- Sediment Impact and Management Practice Assessments (2nd Edition); and
- Dioxin Control Program.

In FY 07-08, the Program developed a new fact sheet titled "Trash Evaluation and Management (2nd Edition). It is included in Appendix B-15.

All fact sheets have been posted on the Program's website at www.scvurppp.org.

Other External Coordination

Program staff tracked PI/P activities and attended meetings (as needed) conducted by the following local and regional programs in FY 07-08:

- California Stormwater Quality Association, PIPP Forum;
- Santa Clara County Household Hazardous Waste Program;
- Bay Area Pollution Prevention Group;
- Watershed Management Initiative's Outreach Subgroup; and
- Urban Pesticide Committee.

Continuous Improvement

There were no PI/P continuous improvement tasks identified in FY 07-08.

Future Tasks

Section 6 of the Program's FY 08-09 Work Plan (submitted March 1, 2008) describes the PI/P activities planned for FY 08-09.

Table 3-1
Evaluation of PI/P Projects Conducted During FY 07-08 (New and Ongoing)

Project Title	Project Description[1]	Type of Outreach[2]	Summary of Evaluation of Effectiveness[3]
Watershed Education and Outreach Campaign	This project included funding for conducting year eight of the Watershed Watch Campaign, ZunZun Schools Assemblies and the Watershed Watchers Program at the Alviso Education Center (San Francisco Bay Wildlife Refuge), and educational assemblies at elementary schools by the musical group ZunZun	G,T,P,C	**Watershed Watch Campaign** **Effective**- Some measures of the success of the FY07-08 Watershed Watch Campaign include: the number of new campaign partners (**3**); value-added resources from partners (**$178,097**.); Watershed Watch events (**9**); and gross impressions from advertising (**12,447,737**). In FY 08-09, a public opinion survey will be conducted to evaluate the Watershed Watch Campaign. Messages will be evaluated and changed, as needed, to increase website visits. Additional information is provided in Section 3 and Appendix B-3. **Alviso Ed Center** **Effective** - 111 programs were conducted and 2,901 people participated. **ZunZun Assemblies** **Effective** - During FY 07-08, ZunZun conducted 47 assemblies at 27 elementary schools in eight cities. In addition, two assemblies were conducted at the Pumpkins in the Park event for the general public, and one at the Water Wizards festival (an event for third grade students from San Jose schools). The assemblies reached approximately 11,840 students in grades K-5.

[1] For detailed project descriptions, see FY 01-02 Annual Report, Section 3, and FY 02-03 Work Plan, Section 3.
[2] Type of outreach codes: G = General, T = Targeted, P = Public Education, C = Citizen Participation
[3] Please refer to text in Section 3 for more detailed effectiveness evaluations and recommendations for improvement.

Table 3-1
Evaluation of PI/P Projects Conducted During FY 07-08 (New and Ongoing)

Project Title	Project Description[1]	Type of Outreach[2]	Summary of Evaluation of Effectiveness[3]
Pesticide User Outreach – "Household Chemical Management" and "Local IPM Store Partnership Program"	Implementation of the following tasks: • Conduct media advertising on less-toxic pest control methods • Implement the local store partnership program • Conduct IPM outreach at events • Conduct IPM workshops • Conduct IPM outreach to businesses • Other outreach as needed	G,T,P,C	**Effective** • The Watershed Watch Campaign advertising used the "Watch Out for Toxic Pesticides" print and radio ads. The ads were modified to include specific pest control tips, and ran from April –June 2008. The local IPM Store Partnership Program continued to be a success in FY 07-08. Ms. Annie Joseph was contracted to provide training on selling less-toxic products to store employees. Ms. Joseph trained approximately 132 employees representing 11 stores. Program staff maintained all 28 participating stores (set-up, restocking of fact sheets, etc.). Toward the end of the year, staff from the City of Palo Alto began maintaining the stores in Palo Alto. • IPM outreach was conducted at seven events. Event staff distributed more than 5,000 IPM fact sheets, brochures and giveaways (flyswatters, notepads, activity books, magnets, and tattoos). • The Program conducted the first Santa Clara Valley Green Gardener Training in FY 07-08. This is an educational initiative that brings quality training to professional landscapers, gardeners and landscape maintenance workers on how to "garden green." Each training session is of ten weeks, with trainees meeting weekly for a 2 hour class. Twenty seven landscape maintenance workers completed the training.

Table 3-1
Evaluation of PI/P Projects Conducted During FY 07-08 (New and Ongoing)

Project Title	Project Description[1]	Type of Outreach[2]	Summary of Evaluation of Effectiveness[3]
			• The Program continued to provide copies of the "Don't Set a Table for Pests" poster to County Health Inspectors for distribution to newly constructed or remodeled food facilities. County Health inspectors distributed 520 posters during FY 07-08. • The Program contributed funds for promoting the Going Native Garden Tour 2008. The tour was held on April 20, 2008 and attracted approximately 3,000 people. The tour featured 42 gardens. Featured gardens demonstrate environmentally sensitive gardening practices that include the use of native plants, water conservation, landscaping to prevent urban runoff, reducing pesticide and fertilizer use, etc.
Mercury Pollution Prevention Outreach Project	The Program worked closely with the Santa Clara County Household Hazardous Waste Program in developing the outreach plan. Outreach activities implemented during FY 07-08 include the following: • Implementation of Media Campaign – The Watershed Watch Campaign advertising used the "Watch Out for Mercury Pollution" radio and print ads. The radio		**Effective** -The County HHW Program collected 496,484 feet (124,121 pounds [4]) of fluorescent bulbs at 32 retail drop-off locations within Santa Clara County[5].This is a significant increase from FY 06-07. In FY 06-07, the County HHW Program collected 353,694 feet (88,423 pounds[6]) of fluorescent bulbs. It is estimated that approximately 1.44 kilograms of total mercury was diverted (i.e., discharge to the environment was

[1] Since fluorescent light bulbs come in different sizes, quantities are reported in terms of the total length (feet) of tubes collected. One four-foot light tube weighs approximately one pound.
[5] Information regarding the collection of mercury containing products (e.g., fluorescent bulbs, thermostats, thermometers and other products) during FY 07-08 obtained from a memorandum *entitled Fiscal Year 2007/2008 HHW Program Update* (dated July 21, 2008). This memorandum was prepared by Wendy Fong, Household Hazardous Waste Program, County of Santa Clara.
[1]

Table 3-1
Evaluation of PI/P Projects Conducted During FY 07-08 (New and Ongoing)

Project Title	Project Description[1]	Type of Outreach[2]	Summary of Evaluation of Effectiveness[3]
	ads ran from January to March 2008, and the print ads ran in March 2008		avoided) to recycling from fluorescent lamps collected by the County HHW Program[7] in FY 07-08. In addition, the County HHW Program also collected 370 mercury-containing thermometers, 1,295 pounds of elemental mercury (includes thermostats, thermometer and other products) and 100,100 pounds of household batteries during FY 07-08.
Schools and Youth Outreach Work Group	In FY 02-03, the Watershed Action Fund was reformed as the Schools and Youth Outreach Work Group. The group aimed to accomplish the following tasks: • Provide input for conducting 50 ZunZun school assemblies and report on activities conducted individually by Co-permittees. • Identify a program for increasing outreach to middle schools	T,P,C	**Effective**- During FY 07-08, ZunZun conducted 47 assemblies at 27 elementary schools in eight cities. In addition, two assemblies were conducted at the Pumpkins in the Park event for the general public, and one at the Water Wizards festival (an event for third grade students from San Jose schools). The assemblies reached approximately 11,840 students in grades K-5. Outreach to middle schools is being conducted through the Wacky Watersheds workshop. In FY 07-08, the Wacky Watersheds workshop staff held two workshops and trained 38 participants.
Program Supplies	Conduct reprints of materials for Program use and order supplies as necessary.	G,T,P,C	**Effective**- The Program Supplies budget was used for printing the following: • OWOW fact sheets and shelf talkers; • OWOW magnets; • "Grow It" Guides in English and Spanish;

[7] Based on a 1999 National Electrical Manufacturers Association survey entitled *Environmental Impact Analysis: Spent Mercury-Containing Lamps, January, 2000 (Fourth Edition)*, the average four-foot fluorescent lamp contains about 11.6 milligrams (mg) of mercury. For the sake of estimating the amount of mercury sent for recycling, approximately 124,121 four-foot fluorescent lamps were collected. As a result, 1.44 kilograms of total mercury diverted (i.e., discharge to the environment was avoided) to recycling is a rough estimate.

Table 3-1
Evaluation of PI/P Projects Conducted During FY 07-08 (New and Ongoing)

Project Title	Project Description[1]	Type of Outreach[2]	Summary of Evaluation of Effectiveness[3]
			• "The 10 Most Wanted Bugs in Your Garden" brochures; • "Pest or Pal" Booklets; and • "Draining Pools and Spas" Brochures.
Program Toll Free Number	Answer the Program's toll free number (1-800-794-2482) and the Watershed Watch Campaign's toll free number, 1-866-WATERSHED, and respond to requests for information.	G,P	**Effective**- Both phone numbers are being used to contact the Program and request materials. Phones are answered and messages are checked daily. During FY07-08, Program staff responded to approximately 25 calls.
Creek Cleanup Events	Work with Creek Connections Action Group to organize and fund two creek cleanup events per year.	G,C	**Effective**- Provided support for advertising for 2008 National River Cleanup event. A total of 1,534 volunteers participated in cleaning 51sites and removed approximately 72,764 pounds of materials (trash and recyclables) from the creeks during the two events.
Restaurant BMP	Distribute a restaurant wash water BMP packet for County Health Inspectors to hand out to restaurant managers via County Health Inspectors at the time of their inspections	T,P	**Effective** - In FY 07-08, County Health inspectors distributed the wash water BMPs and the poster to 520 newly constructed and remodeled food facilities in the County.
Regional Collaboration	Participate in the following BASMAA PI/P work groups and tasks of regional benefit. Attend meetings as needed, participate in review of products, and obtain input from Co-permittee representatives. • Media Relations Work Group • Regional IPM Store Partnership Program	 G,P G,P	**Effective**- See Media Relations Campaign Final Report in Appendix B-13. **Effective**- • Contributions to BASMAA helped fund IPM fact sheet reprints, development of new fact sheets, staffing support at outreach events, on-call assistance to participating stores, and

MONITORING ACTIVITIES

040510

040511

SECTION 4

MONITORING ACTIVITIES

040512

4. MONITORING ACTIVITIES

INTRODUCTION

The Program continued to assess the water quality of local creeks and rivers, and the San Francisco Bay Estuary in FY 07-08 through its direct implementation of and active participation in monitoring-related activities in the San Francisco Bay Area. The Program's monitoring resources were primarily spent implementing the Program's Revised Multi-Year Receiving Waters Monitoring Plan (Revised Multi-Year Plan), participating in collaborative regional monitoring-related programs, conducting investigative studies and implementing pollutant-specific control programs.

This section provides brief backgrounds on SCVURPPP's *Watershed Monitoring and Assessment Program* and regional collaborative monitoring activities, and summarizes significant monitoring-related activities conducted during FY 07-08. The activities described in this section are consistent with Provisions C.7 and C.9 of the Program's NPDES Permit. Each summary includes the following information, to the extent possible:

1) A description of the relationship to NPDES Permit requirement(s) and management question(s) the study was designed to address;
2) A brief description of subtasks and status of project/activity;
3) A brief description of the results;
4) A summary of findings to-date and recommendations (where feasible); and
5) A description of lessons learned and planned/recommended follow-up activities.

In addition, summaries of management activities conducted through the implementation of the Program's Pollutant of Concern (POC) Control Plans are provided for those POCs that do not have separate Annual Report sections (e.g., PCBs, Copper/Nickel and Dioxins). A summary of street sweeping results for FY 07-08 are also provided at the end of the chapter.

The findings of many technical reports are briefly described within this section. To ensure public access to completed reports, work products and environmental data, the Program has placed the majority of its reports and work products on its website (www.scvurppp.org). The website is continually updated to include the latest reports and work products, data inventory sets and other pertinent Program information. When viewing the website, a large majority of the reports and work products are linked to downloadable documents. Reports and work products not available through the website may be obtained by submitting a web-based request form to Program staff.

BACKGROUND

Multi-Year Receiving Waters (Local Creeks/Rivers) Monitoring Plan

Consistent with Provision C.7.b and C.9 of the Permit, the Program developed (and submitted to the Water Board), a Multi-Year Receiving Waters Monitoring Plan (Multi-Year Plan) on March 1, 2002 that identifies Program monitoring activities in Santa Clara Basin Watersheds over an eight-year period. As new monitoring priorities were established, the Multi-Year Plan was revised in FY 03-04 (Revised Multi-Year Plan). This Revised Multi-Year Plan can be found

under the Environmental Monitoring and Assessment Measures link on the Program's website (www.scvurppp.org).

The Revised Multi-Year Plan contains the following information: watershed location (prioritized based on SCBWMI and Program assessment priorities), data type (chemical, biological and physical), number and frequency of sampling events, fiscal years (eight years starting with FY 02-03 through FY09-10), rationale and lead agency. The information on data type uses a tiered monitoring approach discussed by the Water Board staff in its Regional Monitoring and Assessment Strategy (RMAS) memo (Draft Monitoring Design in Water Board-lead Pilot Watersheds, spring 2001) dated February 8, 2001. The following monitoring categories were included within the memorandum: screening level, detailed investigation, and status and trends. The field and analytical methods used in the Revised Multi-Year Plan are described in the Program's Draft Quality Assurance Project Plan (QAPP), which is consistent with the Water Board's Surface Waters Ambient Monitoring Program (SWAMP) Quality Assurance Project Plan.
The Revised Multi-Year Plan incorporates specific data needs that have been identified in Program activities relevant to watershed assessment and monitoring. For example, the Revised Multi-Year Plan incorporates future monitoring activities that will be implemented for sediment-related studies in Stevens and Upper Penitencia Creek watersheds. Tasks associated with these monitoring activities are identified in the Program's Work Plan entitled *Workplan for Conducting Watershed Analysis and Management Practice Assessment in Other Creeks Potentially Impaired by Sediment from Anthropogenic Activities* (dated August 30, 2002). A clear identification of the specific monitoring activities planned for each year is included as part of the Program's Annual Monitoring Plan submitted to the Water Board every March 1.

Annual Monitoring and Watershed Management Measures Work Plans

During FY 06-07, the Program developed the *FY 07-08 Annual Monitoring and Watershed Management Measures Work Plan* (FY 07-08 Monitoring Plan), which was included in the Program's *FY 07-08 Draft Work Plan* (submitted March 1, 2007). The FY 07-08 Monitoring Plan identified monitoring and watershed assessment activities for 27 sites in the Coyote Creek watershed, four sites in Lower Penitencia Creek watershed, and four sites in the Stevens Creek watershed. The selection of these watersheds is consistent with the Program's *Watershed Management and Urban Runoff Management Integration Report* (dated June 29, 2001). The data type and sampling frequency were identified for each sampling site and accompanied by maps showing proposed sampling locations. The monitoring schedule is consistent with the sampling design presented in the Revised Multi-Year Plan (i.e., two sampling events per year representing different hydrological cycles). Information collected during implementation of the FY 07-08 Monitoring Plan is described in this Annual Report.

In preparation for Program-led receiving waters monitoring in FY 08-09, the Program developed the *FY 08-09 Annual Monitoring and Watershed Management Measures Work Plan* (FY 08-09 Monitoring Plan) in FY 07-08 and submitted it to the Water Board on March 1, 2008 as part of the Program's *FY 08-09 Draft Work Plan*. Similar to past annual monitoring plans, the FY 08-09 Monitoring Plan describes planned monitoring for the next fiscal year.

Regional Collaborative Monitoring Activities

Regional Monitoring Program for Water Quality (RMP)

The Regional Monitoring Program for Water Quality in the San Francisco Estuary (RMP) is a collaborative effort between the San Francisco Estuary Institute (SFEI), the Water Board and the regulated discharger community (including SCVURPPP). The RMP's goal is to collect scientifically valid information that allows movement towards understanding contaminant impacts on beneficial uses of the Bay. The RMP focuses on determining spatial patterns and long term trends through sampling of water, sediment, bivalves, and fish; effects on sensitive organisms; and chemical loading to the Bay. To provide the most complete assessment possible of chemical contamination in the Bay, the RMP seeks to synthesize RMP data with data from other sources.

The RMP is based on management questions and program objectives that are updated by the Water Board, RMP staff, RMP Technical Review Committee (TRC) and RMP Steering Committee (SC) every five years. The RMP recently updated its management questions in early 2008 (www.sfei.org/rmp/RMPproginfo.htm). The revised RMP management questions are:

1. Are chemical concentrations in the Estuary at levels of potential concern and are associated impacts likely?
2. What are the concentrations and masses of contaminants in the Estuary and its segments?
3. What are the sources, pathways, loadings, and processes leading to pollutant-related impacts in the Estuary?
4. Are the concentrations, masses, and associated impacts of pollutants in the Estuary increasing or decreasing?
5. What are the projected concentrations, masses, and associated impacts of the pollutants in the Estuary?

The RMP budget is generally broken into two major program elements: Status and Trends; and Special and Pilot Studies. The following paragraphs provide a brief overview of these programs.

RMP Status and Trends Monitoring Program

The Status and Trends Monitoring Program is the long-term contaminant-monitoring component of the RMP that was initiated as a pilot study in 1989. The Status and Trends Monitoring Program is currently comprised of the following program elements that collect data to address the RMP management questions (MQs):

1. *Water/Sediment/Biota Chemistry and Toxicity* monitoring serves as the long-term contaminant monitoring component of the RMP which is designed to characterize status and trends in the Estuary (MQs #1,2 & 4);
2. *Small and Large Tributary Loading Studies* are conducted on a routine schedule (e.g., annually or triennially) to develop baseline pollutant loading estimates from tributaries to the Bay, and assess inter- and intra-annual variability of pollutant loads and concentrations (MQ #3).
3. The *Fish Contamination Study* is a triennial screening of fish tissue for contaminants of concern to human health (MQs #1,2 & 4);

4. The *Causes of Sediment Toxicity Monitoring* component investigates potential causes of observed toxicity in the Estuary (MQ #3);
5. The *USGS Suspended Sediment, Hydrography and Phytoplankton* monitoring is partially funded by the RMP, and includes monthly water quality measurements in the deep channels of the Estuary (from the Lower South Bay to the confluence of the Sacramento and San Joaquin Rivers), sediment transport monitoring and modeling in the northern Estuary, and phytoplankton monitoring throughout the Estuary (MQs #1,2 & 4); and,
6. The *Bird Egg Monitoring Program* will begin in 2009 and occur triennially thereafter to assess trends in pollutant concentrations bioaccumulated in comorant and Forster's Tern eggs (MQs 1, 2 & 4).

RMP Pilot and Special Studies

The RMP also conducts Pilot and Special Studies. Pilot Studies usually are designed to investigate and develop new monitoring measures related to anthropogenic contamination or contaminant effects on biota in the Estuary. Special Studies address specific scientific issues that the TRC, SC, or Water Board identify for further study. These additional studies are developed through an open application process, which starts with an applicant submitting a study idea to the RMP Program Manager for discussion at a TRC quarterly meeting.

Program Involvement in the RMP

The Program actively participated in and contributed approximately $172,000 to SFEI for FY 07-08 expenditures on the RMP. This funding to SFEI is in addition to funding provided by the three south Bay public owned treatment works (POTWs), which are also SCVURPPP Co-permittees. In addition, Program staff actively participated on a variety of RMP committees and work groups that included the RMP Steering Committee; Technical Review Committee; Sources, Pathways and Loadings Work Group (SPLWG); and, Contaminant Fate Workgroup. Status and trends monitoring and pilot/special studies conducted by the RMP are summarized in this annual report. These studies are identified as "RMP" and were conducted under the direction of workgroups and committees for which Program staff participated during FY 07/08. More specifically, Program staff represented the SCVURPPP and/or BASMAA by providing in-kind project support (e.g., assisting in the development of project scopes of work and providing technical review and comment on results and conclusions) for these studies, in addition to funding provided by SCVURPPP.

For the RMP Status and Trends Program, the summaries provided within this section focus on the latest information available (i.e., 2006). The 2006 information was the fifth year that the Status and Trends Monitoring Program collected water and sediment samples using EPA's Environmental Monitoring Program (EMAP) Generalized Random Tessellation Stratified (GRTS) sample design. This type of design is appropriate for addressing the RMP management questions #1, 2 and 4. Monitoring data are available for downloading via the RMP website using the *Status and Trends Monitoring Data Access Tool* at www.sfei.org/rmp/data.htm.

Summaries of the most pertinent Pilot and Special Studies conducted in FY 07-08 by the RMP are also in this section under each pollutant-specific monitoring activity heading. A summary of past Pilot and Special Studies conducted by the RMP is available on the RMP website (www.sfei.org/rmp/).

BASMAA Monitoring Committee

The purpose of the BASMAA Monitoring Committee (MC) is to discuss and coordinate monitoring activities conducted by the Bay area urban runoff management programs. In FY 07-08, the main emphasis for BASMAA MC representatives, including Program and Co-permittee staff, was to participate in development of the monitoring and pollutant of concern-related sections of the Municipal Regional Permit (MRP). The MRP is anticipated to replace the Program's NPDES permit and other Bay Area Phase I municipal stormwater permits. During FY 08-09, the Program will continue to actively participate in the BASMAA Monitoring Committee.

SUMMARIES OF FY 07-08 MONITORING AND ASSESSMENT ACTIVITIES

A summary of FY 07-08 monitoring and assessment activities is provided within Appendix C-1 and Table 4-1. Appendix C-1 includes a historical summary of all monitoring and assessment activities conducted by the Program. The following summaries highlight the objectives, results and conclusions of specific monitoring-related projects conducted during FY 07-08. Monitoring activities were generally aimed at developing and implementing programs/projects designed to assess the condition of water bodies using practical, implementable indicators and protocols. The implementation of these indicators and protocols are a necessary step toward establishing a sound regulatory basis for locally based watershed management.

Monitoring activities presented within this section, involve multiple tasks, subtasks, or coordinated activities that may take place over multiple years and at varying geographical scales (i.e., regional or sub-watershed). In addition, it is important to note that monitoring and assessment activities described within this section are not entirely independent from activities described in Section 5 – Watershed Management Measures. Information gained from conducting studies and implementing activities/measures described in both sections have been used (and will continue to be used) in concert to meet objectives outlined in Permit Provisions C.7, C.9, and C.10, which include; (1) characterizing watersheds and stormwater discharges; (2) assessing existing or potential adverse impacts to beneficial uses; (3) identifying potential sources of pollutants of concern; (4) aiding in developing and implementing strategies for controlling adverse impacts on beneficial uses; and (5) assessing the effectiveness of pollutant prevention/control measures.

Monitoring Activities Addressing Multiple Pollutants

SCVURPPP Watershed Monitoring and Assessment (Local Creeks/Rivers)

Coyote and Lower Penitencia Creeks and Tributaries

In accordance with Provision C.10 (b), the Program developed a *Watershed Monitoring and Assessment Summary Report: Coyote and Lower Penitencia Creeks and Tributaries* (Summary Assessment Report) that summarizes the results and analyses of baseline data collected to-date during FY 08-09. The Summary Assessment Report provides information on possible beneficial use impacts to the extent possible (based on the study design and available data) and suggests next steps for monitoring/assessments and developing strategies to control potential impacts. The following paragraphs provide a brief synopsis of the information found within the Summary Assessment Report that is included in its entirety within Appendix C-2.

In Fiscal Year (FY) 2006-2007, SCVURPPP pilot tested a sediment quality triad (SQT) approach that entails a weight of evidence (WOE) approach using bedded sediment chemistry,

sediment toxicity, benthic macroinvertebrate (BMI) community and physical habitat data. The SQT approach was implemented to better evaluate relationships between BMIs and stressor variables, and to identify potential causes of aquatic life use impacts in creeks within the Santa Clara Valley. In FY 07-08, SCVURPPP conducted a second year of sampling in the Coyote Creek mainstem and first year of sampling within two major tributaries of the Coyote Creek and Lower Penitencia Creek watersheds, and the SQT approach was again utilized.

BMI bioassessments and physical habitat assessments were conducted at 28 locations in Coyote and Lower Penitencia Creek watersheds in April or May 2008. Sediment samples were collected at a subset of sites (n=10) where bioassessment and PHAB surveys were conducted and analyzed for organic (pyrethroid pesticides) and inorganic (metals) chemicals. Toxicity was also evaluated at sites where chemical analyses were conducted by exposing the amphipod, *Hyallela azteca*, to collected sediments in a standard ten-day survival test.

To estimate the magnitude of contamination in each sediment sample, a Sediment Quality Guideline Quotient (SQGQ) was calculated for each contaminant at each site by dividing the measured sediment contaminant concentration by the Probable Effect Concentration (metals) or the LC50 (pyrethroids). The SQGQs for all contaminants measured were then averaged to determine a mean SQGQ for each site/sampling event. BMIs were assessed using the preliminary Benthic Index for Biological Integrity (B-IBI) previously developed by SCVURPPP.

Each line of evidence used in the SQT was ranked into five condition categories (optimal, good, fair, marginal and poor). In general, multiple lines of evidence generally did not agree at most of the sites. Similar rankings (i.e., "poor" or "marginal") for toxicity, B-IBI scores and physical habitat scores occurred at the two lowest elevation sites in Coyote Creek mainstem and the Thompson Creek site.

With the exception of nickel (which is a naturally occurring metal at relatively high concentrations in Bay Area watersheds), metals measured in bedded sediments collected at sites in Coyote Creek and Lower Penitencia Creek watersheds appear to be consistently below concentrations that one would expect to observe some degree of toxic response (i.e., PECs). These results suggest that metals are not a primary driver of the condition of aquatic life in Coyote and Lower Penitencia Creek watersheds, although potential for impacts due to the synergism between metals can not be discounted. At least one pyrethroid pesticide was detected at a majority of the sites sampled in Coyote and Lower Penitencia Creek watersheds. In particular, either Bifenthrin or Cypermethrin concentrations in samples collected in spring 2008 were above levels that one would expect to observe a significant toxic response (i.e., LC50s).

Significant toxicity was observed in sediments collected at 6 of 10 sites during fall 2007 and/or the spring 2008, including the two lowest elevation sites on Coyote Creek mainstem (COY080 and COY240) during both sampling events. The co-occurrence of pyrethroid concentrations above LC50s and sediment toxicity suggests that pyrethroids may be causing (at least partially) the toxicity observed at 4 of the 6 sites.

Total B-IBI scores for sites in Coyote Creek mainstem ranged from 2 – 20 (0-50 possible), sites in Coyote Creek tributaries (i.e., Upper Penitencia and Lower Silver-Thompson Creek) ranged from 6 – 44, and sites in Lower Penitencia Creek watershed ranged from 6-24. PHAB scores for sites in Coyote Creek watershed ranged from 9-54 (0-60 possible), with scores generally increasing in an upstream direction. B-IBI scores for were significantly correlated to average substrate size and reach-scale physical habitat scores.

Sediment and Water Chemistry and Toxicity in Stevens Creek

In addition to baseline water quality monitoring conducted in Coyote and Lower Penitencia Creeks and tributaries, the Program conducted a follow-up monitoring project in FY 07-08 to assess the intra-annual variability in pollutant concentrations in bedded sediment, and identify sources of sediment and/or water toxicity observed in previous sampling events. The following paragraphs provide a brief summary of the study. The full technical report entitled *Assessment of Water and Sediment Chemistry and Toxicity- Stevens Creek* is included in its entirety within Appendix C-3.

Beginning in Fiscal Year (FY) 2002-03, a variety of monitoring programs, including the San Francisco Bay Regional Water Quality Control Board's (Water Board) Surface Water Ambient Monitoring Program (SWAMP) and SCVURPPP collected water and/or sediment quality data at sites in Stevens Creek and its tributaries. Results from SWAMP sampling in FY 02-03 indicated that significant aquatic and chronic water toxicity were present at site STE060 (Stevens Creek at La Barranca Rd.). As a result, Stevens Creek was included on the State of California's 2006 List of Water Quality Limited Segments (i.e., 303(d) list of impaired water bodies) by the Water Board.

In FYs 05-06 and 06-07, SCVURPPP collected and analyzed water quality samples from sites on Stevens Creek, including STE060. Although SWAMP observed acute and chronic toxicity in FY 02-03, only chronic toxicity was observed in FYs 05-06 and 06-07 (SCVURPPP 2007a). Regardless, due to the aquatic toxicity observed at STE060 by SWAMP in FY 02-03, the resulting listing of Stevens Creek on the 303(d) list of impaired water bodies, and the steelhead population present, the Program developed a study designed to evaluate the extent, magnitude, and cause(s) of aquatic toxicity observed by SWAMP in Stevens Creek.

Additionally, little is currently known about the intra-annual variations in bedded sediment chemical concentrations, and how representative a single sample may be of the concentrations found throughout a fiscal year (July – June). To answer these questions, a second investigative study was conducted by SCVURPPP in parallel to the sediment toxicity study to evaluate the variability of chemicals in bedded creek sediments, assess the representativeness of a single bedded sediment sample, which will inform the sampling design of monitoring programs in future fiscal years.

Water samples and bedded sediment samples were collected from three sites during four sampling events in FY 07-08. The first sampling event was conducted on October 9, 2007 prior to the occurrence of a significant rainfall event (>0.5 inches) during the wet weather season (October 15 to April 15). The two sampling events that occurred during the wet weather season occurred on December 12, 2008 following a small storm event, and on January 15, 2008 following the largest storm event of the season. The fourth sampling event was conducted on March 31 and April 1, 2008, after the wet weather season had concluded.

Water samples were analyzed for organophosphate pesticides and used to conduct *Ceriodaphnia dubia* bioassays. Bedded sediments were analyzed for total recoverable metals, a suite of pyrethroid pesticides and used to conduct sediment bioassays using the amphipod *Hyalella azteca*.

The following preliminary conclusions were based on the results and interpretation of data collected during the Stevens Creek investigative study.

1. Based on SWAMP and SCVURPPP data collected between 2002 and 2008, only 2 of 20 samples exhibited acute aquatic toxicity, suggesting that aquatic toxicity impacts are currently minimal in Stevens Creek.
2. Significant sediment toxicity appears to be present in Stevens Creek. In particular, a high degree of toxicity was present after storm events that generate runoff from primarily urban land uses. In general, all metals (with the exception of naturally occurring chromium and nickel) and pyrethroid pesticides appear to be below concentrations which one would expect to observe some degree of toxic response, suggesting that these chemicals are not the primary causes of the observed toxicity.
3. On average, the intra-annual variability of metal concentrations in bedded sediments in Stevens Creek is minimal (±20%). Based on this result, SCVURPPP should feel confident that the concentration of a metal in a single bedded sediment sample collected after a significant rainfall event or following the wet weather season will be representative of the average annual concentration.

City of Palo Alto Creek Monitoring

San Francisquito Creek Long Term Monitoring and Assessment Plan (LTMAP)

In addition to the monitoring conducted by the Program, the City of Palo Alto operates a sampling station at Newell Road on San Francisquito Creek as part of the LTMAP. The Newell Road sampling station captures nearly the entire San Francisquito watershed, including most of the urbanized portion of the watershed. At the Newell Road location, flows are intermittent, with flow beginning in the rainy season and tapering off in the late spring or early summer. During each water year, five to six rainfall events are sampled. Samples are analyzed for metals (including low level mercury, dissolved mercury, and methylmercury), nutrients, pesticides (organochlorine, organophosphate, and pyrethroids), and suspended solids. One sample each year is analyzed for dioxins. Stanford University, Stanford Linear Accelerator Center, and Jasper Ridge Biological Preserve operate three additional LTMAP sampling stations in the upper watershed.

Volunteer Creek Monitoring Program

The City of Palo Alto's volunteer creek monitoring program was developed after a fish die-off that occurred in November 2002 within the Palo Alto Flood Control Basin. Since April 2003, approximately six volunteers and RWQCP staff monitor 21 sites on Adobe, Barron, and Matadero Creeks, as well as the Palo Alto Flood Control Basin, twice each month. A YSI multi-meter probe is used to take measurements of temperature, conductivity, dissolved oxygen, and pH. The volunteer program has collected three years of data that allow evaluation of trends in water quality within the creeks and the flood basin. The data are available on the following website http://www.sanfrancisquito.org/projects/streamkeepers/wq_data/index.html. These data are useful in making policy decisions with respect to managing the Flood Control Basin to maintain adequate dissolved oxygen levels.

Matadero Creek Metals/Cyanide Monitoring

The City of Palo Alto's NPDES permit for wastewater discharge requires monthly monitoring of Matadero Creek for metals and cyanide. These samples are collected as grab samples at Greer

Road and Oregon Expressway. The Renzel Marsh Pond, a freshwater pond enhancement initiated and managed by Palo Alto, discharges to Matadero Creek downstream of the sampling location.

San Francisco Bay Estuary Status and Trends Activities

RMP Status and Trends Monitoring

The following paragraphs summarize sampling that was collected via the RMP Status and Trends Program in August 2007. Data collected in 2007 has not yet been released by the RMP and therefore could not be summarized in this report. Data collected in previous years have been summarized by SFEI in Annual Monitoring Reports and the *2007 Pulse of the Estuary*. Raw data can also be accessed at http://www.sfei.org/rmp/rmp_data_access.html.

Conventional water quality, trace metals, and trace organics sampling in water occurred in 2007 at 22 stations throughout the Estuary. A portion of these sites were historical stations, while the others were chosen based on a stratified-random design. Based on the significant interest, polybrominated diphenyl ethers (PBDEs) were sampled in all matrices. Total and dissolved metals were also analyzed in water. Total metals, pesticides, PAHs and PCBs were analyzed in sediment at 40 random and 7 fixed sites.

Bivalves are excellent trend indicators particularly for organic contaminants. The bivalve monitoring component maintains the long-term database started by the State Mussel Watch Program. Because of logistical complexities, a randomized design is not economically feasible, nor is it technically desirable for this long-term trend monitoring tool. Based on the RMP redesign, bivalve sampling is not biennial, beginning in 2008. Therefore, bivalves were not sampled in 2007.

Because the aquatic toxicity monitoring in the Estuary has shown little toxicity over the past several years, aquatic toxicity sampling has been scaled back to a screening effort every four to five years. Therefore, aquatic toxicity sampling was not conducted in 2007. Sediment toxicity monitoring continued as in previous years. Sediment toxicity measurements were made at 27 sites in the Estuary (20 randomly allocated sediment chemistry stations and seven historical RMP sampling sites).

Sport Fish Contamination Monitoring (RMP)

Sport fish sampling in the RMP began in 1997 and occurs on a triennial basis. The results of the 2006 sampling season are currently being reviewed by RMP workgroups and will be summarized in a report that will be released 2008. The next sampling event is scheduled for 2009. Results from 2003 sampling were summarized in the Program's FY 06-07 Annual Report. Raw data can also be accessed at http://www.sfei.org/rmp/rmp_data_access.html.

Sediment Coring Study (RMP)

In 2006, the RMP and Clean Estuary Partnership (CEP) embarked on a joint study to collect and analyze 17 sediment cores from the Bay and adjacent wetlands. The study has three objectives: (1) provide a more comprehensive characterization of contamination with depth that can be used to assess future changes; (2) verify the historic loading of pollutants to the Bay and how those loads have changed in the last several decades; and, (3) provide valuable data for parameterization and evaluation of the multi-box or other Bay models. The cores were collected

in 2006 and have been segmented for radiodating using thorium, cesium and lead. The radiodating process was completed by late FY 07-08. Core segments are currently being analyzed for pesticides, PCBs, PBDEs, and mercury. Additional information on this study will be summarized in the Program's FY 08-09 Annual Report.

Bird Egg Monitoring (RMP)

As part of the redesign of Status and Trends in 2007, bird egg monitoring of cormorants and terns were included in the RMP on a triennial basis starting in 2008. Cormorants are excellent indicators long-term trends and regional spatial patterns of contaminants in open waters of the Bay. Cormorant eggs have been sampled at three locations (Wheeler Island, Richmond Bridge, and Don Edwards) in 2002, 2004, and 2006 as part of the Exposure and Effects Pilot Study (EEPS) program element. As part of the redesign process, it was recommended to collect three composites of seven eggs (previously the RMP collected two composites of ten eggs) at each of the three stations on a triennial basis. The eggs will be analyzed for mercury, selenium, PBDEs, perfluorinated compounds, PCBs, dioxin and pesticides. Terns are valuable indicators of long-term trends and regional spatial patterns in contaminants in the shallow margins of the Bay. As part of the EEPS program, terns eggs were collected in 2002 and 2003 and analyzed for mercury. Terns have also been very extensively studied by USGS in work funded by CALFED. The results of these studies suggest that terns are at an elevated risk. Similar to Comorants, Terns will also be sampled on a triennial basis beginning in 2008.

Pollutant Source, Pathway and Loading Activities

Pollutant Loadings from the Sacramento and San Joaquin Rivers (RMP)

This study's primary objective is to estimate sediment and associated pollutant loads (including mercury, PCBs, chlorinated pesticides and PAHs) to San Francisco Bay from the Sacramento and San Joaquin Rivers, which drain the Central Valley. Since 2002, the RMP has collaborated with the USGS to monitor suspended solid concentrations at Mallard Island. Ten years of continuous sediment data are now available when combined with data collected by the USGS from 1994-98. The RMP also collected mercury and other sediment-related pollutant concentrations at Mallard Island for the purpose of developing statistical relationships between concentrations and optical backscatter turbidity measurements. These relationships can be used to estimate time-continuous concentration data, and when combined with estimates of discharge, allow estimation of pollutant loads from the Central Valley.

Data collection at Mallard Island continued during WYs 2004 and 2005. In December 2005, routine wet season sampling was completed during the first flush of WY 2006. In January 2006, following RMP Technical Review Committee approval, RMP contingency funds were expended to sample during a large flood event (approximately 7-year return frequency). This storm resulted in much higher flows compared to any previous RMP sampling episodes at Mallard Island. These data are currently being compiled and analyzed for future reporting (scheduled for completion in late 2008). One goal is to compare long-term trends in mercury loads to TMDL Waste Load Allocations (WLAs) assigned to the Central Valley region. This will determine if required load reductions are met.

As part of the RMP redesign in 2007, loading monitoring will be conducted on a triennial basis, beginning in 2010. Therefore, no loading monitoring data were collected on the Sacramento/San Joaquin River station in FY 07-08.

Guadalupe River Pollutant Loading Study (RMP and SCVWD)

Since 2000, the RMP Sources Pathways and Loadings Work Group (SPLWG) have supported the establishment of a "Regional Network of Observation Watersheds". The SPLWG suggested that the RMP:

- Choose watersheds that represent different urban landscapes, different hydrological, climatological, and geological type;
- Provide a testing grounds for development of improved monitoring and modeling techniques;
- Enable a testing ground for management actions and strategies to detect the effect of management actions on long-term trends in loads; and,
- Extrapolate data to other watersheds in each region that are sampled less intensively.

In 2002, the CEP and RMP began jointly funding a mercury and PCBs loading study on the Guadalupe River. This long-term monitoring study aims to measure sediment and associated pollutants loads to the Estuary from the Guadalupe River watershed; and demonstrates methods that could be used to estimate loads from other small tributaries to San Francisco Bay. Water samples and turbidity data are collected at a station near the bottom of the watershed. Through a combination of CEP, RMP and Santa Clara Valley Water District (SCVWD) funding, three years of fieldwork and analysis are complete (WY 2003, 2004 and 2005) and field data from a fourth year (WY 2006) are currently being compiled and analyzed. Analytes include suspended sediment concentration (SSC), mercury, PCBs and a suite of metals. Beginning with year three of the study, PBDEs and methyl mercury were added and organochlorine pesticides were discontinued.

All observations to-date support the hypothesis that the majority of total mercury transported in the system is derived from out-of-channel sources in the New Almaden historic mining district. Other mercury sources (e.g., runoff and channel erosion in urban areas, erosion from Lake Almaden, atmospheric deposition, and channel erosion in the Alamitos Creek and Guadalupe Creek mainstems) appear to be subordinate given the observation of relatively high mercury concentrations on the falling stages when sediments primarily originate from the upper watershed. Controlled releases from the Guadalupe and Almaden reservoirs did not appear to increase mercury concentrations. Particle concentrations of metals associated with urban runoff (e.g., copper and lead and organics (PCBs and PBDEs) were elevated on the rising stages when flood waters are derived mainly from urban runoff.

In 2007 as part of the RMP redesign, the Guadalupe River loading monitoring was scaled back to triennial sampling, beginning in 2011.

Zone 4 – Line A Pollutant Loading Study (RMP)

Based on the success of the Guadalupe River Loading Study (see above), the SPLWG proposed adding a second loading study in 2006. After much discussion, a small industrialized watershed in Hayward named Zone 4-Line A was chosen for sampling, which began in October 2006 (WY 2007). Results from WY 2007 are currently being evaluated and are not yet available, but will be summarized in the Program's FY 08-09 Annual Report. An additional year of sampling is planned to occur in WY 2009.

Guadalupe River Watershed Modeling (RMP)

High levels of PCBs and mercury have been detected in the Guadalupe River through loading studies. These and other data have contributed to an extensive database of contaminants in water, sediment, and fish tissues in the Guadalupe River watershed. In part based on these data, the Draft Guadalupe River Watershed TMDL identifies mercury fish targets, bed and suspended sediment targets for runoff from mining areas, and load allocations from urban areas. Additionally, the Bay Mercury TMDL calls for Guadalupe River watershed load reductions of 98% and the Bay PCB TMDL calls for load reductions of >95% for urban areas. In response, managers in the Guadalupe River (SCVWD) have already started implementing management actions, including the removal of eroding mine wastes in Alamitos Creek.

Although a wealth of information has been collecting in the Guadalupe watershed, a mechanism to validate the linkage between management measures and changes in watershed loading through time is missing. Such a tool would help managers decide for example, if mass is removed from drainage lines results in an equivalent reduction in an annual load to the Bay. The aim of this project is to begin the development of a numeric model to assist in estimating mass loads of mercury and PCBs; to extrapolate the data to determine long term average loads for the period of extensive rainfall data collection (1973-present); and to determine the proportional sources in the watershed and refine the assumptions of the Draft Guadalupe River Mercury TMDL. Ultimately the model will be used to assess the effects of best management practices and impacts of wetland restoration (e.g., effects of South Bay Salt Pond restoration).

The study began in 2008 and will continue through 2009. Additional information on this project will be provided in future Annual Reports.

Watershed-specific Sediment Loads (RMP)

In 2008, the RMP began a study to estimate annual suspended sediment loads to the Bay from local watersheds. Suspended sediment loads to San Francisco Bay are vital for maintaining tidal marsh and mudflat habitats and delivering nutrients and organic carbon to the base of the food web. However, suspended sediments also frequently transport contaminants (e.g., Hg and PCBs) to the Bay. Estimates of suspended sediment loads are currently not available on a watershed basis in the Bay Area. However, these estimates are critical a data gap needed to prioritize watersheds for which empirical observations should be conducted, and assist in modeling watersheds and loads to the Bay. This study will continue through 2008, culminating with a technical report in late 2008 or early 2009.

Regional Stormwater Monitoring and Urban BMP Evaluation (SFEI Proposition 13 Grant)

As a direct result of the TMDLs for Mercury (Hg) and PCBs, significant load reductions (>50%) are required of Bay Area urban runoff programs. This is a difficult prospect for given there is limited quantitative information on where high concentrations of Hg and PCBs occur in urban areas. In addition there is little knowledge or experience on how source and treatment control BMPs or maintenance activities that have been designed and are routinely implemented to control other substances may or may not work for Hg and PCBs. In recognition of these information needs, with support from Water Board and BASMAA, SFEI applied for and received a grant from the Proposition 13 Coastal Non-point-Source Pollution Control Program and work began in 2005. The purpose of the grant is to assist BASMAA and the Water Board to implement the Hg and PCB TMDLs through the development of a science-driven consensus on where and how to apply limited resources to meet the TMDL goals.

From 2005 through 2007, Program staff and additional BASMAA representatives have actively participated in the development and provided oversight on the following tasks designed to provide pertinent information in pursuit of the purpose:

1. Mapping Storm Drains: At the completion of the project storm drains from Richmond to San Jose on the east Bay up to San Francisco on the Peninsula will have been mapped.
2. A Geographic Information System: A GIS of land use, watershed/stormwater catchment boundaries, historic industrial areas, PG&E facilities, auto wrecking facilities, 1950s railway lines, crematoriums, known PCB and Hg spill and industrial accident sites, pump stations, wastewater treatment facilities, and rainfall is being used to help design sampling programs, and to estimate discharge from stormwater catchments.
3. Estimates of Sediment Loads: We have developed a conceptual understanding of the supply and magnitude of sediment that passes through stormwater conveyances. This will be used along with the GIS to help determine where contaminated bed sediments occur.
4. Mercury and PCBs White Paper: This 150 page document provides a thorough review of all that is known about Hg and PCBs in urban areas, the potential of commonly applied BMPs and pollution prevention to remove mass, and an analysis of data gaps.
5. BMPs Desktop Evaluation: This report describes the development and outcomes of a spreadsheet model of the application of a combination of feasible and commonly applied BMPs to address the TMDL goals. Preliminary findings suggest the potential to meet the PCB load reduction goals but only limited possibility to meet the Hg TMDL goals. The model will be updated using data collected during the period of this study.
6. Soil/Sediment Sampling: Based on previous products and oversight from BASMAA/Water Board, sample collection is being focused in older industrial areas in Richmond, San Leandro, Hayward, San Jose, Sunnyvale, San Carlos, South San Francisco, San Bruno, Daly City, and Brisbane. The objectives are to better understand the distribution of Hg and PCBs in urban areas and to determine how release occurs (i.e. runoff, wind, wheel tracking, and grain size distribution).
7. Base Flow and Storm Sampling: Based on previous products and oversight from BASMAA/Water Board, sample collection is being focused in older industrial areas in Richmond, Oakland, Hayward, San Jose, and San Carlos. The objective of this sampling is to characterize the distribution of Hg and PCBs is 3 particles sizes (<25, 25-75, and >75 microns) and determine the potential of control of either urban dry-weather flow or early season storm flow for addressing TMDLs goals.
8. Street Sweeping/ Washing Studies and Catch Basin Cleaning: Data will be collected this fall to determine the potential mass removed by these maintenance practices.
9. Pollution Prevention Status Reports: A series of 5 page Status 2007 reports will be written on 1. Instruments containing Hg recycling, 2. Switches/ thermostat recycling, 3. Fluorescent bulb recycling, 4. Battery recycling, 5. Auto / white-good recycling, 6. Compact fluorescent bulb recycling / buyback, 7. Crematoriums / hospitals, 8. Building demolition / remodeling, 9.Voluntary PCB in-use reporting and phase-out / PCB equipment I.D. inspection and removal, 10. PG&E PCB change out/ phase out implementation, 11. Small capacitor / light ballast change out, and 12. Auto recycling / shredder waste.
10. Recommended Implementation Activities: Based on a series of meetings with BASMAA reps and Water Board TMDL staff and the scientific information generated in through this project including collation of data from other BASMAA studies, Hg and PCB implementation plans will be written for guidance to BASMAA on how to cost effectively address the TMDL goals. Guidance will include where PCB and Hg are likely to occur in

urban areas, what kinds of BMPs and combinations have the best probability to be effective, how existing programs could be focused or enhanced to improve effectiveness, methods for sampling during site evaluations, implementation, and effectiveness monitoring, specific sample preprocessing and lab methods that will yield reliable data, and estimates of implementation costs where information is applicable or available.

The grant is scheduled for completion in 2008. Though in-kind support, Program staff will continue to actively participate and provide oversight to SFEI staff during the completion of this project.

Mercury Monitoring Activities (Provision C.9.c)

Permit Provision C.9.c. requires the Program to develop and implement a mercury pollution prevention plan. In response, the Program developed a Mercury Pollution Prevention Plan (Mercury Plan) consistent with the Provision. The Mercury Plan was submitted to the Water Board on March 1, 2002 as part of the Program's *FY 02-03 Work Plan*. The Mercury Plan identifies actions that will be implemented at the Program level, municipality level, or both; and provides the schedule for initiation and/or completion of Program-level actions. The details of municipality actions and schedules are included in the individual Co-permittee Work Plans and/or Annual Reports, as appropriate.

During FY 07-08, a variety of mercury-related monitoring activities occurred including studies to identify sources of mercury to the Bay, evaluate methyl-mercury loading from various pathways, and those discussed under "Monitoring Activities that Address Multiple Pollutants". The following paragraphs briefly summarize studies not described earlier in this section. A more detailed description of FY 07-08 accomplishments and the prominent mercury pollution prevention activities planned for FY 08-09 are provided within Section 7 - Mercury Pollution Prevention Activities.

Santa Clara Valley Creek Monitoring (SCVURPPP)

In FY 07-08, the Program continued to analyze bedded sediment samples collected in Santa Clara creeks through the implementation of its Revised Multi-Year Plan. Sediment samples were collected as screening level indicators of water quality at a variety of creek sites draining urban and rural land use areas. As described in the Program's Revised Multi-Year Plan, grab samples were collected during two seasons (fall and spring).

Mercury concentrations detected in Santa Clara creek sediment in FY 07-08 ranged between 0.039 mg/kg and 0.55 mg/kg. In general, the highest concentrations were consistently observed in samples collected during the spring. A full description of methods, results and conclusions are presented in Appendix C-2.

Mercury Isotope Source Study (RMP)

In 2007, the RMP developed a "Mercury Strategy" to direct future mercury-related studies. As part of the strategy, the RMP funded a two-year study designed to "fingerprint" sources of mercury (Hg) to the Bay. The study uses Hg isotopes to isotopically fingerprint the various sources of Hg to the Bay and determine their relative importance as sources to the food web. Nine sites have been identified for study, geographically located throughout the Bay, where samples of sediment, water and at least two species of fish are collected annually as part of the

RMP monitoring program. "Sources" of mercury that will be sampled include urban runoff, waste water, industrial point sources and sediments from the Guadalupe, San Joaquin, and Sacramento Rivers. In addition to these samples two atmospheric particulate and reactive gaseous Hg collectors (one in the North Bay and one in the South Bay) will be deployed to collect low level Hg.

Once necessary data has been acquired the researchers will use a combination of graphical and statistical comparisons between potential sources and Hg at each of the nine sites to ascertain which sources of Hg to the food web are possible and which may be eliminated from consideration. Because this will be the first study of its kind it is difficult to predict the results, but the researchers expect to be able to eliminate some sources as major contributors and implicate others as major contributors. The study will be completed in 2009.

Diffusive Gradient in Thinfilm (DGT) to Identify Sources of Bioavailable Mercury (RMP)

This study is also designed to answer specific high priority management questions included in the RMP Mercury Strategy. In background, monitoring ongoing methylmercury (MeHg) discharge into San Francisco Bay with biosentinels (e.g., fish or birds) is desirable to predict potential impacts of mercury on biota. However, in practice the utility of fish sentinels is limited. Alternatively, contaminant sorption devices such as Diffusion Gradient in Thinfilm (DGT) are currently being developed as comparable sentinels for mercury and methyl-mercury.

This RMP study will test the hypothesis that different pathways contribute differently to overall methylmercury in the Bay. DGTs as indicators for potential methyl-mercury bioaccumulation will be deployed at relevant field sites over a range of time periods (up to 28 days). This will provide information about short-term (i.e. day-to-day) fluctuations in methyl-mercury concentrations as well as long term time averaged concentrations (i.e. month-to-month), which are often more valuable for management decisions than spot samples. The selected sites will cover all potential methyl-mercury inputs, including tributaries, industrial discharge, wetland and marshes with high net methylation activity (e.g. Point Isabel and Alviso Slough), and known contaminated areas. The deployment sites will be coordinated with and linked to the RMP Small Fish Biosentinel Project.

Assessment of Locally Derived Mercury Air Deposition (SFEI Proposition 13)

Impacts to the San Francisco Bay Estuary ecosystem due to historical mercury and gold mining are well documented. However, the impacts of local atmospheric emissions and the linkages to urban runoff to the Bay are not well studied. As part of the *Regional Stormwater Monitoring and Urban BMP Evaluation*, wet and dry deposition of atmospheric mercury (Hg) was investigated in the vicinity of the Hanson's Cement plant located in Cupertino. This cement plant was chosen for this investigation as it is likely a significant source of Hg emissions in the San Francisco Bay Area, accounting for 35% of 2005 total estimated local Hg emissions (81.2 kg of 233 kg). To put this mass in context, the Hg TMDL for the Bay estimates that roughly 160 kg of mercury annually enters the Bay from urban stormwater runoff (Bay-wide estimate).

Samples were collected weekly between November 29, 2007 and March 20, 2008, which included the period in February 2008 when cement production was minimized due to annual plant maintenance. During January, when precipitation was collected simultaneously at the cement plant and a nearby control site, average total Hg levels were 7.4 times higher and total Hg deposition was 5.8 times higher at the cement plant, while both parameters were roughly equal in February.

Although total Hg levels were elevated in precipitation near the cement plant during normal operations, methylmercury levels in precipitation were similar between the cement plant and the control site, indicating emissions from the cement plant were not likely a source of methylmercury.

Atmospheric Hg concentrations, including gaseous elemental Hg (GEM), reactive gaseous Hg (RGM), and particulate Hg (Hgp), were measured semi-continuously between November 26 and December 10, 2007, and data were compared to Hg concentrations previously measured at two nearby sites between August and September, 2005. Concentrations for all Hg species were higher at the cement plant compared to two control sites (GEM: 1.1-1.2 times higher, RGM: 4.6-12 times higher, Hgp: 5.3-6.5 times higher). RGM flux, which was more likely to be deposited near the source due to its high depositional velocity, was also calculated using site-specific data averaged over two hours. Average RGM flux was 18 times higher near the cement plant compared to the urban site, and 12 times higher than the rural site. RGM flux was also greatest at night when cement plant emissions were highest.

