WVCWP sponsored creek cleanup and trash monitoring events on 9-16-06 and 5-19-07. High school student volunteers have proven to be receptive to helping with Trash Monitoring. Students and other volunteers were trained to conduct trash monitoring and told why trash has become a pollutant of concern (POC) for the S.F. Bay area. **A third Clean-up was sponsored by WVCWP in partnership with Sacred Heart Elementary/Middle School** 4/18/07 Saratoga. The school is in Saratoga, but serves students from all WVCs. Students and parents participated in the Clean-up and Trash Monitoring. Prior to the event, 4th and 5th grades participated in Enviroscape watershed model demonstrations, where trash issues were discussed in great depth. **City of Campbell sponsored one Clean-up**. This event was held as part of the "Great American Pickup Day" (May 19, 2007). It was well promoted regionally and via the City's website and Public Works staff. About sixty volunteers participated and worked on a variety of sites, including sites along Los Gatos Creek Trail, the railroad tracks next to Winchester Blvd. and short Freeway stretches, picked up by volunteers under the supervision of Caltrans staff. Due to the scattered nature of the sites for this event, WVCWP used slightly simplified monitoring methods. Community volunteers were agreeable to tracking and estimating trash and filling out the forms.	

West Valley Communities

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 06-07 ANNUAL REPORT

			The Town of Los Gatos also promoted the Great American Pickup Day event by posting a flyer on the Town's website. Participants joined the Campbell site cleanup and monitoring activities. **Los Gatos Creek Trail in Los Gatos** is cleaned on a continuing basis by volunteers. Information on volunteering for this activity are found on the Town website. Due to the on-going and informal nature of this activity, these volunteers are not involved in monitoring.	
Public Partici-pation	Creek Keepers Outreach Began in 2001	"Creek Keepers" Program training Provide training on trash tallying and highlight current trash pollution issues for students and volunteers when they participate in a cleanup event.	Training on Trash Monitoring, and trash pollution issues, was provided for volunteers at the following events: **9-16-06 Creek Clean-Up, Westmont** **4-18-07 Creek Clean-up, Wildcat Creek, Saratoga/ Sacred Heart School** **5-19-07 National River Clean Up Day, Westmont** **5-19-07 Great American Pick Up Day, Campbell sites / Los Gatos Creek Trail** "Trash Management" (Section #10) includes results of the Clean-up events.	WVCWP Staff & WVCWP Staff to coordinate with Municipal Staff
Public Partici-pation	Copper/ Nickel and Mercury Activities	Recycling Event for TVs, Monitors and E-waste Plan an E-waste collection event for (but not limited to) West Valley residents, based on success of pilot event held in Los Gatos in January 2006.	*E-Waste Collection & Recycling Event - Saturday April 28, 2007* WVCWP organized, promoted, and carried out a five-hour e-waste collection event – open to all CA residents at Saratoga's North Campus. Partnered with United Datatech (electronic recyclers), Santa Clara County's HHW, program, a Saratoga Boy Scout troop, and Pizza My Heart to coordinate a successful community service.	WVCWP Staff, HHW staff and WVC municipal staff

West Valley Communities

			WVCWP conducted a survey with all participants to find out where they would dispose of fluorescent bulbs and gave everyone an HHW information booklet which lists places to "drop off" used hazardous items (including fluorescent bulbs). Also conducted a Mercury fever thermometer exchange, providing 26 digital solar thermometers to participants.	
TARGETED OUTREACH & SCHOOLS				
Targeted Schools	Expand Outreach to Teachers and Students	Schools Outreach: Watershed Ed. Curriculum Continue to build on 5th grade curriculum for WVCWP classroom watershed presentations, consistent with state required education standards. Expand outreach efforts by developing scripts based on state standards, or text books, for other grade levels in response to teacher interest. Evaluate effectiveness and appeal by soliciting teachers' & students' evaluations.	WVCWP staff made outreach presentations to two 5th grade classes, one 4th grade class, one 2nd-3rd grade class and 2 Kindergarten classes. Student's retention of stormdrain messages and recommended steps to protect their watershed was measured by developing a quiz for 4th and 5th grade students. The Science teacher administered the quiz three weeks after the classes participated in the watershed activity. Responses showed that sixty-five out of sixty-eight students were able to correctly list two actions that they would take to protect their local watersheds. Two sample quizzes with students' responses are included after the evaluation at the end of this report section. Development of an appropriate script for Kindergarten students was a focus of the 06-07 outreach efforts. The interactive presentations developed for the Kindergarten classes were well-received by teachers and students.	WVCWP Staff

Schools	feedback from Teachers and Students	classrooms Conduct water quality protection education or presentations in local schools, using *Enviroscape* and/or other methods to engage students in Watershed campaign messages.	students, parents and teachers. The hardcover book *"All The Way to The Ocean"* is presented to teachers who welcome WVCWP presentations into their classrooms. The book can be shared amongst teachers, and read to new classes each year or borrowed by parents to read to younger siblings, so that the message of stormdrains being linked to the Bay and the Ocean is shared with others. It is hoped that this permanent classroom resource will also remind teachers that stormwater presentations are available to their classes. Three "All The Way to the Ocean" books donated (1 Sacred Heart, 1 St Mary's, 1 Allen at Steinbeck) *Guadalupe Elementary, San Jose 10-23-07* **25 5th grade students** participated in a demonstration and activity. Using a simple model, WVCWP staff, working with Environmental Volunteers docents, demonstrated the role of watersheds and wetlands as a filter of sediments and pollutants and how wetlands act as a retainer for water and a refuge for many different organisms. Students built a model using interactive watershed and wetland kits. Students learned about protecting San Francisco Bay emphasizing runoff, wetlands, marshes, filter, absorption, and pollutants. *K.R. Smith Elementary, San Jose 12-12-06* WVCWP staff, working with Environmental Volunteer docents gave Twenty-one **2nd and 3rd grade students** an opportunity to participate in an interactive Water Cycle demonstration and related activities, to understand how we use and reuse water. WVCWP's Intern developed a	arrangement w/ Teachers

			song to help students remember the stages of the Water Cycle and the concept of Runoff. All students learned the words to the song with enthusiasm. The presentation emphasized evaporation, condensation, precipitation, transpiration, absorption, percolation, run-off, aquifer, groundwater, water table and the understanding that the amount of water on Earth now is the same amount there has always been and the same amount there always will be. After the presentation students were asked to place water words on the water cycle board in the correct location; **all students gave correct responses.** *Sacred Heart Private School, Saratoga* - Presentations *for* 4th and 5th grade Science classes on *3-28-07* **68 students** participated in Enviroscape watershed presentations to learn about reduction of pesticides, proper car washing, erosion control, litter prevention and trash cleanup, safe disposal of mercury products and using HHW for household hazardous waste. West Valley Staff customized curriculum to meet the Science teacher's needs (correlated to state standards for appropriate grade). Pencils engraved with the Clean Water Program's website and stormdrain slogans were distributed to students & teachers. Water vocabulary words (i.e. watershed, runoff, stormdrain, wetlands, pollutants and household hazardous waste) were written on the white board and emphasized throughout the presentation. Three weeks after the presentation sixty-eight students completed a watershed quiz developed by WVCWP staff. Sample quizzes with student responses are provided after the evaluation at the

			end of this section. *St. Mary's School, Los Gatos,* Kindergarten on *5-21-07* For this class of **30 Kindergartners**, the students were split into 2 groups. One group identified storm drains and used trash grabbers and gloves to pick up debris around the school yard. The second group participated in an Enviroscape activity whereby students added pollutants to the watershed, used sprayers to make rain and witnessed the effect that runoff has on the wildlife that live in and around the wetlands and the Bay. The Enviroscape watershed model activity showed children how daily behaviors can contribute to pollution in our local creeks and the Bay. Solutions to pollution were offered and reviewed during a wrap-up question period. West Valley staff built on last year's first-time experience presenting to a Kindergarten class, by redeveloping the script to make it more appropriate for kindergarteners. *Allen at Steinback School, San Jose 5-25-07* Kindergarten This class of **24 students** participated in the same activities as those described above for St. Mary's School.	
Targeted Schools	Expand Outreach to Teachers and Students	General Schools Outreach	**City of Campbell – Arbor Day Event** 4-26-07 This event was open to the general public. Arbor Day events were held at two schools with the intention of engaging teachers, students and parents. Campbell was honored for 25 years of Arbor Day events, and chose to celebrate via tree planting events at Capri Elementary and Rosemary Elementary.	City of Campbell PW staff

West Valley Communities

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 06-07 ANNUAL REPORT

Source	WP Task	FY06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
			The Celebration included members of the City Council, Park and Recreation Commission, city and school district staff and approximately **300 students**. Campbell's Parks Maintenance Supervisor, who is well-trained in IPM, spoke about the City's Urban Trees program. The program offered an opportunity for everyone to become acquainted with the City's success in tree care and the benefits of trees for our air and water.	
Targeted Schools	Expand Outreach to Teachers and Students	General Schools Outreach	**Town of Los Gatos – Public Works Week Corp Yard/ Stormwater Tour** held on 5-23-07 This event was open to the general public, but was targeted at schools, with extensive outreach planned for teachers and students. The outreach was successful and resulted in at least **96** students viewing stormwater-related displays and equipment: *Rolling Hills Middle School (serving Campbell, LG, Saratoga)* 58 - 6th graders, with 4 parents and teachers *Hillbrook Elementary School, Los Gatos* 38 - 2nd graders, with 10 parents and teachers Along with Public Works staff, the event also involved 4 Town of Los Gatos officials: The Town Manager, Mayor, Vice Mayor and 2 Parking & Transportation Commissioners. The event involved a tour of the Public Works	Town of Los Gatos Public Works staff WVCWP Program Manager

			maintenance yard and educational presentations at various tables staffed by PW employees and WVCWP Program Manager. Public Works staff showed students how to operate the various vehicles and machines. Tables were staffed with spokespersons representative of a variety of agencies and departments, e.g. the Street Sweeper, the Code Enforcement Officer, Los Gatos – Monte Sereno Police and Park Service Officers. Display tables showcased give-away-items, educational materials and stormdrain maintenance and protection activities. The WVCWP Manager staffed a Stormwater table displaying the watershed model, photos of litter in the creeks, and a storm drain model to show the difference between a sewer drain and a storm drain. Students received a brief presentation about watersheds and stormwater pollution, with an emphasis on litter, which students can help to prevent. Students went home with "goody bags" containing brochures showing drop-off locations for safe disposal of mercury products, Watershed Watch tattoos, and WVCWP pencils with stormwater messages and the WVCWP website address.	
Targeted Schools	Expand Outreach to Teachers and Students	General Schools Outreach	City of Saratoga staff and WVCWP worked with a Boy Scout (Eagle Scout candidate) to develop a "*Manual for E-Waste Recycling Events*" for general use, and to help any group wanting to hold an E-Waste event at City of Saratoga's North Campus site. WVCWP staff and City of Saratoga PW staff worked with this Scout to integrate knowledge he had gained from his	WVCWP Manager City of Saratoga PW staff

TARGETED OUTREACH				
Targeted Business	URMP	Mercury Pollution Prevention Plan Obtain or develop outreach material for distribution by IND Inspectors on Mercury Pollution Prevention and the proper disposal of fluorescent lights and batteries.	A new HHW information booklet, *What You Don't Know About Mercury May be Harmful to Your Health,* which lists places to "drop off" used hazardous items (including fluorescent bulbs) is being distributed. The IND inspectors said that businesses are very familiar with fluorescent bulb disposal requirements. WVCWP staff employed other public venues and events to distribute the information.	WVCWP w/ Sr. Haz Mat Specialist
Targeted Business	Permit Provision C.4	Education Distribute BMP materials during routine inspections of food facilities and automotive businesses. Discuss relevant educational material with businesses cited for potential stormwater violations.	During FY06-07, WVCWP supported West Valley Sanitation District (WVSD) staff by continuing an outreach strategy to report restaurants that have failed to use effective grease control BMPs. The WVCWP Inspector requests a copy of the restaurant's latest grease trap cleaning records. If the food facility does not have cleaning records or an invoice, the business is referred to the WV Sanitation District for follow up. The WVSD also provides an outreach poster to the business. This very effective poster emphasizes the importance of using BMPs and conducting good housekeeping and maintenance procedures.	SCC Fire; WV Inspector coordinate with WVSD
Reporting	NPDES Permit, Provision C.4	Evaluation/ Reporting Document or estimate (when possible) numbers of residents, students, municipal staff etc. reached by outreach efforts. Report number of calls, website hits and circulation or readership for newspapers or newsletters.	Events *September 16, 2006 Coastal Clean-up Day* – 40 student volunteers (via contact with staff at local high school) *April 18, 2007 Sacred Heart/ Wildcat Creek*– 42 students & parents *May 19, 2007, Nat'l River Clean-up Day* – 19 volunteers Families of over 1500 Westmont High School students	WVCWP Staff

FY 06-07 ANNUAL REPORT

Source	WP Task	FY06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
Public Information/Participation Program EVALUATION – WVCWP PROJECTS				

Outreach – MATERIALS DISTRIBUTION:
The "Grow It Guide" (laminated, "fan-out" guide about less toxic controls for garden pests) has been one of the most popular outreach items among WVC's residents, both in general, and among the Garden Centers. However, WVCWP's supply of these items is running low. These are expensive to print, and are only reasonably priced when ordered in extremely large quantities. In FY 07-08, SCVURPPP intends to coordinate a bulk printing of Grow It Guides: this will facilitate increased distribution of this outreach piece at local West Valley events and venues.

Outreach – MEDIA BUYS FOR EVENT PUBLICITY:
In FY 05-06, WVCWP spent several thousand dollars to promote a free WVC E-Waste event; approximately 250 cars came through the event. Many of the drivers showed up with the news ad in hand. For FY 06-07, WVCWP chose to test less expensive methods of outreach and monitor the results. The 06-07 event was held at a different location, and three similar local events were offered by other agencies within the same month. Therefore, it's not possible to weigh the public response equally. However, the 06-07 E-Waste event did receive a respectable number of cars (170 drivers) even though no money had been spent on newspaper ads. According to the survey, the banner hanging at the site, prior to and during the event, was responsible for bringing in about 35% to 40% of the participants. WVCWP will continue to investigate reasonable and effective methods for advertising local events.

Outreach – PRESS RELEASE COVERAGE:
In the past, the WVC benefited from extensive media coverage in their local papers, which were delivered weekly to residents: the *Campbell Reporter*, the *Los Gatos Weekly Times* (also covered Monte Sereno), and the *Saratoga News*. All of these papers had been operating under the umbrella of "Silicon Valley Community Newspapers" (SVCN) and WVCWP staff had well-established contacts with SVCN staff. Unfortunately, a few of the reporters who enjoyed WVCWP's schools and outreach stories, and with whom WVCWP staff had developed a trusted working relationship, are no longer with the paper. During FY 06-07, all the SVCN papers were caught up in a process of acquisitions and mergers; this interfered with access to local reporters and coverage was limited for the WVCWP.

Targeted Outreach -- SCHOOLS: At Sacred Heart School, 68 students from a 4th grade and a 5th grade class participated in Enviroscape presentations. Emphasis was placed on relevant vocabulary. Three and a half weeks after the presentation, WVCWP Program Manager provided a watershed quiz for the teacher. Students completed the quiz as homework to evaluate their understanding and retention of watershed concepts. Students were asked to name two activities that they would do to help keep our creeks and Bay healthy. Sixty-eight students completed the watershed activity quiz. Sixty-five listed two activities that they would do to keep our local creeks and Bay healthy. Six students answered all eight questions correctly. Thirty-nine students said they would prevent litter or pick up trash. Six students will plant trees, plants, and flowers, (reduce impervious surface). One student would plant the "right kind" of plants (native plants). Three students would not wash cars in the driveway. Four students will pick up pet waste. Two students will put only water in the stormdrain. One

student (according to the quiz answer) will "reduce toxic chemical use and control pests naturally".				
Targeted Outreach -- PARTNERING WITH OTHER ENVIRONMENTAL SCHOOLS OUTREACH PROGRAMS: The WVCWP Public Outreach Coordinator and Program Intern completed *Environmental Volunteers' (*EV) docent training in August and Sept. of 2006. West Valley staff volunteer as EV docents to promote natural science education and to provide Bay Area students (and teachers) with insights from an urban runoff perspective. This docent training also serves to broaden staff's knowledge for WVCWP classroom watershed presentations.

Project Summary

In May – July 2007, the Bay Area Pollution Prevention Group (BAPPG) coordinated a regional collection event for mercury thermometers and other mercury-containing devices. Together, 20 participating agencies and organizations collected **4,264** thermometers, 21 thermostats and 16 pounds of bottled elemental mercury at **30 one-day and ongoing events**. The BAPPG coordinated this regional effort, building capacity on how to conduct an exchange, organizing and developing regional advertising and outreach materials, developing a regional website and phone number with all event dates, hours and location.

The BAPPG coordinated with the Media Relations Committee of the Bay Area Clean Water Agencies and Bay Area Stormwater Agencies Association to develop press releases and a media kit. In addition, the BAPPG worked with the Media Relations consultant, O'Rorke for paid radio and newspaper advertising.

Follow up Questions from the

Classroom Watershed Activity

For questions 1- 5 please make a √ checkmark by the correct answer or answers.

1. A **Watershed** is

   a. A reservoir to store rainwater for use in times of dry weather or drought

   -1 b. All the creeks and streams that flow into the Bay or ocean

   c. All the land area that drains into a particular creek or body of water

2. **Runoff** is a word that describes

   a. The water that overflows from a clogged storm drain during heavy rains

   b. All of the rain, melting snow, and sprinkler water, that is <u>not</u> absorbed or infiltrated into the ground before it reaches the creeks or Bay

   c. Neither of the above

3. A **Storm Drain** helps to protect neighborhoods from flooding during heavy rains. In Santa Clara Valley the water that goes into a storm drain

   a. flows through a pipe system to a water treatment plant for removal of pollutants such as, pet waste, car oil, paint, exhaust particles, brake pad dust, car-wash water, pesticides, fertilizers and litter before it is released into the Bay

   b. flows directly into our local creeks and eventually into the San Francisco Bay

   c. can be found in a home in a bathtub, a kitchen sink, or in a toilet

-1 4. **Most water pollution is now caused by**

   a. industries or big manufacturing businesses

   b. some of people's every day activities

5. **Fluorescent bulbs** save energy and contain mercury. **When they burn out**

   a. put them carefully in the recycle bin

   b. Check (Santa Clara County <u>H</u>ousehold <u>H</u>azardous <u>W</u>aste) at <u>www.hhw.org</u> to find many safe, legal drop-off locations.

6. **Other than recycling, write down <u>two more things</u> that you will DO <u>or</u> NOT DO to help keep our creeks and Bay healthy for aquatic life and for people.**

   reduce toxic cemical use

   control pests naturaly

Thank you for keeping our Creeks clean!

All Correct

Nicholle

Follow up Questions from the

Classroom Watershed Activity

For questions 1- 5 please make a √ checkmark by the correct answer or answers.

1. A **Watershed** is
   a. A reservoir to store rainwater for use in times of dry weather or drought
   b. All the creeks and streams that flow into the Bay or ocean
   ✓ c. All the land area that drains into a particular creek or body of water
2. **Runoff** is a word that describes
   a. The water that overflows from a clogged storm drain during heavy rains
   ✓ b. All of the rain, melting snow, and sprinkler water, that is <u>not</u> absorbed or infiltrated into the ground before it reaches the creeks or Bay
   c. Neither of the above
3. A **Storm Drain** helps to protect neighborhoods from flooding during heavy rains. In Santa Clara Valley the water that goes into a storm drain
   a. flows through a pipe system to a water treatment plant for removal of pollutants such as, pet waste, car oil, paint, exhaust particles, brake pad dust, car-wash water, pesticides, fertilizers and litter before it is released into the Bay
   ✓ b. flows directly into our local creeks and eventually into the San Francisco Bay
   c. can be found in a home in a bathtub, a kitchen sink, or in a toilet
4. **Most water pollution is now caused by**
   a. industries or big manufacturing businesses
   ✓ b. some of people's every day activities
5. **Fluorescent bulbs** save energy and contain mercury. **When they burn out**
   ✓ a. put them carefully in the recycle bin
   ✓ b. Check (Santa Clara County <u>H</u>ousehold <u>H</u>azardous <u>W</u>aste) at <u>www.hhw.org</u> to find many safe, legal drop-off locations.
6. **Other than recycling, write down <u>two more things</u> that you will DO <u>or</u> NOT DO to help keep our creeks and Bay healthy for aquatic life and for people.**

To keep the bay healthy I will not wash my car in the driveway and pick up trash.

Thank you for keeping our Creeks clean!

FY 2006-2007 Work Plan Self Evaluation Matrix

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
	SCVURPPP PMP (I.A.1.)	Summary of Use Track and report use of pesticides on municipally owned property. Report on use of IPM practices.	Pesticides applied by municipal staff are reported monthly to the State of CA Dept. of Pesticide Regulation with copies of monthly reports forwarded to WVCWP for tracking purposes. All pesticides used by Pest Control Operators and Landscape Contractors are listed in the table "*Pesticide Usage by Contractors*" at the end of this Matrix, immediately following the Evaluation. IPM practices for each WV Community are listed in the Evaluation section at the end of this Matrix.	WVCWP to coordinate w/ Cmpbl: Sr. Civil Engr/ Public Works Supt/ Bldg Maint. Supvr LG: Parks Supt & Public Works Supervisor MS: City Manager/ Facility Mgr Stga: Parks, Bldg, Street Maint Supervisors
	SCVURPPP PMP (I.A.3.) PS #3	Implement BMPS and SOPS Continue to Implement standard operating procedures and Best Management Practices for any pesticide use by staff or contractors. Implement IPM practices as BMPs when possible.	During 06-07, the WVC continued to implement the Pest Management Performance Standard (PMPS). A Pest Specific IPM Plan for **"Managing Gophers with Less-Toxic Methods"** was developed in FY 06-07. "Standard Operating Procedures for Pesticide Management" are being followed by staff and contractors. BMPs in general continue to be effective. WVC work with contractors to find the least-toxic method to treat resistant pest problems. The WVC use less-toxic pest management methods in municipal facilities (parks & buildings) whenever practicable, based upon budget and effectiveness.	WVCWP to coordinate w/ Cmpbl: Sr. Civil Engr/ Public Works Supt/ Bldg Maint. Supvr LG: Parks Supt & Public Works Supervisor MS: City Manager/ Facility Mgr Stga: Parks, Bldg, Street Maint Supervisors

WVCWP and all WVC distribute the HHW brochure which informs residents about proper pesticide disposal.	WVCWP coordinate w/ Cmpbl: Sr. Civil Engr LG: PW Dir & Eng Div MS: City Manager Stga: PW Analyst
		Not in Work Plan – additional task undertaken	Sunnyvale staff presented to the IPM AHTG the idea of establishing a Green Gardener Program in Santa Clara Valley (see also Training Table for details). Oct. 12, 2006 through June 2007, WVCWP Pgm Mgr attended meetings and worked on implementation of this training program within Santa Clara County. The work has involved laying the groundwork for instituting this program, which is expected to achieve start-up in 2007-2008. This program targets an audience that WVC have found to be difficult to reach. The training and certification is aimed at yard maintenance businesses who appear to handle the bulk of yard activities in the WV. The Green Gardener certification course will be offered through local Adult Education Centers to provide IPM training for landscape maintenance workers based on similar successful programs in Santa Barbara and Santa Cruz counties.	WVCWP staff

FY 2006-2007 ANNUAL REPORT

Pesticide Management Activities Evaluation

PESTICIDE USAGE REDUCTION MEASURES – Pest Specific

CITY OF CAMPBELL

Campbell is implementing IPM in the following situations:

1) On-going - Yellowjackets:

- Campbell uses traps as the main means of control.
- Parks Maintenance staff tries to clean off picnic tables to prevent attracting wasps and ants.
- If a wasp nest in a tree requires treatment, the PCO uses a non-residual pesticide, and closes the hole in tree so wasps can't return to nest. Parks staff use home insulation spray foam to close the nest/hole; treatment has been successful in preventing return of wasps.
- Staff is evaluating new traps on an ongoing basis which use pheromone to attract wasps, dry fish to bring them into trap, and soap inside trap, which kills in 5-15 seconds

2) On-going - Weeds:

- Campbell uses a chipper to create mulch from green waste; this mulch is used for weed control wherever possible.
- Work Furlough labor hand hoes weeds where possible.
- Staff is investigating use of black plastic for 'solar control' of weeds on an ongoing basis, and determining spots where this would be feasible.
- Staff has been using the tractor with a boom mower for mowing weeds, instead of spraying roadsides and similar areas.

3) On going - Insects:

- In 02-03**,** Campbell controlled an Ash Whitefly infestation with a natural predator, a minute wasp. Since the wasps were ordered and released, they have continued to suppress the Whitefly population.
- Staff is identifying insects and utilizing IPM when appropriate instead of using insecticides. No new insects were identified in FY 06-07.

- Campbell has significantly reduced the spraying of pesticides for infestations of aphid and scale in the Urban forest by employing non-toxic horticultural oils and soaps.

Unfortunately, the City has certain species of street trees with aphid and scale infestations, and the less-toxic methods, including spraying with ultra-fine oil, have not had a noticeable impact on this pest population.

Despite the aphid and scale problem, the City has used NO organophosphate sprays to control the insects and **has implemented a program of injecting the infested trees with a systemic insecticide instead of a spray** (a spray might affect other areas than the targeted site; the systemic chemical stays within the tree). This is in keeping with the City of Campbell IPM Plan.

Staff will continue to investigate less-toxic control methods for aphids and scale insects on an ongoing basis.

3) Gopher Control: The City has implemented a policy of using mechanical traps for gophers instead of baits thus further reducing the use of pesticides.

4) IPM Solutions: City staff have participated in implementation of new County computerized "IPM Solutions Database Input/Response", which allows input of a pest problem and a response with IPM solutions. Staff refer to this database as needed.

RESULTS OF PESTICIDE USE REVIEW FY 06-07:

Campbell has taken a strong stance on pesticide use reduction in recent years, as evidenced by the extensive involvement in IPM training by City staff. The City's PW Superintendent and Parks Supervisor have actively been involved in regional IPM planning meetings and workshops.

Field Activities:

→ Through use of IPM practices Campbell was able to eliminate use of any OP pesticides for the past 5 years, (as compared to using 3.7 oz of diazinon for ant control in 01-02). Campbell has decreased its use of pesticides by using oils and soaps to control aphids and scale in the urban forest.

→ The City is making an effort to stress prevention (prevent weed growth, prevent pest infestations) where possible. Campbell is moving into use of IPM, mechanical and cultural controls, rather than chemical controls, as much as possible given budget and staff limitations.

→ Over the past several years, the Public Works Dept. has instituted improved methods of weed control in some parks and roadsides, such as using green waste to make wood chips, used as mulch to prevent weed growth. For the past 3 years, the City has been using its new specialized tractor with boom mower for mowing roadside & park weeds and to avoid spraying.

→ The City Public Works Dept. has instituted a policy of moving towards installation of more pest resistant trees and shrubs to minimize the need for pesticides; these efforts include removal of certain tree species (such as Tulip and Raywood Ash trees) from the City of Campbell's approved Street Tree List.

TOWN OF LOS GATOS

Los Gatos is implementing IPM in the following situations:

YELLOWJACKETS:

- Los Gatos uses traps as the main means of control.
- Parks staff uses steam cleaning on picnic tables to prevent attracting wasps & ants.

WEEDS:

- Los Gatos uses a chipper to create mulch from green waste; this mulch is used for weed control wherever possible.
- Los Gatos continues to arrange to receive free wood chippings from PG&E tree-trimming contractor. Mulch is used to reduce weed growth on roadsides, median islands, parking lot landscaping and in parks.
- Staff hand-pull weeds where feasible.
- Los Gatos purchased a flail mower to mow weeds in large areas.

RODENTS:

- Rats & mice are trapped by contractor (baits used as last resort).

INVASIVE SPECIES:

- Various species along Los Gatos Creek are hand-pulled by Native Plant Society volunteers.
- Scotch Broom is cut down by Parks staff and volunteers supervised by staff.

SCALE INFESTATION ON TULIP TREES

- Parks staff sprays trees with low concentration detergent & water

RESULTS OF PESTICIDE USE REVIEW FY 06-07:

→ Los Gatos staff has eliminated the use of any OP pesticides for the past 5 years (and in preceding years minimal OPs were used: such as .475 oz of diazinon for ant control in FY 01-02). Avoidance of OP use has been achieved through use of IPM practices and through seeking out less-toxic pesticides.

→ The Town is making an effort to stress prevention (prevent weed growth, prevent pest infestations) where possible. Los Gatos is moving into use of IPM and engineered, rather than chemical, controls as much as possible given budget and staff limitations.

→ In Town facilities, sanitation is being stressed as a means to prevent pest infestations (ants, mice, etc.) so that chemical controls will not be needed.

→ Over the past several years, the Public Works Dept. has instituted improved methods of weed control in some parks and roadsides, such as the arrangement for free wood chips which are used as mulch to prevent weed growth.

→ Los Gatos invested in purchase of a flail mower for staff to use in mowing weeds in large areas.

→ Volunteers work with the Public Works Dept. to trim back brush along the LG Creek Trail, and to remove invasive species.

CITY OF MONTE SERENO

The City of Monte Sereno has extremely limited City property – less than ¼ acre total of landscaped area. A landscaping contractor cares for City property, and is instructed to avoid use of pesticides. When gopher damage appears, the gophers are trapped. Weeds are hand-pulled.

CITY OF SARATOGA

Saratoga is implementing IPM in the following situations:

APHIDS:

2 trees with aphid problems were treated by injecting with a systemic pesticide to reduce to reduce environmental impact. The trees are located downtown with lots of foot traffic, where dripping was a problem, but the injections were able to manage the problem.

YELLOWJACKETS:

Saratoga uses traps as the main means of control.

Parks staff tries to clean off picnic tables every Monday to prevent attracting wasps & ants. The Parks Dept. purchased and installed 18 plastic tables (to replace existing wooden tables); the new tables are easier to keep clean and therefore attract fewer wasps.

No new nests were observed this year and NO Wasp Spray was used.

WEEDS:

Mulch spread last year has continued to be effective in FY 06-07 for weed control. *Last year Saratoga used free mulch from tree service contractor; this mulch is used for weed control wherever possible. Wood chips were dumped and spread as mulch on the unlandscaped medians on Fruitvale Ave (a major arterial)*. This action resulted in NO spraying on a half mile stretch of median which would otherwise be a problem area.

The Street Maintenance Dept. hired a landscape company to cut down roadside weeds twice this year instead of spraying; this cut pesticide applications from 4 to 2 for that task.

Hand hoeing/pulling of weeds is used where possible. Weekly walk-through with lots of hand weeding; Round-up is used when weeds begin to get out of control, such as springtime – the emphasis is on catching the problem early in an attempt to avoid having to spray larger areas later.

RODENTS:

A contractor is engaged to trap rodents in order to avoid poisonous baits; this is done when there is an outbreak of a number of rodents at once. A PCO was hired to use baits in areas where trapping failed. No pesticides were used within City Parks for mole / squirrel / gopher control. A Contractor (Ken Fuson) was hired to trap all reported invasions where turf or landscaping plants where threatened. The contractor sets up a cordoned off area using Macabee traps.

MEDIAN LANDSCAPING:

Policy is to install pest resistant shrubs and landscaping and avoid high-maintenance, low-pest resistance turf and greenery.

West Valley Communities

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2006-2007 ANNUAL REPORT

MICROSPRAY IRRIGATION:

Microspray irrigation systems have been installed in the Heritage Orchard and computerized irrigation systems are used in medians, to reduce any possible runoff which could carry pesticides. Installations are on-going as budget allows; 50% are now computerized. Main medians on major arterials have all been completed.

Two more Electronically Timed controllers were added to City landscaping to monitor water usage and avoid runoff. Nozzles continue to be modified to optimize spray.

RESULTS OF PESTICIDE USE REVIEW FY 06-07:

The City is making an effort to stress prevention (prevent weed growth, prevent pest infestations) where possible. Saratoga is using IPM and engineered, rather than chemical, controls as much as possible given budget and staff limitations.

Over the past several years, the Public Works Dept. has worked on landscape design and improved irrigation systems which will reduce need for pesticide/herbicide use, and reduce any potential runoff which could carry pesticides.

Natural insect controls include use of traps for wasp control, and soapy water for ant control.

Through these types of efforts, Saratoga is progressively reducing chemical pesticide use.

LOS GATOS

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2006-2007 ANNUAL REPORT

MERCURY POLLUTION PREVENTION ACTIVITES

FY 2006-2007 Work Plan Self Evaluation Matrix

Source	WP Task	Work Plan Tasks	Accomplishments	Responsible Party
Mercury Plan (I.D.)	Mercury Policy	Continue Implementation of municipal mercury policy requiring the virtual elimination of mercury from controllable sources in urban runoff from agency operations.	Los Gatos adopted a mercury elimination policy during FY 03-04 and has continued to phase out mercury containing products, with the exception of fluorescent bulbs.	Sr Engineering Technician and Facilities Manager
Mercury Plan (I.E.)	Guidelines for Hg Containing Products Reduction	Continue implementing phase-out of mercury-containing products (MCPs). Phase-out will coincide with replacement of MCPs on an as needed basis. Provide municipal staff with a reminder notice.	Reduction of mercury-containing products is being implemented. Research on alternative products has been conducted through the WVCWP. Non-mercury or low-mercury replacements are being used wherever feasible e.g., thermostats and fluorescent bulbs. West Valley Stormwater Reps review the mercury plan at least once a year during WVCWP meetings and coordinate follow up reminders with municipal staff.	WVCWP & Sr Engineering Technician to notify Facilities Manager
Mercury Plan (II.B. and V.A.)	Disposal Services	Provide Mercury Containing Product Disposal Services to Residents and Small Businesses	Accomplished through funding and participation in the County's HHW program for residents and small businesses.	Pub Works Director and Town Manager
Mercury Plan (II.C.)	Disposal of Mercury Containing Products	Track recycling, replacement, and reduction in use of mercury-containing products. If feasible, document quantities of fluorescent lamps from municipal buildings which are disposed of at hazardous waste collection facilities in FY 06-07.	The Town Facilities Manager continued documenting and reporting quantities of mercury-containing products disposed of by Town as hazardous waste in FY 06-07. Mercury-containing products (primarily fluorescent bulbs) are removed via a private HHW contractor. The Town disposed of approximately: 145 U-shaped and compact bulbs, 591 4-ft bulbs, and 70 8-ft. bulbs. Bins for recycling used batteries are distributed throughout Town departments so that batteries don't end up in the	Facilities Manager

LOS GATOS

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2006-2007 ANNUAL REPORT

Source	WP Task	Work Plan Tasks	Accomplishments	Responsible Party
			trash. All battery bins are disposed of through HHW.	
Mercury Plan (II.F)	Fluorescent Light Recycling Program	Continue participation in the Mercury Ad Hoc Task Group and support on-going implementation of an outreach program to educate small businesses and conditionally exempt small quantity generators about recycling fluorescent lights.	The WVCWP Manager helped develop local campaigns and outreach messages through SCVURPPP's Mercury Ad Hoc Task Group. WVCWP staff helped publicize the partnership with stores that provide convenient fluorescent bulb drop-off sites for local residents and small businesses.	SCVURPPP & WVCWP to coordinate w/ HHW staff
Mercury Plan (II.F and V.C.)	Work with HHW Collection Agencies	Help publicize fluorescent light recycling program. Coordinate educational outreach with fluorescent light recycling events sponsored by HHW.	HHW drop-off information was distributed to Bay Area residents at several community events in FY06-07. WVCWP staff surveyed local public attitudes and behavior in April to evaluate the success or need for outreach. Disposal of fluorescent bulbs was covered in classroom presentations. Other public education efforts are noted in the evaluation at the end of this section and in the Public Information & Participation section of this report.	WVCWP staff conducts public outreach and coordinates with WV Stormwater Rep

Mercury Pollution Prevention Activities Evaluation

On April 28, 2007 a Free Hazardous Waste Recycling Event and **Mercury Thermometer Exchange** was sponsored by the West Valley cities. WVCWP hired additional staff to help greet drivers and raise awareness in the local communities about the *Clean Water Program* and about proper disposal of mercury containing products. *What you Don't Know About Mercury* brochures, provided by HHW, relayed the message that mercury containing products such as fluorescent bulbs, batteries and fever thermometers can leach mercury (a neuron-toxin) into our landfill and ground water, and that by using a responsible drop-off location people can help keep mercury out of our creeks and the Bay. Recycled money pencils, printed with contact information for HHW were given to drivers as a gift for taking a survey. Most participants were interested and responded positively to receiving information with phone numbers and addresses of store partners that serve as collection sites. In the spring, Los Gatos provided information on safe disposal of fluorescent bulbs to 12,000 residential households via the *Vista*, the Town's newsletter. The Town posted information on its website in March notifying residents of the problems associated with mercury containing products, and convenient drop-off locations for fluorescent bulbs. At the Public Works Open House in May more than 100 Los Gatos students were given HHW *Mercury* brochures to take home and share with their families.

Drivers of 170 cars brought their used electronics for recycling to the E-waste collection on 4-28-07. WVCWP and HHW representatives were there to greet the cars and survey the participants about how they would currently dispose of fluorescent bulbs. The survey showed that 59 drivers thought it was okay to throw fluorescent bulbs in the trash, 14 would put them in a recycle bin, 41 would either not use fluorescent bulbs or did not know the safest way to dispose of them, and 56 respondents were committed to the practice of taking fluorescent bulbs to a designated store or HHW drop-off location.

West Valley Communities

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2006-2007 ANNUAL REPORT

Training Summary: Mercury

Training Description	Date	Attendees
WVCWP Training Meeting Presenter: Cheri Donnelly, Program Manager **Topics:** ▪ Reviewed Mercury Management Plan requirements ▪ Reviewed WV Work Plan for Mercury pollution prevention activities ▪ Fluorescent bulb recycling requirements for municipalities ▪ Need for documentation, reporting on bulb recycling ▪ SF Estuary Institute Booklet reviewed: *Contaminant Concentration in Fish from SF Bay, 2003*	October 3, 2006	**WVCWP (2)** Stormwater Discharge Inspector Program Assistant **Campbell (1)** Sr. Civil Engineer **Los Gatos (1)** Sr. Engineering Tech **Saratoga (1)** PW Analyst
Running an E-Waste Recycling Event: Background and Logistics Held at WVCWP office Speaker: Roy Hays, ECS Refining for United Data Tech Distributors **Topics:** ▪ Toxic metals in E-Waste ▪ What's involved in responsible recycling ▪ California regulations for recycling E-waste ▪ Setting up an E-waste recycling event ▪ Recycling event outreach to businesses, schools, residents	February 28, 2007	**WVCWP (2)** Program Manager Public Outreach Coordinator
WVCWP Training Meeting Presenter: Cheri Donnelly, Program Manager **Topics:** ▪ HG Thermometer Exchanges ▪ Upcoming WVC Thermometer + E-Waste Event and related Baywise Events	March 27, 2007	**WVCWP (2)** Stormwater Discharge Inspector Program Assistant **Campbell (1)** Sr. Engineer **Los Gatos (1)**

City of Monte Sereno

City of Saratoga

WEST VALLEY COMMUNITIES

FY 2006-2007 ANNUAL COPPER (and NICKEL) ACTION PLAN REPORT

COPPER ACTION PLAN/NICKEL ACTION PLAN

FY 2006-2007 Work Plan Self Evaluation Matrix

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
Vehicle Washing Operations	CB-1	Continue to distribute outreach materials on proper vehicle/equipment washing at Municipal counters/Post Offices/Libraries and public events, and post on WVCWP website.	The WVCWP "Car Wash Kit" flyer is available on the WVCWP website as a PDF. The site's Home page, www.cleancreeks.org displays a car wash graphic which links to the PDF. The printable flyer includes information on harmful effects of copper: http://www.cleancreeks.org/imagesnew/carwashweb.pdf Los Gatos' website offers a stormwater page that gives car-washing advice and take-action-type tips for water quality: http://www.town.los-gatos.ca.us/index.asp?NID=922	WVWCP staff
Vehicle Washing Operations	CB-1	Discuss copper impacts; teach proper methods of Car Washing and Pool & Spa drainage through use of Enviroscape watershed model in classroom presentations.	WVCWP's classroom presentations are scripted to include hands-on activities so that students can watch pollutants such as copper, from car-washing activities flow directly to the habitat of aquatic life. In addition to recommending the use of commercial car-wash facilities, WVCWP encourages washing on a gravel or lawn area where wash water is captured and infiltrated. The Inspector talks to students about car wash fundraisers and offers to help them set up the WVCWP car-wash kit prior to the event.	WVWCP staff
Vehicle Washing Operations	CB-1	Provide Car Wash Kit & education to charity car wash organizers. Solicit feedback from participants.	The WVCWP Stormwater Discharge Inspector is available to provide guidance on use of the WVCWP car-wash kit for local fundraising events. He usually attends the events to offer guidance and to help publicize the *West Valley Clean Water Program*. The kit uses about 400 ft. of hose and 300 ft. of extension cord. The car wash kit works extremely well, but can be difficult to set up. Photos of the kit in action are used for	WVWCP staff

WEST VALLEY COMMUNITIES

FY 2006-2007 ANNUAL COPPER (and NICKEL) ACTION PLAN REPORT

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
			classroom presentations.	
Vehicle Washing Operations	CB-1	Within the Planning permit process, require source control measures at facilities that will conduct vehicle/ equipment washing and maintenance activities (consistent with Permit Provision C.3.k).	The WVC did not have any regulated projects in FY06-07 that would conduct vehicle/equipment washing and maintenance activities.	Community Dev Directors and Planners
Vehicle Washing	CB-1	Promote improved car washing methods at auto businesses during inspections. Provide info on alternative arrangements for auto businesses with possible compliance problems.	The Stormwater Discharge Inspector distributes vehicle washing outreach materials during pro-active inspections and in relation to any actual or suspected vehicle washing incident. The Inspector is able to answer questions and offer suggestions with the help of visuals. A WVCWP-created fact sheet provides information on wastewater capture systems for automotive facilities. The fact sheet was designed to provide small-scale automotive facilities (those that find installing a full-fledged wash rack cost-prohibitive) with examples of inexpensive treatment technologies and distributor information. This method of outreach has been very effective.	WVWCP ICID Inspector
Vehicle Washing Operations	CB-1	Maintain recommended source controls for vehicle washing at City corporation yard.	Municipal staff follow best management practices and continue to ensure that vehicle wash systems in the Corp Yards prevent wash water runoff.	Pub Works Staff
Vehicle Washing Operations	CB-1	City staff will be familiar with Mobile Surface Cleaning BMPs or review the training video offered by BASMAA.	Municipal staff viewed the training video in 2006. They are familiar with the BMPs. To accommodate new-hires the WVCWP will provide a showing of the BASMAA video in FY07-08.	WVWCP ICID Inspector / Pub Works Supt
Industrial Copper Control	CB-3	Continue Industrial Inspection program with Fire Dept., including NOI sites and other industrial sites such as plating and metal finishing facilities, vehicle service facilities,	The City has an agreement with the SCC Fire Dept to conduct urban runoff inspections for machine shops and metal manufacturing facilities. Annual meetings are held between the WVCWP Manager and Inspector and the Fire	SCVC Fire Dept./ WV ICID Inspector WVCWP Manager

WEST VALLEY COMMUNITIES

FY 2006-2007 ANNUAL COPPER (and NICKEL) ACTION PLAN REPORT

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
		and other permitted sites.	Dept Haz Mat Specialist to ensure excellent communication and prompt follow-up to potential and actual violations. See Industrial Inspection (Section #2) of this report.	
Reducing Traffic Congestion Promoting Alternative Transporta-tion	CB-6/7	Within the Planning permit process encourage and promote best practicable transportation-related design practices and alternative modes of transportation.	The West Valley communities encourage best design practices wherever practicable. These small communities tend not to have large developments conducive to requiring alternative transportation within the permitting process. However, the cities and the Town encourage alternative transportation through other means: **Campbell** now has 3 stations for Light Rail service linking the City to stops throughout Santa Clara Valley. The City Redevelopment Agency was actively involved in this project. Campbell also provides bicycles for employees to ride while at work. Furthermore, the City supported *Bike to Work Day* on 5-19-07 by sending an email to all employees encouraging them to take advantage of the opportunity to ride a bike to work and to stop off at energizer stations such as the one at Whole Foods in Campbell for free beverages, snacks and encouragement. **Los Gatos** approved a large development project (Netflix campus**)** that provided bike racks throughout the commercial campus and bike lockers and shower facilities for employees who will ride their bikes to work. (approx. **260** employees). A future light rail station is also planned adjacent to this site. **Saratoga** Planners and Engineers work with project owners during the permitting process to encourage them to designate a portion of their site, if feasible and appropriate, for open space and walking trails. The City website encourages biking through its *Trail and Bike* maps, showing where striped bike lanes exist, and classifying bike routes according to safety. Pedestrian/equestrian trail maps are	Municipal Planners, Community Development Directors and Civil Engineers

WEST VALLEY COMMUNITIES

FY 2006-2007 ANNUAL COPPER (and NICKEL) ACTION PLAN REPORT

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
			posted to encourage walking as an alternative means of transportation. Link to all maps: http://www.saratoga.ca.us/trail_and_bike_maps.html **Monte Sereno, Los Gatos and Saratoga** are working on a shared project to develop bike paths along Hwy 9. The paths will increase safety and encourage more bicyclists to travel between the main downtown areas of these cities. In addition, the second phase of the project has been initiated which includes a pedestrian path along Highway 9.	
Reducing Traffic Congestion	CB-6/7	Continue to incorporate and support "Best Practices for Integrating Transportation and Land Use" as documented in the VTA's 2003 Community Design & Transportation Manual.	These elements remain in the WVCs' General Plans and serve as guiding principles for their Land Use and Transportation development.	Traffic Engineer
Watershed assessment and protection	CB-8	Implement agreed-upon guidelines & standards developed by the Water Resources Protection Collaborative for watershed protection.	Campbell, Los Gatos and Saratoga have participated in, and invested significant staff time in, the Water Resources Protection Collaborative. Two of the West Valley cities, Los Gatos and Saratoga, adopted the "Guidelines and Standards" in FY06-07 and Campbell and Monte Sereno will adopt them in FY07-08.	Community Development Directors and City Managers
Street sweeping & stormdrain O&M	CB-11	See Street Sweeping tasks on data collection and evaluation.	The West Valley communities conduct street sweeping in residential areas and more frequent sweeping in commercial areas. Sweeping data is collected and noted in Public Agency Activities (Section # 3) of this report.	
Street sweeping & stormdrain O&M	CB-11	Implement (as appropriate) identified improvements to current street sweeping and storm drain system O&M programs (within available budgets). Meet with WVSD for stormdrain O&M evaluation.	Storm Drain Maintenance and Street Sweeping are evaluated in Public Agency Activities (Section #3) of this report.	Pub Works Supt. with WVCWP guidance

WEST VALLEY COMMUNITIES

FY 2006-2007 ANNUAL COPPER (and NICKEL) ACTION PLAN REPORT

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
Street sweeping /stormdrain O&M	CB-11	Ensure that contractor maintains effective street sweeping equipment.	The West Valley cities do not hesitate to change sweeping contractors if the equipment being used does not measure up to municipal standards. The Town of Los Gatos recently purchased a new regenerative air sweeper.	Pub Works Maintenance Superintendents and Supervisors and Director of Pub Works
Outreach on pool, spa maintenance	CB-12	Continue to distribute pool & spa maintenance brochure via agency department counters and public places. As time permits, update WVCWP website with current Pool & Spa maintenance info.	WVCs distributed an additional 500 Pool brochures at Planning & Bldg Dept counters during FY06-07.	WVCWP with Municipal Staff
Outreach on pool, spa maintenance	CB-12	Continue to distribute pool & spa brochures as part of ICID WVC inspections.	The Inspector provides Pool & Spa brochures to residents and pool and spa companies as part of his IC/ID Inspection Program.	WV Inspector
Use of architectural copper	CB-21	Within the Planning permit process, discourage use of copper roofing and gutters.	All WV cities discourage copper architecture with the exception of Los Gatos, which is drafting a Residential Design Guideline that will seek to discourage architects and homeowners from using copper by informing them of its environmental implications. The Guideline will be finalized during FY 07-08.	Planning Dir/ Sr. Planner
Green Building	CB-21	Distribute outreach or expand website to promote Green Building principles. Provide examples of Green Building principles that were implemented.	All WVCs encourage and adhere to Green Building practices. The Cities plan to continue emphasizing green building principals in FY07-08. Los Gatos' website provides Green Building suggestions: http://www.town.los-gatos.ca.us/index.asp?NID=1213 Saratoga's website lists Alternative Building Materials http://www.saratoga.ca.us/pdf/SD-21Alt.bldg.materials.pdf	Planning Dir/ Sr. Planner
E-Waste Disposal	Proper Disposal of items that contain copper	Develop, advertise & conduct West Valley E-Waste Recycling Event **Additional Task – Not in Workplan**	*April 28, 2007* ***Free*** *Hazardous Waste Recycling Event* - for used TVs, monitors and other electronics was sponsored by the West Valley Cities. Drivers of 170 vehicles brought used electronics for recycling. Campbell held a free E-waste event on 3-16-07 at Prune Yard Tower, Campbell.	WVCWP Staff

Nickel Action Plan Tasks				
Control nickel discharge from construction sites	NB-1	Sediment Control: Continue to implement Construction Inspection Performance Standards (see Construction Inspection work plan section).	See Construction Inspection (Section #5) of this report.	Engineering and Building Inspectors WVCWP Inspector
Control nickel discharge from construction sites	NB-1	Training: Continue to have inspectors attend Regional Board/Program workshops on construction site management and learn latest erosion/sediment control techniques	See Construction Inspection Training (Section #5T) of this report.	Engineering and Building Inspectors WVCWP Inspector

Copper/Nickel Action Plan Evaluation

Car Wash Outreach Evaluation:

Car Washing has been highlighted on the WVCWP home page; the Car Wash Kit flyer was also sent to Fire Dept inspectors at their request. The Fire Dept inspects the West Valley Industrial and Commercial facilities, and reports incidents in residential areas if they notice violations while out in the field. WVCWP would like to have an all-inclusive, educational copper brochure, which would include car washing, architectural copper and pool draining in one piece. Staff have initiated a rough draft piece for this purpose. However, the WVCWP has not had the staff or funding to create an informative, attractive, finished piece that would be appropriate for mailing to residents and for distribution at events and municipal counters, etc.