Methyl-mercury Budget for the San Francisco Bay Estuary

In 2008, the RMP began developing a preliminary methylmercury budget for the San Francisco Bay Estuary. The draft budget was presented to the RMP Contaminant Fate Work Group in July 2008. A Draft Report is expected to be completed in late 2008. Based on the presentation, results indicate that methylmercury in the Bay is dominated by the in-Bay methylation processes, as opposed to external loads via POTW discharges, air deposition, or stormwater runoff.

Guadalupe River TMDL for Mercury

The Santa Clara Basin Watershed Management Initiative (SCBWMI) is serving as the stakeholder forum for the development of the Guadalupe River TMDL Report for Mercury. The Guadalupe River Watershed encompasses parts of San Jose, Los Gatos, Campbell, Monte Sereno and the unincorporated Santa Clara County. The Program is a stakeholder in the Guadalupe River TMDL. The Santa Clara Valley Water District (SCVWD) is taking a lead role in the TMDL development process by funding a $900,000 study of mercury sources, fate and transport, and is participating as Co-Chair of the TMDL Work Group and Stakeholder Group. Program staff is also participating in the TMDL process. In addition, the SCVWD entered into a Memorandum of Understanding (MOU) with the Water Board for Phase I and Phase II studies which were funded by the SCVWD.

Since FY 02-03, Program staff, along with other Co-permittee staff, have attended Work Group meetings and reviewed draft technical memoranda developed by the consultant (i.e., Tetra Tech). During July and August 2003, a synoptic survey and preliminary field sampling effort was conducted. The results of the synoptic survey were incorporated into the *Draft Conceptual Model Report* (Tetra Tech, October 2, 2003). Based on the information collected for the conceptual model, a *Data Collection Plan* (Tetra Tech, February 20, 2004) was developed. Sampling in the Guadalupe River watershed, which began in February 2004, included an element to compare total and methyl mercury in creeks draining urban watersheds unaffected by mining (Ross, Canoas and Los Gatos Creeks) to those affected by mining (Alamitos, Guadalupe, Arroyo Calero, Canoas, Randol Creeks and Guadalupe River). Under a contract with the Water Board, the consultant has incorporated the data collection results into the *Final*

Conceptual Model Report (Tetra Tech, May 22, 2005). A summary of the findings in this report were provided in the Program's *FY 04-05 Annual Report*.

Building on the information presented in the conceptual model report, Water Board staff released a TMDL Project Report in January 2006 that describes the estimated loads from source categories, TMDL targets and load and wasteload allocations, and preliminary implementation actions. Program, City of San Jose and SCVWD staff presented oral comments to Water Board staff during the SCBWMI TMDL Stakeholder Workgroup meeting on May 14, 2006. The purpose of the meeting was to obtain Workgroup input on the TMDL Implementation Plan.

A draft Basin Plan amendment and supporting Staff Report were released for public review and comment on February 29, 2008. The documents establish new water quality objectives for waters in the Guadalupe River Watershed, incorporate a TMDL and include an implementation plan. SCVURPPP submitted a comment letter to the Water Board. The Water Board held hearings on the proposed Basin Plan Amendment in May 2008. The TMDL is scheduled for adoption in late 2008.

Pesticide Monitoring Activities (Provision C.9.d)

In response to Provision C.9.d of the Program's NPDES Permit, SCVURPPP developed a Pesticide Management Plan consistent with the Provision. The Pesticide Management Plan, which has many components, is described in Section 6 of the Annual Report. Pesticide-related monitoring activities conducted during FY 07-08 are described below.

Santa Clara Valley Creek Monitoring (SCVURPPP)

During FY 07-08, the Program analyzed water and bedded sediment samples collected in Santa Clara creeks through the implementation of its Revised Multi-Year Plan. Water and sediment samples were collected as screening level indicators of water/sediment quality at a variety of creek sites draining urban and rural land use areas. Specific to pesticides, creek water was analyzed for organophosphate pesticide concentrations and aquatic toxicity (acute and chronic endpoints), while sediment was analyzed for pyrethroid pesticides and sediment toxicity (acute and chronic endpoints). Water and sediment samples were collected four times (fall and spring seasons, and following 2 storm events) in Stevens Creek. Additionally, sediment samples were collected during two seasons (fall and spring) in Coyote and Lower Penitencia Creeks and tributaries.

Results indicate that organophosphate pesticides were not detected during any sampling events. Additionally, aquatic toxicity was not observed at any site sampled. At least one pyrethroid pesticide was detected in sediments at a majority of the sites sampled in Coyote and Lower Penitencia Creek watersheds. Pyrethroids were not consistently detected in Stevens Creek sediment.

Significant toxicity was observed in sediments collected at 6 of 10 sites in Coyote and Lower Penitencia Creek during fall 2007 and/or the spring 2008, including the two lowest elevation sites on Coyote Creek mainstem (COY080 and COY240) during both sampling events. The co-occurrence of pyrethroid concentrations above LC50s and sediment toxicity suggests that pyrethroids may be causing (at least partially) the toxicity at observed at 4 of the 6 sites.

Significant sediment toxicity also appears to be present in Stevens Creek. In particular, a high degree of toxicity was present after storm events that generate runoff from primarily urban land uses. In general, all metals (with the exception of naturally occurring chromium and nickel) and pyrethroid pesticides appear to be below concentrations which one would expect to observe some degree of toxic response, suggesting that these chemicals are not the primary causes of the observed toxicity.

A full description of methods, results and conclusions are presented in Appendices C-1 and C-2.

In future years, SCVURPPP will conduct follow-up investigative studies to determine the causes and (to the extent possible) sources of sediment toxicity in Stevens, Coyote and/or Lower Penitencia Creeks. Consideration will be given to conducting toxicity identification evaluations (TIEs) when bioassay test organism survival is < 50% compared to the laboratory control. In parallel, sediment samples will likely be analyzed for a larger list of analytes, including those associated with toxicity observed in the San Francisco Bay Estuary (e.g., PAHs).

Causes of Sediment Toxicity in the Estuary (RMP)

In 2007, the RMP began a study to determine the causes of the persistent sediment toxicity to bivalves and amphipods that is observed in the Bay. Toxicity to amphipods exhibits a seasonality aspect with samples collected in the winter exhibiting a much higher mortality, while toxicity to bivalves remains unaffected by seasons. In the spring 2007, four estuarine sites located at the mouth of Bay tributaries were sampled to identify toxicity. One of the four sites (Mission Creek) was observed to have sufficient toxicity to conduct Toxicity Identification Evaluation (TIE) testing and sediment chemistry to elucidate the cause of toxicity. In the fall of 2007 and spring 2008 additional sites were sampled, but none exhibited toxicity significant enough to perform a TIE.

The TIE on the Mission Creek sample was successful in that the process was able to separate the chemical group most likely responsible for the observed amphipod toxicity. The results of the interstitial and whole sediment TIEs indicate an organic chemical was responsible for amphipod mortality, and that unionized ammonia was also partially responsible for sediment toxicity in Mission Creek. The researchers were able to separate toxicity due to these two classes of contaminants. Results of organic chemical analyses are pending. Preliminary results do not suggest Mission Creek sediment toxicity was due to pesticides, and results of the PAHs analyses from these TIEs are pending.

An additional TIE will likely be conducted on samples collected from Redwood Creek in 2008. Previous RMP sampling in the south bay station (BA41) adjacent to Redwood Creek showed seasonal toxicity at this station. Results of further TIE analyses will be reported in future Annual Reports.

Copper and Nickel Control Measures (Provisions C.9.a and b)

Management Activities

Implementation of CAP/NAP Baseline Activities (SCVURPPP)

The majority of baseline actions are implemented at the Program level (except for those assigned to San Jose, Sunnyvale and Palo Alto), and are included in the Program's Annual

Reports and Work Plans. In mid-2003, the Program identified the following copper control activities that were deemed appropriate to implement at the Co-permittee level:

- CB-1: Measures to reduce copper discharges from vehicle washing operations;
- CB-3: Measures to control copper in discharges of stormwater in targeted industrial sources;
- CB-6, 7: Measures to reduce traffic congestion/promote alternative transportation;
- CB-8: Measures to classify and assess watersheds and improve institutional arrangements for watershed protection;
- CB-11: Measures to improve street sweeping controls and stormwater system operation and Maintenance;
- CB-12: Measures to control copper discharges from pools and spas;
- CB-21: Measures to discourage architectural use of copper; and
- NB-1: Measures to control nickel discharges from construction sites (sediment).

The *FY 07-08 Copper/Nickel Work Plan* and summary of FY 07-08 accomplishments are provided within Appendix C-4. Currently, the Copper/Nickel Work Plan contains twenty-one copper and seven nickel baseline actions. During FY 07-08, some specific accomplishments included:

- The Program distributed Watershed Watch campaign brochures to residents who requested them through the Watershed Watch website and telephone hotline (CB-1);
- The Cities of San Jose and Sunnyvale conducted distributing stand alone vent BMP information to applicable facilities that may be potential sources of copper (CB-3);
- The City of Palo Alto prepared the seventh annual Copper Action Plan Report (CB-4.3);
- Continued to actively support the Brake Pad Partnership (BPP) (CB-5), providing resources to fund and advocate BPP through BASMAA, actively tracking activities of BPP and efforts under the Proposition 13 grant;
- Continued to work with and support the Land Use Subgroup (LUS). Tasks included conducting a four-question survey of Santa Clara Valley municipalities on the need for municipal staff training regarding riparian corridor protection and preparing a two-page fact sheet entitled *Top Ten Development Tips to Protect Creeks* (CB-6 and CB-7);
- Implemented the sixth year of the Multi-Year Monitoring Plan (including sediment sampling and analyses for all metals including copper and nickel) (CB-8.4);
- Continued to implement Co-permittee street sweeping and catch basin cleaning programs consistent with performance standards (aimed at reducing discharges of pollutants, including copper and nickel, to storm drains and receiving waters). Summarized the amount of material collected and miles swept within the Program's jurisdiction (CB-11);
- Continued distributing the updated brochure entitled *Keep Pool, Spa and Fountain Water Out of Storm Drains, Creeks, and the Bay* (aimed at reducing discharges of pool water, which can contain copper and nickel, to storm drains and receiving waters.) (CB-12);
- Updated the copper "uncertainty studies" research tracking web portal to include additional studies. This web portal is available on the Program's website (www.scvurppp.org). A link to the web portal was also placed on the SFEI website (www.sfei.org)(CB-17(1).
- The City of San Jose continued to monitor dissolved copper and nickel during the dry season (in Lower South San Francisco Bay) as part of their ambient monitoring program (additional information provided below).

2007 Basin Plan Amendment

In June 2007, a Basin Plan Amendment (BPA) was approved by the Water Board adopting north of Dumbarton Bridge (NDB) copper site-specific water quality objectives (SSOs), translators and a Bay-wide Implementation Plan. The Bay-wide CMS will replace what was adopted in the Basin Plan in 2002 (as part of the South San Francisco Bay copper and nickel SSO project). Since the copper control measures and monitoring program have a Bay-wide scope, the majority of existing Basin Plan language pertaining to the implementation of copper and nickel objectives in South San Francisco Bay was deleted.

The BPA changes were approved by the State Water Resources Control Board January 15, 2008, the Office of Administrative Law (OAL) June 12, 2008, and are currently pending approval by USEPA. NDB POTW NPDES permits issued since March 2008 have included a one page Action Plan for Copper table in the Permit Provisions that reflects the new BPA Bay-wide requirements. The South Bay stormwater and POTW NPDES permits will need to be revised to delete the outdated CAP/NAP requirements and include the new BPA Bay-wide requirements. These revisions will likely occur as part of the MRP issuance and reissuance of the POTW NPDES permits, rather than as permit amendments.

The Bay-wide copper SSO Implementation Plan replaced the CAP/NAP requirements in the Basin Plan. It includes the following: required studies to address technical uncertainties; mandatory effluents for all municipal and industrial wastewater dischargers; control measures for major sources of copper (urban runoff, wastewater treatment facilities, lagoons and marine anti-fouling coatings); and an ambient water quality monitoring program (discussed below) designed to detect small changes in dissolved copper concentrations in the Bay that may trigger additional control measures.

The draft MRP contains the following five copper control measures:

- Manage waste generated from cleaning and treating copper architectural features, including copper roofs during construction and post-construction;
- Manage discharges from pools, spas and fountains that contain copper-based chemicals;
- Participate in the Brake Pad Partnership process;
- Educate industrial inspectors on industrial facilities likely to use copper and ensure that proper BMPs are in place to minimize discharges of copper;
- Conduct technical studies to investigate possible copper sediment toxicity and technical studies to investigate sublethal effects of salmonids.

Monitoring Activities

Santa Clara Valley Creek Monitoring (SCVURPPP)

During FY 07-08, the Program continued to analyze sediment samples collected in Santa Clara creeks through the implementation of its Revised Multi-Year Plan. Sediment samples were collected as screening level indicators of water quality at a variety of creek sites draining urban and rural land use areas and analyzed for total recoverable copper concentrations. Sediment samples were collected four times (fall and spring seasons, and following 2 storm events) in Stevens Creek, and during two seasons (fall and spring) in Coyote and Lower Penitencia Creeks and tributaries. A full description of methods, results and conclusions are presented in Appendix C-2.

Lower South Bay Ambient Monitoring (City of San Jose)

In February 1997, the City of San Jose, on behalf of all local agencies in the South Bay, began sampling total and dissolved copper and nickel concentrations at ten stations in the Lower South San Francisco Bay (LSSB). In October 1997, two fresh water stations were added, one each in the lower reaches of Coyote Creek and the Guadalupe River, bringing the total number of stations to twelve (Figure 4-1). The sampling design from the CAP/NAP requires monthly compliance sampling. Ten locations in South San Francisco Bay have been monitored to compare mean dry season dissolved copper and nickel concentrations to respective trigger levels. Results from monthly monitoring at ten stations show ambient concentrations continuing to be well below the adopted SSOs for copper and nickel, respectively. Ambient concentrations have remained consistent (no upward or downward trend) and below the stringent Action Plan trigger values (established as NPDES permit requirements in 2000) for copper and nickel, respectively. The monitoring results are located on http://www.sanjoseca.gov/esd/pub_res.asp, the City of San Jose's Environmental Services Department website.

Figure 4-1: Map of monitoring station locations in LSSB (City of San Jose)

Bay-wide Ambient Monitoring Program (RMP)

The North of Dumbarton Copper SSO Basin Plan amendment (June 2007) includes the Bay-wide Ambient Monitoring Program. With the Bay-wide Ambient Monitoring Program, specific copper concentration triggers will be compared (to data collected through the RMP) to determine if ambient concentrations have increased. This comparison will involve calculating every year the three-year rolling mean of RMP copper concentrations in segments of San Francisco Bay. The rolling mean concentrations will be compared to trigger concentration values for each segment.

The trigger concentrations were calculated to detect a change (from 2003 concentrations) in dissolved copper concentration of about 1 µg/L with a statistical power of 99%. If the trigger concentration is exceeded in any Bay segment, the Water Board will investigate causes of the exceedance and potential control options. Wastewater and urban runoff dischargers will be required to investigate whether they have caused or contributed to the exceedance. If so, the discharger will need to identify and submit a plan and schedule to implement controls to resolve their contribution to the exceedance.

The dissolved copper (µg/L) trigger concentrations at 99% statistical power for each Bay segment (or portion thereof) are as follows:

- Suisun Bay - 2.8 µg/L,
- San Pablo Bay - 3.0 µg/L,
- Central San Francisco Bay and Lower San Francisco Bay (north of Hayward Shoals) - 2.2 µg/L,
- Lower San Francisco Bay (south of Hayward Shoals) - 3.6 µg/L, and
- South San Francisco Bay (SSFB) - 4.2 µg/L.

The RMP will collect three dry season samples per year from each bay segment and five samples per year from SSFB to be used in calculating the three-year moving average value for annual comparison to the triggers. When implemented, this will result in a significant reduction in SSFB Cu/Ni monitoring requirements.

Brake Pad Partnership (SCVURPPP Participation)

The Brake Pad Partnership (BPP) is a multi-stakeholder effort to understand the environmental impacts of automobile brake pad wear debris (which contains copper). Manufacturers, regulators, stormwater management agencies (e.g., SCVURPPP) and environmentalists are working together to understand these impacts. BPP efforts are aimed at developing an approach for evaluating potential impacts of copper (from brake pad debris) affecting water quality in the South San Francisco Bay. Brake pad manufacturers have committed to adding this evaluation approach (to existing practices) for designing products that are safe for the environment while meeting performance requirements.

By late 2007, the BPP had substantially completed its technical work on local air deposition monitoring; generation and characterization of a representative sample of brake pad wear debris; estimating the amount of copper released to the watershed from brake and non-brake sources; watershed modeling; and San Francisco Bay water quality monitoring. Interim results were presented at a BPP stakeholder meeting on July 31, 2007 in Oakland. Project reports and related BPP documents can be found at http://www.suscon.org/brakepad/documents.asp

In February 2008, the BPP transitioned from being only conducted by Bay Area and Sacramento agencies to an effort including municipal agency partners in the Los Angeles, San Diego, Orange County, and Monterey areas. This inclusion was the result of metals, copper, or toxics listings / TMDLs in these areas generating interest in copper sources and solutions. Since this effort has expanded statewide, it was not feasible for BASMAA to act as the convener of the municipal agencies that are partnering with water quality regulators and the manufacturers as the BPP. Since CASQA is a statewide association, it was agreed that they would be the new convener of the expanded list of municipal agencies with interest in the BPP, and will play the role through its Watershed Management and Impaired Waterbodies Subcommittee.

Another transition of the BPP is to change its focus from technical work to legislation which translates technical results and the agreements predicated on those results into a control measure (i.e., regulation) on brake pad composition. To date, the CASQA BPP Work Group is in the process of building a team of agencies and supporters to obtain financial and project management support. Current goals include developing watershed-specific copper memoranda on copper compliance strategies, anticipated compliance strategies and the need for brake copper reduction; and co-sponsoring legislation relating to phased reductions in brake pad copper content.

PCBs and Dioxin Compounds Control Program (Provision C.9.e)

Provision C.9.e. of the Program's NPDES permit requires development of a control program to reduce or eliminate discharges of polychlorinated biphenyls (PCBs) and dioxin-like compounds from urban runoff conveyance systems from controllable sources (if any). As part of the PCBs/Dioxins Control Program, monitoring activities were conducted by the Program during FY 07-08. In addition, PCBs/Dioxins related management activities are described.

Polychlorinated Biphenyls (PCBs)

The Water Board places high priority on addressing PCBs in the Bay and has developed a PCBs TMDL cleanup program. The Program has provided leadership to Bay Area stormwater management agencies in their efforts to assist the Bay PCBs TMDL. This included leading a regional study that characterized the distribution of PCBs concentrations in storm water conveyance sediments in Bay Area watersheds. The Program also performed PCBs case studies in selected areas where elevated concentrations of PCBs were found during the regional study and coordinated similar case studies by other Bay Area storm water management agencies. The case studies were aimed at identifying PCBs sources and controls. The Program also prepared work plans for the above regional and local field studies. The work plans included a preliminary list of known sites where PCBs were used, stored and/or released in Santa Clara County. To facilitate regional coordination, the Program led a work group of representatives from BASMAA and Water Board staff and provided a staff to represent BASMAA on the CEP PCBs workgroup.

The Program also completed a report on efforts to develop methods of controlling discharges of PCBs from Bay Area urban runoff conveyances. The study describes 1) past, current and planned efforts to identify PCBs control options in the Bay Area, 2) management practices currently implemented by Bay Area storm water management agencies that may reduce discharges of PCBs from urban runoff conveyances, and 3) potential additional PCBs storm water control options and some of their advantages, limitations and cost factors.

During FY 07-08, the Program continued to work with other Bay Area dischargers and Water Board staff through BASMAA and the RMP to coordinate and plan activities related to PCBs and other pollutants of concern. Efforts included providing funding to the RMP, participating in selected stakeholder meetings, committees and work groups and, as appropriate, reviewing and commenting on relevant documents prepared by the RMP and Water Board staff. Program staff continued to represent BASMAA'S interests during development of the Bay PCBs TMDL and to represent BASMAA on the RMP TRC, RMP SPLWG and RMP CFWG. Specific projects related to PCBs are summarized below.

PCB TMDL

Program staff continued during FY 07-08 to help represent BASMAA'S interests during development of the San Francisco Bay PCBs TMDL cleanup program. This included reviewing the latest revisions of the staff report and Basin Plan Amendment (*Total Maximum Daily Load for PCBs in San Francisco Bay, Proposed Basin Plan Amendment and Staff Report*), assisting BASMAA to prepare comments, and negotiating with Water Board staff. Program staff also testified on behalf of BASMAA at Water Board hearings on the PCB TMDL in September 2007 and February 2008. The Water Board adopted the TMDL at the February 2008 hearing.

Taking Action for Clean Water (SFEP/BASMAA Partnership – Proposition 50 Grant)

In November 2006, the State Water Resources Control Board awarded the San Francisco Estuary Project (SFEP) a Proposition 50 Coastal Nonpoint Source Pollution grant (Taking Action for Clean Water) that includes several tasks to further implementation of Bay Area Total Maximum Daily Loads (TMDLs). One of these tasks involves PCBs used in historic building materials and aims to help reduce PCB stormwater loads to San Francisco Bay.

The Clean Estuary Partnership (no longer in existence) evaluated available data on sources of PCBs in urban runoff and found that one such source is PCB-containing historic building materials, specifically uncontained materials like sealants, caulking and paint (*Larry Walker Associates, TDC Environmental, and Ann Blake, PCB TMDL Implementation Plan Development, Prepared for CEP, May 2006*). When the building materials fail or buildings are remodeled or demolished, PCBs are released onto the ground and can be washed off by urban runoff.

The Taking Action for Clean Water project is partnering with the Bay Area Stormwater Management Agencies Association (BASMAA) and its member cities to develop Bay Area-specific Best Management Practices (BMPs) to prevent release of PCBs from building materials into urban runoff during renovation, maintenance and demolition of structures. SFEP will coordinate development of the BMPs by completing trial implementation projects in cooperation with BASMAA and local municipalities. The San Francisco Estuary Institute (SFEI) will obtain Bay Area-specific information about the presence of PCBs in building materials, so that management actions can be targeted specifically to the structures most likely to contain PCBs that threaten water quality. During FY 07-08, Program staff continued to assist BASMAA to participate in the project as a stakeholder and project partner, though activities were limited due to a delay in the project. The issue that led to the delay was recently resolved and it is anticipated that the project will move ahead during FY 08-09, beginning with the collection of Bay Area-specific information about the presence of PCBs in building materials. Program staff will continue to represent BASMAA during all phases of the project.

Multibox Bay PCBs Fate and Transport Model (RMP)

This project is a multi-year program, building on model development efforts already underway, to construct a mechanistic model that will advance our understanding of pollutant behavior in the Estuary and provide a new tool for water quality management. The project goals include: 1) developing a better tool for predicting future pollutant concentrations and testing potential management actions; 2) clarifying the uncertainty of existing model predictions; 3) identifying key areas where fieldwork can reduce uncertainties; and 4) conducting key fieldwork, including sediment coring in the Bay to improve estimates of the PCB inventory and historic loads and tracer experiments to quantify flushing. During FY 06-07, the PCBs multi-box model was

independently tested by Tetra Tech and additional testing was conducted by SFEI. A final report on the model is currently being developed and should be released in 08-09.

Dioxins

All segments of San Francisco Bay were listed as impaired by certain dioxin compounds in the 1998 and 2002 Clean Water Act Section 303(d) lists. A report prepared by the CEP (*Dioxins in San Francisco Bay: Conceptual Model/Impairment Assessment, January 2005*) provides a comprehensive discussion of issues related to dioxins in San Francisco Bay.

The Program has developed and implemented three work plans related to dioxins. In March 2002, the Program submitted an initial work plan. This work plan specified reviewing readily available data on methods used to characterize dioxins in storm water runoff and surface waters and concentrations typically found in the Bay Area and other areas. The completed review revealed that dioxins have been found in urban runoff in the Bay Area and other locations, and in sediments in the Bay and other estuaries. It was concluded that existing data are not sufficient to characterize the distribution in urban runoff among Bay Area land uses or calculate loadings to the Bay. The second work plan was completed in March 2004 and described the Program's collaboration with other Bay area storm water management agencies to develop an introductory report on dioxins. The completed report emphasized issues related to urban runoff in the Bay area, including regulatory context, impacts, sources, pathways, review of relevant Bay Area, national and international studies, and qualitative review of potential storm water controls. The third work plan was completed in March 2004. It specified that Program Staff will track regional, state and federal efforts to address dioxins and encourage Co-permittees to track, understand, and participate in these programs, as appropriate. A memorandum documenting the results of this tracking was completed in FY 04-05.

During FY 05-06, Program staff surveyed the Co-permittees regarding dioxins pollution prevention actions they currently implement and any related formal policies, resolutions or ordinances already adopted. The survey revealed that Co-permittees currently implement a wide range of activities that may help prevent formation of dioxins. In particular, the survey revealed most Co-permittees are taking measures that may help address what are the potentially the largest contemporary sources of dioxins in the Bay Area: residential wood burning, diesel exhaust and use of the pesticide 2,4-D. Program staff also continued to track regional, state and federal efforts to address dioxins.

During FY 06-07, Program staff prepared a fact sheet on dioxins, which may be downloaded from the Program's web site. The fact sheet describes dioxins and how they are produced, the Bay Area regulatory background, potential sources of dioxins to the environment and stormwater runoff, and the Program's accomplishments in addressing dioxins.

<u>Dioxins Control Program - FY 07-08 Activities (SCVURPPP)</u>

During FY 07-08, the Program continued to work with other Bay Area dischargers and Water Board staff through BASMAA and the RMP to coordinate and plan activities related to dioxins and other pollutants of concern. Program staff participated in initial discussions regarding potentially expanding the RMP's collection and analysis of environmental samples for dioxins and developing a Water Quality Attainment Strategy for dioxins in San Francisco Bay.

Sediment Control Program (Provision C.9.f)

Provision C.9.f of the Program's NPDES permit contains three sub-provisions related to conducting analyses of excess sediment impairment in urban streams and assessing management practices that are currently being implemented and additional management practices that will be implemented to prevent or reduce excess sediment impairment. The first two sub-provisions (C.9.f.i and ii) are specific to San Francisquito Creek, which is currently listed on the 303(d) of impaired waterbodies. Studies designed to meet the requirements of these sub-provisions have been managed by the Santa Clara Valley Water District and are briefly summarized below.

The third sub-provision (C.9.f.i) is specific to creeks in the Santa Clara Valley (other than San Francisquito Creek) that may be impaired by sediment. Under Management Committee direction, SCVURPPP took the lead on addressing the requirements within this sub-provision. As a first step, a report which identified creeks that are potentially impaired by sediment from anthropogenic activities was submitted to the Water Board as part of the Program's FY 02-03 Work Plan, in fulfillment of Permit Provision C.9.f.iii paragraph 1. Additionally, the Program developed a *Work Plan for Conducting a Watershed Analysis and Management Practice Assessment in Other Creeks Potentially Impaired by Sediment from Anthropogenic Activities* (Work Plan) in fulfillment of Permit Provision C.9.f.iii paragraph 2. The Work Plan identifies a two-phased approach to assess watersheds previously identified by the Program as high priority for watershed analysis due to the potential for anthropogenic sediment impairment. Phase I includes conducting a Limiting Factors Analysis (LFA) and sediment management practices assessment. Phase II includes conducting a rapid sediment budget, which will only be conducted when the Phase I study results indicate that excessive sediment from anthropogenic sources is impacting beneficial uses in the watershed. It was agreed that all projects/studies associated with this sub-provision would be coordinated by the Program's Watershed Analysis AHTG.

Stevens Creek, Upper Penitenica Creek and Saratoga Creek were identified as high priority creeks that may be impaired by sediment from anthropogenic activities. Previous Annual Reports have summarized studies conducted in Stevens and Upper Penitencia Creek watersheds. Additional information is presented below on Upper Penitencia Creek and Saratoga Creek. Following the completion of studies described in this Annual Report, the Program will have fulfilled all requirements in C.9.f.iii.

San Francisquito Creek

<u>Sediment TMDL and Habitat Enhancement Plan</u>

In response to a listing of impairment by sediment under section 303(d) of the Clean Water Act and a need to provide information for a TMDL assessment, two separate (but coordinated) projects have been developed. These projects are the San Francisquito Creek Watershed Analysis and Sediment Reduction Plan (Plan), administered by the San Francisquito Creek Joint Powers Authority (JPA); and the Aquatic Habitat Assessment and Limiting Factors Analysis (AHALFA), managed by the Santa Clara Valley Water District (SCVWD). The Plan fulfills Permit Provisions C.9.f.i and C.9.f.ii of the Program's NPDES permit.

The primary issues driving the TMDL are flooding and degradation of habitat, impacting steelhead trout and other threatened aquatic species. The approach adopted by the JPA and SCVWD in these projects is to assess factors limiting the threatened aquatic species, including

but not confined to those related to excessive sedimentation caused by human land use activities. Project products are intended to produce information that will assist the Water Board to confirm or reject the validity of the sediment impairment listing and help identify other causes of impairment to aquatic species and their habitats in San Francisquito Creek.

There were two main objectives for developing the Sediment Reduction Plan. The first objective was to understand the erosion, transport and deposition of sediment in the San Francisquito Creek watershed, focusing on human-related activities that modify hydrology, alter erosion rates or trap sediment. The second objective was to review existing sediment management policies and practices and recommend management measures to effectively reduce erosion and sediment transport in the watershed. The specific tasks for this project are:

1) *Historical Conditions Analysis:* Analyze historical conditions in the San Francisquito watershed, particularly sediment supply, transport, and deposition as they relate to stream and water character;
2) *Existing Conditions Analysis:* Analyze land use, biological resources, stream management and maintenance and designated beneficial uses;
3) *Watershed Sediment Analysis:* Develop a rapid sediment budget for the watershed; detailing sediment sources, sediment sizes, storage and sediment yield;
4) *Assessment of Existing Management Practices:* Assess existing policies and regulations that provide erosion control or channel protection, identified deficiencies and recommended improvements; and
5) *Watershed Analysis and Sediment Reduction Management Plan:* Incorporate all analyses completed in previous tasks and makes recommendations for measures to manage erosion of the identified human-related sediment sources and estimate reduction of sediment load from these measures.

The Watershed Analysis and Sediment Reduction Management Plan (Final Report) was completed in May 2004. The sediment study was funded under a Proposition 13 grant and administered by the JPA. This report can be found at www.cityofpaloalto.org/jpa/references.html.

The *Aquatic Habitat Assessment and Limiting Factors Analysis* (AHALFA) is intended to characterize channel and habitat conditions with respect to factors that limit the steelhead population in the San Francisquito Creek watershed. Information for this analysis came both from direct data collection and analysis and from studies that have already been performed. Data collection and analysis evaluated stressors that limit: (1) aquatic habitat, (2) steelhead (*Oncorhyncus mykiss*), and (3) development of individuals in specific steelhead life history stages within the lower San Francisquito Creek watershed. The study area includes the lower mainstem of San Francisquito Creek and the Los Trancos Creek subwatershed within Santa Clara County.

The AHALFA Final Report was released on June 12, 2006. The study concluded the following:

1. Suitable winter refuge in pools and other habitats is the key limiting factor limiting smolt production within the study area. The primary cause for lack of overwintering habitat appears to be disconnection of upstream sources of material and loss of material due to hydraulic simplification of the watershed. Existing evidence suggests that overwintering habitat was likely to be historically a limiting factor for steelhead in the lower San Francisquito Creek watershed.

2. Juvenile summer rearing and spawning habitat was determined to be degraded in the study area; however increases in quality and quantity of these habitat features would not likely increase smolt production with commensurate increases in winter rearing habitat.
3. Steelhead outmigration success is limited by seasonal drying of the channel, which may be exacerbated when habitat connectivity is interrupted by passage impediments.
4. Limited available water temperature data suggests that temperatures are generally suitable for steelhead in Los Trancos Creek and unsuitable during the summer months in the San Francisquito Creek mainstem.

The Final Report identified key information needs and future studies to extend the temporal and geographic data sources; and to increase the certainty of the analysis. Some of the key recommendations include:

1. Extend the analysis into the upper reaches of the watershed in San Mateo County, with emphasis on the San Francisquito Creek mainstem, Bear Creek subwatershed and Corte Madera Creek subwatershed.
2. Document the location and carrying capacity of critical steelhead habitat for the entire watershed.
3. Conduct smolt outmigrant trapping and determine the timing and magnitude of flows necessary for downstream passage by smolts.
4. Monitor juvenile steelhead populations in established reaches once (fall) or twice (fall and spring) annually.

In June 2007, the Water Board released a Preliminary Project Report and requested comments from major stakeholders. The Project Reports states that a TMDL will be developed for the San Francisquito Creek in the near future (time uncertain). As the TMDL process continues to unfold, the Program will continue to follow and participate in the sediment-related activities within the San Francisquito watershed.

Upper Penitencia Creek

The Upper Penitencia Creek watershed was identified as a high priority watershed to conduct a watershed analysis focused on sediment. An LFA was initiated in the Upper Penitencia Creek watershed in FY 04-05. The final Upper Penitencia Creek LFA report was included within Appendix C-5 of the Program's FY 05-06 Annual Report.

Based on the results, conclusions and recommended next steps presented in LFA report the Program began conducting two projects in FY 06-07, a sediment management practices assessment and a sediment source assessment. The following paragraphs briefly summarize the results of each project.

Sediment Source Assessment (SCVURPPP)

In FY 06-07, the Program conducted a Sediment Source Assessment for Upper Penitencia Creek watershed. The source assessment was deigned to:

1. Identify and locate sediment sources in the upper part of the Upper Penitencia Creek basin using repeat large-scale aerial photographs and limited field reconnaissance, building on previous studies where possible;
2. Characterize the apparent influence of human activities on sediment sources in the watershed;

3. Identify priority concerns and locations for controlling sediment supply and deposition that may impact juvenile steelhead overwintering habitat, with a focus on sources associated with urban runoff (i.e. roads);
4. Recommend general management actions to reduce sediment supply from high priority locations; and,
5. Provide the foundation for future analyses of sediment production, delivery, and yield, which can more thoroughly describe and potentially address sediment-related management issues in an effective and process-oriented manner.

In July 2007, the Program released the Draft Sediment Source Assessment for review by Co-permittees and interested stakeholders. Comments were received in August and revisions were made. In summary, the source assessment identified the following high priority concerns regarding sediment production in the watershed:

- Gully incision below outlet of reservoir;
- Road related sediment sources along toe slope;
- Chronic road failures along Alum Rock Falls Road; and
- Chronic road related erosion in Joseph Grant County Park.

The Upper Penitencia Creek Sediment Source Assessment (final) is included as Appendix C-5.

Sediment Management Practices Assessment (SCVURPPP)

Following the completion of the Sediment Source Assessment, the Program conducted a Sediment Management Practices Assessment for the Upper Penitencia Creek watershed, as described in the Work Plan. The sediment management practices assessment is intended to meet the following three objectives:

1. Document current sediment management practices in the watershed;
2. Assess the effectiveness of these practices in preventing excess sediment reaching Upper Penitencia Creek and its tributaries; and,
3. Recommend improvements to existing practices and/or recommend new practices that are within or outside of the Program's jurisdictional boundaries.

The Draft Upper Penitencia Creek Sediment Management Practices Assessment was released for comments in September 2008. Following the receipt of comments and associated revisions, the assessment report will be finalized and submitted to the Water Board. The completion of this report will fulfill the requirements in Provision C.9.f.iii paragraph 2 and tasks described in the Work Plan that are associated with sediment assessment in the Upper Penitencia Creek watershed.

Saratoga Creek

Waterbody Assessment and Sediment Impact Analysis (SCVURPPP)

Following Upper Penitencia Creek, Saratoga Creek (upstream of the San Jose Water Company diversion) is the next highest priority creek scheduled for investigation of potential sediment impairment due to anthropogenic activities. In late FY 05-06, Program staff began conducting a water body assessment in Saratoga Creek to:

- Evaluate potential sediment impacts to fish/habitat;

- Evaluate Beneficial Use attainment; and,
- Identify data gaps and additional monitoring needs.

In FYs 05-06 and 06-07, the Program used the Unified Stream Assessment (USA) method (developed by the Center for Watershed Protection) on Saratoga Creek to evaluate instream and riparian corridor conditions and associated stressors. In addition, fish population surveys were conducted in fall 2005, spring 2006 and fall 2006 to assess the current population of cold water fisheries within the watershed.

In July 2007, the Program released the *Waterbody Assessment and Sediment Impact Analysis – Saratoga Creek* for review by Co-permittees and interested stakeholders. Significant comments were received in August/September and revisions are currently being made by Program staff. The following paragraphs provide a brief summary of the findings presented in the draft report, which will be finalized in early FY 2008/09.

Analysis of the relative abundances of fish sampled in 2004 – 2006 and macroinvertebrates sampled in 2004 and 2005 indicated that a warmwater aquatic assemblage predominates in the lower watershed and that a coldwater aquatic assemblage predominates in the upper watershed. Native warmwater fish species included Sacramento sucker, *Catostomus occidentalis*, and California roach, *Hesperoleucus symmetricus*. Rainbow trout, *O. mykiss*[1] was the only coldwater fish species identified in the watershed. Comparisons of densities of *O. mykiss* observed in the Saratoga Creek Watershed to benchmark population health goals (Oregon Department of Fish and Wildlife 1999) indicated that the population is healthy. Densities observed in the Saratoga Creek watershed were also comparable to those in other San Francisco Bay Area watersheds that have similar urban and non-urban land use distributions and some of the most productive steelhead runs in the region.

Spawning gravel quantity and quality in the Saratoga Creek watershed appear to be sufficient to seed the current population, and increasing the amount of spawning habitat would be unlikely to increase the *O. mykiss* population. Neither does summer rearing habitat in most of the upper watershed appear to limit juvenile growth. However, a combination of high natural erosivity, relatively shallow depths, and less pool habitat in one portion of the upper watershed appears to reduce *O. mykiss* abundance. In the lower watershed, *O. mykiss* productivity appears to be limited by the warmer temperature of stream flows as well as lower quality instream and riparian habitat conditions. In the primary rearing reaches winter cover (boulder/cobble substrate) appears to be relatively abundant, but its quality (e.g., embeddedness) may reduce the over-winter carrying capacity of these reaches. Models of erosion risk in the Saratoga Creek watershed demonstrated that such risk is high in the upper watershed (undeveloped land) and may influence sediment loads as well. Therefore, it is likely that a considerable amount of the sediment observed in streambed substrate is naturally occurring. The extent to which the existing sediment load is introduced by anthropogenic activities is unknown.

<u>Sediment Management Practices Assessment (SCVURPPP)</u>

Following the completion of the *Waterbody Assessment and Sediment Impact Analysis – Saratoga Creek*, the Program conducted a Sediment Management Practices Assessment for

[1] *Oncorynchus mykiss*, (*O. mykiss*) is the scientific name that refers to both rainbow trout and steelhead. Rainbow trout differ from steelhead in that they do not migrate to the ocean for part of their life cycle (e.g., they are non-anadromous whereas steelhead is anadromous). It is possible to have both rainbow trout and steelhead co-existing in the same watershed, particularly if barriers exist that completely prevent migratory access to portions of a watershed.

the Saratoga Creek watershed, as described in the Work Plan. The sediment management practices assessment is intended to meet the following three objectives:

1. Document current sediment management practices in the watershed;
2. Assess the effectiveness of these practices in preventing excess sediment reaching Saratoga Creek and its tributaries; and,
3. Recommend improvements to existing practices and/or recommend new practices that are within or outside of the Program's jurisdictional boundaries.

The Draft Saratoga Creek Sediment Management Practices Assessment was released for comments in September 2008. Following the receipt of comments and associated revisions, the assessment report will be finalized and submitted to the Water Board. The completion of this report will fulfill the requirements in Provision C.9.f.iii paragraph 2 and tasks described in the Work Plan that are associated with sediment assessment in the Saratoga Creek watershed.

Trash Characterization and Management Activities

On November 14, 2001, the Water Board released the document entitled *Proposed Revisions to Section 303(d) List of Priorities for Development of Total Maximum Daily Loads for the San Francisco Bay Region* Report. This report states that "between now and the next 303(d) listing cycle, municipalities will be expected to assess trash impairments in their jurisdiction ...", Water Board staff will review information concerning trash in the next listing cycle to determine whether specific water bodies warrant 303(d) listing. In a proactive response to the 303(d) Staff Report, the Program's Management Committee formed a Trash AHTG (first meeting on February 21, 2002). The Trash AHTG developed a Work Plan (submitted March 1, 2003) to identify a strategy for addressing trash problem areas that occur in or near urban streams and waterways of the Santa Clara Basin.

In Fiscal Years 03-04, 04-05 and 05-06, the Program assisted Co-permittees in completing the following Work Plan tasks: 1) document existing trash management practices implemented by municipalities and agencies within the Program's jurisdiction; 2) identify and map high priority trash problem areas and sources of trash in Santa Clara Basin watersheds; 3) develop a strategy to conduct trash evaluations in or near creeks; 4) sponsor a training workshop on how to use existing trash assessment tools (i.e., Water Board Rapid Trash Assessment Protocol and Keep America Beautiful (KAB) Litter Index); and 5) develop standardized reporting format for documenting and evaluating trash management and monitoring activities. Summaries of Program efforts to complete these tasks have been provided in previous Annual Reports.

Building on the existing Trash Work Plan, SCVURPPP developed a *Trash Management and Effectiveness Assessment Strategy* (Trash Strategy) in October 2006 that identifies three areas of focus:

1. Trash Problem Area and Source Identification;
2. Pilot Testing and Implementing Trash Control Measures; and,
3. Water Body and BMP Effectiveness Assessments.

The following paragraphs provide summaries of trash-related tasks conducted by SCVURPPP during FY 07-08. Tasks are organized by the three focus areas listed above.

Trash Problem Area and Source Identification

This task is intended assist Co-permittees in identifying trash problem areas and sources that will allow the effective implementation of trash control measures. This task encompasses Program activities conducted in previous fiscal years and in FY 07-08.

Trash Problem Area Survey (SCVURPPP Co-permittees)

Beginning on November 4, 2003, when Program staff distributed the memorandum entitled *Identification and Documentation of Known Trash Problem Areas*[2]. The memorandum requested that Co-permittees document and compile relevant information regarding known trash problem areas within their jurisdictions. Co-permittee survey responses were submitted to Program staff in late December 2003. Program staff then compiled the trash survey information and converted the location descriptions into spatial coordinates using a Geographic Information System (GIS).

In May 2004, the trash problem area survey results were finalized in a *Trash Problem Area Survey Results Memorandum*. The problem areas survey results memo contains data from 14 out of 15 Co-permittees[3], including the location, reported ownership, trash source, information resource and relevant comments for 195 potential trash problem areas within the Program's jurisdiction. Sixty-four sites are located in creeks or in close proximity to a creek (i.e., banks); and 131 sites are located in areas that were not in the creek (e.g., areas near dumpsters, freeway exit ramps, road sides, etc.). The Santa Clara Valley Water District reported 34 trash problem areas within its jurisdiction. The City of San Jose and Santa Clara County, which has the largest jurisdictional areas, reported 30 and 24 trash problem areas, respectively. The highest number of trash problem areas was reported for the Guadalupe River and Coyote Creek watersheds with 41 and 35 sites, respectively. These watersheds also represent the largest watersheds in the Santa Clara Basin. Sunnyvale West, Baylands and San Francisquito Creek (within Santa Clara County) had the fewest number of sites with one, six and six, respectively.

Creek and Watershed Trash Assessments (SCVURPPP Co-permittees)

During FY 04-05, Co-permittee staff and volunteers from watershed stakeholder groups conducted a total of 189 trash evaluations (146 using the KAB Litter Index and 43 using the Water Board Rapid Trash Assessment Protocol). A summary of the trash evaluation results was provided in the Program's *FY 04-05 Annual Report*.

In FY 05-06, the Program revised the Water Board's RTA Protocol (Version 7.0) to improve the effectiveness of the evaluation tool to better assess trash problem areas in urban streams. The revised Urban Rapid Trash Assessment (RTA) Protocol (Version 1.0) was implemented by Co-permittees for trash evaluations of creek sites. In FY 05-06, a total of 149 unique sites were assessed (128 KAB and 19 Urban RTA). In addition, the Program revised the format for reporting trash evaluation results to improve consistency of Co-permittee responses and to enhance the analysis of trash assessment data on a Program-wide basis.

In FY 06-07, Co-permittees conducted a total of 228 trash evaluations, including 168 trash evaluations using the KAB Litter Index (i.e., non-creek sites) and 60 trash evaluations using the Urban RTA Protocol (Version 1.0) (i.e., creek sites). A total of 164 unique sites were assessed.

[2] All SCVURPPP products referenced in this letter are available at www.scvurppp.org.
[3] Given community characteristics, the City of Los Altos Hill s did not submit trash problem areas list.

The KAB Litter Index was used at 114 sites and the Urban RTA Protocol at 39 sites. A combination of the KAB and Urban RTA Protocol was used at two sites.

In FY 07-08, Co-permittees conducted a total of 125 trash evaluations, including 90 trash evaluations using the KAB Litter Index (i.e., non-creek sites) and 35 trash evaluations using the Urban RTA Protocol (Version 1.0) (i.e., creek sites). *Table 1: Summary Results of FY 07-08 Trash Evaluations* (see Appendix C-6) provides scores (for both KAB and RTA trash evaluations) by watershed. A total of 75 unique sites were assessed. The KAB Litter Index was used at 65 sites and the Urban RTA Protocol at 11 sites. A combination of the KAB and Urban RTA Protocol was used at two sites.

Thirty-two sites were evaluated more than once (i.e., two to five times), typically during different seasonal time periods (i.e., late fall/winter and spring/ early summer). The re-assessed sites included 25 non-creek sites and 7 creek sites. Seventy-four percent of the trash evaluations were conducted in the San Francisquito Creek (n=33), San Tomas Aquino Creek (n=30), Guadalupe River (n=18) and Matadero/Barron Creek (n=11) watersheds.

Evaluation scores are provided within the following tables in Appendix C-6:

- *Trash Problem Area Evaluations Results by Watershed*
- *Trash Problem Area Evaluations Results by Co-permittee and Watershed*
- *Trash Problem Area Evaluations Results by Assessment Tool*

The following paragraphs provide brief summaries of the results from assessments conducted in FY 07-08:

KAB Litter Index – Non-Creek Sites

The KAB Litter Index uses a four-point scoring system to estimate the presence of litter within a specific area. To ensure consistent KAB Litter Index scoring between Co-permittees, Co-permittee staff reviewed materials developed by Keep America Beautiful. These materials included written descriptions (on how to score), photographs (which show conditions) and a training video (which detail how to conduct an evaluation). Several Co-permittees increased the resolution of the original KAB litter scale by assigning scores in tenths (e.g., 1.2) as opposed to whole numbers (e.g., 1). The scoring system currently used for KAB assessments is: 0 – 1.0 ("no litter"); 1.1 – 2.0 ("slightly littered"); 2.1 – 3.0 ("littered"); and 3.1 – 4.0 ("extremely littered").

In summary, KAB assessments results indicate:

- Eighty-three percent of the sites were scored as "no litter" or "slightly littered";
- Seventeen percent of the sites were scored as "littered";
- San Tomas Aquino Creek and Guadalupe River watersheds had the greatest number of sites, twenty-one and seventeen respectively, that were scored as "no litter" or "slightly littered";
- San Tomas Aquino Creek and Coyote Creek watersheds had the greatest number of sites, six and three, respectively, that were scored as "littered"; and
- No sites were scored as "extremely littered".

The majority of trash problem areas in non-creek areas occurred adjacent to roadways (29%), commercial areas (26%), residential homes (13%) and industrial areas (12%). Ninety-one percent of the most prevalent trash items reported by Co-permittees during KAB evaluations (n=135) were plastic/Styrofoam (62%) and biodegradeable/paper (28%). Approximately nine

percent of the remaining trash items observed during these evaluations were a combination of glass and miscellaneous items (includes cigarette butts) (**Note**: the actual number of trash items was not recorded). Sixty-two percent of the suspected trash sources reported by Co-permittees during KAB evaluations (n=114) included litter from both vehicular traffic (33%) and pedestrians (29%). Approximately thirty-eight percent of the remaining trash sources reported was from a combination of litter at commercial areas, illegal dumping, litter at restaurants and litter at schools.

During FY 07-08, a fewer number of trash evaluations were conducted in non-creek areas (n=90) compared to FY 06-07 (n=168). Trash scores were very similar for both years with eighty-five (FY 06-07) and eighty-three percent (FY 07-08) of all sites scored as "no litter" or "slightly littered". Similar to FY 05-06 and FY 06-07, there was no consistent pattern in changes of trash condition over time at non-creek sites. In addition, KAB assessment results did not indicate any spatial relationships between littered non-creek sites and creek sites with poor/marginal trash condition. The KAB assessment results were not conclusive for identifying and prioritizing trash problem areas that are sources of litter in the creeks.

SCVURPPP Urban Rapid Trash Assessment (RTA) – Creek Sites

The Urban Rapid Trash Assessment consists of six assessment parameters (with narrative descriptions) that qualitatively rate the trash condition of each parameter on a scale of 0 – 120. The range of scores for each parameter is divided into four categories: "poor", "marginal", "suboptimal" and "optimal". The total site score represents the summation of the six individual parameter scores. For the purposes of this analysis, the total site score was divided into the same four categories: 0 – 30 ("poor"); 31 – 60 ("marginal"); 61-90 ("suboptimal"); and (91 – 120: "optimal").

- Ninety-four percent of the sites were scored as "optimal" (n=20) or "suboptimal" (n=13);
- Six percent of the sites were scored as "marginal" (n=2); and
- No sites were scored as "poor".

The majority of trash problem areas in creek areas occurred adjacent to residential homes (49%), roadways (25%) and park/trail land uses (10%). Ninety-four percent of the most prevalent trash items reported by Co-permittees (n=77) during Urban RTA evaluations were plastic/Styrofoam (71%) and biodegradeable/paper (23%) (**Note:** trash items are classified and enumerated for a 100 foot section of stream). Over six percent of the remaining trash items reported, in order of most frequent, were a combination of construction materials and fabric/cloth. Over ninety-four percent of the suspected trash sources reported by Co-permittees (n=73) during Urban RTA evaluations included litter from pedestrians (28%); upstream/stormdrain catchment (23%); illegal dumping (23%) and homeless encampments (19%). Approximately seven percent of the remaining trash sources reported were from a combination of litter at schools and recreational areas.

During FY 07-08, a smaller number of trash evaluations were conducted in creeks (n=60) compared to FY 06-07 (n=60). Overall trash scores for creek sites evaluated in FY 07-08 were generally higher than creek sites evaluated in FY 06-07. Ninety-four percent of the creek sites evaluated in FY 07-08 were scored "optimal" or suboptimal", while seventy-two percent of the creek sites evaluated in FY 06-07 were scored "optimal" or suboptimal".

Conclusions

KAB trash evaluation results for non-creek sites indicate that a majority of the trash problem areas have no or limited amounts of litter (i.e., eighty-three percent). Preliminary analysis of sites evaluated more than once indicated that there was no consistent pattern in changes of trash condition over time. In addition, KAB site locations and assessment scores did not appear to have any spatial correlation with location and severity of trash problem areas in creeks. As a result, current implementation of the KAB assessment tool does not appear to be useful approach for identifying potential sources of litter in creeks.

Urban Rapid Trash Assessment evaluation results for creek sites indicate that the majority of the trash problem areas were scored as "optimal" or "suboptimal" (i.e., ninety-four percent). A majority of these sites occurred adjacent to residential homes, roadways and park/trail land uses. These sites contained primarily plastic/Styrofoam and biodegradeable/paper, which are highly mobile litter easily transported by wind and water. Sources of trash were reported to be primarily from littering by pedestrians; upstream/stormdrain catchments, illegal dumping and homeless encampments. There were no apparent spatial patterns for trash conditions in creeks.

Pilot Testing and Implementing Trash Control Measures

The second of the four main areas of focus included in the Trash Strategy is the selection and implementation of appropriate control measures at high priority problem areas. This includes developing a better understanding of potential trash control measures, and beginning the process of implementing structural treatment controls as part of a trash pilot demonstration project. The following are summaries of two tasks conducted in FY 07-08 - Trash BMP Tool Box and Pilot Demonstration Project.

Trash BMP Tool Box (SCVURPPP)

To gain a better understanding of the best possible treatment and institutional BMPs, a thorough review of literature from government, academic, and commercial entities was initiated by Program staff in FY 06-07. This information was bolstered by discussions with municipal employees that operate trash control measures and with representatives who sell trash control devices. The results of the literature review are presented in twelve technical information sheets which makeup a large portion of the Trash BMP Tool Box.

The Tool Box is intended to assist stormwater managers, municipal officials, and other stakeholders in understanding what options are available for controlling and capturing trash within the storm drain conveyance system and the urban landscape. Additional information on potential trash impacts on water quality and beneficial uses, and SCVURPPP creek assessments and characterizations is also provided.

Technical information sheets were developed for the following five categories of structural treatment control devices: 1) Catch Basin Inserts, 2) Netting Devices, 3) Hydrodynamic Separators, 4) Racks and Screens, and 5) Litter Booms. Each technical information sheet provides information related to the description/design, applicability/siting requirements, demonstrated performance and/or effectiveness, maintenance requirements, predicted or known costs (capital and operation and maintenance), and a brief overview of reported advantages and disadvantages.