Pool and Spa Maintenance:

The West Valley communities ordered 150 to 200 more brochures to give out at Planning counters and to new pool and spa owners. During FY06-07, The Town of Los Gatos' standard Conditions Of Approval for new homes with a pool were revised to require a sanitary sewer clean-out within 10 feet of the pool equipment, and a pervious landscaped area for pool filter washout.

Educational Outreach Evaluation:

The WVCWP will continue to provide outreach on car washing, vehicle maintenance, alternative transportation, and pool maintenance during in-class presentations and outreach at community events. WVCWP incorporated messages about activities that can prevent copper runoff as part of Kindergarten and 4th and 5th grade Enviroscape curriculum. These presentations have been successful in raising interest in proper car-washing and pool & spa maintenance methods. Staff have found that children seem especially receptive to the information about copper and car washing when they participate in the Enviroscape activity.

Street Sweeping:

The West Valley cities continued their street sweeping programs and submitted annual sweeping data to the Program. Los Gatos purchased a new PM-10

WEST VALLEY COMMUNITIES

FY 2006-2007 ANNUAL COPPER (and NICKEL) ACTION PLAN REPORT

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
regenerative street sweeper in FY05-06. The Town, by contract, used the new sweeper on Monte Sereno's streets. Campbell hired a new contractor for FY06-07 in order to employ effective, up-to-date equipment. In FY05-06, Campbell decided that the sweeping contractor did not have effective equipment, which required additional sweeping to get the job done effectively. The City is pleased with the results of the change in contractors. Saratoga's sweeping contractor uses two kinds of sweepers to address the different types of debris to be picked up. Saratoga is pleased with their contractor. Saratoga updated street sweeping maps to GIS street map format and posted them on the City's website in FY06-07. Street sweeping is very important to West Valley residents. If the streets are not swept on schedule City or Town staff receive phone calls to register complaints, even on holidays.

Trash Management

City of Campbell

Town of Los Gatos

City of Monte Sereno

City of Saratoga

TRASH INVENTORY & MANAGEMENT

FY 2006-2007 Work Plan Self Evaluation Matrix

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
Trash Work Plan	Strategy	Participate in Trash Ad Hoc Task Group and assist Program staff in developing an effective strategy for trash reduction in urban streams and waterways.	The West Valley Clean Water Program Mgr attended the Trash AHTG meetings and provided feedback from West Valley cities on implementation strategy and tools. Topics this year included discussion about the proposed content of a Trash Control Measures Tool Box and a Trash Sources and Pathways illustration.	WVCWP Mgr attends AHTG – WVCWP Mgr to lead follow-up discussions at West Valley monthly meetings
Trash Work Plan	Pilot Demonstration	Participate in Trash Ad Hoc Task Group and assist Program staff in implementing a Pilot Demonstration Project which focuses on documenting type and volume of trash potentially conveyed through a storm drain system.	The West Valley Clean Water Program Mgr attended the Trash AHTG meetings and provided input on behalf of West Valley cities regarding potential pilot demonstrations.	WVCWP Mgr with input from West Valley Municipal Stormwater Reps
Trash Work Plan	Identify and Prioritize Problem Areas	Continue to Identify and prioritize trash problem areas and other potential sources that may contribute to trash problems in urban streams and waterways. Revise problem area list, based on surveys & other relevant information.	West Valley's list of trash problem sites was revised after conducting assessments in FY06-07. WVCWP staff removed litter at several new locations where excessive litter was found near creeks or waterways. A review of the site list was conducted. This resulted in replacing several of the sites originally listed as West Valley's trash "problem areas" with sites that had a more direct connection to urban streams or waterways. A few sites were replaced because a few years of monitoring and cleanups demonstrated that trash there was less of an issue than originally believed; staff resources should be concentrated on other sites in order to be effective. Assessment also resulted in adding several new sites where trash appears to be more of an on-going problem.	WVCWP Staff to coordinate with municipal staff

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
Trash Work Plan	Evaluations	Continue to conduct trash evaluations in a subset of local trash problem areas using the using the Program's Urban Rapid Trash Assessment (RTA) protocol and/or the KAB Litter index.	WVCWP staff conducted **51 KAB** assessments at the identified sites and listed problem areas in West Valley communities. The number of assessments included: Campbell (23), Los Gatos (11), Monte Sereno (13), and Saratoga (4). Although KAB monitoring usually is limited to drive-by evaluations of a site, several KAB assessments were conducted simultaneously with removal of trash and debris by WVCWP staff. The *Trash Problem Area Activity* reports for each city are included at the end of this report section. WVCWP staff and citizen volunteers also conducted **10 urban rapid trash assessments (RTA)** at listed trash problem areas in Campbell (5), Los Gatos (2) and Saratoga (3). All RTA site assessments included removal of trash and debris by WVCWP staff and volunteers.	WVCWP Staff to coordinate with WV Municipal Staff and Citizen Volunteers
Trash Work Plan	Management Practices	Continue to identify and implement trash control measures, where practical and feasible, to reduce trash and debris.	To address litter and illegal dumping problems, WVCWP staff have incorporated a trash topic into every element of public education and outreach. West Valley inspectors for industrial / commercial and construction sites have been asked to be on the lookout for litter and illegal dumping. Inspectors have been told to consider an accumulation of debris at a site to be a violation of stormwater requirements and to refer such sites to the Stormwater Discharge Inspector. Other trash management activities conducted by West Valley communities include monitoring identified problem areas, holding volunteer cleanup events at problem sites, notifying Caltrans when exceptional litter or debris problems are noticed along highways or freeway ramps, conducting removal of trash and litter as needed at sites within municipal jurisdiction and removing trash at some sites in Caltrans' jurisdiction.	WVCWP Staff to coordinate with municipal staff

Campbell ♦ Los Gatos ♦ Monte Sereno ♦ Saratoga

FY 2006 - 2007 ANNUAL REPORT

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
See PI/P – Citizen Participation	Monitoring/Citizen Participation	Continue to promote citizen participation program to monitor trash in local creeks. Submit trash tally sheets to Program staff (element of Creek Keeper's Program).	WVCWP staff conducted three trash monitoring and cleanup events with student and citizen volunteers. The City of Campbell's Public Works Director, Public Works Superintendent and Mayor partnered with Caltrans, to hold a City-wide pick-up event on 5/19/07. Campbell's event included work on littered areas along railroad tracks and the freeway. Volunteers at all clean-up events were taught to categorize and tally (monitor) debris collected. Participants worked in groups using WVCWP trash tally forms to collect the data that helps identify trash sources and management actions. Summary sheets for these events are included at the end of this report section. Los Gatos held a cleanup event on Saturday (4-21-07). Fourteen volunteers spent several hours picking up roadside debris in downtown Los Gatos. They removed twelve bags of garbage from gutters, sidewalks, catch basins and planters. Most of the debris was leaves but other items included CDs, medicine bottles, lots of cigarette butts and egg cartons! Additionally, Los Gatos has "Adopt-a-Trail" volunteers who collected and monitored trash 6 times (every other month) alongside Los Gatos Creek Trail during FY06-07. A total of 16 bags of debris were collected, including plastic water bottles, power bar wrappers and pet waste bags.	WVCWP Staff to coordinate with municipal staff
Trash Work Plan	Report on Trash Mgmt Practices Implemented	Provide Program staff with specific information on trash management practices implemented within the city's jurisdiction using program-wide standardized format.	WVCWP staff used SCVURPPP's standardized reporting forms to provide data on trash monitoring and management activities at the listed problem sites. *Trash Problem Area Evaluation Results* for each West Valley city, as provided by the Program, are included at the end of this report section.	WVCWP Staff to coordinate with SCVURPPP
Trash Work Plan	Data Collection	Submit Urban RTA Survey forms, trash tally sheets and any other data collection tool to Program staff.	KAB and Urban RTA forms for WV cities were submitted to SCVURPPP in July 2007 for Program-wide analysis and reporting.	WVCWP staff

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
Citizen Participation	E-Waste Event	Safe Disposal of E-waste Provide an opportunity for citizens to participate in safe disposal of e-waste and mercury thermometers.	In response to last year's E-waste survey, local residents requested a second E-waste collection event for FY06-07. WVCWP staff partnered with United Datatech to collect electronic waste on 4-28-07. The community event was free and available to the general public. UDT guaranteed that all collected material would be recycled safely and would not be sent to foreign shores. The City of Saratoga provided the collection site. A total of 13,793 pounds of E-waste was collected and **170 drive-through participants** were served.	WVCWP staff and Municipal staff

Trash Inventory & Management Evaluation

Dumpster Area Inspections & Education for Local Businesses

The WVCWP Inspector checks the dumpster areas of the downtown restaurants in each of the West Valley communities for signs of illegal dumping or debris around open dumpsters. He provides urban runoff education as needed, including the importance of keeping dumpster lids closed, and locked if necessary. His method of informal visits and issuing *Notices To Comply* has helped to reduce the amount of trash-related dumpster violations over the past three years.

Educational Outreach to Students and Teachers in Local Schools

WVCWP staff responded to every opportunity to talk about trash and littering with students. The trash topic is always included in classroom Enviroscape presentations. This year a Saratoga private school (K-8) and parents partnered with WVCWP to hold a cleanup three weeks after WVCWP made presentations to 5th and 6th grade classes. In May and June, following WVCWP presentations, two local Kindergarten classes took a tour around their school to identify storm drains and to pick up any litter they could find.

Creek Keeper Events – Volunteer Participation - Trash Identification, Tallying & Pick-up

The WVCWP has been particularly successful from 2003 to 2007 recruiting student volunteers for creek cleanups and the task of trash tallying. Each event is opened with a brief talk on the trash problem affecting our creeks and Bay. Volunteers appear to be energized by the chance to make a difference. WVCWP talks include visual aids (enlarged photos of trash accumulation downstream, near the South Bay); these appear to make a major impression on volunteers. The WVCWP's trash tally form was designed to be easy for students to use. Categories on the form reflect the trash types that are most often found in West Valley locations. Trash summary forms which show tally sheets' totals for each cleanup event are included at the end of this report section.

Partnering with other Agencies to address the problems:

WVCWP's best chance for success in dealing with the trash problem is to partner with other agencies and work with a well-organized regional group. In January 2007, at the suggestion of Campbell's Public Works Director, WVCWP staff joined the Silicon Valley Anti-Litter Task Force (formerly called the Santa Clara County Litter Technical Advisory Committee). The meetings are led by SC County and the City of San Jose and have a large attendance. WVCWP staff participates in the Education Subcommittee meetings and Campbell's Public Works Director chairs the Finance Subcommittee. On May 19, 2007, the Silicon Valley Litter Campaign sponsored a well-publicized cleanup event called Great American Pick Up Day. WVCWP, on behalf of all West Valley cities, helped staff

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party

a site that was sponsored by the City of Campbell and joined volunteers that were supervised by Caltrans to collect freeway litter.

West Valley's Illegal dumping problem will be difficult to address without the help of law enforcement and other agencies. The City of San Jose has law enforcement staff that participates in the Silicon Valley Anti-Litter Task Force. The West Valley cities cannot afford Police or Sheriff Dept. staff time to enforce anti-litter laws. The environment around some WVC areas (quiet parking lots and sparsely populated roads which border creeks) appear to attract illegal dumpers from other cities, yet WVC law enforcement staff cannot continuously monitor these zones. For instance, the WVCWP Illegal Discharge Inspector responded to a call from a bicyclist who noticed several full trash bags dumped over the side of Prospect Road in Saratoga. When the Inspector visited the sparsely traveled site, he was forced to park the car on a narrow shoulder of road and could not descend the steep drop to where the trash had been tossed. Cleanup from this kind of dumping is too dangerous for WVCWP staff and municipal staff to address alone. Putting a stop to illegal dumping requires a regional and enforceable solution.

General Evaluation of Trash Management Activities

After several years of monitoring trash sites, WVCWP staff is familiar with the sites and the problems that need to be addressed. Two leading trash sources in West Valley communities are "Illegal dumping" and "vehicular litter" (found along highways, freeway-on-and-off-ramps, and smaller arterial roads). The type of litter that is retrieved is predominantly snack, food, beverage and other product packaging and cigarette butts. Several West Valley problem areas are in Caltrans' jurisdiction. In December 2006, the WVCWP Mgr called Caltrans about cleaning up 2 bags of trash dropped and scattered on Hwy 9 near a freeway ramp in Los Gatos. Caltrans responded that day.

Saratoga Creek at Big Basin Way and Sunnyvale-Saratoga Road is a heavily vegetated area that has been used for illegal dumping. It looks better than it did during FY05-06 because Saratoga's maintenance staff and Water District staff removed several illegally-dumped items including a gas water heater and large wrought iron fixtures from the creek banks. Last year the City's Code Enforcement Officer and the Sheriff's Dept agreed to keep an eye on the area. "No Dumping" signs have been posted in the parking lot area above the creek. The banks of the creek are very steep with litter lodged between trees and vegetation about 25 feet from the high-water line. WVCWP staff will continue to monitor and remove trash from the accessible areas at the edge of the downtown parking lot at least two times per year. This site remains one of Saratoga's prioritized problem areas.

While traveling to one of Los Gatos' listed problem sites, WV staff noticed another problem area near where Shannon Creek flows into Guadalupe Creek. Staff stopped to remove illegally-dumped items and collected several bags of debris from this rural setting along Hicks Road. A GIS map indicates that this area may not be within Town jurisdiction. However, the Town's maintenance crews said they would pick up debris if it is reported within Town limits and placed within the "right-of-way". This accumulation of dumped items along a rural road is an illegal dumping concern for all jurisdictions when the abandoned debris is hidden by natural vegetation and steep slopes and violators are not caught.

September 17, 2007

Mr. Bruce Wolfe
Regional Water Quality Control Board
San Francisco Bay Region
1515 Clay St., Suite 1400
Oakland, CA 94612

Subject: Milpitas Urban Runoff Program
FY 06-07 Annual Report

Dear Mr. Wolfe:

This report is submitted by the City of Milpitas, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a. of the Program's reissued municipal storm water National Pollutant Discharge Elimination System (NPDES) Permit (Order No. 01-024). The report summarizes activities performed during FY 06-07 in accordance with the Milpitas Urban Runoff Management Plan (URMP) submitted to the Regional Water Quality Control Board (RWQCB) on March 1, 2006, and the performance standards contained therein. No Milpitas response is required to the RWQCB's to the general comments on FY 05-06 Annual Report. There were no comments issued from RWQCB on FY 06-07 and FY 07-08 URMPs.

Contents of Report

The goals of this Annual Report are to: 1) document implementation of our FY 06-07 Work Plan during the past fiscal year, 2) evaluate program results for continuous improvement, and 3) share this information with other Co-permittees, municipal decision-makers, and the public. To accomplish these goals, the report contains the following sections:

1. Certification Statement
2. Acronyms
3. IC/ID Elimination Activities
4. Industrial/Commercial Discharge Control Program
5. Public Agency Activities
    - Public Streets, Roads & Highways O & M
    - Rural Roads Public Works O & M
    - Storm Drain O & M
    - Water Utility O & M
    - Other Public Agency Activities (Corp Yard, Parks, Ponds etc.)
6. New Development Planning Procedures
7. New Development Construction Activities
8. Public Information and Participation
9. Pest Management Activities
10. Mercury Pollution Prevention Activities
11. Copper Action Plan
12. Nickel Action Plan

13. Trash Inventory and Management
14. Staff Training Summary Table

Thank you for your review of this Annual Report. If you have any questions regarding the materials submitted, please contact Paramjit Uppal at (408) 586-3351 or me at (408) 586-3345.

Sincerely,

Kathleen Phalen, PE
Utility Engineer

Evaluation - ICID Elimination Activities

City staff, primarily through the Fire Department (quick response), Building and Engineering Divisions, responded to all reported ICID incidents. A summary of ICID incidents is provided in the attached ICID Enhanced Reporting Form. It categorizes each incident under the standard incident types.

All restaurants in Milpitas are inspected every three years by the Fire Department. The last inspection cycle was in FY 05-06. For the next two years, restaurants will be inspected on the basis of complaints or report of spills. The next comprehensive inspection round is due in FY 08-09.

The City of Milpitas responds to all the incidents that are reported. Outreach for proper disposal of applicable materials, including vehicle fluids, is provided to the business community in all appropriate circumstances. The annual HazMat and Industrial/Commercial inspections, coupled with education and outreach has led to better understanding of ICID elimination activities.

There were no specific comments from the Regional Board on the Milpitas FY 05-06 Annual Report. The Regional Board has not provided comments on the FY06-07 or FY 07-08 Work Plans.

ICID Incident Type (b)	Reporting Source					Incident Source								Location Date and Responsible Party	Enforcement Action						Comments
	City Inspector	Inter-Department	Other Agency	Citizen	Other	Resi.	Ind.	Com.	Auto Facility	Food Facility	Const. Site	Public Facility	Other/ Unknown		Verbal (d)	Warning (e)	Adm. (f)	Adm. W/ Penalty or Fine (g)	Criminal (h)	Referral for Enforcement (i)	
Gasoline spill	Ronald Bethke					X								1754 Pebble Beach Ct; 6/15/07	X						Antifreeze reported in street gutter. Property owner was made aware not to drain or place any hazardous substance into street or gutter.
Gasoline spill	Zulema Maggi						X							27 Park Victoria Dr, 1030/06; Phillips Conoco	X						Waste Oil spilled, absorbent applied & cleaned.
Gasoline spill	Jeff Maxwell							X						1771 Clear Lake Av; 12/15/06							Gasoline spill in parking lot of 7-11 on Clear Lake. Engine determined product sheen in parking lot & gutters leading away from the RP towards the East. Termination point was found at 3480 Landess. Product sheen limited to mixture with storm runoff in the gutters. Spill Fyter strip not activated & a positive indication not indication for hydrocarbon release. Engine advised Public works crew for
Gasoline spill	Bill Tsudama													Dixon Landing @ Milmont Dr; 1/8/07							Vehicle in the parking area dripping gas from the fuel tank. Absorbent was used to collect the gas. Tow service was called at the request of the vehicle owner.
Gasoline spill	Melvin Vaughn						X							1515 n. Milpitas Blvd; 11/26/06							Fuel leaked from a vehicle. The leak was caused by a punctured fuel tank. Plug-n-dike was used to stop top the leak. A small amount of fuel leaked onto the private road. Solid-absorb was applied and the tow driver removed the residue.
Gasoline spill	Kari Schmidt													1029 Montague Ex; 2/23/07							Semi diesel fuel tank ran over a pole in the business park's roadway. The tank lost approx. 100 gallons of fuel. The leak was slowed with plug-n-dike & due to rain, the fuel had flowed into storm drain. A dike was build around the drain & USAR1 was requested for additional absorbal. The trucking company owner was contacted & advised that he was responsible for the clean-up. He authorized Milpitas Fire to request a clean-up company & agreed to pay for expenses. Clean-up oversight was assumed by SCVWD. All required documentation on the incident & cleanup actions have been
Gasoline spill	Ronald Bethke					X								Jacklin Rd & N. Milpitas Bl	X						Oil spill in roadway & storm drain. Absorbent was placed on oil spill in roadway and storm drain.
	Galahad Zamora							X						S. Main St at S. Abel St; 2/23/07	X						Oil leaked from vehicle. The amount was less than 1 quart. Absorbent material was applied to contain this leak. House of Wreckers was advised of the need to properly dispose of oil soaked absorbent material.
Gasoline spill	Bill Tsudama							X						S. Main St @ Montague Ex; 2/18/07	X						Absorbent used to collect shock hydraulic fluid.
Misc. incidents	Kari Schmidt					X								1869 Yosemite Dr; 3/14/07	X						White substance washed down a storm drain. It was determined that the material was a concrete decorative. Absorb-all was used to contain the product and connecting drains were checked for additional material. Responsible party cleanup spill.
Misc. incidents	Don Ayres										X			KB - Thompson Machado; 2/26/07			Deficiency Notice	X			Pumping muddy water towards catch basin, insufficient catch basin protection, stockpiles un-covered etc., site citied with $100 fine. Issues were addressed.
Misc. incidents	Poh Yee										X			600 S. Abbott Ave; KB Homes		X					General cleanup after storm, catch basins, wattle etc. Work was completed.
Sanitary spill or leak	Paul Inouye	X												428 Barber Lane; 9/14/06; Mayflower Restaurant	X	X					Sanitary sewer backup caused interceptor to overflow. Property Management employee tried to flush / clean area with water resulting into storm drain discharge. This activity was stopped by Fire Engine upon arrival at scene. Customer was educated on how to use proper clean-up and

Evaluation - Industrial Commercial Discharge Control Program

During the past reporting period, the Hazardous Materials and Environmental Services Unit continued to implement its comprehensive inspection program. A total of 424 inspections were completed in FY 06-07. The inspection reports are summarized in the two attached Enhanced Reporting Forms. There are 478 permitted facilities that are included in the Fire Department's annual HazMat inspection program. Some of these 478 HazMat facilities, such as the badminton court or cell phone towers, generally do not have urban runoff issues to report, and are inspected mainly for safety purposes. Fire Department's HazMat inspectors try to inspect most of the listed HazMat facilities at least once a year. However, due to staffing shortage and the steady increase in the number of new facilities every year, it is not always possible to complete the inspections strictly within the one-year time frame. Restaurants are inspected every three years.

The program's main emphasis is that of education and outreach to prevent illegal discharge. The Fire Department has been inspecting businesses for hazardous material code compliance since the early 1980's. Thus, businesses have been educated to use best management practices for many years. Owing to annual inspections, education and outreach, we have seen an increase in awareness regarding proper storage, transportation, use and disposal of applicable materials. There is also a growing awareness of the importance of protecting the Bay from unauthorized releases.

The inspection process identifies best management practice violations and allows time for compliance. All violations are followed up and resolved. When the responsible business fails to comply, enforcement action such as issuance of administrative, civil or criminal citations is taken. If a severe violation is observed, such as material disposal into a storm drain, then a higher level of enforcement action, such as referral to the City or District Attorney, may be taken. For this past fiscal year, no referrals were necessary.

There were no specific comments from the Regional Board on the Milpitas FY 05-06 Annual Report. The Regional Board has not provided comments on the FY 06-07 or FY 07-08 Work Plans.

EVALUATION – PUBLIC STREETS, ROADS AND HIGHWAYS O& M

The City's contract street sweeping program is managed by the Maintenance Division of the Public Works Department and funded by the Solid Waste collection program. Allied Waste Industries performs the street sweeping as part of its municipal solid waste services contract. In FY 06-07, a total of more than 14,146 miles were swept and 8,946 cubic yards of debris was collected. The volume of debris did not include leaves removed. Leaf removal program is implemented in the winter months only.

Each established sweeping route is swept on the same day of the week. Residential, arterial, and commercial street sweeping is conducted two times a month. Industrial street sweeping is conducted four times a month. Open space areas and mountain roads that have no curb and gutter are not scheduled for routine sweeping, but are swept on an as-needed basis. On Monday and Friday, debris from the rural roads and the main arterial roads are collected.

The City conducts additional street sweeping in the period from early Fall into the winter months until leaf fall has been completed. During November and December, three primary areas are swept weekly to remove leaves. This practice effectively removes leaves, debris, and other pollutants, which would otherwise be washed into the storm drain system. Additional City crews are called upon to assist in the fall cleanup.

The City's contractor promptly removes street sweeping material and disposes of nearly all the materials at the Newby Island landfill. A significant amount of this material is taken to the compost area.

Milpitas has a highly effective street maintenance program. There are very few complaints. Complaints are promptly responded to ensure customer and community satisfaction. The City's field crews are trained annually to look for street sweeping BMP deficiencies in the field on a daily basis. Training is provided through Public Works Maintenance's Safety Program. Quarterly meetings are held to discuss BMP deficiencies and safety issues. BMP deficiencies are forwarded to the field employee's immediate supervisor and a service request is generated (record keeping and documentation) and directed to the appropriate department for resolution.

There were no specific comments from Regional Board on the Milpitas FY 05-06 Annual Report. The Regional Board has not provided comments on the FY 06-07 and FY 07-08 Work Plans.

G-2-12	Identify rural PW facilities	URMP page G-2-8	Identify rural PW facilities under the City's jurisdiction.	Completed. Rural facilities include the streets and roads in the undeveloped or low density Hillside Area east of Piedmont Road including the ED Levin County Regional Park. .	Ongoing	Public Works (David Gordillo) /Utility Engg.

EVALUATION – RURAL PUBLIC WORKS MAINTENANCE AND OPERATION

The rural roads are located in the part of City designated "Hillside". The City's General Plan designates the hilly undeveloped area east of Piedmont Road to be rural and recreational. There are 138.9 miles of City streets, of which rural roads are only 1.9 miles. Typically, open space areas and mountain roads that have no curb and gutter are not scheduled for routine sweeping, but are swept on an as-needed basis. Twice a week, Mondays and Fridays, debris is picked up by hand from the rural roads. These roads are not in the proximity of creeks. The dust swept by wind from these areas would typically accumulate in the City's valley floor areas, and would be removed during routine street sweeping.

The SCVURPP Program has established a definition for rural roads and provided guidelines on performance standards, BMPs and SOPs. The City's maintenance activities produce results consistent with the program guidelines. The public has long valued the natural ambience of the rural Hillside area and fully supports efforts to keep the area pristine.

There were no specific comments from Regional Board on the Milpitas FY 05-06 Annual Report. The Regional Board has not issued comments on the FY 06-07 and FY 07-08 Work Plans.

Evaluation - Storm Drain Operations and Maintenance

- Staff from police, fire, and public works continued to implement the City's SOP 8-6 titled " Response and Clean-up Guidelines for Hazardous and Non-Hazardous Material Releases including Discharges of Pollutants into Storm Drains and Water Courses (Urban Runoff Pollution Prevention)".

- City staff completed inspection and cleanup of the City's 78 outfalls in FY 03-04 and determined that ten needed repairs. Repairs of two were completed in FY 04/05 and remaining eight were completed in FY 05/06. City again inspected all 78 outfalls in FY 05/06 and found three that need repair. The outfalls were inspected in 06-07 and three more were determined to need repair.

- City staff performed the operation and maintenance tasks of the storm drain system; contractors were not used.

- Staff has not reported any problems with BMPS; no updates are planned at this time.

There were no specific comments from the Regional Board on the Milpitas FY 05-06 Annual Report. The Regional Board has not issued comments on the FY 06-07 or 07-08 Work Plans.

D-1	Inventory	URMP page D-5	Conduct Inventory of all key O & M activities, and identify routine and unplanned non-storm water discharges from these activities.	Last inventory was completed on 9/99. Completion of this activity is now scheduled for June 2008.	6/08	Public Works Maintenance (Steve Smith)/ Marilyn Nickel
D-4	WUPPP Utility Maintenance SOP	URMP page D-5	Develop WUPPP Utility Maintenance SOP.	Staff performed routine maintenance as needed. SOP is about 75% complete. Completion of this activity is now scheduled for June 2008.	6/08	Public Works Maintenance (Steve Smith)/ Marilyn Nickel
D-6	Individualized Training Plan	URMP page D-5	Develop Individualized Training Plan.	Staff received annual training. SOP is about 75% complete. Completion of this activity is now scheduled for June 2008.	6/08	Public Works Maintenance (Steve Smith)/ Marilyn Nickel
D-7	Training	URMP page D-5	Develop training program.	Staff was trained quarterly on Water Utility O & M.	6/08	Public Works Maintenance (Steve Smith)/ Marilyn Nickel
D-8	WUPPP	URMP page D-5	Implement pollution control measures identified in the WUPPP to manage chlorine, biocides, and algaecides and prevent erosion and sediments.	Since the WUPPP has not been completed, we did not formally implement WUPPP.	6/08	Public Works Maintenance (Steve Smith)/ Marilyn Nickel

Evaluation - Water Utility Operations and Maintenance

- Due to a shortage of staffing resources, we did not take the inventory of key discharges. It is now scheduled for completion by June 2008.
- Contractors are typically utilized to fix major water line breaks; however no repairs were contracted out in 06-07. There were no complaints about contractors not following BMPs to fix water line breaks.
- The first priority is to stop the flow of water.
- Staff has not reported any problems with BMPS; no updates are planned at this time.

There were no specific comments from the Regional Board on the Milpitas FY 05-06 Annual Report. The Regional Board has not issued comments on the FY 06-07 or FY 07-08 Work Plans.

E-C.3.n.5	Effectiveness Evaluation	URMP page E30	Collect information and report a summary of types of pesticide reduction measures	Started collecting data – 7/02 Group 1 and Group 2A projects are	Ongoing	Utility Engineering

[1] Provision C.3.n. requires this information for all projects which meet the Group 1 and Group 2 definitions. Program staff request that Co-permittees consider collecting this information for all projects (and inform Program staff of their decisions), so that there is sufficient data to conduct the alternative project size analysis. As the approach to the alternative project size analysis is further developed, the data needs will be better defined and communicated to the Co-permittees.

Implem. Id.	Activity	Item Source	Tasks Identified in FY 2006-2007 Work Plan	Status / Comments	Due Date (mo/yr)	Responsible Party (Lead)/ Coordinator
			required for C.3 development projects, and the percentage of projects for which pesticide reduction measures were required. (Model conditions of approval for pest resistant landscaping features and practices and a reporting format for pesticide reduction measures are being prepared as part of Actions VII.A.1. and VII.A.4. of the Program's Pesticide Management Plan. Co-permittees are to begin to consider pest-resistant landscaping and design features in the design, landscaping and environmental reviews of development projects in FY 02-03, per Pesticide Management Plan Action VII.A.2.) Required by C.3.n.iii (Model COA 6/02)	reported in Significant Development Projects Table and effectiveness will be reported in next Annual Report.		(Marilyn Nickel) Land Development (Fariborz Heydari) PW (Steve Smith)

Evaluation – New Development Planning Procedures

The Planning, Engineering (Land Development, Design and Construction, Utility Engineering), and Building Divisions have coordinated to integrate the C.3 provisions into the City approval procedures. The City updated its Stormwater C.3 Guidebook in October 2005 to update O & M verification, Hydromodification, Group 2 definition and the waiver program.

General Plan Amendment: Staff updated the Open Space and Environmental Conservation Element of the General Plan as follows:

4.4 Water Quality and Conservation
For water supply, see Section 2.6: Public Utilities and Services.

Urban Runoff (Stormwater) Pollution Prevention

Urban runoff to Bay area creeks and San Francisco Bay contains pollutants that impair aquatic life. Bay fish contain elevated concentrations of mercury, PCBs, and other pollutants harmful to human health.

The California Regional Water Quality Control Board for the San Francisco Bay Region (Water Board) is responsible for enforcing the state's Porter-Cologne Water Quality Act and portions of the Federal Clean Water Act. The Water Board's *Water Quality Control Plan* (Basin Plan) identifies beneficial uses of San Francisco Bay and its tributaries and sets forth criteria and programs for protection of beneficial uses.

The Water Board has issued Municipal Stormwater Runoff National Pollutant Discharge Elimination System (NPDES) permits to Bay Area counties, water districts and municipalities. The permits mandate comprehensive programs to reduce urban runoff pollutants to the maximum extent practicable.

Milpitas, 12 other cities and towns in northern Santa Clara County, Santa Clara County, and the Santa Clara Valley Water District are Co-permittees under a single stormwater NPDES permit. The NPDES permit was issued in 1990 and reissued, with additional requirements, in 1995 and 2001.

Milpitas' *Urban Runoff Management Plan* details the City's comprehensive urban runoff pollution prevention program. To implement the plan, the City:

- Inspects municipal storm drains to eliminate illicit discharges and prevent illegal dumping.
- Inspects private industrial and commercial facilities and enforces requirements to implement Best Management Practices (BMPs) to reduce stormwater pollutants.
- Educates the public about stormwater pollution and prevention methods, and encourages public participation in program planning.
- Inspects construction sites and enforces requirements to implement BMPs to control erosion, sedimentation, and pollutants from construction activities.
- Requires applicants for development approvals to incorporate permanent pollution prevention measures into development projects.
- Advocates and employs Integrated Pest Management, an approach to pest management that relies on information about the life cycles of pests and their interaction with the environment. Pest control methods are applied with the most economical means and with the least possible hazard to people, property, and the environment.
- In cooperation with other agencies, monitors the occurrence and effects of stormwater pollutants in receiving waters.

The City has adopted Performance Standards for its pollution prevention activities. These Performance Standards are continuously improved, with an updated Performance Standard, or new Performance Standard, adopted each year.

Milpitas' *Urban Runoff and Watercourse Protection Ordinance* (Title XI, Chapter 16 of the Milpitas Municipal Code) expresses the City's authority to prohibit non-stormwater discharges to storm drains and to require residents and businesses to implement BMPs.

The 2001 reissued permit added more stringent requirements (Provision "C.3") to control runoff and runoff pollutants from new development. Applicable projects[1] must include facilities to treat runoff before it is discharged from the site. The City is required to inspect these facilities and ensure that they are operated and maintained in perpetuity.

In addition, the reissued permit requires the City to manage increases in peak runoff flow and increased runoff volume where necessary to prevent accelerated erosion of creek beds and banks.

In September 2005, the Milpitas Planning Commission agenda included the revision of the *Stormwater C.3 Guidebook* (adopted in September of 2003) to guide staff and applicants when implementing the new requirements.

Water Conservation

Prompted by the recent drought and water shortages, the City in 1993 adopted a Water Efficient Landscapes Ordinance and in 1994 adopted the Water Conservation Ordinance. The Ordinance seeks to promote conservation and efficient use of water by restricting new and rehabilitated landscaping for public agency projects, private commercial and industrial projects, and common-area landscaping in single-family and multifamily subdivisions and planned unit developments to maximum applied water allowances. It also requires preparation of landscape documentation packages for new and rehabilitated landscapes.

Recycled Water

The City of Milpitas desires to conserve potable water supplies and encourages the use of recycled water for appropriate uses. Potable water shall not be used for irrigation if recycled water is available except as specified in the City Municipal Code.

---

[1] Beginning October 15, 2003, the C.3 requirements are applied to projects that add or replace one acre or more of impervious surface. On or before October 20, 2005, the City will implement Group 2A which consists of an impervious area of 10,000 square feet on sites with a gas station, auto wrecking yard, loading docks and surface parking lots containing more than 10,000 square feet or more of impervious surface area, and vehicle or equipment maintenance areas, outdoor handling or storage of waste or hazardous materials, outdoor animal care, outdoor horticultural activities, and various other industrial and commercial uses where potential pollutant loading cannot be satisfactorily mitigated through other post-construction source control and site design practices. All other developments with impervious areas of 10,000 square feet or more will be required to implement C.3 requirements in accordance with the City's NPDES Permit. On or before August 15, 2006, this threshold is reduced to 10,000 square feet of impervious surface for all sites.

Guiding Principles

4.d-G-1. Assure reasonable protection of beneficial uses of creeks and South San Francisco Bay, and protect environmentally sensitive areas.

4.d-G-2. Comply with regulatory requirements pertaining to water quality.

4.d-G-3. Continuously improve implementation of stormwater pollution-prevention activities.

4.d-G-4. Mitigate the effects that land development can have on water quality.

4.d-G-5. Protect and enhance the quality of water resources in the Planning area.

4.d-G-6. Promote conservation and efficiency in the use of water.

Implementing Policies

4.d-P-1. Implement a comprehensive municipal stormwater pollution-prevention program in compliance with requirements of the Water Board's stormwater NPDES permit.

4.d-P-2. Minimize the use of pesticides that may effect water quality.

4.d-P-3. Work cooperatively with other cities, towns, and the Santa Clara Valley Water District to comply with regulations, reduce pollutants in runoff, and protect and enhance water resources in the Santa Clara Basin.

4.d-P-4. Where consistent with other policies, preserve, create, or restore riparian corridors and wetlands. Where possible, set back development from these areas sufficiently to maximize habitat values.

4.d-P-5. Where feasible, conform developments to natural landforms, avoid excessive grading and disturbance of vegetation and soils, retain native vegetation and significant trees, and maintain natural drainage patterns.

4.d-P-6. Where possible, avoid new outfalls to natural or earthen channels.

4.d-P-7. Applicable projects shall minimize directly connected impervious area by limiting the overall coverage of paving and roofs, directing runoff from impervious areas to adjacent pervious areas, and selecting permeable pavements and surface treatments.

4.d-P-8. Applicable projects shall incorporate facilities (BMPs) to treat stormwater before discharge from the site. The facilities shall be sized to meet regulatory requirements.

4.d-P-9. Applicable projects shall control peak flows and duration of runoff where required to prevent accelerated erosion of downstream watercourses.

4.d-P-10. Projects accommodating outdoor activities, including work areas, storage areas or other areas that are potential sources of stormwater pollutants, shall incorporate measures to control those pollutant sources to the maximum extent practicable.

4.d-P-11. Owners and operators of stormwater treatment facilities shall maintain those facilities and ensure they continue to be effective.

4.d-P-12. Construction sites shall incorporate measures to control erosion, sedimentation, and the generation of runoff pollutants to the maximum extent practicable. The design, scope and location of grading and related activities shall be designed to cause minimum disturbance to terrain and natural features. (Title II, Chapter 13 of the Municipal Code includes requirements for control of erosion and sedimentation during grading and construction.)

Required Actions

Milpitas Urban Runoff Management Program
(Details of implementation are in Title XI, Chapter 16 of the Municipal Code and in the Milpitas Urban Runoff Management Plan.)

4.d-A-1. Inspect commercial and industrial facilities and require BMPs.

4.d-A-2. Conduct surveillance and enforcement to reduce illegal dumping to storm drains.

4.d-A-3. Implement BMPs to minimize runoff pollutants during operation and maintenance of streets, roads, storm drains, and water supply mains and facilities.

4.d-A-4. Inspect construction sites and require erosion and sedimentation control and pollution-prevention BMPs.

4.d-A-5. Publicize and promote Integrated Pest Management and use Integrated Pest Management in maintenance of City parks and other facilities.

4.d-A-6. Update the Urban Runoff Management Plan as required in accordance with the Water Quality Control Board's Stormwater NPDES Permit.

Cooperative Efforts to Protect and Enhance Water Quality

4.d-A-7. Support and participate in the Santa Clara Valley Urban Runoff Pollution Prevention Program (SCVURPPP). Through SCVURPPP, support regional organizations and efforts, including the Bay Area Stormwater Management Agencies Association, to monitor and protect water quality in San Francisco Bay and its tributaries.

4.d-A-8. Coordinate with the Santa Clara Valley Water District to plan and implement multi-objective projects to reduce flood hazards, restore stream functions, and provide recreational resources along Berryessa Creek and other Milpitas creeks.

Development Requirements
(Details of implementation are in Title XI, Chapter 16 of the Municipal Code, the Milpitas Urban Runoff Management Plan, and the Milpitas Stormwater C.3 Guidebook.)

4.d-A-9. Provide guidelines to help applicants comply with stormwater requirements for new development.

4.d-A-10. Require developers of applicable projects to submit, with application for planning and zoning approval, a Stormwater Control Plan detailing the required stormwater pollution prevention and flow control measures incorporated into the project.

4.d-A-11. Require developers of applicable projects to prepare and submit, prior to final approval of construction, a Stormwater Control Operation and Maintenance Plan detailing maintenance requirements and methods for the stormwater treatment and flow control facilities incorporated into the project.

4.d-A-12. When conducting environmental reviews of proposed projects, evaluate water quality effects and identify appropriate mitigation measures.

4.d-A-13. Adopt and revise public works standards to minimize the impacts of development on water quality, provided that the new standards would also be consistent with other City policies.

4.d-A-14. Allow access to sites for City inspection of stormwater treatment and flow control facilities.

Other Activities: Staff also participated in program-level C3 Ad Hoc Committees to assist in the process of development of C3 provisions such as O & M Work Group and, Hydromodification Management Plan and the Development Review Process Work Group.

City management has worked with other Co-permittees in the development of a Waiver Program to address site impracticability, smart growth projects, and redevelopment areas pursuant to the Community Redevelopment Law (Health & Safety Code 330000 et. seq.), affordable and senor housing projects and brownfields that were approved by the RWQCB in June 2005. A Smart Growth Project being pursued by the City is the proposed Milpitas Transit Area Specific Plan. The plan proposes a mixed-use Transit Oriented Development in close proximity to the future Montague BART Station and two light rail stations. The project will consist of 7,185 dwelling units, 800,000 square feet of office, 175,000 square feet of hotel and 500,000 square feet of retail.

The City has developed a database to incorporate the O & M verification program. With this database, the City will be able to track all projects with permanent BMPs and their status including an inspection schedule. City staff have been trained to use this database.

A City consultant has also reviewed and provided guidance for preliminary identification and analysis of stormwater management options for the City's Library expansion project in November 2004.

The City is diligently working on meeting C3 requirements.