The technical information sheets on institutional controls provide a broad overview of various practices/strategies that have been used to prevent trash to, or remove trash from water bodies.

Sheets were developed for the following seven institutional controls: 1) Enhanced Street Sweeping, 2) Storm Drain Signage/Stenciling, 3) Education and Outreach, 4) Volunteer Cleanup Efforts, 5) Improved Trash Bin/Container Management, 6) Anti-littering/Dumping Enforcement, and 7) Source Control through Official Bans/Prohibitions and Legislation. Each technical information sheet provides information related to the description/design, performance and/or effectiveness, predicted or known costs (capital and operation and maintenance), and a brief overview of reported advantages and disadvantages.

The final version of the Trash BMP Tool Box was completed in September 2007 and is publicly available through the Program's website www.scvurppp.org. Additionally, for the Trash BMP Tool Box, the Program received an award from the California Stormwater Quality Association (CASQA) for the best BMP implementation project in 2008.

Pilot Demonstration of Trash Treatment Controls (City of San Jose and City of Sunnyvale)

To assist Co-permittees in implementing a trash demonstration pilot study (Pilot Study) within their jurisdictions and to complete Trash Strategy Task 2.2, the Program developed a *Pilot Trash Structural Treatment Control Study Implementation Plan* (Pilot Study Implementation Plan). The Pilot Study Implementation Plan was completed in April 2008. It is available on the Program's website and also included as Appendix C-7.

The Pilot Study Implementation Plan provides specific objectives of the Pilot Study. They include:

- Increasing the removal of trash in stormwater conveyance systems through the implementation of selected treatment BMPs;
- Estimating trash loading rates to the conveyance systems from various sources and/or land use types;
- Characterizing the types of trash removed by selected treatment BMPs;
- Determining operation and maintenance requirements and costs for treatment BMPs implemented by the Cities; and
- Identifying opportunities and challenges for future implementation.

The implementation of the Pilot Study will provide Co-permittees with valuable information that will assist them in addressing trash control requirements through the MRP. To gain insight into the most dominant trash sources and the most effective ways to reduce trash from entering urban creeks through stormwater conveyance systems, the two largest cities in Santa Clara County, the City of San Jose and the City of Sunnyvale, agreed to participate in the Pilot Study.

The Pilot Study implementation Plan discusses the selection of the trash treatment BMP used in the Pilot Study. Based on the information from the Trash BMP Tool Box, discussions with the County of Los Angeles and extensive field reconnaissance, both cities selected the StormTek™ catch basin insert as the device most likely to meet the objectives of the Pilot Study. The StormTek™ catch basin insert is designated as a full-capture treatment device by the Los Angeles Regional Water Quality Control Board and consists of a perforated metal screen placed horizontally or vertically in front of the storm drain pipe outlet within a catch basin. It is capable of catching smaller and larger debris and uses the volume of the catch basin to retain trash before it is transported through the stormwater conveyance system. Captured debris remains within the catch basin until it is removed by a maintenance crew.

Pilot Study Implementation and Preliminary Observations

During FY 07-08, the Cities of San Jose and Sunnyvale began implementing the Pilot Study. Figures showing StormTek™ catch basin insert locations within the Program's jurisdiction are provided within Appendix C-8. In 2007, the City of San Jose installed approximately 46 StormTek™ catch basin inserts. On March 28, 2008, City of San Jose staff inspected and performed necessary maintenance (i.e., clean-out of debris) of installed catch basin inserts. Preliminary results indicate that StormTek™ catch basin inserts are effective at preventing material from entering the stormwater conveyance system, without significantly affecting catch basin function or capacity; and that the majority of material captured is leafy debris. In spring 2008, an additional 40 StormTek™ catch basin inserts were installed within the City of San Jose.

The City of Sunnyvale installed eleven StormTek™ catch basin inserts in January 2008. Two additional catch basin inserts were installed in CY 2008. Installation photographs are included within Appendix C-9. On February 8, 2008, City of Sunnyvale staff inspected the eleven installed catch basin inserts to determine their performance. The inspection revealed all units to be functioning well. Some were beginning to fill with debris (mostly leaf litter), but were not filled to the point where bypass would occur. The retrofitted inlets were cleaned on May 19, 2008. All debris was removed with a clamshell shovel, bagged, labeled, and taken to a processing area where litter was sorted from the leaf debris, weighed (wet weight), and approximate volumes for both leaf debris and litter were measured.

A total of 830 pounds of leafy debris and 32 pounds of trash were removed. This was approximately 1.2 cubic yards of leafy debris and 0.2 cubic yards of litter. The leafy debris (deciduous leaves, conifer needles, and twigs) appeared to be from the local street trees and was not from material being dumped or discarded by residents or businesses. The City of Sunnyvale requires the use of green-waste carts by residents for yard debris pick-up.

The most common types of litter categories observed in the retrofitted inlets were plastics. Plastic food wrappers (e.g., candy bar wrappers, chip bags, snack food wrappers) cellophane, plastic cups, lids and straws and Styrofoam packing materials were frequently observed. Paper was also very common in some areas. Cigarette butts were frequently found, especially on inlets that were close to stop lights and on roadways with higher traffic flows. Very few glass or metal items were observed in the litter. A more detailed description of the materials and quantities observed will be included in the final Pilot Study report that will be available in September 2009.

Additional analyses of the data collected in March 2008, May 2008 and during the wet season of 2008-2009 will be included in the final Pilot Study report. This will include information on trash loading rates from specific land uses to the stormwater conveyance system; more detailed information on the types of debris removed; maintenance frequency required for proper operations; and operation and maintenance cost estimates.

Water Body and BMP Effectiveness Assessments

Assessing the condition of urban creeks (as related to trash) and evaluating the effectiveness of control measure implementation over time is the third focus area identified in the trash strategy. This element is currently scheduled to be completed in FY 08-09.

Estimating Costs of Trash Full Capture Devices in the San Francisco Bay Area (SCVURPPP)

In February 2008, the Program assisted the Bay Area Stormwater Management Agencies Association (BASMAA) in developing preliminary cost estimates for implementing full capture devices in the San Francisco Bay area. The cost evaluation estimates capital and annual operation and maintenance costs for catch basin inserts (i.e., StormTek™ catch basin inserts), and small and large hydrodynamic separators (e.g., continuous deflection systems). The estimated capital cost for manufacturing and installing a StormTek™ device is approximately $1,000 per unit, while the estimated annual maintenance cost is $2,500 per unit. Capital and maintenance costs for hydrodynamic separators were also estimated. The estimated capital cost for manufacturing and installing a small capacity and large capacity hydrodynamic separator is approximately $100,000 and $420,000 per unit, respectively, while the estimated annual maintenance cost is $5,000 and $20,000 per unit, respectively. The Program will continue to update these estimates as additional information becomes available, including the results of the Pilot Study.

Creek Clean-ups

In FY 07-08, the Creek Connection Action Group sponsored two creek clean-up events: Coastal Clean-up Day on September 15, 2007 and National Rivers Clean-up Day on May 19, 2008 The Program provided financial support for one of the events (National Rivers Clean-up Day). A total of 1,534 volunteers participated in cleaning 51 sites and removed approximately 72,764 pounds of materials (trash and recyclables) from the creeks during the two events.

Results by clean-up event for FY 07-08 are as follows:

	Coastal Clean-up Day Sept. 15, 2007	National Rivers Clean-up Day May 17, 2008	Total
Number of sites	24	27	51
Number of volunteers	865	669	1,534
Pounds of recyclables	12,052	11,518	23,570
Pounds of trash	31,694	17,500	49,194
Pounds of material (trash plus recyclables)	43,746	29,018	72,764

Evaluation of Effectiveness

To evaluate the effectiveness of the two annual creek clean-up events, data from the past nine years of events were compiled and reviewed. The table below presents the total numbers of sites, numbers of volunteers, and pounds of materials collected each year.

Beginning in FY 01-02, some site managers implemented a procedure for separating out recyclable materials from trash prior to weighing it. Thus, the total pounds of material collected are the sum of the recyclables and trash quantities. According to the Santa Clara Valley Water District, this procedure is done more frequently at Coastal Clean-up Event sites than at National Rivers Day sites. Since this procedure is not done at all sites, it is more appropriate to compare the total quantities of materials collected rather than the individual components.

Summary Results of Creek Clean-up Events[4], September 1998 – May 2008

Fiscal Year	No. of sites	No. of volunteers	lbs. of recyclables	lbs. of trash	Total lbs. collected	Average lbs./site
FY 98-99	35	1,877	Not Recorded	84,582	84,582	2,417
FY 99-00	35	1,586	Not Recorded	43,475	43,475	1,242
FY 00-01	41	1,745	Not Recorded	58,108	58,108	1,417
FY 01-02	37	1,742	13,750	59,340	73,090	1,975
FY 02-03	48	2,091	8,071	44,883	52,954	1,103
FY 03-04	56	1,943	6,537	36,718	43,255	778
FY 04-05	61	1,618	7,890	39,730	47,620	781
FY 05-06	55	1,458	4,110	29,248	33,358	607
FY 06-07	44	1,631	15,394	52,067	67,461	1,533
FY 07-08	51	1,534	23,570	49,194	72,764	1,427
Annual Average	*46*	*1,723*	*11,332*	*49,735*	*57,667*	
Total	**463**	**17,225**	**79,322**	**497,345**	**576,667**	

The total amount of trash and recyclables collected during the two creek cleanup events each year are plotted in the figure below:

[4] The data presented in this table represent the total quantities from the two major creek cleanup events in Santa Clara County (including Gilroy and Morgan Hill). The data do not include quantities of trash that may have been collected by the Santa Clara Valley Water District (SCVWD) or by other volunteer groups during other times of the year. The SCVWD has an "Adopt-a-Creek" program in which community groups (e.g., scout troops and schools) agree to care for a certain section of creek. Care includes trash pickup at least twice during the year. These groups are not required to report the amount of trash they collect. A section of creek that is regularly cleaned may not be included as one of the sites involved in the two major creek cleanup events.

The average pounds of trash and recyclables collected at each site during the two creek cleanup events each year are plotted in the figure below:

From the data in the table and figures above, it can be concluded that the total amount of trash and recyclables collected shows a decreasing trend from FY 98-99 to FY 05-06. However, the amount of trash and recyclables collected has increased in the last two years. This increase is related to targeting and addressing the most problematic trash problem areas (not including homeless encampments) with significant amounts of trash. In the past, some sites were chosen due to their familiarity and close proximity to certain local organizations participating in the creek cleanup. In some instances, these sites did not have significant levels of trash. In addition, volunteers are becoming more aware of current trash issues within local creeks and San Francisco Bay. As a result, the level of effort of removing all observed trash and recyclables has increased resulting in more thorough trash cleanups. Co-permittees intend to continue participating in future creek cleanups, as they provide a valuable opportunity for citizen participation as well as an important element of a trash management program.

Summary of Co-Permittee Street Sweeping Results

A summary of street sweeping activities conducted by Co-permittees is provided within the table entitled *Summary of Co-permittee Street Sweeping Activities- FY 2007-2008* (see Appendix C-10). During FY 07-08, Co-permittees swept approximately 196,950 miles of paved streets and removed approximately 90,004 yd^3 or 58,458 tons of material[5]. Approximately 7,717 yd^3 of leaf litter was removed[6] by Co-permittees who have leaf removal programs other than routine street

[5] To determine the total volume of material removed in tons, it is necessary to convert cubic yards to tons. It is estimated that the average density of street sweeping material is 1,299 pounds per cubic yard (0.6495 tons per cubic yard) (Source: EOA, Inc., October 1996, Estimation of Copper Collected Through Street Sweeping Efforts. Prepared for San Mateo Countywide Stormwater Pollution Prevention Program). A value of 58,458 tons is calculated when 90,004 cubic yards is converted over to tons (90,004 cubic yards* .6495 tons/cubic yard= 58,458 tons).

[6] An additional 1,957 tons of leaf litter was collected by the City of Palo Alto. However, this figure is a combined figure that included the weight of the material collected from street sweeping plus the leaves collected by our autumn leaf pushing and pickup program. Since all of the material (both street sweeping debris and leaves gathered by leaf pusher trucks) is combined and hauled to the landfill in garbage compactor trucks, there is no way to provide a separate figure for leaf removal.

sweeping. In addition, approximately 97,495 tons of yard waste (which includes large amounts of leaves) was routinely collected by Co-permittees. As a result, yard waste pick-up programs are keeping large amounts of leaves out of Co-permittee storm drain systems.

Evaluation of Effectiveness

One way to measure street sweeping effectiveness is to determine what solids and associated pollutants are collected within street sweeping debris. A typical unit of measure is the total volume of the pollutant removed by the sweeper relative to the curb length swept (e.g., yd^3/curb mile). This unit is typically referred as the removal rate. During FY 07-08, the average Co-permittee removal rate was 0.46 yd^3/curb mile (see Appendix C-10). The Co-permittee removal rate ranged from 0.19 yd^3/curb mile (City of Los Altos) to 0.81 yd^3/curb mile (City of Monte Sereno). During FY 06-07, the average Co-permittee removal rate was 0.49 yd^3/curb mile. The effectiveness of street sweeping depends upon a number of factors including accumulation rates of pollutants, the relationship between rainfall and sweeping frequencies, particle size, pavement condition and automobile parking controls[7].

Many studies have shown that street sweeping removes significant quantities of dirt and debris from street surfaces[8]. However, results also demonstrate that the coefficient of variation of copper values and other metals (e.g., lead and zinc) in street sweeping debris is quite high[9]. To illustrate the effectiveness of street sweeping activities for pollutant removal, Program staff estimated the mean pollutant reduction for the following four metals: copper, nickel, lead and zinc. These estimates are provided within the tables entitled *Summary of Co-permittee Street Sweeping Activities and estimated Mean Pollutant Load Reduction for Copper and Nickel- FY 2007- 2008* and *Summary of Co-permittee Street Sweeping Activities and estimated Mean Pollutant Load Reduction for Lead and Zinc- FY 2007- 2008*. Both tables are provided within Appendix C-10. To determine the estimated pollutant load reduction (in pounds), the volume of material collected (in cubic yards) for each Co-permittee land use type (i.e., residential, commercial and industrial) was determined. This value was then multiplied by the mean concentration of trace metal content for street sweeping samples collected in the study entitled *Chemical and Physical Characteristics of Street Sweeping Sediments in Tampa, Florida, May 1999* and converted over to pounds of pollutant removed. These mean concentration values and the algorithm used to calculate the pounds of pollutant removed are provided within the tables. The estimated mean pollutant load reduction values for each land use type were summed. During FY 07-08, it is estimated that Co-permittees street sweeping activities resulted in the following pollutant load reductions for copper, nickel, lead and zinc:

[7] Source: Woodward Clyde Consultants, December 1994. *Street Sweeping Literature Review/Storm Inlet Modification*, Prepared for Alameda County Urban Runoff Clean Water Program.
[8] Source: Sartor, J. and G. Boyd, 1972. *Water Pollution Aspects of Street Surface Contaminants*. Prepared for United States Environmental Protection Agency, Washington, DC.
[9] Source: EOA, Inc, October 1996. *Estimation of Copper Collected Through Street Sweeping Efforts*: Final Report. Prepared for San Mateo Countywide Stormwater Pollution Prevention Program.

Land Use Type	Estimated Mean Pollutant Load Reduction (Pounds)			
	Copper	Nickel	Lead	Zinc
Residential	1176	2325	2192	2950
Commercial	571	1131	2729	1933
Industrial	354	69	332	274
Total	**2102**	**3525**	**5253**	**5157**

It is important to note that there is uncertainty with these estimates since certain assumptions were made regarding the exact volume of material collected from a particular land use type.

[1] Projects reviewed and approved by Budget Ad Hoc Table Group for inclusion in Work Plan.
[2] Monitoring Priorities (updated at Monitoring AHTG meeting November 8, 1999):
1) New projects needed to implement the results, and achieve the goals, of current projects.
2) New projects that implement continuous improvement items identified through the annual review process.
3) Projects that support the Santa Clara Basin Watershed Management Initiative in one of the following ways:
a) Investigate Beneficial Uses and Causes of Impairment (including field work)
b) Review and Compile Environmental Data and Make it Accessible
c) Develop Strategies for Controlling Impacts of Land Use on Beneficial Uses
d) Facilitate and Support WMI Subgroups (including coordination with other agencies)
4) Projects identified through participation in regional monitoring collaborative efforts, including the Regional Monitoring Program and BASMAA

WATERSHED
MANAGEMENT

040568

SECTION 5

WATERSHED MANAGEMENT MEASURES

040569

5. WATERSHED MANAGEMENT MEASURES

INTRODUCTION

During FY 07-08, the Program conducted a variety of watershed-related management measures and activities. They included conducting watershed assessment activities and special studies, and participating in and coordinating with the Santa Clara Basin Watershed Management Initiative (SCBWMI) sub and core groups. Activities described in this section are consistent with Provision C.10 (i.e., Watershed Management) of the Program's NPDES Permit.

The Program's watershed management strategy (pursuant to NPDES Permit Provision C.10) is to integrate its watershed management efforts with the SCBWMI. Activities that include implementing environmental monitoring and assessment measures are necessary components needed to fully integrate our efforts. Therefore, it is important to note that watershed management measures described in this section are not entirely independent from activities described in Section 4 – Monitoring Activities. Information gained from conducting studies and implementing activities/measures described in both sections have been used (and will continue to be used) in concert to meet objectives outlined in Permit Provisions C.7, C.9, and C.10. They include: (1) characterizing watersheds and stormwater discharges; (2) assessing existing or potential adverse impacts to beneficial uses; (3) identifying potential sources of pollutants of concern; (4) aiding in developing and implementing strategies for controlling adverse impacts on beneficial uses; and (5) assessing the effectiveness of pollutant prevention/control measures.

BACKGROUND

The Water Board encouraged starting the SCBWMI in 1996. The first meetings of the SCBWMI's Core Group and subgroups were held in 1997. During FY 98-99, SCBWMI stakeholders formally joined in a signatory document outlining the SCBWMI's mission, goals and objectives. The Santa Clara Valley Water District and the Cities of San Jose, Sunnyvale and Palo Alto committed additional funds and other resources to the SCBWMI. A Report Preparation Team (RPT) consisting of staff from these agencies developed a plan, schedule, and outline for a Watershed Assessment Report (WAR). The RPT and the SCBWMI subgroups began preparing sections of the WAR soon after.

In late 1999, the Program prepared *Watersheds 2000: A Vision of the Santa Clara Valley Urban Runoff Program's Role in Watershed Management and the Santa Clara Basin Watershed Management Initiative.* This document outlines the Program's long-term vision, roles and responsibilities with regard to the SCBWMI and provides a monitoring/continuous improvement and outreach strategy.

The Program's involvement in the SCBWMI is organized by the concept of continuous improvement, as described in the Program's Urban Runoff Management Plan (URMP). The SCBWMI identifies specific watershed issues and recommendations that are brought to the Program's Management Committee for consideration and action as appropriate. In addition, results from SCVURPPP studies related to watershed monitoring, assessment and management are frequently distributed, presented and discussed with SCBWMI subgroups. This approach creates an informed and coordinated partnership between the Program and SCBWMI.

FY 07-08 SCVURPPP ACCOMPLISHMENTS

Bay Area Macroinvertebrate Bioassessment Information Network (BAMBI)

The increased interest in bioassessment within the Bay Area spawned the formation of the Bay Area Macroinvertebrate Bioassessment Information Network (BAMBI) in February 2002. BAMBI is a network of scientists, watershed managers, regulators and community members interested in using biological communities as indicators (i.e., benthic macroinvertebrates) of stream health in the San Francisco Bay Area. The goal of BAMBI is to maximize the utility of aquatic bioassessment in the Bay Area by developing a programmatic and analytical framework for the collection, sharing, analysis and use of bioassessment data. Specific activities conducted by BAMBI in FY 07-08 are presented below. Additional information on BAMBI is provided at www.bayareabugs.org.

BAMBI 2008 Annual Meeting

Since 2002, Program staff has helped coordinate an Annual BAMBI meeting where bioassessment data and analyses can be presented from a local, regional or state perspective. On January 30, 2008, the sixth annual BAMBI meeting was held. Presentations included an update on the development of the Index of Biotic Integrity (IBI) for San Francisco Bay Area creeks, long-term variability of bioassessment data and the effects of urbanization on BMIs. Presenters included UC Berkeley PhD candidates and Program staff. The meeting agenda for the January 30 meeting and presentations by Program staff are included within Appendix D-1.

Index of Biotic Integrity (IBI) for San Francisco Bay Area Creeks (SCVURPPP)

In collaboration with Alameda Countywide Clean Water Program and Water Board staff, Program staff developed a draft Work Plan to outline tasks that should be completed during the development of a Benthic Macroinvertebrate Index of Biotic Integrity (B-IBI) for creeks in the San Francisco Bay Area. An IBI serves as an easy-to-use scorecard for determining the condition of water quality and stream habitat (i.e., stream health) using biological communities. The IBI approach is designed to maximize detection of degradation by controlling for natural variation in biological communities. The San Francisco Bay Area IBI Work Plan was included in the Program's *FY 04-05 Annual Report*.

The Work Plan has six main tasks listed in sequential order:

1. Form Technical Advisory Group;
2. Compile Existing BMI Data from Participating Agencies/Organizations;
3. Standardize Datasets and Import into Database;
4. Develop Reference Conditions;
5. Select Metrics for the IBI; and
6. Develop, Validate and Refine IBI.

During FY 07-08, Program staff contributed substantial in-kind services towards the completion of tasks 1 through 5. The following are status summaries for these tasks:

Task 1: Technical Advisory Group (TAG) - A Technical Advisory Group (TAG) was formed in 2006. The TAG consists of Program, California Department of Fish and Game (CDFG) and USGS staff, UC Berkeley graduate students and other Bay Area municipal stormwater program staff. On June 21, 2006, the TAG met to discuss the initial steps in developing reference conditions for Bay Area creeks. A meeting agenda was included within Appendix D-1 of the

Program's *FY 05-06 Annual Report*. The TAG discussed the B-IBI at the January 30, 2008 BAMBI meeting and provided additional input.

Task 2 – Compile Existing Data – In FY 07-08, Program staff spent a substantial amount of time collecting and compiling existing benthic macroinvertebrate data from eight Bay Area counties. Data sources included the Water Board, municipal stormwater programs and volunteer monitoring programs. Data from approximately 400 sites have been compiled. Although this task is likely to be ongoing due to the need to manage bioassessment data collected in the future, it is deemed complete for the purposes of the B-IBI development.

Task 3: Standardize Datasets and Import into Database – Datasets compiled in Task 2 were standardized into a format that could be imported to the California Ecological Data Application System (Cal EDAS), which is currently housed at SCVURPPP. All bioassessment data collected through spring 2005 has been placed in Cal EDAS. In FY 07-08, Program staff began generating data outputs needed to complete Tasks 4-6.

Task 4: Develop Reference Conditions – The development of biological reference conditions for Bay Area creeks is an integral step in completing the B-IBI. Reference conditions provide a way for comparing biological data from a potentially impacted site to a "least disturbed" site. They are also used to determine the degree of impact of a site. On June 21, 2006, the TAG met to begin discussing reference conditions development. As a next step, Program staff began working with UC Berkeley PhD candidates to conduct a GIS based land use analysis to define "least disturbed sites" that will form the pool of reference sites used to establish the B-IBI.

Task 5: Select Metrics for the B-IBI – In FY 07-08, Program staff began conducting analyses to determine the pool of metrics that will be used in the B-IBI. This task will continue into FY 08-09.

In FY 08-09, Program staff plans to continue supporting and actively participating in BAMBI activities, with specific objectives to complete a Draft Provisional B-IBI for San Francisco Bay Area creeks.

Unified Stream Assessment – Matadero Creek

In accordance with the Multi-Year Plan Receiving Waters Monitoring Plan, the Program conducted a screening-level continuous creek walk during the summer 2007 to assess the overall condition and potential impacts to creeks in the Matadero Creek watershed. Based on the information collected, the report entitled *Unified Stream Assessment in Matadero Creek Watershed* was developed and is included in Appendix D-2. This report documents the methods and results of creek walks conducted in the Matadero Creek watershed using the Unified Stream Assessment (USA) protocol. The USA uses visual observations to provide an overall picture of the condition and features of the creek channel and riparian corridor. Overall reach condition (e.g., bank stability, instream and riparian habitat, floodplain connectivity) is qualitatively assessed. In addition, individual impacts such as creek crossings, utilities, outfalls, areas with erosion, channel modifications and trash are documented. Potential uses for the creek walk data include helping with the interpretation of existing screening-level data, informing the design of future monitoring watersheds, and assisting with the selection and targeting of activities aimed at improving creek health and water quality condition.

Evaluating the Utility of the Unified Stream Assessment

During 2008, the Program collaborated with San Mateo Countywide Water Pollution Prevention Program (SMCWPPP) to develop a guidance document on the potential uses of the Unified

Stream Assessment (USA) protocol based on recent experience in the Bay Area (See Appendix D-3). This document, which is entitled *Unified Stream Assessment: Potential Uses for Stormwater Program - San Francisco Bay Area Examples* is intended for use by municipal stormwater programs and other interested agencies. In future years, Phase I municipal stormwater programs in the Bay Area will likely be required to conduct stream surveys using the USA or an equivalent method.

Data generated through USA surveys can address multiple stormwater monitoring-related objectives. Stormwater programs that need to further develop their monitoring programs may conduct USA surveys to establish baseline data, identify the types and locations of potential impacts to water quality, identify potential Beneficial Uses to protect and threats to such Uses, and identify or refine monitoring objectives, parameters and sampling locations. Programs may also use USA survey data to better understand stream conditions and threats to water quality upstream and downstream of existing monitoring sites. This will assist in the interpretation of existing monitoring data and the identification of appropriate stormwater BMPs and potential restoration activities.

Stream Studies Inventory

The Watershed Assessment and Monitoring Subgroup (WAMS), an entity within the SCBWMI, has a mission to provide the SCBWMI with a solid scientific foundation for watershed planning. One of WAMS's tasks is to coordinate the SCBWMI's data collection and data management efforts with stream monitoring studies within the Basin. The *Inventory of Santa Clara Basin Stream Studies* (SSI) is a result of this task and was initially prepared by the Program in November 1998. The purpose of the SSI is to promote inter-agency awareness of environmental investigations within riparian corridors and to facilitate coordination of related data collection and management. It also describes stream-related multi-stakeholder studies and projects that were in-progress in the Santa Clara Basin. The SSI was updated, revised and reissued in February 2000 (Version 2.0), July 2001 (Version 3.0), August 2002 (Version 4.0), November 2003 (Version 5.0) and June 2005 (Version 6.0) (www.scvurppp.org).

On September 15, 2006, the Program finalized the *Inventory of Santa Clara Basin Stream Studies (Updated Version 7.0)*. This version describes twenty-nine related multi-stakeholder studies and projects that recently started or are in-progress within the Santa Clara Basin. Information for seven new studies was added to the updated version and twenty-two ongoing projects were updated with current information. Eight projects listed in the SSI Version 6.0 Report were determined to be complete or discontinued. As a result, they are not included within the updated SSI Version 7.0. Information describing the completed studies was archived into the Program's metadata database.

Watershed Data Management

To comply with its NPDES permit, the Program compiles, develops and analyzes a variety of data sets and reports. Most of this data is collected and generated as part of the Program's environmental monitoring and assessment activities. A majority of the information collected and used by the Program originates from different municipalities and agencies that conduct studies within Program jurisdictional boundaries.

The Program developed a relational database as an initial task to systematically describe and document data used for its activities. The intent of the database is to demonstrate its usefulness of how to systematically and efficiently collect and document all of the relevant data

used in the Program's activities. In addition, the database was designed to explore the feasibility of eventually expanding and coordinating its maintenance and use with other agencies and organizations in the Program.

The SCVURPPP metadata database currently stores information on watershed studies described in the updated SSI Version 7.0 as well as archived information from previous versions of the SSI. The database was also developed to produce a report listing current project information in a format similar to previous SSI Reports. The project summaries of the 2003 SSI report were produced from the database. In addition, the Program database provides querying capabilities for watershed information listed in both the SSI and SCBWMI's Metadata Database.

The SCVURPPP Metadata Database guidance manual entitled *SCVURPPP Metadata Database Program User Documentation* is also available. The manual describes software and hardware requirements, installation procedures, data entry procedures and querying techniques for watershed information listed in both the SSI and SCBWMI's Metadata Database. The *SCVURPPP Metadata Database Program User Documentation* can be found on the Program's website (www.scvurppp.org).

Develop Strategies for Controlling Impacts of Land Use on Beneficial Uses

During FY 07-08, the Program collaborated with the SCBWMI Land Use Subgroup (LUS) on the following activities:

- At the July 11, 2007 LUS meeting, Program staff provided an update of San Mateo County's Sustainable, Green Streets and Parking Lots Program. This program, initiated to directly address the connection between motor vehicle transportation and water quality, is funded by motor vehicle registration fees. It is designed to generate support for the widespread use of stormwater pollution prevention and treatment and flow control BMPs that are well suited for use within streets and parking lots.
- The Program, in collaboration with the LUS, sponsored a session and a mobile workshop at the 2007 conference of the California Chapter of the American Planning Association (CCAPA) held in San Jose (September 30 – October 3, 2007). Program staff gave the presentation entitled "Site Design Elements for Protecting Water Quality" as part of the session entitled "Ground-truthing Smart Growth and New Urbanist Developments". Program staff also developed the program for and helped lead a mobile workshop that featured visits to several local sites with exemplary site design elements, including a green roof at Agilent Technologies in Santa Clara, a pervious concrete parking lot at Congregation Sinai in San Jose, and vegetated swales at the Tully Library in San Jose. Mobile workshop evaluation responses showed that the majority of participants gave the workshop high remarks. A detailed summary entitled "Summary of Sessions and Mobile Workshop at the 2007 CCAPA Conference" was prepared for LUS and Program staff use.
- In spring 2008, Program staff assisted LUS to conduct a four-question survey of Santa Clara Valley municipalities on the need for municipal staff training regarding riparian corridor protection. Survey results were presented in the report entitled "Riparian Corridor Training Needs: Survey Results". The report was finalized on April 8, 2008 (see www.scbwmi.org/PDFs/SUMMARY_2008_LUS_Riparian_Survey.pdf). LUS is exploring two training options: a creekside trail design roundtable, and riparian corridor training for development review staff.

- In June 2008, Program staff worked with LUS to develop and finalize a two-page fact sheet entitled *Top Ten Development Tips to Protect Creeks*. The fact sheet is intended for distribution to planners, designers and project applicants. In addition, LUS prepared a PowerPoint presentation based on information presented within the fact sheet. The presentation will be made to city planners and Co-permittee staff at future meetings and training sessions.

Controlling Sources of Pollutants Through Support of Product Stewardship

Many pollutants identified as "pollutants of concern" by SCVURPPP are contained in products that are required by federal and state law to be disposed of as hazardous or universal waste. In addition, consumer products make up a large percentage of wastes disposed of in landfills. In recent years, due to legislative bans and rising environmental awareness, the quantity of household hazardous waste (HHW) being disposed of at local HHW collection programs has increased significantly. Most HHW programs are not equipped or funded sufficiently to handle this increasing demand.

In February 2007, based on a recommendation from the SCVURPPP Watershed Education and Outreach AHTG, the Management Committee convened a Work Group to evaluate the HHW source reduction and funding issues in Santa Clara County, and recommend both long-term and short-term solutions. Work Group members included representatives from the Program, Co-permittees, County HHW Program, and the environmental community. The Work Group, with assistance from Program staff, developed and distributed a memorandum entitled "Recommendations for Addressing Household Hazardous Waste Source Reduction and Funding Issues" on October 31, 2007. The Work Group's recommendations included the following:

- CPSC Participation -- SCVURPPP and its Co-permittees should consider joining the California Product Stewardship Council (CPSC) to demonstrate support for "extended producer responsibility" (EPR) legislation and programs. EPR is a policy approach that holds producers responsible for the costs of responsibly managing their products at their end of life. Some examples of the EPR approach include take-back programs for batteries and cell phones where manufacturers, not local government agencies, bear the disposal cost.
- EPR Resolutions – Co-permittees should consider adopting EPR resolutions and environmental procurement policies, and designate staff to be responsible for following up on these issues with their City Councils/Boards. EPR resolutions will set the stage for support letters and lobbying by their agencies, and send a message to legislators that this issue is a priority for government agencies.

In September 2007, the SCBWMI Core Group identified product stewardship as a priority and formed a Product Stewardship Subgroup to address these issues in Santa Clara Valley watersheds. A representative of SCVURPPP is participating on this Subgroup. One of the Subgroup's tasks is to track the progress of SCVURPPP Co-permittees on the two recommendations stated above. In a progress report to the Management Committee dated July 17, 2008, the Subgroup provided the following information:

Co-permittees and organizations that have signed the CPSC Pledge of Support:

- Cupertino
- Los Altos
- Los Altos Hills
- Palo Alto
- San Jose
- Santa Clara County
- Santa Clara Valley Water District
- Sunnyvale
- SCVURPPP
- West Valley Clean Water Program
- CLEAN South Bay

Co-permittees with adopted Extended Producer Responsibility Resolutions:

- Campbell
- Cupertino
- Los Altos
- Los Altos Hills
- Los Gatos
- Monte Sereno
- Santa Clara County
- Saratoga
- Sunnyvale

The Subgroup also reported that Mountain View, Palo Alto, and San Jose expect to present Product Stewardship Resolutions to their respective city councils before the end of 2008, and the Environmental Advisory Committee of the Santa Clara Valley Water District is considering development of environmental procurement policy recommendations.

Table 5-1
Status of FY 2007-2008 Watershed Management Measures Projects[1]

Title	Category/ Monitoring Priority (MP)[2]/ Permit Provision	Capsule Scope	Product(s)[3]	Status Schedule
FY 07-08 Rapid Bioassessments	Permit Provision C.7 and C.10	Evaluate water and physical habitat quality in Santa Clara Basin Watersheds.	*Watershed Monitoring and Assessment Summary Report: Coyote Creek and Lower Penitencia Creeks*[4a, b]	Completed-9/15/08
Bay Area Macroinvertebrate Bioassessment Information Network (BAMBI)	MP #4	Collaborate with other BASMAA member agencies to develop regional bioassessment tools necessary to provide context to bioassessment data collected in Santa Clara Basin creeks.	BAMBI – annual meeting agenda and three PowerPoint presentations[4a]	Completed-1/30/07
Unified Stream Assessment – Matadero Creek	MP #3	Conduct screening-level continuous creek walk to assess the overall condition and potential impacts to creeks in the Matadero Creek watershed	*Unified Stream Assessment in Matadero Creek Watershed*	Completed-9/15/08

[1] Projects reviewed and approved for inclusion in Work Plan by Budget Ad Hoc Table Group.
[2] Monitoring Priorities (updated at Monitoring AHTG meeting November 8, 1999):
1) New projects needed to implement the results, and achieve the goals, of current projects.
2) New projects that implement continuous improvement items identified through the annual review process.
3) Projects that support the Santa Clara Basin Watershed Management Initiative in one of the following ways:
   a) Investigate Beneficial Uses and Causes of Impairment (including field work)
   b) Review and Compile Environmental Data and Make it Accessible
   c) Develop Strategies for Controlling Impacts of Land Use on Beneficial Uses
   d) Facilitate and Support WMI Subgroups (including coordination with other agencies)
4) Projects identified through participation in regional monitoring collaborative efforts, including the Regional Monitoring Program and BASMAA.
[3] Refer to Appendix C-1 for additional details.
[4] a) Provided within *FY 06-07 Annual Report*
b) Provided on Program's website (www.scvurppp.org)

040582

SECTION 6

PESTICIDE MANAGEMENT

040583

6. PESTICIDE MANAGEMENT ACTIVITIES

INTRODUCTION

The goals and objectives of the Program's Urban Runoff Management Plan (URMP) include: effectively prohibiting non-storm water discharges to storm drains and watercourses; reducing pollutants in storm water discharges to the "maximum extent practicable" (MEP); and not causing or contributing to violations of water quality standards, as required by the Program's NPDES permit. The Program's approach to meeting these goals and objectives focuses on the use of best management practices (BMPs) for source control and pollution prevention.

The Program's approach to pesticide management has a similar focus on source control and pollution prevention. Program BMPs for pesticide management have included significant outreach efforts to residents, businesses, and municipal staff to provide education and achieve behavior changes relative to uses of pesticides and less toxic pest control methods. Outreach efforts have been supplemented by monitoring studies to define the problem; participation in regional monitoring and organizations to address pesticide issues; and development of performance standards and local pest management plans.

BACKGROUND

Diazinon and chlorpyrifos have been identified in recent studies as causing toxicity in local creeks and wastewater treatment plant effluent. In May 1999, the U.S. Environmental Protection Agency (USEPA) listed San Francisco Bay and 35 Bay Area urban creeks as impaired by diazinon under Section 303(d) of the Clean Water Act (CWA). The 303(d) listing triggered the need for USEPA and the State to develop Total Maximum Daily Loads (TMDLs) for the impaired waterbodies. The San Francisco Bay Regional Water Quality Control Board developed a draft TMDL work plan that calls for an urban creeks diazinon TMDL to be developed by June 2002, followed by an Implementation Plan by June 2003.

The Program's NPDES Permit Provision C.9.d. includes specific requirements for a pesticide control program. The Program and Co-permittees must develop and implement a pesticide control plan that addresses municipal uses of pesticides, including diazinon and other lower priority banned pesticides (e.g., chlordane, dieldrin, and DDT) and the use of these pesticides by others within municipal jurisdictions. The permit provision also requests that the Program continue to work with the Urban Pesticide Committee, BASMAA, and the California Stormwater Quality Association Pesticide Committee to assess impacts of pesticide use and encourage actions by other state and federal agencies.

As required by Permit Provision C.9.d., the Program developed a Pesticide Management Work Plan (Pesticide Plan) and submitted it to the Water Board on June 26, 2001. The submittal to the Water Board included a preliminary draft Pest Management Performance Standard and municipal pesticide use surveys completed by each Co-permittee. After receiving comments from Water Board staff, the final Pesticide Plan and Pest Management Performance Standard were provided in the Program's *FY 02-03 Work Plan* (dated March 1, 2002).

The purpose of the Pesticide Plan is to control pesticide-related toxicity in urban runoff, by minimizing pesticide use and reducing the amount of pesticides in storm water and landscape runoff to the maximum extent practicable. The Plan identifies the goals of each work plan element, actions, monitoring mechanisms and schedules. The Plan also identifies whether

actions will be implemented at the Program level, municipality level, or both. The details of municipality actions and schedules were provided in individual Co-permittee pest management plans submitted with the Co-permittees' FY 00-01 Annual Reports.

During FY 07-08, the Program continued to implement ongoing Pesticide Plan tasks (all one-time tasks have been completed). This Annual Report provides information on the progress of these ongoing tasks.

PAST PESTICIDE MANAGEMENT ACTIVITIES

The Program has, since its inception, actively participated in a number of activities aimed at understanding water quality problems in creeks and San Francisco Bay and reducing pollutants, including pesticides, to the MEP. The Program's earlier Work Plans and Annual Reports have presented the history of the Program's and Co-permittee's pesticide-related activities in the areas of monitoring and science, outreach and education, URMP implementation and correspondence with Water Board staff regarding these activities.

IMPLEMENTATION OF FY 07-08 PESTICIDE MANAGEMENT TASKS

Table 6-1 presents the status of the FY 07-08 ongoing pesticide management tasks. The table references tasks in the SCVURPPP Pesticide Plan (rev. 2/15/02) and the related performance standard and/or permit provision. More details on the accomplishments for and effectiveness of some of the key elements of the Pesticide Plan are provided below.

Outreach and Education

Highlights of Program PI/P activities specifically related to pesticide use that were accomplished in FY 07-08 include:

- IPM Store Partnership Program – The Program contributed funds to and participated in the Regional IPM Program and implemented the local IPM Partnership Program in 28 stores. The participating stores had in-store "Our Water Our World" displays and IPM fact sheets and stocked less-toxic products. Program staff routinely visited the participating stores for restocking literature racks and updating shelf-talkers. The Program contracted with Ms. Annie Joseph for store employee training. Ms. Joseph trained approximately 130 employees representing 11 stores. In addition, she worked with two participating stores, SummerWinds (Almaden Expressway, San Jose) and OSH (Prospect, San Jose) to implement the "Increasing Shelf Space for Less-Toxic Products" projects. Her work included: 1) meeting with pesticide buyers at stores; 2) motivating them to increase the store's inventory of less-toxic products; and 3) building endcaps showcasing these products. More details on this project are included in Appendix B-8.
- Media Advertising – Messages about less-toxic pest control were included within Watershed Watch advertising. The advertisement "Watch Out for Toxic Pesticides" was modified to include specific pest control tips. Advertisements were placed in local community newspapers and radio stations. Additional details on the media campaign are copies of advertisements are included within Section 3 and Appendix B-3.
- Outreach at Events – Program, Co-permittee and Watershed Watch staff conducted IPM outreach at seven events. More than 5,000 IPM fact sheets, brochures and giveaways (pencils, activity books, magnets, etc.) were distributed to the public.

- Going Native Garden Tour – The Program provided funding to support the Going Native Garden Tour held on April 20, 2008. Approximately 3,000 people attended the tour. The tour featured 42 gardens that demonstrated environmentally sensitive gardening practices.

- Outreach to Restaurants - The Program continued to provide copies of the "Don't Lay a Table for Pests" poster to County Health inspectors for distribution to food facilities.

- Santa Clara Valley Green Gardener Training - In FY 07-08, the Program piloted the first Santa Clara Valley Green Gardener Training. This is an educational initiative that brings quality training to professional landscapers, gardeners and landscape maintenance workers on how to "garden green." Each training session is of ten weeks, with trainees meeting weekly for a 2 hour class.

  The Green Gardener training program was first developed by the City and County of Santa Barbara, and has been successful in Santa Cruz and Monterey County as well. The Santa Clara Valley Urban Runoff Pollution Prevention Program (SCVURPPP), in cooperation with the Metropolitan Adult Education Program (MAEP), and the Master Gardeners of Santa Clara County collaborated to conduct the first Green Gardener training in Santa Clara County. SCVURPPP provided funds toward student fees, guest speaker fees, and supplies (soil probes, magnifying lenses, and Green Gardener patches). A fact sheet about the Green Gardener Program is included in Appendix B-10.

  The pilot Green Gardener Training was held from February 7 to April 17. The Program conducted outreach to inform local landscape maintenance businesses about the training. Outreach efforts included the following:

  - mailing letters and flyers to local landscaping businesses
  - advertising on a Spanish radio station
  - an article in the California Landscape Contractors Association (CLCA) newsletter
  - information published on the Watershed Watch website
  - training announcement in the Mercury News

  Twenty seven landscape maintenance professionals completed the first Santa Clara Valley Green Gardener training, and twenty more requested that they be placed on a waiting list for the next training.

  The Program also conducted outreach to inform residents about the availability of trained Green Gardeners. Outreach efforts included radio ads, distribution of flyers at outreach events, and creation of new pages about the Green Gardener Program on the Watershed Watch website.

  Copies of all Green Gardener outreach materials are included in Appendix B-10

Monitoring and Science

Monitoring and TMDL-related activities that were accomplished in FY 07-08 include:

- Continued to fund the Regional Monitoring Program ($168,530) and participate in the Regional Monitoring Program (RMP) steering and technical committees to focus RMP resources on 303(d) problem pollutants (including pesticides);
- Attended the Urban Pesticide Committee meetings and participated in discussions on pesticide impacts on local water bodies;

- Supported actions by the California Stormwater Quality Association (CASQA) to comment on and assist with USEPA's pesticide risk assessments. The Program's dues helped fund the CASQA consultant contract covering comment letters on risk assessments and other pesticide-related tasks.
- Completed the sixth year of sampling under SCVURPPP's Multi-Year Receiving Waters Monitoring Program, which included:
  - Attempting to detect the extent and magnitude of aquatic toxicity in Stevens Creek, by performing aquatic toxicity testing (*Cerio daphnia*) on samples collected at three sites in the Stevens Creek watershed during four sampling events (i.e., dry weather, following two storm events, and spring), with follow up chemical analyses when significant toxicity was observed;
  - Collecting bedded sediments, analyzing for pyrethroid pesticides, and performing sediment toxicity tests (*Hyallela azteca*) at four sites on Coyote Creek (mainstem) during dry weather and spring sampling events; three sites on Stevens Creek during four sampling events (i.e., dry weather, following two storm events, and spring); and two sites on Upper Penitencia Creek, two sites on Lower Penitencia Creek, and two sites on Lower Silver/Thompson Creek during the spring sampling event.

Additional information on monitoring and science activities, including results, is provided within Section 4; and the technical reports entitled *Watershed Monitoring and Assessment Summary Report: Coyote and Lower Penitencia Creeks and Tributaries* (Appendix C-2) and *Assessment of Water and Sediment Chemistry and Toxicity- Stevens Creek* (Appendix C-3).

URMP Implementation

Pest Management Performance Standard

The Program's 2004 Urban Runoff Management Plan (URMP) contains a model Pest Management Performance Standard (PMPS) approved by Water Board staff that: 1) limits the use of pesticides that are known to cause or contribute to impairment of receiving waters; 2) requires use of least-toxic pest control methods by municipal employees at municipally-owned facilities; and 3) meets other requirements of NPDES Permit Provision C.9.d. The PMPS includes guidance to Co-permittees on work plan tasks and legal authority needed to implement the standard, and BMPs for protecting water quality if pesticides must be used after implementing an IPM program. The Co-permittees have updated their local URMPs to include the PMPS and have been implementing the PMPS since FY 01-02.

Local Pest Management Plans

Co-permittees completed their local pest management work plans and submitted them as part of their FY 00-01 Annual Reports (September 15, 2001). Implementation of these Work Plan tasks began in FY 01-02. Efforts to date are described in Co-permittees FY 07-08 Annual Reports.

EVALUATION OF EFFECTIVENESS

Outreach and Education

Outreach and education tasks related to pesticide reduction are evaluated in Section 3 and Table 3-1.

Monitoring and Science

The Program and Co-permittee staff completed all environmental and programmatic monitoring tasks that were planned for FY 07-08. This included conducting, funding and/or participating in local and regional monitoring activities. A full description of these activities and an assessment of how effective these activities were in meeting monitoring program objectives are included in Section 4 – Monitoring Activities.

URMP Implementation

Program staff successfully worked with the Pest Management AHTG, Water Board staff and other interested parties to complete a revised version of the Pest Management Performance Standard (PMPS) that was acceptable to all parties involved. The Co-permittees are now in the process of implementing the PMPS. The Co-permittees have evaluated their local pest management efforts during FY 07-08 in their individual Annual Reports.

Table 6-1
Status of FY 07-08 Pesticide Management Tasks[1]

Task[1]	Updated Schedule	Status
I. Municipal Pesticide Use		
I.A.1 Develop and implement a process for tracking pesticide use on municipally owned property (PS#8). Include in the process reporting and justification for the use of OP pesticide and BMPs employed during OP pesticide use.	Annual Reporting	**Completed/Ongoing** – The Pest Management Performance Standard includes a suggested reporting process, which the Co-permittees implemented for the FY 01-02 Annual Report. The first year was focused on reporting use of organophosphate pesticides, particularly chlorpyrifos and diazinon. For the FY 02-03 Annual Report, Water Board staff requested Co-permittees to submit pesticide use summaries and not actual data. This practice was continued for the FY 07-08 Annual Report.
Monitoring Mechanism 1.A.1 Document completion of tasks in annual reports. Use pesticide-tracking process to document pesticide use.	Annually	**Completed/Ongoing** – Pesticide use summaries are included in Co-permittee FY 07-08 Annual Reports.
II. Public Education and Outreach		
II.A.1 Implement the Watershed Education & Outreach (WE&O) Campaign targeting the general public and include messages about less-toxic pest control and proper disposal. The Campaign will include extensive media campaign with South Bay English- and Spanish-language TV and radio stations.	Began development FY 00-01; Ongoing through 07-08.	**Completed/Ongoing** – Messages about less-toxic pest control were included within Watershed Watch advertising. Advertisements were placed in local community newspapers and radio stations.

[1] The status of the complete set of Program Pesticide Plan tasks is presented in Table 6-1 of the Program's *FY 03-04 Annual Report*.

Table 6-1, continued
Status of FY 07-08 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
II.A.2 Develop simple, effective, targeted messages regarding proper pesticide use and disposal, effects on water quality, and IPM.	Ongoing as needed	**Completed/Ongoing** — The advertisement "Watch Out for Toxic Pesticides" was modified to include specific pest control tips. Additional details are included within Section 3 of this Annual Report.
II.A.3 Prepare appropriate outreach materials (e.g., fact sheets or a consumer guide regarding pest control services) to address target groups.	Ongoing as needed	**Completed/Ongoing** -- Developed through BASMAA participation. The Program continues to participate in BASMAA's Regional IPM Partnership and Media Relations efforts to develop new IPM fact sheets and press releases. The Program purchased and distributed large quantities of the fact sheets.
II.A.4 Identify and attend community events and distribute outreach materials. (Program will attend events strategic to the WE&O Campaign.)	Annually	**Completed/Ongoing** -- Program staff, Co-permittee representatives and Watershed Watch consultant staff conducted IPM outreach at seven community events during FY 07-08. The IPM display was used at some events. OWOW fact sheets and brochures (e.g., "Grow It!" Guides,"Backyard Bugs" and "Pests Bugging You?") were distributed. (See Section 3 of this Annual Report for details).
II.A.6. Create, update, and publicize web sites to promote IPM and reduce pesticide use.	Completed 6/02; Update as needed.	**Completed/Ongoing** -- The Watershed Watch website was launched in September 2001 and is continually updated. The website directs browsers to call the toll-free number to the Program office for information on less-toxic pest control. A web page specifically for IPM was completed in June 2002 and is updated regularly. The web page also includes many pages in Spanish and links to other sites with information on IPM.

Table 6-1, continued
Status of FY 07-08 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
II.A.7 Coordinate with the Master Gardeners program and use their services to train residents. Provide IPM training and information on water quality impacts of pesticide use to Master Gardeners as needed.	Ongoing as appropriate	**Completed/Ongoing** – Since FY 01-02, Program staff has worked with Master Gardeners and San Jose Community Garden staff to conduct IPM training programs for community gardeners. From FY 02-03 to FY 04-05, the Program conducted community IPM workshops in coordination with Watershed Watch, United Neighborhoods, Guadalupe Gardens, the Santa Clara County Household Hazardous Waste Program and Master Gardeners. In FY 07-08, the Program collaborated with the Master Gardeners to implement the pilot Santa Clara Valley Green Gardener Training Program.
II.A.8 Create and/or publicize existing IPM demonstration gardens (such as the garden at the San Francisco Bay Wildlife Refuge in Alviso).	Began FY 01-02; Ongoing	**Completed/Ongoing** – Since FY 01-02, the Watershed Watch Campaign has partnered with the Don Edwards San Francisco Bay Wildlife Refuge at Alviso. The Alviso site has a pesticide-free native plant demonstration garden. Workshops at this location are promoted on the Watershed Watch website. Since FY 03-04, the Program has been providing promotional support for the Going Native Garden Tour. In FY 07-08, approximately 3,000 people attended the tour which featured 42 gardens. Featured gardens demonstrate environmentally sensitive gardening practices which include the use of native plants, water conservation, landscaping to prevent urban runoff, reducing pesticide and fertilizer use, etc.

Table 6-1, continued
Status of FY 07-08 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
II.A.9 Continue to fund BASMAA Regional Media Relations Campaign featuring pitches to Bay Area media and responses to breaking news on pesticide-related topics.	Ongoing.	**Completed/Ongoing** – SCVURPPP funded this campaign as part of its BASMAA baseline dues for FY 07-08. Program staff participated in meetings of the work group and reviewed draft products. (See Section 3 of this Annual Report for additional details)
II.A.11 Identify consumer and business publications that could include articles about IPM or less toxic pest management, submit articles or letters to the editor, and encourage them to print them.	Ongoing	**Completed/Ongoing** -- An article describing impacts of pesticide use on water quality and containing hints for pesticide-free pest control was developed in December 2004 and sent to select publications. The article was included in the April 2005 issue of the *Tideline* magazine and was also placed on the Friends of Guadalupe Gardens website in October 2004. In January 2008, an article on the Santa Clara Valley Green Gardener Training was published in the California Landscape Contractors Association (CLCA) newsletter.
II.A.12 Implement a "Pesticide User Outreach" project targeting residential and commercial users.	FY 01-02 through FY 07-08	**Completed/ Ongoing** -- A Pesticide User Outreach Work Plan is developed and implemented each year, as Program budget allows. Tasks implemented include the media advertising campaign (as part of the Watershed Watch Campaign), local IPM Store Partnership Program, restaurant outreach, IPM workshop, IPM outreach at events, IPM outreach to special districts and development of an outreach article.

Table 6-1, continued
Status of FY 07-08 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
II.A.13 Provide information on less toxic pest control (e.g., IPM techniques, municipal IPM policies, model contract language, training opportunities, etc.) to neighboring special districts (e.g., Valley Transportation Authority, sanitary and utility districts, open space districts, vector control districts, and school districts) as appropriate.	FY 01-02 through FY 04-05	**Completed** – VTA, open space and vector control district staff were invited to the Program's IPM Workshop in March 2003 and provided copies of the Program's Pest Management Performance Standard. In January 2005, a letter explaining the impact of pesticide use on urban runoff was developed and mailed (along with IPM fact sheets) to all special districts within the Co-permittees' jurisdiction. The cover letter and list of special districts were included in the FY 04-05 Annual Report.
Monitoring Mechanism II.A.1. Document or estimate numbers of residents reached by outreach efforts, including events, web site promotion, municipal employee outreach, and media advertising. Monitor responses to outreach efforts through documentation of calls to the Program's general and watershed campaign hotlines.	Annually	**Completed/Ongoing** -- See Section 3 of this Annual Report.
Monitoring Mechanism II.A.2. Survey local public attitudes and behavior to evaluate the success of outreach efforts and the saturation of outreach messages. (Program will conduct countywide survey as part of evaluation of WE&O Campaign. Program may also conduct surveys to evaluate effectiveness of specific projects.)	FY 03-04 and FY 04-05	**Completed/Ongoing** – A Countywide survey was conducted to evaluate the success of the WE&O Campaign. The evaluation report was included in the Program's *FY 03-04 Annual Report*. Some of the survey questions tracked the publics' knowledge about various pollutants (including pesticides), which affect the water quality in San Francisco Bay. Nineteen percent of the respondents in 2003 say that pesticides affect the water quality of the Bay compared to seven percent in 1991. Approximately 23 percent of residents say that they use less-toxic ways to control pests in their home and garden. Details of the stores partnership program evaluation and IPM outreach events are described in Section 3.