There were no specific comments from the Regional Board on the Milpitas FY 05-06 Annual Report. The Regional Board has not provided comments on the FY 06-07 or FY 07-08 Work Plans.

Additional Information – New Development Planning Procedures

BMP O & M Verification Program – C.3.e: As part of developing and implementing a program to verify that required treatment BMPs are properly maintained over the life of the project, the City has developed a database to track C.3 activities including the Operation and Maintenance Program. In this database, project information such as property address, contact person, responsible party, BMPs installed, BMPs maintenance and inspection frequency required etc. will be entered. The City will also develop criteria to inspect a subset of prioritized treatment measures for appropriate operation and maintenance on an annual basis.

The City has reviewed Program-provided examples of operation and maintenance-related ordinance, policy and agreement language and had formulated language for special conditions, O & M plans and agreements for incorporation into the City's project approval process. The approval process (for Private and Public Projects) is shown below:

C3 Procedure – Private Projects

Function	#	Activity	Description	Lead Section
Planning Approval	1	Inform applicants of C3 requirements	Provide forms: • C3 Data Form • C3 Waiver Form, if applicable. • C3 Alternative Compliance Form, if applicable.	**Planning**
	2	Receive application	Assign Permit # in database.	**Planning***
	3	Review applications for completeness and applicability of C3 requirements	For projects with more than 10,000 SF of new impervious surface area (created, added, or replaced impervious surface, including roof area, streets, and sidewalk). Threshold of 10,000 SF became effective April 15, 2005.	**Planning*** **Engineering***
	4	Assign conditions of approval for permanent urban runoff controls	Permanent controls to manage storm water peak volume and quality are mandated. Site Design Measures guidelines are used to determine the appropriate BMP for the specific site conditions. BMPs may include vegetative swales, detention basins etc. In accordance with Hydromodification Management Plan, BMPs will be selected to control peak discharges.	**Land Development Engineering***
	5	Assign conditions of approval for long-term O&M of permanent controls	a. City oversight to insure proper operation and maintenance occurs is mandated. b. Approve O&M Plan. (O&M Plan not required if project has received C3 waiver.)	**Land Development Engineering***

	6	Assign conditions of approval for other C3 elements	a. Pesticide reduction (choose plantings and design landscape to minimize use and runoff of pesticides) b. Source control (includes plumbing several areas to sanitary such as restaurant mat washing, trash enclosures, swimming pools, vehicle wash areas, fire sprinkler test water, etc) c. Site design (includes minimize land disturbance, minimize impervious surface area, minimum impact street and parking lot designs, downspouts to bubble-ups, microdetention at landscapes).	**a. Planning*** **b. Engineering*** **c. Land Development Engineering* Planning***
	7	Plan check proposed permanent controls	Perform detailed plan check for hydrology, hydraulically-sized detention basins, and vegetative swales, etc. Coordinate with SWPPP, erosion control plan and grading plan. Verify conditions of approval in #4 are met. Plan check for conditions of approval in #5. May include review and recordation of CC&Rs for O&M responsibility. Plan check for conditions of approval #6a - pesticide reduction measures. Plan check conditions of approval #6b - site design measures. Plan check for conditions of approval #6c - source control measures.	**Land Development Engineering***
Construction & Inspection	8	Inspect and accept installation of permanent controls	Inspect construction of detention basins, swales, fossil filter inserts, etc. in accordance with plans. Grading, landscape and site drainage would also be inspected.	**Public Works Inspection***
Post-Construction	9	Long-term Permanent Controls O&M	Oversee and administer program to ensure that controls are annually maintained. Develop and maintain a database, coordinate inspection, and follow up with enforcement issues.	**Utility Engineering***

	10	Perform annual inspections of permanent controls	Inspect a subset annually to insure they are operated and maintained appropriately. (Annual inspection not required if project has received C3 waiver.)	**Utility Engineering***
	11	Enforce O&M of permanent controls	Notify responsible City Department of needed O & M actions. Monitor for compliance. Elevate continuing noncompliance to City Manager if necessary.	**Utility Engineering***
	12	Reporting	Report program status to RWQCB.	**Utility Engineering**

* Requires input into C3 PTWin (CRW once in operation) database.

C3 Procedure – Public Projects

Function	#	Activity	Description	Lead Section
Planning Approval	1	Establish project requirements as part of project scope.		
	1a	Assign conditions for design including permanent urban runoff controls to project.	Permanent controls to manage storm water volume and quality are mandated. These controls might include detention basins, infiltration areas such as swales, fossil filter inserts at catch basins, etc. or offsite treatment. Hydromodification Management Plan.	**Design & Construction Engineering or Special Projects Engineering***
	1b	Assign conditions for long-term O&M of permanent controls to project.	c. City oversight to ensure proper operation and maintenance occurs is mandated. d. Develop O&M Plan. (O&M Plan not required if project has received C3 waiver.)	**Design & Construction Engineering or Special Projects Engineering***

	1c	Assign conditions for other C3 elements to project.	a. Pesticide reduction (choose plantings and design landscape to minimize use and runoff of pesticides) b. Source control (includes plumbing several areas to sanitary such as restaurant mat washing, trash enclosures, swimming pools, vehicle wash areas, fire sprinkler test water, etc) c. Site design (includes minimize land disturbance, minimize impervious surface area, minimum impact street and parking lot designs, downspouts to bubble-ups, microdetention at landscapes and cisterns).	**Design & Construction Engineering or Special Projects Engineering*** **Planning***
	2	Complete application upon CIP approval by City Council	For projects with more than 10,000 SF of new impervious surface area (created, added, or replaced impervious surface, including roof area, streets, and sidewalk). Review for Waiver and Alternative Compliance. Include C3 provisions even if waiver applies. Assign Urban Runoff Certification # in database. Complete forms: • C3 Data Form • C3 Waiver Form, if applicable. • C3 Alternative Compliance Form, if applicable.	**Design & Construction Engineering or Special Projects Engineering***

	3	Plan check proposed permanent controls	Perform detailed plan check for hydrology, hydraulically-size detention basins and vegetative swales etc. Coordination with SWPPP, erosion control plan, and grading plan. Verify scope of work items are met. Plan check for conditions of approval. Plan check for conditions of approval - pesticide measures. Plan check conditions of approval - site design measures. Plan check for conditions of approval - source control measures.	**Design & Construction Engineering or Special Projects Engineering***
Construction & Inspection	4	Inspect and accept installation of permanent controls	Inspect construction of detention basins, swales, etc in accordance with plans. Grading, landscape and site drainage would also be inspected.	**Public Works Inspection***
Post Construction	5	Long-term Permanent Controls O&M	Oversee and administer program to insure that controls are annually maintained. Develop and maintain a database, coordinate inspection, and follow up with enforcement issues.	**Utility Engineering***
	6	Perform annual inspections of permanent controls	Inspect a subset annually to insure they are operated and maintained appropriately.	**Utility Engineering***
	7	Enforce O&M of permanent controls	Notify responsible City Department of needed O & M actions. Monitor for compliance. Elevate continuing noncompliance to City Manager if necessary.	**Utility Engineering***
	8	Reporting	Report program status to RWQCB.	**Utility Engineering***

* Requires input into C3 PTWin (CRW once in operation) database.

Alternative Certification of Adherence to Design Criteria for Stormwater Treatment Measures – C.3.h: No alternative certification was approved in FY 06-07.

Site Design Measures Guidance & Standards Development – C.3.j: The City of Milpitas adopted a C.3 Guidebook in 2003 and updated it in 2005. The Stormwater C.3 Guidebook is designed for staff and developer use, outlining planning application submittal requirements, including Site Design Measures, to meet development standards for stormwater quality. This Guidebook, which is placed on the city web site, references other standard supporting documents such as BAASMA's design guidance manual for stormwater quality protection, "Start at the Source".

This Guidebook, in Step 3 of Chapter 3 addresses Design to Minimize Imperviousness through cluster development, optimizing the site layout, minimizing directly connected impervious area, detaining and retaining runoff throughout the site and through documentation of design.

General Plan – C.3.l: The General Plan was amended on January 17, 2006 to better implement the provisions of C.3.

Reporting – C.3.n: Please see attached "Development Projects Table".

Reporting Form for Planning Procedures Performance Standard - Summary Tables / Additional Information Significant Development Projects1 Reviewed and/or Approved During July 1, 2006 – June 30, 2007					
Private Projects					
Project Name – Piercey Toyota	Project Description - Automobile Dealership	Project Type – Commercial	Site Size (AC) – 10 acres	New Impervious Surface (AC) – 8.12 acres	Project Status – Approved 3/21/06. Occupancy in 2007.
Site Design: The automobile dealership consists of two buildings and concrete and asphalt paving. Planter curbs at the perimeter of the site at the north and west edge of the pavement area and throughout the balance of the site are flush with the adjacent paving to allow thru-site drainage. No outdoor storage of equipment or materials. No vehicle or equipment and maintenance allowed outdoors.	Source Control: Interior floor and car lift drains plumbed to sanitary sewer. Tanks, containers and sinks used for parts cleaning connected to sanitary sewer. Outdoor parking lot drain inlets with filter inserts Outdoor drains marked "No Dumping-Drains to Creek." Covered refuse area prevents rainwater entering dumpsters. Fire sprinkler test water drains to sanitary sewer Condensate drain lines discharge to sanitary sewer or to landscaped areas. No copper or other unprotected metal roofing, gutters, or trim. Covered on-site car wash facility. No water drains in or out due to grade breaks and inlet structures (catch basins and trench drains).	Treatment BMPs: Grassy swales located adjacent to I-880 to the west and along the property line to the north. Swales designed in accordance "Stormwater C.3 Guidebook" and illustrations and specifications in the "California Stormwater BMP Handbook for New Development and Redevelopment." Pavement areas that do not drain to grassy swales drain to inlets with filters.	Numeric Criteria: Flow-based and Volume-based criteria is used to design BMPs	O&M Responsibility: Operation and maintenance of Stormwater Management Facilities will be the responsibility of the property owner in perpetuity. Applicant will prepare and submit, for the City's review, an acceptable Stormwater Control Operation and Maintenance Agreement before sale, transfer, or permanent occupancy of the site. Owner responsible for maintenance of stormwater management facilities.	Pesticide Reduction Meas: Landscaping designed to minimize required irrigation, promote surface infiltration, and minimize use of fertilizers and pesticides. Pest-resistant plants will be selected, especially for locations adjacent to hardscape. Plants appropriate to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, use of recycled water (where applicable), and plant interactions. Native trees, shrubs and ground cover will be preserved to the maximum extent possible.

[1].

Reporting Form for Planning Procedures Performance Standard - Summary Tables / Additional Information

Significant Development Projects1 Reviewed and/or Approved During July 1, 2006 – June 30, 2007

Project Name – D.R. Horton, The Paragon	Project Description - 147 unit residential condominium development	Project Type - Residential	Site Size (AC) – 4.6 acres	New Impervious Surface (AC) – 3.87 acres	Project Status: Approved by Council on 12/5/05. Building permits issued 5/07.
Site Design. Project is a "Smart Growth," very high-density in-fill providing needed housing near transit. Project type presents limited opportunity for landscape-based BMPs. Conventional concrete, asphalt present at the existing site. Landscape planters and recreation area between the buildings and paved areas help reduce impervious areas for the site, but 84% of the site will be impervious. Hydrodynamic separators incorporated into the project storm drain system to remove trash, debris, and sediment.	Source Control. All inlets marked 'NO DUMPING – DRAINS TO THE BAY." Parking garage floor drain to the sanitary sewer. Car washing prohibited on site. Indoor refuse area plumbed to sanitary sewer. Roofing, gutter and trim cannot be made of copper or other unprotected metals that may leach into runoff. Plaza, sidewalk and parking lots shall be swept regularly to prevent the accumulation of litter and debris.	Treatment BMPs. Storm water will drain to landscape areas as feasible and the remaining will drain to public storm drains protected by hydrodynamic separators. Two vortex hydrodynamic separators used to remove litter and sediment before discharge to existing public storm drain.	Numeric Criteria: Flow-based criteria is used to design BMPs.	O&M Responsibility: Owner will operate and maintain the hydrodynamic separators. Owner will execute a Stormwater Management Facilities Operation and Maintenance Agreement and Right of Entry on form provided by City. The owner will submit, Stormwater Facilities O&M Plan including detailed maintenance requirements and a maintenance schedule.	Pesticide Reduction Measures: Landscaping designed to minimize irrigation and runoff, promote surface infiltration, and to minimize the use of fertilizers and pesticides. Pest-resistant plants especially for locations adjacent to hardscape.

Reporting Form for Planning Procedures Performance Standard - Summary Tables / Additional Information

Significant Development Projects1 Reviewed and/or Approved During July 1, 2006 – June 30, 2007

Project Name **Venture Corporation**	**Project Description -** Demolish 125,000 + sq ft industrial building and construct 10 industrial R&D condominium buildings	**Project Type –** **Industrial**	**Site Size (AC) –** **12.02 acres**	**New Impervious Surface (AC)** **0.1668 acres (7,269sf)**	**Project Status (Approval Date) –** March 22, 2006. Grading in fall 2006, complete occupancy expected in 2008/2009.
Site Design - 12 industrial buildings, driveways. 47% of the site (including the lagoon) will be pervious.	Source Control. All storm drain inlets marked "NO DUMPING – DRAINS TO OCEAN". All trash storage areas walled, covered, and enclosed in a concrete paved enclosure and designed to prohibit run-on from adjoining areas. All trash containers include attached lids that exclude rain. Timing and application methods of irrigation designed to minimize the runoff of excess irrigation water into the storm water conveyance system. Site landscaped to the maximum extent possible with native, drought-resistant plants to minimize post-construction irrigation requirements.	Treatment BMPs. Parking and roof areas will be treated by the use of biofiltration swales. Existing lagoon also provides additional treatment control. CDS Interceptor designed to capture runoff prior to discharge to the lagoon.	Numeric Criteria: Flow-based criteria used to design BMPs	O&M Responsibility**:** Owner shall enter into a contract with the city obliging the project proponent to maintain, repair and replace all BMPs as necessary into perpetuity. Owner shall inspect the CDS interceptor at the beginning and end of every rainy season. Sediment shall be removed every 12 months. The contents should be removed by a professional pumping company engaged in that line of work and familiar with regulations for disposal of such material.	Pesticide Reduction Measures: Landscaping will be designed to minimize required irrigation and runoff, to promote surface infiltration, and to minimize the use of fertilizers and pesticides that can contribute to stormwater pollution. Where possible, pest-resistant plants will be selected, especially for locations adjacent to hardscape. Plants will be selected appropriate to site soils, slopes, climate, sun, wind, rain, land use, air movement, ecological consistency, use of recycled water (where applicable), and plant interactions.

Reporting Form for Planning Procedures Performance Standard - Summary Tables / Additional Information

Significant Development Projects1 Reviewed and/or Approved During July 1, 2006 – June 30, 2007

Project Name **Public Storage**	**Project Description -** Demolish single-story self storage buildings and replace them with a three-story 88,530 square foot self storage building	**Project Type –** **Self Storage**	**Site Size (AC) –** **4.94 acres**	**New Impervious Surface (AC)** **0.0 acres)**	**Project Status (Approval Date) –** July 12, 2006. Demolition in 2006 and completion expected in 2007/2008.
Site Design. The Public Storage project will remove existing single story storage units and replace them with a 3-story storage building. Net pervious area will be reduced from 203,899 square feet to 199,534 square feet. Native trees, shrubs, and ground cover preserved to the maximum extent possible. Pest-resistant plants selected for locations adjacent to hardscape No outdoor storage of equipment or materials allowed. Prohibition of maintenance and washing of cars on site.	Source Control. Roof drains direct majority of roof water to landscape areas. Drains marked “No Dumping-Drains to Creek”. Interior floor drains plumbed to sanitary sewer. Fire sprinkler test and system drain water discharge to the sanitary sewer or landscape. Condensate drain lines discharge to sanitary sewer or to landscaped areas. No copper or other unprotected metal roofing, gutter, and trim. New hardscape areas drain to drain inlets with filter inserts. Sidewalks, parking lots, and drive aisles shall be swept regularly to prevent accumulation of litter and debris.	Treatment BMPs. Landscape swales with plantings appropriate for soil and moisture conditions. Area drains within the drive aisles fitted with filter inserts	Numeric Criteria: Flow-based criteria is used to design BMPs.	O&M Responsibility: Owner shall: Inspect soil in swale and planters for uniform percolation as specified in the Stormwater Control Operation and Maintenance Plan; Remove debris or sediment; Inspect inlets and side slopes of channels for evidence of erosion and shall repair; Iinspect drains for blockages and overflow; Replenish mulch as necessary; Inspected filters biannually and replace medium as needed; Inspectinlet markings inspected annually and replace or renewe as needed.	Pesticide Reduction Measures: Pest-resistant plants for locations adjacent to hardscape. Landscaping contractor contract to use Integrated Pest Management (IPM) principles. Landscaping designed to minimize required irrigation and runoff, to promote surface infiltration, and to minimize the use of fertilizers and pesticides.

Reporting Form for Planning Procedures Performance Standard - Summary Tables / Additional Information Significant Development Projects1 Reviewed and/or Approved During July 1, 2006 – June 30, 2007					
Project Name – D.R. Horton "Centria" condominium development	Project Description - Multistory condominium building with internal parking structures	Project Type - Residential	Site Size (AC) - 8.2 acres	New Impervious Surface (AC) – 6.09 acres	Project Status (Approval Date) – Approved by Planning Commission on 5/10/06. Construction completion expected in 2008/2009.
Site Design. Clustering of buildings, landscape swales in open space	Source Control - Covered trash areas, parking structure, street sweeping by the HOA, sanitary sewer drains for swimming pools and parking structure. Storm drain stenciling.	Treatment BMPs - Landscape swales adjacent to pedestrian trails, structural stormwater treatment units in locations that can't be drained to swales	Numeric Criteria: Flow-based criteria used to design BMPs	O&M Responsibility: Owner responsible for O & M. O&M agreement requires on-site recordkeeping for maintenance of the permanent BMPs.	Pesticide Reduction Measures: Pest resistance plant material will be used.

CITY OF MILPITAS
New Development Construction Activities – Self –Evaluation Matrix

Implem. Id.	Activity	Item Source	Tasks Identified in FY 2006-2007 Work Plan	Status / Comments	Due Date (mo/yr)	Responsible Party (Lead)/ Coordinator
F-6.B	Annual training	URMP page F-11	Provide annual training.	An Enforcement Response Plan was developed. City staff trained on revised Enforcement Response Plan in March 2006 and this will be an on going effort.	Annually or more frequently	Engineering and Building Division
F-6.C	Effective BMP and stormwater regulations	URMP page F-11	Inspectors will receive training and education on effective BMPs and stormwater regulations through workshops, literature reviews on environmental regulations, seminars and conferences conducted by Federal, State, and Local environmental organizations.	See Staff Training Summary at the end of this Report for information.	Ongoing - Program has scheduled info-sharing & training workshops	Engineering and Building Division
F-7.B	Distribution of new requirements	URMP page F-11	New materials will be developed and distributed when changes are made to the City's ordinances, conditions of approval, or other requirements for construction and post- construction BMPs.	C3 requirements were developed and information was provided to developers and contractors.	Ongoing	Engineering and Building Division

Evaluation - New Development Construction Procedures

City has been using a Construction Inspection Enforcement Response Plan since March 2006. This Plan includes newly developed documents such as Process Flow Chart, Urban Runoff Contractor Acknowledgement, Notice of Non-Compliance, Stop Work Notice, emergency Contractor Time and Materials Form, Deficiency Notice, updated SWPPP Checklist, and an updated City code.

City staff has been trained on this new Response Plan and other C3 requirements. City staff has also attended various training classes and workshops for these requirements. regulations.

The Special Project Team also held meetings on regular basis to review the requirements and recommendations of preventing pollution from entering the storm water system, and to revise the City's "front end" specifications to reflect those principles, along with other construction practices. To that end the City's front-end specifications were revised to strengthen contractor requirements to perform in compliance with proper urban runoff practices, and to allow the City better tools to enforce contractor compliance with the specifications.

Public works and Building inspectors coordinate to inspect and enforce construction related BMPs. They continue to improve developer and contractor understanding of requirements through education and staff's persistence. As noted on the ICID table, staff issued three citations with financial penalties to contractors. Developers and contractors have been increasingly more responsive to Storm Water Pollution Prevention Plan compliance.

There were no specific comments from the Regional Board on the Milpitas FY 05-06 Annual Report. The Regional Board has not issued comments on the FY 06-07 or FY 07-08 Work Plans.

CITY OF MILPITAS
PUBLIC INFORMATION/PARTICIPATION-SELF-EVALUATION MATRIX

Implem. Id.	Activity	Item Source	Tasks Identified in FY 2006-2007 Work Plan	Status / Comments	Due Date (mo/yr)	Responsible Party (Lead)/ Coordinator
Public Information / Participation						
I-1	Outreach distribution	URMP Page I-4	Use of reply card on utility bills and Annual Water Quality Report as mechanism to reach residential audience for outreach material. Media advertisements, stencil storm drains, slides at movie theaters.	Pollution prevention literature was distributed at City events and made available at the following City facilities: City Hall, Senior Center, Community Center, Sports Center, Library, Police Department and Fire Department. In addition, information was distributed to all employees. In 06/07 public service announcements were continuously aired on the City's Radio (1620 AM) and Cable TV (CTV 15) stations. Staff updated announcements frequently. Stormwater pollution prevention videos were aired on CTV 26 daily. We also ran 26 comic strips regarding Urban Runoff in the Milpitas Post.	Ongoing	Utility Engineering (Vency Woo)
I-2	Targeted Outreach	URMP Page I-5	Continue education efforts targeted towards residential customers, retail outlets, restaurants, commercial and industrial customers, new development and special interest groups.	Information provided to residential customers based on reply card requests, hotline requests, water bill messages and direct mailing of City publications including the Annual Water Quality Report and the Milpitas Yellow Pages. Information is also provided at City sponsored events. The Fire Department Inspectors distribute outreach materials at the time of inspection. Construction BMPs are provided to contractors and developers by the Building Division. The Milpitas Stormwater C.3 Guidebook was distributed to developers on as needed basis. The guidebook is also available on our web site. A letter was sent to all developers and contractors in October notifying them about	Ongoing	Utility Engineering (Vency Woo)

I-8	Effectiveness Evaluation	URMP Page I-6	Develop an evaluation procedure to gauge public (contractors, developers) knowledge of program goals, and effectiveness of PIP activities.	See Evaluation text.	Ongoing	Utility Engineering (Vency Woo)

Evaluation of Public Information / Participation Program Effectiveness

The City measures its outreach effectiveness by the number of outreach activities performed, the quality and quantity of materials distributed, and level of business and citizen participation in city sponsored special events.

In fiscal year 06/07, staff continued to distribute BMP guidelines to residents, developers and contractors during project planning and construction. In addition, staff performed outreach activities by means of direct mailings (such as Annual Residential Newsletter and Annual Consumer Confidence Report), literature distribution at City owned facilities, announcements through city media such as the City website, television and radio stations, and placing periodic advertisements in the Milpitas Yellow Pages and the Milpitas Post, (a local newspaper published weekly). As a result, we continued to receive a high number of literature request forms and hotline phone calls.

City sponsored events such as the Harvest Festival, the Annual Creek Clean Up event and the County Household Hazardous Waste drop off event continued to draw exceptional public participation and were excellent opportunities to educate and interact with a large number of residents.

The Kids in Creeks program was offered to all elementary school science specialists. The program provides tours of Berryessa Creek. Materials to test water samples, check water flow rates and learn about wildlife are provided by the City.

Summary of Evaluation of Public Information / Participation Program Effectiveness

Activity	Type of Outreach	Level of Implementation	Evaluation of Effectiveness
1. City facility literature distribution	General	Clean It, Grow It, Home Maintenance Tips, Keep Your Pool, Spa and Fountain Copper-free, Help Prevent Pollution of Our Creeks and Bay, Pests Bugging You, and Keeping it All in Tune	➢ 100 of each of these brochures were distributed at City facilities: City Hall, Senior Center, Community Center, Sports Center, Police Department, and Fire Department. ➢ Distributed materials to all permanent and temporary municipal employees. ➢ Distributed calendar/decals for city vehicles.
2. City Cable TV Channel 15 and 26 and Radio 1620 AM	General	Aired public service announcements on the City's Radio (1620 AM) and Cable TV (CTV 15 and CTV 26). Topics covered include: Mercury, IPM, Copper, HHW Recycling, Car Care Tips,	➢ 10,000 households subscribe to CTV 15 and CTV 26. Each TV PSA aired an average of 30 times per day. Announcements are periodically revised throughout the year. We also ran PSAs on our local radio station at the same frequency. However, we are unable to determine the number of

Activity	Type of Outreach	Level of Implementation	Evaluation of Effectiveness
		and Volunteer Opportunities.	residents reached through this effort. ➢ This year we continued airing pollution prevention videos. 15-30 second spots run in normal rotation at a frequency of 30x/day. The 10-15 minute videos air daily.
3. City of Milpitas Web site	General	Provide information on Urban Runoff, pollution prevention tips and programs	➢ The website was updated in 06/07 and is accessible to all City employees and 65,000 Milpitas residents as well as the general public. Information is made available throughout the year.
4. City sponsored events	General	Literature distribution and promotional products; pencils, decal calendars, sponges as well as educational displays	➢ Distributed 150 copies of each of the following brochures at City sponsored public events: • HHW Brochures • Grow It's • Pests Bugging You • Brochure Request Forms • Oil Recycling Jugs • Funnels • Pencils • Sponges • No Dumping Calendars ➢ Coordinated with County for the Household Hazardous Waste Drop-off event located in Milpitas in June 2007.
5. Welcome to Milpitas-City of Milpitas City Information Catalog/ Magazine	General	Pollution Prevention Tips	➢ Placed advertisements in the Welcome to Milpitas (City Information Magazine) promoting proper disposal of fluorescent light bulbs.
6. Urban Runoff Hotline	General	Maintain hotline # (408) 586-2605 to provide pollution prevention tips and receive request for information.	➢ Staff checked the hotline daily and responded to questions and literature requests immediately.
7. Newsletters and Newspapers	General	Milpitas Post (A local newspaper published	➢ Advertisements were placed in the Milpitas Post announcing volunteer

Activity	Type of Outreach	Level of Implementation	Evaluation of Effectiveness
		weekly), provide advertisements on special topic issues-automotive care, home repair, gardening, street sweeping etc.	opportunities and special events such as Pollution Prevention Week, and the HHW drop off event. All advertisements included pollution prevention messages. ➢ Placed advertisements in the Milpitas Yellow Pages promoting proper disposal of fluorescent light bulbs. ➢ Published 26 comic strips regarding Urban Runoff in the Milpitas Post.
8. Coordinate National Pollution Prevention Week	General	Distribute literature to the general public, display pollution prevention messages on City's web page, school outreach, residential door-hangers (Joint effort with Public Works, and Solid Waste).	➢ Aired public service announcements on the City's cable television and radio stations. ➢ Placed advertisements in the local newspaper. ➢ Distributed a door hanger containing pollution prevention messages with focus on litter prevention and recycling of mercury containing products, pesticides and other HHW items. ➢ City Council adopted a Proclamation for Pollution Prevention Week in September 2006.
9. Solid Waste Activities	General	Joint effort with Solid Waste (Household Hazardous Waste Programs), messages in newsletters, etc.	➢ Combined outreach efforts with other departments whenever possible
10. Outreach Distribution	General	Use of reply card on Annual Consumer Confidence Report for residential customers, distribute BMP material and stormwater pollution prevention material to City owned facilities, place and distribute BMP materials at Household Hazardous Waste	➢ The City received approximately 60 reply cards or information request forms. All calls and information request were answered expeditiously.

Activity	Type of Outreach	Level of Implementation	Evaluation of Effectiveness
		Collection Event and the Pollution Prevention Week events.	
11. Residential	Targeted	Mass mailings, City sponsored events	➢ The City's Annual Consumer Confidence Report, including pollution prevention articles and a brochure request from, was mailed to all postal accounts and included in the Finance Department's new utility account packet. ➢ Single Family residents were advised to keep leaves out of the storm drains during fall season via mail in October 2006. ➢ Residents were mailed a newsletter in January 2007, which contained messages: about used motor oil, brake and anti-freeze recycling, both curbside and referrals to local certified businesses; help keep street and the Bay clean; use the Yard Trimming Recycling Program to keep tree and brush debris of storm drains etc.
12. Retail Outlets	Targeted	Regional IPM Store Partnership Program	➢ The local Orchard Supply Hardware Store is participating in the IPM store partnership program. IPM brochures are available in a brochure rack.
13. Commercial/ Industrial Customers	Targeted	Target mailings to vehicle service shops, restaurants etc.	➢ Information was provided on request, during inspections or on as-needed basis ➢ Hazardous Materials inspectors distribute information in the field.
14. Special Interest Groups	Targeted	Provide information on request to target groups (garden clubs, auto enthusiasts, pool owners, handymen, construction workers, etc.)	➢ Information was provided on request, during inspections or on as-needed basis ➢ Mailed Rainy Season letter to developers. ➢ Keep your Pool, Spa, or Fountain Copper-Free was distributed to all pool permit applicants.

Activity	Type of Outreach	Level of Implementation	Evaluation of Effectiveness
15. Industrial / Commercial Discharges	Targeted	'Industrial BMPs', 'Mobile Cleaner BMPs', 'Preventing Storm Drain Pollution' and other program material	➢ Information was provided on request, during inspections or on as-needed basis.
16. New Development and Construction	Targeted	'Blueprint for a Clean Bay', 'BASMAA Recyclers and Disposal Services', 'BMPs for the construction industry (8 pamphlets)	➢ Information was provided on request, during inspections or on as-needed basis. ➢ The Milpitas Stormwater C.3 guidebook was distributed to developers as needed. It is also located on the City's website. ➢ Distributed a 24X36 blueprint with construction BMPs with all public and private project applications.
17. Illicit connection and illegal dumping elimination	Targeted	IC/ID cards to be distributed to industrial and commercial facilities	➢ Information was provided on request, during inspections or on as-needed basis
18. Pesticide Discharges	Targeted	Training programs for municipal employees, public education and outreach programs for residential and commercial pesticide users and pest control operators	➢ IPM messages were placed on our website, Radio and CTV. ➢ See Staff Training Table. ➢ IPM articles were placed in various newsletters and newspapers. See numbers 5 and 8 above.
19. Municipal Employee Training	Targeted	Continue employee yearly training on runoff pollution prevention. Maintain Employee awareness through workshops, newsletters and meetings	➢ See Staff Training Table at the end of this Report.
20. School outreach program	Educational	Involve schools in creek clean up event and the Kids in Creeks education program; stipends to encourage teacher participation in Watershed	➢ 270 students participated in the Kids in Creeks program and were escorted on field trips to Berryessa creek where they performed water quality tests. ➢ 89 volunteers from various schools

Activity	Type of Outreach	Level of Implementation	Evaluation of Effectiveness
		Education Workshops	participated in the annual Creek Clean Up event. A total of 1,261 lbs of trash was removed from Coyote, Penintencia, and Berryessa Creek. In addition, 880 pounds of recyclables were removed during the Creek Clean Up Event.
21. Coordinate creek clean up and Household Hazardous Waste disposal events	General	Advertise in Milpitas Post, schools, jointly with Santa Clara Valley Water District Coordinate for more citizen involvement on City events	➢ Articles were placed in the Milpitas Post. The event announcements also received priority placement on our website.
22. Watershed outreach and education	Watershed Outreach and Education	Materials will be distributed as necessary	➢ The City's website contains a link to the Watershed Watch website. ➢ The City of Milpitas helped staff Watershed Watch outreach events whenever possible.

There were no specific comments from Regional Board on the Milpitas FY 05-06 Annual Report. The Regional Board has not issued comments on the FY 06-07 or FY 07-08 Work Plans.

Evaluation – Pest Management

In FY 06-07 the City made a conscious effort to address pest management issues with an integrated approach. Pesticide use was incorporated as one management tool along with the application of cultural and mechanical control practices.

City staff licensed by the State as pesticide applicators have applied pesticides for the control of weeds and insects in landscaped areas around city buildings, in parks, in street medians, right-of-way areas, and in city street trees.

The City operates a Dog Park on leased land within Ed Levin County Park. The lease prohibits the use of pesticides and herbicides.

There were no specific comments from the Regional Board on the Milpitas FY 05-06 Annual Report. The Regional Board has not issued comments on the FY 06-07 or FY 07-08 Work Plans.

Trash Inventory and Management – Self-Evaluation Matrix

Implem. Id.	Activity	Item Source	Tasks Identified in FY 2006-2007 Work Plan	Status / Comments	Due Date (mo/yr)	Responsible Party (Lead)/ Coordinator
T-1	Revise and document existing trash problem areas list	URMP L-5 Page 1	Annually revise trash problem areas list on an as-needed basis. Revisions should be based on trash problem areas surveys and other relevant information.	Staff in Utility Engineering works with Public Works Dept., Neighborhood Services, and Solid Waste Sections to update and maintain a list of trash problem areas in the City. The 12 trash problem areas were inspected in 06-07 and were evaluated and reported to SCVURPPP in June 2007. As new information becomes available, staff will add them to the list of trash problem areas.	Ongoing	David Gordillo, Steve Smith (Public Works), Ralph Campa (Allied Waste), Gloria Anaya (Neighborhood Services), Paramjit Uppal (Utility Engineering)
T-2	Trash evaluations using RWQCB tools	URMP L-5 Page 1	Conduct trash evaluations using RWQCB's Rapid Trash Assessment protocol (Version 1.0) and/or the KAB litter index in a subset of trash problem areas	Staff evaluated 12 trash problem areas using the KAB Litter Index. Results were submitted to SCVURPP in June 2007 and are included in this report in the following table.	Ongoing	Dave Gordillo, Steve Smith (Public Works), Paramjit Uppal (Utility Engineering)
T-3	Identify and prioritize trash problem areas and sources	URMP L-5 Page 1	Continue identifying and prioritizing trash problem areas in urban streams and waterways and other potential sources that may contribute trash to those areas.	Staff has submitted information on the trash problem areas to SCVURPP. The Program has documented and converted the locations into spatial coordinates using a GIS. Maps were generated showing the distribution of trash problem areas across major Santa Clara Basin Watersheds. Utility Engineering staff are working with Public Works, Solid Waste and Neighborhood Services to continue to identifying high priority trash problem areas.	Ongoing	Dave Gordillo, Steve Smith (Public Works), Ralph Campa (Allied Waste), Gloria Anaya (Neighborhood Services), Paramjit Uppal (Utility Engineering)

Staff worked with the SCVURPPP last year and will continue to support the Program.	Ongoing	Dave Gordillo, Steve Smith (Public Works), Paramjit Uppal (Utility Engineering)
T-8	Survey forms and Tally sheets	1-6-06 SCVURPP Memo	Submit Urban Rapid Trash Assessment Survey Forms, Trash Item Tally Sheets and any other data collection tool to SCVURPPP program staff.	Staff gathered data from the different sections and submitted the information as well as results of evaluation using KAB Litter Index to SCVURPPP in a standardized format in June 2007.	Ongoing	Paramjit Uppal (Utility Engineering)
T-9	Trash Fact Sheets	1-6-06 SCVURPP Memo	Assist SCVURPPP to develop appropriate Trash Fact Sheets.	Staff worked with the SCVURPPP on this activity last year and will continue to support the Program.	Ongoing	Paramjit Uppal (Utility Engineering)

Evaluation – Trash Inventory and Management

This year, City of Milpitas continued the trash management activities in developed in previous years. The City identified 12 trash problem areas in FY 03-04 by conducting the Identification and Documentation of Known Trash Problem Areas Survey for problem areas in creeks, streets, parks and other land uses within urban areas. Data sources included trash complaint databases, maintenance and operation records, existing lists of trash hot spots, employees' knowledge. and creek clean-up locations. The Program mapped these locations into GIS to facilitate future evaluations.

In June 2007, Utility Engineering staff visited the 12 identified trash problem areas to assess the current status and extent of the problem. Staff used the Keep America Beautiful (KAB) Litter Index tool kit survey and checklists, including the Windshield Survey, the Trash Item Tally Worksheet, and Neighborhood Spotters Checklist to characterize the quality and quantity of trash. Five sites had KAB Index ratings of 1 (no litter), two sites had ratings between 1 and 2 (less than slightly littered), three sites had ratings of 2 (slightly littered), and the remaining two sites had ratings between 2 and 3 (less than littered). No sites reached the top level of 4 (extremely littered). The results are shown in the Trash problem Area Activity Report included in this 06-07 Annual Report.

The FY06/07 assessment shows that City of Milpitas trash reduction and abatement programs and services are effectively controlling trash. City services include:

- unlimited trash collection for single family residents,
- single-stream curbside recycling and no-cost recycling for businesses
- neighborhood clean-up events each spring and summer,
- free disposal of household items, remodeling debris, yard trims at Newby Island landfill;
- free household hazardous waste collection program;
- biweekly street sweeping;
- annual volunteer creek clean-up events;

City programs include:

- Utility Engineering - solid waste and yard waste recycling public outreach including annual promotional campaigns and school projects
- Public Works - litter control in parks, streets and right-of-way, landscaped areas, storm drain and catch basin cleaning,
- Planning - incentive programs such as the Annual Neighborhood Beautification Awards Program for residential and non-residential properties,
- Police - Abandoned Vehicle Abatement Program.
- Code enforcement - response to private property trash complaints,

The City values its neighborhood beautification efforts for their positive impacts on quality of life for the residents will continue its trash abatement efforts in the future.

There were no specific comments from Regional Board on the Milpitas FY 05-06 Annual Report. The Regional Board has not issued comments on the FY 06-07 or FY 07-08 Work Plans.

WEST VALLEY CLEAN WATER PROGRAM

September 15, 2007

Mr. Bruce Wolfe
Regional Water Quality Control Board
San Francisco Bay Region
1515 Clay St., Suite 1400
Oakland, CA 94612

Subject: West Valley Communities Urban Runoff Management Program
FY 2006-2007 Annual Report

Dear Mr. Wolfe:

This report is submitted by the West Valley Cities of Campbell, Monte Sereno, Saratoga, and the Town of Los Gatos, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a. of the Program's reissued municipal storm water NPDES Permit (Order No. 01-024). The report summarizes activities performed during FY 2006-2007 in accordance with the West Valley Communities' Urban Runoff Management Plan (URMP) submitted to the Regional Board on September 1, 2004 and the performance standards contained therein.

Contents of Report

The goals of this Annual Report are to: 1) concisely document implementation of our URMP and FY 06-07 work plan during the past fiscal year; 2) evaluate program results for continuous improvement; 3) comply with permit requirements; and 4) share this information with other Co-permittees, municipal decision-makers, and the public. To accomplish these goals, the report contains the following sections:

I. Attachments:
   1. Table of Contents
   2. Transmittal Letter with Program Highlights
   3. Certification Statement

8. Mercury Pollution Prevention Activities
9. Copper Action Plan / Nickel Action Plan
10. Trash Inventory and Management
11. Water Quality Monitoring and Watershed Management

Training Summaries are provided at the end of each element

PROGRAM HIGHLIGHTS AND ACCOMPLISHMENTS

During FY06-07, the West Valley Communities of Campbell, Los Gatos, Monte Sereno, and Saratoga continued efforts to implement their URMP to the maximum extent practicable. The activities that were implemented for each element of each Community's URMP are described in Chapter 14 of the Santa Clara Valley Urban Runoff Pollution Prevention Program's URMP. Highlights of the West Valley Communities accomplishments in various program elements are described below.

Preparation for the Municipal Regional Permit (MRP)

The proposed Municipal Regional Permit was the focus of a large amount of staff time for WVCWP and West Valley cities' municipal staff throughout FY 06-07. Numerous meetings, discussions and training related to the upcoming MRP took place. All staff endeavored to participate meaningfully during this important phase of MRP development. This included analysis of proposed requirements, discussion of feasibility of implementing those requirements within municipal budget limitations, and attempting to develop useful feedback to help move this process forward. In the May 2007 version of the Draft MRP, the WVCs were pleased to see some revisions which reflected the feedback that had been provided to Water Board staff.

Illicit Connection and Illegal Dumping Elimination Activities

The WVCWP Stormwater Discharge Inspector ("Inspector") coordinates all follow-up, reporting, and education related to illegal discharges to the storm drain system and responses to facility inspection referrals. To provide a better understanding of the WVCWP Inspector's role and to evaluate and confirm response procedures, the WVCWP Inspector and WVCWP Program Manager have held and attended meetings with Santa Clara County Dept of Environmental Health (regarding food facility inspections) and SCC Fire Dept (regarding industrial and commercial inspections) and municipal staff (regarding incident reports and construction inspections). The increase in communication has facilitated a system of referrals and follow-up that is working phenomenally well for the West Valley Cities. Every potential incident is investigated during resolution, and after compliance has been achieved. All facilities that were inspected for a potential violation and were subsequently brought into compliance are prioritized for at least one pro-active inspection the following year.

Public Agency Activities: Storm Drain Operation & Maintenance

The West Valley Sanitation District (WVSD) conducts inspections and cleaning of half of the West Valley Cities' storm drain system each year, except for Monte Sereno, where storm drain structures are inspected and cleaned annually. FY06-07 was the second year that WVSD

provided enhanced annual reports to the cities on their inspection and maintenance activities. The reports are generated from a database of numbered storm drain structures with corresponding street names. The number of pounds and types of debris removed during the inspection cycle is also reported.

In FY 06-07, the WV cities reviewed the second year's data, and were pleased to find that at least 65% of the structures in each city, where the system is inspected on a two-year cycle, were found to be free of debris such as leaves, paper, dirt, rocks, sand etc. and therefore, did not require any cleaning.

In Campbell, 584 out of 888 structures (66%) were clean and only 40 structures required a two-man cleaning crew. In Los Gatos 1,197 out of 1,575 structures (76%) were clean and only 49 structures required a two-man cleaning crew. In Monte Sereno 172 out of 365 structures (47%) were clean. Twenty-four structures required a two-man cleaning crew and of those, 19 were impacted by mud and dirt. Monte Sereno's storm drain system will remain, as it has been, on an annual inspection and cleaning program. In Saratoga 1,566 out of 2,182 structures (72%) were found clean and only 40 structures required a two-man cleaning crew.

The data shows that the biennial inspection cycle is more than adequate for most of West Valley's storm drain inlets and structures, as evidenced by the number of structures that are found clean on a 2-year cleaning cycle. It is therefore important to the West Valley cities to continue the current maintenance cycle in lieu of using limited resources on more frequent and unnecessary inspections. The information provided in the WVSD annual reports will facilitate the effective prioritization of appropriate locations and structures for more frequent annual inspections and cleaning. The WVSD reports were distributed at the annual Storm Drain workshop on 6-20-07 and will be reviewed by WV cities as they determine future management actions for stormdrain maintenance and for other activities such as trash management.

Planning Procedures & New Development

During FY 06-07, the West Valley communities devoted extensive time to reviewing and analyzing the proposed Municipal Regional Permit (MRP), especially regarding proposed C.3 revisions. These efforts led to an invitation to Water Board staff to attend one of the West Valley monthly meetings. The WVCs were pleased with the subsequent meeting on Dec. 19, 2006. WVCs were represented by decision-making staff (two Public Works Directors, one City Attorney) who appreciated the opportunity to speak directly with Water Board staff. In the spirit of reaching consensus, municipal decision-makers were able to inquire about the intent of proposed requirements, and to put forward ideas for feasible means of implementing the MRP, within the municipal framework. West Valley municipal staff came away with a greater understanding of the Water Board's objectives, and greater clarity on possible implementation of the related proposed requirements.

Public Information/ Participation

A broadened direction in PI/P this year involved partnering with a local non-profit environmental education program: Environmental Volunteers (EVs). The EV program trains docents to provide free environmental education activities in K-8 classrooms. WVCWP staff attended numerous trainings to become qualified EV docents. WV staff then led classroom presentations with other EV docents, and were able to incorporate new watershed-related messages into the educational activities. Overall, WVCWP staff reached 168 students directly through classroom presentations in FY 06-07.

Pesticide Management Activities

In FY 06-07, the WVCWP Manager, and other Co-permittees from SCVURPPP's IPM Ad Hoc Task Group, responded to a presentation and public outreach suggestion from Sunnyvale staff. The WVCWP manager invested time in evaluating and helping to lay the groundwork for instituting a new outreach program related to pesticide management. For the past several years, the Clean Water Program has been investigating ways to educate yard-maintenance workers. Finding a relevant means of contact has proven to be difficult, especially since many are not fluent in English. The "Green Gardener" program, offered in both Spanish and English, was developed to reach the small landscaping businesses, which are prevalent in the West Valley cities. The program (www.greengardener.org) has been successfully implemented in Santa Cruz and Santa Barbara counties. Via telephone conferences, the experienced agencies offered feedback and guidance to help the SCVURPPP set up a similar educational program in Santa Clara Valley. The curriculum, offered as adult education courses with hands-on training activities, teaches landscape maintenance practices that incorporate pollution prevention principles (IPM). At the end of FY06-07, the IPM AHTG held meetings to discuss applying for DPR grant money to set up a local program through Metropolitan Adult Education Program (MAEP).

Public Information/ Participation and Public Agency Activities

The Town of Los Gatos promoted a new outreach event to the public in May 2007. The "Public Works Week Corporation Yard Tour" drew in over **100** students, teachers and parents from local schools. The tour participants viewed Public Works and stormwater displays. Municipal staff demonstrated to the students the purpose and details of operation for the vehicles and machines, including the Town's new regenerative-air street-sweeper. Display tables were set up by spokespersons representative of a variety of agencies and departments, including the Street Sweeper, the Code Enforcement Officer, Park Service Officers and the Clean Water Program Manager. Visitors received a brief presentation about watersheds, viewed a model of a storm drain and learned where to recycle hazardous materials. Emphasis was placed on prevention of litter and illegal dumping. This event helped Los Gatos successfully generate support and understanding among residents for the Town's watershed protection issues.

These highlights help to demonstrate the West Valley Communities' commitment to implementing the requirements outlined in the Urban Runoff Management Plans.

Thank you for your review of this Annual Report. If you have any questions regarding the materials submitted, please contact me at 408.354.4734.

Very truly yours,

Cheryl C. Donnelly

Type of Incident	Complaints not Found	Incident Source	Report Source	Follow-up Action
• 1 Accidental Spill • 2 Complaint not found • 1 Paint Discharge • 1 Slurry Discharge **Total 5 Reported** .	The 2 'complaint not found' incidents were proactive inspections requested by the City. No violations were noticed.	• 1 Residential • 3 Construction Sites • 1 unknown (source of oil slick could not be determined)	• 1 IC/ID Inspector • 3 City Staff • 1 Citizen Complaint	• 5 Verbal Notices **Incident Status** 2 Resolved 2 Non Incidents 1 Referred to City staff

IC/ID Program Evaluation

IC/ID Program Background

Monte Sereno is a strictly residential city with about 3,700 residents. It covers 1.5 square miles and is surrounded by the Town of Los Gatos. The only non-residential sites in the City are a public elementary school and City Hall.

The IC/ID reports in the City are primarily related to new or re-development of single family homes and landscaping projects or pool discharges. The Construction Inspection Engineer says that developers and contractors are very eager to maintain a good reputation both with municipal staff and with the residents. If an incident occurs, it is often the result of an accident or it is related to a construction site. The City Engineering Inspector says that all it generally takes is one word

from municipal staff and the problem is addressed and resolved immediately.

Trend Analysis

In FY04-05 four (4) potential violations were investigated. Residential and construction sites were the incident sources for three (3) of the reported incidents. One (1) dumping report was not actually in the City's jurisdiction; it was trash noted on a median on Hwy 9, which is in Caltrans jurisdiction, although the City monitors the area because it does not have any other problem trash areas to address. The remaining three incidents were construction related. One involved a painter washing brushes where the runoff flowed to the street. Another was a result of pumping water from a hole dug for a swimming pool after it rained. Finally, a pile of dirt was left in the street during a landscaping job.

In FY05-06 the West Valley IC/ID inspector responded to eleven (11) reports of potential violations in Monte Sereno. Six (6) were considered non-incidents because one (1) was an allowable discharge and five (5) were complaints not found (although one of those was categorized as a miscellaneous incident). One miscellaneous incident was due to a broken sprinkler, which was fixed immediately. Finally the four violations that were given a verbal notice were, two (2) grey water discharges, one (1) landscape material dumping; and one (1) tracking soil discharge.

In FY06-07 the West Valley IC/ID inspector responded to five (5) reports of potential violations in Monte Sereno, of which, two (2) were considered non-incidents as they were proactive inspections where no violations were observed. Of the three violations, two active incidents were stopped and given verbal notices. For the other incident, the source could not be determined. All proactive inspections included outreach which WVCWP counts as verbal notice.

Overall, Monte Sereno had approximately half the number of actual violations (3) as it had in FY05-06 (5). The reporting is excellent as the City is small enough to afford frequent drive-by inspections of all residential areas. The Construction Inspectors are aware of each project that has a grading permit and keep a close watch over contractors. Three out of the five potential violations were reported by municipal staff to the West Valley Inspector for education and follow up. In FY 07-08, Monte Sereno staff will continue to dedicate significant resources towards educating developers and contractors about erosion control and storm water requirements.

Storm Drain Operations and Maintenance				
Annual Storm Drain Cleaning	2004 URMP	Annual Storm Drain Cleaning Continue contract w/ WVSD. Continue schedule/cycle for inspection and cleaning of storm drain system (two year cycle for residential). Contractor, *McKenna Landscape*, will clean high leaf drop and other noted areas more frequently and as needed. Monte Sereno is strictly residential, with a population of approx. 3,800.	WVSD performs systematic storm drain cleaning and inspection of storm drains annually. Because Monte Sereno is much smaller than the other 3 West Valley cities, all of the City's storm drain systems are inspected and cleaned each year (approximately 365 structures). City staff provides additional cleaning and removal of storm debris from all inlets and grates as needed.	City Manager & City Engineers to coordinate with WVSD per Agreement
Training - Annual WVSD/ Oper. & Maint. Meeting	2004 URMP	Training - Annual WVSD/ Oper. & Maint. Meeting Annual WVSD / Operations & Maint. Supervisors meeting - evaluate status of annual storm drain cleaning and provide training on maintenance issues. Rural public works BMPs and SOPs may be reviewed as part of the annual WVCWP Street Maintenance Supervisors meeting.	The annual WV Storm Drain Op & Maint. Supervisor's workshop was held on June 20, 2006. Monte Sereno Engineering staff attended. Staff from WVSD, WVCWP, and all other WV Communities also participated. Topics included: • WVSD Storm Drain structure cleaning & debris findings for each city (will be used to help identify additional trash problem areas) • Review of Emergency Response Procedures for SD overflow • Street sweeping for water quality including capture of fine particulate matter • Power Point Presentation on S/D cleaning and maintenance requirements and existing practices Round table discussion on all topics	Mtg lead by WVSD. Attended by City Engineers

Storm Drain Stencils or Signage	C/I item -Source Control Measure	Storm Drain Stencils or Signage Continue to replace and/or upgrade storm drain stencils or signage on storm drains or catch basins, as needed. Stencils will be replaced with the type of stencil most appropriate for the location.	Monte Sereno's storm drain signage is replaced if it becomes worn, or bent (if it is metal). The City uses thermoplastic stencils on all curbless inlets.	City Engineer coordinates with WVCWP
Trash Reduction	Trash Reduction Activities	Trash Reduction Public Works Maintenance Division will provide additional cleanup in trash problem spots discovered by staff or reported by the public.	During inspection and cleaning of storm drain structures, WVSD staff notes catch basins that require additional cleaning. The data will be helpful in locating trash problem areas by storm drain location.	WVSD and WVCWP provide evaluation results; City Engineer reviews and analyzes data. City Manager is the decision maker for management actions.
Street Sweeping/ Pavement Management				
Street Sweeping Program	URMP	a. Street Sweeping Program By contract – residential swept quarterly. High leaf drop and other noted areas cleaned more frequently and as needed (i.e., residential construction zones - swept by responsible party).	The Town of Los Gatos has been the contracted street sweeper for the City of Monte Sereno for several years. The Town uses a fairly new PM10-certified regenerative air sweeper to sweep Monte Sereno's residential streets quarterly. However, Monte Sereno plans to hire a new street sweeping contractor for FY07-08 because Los Gatos proposed a significant increase in rates for sweeping services in FY07-08. All residents and businesses are required to utilize large recycling bins for leaves and other yard waste as part of their trash collection service.	By Contract with Town of Los Gatos Streets Maintenance Division
Street Sweeping Data Collection	NPDES Permit	b. Street Sweeping Data Collection Collect and review street sweeping data and provide number of curb miles swept and cubic yards of debris to WVCWP for each Annual Report. Solicit feedback from Street Sweeping staff on effectiveness of	Street Sweeping data was collected and provided to the SCVURPPP at the end of the fiscal year. See the three-year comparison table in the evaluation section (below), for curb miles swept, debris collected and yard waste recycled.	Los Gatos Pub Works Specialist tracked data

		the program.		
Training	FY06-07 Work Plan, RWQCB comments	c. Training As needed, provide training meetings on collection of street sweeping data to appropriate municipal staff.	Training for municipal staff on street sweeping data collection requirements and preferred sweeping methods, was provided at WVCWP's June 20, 2007, Storm Drain Operation and Maintenance workshop. Engineering staff attended.	WVSD, WVCWP host workshop; Engineering staff and sweeping contractor attend
Corporation Yard				
The City of Monte Sereno does not have a corporation yard. The City does not have any City-owned vehicles.				
Rural Public Works Activities				
Rural Public Works Perf Std	Cont Imprvmt item	Performance Standards Implementation Evaluate the effectiveness of Rural Public Works BMPs used on applicable maintenance activities (if any) and report on it in the FY06-07 Annual Rpt	The model performance standard has been adopted. One rural public works project (RPW) on Withey Rd was contracted out to McKenna Landscaping during FY06-07. The City Engineer was on-site to ensure the erosion control and stormwater BMPs were implemented.	City Engineer
Rural Public Works Perf Std	Rural PW PS	Evaluate training materials to determine whether there is a need to obtain or develop additional educational tools (e.g. a video CD) for maintenance staff and for outreach to contractors.	WVCWP staff developed a short PowerPoint presentation consisting of Rural Public Works (RPW) standards and BMPs for staff training. The presentation slides are sufficient at this time. The West Valley Cities have very few rural public works projects. If staff or municipal contractors begin to construct more RPW projects, WVCWP staff will take photographs of the sites and the BMPs to include in training presentations.	WVCWP
Training	FY06-07 Work Plan	Appropriate staff will receive annual training on the use of current BMPs and SOPs, as noted in the performance standard. BMPs and SOPs may be reviewed as part of the annual WVCWP Street Maintenance Supervisors meeting.	City Engineering staff reviewed the Rural Public Works standards at a WVCWP workshop for storm drain maintenance in June 2006. The City Engineer oversees all contracted rural public works and is knowledgeable about BMPs and erosion control procedures for RPW; therefore, specific training on this topic was not conducted in FY06-07	City Engineer

Monte Sereno

FY 2006-2007 ANNUAL REPORT

Activity	Task Source	Work Plan Tasks	Accomplishments	Responsible Party

Rural Public Works Program Evaluation

Stormwater BMPs are currently discussed in pre-construction meetings with contractors; the City inspects all contracted work for rural public works in its jurisdiction and ensures the use of stormwater quality and erosion control BMPs. The rural public works project (RPW), on Withey Rd in Monte Sereno, was contracted out to McKenna Landscaping. McKenna has been a contractor for the City of Monte Sereno for several years and is familiar with the City's stormwater requirements for RPW. The City Engineer was on-site to further discuss the stormwater BMPs and erosion control measures. The project consisted of replacing a small area of eroded soil under a pipe and covering the area with netting for vegetation. Erosion control and RPW BMPs were implemented.

183 curb miles

Commercial & Arterials
Monte Sereno does not have any commercial or industrial areas

Debris Collected

FY04-05

Monte Sereno does not have any commercial streets or arterials. The City is strictly Residential

Annual Residential Total
67 cubic yards of debris collected

FY05-06

Monte Sereno does not have any commercial streets or arterials. The City is strictly Residential

Annual Residential Total
120.5 cubic yards of debris collected

FY06-07

Residential
154 cubic yards

Commercial & Arterials
Monte Sereno does not have any commercial or industrial areas

Yard Waste Recycled

FY04-05: An annual total of **1,020 tons** of yard waste was picked up by garbage collection service during FY 04-05.

FY05-06: An annual total of **1,376.4 tons** of yard waste was picked up by garbage collection service during FY 05-06.

FY06-07 Residents recycled 539.85 tons of yard waste using Waste Management garbage collection service from July '06 to the end of January '07. In March the West Valley Cities changed contractors; the total amount of yard waste recycled using West Valley Collection and Recycling from 3/1 to 6/30 2007 was reported as 239 tons for a combined **total of 778.85 tons.** Any leaves or yard waste that might have been picked up by storm drain maintenance staff was not tracked.

Monte Sereno

FY 2006-2007 ANNUAL REPORT

Public Agency Activities: Operations and Maintenance Evaluation

Storm Drain Maintenance: In FY06-07, West Valley Sanitation District (WVSD) provided its second enhanced annual report to the cities on storm drain cleaning. Since June 2006 the reports have listed the structures that were inspected and cleaned with the maintenance crew's findings. Approximately 365 structures were inspected and cleaned, as needed. Of those, 127 structures did not have any debris and were noted as "clean". Only 12 structures contained more than 5 or 10 lbs. of debris. Four of these structures included leaves/paper; and one was due to grease/soap. The WVSD inspection reports are generated from a database of numbered storm drain locations with the street names. It is possible to locate the street on a map and target specific audiences and specific locations for additional public outreach or construction inspection. The WVSD reports were distributed at the annual Storm Drain workshop on 6-20-07 and will be reviewed by WV cities as they determine future management actions for trash problem areas.

Storm Drain Stencils: The engineering staff has continued to share feedback with the other WV cities regarding the most effective way to mark storm drain basins. All storm drain catch basins within Monte Sereno are appropriately signed for the inlet location. Because the number of storm drain inlets in Monte Sereno is small, the City was able to apply the more expensive thermoplastic stencils to all curbless drain inlets after a successful pilot was conducted. Thermoplastic signage was found to be more durable than painted stencils and it holds its color. Staff have also noted that thermoplastic stencils have endured a few years of street sweeping passes. The best feature of the thermoplastic stencils is that they are visible at night. The downside of using thermoplastic stencils is the cost (about $250 per stencil, installed) and they must be applied to a horizontal surface, preventing their visibility from a distance. Santa Clara County staff asked the WVCs for a recommendation on where to purchase metal plaques similar to those previously installed by the West Valley Cities. West Valley reported that municipal staff have discontinued application of the metal plaques because the sharp edges have a potential to get caught in street sweepers and bend, creating possible injury to pedestrians or bicyclists. Replacing the plaques was also a problem. When plaques came loose or were removed, concrete chunks crumbled from the curb with the screws (used for attaching the plaques) making replacement in the same spot impossible. If signage in Monte Sereno becomes worn, or bent (if it is metal), it is replaced with thermoplastic stencils or painted stencils depending on the location of the inlet.

Street Sweeping: The City collected 154 cubic yards of debris in FY06-07, 33.5 cubic yards more than the amount of debris collected in FY05-06. This year the City swept 26 more curb miles than in FY05-06.

The City plans to change street sweeping contractors for FY07-08. Monte Sereno plan's to use the same street sweeping contractor that the City of Saratoga used for FY06-07. The decision was based on cost. The current contracted sweeper (the Town of Los Gatos) significantly increased the rates for FY07-08.

Yard Waste - Curbside Collection and Recycling: The West Valley yard waste recycling program reduces the amount of debris that gets into the storm drain, since leaves are collected in oversized bins rather than being stored in the street. In FY06-07, the total yard waste collected was down sharply from the previous two years for all West Valley cities. The reason for the decrease is not apparent without reviewing the data collected for the previous years and the garbage collection companies' tracking methods. There are a few factors that would contribute to the drop. 1) The data for February 2007 was not reported for West Valley cities due to a change in service contractors; 2) There might be a significant difference in methods used by the two different contractors to collect data; 3) City crews provide some additional, unscheduled leaf and tree limb removal, which is not tracked. 4) The annual weather might be a consideration because yard waste collection is determined by the amount of debris residents generate from yard maintenance and tree trimming. Some years have stormier weather producing more fallout from trees and a greater need to dispose of branch material. The new garbage & recycling company will be asked about their methods of tracking yard waste collection. The cities may request monthly totals to see if more consistent year-end totals can be obtained.

Monte Sereno

FY 2006-2007 ANNUAL REPORT

Training Evaluation: The WVCWP Storm Drain Maintenance Workshop (6/20/07) drew more staff participation this year. Municipal staff evaluated the workshop as having "good information that needs to be presented to City Council." Another response noted that "City law enforcement needs to attend the workshops". It was also suggested that San Jose Water Company attend our trainings since the water company crews have been noticed using improper storm drain protection methods when working on their pipelines. Attendees wanted to know "how to educate the public to get them on our side?" It was evident that BMPs are being used by municipal staff but there was some frustration among street and park maintenance workers because they don't have enough authority to convince residents and private contractors to keep pollutants from reaching the storm drain system. The WVCWP Inspector offered his card to all attendees and requested that they report any incidents to him for immediate follow-up. One challenge is to catch the violator in the act of allowing pollutants into the storm drain system. By the time the incident, or the result of the incident, is seen it is often too late to stop it. The maintenance crews are generally called to clean up spills. Attendees requested continued updates on the MRP requirements for storm drain maintenance and street sweeping practices. Several of the attendees stayed after the workshop for additional discussion among the cities.

			assistance from the WVCWP, City staff will continue to track regional implementation of the HMP.	
Training		Provide incremental training on HMP requirements to City staff via SCVURPPP workshops and/or in-house staff training.	To stay informed of the most recent HMP developments, the WVCWP Mgr participates in the C3PO AHTG meetings. Proposed revisions to the HMP were reviewed during the West Valley Communities' round table discussions regarding the administrative drafts of the MRP in November '06 and in June '07.	SCVURPPP to provide training; WVCWP Mgr to Facilitate training for WVCs; City Engineer attend training as needed
HMP Reporting	C.3.f.viii	Provide development and implementation status and a summary of projects incorporating HMP measures to WVCWP staff for Annual Report.	City of Monte Sereno did not have any projects which meet the criteria for required HMP implementation during FY06-07.	City Engineer
C.3.g Waiver and Compensatory Mitigation Program				
Waiver Program or Alternate Compliance	Permit C.3.g.	Provide information on any projects allowed to implement alternative compliance measures during FY06-07.	All applicable projects are required to implement C3 requirements without using alternative or off-site compliance measures. The City does not foresee using a Waiver Program.	City Engineer and City Manager
C.3.h Alternate Certification				
Alternate Certificat'n reporting	Permit C.3.h	List the projects certified by someone other than municipal staff and mechanism for ensuring that outside certifiers are qualified in the Annual Report.	Monte Sereno did not approve any Group 1 or Group 2 projects in FY06-07. The City has a consulting civil engineering company on retainer to act as its City Engineer. Civil engineers from this company attend SCVURPPP C.3 training events and perform C.3 compliance reviews for the City. They are responsible for evaluating Group 1 or Group 2 Project designs to ensure they meet C.3 requirements.	City Manager/ City Engineer
C.3.j Site Design Measures Guidance and Standards Development				
Site Design Measures Guidance & Standards	(Permit C.3.j.)	Summarize the status of revision and implementation of site design standards and guidance related to watershed protection. Provide Summary to WVCWP	There were no site design standard revisions in FY '06-07. However, the City does require minimization of impervious surface on all permitted projects. When practicable, the City also requires pervious pavers or other pervious materials for	City Manager /City Engineer/City Planner

C.3.k Source Control Measures				
Source Control Measures	Permit C.3.k.	Incorporate stormwater pollutant source control measures on all development projects.	In FY '06-07, there were no revisions to the City's requirements for source control BMPs.	City Manager / Planning Director
C.3.l General Plan Update				
General Plan	Permit C.3.l	Revise General Plan, at next planned update, to reflect principles and policies needed to address C.3 requirements.	In early FY '06-'07, the City began the review for the General Plan revision. As part of the General Plan revision, the City plans to adopt the Guidelines and Standards developed by the Santa Clara Valley Water Resources Protection Collaborative	City Manager
C.3.n Reporting Requirements				
C3 Project Reporting	Permit C.3.n.i. (C.3.c.)	Report on Group 1 and Group 2 projects that received final approval for construction during FY06-07. List project name, location, project type, size, and sq. footage of impervious surface area.	Monte Sereno did not approve any Group 1 or 2 projects during FY06-07. However, the City did collect impervious surface data on projects that required a grading permit. All development projects in Monte Sereno are single family homes, which are not part of a larger development or subdivision. The City's development permit process requires that no runoff be allowed from the resulting project site, wherever feasible.	City Engineer
C3 Project Reporting	Permit C.3.n.ii.	For Group 1 and Group 2 projects, report type of treatment BMPs used, numeric sizing criteria used, O&M inspections, and any follow-up actions. Note site design measures used, and source control measures required.	See answer above.	City Engineer

FY 2006-2007 ANNUAL REPORT

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
Report Pesticide Reduction Measures	NPDES Permit Provision C.3.n.iii	For Group 1 and Group 2 projects, describe the types of pesticide reduction measures required. Give the percentage of new development and significant redevelopment projects for which pesticide reduction measures were required.	On all permitted projects, native plants are recommended and plant selection is reviewed as part of landscape plan approval.	City Manager/ City Planner

Planning Procedures Evaluation

Site Design and Source Control measures are being required on all new development projects via Monte Sereno's "Residential Design Guidelines" and Monte Sereno's Site Development Permit requirements. The City continues to encourage stormwater measure, including flow controls, on all projects. Developers and property owners are receptive to the suggestions, making the process run very smoothly. BMPs most often required include the following, all are for single-family residential projects:

1. Rocky swales to energy dissipators
2. Permeable pavement
3. Drywells, which overflow to vegetated area, were required (per City Engineer) on all residential development projects, where feasible (except where the ground water level is too high).

MONTE SERENO

FY 2006-2007 ANNUAL REPORT

CONSTRUCTION INSPECTIONS

FY 2006-2007 Work Plan Self Evaluation Matrix

Source	WP Task	Work Plan Tasks	Accomplishments	Responsible Party
	URMP	Staff Training Participate in and support RWQCB and Program sponsored workshops on erosion control and construction BMPs; support distribution of related materials.	On 12-5-2006 the WVCWP Stormwater Discharge Inspector and Manager attended the attended the SCVURPPP's Construction Site Management and Erosion Control Workshop.	WVCWP to coordinate w/ SCVURPP; attend by WVCWP Inspector, City Bldg Inspector or City Eng inspector
	URMP	Construction Inspections Continue construction site inspections for stormwater issues (i.e., dirt tracking, mat'l storage, housekeeping, erosion control, etc.).	Monte Sereno inspected approximately 20 sites with active grading permits from October 1, 2006 to April 15, 2007 (all single-family dwellings not part of a larger common development). Municipal Code Section 9.04.120 requires erosion and sediment control materials to be onsite by October 1st and in place before October 15th or a "stop work order" will be issued. Periodic inspections are conducted by the City engineering staff including inspections before, during, and after every major storm event. Sites with potential problems are inspected at least once a week but not more than twice a week. Residents usually call to report an issue if erosion control is not installed correctly. See the construction inspection incident spreadsheet (following this table) for details.	City Engineering Inspectors

MONTE SERENO

FY 2006-2007 ANNUAL REPORT

Construction Inspection Evaluation

Construction Site evaluation:

FY 05-06		FY 06-07	
Complaint Not Found	4	Complaint Not Found	2
Grey Water Discharge	2	Paint Discharge	1
Miscellaneous	1	Slurry Discharge	1
Tracking Soil	1		4
	8		

Reported Incidents:

This year the WVCWP Inspector responded to four (4) construction-related incident calls for Monte Sereno. Two of those were pro-active inspections requested by the City. Both pro-active inspections revealed construction sites that were in compliance. One paint discharge incident and one saw cutting slurry discharge were addressed by providing the contractor with a verbal notice to comply. (The Construction Incident and Follow-up table is attached). The number of incidents in Monte Sereno has stayed about the same since FY04-05 if you exclude the complaints that were not found in FY 05-06. There were three (3) incidents in FY04-05 and four (4) in FY05-06 and four (4) again in FY06-07. Coordinated efforts between the City's Building and Engineering Inspectors and the WVCWP Inspector are working well. Engineering/erosion control inspectors have informed WVCWP staff that developers and contractors in the City are very eager to protect their good reputation with local residents and City staff. Any mention of a potential violation (verbal notice) from an inspector results in immediate action to comply. Monte Sereno, having a population of about 3,800 in a strictly residential community, has construction sites that are closely scrutinized by neighbors and inspectors. In addition, the WVCWP office is in Monte Sereno, which makes it easy for Clean Water Program staff to watch for potential problems on the way to and from work. Potential incidents are inspected and re-inspected (if necessary) until final resolution is achieved.

Construction Site Erosion Control Inspector Training:

Monte Sereno's Engineering Inspector meets annually with the WVCWP Manager to review NPDES permit requirements, the City's Construction Inspection Performance Standard, and the WVCWP IC/ID Inspection Program procedures.

Construction Inspection Program Evaluation:

Monte Sereno construction activities are well monitored and developers generally act responsibly and are aware of stormwater issues. No changes are planned for this program. Continued public outreach efforts and further training and communication between municipal inspection staff and the WV Stormwater Inspector will help maintain Mont Sereno's success in this area.

			exchanged at the 06-07event.	
	WVCWP Public Service Event	*Public Outreach Event*	***Free** E-Waste Recycling Event April 28,2007* Recycling of TVs, monitors and all office electronics. The event was sponsored by the four West Valley Cities through the *Clean Water Program*. It was held at the City of Saratoga's North Campus, on Prospect Road in Saratoga. The event was for West Valley businesses, residents and schools. However, it was open to the general public (CA residents). A Banner and Flyers were created. WV staff **distributed 123 flyers** for posting at 67 businesses from April 10th to the 24th. **270 E-Waste Event flyers** were taken home by private-school students in Saratoga, where WVCWP staff gave two classroom presentations. The event was also advertised via notices on municipal web sites. **170 cars** brought E-waste for recycling. Staff greeted drivers and surveyed them on behaviors associated with improper E-waste disposal. Give-away-items were provided to encourage participants to use convenient drop-off locations at partnering hardware and home improvement stores.	WVCWP Staff coordinated with municipal staff

Public Information/Participation Program EVALUATION - *SCV Program Projects/Support*

Pesticide User Outreach - STORE PARTNERSHIP:

Managers of Summerwinds Garden Center in Campbell have shown their interest in less toxic products. In fall of 2006 Summerwinds' store management chose to participate in the IPM store partnership displays being introduced at two other gardening stores. A consultant representing SCVURPPP's Watershed Watch and OWOW campaigns worked with the Campbell store to increase shelf space and display exposure for the promotion of less-toxic products. Sales of less-toxic

products rose by a noticeable percentage in FY06-07 (exact figures are not given, as the store does not wish this information to be publicized).

Mercury Pollution Prevention Outreach – THERMOMETER EXCHANGE:

This regional thermometer event was organized by the Bay Area Pollution Prevention Group (BAPPG). The "Spring Thermometer Exchange" program was advertised on www.baywise.org . Twenty Bay Area agencies were supported with clear guidance and an extensive advertising campaign, including ads in the San Jose Mercury News and the San Francisco Chronicle. The WVCWP Manager previously considered holding an event but rejected the idea because of concerns that it might not be feasible with the limited staff resources for West Valley public outreach events. The Manager heard about the BAPPG event a little late, through discussion at a Watershed Watch ad-hoc task group meeting. The outcome was that a regionally organized thermometer exchange was relatively easy to staff and implement locally. Since FY06-07 was the first year of this specific partnership, some agencies, including WVCWP, ended up with events scheduled a few days prior to the commencement of the advertising campaign. The West Valley Clean Water Program is now a member of the BAPPG and on the regional BayWise website: http://www.baywise.info/index.cfm?fuseaction=links&categoryID=8F785744-40CA-38F9-55F3387AE0E4551C In the future the West Valley thermometer exchanges will be coordinated with BAPPG events to take advantage of regional exposure and advertising. The BAPPG event summary is attached at the end of this report section.

Mercury Outreach - E-WASTE RECYCLING EVENT:

WVCWP designated staff time and funds to organize a Free E-Waste Recycling Event for West Valley residents, businesses and schools, and to publicize safe and legal disposal of Mercury and Copper-containing items. As a follow-up to WV's very successful 2006 "TV and Monitor Collection Event", WVCWP responded to residents' requests and delivered a similar, broader **all-product E-Waste Event** in April 2007. The event was held at a centrally-located and easily-accessible site - City of Saratoga's North Campus.

The WV cities found that a free E-Waste recycling event provides a meaningful way to effect behavior change, while providing a platform for conducting community outreach and education on this topic. Outreach resulted in completed surveys from **170** drivers and discussion with each driver (and most passengers) about disposal of hazardous waste.

The WVCWP advertised the event by distributing flyers and painting a large banner for the site. The *Los Gatos Weekly*, the *Saratoga News,* and the *Campbell Reporter* also carried Calendar section notices about the event. A strong emphasis was placed on the use of a responsible recycling firm. By using a responsible recycler we help prevent export of our waste to foreign dumps where mercury leaches into the environment. The results of surveys taken during the event showed that the banner was probably the most effective form of outreach among the 4 different outreach techniques mentioned. Attendees learned about the event via:

62 via banner - 33 via flyer - 28 via websites – 13 via newspaper - 19 via "other", which in most cases was specifically stated as "my wife" (15 – no response). The "my wife" answer provides some insight as to which target audience may be a good catalyst for behavior change in the West Valley communities.

			community event banner, and written or email responses to public inquiries and calls.	
General	CI Item	WVCWP Website Revisions While promoting the website, continue to expand and update the site with new educational material and up-to-date topics for the public on HHW, pest management, and other pollutant reduction e.g. mercury, trash, & copper /nickel	WVCWP posts information about Trash Cleanups for National River Clean Up Day and Coastal Clean Up Day on the *Cleancreeks.org* Home page to announce these events. Mercury and Copper issues were featured prior to the April E-waste event. The "Take Action" page was revised to include links to the UC Davis IPM site for residents interested in less toxic pest control. In addition, the page now highlights the question of home and garden chemicals' safety, with links to sites on toxicity information. During FY06-07, WVCWP staff developed drafts for new versions of the "About Us" page, to feature NPDES and stormwater information, and the "Take Action" page, to offer a variety of ideas and links leading visitors to useful next-step information. Work on the new website pages is planned for FY 07-08, but is contingent upon the amount of staff time that will be available after negotiating and preparing for implementation of the new MRP requirements.	WVCWP Staff
CITIZEN PARTICIPATION				
Public Partici-pation	Trash Monitoring Work Plan	Creek Clean-ups Continue implementation of trash monitoring activity during Creek Clean-ups. Conduct a minimum of two clean-up events (i.e. on Coastal Clean-up Day and National Rivers Day).	**Trash Monitoring was conducted at 4 different Clean-up sites in FY 06-07.** See *Trash Management* (Section #10) for results. Two of the creek clean-ups were held at an established site: San Tomas Aquino Creek next to Westmont High School (which serves Campbell, Los Gatos, Monte Sereno	WVCWP Staff & WVCWP Staff to coordinate with Municipal Staff

West Valley Communities

			and Saratoga students). WVCWP sponsored creek cleanup and trash monitoring events on 9-16-06 and 5-19-07. High school student volunteers have proven to be receptive to helping with Trash Monitoring. Students and other volunteers were trained to conduct trash monitoring and told why trash has become a pollutant of concern (POC) for the S.F. Bay area. **A third Clean-up was sponsored by WVCWP in partnership with Sacred Heart Elementary/Middle School** 4/18/07 Saratoga. The school is in Saratoga, but serves students from all WVCs. Students and parents participated in the Clean-up and Trash Monitoring. Prior to the event, 4th and 5th grades participated in Enviroscape watershed model demonstrations, where trash issues were discussed in great depth. **City of Campbell sponsored one Clean-up**. This event was held as part of the "Great American Pickup Day" (May 19, 2007). It was well promoted regionally and via the City's website and Public Works staff. About sixty volunteers participated and worked on a variety of sites, including sites along Los Gatos Creek Trail, the railroad tracks next to Winchester Blvd. and short Freeway stretches, picked up by volunteers under the supervision of Caltrans staff. Due to the scattered nature of the sites for this event, WVCWP used slightly simplified monitoring methods. Community volunteers were agreeable to tracking and estimating trash and filling out the forms.	

West Valley Communities

Santa Clara Valley Urban Runoff Pollution Prevention Program

			WVCWP conducted a survey with all participants to find out where they would dispose of fluorescent bulbs and gave everyone an HHW information booklet which lists places to "drop off" used hazardous items (including fluorescent bulbs). Also conducted a Mercury fever thermometer exchange, providing 26 digital solar thermometers to participants.	
TARGETED OUTREACH & SCHOOLS				
Targeted Schools	Expand Outreach to Teachers and Students	Schools Outreach: Watershed Ed. Curriculum Continue to build on 5th grade curriculum for WVCWP classroom watershed presentations, consistent with state required education standards. Expand outreach efforts by developing scripts based on state standards, or text books, for other grade levels in response to teacher interest. Evaluate effectiveness and appeal by soliciting teachers' & students' evaluations.	WVCWP staff made outreach presentations to two 5th grade classes, one 4th grade class, one 2nd-3rd grade class and 2 Kindergarten classes. Student's retention of stormdrain messages and recommended steps to protect their watershed was measured by developing a quiz for 4th and 5th grade students. The Science teacher administered the quiz three weeks after the classes participated in the watershed activity. Responses showed that sixty-five out of sixty-eight students were able to correctly list two actions that they would take to protect their local watersheds. Two sample quizzes with students' responses are included after the evaluation at the end of this report section. Development of an appropriate script for Kindergarten students was a focus of the 06-07 outreach efforts. The interactive presentations developed for the Kindergarten classes were well-received by teachers and students.	WVCWP Staff
Targeted	Based on	Provide Watershed Education in	WVCWP is evaluating a new outreach item aimed at	WVCWP Staff by

Schools	feedback from Teachers and Students	classrooms Conduct water quality protection education or presentations in local schools, using *Enviroscape* and/or other methods to engage students in Watershed campaign messages.	students, parents and teachers. The hardcover book *"All The Way to The Ocean"* is presented to teachers who welcome WVCWP presentations into their classrooms. The book can be shared amongst teachers, and read to new classes each year or borrowed by parents to read to younger siblings, so that the message of stormdrains being linked to the Bay and the Ocean is shared with others. It is hoped that this permanent classroom resource will also remind teachers that stormwater presentations are available to their classes. Three "All The Way to the Ocean" books donated (1 Sacred Heart, 1 St Mary's, 1 Allen at Steinbeck) *Guadalupe Elementary, San Jose 10-23-07* **25 5th grade students** participated in a demonstration and activity. Using a simple model, WVCWP staff, working with Environmental Volunteers docents, demonstrated the role of watersheds and wetlands as a filter of sediments and pollutants and how wetlands act as a retainer for water and a refuge for many different organisms. Students built a model using interactive watershed and wetland kits. Students learned about protecting San Francisco Bay emphasizing runoff, wetlands, marshes, filter, absorption, and pollutants. *K.R. Smith Elementary, San Jose 12-12-06* WVCWP staff, working with Environmental Volunteer docents gave Twenty-one **2nd and 3rd grade students** an opportunity to participate in an interactive Water Cycle demonstration and related activities, to understand how we use and reuse water. WVCWP's Intern developed a	arrangement w/ Teachers

			end of this section. *St. Mary's School, Los Gatos,* Kindergarten on *5-21-07* For this class of **30 Kindergartners**, the students were split into 2 groups. One group identified storm drains and used trash grabbers and gloves to pick up debris around the school yard. The second group participated in an Enviroscape activity whereby students added pollutants to the watershed, used sprayers to make rain and witnessed the effect that runoff has on the wildlife that live in and around the wetlands and the Bay. The Enviroscape watershed model activity showed children how daily behaviors can contribute to pollution in our local creeks and the Bay. Solutions to pollution were offered and reviewed during a wrap-up question period. West Valley staff built on last year's first-time experience presenting to a Kindergarten class, by redeveloping the script to make it more appropriate for kindergarteners. *Allen at Steinback School, San Jose 5-25-07* Kindergarten This class of **24 students** participated in the same activities as those described above for St. Mary's School.	
Targeted Schools	Expand Outreach to Teachers and Students	General Schools Outreach	**City of Campbell – Arbor Day Event** 4-26-07 This event was open to the general public. Arbor Day events were held at two schools with the intention of engaging teachers, students and parents. Campbell was honored for 25 years of Arbor Day events, and chose to celebrate via tree planting events at Capri Elementary and Rosemary Elementary.	City of Campbell PW staff

TARGETED OUTREACH				
Targeted Business	URMP	Mercury Pollution Prevention Plan Obtain or develop outreach material for distribution by IND Inspectors on Mercury Pollution Prevention and the proper disposal of fluorescent lights and batteries.	A new HHW information booklet, *What You Don't Know About Mercury May be Harmful to Your Health,* which lists places to "drop off" used hazardous items (including fluorescent bulbs) is being distributed. The IND inspectors said that businesses are very familiar with fluorescent bulb disposal requirements. WVCWP staff employed other public venues and events to distribute the information.	WVCWP w/ Sr. Haz Mat Specialist
Targeted Business	Permit Provision C.4	Education Distribute BMP materials during routine inspections of food facilities and automotive businesses. Discuss relevant educational material with businesses cited for potential stormwater violations.	During FY06-07, WVCWP supported West Valley Sanitation District (WVSD) staff by continuing an outreach strategy to report restaurants that have failed to use effective grease control BMPs. The WVCWP Inspector requests a copy of the restaurant's latest grease trap cleaning records. If the food facility does not have cleaning records or an invoice, the business is referred to the WV Sanitation District for follow up. The WVSD also provides an outreach poster to the business. This very effective poster emphasizes the importance of using BMPs and conducting good housekeeping and maintenance procedures.	SCC Fire; WV Inspector coordinate with WVSD
Reporting	NPDES Permit, Provision C.4	Evaluation/ Reporting Document or estimate (when possible) numbers of residents, students, municipal staff etc. reached by outreach efforts. Report number of calls, website hits and circulation or readership for newspapers or newsletters. FY 06-07 ANNUAL REPORT

Source	WP Task	FY06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
Public Information/Participation Program EVALUATION – WVCWP PROJECTS				

Outreach – MATERIALS DISTRIBUTION:
The "Grow It Guide" (laminated, "fan-out" guide about less toxic controls for garden pests) has been one of the most popular outreach items among WVC's residents, both in general, and among the Garden Centers. However, WVCWP's supply of these items is running low. These are expensive to print, and are only reasonably priced when ordered in extremely large quantities. In FY 07-08, SCVURPPP intends to coordinate a bulk printing of Grow It Guides: this will facilitate increased distribution of this outreach piece at local West Valley events and venues.

Outreach – MEDIA BUYS FOR EVENT PUBLICITY:
In FY 05-06, WVCWP spent several thousand dollars to promote a free WVC E-Waste event; approximately 250 cars came through the event. Many of the drivers showed up with the news ad in hand. For FY 06-07, WVCWP chose to test less expensive methods of outreach and monitor the results. The 06-07 event was held at a different location, and three similar local events were offered by other agencies within the same month. Therefore, it's not possible to weigh the public response equally. However, the 06-07 E-Waste event did receive a respectable number of cars (170 drivers) even though no money had been spent on newspaper ads. According to the survey, the banner hanging at the site, prior to and during the event, was responsible for bringing in about 35% to 40% of the participants. WVCWP will continue to investigate reasonable and effective methods for advertising local events.

Outreach – PRESS RELEASE COVERAGE:
In the past, the WVC benefited from extensive media coverage in their local papers, which were delivered weekly to residents: the *Campbell Reporter*, the *Los Gatos Weekly Times* (also covered Monte Sereno), and the *Saratoga News*. All of these papers had been operating under the umbrella of "Silicon Valley Community Newspapers" (SVCN) and WVCWP staff had well-established contacts with SVCN staff. Unfortunately, a few of the reporters who enjoyed WVCWP's schools and outreach stories, and with whom WVCWP staff had developed a trusted working relationship, are no longer with the paper. During FY 06-07, all the SVCN papers were caught up in a process of acquisitions and mergers; this interfered with access to local reporters and coverage was limited for the WVCWP.

Targeted Outreach -- SCHOOLS: At Sacred Heart School, 68 students from a 4th grade and a 5th grade class participated in Enviroscape presentations. Emphasis was placed on relevant vocabulary. Three and a half weeks after the presentation, WVCWP Program Manager provided a watershed quiz for the teacher. Students completed the quiz as homework to evaluate their understanding and retention of watershed concepts. Students were asked to name two activities that they would do to help keep our creeks and Bay healthy. Sixty-eight students completed the watershed activity quiz. Sixty-five listed two activities that they would do to keep our local creeks and Bay healthy. Six students answered all eight questions correctly. Thirty-nine students said they would prevent litter or pick up trash. Six students will plant trees, plants, and flowers, (reduce impervious surface). One student would plant the "right kind" of plants (native plants). Three students would not wash cars in the driveway. Four students will pick up pet waste. Two students will put only water in the stormdrain. One

Project Summary

In May – July 2007, the Bay Area Pollution Prevention Group (BAPPG) coordinated a regional collection event for mercury thermometers and other mercury-containing devices. Together, 20 participating agencies and organizations collected **4,264** thermometers, 21 thermostats and 16 pounds of bottled elemental mercury at **30 one-day and ongoing events**. The BAPPG coordinated this regional effort, building capacity on how to conduct an exchange, organizing and developing regional advertising and outreach materials, developing a regional website and phone number with all event dates, hours and location.

The BAPPG coordinated with the Media Relations Committee of the Bay Area Clean Water Agencies and Bay Area Stormwater Agencies Association to develop press releases and a media kit. In addition, the BAPPG worked with the Media Relations consultant, O'Rorke for paid radio and newspaper advertising.

Follow up Questions from the

Classroom Watershed Activity

For questions 1- 5 please make a √ checkmark by the correct answer or answers.

1. A **Watershed** is

   a. A reservoir to store rainwater for use in times of dry weather or drought

   -1 b. All the creeks and streams that flow into the Bay or ocean

   c. All the land area that drains into a particular creek or body of water

2. **Runoff** is a word that describes

   a. The water that overflows from a clogged storm drain during heavy rains

   b. All of the rain, melting snow, and sprinkler water, that is not absorbed or infiltrated into the ground before it reaches the creeks or Bay

   c. Neither of the above

3. A **Storm Drain** helps to protect neighborhoods from flooding during heavy rains. In Santa Clara Valley the water that goes into a storm drain

   a. flows through a pipe system to a water treatment plant for removal of pollutants such as, pet waste, car oil, paint, exhaust particles, brake pad dust, car-wash water, pesticides, fertilizers and litter before it is released into the Bay

   b. flows directly into our local creeks and eventually into the San Francisco Bay

   c. can be found in a home in a bathtub, a kitchen sink, or in a toilet

-1 4. **Most water pollution is now caused by**

   a. industries or big manufacturing businesses

   b. some of people's every day activities

5. **Fluorescent bulbs** save energy and contain mercury. **When they burn out**

   a. put them carefully in the recycle bin

   b. Check (Santa Clara County Household Hazardous Waste) at www.hhw.org to find many safe, legal drop-off locations.

6. **Other than recycling, write down two more things that you will DO or NOT DO to help keep our creeks and Bay healthy for aquatic life and for people.**

   reduce toxic cemical use

   control pests naturaly

Thank you for keeping our Creeks clean!

All Correct

Nicholle

Follow up Questions from the

Classroom Watershed Activity

For questions 1- 5 please make a √ checkmark by the correct answer or answers.

1. A **Watershed** is
   a. A reservoir to store rainwater for use in times of dry weather or drought
   b. All the creeks and streams that flow into the Bay or ocean
   ✓ c. All the land area that drains into a particular creek or body of water
2. **Runoff** is a word that describes
   a. The water that overflows from a clogged storm drain during heavy rains
   ✓ b. All of the rain, melting snow, and sprinkler water, that is <u>not</u> absorbed or infiltrated into the ground before it reaches the creeks or Bay
   c. Neither of the above
3. A **Storm Drain** helps to protect neighborhoods from flooding during heavy rains. In Santa Clara Valley the water that goes into a storm drain
   a. flows through a pipe system to a water treatment plant for removal of pollutants such as, pet waste, car oil, paint, exhaust particles, brake pad dust, car-wash water, pesticides, fertilizers and litter before it is released into the Bay
   ✓ b. flows directly into our local creeks and eventually into the San Francisco Bay
   c. can be found in a home in a bathtub, a kitchen sink, or in a toilet
4. **Most water pollution is now caused by**
   a. industries or big manufacturing businesses
   ✓ b. some of people's every day activities
5. **Fluorescent bulbs** save energy and contain mercury. **When they burn out**
   ✓ a. put them carefully in the recycle bin
   ✓ b. Check (Santa Clara County <u>H</u>ousehold <u>H</u>azardous <u>W</u>aste) at <u>www.hhw.org</u> to find many safe, legal drop-off locations.
6. **Other than recycling, write down <u>two more things</u> that you will DO <u>or</u> NOT DO to help keep our creeks and Bay healthy for aquatic life and for people.**

To keep the bay healthy I will not wash my car in the driveway and pick up trash.

Thank you for keeping our Creeks clean!

PESTICIDE USAGE REDUCTION MEASURES – Pest Specific

CITY OF CAMPBELL

Campbell is implementing IPM in the following situations:

1) On-going - Yellowjackets:

- Campbell uses traps as the main means of control.
- Parks Maintenance staff tries to clean off picnic tables to prevent attracting wasps and ants.
- If a wasp nest in a tree requires treatment, the PCO uses a non-residual pesticide, and closes the hole in tree so wasps can't return to nest. Parks staff use home insulation spray foam to close the nest/hole; treatment has been successful in preventing return of wasps.
- Staff is evaluating new traps on an ongoing basis which use pheromone to attract wasps, dry fish to bring them into trap, and soap inside trap, which kills in 5-15 seconds

2) On-going - Weeds:

- Campbell uses a chipper to create mulch from green waste; this mulch is used for weed control wherever possible.
- Work Furlough labor hand hoes weeds where possible.
- Staff is investigating use of black plastic for 'solar control' of weeds on an ongoing basis, and determining spots where this would be feasible.
- Staff has been using the tractor with a boom mower for mowing weeds, instead of spraying roadsides and similar areas.

3) On going - Insects:

- In 02-03**,** Campbell controlled an Ash Whitefly infestation with a natural predator, a minute wasp. Since the wasps were ordered and released, they have continued to suppress the Whitefly population.
- Staff is identifying insects and utilizing IPM when appropriate instead of using insecticides. No new insects were identified in FY 06-07.