Table 6-1, continued
Status of FY 07-08 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
		In October and November 2004, the BASMAA Regional IPM Committee conducted a customer intercept survey to evaluate the OWOW Store Partnership Project. The survey included interviewing 375 customers at 5 stores in Santa Clara County. The evaluation indicates that: • Overall, 31% of the people interviewed were aware of the Our Water Our World promotion. • The fact sheet garnered the highest recognition of the four items (16%), followed by the logo (15%). • Of the people who had identified at least one of the promotional items in Q3 (n=104), 82 percent said that these items helped them identify less-toxic products or methods. The detailed survey report was included in the FY04-05 Annual Report.
II.B.1 Continue to fund and participate in the BASMAA Regional IPM Partnership.	Ongoing	**Completed/Ongoing** -- SCVURPPP funded this program as part of its BASMAA baseline dues for FY 07-08. Program staff participated in meetings of the work group and reviewed draft products. See Section 3 for details.
II.B.2 Continue to implement cost-effective elements of the IPM Store Partnership Program, as identified in the work plan developed for Action Item II.A.12. Create and provide fact sheets and other materials to pesticide retailers to facilitate point-of-purchase outreach. Visit stores as necessary to ensure ongoing participation.	Ongoing	**Completed/Ongoing** – The Program continued to implement the IPM store partnership program in 28 stores in Santa Clara Valley. Training on selling less-toxic products was provided to 132 employees at 11 stores. A summary of evaluations received is included within Appendix B-8 of this Annual Report

Table 6-1, continued
Status of FY 07-08 Pesticide Management Tasks

Task[1]	Updated Schedule	Status
II.B.3 Offer IPM training opportunities to pesticide retailer employees through coordination with Master Gardener-taught educational programs. (See Action II.A.7.)	Ongoing	**Completed/Ongoing** – The Program contracted with Ms. Annie Joseph to provide training on selling less-toxic products to store employees (See Tasks II.A.12 and Section 3).
Monitoring Mechanism II.B.1. Document number of participating stores, materials distributed and employees trained. Evaluate the cost-effectiveness of the IPM Store Partnership Program each year. Implement the evaluation component of the Pesticide User Outreach work plan each year.	Annually	**Completed/Ongoing** -- See Section 3 and Table 3-1 of this Annual Report.
III. Pest Control Operators (PCOs)		
III.A.3. Develop and conduct accredited workshops for PCOs that focus on IPM techniques.	Done	On November 4, 2003 the Program conducted an IPM workshop for PCOs. In FY 07-08, the Program conducted the first Santa Clara Valley Green Gardener Training. This is an educational initiative that brings quality training to professional landscapers, gardeners and landscape maintenance workers on how to "garden green." Each training session lasts ten weeks, with trainees meeting weekly for a two-hour class. Based on the IPM content of the course, three trainees, who are PCOs, obtained 18 hours of general credit CEUs from the Continuing Education Center for Pest Management. Additional details are included in Section 3 and Section 6 of this Annual Report.

Table 6-1, continued
Status of FY 07-08 Pesticide Management Tasks

Task[2]	Updated Schedule	Status
III.B.1. Identify and work with PCO trade organizations to develop industry standards for BMPs to protect water quality, through participation in UPC and BASMAA.	Ongoing	**In Progress** – Program will work with the UPC and a consultant to accomplish this task.
Monitoring Mechanism III.A.1. Document the numbers of PCOs receiving presentations and/or training and pesticide use by PCOs on municipal property.	Done	Nineteen PCOs attended the November 4, 2003 training. Twenty-seven landscape maintenance professionals completed the first Santa Clara Valley Green Gardener training, and twenty more requested that they be placed on a waiting list for the next training.
IV. Commercial Businesses		
IV.A.1 Research reports and surveys of commercial business pesticide use and other stormwater programs' and POTWs' efforts to address this issue. Develop recommendations and a work plan (including an evaluation component) to provide outreach on less toxic pest control to target businesses in the South Bay, as appropriate and cost-effective.	FY 02-03 through FY 04-05	**Completed/Ongoing** – The SCVURPPP IPM Work Group decided to use San Francisco's "Setting a Table for Pests" poster for outreach to restaurants. This item was approved by the Santa Clara County Department of Environmental Health inspectors for inclusion in their new food facilities packet for distribution to new or remodeled food facilities during routine inspections. Copies of this poster are being provided to County Health Inspectors since FY 02-03.
IV.A.2 Develop and implement education programs that target commercial businesses, per recommendations from Action IV.A.1	Ongoing;	**Completed/Ongoing** – As described above, the Program is distributing the "Don't Lay a Table for Pests" poster to new or remodeled food facilities through County Health Inspectors. Beginning FY 03-04, the Program has also focused on educating employees at local hardware stores and nurseries on selling less-toxic products to consumers.

[2] The status of the complete set of Program Pesticide Plan tasks is presented in Table 6-1 of the Program's *FY 03-04 Annual Report*.

Table 6-1, continued
Status of FY 07-08 Pesticide Management Tasks

Task[2]	Updated Schedule	Status
Monitoring Mechanism IV.A.1. Document outreach efforts targeting businesses, as recommended in the work plan to be developed by the Program. Implement the evaluation component of the work plan.	Ongoing	County Health Inspectors distributed approximately 520 copies of the "Don't Set a Table for Pests" poster during FY 07-08.
V. Household Hazardous Waste Collection		
V.A.3 Work with HHW collection agencies to support, enhance, and help publicize programs for proper pesticide disposal (PS #7).	Ongoing; began FY 00-01	**Ongoing** – In FY 07-08, the Watershed Watch Campaign continued to educate consumers on proper pesticide disposal through outreach events and distribution of educational material. The County HHW Program collected 1,000 pounds of dursban and diazinon in FY 07-08. In addition, the County HHW Program also managed over 280,750 pounds of other poisons. In FY 05-06, the Program contacted all participating stores to ensure that employees were aware of the stop-sale date for diazinon. This follow-up indicated that all stores were aware of the stop-sale date and had taken diazinon off their shelves for proper disposal.
Monitoring Mechanism V.A.1. Document that household hazardous waste collection programs adequately serve residents and businesses and that any exchange programs do not exchange organophosphate or banned pesticides.	Annually	County HHW -- No residents were turned away with the exception of those who brought munitions, explosives or radioactive waste. Collection facilities and events have expanded in number. The County does operate a material reuse program that allows residents to take usable items (e.g., paint, left by other residents). This program does not include banned pesticides exchange. Palo Alto – No Palo Alto residents were turned away.

Table 6-1, continued
Status of FY 07-08 Pesticide Management Tasks

Task[2]	Updated Schedule	Status
		Palo Alto does not have an exchange for the items brought for disposal.
Monitoring Mechanism V.A.2. Document quantities of pesticide disposal at household hazardous waste collection facilities (only possible on a county-wide basis at present).	Annually	County HHW – Although the grant award to conduct public education on dursban and diazinon has ended, the County HHW Program collected 1,000 pounds of these two pesticides Palo Alto -- 57,428 pounds of pesticides were collected from residents during FY 07-08. This represents an decrease from FY 07-08 (62,988 pounds were collected in FY 07-08).
VI. County Agricultural Commissioners – All Tasks Completed		
VII. New Development		
VII.A.4 Develop and propose enhanced reporting format for documenting use of pesticide reduction measures at development sites. (Draft Permit Provision C.3.n.)	Annual Reports	**Completed/Ongoing** -- A section for documenting pesticide reduction measures required of project applicants is included in the Program's model data collection form for collecting other development project data prior to implementing C.3. (i.e., impervious surface area). The reporting form included in the Planning Procedures Performance Standard for annual reporting of information on Group 1 projects allows Co-permittees to more specifically list the pesticide reduction measures required.

Table 6-1, continued
Status of FY 07-08 Pesticide Management Tasks

Task[3]	Updated Schedule	Status
VIII. Monitoring and Science		
VIII.A.1. Continue financial support of the Regional Monitoring Program (RMP). Continue to actively participate in the RMP advisory and technical committees to focus RMP resources on 303(d) problem pollutants, including OP pesticides.	Annually	**Completed/Ongoing** – The Program contributed $168,530 to the RMP in FY 07-08.. Program staff attends the RMP Technical Review Committee meetings and prepare meeting summaries for Management Committee.
VIII.A.2. Work with Water Board staff to refine the problem statement for the diazinon TMDL and determine data needs, with assistance from the BASMAA Pesticide Work Group.	FY 01-02 and beyond	**In Progress** – Program staff attend the Urban Pesticide Committee meetings at which the diazinon TMDL has been discussed. Program staff also worked on the TMDL with Water Board staff as part of the Clean Estuary Program (CEP).
VIII.A.3. Participate in a coordinated regional plan to collect data for the diazinon TMDL, as defined in the RWQCB/BACWA/BASMAA MOU.	FY 01-02 through FY 05-06	**Ongoing** – The Program participated in a regional data collection plan through the CEP.
Monitoring Mechanism VIII.A.1. Submit monitoring data and reports to the Regional Water Quality Control Board and other interested parties (such as USEPA) per the reporting schedule in the Program's Multi-Year Receiving Waters Monitoring Program.	FY 02-03 and beyond	**Completed/Ongoing** – The Program completed and submitted its fifth Watershed Monitoring and Assessment Summary Report in September 2007 (See Appendix C-2 of the *FY 06-07 Annual Report*).

[3] The status of the complete set of Program Pesticide Plan tasks is presented in Table 6-1 of the Program's *FY 03-04 Annual Report*.

Table 6-1, continued
Status of FY 07-08 Pesticide Management Tasks

Task[4]	Updated Schedule	Status
IX. Regional, State, and Federal Coordination		
IX.A.1. Support actions by the California Stormwater Quality Task Force (now California Stormwater Quality Association) Pesticide Committee to comment on and assist with USEPA's pesticide risk assessments.	Ongoing	**Completed/Ongoing** – SCVURPPP provided funding to CASQA's consultant contract that funded Geoff Brosseau's and Kelly Moran's efforts to review risk assessments and provide comments on behalf of the CASQA member agencies.
IX.A.2. Through participation in the UPC and CASQA, work with the U.S.EPA, the California Department of Pesticide Regulation, and the pesticide industry to eliminate uses of pesticides likely to enter surface water from those listed on product labels.	Ongoing	**Ongoing** – Program staff regularly participates in the UPC and CASQA and support efforts to eliminate uses of pesticides that cause risk to water quality. The CASQA General Meeting on May 9, 2008 addressed "True Source Control" and included apresentation on pesticide regulation as a means of source control. The CASQA Pesticide Subcommittee provides regular updates to the CASQA members
Monitoring Mechanism IX.A.1. Document correspondence with U.S. EPA and the California Department of Pesticide Regulation and successes in achieving changes in registered uses and labeling that protect water quality.	Annually	**Completed/Ongoing** – Copies of correspondence sent by the CASQA Pesticide Committee, with support from SCVURPPP, are provided to the Management Committee and the Water Board. Successes related to protection of water quality were the banning of chlorpyrifos, limiting uses of diazinon and convincing EPA that its Offices of Pesticides and Water needed to coordinate their efforts.
IX.B.1. Participate in the activities of the Bay Area Stormwater Management Agencies Association, the California Storm Water Quality Association, and the Urban Pesticide Committee and communicate Program efforts.	Annually	**Completed/Ongoing** – Program staff regularly attended BASMAA, CASQA (General and Executive Committee) and UPC meetings to communicate Program efforts (see Appendix A-2 for list of meetings attended during FY 07-08).

[4] The status of the complete set of Program Pesticide Plan tasks is presented in Table 6-1 of the Program's *FY 03-04 Annual Report*.

Table 6-1, continued
Status of FY 07-08 Pesticide Management Tasks

Task[4]	Updated Schedule	Status
IX.B.2. Collaborate in technical studies to support TMDL development and implementation. (See Action VIII.A.3.)	As Needed.	**Completed/Ongoing** – The Program participated in a regional effort (know as the Clean Estuary Partnership) to develop TMDLs.
Monitoring Mechanism IX.B.1. Document attendance by Program staff at regional and statewide meetings and completion of regional and statewide efforts.	Annually	**Completed/Ongoing** – Appendix A-2 contains a list of meetings attended by Program staff during FY 07-08. Meeting summaries are provided within Management Committee packets.
X. Review and Revision of Work Plan		
X.A.1. Review and continuously improve the goals, actions, and monitoring mechanisms of the work plan considering results of self-evaluations, comments from Water Board staff and other interested parties, and results of local performance review meetings if any.	Annually- As Needed	**Completed/Ongoing** – The Pesticide Plan was revised twice in FY 01-02 based on comments from Water Board staff and interested parties (specifically RWQCB letters dated 8/15/01 and 12/21/01) and submitted to the Water Board on October 15, 2001 and March 1, 2002, respectively. The Plan will be updated at the beginning of the next permit cycle to correspond to the reissued permit requirements. Task evaluations are provided in Sections 3, 6, and 8 of this Annual Report.
Monitoring Mechanism IX.A.1. Complete revised work plan that incorporates continuous improvement items, and report on completion of work plan tasks.	Annually	**Completed/Ongoing** – See response to Action X.A.1. above and Section 6 of this Annual Report.

MERCURY ACTIVITIES

040603

040604

SECTION 7

MERCURY POLLUTION PREVENTION ACTIVITIES

040605

7. MERCURY POLLUTION PREVENTION ACTIVITIES

INTRODUCTION

Mercury has been found in sediments in South San Francisco Bay and the Guadalupe River Watershed. Some types of fish caught in the Bay contain mercury and other pollutants at concentrations that may threaten the health of humans consuming those fish. In response, the California Office of Environmental Health and Hazard Assessment issued an interim fish consumption advisory. The U.S. Environmental Protection Agency (EPA) has listed the Bay and the Guadalupe River Watershed (including the Guadalupe River, Alamitos Creek, Guadalupe Creek, Calero Reservoir, and Guadalupe Reservoir) as impaired by mercury under Section 303(d) of the Clean Water Act. In accordance with Section 303(d), the Water Board is required to establish a Total Maximum Daily Load (TMDL) for mercury in the South San Francisco Bay and the Guadalupe River Watershed.

Permit Provision C.9.c. requires the Program to address the impairment by developing and implementing a mercury pollution prevention plan. The Program developed a Mercury Pollution Prevention Plan (Mercury Plan) consistent with this Provision. The Mercury Plan was submitted to the Water Board on March 1, 2002 as part of the Program's FY 02-03 Work Plan. This section describes and evaluates Mercury Plan tasks completed during FY 07-08.

MERCURY POLLUTION PREVENTION PLAN

The Mercury Plan is based on the premise that a Bay area-wide approach (and coordination) in addressing mercury pollution prevention will be most successful. For this reason, many of the actions identified in the Mercury Plan are for Program-level participation in regional efforts. These efforts are supplemented by countywide and local efforts.

The Mercury Pollution Prevention Plan addresses five general goals:

I. **Municipal Use of Mercury-Containing Products** – Eliminate all unnecessary municipal use of mercury-containing products and establish proper disposal methods for products that cannot be eliminated.

II. **Household Hazardous Waste Collection** – Provide mercury-containing product disposal services through household hazardous waste (HHW) collection programs for residents and small businesses, and encourage use of these programs.

III. **Monitoring and Science** – Participate in coordinated monitoring efforts to support mercury TMDL development and implementation, including assessment of air pollution sources of mercury and concentrations of mercury in sediment.

IV. **Regional, State, and Federal Coordination** – Actively participate in regional, state and federal coordination efforts to achieve a reduction in the amount of mercury in urban runoff and air emissions.

V. **Public Education and Outreach** –Increase awareness of proper disposal of mercury-containing products and available non-mercury containing alternatives.

The Mercury Plan identifies actions that will be implemented at the Program level, municipality level, or both; and provides the schedule for initiation and/or completion of Program-level actions. The details of municipality actions and schedules are included in the individual Co-permittee work plans and/or annual reports, as appropriate.

FY 07-08 MERCURY POLLUTION PREVENTION ACTIVITIES

The status of the Program's FY 07-08 Mercury Plan tasks is summarized in Table 7-1. Highlights of Program accomplishments, as developed and/or implemented by the Mercury Pollution Prevention Plan AHTG, PIP AHTG, Program staff and municipalities are provided below.

Guidelines for Reduction and Management of Mercury-Containing Products

During FY 02-03, the Mercury Pollution Prevention Plan AHTG and Program staff developed guidelines for the reduction and management of mercury-containing products identified for virtual elimination. The goals of the *Guidelines for Mercury-Containing Products Reduction and Management* are to work towards the virtual elimination of mercury from controllable sources that may affect urban runoff due to agency operations; and establish proper recycling and disposal methods for products that cannot be eliminated due to technological, safety or economic factors. Co-permittees continued implementing the *Guidelines for Mercury-Containing Products Reduction and Management* in FY 07-08.

Mercury Pollution Prevention Outreach Workgroup

In December 2002, Program staff established a new Work Group called the Mercury Pollution Prevention Outreach Work Group. This Work Group implements the Public Education and Outreach elements of the Mercury Plan by organizing a public education, outreach and participation program designed to reach residential and commercial users of mercury-containing products.

FY 07-08 Tasks

Since FY 03-04, the Program has been coordinating its mercury outreach with the County Household Hazardous Waste (HHW) Program. The Program provided funds to develop and conduct media advertising to meet the requirements of a $300,000, three-year California Integrated Waste Management Board (CIWMB) grant awarded to the County HHW Program. Under this grant, the County HHW Program developed partnerships with local hardware stores for collecting spent fluorescent lamps. The Grant ended in March 2006; however, the store partnership program continued.

In FY 07-08 the Program's Watershed Watch Campaign ran the "Watch Out for Mercury Pollution "advertisements to educate people on the proper disposal of fluorescent bulbs, and to inform them of fluorescent bulb drop-off locations. The advertising campaign ran from January to April 2008 and was coordinated with advertising done by the County HHW Program and the Santa Clara County Integrated Waste Management Division. The County HHW Program ran print advertisements during the same time period and the County IWM Division ran cable TV advertisements.

Details of the outreach campaign are in the FY 07-08 detailed Watershed Watch Campaign and Media Report included within Appendix B-3.

Monitoring and Science

The Santa Clara Basin Watershed Management Initiative (SCBWMI) is serving as the stakeholder forum for the development of the Guadalupe River TMDL Report for Mercury. The Guadalupe River Watershed encompasses parts of San Jose, Los Gatos, Campbell, Monte Sereno and Santa Clara. The Program is a stakeholder in the Guadalupe River TMDL process. The Santa Clara Valley Water District (SCVWD) is taking the lead role in the TMDL development process by solely funding the $900,000 study and serving as Co-Chair of the TMDL Work Group and Stakeholder Group. Program staff is also participating in the TMDL process.

Water Board staff produced the Guadalupe River Watershed Mercury TMDL Project Report (January 2006). Program staff, along with other Co-permittee staff, have reviewed the report and attended work group meetings to discuss the draft report and implementation plan. A draft Basin Plan amendment and supporting Staff Report were released for public review and comment on February 29, 2008. The documents establish new water quality objectives for waters in the Guadalupe River Watershed, incorporate a TMDL and include an implementation plan. SCVURPPP submitted a comment letter to the Water Board. The Water Board held hearings on the proposed Basin Plan Amendment in May 2008. The TMDL is scheduled for adoption in late 2008.

The Program continued to provide financial support to the Regional Monitoring Program (RMP). In addition, Program and Co-permittee staff actively participates in RMP Technical Review Committee (TRC) and Steering Committee (SC) meetings, Work Group meetings and provides meeting summaries to the Management Committee. Staff reviewed available draft reports and provided input on mercury-related studies, including those described in Section 4.

The Water Board issued a new NPDES permit, Order R2-2007-0077, to implement the San Francisco Bay Mercury TMDL adopted by the Water Board on August 9, 2006. This Watershed Permit for Municipal and Industrial Wastewater Discharges of Mercury to San Francisco Bay; Counties of Alameda, Contra Costa, Solano, Napa, Sonoma, Marin, San Francisco, San Mateo and Santa Clara was adopted November 2007. The Sunnyvale, San Jose/Santa Clara and Palo Alto POTWs must comply with the requirements in this Order.

In addition, the Program's *Multi-Year Receiving Waters Monitoring Plan* includes collecting and analyzing receiving water samples for mercury. Refer to Section 4- Monitoring Activities for additional details regarding mercury monitoring activities.

Program staff is tracking the results of the "historic" meeting between the State Air Resources Board and State Water Quality Control Board in February 2006. During the meeting, the idea of cross media (water and air) coordination in the investigation of the aerial deposition of pollutants from air to land was discussed. Once deposited on land, pollutants can enter water bodies through stormwater runoff. The priorities of future work groups will be to identify an inventory of the original sources of various pollutants and develop an action plan to address those pollutants at the source. Future Water Board-Air Board meetings are anticipated, however, none occurred in FY07-08.

U.S. Department of Energy (DOE) Office of Building Technology's Vision 2020 Lighting Technology Roadmap

Since the Mercury Plan's first year of implementation, Program staff has been tracking the progress made by the U.S. Department of Energy (DOE) office of Building Technology's Vision 2020 Lighting Technology Roadmap in accordance with Mercury Plan Action IV.F. DOE's Building Technologies Program continues to move forward on their Vision 2020 Roadmap. Progress includes seven strategies to address the challenges of transforming the lighting marketplace and developing new technologies that enhance lighting quality, efficiency and cost effectiveness. The Draft Multi-Year Program Plan is in the process of being updated for 2008. The draft plan, along with other information resources, is available at www1.eere.energy.gov/buildings/.

EVALUATION OF PROGRAM EFFECTIVENESS AND NEXT STEPS FOR MERCURY PLAN

All of the one-time, specific tasks identified in the Mercury Plan have been completed. The Program continues to implement the ongoing activities in the Mercury Plan. During FY 07-08, there was progress made on tasks related to public outreach and regional partnerships. Significant outcomes from the FY 07-08 Work Plan and the primary mercury pollution prevention activities planned for FY 08-09 include:

Guidelines for Reduction and Management of Mercury-Containing Products: In FY 03-04, Co-permittees began strategizing on how to implement the Program's Guidelines for reducing and managing mercury-containing products identified for virtual elimination and began implementation in FY 04-05. Implementation will continue in FY 08-09.

Mercury Pollution Prevention Outreach:

The mercury outreach media campaign included radio ads to promote the County HHW retail store collection locations as described in Appendix B-3.

During FY 07-08, the CoHHW Program collected 496,484 feet (124,121 pounds[1]) of fluorescent bulbs at 30 retail drop-off locations within Santa Clara County[2].This is more than a 40% increase from FY 06-07. In FY 06-07, the CoHHW Program collected 353,694 feet (88,423 pounds) of fluorescent bulbs.

It is estimated that approximately 1.44 kilograms of total mercury was diverted (i.e., discharge to the environment was avoided) to recycling from fluorescent lamps collected by the County HHW Program[3] in FY 07-08.

During FY 07-08, the HHW Program also collected:

[1] Since fluorescent light bulbs come in different sizes, quantities are reported in terms of the total length (feet) of tubes collected. One four-foot light tube weighs approximately one pound.
[2] Information regarding the collection of mercury containing products (e.g., fluorescent bulbs, thermostats, thermometers and other products) during FY 07-08 obtained from a memorandum *entitled Fiscal Year 2007/2008 HHW Program Update* (dated July 21, 2008). This memorandum was prepared by Wendy Fong, Household Hazardous Waste Program, County of Santa Clara.
[3] Based on a 1999 National Electrical Manufacturers Association survey entitled *Environmental Impact Analysis: Spent Mercury-Containing Lamps, January, 2000 (Fourth Edition)*, the average four-foot fluorescent lamp contains about 11.6 milligrams (mg) of mercury. For the sake of estimating the amount of mercury sent for recycling, approximately 124,121 four-foot fluorescent lamps were collected. As a result, 1.44 kilograms of total mercury diverted (i.e., discharge to the environment was avoided) to recycling is a rough estimate.

- 1,295 pounds of elemental mercury (includes thermostats, thermometer and other products), an increase of 1% over FY 06-07;
- 100,100 pounds of household batteries, an increase of 52% over FY 06-07; and
- 370 mercury-containing thermometers at five thermometer exchange events.

These data indicates the success of the coordinated mercury outreach media campaign conducted by the Program, the County HHW Program and the County IWM Division.

In FY 08-09, the Program will continue to conduct advertising to promote the fluorescent bulbs drop-off locations, as municipal budgets/resources permit.

Coordination Efforts with Regional Organizations: The RMP Steering Committee and RMP Technical Review Committee meetings and Program staff review of several draft products are recent highlights of the Program's coordination efforts with local and regional organizations. Program staff will continue to attend Regional Monitoring Program (RMP) Steering Committee and Technical Review Committee meetings.

SCVURPPP Co-permittees, San Jose, Palo Alto and Sunnyvale fund and support activities implemented by the Bay Area Pollution Prevention Group (BAPPG). In FY 07-08, BAPPG conducted the following activities for mercury pollution prevention outreach:

- Thermometer Exchange Event Coordination – Coordinated a group buy of thermometers for conducting thermometer exchanges during Pollution Prevention week. In May – July 2007 twenty agencies and organizations collected 4,264 thermometers, 21 thermostats and 16 pounds of bottled elemental mercury at 30 one-day and ongoing events. Another coordinated event is planned for Pollution Prevention week in September 2008.
- Update Amalgam Separator List – In 2008 updated the list of ISO-certified amalgam separators for use by Bay Area agencies in implementing their Mandatory Amalgam Separator Programs. The List is available on the BAPPG Yahoo! Groups site for all members.

Table 7-1
Status of FY 07-08 Mercury Pollution Prevention Tasks[1]

Task	Status
I. Municipal Use of Mercury-Containing Products	
I.F. Implement guidelines developed under Action I.E.	**On-going** - Co-permittees began implementation in FY 03-04.
II. Household Hazardous Waste Collection	
II.A. Provide mercury-containing products disposal services for residents and small businesses.	**On-going** - Disposal services are provided by the County HHW Program, Palo Alto Regional Water Pollution Control Plant and the Sunnyvale Materials Recovery and Transfer (SMaRT®) Station.
II.C. Implement guidelines developed under Action II.B.	**On-going** - Co-permittees began implementation in FY 03-04.
II.F. Work with HHW collection agencies to develop and help publicize fluorescent light recycling program.[2]	**Completed/Ongoing** – Began effort in FY 02-03. The Mercury Pollution Prevention Outreach Workgroup collaborated with the Santa Clara CoHHW Program for implementing the outreach component in the Program's two-phase fluorescent light tube (FLT) recycling campaign. The first phase of the campaign, which was developed in FY 02-03, targeted residents. The second phase, completed in FY 03-04, targeted small businesses. The main objective of both phases was to show the negative health and environmental impacts of mercury and the methods available to the public for the proper disposal of FLTs. Since FY 04-05, the Program has been conducting outreach to promote the free fluorescent bulb drop off locations provided by the County HHW Program.
III. Monitoring and Science	
III.A. Continue financial support of the Regional Monitoring Program (RMP), including the Mercury Deposition Network Pilot Study and	**On-going** - Program and Co-permittee staffs actively participated in RMP TRC and SC meetings and provided meeting summaries to

[1] Completed Mercury Pollution Prevention Tasks are described in previous Annual Reports (Table 7-1).
[2] Action II.F. is being conducted in conjunction with Public Education and Outreach Actions.

Table 7-1
Status of FY 07-08 Mercury Pollution Prevention Tasks[1]

Task	Status
the Clean Estuary Partnership (CEP). Continue to actively participate in the RMP Steering Committee (SC) and Technical Review Committee (TRC).	Management Committee. Staff reviewed available reports and provided comments. Draft reports included *2008 Draft RMP Monitoring Plan.* Both Program and Co-permittee staff were actively involved with the CEP technical and management committees; and review of proposed Work Plans and study scopes. Program and Co-permittee staffs also participated in the CEP Mercury Work Group. The CEP was disbanded in 2008. Staff will continue to participate in regional collaborative projects through BASMAA.
• The City of San Jose will continue to provide in-kind services for the maintenance of the Mercury Deposition Network site near San Jose.	The City of San Jose continued this activity beyond the December 2005 compliance date and into FY 05-06. The City decided not to continue this effort into FY 06-07.
III.B. Provide financial and staff support for a coordinated regional plan to collect data for the mercury TMDL, as defined in the CEP MOU.	**Completed** - The Program participated in CEP activities (formerly TMDL MOU) until the group was disbanded in 2008.
IV. Regional, State, and Federal Coordination	
IV.A. Participate in the activities of the Bay Area Stormwater Management Agencies Association, the California Storm Water Quality Task Force, and the San Francisco Estuary Institute and communicate Program efforts.	**On-going** - Program staff continue to attend BASMAA, CASQA and SFEI RMP meetings. Meeting information and participation is provided in the Program's *Review of FY 07-08 Program Management Services* within Appendix A-2).
IV.B. Collaborate in technical studies to support TMDL development and implementation including the Santa Clara Basin WMI Guadalupe River Mercury TMDL Workgroup.	**On-going** - Program and Co-permittee staffs actively participate in the Guadalupe Mercury TMDL Watershed Work Group and Stakeholder group. Program and Co-permittee staff reviewed the draft Basin Plan Amendment and supporting Staff Report released February 2008.

Table 7-1
Status of FY 07-08 Mercury Pollution Prevention Tasks[1]

Task	Status
IV.E Support, participate in, and advocate increased regional collaboration with the RWQCB and the Bay Area Air Quality Management District (BAAQMD).	**Ongoing** - The Program will support the RWQCB in collaborating with the BAAQMD but will not directly work with the BAAQMD. The Program supports the RWQCB in their efforts. Mercury air deposition is being addressed regionally. Program staff will continue to track the progress of the State Water Board Air Board meetings. The first meeting was held in February 2006.
IV.F. Support and track the progress of the U.S. Department of Energy (DOE) Office of Building Technology's Vision 2020 Lighting Technology Roadmap.[3]	**In Progress** - DOE's Building Technologies Program continues to move forward on their Vision 2020 Roadmap. Progress includes seven strategies to address the challenges of transforming the lighting marketplace and developing new technologies that enhance lighting quality, efficiency and cost effectiveness. The Draft Multi-Year Program Plan is available on their website. Currently, it is in the process of being updated for 2008.
V. Public Education and Outreach	
V.A. Develop various outreach programs to educate target audiences about proper disposal of mercury-containing products and alternative non-mercury containing products. Outreach programs will include, but may not be limited to, the following:	**Completed/Ongoing**[4] - In FY 07-08, the Mercury Pollution Prevention Outreach Work Group continued its mercury pollution prevention outreach.
• Develop and begin to implement a fluorescent light recycling outreach program to educate residential users	**Completed/Ongoing**[4] - Phase I outreach of the two year, two phase Work Plan was completed in FY 02-03. This phase focused on residential outreach. Additional annual outreach is continuing, as

[3] DOE's Vision 2020 Lighting Technology Roadmap includes this goal for the year 2020, "Highly efficient, reduced-mercury fluorescent sources will come to market." Sustainable Conservation's September 27, 2000 report entitled *Reducing Mercury Releases from Fluorescent Lamps: Analysis of Voluntary Approaches* concluded that "we do not believe that starting a new collaborative approach with manufacturers to create mercury-free fluorescent lamps is the most effective use of resources at this time." Sustainable Conservation recommends focusing on voluntary recycling of mercury-containing lamps as an alternative approach.

[4] These tasks were marked as Completed and Ongoing since the specific public education and outreach task was completed but outreach is ongoing. Articles will continue to be posted and updated, as appropriate. The Program will continue to assist the CoHHW with public outreach activities as resources allow.

Table 7-1
Status of FY 07-08 Mercury Pollution Prevention Tasks[1]

Task	Status
and encourage proper disposal of fluorescent lights.	appropriate. The County HHW Program has continued to develop partnerships retail stores to provide free fluorescent lamps drop-off sites for residents. The Program's Watershed Watch Campaign conducted media advertising to inform residents about these locations. (See Section 7 of this Annual Report for additional details).
• Develop and begin to implement a fluorescent light recycling outreach program to educate small businesses and conditionally exempt small quantity generators and encourage proper disposal of fluorescent lights. (For example, the small business outreach program might include coordination with local chapters of the Building Owners and Managers Association [BOMA] or the National Association of Industrial and Office Properties [NAIOP].)	**Completed/Ongoing[4]** - In FY 03-04, the Work Group implemented Phase II of the two-year, two-phase Work Plan. Phase II outreach efforts were focused on small businesses and CESQGs. Additional annual outreach is continuing, as appropriate.
• Coordinate with municipal inspectors to integrate mercury outreach to industrial businesses into their existing routine pretreatment, source control, and/or hazardous materials inspection processes	**Ongoing** - Co-permittees began coordination efforts in FY 03-04.
V.B. Develop or adapt existing mercury outreach materials, as needed, for outreach programs.	**Completed/Ongoing[4]** - As part of the Outreach Work Plan for Action V.A, development of materials began in FY 02-03. To date, the following outreach pieces have been developed by the Outreach Work Group: • Two fact sheets for the worldwide web (one for residents and one for businesses); • Two newsletter articles (one for residents and one for businesses);

Table 7-1
Status of FY 07-08 Mercury Pollution Prevention Tasks[1]

Task	Status
	• One press release; • One video public service announcement for broadcast on local city cable channels; • Four newspaper ads, three radio ads, two transit (bus poster) ad; and • Signage (posters and decals) for promoting the fluorescent drop-off locations. All outreach pieces aim to show the negative health and environmental impacts of mercury and the methods available to the public for the proper disposal of FLTs. The Program did not develop any new outreach materials in FY 07-08.
V.C. Attend community events and distribute outreach materials.	**Completed/Ongoing[4]** - As part of the Outreach Work Plan for Action V.A, distribution of outreach materials continued during FY 07-08.

SECTION 8

NEW AND REDEVELOPMENT CONTROL MEASURES

040619

8. NEW AND REDEVELOPMENT CONTROL MEASURES

INTRODUCTION

This section describes the Program's efforts during FY 07-08 to assist Co-permittees to control the impacts of development on stormwater quality and flow through the development project planning, review and approval process. Tasks related to construction inspection are described under Section 2, Co-permittee Guidance, and Section 2, Performance Standards.

BACKGROUND

On October 17, 2001, the Water Board adopted Order 01-119 which amended the Program's Permit Provision C.3. (New and Redevelopment Requirements) to contain significant new requirements. These requirements include:

- Numeric design standards for sizing stormwater treatment controls;
- Limits on increases in peak stormwater discharge rates and/or durations from new or redevelopment sites ("hydromodification") that may result in increased potential for erosion or other adverse impacts in creeks;
- Requirements for operation and maintenance of stormwater controls;
- Requirements for site design and source control measures;
- Definition of a minimum project size, based on amount of impervious surface created, for which the design standards, control measures, peak flow limitations, and maintenance requirements apply;
- Requirements for changes to General Plans and environmental review processes to provide authority to implement the requirements; and
- Reporting requirements.

These requirements are now applicable to "Group 1" projects (those with one acre or more of impervious surface) and "Group 2" projects (those with 10,000 square feet or more of impervious surface).

To assist Co-permittees in completing and implementing these requirements, Program staff prepared the *Guidance for Work Plan Tasks Related to Implementation of Permit Provision C.3. (New and Redevelopment Requirements)* in March 2002[1]. This guidance identified proposed actions to meet the requirements of Provision C.3. and whether the actions would be implemented at the Program level, Co-permittee level or both. All of the Program and Co-permittee "start up" tasks have been completed, and Co-permittees are in the ongoing implementation phase.

In February 2003, the Water Board adopted and/or amended the stormwater permits for the Contra Costa, Alameda, and San Mateo countywide stormwater programs with different requirements than those in the Program's permit. The Water Board Executive Officer stated the Board's intention to make all of the permits consistent, and as a result, extended the deadlines for implementation of certain C.3. provisions[2]. In addition, the Program submitted a letter to the Water Board on September 22, 2003 proposing an alternative Group 1 and Group 2 project

[1] See www.scvurppp-w2k.com/pdfs/0102/SC33.24_c3_new_and_redevelopment.pdf

[2] Letter to Beau Goldie, SCVURPPP Management Committee Chair, from Loretta K. Barsamian, Executive Officer, California Regional Water Quality Control Board, San Francisco Bay Region, Re: Extension of Specified Deadlines in Order 01-119, May 12, 2003.

definition consistent with the other stormwater programs' permits[3], which was accepted by the Water Board in a letter dated January 29, 2004[4]. On July 20, 2005, the Water Board adopted a Tentative Order[5] (which amended portions of Provision C.3. in Order 01-119) to further conform the permit language to that of the other permits in the region, amend the Group 2 requirements to include a revised alternative Group 2 definition, and incorporate key provisions in the Hydromodification Management Plan (HMP) Report.

The adopted Order No.R2-2005-0035 allows a phased implementation of C.3. at Group 2 projects based on land use and potential for pollution. Group 2A consists of projects under one acre and greater than 10,000 square feet of impervious surface that have one of the following land use categories: gas stations; auto wrecking yards; loading docks or parking lots greater than 10,000 square feet; and other industrial or commercial uses where potential pollutant loading cannot be mitigated by post-construction source control and site design practices. Implementation for Group 2A projects began on October 20, 2005. Group 2B consists of all other land uses in the same size category and implementation for Group 2B began on August 15, 2006.

Order R2-2005-0035 also adopted the key provisions of the Program's HMP Report. The key provisions, including management standard, performance criteria, and applicability criteria, are presented in Attachment A to the Order, and an applicability map is presented in Attachment B. The Order required Co-permittees to begin implementation of the HMP on October 20, 2005.

To summarize, on October 15, 2003, Co-permittees began implementing the C.3. requirements for Group 1 projects (i.e., those projects that included creation or replacement of one acre or more of impervious surface). On October 20, 2005, Co-permittees began implementing the HMP requirements and C.3. requirements for Group 2A, and on August 15, 2006, Co-permittees began (or continued) implementing C.3. requirements for all Group 2 projects (i.e., those projects that included creation or replacement of 10,000 square feet or more of impervious surface).

IMPLEMENTATION OF FY 07-08 C.3. TASKS

During FY 07-08, Program efforts continued to focus on assistance to Co-permittees with C.3. and HMP implementation, conducting training workshops for municipal staff and the development community, and participation with Water Board staff on the development of the new and redevelopment requirements for the Municipal Regional Permit (MRP).

Table 8-1 presents the status of the Program's new and redevelopment (C.3.) tasks scheduled for completion or ongoing in FY 07-08. The table includes tasks outlined in the *FY 07-08 Work Plan*, including some remaining tasks from the original *C.3. Work Plan Guidance* (the numbered tasks) and some new tasks identified for FY 07-08.

---

[3] Letter to Loretta Barsamian, Executive Officer, California Regional Water Quality Control Board, San Francisco Bay Region, from Beau Goldie, Chair, SCVURPPP Management Committee, Re: Revised Request for Regional Board Approval of an Alternative "Group 2 Project" Definition, September 22, 2003.

[4] Letter to Beau Goldie, SCVURPPP Management Committee Chair, from Bruce Wolfe, Executive Officer, California Regional Water Quality Control Board, San Francisco Bay Region, Re: Approval of the Proposed Alternate Group 2 Project Definition, January 29, 2004.

[5] Order No. R2-2005-0035, NPDES Permit No. CAS029718, Amendment Revising Order No. 01-119 (Provision C.3., New and Redevelopment Requirements), July 20, 2005.

Highlights of accomplishments and evaluation of effectiveness of some of the key tasks are provided below.

Ad Hoc Task Group and Work Group Participation

In FY 01-02, the Program formed the C.3. Provision Oversight Ad Hoc Task Group (C3PO AHTG) to oversee, coordinate, and discuss Program guidance on implementation of C.3. tasks. During FY 07-08, the C3PO AHTG continued to meet approximately bimonthly and received updates on C.3. and HMP issues and projects; received updates on and discussed the proposed C.3. provisions in the draft Municipal Regional Permit (MRP); helped plan the annual workshop; and shared information on implementation of C.3. The C3PO AHTG provided valuable assistance to Program staff in development of the C.3. implementation tools and continues to be a useful forum for discussion of experience with implementing the C.3. requirements.

A number of work groups have been formed to work on specific issues under C.3. The list of AHTG and work group members, and the missions of each group, are provided in Section 2, Table 2-2. During FY 07-08, only one work group, the HMP Instream Solutions Work Group, was active, as Program and Co-permittee efforts were focused on development of the MRP.

C.3. Implementation Products

In 2004, the Program completed a document entitled *Developments Protecting Water Quality: A Guidebook of Site Design Examples* (Guidebook) that provides information on local projects or areas where innovative design measures which protect water quality have been applied. In FY 05-06, Program staff collected information on approximately ten additional projects installed after the completion of the original Guidebook and completed the process of updating the Guidebook to include these examples in FY 06-07. The February 2007 version is available on the Program's website (www.scvurppp.org)

In 2006, the Program began an awards program for exemplary site designs to protect water quality. This awards program recognizes Santa Clara Valley's public agency and private development community leaders who are solving site design challenges, reducing stormwater pollution and runoff quantity, and meeting the requirements of the NPDES permit. Applications for the awards program also help provide information on additional site design examples for updating the Guidebook. An Awards Committee consisting of Program staff, Co-permittee representative(s), local consultant(s), and an environmental group representative review the submittals and select the winners.

The 2007 award winners included:

- Exemplary Private Project (Small Site) – 361-369 California Avenue, City of Palo Alto;
- Exemplary Public Project (Large Site) – Stanford/Palo Alto Community Playing Fields;
- Exemplary Private Project (Recreational) – Stanford Football Stadium, Stanford University.
-

The award winners were recognized at an awards ceremony on March 19, 2008 as part of an American Public Works Association South Bay Chapter meeting.

The Program continued the awards program in 2008, and began the nomination process earlier in the year at the request of the Management Committee. The 2008 award winners were announced at the June 3, 2008 C.3. Workshop. Winners included:

- Exemplary Private Project, Residential – "Modern Ice" Multi-family Housing Project, San Jose
- Exemplary Private Project, Commercial – IdeAs (Integrated Design Associates, Inc.), San Jose
- Honorable Mention:
    - Santa Clara Valley Water District Water Quality Laboratory, San Jose
    - Verizon Wireless Maintenance Switch Center, Sunnyvale
    - Fowler Creek Community Park, San Jose

C.3. Workshops

During FY 07-08, the Program conducted and/or co-sponsored four workshops to assist Co-permittees with implementation of Provision C.3. and requirements for construction site management and inspection:

- The Bay Area Hydrology Model (BAHM) Basic and Advanced Trainings, July 17-19, 2007 and November 27-29, 2007 (various South Bay locations), presented by Clear Creek Solutions;
- Construction Site Management Workshop, December 3-4, 2007 (Cupertino), co-sponsored by the San Francisco Estuary Program;
- Workshop on the Draft Statewide Construction General Permit, April 30, 2008 (San Jose); and
- The Annual C.3. Workshop, entitled *Sharing Experience with Implementation of Stormwater Requirements at Development Projects*, June 3, 2008 (Sunnyvale).

The Annual C.3. Workshop attracted 117 participants. The workshop was designed to address topics of interest to municipal and private planning/engineering staffs. The morning sessions presented case studies of implementation of C.3. on a variety of projects; an update on stormwater regulations; a discussion of green building standards (e.g., LEED) and the C.3. requirements; and an overview of the latest trends and approaches in low impact development (LID). The afternoon sessions focused on inspection and maintenance of stormwater treatment measures and landscaping, both during and after construction, and local experience with inspection programs. The workshop also featured exhibits for six vendors of stormwater control measures and related products. The agenda and evaluation summary for the workshop are presented within Appendix A-7.

Guidance for Treatment BMP Operation and Maintenance Verification Programs

Provision C.3.e of the Program's NPDES permit requires each Co-permittee to implement a stormwater treatment BMP Operation and Maintenance (O&M) Verification Program. To address Provision C.3.e, the BMP O & M Verification Work Group was formed (by the C3PO AHTG) to develop guidance for implementing an O&M verification program. In FY 02-03 and FY 03-04, Program staff and Work Group developed a total of eight guidance documents to assist Co-permittees in implementing a BMP O&M Verification Program. Information from these

documents was included in Chapter VI of the *C.3. Stormwater Handbook* (rev. May 2006)[6]. In FY 04-05, the Program provided assistance to Co-permittees that were setting up verification programs, conducted a training workshop on O& M verification; and continued work on defining database and reporting requirements. Program staff and the Work Group also developed an approach to use standardized data fields to track treatment BMPs and relevant inspection results, ensured consistent data collection among Co-permittees, and began developing a data collection form which includes the standardized fields.

During FY 05-06, Program staff and the Work Group completed the "Standard Stormwater Treatment BMP Inspection Data Collection Form" and guidance on what inspection data should be included in future Annual Reports. Co-permittees are expected to use the form or a form with similar standardized fields while conducting BMP O&M verification inspections. The June 2006 C.3. Workshop featured a session for inspectors on how to use the standardized form. During FY 06-07, Co-permittees began conducting BMP O&M inspections using the standardized inspection form.

In FY 07-08, Co-permittees continued to use the standardized form, and submitted inspection data to the Program using the Treatment BMP Inspection Activity Report form, for compilation. Appendix G-1 presents an example of this form containing all of the data submitted by the Co-permittees for FY 06-07. Appendix G-2 contains an Inspection Activity Summary Report of submitted data. A total of 56 inspections were conducted at approximately 35 sites. The Summary Report summarizes the information by Co-permittee, reason for inspection, project type, BMP type, inspection results and enforcement action.

The BMP O&M Verification Work Group continued to coordinate efforts and share information with the Santa Clara County Vector Control District. District staff regularly attends Work Group and/or C3PO AHTG meetings. The Program provides the Vector Control District a copy of the Annual Report tables that list the locations of BMPs. In addition, Co-permittee inspection staff is instructed to refer problem BMP sites (e.g., those with standing water) to the Vector Control District. The Standard Stormwater Treatment BMP Inspection Data Collection Form includes fields to indicate when the BMP being inspected appears to provide potential mosquito breeding habitat.

Hydromodification Management

Background

Provision C.3.f. requires the Co-permittees to manage increases in runoff peak flows and volumes from Group 1 development projects through the implementation of a Hydromodification Management Plan (HMP). A detailed history of the Program's HMP development has been provided in previous annual reports. During the period FY 01-02 to FY 05-06, the Program and its consultants: developed a work plan; conducted a literature review; conducted watershed hydrologic and geomorphic assessments of three subwatersheds in Santa Clara Valley; produced six technical memoranda on key technical issues; completed four interim and draft HMP reports; conducted a series of public meetings; and completed the final report. All products are available on the Program's website (www.scvurppp.org)

The Final *Hydromodification Management Plan Report* was submitted to the Water Board on April 21, 2005 and the key provisions adopted as part of a Tentative Order by the Water Board

[6] See www.scvurppp-w2k.com/permit_c3_docs/C3_Handbook/Handbook_May_2006-Oct_update.pdf

on July 20, 2005. The Order required Co-permittees to implement the HMP provisions within three months of adoption (by October 20, 2005). All Co-permittees have policies and/or ordinances in place requiring the implementation of the HMP, if applicable.

To assist Co-permittees with implementation of the approved HMP, the Program formed a HMP Implementation Phase (HIP) Work Group in FY 05-06. With direction and assistance from the HIP Work Group, Program staff has developed: 1) an HMP fact sheet; 2) Chapter V of the *C.3. Stormwater Handbook* that includes the key provisions of the HMP and implementation guidance; 3) and a list of qualified consulting firms that can design stormwater flow and treatment controls. In addition, Program staff conducted a series of "HMP 101" workshops in FYs 05-06 and 06-07 for Co-permittee staff that covered the basic principles of hydromodification management.

FY 07-08 Accomplishments

During FY 07-08, Program staff efforts focused on: 1) working on proposed revisions to the HMP applicability criteria and negotiation with Water Board staff; 2) continued training on the Bay Area Hydrology Model; 3) participation in the HMP Instream Projects Work Group; and 4) completing other HMP implementation studies.

Revised HMP Applicability Criteria

The key provisions for HMP applicability adopted by the Water Board on July 20, 2005 were considered interim provisions until the MRP adopted consistent criteria for all Phase I Bay Area municipal stormwater programs. During the Fall of 2007, Program staff, with the assistance of Co-permittee staff, developed a proposed, revised HMP applicability map that addressed many of the Water Board staff concerns about the interim map. After numerous meetings with Water Board staff and changes to the proposed map, a final draft map and associated criteria were completed and issued as part of the MRP Tentative Order on December 4, 2007.

Bay Area Hydrology Model (BAHM): The Program, along with the San Mateo and Alameda County stormwater programs, jointly funded the development of a tool for simulating pre- and post-project hydrology and automatically sizing flow control facilities to meet HMP requirements. Clear Creek Solutions (CCS), the consulting firm who developed the Western Washington Hydrology Model, was contracted to develop a Bay Area version, based on the HSPF watershed hydrology model. The Program contracted separately with CCS to perform local calibration of the model to two watersheds in Santa Clara Valley. The final calibration report was completed in October 2007 and is available on the Program's website (www.scvurppp.org).

The BAHM was completed in July 2007 and a series of six trainings were conducted on July 17-19, 2007. Trainings were co-sponsored by the Alameda and San Mateo countywide stormwater programs. The training hosted by SCVURPPP in San Jose attracted 43 participants, including agency staff, consultants, and Water Board staff. Another series of trainings (beginning and advanced sessions) were conducted on November 27-29, 2007 in Fremont and Santa Clara, attracting 93[7] participants. The agenda, evaluation summary, and list of attendees for each of the trainings are provided in Appendix A-4.

[7] 93 out of 120 total slots in 6 training sessions were filled; some participants attended two sessions (beginning and advanced) and are counted twice.

The BAHM has the ability to model common site design (including LID) and treatment control measures and quantify the reduction in flow duration due to these measures. Additional testing was conducted in FY 07-08 by Clear Creek Solutions to fine tune and improve guidance on the use of the BAHM for this purpose. A "BAHM Project Book" with more that 20 example projects was completed and will be made available to Co-permittee agencies from the three partnering programs (and copies will be available for sale to the general public).

HMP Instream Projects Work Group: The HMP Instream Projects Work Group, consisting of Santa Clara Valley Water District, City of San Jose and Program staff, was formed to explore the feasibility of allowing developers of projects requiring hydromodification controls to contribute to regional stream restoration and/or hydromodification control projects in lieu of installing controls on-site. The work group continues to meet to review potential funding mechanisms, review lists of District projects, and discuss approaches for linking instream projects to potential development projects in the contributing watersheds. In FY 07- 08, a potential project was identified and explored but could not be carried forward due to institutional issues. The Work Group met twice in FY 07-08 and is planning to resume discussions in Fall of 2008.

HMP Implementation Studies: In FY 06-07, the Program contracted with GeoSyntec Consultants to do a comparison of flow basin sizing using the HEC-HMS and HSPF models. The results provided guidance on model use and sizing procedures and assisted development of the BAHM. Based on the comparison, several parameters in the BAHM and the flow frequency analysis methodology were adjusted to better match observed flow data. In addition, the Program also contracted with GeoSyntec to develop a methodology for estimating costs for the purpose of determining impracticability of hydromodification management measures (i.e., the 2% cost cap). Both products were completed and are available on the Program's website (www.scvurppp.org).

Next Steps

The Program's approach to hydromodification control will continue to be improved through lessons learned from implementation experiences, use of the BAHM, and review of approaches proposed by other Bay Area stormwater programs. Chapter 7 of the Final HMP Report, HMP Implementation Guidance, describes the anticipated next steps towards addressing remaining implementation issues, refining the guidance and coordinating with other Bay Area programs and Water Board staff in development of a consistent, regional approach. An updated list and schedule of next steps is provided in Table 8-2.

Other Tasks

Other tasks that Program staff accomplished during FY 07-08 include the following:

- Program staff continued to spend significant effort reviewing and commenting on the drafts C.3. and HMP sections of the MRP, and attending several meetings with BASMAA and Water Board staff on this topic.
- Program staff gave the following presentations on the permit requirements for new and redevelopment projects and other Program elements:
    - California Chapter of American Planning Association (CCAPA) Annual Conference, San Jose, CA, presentation by Jill Bicknell entitled "Site Design Elements for Protecting Water Quality" (October 1, 2007);

- American Public Works Association, South Bay Chapter Meeting, Mountain View, CA, presentation by Jill Bicknell entitled "Stormwater C.3. Requirements for Development Projects: What's Current and What's Coming" (October 17, 2007);
- Consulting Engineers and Land Surveyors of California (CELSOC) Santa Clara County Chapter Meeting, San Jose, CA, presentation by Jill Bicknell entitled "Stormwater C.3. Requirements for Development Projects: What's Current and What's Coming" (January 7, 2008);
- Regional Water Board MRP Workshop, Oakland, CA, presentation by Jill Bicknell entitled "BASMAA Comments on MRP Provision C.3. - New Development and Redevelopment Requirements" (March 11, 2008);
- California Coastal Commission LID Workshop, Oakland, CA, presentation by Jill Bicknell entitled "LID for Stormwater Treatment and Hydromodification Management" (April 23, 2008);
- California NPS Conference, Hydromodification Workshop, San Diego, CA, presentations by Jill Bicknell entitled "Potential Solutions: Flow Duration Control Approach" and "Hydromodification Management Tools" (May 7, 2008);

- Program staff reported on the Program's C.3. implementation progress at BASMAA New Development Committee meetings.
- Program staff continued to chair the BASMAA BMP Sizing Tools Work Group, a group overseeing a BASMAA Task of Regional Benefit to develop an automated, web-based BMP sizing tool. The Program is helping to fund the project and overseeing the consultant contract. The BMPs selected for the tool include vegetated swale, pervious paving, infiltration trench, and bioretention area. The tool is under development and expected to be completed in September 2008.