- Campbell has significantly reduced the spraying of pesticides for infestations of aphid and scale in the Urban forest by employing non-toxic horticultural oils and soaps.

Unfortunately, the City has certain species of street trees with aphid and scale infestations, and the less-toxic methods, including spraying with ultra-fine oil, have not had a noticeable impact on this pest population.

Despite the aphid and scale problem, the City has used NO organophosphate sprays to control the insects and **has implemented a program of injecting the infested trees with a systemic insecticide instead of a spray** (a spray might affect other areas than the targeted site; the systemic chemical stays within the tree). This is in keeping with the City of Campbell IPM Plan.

Staff will continue to investigate less-toxic control methods for aphids and scale insects on an ongoing basis.

3) Gopher Control: The City has implemented a policy of using mechanical traps for gophers instead of baits thus further reducing the use of pesticides.

4) IPM Solutions: City staff have participated in implementation of new County computerized "IPM Solutions Database Input/Response", which allows input of a pest problem and a response with IPM solutions. Staff refer to this database as needed.

RESULTS OF PESTICIDE USE REVIEW FY 06-07:

Campbell has taken a strong stance on pesticide use reduction in recent years, as evidenced by the extensive involvement in IPM training by City staff. The City's PW Superintendent and Parks Supervisor have actively been involved in regional IPM planning meetings and workshops.

Field Activities:

→ Through use of IPM practices Campbell was able to eliminate use of any OP pesticides for the past 5 years, (as compared to using 3.7 oz of diazinon for ant control in 01-02). Campbell has decreased its use of pesticides by using oils and soaps to control aphids and scale in the urban forest.

→ The City is making an effort to stress prevention (prevent weed growth, prevent pest infestations) where possible. Campbell is moving into use of IPM, mechanical and cultural controls, rather than chemical controls, as much as possible given budget and staff limitations.

→ Over the past several years, the Public Works Dept. has instituted improved methods of weed control in some parks and roadsides, such as using green waste to make wood chips, used as mulch to prevent weed growth. For the past 3 years, the City has been using its new specialized tractor with boom mower for mowing roadside & park weeds and to avoid spraying.

→ The City Public Works Dept. has instituted a policy of moving towards installation of more pest resistant trees and shrubs to minimize the need for pesticides; these efforts include removal of certain tree species (such as Tulip and Raywood Ash trees) from the City of Campbell's approved Street Tree List.

TOWN OF LOS GATOS

Los Gatos is implementing IPM in the following situations:

YELLOWJACKETS:

- Los Gatos uses traps as the main means of control.
- Parks staff uses steam cleaning on picnic tables to prevent attracting wasps & ants.

WEEDS:

- Los Gatos uses a chipper to create mulch from green waste; this mulch is used for weed control wherever possible.
- Los Gatos continues to arrange to receive free wood chippings from PG&E tree-trimming contractor. Mulch is used to reduce weed growth on roadsides, median islands, parking lot landscaping and in parks.
- Staff hand-pull weeds where feasible.
- Los Gatos purchased a flail mower to mow weeds in large areas.

RODENTS:

- Rats & mice are trapped by contractor (baits used as last resort).

INVASIVE SPECIES:

- Various species along Los Gatos Creek are hand-pulled by Native Plant Society volunteers.
- Scotch Broom is cut down by Parks staff and volunteers supervised by staff.

SCALE INFESTATION ON TULIP TREES

- Parks staff sprays trees with low concentration detergent & water

RESULTS OF PESTICIDE USE REVIEW FY 06-07:

→ Los Gatos staff has eliminated the use of any OP pesticides for the past 5 years (and in preceding years minimal OPs were used: such as .475 oz of diazinon for ant control in FY 01-02). Avoidance of OP use has been achieved through use of IPM practices and through seeking out less-toxic pesticides.

→ The Town is making an effort to stress prevention (prevent weed growth, prevent pest infestations) where possible. Los Gatos is moving into use of IPM and engineered, rather than chemical, controls as much as possible given budget and staff limitations.

→ In Town facilities, sanitation is being stressed as a means to prevent pest infestations (ants, mice, etc.) so that chemical controls will not be needed.

→ Over the past several years, the Public Works Dept. has instituted improved methods of weed control in some parks and roadsides, such as the arrangement for free wood chips which are used as mulch to prevent weed growth.

→ Los Gatos invested in purchase of a flail mower for staff to use in mowing weeds in large areas.

→ Volunteers work with the Public Works Dept. to trim back brush along the LG Creek Trail, and to remove invasive species.

CITY OF MONTE SERENO

The City of Monte Sereno has extremely limited City property – less than ¼ acre total of landscaped area. A landscaping contractor cares for City property, and is instructed to avoid use of pesticides. When gopher damage appears, the gophers are trapped. Weeds are hand-pulled.

CITY OF SARATOGA

Saratoga is implementing IPM in the following situations:

APHIDS:

2 trees with aphid problems were treated by injecting with a systemic pesticide to reduce to reduce environmental impact. The trees are located downtown with lots of foot traffic, where dripping was a problem, but the injections were able to manage the problem.

YELLOWJACKETS:

Saratoga uses traps as the main means of control.

Parks staff tries to clean off picnic tables every Monday to prevent attracting wasps & ants. The Parks Dept. purchased and installed 18 plastic tables (to replace existing wooden tables); the new tables are easier to keep clean and therefore attract fewer wasps.

No new nests were observed this year and NO Wasp Spray was used.

WEEDS:

Mulch spread last year has continued to be effective in FY 06-07 for weed control. *Last year Saratoga used free mulch from tree service contractor; this mulch is used for weed control wherever possible. Wood chips were dumped and spread as mulch on the unlandscaped medians on Fruitvale Ave (a major arterial)*. This action resulted in NO spraying on a half mile stretch of median which would otherwise be a problem area.

The Street Maintenance Dept. hired a landscape company to cut down roadside weeds twice this year instead of spraying; this cut pesticide applications from 4 to 2 for that task.

Hand hoeing/pulling of weeds is used where possible. Weekly walk-through with lots of hand weeding; Round-up is used when weeds begin to get out of control, such as springtime – the emphasis is on catching the problem early in an attempt to avoid having to spray larger areas later.

RODENTS:

A contractor is engaged to trap rodents in order to avoid poisonous baits; this is done when there is an outbreak of a number of rodents at once. A PCO was hired to use baits in areas where trapping failed. No pesticides were used within City Parks for mole / squirrel / gopher control. A Contractor (Ken Fuson) was hired to trap all reported invasions where turf or landscaping plants where threatened. The contractor sets up a cordoned off area using Macabee traps.

MEDIAN LANDSCAPING:

Policy is to install pest resistant shrubs and landscaping and avoid high-maintenance, low-pest resistance turf and greenery.

West Valley Communities

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2006-2007 ANNUAL REPORT

MICROSPRAY IRRIGATION:

Microspray irrigation systems have been installed in the Heritage Orchard and computerized irrigation systems are used in medians, to reduce any possible runoff which could carry pesticides. Installations are on-going as budget allows; 50% are now computerized. Main medians on major arterials have all been completed.

Two more Electronically Timed controllers were added to City landscaping to monitor water usage and avoid runoff. Nozzles continue to be modified to optimize spray.

RESULTS OF PESTICIDE USE REVIEW FY 06-07:

The City is making an effort to stress prevention (prevent weed growth, prevent pest infestations) where possible. Saratoga is using IPM and engineered, rather than chemical, controls as much as possible given budget and staff limitations.

Over the past several years, the Public Works Dept. has worked on landscape design and improved irrigation systems which will reduce need for pesticide/herbicide use, and reduce any potential runoff which could carry pesticides.

Natural insect controls include use of traps for wasp control, and soapy water for ant control.

Through these types of efforts, Saratoga is progressively reducing chemical pesticide use.

West Valley Communities

EcoWise Certification Presentation Management Committee Meeting (Jan. 15, 2007) **PowerPoint Presentation from EcoWise Certification Program** Presented orally with PowerPoint printouts at WVCWP meeting (Feb. 27, 2007) **Topics:** Certified practitioners employ techniques to control pests while minimizing the need to use pesticides. EcoWise Certified professionals can manage ants, roaches, flies, spiders, rodents, stinging insects, bed bugs and many other pests. EcoWise Certification does not cover termites or other wood destroying organisms. **EcoWise Certification Program** **EcoWise Certification availability for interested Pest Control Contractors** **Using EcoWise contractors for municipal structural pest control** **Encouraging municipal Pest Control Contractors to attain EcoWise certification** **Finding EcoWise certified contractors** **Staff who viewed presentation later presented info to municipal Parks and Facilities Maintenance Supervisors.**	Jan. 15, 2007 & Feb 27, 2007	**WVCWP (1)** Program Manager **Campbell (1)** Senior Civil Engineer **Los Gatos (1)** Senior Engineering Technician **Saratoga (1)** Public Works Analyst

Mercury Pollution Prevention Activities

City of Campbell

Town of Los Gatos

City of Monte Sereno

City of Saratoga

MONTE SERENO

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2006-2007 ANNUAL REPORT

MERCURY POLLUTION PREVENTION ACTIVITES

FY 2006-2007 Work Plan Self Evaluation Matrix

Source	WP Task	Work Plan Tasks	Accomplishments	Responsible Party
Mercury Plan (I.D.)	Mercury Policy	Continue Implementation of municipal mercury policy requiring the virtual elimination of mercury from controllable sources in urban runoff from agency operations.	Monte Sereno adopted a mercury elimination policy during FY 03-04. However, Monte Sereno does not have a corporation yard or city vehicles. The City has one single-story building for five full-time staff and five part-time staff. Therefore, the City's fluorescent light bulbs, one thermostat and a few batteries comprise the City's inventory of mercury containing products. All of these products of disposed of through HHW.	Finance and Facilities Manager
Mercury Plan (I.E.)	Guidelines for Hg Containing Products Reduction	Continue implementing phase-out of mercury-containing products (MCPs). Phase-out will coincide with replacement of MCPs on an as needed basis. Provide municipal staff with a reminder notice.	Reduction of mercury-containing products is being implemented. Research on alternative products has been conducted through the WVCWP and non-mercury or low-mercury replacements are being used wherever feasible e.g., thermostats and fluorescent bulbs. WVCWP Manager reminds Monte Sereno staff annually about the mercury reduction plan and coordinates tracking of fluorescent bulbs disposed of by the City through HHW.	Finance and Facilities Manager
Mercury Plan (II.B.)	Disposal Services	Provide Mercury Containing Product Disposal Services to Residents and Small Businesses	Provided through funding and participation in County HHW program for residents and small businesses	City Manager
Mercury Plan (II.C.)	Disposal of Mercury Containing Products	Track recycling, replacement, and reduction in use of mercury-containing products. If feasible, document quantities of fluorescent lamps (from City buildings and departments) which are disposed of at hazardous waste collection facilities in FY 06-07.	Twelve 4-foot fluorescent bulbs were collected from the City's building and taken to HHW for disposal in FY06-07. Employees store used batteries in a bag located in the City's file room for later drop off at HHW.	Finance and Facilities Manager
Mercury Plan (II.F)	Fluorescent Light Recycling	Continue participation in the Mercury Ad Hoc Task Group and support on-going	The WVCWP Manager helped develop local campaigns and	SCVURPPP & WVCWP to coordinate w/ HHW

MONTE SERENO

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2006-2007 ANNUAL REPORT

Source	WP Task	Work Plan Tasks	Accomplishments	Responsible Party
	Program	implementation of an outreach program to educate small businesses and conditionally exempt small quantity generators about recycling fluorescent lights.	outreach messages through SCVURPPP's Mercury Ad Hoc Task Group. WVCWP staff helped publicize the partnership with stores that provide convenient fluorescent bulb drop-off sites for local residents and small businesses.	staff
Mercury Plan (II.F and V.C.)	Work with HHW Collection Agencies	Help publicize fluorescent light recycling program. Coordinate educational outreach with fluorescent light recycling events sponsored by HHW.	WVCWP staff distributed HHW drop-off information to Bay Area residents at several community events and surveyed local public attitudes and behavior to evaluate the success or need for outreach efforts. Disposal of fluorescent bulbs was covered in classroom presentations. PIP efforts are noted in the evaluation at the end of this section and in the Public Information & Participation section of this report.	WVCWP staff conducts public outreach and coordinates with WV Stormwater Rep

Mercury Pollution Prevention Activities Evaluation

On April 28, 2007 a Free Hazardous Waste Recycling Event and **Mercury Thermometer Exchange** was sponsored by the West Valley cities. WVCWP hired additional staff to help greet drivers and raise awareness in the local communities about the *Clean Water Program* and about proper disposal of mercury containing products. *What you Don't Know About Mercury* brochures, provided by HHW, relayed the message that mercury containing products such as fluorescent bulbs, batteries and fever thermometers can leach mercury (a neuron-toxin) into our landfill and ground water, and that by using a responsible drop-off location people can help keep mercury out of our creeks and the Bay. Recycled money pencils, printed with contact information for HHW were given to drivers as a gift for taking a survey. Most participants were interested and responded positively to receiving information with phone numbers and addresses of store partners that serve as collection sites.

Drivers of 170 cars brought their used electronics for recycling to the E-waste collection on 4-28-07. WVCWP and HHW representatives were there to greet the cars and survey the participants about how they would currently dispose of fluorescent bulbs. The survey showed that 59 drivers thought it was okay to throw fluorescent bulbs in the trash, 14 would put them in a recycle bin, 41 would either not use fluorescent bulbs or did not know the safest way to dispose of them, and 56 respondents were committed to the practice of taking fluorescent bulbs to a designated store or HHW drop-off location.

Copper Action Plan/ Nickel Action Plan

City of Campbell

Town of Los Gatos

City of Monte Sereno

City of Saratoga

WEST VALLEY COMMUNITIES

FY 2006-2007 ANNUAL COPPER (and NICKEL) ACTION PLAN REPORT

COPPER ACTION PLAN/NICKEL ACTION PLAN

FY 2006-2007 Work Plan Self Evaluation Matrix

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
Vehicle Washing Operations	CB-1	Continue to distribute outreach materials on proper vehicle/equipment washing at Municipal counters/Post Offices/Libraries and public events, and post on WVCWP website.	The WVCWP "Car Wash Kit" flyer is available on the WVCWP website as a PDF. The site's Home page, www.cleancreeks.org displays a car wash graphic which links to the PDF. The printable flyer includes information on harmful effects of copper: http://www.cleancreeks.org/imagesnew/carwashweb.pdf Los Gatos' website offers a stormwater page that gives car-washing advice and take-action-type tips for water quality: http://www.town.los-gatos.ca.us/index.asp?NID=922	WVWCP staff
Vehicle Washing Operations	CB-1	Discuss copper impacts; teach proper methods of Car Washing and Pool & Spa drainage through use of Enviroscape watershed model in classroom presentations.	WVCWP's classroom presentations are scripted to include hands-on activities so that students can watch pollutants such as copper, from car-washing activities flow directly to the habitat of aquatic life. In addition to recommending the use of commercial car-wash facilities, WVCWP encourages washing on a gravel or lawn area where wash water is captured and infiltrated. The Inspector talks to students about car wash fundraisers and offers to help them set up the WVCWP car-wash kit prior to the event.	WVWCP staff
Vehicle Washing Operations	CB-1	Provide Car Wash Kit & education to charity car wash organizers. Solicit feedback from participants.	The WVCWP Stormwater Discharge Inspector is available to provide guidance on use of the WVCWP car-wash kit for local fundraising events. He usually attends the events to offer guidance and to help publicize the *West Valley Clean Water Program*. The kit uses about 400 ft. of hose and 300 ft. of extension cord. The car wash kit works extremely well, but can be difficult to set up. Photos of the kit in action are used for	WVWCP staff

WEST VALLEY COMMUNITIES

FY 2006-2007 ANNUAL COPPER (and NICKEL) ACTION PLAN REPORT

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
			classroom presentations.	
Vehicle Washing Operations	CB-1	Within the Planning permit process, require source control measures at facilities that will conduct vehicle/ equipment washing and maintenance activities (consistent with Permit Provision C.3.k).	The WVC did not have any regulated projects in FY06-07 that would conduct vehicle/equipment washing and maintenance activities.	Community Dev Directors and Planners
Vehicle Washing	CB-1	Promote improved car washing methods at auto businesses during inspections. Provide info on alternative arrangements for auto businesses with possible compliance problems.	The Stormwater Discharge Inspector distributes vehicle washing outreach materials during pro-active inspections and in relation to any actual or suspected vehicle washing incident. The Inspector is able to answer questions and offer suggestions with the help of visuals. A WVCWP-created fact sheet provides information on wastewater capture systems for automotive facilities. The fact sheet was designed to provide small-scale automotive facilities (those that find installing a full-fledged wash rack cost-prohibitive) with examples of inexpensive treatment technologies and distributor information. This method of outreach has been very effective.	WVWCP ICID Inspector
Vehicle Washing Operations	CB-1	Maintain recommended source controls for vehicle washing at City corporation yard.	Municipal staff follow best management practices and continue to ensure that vehicle wash systems in the Corp Yards prevent wash water runoff.	Pub Works Staff
Vehicle Washing Operations	CB-1	City staff will be familiar with Mobile Surface Cleaning BMPs or review the training video offered by BASMAA.	Municipal staff viewed the training video in 2006. They are familiar with the BMPs. To accommodate new-hires the WVCWP will provide a showing of the BASMAA video in FY07-08.	WVWCP ICID Inspector / Pub Works Supt
Industrial Copper Control	CB-3	Continue Industrial Inspection program with Fire Dept., including NOI sites and other industrial sites such as plating and metal finishing facilities, vehicle service facilities,	The City has an agreement with the SCC Fire Dept to conduct urban runoff inspections for machine shops and metal manufacturing facilities. Annual meetings are held between the WVCWP Manager and Inspector and the Fire	SCVC Fire Dept./ WV ICID Inspector WVCWP Manager

WEST VALLEY COMMUNITIES

		and other permitted sites.	Dept Haz Mat Specialist to ensure excellent communication and prompt follow-up to potential and actual violations. See Industrial Inspection (Section #2) of this report.	
Reducing Traffic Congestion Promoting Alternative Transporta-tion	CB-6/7	Within the Planning permit process encourage and promote best practicable transportation-related design practices and alternative modes of transportation.	The West Valley communities encourage best design practices wherever practicable. These small communities tend not to have large developments conducive to requiring alternative transportation within the permitting process. However, the cities and the Town encourage alternative transportation through other means: **Campbell** now has 3 stations for Light Rail service linking the City to stops throughout Santa Clara Valley. The City Redevelopment Agency was actively involved in this project. Campbell also provides bicycles for employees to ride while at work. Furthermore, the City supported *Bike to Work Day* on 5-19-07 by sending an email to all employees encouraging them to take advantage of the opportunity to ride a bike to work and to stop off at energizer stations such as the one at Whole Foods in Campbell for free beverages, snacks and encouragement. **Los Gatos** approved a large development project (Netflix campus**)** that provided bike racks throughout the commercial campus and bike lockers and shower facilities for employees who will ride their bikes to work. (approx. **260** employees). A future light rail station is also planned adjacent to this site. **Saratoga** Planners and Engineers work with project owners during the permitting process to encourage them to designate a portion of their site, if feasible and appropriate, for open space and walking trails. The City website encourages biking through its *Trail and Bike* maps, showing where striped bike lanes exist, and classifying bike routes according to safety. Pedestrian/equestrian trail maps are	Municipal Planners, Community Development Directors and Civil Engineers

WEST VALLEY COMMUNITIES

FY 2006-2007 ANNUAL COPPER (and NICKEL) ACTION PLAN REPORT

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
			posted to encourage walking as an alternative means of transportation. Link to all maps: http://www.saratoga.ca.us/trail_and_bike_maps.html **Monte Sereno, Los Gatos and Saratoga** are working on a shared project to develop bike paths along Hwy 9. The paths will increase safety and encourage more bicyclists to travel between the main downtown areas of these cities. In addition, the second phase of the project has been initiated which includes a pedestrian path along Highway 9.	
Reducing Traffic Congestion	CB-6/7	Continue to incorporate and support "Best Practices for Integrating Transportation and Land Use" as documented in the VTA's 2003 Community Design & Transportation Manual.	These elements remain in the WVCs' General Plans and serve as guiding principles for their Land Use and Transportation development.	Traffic Engineer
Watershed assessment and protection	CB-8	Implement agreed-upon guidelines & standards developed by the Water Resources Protection Collaborative for watershed protection.	Campbell, Los Gatos and Saratoga have participated in, and invested significant staff time in, the Water Resources Protection Collaborative. Two of the West Valley cities, Los Gatos and Saratoga, adopted the "Guidelines and Standards" in FY06-07 and Campbell and Monte Sereno will adopt them in FY07-08.	Community Development Directors and City Managers
Street sweeping & stormdrain O&M	CB-11	See Street Sweeping tasks on data collection and evaluation.	The West Valley communities conduct street sweeping in residential areas and more frequent sweeping in commercial areas. Sweeping data is collected and noted in Public Agency Activities (Section # 3) of this report.	
Street sweeping & stormdrain O&M	CB-11	Implement (as appropriate) identified improvements to current street sweeping and storm drain system O&M programs (within available budgets). Meet with WVSD for stormdrain O&M evaluation.	Storm Drain Maintenance and Street Sweeping are evaluated in Public Agency Activities (Section #3) of this report.	Pub Works Supt. with WVCWP guidance

WEST VALLEY COMMUNITIES

FY 2006-2007 ANNUAL COPPER (and NICKEL) ACTION PLAN REPORT

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
Street sweeping /stormdrain O&M	CB-11	Ensure that contractor maintains effective street sweeping equipment.	The West Valley cities do not hesitate to change sweeping contractors if the equipment being used does not measure up to municipal standards. The Town of Los Gatos recently purchased a new regenerative air sweeper.	Pub Works Maintenance Superintendents and Supervisors and Director of Pub Works
Outreach on pool, spa maintenance	CB-12	Continue to distribute pool & spa maintenance brochure via agency department counters and public places. As time permits, update WVCWP website with current Pool & Spa maintenance info.	WVCs distributed an additional 500 Pool brochures at Planning & Bldg Dept counters during FY06-07.	WVCWP with Municipal Staff
Outreach on pool, spa maintenance	CB-12	Continue to distribute pool & spa brochures as part of ICID WVC inspections.	The Inspector provides Pool & Spa brochures to residents and pool and spa companies as part of his IC/ID Inspection Program.	WV Inspector
Use of architectural copper	CB-21	Within the Planning permit process, discourage use of copper roofing and gutters.	All WV cities discourage copper architecture with the exception of Los Gatos, which is drafting a Residential Design Guideline that will seek to discourage architects and homeowners from using copper by informing them of its environmental implications. The Guideline will be finalized during FY 07-08.	Planning Dir/ Sr. Planner
Green Building	CB-21	Distribute outreach or expand website to promote Green Building principles. Provide examples of Green Building principles that were implemented.	All WVCs encourage and adhere to Green Building practices. The Cities plan to continue emphasizing green building principals in FY07-08. Los Gatos' website provides Green Building suggestions: http://www.town.los-gatos.ca.us/index.asp?NID=1213 Saratoga's website lists Alternative Building Materials http://www.saratoga.ca.us/pdf/SD-21Alt.bldg.materials.pdf	Planning Dir/ Sr. Planner
E-Waste Disposal	Proper Disposal of items that contain copper	Develop, advertise & conduct West Valley E-Waste Recycling Event **Additional Task – Not in Workplan**	*April 28, 2007* ***Free*** *Hazardous Waste Recycling Event* - for used TVs, monitors and other electronics was sponsored by the West Valley Cities. Drivers of 170 vehicles brought used electronics for recycling. Campbell held a free E-waste event on 3-16-07 at Prune Yard Tower, Campbell.	WVCWP Staff

WEST VALLEY COMMUNITIES

FY 2006-2007 ANNUAL COPPER (and NICKEL) ACTION PLAN REPORT

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party

Control nickel discharge from construction sites	NB-1	Sediment Control: Continue to implement Construction Inspection Performance Standards (see Construction Inspection work plan section).	See Construction Inspection (Section #5) of this report.	Engineering and Building Inspectors WVCWP Inspector
Control nickel discharge from construction sites	NB-1	Training: Continue to have inspectors attend Regional Board/Program workshops on construction site management and learn latest erosion/sediment control techniques	See Construction Inspection Training (Section #5T) of this report.	Engineering and Building Inspectors WVCWP Inspector

Copper/Nickel Action Plan Evaluation

Car Wash Outreach Evaluation:

Car Washing has been highlighted on the WVCWP home page; the Car Wash Kit flyer was also sent to Fire Dept inspectors at their request. The Fire Dept inspects the West Valley Industrial and Commercial facilities, and reports incidents in residential areas if they notice violations while out in the field. WVCWP would like to have an all-inclusive, educational copper brochure, which would include car washing, architectural copper and pool draining in one piece. Staff have initiated a rough draft piece for this purpose. However, the WVCWP has not had the staff or funding to create an informative, attractive, finished piece that would be appropriate for mailing to residents and for distribution at events and municipal counters, etc.

Pool and Spa Maintenance:

The West Valley communities ordered 150 to 200 more brochures to give out at Planning counters and to new pool and spa owners. During FY06-07, The Town of Los Gatos' standard Conditions Of Approval for new homes with a pool were revised to require a sanitary sewer clean-out within 10 feet of the pool equipment, and a pervious landscaped area for pool filter washout.

Educational Outreach Evaluation:

The WVCWP will continue to provide outreach on car washing, vehicle maintenance, alternative transportation, and pool maintenance during in-class presentations and outreach at community events. WVCWP incorporated messages about activities that can prevent copper runoff as part of Kindergarten and 4th and 5th grade Enviroscape curriculum. These presentations have been successful in raising interest in proper car-washing and pool & spa maintenance methods. Staff have found that children seem especially receptive to the information about copper and car washing when they participate in the Enviroscape activity.

Street Sweeping:

The West Valley cities continued their street sweeping programs and submitted annual sweeping data to the Program. Los Gatos purchased a new PM-10

WEST VALLEY COMMUNITIES

FY 2006-2007 ANNUAL COPPER (and NICKEL) ACTION PLAN REPORT

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
regenerative street sweeper in FY05-06. The Town, by contract, used the new sweeper on Monte Sereno's streets. Campbell hired a new contractor for FY06-07 in order to employ effective, up-to-date equipment. In FY05-06, Campbell decided that the sweeping contractor did not have effective equipment, which required additional sweeping to get the job done effectively. The City is pleased with the results of the change in contractors. Saratoga's sweeping contractor uses two kinds of sweepers to address the different types of debris to be picked up. Saratoga is pleased with their contractor. Saratoga updated street sweeping maps to GIS street map format and posted them on the City's website in FY06-07. Street sweeping is very important to West Valley residents. If the streets are not swept on schedule City or Town staff receive phone calls to register complaints, even on holidays.				

Training Summary: Copper/ Nickel

Training Description	Date	Attendees
WVCWP Monthly Meeting – Copper Work Plan Guidance Discussion led by: WVCWP Program Manager **Topics:** ▪ Adopting Guidelines & Standards developed by Water Resources Protection Collaborative ▪ Providing outreach to Mobile Surface Cleaners ▪ Conducting and documenting street-sweeping in residential and industrial/commercial areas ▪ Providing outreach to residents on proper pool and spa maintenance ▪ Discouraging the use of copper roofs and architecture in development permit process ▪ Planning for an E-waste event	January 23, 2007	**WVCWP (3)** Program Manager Program Assistant Sormwater Inspector **Campbell** Senior Civil Engineer **Los Gatos (1)** Senior Engineering Technician **Saratoga (1)** Public Works Analyst
Street Sweeping Training Slide Presentation using information from Ranger Kidwell-Ross of Worldsweeper.com Training meeting held in Campbell Community Center **Topics**: • Running a streetsweeper at optimum speed for removal of debris and fine particles • Percent of pollutants and metals removed as fine particulates • Types of streetsweeping equipment used for different types of jobs • Street-sweeping as a BMP and a source control measure	**June 20, 2007**	**WVCWP (3)** Program Manager Stormwater Inspector Public Outreach Coordinator **Campbell (8)** Public Works Superintendent PW Supervisor **Los Gatos (6)** PW Superintendent Street Maintenance Worker Parks Lead Worker **Monte Sereno (1)** Assistant City Engineer **Saratoga (5)** Street Maintenance Supervisor Parks Maintenance Supervisor Lead Maint Worker & Maint Specialist Lead Parks Worker **WV Sanitation District (2)** Director of Engineering & Operations Operations Supervisor

Trash Management

City of Campbell

Town of Los Gatos

City of Monte Sereno

City of Saratoga

TRASH INVENTORY & MANAGEMENT

FY 2006-2007 Work Plan Self Evaluation Matrix

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
Trash Work Plan	Strategy	Participate in Trash Ad Hoc Task Group and assist Program staff in developing an effective strategy for trash reduction in urban streams and waterways.	The West Valley Clean Water Program Mgr attended the Trash AHTG meetings and provided feedback from West Valley cities on implementation strategy and tools. Topics this year included discussion about the proposed content of a Trash Control Measures Tool Box and a Trash Sources and Pathways illustration.	WVCWP Mgr attends AHTG – WVCWP Mgr to lead follow-up discussions at West Valley monthly meetings
Trash Work Plan	Pilot Demonstration	Participate in Trash Ad Hoc Task Group and assist Program staff in implementing a Pilot Demonstration Project which focuses on documenting type and volume of trash potentially conveyed through a storm drain system.	The West Valley Clean Water Program Mgr attended the Trash AHTG meetings and provided input on behalf of West Valley cities regarding potential pilot demonstrations.	WVCWP Mgr with input from West Valley Municipal Stormwater Reps
Trash Work Plan	Identify and Prioritize Problem Areas	Continue to Identify and prioritize trash problem areas and other potential sources that may contribute to trash problems in urban streams and waterways. Revise problem area list, based on surveys & other relevant information.	West Valley's list of trash problem sites was revised after conducting assessments in FY06-07. WVCWP staff removed litter at several new locations where excessive litter was found near creeks or waterways. A review of the site list was conducted. This resulted in replacing several of the sites originally listed as West Valley's trash "problem areas" with sites that had a more direct connection to urban streams or waterways. A few sites were replaced because a few years of monitoring and cleanups demonstrated that trash there was less of an issue than originally believed; staff resources should be concentrated on other sites in order to be effective. Assessment also resulted in adding several new sites where trash appears to be more of an on-going problem.	WVCWP Staff to coordinate with municipal staff

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
Trash Work Plan	Evaluations	Continue to conduct trash evaluations in a subset of local trash problem areas using the using the Program's Urban Rapid Trash Assessment (RTA) protocol and/or the KAB Litter index.	WVCWP staff conducted **51 KAB** assessments at the identified sites and listed problem areas in West Valley communities. The number of assessments included: Campbell (23), Los Gatos (11), Monte Sereno (13), and Saratoga (4). Although KAB monitoring usually is limited to drive-by evaluations of a site, several KAB assessments were conducted simultaneously with removal of trash and debris by WVCWP staff. The *Trash Problem Area Activity* reports for each city are included at the end of this report section. WVCWP staff and citizen volunteers also conducted **10 urban rapid trash assessments (RTA)** at listed trash problem areas in Campbell (5), Los Gatos (2) and Saratoga (3). All RTA site assessments included removal of trash and debris by WVCWP staff and volunteers.	WVCWP Staff to coordinate with WV Municipal Staff and Citizen Volunteers
Trash Work Plan	Management Practices	Continue to identify and implement trash control measures, where practical and feasible, to reduce trash and debris.	To address litter and illegal dumping problems, WVCWP staff have incorporated a trash topic into every element of public education and outreach. West Valley inspectors for industrial / commercial and construction sites have been asked to be on the lookout for litter and illegal dumping. Inspectors have been told to consider an accumulation of debris at a site to be a violation of stormwater requirements and to refer such sites to the Stormwater Discharge Inspector. Other trash management activities conducted by West Valley communities include monitoring identified problem areas, holding volunteer cleanup events at problem sites, notifying Caltrans when exceptional litter or debris problems are noticed along highways or freeway ramps, conducting removal of trash and litter as needed at sites within municipal jurisdiction and removing trash at some sites in Caltrans' jurisdiction.	WVCWP Staff to coordinate with municipal staff

Campbell ♦ Los Gatos ♦ Monte Sereno ♦ Saratoga

FY 2006 - 2007 ANNUAL REPORT

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
See PI/P – Citizen Participation	Monitoring/Citizen Participation	Continue to promote citizen participation program to monitor trash in local creeks. Submit trash tally sheets to Program staff (element of Creek Keeper's Program).	WVCWP staff conducted three trash monitoring and cleanup events with student and citizen volunteers. The City of Campbell's Public Works Director, Public Works Superintendent and Mayor partnered with Caltrans, to hold a City-wide pick-up event on 5/19/07. Campbell's event included work on littered areas along railroad tracks and the freeway. Volunteers at all clean-up events were taught to categorize and tally (monitor) debris collected. Participants worked in groups using WVCWP trash tally forms to collect the data that helps identify trash sources and management actions. Summary sheets for these events are included at the end of this report section. Los Gatos held a cleanup event on Saturday (4-21-07). Fourteen volunteers spent several hours picking up roadside debris in downtown Los Gatos. They removed twelve bags of garbage from gutters, sidewalks, catch basins and planters. Most of the debris was leaves but other items included CDs, medicine bottles, lots of cigarette butts and egg cartons! Additionally, Los Gatos has "Adopt-a-Trail" volunteers who collected and monitored trash 6 times (every other month) alongside Los Gatos Creek Trail during FY06-07. A total of 16 bags of debris were collected, including plastic water bottles, power bar wrappers and pet waste bags.	WVCWP Staff to coordinate with municipal staff
Trash Work Plan	Report on Trash Mgmt Practices Implemented	Provide Program staff with specific information on trash management practices implemented within the city's jurisdiction using program-wide standardized format.	WVCWP staff used SCVURPPP's standardized reporting forms to provide data on trash monitoring and management activities at the listed problem sites. *Trash Problem Area Evaluation Results* for each West Valley city, as provided by the Program, are included at the end of this report section.	WVCWP Staff to coordinate with SCVURPPP
Trash Work Plan	Data Collection	Submit Urban RTA Survey forms, trash tally sheets and any other data collection tool to Program staff.	KAB and Urban RTA forms for WV cities were submitted to SCVURPPP in July 2007 for Program-wide analysis and reporting.	WVCWP staff

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
Citizen Participation	E-Waste Event	Safe Disposal of E-waste Provide an opportunity for citizens to participate in safe disposal of e-waste and mercury thermometers.	In response to last year's E-waste survey, local residents requested a second E-waste collection event for FY06-07. WVCWP staff partnered with United Datatech to collect electronic waste on 4-28-07. The community event was free and available to the general public. UDT guaranteed that all collected material would be recycled safely and would not be sent to foreign shores. The City of Saratoga provided the collection site. A total of 13,793 pounds of E-waste was collected and **170 drive-through participants** were served.	WVCWP staff and Municipal staff

Trash Inventory & Management Evaluation

Dumpster Area Inspections & Education for Local Businesses

The WVCWP Inspector checks the dumpster areas of the downtown restaurants in each of the West Valley communities for signs of illegal dumping or debris around open dumpsters. He provides urban runoff education as needed, including the importance of keeping dumpster lids closed, and locked if necessary. His method of informal visits and issuing *Notices To Comply* has helped to reduce the amount of trash-related dumpster violations over the past three years.

Educational Outreach to Students and Teachers in Local Schools

WVCWP staff responded to every opportunity to talk about trash and littering with students. The trash topic is always included in classroom Enviroscape presentations. This year a Saratoga private school (K-8) and parents partnered with WVCWP to hold a cleanup three weeks after WVCWP made presentations to 5th and 6th grade classes. In May and June, following WVCWP presentations, two local Kindergarten classes took a tour around their school to identify storm drains and to pick up any litter they could find.

Creek Keeper Events – Volunteer Participation - Trash Identification, Tallying & Pick-up

The WVCWP has been particularly successful from 2003 to 2007 recruiting student volunteers for creek cleanups and the task of trash tallying. Each event is opened with a brief talk on the trash problem affecting our creeks and Bay. Volunteers appear to be energized by the chance to make a difference. WVCWP talks include visual aids (enlarged photos of trash accumulation downstream, near the South Bay); these appear to make a major impression on volunteers. The WVCWP's trash tally form was designed to be easy for students to use. Categories on the form reflect the trash types that are most often found in West Valley locations. Trash summary forms which show tally sheets' totals for each cleanup event are included at the end of this report section.

Partnering with other Agencies to address the problems:

WVCWP's best chance for success in dealing with the trash problem is to partner with other agencies and work with a well-organized regional group. In January 2007, at the suggestion of Campbell's Public Works Director, WVCWP staff joined the Silicon Valley Anti-Litter Task Force (formerly called the Santa Clara County Litter Technical Advisory Committee). The meetings are led by SC County and the City of San Jose and have a large attendance. WVCWP staff participates in the Education Subcommittee meetings and Campbell's Public Works Director chairs the Finance Subcommittee. On May 19, 2007, the Silicon Valley Litter Campaign sponsored a well-publicized cleanup event called Great American Pick Up Day. WVCWP, on behalf of all West Valley cities, helped staff

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party

a site that was sponsored by the City of Campbell and joined volunteers that were supervised by Caltrans to collect freeway litter.

West Valley's Illegal dumping problem will be difficult to address without the help of law enforcement and other agencies. The City of San Jose has law enforcement staff that participates in the Silicon Valley Anti-Litter Task Force. The West Valley cities cannot afford Police or Sheriff Dept. staff time to enforce anti-litter laws. The environment around some WVC areas (quiet parking lots and sparsely populated roads which border creeks) appear to attract illegal dumpers from other cities, yet WVC law enforcement staff cannot continuously monitor these zones. For instance, the WVCWP Illegal Discharge Inspector responded to a call from a bicyclist who noticed several full trash bags dumped over the side of Prospect Road in Saratoga. When the Inspector visited the sparsely traveled site, he was forced to park the car on a narrow shoulder of road and could not descend the steep drop to where the trash had been tossed. Cleanup from this kind of dumping is too dangerous for WVCWP staff and municipal staff to address alone. Putting a stop to illegal dumping requires a regional and enforceable solution.

General Evaluation of Trash Management Activities

After several years of monitoring trash sites, WVCWP staff is familiar with the sites and the problems that need to be addressed. Two leading trash sources in West Valley communities are "Illegal dumping" and "vehicular litter" (found along highways, freeway-on-and-off-ramps, and smaller arterial roads). The type of litter that is retrieved is predominantly snack, food, beverage and other product packaging and cigarette butts. Several West Valley problem areas are in Caltrans' jurisdiction. In December 2006, the WVCWP Mgr called Caltrans about cleaning up 2 bags of trash dropped and scattered on Hwy 9 near a freeway ramp in Los Gatos. Caltrans responded that day.

Saratoga Creek at Big Basin Way and Sunnyvale-Saratoga Road is a heavily vegetated area that has been used for illegal dumping. It looks better than it did during FY05-06 because Saratoga's maintenance staff and Water District staff removed several illegally-dumped items including a gas water heater and large wrought iron fixtures from the creek banks. Last year the City's Code Enforcement Officer and the Sheriff's Dept agreed to keep an eye on the area. "No Dumping" signs have been posted in the parking lot area above the creek. The banks of the creek are very steep with litter lodged between trees and vegetation about 25 feet from the high-water line. WVCWP staff will continue to monitor and remove trash from the accessible areas at the edge of the downtown parking lot at least two times per year. This site remains one of Saratoga's prioritized problem areas.

While traveling to one of Los Gatos' listed problem sites, WV staff noticed another problem area near where Shannon Creek flows into Guadalupe Creek. Staff stopped to remove illegally-dumped items and collected several bags of debris from this rural setting along Hicks Road. A GIS map indicates that this area may not be within Town jurisdiction. However, the Town's maintenance crews said they would pick up debris if it is reported within Town limits and placed within the "right-of-way". This accumulation of dumped items along a rural road is an illegal dumping concern for all jurisdictions when the abandoned debris is hidden by natural vegetation and steep slopes and violators are not caught.

Trash Problem Area Evaluation Results by Copermittee & Watershed

ID #	Date	Location	Assessment Tool	Score	Existing Management Actions	Recommended Management Actions and/or Future Evaluations
MI09	5/22/2007	Penitencia Creek off of Marilyn Dr. between Abbott and Abel	KAB	2.5	Allied Waste Services does not clean the creek. The City does not have access to this area because it is fenced off.	It is difficult to take action since most of the trash is windblown and water borne. Neither Allied Waste Services nor the City are responsible for creek clean-up.
MI07b	5/22/2007	Berryessa Creek at Abel Blvd.	KAB	2	The litter is cleaned up during the annual creek clean-up programs. The last creek clean-up was on September 16, 2006.	This area will again be cleaned during the annual Costal Cleanup Day on September 15, 2007.
MI04	5/21/2007	Piedmont Rd. between Yosemite and Uridias Ranch	KAB	1.75	This is a persistent problem. This area is inspected twice a week (Monday and Friday) or as needed. Trash is removed.	Existing management practices suffice.
MI02	5/21/2007	Downing Road Near Old Calaveras	KAB	1.25	This area is inspected twice a week (Monday and Friday) or as needed. Trash is removed.	Existing management practices suffice.
MI10	5/22/2007	Minnis Circle	KAB	1	The trash that is accumulated by commercial customers is often cleaned up. Problems occasionally resurface. Typical trash includes paper, cardboard, containers, parts from body repair shops and other commercial stores.	No longer a problem site. Persistent clean-up have resulted in major improvement in this area. Management practices will be continued.
MI07a	5/22/2007	Berryessa Creek at Calaveras Blvd.	KAB	1	The litter is cleaned up during the annual creek clean-up programs. The last creek clean-up was on September 16, 2006.	This area will again be cleaned during the annual Costal Cleanup Day on September 15, 2007.
MI03	5/21/2007	Calaveras Road near Spring Creek Ln.	KAB	1	This area is inspected twice a week (Monday and Friday) or as needed. Trash is removed.	Existing management practices suffice.
MI01	5/21/2007	Old Calaveras near intersection of Downing	KAB	1	This area is inspected twice a week (Monday and Friday) or as needed. Trash is removed.	Existing management practices suffice.

Oakland, CA 94612

Subject: City of Mountain View's Urban Runoff Management Program
FY 2006-2007 Annual Report

Dear Mr. Wolfe:

This report is submitted by the City of Mountain View, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a. of the Program's reissued municipal storm water NPDES Permit (Order No. 01-024). The report summarizes activities performed during FY 2006-2007 in accordance with the City of Mountain View's Urban Runoff Management Plan (URMP) submitted to the Regional Board on September 1, 1997 and updated in September 2004, and the performance standards contained therein.

Contents of Report

The goals of this Annual Report are to: 1) concisely document implementation of our URMP and FY 06-07 work plan during the past fiscal year; 2) evaluate program results for continuous improvement; 3) comply with permit requirements; and 4) share this information with other Co-permittees, municipal decision-makers, and the public. To accomplish these goals, the report contains the following sections:

I. Contents of report;
II. Program highlights and accomplishments;
III. Summary of continuous improvement activities;
IV. Attachments:
   A. Certification Statements
   B. Self-Evaluation and Work Plan Completion Matrix
      - ICID
      - IND/COMM Inspections
      - Street, Roads, and Highways
      - Corporation Yards
      - Rural Public Works
      - Storm Drain O&M
      - Water Operations
      - New Development Planning Procedures
      - New Development Construction Inspection
      - Pest Management

- Mercury Pollution Prevention
- Copper/Nickel
- Trash Inventory and Management
- Water Quality Monitoring
- PIP
- Staff Training
- Annual Reports and Work Plans

C. List of Acronyms, Abbreviations, and Definitions
D. Treatment BMPs Inspection Activity Report for FY 06-07
E. Pesticide Use Evaluation for FY 06-07

Program Highlights and Accomplishments

The City's Urban Runoff Management Plan URMP describes activities that are implemented to control storm water runoff pollution. During FY 06-07, the City continued efforts to implement its URMP to the maximum extent practicable. Attachment B provides self-evaluation for each element in the City's URMP. Highlights of the City's FY 06-07 URMP accomplishments are listed below:

- The City responded to 68 ICID incidents, which resulted in the issuance of 6 warning notices, 2 administrative actions, and 1 administrative action with a penalty. The penalty citation was issued for $3,000.
- The City continued its restaurant inspection and outreach program, conducting 88 restaurant inspections, which were fewer inspections than past years. This reduction was due to changes in staffing. The City is currently undergoing recruitment to fill vacant positions and the goal is to train incoming inspectors to perform the restaurant inspections, which also include fire and life safety inspections. The City collected $250 in penalties resulting from the restaurant inspections.
- The City implemented the enhanced data collection and reporting requirements for the ICID and Industrial inspection programs.
- In addition to the restaurant inspections, the City conducted 222 industrial/commercial inspections and re-inspections (this figure does not include restaurants and hazardous materials facilities) during FY 06-07.
- The City conducted training for streets, parks, water, wastewater, fleet services, facilities personnel.
- The City implemented its PIP program, which included school outreach, publications, and public events, and multi-cultural outreach.
- The City reviewed 98 projects for storm water related items.
- The City implemented its C.3 requirements, which included approval of 4 new projects. These projects included required runoff BMPs.
- The City developed an abbreviatedform for C.3 requirements at small project sites.
- The City initiated its treatment BMP inspection program.
- The City developed a database that will be used to permit stormwater treatment BMPs, as well as track inspection and maintenance activities for those BMPs.
- The City conducted 117 construction site inspections, and issued 44 written notices.
- The City implemented its IPM Policy and IPM Plan.
- The City utilized a database for tracking pesticide use.

Continuous Improvement Activities

The City is committed to seeking URMP areas for improvement. The current continuous improvement items are listed below:

- The City will continue to implement its enhanced restaurant inspection program.
- The City will continue to work to improve implementation of the C.3 requirements, including use of the database to issue permits for operating and maintaining stormwater treatment BMPs.
- The City will closely monitor development of the Municipal Regional Permit to identify areas that may need to be modified to comply with any new requirements.
- The City will continue to evaluate and implement improvements to the IPM Plan, and pesticide management program.

Thank you for your review of this Annual Report. If you have any questions regarding the materials submitted, please contact me at (650) 903-6225.

Very truly yours,

Eric Anderson, Urban Runoff Coordinator

cc. Sue Ma, RWQCB

FY 2006-2007 ANNUAL REPORT

Municipality: City of Mountain View

ICID Program Evaluation

During FY 06-07, the City responded to 68 ICID incidents, which is less than past years' results (92 incidents in FY 02-03, 89 incidents in FY 03-04, 74 incidents in FY 04-05, and 80 incidents in FY 05-06). The breakdown of the types of incidents, potential source, sources of reports, and follow-up and enforcement actions are summarized in the attachment to this section of the annual report. During FY 06-07 the City responded to 12 fewer incidents than during FY 05-06. Evaluation of the "Incident Type" data showed that the City responded to 3 fewer "accidental spills", 14 fewer "vehicle and equipment leaking," 4 more "grey water" incidents, and 4 more sanitary sewer overflow incidents in FY 06-07 compared to FY 05-06. The "accidental spills" incidents are mostly vehicle accidents that result in spilled vehicle fluids. The "vehicle and equipment leaking" incidents are typically Fire Department responses to fuel or other vehicle fluid leaks. The remaining incident types were consistent (+/- 1) during FY 06-07 when compared to FY 05-06.

During FY 06-07, the City continued its restaurant inspection program to address restaurant-related ICID incidents. This will be discussed further in the IND section of the annual report.

During FY 06-07, the City switched its incident data management system from CAD-RMS to a program called Firehouse. Use of this new database has enabled the Environmental Protection Division to have greater access to incident records.

Review of the data does not provide useful information regarding the distribution of ICID incidents. The incidents appear to be randomly occurring throughout the City.

Industrial/Commercial Program Evaluation

During FY 06-07, the City implemented its Industrial/Commercial inspection program. The data above summarizes the City's actions. Common types of problems found are spills and leaks, housekeeping, training requirements, secondary containment needs, and equipment washing.

During FY 05-06 the City conducted 32 automotive facility inspections, which was lower than past years, because only automotive facilities that were permitted to discharge to the sanitary sewer were inspected due to a staffing shortage. The inspections evaluated sanitary sewer discharges and stormwater issues. During FY 06-07, the City resumed inspections of all automotive facilities as an inspector was hired, and 166 automotive facility inspections were completed.

During FY 06-07, the City conducted 88 restaurant inspections. Due to staffing changes, fewer Fire and Life Safety/Environmental inspections were conducted at food facilities. Existing inspection staff are being trained to perform these inspections.

During FY 06-07, The City collected penalties related to commercial and industrial inspections in the amount of $250.

Public Streets, Roads & Highway O&M Program Evaluation
During FY 06-07, the City's sweeping totals increased compared to FY 05-06, but were similar to past years. A summary of the City's sweeping totals is included with this report. The City also continued to implement the Clean Sweep program, which provides access to streets that are impacted with parked cars, and the annual leaf removal program. Training during FY 06-07 (March 29, 2007) focused on incident response, preventing spills from reaching the storm drain or the sanitary sewer drain, chemical handling, and how to handle abandoned wastes. The Public Services Department's Safety and Training Manager coordinated the training, and the Urban Runoff Coordinator participated in the training presentation. Training in conjunction with the Safety and Training Manager is a good way to present multiple topics to the employees without impacting operations.

Corporation Yard O&M Program Evaluation

During FY 06-07, the City conducted training (March 29, 2007) for all MOC operations and maintenance employees regarding the Environmental Compliance Plan. The training mostly covered hazardous materials issues, such as storage, and incident response, spill mitigation, and reporting.

The City continued its contract for SWPPP inspections and monitoring for the MOC. Quarterly dry weather inspections and monthly wet weather inspections did not result in discoveries of new pollutant sources or new BMPs that may be needed. The project to construct a roof over the bulk storage area started in FY 06-07 and should be completed in fall 2007. The Annual Report for the MOC SWPPP is available for review upon request.

Rural Public Works Program Evaluation

The City of Mountain View is urbanized, so most of the Rural Public Works Performance Standards do not apply. The standards describing work performed along or across stream channels may be applicable depending on the project. The City's Public Works specifications require contractors to install erosion controls, and City contacts require contractor to obtain the necessary permits for working in and along watercourses.

Storm Drain System O&M Program Evaluation

During FY 06-07, the City's Wastewater Section continued to maintain storm drains by cleaning catch basins using a vacuum truck. The Wastewater Section also stencils storm drains throughout the City. Wastewater conducts preventative maintenance on the City's sanitary sewer system, which reduces sewer overflow incidents. In cases where sewer overflows occur, Wastewater will unplug the sewer, and vacuum the spilled sewage. These incidents are reported in the ICID data. During FY 06-07, the City reports an increased number of sewage overflows from 16 to 20 incidents. This may result from improved reporting rather than an actual increased number of incidents. Wastewater now reports incidents, which were considered minor and un-reportable in the past, such as minor overflows from private sewer laterals. Wastewater also responds to other types spill incidents, when needed.

Training during FY 06-07 focused on incident response, preventing spills from reaching the storm drain or the sanitary sewer drain, chemical handling, and how to handle abandoned wastes. The Public Services Department's Safety and Training Manager coordinated the training, and the urban runoff Coordinator assisted with the training presentation. Training in conjunction with the Safety and Training Manager is a good way to present multiple topics to the employees without impacting operations.

NEW DEVELOPMENT PLANNING PROCEDURES (C.3)

FY 2006-2007 Work Plan Self Evaluation Matrix

Item No.	Activity	FY06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
C.3.a Performance Standard Implementation Goal: To modify Mountain View's URMP to include revised model Planning Procedures Performance Standards that incorporate Provision C.3 requirements.				
NDP - all	**a.1.** Incorporate revised model Planning Procedures Performance Standards into local urban runoff management plans.	The City will review the Program-developed model Planning Procedures Performance Standards when completed. If acceptable, the City will incorporate the model Planning Procedures Performance Standard into its Urban Runoff Management Plan.	The Program's model Performance Standard and Supporting Documents for Planning Procedures for New Development and Redevelopment are adopted and included in the City's URMP.	FD
C.3.b Development Project Approval Process Goal: To modify Mountain View's development project approval processes, for both private and public development project, to incorporate the requirement of Provision C.3				
NDP – 1	**b.1.** Assess current stormwater-related requirements in Co-	1) Conditions of Approval will be revised to list Group 2 projects when the deadlines are determined.	1. During FY 06-07, the City's Conditions of Approval were revised to require stormwater treatment controls for Group 2B projects.	FD CDD PW

	permittee's development review process, for public and private projects, and identify additional steps or tools required at each stage of the process to meet C.3. requirements.	2) Develop guidance document to assist developers and City staff implement the C.3 requirements.	2. During FY 06-07, the City's guidance document outlining the C.3 requirements was revised to include Group 2B projects.	
NDP – 1	**b.2.** Develop new or modify existing review policies, ordinances, procedures, and/or conditions of approval to incorporate Group 1 requirements (based on results of tasks under C.3.c. through C.3.m.)	Policies, ordinances, procedures, and/or conditions of approval are required to implement the C.3 requirements. Revisions are incorporated as necessary to reflect changing requirements.	In October 2004, the Mountain View City Council adopted a new section (Sec. 35.32.23) of the ordinance, titled "Permanent stormwater pollution prevention measures." This ordinance section requires implementation of the C.3 requirements, the City's stormwater Quality Guidelines, and inspection and maintenance responsibilities. Standard Operating Procedures are included in the URMP. Conditions of approval modified to require C.3 controls for Group 2B projects. Guidance document outlines C.3 requirements for developers. Guidance document was revised to include Group 2B requirements.	FD CDD PW
NDP - 10	**b.3.** Train Co-permittee staff in planning, building, and engineering departments on the	The City will train Planning, Building, and Engineering staff on all changes to the development review process, and the use of tools, such as check sheets and updated materials. Staff training will be performed either in-house, or as	City staff attended SCVURPPP C.3 training workshops – see Staff Training Table. In August 2006, Urban Runoff Coordinator met with Directors and Managers from Community Development Department and Public Works to discuss Group 2B and other C.3 implementation topics. Urban Runoff Coordinator will	FD CDD PW

	C.3. provisions and goals, the required changes in the approval process, and the use of appropriate tools.	part of a Program-wide effort.	conduct Community Development Department staff training during Fall 2007 for update regarding C.3 implementation.	
C.3.c Requirements for Group 1 and Group 2 Projects Goal: Prepare to require proponents of Group 1 projects to design and implement stormwater treatment BMPs or reduce stormwater pollution to the maximum extent practicable. Participate in development of the proposal for an alternative Group 2 project definition and prepare to implement C.3 requirements for Group 2 projects as needed				
NDP – 12	**c.1.** Develop and implement a procedure to request and log the type, size, and impervious area of every project (and extent of redevelopment if applicable) for determination of applicability of Group 1 (and later Group 2) requirements.	1. An impervious surface data sheet was developed for preliminary information about the types of projects that occur in Mountain View. 2. The impervious surface data collection sheet may be modified for use in the guidance document as a way to determine applicability of the C.3 requirements.	Impervious surface data collection sheets are required to be submitted with the Stormwater Management Plan required by the City's guidance document. Impervious surface calculation sheets may also be required during the Planning review process to determine if the project meets the C.3 threshold.	FD CDD PW
NDP – 12	**c.2.** Develop a method for determining	1. For Group 1 projects, Community Development Applications received on or after October 15, 2003 will be	1. The City determined that group 1 project applications received on or after October 15, 2003 were subject to C.3 requirements. For	FD CDD PW

	whether a private project was "deemed complete" by 7/15/03, or documenting that a public project was funded and scheduled for construction by 10/15/03.	subject to the City's C.3 implementation program outlined in the guidance document. 2. For public projects, the City will document projects funded and scheduled for construction by 10/15/03, which will be exempted from C.3 requirements.	Group 2A, the date was October 2005, and for Group 2B, the date was August 2006. 2. For Group 1, C.3 requirements were included on public projects funded and scheduled for construction by 1/15/2004. For Group 2A, the date was October 2005, and for Group 2B, the date was August 2006.

SANTA CLARA VALLEY URBAN RUNOFF POLLUTION PREVENTION PROGRAM

FY 2006-2007 ANNUAL REPORT

Municipality: City of Mountain View

Item No.	Activity	FY06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
C.3.e. Operation and Maintenance of Treatment BMPs Goal: To develop and implement local agency operation and maintenance (O&M) verification programs to help ensure the proper maintenance of stormwater treatment measures on public and private property.				
NDP – 8	**e.1.** Develop and implement a procedure for logging information about treatment BMPs installed at approved Group 1 projects, and for maintaining a list or database of properties, treatment BMPs, and responsible operators.	The City's Fire and Environmental Protection Division currently maintains a database of facilities that have stormwater treatment BMPs. The database is set up to print out annual letters requiring the facility contact to submit proof of BMP maintenance.	During FY 06-07, the City developed a database system that will be used to issue a permit to stormwater treatment system operators. The permit will list maintenance requirements, and required reporting and submittals. The database will also be used to issue annual maintenance verification letters, and to track inspection and maintenance activities. The database was completed at the end of FY 06-07 and will be implemented in FY 07-08.	FD RBF
NDP – 8	**e.2.** Adapt model O&M agreement language to meet agency-specific needs and requirements and incorporate into the project review and	The City will review the model O&M agreement language that will be developed by the Program, and is due 12/02. If acceptable, the O&M agreement language will be incorporated into the project review and approval process as appropriate.	A final O&M agreement has been developed. Completed O&M agreements are required as part of the Stormwater Management Plan review and approval.	FD

	approval process.			
NDP – 8	**e.3.** Develop local programs for inspection of a subset of prioritized treatment BMPs to verify that the responsible party is performing required O&M.	The City will utilize the O&M verification system that is currently in place for treatment BMPs. The current system is to send annual maintenance letters to all facilities with treatment BMPs requiring submittal of maintenance certification. Additionally, treatment BMPs that are considered to be a priority for inspections will be inspected annually.	During FY 06-07, the City inspected 3 sites that have stormwater treatment controls. The results from these inspections were submitted to SCVURPPP for reporting. During FY 07-08, the City will continue inspecting stormwater treatment facilities and the inspection results will be entered into the C.3 database.	FD
NDP - 12	**e.4.** Report on BMP O&M verification program.	The City will report on the progress of the BMP O&M verification program during the Annual Reporting process. The annual reports will include effectiveness evaluation and planned program improvements.	As previously stated, the City developed a new permitting, maintenance tracking, inspection tracking, and reporting database that will be implemented in FY 07-08.	FD
C.3.f. Hydromodification Management Plan (HMP) Goal: To manage increases in runoff peak flow and volume for Group1 projects, where such increases may cause increases erosion of creek beds and banks or related impacts, through implementation of a HMP.				
NDP – 1	**f.1.** Upon adoption by the Regional Board, begin implementation of HMP requirements for Group 1 projects that may cause	The City will review the HMP requirements. If acceptable, the HMP requirements will be implemented	HMP requirements have been incorporated into the City's C.3 implementation process and into the guidance document.	FD CDD PW

	increased erosion of other related impacts.			
C.3.h. Alternative Certification Goal: To allow a professionally qualified person to certify the adequacy of design of stormwater treatment measures.				
NDP	**h.1.** Alternative certification	The City will develop an internal procedure to allow alternative certification of the adequacy of design of stormwater treatment measures.	The City's guidance document was revised to include a third-party engineer's certification requirement. During FY 06-07, third party engineers were required to certify that the treatment controls designed for the project meet the City's Guidelines and requirements.	FD CDD PW
C.3.g. Waiver and Compensatory Mitigation Program Goal: Establish a program under which a project proponent may request a waiver from treatment BMP requirements due to impracticability, with a provision to provide an equivalent water quality benefit to the same receiving water (that allows participation in regional solutions).				
NDP – 1	**g.1.** Develop local waiver program, perform legal review, and incorporate provisions in project review process	The City will review the model waiver and compensatory mitigation program that will be developed by the Program, and is due 3/03. If acceptable, the waiver and compensatory mitigation program will be incorporated into the project review and approval process as appropriate.	At this time, the City does not have a waiver and compensatory mitigation program since there is not a system to allow for participation in regional solutions. The City will consider a waiver and compensatory mitigation program if a viable opportunity becomes available.	
NDP - 12	**g.2.** Tracking information for reporting on waivers granted, including project data, reasons for and terms of the waiver, and the	If an acceptable waiver and compensatory mitigation program is adopted, the City's Fire and Environmental Protection Division will update the new development tracking database to include the requested waiver information.	Waiver tracking program is not applicable at this time.	

	alternative benefit project and completion date.			
C.3.j. Site Design Measures Guidance and Standards Development Goal: To incorporate site design measures that reduce water quality impacts into local design standards and encourage their use in project designs to meet C.3. requirements.				
NDP – 4	**j.1.** Review existing local design standards and guidance, and compare them to the list of areas to address in Provision C.3.j. and other references such as "Start at the Source" and the "Development Policies Comparison" work sheet. Prepare and submit an analysis of local standards, identified opportunities for revision, and proposed revisions.	1. Review list of recommended site design measures to reduce water quality impacts using references, including the NPDES Permit and "Start at the Source." 2. Compare the list of recommended site design measures with existing City standards and guidance. 3. Identify opportunities for revisions to City standards that will incorporate site design measures to reduce water quality impacts. 4. Prepare and submit an analysis of the revisions proposed to be incorporated into the City's project review process, including schedule for revisions and implementation	The City's C.3 guidance document references site design measures. The City's C.3 guidance document also provides reference to the SCVURPPP C.3 Handbook, and the Start at the Source" Design Guidance Manual.	CDD FD

C.3.l. Update General Plans Goal: Include water quality and watershed protection principles and policies in General Plans to the extent necessary to provide the basis for implementation of the measures required by Provision C.3.				
NDP - 1	**I.1.** Review current	The current City General Plan Policy has been reviewed, and pursuant to	General Plan was reviewed and found to adequately address policies needed to implement Provision C.3.	CA FD

	General Plan policies related to water quality and watershed protection, and incorporate additional policies as shown in C.3.I. as appropriate.	Goal F, Policy 16 of the Environmental Management Chapter is shown to adequately address the principles and policies that are needed to implement Provision C.3.	The pertinent General Plan sections are included in the City's URMP.	
C.3.m. Water Quality Review Processes Goal: To ensure that water quality impacts and appropriate mitigation measures are identified as part of environmental review of proposed projects.				
NDP - 3	**m.1.** Review CEQA initial study checklists and other environmental review documents and modify documents as needed to include questions that sufficiently address water quality impacts of projects.	1. Review and evaluate the examples of CEQA Water Quality Review questions that are listed in C.3.m. 2. Compare the examples in C.3.m. to the City's existing CEQA and other environmental review documents. 3. Revise CEQA and other environmental review documents as necessary.	The City reviewed the example Water Quality Review questions listed in C.3.m, and determined that the City's existing CEQA check list adequately addresses the questions in a manner that is consistent with the SCVURPPP memo, dated October 17, 2003.	FD CDD
C.3.n. Reporting Requirements Goal: To meet the Provision C.3. reporting requirements, and plan for anticipated data needs, and begin collecting and tracking required data on development projects as needed.

FY 2006-2007 ANNUAL REPORT

Municipality: City of Mountain View

NDP – 12	**n.1.** Provide information from Table 1 of Provision C.3 in Annual Reports	Tables will be included in Annual Reports.	See project reporting tables (Part 1 and Part 2) that are included in this report.	CDD PW
NDP - 8	**n.3.** Collect information and report a summary of types of pesticide reduction measures required for development projects, and the percentage of projects for which pesticide controls were required.	The City will continue to review and evaluate pesticide reduction measures for possible implementation. The City currently requires the following pesticide reduction measures for landscaping on new projects: • No steep slopes (>10%) • Use of mulches • Selecting plants appropriate for the climate zone • Irrigation systems that reduce runoff	No new pesticide reduction measures were added during FY 06-07. The Fire and Environmental Protection Division reviewed 30 projects as part of the development review process during FY 06-07. Conditions to reduce pesticide runoff were placed on 22 of the 30 projects.	FD CDD

Regional Board Comments on New Development-Planning Procedures in FY 2005-2006 Annual Report		
Item	**RWQCB Comment**	**City of Mountain View Response**
No comment	NA	NA

New Development-Planning Procedures Program Evaluation

During FY 06-07, the City implemented the C.3 requirements using its existing development review process. Information regarding the requirements is provided to applicants early in the planning process. The City revised its Conditions of Approval, and the C.3 guidance document, titled "Stormwater Quality Guidelines Development Project," to reflect Group 2B requirements. The Fire and Environmental Protection Division places conditions of approval on projects requiring applicants to prepare and submit a Stormwater Management Plan for applicable projects. The information required in the Stormwater Management Plan is listed in the City's Stormwater Quality Guidelines document. The Stormwater Management Plan includes information about the treatment controls that will be installed or used to comply with the requirements. The Plan also describes the O&M requirements. During the plan review phase of the process, building plans and the Stormwater Management Plan are checked to verify that the conditions and requirements are met. Plans are approved and a building permit will be issued when the conditions and requirements are met.

During FY 06-07, the City developed an abbreviated form for permanent stormwater treatment requirements at small projects. An owner or architect of a small project using landscape treatment controls to meet the stormwater treatment requirement will be able to use the abbreviated form to show that proposed controls meet the requirement. The purpose of the abbreviated form is to provide a simplified method for showing compliance with the C.3 requirement. The abbreviated form was completed and submitted for one project during FY 06-07.

During FY 06-07, the City placed the C.3 Planning Condition on 20 projects. This is a larger number of projects than in past years due to the impervious surface reduction to the Group 2B threshold. Most of the projects that had the C.3 condition are still in the Planning phase and have not submitted building plans to the City. The City approved four private projects that included stormwater treatment controls. Controls for these projects included mechanical treatment devices and drainage to vegetated swales. There were no public projects that required stormwater treatment controls in FY 06-07. Conditions were placed on all projects that Maintenance Agreements would be entered and recorded prior to final occupancy.

A number of previously reported Group 1 projects were completed during FY 06-07 and the City initiated its inspections and O&M

verification program. A summary of the BMP inspections is included in Attachment D. During FY 06-07, the City also developed a database that will be used to issue permits to BMP operators, and to track inspection and maintenance activities.

The City reviewed 98 projects for potential stormwater related impacts and requirements.

The Tables below provide information on the three projects that were approved during FY 06-07.

Part 1 – Group 1 New Development and Significant Redevelopment Projects

SANTA CLARA VALLEY URBAN RUNOFF POLLUTION PREVENTION PROGRAM
FY 2006-2007 ANNUAL REPORT

Municipality: City of Mountain View

New Development-Construction Inspection Program Evaluation
During FY 06-07, the City continued to implement an effective construction inspection program. The City conducted 117 construction site inspections and issued 44 written notices. Most notices were for minor violations with corrective actions. The majority of the inspections were conducted at small project sites. The City currently has a few moderately sized projects, which are the priority sites for inspections. Most of the construction inspection items identified were housekeeping issues that were corrected, such as sweeping, replacing filters, and adding rock to the construction driveway. Pre-winter inspections were conducted and information was distributed, which seemed to help maintain compliance throughout the winter. The City will continue to implement its construction inspection program. Pre-winter inspection and information distribution is important for achieving compliance, and will be conducted again in FY 07-08.

PEST MANAGEMENT (Provision C.9.d of the Permit)				
FY 2006-2007 Work Plan Self Evaluation Matrix				
Item No.	**Activity**	**FY 06-07 Work Plan Tasks**	**FY 06-07 Accomplishments**	**Responsible Party**
Municpal Pesticide Use **Goal 1.A.** Eliminate all unnecessary municipal pesticide use (particularly organophoshate (OP) pesticide use) and implement Integrated Pest Management (IMP) techniques.				
I.A.1	Record Keeping and Tracking	Develop and implement a process for tracking pesticide use on municipally owned property (PS #8). Include in the process reporting and justification for the use of OP pesticides and BMPs employed during OP pesticide use.	Pesticide use tracking database was used during FY 06-07. Pesticide use data for FY 06-07 is available on request.	FD, CSD, SGL, and PCO
I.A.2	IPM Policy	Adopt an IPM policy and/or ordinance requiring the use of IPM techniques in the agency's operations, minimization of pesticide use, and the restricted use of organophosphate pesticides only when their use is justified and adverse water quality impacts are minimized (PS #2).	City's IPM Policy was adopted by the City Council on September 10, 2002.	FD, CSD, SGL
I.A.3	IPM Plan	Develop and implement standard operating procedures (SOPs) and best management practices (BMPs) for implementing the IPM policy. (PS #3).	Final IPM Plan was completed in June 2003. IPM Plan includes SOPs and BMPs. The Plan was implemented during FY 06-07.	FD, CSD, SGL, CM

ATTACHMENT B

SANTA CLARA VALLEY URBAN RUNOFF POLLUTION PREVENTION PROGRAM

FY 2006-2007 ANNUAL REPORT

Municipality: City of Mountain View

		BMPs will include special precautions to reduce water quality impacts when applying pesticides.		
I.A.4	Performance Standards	Update local URMPs to incorporate/adapt the model Pest Management Performance Standard, including a description of the legal authority (IPM policy/ordinance, contract language), work plan elements, BMPs, and SOPs needed for implementation. (Program FY 01-02 Work Plan)	Program's Model PS is adopted and included in the City's URMP.	FD
I.A.5	Contract PCOs	Develop and implement a process to ensure that any contractor employed to conduct pest control and pesticide application on municipal property engages in pest control methods consistent with the IPM policy adopted by the agency (PS #5).	City's PCO contract did not go for bid during FY 06-07. City's purchasing Division was notified of the IPM Policy and will be informed that future IPM requirements will be included when new PCO Contract is solicited. IPM Policy and Plan have been provided to the City's PCO contractor.	FD, purchasing
I.A.6	Chemical storage area inspection	Conduct a periodic agency-wide search of chemical storage areas for pesticides no longer legal for application per EPA, State, and/or local requirements, and properly dispose of any such pesticides pursuant to appropriate waste disposal regulations.	During FY 06-07, the Fire Department evaluated City-wide chemical inventories. No OP pesticides were identified.	FD
MM I.A.1	Annual report	Document completion of tasks in annual reports. Use pesticide-tracking process to document pesticide use.	Pesticide use data will be used in the effectiveness evaluation section of the annual report.	FD

SANTA CLARA VALLEY URBAN RUNOFF POLLUTION PREVENTION PROGRAM

FY 2006-2007 ANNUAL REPORT

Municipality: City of Mountain View

Goal 1.B. Raise awareness of all municipal employees and train employees who apply pesticides for the municipality about the municipality's IPM Policy and/or IPM techniques as appropriate.				
I.B.1	Employee Training	Ensure that employees who apply pesticides for the agency obtain the appropriate training as required by the County Agricultural Commissioner and the State Department of Pesticide Regulation (DPR) (PS #4a).	All City pesticide applicators receive training required by the County and State.	CSD, SGL
I.B.2	IPM Training	Provide annual training on the appropriate portions of the IPM Policy, SOPs, and BMPs, and the latest IPM techniques to employees within departments responsible for pesticide application (PS #4b).	Environmental Safety Division personnel and Community Services Managers and Supervisors attended the Regional IPM training workshop on November 14, 2007. Employees from the City's contract structural pest control operator, Bay Valley Pest Control, also attended the workshop.	FD. CSD, SGL
I.B.3	Training	Periodically (at least annually) inform employees who are not authorized and trained to apply pesticides that they cannot use over-the-counter pesticides in or around the workplace, consistent with the IPM Policy (PS #4c).	Departments have been informed to contact the PCO for pest problems. Training conducted by the Safety and Training Manager and the Urban Runoff Coordinator on March 29, 2006 reviewed the Environmental Compliance Plan for the Operations and Maintenance Divisions. This training covered incident response (including spills), chemical handling, emergency response, and handling abandoned waste. The over-the-counter pesticide prohibition was also discussed.	FD, CSD, PS
I.B.4	Training Workshop	Assist with and send staff to a workshop on least-toxic pest control methods and pesticide management BMPs. (Program FY 01-02 Work Plan)	Environmental Safety Division personnel and Community Services Managers and Supervisors attended the Regional IPM training workshop on November 14, 2007. Employees from the City's	NA

			contract structural pest control operator, Bay Valley Pest Control, also attended the workshop.	

Item No.	Activity	FY06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
Public Education and Outreach **Goal II.A.** Increase awareness of IPM so target audiences recall less toxic pest management messages and adopt IPM behaviors. Target audiences include residential and commercial users, pesticide retailers, municipal employees, and special districts (PS #6)				
II.A.1	WE&O Outreach	Assist with local implementation of the Watershed Education & Outreach (WE&O) Campaign[1], which will target the general public and include messages about less-toxic pest control and proper disposal (Program FY 01-02 Work Plan).	The City supports WE&O Outreach through Program participation. The City distributed IPM and less toxic pest control information at various public events, such as the Art and Wine Festival, and Arbor Day Fair. The Community Outreach Coordinator also distributed Pest control fact sheets in English and Spanish.	FD, CM
II.A.10	Local Outreach	Prepare and pitch IPM stories and press releases to local media.	During FY 06-07, the City did not prepare IPM articles.	FD
II.A.12	IPM Outreach	Assist with implementation of local components of a "Pesticide User Outreach" project[2] targeting residential and commercial users (see Program FY 01-02 Work Plan).	City supports this item through Program Participation.	FD
II.A.13	IPM Outreach	Provide information on less toxic pest control (e.g., IPM techniques, municipal IPM policies, model contract language,	The City did not provide information to neighboring special districts. City supports outreach through regional effort.	FD

[1] Funded by all Co-permittees in FY 01-02.
[2] Funded by all Co-permittees in FY 01-02.

		training opportunities, etc.) to neighboring special districts (e.g., open space districts, vector control districts, and school districts) as appropriate		
MM II.A.1	Annual report	Document or estimate numbers of residents reached by outreach efforts and media advertising	Through distribution of IPM materials at community events, the City educated approximately 2,500 residents.	FD
Goal II.B. Educate pesticide retailers and consumers about less toxic pest control products and promote the sale of such projects.				
II.B.1	IPM Outreach	Continue to fund and participate in the BASMAA Regional IPM Partnership[3]. (Program FY 01-02 Work Plan)	City addressed this item through Program participation.	FD
II.B.2	IPM Outreach	Continue to implement cost-effective elements of the IPM Store Partnership Program. Create and provide fact sheets and other materials to pesticide retailers to facilitate point-of-purchase outreach. Visit stores as necessary to ensure ongoing participation. (Program FY 01-02 Work Plan)	The City continued its support of the Our Water Our World program during FY 06-07. Three stores in Mountain View participated in the program.	FD
II.B.3	IPM Outreach	Assist Program to offer IPM training opportunities to pesticide retailer employees through coordination with Master Gardener-taught educational programs.	This item addressed through Program participation.	FD
MM II.B.1	IPM Outreach	Document number of participating stores, materials distributed and employees trained. Evaluate the cost-	Three stores continued participation in the OWOW program. Pest fact sheets, and shelf talkers provided at the stores.	FD

[3] Funded by all Co-permittees in FY 01-02.

		effectiveness of the IPM Store Partnership Program each year		
Pest Control Operators (PCOs) **Goal III.A.** Minimize pesticide use by PCOs contracted for structural pest control and landscape maintenance.				
III.A.4	PCO operations	Require PCOs contracted for municipal applications to use pest control methods consistent with the municipality's IPM policy (through contract specifications). Specifically, require contractors to: a) follow the agency's IPM policy, BMPs, and SOPs; b) provide evidence of current IPM training, when feasible; and c) provide documentation of pesticide use on agency property to the agency in a timely manner (PS#5).	IPM Policy and Plan was provided to the City's contract PCO, Bay Valley Pest. Bay Valley submits records of pesticide applications to the City. Another landscape contractor applies small amounts of category III herbicides in accordance with the City's IPM policy. The contractor has been notified of the IPM policy.	FD
MM III.A.1	Record keeping and tracking	Document pesticide use by PCOs on municipal property	During FY 06-07, records of pesticide applications by Bay Valley were submitted to the City. These records were included in the pesticide database. Pesticide use data for FY 06-07 is available on request. Pesticide use by a landscaping company contracted by the City to perform minor work at public Parks had not been tracked in previous years. The City's pesticide use tracking process was updated to include pesticides applied by the contractor. This is a small amount of pesticide use, and is included in the FY 06-07 pesticide summary.	

ATTACHMENT B

SANTA CLARA VALLEY URBAN RUNOFF POLLUTION PREVENTION PROGRAM

FY 2006-2007 ANNUAL REPORT

Municipality: City of Mountain View

Goal III.B. Require all PCOs to implement Best Management Practices (BMPs)				
III.B.2	PCO Contracts	Require PCOs contracted by municipalities to implement BMPs through contract specifications (see Action III.A.4., PS #5)	PCO contract was not up for renewal during FY 06-07. IPM Policy was provided to City's purchasing Division for inclusion in future contracts.	
MM III.B.1	Reporting	Document efforts to complete the above actions	Purchasing Division was advised of requirement to include IPM in City pest control operations.	FD, FASD

Commercial Businesses				
Goal IV.A. Determine the extent of commercial business employees use of pesticides (I.E., pesticide applications not performed by a licensed PCO) and conduct appropriate outreach regarding less toxic pest management.				
IV.A. 1	Commercial Outreach	Develop and implement education programs that target commercial businesses, per recommendations developed in Program work plan.	No commercial outreach regarding IPM was conducted in FY 06-07. City supports regional outreach efforts.	NA
MM IV.A. 1	Commercial Outreach	Document outreach efforts targeting businesses, as recommended in the work plan to be developed by the Program	No commercial outreach regarding IPM was conducted in FY 06-07. City supports regional outreach efforts.	NA
Household Hazardous Waste Collection				
Goal V.A. Provide pesticide disposal services through household hazardous waste (HHW) collection programs for all residents and small businesses, and encourage use of these programs.				
V.A.1	HHW	Ensure that adequate pesticide disposal services exist for residents and conditionally exempt small quantity	The City participates in the Santa Clara County HHW Program. Businesses are also eligible to participate in the Palo Alto small quantity program.	PW – Solid Waste

		commercial generators.		
V.A.3	HHW	Work with HHW collection agencies to support, enhance, and help publicize programs for proper pesticide disposal (PS #7).	The Public Works Department, Solid Waste Division publicizes HHW information in the Resource newsletter.	PW – Solid Waste
V.A.5	HHW Outreach	Provide hazardous waste disposal information to residents, through distribution of materials (e.g., utility bill insert, city newsletter, community events, etc.) or advertising in local media	HHW information included in the City's Resource newsletter.	PW- Solid Waste
MM V.A.1	Reporting	Document that household hazardous waste collection programs adequately serve residents and businesses and that any exchange programs do not exchange organophosphate or banned pesticides.	The City participates in the Santa Clara County HHW Program. Documentation regarding the ability to serve the residents and the prohibition against exchanging OP pesticides or banned pesticides is available from the County HHW Program.	SC County HHW
New Development **Goal VI.A.** Minimize pesticide use at new and redevelopment sites.				
VII.A.1	New Development	Have appropriate municipal staff coordinate with Program to identify landscaping techniques less likely to attract pests, including a list of pest-resistant plants, and develop model conditions of approval for pest resistant landscaping features and practices. (Required to meet NPDES Permit Provision C.9.d.ii. and Draft Permit	During FY 06-07, the City used planning conditions to minimize irrigation runoff, which also reduces pesticide runoff. Standard condition also directs developers to select appropriate plants for the location and in accordance with the appropriate climate zones.	FD

		Provision C.3.k.)		
VII.A.2	New Development Review	Consider pest-resistant landscaping and design features in the design, landscaping, and environmental reviews of proposed development projects. (NPDES Permit Provision C.9.d.ii.)	During FY 06-07, the City used planning conditions to minimize irrigation runoff, which also reduces pesticide runoff. Standard condition also directs developers to select appropriate plants for the location and in accordance with the appropriate climate zones.	FD
VII.A.3	Training	Train staff responsible for design review on pest-resistant landscaping techniques and model conditions of approval and the importance of minimizing pesticide use in runoff from development sites (NPDES Permit Provision C.9.d.ii.).	No new pesticide reduction conditions were added, so no additional training was conducted.	FD
VII.A.4	Tracking	Develop and propose enhanced reporting format for documenting use of pesticide reduction measures at development sites. (Draft Permit Provision C.3.n.)	No action on this item during FY 06-07.	FD
MM VII.A.1	Reporting	Summarize types of pesticide reduction measures required (such as by conditions of approval) for new development and significant redevelopment projects, and the percentage of new development and significant redevelopment projects for which pesticide reduction measures were required (Draft Permit Provision C.3.n.).	During FY 06-07, the following conditions were required to control irrigation runoff, which also reduces pesticide runoff: 1. Require no steep slopes exceeding 10%; use mulch as cover; plants with low water requirements; appropriate plants for climate zone. 2. Efficient irrigation systems, including; multiprogramable timers; rain shutoff devices; drip irrigation, and flow reducers.	FD

(Provision C.9.c of the Permit)

FY 2006-2007 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
MPP Pro-gram	Adoption of City mercury reduction policy.	The City adopted a mercury policy in FY 03-04, requiring the virtual elimination of mercury from controllable sources in urban runoff from agency operations.	In June 2004, the City finalized Administrative Instruction No: 16-01, which established a Mercury Control Program. The Mercury Control Program includes: a procedure for the elimination of mercury-containing products to the maximum extent practicable; maximum recycling of fluorescent lights; participation in a household hazardous waste collection program for residential disposal of mercury-containing products; and public outreach.	FD
MP Task I.F	Implement guidelines for mercury-containing products reduction and management	The City will implement measures to reduce the quantity of mercury-containing products, and manage essential mercury-containing products.	No major mercury reduction measures were identified for FY 06-07. Mercury-containing switches will be removed at the time of replacement. Fluorescent lights are hauled for disposal.	PW
MP Task II.D	Documentation and reporting of mercury-containing products disposal	The City will implement measures for documenting and reporting quantities of mercury-containing products disposed.	The City maintained fluorescent light disposal records. During FY 06-07, the City recycled: 243 – 2 ft lamps, 269 – 3 ft lamps, 1096 – 4 ft lamps, 27 – 8 ft lamps, 411 U-tube lamps, 11 circular lamps, 438 HID, and 537 compact lamps	PW

Mercury Pollution Prevention Program Evaluation

During FY 06-07, the City implemented its Mercury Control Program. The Mercury Control Plan establishes a policy for reducing mercury-containing products at City facilities, through identification of mercury-containing parts and devices at City facilities, and the gradual phase-out of those parts and devices. The City supports the County-wide HHW and small quantity generators programs.

COPPER ACTION PLAN/NICKEL ACTION PLAN

FY 2006-2007 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
CB-1	Vehicle Washing Operations	• Public outreach and education efforts to reduce vehicle wash discharges, including brochure distribution, and mobile cleaners information • Provide car wash kit to charity car wash organizers and educate on the use of the kits. • Inspect auto businesses regarding car wash requirements, and prohibited storm drain discharge. • Continue to maintain car wash systems for City vehicles at the Corp yard and Fire Stations. • Require vehicle wash systems draining to the sanitary sewer as source control measures for projects, where the control is applicable. • Submit data regarding vehicle washing outreach activities and	During FY 06-07, the City provided a car wash kit to local charities conducting car washes. The car wash kit is used to divert car wash water from storm drains. The City also maintained 7 City car wash facilities (2 at the Corporation Yard, 1 at the Golf Course Maintenance facility, and 4 at Fire Stations). The vehicle service facility inspection program verifies that fleet washing water is not draining into the storm drain system. Vehicle facility operators are also notified about vehicle washing requirements, including rental operations. Vehicle BMP information is provided to residents at City outreach facilities, including the Art and Wine Festival, and Arbor Day.	FD

		effectiveness evaluation in annual reports.		
CB-3	Industrial Copper Control	Continue Industrial Inspection program, including NOI sites such as plating and metal finishing facilities, vehicle service facilities, and other permitted sites.	The City conducted its industrial facility inspection program. Details are provided in the Industrial/Commercial Discharges Control Program section of this report. Inspections involve observing outdoor areas where spills or equipment discharges could release pollutants including copper and nickel into the storm drain system. The City's Environmental Protection Division is in the process of closing a metal plating facility that will be discontinuing operations in Mountain View. This closure reflects a steady change in the land use and industrial community make up within the City.	FD
CB-6/7	Reducing Traffic Congestion/Promoting Alternative Transportation	Review the results of the Development Policies Comparison Project Report, particularly Section VI., Policies to Limit Auto Use/Promote Alternative Transportation, in the Policy, Code, and Ordinance Worksheet, and investigate updating local development rules to promote better transportation-related design practices and alternative modes of transportation.	The City of Mountain View has actively supported public transportation projects including and extensive bike trail system, light rail station, and promotion of transit-oriented development.	Community Development Department
CB-8	Watershed Protection Measures	• General Plan revisions will be considered during the next City-wide GP revision, which currently is not scheduled. • CEQA revisions related to	The General Plan was not revised during FY 06-07.	

		stormwater are currently being evaluated as described in the C.3 Work Plan. Guidance from SCVURPPP and the City of San Jose addressing water quality review in CEQA will be reviewed and implemented, if acceptable. • HMP implementation will be incorporated upon completion of the document. • Continue C.3 implementation efforts	The City's existing CEQA document adequately addresses water quality review issues. The City has a condition requiring eligible projects to comply with HMP requirements. The City does not expect HMP projects to be submitted for review. See New Development – Planning Procedures.	
CB-11	Street Sweeping	• City will continue to implement street sweeping program. • City will continue "Clean Sweep" program designed to secure access to heavily impacted streets that have a lot of cars typically parked throughout the day. • Maintain effective street sweeping equipment. • Continue to collect and report street sweeping information including mile swept and material removed for annual reports. • Continue to manage street sweeping solids.	See Streets and Roads Maintenance Section for more details.	

		• Continue to maintain storm drain catch basins • Attend SCVURPPP training workshops, if provided. • Evaluate need for improvement in FY 03-04 annual report.		
CB-12	Copper from Pools and Spas	• City will respond to complaints of pool/spa discharges. • Assist Program development of pool brochure. • City will distribute outreach materials.	The City responded to 1 pool discharge incident. The City supports regional outreach efforts. The Program completed mailing of the new Program pool brochure.	FD
CB-21	Architectural Copper	Review study and ordinance from Palo Alto and consider feasibility of limiting the use of these materials.	The City does not currently limit the use of architectural copper materials.	
NB-1	Discharges from Construction Sites	Continue to implement Construction Inspection Performance Standards and other tasks in Construction Inspection element of the Work Plan.	See the Construction Inspection section of this report for more details.	FD

Water Quality and Water-shed Mgt.	Trash Investigations and Plan Development	The City will support the Program's effort to develop a Trash Work Plan. The Work Plan will characterize the trash problem, identify trash hot spots, identify on-going efforts to reduce trash, and provide documentation regarding trash complaints/incidents.	The City conducted trash abatement activities, including sponsoring two creek cleanups, and maintenance of parks, roadways, and the Stevens Creek Trail. City Public Services employees also respond to trash dumping incidents. The City participated in trash assessments at two sites in Mountain View at Stevens Creek. The trash assessment data was submitted to the Regional Board. The assessments were completed collaboratively with volunteers from the Stevens Creek watershed Council, and staff from the Santa Clara Valley Water District, the City of Sunnyvale, and the City of Cupertino. Other Water Quality & Watershed Management Programs Evaluation

Current trash control efforts include two City-sponsored creek cleanups a year. These cleanup events occurred on Stevens Creek and Permanente Creek. A local organization, Friends of Stevens Creek Trail, with some support from the City also conducted creek cleanups throughout the year. City Community Services Department personnel and Shoreline Park Rangers also patrol Stevens Creek Trail and remove trash as needed. After conducting volunteer creek clean-ups for a number of years, it appears that the amount of trash removed during these events is decreasing.

City Community Services Department employees maintain City parks, including litter removal. City Public Services Department personnel also respond to trash dumping incidents that may occur throughout the City.

The City participated in a collaborative effort with volunteers from the Stevens Creek Watershed Council, and staff from the Water District, to conduct its trash assessments. These assessments were conducted at two sites along Stevens Creek. A summary of those assessments is attached.

Trash Problem Area Evaluation Results FY 06-07

Watershed	ID#	Date	Location of Trash Problem Area	Reported Ownership	Score	Trash Sources	Trash Type	Trash Management Activities	Comments
Stevens Creek/ Baylands	CL01	5/10/06	La Avenida Stevens Creek Trailhead, 100 ft South of island in creek	SCVWD	63 (RTA)	• Upstream, storm drain catchment • Litter – pedestrian	• Plastic/ styrofoam • Miscellaneous • Paper	Site is cleaned at least twice per year by volunteers. Park rangers also patrol the location and pick up litter along the trail.	Majority of litter and debris comes from upstream sources.
Stevens Creek	CL02	5/10/06	El Camino Real bridge crossing, 100 ft. north	SCVWD	49 (RTA)	• Upstream, storm drain catchment • Litter – pedestrian • Litter - vehicular	• Plastic/ styrofoam • Miscellaneous • Paper	Site is occasionally cleaned up by volunteers. No current management actions in place. Accumulation of debris on the top of bank, which is apparently from transient population.	Site is located below the El Camino bridge and several upstream outfalls. Site will be considered for future clean up event, but access is difficult. On-going trail construction may result in trash during construction. Completion of Stevens Creek Trail extension project should improve clean-up access and may result in reduced transient population.

PUBLIC INFORMATION/PARTICIPATION
(Provision C.4)

FY 2006-2007 Work Plan Self Evaluation Matrix

Item No.	Activity	FY06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
General Outreach				
PIP – 1-4	PIP Master Plan – General Outreach	Continue to conduct PIP General Outreach activities.	General outreach activities conducted during FY 06-07 include maintaining brochure stands at City facilities, participating in HHW program, storm drain stenciling, and articles in local publications.	FD
Targeted Outreach				
PIP – 1-4	PIP Master Plan – Targeted Outreach	Continue to conduct PIP targeted outreach activities.	Targeted outreach activities conducted during FY 06-07 include participation in the Clean Bay Business Program, displaying brochures at local auto parts stores, and continuing restaurant outreach. Targeted outreach to restaurants is explained in the Industrial/Commercial section of this report. Three Mountain View stores also participated in the Our Water, Our World Program designed to distribute pesticide alternatives. This is further explained in the Pest Management Section of the report. The City also participated in 2 pharmaceutical take-back events in FY 06-07. Participation included promoting	FD

			the event and staffing a drop-off location for residents to dispose of unwanted pharmaceutical products.	
PIP – 1-4	Targeted Outreach – Multicultural Outreach	Continue to support the City's multicultural outreach program, which is designed to provide information regarding various topics to non-English speaking people.	During FY 06-07, the multicultural outreach program distributed pollution prevention information at public events. Spanish brochures and fact sheets for vehicle BMPs and pesticide information are distributed through the multi-cultural outreach program.	CM
Educational Programs				
PIP – 1-4	PIP Master Plan – Education Activities	Continue to conduct PIP education activities.	During FY 06-07, the City sponsored a school education and outreach program along with the City of Palo Alto. In total, 39 school presentations were made to 947 students in Mountain View. The presentations were made to 2nd-8th grade groups. A summary of the school outreach program is available upon request. The City also conducted employee training activities, which are summarized in the Staff Training Table.	FD
Citizen Participation				
PIP – 1-4	PIP Master Plan – Citizen Participation	Continue to conduct PIP citizen participation activities.	During FY 06-07, the City sponsored two creek cleanup events, where citizens removed trash and debris from local creeks. The City also staffed information booths at the Mountain View Art and Wine Festival, the Alza Earth Day Fair, and the Arbor Day Fair. The primary messages at those events were IPM and pesticide reduction, pharmaceutical disposal, Mercury reduction, and vehicle sources.	FD

Public Information/Participation Program Evaluation

General Outreach:

During FY 06-07, articles in the Resource newsletter advertised HHW, creek clean-up, pharmaceutical disposal, and mercury thermometer drop-off events. The City continued storm drain stenciling activities. The City also displayed BMP brochures at City facilities.