Evaluation of Effectiveness

The process for working with the Co-permittees to implement C.3. has worked well. As mentioned above, the C3PO AHTG and its work groups have provided valuable assistance to Program staff in development of the C.3. implementation tools. In addition, the C3PO AHTG has also been a useful forum for discussion of development review processes used by the various Co-permittees and sharing of ideas and lessons learned about implementing C.3. requirements.

On July 18, 2007, the Program received comments from Water Board staff on the New Development and Redevelopment element of the FY 05-06 Annual Report (Program and Co-permittee sections). In the letter, Water Board staff commended the Program for its work and leadership in implementing the C.3. O&M requirements, particularly the "comprehensive, user-friendly Standard Stormwater Treatment BMP Inspection Data Collection Form." They also commended the Co-permittees for providing more detailed and comprehensive information in the New and Redevelopment reporting tables and for beginning to perform and report BMP O&M verification inspections. The Co-permittees continued to implement these procedures in FY 07-08. No comments have been received from Water Board staff on the FY 06-07 Annual Report.

The evaluation summaries from the Program's C.3. workshop and BAHM training are provided within Appendices A-4 and A-7. Based on the evaluations, the workshops were successful

overall and the expectations of most attendees were met. Comments on the evaluation forms will be used in planning subsequent workshops.

During FY 07-08, a significant amount of Program and Co-permittee staff time was expended working with Water Board staff on the development of the MRP, including participation in special BASMAA meetings and Water Board stakeholder meetings. While this work was important and usually productive, this shifting of resources prevented the Program from making more progress on C.3. and HMP implementation tasks.

Program staff will continue to work with the Co-permittees and Water Board staff to evaluate the C.3. planning and implementation process and products during future C3PO AHTG meetings and C.3. workshops.

Table 8-1
Status of FY 07-08 C.3. Implementation Tasks

Task	Updated Schedule	Status
C.3.c. Requirements for Group 1 and Group 2 Projects		
All original C.3. tasks have been completed. Other Tasks:		
Promote/facilitate regional roundtable meetings with SCVURPPP agency staff and other stormwater programs to share information about implementation strategies and experience.	Ongoing	**Completed/Ongoing** – SCVURPPP agencies shared information on implementation of C.3. on specific projects at internal meetings of the C.3. Provision Oversight (C3PO) Ad Hoc Task Group (AHTG). In addition, Program and some Co-permittee staff attended BASMAA New Development Committee meetings, and sessions at the CASQA conference related to new development.
Prepare guidance on implementing changes to Provision C.3. in the Regional Permit, and updates to the C.3. Handbook to reflect those changes.	6/09	**To Be Done** – This task was deferred until adoption of the MRP (expected late 2008/early 2009).
Continue development of model standards and specifications for preferred BMPs.	6/09	**To Be Done** – This task was deferred to FY 08-09 due to staff time needed to review, comment on and participate in stakeholder meetings for the Municipal Regional Permit (MRP). Standards and specifications will be include in FY 08-09 updates to the C.3. Handbook.
Continue assistance with the C3PO AHTG meetings and action items.	Ongoing	**Completed/Ongoing** – Program staff conducted and prepared meeting summaries for five AHTG meetings in FY 07-08 (approximately bimonthly).
Conduct one workshop on a C.3-related topic (to be determined).	6/08	**Completed** – The Program's annual C.3. workshop, held on June 3, 2008 featured presentations covering green building standards, low impact development, update on stormwater regulations, inspection of stormwater treatment measures, and case studies of C.3. implementation on various projects.

Table _ ., continued
Status of FY 07-08 C.3. Implementation Tasks

Task	Updated Schedule	Status
Supervise BASMAA project for developing automated BMP sizing/design tool.	9/08	**In Progress** – During FY 05-06, Program staff chaired a BASMAA work group that selected a consultant to develop the sizing tool, worked with the consultant and work group to develop and approve a scope of work, and solicited funding. The BMPs selected for the tool included vegetated swale, pervious paving, infiltration trench, and bioretention area. The tool is nearly completed and expected to be ready in September 2008.
C.3.e. Operation and Maintenance of Treatment BMPs		
e.6. Assist Co-permittees to report on treatment BMPs O&M verification program in each annual report, including organizational structure, evaluation of effectiveness, and planned improvement to the program. Continue assistance with SCVURPPP agencies' implementation of BMP O&M verification programs and the Program-wide database.	Annually	**Completed/Ongoing** –In FY 06-07, Co-permittees began to conduct BMP O&M verification inspections on recently constructed projects. Program staff provided an inspection data collection form and guidance for data collection. Program staff also completed a database for compiling the results of Co-permittee BMP O&M inspections and collected data from the Co-permittees for the Annual Report. These activities continued in FY 07-08. *Guidance on O&M annual reporting assisted Co-permittee compliance with regulatory requirements in C.3.e. and C.3.n.*

Table 8-1, continued
Status of FY 07-08 C.3. Implementation Tasks

Task	Updated Schedule	Status
C.3.f. Hydromodification Management Plan		
f.2. Develop guidance to the Co-permittees on implementation of the HMP as part of requirements for Group 1 projects that may cause increased erosion or other related impacts (See also Table 8-2): • Provide guidance on any changes to HMP requirements in the Regional Permit, and update the HMP and C.3. Stormwater Handbook to reflect these changes; • Conduct one workshop on HMP implementation and hydromodification control measures; • Continue to provide guidance and conduct trainings on the Bay Area Hydrology Model (BAHM); • Continue to assist with the HMP Implementation Phase (HIP) Work Group meetings and action items; • Continue to meet with the HMP Instream Measures Work Group and work toward progress on HMP "next steps" (Table 8-2).	Report completed 4/05; additional guidance 6/06; workshops FY 05-06 and FY 06-07	**Completed/Ongoing** – Guidance on HMP implementation is provided within Chapter 7 of the HMP Report and Chapter V of the *C.3. Stormwater Handbook.* Two "HMP 101" workshops covering the basic principles of hydromodification management were conducted for Co-permittee staff and the development community. • **To Be Done** – This task was deferred until adoption of the MRP (expected late 2008/early 2009). Program and Co-permittee staff worked with Water Board staff to develop revised HM requirements for the MRP. • **Deferred** – A third HMP workshop was deferred until adoption of the MRP. • **Completed/Ongoing** – Basic and advanced BAHM trainings were conducted July 17-19, 2007 and November 27-29, 2007 by Clear Creek Solutions with Program sponsorship. • **Deferred** – The HIP Work Group did not meet during FY 07-08 since Program and Co-permittee staff focused on working with Water Board staff on revised HM requirements. • **Completed/Ongoing** – See Table 8-2. *Guidance on HMP implementation will assist Co-permittee compliance with regulatory requirements in C.3.f.*

Table 8-1, continued
Status of FY 07-08 C.3. Implementation Tasks

Task	Updated Schedule	Status
f.3. Continue implementation of HMP requirements for Group 1 projects that may cause increased erosion or other related impacts:	Began implementation 10/05; Ongoing	**Completed/Ongoing** – On July 20, 2005, the Water Board adopted a Tentative Order approving key provisions of the HMP Report (Order R2-2005-0035). The Order requires implementation of HMP requirements by October 20, 2005. In order to implement the HMP, Co-permittees amended their ordinances and policies as needed. San Jose has begun implementation by requiring flow controls in the conceptual planning phases of large development projects, and one project with a combination flow duration basin/park is under construction. (Other Co-permittees have not had any projects for which the HMP was applicable.)Program staff have assisted with guidance on implementation (see Task f.2.); reviewed several conceptual design submittals to meet HMP requirements for projects in San Jose; and updated a list of qualified consulting firms that can design stormwater flow and treatment controls for use by Co-permittees and developers.
• Continue to collect data on HMP implementation at small sites and plan to re-evaluate the small site size threshold after two years of implementation (HMP Next Steps Task 9 – may be superseded by changes to the permit);	10/07	The re-evaluation of the small site size threshold was superseded by the revised HM requirements in the draft MRP, which require all projects that create or replace 1 acre or more of impervious surface in certain areas of the Santa Clara Basin to implement HM controls, based on a revised HMP map.
• Conduct programmatic monitoring tasks identified in Section 7.8 of the HMP Report (tracking projects, documenting BMP design and inspection, self-evaluation).	Annually	**Completed/Ongoing** – Co-permittees have been tracking and reporting information on projects subject to HMP requirements as part of their annual reporting tasks.

Table 8-1, continued
Status of FY 07-08 C.3. Implementation Tasks

Task	Updated Schedule	Status
C.3.g. Waiver and Compensatory Mitigation Program		
g.3 Assist Co-permittees to track and report information on waivers granted, including project name, location, type, percent impervious surface, reasons for and terms of waiver, and the alternative benefit project and completion date.	Each Annual Report	**Completed/Ongoing** – Program staff developed a reporting form for projects granted a waiver and alternative compliance, which is included in Attachment 6 to the Planning Procedures Performance Standards and Attachment VII-3, Part 3 of the *C.3. Stormwater Handbook*. No projects to date have used the alternative compliance option. *Guidance on waiver reporting assisted Co-permittee compliance with regulatory requirements in C.3.g.*
C.3.j. Site Design Measures Guidance and Standards Development		
j.2. Assist Co-permittees to prepare and submit reports summarizing the status of review, revision, and implementation of local site design guidance and standards, as part of their annual reports.	Annually	**Completed/Ongoing** – On September 15, 2003, the Program submitted a compilation of the Co-permittees' "Site Design Standards and Guidance Review". This review contained recommendations for revisions to local site design standards. Each year, the Program's Annual Report preparation memorandum provides direction for submitting information on any revisions completed during the fiscal year. *Guidance on site design review reporting assisted Co-permittee compliance with regulatory requirements in C.3.j.*
C.3.n. Reporting Requirements		
n.1. Provide information described in Table 1 of Provision C.3. in annual reports (Program to provide guidance for each annual report).	Annually	**Completed/Ongoing** – Each June, Co-permittees are provides guidance (within the Program's Annual Report preparation guidance memorandum) on C.3. reporting. Reporting requirements are cross-referenced with Table 1 of Provision C.3. and any comments/direction provided by Water Board staff. Data are reported using Group 1 and 2 reporting forms in the PPPS and Attachment VII-3 of the *C.3. Stormwater Handbook*. *Guidance on annual reporting assisted Co-permittee compliance with regulatory requirements in C.3.n.*

Table o-1, continued
Status of FY 07-08 C.3. Implementation Tasks

Task	Updated Schedule	Status
n.2. Assist Co-permittees to collect information and summarize types of pesticide reduction measures required for development projects, and the percentage of projects for which pesticide reduction measures were required.	Annually	**Completed/Ongoing** – Program staff provided guidance for reporting within the memorandum entitled *FY 03-04 Annual Report Preparation Guidance*-dated June 11, 2004. (See Task n.1). This is reinforced in subsequent annual report guidance memoranda provided each June. Data can be recorded on C.3. Summary Data Forms and reported using Group 1 and 2 reporting forms (PPPS and Attachment VII-3 of *C.3. Stormwater Handbook*.) *Guidance assisted Co-permittee compliance with regulatory requirements in C.3.n. and C.9.d.ii.*

Table 8-2

SCVURPPP HMP - Summary of Next Steps (Updated 9/15/08)

Task[1]	Anticipated Completion Date[2]	Status
1. Develop the following: a. a funding mechanism[3] such that projects can utilize in-stream control options b. a methodology for determining developer contributions based on the stream changes expected to result from changes in project runoff conditions.	6/09 6/09	**In Progress** - The HMP Instream Projects Work Group, consisting of Water District, City of San Jose and Program staff, met regularly in FY 06-07 to review potential funding mechanisms, review lists of Water District projects, and discuss approaches for linking instream projects to potential development projects in the contributing watersheds. A potential project was identified and explored but could not be carried forward due to institutional issues. The Work Group met twice in FY 07-08 and is planning to resume discussions in Fall of 2008.
2. Work with City/County planning and public works departments and the Water District to determine the timing and method of notifying District staff during the development review process about HMP projects that may need in-stream controls, in a manner that does not unreasonably prolong the review process. Further, look at ways to improve method to provide early communication on Group 1 project reporting.	6/09	**In Progress** – This task was delayed pending decisions by the HMP Instream Projects Work Group. Some Co-permittees already have a process for involving Water District staff in development project review. Program staff will document current practices and develop guidance for other Co-permittees, in consultation with Water District staff.
3. Facilitate review of District's MDL analysis, both by the Co-permittees and the Expert Panel, and work with the Management Committee to determine the need to integrate some or all of the MDL analyses into implementation of the HMP.	N.A.	**Eliminated** – This task is no longer needed to implement the HMP. A revised HMP applicability map was developed by the Program based on other criteria, negotiated with Water Board staff, and will likely be adopted. The Management Committee voted to remove this action item from the list at its December 20, 2007 meeting.
4. Conduct additional studies of implementation of site design, integrated management practices, and/or basins at example development sites in Santa Clara Valley.	6/08	**In Progress** – In FY 06-07, the Program contracted with GeoSyntec Consultants to do a comparison of flow basin sizing using the HEC-HMS and HSPF models. The results provided guidance on model use and sizing

[1] Tasks are from Chapter 7 of April 2005 HMP Report. *Tasks in italics have been added.*
[2] All dates depend on availability of resources and cooperation/collaboration of numerous staff from different agencies and may change because of circumstances beyond the control of the Program. The Program periodically updates the Management Committee regarding schedule changes and will transmit updates schedules to Water Board staff.
[3] The intent is to describe a mechanism agreeable to Co-permittees and next steps for implementation.

Table _ _
SCVURPPP HMP - Summary of Next Steps (continued)

Task[1]	Anticipated Completion Date[2]	Status
		procedures and assisted development of the BAHM. In addition, the Program also contracted with GeoSyntec to develop a methodology for estimating costs for the purpose of determining impracticability of hydromodification management measures (i.e. the 2% cost cap). Both products were completed and are available on the Program's website.
Bay Area Hydrology Model (BAHM) Development Project – Regional Model, Local Calibration, Training	Completed 7/07; Ongoing	**Completed/Ongoing** –The BAHM was completed in July 2007 The Program participated with the Alameda and San Mateo countywide stormwater programs in the development of the regional component of the BAHM, and also contracted with the software developer, Clear Creek Solutions, to calibrate the model to two watersheds in Santa Clara Valley. Local calibration was completed in May 2007, and the final calibration report was completed in October 2007. A series of trainings were conducted in July and November, 2007. The BAHM includes the ability to model common site design (including LID) and treatment control measures and quantify the reduction in flow duration due to these measures. Additional testing was conducted in FY 07-08 by Clear Creek Solutions to fine tune and improve guidance on the use of the BAHM for this purpose.
5. During implementation of the HMP, obtain feedback/suggestions for further refinement and implementation guidance	As needed/ Ongoing	**Completed/Ongoing** – The HMP Implementation Work Group has been meeting on a regular basis, and has been an effective forum to share experience with HMP implementation and obtain suggestions for additional HMP guidance. Members of the development community have also attended these meetings. Program staff have reviewed several conceptual design submittals to meet HMP requirements for projects in San Jose and discussed these with the work group. Additional guidance will be prepared on HMP implementation following adoption of new requirements in the MRP (expected mid-2008).

Table 8-2
SCVURPPP HMP - Summary of Next Steps (continued)

Task[1]	Anticipated Completion Date[2]	Status
6. Coordinate with other Bay Area stormwater programs to work toward a consistent approach for the Bay Area (via participation in development of the Municipal Regional Permit (MRP).	Ongoing until completion of MRP	**In Progress** –The MRP Tentative Order (December 4, 2007) contains consistent HMP requirements for all Permittees except those in Contra Costa County. During FY 08-09, Program staff will continue to work with other Bay Area programs and Water Board staff to address these differences.
7. Coordinate additional Co-permittee, Bay Area stormwater program, and Water Board staff review process and progress meetings, including: a. The development of a schedule for Bay Area-wide HMP implementation in the upcoming Municipal Regional Permit.	6/07	**Completed** – Hydromodification management (HM) requirements for the San Mateo, Alameda and Fairfield-Suisun stormwater programs were adopted by the Water Board on March 14, 2007. Implementation began in June 2007. The Contra Costa program began implementation in October 2006. Under the MRP, these programs will continue implementation of their current requirements. SCVURPPP began implementation in October 2005. However, the MRP contains new requirements for SCVURPPP that will take effect upon MRP adoption.
b. Public outreach – HMP updates, workshop *c. HMP Work Group Meetings*	Ongoing Ongoing	**Completed/Ongoing** – Program staff have conducted two "HMP 101" workshops for Co-permittee staff covering basic principles of hydromodification management. Additional workshops and meetings of the HMP Implementation Phase Work Group will be conducted as needed.
8. Collect data on the implementation of the HMP at small sites for a period of two years after the start of implementation, and plan to re-evaluate the small site size threshold and approach at that time. Conduct and document the reevaluation.	N.A.	**Eliminated** -- To date there have been no small sites required to implement HMP requirements. The MRP will likely reduce the threshold for projects subject to HMP requirements to one acre of impervious surface. As a result, this task is no longer needed.
9. Make additional refinements per: 1) lessons learned from implementation efforts based on the draft HMP; 2) the need for consistency with HMPs being developed by other Bay Area stormwater programs; and 3) development community, Co-permittee, and Water Board feedback.	Report in ARs beginning with FY 05-06 AR	**In Progress** – See Task 5. Additional refinements to the HMP will be made pending adoption of the MRP, and continuing input from Co-permittee staff and developers.

SECTION 9

CO-PERMITTEE IND AND IC/ID SUMMARY TABLES

040641

9. CO-PERMITTEE IND AND IC/ID SUMMARY TABLES

INTRODUCTION

On September 7, 2001, the Industrial Inspection Ad Hoc Task Group (Industrial Inspection AHTG) recommended the adoption of Program-wide categories and enforcement actions developed by the Industrial Inspection AHTG. These categories and procedures are described in the *Continuous Improvement of Industrial Reporting Technical Memorandum* and *Continuous Improvement of Illicit Connection/Illegal Dumping Reporting Technical Memorandum.* The Management Committee approved both memoranda as the Program's strategy to implement IND and IC/ID reporting requirements (as required in Permit Provisions C.6.a.i. and ii). The memoranda were included as attachments within the Program's *FY 00-01 Annual Report* and submitted to the Water Board on September 17, 2001. Each Co-permittee began implementing these procedures immediately thereafter. Implementation of the enhanced reporting requirements by the Co-permittees has been very successful as shown in the past five Program annual reports.

In accordance with the Program's *FY 04-05 Work Plan* submitted to the Water Board on March 1, 2004, the Program committed to updating the Industrial/Commercial Discharger Control Program and Illicit Connection/Illegal Dumping Elimination Activities performance standards during FY 04-05. The updates were essentially administrative (e.g., incorporating enhanced reporting requirements and results of Co-permittee evaluations) and were directed at modifying the Program's model performance standards to reflect Management Committee direction and actual Co-permittee implementation. These administrative updates were provided to the Industrial Inspection AHTG for review during January 2005. The Management Committee approved final updated performance standards on February 17, 2005. Final updates were provided within Attachments 2-1 and 2-2 of the Program's *FY 05-06 Work Plan* (dated March 1, 2005) and hereby incorporated into the URMP.

IND and IC/ID summary tables, provided within Appendix H-1, were constructed by Program staff using data submitted from individual Co-permittees. The categories presented within the summary tables are consistent with the strategy provided in both performance dated February 17, 2005. In addition, summary tables represent incidents and/or inspections that occurred between July 1, 2007 and June 30, 2008. Pie charts and a bar graph showing pertinent information found within the IND and IC/ID summary tables are also included within this section. During FY 07-08, the Co-permittees conducted and/or responded to 10,033 IND inspections and IC/ID incidents. A summary of IND inspections and IC/ID incidents reported for individual Co-permittees is provided as Appendix H-2. The vast majority (95 percent) of IND inspections conducted during FY 07-08 resulted in no action or level 1 enforcement (verbal or written warnings). Appendix H-1 provides detailed inspection data relating to facility categories and enforcement actions. In addition, the two most common IC/ID incidents during FY 07-08 were miscellaneous incidents and vehicle & equipment leaking. Approximately 36 percent of the IC/ID incidents received verbal or written warnings. Other relevant IC/ID information relating to incident type, incident report source, incident source and enforcement action is also provided within Appendix H-1.

In accordance with the Water Board's letter, *Review of Program's Draft FY 2003-04 Work Plan* dated June 24, 2003, the Program informed the Co-permittees (see FY 02-03 Annual Report Preparation Guidance dated June 18, 2003) that each Co-permitee should independently

evaluate their individual IND and IC/ID inspection data and utilize the results of the analysis to set inspection priorities and gauge program effectiveness. Within the FY 02-03 Annual Report, as well as subsequent annual reports, Co-permittees have provided an effectiveness evaluation or analysis of their IND and ICID programs and/or data. This step was performed to address the Water Board's concerns regarding IND reporting procedures.

Since the implementation of the enhanced reporting requirements, Co-permittees have established inspection frequencies to reflect local conditions and characteristics, and adjusted them as needed based on inspection results. For this reason, inspection frequencies vary among Co-permittees depending on the types of business categories and potential threats to stormwater pollution occurring in each jurisdictional area. For example, during FY 07-08, the Cities of Santa Clara and Palo Alto shifted their inspection priorities to address specific industrial and commercial categories within their jurisdictional areas. The City of Santa Clara conducted the vast majority (75 %) of their IND inspections at automotive facilities (577 inspections) and machine shops (527 inspections). By comparison, during FY 06-07, the City of Santa Clara conducted 127 inspections at automotive facilities and 0 inspections at machine shops, and focused on other businesses. During FY 07-08, the City of Palo Alto focused their efforts on construction sites. A total of 439 IC/ID incidents involving construction sites were reported. During FY 08-09, inspection priorities may change at both cities due to limited resources and the need to determine the compliance status of other industrial and commercial categories. This inspection approach is similar to that of other cities within the Program's jurisdiction.

WEST VALLEY CLEAN WATER PROGRAM

September 15, 2008

SEP 15 2008

Mr. Bruce Wolfe
Regional Water Quality Control Board
San Francisco Bay Region
1515 Clay St., Suite 1400
Oakland, CA 94612

Subject: FY2007-2008 Annual Report for
West Valley Communities Urban Runoff Management Program

Dear Mr. Wolfe:

This report is submitted by the West Valley Cities of Campbell, Monte Sereno, Saratoga, and the Town of Los Gatos, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a. of the Program's reissued municipal storm water NPDES Permit (Order No. 01-024). The report summarizes activities performed during FY2007-2008 in accordance with the West Valley Communities' Urban Runoff Management Plan (URMP) submitted to the Regional Board on September 1, 2004 and the performance standards contained therein.

Contents of Report

The goals of this Annual Report are to: 1) concisely document implementation of URMP and FY07-08 Workplan; 2) evaluate program results for continuous improvement; 3) comply with permit requirements; and 4) share this information with other Co-permittees, municipal decision-makers, and the public. This report includes the following sections:

I. Preface
   - Table of Contents
   - Transmittal Letter with Program Highlights
   - Certification Statement
   - List of Acronyms

II. Program Elements
   1. IC/ID Elimination Activities
   2. Industrial / Commercial Discharger Control Program
   3. Public Agency Activities
      - Storm Drain O & M
      - Street Sweeping
      - Corporation Yard
      - Rural Public Works
   4. New Development: Planning Procedures
   5. Construction Inspection
   6. Public Information & Participation
   7. Pesticide Management Activities
   8. Mercury Pollution Prevention Activities
   9. Copper Action Plan / Nickel Action Plan
   10. Trash Inventory and Management
   11. Water Quality Monitoring and Watershed Management

   Training Summaries are provided at the end of each element

PROGRAM HIGHLIGHTS AND ACCOMPLISHMENTS

During FY07-08, the West Valley Communities of Campbell, Los Gatos, Monte Sereno, and Saratoga continued efforts to implement their URMP to the maximum extent practicable.

- Established municipal programs, such as Storm Drain Maintenance and Cleaning, are working at mature, efficient levels and continue to indicate that overall pollution prevention efforts seem to be working, because less pollution is residing in or even reaching the storm drain system.
- The West Valley Communities also continue to benefit from its joint and robust public information program through the WV Clean Water Program (WV CWP). The WV CWP has built relationships with local schools and provides in-class stormwater pollution prevention presentations with a 3-D interactive 'Enviroscape' model. The hands-on presentation is very well received and after working with the model, the students are keenly aware of the connection between themselves and pollution making its way into creeks and the Bay. Very encouraging is an observed increase in student's willingness to participate in protecting the local creeks through their own clean-up efforts. One 'success' that can be attributed to a connection with the schools, is when water quality issues became of such interest to a student that it becomes integrated into a school project - a science fair entry. This student, who utilized the WV CWP as a resource for information, was recognized for his storm water pollution project all the way up to the State level of competition!
- The West Valley Communities remain committed to the watershed approach for preventing urban runoff pollution. Through the WV CWP, the WV Communities actively participate in SCVURPPP's many task groups, WEO and Trash Task Groups, as well as other related programs like the Silicon Valley Anti-Litter Campaign (SVALC).
- The proposed MRP was the focus of Managers and Staff discussions throughout FY07-08. Staff participated in many discussions through both SCVURPPP and professional associations in anticipation of the RWQCB's release of a Tentative Order in December 2007. Additional Staff effort was invested in meetings with SCVURPPP and peer groups for collaborative and coordinated topical submittal of comments on the draft Tentative Order, and in preparation for participation in the March 2008 RWQCB Hearing.
- Planning Staff continued participation with the SCVWD Water Collaborative through FY0708, and subsequently passed the Collaborative's work product 'Standards and Guidelines' for development along creeks early in 2008.
- Through WV CWP, the WV Communities continued to provide significant support for implementation of the "Green Gardener" program. In FY0708 the program was successful in completing its inaugural session at full capacity – in both English and Spanish!

Thank you in advance for your review of this Annual Report. Should there be any questions regarding the materials submitted, please contact me at 408.354.4734.

Respectfully,

Kelly Carroll

Kelly Carroll

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

ILLICIT CONNECTION & ILLEGAL DUMPING ELIMINATION ACTIVITIES

FY 2007-2008 Work Plan Self Evaluation Matrix

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
	Program	a. ICID Standard Operating Procedure Updates Update SOPs and BMPs as changes occur per the Municipal Regional Permit and effectiveness evaluation. Provide staff training on revisions.	During the next FY the Illegal Discharge Enforcement Response Plan will be reviewed and updated if necessary.	WVCWP Manager WV Inspector Sr Eng
	URMP 2004	b. Response Program Continue to implement IC/ID Stormwater Discharge Inspector response program and evaluate for continuous improvement.	The WV Communities continue to conduct a centralized incident response and proactive restaurant and vehicle shop inspection program. The WV Inspector follows up on all reports of potential stormwater violations and stormwater incident reports, including interagency referrals from Fire Dept, DEH Inspectors, SCVWD, WVSD, municipal staff and other agencies.	WV Inspector Sr Eng
			CAMPBELL: During FY 07-08 response was provided to 40 incident reports and 31 follow up visits conducted (20 restaurant/food, 15 vehicle shop, 4 residential, 22 commercial, 5 construction related, 1 public facility, and 4 other/unknown).	
	IC/ID Perf Std	c. Standardized Reporting Report on incidents using categories consistent with SCVURPPP Program. Document follow-through to point of resolution or referral for enforcement action (penalty or fine).	All incidents are entered into the SCVURPPP Standard Database. Each incident is given a tracking number for documentation purposes. Multiple entries are made under the same tracking number to document all follow-up visits and actions.	WV Inspector

FY 2007-2008 ANNUAL REPORT

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
	Municipal Staff Training	Municipal staff Training Conduct training & evaluation meeting between Storm Water Discharge Inspector and City staff, to improve interdepartmental procedures.	Provide Annual Street Maintenance and Storm Drain Supervisor Training on June 20, 2008. Topics covered included Current Municipal NPDES Permit Requirements, contacting and working with the WV Inspector on ICID calls and municipal responsibility for following up with clean up of pollution in the SD system, and Future MRP Requirements. Provide Annual Urban Runoff Food Facility Inspection Program training meeting with SC Co. DEH inspectors and City of Cupertino representatives; a total of twenty (20) people attended on April 22, 2008. The power point presentation covered topics including restaurant inspections, dumpster problems, WVSD's FOG (Fats, Oil and Grease), the inspector's referral process including IC/ID, IND, and NTC (Notice to Comply), and Fluorescent Light Bulb/Battery-safe disposal information. The cooperation and sharing of information involving all three agencies was emphasized.	WV CWP Staff
			CAMPBELL: Annual Corp Yard Walk Thru completed on May 15, 2008. Thirty one (31) Public Works people in attendance. Topics covered; Review SWPPP, Proper Spill Handling/Cleanup, Secondary Containment, Vehicle Washing, Disposal of and Handling of Products Containing Mercury (distributed Mercury Booklet), Pesticides (training, record keeping, and storage), Street Sweeping Data, E-Waste Drop Off now at Goodwill Drop Off Sites, Sign in Log completed (name, job title). The WV Inspector also discussed proper ICID documentation and reporting procedures. Municipal staff was told to call the WV Inspector if they see a potential stormwater violation in the field.	WVCWP Inspector to co-ord with Public Works staff

IC/ID Program Evaluation: Campbell

IC/ID Training

The multiple trainings that the WVCWP staff and the municipal staff attended have been quite effective in building relationships with the Fire Dept., DEH, and the Municipalities. Inspectors from the Fire Dept., DEH, and the Municipalities, continue to look for possible stormwater violations while they are on their field inspections. If the Inspectors from the Fire Dept., DEH, and the Municipalities observe any potential stormwater violations they immediately contact the WVCWP Inspector. All interagency referrals are documented in the IC/ID reporting section.

Trend Analysis for City of Campbell

In FY04-05 eighteen (18) reported incidents were investigated. Two (2) automotive related violations for vehicle and equipment leaking were found. Four (4) accidental spills accounted for the number one IC/ID incident type in Campbell for FY04-05. This was followed by three (3) complaints not found, two (2) non-incidents and one (1) construction site incident.

In FY05-06 the West Valley IC/ID inspector responded to thirty-two (32) reports of potential violations in Campbell. Additionally, he conducted follow up visits to five (5) of these sites to ensure on-going compliance. He continued to conduct proactive vehicle shop and restaurant inspections, particularly to those sites which have had violations in the past. Eight (8) incidents originated from Campbell's primary target, automotive facilities. Four (4) accidental spills were next in frequency. Three (3) of the accidental spills were the result of vehicular accidents. Additionally, one (1) reported incident was caused by a fire and one (1) incident was caused by vandalism. There was one (1) food facility violation caused by a leaking dumpster. There was one (1) construction site violation, which is the typical number for Campbell over the last four years. No noticeable trends were evident other than the need to stay on top of vehicle shops and car washes for continued compliance.

In FY06-07 the West Valley IC/ID inspector responded to fifty-seven (57) reports of potential violations in Campbell. Twenty-five (25) incidents originated from Campbell's primary target, automotive facilities. The next common incidents occurred at commercial facilities (19). There was only one (1) construction site violation, which is the typical number for Campbell over the last several years.

In FY07-08 the West Valley IC/ID inspector responded to forty (40) reports of potential violations in Campbell and thirty one (31) follow ups. Twenty two (22) of these were in a Commercial area, twenty (20) Food Facility, fifteen (15) Automobile Facility, five (5) Construction Site, four (4) Residential, one (1) Public Facility, and four (4) Other violations. This was a slight decrease in incident related activity from fifty seven (57) in FY06-07. The West Valley inspector provided outreach and educational materials at each of the incident responses, as appropriate.

Two (2) of these incidents were referred to another agency for Enforcement Action. One was a major shared dumpster problem which was referred to S.C. Co. DEH. This problem has been resolved by mid-July 2008, with the cooperation of the restaurant violators, DEH, and the WVCWP inspector. The other incident, involving Los Gatos Creek, also has been resolved, with the assistance of Campbell's City Staff.

Under the heading 'Incident Status', two (2) incidents remain 'open to be resolved in FY08-09.' One of these involving a Safeway Store sanitary spill problem has been resolved at the time of writing this report (July 2008) following extensive plumbing work. The other incident should be resolved as soon as Storm Drain protective mats, which are on order, are delivered.

FY 2007-2008 ANNUAL REPORT

INDUSTRIAL/COMMERCIAL DISCHARGER CONTROL PROGRAMS

Annual Report FY 2007-2008 Self Evaluation Matrix

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
	URMP	a. Joint Inspections of Retail Food Facilities Continue inspection program w/ DEH. All facilities will be inspected a minimum of once per year. Report inspection results in Annual Report. WVCWP IC/ID Inspector will conduct follow-up and distribute BMP materials per DEH referrals. Continue to evaluate data management for improvements.	CAMPBELL: Approximate number of *food handling* facilities in Campbell is 266. In FY 07-08, all 266 food handling facilities in Campbell were inspected; most of them were inspected 2 or 3 times by Santa Clara County Environmental Health Specialists (inspectors).	Insp'ns conducted by SCC DEH WVCWP Inspector by referral
	URMP	b. Training & Evaluation Conduct annual joint training meeting with Cupertino and SCC DEH to evaluate Inspection Program and make improvements. Annual meeting per agreement.	On April 22, 2008 the WVCWP inspector conducted the annual WV Cities, Cupertino, and DEH inspector training meeting.	Annual Meeting WVCWP to coord. w/ Cupertino & DEH
	Continued from FY01-02 Pilot Program	c. WVCWP Restaurant Inspection Program Continue implementation of proactive inspection program targeting medium to large-scale restaurants. *Medium to large-scale* restaurants are defined as, restaurants with 6 or more employees and/or ones that routinely handle large quantities of grease.	CAMPBELL: The WVCWP Inspector conducted 16 additional inspections of food related facilities. Approx. 58 *medium to large-scale* restaurants in Campbell	WV Inspector

FY 2007-2008 ANNUAL REPORT

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
	Continued from Restaurant Inspection Pilot	d. Support West Valley Sanitation District's Fats, Oils and Grease Program Expand scope of restaurant inspections to focus on grease trap maintenance. During pro-active visits, the WVCWP Inspector will look at grease trap cleaning records. Any food facility without records will be referred to the West Valley Sanitation District for follow up.	WVCWP manager and Inspectors met with DEH representatives to re-emphasize the importance of tracking grease maintenance records. WVCWP Inspector continued to alert restaurants about regularly maintaining grease interceptors and the need for record keeping.	WV Inspector
	URMP	e. Joint Inspections of Ind/Comm Facilities Based on terms of revised 6/30/06 Agreement with Fire Dept. The inspection frequency goal is 100%. The total number of facilities by business category inspected will be included in the annual report.	CAMPBELL: Renewed Joint inspection contract with the Santa Clara County Fire Department for a 5 year period, through July 2011. The SCCFD will inspect specific facilities, provide inspection forms, referrals for potential stormwater violations, and provide an annual inspection list. Approximate number of facilities in Campbell is 309.	Inspections & data tracking conducted by SCC Fire WVCWP Inspector by referral
	URMP	g. Training & Evaluation Conduct annual joint meeting/training w/ SCC Fire to evaluate inspection reporting and confirm distribution of materials. Determine training topics, if needed, on the West Valley Fire Dept Inspection Agreement.	On June 10, 2008, the Fire Dept. conducted the annual Urban Runoff Inspection training program with Fire Dept. personnel and the WVCWP staff. On March 13th, 2008 the WVCWP Manager and the SCCFD met for the annual review of the joint inspection program, contract, and training topics.	Annual Mtg w/ WVCWP & Sr Haz Mat Specialist/ IND Inspectors
	URMP	h. NOI Filers Provide updated list of NOI Filers to SCC Fire.	CAMPBELL: The list of NOI sites, 4 in Campbell, was sent electronically to the Fire Dept on 4-21-08.	WV Inspector
	Continued from Vehicle Shop Inspection Pilot	i. WVCWP Vehicle Shop Inspection Program Continue to pro-actively inspect vehicle maintenance and car wash facilities as part of IC/ID inspection program. Suggest alternatives and promote improved car	CAMPBELL: In FY07-08 the West Valley Inspector conducted 7 pro-active inspections of vehicle shops in the City of Campbell. He also followed up on automotive shop referrals from the Fire Dept's facility inspections. The follow up inspections reported by the Fire Dept as potential violations have been moved to ICID (section 1) of this	WV Inspector

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Industrial/Commercial Program Evaluation

Fire Dept Inspections of Industrial / Commercial Facilities:

Of the 299 facilities inspected by the Fire Dept., 11 potential or actual violations were found and reported to the WVCWP for follow up. The list of violations is provided to WVCWP at the end of each fiscal year. The West Valley Inspector will schedule a training meeting with the Fire Dept Haz Mat Specialist in FY 08-09 to discuss further inspections of sites with reported violations during FY 07-08. The sites with previous violations will be prioritized for inspections at the beginning of FY 08-09.

After a steady stream of improvements and more communication between Fire Dept and WVCWP staff, the inspection program is prepared for maximum efficiency for the West Valley Cities in FY 08-09. When Saratoga was added to the Fire Dept Inspection Agreement for Campbell and Los Gatos (7/1/02), all West Valley facility inspections were coordinated under one umbrella. Monte Sereno does not conduct IND inspections because it has NO industrial or commercial facilities. Since 2001, WVCWP staff has met with Fire Dept staff at least twice a year to discuss standardized reporting, documentation and follow-up.

The West Valley Inspector's pro-active vehicle shop inspection program is designed to supplement Fire Dept facility inspections. Shop owners are made to realize the City's responsibility for making sure that the sites are in compliance with water quality requirements. The Inspector has made a positive impact with his visits and the distribution of educational materials depicting the right way to keep equipment, vehicle parts, and service areas covered, and all vehicle wash water managed properly. In a few cases the Inspector's meetings with vehicle shop owners have led to the facility's purchase of a wastewater capture system (noted in previous annual reports).

Annual Food Facility Inspection Training Meeting

Of the 266 facilities inspected by the DEH, no potential or actual violations were found and reported to the WVCWP for follow up. The Supervising Environmental Health Specialist at DEH had left and DEH was not always able to make the referrals to WVCWP due to staff shortage. However DEH has hired new staff and this will improve the coordination between DEH and WVCWP in FY 08-09.

On April 22, 2008, DEH representatives met with the WVCWP Manager and Inspector. The importance of reporting all potential West Valley stormwater violations to the West Valley inspector was re-emphasized. Other topics covered at this meeting were (1) Updated contact information (2) How to report urban runoff violations to municipal inspectors to ensure accurate tracking and follow up (3) Feedback on the effectiveness of outreach and educational handouts (4) Reminder to distribute pesticide reduction fact sheets called "Don't Set a Table for Pests" to restaurants.

During FY 07-08 the West Valley Inspector continued a more aggressive effort to alert restaurants to the need for regular grease interceptor maintenance and record keeping. The WVCWP Inspector and the West Valley Sanitation District's Director of Operations continue to have discussions regarding grease interceptor maintenance records and related issues. The Sanitation District is notified if the records are not available. At the April 22, 2008 meeting, the West Valley Inspector again suggested that Environmental Health Specialists look for grease trap maintenance records during their restaurant inspections.

PUBLIC AGENCY ACTIVITIES: Operations and Maintenance

FY 2007-2008 Work Plan Self Evaluation Matrix

Storm Drain Operations and Maintenance

Source	Task Source	FY07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
	2004 URMP	Annual Storm Drain Cleaning Continue contract w/ WVSD. Continue schedule/cycle for inspection and cleaning of storm drain system (two year cycle for residential & one year cycle for commercial/industrial); Public Works staff will clean high leaf drop and other noted areas more frequently and as needed.	CAMPBELL: West Valley Sanitation District (WVSD) performs systematic storm drain cleaning and inspection annually. Each year half the City's storm drains in residential areas are cleaned and inspected. Arterials and commercial/ industrial areas are done annually. City staff performs additional pro-active cleaning of storm drain inlets and grates before storm season in high leaf drop areas. Engineered treatment BMPs on City parking lots are cleaned at least annually.	Sr. Civil Engineer coord with WVSD per contract; Pub Works Supt coord in-field operations
	Trash Reduction Activities On-going	Trash Reduction WVSD and/or Public Works staff will provide additional cleanup in trash problem spots discovered by staff or reported by the public.	CAMPBELL: During inspection and cleaning of storm drain structures, WVSD staff notes catch basins that require additional cleaning. The data will be helpful in locating trash problem areas by storm drain location. Campbell's report included 5 structures that received additional cleaning due to excessive amounts (over 50 lbs) of leaves/ paper.	Pub Works Supt coord in-field operations; WVCWP staff
	2004 URMP	Training - Annual WVSD/ Oper. & Maint. Meeting Annual WVSD & WVCWP / Operations & Maintenance. Supervisors meeting: evaluate status of annual storm drain cleaning and provide training on maintenance issues. Rural public works BMPs & SOPs may be reviewed as part of the annual WVCWP Street Maintenance Supervisors meeting.	The annual WV Storm Drain Op & Maintenance Supervisor's workshop was held on June 20, 2008 at Campbell Community Center. See Training Table for staff attendance. Staff from WVSD, WVCWP, and the other WV Communities also participated. Topics included: • The WVCWP Program Assistant presented on the current NPDES Permit requirements and the possible future requirements of the MRP. • The Environmental Specialist from the City of Sunnyvale gave a presentation on Sunnyvale's storm drain catch basin insert pilot program. WVSD Storm Drain structure cleaning & debris findings for each city will be used to help identify additional trash problem areas.	Mtg lead by WVSD; Attend by Pub Works Supt/Supvrs; Hosted by WVCWP

FY 2007-2008 ANNUAL REPORT

Source	Task Source	FY07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
	C/I item -Source Control Measure	Storm Drain Stencils or Signage Continue to replace and/or upgrade storm drain stencils or signage on storm drains or catch basins, as needed. Stencils will be replaced with the type of stencil most appropriate for the location.	CAMPBELL: The City has approximately 1,096 SD inlets. The Public Works Supt is continuing to replace signage in the high-use and downtown areas with thermoplastic stencils due to a successful pilot in 2002 - 2004. Since thermoplastic stencils can not be applied to a vertical surface, painted stencils are the preferred method of storm drain signage in most catchment areas. The application of more durable metal plaques in 1999 and 2000 proved problematic.	Public Works Supt
Street Sweeping/ Pavement Management				
	URMP - Street Sweeping	a. Street Sweeping Program By contract – residential swept twice monthly; downtown every week; arterials and Commercial/industrial areas once weekly. High leaf drop and other noted areas cleaned more frequently and as needed (i.e., construction zones - swept by responsible party).	CAMPBELL: The City has two contractors performing sweeping services. A vacuum type sweeper is used for areas that are conducive to picking up fine particulates and a broom type sweeper is used in other areas. The corporation yard is swept on Fridays. Sweeping data includes both types of sweepers. In heavy leaf drop areas, a front-end loader/dump truck crew removes leaves prior to street sweeping. Residents and businesses are given large recycling receptacles for yard waste as part of the required solid waste service. Yard waste is not allowed in streets; yard waste bins are emptied weekly by the City's recycling contractor.	Public Works Supt Uses a Contractor for sweeping
		b. Street Sweeping Data Collection		
	NPDES Permit	b. Street Sweeping Data Collection Collect and review street sweeping data and provide number of curb miles swept and cubic yards of debris to WVCWP for each Annual Report.	CAMPBELL: Street Sweeping data was collected and provided to the SCVURPPP at the end of the fiscal year. See the three-year comparison table in the evaluation section (below), for curb miles swept, debris collected and yard waste recycled.	Public Works Supt coord with WVCWP

Street Sweeping Totals for FY05-06 through FY07-08

Curb Miles Swept — Campbell

FY05-06

Residential
5,454 curb miles swept
Commercial & Arterials
1,807 curb miles swept
Annual Combined Total
7,261 miles curb miles swept

FY06-07

Residential
3,419 curb miles swept
Commercial & Arterials
2,359 curb miles swept
28 miles of other areas
Annual Combined Total
5,806 curb miles swept

FY07-08

Residential
2,983 curb miles swept
Commercial & Arterials
2,690curb miles swept
Annual Combined Total
5,673 curb miles swept

Debris Collected

FY05-06

Residential
1,142 cubic yards of debris collected
Commercial & Arterials
884 cubic yards of debris collected
Annual Combined Total
2,026 cubic yards of debris collected

FY06-07

Residential
1,011 cubic yards
Commercial & Arterials
760 cubic yards
72 cubic yards of other debris
Annual Combined Total
1,843 cubic yards

FY07-08

Residential
1,167 cubic yards
Commercial & Arterials
919 cubic yards
Annual Combined Total
2,086 cubic yards

Yard Waste Recycled

FY05-06: An annual total of **6,609 tons** of yard waste was picked up by garbage collection service.

FY06-07 An annual total of **5,587 tons** of yard waste was picked up by garbage collection service.

FY07-08 An annual total of **19,260 tons** of diverted waste was picked up by garbage collection service. *
* Diverted waste totals are not representative of yard waste collected. Diverted waste totals include all waste that is diverted from landfills. The WVCWP asked the garbage collection company to submit separate totals for yard waste collected for FY 08-09.

Public Agency Activities: Operations and Maintenance Evaluation

Storm Drain Maintenance

In FY 07-08, West Valley Sanitation District (WVSD) provided its third enhanced annual report to the cities on storm drain cleaning. Since June 2007 the reports have listed the structures that were inspected and cleaned with the maintenance crew's findings. A total of 1,188 structures were inspected.

- Of those inspected, 656 were found without any debris and were noted as "clean."
- Of those inspected, 532 had some visible debris upon inspection.
- Of those 532 that had visible debris, 63 had 10 pounds or more of debris and required cleaning
- Of the 63 storm drains that required cleaning, 5 required excessive/additional (50Lbs+) cleaning

In addition to the West Valley IC/ID inspector's incident response program and follow-through to resolution, Campbell Streets crews provided immediate response and cleanup for accidental spills and reports of illegal discharges to the storm drain as noted below:

4/9/08 Swept up glass at 794 Virginia
4/10/08 Swept up glass at 185 Morrene
4/17/08 Swept up glass spill on McGlincey Avenue
5/19 Swept up glass spill on Winchester and Sanford
6/2/08 Cleaned out filters from storm drains at Civic Center and Second Street.
6/14/08 Diesel spill cleanup Union Ave., at McGlincy PD Report 08-0614
6/30/08 Swept up glass from the roadway-Bascom Ave.

Storm Drain Stencils:

Campbell's decision to go back to using painted stencils for most applications, and using thermoplastic storm drain stencils in selected high-use and downtown areas, is working very well. Thermoplastic signage is more durable than painted stencils and holds its color. Staff has also noted that thermoplastic stencils have endured a few years of street sweeping passes. The best feature of the thermoplastic stencils is that they are visible at night. The downside of using thermoplastic stencils is the cost (about $250 per stencil, installed) and they must be applied to a horizontal surface, preventing their visibility from a distance. Santa Clara County staff asked the WVCs for a recommendation on where to purchase metal plaques similar to those previously installed by the West Valley Cities. West Valley reported that municipal staff has discontinued application of the metal plaques because the sharp edges have a potential to get caught in street sweepers and bend, creating possible injury to pedestrians or bicyclists. Replacing the plaques was also a problem. When plaques came loose or were removed, concrete chunks crumbled from the curb with the screws (used for attaching the plaques) making replacement in the same spot impossible.

Yard Waste - Curbside Collection and Recycling:

The West Valley yard waste recycling program reduces the amount of debris that gets into the storm drain, since leaves are collected in oversized bins rather than being stored in the street. In FY 07-08, the total yard waste collected rose sharply from the previous two years for all West Valley cities. The reason for the increase is due to the garbage collection service's reporting methods. The totals were given for all diverted waste. Totals for yard waste recycled were not provided. The WVCWP asked the garbage collection company to provide separate yard waste totals for FY 08-09.

Training Evaluation:

The WVCWP Storm Drain Maintenance Workshop (6/20/08) drew more staff participation this year. Municipal staff evaluated the workshop as having "All useful and pertinent information." Another response noted, "Today a new topic was covered about full capture. I would like to learn new BMP's in the future". It was

evident that BMPs are being used by municipal staff but there was some frustration among street and park maintenance workers because they don't have enough authority to convince residents and private contractors to keep pollutants from reaching the storm drain system. The WVCWP Inspector offered his card to all attendees and requested that they report any incidents to him for immediate follow-up. One challenge is to catch the violator in the act of allowing pollutants into the storm drain system. By the time the incident, or the result of the incident, is seen it is often too late to stop it. The maintenance crews are generally called to clean up spills. Attendees requested continued updates on the MRP requirements for storm drain maintenance and street sweeping practices. Several of the attendees stayed after the workshop for additional discussion among the cities.

Corporation Yard:

Campbell Corp Yard Walk-Thru
May 15, 2008
7:30 – 8:30 am
Attendance: 31 (1 Pub. Wks. Superintendent, 3 Supervisors, 2 Leadworkers, 20 Maint. Wkrs., 1 Mech, 2 Signal & Street Lighting, 2 Office)
Leader: Jack Lovell, WVCWP Inspector
Topics:

- Review SWPPP
- Proper Spill Handling/Cleanup
- Secondary Containment
- Vehicle Washing
- Disposal of and Record Keeping of Products Containing Mercury (Mercury Booklet)
- Pesticides; Training, Record Keeping, and Storage
- Street Sweeping Data
- E-Waste Drop Off now at Goodwill Drop Off Sites
- Sign In Log; including name and job title
- Reminder of Upcoming Street Maint. & Storm Drain Supvs. Training on June 20.
- Took Pictures to Document

Report Pesticide Reduction Measures	NPDES Permit Provision C.3.n.iii	For Group 1 and Group 2 projects, report on the percentage of projects for which pesticide reduction measures were required.	CAMPBELL: The document, 'Landscape Maintenance Techniques for Pest Reduction,' is reviewed with Group 1 and Group 2 project applicants and included in the application packet. Campbell also has the document on the City's website.	Sr. Civil Engineer & Comm Dev Dir/Planners

Planning Procedures Evaluation

During FY07-08, Campbell Public Works Engineering staff worked closely with Community Development and the WVCWP to streamline the procedures for Group 1 and Group 2 project applications. Several of the City's C.3-related documents are on the City's website at http://www.cityofcampbell.com/PublicWorks/StormWater.htm

In FY07-08 the City of Campbell participated in the Water Resources Protection Collaborative. The Collaborative was enacted in an effort to clarify and streamline local permitting for streamside activities, representatives from the water district, cities, the county and business, agriculture, streamside property owner and environmental interests created a partnership known as the Water Resources Protection Collaborative. The approach makes a clear distinction regarding governance. Municipal organizations will continue to exercise their land use authority. The Collaborative developed model Guidelines and Standards which will serve as a basis for the District and municipal organizations to implement as appropriate. Each municipal organization will develop and apply these standards as needed for their jurisdiction. The City of Campbell adopted these guidelines in early 2008.

Evaluation of BMP O&M Inspection & Verification Program

In FY0708, City's Sr Civil Engineer used the SCVURPPP's Standard BMP O&M Inspection forms to conduct inspection at 5 facilities. Data from the forms were used to complete SCVURPPP Standard BMP O&M Data Collection Table. Last year the City's Sr. Civil Engineer/ Stormwater Rep attended the BMP O&M work group meeting on March 5, 2007 to provide input on the finalization of SCVURPP's BMP O&M inspection forms. The City has committed to using the finalized forms to facilitate the synthesis of county-wide data. The City's Civil Engineer also participated in WVCWP meetings (8-1-06 & 3-27-07) where three West Valley cities considered BMP inspection procedures (in addition to SCVURPPP-standardized inspection forms) which would facilitate implementation, e.g. procedures for reporting constructed treatment measures to County Vector Control and producing a single-page laminated list of information about BMPs for inspectors. In addition, Campbell's Senior Engineer attended the Annual C.3. Workshop on June 3rd.

Staff in both the Public Works and Community Development Departments are continuing to evaluate how to improve the efficiency of the O & M Verification program. The Standard Operating Procedures in the City's URMP state that Public Works Engineering staff are available to conduct inspections of stormwater treatments at Group 1 and Group 2 sites. However, depending on the type and location of stormwater BMP treatment, Campbell is also prepared, if necessary, to hire an outside civil engineering consultant to perform this task.

Reporting Group 1 and Group 2 Projects

Campbell has five Group 1 projects that were completed last fiscal year and were inspected during FY0708. No other projects were deemed complete during FY0708.

Santa Clara Valley Urban Runoff Pollution Prevention Program

Top Ten Development Tips to Protect Creeks

WMI WATERSHED

The scenic creeks that meander through the Santa Clara Valley can be harmed by development – unless we take precautions. If loose soil is allowed to wash into creeks, it can result in sedimentation that harms migratory fish. Development in or near "riparian corridors" can result in excessive erosion, increased pollution, and loss of wildlife habitat. (A "riparian corridor" is the strip of land, centered on a stream, characterized by vegetation that grows adjacent to freshwater watercourses.) The local municipality may require permanent stormwater treatment measures to reduce impacts. Following these "top ten" tips will help protect local creeks for our own enjoyment, native fish and wildlife, and future generations.

In the Site Layout...

Don't: **✓Do:**

1. **Maintain setbacks.** Keep buildings, decks and other structures and impervious surfaces at least 100 feet away from the edge of riparian corridors (*clustering development away from streams minimizes impact on stream habitat areas.*

2. **Preserve native trees** and protect the riparian habitat through creative site plan design (*the urban forest provides shade, improved air quality, site aesthetics, and reduces noise*).

✓

3. **Avoid intrusive activities.** Balance the need to protect riparian habitat from intrusive activities with creek-friendly recreation. (*Although human activities can adversely impact habitat areas, spending time along creeks can enhance residents' appreciation of the natural environment*).

✓

In the Project Design...

4. **Avoid night lighting**, bright colors, reflective surfaces and noise near the riparian corridor (*riparian and wildlife habitat protection.*)

In the Project Design...

Don't: **✓ Do:**

5. **Control pollutant sources** on the site (*cover debris and material storage, specify roofed trash enclosures, and implement an effective trash removal program.*

In Landscaping...

6. Use suitable **California native plants** and avoid the use of invasive species (*for example, English Ivy suffocates other plants and trees, and attracts snails and pests*).

7. Use **Integrated Pest Management** techniques in design and maintenance (*sustainable landscaping practices promote healthy soils, conserve water, and help avoid the use of harmful pesticides and quick-release fertilizers*).

8. Preserve, maintain, and restore **native vegetation** within the **riparian setback area** to buffer the creek from development (*protects habitat and reduces erosion, sedimentation, and excessive runoff during storms*).

During Environmental Review...

9. Determine and **mitigate all impacts** of the project on the creek (*site design, impervious surfaces, activity areas, site grading, filling in floodplain areas, pollution, and landscaping all affect habitat*).

10. Understand that **every section of a stream contributes** to the water quality and habitat value of the entire stream (*even channelized sections can serve to connect better habitat areas*).

Training Summary: Planning Procedures

CONSTRUCTION INSPECTIONS

FY 2007-2008 Work Plan Self Evaluation Matrix

Source	WP Task	Work Plan Tasks	Accomplishments	Responsible Party
	URMP	Staff Training Participate in and support RWQCB and Program- sponsored workshops on erosion control and construction BMPs; support distribution of related materials.	CAMPBELL: On December 5th 2008, Campbell's Sr. Civil Engineer attended the SCVURPPP's Construction Site Management and Erosion Control Workshop. WVCWP's Stormwater Discharge Inspector and Manager also attended.	WVCWP to coord w/ SCVURPPP; inspectors to attend training
	URMP	Construction Inspections Continue construction site inspections and follow-up for stormwater issues (i.e., mud tracking, mat'l storage, housekeeping, etc.). Document sites inspected and note any violations through final resolution. Report violations to WVCWP for Annual Report.	CAMPBELL: Campbell staff inspected all construction sites for stormwater issues. Problems related to stormwater requirements were addressed and verbal notices to comply were issued. Compliance was monitored by Staff. Large commercial projects were monitored monthly and were required to be certified by project Civil Engineers for compliance. During FY07-08 the City of Campbell issued permits for 5 new commercial/ industrial buildings, 66 new residential units, 8 grading permits, 19 demolition permits, and 436 residential remodel/additions. Any need to remind contractors about construction BMPs was handled successfully by the City's Building Inspectors. Additionally, two construction site-related, potential stormwater incidents were referred to the WVCWP Inspector by other agencies for follow-up. One potential paint-discharge violation was called in by a citizen. The attached spreadsheet provides incident details and resolution.	Eng Inspectors / Bldg Official WV Inspector by referral

Campbell

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Construction Inspection Evaluation Campbell

Construction Site evaluation:

*FY07-08**	
Paint Discharge	*2*
Oil Discharge	*3*
Landscape/Dirt in gutter	*1*
Grey Water Discharge	*1*
Total Number of Incidents	*7*

**issues observed and resolved by Municipal Inspectors.*

Previous Year - FY06-07	
Paint Discharge	*2*
Oil Discharge	*1*
	3

The number of incidents is the same as for the previous year. In FY07-08 two construction related incidents were reported to WVCWP, however upon response the complaint was not found or could not be verified. Last year the only construction related incidents were 2 paint discharges and one oil discharge. The City's Construction Inspectors handle most of the incidents that can be easily and quickly resolved. This year the WVCWP Inspector and Program Manager met with Campbell Engineering Inspectors in May to discuss requirements for construction inspections and the importance of documenting violations even if the incident is immediately resolved. Campbell inspectors say that if there are construction site problems, they are resolved very quickly because contractors and project managers are quick to comply.

The Construction Inspection Program currently works well – During FY07-08 the WVCWP made it a priority to provide additional training on construction inspection requirements and to encourage self evaluations of municipal inspection programs. Several WV meetings and municipal training sessions were held to discuss BMPs, URMP requirements and documentation of inspection activities. It was determined that inspectors would benefit from a review of documentation requirements. An email notice to that effect was sent to building inspectors prior to the rainy season on 10-4-07. The Construction Inspection training table details the training sessions attended and conducted in FY07-08.

Work Plan Self Evaluation Matrix

Source	WP Task	FY07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
A. SCV PROGRAM - PROJECTS/SUPPORT				
	NPDES Permit, Provision C.4, C.9 & Pest Mgt Plan (PMP)	a. Watershed Education and Outreach Campaign Help to develop/implement ongoing watershed education and outreach campaign. WVCWP Mgr assists via WEO Ad hoc Task Group. Participate in campaign development and special projects, e.g. community events. Campaign will include funding for educational programs at the Alviso Ed Center and funding for ZunZun performances in local schools. See SCVURPPP FY07-08 Watershed Watch Work Plan for details.	WVCWP Pgm Mgr assists via participation in the Watershed Education and Outreach Ad Hoc Task Group. WVCWCP helped plan and implement the Watershed Watch campaign, aimed at IPM and Mercury Pollution Prevention, in the fall of 2007. *Watershed Watch Media Campaign* The FY07-08 campaign featured ongoing IPM and Mercury ads in community newspapers. The WV communities, (along with 3 other cities and the County Integrated Waste Mgmt Division) contributed additional funds towards local media buys. WVCWP regularly provided staff support for Program outreach events. *Haunt the Hollow Halloween Event on Sunday 10/28/07* 1 WVCWP staff member & 1 WVCWP volunteer assisted at this event wearing costumes, they handed out educational materials and gave visitors an opportunity to complete a watershed survey. The survey had two questions one regarding fluorescent light disposal and the other pertaining to the treatment or lack of treatment of water that flows down the storm drain. The completed surveys were collected and tallied. Surveys with contact information were entered in a drawing. Two winners each received two tickets to Gilroy Gardens. The theme park is a Watershed Watch partner.	WVCWP Staff

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

	NPDES Permit, Provision C.4, C.9 & Pest Mgt Plan (PMP)	b. Pesticide User Outreach Project Continue to provide funding and to participate in Our Water Our World IPM Store Partnership. Project scope will include items in Program's Pesticide Management Plan based on provision c.9.d of the Permit for outreach to residents, commercial businesses, and pest control operators.	Campbell Clean up Event Saturday April 12, 2008 In conjunction with Great American Pick-up and Keep California Beautiful For more information visit http://www.ci.campbell.ca.us/General/CommunityCleanup/CommunityCleanup.htm	WVCWP Staff
	NPDES Permit, Provision C.9.c.	c. Mercury Pollution Prevention Outreach Participate in the Program's Mercury Pollution Prevention Outreach Work Group and conduct local implementation of the Program's Mercury Pollution Prevention Plan including public education on: 1) negative health and environmental impacts of mercury, and 2) proper disposal of products containing mercury.	1-9-08: Three (3) HHW Mercury brochures were given to St Mary's 5th grade teacher, in Los Gatos to show students and parents some convenient drop-off locations for mercury bulbs and batteries. 1.25 hour long Watershed presentation was provided to 35 students by WVCWP staff with specific focus on the dangers of mercury waste in our watershed and the proper disposal of mercury containing items such as fluorescent bulbs. ********** Campbell Clean up Event Saturday April 12, 2008 In conjunction with Great American Pick-up and Keep California Beautiful For more information visit http://www.ci.campbell.ca.us/General/CommunityCleanup/CommunityCleanup.htm ********** St. Mary's School, Los Gatos –Presentations for kindergarten classes on 5-6 -08 ********** Urban Runoff Food Facility Inspection Program Annual Meeting April 22, 2008 9:00AM- 10:00AM Refer to IND Training for full summary.	WVCWP Staff

Public Information/Participation Program EVALUATION - *SCV Program Projects/Support*

Pesticide User Outreach - STORE PARTNERSHIP:
Managers of Summerwinds Garden Center in Campbell have shown their interest in less toxic products. Summerwinds' store management chose to participate in the IPM store partnership. A consultant representing SCVURPPP's Watershed Watch and OWOW campaigns worked with the Campbell store to increase shelf space and display exposure for the promotion of less-toxic products.
SCVURPPP's Watershed Watch procured a partnership with: local nursery (Yamagami's), 2 car wash companies (w/ total of at least 6 locations), paint store (Kelly Moore) and local park/zoo (Happy Hollow) to participate in annual Discount Card Program. The Watershed Watch Discount Cards were distributed by SCVURPPP to patrons of Classic Car washes over 2hrs on four consecutive Wednesdays in May/June. WV CWP distributed Cards at the April 26 National River Clean-up Day (75 cards), Los Gatos Public Works Open House (30 cards) and to PW Staff who attended the annual SD & Street Maintenance Supervisors Training Meeting (20 cards).

B. WVCWP PROJECTS

GENERAL OUTREACH

General	NPDES Permit, Provision C.4 and C.9	a. Distribute Materials. Distribute public information materials at civic centers, libraries, building and planning department counters and similar venues. Maintain a website (and phone request line) for public requests and distribution of materials.	July 9, 07 contacted Nancy Higgins, instructor for Community Education course on organic gardening for residents. Delivered materials for 2 classes, one in Campbell and one in Los Gatos. Provided 2 Site Design Guidelines books featuring pervious surfaces for driveways and patios and rain gutter downspouts directed to landscaping. Provided Grow It Guides, OWOW pocket guides for natural pest control and other about 40 – 50 copies of smaller ed material. Nancy requested an Enviroscape Presentation for her adult ed classes. Will arrange is time is permitted away from AR ********** Haunt the Hollow EVENT 10-28-07 1 Master Gardener; 150 HHW English; 11 Mercury; 300 Environmental News Quiz; 30 Gutter Getters; 2 Diazinon; 20 Our Water Our Word Magnets; 50 Watershed Watch Discount Car Wash Coupons	WVCWP Staff

TARGETED OUTREACH & SCHOOLS				
Target Schools	Expand Outreach to Teachers and Students	g. Schools Outreach: Watershed Ed. Curriculum Continue to build on 5th grade curriculum for WVCWP classroom watershed presentations, consistent with state required education standards. Expand outreach efforts by developing scripts based on state standards, or text books, for other grade levels in response to teacher interest. Evaluate effectiveness and appeal by soliciting teachers' & students' evaluations.	Development of an appropriate script for Kindergarten students was a focus of the 07-08 outreach efforts. The interactive presentations developed for the Kindergarten classes were well-received by teachers and students. Cumberland Elementary, Sunnyvale 10-30-07 30 5th grade students participated in demonstrations and activities. ********** Casa Di Mir Montessori School, Campbell – Presentations for 6-12 year-olds on 2-13-08 ********** Queen of Apostles Private Elementary School – Presentations for 4th and 5th grade science classes on 4-4-08; 70 students, approximately 35 4th graders and 35 5th graders, from the science classes, participated in Enviroscape presentations ********** St. Mary's School, Los Gatos –Presentations for kindergarten classes on 5-6-08; 40 students, approximately 20 in each section.	WVCWP Staff
Target Schools	Based on feedback from Teachers and Students	h. Provide Watershed Education in classrooms Conduct water quality protection education or presentations in local schools, using *Enviroscape* and/or other methods to engage students in Watershed campaign messages. Improve presentation format based on teacher/student feedback.	Cumberland Elementary, Sunnnyvale 10-30-07 30 5th grade students participated in demonstrations and activities. Using 2 simple models, Two WVCWP staff, working with Environmental Volunteers docents, demonstrated the role of the Water Cycle and a participated in an experiment showing how water evaporates and how condensation occurs by using a hot plate, salt water and ice cubes. Second demonstration was a water density kit with a experiment using an egg to show the difference in density between fresh and salt water. ********** Casa Di Mir Montessori School, Campbell – Presentations for 6-12 year-olds on 2-13-08; Approximately 50 students	WVCWP Staff by arrangement w/ Teachers

			between ages 6-12 participated in Water Conservation Day at Casa Di Mir Montessori School. The Director of the Federation of Fly Fishers gave a presentation on water resources and conservation. Montessori School invited the WVCWP to present on watersheds. The WVCWP gave two presentations about urban run-off, pollutants and trash in the Southern San Francisco Bay watershed. The Enviroscape was used to demonstrate urban run-off. ********** Queen of Apostles Private Elementary School – Presentations for 4th and 5th grade science classes on 4-4-08; 70 students, approximately 35 4th graders and 35 5th graders, from the science classes, participated in Enviroscape presentations to learn about reduction of pesticides, proper car washing techniques, erosion control, litter prevention and trash cleanup, safe disposal of HHW. Two separate presentations were given with approximately 35 students in each. School staff videotaped the presentations. The WVCWP distributed 20 T-shirts, 70 pencils, 4 hats, 5 visors, 2 water bottles, 10 "No Dumping" placards, and 4 gutter getters. ********** St. Mary's School, Los Gatos –Presentations for kindergarten classes on 5-6-08; 40 students, approximately 20 in each section. Two Enviroscape presentations were given to educate the students about reduction of pesticides, proper car washing techniques, erosion control, litter prevention and trash cleanup, safe disposal of HHW. The WVCWP distributed 3 T-shirts, 40 pencils, 10 magnets, 4 puzzles, and 20 paint sticks. Approximately 5 mercury brochures were also given to the teachers.	
			<u>Additional School Outreach:</u> Los Gatos Public Works Open House Thursday 22nd, May 2008 Los Gatos Corporation Yard Approximately 20 students from Village School's kindergarten class and 34 students from St. Mary's Elementary School attended the Open House. WVCWP	Municipal Staff WVCWU Staff Support

			gave a presentation on watersheds and pollution prevention. Topics covered included mercury, copper, car washing and littering. Approximately 15 T-shirts, 25 water bottles, 20 gutter getters, and 5 activity books were distributed. ********** SCVURPPP/ Watershed Watch sponsored ZunZun Assemblies 9/26/07 Village Sch, Cmbl, 223 Students 12/6/07 Capri Sch, Cmbl, 640 Students 4/16/08 Casa di Mir Montessori, Cmbl, 115 Students 4/28/08 Campbell Christian, Cmbl, 220 Students 5/29/08 Prospect High Sch SpEd, Stga, 125 Students	
TARGETED OUTREACH				
Targeted Business	Permit Provision C.4	i. Education – Businesses Distribute BMP materials during WVCWP inspections of food facilities and automotive businesses. Discuss relevant educational material with businesses cited for potential stormwater violations.	WV Inspector distributed 40 pool & Spa BMP brochures to Leslie's pool & spa retail outlets during Sept 2007, as a follow-up to newsletter article published by MS. The WVCWP Inspector distributed BMP materials to all restaurants and food facilities that were visited in FY 07-08. Material distributed included: Posters that depict proper mat washing techniques (Good Cleaning Practices' Poster & packet), informational pamphlets on grease and food scraps (WVSD/ SJ POTW FOG program poster), and information on pest control (Don't Set Table for Pests). The WVCWP inspector also distributed educational material to local businesses that may partake in activities that could affect stormwater quality (i.e. 'Vacu-boom' Brochure). This past year there was a focused effort to raise awareness of Mercury pollution and so 'What you don't know about Mercury' packets were handed out at every facility visited.	WVCWP Inspector
Reporting	NPDES Permit, Provision C.4	j. Evaluation/ Reporting Document or estimate (as feasible) numbers of residents, students, municipal staff etc. reached by outreach efforts. Public Information/Participation Program EVALUATION – WVCWP PROJECTS

San Tomas Aquino Creek Clean up @ Westmont High Event Summary
Saturday September 15, 2007; In conjunction with International Coastal Cleanup Day

Summary of Survey completed by Volunteers:
(Based on 30 volunteer response sheets)
Most common pieces of trash collected: Cigarette butts, paper bags, food wrappers, and glass.
Least common pieces of trash collected: Plastic bottles, rubber.
Most Unusual pieces of trash collected: Spray paint cans, bicycle seat, insulation, soccer ball, credit card,
Comments by volunteers
"It was a great experience."
WVCWP Contributions:
Approximately 50 pencils; 25 pairs of gloves; Snacks and drinks for all volunteers.
Results:
30 volunteers worked at the cleanup for 4 hours each. At a minimum wage of $8.00 an hour this would have cost $960 in temporary labor.
19 bags of recyclables = 77 lbs (estimated)
27 bags of trash = 115 lbs (estimated)
Total collected = 192 lbs (estimated)

****

Saratoga Creek Cleanup Event Summary
Saturday September 29th, 2007

Hosting Agency(s): WVCWP; City of Saratoga
Summary of Survey completed by Volunteers:
(Based on 8 volunteer response sheets)
Est. Number of recyclables collected: 6 Bags

Est. Number of trash collected: 43 Bags
Most common pieces of trash collected: Beverage containers, Liquor bottles, and food wrappers.
Least common pieces of trash collected: Metal, cloth, wood, rubber.
Most Unusual pieces of trash collected: Filing cabinet, Oven, and a 30' pipe.
Comments by volunteers
"This Location was so dirty we should do it every 2-3 months."
Items for participating volunteers
10 T-shirts – for all participants; Pencils; 10 pairs of gloves.
Results:
16 volunteers worked at the cleanup for 4 hours each. At a minimum wage of $8.00 an hour this would have cost $512 in temporary labor.
Results were not weighed.

****

Campbell Clean up Event Summary:
Saturday April 12, 2008; In conjunction with Great American Pick-up and Keep California Beautiful

Participating Agencies & Dignitaries
Campbell City Manager, Dan Rich; Campbell Council Member, Dan Furtado; VTA; CalTrans; Volunteer Center of Silicon Valley; Campbell Maintenance Crew Workers; WV Clean Water Program
Summary of Survey completed by Volunteers:
(Based on 29 volunteer response sheets)
Most common pieces of trash collected: Cigarette butts, plastics, paper, glass.
Least common pieces of trash collected: Metal, cloth, wood, rubber.
Most Unusual pieces of trash collected: Luggage, dead birds, dollar bill, shower drain, credit cards, hubcap, rug, unopened/ full juice bottle, hanger, T-shirt, tires, car bumper, and a bicycle.
Comments by volunteers
"It was great exercise!" ; "The water seems twice as dirty as the trails."; "There is too much litter on the ground. People should be responsible for their own trash!"; "I had a great time, see you at the next event!"
Comments by Director of "Volunteer Center of Silicon Valley"
Stephen Quigley (Executive Director) said that he had been visiting various "clean-up" events; noticing an average of 30-40 volunteers per site, he was, however, pleased to find that the Campbell site had approximately 100 volunteers.
Comments by CalTrans
Some areas were *just* cleaned (the week prior) by their Adopt-a-highway/ or other work crew.
Give Away Bags for volunteers
Approximately 70 Bags were handed out; each with a content of:
A pencil, Recycle bag, Volunteer stickers, Flower packet (plant a butterfly garden), Solar/Mercury-Free Thermometer + Mercury brochure, "Stop Junk Mail" brochure, HHW brochure, Oil Rag, Adopt a Creek brochure, Certified Recycle Centers flyer/list, Bio-Hazard Disposal list, E-Waste Recycle list
Other items for participating volunteers
100 T-shirts – for all participants; 8 water bottles for those who shared what they found after the event; 25 Temporary tattoos to the students who participated (from a Campbell school, St. Mary's School of Los Gatos, & other younger children)
WVCWP Contributions:
50 mercury brochures; 50 mercury free thermometers; 50 pencils
* Many Thanks to Group Event Coordinator; Diana Johnson (Who mentioned; it is possible that there may be an article, on the event, by The Campbell Reporter.)
* And a Special Thanks to California's Bottle/Can and Phone Recycling Centers, who provided grants from CRV funds to support this event.

Sam Tomas Aquino Creek Cleanup @ Westmont High: Saturday May 17th , 2008
In conjunction with International Coastal Clean-up Day
Rapid Trash Assessment of Location:
Trash assessment conducted on 4/16/08.
Scores are as follows: Level of Trash (17), Actual Number of Trash Items Found (18), Threat to Aquatic Life (16), Threat to Human Health (18), Illegal Dumping (8), Accumulation of Trash (18), Total Score=95.
Cleanup Cancelled due to the outstanding condition of the cleanup site.

****

Lexington Reservoir Cleanup @ Lexington Reservoir Launch Ramp Lot: Saturday May 17th , 2008
In conjunction with International Coastal Clean-up Day
Participating Agencies
Santa Clara County Parks, WV Clean Water Program

Summary of Survey completed by Volunteers: (Based on 29 volunteer response sheets)
Most common pieces of trash collected: Paper, plastics, and glass.
Least common pieces of trash collected: Metal, cloth, wood, rubber.
Most Unusual pieces of trash collected: Car seat, tire, street cone.
Give Away Bags for volunteers: Approximately 70 Bags were handed out;
WVCWP Contributions:25 mercury brochures; 25 T-shirts
Results: 35 volunteers worked at the cleanup for 4 hours each. At a minimum wage of $8.00 an hour this would have cost $1,120 in temporary labor. Assuming 20 lbs per bag: 5 bags of recyclables = 100 lbs; 45 bags of trash = 900 lbs; Total collected = 1,000 lbs
Comments by volunteers
"I never knew there was so much trash down here!"
"The water seems twice as dirty as the trails."
"The Police should put the people who litter in jail."

West Valley Recycles! Spring 2008

BILL PAY THE EASY WAY

West Valley Collection & Recycling has made it easier than ever to pay your bill. Choose the method that works best for you.

Mail It: Make your check payable to West Valley Collection & Recycling. Be sure to include the payment stub to get credit for your payment right away. Use the pre-addressed envelope included with your bill.

Drop It In: We accept payments at our office Monday through Friday from 8 AM – 4:30 PM.

Deliver check to:
West Valley
Collection & Recycling
1333 Old Oakland Road
San Jose, CA 95112

Pay Your Bill Online: Visit our new online payment system at www.wastecollections.com, click on "Online Bill Pay" and follow a few simple instructions. You must have your current invoice and credit card or debit card information available.

Home banking customers continue to use the remit address:

West Valley
Collection & Recycling
Dept. 1493
Los Angeles, CA 90084-1493

You must have your current invoice available.

Have questions about your recycling service?

Ask Randy

Q: I recycle regularly, but does it really make a difference?

A: Recycling has a huge impact on our environment! Consider the aluminum can-what most people recycle most. More aluminum goes into beverage cans than any other product and if it is thrown away it will still be a can 500 years from now. Yet a recycled aluminum can will be back on the shelf as a new can in as little as 60 days. Now consider this: Recycling one aluminum can saves enough energy to run a TV for three hours—or the equivalent of a half a gallon of gasoline. Keep on recycling!

Spring Cleaning: A Place for Everything.

It's spring. Birds are singing, flowers are blooming and houses are filled to the brim with clutter—the aftermath of a long, cold, winter. From basements to bedrooms to backyards, everything could use a good spring-cleaning. Here are some ideas to make the job easy and environmentally friendly. First, organize what is not trash into labeled piles: sell, donate, recycle. Next, get to work:

- Have a garage sale or even better, organize a neighborhood garage sale.
- Donate your gently used clothing, books, furniture and working appliances to a local thrift store benefiting charity. Some organizations provide pick-up service, and all of them should provide you with a donation receipt to use as a write off on your income taxes.
- Recycle items that can't be reused.
- Request a bulky item pick-up. WVC&R will remove items placed at your curb for a small fee. Just call customer service at **(408) 283-9250** and we will pick up these items on your next collection day.
- Drop off your e-waste. The televisions, computer stuff, and vintage VCRs that didn't get picked up at the big garage sale can be dropped off at our facility. Check out **westvalleyrecycles.com** or call **(408) 283-9250** for a list of acceptable items, hours of operation and directions.
- Batteries, fluorescent light bulbs, non-empty aerosol cans and paints do not belong in our landfill. Check out **westvalleyrecycles.com** ewaste and universal drop off for more information.

IMPORTANT TO NOTE:

WEST VALLEY COLLECTION & RECYCLING, LLC
1333 Oakland Road
San Jose CA 95112-9894

West Valley Recycles! Spring 2008

10 Simple Ways to Celebrate Earth Day – Every Day.

In honor of Earth Day: Ten simple things anyone can easily do to pay tribute to the Earth and care for the earth's environment.

1. REDUCE

Skip the bottled water. It's expensive, and it produces large amounts of waste. Use a reusable water bottle when possible and filter your tap water for drinking, save money and make a big difference.

2. REUSE

Most products we buy cause greenhouse gas emissions during production and distribution. Take your lunch in a reusable lunch box instead of a disposable one. Reuse grocery bags and just say no to disposable utensils.

3. RECYCLE, RECYCLE, RECYCLE

Of course, you already know that recycling saves energy and reduces greenhouse gas emissions. But did you know this? If the recycling rate for aluminum and steel cans, plastic #1, glass, newspaper and corrugated cardboard increased just 10%, 3.9 million more tons of materials would be recycled, saving enough energy to power 1.5 million homes for one year. Check out the recycling how-to page at **www.westvalleyrecycles.com**

Okay, those were pretty easy; why not try some of these?

4. BUY RECYCLED

Purchasing recycled products completes the recycling loop. By buying recycled, you play an important role in making the whole process a success. As consumers demand more environmentally sound products, manufacturers will have to meet that demand by producing high quality recycled products.

5. WALK OR RIDE YOUR BIKE TO WORK OR SCHOOL

Save money on gas and parking while improving your health and dropping pounds. Stop and smell the roses. If you live too far from your office, explore telecommuting, public transportation or carpooling.

6. SWITCH TO CFLs

Switch to the "twisty bulbs," called compact fluorescents or CFLs. These replace incandescent, halogen and other lights around your house to use up to 80% less energy. But remember: All fluorescent lamps and tubes are hazardous waste and must be taken to an authorized recycling facility. Call West Valley Collection and Recycling customer service at **(408) 283-9250** for information.

7. SWITCH IT OFF

Almost 40% of the electricity used to power your home electronics is consumed while they are in standby mode.

Hook up your home computer system and accessories to a power strip that can be switched off each night.

8. PLANT A TREE

A single tree will absorb one ton of carbon dioxide over its lifetime. Shade provided by trees can reduce your air conditioning bill by 10 to 15%. Pretty cool.

9. START A COMPOST PILE

Yard trimmings and food residuals account for 23% of the U.S. waste stream. Natural composting began with the first plants on earth and has been going on ever since. As vegetation falls to the ground, it decays, providing nutrients needed for plants, animals, and microorganisms. It's that simple.

Go to **www.reducewaste.org** to find the 2008 Home Composting Workshop Schedule.

10. MAKE EVERY DAY EARTH DAY

Check out the links page at **www.westvalleyrecycles.com** for events, drop-off sites, how-to workshops and environmental happenings all year round.

Clean Green

Spring. Let in the fresh air. Quick! Because the levels of pollutants indoors can be up to 100 times higher than outdoors, according to the U.S. EPA. Indoor air pollution is due in large part to volatile organic compounds (VOCs) that evaporate from cleaning products that can trigger health problems like allergies and asthma.

Try these simple ingredients you might already have around the house for earth friendly cleaning—like baking soda, vinegar, lemon juice, hydrogen peroxide and borax. They're powerful, safe, and less expensive than chemical alternatives.

- For glass, use a mixture of half white vinegar and half water.
- Baking soda and cornstarch make good carpet deodorizers.
- Clean mildew and mold with a mixture of lemon juice or white vinegar and salt.
- A paste of baking soda, salt, and hot water makes a great oven cleaner.
- Instead of using a store-bought drain cleaner, which likely contains lye, hydrochloric acid and sulfuric acid, try pouring a quarter cup of baking soda down the clogged drain, followed by a half cup of vinegar. Close the drain tightly until fizzing stops, then flush with boiling water.

don't let LITTER trash your community!

Volunteer with other concerned citizens to pick up litter in your community.

Great American Litter PICKUP

Saturday, April 12, 2008

Volunteers are encouraged to bring their own pick-up stick & gloves.
All youth under 18 need supervision & transportation to get to clean-up sites.

Clean-up: 8:30 – 11:30 AM

For more information or to sign up call: **(408) 277-3208**

Para información sobre este día de limpieza comunitaria, llame al (408) 277-3208.

City of Campbell's

Great American Litter

PICK UP

Saturday, April 12, 2008

Clean-up: 8:30 – 11:30 AM • Celebration: 12:00 – 1:00 PM

Help clean up litter in the City of Campbell. Register your family, friends, students or service club! To register for this event, please call (408)866-2145, or visit our website at www.cityofcampbell.com

The City of Campbell's cleanup will focus on four locations: the Los Gatos County Creek Park, the Los Gatos Creek Trail, the Camden on and off ramps of Highway 17, and along the railroad tracks adjacent to Winchester Boulevard.

Rain or shine, volunteers will be asked to meet at the park, at which time they will sign in and disperse into groups. An agenda and instructions on safety and debris removal will be discussed.. Gloves, vests and other tools will be furnished.

Volunteers are encouraged to dress appropriately for the event.

Refreshments will be provided in the morning and the event will conclude with a lunch at noon at the park pavilion.

Schedule of Events:

Registration:.....	**8:00 - 8:15 AM**	**Los Gatos County Creek Park, 1220 Dell Avenue, Campbell**
Orientation:	**8:15 - 8:30 AM**	**Welcome and Introductions, safety precautions, group assignments**
Go to Cleanup Sites:...	**8:30 - 11:30 AM**	**Pick up litter in designated areas**
Celebratory Lunch:	**11:30 - 1:00 PM**	**Return to Los Gatos County Creek Park Pavilion, Closing Ceremonies**

For information online, please visit our website at www.cityofcampbell.com.

CAMPBELL'S A LOT CLEANER THANKS TO THE EFFORTSOF VOLUNTEERS

Residents participate in 6th annual clean-up

By CHRIS VONGSARATH

One man's trash may be another man's treasure,but not when it comes to the cigarette butts, plastic food wrappers and empty aluminum cans people toss out of their cars as they whiz down Highway 17. That's why on April 12, community members came together for the Campbell's sixth annual Great American Pick Up Litter event, spending four hours picking up litter and cleaning up the city.

Photograph by Patricia Appelquist

Community members come together for the sixth annual City of Campbell Great American Pick Up Litter event. There were about 100 people on hand to help with Campbell's clean-up effort.

About 100 people volunteered for the event, which ran from 8 a.m. until noon. The volunteers came from local organizations, such as Campbell's Kiwanis and Lions clubs, and from city hall as Councilman Dan Furtado and city manager Dan Rich used their weekend to chip in. Most were regular residents who care about keeping Campbell clean.

"There are volunteers that just want to get involved with the community and just want to better the community," said Diana Johnson, office specialist in the public works department. "There are some who like to go out because of Earth Day, and families that just want a family outing."

Whatever the reason, four areas around the city are a lot cleaner thanks to the volunteers' efforts. Equipped with two plastic bags—one for trash and another for recycling—the volunteers set out to pick up trash at Los Gatos Creek Park, Los Gatos Creek Trail, the Highway 17 off-ramp at Camden Avenue,and along the railroad tracks that run parallel to Winchester Boulevard. Representatives from the Santa Clara Valley Transportation Authority and Caltrans were also on hand,since the volunteers were working on the railroads and highway.

In all,the volunteers came back with 27 bags of aluminum cans,plastic, glass and paper,which equals 540 pounds of recyclable material,Johnson said.They also collected 60 bags of trash, meaning 1,200 pounds of litter is now gone from the city's parks and roadways.

For their efforts, they were awarded free pizza from City Pizza. Starbucks also donated free coffee, and Whole Foods donated water.

Participation in the event hasn't dropped off in the six years it's been held,Johnson said.

"There's been a countywide effort to pick up litter," she said, "and we're encouraging volunteers in our community to pitch in."

'There's been a countywide effort to pick up litter ...

and we're encouraging volunteers in our community to pitch in'
— Diana Johnson

Weed Worries?

Use less toxic ways to control pests and prevent polluted runoff from entering our creeks and the Bay.

Applying thick mulch blocks light to help prevent weed growth. And it saves water, too!

WEST VALLEY CLEAN WATER PROGRAM

October 12, 2007

Attn: Tom Babb
Department of Pesticide Regulation (DPR)
Pest Management and Licensing
1001 I Street, 3rd Floor, MS-3A
Sacramento, CA 95812-4015

Dear Mr. Babb:

A Proposal for the Santa Clara Valley Green Gardener Training program is being submitted to the DPR Alliance Grant Program by the County of Santa Clara in cooperation with the Santa Clara Valley Urban Runoff Pollution Prevention Program (SCVURPPP). As a member of SCVURPPP, The West Valley Clean Water Program, on behalf of the cities of Campbell, Monte Sereno, Saratoga and the Town of Los Gatos, will provide in-kind staff time as a management team member. This staff time is allotted for the grant period from January 2008 through June 2010 to assist with implementation of this proposal, should it be approved by DPR.

The West Valley Communities support a number of public outreach and education programs which help to prevent storm water pollution and fulfill the requirements of their NPDES Storm Water Discharge Permit. Clean Water Program staff use every opportunity to communicate with the public about Integrated Pest Management (IPM) strategies and benefits. The goal of the proposed program is to provide training to landscape maintenance workers and landscape professionals who may not be aware of the less-toxic methods they can use through IPM techniques. This proposal will provide an opportunity to reach currently underserved businesses and provide outreach to residents regarding the importance of employing landscape maintenance workers who understand and use IPM to promote local storm water pollution prevention efforts.

If you have questions regarding the support of the West Valley Clean Water Program staff for this project, please contact me at (408) 316-1233.

Sincerely,

Cheryl C. Donnelly

Cheri C. Donnelly

Why You Want These Bugs in Custody

Most insects found in your garden don't harm plants. In fact, 97% of the insects you see fall into this category! Such insects are called "beneficials" because they benefit the garden by pollinating plants, improving soil, and eating the pests that really harm plants. These hard-working "beneficials" can be a gardener's best friend by keeping problem pests under control naturally, without the use of harmful chemicals.

Making a Positive Identification

Before you stomp on or spray any unfamiliar bugs in your garden, make sure you know the good guys from the bad guys. Remember that most insects go through several changes during their life cycle, so the young (larva or nymph) may look totally different from the adult. And, keep in mind, it is often the "young" of the insect that eats the most pests. This brochure will help you to identify some of the most common beneficials (both adults and their young) found in local gardens. Here are some tips for attracting and keeping beneficials in your garden:

- **Go Undercover:** Provide beneficials with shelter and over-wintering sites by covering bare dirt with an organic mulch like leaves or bark. Remember to leave a small area of exposed soil to encourage solitary native bees that are "ground-nesters."
- **Lure Them Out of Hiding:** Include a variety of different pollen and nectar-rich plants to provide beneficials with a food source – in addition to pests.
- **Crack Down on Crime:** Pesticides (particularly broad-spectrum pesticides that don't target single pests) kill the beneficials as well as true garden pests. Protect beneficial insects by not using pesticides! These chemicals can also run off gardens and lawns with rain and over-watering, entering storm drains – a direct route to local creeks and other bodies of water – where they can harm water quality and wildlife. For information on pesticide alternatives, go to www.OurWaterOurWorld.org.

Bringing in the FBI: Flowers for Beneficial Insects

Most beneficial insects need to supplement their diets with pollen and nectar. You can attract them to your garden, and encourage them to stay and hunt for pests, by offering them a variety of nectar and pollen-rich flowers. Plants with daisy-like flowers or plants with clusters of multiple small flowers are especially attractive to beneficials. Choose a diversity of plants that bloom at different times so that the beneficials can feed throughout the year. Many common garden plants suited to our Mediterranean climate will attract beneficials, including oregano, alyssum, borage, dill, angelica, cosmo, tansy, calendula and rosemary.

Here are some California native plants guaranteed to draw in many of the 10 most wanted

Having a Good Defense

Many native plants have developed **natural defenses** to ward off insect pests and diseases. These defenses can eliminate the need for pesticides and reduce maintenance costs. Because native plants have adapted to grow in our specific climate, they often require very little care once established and are generally more tolerant of drought. The diversity of natives available offers gardeners great choices for both fragrant flowers and beautiful foliage – and provides food and habitat for our native birds, wildlife, butterflies, and beneficial insects.

Early Fall is an ideal time to plant natives. The cool weather and rainfall will help young plants establish a healthy root system before colorful Spring blooms emerge.

The 10 'Most Wanted' Bugs in Your Garden

Guilty of: Controlling garden pests without the need for toxic chemicals

Reward: A healthy, sustainable garden that saves money and resources and protects the health of families, pets and the environment

ASSESSING THE LINE-UP

Here are rap sheets and mug shots on ten beneficial bugs that consume large numbers of pests or pollinate plants. Do not attempt to apprehend them... just let them serve time in your garden!

Lacewing larva and aphid

Green Lacewing

Aliases: Aphid wolf, aphid lion.
Wanted For: Aggressively devouring aphids, thrips, mealybugs, scale, spider mites, leafhoppers and insect eggs.
Family History: Adult green lacewings feed on nectar, pollen, and honeydew – at dawn and dusk. Juveniles are voracious predators known to eat up to 20 or 30 aphids a day.
Sightings: Last seen around nectar-producing plants like sunflowers, tansy and buckwheat.

Soldier beetle larva

Soldier Beetle

Aliases: Leatherwings.
Wanted For: Attacking and feeding on aphids and other soft-bodied insects.
Family History: Adults feed on pollen and insect pests on plants. The larva (or "young") hunt for pests in leaf litter and soil.
Sightings: Known to feed on the pollen of flowers like goldenrod and milkweed while waiting for its prey. Reports of sightings appear in early spring, shortly after aphids begin hatching.

Dragonfly nymph

Dragonfly

Aliases: Mosquito hawk, darner.
Wanted for: Preying on unsuspecting flying insects like mosquitoes, flies and midges.
Family History: The dragonfly's excellent eyesight, strong jaws and agile flight make it a deadly predator able to catch prey in mid-air. Dragonfly larvae (nymphs) live in water and are also efficient hunters eating mosquito larvae and other insects, snails and even small fish.
Known Accomplices: Often seen in the company of its relative, the damselfly, another insect predator. Don't be fooled: when at rest, dragonflies hold their wings outstretched while damselflies fold their wings closed over their bodies.
Sightings: Last seen near garden ponds, streams and other bodies of water.

Bumblebee nest cells cut open to show developmental stages

Bee

Aliases: European honeybee, bumblebee. (Also includes hundreds of native bee species including leafcutter and orchard bees.)
Wanted For: Pollinating the flowers of many of our ornamental, fruit and vegetable plants.
Family History: Specially equipped for moving large quantities of nectar and pollen, honeybees are usually found in colonies in hives. Most native bees are masters at eluding notice and often live alone in ground nests. Bee populations are diminishing due to pesticide use, and loss of habitat.
Sightings: Usually seen in gangs in the vicinity of flowers high in nectar and pollen including asters, sunflowers, mints, lavender, rosemary and sages.

Syrphus larva eating brocolli aphids

Syrphid Fly

Aliases: Hoverfly, flower fly.
Wanted For: Hunting down aphids, mealybugs and other pests, and for pollinating plants.
Family History: Adults are known to be important pollinators. The larvae suck the juices out of their victims. A single larva can consume hundreds of victims a month.
Sightings: Larvae are usually found under leaves in the company of aphids. Adults have been seen lurking around ceanothus, sunflowers, feverfew and other nectar-rich flowers.
Master of Disguise: With their yellow and black stripes the adults appear to be bees. They have only one set of wings and can't sting. The larva look like fat, legless caterpillars.

Ground beetle larva

Ground Beetle

Aliases: Predacious ground beetle, and carabids, among others.
Wanted For: Conspiring to eat many soil-dwelling pests like slugs, snails, cutworms and root maggots.
Family History: Fast-moving predator, armed with strong jaws. Generally dark brown or black with long legs, and shiny, hard front wing covers that sometimes have a metallic sheen. Usually hunts at night. Reported to be able to consume its body weight in food each day. Larva also feed on soil insects.
Sightings: Usually sighted hiding in soil or under rocks, dried leaves and mulch.

Parasitoid wasp cocoons on caterpillar

Parasitic Wasp

Aliases: Trichogramma, Braconid, Hyposoter and Ichneumon, among others.
Wanted For: Parasitizing the eggs of cutworms, cabbage loopers, codling moths, tomato hornworms, aphids, whiteflies, scales and other pests.
Family History: These tiny, notorious wasps lay their eggs on or inside of pests or insect eggs and the larva eat the pest. Can be tracked by the tell-tale signs they leave behind, like tiny, white cocoons on caterpillars, or "aphid mummies," – the tan, dried up husks of aphids stuck to a leaf.
Sightings: Suspected of foraging for nectar on tiny flowers like alyssum, yarrow, tansy, and clover.

Orb weaver spider

Juveniles closely resemble adults

Spider

Aliases: Funnel weavers, crab spiders, and golden orb spiders, among others.
Wanted For: Trapping and bugnapping a wide variety of insect pests.
Family History: The most deadly natural enemy of pests, spiders are skilled predators. They may hunt with webs or track their victims on the ground and on plants. Can be identified as arachnids, with eight legs and two body parts.
Sightings: All over your garden, and on front porches near lights.
Warning: Spiders are thought of as fearsome creepy crawlers but very few have a bite that is harmful. Always wear gloves when cleaning garages, debris, woodpiles, storage areas or piles of clutter.

Ladybug larva and pupa

Ladybeetle

Aliases: Ladybug, ladybird beetle, seven-spotted ladybeetle.
Wanted For: Gorging on soft-bodied insects like aphids, scale, thrips, mealybugs and spider mites.
Family History: Both adults and larva eat large numbers of pests. It is believed that one ladybug can devour 5,000 aphids in its lifetime. Most common suspect is red with black spots – but watch for many other species in a variety of colors, with or without spots.
Warning: Be on the lookout for a ladybug look-alike: the spotted cucumber beetle! This green beetle with black spots feeds on crops and foliage.
Sightings: Known to loiter on nectar-rich flowers like yarrow, clover and tansy.

Tachinid fly eggs on a caterpillar

Tachinid Fly

Aliases: Diptera.
Wanted For: Attacking unsuspecting caterpillars and beetles.
Family History: Disguised as a hairy housefly, this parasitic insect lays its eggs on caterpillars, grubs and other insects. When the eggs hatch, the young (larva) tunnel into their victims and eat them.
Sightings: Often seen stealing the nectar and pollen of tansy, milkweed and Queen Anne's Lace.

FY 2007-2008 Work Plan Self Evaluation Matrix

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
	SCVURPPP PMP (I.A.1.)	Summary of Use Track and report use of pesticides on municipally owned property.	Pesticides applied by municipal staff are reported monthly to the State of CA Dept. of Pesticide Regulation with copies of monthly reports forwarded to WVCWP for tracking purposes. Pesticide use by the municipal Pest Control contractor (PCO) are also forwarded to WVCWP. IPM practices are listed in the Evaluation section at the end of this Matrix.	PW Supt, Parks Spvsr
	SCVURPPP PMP (I.A.3.) PS #3	Implement BMPS Continue to Implement IPM practices as Best Management Practices (BMPs) for any pesticide used by staff or contractors. Report on use of IPM practices on municipal property.	During 07-08, the WVC continued to implement the Pest Management Performance Standard (PMPS). "Standard Operating Procedures for Pesticide Management" are being followed by staff and contractors. BMPs in general continue to be effective. WVC work with contractors to find the least-toxic method to treat resistant pest problems. The WVC use less-toxic pest management methods in municipal facilities (parks & buildings) whenever practicable, based upon budget and effectiveness. *See "Evaluation" section below for details on IPM implementation.*	Sr. Civil Engr/ coord w/ PW Supt, and Parks Spvsr
	SCVURPPP PMP (I.A.6.)	Banned Pesticides Inventory If any pesticides have been banned w/in the past FY (per EPA, State &/or local requirements), conduct an agency-wide search of chemical for these pesticides. Properly dispose of these banned substances pursuant to appropriate waste disposal regulations.	All storage areas are cleaned quarterly, and any pesticides that are no longer legal or no longer used are disposed of according to State regulations.	PW Supt/ Parks Spvsr

Campbell

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
	SCVURPPP PMP (I.B.2.) PS#5.b	Staff Training for Applicators Attend and/or conduct annual training which reviews appropriate portions of the IPM Policy, BMPs, and relevant IPM techniques for employees within departments responsible for pesticide application.	The City of Campbell continued its proactive approach to reducing pesticide usage by sponsoring staff attendance at a number of IPM-related trainings. Along with a variety of trainings attended by supervisory staff, 2 IPM trainings were attended by a total of 7 Parks staff. These trainings allow staff to keep current with the latest information on IPM and Less Toxic Pest Control strategies, so that pesticide usage can continuously be reduced, and so that staff will be prepared when new pest problems arise. All maintenance staff attended a training by WVCWP Stormwater Inspector on non-point source pollution. In addition, Campbell has a number of staff with Qualified Applicator Certificates (6) who are well-trained in all aspects of pesticides management. 2 of these employees pursued the training and received their Certification in 2008. In addition, the City Parks Supervisor holds a Pest Control Advisor license. SEE PESTICIDE MANAGEMENT TRAINING TABLE FOR DETAILS.	PW Supt/ Parks Spvsr WVCWP to provide training
	SCVURPPP PMP (I.B.3.) PS#5.c	Municipal Staff Education Inform employees who are not authorized and trained to apply pesticides that they cannot use over-the-counter pesticides in or around the workplace.	All City employees received this information via e-mail on July 27, 2007. The e-mail included information on the City's Stormwater Permit and IPM Plan.	Sr. Civil Engr; WVCWP to provide notice

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
	SCVURPPP PMP (II.A.1.)	Watershed Ed. & Outreach Campaign (WE&O)[1] Attend WEO and IPM work groups. Continue to assist with development of strategy for a campaign and training program (in Spanish & English) designed for staff of very small landscape businesses (typically 1-8 employees) mainly serving homeowners.	WVCWP Program Manager participates in the IPM Ad Hoc Task Group on behalf of the WVC. Project implementation and projects for consideration, which are discussed in the AHTG, are presented to City staff for appropriate follow-through. WVCWP contributed additional funds to the SCVURPPP's IPM ad campaign. This allowed the IPM ad to appear in the three (3) weekly community newspapers for six (6) weeks in the spring. (Campbell Reporter, Los Gatos Weekly, Saratoga News). WVCWP was very involved with the development of the new training program for small landscape businesses – from concept, to grant proposal, to implementation of a successful class series. The first set of classes were held from Feb- April 2007 – one in English and one in Spanish; Both classes were attended at capacity (40 students) and had waiting lists. Positive media coverage about the class was received in local ethnic and San Jose community newspapers. The classes are being listed in the Fall session and projected to be full. Since many WV residents employ small landscape contracting firms, it is hoped that these classes will have an impact on reducing residential pesticide use in the WVC. See "Evaluation" below, for details	WVCWP Staff
	SCVURPPP PMP (II.A.4.)	Community & School Opportunities Identify opportunities and attend community events/school classrooms to demonstrate reasons for, and methods of, less toxic pest control.	Information on the importance of reducing pesticide use, and the toxic effects of pesticide runoff, is included in all WVCWP educational presentations at schools. IPM information, and HHW brochures detailing proper pesticide disposal, are distributed at a variety of venues. In FY 07-08, WVCWP participated in helping to develop a	WVCWP Staff

Pesticide Management Activities Evaluation

PESTICIDE USAGE REDUCTION MEASURES – Pest Specific

Campbell is implementing IPM in the following situations:

1) On-going - Yellowjackets:

- Campbell uses traps as the main means of control.
- Parks Maintenance staff tries to clean off picnic tables to prevent attracting wasps and ants.
- If a wasp nest in a tree requires treatment, the PCO uses a non-residual pesticide, and closes the hole in tree so wasps can't return to nest. Parks staff use home insulation spray foam to close the nest/hole; treatment has been successful in preventing return of wasps.
- Staff is using traps which incorporate pheromone to attract wasps, dry fish to bring them into trap, and soap inside trap, which kills in 5-15 seconds

2) On-going - Weeds:

The Parks Dept. anticipates that it will be able to **substantially decrease its use of herbicides for turf**:

Based upon techniques learned at a previous WVC IPM Training (Cornell University Extension Turf Specialist) the Parks Department purchased a $25,000 dollar Deep Tyne Aerator in May 2008. The unit will reduce pesticide use on the turf by reducing compaction, increasing water flow through the soil profile and promoting healthier, more vigorous turf that will be able to crowd out the broadleaf and other grassy weeds. This should have a big impact on pesticide use on turf areas in the City.

- This year Campbell has encouraged our tree contractors to dump their wood chips from tree work done for the City in the City's organic waste area. The wood chips are then used in the City's mulching program to reduce weeds and reduce the watering of trees. Previously, the contractors would typically haul the wood chips to the local landfill for disposal, where it was combined with regular garbage..
- Campbell uses a chipper to create mulch from its own green waste; this mulch is used for weed control wherever possible.
- Work Furlough labor hand hoes weeds where possible. Use of black plastic to kill off emerging weeds and seeds in landscaped areas was investigated; it was found to not be workable and these efforts were discontinued.
- Staff has been using the tractor with a boom mower for mowing weeds, instead of spraying roadsides and similar areas.

3) On going - Insects:

In FY 07-08, Campbell staff tested a new **all-organic oil** in the City's tree spray program. The oil was found to be surprisingly effective against the target pest, aphids. Due to use of this new oil, the City has been able to reduce the use of pesticides in combating the aphids in City trees.

Unfortunately, the City has certain species of street trees with aphid and scale infestations which are difficult to treat. When pesticide use is necessary, a systemic pesticide, injected around the roots, is used. This results in the pesticide being taken up by the tree, rather than running off and becoming a pollutant in local streams.

- In 02-03, Campbell controlled an Ash Whitefly infestation with a natural predator, a minute wasp. Since the wasps were ordered and released, they have

Campbell

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

continued to suppress the Whitefly population.

- Staff is identifying insects and utilizing IPM when appropriate instead of using insecticides. No new insects were identified in FY 007-08.

4) On-going - Gopher Control:

The City has implemented a policy of using mechanical traps for gophers instead of baits thus further reducing the use of pesticides.

5) On-going - IPM Solutions:

City staff have participated in implementation of new County computerized "IPM Solutions Database Input/Response", which allows input of a pest problem and a response with IPM solutions. Staff refer to this database as needed.

RESULTS OF PESTICIDE USE REVIEW FY 07-08:

Campbell has taken a strong stance on pesticide use reduction in recent years, as evidenced by the extensive involvement in IPM training by City staff. The City's PW Superintendent and Parks Supervisor have actively been involved in regional IPM workshops. (see Pesticide Management Training Summary)

Pesticide Management Evaluation

→ Through use of IPM practices Campbell was able to eliminate use of any Organophosphate pesticides for the past 6 years. Campbell has decreased its use of insect-control pesticides by using oils and soaps to control aphids and scale in the urban forest.

→ The City is making an effort to stress prevention (prevent weed growth, prevent pest infestations) where possible. Campbell is moving into use of IPM, mechanical and cultural controls (such as Deep Tyne Aerator and Boom Mower), rather than chemical controls, as much as possible given budget and staff limitations.

→ The City Public Works Dept. has instituted a policy of moving towards installation of more pest resistant trees and shrubs to minimize the need for pesticides; these efforts include removal of certain tree species (such as Tulip and Raywood Ash trees) from the City of Campbell 's approved Street Tree List.
Over the past several years, the Public Works Dept. has instituted improved methods of weed control in some parks and roadsides, such as using green waste to make wood chips, used as mulch to prevent weed growth. For the past 3 years, the City has been using its new specialized tractor with boom mower for mowing roadside & park weeds and to avoid spraying. With the purchase of the new aerator, the City anticipates a significant reduction in the use of herbicides on its extensive turf areas.

To: City Staff
July 27, 2007

From: Public Works Dept.

Subject: **STAFF USE OF PESTICIDES - Reminder**

Hello,

This is the Annual Reminder concerning **pesticide use on City grounds and facilities**.

Pesticide use by City of Campbell is tracked by the California Water Board as part of our Stormwater Permit requirements.

Therefore, it is important that **all city staff** follow City policy concerning pesticide use.

"Pesticide use" INCLUDES over-the-counter pesticides in spray bottles and cans, etc., such as might be used for ants in the lunchroom.

Please read below for details:

Our City has adopted an Integrated Pest Management Policy and IPM Plans for various pests. The Plans include strategies for controlling pests (such as ants and wasps) using the least toxic methods possible.

By adhering to these plans, the City helps to provide a healthier environment for staff and the public. In addition, the California Water Board's Stormwater Discharge Permit requires municipalities to reduce pesticide use.