Targeted Outreach:

Vehicle BMP brochures were provided for distribution at local auto parts stores. Three hardware and garden stores in Mountain View also participated in the Our Water, Our World program, which promotes use of less toxic pesticides. As explained in the Industrial Commercial Discharges section of this report, restaurant inspections included distribution of BMP posters. The City also participated in a pharmaceutical take-back program, which allowed residents to drop off unwanted pharmaceutical products. The City also distribute information at public events, such as the Art and Wine Festival, Alza's Earth Day, and the Arbor Day Fair. City staff also worked at the Program booth for the Home Show.

The multicultural outreach program seems to be an effective method to provide information in different languages. However, limited multi-language outreach materials are available. The City supports regional efforts to produce multi-language materials.

The City also continued distribution a fact sheet describing oil recycling options for apartment tenants. This piece was translated into a Spanish language version.

ATTACHMENT B

SANTA CLARA VALLEY URBAN RUNOFF POLLUTION PREVENTION PROGRAM

FY 2006-2007 ANNUAL REPORT

Municipality: City of Mountain View

Education Activities:

The City's participation in the school education program was conducted through funding the Palo Alto Program. Mountain View commends the education consultant, and the City of Palo Alto for developing and implementing an outstanding program, and for educating students in Mountain View about water pollution issues.

A summary of employee training efforts is listed below.

Citizen Participation:

During FY 06-07, the City sponsored two volunteer creek cleanups and supported other cleanup efforts. These events successfully removed litter and debris from local waterways. The City also distributed information at public events. The effectiveness of information distribution at these public events is difficult to describe because a lot of people who visit the information booth are already informed about the issues, and some visitors seem to randomly collect free materials without considering the message.

Staff Training Evaluation
During FY 06-07, staff received training on a number of topics, including spill response, storm drain pollution prevention, IPM practices, industrial inspections, construction inspections, and C.3 topics. The City strongly supports regional training efforts for IPM-related issues. The City continued to train employees about stormwater pollution prevention. Stormwater pollution prevention training is coordinated and conducted with safety training assemblies, which seems to be a great method for streamlining different training requirements.

Pesticide Use Evaluation for FY 06-07

CITY OF MOUNTAIN VIEW
MEMORANDUM

DATE: August 15, 2007

TO: City of Mountain View's IPM Plan

FROM: Eric Anderson, Urban Runoff Coordinator

SUBJECT: Pesticide Use Evaluation for FY 06-07

The purpose of this memo is to provide an evaluation of the City of Mountain View's pesticide use data for the Fiscal Year 2006-2007 (FY 06-07). The City's FY 06-07 pesticide use data will be compared to pesticide use data from Fiscal Year 2002-2003 (FY 02-03), Fiscal Year 2003-2004 (FY 03-04), Fiscal Year 2004-2005 (FY 04-05), and Fiscal Year 2005-2006 (FY 05-06) to identify possible trends in the City's pesticide use practices. The comparison and evaluation involve both the types and quantities of pesticides used at City facilities.

The pesticide use data is used to evaluate the City's implementation of its Integrated Pest Management (IPM) Policy, and IPM Plan. The City's IPM Policy was adopted by the City Council on September 10, 2002. The IPM Plan, which outlines the method for implementing the IPM Policy, was completed in June 2003.

The result of this evaluation will be to make recommendations for implementation of the IPM Plan during FY 07-08. This evaluation may also identify barriers to implementation of the IPM Policy and Plan. Pesticide use reports and evaluations are conducted annually. The pesticide use data and the evaluation will be included in Appendix 4 of the IPM Plan. The evaluation will also be included in the City's annual report to the Regional Water Quality Control Board, as required in the City's NPDES storm water permit.

The evaluation includes the following sections:

1. Description of the pesticide use tracking and reporting procedure and an evaluation of the procedure.
2. An evaluation of the use of prohibited pesticides at City facilities during FY 06-07 in comparison to past years.
3. A summary of the pesticide use data for FY 02-03, FY 03-04, FY 04-05, FY 05-06, and FY 06-07.
4. A discussion of the pesticide use data for FY 02-03, FY 03-04, FY 04-05, FY 05-06, and FY 06-07.
5. A summary and evaluation of overall pesticide use at City facilities.

Pesticide Use Tracking and Reporting Procedure

Data was collected from the Forestry and Roadway Landscaping Division (FRL), Shoreline Golf Links (SGL), and the City's contract pest control operators, Bay Valley Pest Control and Valley Crest Landscape Maintenance. FRL monitors and administers pesticide use for both FRL and the Parks Division. FRL and Shoreline Golf Links data were tracked using the required monthly report to the State Department of Pesticide Regulation, which includes the product name, registration number, quantity used, and a general description of the area where the application occurred. Bay Valley Pest Control's use data is tracked using the service invoices, which include the application date, product used, quantity used, target pest, and location.

All of the data is routed to the City's Fire and Environmental Protection Division, where the data is entered into the pesticide use tracking database. The database tracks products, date of application, quantities, and active ingredients applied. A comprehensive summary of pesticide use at City facilities during FY 06-07 was produced and is included in the City's IPM Plan.

In the FY 05-06 Pesticide Use Evaluation, the City reported two changes to the data collection and reporting system, which included: 1) additional data collection and reporting of pesticide use by a landscape contractor working for the City; and 2) tracking and reporting three Cateogory III pesticides that had not been tracked in previous years. During FY 06-07, these two changes were implemented and no additional changes to pesticide use tracking system were implemented.

Prohibited Pesticides

The City's IPM Plan specifically prohibits use of the following pesticides: diazinon, chlorpyrifos, chlordane, dieldrin, and DDT. During FY 06-07, the City did not use or store prohibited pesticide products.

Summary of Pesticide Use Data

Summaries of pesticide use for FY 02-03, FY 03-04, FY 04-05, FY 05-06, and FY 06-07 are shown in the tables below. Table 1 shows a comparison of the number of different Category I, II, and III pesticides that were used during the past reporting years. Summaries of pesticide use quantities are listed in Tables 2 and 3, which are shown on pages 4 and 5 of this report. Table 2 shows a comparison of the quantity of Category I, II, III, and non-regulated pesticides that were applied during the past three reporting years. The quantities shown in Table 2 include active and inert ingredients. Inert ingredients are typically emulsifiers or carriers that aid in delivery of the active ingredient, which is the material in a pesticide formulation that destroys the target pest or performs the desired function. Table 3 shows a comparison of the quantity of Category I, II, III, and non-regulated active ingredients that were applied during the past three reporting years.

Additionally, narrative analysis of the pesticide use data is provided for Category I, II, III, and non-regulated products, as well as an analysis of overall pesticide use trends..

Table 1 - Number of Different Pesticides Used:

Pesticide Category	Number of Different Pesticides Used				
	FY 02-03	FY 03-04	FY 04-05	FY 05-06	FY 06-07
I	1	0	0	1	0
II	4	8	6	5	7
III	19	22	22	25	29
None	0	0	0	0	1
Total	**24**	**30**	**28**	**31**	**37**

NOTE: "None" indicates a non-regulated, exempt pesticide that is not listed with a toxicity category

Category I Pesticide Use:

The IPM Plan bans the use of Category I pesticides at City facilities, except in cases where a pest outbreak poses an immediate threat to public health or significant economic loss will result if the banned product is not applied. Use of a Category I pesticide must be approved by the Community Services Director, or his/her designee. The FY 05-06 Pesticide Use Evaluation reported use of a Category I, which occurred inadvertently after the fungicide had been re-classified from Category II to Category I. An alternative Category II fungicide was substituted, so during FY 06-07, no Category I pesticides were used at City facilities. Category I pesticide use has not been eliminated as a future option, but is only to be used under certain conditions.

Category II Pesticide Use:

The IPM Plan limits the use of Category II pesticides at City facilities. Category II pesticides may be used when a Pest Control Advisor recommends their use after non-chemical controls and Category III pesticides have been ineffective, or when Category II pesticides may be needed to prevent an outbreak that may cause a threat to public health or significant economic loss.

During FY 06-07, seven Category II pesticides were applied at City facilities. A discussion of the Category II pesticide use is provided below:

Forestry and Roadway Landscaping Division

- During FY 06-07, the Forestry and Roadway Landscaping Division (FRL) applied 75 pounds of the insecticide "m-pede," which is a decrease from the 140 pounds applied during FY 05-06. This product is used to treat aphid infestations, primarily in trees, so amounts used will depend on yearly fluctuations in aphid populations.

Table 2 - Quantity of Pesticides Applied:

Pesticide Category	Quantity of Pesticides Applied (Pounds) and Percent Change Compared to FY 05-06 & 4-Year Average							
	FY 02-03	FY 03-04	FY 04-05	FY 05-06	4-Year Average	FY 06-07	% Change to Previous Year	% Change to 4-Year Average

*** Total 2 evaluates use not including non-regulated, exempt Clove Oil product.*

039191

Shoreline Golf Links

- During FY 06-07, SGL applied 216 pounds of the algaecide "K-tea," which is an increase from 50 pounds applied in FY 05-06. The increase in algaecide use was due to excessive algae growth in the ponds on the golf course.
- During FY 06-07, SGL applied 19.9 pounds of the herbicide "Reward", which is an increase from the 8.7 pounds applied in FY 05-06, and an increase from the 3.1 pounds applied in FY 03-04. Part of the explanation for increased herbicide use at SGL was increased weed growth due to damage and seed dispersal by an increased population of geese and coots.
- During FY 06-07, three different Category II fungicides, Buctril, Daconil, and Eagle WSP, were used to control fungus on the golf course greens. SGL applied 8.3 pounds of Buctril, 95.8 pounds of Daconil, and 3 pounds of Eagle. These fungicides were not used during FY 05-06, but a different Category II fungicide, Banner Maxx, was used instead.
- During FY 06-07, SGL applied 33.3 pounds of "Trimec Plus" to the roughs and fairways, which is a reduction from 141.6 pounds applied in FY 05-06.

Annual variations in the use of the products Banner Maxx, Reward, Buctril, Daconil, Trimec Plus, and Eagle is due to the practice of rotating pesticide use over an annual or multi-year frequency. This is a commonly accepted practice that minimizes the build up of resistance by a pest to a single pesticide. If this practice were not implemented, pesticide use would most likely be higher because additional pesticide applications would be needed after initial applications were shown to be ineffective.

Category III Pesticide Use:

Public Services and Community Services Departments

The IPM Plan promotes the use of less toxic methods for controlling pests at City facilities. If pesticides are needed, Category III pesticides should be used, unless these pesticides are ineffective, or Category I or Category II pesticides are needed to prevent an outbreak that may cause a threat to public health or significant economic loss. During FY 06-07, 29 different Category III pesticides were used at City facilities to address specific problems or situations. Seven of the Category III pesticides had not been used at City facilities in the past.

Non-regulated/Exempt Products:

Bay Valley Pest Control

During FY 06-07, the City's contract pest control operator, Bay Valley Pest Control, used 47 pounds of a non-regulated and exempt product to control ants at City facilities. The

product is a clove oil based chemical. Although this is a non-regulated product, use of this product was tracked in the pesticide use database, as reflected in summary Tables 2 and 3. Analysis of total pesticide use in Tables 2 and 3 reflect: 1) totals including use of the non-regulated clove oil product; and 2) totals not including use of the non-regulated product. For FY 06-07, including the non-regulated product in the database did not significantly impact the analysis of percent change in use.

Discussion of Pesticide Use Data

For the purpose of the total pesticide use evaluation, the "Total 1" in Tables 1 and 2 will be discussed. "Total 1" reflects the all pest control applications, including non-regulated products.

The total amount of pesticides applied during FY 06-07 decreased by 2,347 pounds (38% decrease) compared to FY 05-06, and increased 99 pounds (3%) compared to the 4-year average. The amount of Category III pesticides applied during FY 06-07 decreased by 2,133 pounds (39% decrease) compared to FY 05-06, and increased 122 pounds (4% increase) compared to the 4-year average. The amount of Category II pesticides applied during FY 06-07 increased by 79 pounds (21% increase) compared to FY 05-06, and increased 26 pounds (6% increase) compared to the 4-year average. No Category I pesticides were used in FY 06-07, which is a 100% decrease compared to FY 05-06 and the 4-year average. Lastly, 47 pounds of non-regulated and exempt pest control product were used at City facilities in FY 06-07, which is a 100% increase compared to FY 05-06 and the 4-year average. Last year's pesticide use evaluation report, which compared FY 04-05 and FY 05-06 data, showed a 75% increase in total pesticide use, a 65% increase in Category III pesticide use, a 41% increase in Category II pesticide use, and a 100% increase in Category I pesticide use.

The total amount of active ingredient applied during FY 06-07 decreased by 570 pounds (36% decrease) compared to FY 05-06, and decreased 152 pounds (13%) compared to the 4-year average. The amount of Category III active ingredient applied during FY 06-07 decreased by 353 pounds (29% decrease) compared to FY 05-06, and decreased 69 pounds (7% decrease) compared to the 4-year average. The amount of Category II active ingredient applied during FY 06-07 decreased by 104 pounds (43% decrease) compared to FY 05-06, and decreased 57 pounds (29% decrease) compared to the 4-year average. No Category I pesticides were used in FY 06-07, which is a 100% decrease in active ingredient applied compared to FY 05-06 and the 4-year average. Lastly, 3 pounds of active ingredient from non-regulated pest control products were applied at City facilities in FY 06-07, which is a 100% increase compared to FY 05-06 and the 4-year average. Last year's pesticide use evaluation report, which compared FY 04-05 and FY 05-06 data, showed a 47% increase in total active ingredient use, a 24% increase in Category III active ingredient use, a 180% increase in Category II active ingredient use, and a 100% increase in Category I active ingredient use.

Analysis of Pesticide Use Data

Review of the data for FY 06-07 shows a decrease in total pesticide use and total active ingredient applied compared to FY 05-06. The data also shows a slight increase in total pesticide use compared to the average use over the past 4 years, and a decrease in the amount of active ingredient applied when compared to the 4-year average. This observation indicates that the amount of pesticides applied in FY 06-07 was normal compared to historical data and that the amount applied in FY 05-06 was higher than normal years. The explanation for higher pesticide use in FY 05-06 was unusual weather conditions of early winter rain, followed by warm weather, then late winter rains, which essentially created two growing seasons for weeds. Weather conditions in FY 06-07 were less likely to cause drastic increases in pesticide applications.

The trends of use data for Category I, II, and III pesticides are consistent with the findings for total pesticide use. The amount of Category III pesticides applied in FY 06-07 decreased compared to FY 05-06, and increased slightly compared to the 4-year average. Though the total amount of Category II pesticide use increased in FY 06-07 compared to FY 05-06, this increase is explained by the use of a Category I pesticide in FY 05-06, which was not used in FY 06-07. The substitute for the Category I pesticide used in FY 05-06 was a Category II product. Combining the amount of Category I and II pesticides that were used in FY 05-06 and FY 06-07, and comparing the use from those years shows a 37% decrease in Category I and II pesticide use during FY 06-07. Evaluation of the active ingredient use data shows a decrease for Category I, II, and III ingredients, compared to FY 05-06 and compared to the 4-year average. It is also important to note that during FY 06-07, the City expanded its service area by adding a new park.

During FY 06-07, the City's Category III pesticide use was 87% of the total pesticide use for the year, which is consistent with FY 05-06, when the City's Category III pesticide use was 88% of the total pesticide use for the year. This is a decrease compared to FY 04-05, when the City's Category III pesticide use was 93 % of the total pesticide use for the year, but higher than FY 03-04 when Category III pesticides accounted for 82% of the total pesticide use. The volume of pesticide use is heavily dependent on seasonal variations in pest and weed populations, which are typically the result of regional weather patterns. When pesticides are needed, the City will continue to evaluate and consider the least toxic pesticide solutions. The City will also continue to seek non-chemical solutions to pest incidents. The City's primary IPM technique is to maintain healthy landscape and turf through implementation of effective cultural practices. City staff also utilizes biological and organic controls, such as nematodes in turf areas and mulch around tree basins and planting beds, as well as physical and mechanical controls to help control pest problems.

Recommendations to address pesticide use at City facilities are listed below:

1. Continue to train employees regarding the IPM Plan requirements for using Category I and Category II pesticides.

2. Continue to seek less toxic alternatives to the Category I and Category II pesticides that may be considered for use, although the alternatives are potentially more expensive and/or labor intensive.
3. Continue to use less toxic products to control pests. If less toxic alternatives are ineffective and the pest outbreak poses a public health or economic threat, propose use of a Category II pesticide, or lastly, a Category I pesticide.
4. Continue to track regional efforts to develop a list of approved pesticides that not only considers acute toxicity, but other factors such as carcinogenicity, reproductive toxicity, and potential groundwater contaminants.
5. Continue to develop program and budget recommendations to implement possible alternatives.

Summary

This report has provided an evaluation of the City of Mountain View's pesticide use data for FY 06-07. Data from FY 06-07 was compared to data from previous years. The comparison and evaluation involved both the types and quantities of pesticides used at City facilities. The total amount of pesticide and the amount of Category I and III pesticide use decreased from FY 05-06. The amount of Category II pesticide used did increase compared to FY 05-06, but this increase was offset by the elimination of a Category I pesticide that was used in FY 05-06, but not was used in FY 06-07. The primary explanation for the overall decrease in pesticide use compared to FY 05-06 is that pesticide use in FY 05-06 was unusually high. During FY 06-07, a non-regulated and exempt pest control product was used at City facilities to control ants. Use of this type of exempt product is an example of reduced risk chemical use that is an important component of the City's IPM program. Staff will continue to evaluate and consider alternative or least toxic pesticide solutions for application whenever possible.

Dear Mr. Wolfe:

This report is submitted by the City of Palo Alto, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a. of the Program's municipal storm water NPDES Permit (Order No. 01-024). The report summarizes activities performed during FY 2006-2007 in accordance with the City of Palo Alto's Urban Runoff Management Plan (URMP) submitted to the Regional Board on September 1, 2004 and the performance standards contained therein.

Contents of Report

The goals of this Annual Report are to: 1) concisely document implementation of our URMP and FY 06-07 work plan during the past fiscal year; 2) evaluate program results for continuous improvement; 3) comply with permit requirements; and 4) share this information with other Co-permittees, municipal decision-makers, and the public. To accomplish these goals, the report contains the following sections:

I. Contents of report;
II. Program highlights and accomplishments;
III. Summary of continuous improvement activities;
IV. Attachments:
   A. Certification Statements
   B. List of Abbreviations and Acronyms
   C. Annual Report
      - IC/ID Elimination Activities
      - Industrial/Commercial Discharger Control Program

Program Highlights and Accomplishments

The City of Palo Alto's Urban Runoff Pollution Prevention Program for FY 2006-07 included several notable accomplishments. The following programs and activities are described in the body of this Annual Report:

- Palo Alto has demonstrated continued leadership in the area of land development review. Staff in the Public Works, Utilities, and Planning Departments have been briefed on the C.3 requirements by the Management Committee representative and have attended Program training workshops. Presentations on C.3 design concepts and requirements have been made to the land development decision makers (Planning Commission, Architectural Review Board, City Council).

  As noted in the attached Annual Report, there was an increase in the number of permit applications subject to the C.3 provisions following the advent of Group 2 requirements in August 2006. We conducted three BMP maintenance verification inspections this year, and this number will increase substantially next year.

City Public Works and Planning staff members participated in the Santa Clara Valley Water Resources Protection Collaborative and the development of its Guidelines and Standards (G&S) for Land Uses Near Streams. The City Council approved a stream protection ordinance consistent with the G&S in January 2007. The ordinance, which applies to projects requiring discretionary planning review, will serve to protect stream health and riparian vegetation.

- Palo Alto Environmental Compliance staff placed an increased focus on the inspection of food service facilities during the past fiscal year. A new employee spent almost all of his time inspecting restaurants and coordinating with wastewater collection system maintenance crews. Primary emphasis was placed on verification of proper restaurant grease controls in an attempt to reduce the number of sanitary sewer overflows caused by grease blockages. Inspection locations were prioritized based on spill history and the frequency of other violations. In addition to helping to prevent the overflow of sewage into the storm drain system, the inspection program also focused on the correction of other bad behaviors associated with food service facilities (e.g. floor mat cleaning, dumpster maintenance, etc.).

- Trash management was and will continue to be another high-priority area for City storm water staff. The trash management program has become more institutionalized into the City's routine business processes. Some preliminary trash hot spots have been eliminated based on follow-up inspections, allowing for greater focus on the remaining sites. This year, staff focused on improving the coordination of the City's trash reduction activities with those of volunteer-based organizations like the San Francisquito Watershed Council. Staff worked to optimize volunteer clean-up events by identifying trash hot spots prior to the events, actively participated in several of the clean-up events, and followed up with the volunteer organizations to assess the effectiveness of the events.

- Palo Alto staff were instrumental in the development of the EcoWise program, a regional certification program for pest control operators (PCO). PCOs must complete staff training, pass an exam on integrated pest management (IPM) techniques, and integrate those IPM techniques into their standard business practices in order to achieve EcoWise-certified status. Palo Alto has contracted with Pestec, the first EcoWise-certified PCO, to conduct pest management at City facilities.

- City staff has actively participated in many of the Program's Ad Hoc Task Groups (including Watershed Education & Outreach, Trash Management, and C.3 Provision Oversight (C3PO), the Watershed Management Initiative, and the Water Resources Protection Collaborative, providing valuable input to Program endeavors and keeping informed of the current issues and policies relevant to storm water pollution prevention.

Continuous Improvement Activities

The following is a summary of the key continuous improvement activities to be pursued in the coming year:

Identified Improvement	Status	Schedule for Completion
Consider implementation of the Water Resources Protection Collaborative's Guidelines and Standards (G&S) for Land Uses Near Streams for ministerial projects	The G&S have been incorporated into the zoning ordinance for discretionary projects; next step is to consider applying the G&S to ministerial projects.	June 2008
Review and update the Water Utility Pollution Prevention Plan (WUPPP)	The existing WUPPP is out-of-date and needs to be modified to reflect current practices and staffing.	June 2008
Improve coordination with volunteer organizations to address trash hot spots	Make better use of volunteers in the fight against trash by coordinating with the San Francisquito Watershed Council and other grass root organizations.	June 2008
Ensure that the City's Municipal Service Center (corporation yard) is in conformance with the updated Storm Water Pollution Prevention Plan	Conduct follow-up inspection and coordinate with key management staff prior to the start of the rainy season.	October 2007
Implement the City's Innovative Storm Drain Improvements project, providing grant funding for cisterns, permeable pavements, green roofs to private and public projects	The City's Storm Drainage Fund has $250,000 annual funding available for this grant program. Need to develop criteria, outreach, and implementation strategy.	December 2007

Thank you for your review of this Annual Report. If you have any questions regarding the materials submitted, please contact me at (650) 329-2129.

Very truly yours,

Joe Teresi

IC/ID Program Evaluation

We continue to receive illegal dumping reports from the public as well as from City employees. Awareness among City staff has improved over the past several years. Proactive members of the fire department, building inspection, planning code enforcement, street maintenance, storm water collection maintenance, utilities, and wastewater field operations crews have been a consistent source of referrals. This leads us to believe that there are more active observers out in the field each day beyond those employed directly within our program.

Construction activities still dominate the IC/ID incidents and continue to require outreach, education, and enforcement efforts. A large percentage of construction personnel appear to comprehend the rules and regulations about pollution to the storm water system. Aggressive monitoring and enforcement as well as information provided during the planning and permitting process appears to be effective. Problems and issues with dewatering of excavations at construction sites have improved as a result of recent modifications to the planning and building permitting processes that require effective best management practices to be implemented.

The noticeable increase in efforts from our industrial waste staff and the wastewater collection system operations staff regarding identification, prioritization and prevention of sanitary sewer overflows (SSO) has been successful. The increased focus will continue to be applied to the use of source control measures to reduce the amount of blockage-causing grease discharged to the sanitary sewer system by food service facilities and to reduce on-site storage and cleaning issues. The wastewater operations field crews have improved their efforts to 1) identify problem locations in order to prioritize them for more frequent line cleaning, and 2) identify and document non-compliant facilities. Utility crews have also improved the identification of utility vaults that are receiving discharges from food service facilities that are not using effective BMP's in their operations. Due to these improved efforts, the number of SSOs is lower than in previous years.

	Food Service Facility Inspections	1. Continue to work with Statewide Fat-Oils-Grease (FOG) work group to develop measures to prevent sanitary sewer blockages caused by FOG discharges by food service facilities. 2. Share information/recommendations from FOG with Program co-permittees. 3. Initiate a discharge permit program for food service facilities.	1. This is the first complete fiscal year that the Environmental Compliance Division has been able to increase the FOG program efforts with the hiring of a new staff member to conduct investigations, notify operators of violations, and to report findings with regard to storm water issues. 2. Environmental Compliance Division shall continue to host and maintain the Cal FOG website (http://www.calfog.org), which includes a collection of superior outreach materials from around the country. 3. Environmental Compliance Division did not develop a discharge permitting program for food service facilities due to resistance from the local Chamber of Commerce and resource constraints. Business licenses have been proposed for the City and will help with the tracking of food service facilities. However, the new FOG Program will include substantial increases in the number of restaurant inspections regardless of the status of a business license program. 4. Environmental Compliance Division continues to review pre-submittal documents and building	Public Works Environmental Compliance

			plans for compliance with storm water requirements and conditions of approval. 5. FOG Inspections were conducted at 173 food service establishments (FSEs). 6. FOG Inspections included 303 visits to FSEs. 7. FOG Inspections resulted in the issuance of 84 Compliance Directives, 49 of which were identified as storm water related. 8. FOG Inspections resulted in the issuance of 48 Notices of Noncompliance, 26 of which were storm water related. 9. FOG Inspections resulted in the issuance of 9 Warning Letters, 7 of which were storm water related. 10. FOG Inspections resulted in the issuance of 2 Compliance Agreements that were initiated by sanitary sewer overflows that affected the storm drain system.	
	Inspection of Facilities	Continue enforcement of new provisions in Sewer Use Ordinance, updated in 2002.	The Environmental Compliance Division continues to work with the Planning and Building Inspection Divisions to ensure that all newly-constructed and remodeled facilities meet all requirements of the Sewer Use Ordinance. Industrial facilities are inspected for compliance during each pre-treatment inspection. Facilities are inspected either semi-annually or annually. All industrial inspections include a storm water inspection. A total of 101 automotive repair facilities and 72 industrial sites were inspected during the 2006-2007 fiscal year.	Public Works Environmental Compliance

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 ANNUAL REPORT

Municipality: City of Palo Alto

	Enhanced Reporting Procedures	1. Prepare Annual Report using enhanced reporting procedures adopted in December 2001. 2. Implement plan for automation of incident reporting.	Semi-annual reporting proceeds with complete and accurate documentation within the data system. The data system has been modified to allow for greater ease of use and additional ways of interpreting and presenting the data. The new access database program is complete and shall be tested and debugged in the first quarter of FY 07-08. This database will help improve efficiency, communications, and information exchange between existing data systems.	Public Works Environmental Compliance
	Effectiveness Evaluation	Review and evaluate effectiveness of IND program as part of Annual Report.	See effectiveness evaluation discussion below.	Public Works Environmental Compliance

Municipality: City of Palo Alto

Industrial/Commercial Program Evaluation

Restaurants continue to be one of the more difficult facilities to educate and bring into compliance due to the high employee turnover rates and the lack of employee knowledge of the Palo Alto Municipal Code requirements. The alleys and parking lots behind commercial businesses are prime problem areas. The cleaning of floor mats, tallow bins, dumpsters, equipment and vehicles are key sources of the problem. The City's Fats-Oils- Grease (FOG) program was staffed with a full-time position in FY 06-07. The Program has been expanded and includes more rigorous inspections and enforcement. Stormwater issues and prevention of FOG-related sewer overflows are key priorities. The wastewater operations group has also become more proactive in sewer line cleaning and videotaping and will be using the gathered information to drive inspections, corrective actions and enforcement.

The storm water inspection of industrial facilities and automotive repair facilities continues to be a solid integrated part of the wastewater inspection program. These inspections help increase awareness at the facilities and are an expectation of their operations. As a result, there are relatively few significant storm water issues found during inspections at permitted facilities.

Public Streets, Roads & Highway O&M Program Evaluation

STREET SWEEPING DATA

See attached sheet for annual street sweeping data.

Public Works Operations staff reports storm water pollution violations to Environmental Compliance staff when violations are observed by field crews or (on rare occasions) reported by residents. Environmental Compliance staff are supportive when violations are reported and take appropriate steps to follow-up with the responsible party to promote future compliance with storm water discharge regulations and BMPs. Ongoing BMPs are reviewed by individual work crews at bi-weekly tailgate meetings and evaluated for effectiveness and potential modification. The street maintenance crew's slurry recovery system & trailer is working well. The system has a long vacuum hose, a powerful motor, and large storage capacity for captured slurry.

Santa Clara Valley
Urban Runoff
Pollution Prevention Program

FY 2006-2007 Monthly Record Keeping Form

Month and Year: 7/1/2006 -- 6/30/2007

Agency: City of Palo Alto

Completed by: David Aro – Manager, Maintenance Operations

STREET SWEEPING	Volume of material collected (cubic yards)	Miles swept* (curb miles)
1. Sweeping		
Residential Areas:		
Broom	1767	2151
Regenerative Air	11637	11738
Vacuum	0	0
Commercial Areas:		
Broom	18	96
Regenerative Air	1330	3046
Vacuum	0	0
Industrial Areas:		
Broom	192	1120
Regenerative Air	425	1289
Vacuum	0	0
Other Areas Swept: (e.g., parking lots, major arterials)		
Broom	9	18
Regenerative Air	245	1817
Vacuum	0	0
TOTAL	15,623	23,142

2. Have there been any changes in your street sweeping program?
(efforts to have parked cars removed, changed sweeping frequency, new equipment, significant downtime, etc.)

We are continuing to expand our efforts to post "NO PARKING" signs in neighborhoods with an abundance of parked cars. This has allowed the street sweepers to effectively access and sweep gutters in residential neighborhoods where parked cars previously obstructed access.

One broom sweeper was replaced with a CNG-fueled regenerative air sweeper during the past fiscal year.

LEAF REMOVAL

Volume of leaves removed by City/Town crews: 1957 **tons** (Note: This figure is a combined figure that includes the weight of the material tabulated above PLUS the leaves collected by our autumn leaf pushing and pickup program. Since all of the material (both street sweeping debris and leaves gathered by leaf pushing trucks) is combined and hauled to the Landfill in garbage compactor trucks, there is no way to provide a separate figure for leaf removal.)

Check box if you have a yard waste collection program: **X** Volume of yard waste collected: 12987 **tons**
(Note: This figure is the total weight of the material collected by the City's yard waste pickup program (includes leaves, grass clippings, tree trimmings, etc.). We do not have the ability to separate out the weight or volume of leaves alone.)

* Report total miles covered by sweepers including areas operated in tandem or repeated.

Corporation Yard O&M Program Evaluation

Some areas of the MSC are currently under construction and tenant improvements are in progress which resulted in outdoor storage of items that are normally placed inside. The MSC inspection during the first quarter of FY 2006-2007 also revealed some minor areas of concern with respect to compliance with the SWPPP. Public Works Environmental Compliance Division management will coordinate with other Public Works Divisions and Utilities Division management this summer (prior to the rainy season) to address areas of concern. The MSC will be inspected again prior to the FY 2007-08 rainy season.

Rural Public Works Program Evaluation

The contractor who performs fire road and trail maintenance for the Community Services Department in the City's foothills parkland is well-versed in erosion control techniques. The contractor provides valuable advice to City staff on road and trail maintenance issues.

Compliance with required rural public works best management practices has improved since Open Space and Environmental Compliance staff met with Utilities management last year to review the requirements of the Performance Standard and to solicit their cooperation. Open Space staff continue to monitor the performance of the Utilities crews when they work in the open space preserves. Public Works and Utilities staff will review the Performance Standard and the appropriate BMP's during annual staff training prior to the 2007-08 rainy season.

Santa Clara Valley Urban Runoff Pollution Prevention Program

Municipality: City of Palo Alto

During last fall's clean-up of downed trees and branches from San Francisquito Creek, crews did not follow established procedures for leaving woody debris in the creek (the materials were cut into pieces that were too small to provide habitat value as shelter for fish). This year, staff from the San Francisquito Creek Joint Powers Authority will provide specialized training to City tree maintenance crews prior to the annual creek clean-up.

N/A	N/A	N/A

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 ANNUAL REPORT

Municipality: City of Palo Alto

Storm Drain System O&M Program Evaluation

STORM DRAIN MAINTENANCE DATA

Number of catch basins cleaned – 2,750 each
Weight of debris removed from catch basins (using hand tools) – 29,740 lbs.
Weight of debris removed by vactor truck – 124,180 lbs.
Linear feet of pipeline cleaned by vactor truck – 287,957 lf.
Hours of maintenance on storm water pump stations – 304 hours

Best Management Practices (BMP's) for contractors continues to be problematic, especially during the first heavy rain events of each year when filter fabric and other Best Management Practices are discovered blocking catch basin inlets causing localized flooding complaints. As construction projects often last many months and the inspection of BMPs is a lower priority item for construction crews, they sometimes ignore maintenance of filter fabric and sand bags. Consequently, City staff is left to discover the abandoned fabric or sand and class 2 materials blocking the catch basin outlets or downstream inside the pipeline. Staff must then remove filter fabric and other damaged sand bags from blocked inlets and clean base rock out of the catch basins. More emphasis is being placed on on-site BMPs such as perimeter straw wattles and stabilized construction entrances that keep sediment on site (rather than trying to capture sediment in the gutter with sand bags).

Water System O&M Program Evaluation
Water crews continue to employ best management practices to de-chlorinate potable water prior to discharge to gutters and storm drains and to control pollutant discharges during construction/maintenance activities. During routine tailgate meetings and prior to hydrant flushing, operators are reminded to employ storm water pollution prevention measures at each job site. In addition, the daily operation worksheet contains specific instructions on the use of the de-chlorinator. During this reporting period, water transmission operations staff flushed its entire system. Prior to the flushing, new de-chlorinators were purchased to ensure that any discharge to the storm drain is de chlorinated.

	Permit Provision C.3.c	1. Modify City's storm water ordinance to include Group 2 projects. 2. Begin enforcement of requirements for Group 2 projects.	1. The City's storm water ordinance was modified to include Group 2 projects, with an effective date of August 10, 2006. 2. Public Works Engineering development review staff began enforcement of requirements for Group 2 projects concurrently with the ordinance update.	Public Works Engineering & Planning
	Permit Provision C.3.e	1. Continue inspection of BMP controls to verify maintenance at Group 1 projects on an annual basis. 2. Modify BMP inspection program to incorporate Group 2 projects. 3. Report on BMP maintenance inspections.	1. All three (3) completed Group 1 project sites were inspected to verify adequate maintenance in FY 2006-2007. 2. Group 2 projects have now been incorporated into the City's maintenance verification inspection process. 3. The C.3 Treatment BMP's Inspection Activity Report for FY 06-07 was submitted to SCVURPPP.	Public Works Environmental Compliance
	Permit provision C.3.f	1. Continue participation in development of Program HMP. 2. Develop ordinance changes and/or conditions or approval to comply with HMP. 3. Provide staff training on HMP requirements.	1. Public Works Engineering staff monitored the Program's development of the Bay Area Hydrology Model tool for use in designing HMP measures. 2. The City's existing ordinance is consistent with the HMP requirements contained in the current Program NPDES storm water permit. 3. Three Public Works Engineering staff members	Public Works Engineering

		4. Start implementation of HMP requirements for applicable projects.	attended the Program's HMP 101 training session. 4. No development applications for projects subject to the HMP requirements have been received to-date.	
	Permit Provision C.3.j	1. Adopt changes to appropriate ordinances and/or policies based on review of existing local design standards and a comparison to the list of areas to address in Provision C.3.j and other references such as "Start at the Source" and the "Development Policies Comparison" work sheet. 2. Report on ordinance and policy changes as part of Annual Report.	1. The City Council adopted a Stream Corridor Protection ordinance on January 22, 2007. The ordinance is consistent with the Guidelines and Standards for Land Uses Near Streams developed by the Santa Clara Valley Water Resources Protection Collaborative. The ordinance includes requirements for placement of structures, preservation of riparian vegetation, and project design elements that serve to protect the health and integrity of riparian corridors.	Public Works Engineering & Environmental Compliance, Planning, & Building Inspection
	Permit Provision C.3.m	Report on changes to environmental review process as part of Annual Report.	No changes to report.	Planning
	Permit Provision C.3.n	Report on new development and redevelopment projects for which C.3 requirements apply, as part of Annual Report.	See attached matrix.	Public Works Engineering
	Staff Training	Provide annual training to Planning and Public Works Engineering staff.	Provided training to applicable work groups on the storm water regulations as follows: • Planning: 02/27/07 • PW Engineering development review staff: 12/12/06 • PW Engineering: 10/18/06	Planning & Public Works Engineering Divisions

Regional Board Comments on New Development-Planning Procedures in FY 2005-2006 Annual Report

Item	RWQCB Comment	City Of Palo Alto Response
N/A	N/A	N/A

New Development-Planning Procedures Program Evaluation

The first full year of C.3 maintenance verification inspections went well. Working relationships between inspectors and maintenance personnel were established to insure that the maintenance inspections will have the full benefit of the knowledge pf those persons involved during design, construction, and future maintenance of the storm water treatment devices.

Due to the inclusion of Group 2 projects starting in August 2006, there has been a marked increase in the number of projects subject to the C.3 permit provisions. Permit applicants and project designers are increasingly knowledgeable about the storm water treatment requirements and routinely include treatment measures, site design measures, and source control measures in early planning submittals.

The recent adoption of a stream protection ordinance will allow the City to better protect the health and integrity of streams and the riparian corridor. Currently the ordinance applies only to discretionary projects, while compliance for ministerial permits is voluntary. For ministerial permits, the emphasis is currently on outreach and education to applicants. In order to increase the effectiveness of the ordinance, staff will explore the possibility of applying it to ministerial permits in the future.

<u>Description of the Organizational Structure of the City of Palo Alto's Operation and Maintenance Verification Program</u>
Legal authority for the City of Palo Alto's Operation and Maintenance (O&M) Verification Program is contained in the Palo Alto Municipal Code. The program is implemented by staff in the Engineering and Environmental Compliance Divisions of the Public Works Department. The enforcement mechanism is a written maintenance agreement, signed by the City and the party responsible for maintenance and then recorded with the Santa Clara County Recorder's Office.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 ANNUAL REPORT

Municipality: City of Palo Alto

Legal Authority

Palo Alto Municipal Code Chapter 16.11.040 Inspection and maintenance.

(a) The property owner(s), its administrators, successors, or any other persons, including any homeowner's association, shall take all necessary actions to ensure that the permanent stormwater pollution prevention measures and hydromodification management measures are properly maintained so that they continue to operate as originally designed and approved. The maintenance of the control measures shall be in accordance with the terms and conditions of a maintenance agreement and shall be in the form of a covenant running with the land, environmental mitigation measures, a use permit, enforceable conditions of approval, or other legal agreement. The agreement shall provide access to the extent allowable by law for representatives or agents of city for the purposes of verification of proper operation and maintenance of the specific PSPPM and hydromodification management measures. The agreement shall be recorded in the office of the county recorder, shall remain in force until ownership of the developed property has been transferred, and upon transfer, shall be binding on the new owner(s).

(b) Any property owner that has been required by this chapter to construct or install and maintain permanent stormwater pollution prevention measures and hydromodification management measures shall upon transferring ownership of such property provide the new owners with a current copy of this chapter, and shall inform the new owners in writing of their obligation to properly operate and maintain such PSPPM and hydromodification management measures.

(c) It shall be unlawful to alter, modify or change any components of the permanent stormwater pollution prevention measures or hydromodification management measures without first obtaining the written certification of the city engineer that the requirements of this chapter have been satisfied.

Implementation

Public Works Engineering development review staff requires the execution of a written maintenance agreement as a condition of approval for all Group 1 and 2 development and redevelopment projects. The City Attorney has drafted a standard agreement that is used as the template for the maintenance agreements negotiated with each developer. Final building occupancy is not granted until the agreement is executed.

An inspector in the Public Works Environmental Compliance Division is responsible for periodic maintenance verification inspections of stormwater treatment controls incorporated into approved Group 1 and 2 development and redevelopment projects. The municipal fee schedule contains a fee for these inspections that is charged to the party responsible for maintenance of the storm water control measures. The requirement for the periodic inspections is contained in the standard maintenance agreement and site access for the City inspector is authorized in the Municipal Code.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 ANNUAL REPORT

Municipality: City of Palo Alto

New Development-Construction Inspection Program Evaluation

The continuing efforts of the storm water program investigator have improved the organization, inspection, and enforcement of new development construction locations. Job experience and knowledge of the city, City procedures, and code enforcement activities are vital to the success of the program. Further investigator and staff training will enable city personnel to continually improve the program. Proactive inspection levels are back to normal, as well as the effective response to complaints and interdepartmental referrals during the non-rainy season.

Reports generated by the Building Division's Accela Permits program are an essential tool used to find all large sites over 10,000 square feet with substantial earth disturbance work as well as construction sites with approved dewatering permits. This resource is also important in the identification of the date when a permit was issued as well as the status of the permit. A series of meetings with other departments and Public Works Department divisions are scheduled to inform other persons of the purpose of the storm water program.

The rainy season was very short during this reporting period. All large construction sites were inspected on a regular basis during the year to ensure compliance with storm water regulations.

	Pesticide Outreach	1. Develop, prepare, and distribute appropriate outreach materials (fact sheets, brochures, etc.) regarding proper pesticide use and disposal and IPM techniques.	1. Actively participated in the IPM Regional Partnership program, including funding the BASMAA project lead. Supported local hardware stores by stocking *Our Water Our World* fact sheets and shelf talkers for less-toxic products. Locally, ran print ads, movie ads, internet banner ads, two utility inserts, and an OpEd piece from Palo Alto's mayor regarding pesticide use.	Public Works Environmental Compliance
		2. Attend community events and coordinate with local gardening and environmental groups to distribute materials.	2. Attended 10 events promoting IPM (e.g. Farmer's Markets, Orchard Supply Hardware weekend events, Community Concerts, fairs, and guest speaker programs).	
		3. Conduct residential IPM workshops.	3. Approximately 50 RWQCP service area residents attended a less-toxic pest control workshop held in partnership with Common Ground Garden Center and the Palo Alto Recycling Program.	