One of the goals of the policy is to ensure that pesticides that are purchased are applied only by staff who have received training in pesticide use, and in Less Toxic Pest Control measures.
<u>To help meet this goal, Staff Members should please:</u>

- Contact the Facilities Maintenance Supervisor Brett Stollenwerk or the Parks Maintenance Supervisor Vince Huppe if anyone needs structural or landscape pests removed.
- Discontinue the use of any pesticides they may currently have stored in the facilities - such as ant or wasp spray in a staff kitchen - (this applies to staff not trained in pesticide application).
- Dispose of existing containers of pesticides through the City's Hazardous Waste program (contact Al Oxonian at 408-866-2162).
- Remember that only staff licensed as "Pest Control Advisors" may order pesticides or purchase pesticides over-the-counter for use on City Property.

Thank you for your help in our efforts to protect employee health and local water quality.

If there are any questions on these procedures, please contact: Al Oxonian at 408-866-2162.

Source	WP Task	Work Plan Tasks	Accomplishments	Responsible Party
	Mercury Plan (I.E.)	Reduction of Hg Containing Products Continue implementing phase-out of mercury-containing products (MCPs). Phase-out will coincide with replacement of MCPs on an as-needed basis.	Reduction of mercury-containing products is being implemented. Research on alternative products has been conducted through the WVCWP. Non-mercury or low-mercury replacements are being used wherever feasible e.g., thermostats and fluorescent bulbs. At the WVCWP-sponsored meeting with DEH in April 2008, each member in the audience was given the booklet, "What You Don't Know About Mercury". Discussion followed as to how and where to dispose of mercury containing products, including fluorescent bulbs, thermometers, and batteries. In the back of the booklet there is a list of approved drop-off locations in our area. Record keeping for MCPs was also discussed.	Public Works Superintendent & Facilities Manager
		Provide Pub Works Supvsr and Facilities Maintenance Manager with a reminder notice.	CAMPBELL: Campbell adopted a mercury elimination policy during FY 03-04 and has continued to phase out mercury containing products, with the exception of fluorescent bulbs. The WVCWP Stormwater Inspector conducted a training on disposal & discontinuation of Mercury Containing Products during the Annual Corp Yard Walk-Thru Training on May 15, 2008. The Training was attended by **31** City of Campbell staff members. Topics covered included: • What are Mercury Containing Products (MCPs)? • Requirements for MCPs • Proper Disposal of MCPs • E-waste Drop-off Sites • Record-keeping for MCP Disposal	Public Works Superintendent & Facilities Manager

Source	WP Task	Work Plan Tasks	Accomplishments	Responsible Party
	Mercury Plan (II.C.)	Track Disposal of Mercury Containing Products Continue documenting the quantities of mercury-containing fluorescent bulbs disposed from City/ Town buildings and departments at hazardous waste collection facilities. The quantities of disposed product will be reported in annual report	CAMPBELL: The City collects used batteries from municipal staff via collection buckets in municipal offices. Total for FY 07-08 (through last collection on 3/13/08): 5x 5 gallon buckets = appx. 250 lbs of batteries, total. The batteries are taken to the City's waste management contractor, West Valley Collection and Recycling. During FY 07-08, the following recyclable materials were disposed of by the City's HHW Contractor (WEST-LITE Supply of San Francisco, CA): 980x – 4 ft Fluorescent Lamps 99x - 8 ft Fluorescent Lamps 16x – U-Ben Fluorescent Lamps 86x – Circular Fluorescent Lamps 226x – Mag/Electronic Ballasts The City collects all Mercury Containing Products on site until a truckload of products has been accumulated; the contractor then picks up the MCPs. All bulbs are kept in cardboard containers to prevent breakage. All items are categorized and logged in City records.	Public Works Superintendent & Facilities Manager
	Mercury Plan (II.F)	Fluorescent Light Recycling Campaign Continue participation in the Mercury Ad Hoc Task Group and support ongoing implementation of an outreach program to about recycling fluorescent bulbs.	The WVCWP Manager helped develop local campaigns and outreach messages through SCVURPPP's Mercury Ad Hoc Task Group. WVCWP provided funding for SCVURPPP's Mercury ad to appear in the 3 weekly local newspapers for 6 weeks in Fall 2007 (Campbell Reporter, Los Gatos Weekly, Saratoga News).	SCVURPPP & WVCWP to coordinate w/ HHW staff

Campbell

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Mercury Pollution Prevention Activities Evaluation

Efforts to Enact "Extended Producer Responsibility" Requirements:

At its November meeting for the 4 West Valley Communities, WVCWP hosted a presentation by Rob D'Arcy of Santa Clara County HHW on "Extended Producer Responsibility" – targeting producers of products with HHW, including mercury containing products such as E-Waste. HHW was seeking to have co-permittees pass resolutions supporting EPR. The goal of EPR is to shift California's product waste management system from one that is government-funded and taxpayer-financed to one that relies on producer responsibility. This will also help in removing more of these products from the waste stream.

All WV Cities passed resolutions supporting Extended Producer Responsibility in FY 07-08.

Community Involvement in E-Waste Recycling

Over the past several years, there have been a number of E-waste events held by various entities (schools, scout groups, etc.), thereby reducing the need for WVCWP to sponsor E-waste events. This is a certain measure of success for previous public outreach efforts related to Mercury and E-waste – residents are now taking on the task of organizing these events, and handling safe disposal of mercury containing products. This is a demonstration of the effective partnerships that can develop between municipal efforts and their residents, and which can be especially effective in smaller communities.

WEO AHTG Advertising

Through its Watershed Education Outreach ad hoc task group, SCVURPPP published mercury ads in newspapers serving the Santa Clara Valley. In an effort to ensure reaching a maximum number of WV residents, WVCWP funded and arranged for printing of the ads in 3 local weekly papers, for a 6 week run. This meant an extra 18 ads aimed at West Valley residents. The ads ran in the *Campbell Reporter*, the *Los Gatos Weekly*, and the *Saratoga News*.

COPPER ACTION PLAN/NICKEL ACTION PLAN

FY 2006-2007 Work Plan Self Evaluation Matrix

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
Vehicle Washing Operations	CB-1	As part of the West Valley Industrial Commercial Inspection Program, promote improved car washing methods at auto businesses. Provide info on alternative arrangements for businesses with possible compliance problems. (Section 2.i of this work plan - Industrial Inspection Program)	The Stormwater Discharge Inspector distributes vehicle washing outreach materials during pro-active inspections and in relation to any actual or suspected vehicle washing incident. The Inspector is able to answer questions and offer suggestions with the help of visuals. A WVCWP-created fact sheet provides information on wastewater capture systems for automotive facilities. The fact sheet was designed to provide small-scale automotive facilities (those that find installing a full-fledged wash rack cost-prohibitive) with examples of inexpensive treatment technologies and distributor information. This method of outreach has been very effective.	WVCWP Inspector
Vehicle Washing Operations	CB-1	Place outreach material on proper vehicle/equipment washing at municipal counters, post offices, libraries and public events. Update WVCWP website to include copper information.	The Car Wash Kit flyer is posted in WVC Municipal Offices. For FY07-08, WVCWP home page featured a graphic highlighting car washing, and a link to a printable PDF with information on proper car washing, and water quality degradation from improper washing. The link also gives information on obtaining the free Car Wash Kit for Car Wash Events (this graphic is sometimes temporarily swapped out for publicizing events, such as a WV E-waste event). www.cleancreeks.org http://www.cleancreeks.org/imagesnew/carwashweb.pdf Currently, the WVC do not have any comprehensive outreach material on copper so in FY 07-08 WVCWP staff worked on a draft copper outreach piece (tri-fold), including car washing info. The piece will be distributed for WVC feedback in FY 08-09. Once finalized, it can be distributed to the public and posted on the website.	WVCWP staff

Campbell

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
Vehicle Washing Operations & Pool/ Spa Maint.	CB-1 & CB-12	In classroom presentations, introduce impacts of copper on aquatic life; teach proper methods of car washing and pool & spa drainage using the Enviroscape watershed model.	WVCWP's classroom presentations are scripted to include hands-on activities so that students can watch pollutants, such as copper from car-washing activities & pool draining, flow directly to waterways. In addition to recommending the use of commercial car-wash facilities, WVCWP encourages washing on a gravel or lawn area where wash water is captured and infiltrated. Students also learn about runoff from car wash fundraisers and the need to borrow the WVCWP Car-Wash Kit for any such event. Proper Pool Draining instruction includes photos of a Sanitary Sewer Cleanout, and other graphics about pool & spa drainage. School presentations in FY 07-08 included: *Casa Di Mir Montessori School, Campbell – Presentations for 6-12 year-olds on 2-13-08* *Queen of Apostles Private Elementary School – Presentations for 4th and 5th grade science classes on 4-4-08* *St. Mary's School, Los Gatos –Presentations for kindergarten classes on 5-6-08*	WVWCP staff
Vehicle Washing Operations	CB-1	Promote use of Car Wash Kit. Provide kit; provide training to charity car wash organizers. Document use in A/R. Solicit feedback from participants.	In FY 07-08, a 220 word "Car Washing" article for municipal newsletters was created. The article will run in "The Saratogan" Summer 2008 issue (FY 08-09), and hopefully in additional municipal newsletters in Spring 09. **October 13 & 14, 2007** The WVCWP Carwash Kit was used at a very large fundraiser at Fisher Middle School, LG. Two WVCWP staff attended in order to educate event organizers on Car Wash Kit set up, and spoke to other interested residents The fundraiser was very well-attended (may have raised $10,000) and many attendees were educated about the	WVWCP staff

			Car Wash Kit. 100 Car Wash brochures were distributed. The entire event received extensive media coverage. **September 30, 2007** The Car Wash Kit was also used at the Silicon Valley Roller Girls Carwash Fundraiser in Campbell. The Stormwater Inspector gave instruction about set-up and use of the Kit, and education about carwash runoff. The WVCWP Stormwater Discharge Inspector is available to provide guidance on use of the WVCWP car-wash kit for local fundraising events. He usually attends the events to offer guidance and to help publicize the *West Valley Clean Water Program.* The kit uses about 400 ft. of hose and 300 ft. of extension cord. The car wash kit works extremely well, but can be difficult to set up. Photos of the kit in action are used for classroom presentations.	
Vehicle Washing Operations	CB-1	Within the development project permit process for Group 2 projects, require source control measures at facilities that will conduct vehicle/ equipment washing and maintenance activities (consistent with Permit requirements).	Campbell did not have any regulated projects in FY07-08 that would conduct vehicle/equipment washing and maintenance activities.	Community Dev Dir & Engineering
Vehicle Washing Operations	CB-1	Include recommended source controls for vehicle washing in the City's corporation yard SWPPP and continue to train staff to use BMPs.	Source control BMPs are included in the SWPPP. Corp Yard BMP training is covered annually in the Corp Yard Walk Through (see Public Agency Activities section). Municipal staff follow best management practices and continue to ensure that vehicle wash systems in the Corp Yard prevent wash water runoff. Municipal staff viewed the BASMAA training video in 2006.	Streets Maint. Supt

Campbell

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
Industrial Copper Control	CB-3	Continue joint Inspections with Fire Dept., targeting industrial sources for copper, e.g. metal plating and metal finishing facilities.	The City has an agreement with the SCC Fire Dept to conduct urban runoff inspections for machine shops and metal manufacturing facilities. Annual meetings are held between the WVCWP Manager and Inspector and the Fire Dept Haz Mat Specialist to ensure excellent communication and prompt follow-up to potential and actual violations. For Campbell inspection data, **see IND section** of this report.	SCVC Fire Dept.
Reducing Traffic Congestion	CB-6/7	Within the development permit process, encourage pedestrian oriented design practices (trails) and planning that will accommodate bicyclists (paths).	The West Valley communities encourage best design practices wherever practicable. These small communities tend not to have large developments conducive to requiring alternative transportation within the permitting process. However, the cities and the Town encourage alternatives transportation through other means: For several years, the cities of Monte Sereno and Saratoga, and Town of Los Gatos, have been working with CalTrans on improving bicycle and walking features along the stretch of Hwy 9 that links these 3 municipalities. The stretch is heavily used by bikers and walkers, and improvements would overcome current safety problems, thereby encouraging greater pedestrian/bicycle use of this transportation corridor. From Los Gatos, pedestrians and bicyclists can continue into Campbell via the Los Gatos Creek Trail. In June of 2008, several agencies gathered on Highway 9 in Saratoga to announce nearly $500,000 of unused bond money that can be used to improve safety along this corridor. Improvements will include a T-intersection that will make cars more visible to bicyclists and a street light at Austin Way & Hwy 9. Caltrans estimates the project will be completed in approximately 2 years. The Silicon Valley Leadership Group CEO discovered the	

			unused bicycle improvement money while reading through documents from the California Transportation Commission. Agencies involved in these improvements include Town of Los Gatos, Cities of Monte Sereno and Saratoga, CalTrans, Valley Transportation Authority, Calif. Transportation Commission. In addition, other improvements will be funded by State Bicycle and Pedesterian Improvement grant funding. Bicycle and pedestrian facilities along Hwy 9 from Los Gatos to Saratoga will be improved through a multi-year project. The first phase will improve the bicycle route system to reduce hazards and improve safety for bicyclists along this route. Phase I work was carried out during FY 07-08.	
			CAMPBELL: Campbell now has a station for Light Rail service linking the City to stops throughout the Santa Clara Valley. The City Redevelopment Agency was actively involved in this project.	Community Dev Dir/ Planners Public Works Dir & Sr Civil Engineer
		Additional Task created by Campbell: Promote annual "Bike to Work Day" for Santa Clara County by advertising the event on the City's Website and encouraging employees to participate through e-mail distribution. Maintain a fleet of bicycles for employees to use to commute from one City office site to another.	CAMPBELL: The City supported "Bike to Work Day" on May 8th, 2008 by sending an email to all employees encouraging them to take advantage of the opportunity to ride a bike to work and to stop off at energizer stations for free beverages. 18 City employees participated in 2008. Bicycles on Municipal Campus: Campbell provides bicycles for employees to ride while at work, as a means of moving between various municipal sites. This helps to avoid the use of cars and trucks.	Community Dev Dir/ Planners Public Works Dir & Sr Civil Engineer
Water-shed assessm't and protection	CB-8	Consider watershed protection in all CEQA actions.	All WVC have adopted the CEQA review guidance from SCVURPPP, as documented in the June 2004, *C.3 Stormwater Handbook*, to address water quality as part of the C.3.m implementation.	Planning staff

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
Water-shed assessm't and protection	CB-8	Continue to receive training and develop understanding of the Hydromodification Management Plan (HMP) and implement HMP Permit requirements on qualifying projects.	In September 2007, municipal engineers from the WVC attended trainings presented by SCVURPPP/ EOA staff on the HMP, including proposed applicability maps. Some additional HMP training was received at the June 3, 2008 SCVURPPP workshop. See Planning Procedures Training Summary for details.	Sr Civil Eng & Eng. staff as it applies
Water-shed assessm't and protection	CB-8	Continue to Implement Guidelines & Standards developed by the Water Resources Protection Collaborative for watershed protection. Support new Collaborative issues for watershed protection as they arise.	Campbell, Los Gatos and Saratoga have participated in, and invested significant staff time in, the Water Resources Protection Collaborative. Campbell adopted the "Guidelines and Standards" on December 3rd 2007.	Cmmty Dev Dir & Planning staff
Street sweeping	CB-11	Conduct regular street sweeping, evaluate efforts and collect data for Annual Report. Campbell contracts with a Street Sweeping Service – Ensure the contractor uses and maintains effective street sweeping equipment.	The West Valley communities conduct street sweeping in residential areas and more frequent sweeping in commercial areas. Sweeping data is collected and noted in Public Agency Activities (Section # 3) of this report. The West Valley cities do not hesitate to change sweeping contractors if the equipment being used does not measure up to municipal standards. The City has two contractors performing sweeping services. A vacuum type sweeper is used for areas that are conducive to picking up fine particulates and a broom type sweeper is used in other areas.	St Maint Supt & Sweeping Contractor
Outreach on Pool, Spa maint'nce	CB-12	Continue to distribute Pool & Spa maintenance brochure via agency counters, website and during IC/ID inspections.	WV Inspector distributed 40 Pool & Spa brochures to Leslie's pool & spa retail outlets during Sept 2007. Pool & Spa brochures are available at all WVC municipal offices.	WVCWP with Municipal Staff
			CAMPBELL: City website features complete information on draining pools and spas: **"9. What is the proper procedure for draining my pool?** Pool water can be drained to the property owner's sanitary	WVCWP & Sr. Civil Eng

			sewer cleanout or can be drained in the property owner's lawn or open ground. Pools cannot be drained into the street or storm drain system. For more information, please read/print the Draining Pools and Spas Brochure (825k pdf) provided by the Santa Clara Valley Urban Runoff Pollution"	
Use of copper architecture	CB-21	Within the development permit process, continue to limit and discourage use of copper architecture. Inform applicants about the negative water quality impacts related to the use of copper roofing, rain gutters and other copper architecture.	All WV cities discourage copper architecture with the exception of Los Gatos, which is drafting a Residential Design Guideline that will seek to discourage architects and homeowners from using copper by informing them of its environmental implications.	Community Dev Dir, Planning Commission, & Planners
Green Building	CB-21	Provide information about negative impacts of copper architecture and alternative materials via link on West Valley Clean Water website.	Currently, WVCWP and WVC do not have any good outreach material on architectural copper, so in FY 07-08 WVCWP staff worked on creating a draft of a comprehensive copper outreach piece (tri-fold), including architectural copper info. The piece will be distributed for WVC feedback in FY 08-09. Once finalized, it can be distributed to the public and posted as a downloadable PDF on the website.	WVCWP staff
Nickel Action Plan Tasks				
Control Measures for Constr Sites	NB-1	Continue to implement Construction Inspection Performance Standards (Section 5, Construction Inspection section of this work plan).	See Construction Inspection (Section #5) of this report.	
Training on Control Measures for Constr sites & New Dev	NB-1	Attend Construction site management workshops sponsored by Water Board and SCVURPPP for latest erosion/sediment control techniques and continue to attend workshops on post development Stormwater treatment BMPs.	See Construction Inspection Training (Section #5T) of this report.	

Campbell

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Copper/Nickel Action Plan Evaluation

Car Wash Outreach - Evaluation:

Additional WVCWP staff have been trained in use of the Car Wash Kit. This will enable increased outreach efforts, as it ensures that staff will be available to set up the Kit at Car Wash fundraising events, and to instruct event organizers in use of the kit. The kit was used successfully at several events in FY 07-08. A *"Clean" Car Washing* article was created, and will run in the Summer issue of the Saratoga municipal newsletter. Depending upon space available, it will run in other WVC newsletters in 2009. In addition, WVCWP staff worked on developing new Car Wash outreach strategies for FY 08-09.

Pool and Spa Maintenance - Evaluation:

In Fall FY 07-08, WVCWP initiated a new outreach effort involving placing Pool & Spa brochures at the major swimming pool retail chain in the area. This fall, staff will return to the stores and check on the status of the brochures, and whether this was an effective form of outreach.

The **Town of Los Gatos'** standard Conditions Of Approval for new homes with a pool were revised in FY 06-07 to require a sanitary sewer clean-out within 10 feet of the pool equipment, and a pervious landscaped area for pool filter washout. The new Conditions of Approval are being implemented successfully.

Promotion of Pedestrian Trails And Bike Paths - Evaluation:

The City of Campbell has been actively involved in the development of Light Rail facilities in the City. As of FY 07-08, there is 1 Light Rail station operating in Campbell. This links the city to stops throughout the Santa Clara Valley, and should be a major factor in reducing car traffic.

The WVC of Los Gatos, Monte Sereno and Saratoga have invested extensive efforts into improving the stretch of State Highway 9 which runs from Saratoga, through Monte Sereno, and into Los Gatos (appx. 4 miles). This stretch is heavily traveled by local residents, and many have expressed an interest in using it for walking and biking, if it were a safer route. In fact, it currently receives a high degree of bike traffic, and some pedestrian traffic. From Los Gatos, pedestrians and bicyclists can continue on into Campbell via the Los Gatos Creek Trail. The Cities and Town have worked closely with CalTrans on developing strategies for improving safety on this stretch. Funding has been obtained from various sources and Phase 1 of the improvements was started in FY 07-08.

Street Sweeping - Evaluation:

The West Valley cities continued their street sweeping programs. Campbell and Saratoga are using both vacuum sweepers and broom sweepers, based upon conditions. Los Gatos and Monte Sereno are both swept using regenerative air sweepers. By using vacuum and regenerative air sweepers, all WVC are making concerted efforts to remove fine particulates, including copper, from their roadways.

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

TRASH INVENTORY & MANAGEMENT

FY 2007-2008 Work Plan Self Evaluation Matrix

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
	Program's Trash Work Plan	Long-Term Management Strategy Participate in Trash Ad Hoc Task Group and assist Program staff in developing (and revising per the MRP) long-term trash management strategy for reducing trash in urban streams and waterways and other potential sources that may contribute trash to those areas.	The West Valley Clean Water Program Mgr attended the Trash AHTG meetings and provided feedback from West Valley cities on implementation strategy and tools. Topics this year included issues related to Structural Treatment Control, 303(d) listings and Trash Problem Areas at various creek sites. Reviewed drafts of 'Trash Evaluation & Management Fact Sheet, 2nd Edition'.	WVCWP Mgr to participate in AHTG and coordinate WVC efforts
	Program's Trash Work Plan	Additional Task – not in 07-08 Workplan Participate in Creek Connection Action Group (CCAG) developing long-term trash management strategy for reducing trash in waterways. Address other potential sources which may contribute trash to waterways.	WVCWP Program Manager participated in policy planning meetings held by Heidi McFarland, Santa Clara County Parks Dept, to discuss various proposed projects and overall trash issues. CCAG coordinates the 2 annual county-wide cleanup events. These strategy meetings were aimed at addressing the bigger picture of trash generation.	WVCWP staff attends meetings
	Program's Trash Mgmt Strategy	Implement Trash Management Strategy Begin implementation of long-term trash management strategy for each high priority watershed defined within the technical memorandum entitled *Prioritization of Trash Problem Areas*. This strategy will be provided within the technical memorandum entitled *Long-Term Trash Management Strategy*, which will be developed during FY07-08.	The *Long-Term Trash Management Strategy*, as developed in FY 2007-2008, consists of 3 main points: • Identify Trash Problem Area & Sources • Evaluate & Implement Enhanced Trash BMPs • Assess Effectiveness of BMPs Over Time WVCWP and West Valley Communities staff continued to use assessment tools to identify where Trash Problem Areas, and Trash Sources, existed. Over the past several years, using these tools, it was determined that some sites had at first appeared to be problem areas, but after initial cleanup, the Trash problem did not recur. These sites were then removed from the Trash Problem area list so that resources could be devoted to other sites and other	WVCWP coord w/ Sr. Civil Eng, Pub Works Dir & Pub Works Supt

			BMPs. For WVCWP, part of the Trash Management Strategy is to address vehicular generation of litter, and illegal dumping. By participating in the Silicon Valley Anti-Litter Campaign, WVCWP was involved in the initiation of a hotline allowing drivers to report license numbers of vehicles which they see littering. For illegal dumping, a strategy of directly contacting property owners near any sites where dumping occurs was initiated several years ago, and has continued. In FY 07-08, 25 homeowners near Smith Creek in Los Gatos were contacted. Current BMP methods are in the process of being evaluated. BMPs include ongoing methods such as streetsweeping, increased use of trash cans for the public, increased scheduling of trash pickup by Municipal staff, institutional regulations such as requiring clean up after events by event permittees, increased communication with Cal Trans, etc. (see Management Practices row, below) Staff will continue to observe the results of BMP implementation in order to assess their effectiveness.	
	Program's Trash Work Plan	Pilot Demonstration Assist Program in implementing Pilot Demonstration Projects which focus on assessing control measure effectiveness.	The West Valley Clean Water Program Mgr attended the Trash AHTG meetings and provided input on behalf of West Valley cities regarding potential pilot demonstrations. The Pilot Demonstration program has been well-publicized. Regular updates to SCV URPPP Management Committee have been given on installation and first wet season results. The Pilot Demonstration was included in the SCVURPPP 'Trash Management and Evaluation, 2nd Ed' document, circulated in May 2008. At the annual WVCWP Streets Maintenance Supervisors' meeting, WV Communities staff and WV Sanitation District staff viewed a presentation by City of Sunnyvale on Sunnyvale's current experience with the Pilot program.	SCVURPPP, City of Sunnyvale, City of San Jose WVCWP staff, Sr. Civil Eng; Pub Works Supt

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
	Trash Work Plan	Evaluations Continue to conduct trash evaluations in a subset of local trash problem areas using the Programs Urban Rapid Trash Assessment (RTA) protocol and/or the KAB Litter index.	WVCWP staff used SCVURPPP's standardized reporting forms to assess trash problems. WVCWP staff conducted **21** assessments at the identified sites and listed problem areas in West Valley communities. The number of assessments included: Campbell **5** - Los Gatos **3** - Monte Sereno **5** and Saratoga **4.** Although such monitoring usually is limited to drive-by evaluations of a site, several assessments were conducted simultaneously with removal of trash and debris by WVCWP staff.	WVCWP staff, Sr Civil Eng and Parks & Pub Works staff
	Trash Work Plan	Identify and Prioritize Problem Areas Continue to identify and prioritize trash problem areas based on criteria provided by Program staff during FY 06-07.	Identification & prioritization are determined by: • monitoring previously identified problem areas, • using volunteer monitoring during cleanup events at problem sites, • keeping records of areas where Trash has been noted, or illegal dumping has been noted. If the site is noted repeatedly, then identifying it as a Problem Area will be considered. As noted in FY06-07, a few sites were taken off the Priority List, since several years of monitoring demonstrated that trash there was less of an issue than was originally believed. It was decided that staff resources should be concentrated on problem sites in order to be effective. Clean site conditions at the site for the WVCWP biannual Creek Cleanup (San Tomas Aquino Creek at Westmont High School) resulted in removing that site from this year's National River Clean-up Day site list.	Parks & Pub Works staff, Sr Civil Eng & WVCWP staff

Campbell

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
	Technical Memo: *Trash Mgmt Effective-ness Strategy (FY06-07)*	Evaluate Trash Management Measures Track existing trash management practices to evaluate effectiveness. Selected effectiveness methods may include using the Program's Urban Rapid Trash Assessment protocol (Version 1.0) and/or the KAB Litter Index in a subset of high priority trash problem areas.	WVCWP staff used SCVURPPP's standardized reporting forms to identify trash problems. When completed by staff, these forms provide data on trash monitoring and management activities at the listed problem sites. Completed forms are used for review to determine effectiveness of trash management practices. Discussion was initiated on determining a better means of training on use of trash evaluation tools, in order to ensure standardization among staff and among co-permittees. One Trash Management Measure/ Evaluation Method involves Creek Cleanups and Monitoring. Over several years of Creek Cleanups and monitoring, WVCWP has been able to cut back on cleanups at 2 sites, due to lack of trash at the sites. La Rinconada Park, along Smith Creek in Los Gatos, is a creekside park with a tennis court, lawn area, picnic/ bbq area, playground and a ½ mile long creekside trail. After several cleanups, 1 final cleanup was held, at which there was basically nothing for the volunteers to pick-up, nor monitor. Monitoring showed that construction & remodeling activities for several homes nearby may have been contributing to the trash. Trash included wrappers from construction materials, and food wrappers, etc. probably from construction workers. Once the construction was completed, trash was generally not being generated. San Tomas Aquino Creek, at Westmont High School in Los Gatos, has been the site of biannual Creek Cleanups for some years. The last cleanup was held here in Sept 2007. In Spring 2008 an assessment of the site was conducted. This determined that there was minimal trash, and the regularly-scheduled May Cleanup was cancelled, since there would be virtually nothing for the volunteers to pick up or monitor. The site will be evaluated again in fall and at that time if there doesn't appear to be a regular generation	WVCWP Mgr to participate in AHTG and coordinate WVC efforts

			of trash, a recommendation on whether to continue clean-ups at the site will be made. In these instances, it appears that the Creek Cleanups have been an effective Trash Management Measure, and may provide an opportunity to focus efforts in another area (BMP implementation) or other approaches to reducing trash generation.	
	Program's Trash Work Plan	Management Practices Continue to identify and implement trash control measures, where practical and feasible, to reduce trash and debris.	Control measures in addition to scheduled/systematic control measures • notify Caltrans when exceptional litter or debris problems are noticed along highways/freeways and around on-ramps • conduct removal of trash and litter as needed at sites within municipal jurisdiction • remove trash (where feasible) at some sites in Caltrans' jurisdiction • monitor identified problem areas • hold volunteer cleanup events at problem sites, when feasible • highlight litter problems during classroom presentations • WVC IND inspectors and construction site inspectors watch for litter and illegal dumping. Inspectors will consider an accumulation of debris at a site to be a stormwater violation and refer such sites to the WVCWP Stormwater Discharge Inspector. Systematic Control Measures • Trash collection is mandatory for WV residents - via WV Collection & Recycling (WVC&R) • WVC&R holds annual free, curbside Waste Collection days for items weighing up to 70 lbs, wood scraps and other items not usually allowed under weekly collection guidelines • All WVC conduct streetsweeping, with extra sweeping for areas of high trash generation (downtowns) and high leaf drop.	Parks Spvsr & PW Supt; WVCWP staff to assist

Campbell

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

			CAMPBELL: Annual Community Clean-up held April 12, 2008. WVCWP Manager spoke to volunteers about litter issues in WV watersheds. Volunteers picked up litter in parks, including Los Gatos Creek Park alongside LG Creek.	Parks Spvsr & PW Supt; WVCWP staff to assist
	Trash Problem Area Activity Report	Provide City/ Town Specific Information Provide Program staff with specific information on trash management practices implemented within the City's jurisdiction using program-wide standardized reporting forms.	WVCWP staff used SCVURPPP's standardized reporting forms to provide data on trash monitoring and management activities at the listed problem sites. ***Trash Problem Area Evaluation Results*** for each West Valley city, as provided by the Program, are included at the end of this report section.	WVCWP staff coord with Sr Civil Eng and PW Supt
	Program's Trash Work Plan	Submit Annual Report Data Submit Urban Rapid Trash Assessment Surveys, Trash Item Tally Sheets and any other data collection tool to Program staff.	Trash Assessment forms for WV cities were submitted to SCVURPPP in July 2008 for Program-wide analysis and reporting.	WVCWP staff
	SCC Trash Advisory Committee – Education sub-group	Support (TAC) Trash Advisory Committee Continue to attend Santa Clara County TAC meetings with SC County, City of San Jose and the Office of Education. Assist in development and implementation of a five-year outreach plan targeting 16 – 24 yr-olds. *Note: This committee has been renamed as the* "Silicon Valley Anti-Litter Campaign"	WVCWP Program Manager attends General meetings and Education sub-committee meetings. City of Campbell Public Works Director is Co-Chair of the finance sub-committee and a Campbell City Council Member is Co-Chair of the cleanup event subcommittee. The group and sub-committees are going forward with parallel objectives: • Host clean-up events in support of 'Keep America Beautiful' campaign • Design, purchase & distribute window clings reminding drivers to report 'litterbug' sightings (SC County) • Host telephone hotline & website to accept litterbug sightings and generate a letter to vehicle owner stating their vehicle was reported as creating litter on the streets (roads & highways, parking lots, etc) • Fund/ solicit support for purchase & distribution of tarps to vehicles w/ uncovered solid waste; distribution is mainly at landfills w/ their cooperation • Begin work on 5-year plan/ strategies, including a request for needed & desired funding	WVCWP Staff

Citizen Participatio n	See PI/P – Citizen Participation	Monitoring/Citizen Participation Continue to promote citizen participation program to monitor trash near local creeks. Transfer data to trash tally sheets (element of Creek Keeper's Program). See PI/P (Section 6 of this Work Plan)	WVCWP staff conducted 3 trash monitoring / Cleanup events with student and citizen volunteers. The volunteers at all clean-up events were taught to participate in groups and learned how to use the WVCWP trash tally forms to collect the data which helps identify trash sources. **9-15-07 SanTomas Aquino Creek** WVCWP held a cleanup event at Westmont High School in Campbell. Fifty volunteers spent several hours cleaning up the creek. They removed 46 bags of garbage. **9-29-07 Saratoga Creek at Big Basin Way** Joint WVCWP/ Saratoga staff cleanup. Some volunteers helped at this cleanup in Saratoga on Big Basin Way at Hwy 9 along the parking lot and down the bank, where possible. This was mainly staff with a small number of volunteer residents. A total of 49 bags of garbage and recyclables were collected. Monitoring showed that the trash source was a combination of littering and illegal dumping. Litter was mainly food wrappers and alcohol & beverage containers. A file cabinet, oven, and 30 ft pipe were removed from creek side. **9-29-07 Saratoga Creek at Wildwood Park** In addition to Big Basin Way, Wildwood Park in Saratoga was cleaned by a West Valley staff member and volunteers. Trash was collected and tallied. One bag of trash was removed. **5-17-08 National River Cleanup Day – Cleanup not needed at regular site - San Tomas Aquino Creek** at Westmont High School – site was very clean WVCWP's annual site for this event was determined to be a very clean site prior to May 17, and not appropriate for bringing in a large number of volunteers – i.e. there would hardly be anything to pick up. WVCWP conveyed this information to the County-wide group (Creek Connections Action Group) who concurred with the assessment. WVCWP staff instead supported the cleanup event at Lexington Reservoir Launch Ramp Lot in Los Gatos. This	WVCWP Staff

Campbell

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

			site was hosted by Santa Clara County Parks Dept. WVCWP staff participated as a Training opportunity in order to learn how SC County Parks host a site and handle the volunteer monitoring activities. SEE PI/P ELEMENT for additional info	
			CAMPBELL: Annual Community Clean-up held April 12, 2008, in conjunction with 'Keep America Beautiful' campaign. Public Works staff organized and promoted the Clean-up, and provided City Maintenance workers. WVCWP Manager spoke to volunteers about litter issues in WV watersheds. Volunteers picked up litter in several parks, including Los Gatos Creek Park alongside LG Creek (Campbell section of Trail), 2 miles alongside the railroad tracks on Winchester Blvd (supervised by VTA), and in the off-ramp area off Hwy 17 @ Camden Ave (supervised by CalTrans); Total results for several parks combined: 17 Bags recyclables, 58 bags trash See Evaluation Section (below) for volunteer comments. SEE PI/P ELEMENT for details on Materials Distributed	Public Works staff

Trash Inventory & Management Evaluation

General Evaluation of Trash Problems

After several years of monitoring trash sites, WVCWP staff is familiar with the sites and the problems that need to be addressed. Two leading trash sources in West Valley communities are "Illegal dumping" and "vehicular litter" (found along highways, freeway-on-and-off-ramps, and smaller arterial roads). The type of litter that is retrieved is predominantly snack, food, beverage and other product packaging and cigarette butts. School lunch yards are another source of trash, and WVCWP regularly holds outreach activities at schools, including cleanups, to address this issue.

Limitations to improving litter control

Since a major source of trash in the WVC is 'vehicular litter', much of it is in CalTrans' jurisdiction, which means that the WVC often do not have direct control of addressing the litter problem. Cities would like to address litter on Highway medians and freeway on and off ramps, but those areas are under Caltrans jurisdiction. Increased communication and partnering with Caltrans are goals of the WV Communities. When a noticeable littering incident is brought to the attention of WVC/WVCWP, CalTrans is contacted and they have been responsive to removing the litter. It is hoped that WVCWP's participation in the Silicon Valley Anti-Litter Campaign *(formerly the SC County Trash Advisory Committee)* will be another means of helping to address, and conduct outreach to, vehicular littering. The first step in this process has been the initiation of a hotline allowing drivers to report vehicles which are observed in the act of littering.

In general, an impediment to more effective litter control is the common problem of lack of funding. Areas which could be helped by increased funding include:

- Cost of staff time for Stormwater Inspector, PW staff and Sheriff's Dept to patrol areas where illegal dumping occurs. Increased funding for patrols could have a big impact on trash in creeks in the WV Communities, where a number of roads border creeks in less-developed areas. Many of these roads are winding with little traffic, and appear to facilitate illegal dumping via their lack of passersby, who might otherwise deter a perpetrator.
- Cost of publicity for anti-littering campaigns and advertising creek clean-ups, community clean-ups, and e-waste recycling.
- Staff time to organize volunteer clean-ups and handle publicity.

Another major issue is homeless encampments. Placement of trash cans near homeless encampments has been discussed, but it has been determined that this can be seen as "encouragement" and then becomes a liability issue.

Dumpster Area Inspections & Education for Local Businesses

The WVCWP Inspector checks the dumpster areas of the downtown restaurants in each of the West Valley communities for signs of illegal dumping or debris around open dumpsters. He provides urban runoff education as needed, including the importance of keeping dumpster lids closed, and locked if necessary. This method of informal visits and issuing *Notices To Comply* has helped to reduce the amount of trash-related dumpster violations over the past years.

Outreach: Illegal Dumping

In a strategy to raise awareness of illegal dumping in neighborhoods, WVCWP responded aggressively to an illegal dumping incident in a Los Gatos residential area. This technique will continue to be used by WVC, if/when similar situations arise.

In this case, the Town of LG maintenance crews had discovered illegally dumped yard waste and trash behind houses on Montclair Rd. The site was examined by the WVCWP Inspector. The materials had been dumped near the stormwater drainage culvert, which ultimately feeds to Smith Creek.

Campbell

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

WVCWP and Town of LG chose to raise awareness via a letter to residents, and doorhangers placed on doors in the neighborhood. Appx. 25 homes were directly contacted in this manner. These efforts were aimed at both educating residents that such dumping is illegal, and encouraging residents to call and report any such dumping they may see.

Educational Outreach to Students and Teachers in Local Schools

WVCWP staff responded to every opportunity to talk about trash and littering with students. The trash topic is always included in classroom Enviroscape presentations. Local students have been responsive to outreach efforts requesting volunteers at Clean-up events.

In FY 08-09, WVCWP will direct staff time to a new task of developing a structured Schoolyard Trash Cleanup Program with interested pilot schools.

Creek Keeper Events – Volunteer Participation - Trash Identification, Tallying & Pick-up

The WVC are all small, but have been successful in promoting volunteer participation from residents. Volunteer involvement in various clean-ups has been a measure of the success of outreach programs. A number of residents have become actively involved in clean-ups, which is also perhaps an indication of the mindset of small town residents, who may be eager to make a difference in their community. WVCWP will make efforts to continue efforts to partner with residents in combating local Trash problems.

WVCWP has been particularly successful in recruiting student volunteers for creek cleanups and the task of trash tallying. Each event is opened with a brief talk on the trash problem affecting our creeks and Bay. The WVCWP's trash tally form was designed to be easy for students to use. Categories on the form reflect the trash types that are most often found in West Valley locations. In May 2008, 2 WVCWP staff members supported a Los Gatos cleanup site hosted by SC County Parks Dept; this allowed staff to gain a perspective on methods used by the Parks Dept. to train volunteers in Trash Monitoring activities.

Volunteers have been very enthusiastic about local clean-up events.

Results of Campbell's municipally sponsored **Great American Pick-up** on April 12, 2008 are listed below.

The event was featured in an article in the *Campbell Reporter* weekly newspaper, and the results were displayed on the City of Campbell website.

The Executive Director of the Volunteer Center of Silicon Valley said that he had been visiting various "clean-up" events; noticing an average of 30-40 volunteers per site. He was, however, pleased to find that the Campbell site had approximately **100** volunteers.

Total results for several parks combined: 17 Bags recyclables, 58 bags trash

Most common pieces of trash collected: Cigarette butts, plastics, paper, glass.

Least common pieces of trash collected: Metal, cloth, wood, rubber.

Most Unusual pieces of trash collected: Luggage, dead birds, dollar bill, shower drain, credit cards, hubcap, rug, unopened/ full juice bottle, hanger, T-shirt, tires, car bumper, and a bicycle

Comments by CalTrans

Some areas were *just* cleaned (the week prior) by their Adopt-a-highway/ or other work crew.

Comments by volunteers

"It was great exercise!"

"The water seems twice as dirty as the trails."

"There is too much litter on the ground. People should be responsible for their own trash!"

"I had a great time, see you at the next event!"

Overall Trash Management Evaluation

In general, WVC residents appear to be conscientious about litter and aware of how their actions have a direct impact on 'clean/green areas'. Many residents are also avid supporters of maintaining the environment because they utilize the amenities they gain from such surroundings – biking, hiking, natural scenery, etc. Some West Valley schools have student volunteer groups that conduct schoolyard clean ups, and some have even adopted stretches of their neighboring creeks. While WVCWP conducts anti-litter outreach activities for residents, the WVC still need to address litter from vehicular traffic and illegal dumping, which may not be originating with local residents, so it is hard to address via outreach efforts in the WVC.

In this light, the WVC's best chance for success in dealing with the trash problem is to partner with other agencies and work with a well-organized regional group. WVCWP staff have become actively involved in the Silicon Valley Anti-Litter Campaign *(formerly the SC County Trash Advisory Committee)*, especially the Educational Outreach sub-group. WVCWP has also worked on developing a working partnership with CalTrans.

In its efforts to address litter problems by moving 'up' the trash stream, WVCWP will direct staff time in FY 08-09 towards developing a structured Schoolyard Cleanup Program with interested local schools. Staff will be contacting schools bordering creeks to determine interest, and developing a program which schools can institutionalize and implement on an on-going basis. It is hoped that initial efforts will prove successful, and the program can be expanded to include a number of schools. This would result in cleaner areas directly adjacent to creeks, less trash generated from school yards, and families with increased awareness of trash problems in their watershed. The goal is to move up from the creeksides, where public accessibility is limited - up the trash source line, and reduce the amount of trash that hits the ground through education and habit-forming guidance.

New data management methods within the WV Sanitation District are allowing generation of more detailed reports on stormdrain inspection findings. The WVC are working with WVSD on stormdrain report analysis related to Trash, in order to improve identification of possible Trash sources and problem areas.

					Guadalupe River	
CA08a	11/15/2007	Hwy 17 (Fwy 880) exit northbound at White Oaks Rd	KAB	2	Assess once or twice a year and notify Caltrans when litter is excessive. Fast food trash was observed on the freeway off-ramp. Caltrans jurisdiction.	Continue to assess once a year, when feasible. Notify Caltrans when debris is excessive.
CA04	11/15/2007	White Oaks Rd (west side of street) from Redding Rd.to Shelley Ave near a water ditch and Hwy 17 off-ramp	KAB	2	Assess once or twice a year. City has regular maintenance schedule.	City conducts regular maintenance. Continue to assess once or twice per year w/ additional cleanup if feasible Roadside near waterway (ditch) is littered.
					San Tomas Aquino Creek	
CA11	9/12/2007	4805 Westmont Avenue behind Westmont High School along San Tomas Aquino Creek - third stretch of 100 ft	RTA	101	Conduct volunteer creek cleanup events twice a year in fall and spring. During FY 06-07, staff completed urban RTA assessments for five consecutive 100' stretches. However, creek cleanup covered a greater distance.	Continue to assess and hold creek clean ups twice a year.
CA11	9/12/2007	4805 Westmont Avenue behind Westmont High School along San Tomas Aquino Creek - second stretch of 100 ft	RTA	106	Conduct volunteer creek cleanup events twice a year in fall and spring. During FY 06-07, staff completed urban RTA assessments for five consecutive 100' stretches. However, creek cleanup covered a greater distance.	Continue to assess and hold creek clean ups twice a year.
CA11	11/15/2007	4805 Westmont Avenue behind Westmont High School along San Tomas Aquino Creek - fourth stretch of 100 ft	KAB	1	Conduct volunteer creek cleanup events twice a year in fall and spring. During FY 06-07, staff completed urban RTA assessments for five consecutive 100' stretches. However, creek cleanup covered a greater distance.	Continue to assess and hold creek clean ups twice a year.

Saratoga						
					San Tomas Aquino Creek	
SA03	9/18/2007	First 200' stretch of the creek from Highway 9 behind Big Basin Way. Represents the gas station and commercial parking lot area behind Big Basin Way to the top bank of Saratoga Creek.	RTA	64	Current practice includes assessment and cleanup at least once a year.	Not all debris can be tallied and collected at this site due to steep banks and vegetation. WVCWP staff will 1) continue to monitor and pick up trash in the accessible area at the top of the creek's bank; 2) continue to coordinate volunteer clean up even
SA03	11/14/2007	First 200' stretch of the creek from Highway 9 behind Big Basin Way. Represents the gas station and commercial parking lot area behind Big Basin Way to the top bank of Saratoga Creek.	KAB	2	The site is located behind restaurants and commercial establishments. Most of the litter is from pedestrians and trash that is left at the edge of the parking lot near the guardrail at the top of the creek bank. Current practice includes assessment at least once or twice a year.	Creek access is difficult due to steep slopes and dense vegetation. WVCWP staff will continue to monitor trash and work with Saratoga staff and volunteers to hold cleanups when feasible. Provide additional outreach to businesses and continue to assess an
SA02	11/14/2007	A 400' stretch of Wildcat Creek near Sacred Heart School upstream of the previous SA02 site that was near Fruitvale Ave. by City Hall to Sacred Heart School	KAB	1	This site is on property owned by a private school. Cleanups are conducted annually when feasible. There are a few residential homes nearby but the site is not easily accessed because it is fenced off and locked. The school has adopted this stretch of Wildcat Creek.	Continue to work with teachers on presentations to promote anti-litter and anti-dumping activities. Coordinate annual cleanups with Urban RTA assessments, as feasible.
SA05	11/14/2007	125 ft stretch of Quito Rd. from Sobey Rd. (near Hwy 9) extending toward Bicknell Rd.	KAB	1	This is an additional site that was cleaned due to a noticeable increase of trash along Quito Rd. This site is in close proximity to San Tomas Aquino Creek.	Quito Rd is in Caltrans jurisdiction. WVCWP will provide cleanup as time permits due to the potential for trash ending up in nearby San Tomas Aquino Creek.

Trash Assessment Parameter	**Least Disturbed (Optimal Urban)**	**Sub optimal Urban**	**Marginal Urban**	**Poor**
5. Illegal Dumping	D: No evidence of illegal dumping. No bags of trash, no yard waste, no household items placed at site to avoid proper disposal, no shopping carts.	D: Some evidence of illegal dumping. Limited vehicular access limits the amount of potential dumping, or material dumped is diffuse paper-based debris.	D: Presence of **one** of the following: furniture, appliances, shopping carts, bags of garbage or yard waste, coupled with vehicular access that facilitates in-and-out dumping of materials to avoid landfill costs.	D: Evidence of chronic dumping, with **more than one** of the following items: furniture, appliances, shopping carts, bags of garbage, or yard waste. Easy vehicular access for in-and-out dumping of materials to avoid landfill costs.
Illegal Littering	L: Any trash is incidental litter or carried downstream from another location.	L: Some evidence of litter within creek and banks originating from adjacent land uses	L: Prevalent in-stream or shoreline littering that appears to originate from adjacent land uses.	L: Large amountof litter within creek and on banks that appears to originate from adjacent land uses.
D-SCORE	10 9	8 7 6	5 4 3	1 0
L-SCORE	10 9	8 7 6	5 4 3	2 1
6. Accum-ulation of Trash	There does not appear to be a problem with trash accumulation from downstream transport. Trash, if any, appears to have been directly deposited at the stream location.	Some evidence that litter and debris have been transported from upstream areas to the location, based on evidence such as silt marks, faded colors or location near high water line.	Evidence that trash is carried to the location from upstream, as evidenced by its location near high water line, siltation marks on the debris, or faded colors.	Trash appears to have accumulated in substantial quantities at the location based on delivery from upstream areas, and is in various states of degradation based on its persistence in the waterbody. A large percentage of trash items have been carried to the location from upstream.

Annual Cleanup Program

West Valley Collection & Recycling (WVC&R) will collect an unlimited number of items from your curb at no additional cost for one day only.

Please have your items, containers and bundles curbside by

6 AM on Monday, February 18, 2008

WVC&R will collect:

- Items weighing up to 70 pounds (except as described below)
- Garbage in 32 gallon plastic bags, 32 gallon cans, and sturdy cardboard boxes (all small items must be contained)
- Tree prunings, branches and scrap wood up to 3" in diameter and 3' long in tied bundles weighing up to 70 pounds

WVC&R will not collect:

- 35, 65 or 95 gallon wheeled carts (they are awkward to lift manually)
- Concrete or Dirt (call Guadalupe Landfill 408.286.1670)
- Tires (call Guadalupe Landfill 408.286.1670)
- Items containing CFC's such as refrigerators (call WVC&R 408.283.9250)
- Hazardous Waste (call 408.299.7300 or visit www.hhw.org)
- E-Waste, Universal Waste, Motor Oil and Water Based Paints:
  - You can drop off TV's, Computers, household batteries, motor oil and water based paints at WVC&R's processing facility by appointment. For more information call customer service at 408.283.9250 or visit www.westvalleyrecycles.com
- Large items or containers over 70 pounds:
  - WVC&R will collect large items such as sofas and refrigerators for a fee. To schedule an appointment please call customer service at 408.283.9250

WVC&R makes it easy for you to donate your reusable items. For assistance locating local charitable organizations, visit www.westvalleyrecycles.com or call 408.283.9250.

Please remember to place recyclables in your recycling cart for your regular weekly collection.

To learn more about any of these programs visit www.westvalleyrecycles.com or call customer service at 408.283.9250.

Subject: City of Cupertino Urban Runoff Management Program
FY 2007-2008 Annual Report

Dear Mr. Wolfe:

This report is submitted by the City of Cupertino, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a.of the Program's reissued municipal storm water NPDES Permit (Order No. 01-024). The report summarizes activities performed during FY 2007-2008 in accordance with the City of Cupertino's Urban Runoff Management Plan (URMP) submitted to the Regional Board on September 1, 1997 and updated in October 2000 and September 2004, and the performance standards contained therein.

Contents of Report

The goals of this Annual Report are to: 1) concisely document implementation of our URMP and FY 07-08 work plan during the past fiscal year; 2) evaluate program results for continuous improvement; 3) comply with permit requirements; and 4) share this information with other Co-permittees, municipal decision-makers, and the public. To accomplish these goals, the report contains the following sections:

- 0: - Certification Statement
- 0: - Table of Contents
- 0: - Acronyms
- 1: - IC/ID Elimination
- 2: - Industrial/Commercial Discharger Control Program
- 3: - Public Agency
  - Public Streets, Roads & Highways O & M and Rural Roads
  - Storm Drain Operation and Maintenance
  - Corporation Yards Operation and Maintenance
- 4: New Development and Redevelopment Procedures
- 5: Construction Inspection
- 6: Public Information & Participation
- 7: Pesticide Management
- 8: Mercury Pollution Prevention
- 9: Copper and Nickel Action Plan

- 10: Trash Inventory and Management
- 11: Water Quality Monitoring & Permit Reapplication Process
- 12: Staff Training Summary Table

There were no comments for Cupertino on the FY 06-07 Annual Report by the Water Board Staff that required a response.

Program Highlights and Accomplishments

IC/ID Elimination and Industrial Commercial Discharger Control:

The City's IC/ID Inspector conducted daily proactive inspections of Cupertino's storm drain system during FY07-08; special attention was given to inlets that are on private commercial properties, such as restaurants. The inspector identified two major problem sites involving several restaurants that share one dumpster and tallow bin area. At one site, educational meetings were conducted by City staff and the property owner, to explain housekeeping requirements and to allow restaurant and business managers to name the challenges they were experiencing while trying to keep the area clean. The other site received sixteen visits and follow-up inspections by Cupertino's IC/ID Inspector, resulting in action by the City Attorney. Some City inspections were conducted simultaneously with improvements that were being implemented by the property owner. The property owner's compliance included replacement of a leaking compactor, hiring a guard to watch the trash enclosure area, an educational meeting held for restaurant managers covering BMPs in English and Mandarin, new secondary containment for the tallow bins and meetings at City Hall. The public hearing that was initiated by the City Attorney was ultimately not needed due to the property owner's actions and proof of compliance. The site will continue to be monitored by Cupertino's IC/ID Inspector and the City's garbage and recycling company in FY08-09.

Public Information and Participation:

This spring, Environmental Programs staff viewed and evaluated Cupertino's creek presentation and creek-walk program, started in 1995. Currently the program is offered to all Cupertino Union School District 3rd and 4th grade classes. The evaluation confirmed that activities addressing each water quality pollutant of concern are presented to students. The creek education program reinforces the watershed concept, teaches the difference between the storm drain and the sanitary drain, discusses how activities like car-washing (copper), battery disposal (mercury) and gardening (pesticides) can contribute to water pollution. Students and teachers then accompany Cupertino's Naturalist on a creek walk, identifying plants and signs of wildlife along the way. The walk culminates in exploratory exercises that help students identify aquatic life in creek water samples. The popularity of this program has grown past Cupertino's border, since CUSD encompasses schools in Cupertino, Saratoga, Los Altos, Sunnyvale & Santa Clara. Schools in neighboring cities have asked to participate in the field trips. Cupertino provides free education, but only pays for the transportation to McClellan Ranch for Cupertino students. Bus fare has been covered by some cities, such as San Jose and Sunnyvale, in order to attain this creek education for their residents. Through this program students learn to take responsibility for their creeks and to teach others to do the same.

The City Manager's staff provides annual tours of City Hall to all Cupertino 3rd grade classes in the spring. In 2008, as they approached the Environmental Programs Manager's office, 3rd-graders were greeted with a brief presentation, including a few simple props and pictures, showing what people can do to protect our environment. Students

often carry these messages home to their families. Later, the same month, at a City environmental event, a parent asked if there were any brochures or guidelines for car-washing. The mother explained that her 3rd-grader had visited City Hall and learned that washing cars in the driveway was bad for the environment. This is a testament to the success of teaching Cupertino's young residents the water quality messages; they are the ones most likely to spread the word.

Household Hazardous Waste collection

Cupertino staff promoted HHW services in displays and at all City events. In FY 07-08, the Countywide Household Hazardous Waste Program collected 40% more fluorescent lamps over the previous fiscal year. This represents another big jump in public awareness over the 30% increase in participation in FY06-07.