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 ANNUAL REPORT

Municipality: City of Palo Alto

		4. Update City's Clean Bay website to provide information about and promote IPM techniques. 5. Conduct outreach to employees who do not apply pesticides during the course of their work. 6. Continue to implement IPM Partnership with hardware garden supply stores in POTW service area. 7. Offer training to employees of IPM Partnership stores in POTW service area.	4. Ongoing. The Clean Bay website directs users to regional websites (*Our Water, Our World*, EcoWise Certified, etc.). 5. City-wide e-mail and intranet messages providing information on IPM are distributed to employees periodically. 6. Stocked *Our Water Our World* fact sheets and shelf talkers for less-toxic products at local stores. 7. Training in FY06-07 included: Mountain View Summerwinds,14 people; Palo Alto Ace Hardware, 15 people; Palo Alto Summerwinds, 5 people; Summerwinds general training (not store specific), 56 people.	
	Mercury Outreach	1. Continue to publicize the fluorescent bulb, thermometer, and thermostat drop-off programs through utility bill inserts, newspaper advertising, etc. 2. Provide digital thermometer to all residents who recycle mercury thermometers. 3. Expand and promote collection sites for mercury thermometers at senior centers and municipal locations. 4. Support the Program's efforts to provide outreach and assistance regarding Universal Waste Rule (UWR) to conditionally-exempt small quantity generators.	1. Ongoing: • City of Palo Alto web site publicizes all locations for lamp recycling and thermometer exchanges. • Fluorescent light recycling also advertised through County outreach program • As part of School Outreach Campaign, reached 500 students in 20 fourth grade classroom presentations specific to mercury. 2. Ongoing at RWQCP and at special events. 3. Thermometer take-backs now offered as special event service. RWQCP is partnering with East Palo Alto's Ravenswood Health Center to provide digital	Public Works Environmental Compliance

		5. Support County's program for fluorescent bulb drop-off at hardware stores and recycling centers.	thermometers as part of its mercury awareness campaign. 4. RWQCP staff support outreach to small quantity generators through participation in the SCVURPPP WE&O Subgroup. 5. The original RWQCP program was adopted and expanded by Santa Clara County. Currently five stores accept fluorescent bulbs in the RWQCP service area. Palo Alto supports the County program through advertising in the RWQCP service area that supplements County program advertising.	
	Copper Outreach	Conduct outreach to Building/Planning staff and to developers on ban of copper roofs and gutters implemented in January 2003.	Continued using a stamp on all building permit plan sets approved by the Development Center to notify residents regarding the ban on copper roofs and gutters.	Public Works Environmental Compliance
	School Outreach	Continue outreach to elementary, middle, and high schools, focusing on pesticides, mercury, and other pollutants of concern (school programs include "What's Bugging You?" and "Mercury: Past and Present")	In 2006-07, the RWQCP School Outreach Program reached 4,045 students throughout the service area. All programs include a discussion of storm water and pollution prevention. • 115 elementary school presentations and tours • 57 middle school presentations (includes hands-on lab) Of the 172 total presentations, 69 were conducted in Palo Alto; 103 in RWQCP partner cities.	Public Works Environmental Compliance

FY 2006-2007 ANNUAL REPORT

Municipality: City of Palo Alto

	Vehicle Service Facility Recognition	Continue periodic recognition (newspaper advertisement and promotional materials) of vehicle service facilities that qualify for designation as Clean Bay Businesses.	Vehicle service facilities that qualify as "Clean Bay Businesses" receive promotional materials and are listed in full-page newspaper ads paid for by the RWQCP. Shops that have been Clean Bay Businesses for 10 consecutive years receive a special "Outstanding Achievement" plaque and other recognition materials.	Public Works Environmental Compliance
	Watershed Education and Outreach	1. Develop City PI/P workplan that is coordinated with the Program's Watershed Education and Outreach Campaign. 2. Implement City PI/P workplan.	Done annually and in alignment with BASMAA, BAPPG projects, and other regional outreach efforts as feasible.	Public Works Environmental Compliance & Engineering

Regional Board Comments on Public Information/Participation Requirements in FY 2005-2006 Annual Report

Item	RWQCB Comment	City Of Palo Alto Response
N/A	N/A	N/A

Public Information/Participation Program Evaluation

Pesticide Outreach: Approximately 650 people have taken less-toxic pest control workshops to-date. Previous years' workshop evaluations indicate that 83% are likely to try two or more IPM techniques they learned at the workshop. Workshops were reduced in 2006-07 to focus on other IPM project priorities.

Mercury Outreach: See evaluation in Mercury Program Section

Copper Outreach: The ordinance banning copper architectural materials has been effective at eliminating the installation of new copper roofs.

School Outreach: 78% of teachers returned a postage-paid evaluation postcard, with a cumulative rating of 4.9 out of 5 in both quality of program and clarity of presenter. 94% stated students' understanding of water pollution prevention and the difference between storm drain/sewer systems **increased**.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 ANNUAL REPORT

Municipality: City of Palo Alto

Vehicle Service Facilities: Since inception of this program, the participation has increased to 98% of eligible facilities. Eighty-eight shops have participated in the Clean Bay program for at least 10 years.

Public education challenges include finding new and compelling messages to inspire the public to use less-toxic do-it-yourself and contracted pest control methods, and to recycle mercury-containing items. RWQCP will continue identifying strategies with partner agencies and its communications consultant for effective outreach to non-English speaking communities via local newsletters, community groups and health centers. Staff also plans to provide additional funds to expand run time of ads produced by the WEO campaign that focus on mercury and pesticides. Staff is also participating in co-permittee and potential regional efforts to support expansion plans for the Bay Friendly Garden Project through DPR grant funds which will target landscape maintenance workers, training them to use IPM practices.

Municipality: City of Palo Alto

Regional Board Comments on Pest Management in FY 2005-2006 Annual Report

Item	RWQCB Comment	City Of Palo Alto Response
N/A	N/A	N/A

Pest Management Program Evaluation

The City's use of pesticides associated with ecotoxicity has been reduced over time through use of IPM strategies. Palo Alto has made significant strides in targeting the source of pollution stemming from staff and contractor structural pest control currently most associated with impaired water quality. Future efforts will continue to target landscape pest control problems that lead to use of ecotoxic fungicides and rodenticides, which are currently the greatest source of ecotoxicity in City operations.

For residential and business use, Palo Alto will continue to promote new and existing programs locally and regionally, such as EcoWise Certified, Bay Friendly, Green Gardener and *Our Water, Our World*. These programs are effective in providing education to non-municipal audiences that contribute to urban pesticide pollution.

MERCURY POLLUTION PREVENTION PROGRAM
(Provision C.9.c of the Permit)

FY 2006-2007 Work Plan Self Evaluation Matrix

Item No.	Activity	FY06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
	Municipal Use of Mercury-Containing Products	1. Continue to implement the City's Mercury Elimination Policy. 2. Continue recycling of fluorescent bulbs used in City facilities and purchase of low-mercury bulbs. 3. Regional Water Quality Control Plant will continue to replace mercury switches with non-mercury alternatives (typically upon failure).	1. Ongoing 2. Ongoing 3. Since 2002, RWQCP has replaced or removed 37 mercury switches (approximately 2.3 pounds). Many of the switches that were recycled were not in service but were warehouse inventory. No mercury switches were replaced in FY 2006-07.	Public Works Environmental Compliance
	Household Hazardous Waste Collection	1. Support the County's program to provide fluorescent bulb drop-off and recycling for residents at local hardware stores. 2. Continue thermometer and thermostat drop-off and recycling program for residents at the POTW. 3. Continue collection of fluorescent bulbs, thermometers, and	1. The original RWQCP program was adopted and expanded by Santa Clara County. Currently five stores accept fluorescent bulbs in the RWQCP service area. Palo Alto supports the County program through advertising in the RWQCP service area that supplements County program advertising. 2. Digital thermometer program replaced previous coupon-based program. This program is less active than in the past, as many residents have	Public Works Environmental Compliance

		thermostats from residents and small quantity commercial generators at Household Hazardous Waste collection events in Palo Alto. 4. Document and report on collection of mercury-containing products.	already exchanged mercury thermometers. The RWQCP has partnered with Palo Alto Utilities for mercury thermostat exchanges and rebates for digital thermostats, and with occasional regional efforts to collect thermostats, such as 2007 BAPPG thermometer take-back. 3. Ongoing at monthly Household Hazardous Waste collection events, with fluorescent bulbs accepted daily at the Palo Alto Recycling Center. 4. The most recent data available for the City of Palo Alto HHW program indicate that 12,321 lbs of fluorescent bulbs were collected at the Recycling Center drop-off site and 270 pounds of thermometers and thermostats were collected at monthly Palo Alto HHW events. These data are for FY 05-06. (HHW 303a Form, 2005-06)	
	Regional, State, and Federal Coordination	Support and participate in development of the WMI Watershed Action Plan, and efforts by BASMAA and the Bay Area Pollution Prevention Group to control mercury.	Palo Alto staff regularly participate in regional mercury efforts (e.g. BAPPG regional thermometer take back event described above). In FY 06-07, Palo Alto staff also took a lead role with BAPPG in organizing a workshop on dental amalgam recovery programs.	Public Works Environmental Compliance
	Public Outreach and Education	Public Education and Outreach is a major focus of Palo Alto's Mercury Pollution Prevention Program. Regional Board Comments on Mercury Pollution Prevention Program in FY 2005-2006 Annual Report		
Item	**RWQCB Comment**	**City Of Palo Alto Response**
N/A	N/A	N/A

Mercury Pollution Prevention Program Evaluation
RWQCP actively participates in SCVURPPP pollution prevention activities, diverts thermostats and thermometers for recycling, and provides extensive outreach to schools in its service area. RWQCP staff believe there is a need for regional coordination on product stewardship issues for mercury-containing products. Mercury pollution prevention programs continue to be good vehicles for engaging the public. Mercury is both an ecosystem issue and a human health issue. As such, the campaign to remove mercury from the home resonates with parents wanting to protect children from toxics. Therefore, RWQCP staff plan to continue using mercury programs as key public messages, alternating them with other pollutant messages.

COPPER ACTION PLAN/NICKEL ACTION PLAN
(Provision C.9.a & b of the Permit)

FY 2006-2007 Work Plan Self Evaluation Matrix

Item No.	Activity	FY06-07 Work Plan Tasks	FY 06-07 Accomplishments	Responsible Party
CB-1	Vehicle Washing Operations	• Distribute outreach materials on proper vehicle/equipment washing at City department counters and public events, and post on City web site. • Provide car wash kit to charity car wash organizers and educate on the use of the kits. • Submit data regarding vehicle washing outreach activities and effectiveness evaluation in annual reports. • Require source control measures for Group 1 new development and redevelopment projects that will conduct vehicle/equipment washing and maintenance activities (consistent with Permit Provision C.3.k). • Inspect auto businesses regarding car wash requirements, and prohibited storm drain discharge.	Within CB-1, Paragraphs 1, 2, 5, 6, 7, 8, & 9 are ongoing programs which have been run by Palo Alto for a number of years, and which were run again successfully in FY 2006-07. Paragraph 3 calls for an effectiveness evaluation regarding vehicle washing outreach Utility bill stuffers, fliers, and special event displays have been used successfully to promote changes in vehicle washing practices as a means to protect storm water quality. Awareness of this issue has grown over the years, serving as a testament to the outreach program. Palo Alto does not do its own public opinion surveys, but rather relies on regional surveys to quantify and confirm the success of this and other behavior modifications. With respect to Paragraph 4, two of the Group 1 projects approved to-date in Palo Alto (multi-family residential developments) include covered vehicle wash areas that are plumbed to the sanitary sewer.	Public Works Environmental Compliance Public Works Environmental Compliance Public Works Environmental Compliance Public Works Engineering Public Works Environmental Compliance

		• Inspect vehicle washing facilities as part of stormwater inspections for industrial and commercial businesses. • Continue to maintain car wash systems for City vehicles at the corporation yard and fire stations. • Encourage municipal staff to use certified mobile cleaners when contracting cleaning services. • Refer mobile cleaners to BASMAA's online training module for education and certification.		Public Works Environmental Compliance Public Works Fleet Mgmt. & Fire Dept. Public Works Operations & Facilities Mgmt. Public Works Environmental Compliance
CB-3	Industrial Copper Control	Continue Industrial Inspection program, including NOI sites such as plating and metal finishing facilities, vehicle service facilities, and other permitted sites.	All inspections completed in FY 2006-07.	Public Works Environmental Compliance
CB-4	Quantify Source Loadings of Copper	• Collect data on potential indicators of copper. • Review data on copper additions to water supply reservoirs (SCVWD & SFWD) and prepare fact sheet for reservoir managers.	These activities were completed, with the exception that the reservoir fact sheet is being deferred to the Bay-Wide Copper Action Plan as it will be much more effective if prepared by all the Bay Area agencies.	Public Works Environmental Compliance

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 ANNUAL REPORT

Municipality: City of Palo Alto

		• Prepare and submit report on potential indicators as part of Clean Bay Plan.		
CB-6/7	Reducing Traffic Congestion/ Promoting Alternative Transportation	1. Update the City's Zoning Ordinance, based on the results of the Development Policies Comparison Project Report (particularly Section VI, Policies to Limit Auto Use/Promote Alternative Transportation) to promote better transportation-related design practices and alternative modes of transportation.	City Council adopted a amendment to the Zoning Ordinance creating a Pedestrian and Transit Oriented Development Combining District in September 2006. The new zoning district is intended to allow higher density residential dwellings within a walkable distance of the California Avenue Caltrain Station, in order to support the use of public transportation, require streetscape design elements that are attractive pedestrians and bicyclists, and increase connectivity to surrounding existing and planned pedestrian and bicycle facilities.	Public Works Engineering & Planning
CB-8	Watershed assessment and protection	1. Revise City's General Plan, as needed, at next scheduled update, based on recommendations from the *Development Policies Comparison Project* and Provision C.3.l.	No relevant revisions this year.	Planning
CB-11	Street sweeping and storm drain O&M	• Follow Program guidance regarding the collection and reporting of street sweeping data. Provide data for Annual Report. • Evaluate need for improvement of current street sweeping and storm drain system O&M programs (within available budget) in Annual Report.	Palo Alto continues to exceed minimum street sweeping frequencies. No new program changes.	Public Works Operations

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 ANNUAL REPORT

Municipality: City of Palo Alto

Copper Action Plan/Nickel Action Plan Program Evaluation
Palo Alto's activities to reduce copper have become institutionalized and continue to be fully implemented. Any large reductions in copper discharges will have to come from copper use reductions in brake pads, construction materials or pesticides. However, copper concentrations in Bay samples continue to be below the established "trigger" value, and therefore the need for such reductions is not immediate.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2006-2007 ANNUAL REPORT

Municipality: City of Palo Alto

Trash Inventory & Management Program Evaluation
This program continues to make significant progress. The removal of sites that are not "hot spots" and the addition of new sites shall address the current trash inventory for the City of Palo Alto. The creation of the Trash BMP Tool Box Pamphlet as provided by SCVURPPP will provide technical information to resolve future trash problems. The proposed combined effort to coordinate City of Palo Alto Environmental Compliance Division, Public Works Engineering, Public Works Operations, Palo Alto Police Department, San Francisquito Watershed Council, and other interested environmental persons and groups shall improve reporting accuracy and help increase the total number of trash items removed from local creeks and waterways. A new Trash Hot Spot Action Plan will be created during FY 2007-2008 to incorporate the combined efforts of the work groups and persons involved as well as to document proposed methods for reducing trash loads in our waterways. Continued joint efforts by local jurisdictions may place more pressure on Caltrans to improve cleaning efforts on freeway on ramps and off ramps. In FY 2007-08, staff will conduct research on trash capturing devices both upstream and downstream of the Matadero Pump Station. This will help to identify the most effective method for screening trash and may lead to modifications to the trash racks at the Matadero Pump Station and other City pump stations that will increase the level of trash removal prior to discharge of pump effluent to local creeks. This proposal to study pump stations as trash removal devices may be the first in the region.

GLOSSARY 171

Executive Summary

The City is required to submit to the Regional Water Quality Control Board (Water Board) an Annual Report that documents the progress of the Urban Runoff Management Plan for the previous fiscal year. The Annual Report is prepared pursuant to provision C.6 of the City's National Pollutant Discharge Elimination System (NPDES) permit for stormwater discharge through the City's storm sewer system to waters of the United States.

The Report includes sections for each of the program elements included in the Urban Runoff Management Plan as required in the permit. Each section is comprised of an update on the status of the work plan, an evaluation of various performance elements, responses to Water Board feedback received during the past year, and additional tables or information to demonstrate performance for a program element. Summaries are also provided for the array of outreach activities and municipal training sessions that are included in various program elements.

Alum Rock Library extended detention basin, a stormwater treatment control measure

Most program elements contain components carried out by more than one City department. The strategy for attaining compliance focuses on three different types of activities that the City conducts:

1. Enforcement and monitoring to detect and respond to incidents of illegal discharge to the storm sewer system;
2. Structural and business process changes to City operations and services; and
3. Education for municipal employees as well as the community at large.

The City also contributes to activities undertaken by the Santa Clara Valley Urban Runoff Pollution Prevention Program (Program) and the Bay Area Stormwater Management Agencies Association (BASMAA); however, this report includes only activities performed by the City. An overview of the year for each program element follows.

Illicit Connection / Illegal Discharge Inspection (ICID)

The City's Environmental Services Department (ESD) responds to complaints regarding illegal discharges or threats of discharge to the storm sewer system. This year, the City responded to 672 cases, which is a lower overall caseload than the average of the previous five years. The number of incidents at residential, automotive, public, and food facilities remained about the same as past years, while the number of incidents at commercial, industrial, and construction locations decreased. The drop in commercial and industrial incidents may be due to the increase in outreach and best management practice (BMP) literature distribution by environmental inspectors. The drop in construction incidents may be due to a shorter wet season and ongoing and more consistent inspections of construction sites during the wet season. Residential incidents continue to be most frequent, and the most common types of violation are vehicle-

related. Other significant types of violations include oil and grease at food facilities, tracking soil, dumping, paint, and cement. ESD responds to all complaints with education and enforcement in partnership to achieve compliance and prevent future incidents.

In an effort to reduce the amount of illegal dumping, City staff continues to conduct targeted outreach. In FY 06-07, City staff analyzed the record of calls regarding illegal dumping from the previous fiscal year, mapping calls to zip codes throughout the City. Staff then directed outreach to the Strong Neighborhoods Initiative (SNI) groups in those zip codes that exhibited a high number of residential complaints. The Strong Neighborhoods Initiative is a City initiative designed to build strong neighborhoods by developing community leadership and working collaboratively with residents to achieve the delivery of City services and neighborhood priorities. Staff conducted outreach to six neighborhoods through a combination of direct outreach at community meetings and an education article for a neighborhood newsletter. The neighborhood groups gladly accepted the information and asked insightful questions of City staff concerning illegal dumping and associated environmental issues.

Storm drain inlet stenciled with the name of the nearest creek and the City's stormwater dumping complaint number

In FY 07-08, the City will continue to conduct stormwater outreach, with a goal of reaching eight additional neighborhoods. In an effort to draw attention to soil tracking at construction sites, the City will also pilot highly visible signs to be fence-mounted at building sites which alert readers to report to the City any mud or dirt that they may see on the street.

Industrial & Commercial Discharges (IND)

Under this program element, ESD inspected more than 3,900 businesses in FY 06-07 to ensure that proper practices are employed to prevent stormwater pollution. How frequently a business is inspected depends on their potential for contributing pollutants as determined by previous inspection results. This method of assigning inspection frequencies has been effective in focusing inspection resources on high priority cases to best protect water quality. Sixty-eight percent of the businesses inspected are found to have no significant stormwater issues and thus do not warrant near-term re-inspection. When issues are identified, education and enforcement are used together to achieve compliance.

The total inventory of facilities in the City that are subject to inspection has more than doubled over the last five years, which has presented a significant workload challenge. The increases have appeared to stabilize, and the City has successfully integrated the increased workload over the past years by prioritizing and phasing initial inspections and resources. To maintain service levels, the City has added two inspectors to assist in meeting the forecasted workload.

FY 06-07 marked the first year for the City's new Fats, Oils, and Grease (FOG) Inspection Program, and 1,849 facilities were inspected. Though the City has conducted comprehensive restaurant inspections over the past four years as part of IND, the new FOG Program dedicates

ESD Watershed Enforcement Inspector observing a grease interceptor at a San José mall

specific resources and staff to inspect stormwater practices solely at food service facilities. This Program focuses particularly on integrating the sanitary sewer management plan (SSMP) requirements and enhancing the businesses' general awareness of stormwater issues related to food service facilities.

Education remains the primary tool for preventing or stopping practices that may pollute stormwater. In FY 06-07, inspectors distributed more than 10,600 Best Management Practices (BMPs) brochures, fact sheets, posters, and other materials as part of the IND program. Generally, inspectors are very proactive in discussing stormwater issues and distributing BMPs to support educational efforts. For example, some businesses that did not have any current stormwater issues were still given BMPs by inspectors to assist the business in their efforts to keep pollution out of the storm drain system.

New and Redevelopment (NRD)

This program element is driven by the New and Redevelopment provision (also referred to as C.3) of the permit, amended in October 2001 and most recently in July 2005. This provision requires that development projects implement controls to address pollutant discharges and increased storm flows for the life of a project.

The City continues to make strides in integrating stormwater controls into development projects. Thirty-seven private development projects included in this year's report incorporated hydraulically-sized stormwater management measures. This success is the product of policy development, staff training and coordination, regional collaboration, and ongoing outreach to and collaboration with the development community.

Several policies support the advancement of stormwater management in development projects. City Policy 6-29 (entitled "Post-Construction Urban Runoff Management") was revised in August 2006 to expand implementation of stormwater treatment measures. The revisions require the implementation of post-construction BMPs and Treatment Control Measures (TCMs) and establish specific numeric sizing criteria for projects that create or replace 10,000 square feet of impervious surface. The City also updated the Parkland Dedication and Park Impact Ordinances (PDO/PIO) to create incentives for developing stormwater facilities that also serve a recreational public purpose. In addition, the City updated its Green Building Policy, requiring stronger integration of green building principles in the development of municipal buildings, including enhanced use of stormwater TCMs, appropriate site design, BMPs, and hydromodification management. Implementing stormwater treatment and hydromodification controls on smaller, infill sites in a developed urban area is much more difficult given the limited land area and the high cost of land. In addition to the project-by-project approach, the City continues to emphasize its policies that discourage sprawl and encourage increased densities. These policies have an associated water quality benefit as they reduce traffic congestion and the associated air pollution.

The City continued implementation of its expansive training program on stormwater control techniques. City staff received the information and resources needed to effectively guide and review development applications and to design public projects. Among the FY 06-07 training highlights were a two-day workshop on stormwater treatment by Dr. Gary Minton, the Program's annual training on stormwater controls, a Watershed Management Initiative Land Use Subgroup Workshop, a seminar on bioretention, a training event on pervious pavement, and a demonstration and training of the Bay Area Hydrology Model (BAHM) software. City staff were also exposed to numerous stormwater treatment products and given the opportunity to meet with vendors to ask questions and learn more about proprietary products. In addition, several trainings and presentations were given to City planners, project managers and engineers responsible for plan review of private projects and design of municipal projects.

The City continues to emphasize site design, source control, and Low Impact Development (LID) as key strategies for minimizing stormwater pollution. In addition, the City made considerable efforts to emphasize appropriate selection of landscape-based TCMs and effective operation and maintenance of BMPs.

The City conducted a pilot inspection program in FY 06-07 even though all projects constructed to-date were approved prior to numeric sizing requirements. Based on the Operation and Maintenance (O&M) Verification Program, revised in FY 05-06, City staff inspected 20 BMPs at 12 different sites utilizing the Program's standard inspection data collection form. It has been determined that as numerically-sized BMPs are installed, additional resources and coordination among departments will be necessary to ensure appropriate installation, operation, and maintenance of BMPs.

Shared walkways like this one in Willow Glen are one of many site design low impact development (LID) techniques used in the City

The City also continued to actively participate in efforts to develop analytical tools and conduct outreach on a regional basis. The City remained an active partner in the Program's development of various guidelines and tools to implement stormwater controls on development projects. In addition, the City contributed to the development of the BAHM software and produced the first draft of the Stormwater Control Plan Design Guidelines Manual for developers and City staff, which will be completed in FY 07-08. Additionally, City staff from key departments continues to provide information on new requirements and stormwater strategies to the public and the development community.

Construction Inspection (CON)

The City inspects activities at construction sites to prevent sediment and other pollutants from entering the storm sewer system. Inspectors from Public Works and Building review erosion and sediment controls as part of their routine inspections. Environmental Services supplements this

effort with limited inspection and broad enforcement follow-up. These departments also collaborate in providing outreach materials and training to the development community on appropriate best management practices.

Construction materials covered and contained to prevent runoff pollution on Lundy Avenue.

In FY 06-07, the City again focused on staff training, hosting and coordinating several training sessions for staff involved in construction inspection. The City retained a consultant that conducted two annual erosion and sediment control trainings for Building, Environmental, and Public Works construction inspectors in October 2006. The trainings were a great success and the City plans to retain the consultant again in 2007 to conduct this training. In FY 06-07, City staff also implemented a new training program to further supplement the fall annual trainings. This new program involved short, focused stormwater BMP trainings conducted during Public Works and Building inspector section meetings. Approximately 136 Public Works and Building inspectors attended one or more of these 20 training sessions. The City plans to continue these focused trainings in FY 07-08.

Additional construction inspection training occurred in FY 06-07. In December 2006, City staff attended trainings held by the Santa Clara Valley Urban Runoff Pollution Prevention Program and the Water Board for construction inspectors and project managers. City staff held an additional training in March 2007 for Public Works capital improvement project managers. These focused trainings help project managers and teams ensure erosion and sediment control measures are included on plans and specifications. Trainings have also made inspectors more vigilant in identifying and correcting problems at construction sites.

While inspection efforts are improving, site conditions still show that continued attention is necessary to ensure stormwater issues are addressed. City staff will continue their commitment to quickly identify and correct areas of concern at construction sites, thus reducing the need for elevated enforcement response and monetary penalties.

Public Streets, Roads, & Highways (PSR)

This program element is pursuant to provision C.2.a of the permit and is one of several that address municipal activities. These program elements essentially consist of BMPs being incorporated into City operations such as street repair. Training plays a key role in ensuring that staff uses the proper techniques during the course of their duties to protect water quality. For FY 06-07, this training was completed in June 2007. Session content centered on review of the Department of Transportation's BMPs and Standard Operating Procedures (SOPs) for O&M activities. Corporation Yard Stormwater Pollution Prevention Plan training was integrated into the DOT crew training in FY 06-07. Training content is directed by which work groups are

present, and the training curriculum is revised when needed to reflect new practices. On average, 91% of the employees responded that the BMPs taught were appropriate for their work.

Bermed and covered vehicle wash pad at the Central Service Yard.

Training was also conducted for Rural Public Works BMPs in accordance with provision C.5, which requires that the City employ proper techniques when conducting maintenance activities in rural areas. This standard is integrated as part of the PSR program element. The City's departments of Parks, Recreation, and Neighborhood Services; General Services; and Transportation are responsible for managing rural public works maintenance and support activities.

The City conducts an extensive Street Sweeping program, involving the sweeping of the central business district; neighborhood business districts; arterials, collectors, and bicycle lanes; and residential streets. Annually, the City sends out a calendar of the residential street sweeping schedule to each single-family dwelling, and asks neighborhood associations within the City to include reminders in their association newsletters for moving parked vehicles on street sweeping days. The City is continuing to expand the areas in which parking restrictions are required and enforced to improve the effectiveness of the street sweeping program. In FY 06-07, the enforcement area was broadened from 196 to 239 curb miles. The City anticipates expanding the areas in which parking restrictions are required and enforced for street sweeping by approximately 20 curb miles in FY 07-08.

Storm Drain System Operation & Maintenance (SDO)

Storm Drain System Operation and Maintenance is another municipal activity program element implemented in accordance with provision C.2.a of the permit. This program includes key maintenance activities that are conducted to ensure the proper function of the storm sewer system to collect and convey storm runoff. Maintenance staff training was conducted to coincide with that of the PSR program element and was completed in June 2007.

Department of Transportation crew cleaning a storm drain catch basin in a neighborhood near Almaden Lake Park

The Department of Transportation successfully implemented its annual storm drain inlet inspection and cleaning program, cleaning approximately 28,900 inlets. To date, the City has been able to achieve the more comprehensive Tier 2 level of inlet cleaning performance.

Evaluation of the data collected during inlet cleaning indicates that approximately six percent of the City's

storm drain inlets and catch basins had a problem associated with them. The key problems for stormwater protection were cars parked on catch basins; high debris (leaves, lawn clippings, dirt and other natural materials); excessive garbage (paper, bottles, cans, and other man-made waste); and pollution (concrete, antifreeze, oil, paint, etc. that appear to have been intentionally dumped into the inlet or catch basin). Maintenance staff is directed to contact Environmental Enforcement when pollution is identified. Using this information, the City directs resources to known problem areas.

Water Utilities Operations & Maintenance (WUO&M)

This program element addresses a municipal activity and is implemented in accordance with provision C.2.a. The program addresses O&M activities at the City's Municipal Water system. The key tools for implementing this program are the Water Utility Pollution Prevention Plan and staff training to ensure that proper techniques are employed during maintenance activities. The City's training program includes the annual development of a video demonstrating the implementation of BMPs for a specific work function. This year's water meter testing program was the focus of the annual program evaluation. The training activity reviewed the procedures for discharging during the process of testing water meters to ensure accuracy. It was determined that no changes in the current practices are needed.

Water System Technician taking a sample

Pesticide Management (PM)

This program element is required pursuant to provision C.9.d. of the permit. The purpose of the Pesticide Management program is to reduce the amount of pesticides in stormwater and landscape runoff. Activities include setting municipal policy, implementing proper techniques when selecting and applying pesticides on City property, staff training, public education, and City participation in regional efforts to influence regulations that affect pesticide management. In 2003, the Council adopted an Integrated Pest Management (IPM) Policy, which calls for municipal operations to incorporate IPM techniques and to reduce, phase-out, and ultimately eliminate the use of pesticides that cause impairment of surface waters.

The City has incorporated the use of IPM techniques for many years. Pesticide use on City property is based upon specific site needs. The decision to use a pesticide is determined by several factors such as site evaluation, accurate identification of the pest, site history, monitoring of thresholds, review of alternative means of control, and selection of the most favorable and effective pesticide. The City also seeks to reduce the need for pesticide usage through alternate actions such as mulching, weed barriers, proper irrigation, and selection of disease resistant plants. In many instances, plant diseases and pest problems are tolerated rather than employing any pesticides. When pesticide use is necessary, the City strives to use products that are less toxic and safer for employees, the public, and the environment.

In FY 06-07, the City continued data collection and tracking of pesticide applications on City property. This year's report contained more information for City applications than in past years,

The City began installing roosting boxes to attract bats and barn owls, which prey on pests

photo: US Bureau of Reclamation

as the City was able to successfully work with contractors to incorporate pesticide use data from Special Assessment Districts, City facilities, and Municipal Water Resources sites. Because FY 06-07 reporting captures a much wider picture of pesticide use in City operations than in previous reporting years, FY 06-07 total pesticide usages for City applications are not directly comparable to previous fiscal years' usage numbers. The City will continue collecting pesticide use data from all City sources into the future, which will increase the availability of accurate and comparable data.

City staff uses ongoing and new methods to resolve municipal pest problems with less toxic and non-chemical IPM techniques. Continued IPM methods include scraping and washing tussock moth cocoons from trees in Special Assessment Districts and applying mulch in landscapes citywide as a water-saving weed barrier. New pilot projects that have begun this year include mounting barn owl boxes in City parks to encourage predation of gophers, posting bat boxes in Community Gardens to encourage bats to roost and feast on mosquitoes and other pesky insects, and using an injection herbicide as opposed to a broadcast spray herbicide on trees when severe tussock moth infestations call for pesticide use. The City intends to continue these pilot projects in FY 07-08, as well as introducing a pilot project which will utilize grazing animals in vegetation management.

In FY 06-07, the City took a lead role in the planning process as co-host for the 3rd Annual Regional IPM Conference, which was held in November 2006 at the McEnery Convention Center in San Jose. The conference featured talented and informative speakers and attracted over 400 attendees from many diverse organizations, including industry, government, and local homeowners.

Mercury (M)

This program element is implemented pursuant to provision C.9.c of the permit. The City has continued its efforts to reduce or eliminate potential mercury discharges from municipal operations. The City purchases low mercury-containing fluorescent lamps, and spent lamps are recycled properly. In FY 06-07, the City recycled more than 61,000 feet, or over 11.5 miles, of mercury-containing spent fluorescent lamps. Residential recycling of lamps is accomplished through the City's support of the Santa Clara County's Household & Small

Mercury thermometer take-back event at the Williams Street Senior Center

Business Hazardous Waste program.

The City, in conjunction with the Bay Area Pollution Prevention Group (BAPPG), hosted three mercury thermometer take-back events, where City residents exchanged their mercury fever thermometers for non-mercury-containing digital fever thermometers. Over 1,100 mercury-containing thermometers were collected at three City-sponsored events, removing 2.3 pounds of mercury from the environment. More thermometer exchange events will take place in San José as well as the San José/Santa Clara Water Pollution Control Plant's Service Area in FY 07-08.

In addition, the City has operated and maintained a National Mercury Deposition Network (MDN) site from January 2000 through December 2006, collecting samples, recording data, and sending both to the national MDN laboratory. The City also continues its support of the San Francisco Bay Regional Monitoring Program, AB 982 Total Maximum Daily Load (TMDL) Public Advisory Group, WMI Guadalupe River Mercury TMDL Workgroup, and the Clean Estuary Partnership. The City continues its commitment to work with the Water Board and stakeholders toward TMDLs that are technically defensible and feasible for implementation.

Copper & Nickel Action Plans (CNAP)

This program element is implemented pursuant to provisions C.9.a and C.9.b of the permit, which incorporate Action Plans for copper and nickel to be implemented based on water quality monitoring results in the South Bay. The action plans include activities for which various agencies or entities assume responsibility. Only activities undertaken at the municipal level for stormwater are included in this report. Such activities have largely been integrated into other ongoing program elements but are reported as a summary for clarity. Copper and Nickel remain among the list of pollutants addressed by general and targeted outreach regarding stormwater pollution prevention.

Discharge from swimming pools must be discharged into the sanitary system and not into storm drains

In the City's Industrial and Commercial Inspection program, key activities have been implemented to address copper either exclusively or among the array of potential pollutants. A fact sheet regarding rooftop sources of copper pollution was again distributed to select industrial facilities. The City also continued its "NOI Filers" project. This activity aimed to increase awareness among industrial facilities of their obligations under the State's General Industrial Activities Stormwater Permit (GIASP) by providing them with BMPs and information alerting them to the requirements. Review of this information has already been successfully incorporated into routine inspections and the City reports to the Water Board a list of facilities that have not yet filed under the GIASP.

The City provides BMP information for its residential and commercial constituents on various actions they can take to reduce or eliminate the exposure and discharge of copper from their activities. Materials are distributed via

inspection, at the City's planning and permitting offices, at outreach events, and on the City's website.

Trash (TRA)

This program element is implemented pursuant to the Program's Trash Work Plan and provision C.1 of the permit. The purpose of the Trash program is to address litter and illegal dumping that threatens to pollute urban waterways. The impetus for this program was the 2001 Water Board Staff Report recommending that all urban creeks, lakes, and shorelines be placed on a monitoring list due to the threat of trash impairment to water quality. Activities associated with the Trash program since its inception in FY 02-03 include a survey of San Jose's established trash management services and programs, identification of litter hotspots, and evaluation of ways to enhance trash management practices.

The City continued to assess high priority sites based on previous years' assessment data. Assessments were performed using one of two standard protocols selected by the Program, which are also used by all co-permittees in the Santa Clara Valley. Assessments provided information regarding the type and potential sources of trash found in and around urban creeks and offered insight into the effectiveness of existing trash management practices. The trash assessments revealed that existing trash management activities are sufficient at many locations, but that enhancements are needed in others. Sites will continue to be assessed based on their priority, and the City plans on reviewing its trash problem areas to better focus assessment work in potentially high trash-generating areas.

San José PD officer on the East bank of the Guadalupe River. Above: before and Below: after weekend encampment clean-up

The City continues to try to maximize existing resources to address trash problem areas throughout the City. The City contributes significant resources to perform illegal encampment clean-ups one weekend per month. This informal partnership with the Santa Clara Valley Water District is a vital service, removing tons of debris from City creeks. Enforcement inspectors contact property owners to ensure clean up and/or prevent trash from re-accumulating. The City also participates in the Silicon Valley Anti-Litter Campaign, and is exploring long-term illegal encampment solutions with the County's Blue Ribbon Commission on Housing and Homeless Issues.

The City of San José and the Santa Clara Valley Water District (District) continued efforts associated with the Memorandum of Agreement for Trash Prevention and Removal (Trash MOA), which began in FY 04-05. Partnered clean-up projects on the Coyote Creek and Los

Gatos Creek were the highlight of FY 06-07 activities. The Trash MOA calls for three partnered clean-up projects each calendar year that are intended to take place at locations that fall outside the normal scope of operations of the City and District. During this reporting period, partnered clean-up projects occurred on Coyote Creek and Los Gatos Creek. An estimated total of 16 tons of debris was removed in FY 06-07, a four-fold increase from FY 05-06. Over half of the debris was removed from one site, highlighting well the value of this collaboration.

In addition, the City is investigating structural trash management controls. In FY 06-07, the City started identifying ways to enhance existing trash management practices, including the piloting of structural trash controls like catch basin inserts. A small number of catch basin inserts will be installed in FY 07-08 as part of a structural trash management pilot program.

Monitoring (MON)

Program staff monitoring Calabazas Creek

Monitoring activities required in the stormwater permit are generally implemented at the Program level. However, the City participates directly in monitoring activities region-wide, including the San Francisco Bay Regional Monitoring Program through participation in the Sources, Pathways and Loadings Workgroup and Technical Committee, SCVURPPP Multi-year Monitoring Program, various regional and Program-focused investigations of pollutants and sources to the storm drain system, and special studies in support of TMDLs.

This year, City staff actively participated in planning and reviewing activities for the Regional Monitoring Program (RMP), serving as chair of the RMP Technical Committee and members of the Sources, Pathways and Loadings workgroup. Financial support for the RMP has continued since its inception. City staff also serve on the Guadalupe Mercury TMDL Workgroup, representing the City and the Watershed Management Initiative's Watershed Assessment and Monitoring Subgroup. The City reviewed special study reports and provided in-kind services in support of the Guadalupe Mercury TMDL.

Municipal Compliance (MC)

This program element summarizes the City's efforts to train City staff on pollution prevention practices and to ensure that City facilities comply with stormwater requirements. In FY 06-07, the City held more than 96 sessions on various topics to ensure that City staff received training on procedures and issues related to stormwater programs. The City retained a consultant that conducted the annual erosion and sediment

Public Works Landscape Architect speaking at the annual erosion and sediment control training for Capitol Improvement Project managers

control training for Building, Environmental, and Public Works construction inspectors. The training was a great success and the City will retain the consultant to conduct this training again in 2007. Trainings continued on the implementation of the New and Redevelopment (C.3) requirements with a strong focus on hydromodification sizing measures for engineers, site visits for planners, and presentations to City staff on how to maintain permanent BMPs during and after construction.

To ensure stormwater compliance at City properties, Corporation Yards were routinely inspected for stormwater permit compliance. An annual inspection was conducted at each of the six Yards during the first quarter of 2007. Three hazardous material inspections at each of the Yards and the Municipal Garage, which include stormwater issues, were also conducted over the course of FY 06-07. The Corporation Yards' Pollution Prevention Team (P2 Team) met in FY 06-07 to review and update Yard Stormwater Pollution Prevention Plans (SWPPPs), assess the Yards for current stormwater best management practices (BMPs) in use, and assist in implementing the SWPPPs (e.g., training). SWPPP revisions for two of the Yards (Central and Municipal Garage) were drafted in FY 06-07 and are currently under review. Also, SWPPP training was conducted at all of the Yards in June 2007. On average, 90% of the employees responded that the BMPs taught were appropriate for their work. The combination of site inspections and the semi-annual meetings appears to be working well. The concerns identified in the Yards' inspection reports are usually minor and resolved swiftly.

Public Information / Participation (PIP)

This program is implemented in accordance with provision C.4 and includes general outreach, targeted outreach, educational programs, and public participation activities. The City has a robust and broad-based public information and public participation program, utilizing many different outreach methods to best deliver stormwater pollution prevention and watershed protection messages. Conducting outreach to the community and providing opportunities for participation in water quality protection activities are critical to evoking the behavior changes needed to manage stormwater quality. They are also important for garnering the support needed to continue and expand services and programs.

Environmental Specialist educating 3rd graders at the Water Wizards Festival

The City participates in and supports a wide variety of stormwater outreach and education activities, including many in collaboration with other local and regional agencies. Highlights for FY 06-07 include: participation in dozens of community events; providing access and supplies for multiple creek clean-up sites; training sessions for developers on construction requirements; and launching of the San José Go Green Schools program. Outreach continues to be a vital tool for inspectors, allowing for direct education of polluters and potential polluters. Education is the first step in the City's Enforcement Response Plan. Educating the youth of San José continues to be a priority, with multiple programs targeting students, teachers, administrators, and school communities with watershed education and green practices.

The City also actively supports Program-wide outreach and education activities, including IPM outreach, Mercury outreach, and the Watershed Watch campaign. Coordinating outreach activities with the Program and Bay Area-wide efforts enables the City to deliver some of its pollution prevention messages more effectively and at reduced cost.

Permit Reapplication

The City's current NPDES permit was adopted in February 2001 for a five-year period. The permit was amended in October 2001 and July 2005, with both amendments relating to the New and Redevelopment stormwater treatment and hydromodification provision, also known as Provision C.3. The permit has been administratively extended since February 2006, pending the adoption of the Bay Area-wide Municipal Regional Permit.

Urban Runoff staff evaluating the draft Municipal Regional Permit

In late 2005, the Water Board embarked on a multi-stakeholder process to craft an NPDES permit, called the Municipal Regional Permit (MRP) that would apply to all municipal stormwater dischargers in the Bay Area. In the past, NPDES permits were issued separately to Bay Area stormwater programs with staggered adoption dates, which often resulted in uneven and inequitable requirements.

City staff has dedicated numerous hours analyzing MRP drafts, briefing stakeholders, and preparing responses to the drafts. Staff has also participated in the steering and stakeholder meetings convened by Water Board staff. City staff will continue to participate in the MRP process through the Program, BASMAA, and individually as a City. The Water Board is expected to adopt the MRP in 2008.

Conclusion

The City of San José is committed to managing and protecting stormwater quality and dedicates significant resources to a variety of activities designed to address stormwater quality issues. The City actively participates in many local and regional efforts designed to leverage the most value for its resources and citizens. The City strives to be a leader in watershed protection, and continues to meet or exceed its permit-mandated obligations. Future fiscal years will bring new challenges, but the City is actively positioning itself to best meet these challenges and maintain the high quality of service its constituents expect.

National River Clean-up Day volunteers from San José High, who have cleaned their section of Coyote Creek for two years

Certification Statement

City of San José
FY 2006-2007 ANNUAL REPORT

Certification Statement

"I certify, under penalty of law, that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted, is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

ICID 5.B	In Annual Report, document and evaluate what worked well and what needs improvement.	Annually	Done FY 06-07. See 1.B: *ICID Program Evaluation*.	ESD-WE

1.B ICID Program Evaluation

The City's Environmental Services Department (ESD) responds to complaints regarding illegal discharges or threats of discharge to the storm sewer system. The total number of incidents decreased from 792 last year to 672 this year. Figure 1 illustrates the distribution of ICID incident types for residential, commercial, industrial, automotive, food, construction, and public facilities. The number of incidents at residential, automotive, public, and food facilities remained about the same as past years, while the number of incidents at commercial, industrial, and construction locations decreased. The drop in incidents at commercial, industrial, and construction sites may be due to increased inspections and outreach to site managers. Residential incidents continue to be most frequent, and the most common types of violation are vehicle-related. Other significant types of violations include oil and grease at food facilities, tracking soil, dumping, paint, and cement.

Vehicle and equipment leaking is at 94 incidents, down from 107 reported last year, though this type of incident continues to be the leading type of incident reported in residential areas. Residential areas lead the total number of complaints at 341, or 51% of total complaints. The high number of complaints in residential areas as shown in Figure 2 may be explained by the increased residential awareness and the fact that over 34% of the City's land area is used for residential purposes versus 15% for commercial and industrial uses combined. Open space, roads, baylands and schools generally account for the remaining land area in San Jose.

Oil and grease issues continue to be the leading complaint at food facilities. To better address this issue, the City expanded the food service facility inspections to more comprehensively address Fats, Oils and Grease (FOG) in FY 06-07. The City's FOG Program is a trained inspection group that is extremely knowledgeable about Fats, Oils, and Grease and works with food service facilities to reduce the number of grease related incidents. Please see IND section for details.

The number of construction-related incidents is lower than last year, with 73 reported in FY 05-06 versus 44 this year. Construction incidents have decreased due to ongoing and more consistent inspections of construction sites by City staff during the wet season. These inspections were more detailed and better coordinated among ESD, PW, and PBCE than in past years, and the inspectors worked proactively to prevent storm water pollution at construction sites. Please see CON section for details.

The number of commercial and industrial ICID incidents decreased from 228 and 32, respectively, in FY 05-06 to 177 and 4 in FY 06-07. This decrease in commercial and industrial incidents may be attributed to the increase in inspections, resources, and outreach to local businesses by ESD environmental inspectors, who have made special efforts to educate property owners and managers on BMPs and protection of stormwater quality. ESD staff will continue to monitor these results throughout the next few years.

Targeted Outreach

In an effort to reduce the amount of illegal dumping and encourage pollution-free vehicle maintenance techniques, City staff continues to conduct targeted outreach. In FY 06-07, City staff analyzed the record of calls from the previous fiscal year, mapping ICID calls to zip codes throughout the City. The City then directed outreach to Strong Neighborhood Initiate (SNI) areas that exhibited a high number of residential complaints during the previous fiscal year. The Strong Neighborhoods Initiative is a City program designed to build strong neighborhoods by developing community leadership and working collaboratively with residents to achieve the delivery of City services and neighborhood priorities. In FY 06-07, City staff conducted outreach to six neighborhoods through a combination of direct outreach at five community meetings and an ICID education article for one neighborhood newsletter. The neighborhood groups gladly accepted the distributed information and usually asked questions of the City staff concerning ICID and associated environmental issues. In FY 07-08, the City plans to conduct ICID outreach in eight additional communities.

To help reduce the ICID complaints from food facilities and construction sites, two initiatives are underway. The FOG program will continue its outreach to local food facilities, which over time should correspond with a drop in ICID complaints related to oils and grease. Additionally, in an effort to discourage the occurrence of and draw attention to potential soil tracking at construction sites, the City will pilot highly visible signs to be fence-mounted at building sites which alert readers to report to the City any mud that they may see on the street. Any trends will be monitored for continuous program improvement.

1.C ICID Response to Water Board Comments

No comments received from Water Board on this Program Element.

1.D ICID Summary Tables / Additional Information

Incident Types by Potential Source of Incident

Incident Type	Residential	Commercial	Industrial	Automotive Facility	Food Facility	Construction	Public Facilities & Utilities	Totals