Cupertino's Commitment to Extended Producer Responsibility

As public awareness increases, more people use the safe disposal services offered through HHW at a cost to local government. It has become evident that cities must go a step further and support the producer's responsibility to take back the spent or used products they sell. In February 2008, the City of Cupertino signed an Extended Producer Responsibility (EPR) Policy, which requires that City staff will promote, and favor purchase of materials from, manufacturers that are willing to set up a take-back program for the end of their product's life. In support of the EPR Policy, the City's Environmental Program's Manager became a member of the CA Product Stewardship Council (CPSC). The CPSC's mission is to shift product waste management responsibility from local government-funded and taxpayer-financed waste diversion to the Producer in order to reduce public costs and ultimately drive improvement in product design that promotes environmental sustainability.

New Development:

During FY07-08, The City of Cupertino conducted its first annual Operation and Maintenance inspection at Whole Foods Market, the City's first Group 1 site. The Public Works Inspector gained experience in enforcing maintenance requirements backed by the City's ordinance, which requires annual inspection and maintenance by the property owner in addition to the inspection conducted by Public Works.

These highlights help to demonstrate Cupertino's commitment to implementing the requirements outlined in the Urban Runoff Management Plan.

Thank you for your review of this Annual Report. If you have any questions regarding the materials submitted, please contact me at 408.777.3242.

FY 07- 08 Annual Report

Section 1

IC/ID Elimination Activities

Sar `lara Valley Urban Runoff Pollution Prevention Program
FY 7-2008 Annual Report: General Tasks
Cupertino

P.S. Id.	*Activity*	*FY07-08 Tasks*	*Status / Comments*	*Due Date*	*Responsible Party*
Illicit Connection & Illegal Dumping Elimination Activities					
ICID PS-2	Staff training	Hold annual training for IC/ID (urban runoff) inspector and on-call staff.	The IC/ID Inspector attended water monitoring training from the Stevens Permanente Creek Watershed Council at De Anza College on 3/27/08, training at SC County Office with DEH Inspectors on restaurant inspections on 4/22/08 and training on streets and storm drain maintenance, held at Campbell Community Ctr on 6/20/08. Streets and storm drain maintenance workshop included a presentation on Sunnyvale's pilot trash-capture-system program by Kristy McCumby. The Env.Prgm. Mgr. met with the City's IC/ID Inspector on several occasions to discuss aspects of Cupertino's incident response program. Other on-call staffs were trained as part of the overall Corp Yard training held 2/14/08.	Training Dates 3/27/08 4/22/08 6/20/08	Environmental Programs Manager and IC/ID (nonpoint source) Inspector
ICID PS-4	Field Investigations	NPS inspector annually walks the creeks, watching for evidence of any illegal dumping or illicit connections.	Throughout February 2008 the nonpoint source (IC/ID) inspector conducted his annual creek walks to assess any negative impacts. No evidence of homeless camps, broken sewer lines, or trash was found. Each year photos are taken and filed in the Creek Inspections binder to document creek conditions. A water test is conducted for PH levels at creek or storm drain sites where further water quality assessment is deemed helpful. No problems, other than those directly related to a violation or an accidental spill, were discovered in FY07-08.	Ongoing	IC/ID Inspector provides reports with photos and assessments to the Env. Prg. Mgr on a regular basis
ICID PS-6	Enhanced reporting requirements	Provide quarterly reports to Program.	Quarterly reports were submitted to Program staff as requested. Cupertino's IC/ID detailed inspection table is included at the end of this section. All violations are re-inspected through resolution and after compliance.	quarterly and ongoing	Public Works Dept. enters inspector's data in the Programs Access database

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2007-2008 Annual Report: General Tasks
Cupertino

P.S. Id.	*Activity*	*FY07-08 Tasks*	*Status / Comments*	*Due Date*	*Responsible Party*
ICID PS-7	Effectiveness Evaluation	Review and evaluate the effectiveness of city efforts.	See Below	7/08	Public Works Dept.

Evaluation:

A total of 63 potential violations were noted. Five were accidental spills or water line breaks and 8 were allowable discharges. Most notable were 12 violations attributed to food facility grease and 17 misc. violations. It is difficult to determine the exact number of grease violations because Cupertino's Inspector was calling dumpster-area-problems "grease" issues due to the discharge of greasy food scraps. Program staff uses the food facility grease category to mean tallow bin leaks or spills. Therefore, some of the grease issues should have been categorized as misc incidents, and were re-categorized by Program staff.

It is clear that food-facility and dumpster area violations (litter/debris) are Cupertino's priority concern. The highest number of violations came from food facilities. The IC/ID Inspector conducted 16 inspections of one problem site, Cupertino Village, where more than 7 restaurants share a trash enclosure area, a compactor and tallow bins. Cupertino Village property owner received 16 verbal or written notices-to-comply throughout the year concerning their trash bin area. In April, a meeting was held with the City Manager, Code Enforcement, Public Works/ Environmental Programs, and the City Attorney to discuss legal action that would include a letter to the property owner from the City Attorney and a public hearing if the violations were not resolved. The letter was sent 4/21/08, noting a mandatory compliance date and required meeting between the property owner and City staff before 5/1/08. Part of the problem had been a leaking compactor, which was replaced as part of the owner's measures to comply. Education was provided by the owner's consultant to each restaurant manager along with notification of a plan to keep individual tallow bins in the restaurants, rather than in a shared disposal area. County Health Inspector visited the restaurants with Cupertino's Environmental Programs Manager and ultimately did not allow tallow bins in the restaurants due to limited space. The owner is now remodeling the trash enclosure and building a separate shared tallow bin enclosure. Additional garbage bins were rented from the garbage company and collection service was increased along with double bagging of wet waste until the new compactor arrives. City staffs continue to monitor the site and contact the owner at the first sign of problems. The site was brought into compliance by April 30th, but continued monitoring has been conducted by City staff working with garbage collection staff.

The City will continue to address other food facility issues in 08-09 with repeat inspections, communication with property owners and penalties or fines. Other noted types of violations in FY07-08 were 7 sanitary spills or leaks and 4 water line breaks. At least 40% of the reporting came from citizen complaints, which is an indication that public education is effective. City finds that re-inspections and legal enforcement is effective.

CU' TINO
Summary c J Inspections
7/1/07 to 6/30/08

	Date	Resolved	Facility Name	Address	Incident Reporting Source	Incident Type	Incident Source	Enforcement Action	Inspector Notes
1	7/20/07	Yes	Residential Area	10281 Phariap Drive, Cupertino, CA 95014	Citizen Complaints	Saw cutting slurry discharge	Residential	Verbal Notice	The workers were saw cutting the concrete. Red dust and mud went into the sidewalk and gutter as the workers were washing it down.
2	7/25/07	Yes	Allied Fire Protection	19191 Vallco Parkway, Cupertino, CA 95014	Illicit discharge inspectors	Other: Water discharge	Public facilities and Utilities	Verbal Notice	Discharge from Fire Sprinkler water from inside the building to the gutter with a hose.
3	8/1/07	Yes	Hewlett Packard	19483 Pruneridge Ave, Cupertino, CA 95014	Interdepartmental	Sanitary spill or leak	Industrial	Verbal Notice	Sewage lack located in southwest corner of building 47. Sewage was running into the stormdrain in front of building 48.
4	8/2/07	Yes	JJCV ltd, Liability Co.	19825 Stevens Creek Blvd., Cupertino, CA 95014	Citizen Complaints	Water line breaks	Food Facilities	Verbal Notice	Waterline Sprinkler broke and discharged water and mud onto the sidewalk and into stormdrain.
5	8/6/07	Yes	Cupertino Village	10765 North Wolfe Ave, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Verbal Notice	Discharge of food, oil and grease tracking into the parking lot and into stormdrain. Same occurred on 8/7/07.
6	8/6/07	Yes	Residential Area	19866 Marritt Drive, Cupertino, CA 95014	Citizen Complaints	Other: Drain out from water heater	Residential	Verbal Notice	Day Chung Rhee was draining water from water heaters and it was running down driveway into gutter and stormdrain.
7	11/9/07	Yes	Residential Area	10173 Miner Court, Cupertino, CA 95014	Citizen Complaints	Saw cutting slurry discharge	Residential	Verbal Notice	Kailing Zheng was cutting tile on the driveway. Water and dust washed down into the gutter and stormdrain.
8	11/14/07	Yes	Residential Area	18881 Tuggle Avenue, Cupertino, CA 95014	Citizen Complaints	Un-hardened cement discharge	Residential	No Action	Inspector asked contractor to clean up the spill. Inspector provided Chapter 9.18.010 Stormwater Pollution Prevention and Watershed Protection Public Education Info.
9	11/19/07	Yes	Residential Area	1375 Wildflower Way, Cupertino, CA 95014	Citizen Complaints	Other: Discharge of mud	Residential	No Action	Inspector asked contractor to clean up the gutter and stormdrain. Provided Chapter 9.18.010 Stormdrain Pollution Prevention and Watershed Protection info.
10	11/21/07	Yes	Residential Area	10944 Dryden Ave, Cupertino, CA 95014	Citizen Complaints	Pools/Spas/Fountains discharge	Residential	Verbal Notice	Provided Public Education and Chapter 9.18.010 Stormdrain Pollution Prevention and Watershed Protection info.

CUPERTINO
Summary of ICID Inspections
7/1/07 to 6/30/08

11	12/5/07	Yes	United Express Food	10710 South De Anza Blvd., Cupertino, CA 95014	Citizen Complaints	Other: Discharge of soapy water.	Food Facilities	Verbal Notice	Informed Jorge Rivera that he can not wash the sidewalk with soap and water. Was provided Public Education, Chapter 9.18.0010 Stormwater Pollution Prevention and Watershed Protection info.
12	12/7/07	Yes	Glen Brook Apartments	Glenbrook Apts. 10100 Mary Avenue, Cupertino, CA 95014	Citizen Complaints	Surface cleaning discharge	Residential	Verbal Notice	Asked Apartment Manager to put sandbags around the stormdrain, contain the mud and clean up the discharge. Provided Public Education and Chapter 9.18.010 Stormdrain Prevention and Watershed Protection info.
13	12/21/07	Yes	Residential Area	18725 Loree Ave, Cupertino, CA 95014	Citizen Complaints	Un-hardened cement discharge	Residential	Verbal Notice	Asked Mr. Ho to clean up the discharge and to put a drip pan under the concrete pumping. Provide Outreach material and provided Chapter 9.18.010 Stormwater Pollution Prevention and Watershed Protection.
14	1/2/08	No	Cupertino Village	10765 Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Warning Notice	Informed Kimco to clean up the spill. Provided public education and provided Chapter 9.18.010 Stormwater Pollution Prevention and Watershed Protection.
15	1/4/08	Yes	Cupertino Village	10765 North Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Warning Notice	Informed to clean up and provided Public Education chapter 9.18.010 Stormdrain Pollution Prevention and Watershed Protection info.
16	1/14/08	Yes	Residential Area	10510 Stors Avenue, Cupertino, CA 95014	Interdepartmental	Misc. incidents	Residential	Verbal Notice	Asked Mr. Kid to cleanup granite dust from the gutter and stormdrain. Provided Public Education and provided Chapter 9.18.010 Stormdrain water Pollution Prevention and Watershed Protection info.
17	1/16/08	No	Cupertino Village	10765 N. Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Warning Notice	Asked to clean up the spill and provided Public Education and Chapter 9.18.010 Stormwater Pollution Prevention and Watershed Protection info.
18	2/15/08	Yes	Rancho Deep Cliff property	10870 Kester Drive Ranch Drive & Deep Cliff Drive, Cupertino, CA 95014	Citizen Complaints	Sanitary spill or leak	Public facilities and Utilities	Verbal Notice	Informed Association Manager of the sanitary discharge in gutter and stormdrain/creek, and to clean up the discharge. Provided Chapter 9.18.010 Stormwater Pollution Prevention and Watershed Protection info.
19	2/15/08	Yes	The Oaks	21269 Stevens Creek Blvd. Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Referral for Enforcement	Informed property owner of the discharge of the oil and grease by phone message. Also spoke to Property Manager of the discharge and asked to have it cleaned up. Code Enforcement sent a letter dated 2/15/08, regarding the Light Industrial Zoning Code
20	2/21/08	Yes	The Oaks	21269 Stevens Creek Blvd, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Referral for Enforcement	Called Cupertino Enforcement Officer to contact the Property Manager and Owner to clean up spill. Provided Chapter 9.18.010 Stormwater Pollution Prevention and Watershed Protection Municipal Code info.
21	2/25/08	Yes	Marion Restaurant	Marion Restaurants, 19628 Stevens Creek, Cupertino, CA 95014	Citizen Complaints	Pools/Spas/Fountains discharge	Food Facilities	Verbal Notice	Informed Mr. Lee that he can not discharge anything into the stormdrain including water from the foundation and asked him to stop immediately. Provided Public Education info. Chapter 9.18.010 Stormwater Pollution Prevention and Watershed Protection info.

CU' TINO
Summary c) Inspections
7/1/07 to 6/30/08

22	3/4/08	Yes	Cupertino Village	10765 N. Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Verbal Notice	Informed to clean up the discharge pf pik, grease and food.
23	3/10/08	Yes	Cupertino Village	10765 N. Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Referral for Enforcement	Asked for the discharge to be cleaned up.
24	3/11/08	Yes	Cupertino Village	10765 N. Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Referral for Enforcement	Asked for the discharge to be cleaned up.
25	3/12/08	Yes	Cupertino Village	10765 N. Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Referral for Enforcement	Asked that discharge be cleaned up.
26	3/14/08	Yes	Homestead 76	21855 Homestead Road, Cupertino	Illicit discharge inspectors	Surface cleaning discharge	Public facilities and Utilities	Referral for Enforcement	Resolved through City's NPS Program
27	3/20/08	Yes	Beacon Gas Station	22510 Stevens Creek Blvd, Cupertino, Ca 95014	Other agency	Misc. incidents	Automotive Facilities	Verbal Notice	Asked the owner to clean up the dirt in the stormdrain in the parking lot, which he did. Provided public education and Chapter 9.18.010 Storm water pollution prevention and water shed protection info.
28	3/25/08	Yes	Cupertino Village	10765 N. Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Verbal Notice	Informed Kimco Realty to clean up the cooking oil from the parking lot, which they did.
29	4/1/08	Yes	Cupertino Village	10765 N. Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Verbal Notice	Spoke to Kimco Realty Corporation, informed them of the spill and told them to clean up the spill from the Compactor. Contacted Able Plumbing to vacuum out the stormdrain. Grease had made it half way to the second drain, so Able Plumbing had to flush both S/Ds.
30	4/2/08	Yes	Cupertino Village	10765 N. Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Verbal Notice	Informed KIMCO to clean up oil and grease spill.
31	4/2/08	Yes	Union 76 Gas Station	21855 Homestead Road, Cupertino, CA 95014	Other agency	Landscape material dumping	Automotive Facilities	Verbal Notice	Asked the owner to cleanup the storm drain in the parking lot. Owner complied. Provided Public Education and Chapter 9.18.010 Stormwater Pollution Prevention and Watershed Protection info.
32	4/3/08	Yes	Cupertino Village	10765 N. Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Verbal Notice	Requested KIMCO to clean the oil and grease again. KIMCO complied.
33	4/7/08	Yes	Commercial Area	Stevens Creek Blvd, Cupertino, CA 95014	Interdepartmental	Water line breaks	Construction Sites	Verbal Notice	Inspector asked the California Water Service Company to protect the storm drain with sandbags and clean up the street and gutter.

CUPERTINO
Summary of ICID Inspections
7/1/07 to 6/30/08

34	4/7/08	Yes	Cupertino Square	10123 N. Wolfe Road, Cupertino, CA 95014	Other agency	Sanitary spill or leak	Public facilities and Utilities	Verbal Notice	Asked Mike Rohde, General Manager and Joe Goodwin, Operations Manager to clean up all residue on the sidewalk, stormdrain, street and gutter, and to sanitize sidewalk and stormdrain. The storm drain was snaked and cleared out blockage.
35	4/7/08	Yes	Residential Area	10720 Orline Court, Cupertino, CA 95014	Citizen Complaints	Tracking oil	Residential	Verbal Notice	Informed Mr. Julio, of Construction Services to clean and sweep up the oil. He complied.
36	4/9/08	No	Cupertino Square	10123 N. Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Sanitary spill or leak	Public facilities and Utilities	Verbal Notice	Informed Cupertino Square to clean up and sanitize the sewer spill on the sidewalk and stormdrain.
37	4/9/08	Yes	Cupertino Village	10983 North Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Verbal Notice	Asked the Store Manager to clean up the discharge from the tallow, and from the pallets and plastic bags that got tallow on them. Informed that the carpets could not be rinsed, since it would go into the stormdrain.
38	4/9/08	Yes	Residential	Mann Drive, Cupertino, CA 95014	Other agency	Water line breaks	Residential	Verbal Notice	Informed San Jose Water Truck # 76.S.I.W. to clean up the mud on the street, gutter, and in the stormdrain. They complied.
39	4/9/08	Yes	Residential Area	Voss Ave, Cupertino, CA 95014	Other agency	Water line breaks	Construction Sites	Verbal Notice	San Jose Water repaired the water line break and cleaned up the stormdrain.
40	4/12/08	Yes	Cupertino Square	10123 N. Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Sanitary spill or leak	Public facilities and Utilities	Verbal Notice	Informed Cupertino Square to clean up and sanitize the sewer spill again and to clean up the stormdrain, gutter, street, and sidewalk.
41	4/15/08	Yes	Cupertino Square	10123 N. Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Sanitary spill or leak	Public facilities and Utilities	Verbal Notice	The ground was sanitized, both storm drain and storm pipes between both stormdrains was cleaned. Found that tree roots were penetrating the 6" pipe about 57 inches from the clean out. Cupertino Square hired West Point Solutions Plumbing to replace the 6" pipe.
42	4/21/08	Yes	Cupertino Village	10765 Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Verbal Notice	Asked Kimco Realty to clean up the discharge. They said they would comply.
43	4/23/08	Yes	Residential Area	10134 Santa Clara Street, Cupertino, CA 95014	Citizen Complaints	Vehicle repair	Residential	Verbal Notice	Asked owner of Ford Bronco to cleanup the drippings immediately, provided Public Education and Stormwater Pollution Prevention Watershed outreach information to auto owner.
44	4/24/08	Yes	Residential Area	10688 Stevens Canyon Road, Cupertino, CA 95014	Citizen Complaints	Other: Overwatering sprinkler system.	Residential	Verbal Notice	Asked for the removal of the water softener water line that was running into the stormdrain. Informed owners that they can put water softener line to the sanitary system. Inspector provided public education on stormwater pollution prevention.

CU' TINO
Summary c) Inspections
7/1/07 to 6/30/08

45	5/5/08	Yes	Residential Area	21478 Meteor Drive, Cupertino, CA 95014	Citizen Complaints	Other: Overwatering sprinkler system.	Residential	Verbal Notice	Asked Property Owner to cut back on watering and provided Public Education and Storm water Pollution and Watershed Protection Outreach info.
46	5/6/08	Yes	Residential Area	10490 SanFlipe Road, Cupertino, CA 95014	Citizen Complaints	Overwatering sprinkler system.	Residential	Verbal Notice	Asked property owner to repair sprinklers and cut back on watering lawn. Provide Outreach info on Public Education and Stormwater Pollution and Watershed Protection.
47	5/7/08	Yes	Residential Area	21458 Meteor Drive, Cupertino, CA 95014	Citizen Complaints	Other: Overwatering Sprinkler system.	Residential	Verbal Notice	Asked property owner to reduce watering lawn and provided outreach material on Public Education and Stormwater Pollution and Watershed Protection.
48	5/7/08	Yes	Residential Area	10700 Castin Avenue, Cupertino, CA 95014	Citizen Complaints	Other, overwatering sprinkler system.	Residential	Verbal Notice	Asked property owner to reduce overwatering plants and provided Public Education info on Stormwater Pollution and Watershed Protection 9.18.010
49	5/8/08	Yes	Cupertino Village	10765 N. Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Verbal Notice	Asked property Managers to clean up the oil and grease.
50	5/10/08	Yes	Residential// School Area	20833 Stevens Creek Blvd, Cupertino, CA 95014	Other agency	Sanitary spill or leak	Residential	Verbal Notice	Cupertino Sanitary District contacted Able Plumbing to clean up. Flushed line from downstream manhole to remove blockage. Removed large tree branch. Washed , scrubbed, and rinsed stormdrain.
51	6/2/08	Yes	Residential Area	11123 Canyon Vista Drive, Cupertino, CA 95014	Citizen Complaints	Other, clogged stormdrain line. Needs repair.	Residential	Verbal Notice	Lyle Peddicord, Association Manager and Aquater Plumbing, Chris Johnson, Vice President agreed to fix the stormdrain line.
52	6/4/08	Yes	Residential Area	21720 Lomila Avenue, Cupertino, CA 95014	Citizen Complaints	Discharge of Sprinklers into stormdrain	Residential	Verbal Notice	Asked property owner to cut back on the water flow, which was going into the street, gutter, and stormdrain. Replaced sprinkler pipe. Provided Public Education and Stormwater Pollution Prevention and Watershed Protection Outreach info.
53	6/5/08	Yes	Residential Area	10181 Pasadena Ave, Cupertino, CA 95014	Citizen Complaints	Other, discharge of sprinkler system	Residential	Verbal Notice	Asked Property Management to cut back on the watering and provided Public Education: 9.18.010 Stormwater Pollution Prevention and Watershed Protection.
54	6/9/08	Yes	Pet Smart	20558 Stevens Creek Blvd, Cupertino, CA 95014	Illicit discharge inspectors	Other: Fluorescent Lights in the dumpster	Commercial	Verbal Notice	Asked the store manager to pull the fluorescent lights out of the dumpster, and to call SCC Small Business Hazardous Waste Recycling and Disposal Program @ 408 299-7300. Provided Public Education info.

CUPERTINO
Summary of ICID Inspections
7/1/07 to 6/30/08

55	6/11/08	Yes	Cupertino Village	10765 N. Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Verbal Notice	Asked Kimco to clean up the oil and grease discharge in the parking lot and the dumpster. Provided Public Education Outreach information.
56	6/11/08	Yes	Ranch 99 Market - Cupertino Village	10983 North Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Verbal Notice	Asked the store manager to clean up the oil discharge and cleanup the broken pallet and papers.
57	6/16/08	Yes	Homestead Lanes	20990 Homestead Road, Cupertino, CA 95014	Illicit discharge inspectors	Other: Sprinkler head broken	Public facilities and Utilities	Verbal Notice	Asked property owner to repair broken sprinklers and to clean up the mud on the sidewalk, gutter and stormdrain. Owner complied. Provided Public Education on Stormwater Pollution Prevention and Watershed Protection.
58	6/16/08	Yes	Ranch 99 Market	10983 North Wolfe Road, Cupertino, CA 95014	Illicit discharge inspectors	Food Facility Oil & grease discharge	Food Facilities	Verbal Notice	Watermelon, lettuce, and grease was cleaned up.
59	6/18/08	Yes	Residential Area	10780 Maxine Ave, Cupertino, CA 95014	Illicit discharge inspectors	Other: Discharge of water from broken timer	Residential	Verbal Notice	Contacted property owner and asked him to turn off the water and repair the timer. Provided Public Education and Stormwater Pollution Prevention and Watershed Protection Outreach info.
60	6/22/08	Yes	Residential Area	22032 Lindy Lane	Citizen Complaints	Vehicle & equipment leaking	Residential		The hydraulic fluid was cleaned up. Checked the stormdrain and pipes. Discharge did not go into stormdrain.
61	6/24/08	Yes	Residential Area	10776 West Estates Drive, Cupertino, CA 95014	Citizen Complaints	Vehicle washing	Residential	Verbal Notice	Asked Property owner to wash her car on the lawn because soap and water cannot go into the stormdrain. Provided Outreach and Public Education info on Stormwater Pollution Prevention and Watershed Protection.

Industrial/Commercial Discharger Control Program

Sa[illegible]lara Valley Urban Runoff Pollution Prevention Progran
FY 2007-2008 Annual Report: General Tasks
Cupertino

P.S. Id.	Activity	FY07-08 Tasks	Status / Comments	Due Date	Responsible Party
Industrial/Commercial Discharger Control Programs					
IND-PS-3	Coordination with Health Dept.	Continue to hold an annual overview of the restaurant inspection program with the Co. Health Dept.	Cupertino's annual restaurant inspection training meeting was held on 4/22/08 with County Health Dept. Manager, DEH Inspectors and Managers and ICID Inspectors from Cupertino and the West Valley Clean Water Program. The topics covered how to identify potential restaurant storm drain violations, inspector's feedback, incident tracking, enforcement, data collection and public education materials. Slide show presentation provided photos of actual violations and examples of proper site management. Round-table discussion took place to address questions and share answers. Very valuable information-sharing and partnership building is achieved in these biennial sessions.	4/08	Environmental Programs Mgr, IC/ID Inspector, DEH restaurant inspectors
IND PS-3	Check for new industrial businesses.	In spring '08 the City's Industrial Inspector will review applications for "Tenant Improvements" (TI) in the Building Dept. to determine if any of the businesses on the two light-Industrial streets had changed their operations and should be included in routine Industrial inspections.	No improvements were found that would require industrial inspections.	spring'08 and ongoing	Industrial inspector
IND PS-3	Industrial Commercial Inspections	Twenty four industrial facilities, consisting of dry cleaners and automotive related businesses are scheduled for FY 07-08. Inspections are conducted biennially.	Twenty four industrial facilities were inspected. Seven potential violations were noted at automotive facilities. Four were resolved and three were referred to the ICID inspector for follow-up. See inspection detail table at the end of this section.	2008	Industrial Inspector
IND PS-3	Commercial Food Facility Inspections	The County Dept of Environmental Health conducts restaurant inspections annually in Cupertino (through an agreement between the City and the Health Dept.). The city's nonpoint source inspector also conducts daily proactive inspects storm drains near or on restaurant property and distributes educational information	The County Health Dept. inspected 260 food facilities in Cupertino, conducting a total of 787 inspections. Two warning notices were issued for potential storm drain violations. Both involved inadequate dumpster maintenance, one included evidence of racks being washed outside. The violations from DEH will trigger additional follow	FY07-08 ongoing	County Dept of Environmental Health Inspectors with Cupertino ICID Inspector follow up.

		as necessary.	up inspection(s) by Cupertino's ICID Inspector. See attached table of violations noted by DEH.		
IND PS-4	Staff training	Hold water quality or nonpoint source training for Industrial Inspector and Building Inspectors.	On June 10, '08, an in-house training session included a review of Cupertino's Industrial and Commercial Inspection Performance Standards. Also discussed, were additional proactive inspections, and the goal of implementing an "all eyes" participation in reporting potential violations while out in the field on other municipal business.	Every two years	Environmental Programs Mgr Presented Six Building Inspectors and the Bldg Official attended
IND PS-4	Enhanced reporting requirements	Continue to track all non-compliance, follow-up enforcement actions and final resolutions resulting from inspections. Submit data to the Program.	Cupertino's data on results and follow-up of industrial/commercial inspections conducted during the fiscal year was submitted to the Program in July 2008.	Ongoing	Public Works Dept.
IND PS-4	Effectiveness Evaluation of Restaurant Inspections	Review and evaluate the effectiveness of city efforts.	County Health Dept. staff reported two violations during restaurant inspections related to urban runoff. Follow up is conducted by County staff and by Cupertino's IC/ID Insp. City staff continues to meet with County Health Dept. staff annually to discuss any issues that may come up during the year. This practice has worked well for many years.	7/08	Public Works Dept.
IND PS-4	Effectiveness Evaluation of Industrial Facility Inspections.	Review and evaluate the effectiveness of city efforts.	The City's Industrial Facility Inspections turned up a total of 4 violations that were resolved and 2 referrals to the ICID inspector to clean leaf and plant debris from storm drains. One site was referred to Cupertino's IC/ID Inspector to address the need for secondary containment of oil filters and proper spill cleanup. Facilities where violations were discovered and resolved will be re-inspected in FY08-09.	7/08	Building Dept and IC/ID Inspector

Public Agency Activities

- Public Streets, Roads &* Highways O & M and Rural Roads
- Storm Drain Operation and Maintenance
- Corporation Yards Operation and Maintenance

San' Clara Valley Urban Runoff Pollution Prevention Program
FY 7-2008 Annual Report: General Tasks
Cupertino

P.S. Id.	Activity	FY07-08 Tasks	Status / Comments	Due Date	Responsible Party
Public Streets, Roads, and Highways Operation and Maintenance and Rural Roads					
PSRH PS-3	Staff training	Hold annual training for public works, streets division staff and public works supervisors.	Annual training for Public Works Maintenance staff was conducted at the City's Corp Yard on 2/21/08. The City's civil engineering consultant gave a general overview of current and future NPDES permit req's and discussed roads maintenance activities of concern and their corresponding BMPs. These BMPs include cleaning and draining sweepers in the yard, proper handling of pesticides, protecting nearby catch basins/outfalls, and not pushing debris over embankments). Corp Yard staff were reminded to tell their supervisor if they notice significant or chronic problems (trash dumping, erosion, inlet blockages). At the end of the training session, the crews discussed upcoming staffing changes and noted that there had not been any procedural changes during the year.	2/08	Public Works Dept.
PSRH PS-5	Effectiveness Evaluation	Review and evaluate the effectiveness of city efforts.	See below	7/08	Public Works Dept.

EVALUATION

The City's regular street sweeping program, by contractor, did not change during FY '07-'08. Frequent additional fall leaf clean-up in both the East Estates and Rancho Rinconada areas continues to be very effective.

During FY '07-'08, there was no major work involving City crew maintenance on the less than 1 mile of rural roads. As with other Cupertino roadways, the only pavement work done by City crews is filling potholes with "cold patch." Street resurfacing and work on traffic loop detectors are done by contractors. Contract documents for these types of work include urban runoff quality control provisions and have for many years.

City crews in the Grounds Division clean the plaza at the Civic Center approximately weekly using steam washing (w/o soap). The maintenance staff and their new supervisor have been trained on the appropriate BMPs for this activity.

Due to recent significant staffing changes (including the retirement of the long-time Assistant Director of Public Works for Maintenance), during FY '08-'09, the Environmental Programs Manager will coordinate in-house training on standard operating procedures for maintaining streets, especially rural roads.

New 07-08 Storm Drain Cleaning BMP
Vacuum is inserted at least three feet into inlet

San' ^lara Valley Urban Runoff Pollution Prevention Program
FY '-2008 Annual Report: General Tasks
Cupertino

P.S. Id.	*Activity*	*FY07-08 Tasks*	*Status / Comments*	*Due Date*	*Responsible Party*
Storm Drain System Operation and Maintenance					
SD PS-1	Storm Drain Maintenance	All tasks are routine and on-going	The City's contractor vacuums all of the storm drain inlets on a 2-year rotating basis. Half of the storm drains are cleaned one year, and the remaining half the following year. Certain known problem areas are cleaned each year before the rainy season. Every day during the cleaning cycle, the contractor's foreman meets with the City's IC/ID Inspector to report the number of drains cleaned and the type and number of lbs of debris collected. At this time, the Inspector may direct the contractor to modify how cleaning is conducted.	Ongoing	Public Works Dept.
SD PS - 2	Storm Drain Operation and Maintenance	Review and evaluate one BMP, with input from maintenance staff. Evaluate "hot spots" as appropriate.	During FY'07-'08, a change was made to how the City's contractor conducts routine storm drain cleaning. The contractor had been cleaning the storm drain inlet and 2' upstream of the inlet. However, since the City's IC/ID Inspector had been noticing sediment, trash, and other debris in the lines, the FY '07-'08 storm drain cleaning contract was changed to require cleaning at least 3' upstream of the inlet. (see photo attached) Since then, the IC/ID has noted fewer clogs in the system. Staff will continue to evaluate the effectiveness of this change and discuss and results in future annual reports. During FY '07-'08, the City's IC/ID Inspector has been even more involved with making sure that any illegal storm drain discharge discovered during routine cleaning is completely resolved.	2/08	Public Works Dept.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2007-2008 Annual Report: General Tasks
Cupertino

P.S. Id.	*Activity*	*FY07-08 Tasks*	*Status / Comments*	*Due Date*	*Responsible Party*
SD-4	Annual training	Hold annual training for staff responsible for the maintenance of the storm drain system.	Annual training for Public Works Maintenance staff was conducted at the City's Corp Yard on 2/21/08. The City's civil engineering consultant. gave a general overview of current and future NPDES permit req's and discussed maintenance activities of concern and their corresponding BMPs (such as not washing or rinsing equipment in the field and making sure pollutants don't go into the storm drain). At the end of the training session, Corp. Yard crews discussed upcoming staffing changes.	2/08	Public Works Dept.
SD PS-5	Effectiveness Evaluation	Review and evaluate the effectiveness of city efforts.	See below.	7/08	Public Works Dept.

EVALUATION

In the past few years, the City began cleaning the storm drain system in "hot spot" areas near De Anza College and in the western hillside areas at least annually, and in some areas, more than once per year. This change was made to reduce localized flooding problems and has made a noticeable improvement.

Aside from changes in "hot spot" cleaning frequency and how far in the storm drain line the contractor cleans, there have been no other significant changes to how Cupertino conducts its Storm Drain Operation and Maintenance Program.

Due to recent staffing changes (including the retirement of the long-time Assistant Director of Public Works for Maintenance), during FY '08-'09, the Environmental Programs Manager will coordinate in-house training to ensure that new staff is trained on standard operating procedures for maintaining the City's storm drains and responding to illegal dumping.

Cupertino

P.S. Id.	*Activity*	*FY07-08 Tasks*	*Status / Comments*	*Due Date*	*Responsible Party*
Corporation Yard Operation and Maintenance					
PSRH PS-3	Staff training	Hold annual training for corporation yard staff and public works supervisors.	Annual training for Public Works Maintenance staff was conducted at the City's Corp Yard on 2/21/08. The City's civil engineering consultant gave a general overview of current and future NPDES permit req's and discussed the contents of the City's Corp Yard SWPPP; corp yard activities of concern; and corresponding BMPs. Corp Yard staff were reminded to tell their supervisor if they notice significant or chronic problems. At the end of the training session, Yard crews provided feedback on upcoming staffing changes and noted that there had not been any procedural changes during the year.	2/08	Public Works Dept.
PSRH PS-5	Effectiveness Evaluation	Review and evaluate the effectiveness of city efforts.	See below.	7/08	Public Works Dept.

EVALUATION

Corporation yard Haz Mat staff inspects the corporation yard weekly as part of the City's regular haz mat inspection.
Continued staff training is the likely reason that there were no significant spills at the Yard during FY '07-'08. The City's IC/ID Inspector continues to work with Corp Yard supervisors to maintain a high level of housekeeping. Special attention is being paid to an equipment washing area and to vehicle and equipment leak prevention.

On July 14, 2008, the Environmental Programs Manager, the Industrial Waste Inspector, and the City's civil engineering consultant met with the Assistant Director of Public Works for Maintenance and other Corp Yard to go over the previous year's stormwater quality control activities and the most recent Corp Yard SWPPP (2001). According to Corp Yard staff, there have been no major modifications to how activities are conducted at this site for several years.

Due to recent significant staff changes (including the retirement of the long-time Assistant Director of Public Works for Maintenance, in FY '08-'09, the Environmental Programs Manager will coordinate focused in-house training on standard operating procedures for maintenance activities, including those conducted at the Service Yard. As part of this training all staff at this site will review the Corp Yard SWPPP and new staff will be reminded where the multiple copies are kept.

New Development and Redevelopment Procedures

Cupertino

Activity	Permit Item Source	FY07- 08 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
C.3.b Development Project Approval Process -- Planning Procedures					
Ordinance Revision	C.3.b.2	Modify existing review policies, procedures, and/or conditions of approval to incorporate C.3 requirements (based on results of tasks under C.3.c. through C.3.m.)	There were no revisions to the City's Water Course Protection ordinance during the '07-'08 fiscal year due to continued MRP negotiations.	N.A.	Public Works, Planning, City Attorney
Staff Training	C.3.b.3	Continue to train Cupertino staff in planning, building, and engineering departments on the C.3 provisions.	The Environmental Programs Manager, the Public Works Senior Civil Engineer and an Assistant Planner attended SCVURPPP's Annual C.3 Workshop on 6/3/08. In-house training was given to Public Works and Planning staff on 6/25/08. Topics discussed include draft proposed changes to NPDES permit provision C.3, feedback from staff and the development community on current C.3 requirements, BMP O&M inspections (inspection forms, tracking/resolving enforcement issues), City sustainability efforts, 3rd party certification of stormwater treatment BMPs, and up-coming large projects.	6/08	Public Works – Environmental Division
C.3.c. Requirements for Group 1 and Group 2 Projects					
Guidance Manual	C.3.c.4	Review any changes to the SCVURPPP C.3 Guidance Manual.	Due to protracted MRP negotiations, SCVURPPP did not revise the C.3 Guidance Manual during the '07-'08 fiscal year.	N.A.	Public Works Environmental Division
Guidance Manual Update	C.3.c.9	Update Performance Standard as needed.	Once the MRP negotiations are completed, as requested, the City will assist SCVURPPP with any revisions to the Planning Procedures Performance Standard.	N.A.	Public Works Environmental Division

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2007-2008 Annual Report: New and Redevelopment Requirements

Cupertino

Activity	Permit Item Source	FY07- 08 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
C.3.e Operation and Maintenance of Treatment BMPs					
Data Form and Staff Training	C.3.e.1	Log information about treatment BMPs installed at approved Group 1 and 2 projects and maintain a list or database of properties, treatment BMPs, and responsible operators.	The five approved C.3 projects in Cupertino have been logged into a Project reporting table. The reporting tables from previous years were reviewed this spring to determine which BMP O&M projects were ready for inspection by the Public Works Inspector. The results of all O&M inspections are documented in an Excel spreadsheet and reviewed along with the project reporting tables to determine which sites are ready for inspections or re-inspections. Once the MRP has been approved, the Environmental Programs Manager will pursue the use of an Access database to track approved C.3 projects. The Public Works Inspector and the IC/ID Inspector attended the SCVURPPP C.3 workshop on 6/3/08, including the session on "Inspection of Stormwater Treatment Measures During and After Construction."	9/08 AR and ongoing	Public Works Environmental Division
BMP O&M Agreement Mechanism	C.3.e.2	Review use of City's BMP O&M and easement agreements and consider modifications, as needed.	No changes to the City's BMP O&M easement agreements were made in FY '07-'08. According to Public Works & Planning staff attending in-house training on 6/25/08, developers have not brought up issues with these documents.	9/08 AR and ongoing	Public Works, Planning, City Attorney
BMP Inspection Program	C.3.e.5	Develop local program for inspecting a subset of prioritized treatment BMPs to verify that the responsible party is performing proper O&M.	The Public Works Inspector annually inspects all sites with stormwater treatment controls. Any site with flow controls will also be inspected annually (there have been no projects subject to the HMP). The City will continue to work with SCVURPPP to evaluate inspection forms and reporting requirements. **See the**	6/08	Public Works Engineering

Cupertino

Activity	Permit Item Source	FY07- 08 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
			attached organizational description of the City's BMP O&M Inspection Program.		
Reporting	C.3.e.6	Report on the Cupertino treatment BMPs O&M verification program in each annual report, including organizational structure, evaluation of effectiveness, and planned improvement to the program. Include a list or summary of treatment BMPs inspected during the year, inspection results, and any required follow-up and correction.	Since very few C3 regulated sites have been developed in Cupertino, only one site required O&M inspection during FY '07-'08 (Whole Foods). **See the attached BMP O&M Inspection Results Table.** The follow-up to specific concerns raised during this inspection will be addressed and resolved in early FY '08-'09 and will be reported in the FY 08-'09 Annual Report.	9/08 AR and ongoing	Public Works Environmental and Engineering Divisions
C.3.f Hydromodification Management Plan					
Staff training	C.3.f.3	Implement HMP as part of requirements for Group 1 projects that may cause increased erosion or other related impacts.	Planning and/or Public Works staff review every project for HMP applicability. In FY '07-'08, there were no projects in Cupertino that were subject to these requirements.	9/08AR and on-going	Public Works and Planning
C.3.h Alternative Certification					
Reporting	C.3.h.1	List projects certified by someone other than City staff.	None of the three Group 1 projects approved in FY '07-'08 used 3rd party certification (no Group 2 projects were approved). However, due to significant staffing changes and the anticipated use of more complex stormwater treatment measures, Public Works staff began requiring 3rd party certification of treatment and flow control BMPs in July 2008.	Report in 9/08 AR and ongoing	Public Works Environmental Division

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2007-2008 Annual Report: New and Redevelopment Requirements

Cupertino

Activity	Permit Item Source	FY07- 08 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
C.3.k Source Control Measures					
Ordinance Revision	C.3.k.	Enhance source control requirements for new and redevelopment projects.	There were no revisions to the source control requirements contained in the City's Water Course Protection ordinance. These requirements will be reviewed upon issuance of the MRP to determine if changes are needed.	9/08 AR and ongoing	
Reporting	C.3.k.3	Implement source control measures requirements by including appropriate conditions of approval in Group 1 and 2 projects. Report status and provide examples of application of conditions in annual reports.	The three Group 1 projects approved in FY '07-'08 were subject to a standard development condition of approval requiring source control measures, including those for pesticide and trash controls.	9/08 AR and ongoing	Public Works Environmental Division
C.3.m Water Quality Review Processes					
CEQA Review	C.3.m.1	Review CEQA initial study checklists and other environmental review documents and modify documents as needed to include questions that sufficiently address water quality impacts of projects.	There were no changes made to the City's CEQA review process in FY '07-'08.	9/08 AR and ongoing	Public Works Environmental Division and Planning
C.3.n Reporting Requirements					
Reporting	C.3.n.1	Provide information described in Table 1 of Provision C.3. in annual reports.	There were three Group 1 projects and no Group 2 projects approved during FY '07-08 (**see Table 1 of this Annual Report for additional information**).	9/08 AR and ongoing information collection	Public Works Environmental Division and Planning
Reporting	C.3.n.4	Collect and report the following for all projects that must implement treatment measures: BMPs, site design, and source control measures used, sizing criteria, O&M responsibility mechanism and responsible party.	**See Table 2 of this Annual Report for detailed information on these projects.**	9/08 AR and ongoing	Planning and Public Works Engineering

Cupertino

Activity	Permit Item Source	FY07- 08 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
Pesticide Control Measures	C.3.n.5	Collect information and report a summary of types of pesticide reduction measures required for development projects and the percentage of projects for which pesticide reduction measures were required.	All projects receive, as part of the Application Packet, a list of conditions related to reducing pesticide use. This packet also includes the Pesticide Maintenance Fact Sheet and the Pest-Resistant plant list. **See Table 2 of this Annual Report.**	9/08 AR and ongoing	Planning and Public Works Engineering

EVALUATION

Cupertino is undergoing a major City-wide effort to incorporate sustainability concepts into its General Plan policies. The current focus is on sustainable development and is being handled through the development review process. All commercial/public developments are evaluated for LEED certification potential (silver, at minimum) and residential projects are encouraged to use BIG (Build It Green) concepts. On 5/19/08, Planning staff gave a presentation to the City Council about LEED and BIG concepts. As part of this, Public Works and Planning staff are steering developers away from vault type stormwater treatment controls and planners are asking up-front for reductions in the amounts of impervious surface. Increasingly, developers are relaying to Planning staff that site constraints make it difficult to meet some C.3 requirements.

There have been significant staffing changes in both the Public Works and Community Development Department during the first half of 2008. As a result, the Environmental Programs Manager will be coordinating focused staff training on C.3 requirements, to occur during FY '08-'09. Related to staffing changes, in July 2008, the Public Works Department began requiring 3rd party certification of treatment and flow control design.
The City's Public Works Inspector is solely responsible for BMP O&M inspections. Now that there are five approved C.3-regulated projects and the Public Works Inspector has conducted the first BMP O&M inspection, the City's Environmental Programs Manager and the Public Works Inspector will meet to discuss revisions to the BMP O&M Inspection Program procedures during FY '08-'09.

CITY OF
CUPERTINO

STANDARD OPERATING PROCEDURES FOR CUPERTINO'S

PERMANENT BMP OPERATION AND MAINTENANCE INSPECTION PROGRAM

Selection of Annual Permanent BMP O&M Inspection Sites

- Permanent BMPs at all C.3 regulated project properties will be inspected annually, by early fall. The permanent BMPs are inspected by the PW Inspector when the project is first completed. If early fall is not a full year since the original inspection, then O & M inspections will take place after the one year period. After that inspections will be scheduled by early fall.
- In the future, depending on the total number of Group 1, 2A & 2B properties in Cupertino, the City may develop criteria for inspecting a subset of these sites, as allowed under NPDES Permit Provision C.3.e.

Permanent BMP O&M Inspection Program Responsibilities

- Public Works Engineering Division staff perform development plan review for stormwater quality compliance
- The Public Works Inspector tracks the permanent BMP construction and BMP O&M inspections and enforcement for all C.3 regulated projects using the C.3 project reporting tables and an Excel inspection results spreadsheet.
- Since the Public Works Inspector will inspect construction of the on-site permanent BMPs at C3 regulated projects and will sign-off on final City-approval for site occupancy, he/she will note when the project is completed.
- The Public Works Inspector will submit a Permanent BMP O&M Inspection summary report for the previous fiscal year to the Environmental Programs Manager by July 30th of each year.
- The Environmental Programs Manager will include BMP O&M inspection data in the Annual Report.

Permanent BMP O&M Pre-Inspection Preparation

- The Public Works Inspector reviews the C3 regulated project reporting table and the Permanent BMP O&M Inspection records at least two weeks prior to beginning annual inspections.
- The Public Works Inspector or Public Works Administrative staff will contact each Group 1, 2A & 2B site owner/manager to arrange a mutually agreeable inspection appointment.

- Prior to each site inspection, the Public Works Inspector will review the site's Storm Water Management Plan, including any applicable as-built construction plans, for BMP information, including BMP types and locations. At this time, the Inspector will also review the property owner's available site BMP O&M maintenance records (required per Muni Code 9.18.180), any previous inspection reports, and any necessary special procedures (e.g., inspection forms, underground confined space entry).
- The Public Works Inspector will, if needed, review the applicable CASQA or SCVURPPP BMP fact sheets and information on the City's BMP Inspection Program, which may be useful in addressing questions or comments raised by BMP owners or operators during the inspection.
- Prior to each site inspection, the Public Works Inspector will assemble the necessary equipment and supplies.

Permanent BMP O&M Inspection and Enforcement Procedures

- Upon arriving at the inspection site, the Public Works Inspector will contact the site manager/owner and explain the purpose of the visit.
- Permanent BMP O&M inspection by the City will be conducted and documented in accordance with the SCVURPPP standard inspection checklist.
- If any deficiency is noted, the Public Works Inspector will document it in writing. The written Notice of Violation will include a copy of the BMP O&M inspection form, including a list of corrective actions needed and a compliance schedule. This Notice will be sent to the Group 1, 2A & 2B property owner/manager within ten working days of an inspection.
- The Public Works Inspector will enter the permanent BMP O&M inspection information, including any violations, into the Permanent BMP O&M Inspection Excel spreadsheet.
- The Public Works Inspector will provide written notification to the Environmental Programs Manager of any Group 1, 2A & 2B property with a permanent BMP O&M violation, including information on location, the nature of violation and any needed follow-up.
- The property owner and, if applicable, the site manager, will be instructed to notify the Public Works Inspector within the time period indicated on the Notice of Violation so that the facilities can be re-inspected. The inspector will complete a new inspection form, noting whether all recommended maintenance activities have been completed and if any other actions are needed to assure proper operation of the facility.
- If repairs are not undertaken or are not done properly within the time allocated in the compliance schedule, the City will begin enforcement proceedings as provided in City Code Section 9.18.
- Once all necessary repairs have been completed, the Public Works Inspector will note this in the City's BMP O&M SCVURPPP Excel Spreadsheet, including the date work was completed and any other pertinent information (such as if City intervention was required to complete corrective work).

Background Data for BMP Type

The *Standard Stormwater Treatment BMP Inspection Data Collection Form* (Inspection Form) lists twenty stormwater treatment BMP types (see Section III). Inspectors, data entry staff and others who use the Inspection Form can refer to the California Stormwater Quality Association (CASQA) and SCVURPPP Fact Sheets for background information. The CASQA Fact Sheets are numbered (see below) and are located in the CASQA *Stormwater BMP Handbook for New Development and Redevelopment,* as well as SCVURPPP's *C3. Stormwater Handbook.* The SCVURPPP Fact Sheets are also located in the *C3. Stormwater Handbook.* Both Handbooks are available online.

<u>CASQA Reference Number</u>
Bioretention TC-32
Drain Insert MP-52
Extended Detention Basin TC-22
Infiltration Basin TC-11
Infiltration Trench TC-10
Media Filter TC-40 and MP-40
Retention/Irrigation TC-12
Vegetated Buffer Strip TC-31
Vegetated Swale TC-30
Vortex Separator MP-51
Water Quality Inlet TC-50
Wet Pond TC-20
Wetland MP-20
Wet Vault MP-50

<u>SCVURPPP Fact Sheets</u> (no identification numbers)
Exfiltration Trench
Hydrodynamic Separator
Planter Boxes
Porous Pavement
Roof Gardens
Underground Detention Systems

Potential Inspection Results with Definitions

If mosquitoes or mosquito larvae are observed within a BMP, report condition to: Santa Clara County Vector Control District, 976 Lenzen Ave., San Jose, CA 95126; phone: 408-792-5010; fax: 408-298-6356; email: timothy.mulligan@deh.co.scl.ca.us; website: www.sccvector.org

ID	Inspection Results	Definitions
I	**All BMP Types**	
1	No Visible/Apparent Problems	No visible or apparent problems with BMP function. BMP appears to be well-maintained
2	Significant Engineering/Design Flaws	BMP observed to have significant engineering/design flaws which lessen its effectiveness as a stormwater treatment measure.
3	Unauthorized Modifications	Any modification that lessens the effectiveness of the BMP; any modification not authorized by the City, designated agency or other regulatory agency.
4	BMP Destroyed or Eliminated	BMP destroyed, removed or eliminated from property.
5	Trash/Debris Accumulation or Dumping	Trash & debris accumulates within and/or on BMP; trash & debris interferes with proper BMP function; visual evidence of trash/debris dumping.
6	Evidence of Contaminants & Pollution	Evidence or presence of oil, gasoline, contaminants or other pollutants.
7	BMP Access Obstructed	Access to BMP obstructed or limited.
8	Obnoxious Odors	Unpleasant odors within/from the BMP.
9	Fencing - Missing or Broken Bars	Any defect in or damage to the fence or gate that permits easy entry to a facility.
10	BMP Cannot Be Located	BMP cannot be located for inspection.
II.	**Biofiltration (Bioretention, Vegetated Buffer Strip, Vegetated Swale, Roof Gardens, Planter Boxes)**	
	A. General	
11	Uneven or Clogged Flow Spreader	Flow spreader uneven or clogged so that flows are not uniformly distributed across the BMP.
12	Leaking or Malfunctioning Irrigation System	Irrigation system leaking or malfunctioning.
	B. Sediment and Erosion Problems	
13	Sediment Accumulation	Sediment depth exceeds 2 inches on more than 10% of the vegetated treatment area; or sediment interferes with BMP performance.
14	Erosion/Scouring	Eroded or scoured areas due to flow channelization, higher flows, wind or water.
	C. Vegetation Maintenance Issues	
15	Poor Vegetation Coverage	Planted vegetation is sparse or bare or eroded patches occur in more than 10 % of the BMP. Growth of planted vegetation is poor because sunlight does not reach swale.
16	Invasive/Nuisance Vegetation or Weeds	Planted vegetation is excessively tall; nuisance weeds, invasive or noxious vegetation are overgrown; vegetation reduces free movement of water through BMP.
17	Tree/Brush Growth	Growth does not allow maintenance access or interferes with maintenance activity.
	D. Drainage Problems	
	Standing Water/Excessive Ponding/Soggy Soil	Water is observed within the BMP (between storms) and appears not to drain freely or soil is excessively soggy. Excessive ponding of water within vegetated swale or other BMP.
19	Mosquito Habitat	Suitable habitat exists for mosquito production (e.g., standing water for more than 72 hours in areas accessible to mosquitoes).
20	Clogged or Obstructed Inlets/Outlets	Inlet/outlet clogged or obstructed with sediment and/or debris.
21	Constant Baseflow/Damage	Small quantities of water flow through the vegetated swale, even when it has been dry for weeks, and an eroded, muddy channel has formed in the swale bottom; constant baseflow from irrigation runoff..
III.	**Detention and Infiltration (Extended Detention Basin, Wet Pond, Wetland, Exfiltration Trench, Infiltration Basin, Infiltration Trench, Retention/Irrigation)**	
	A. Vegetation Maintenance Issues	
22	Invasive/Nuisance Vegetation or Weeds	Invasive, nuisance vegetation or weeds are present.
23	Tree/Brush Growth & Hazard Trees	Growth does not allow maintenance access or interferes with maintenance activity; dead, diseased or dying trees; tree growth on berms or emergency spillway >4 feet in height or covering more than 10 % of spillway.
	B. Sediment and Erosion Problems	
24	Sediment Accumulation	Detention BMPs- sediment on pool bottom preventing water flow in/out of the facility. Infiltration BMPs -Sediment in storage areas, rock filters, and pre-settling ponds and vaults preventing infiltration.
25	Erosion	Eroded damage over two inches deep; potential for continued erosion; any erosion on a compacted berm embankment; soil from adjacent areas washes into/on BMP; continued erosion is prevalent.
	C. Animal Pests	
26	Rodent Holes	If facility acts as a dam or berm, any evidence of rodent holes, or any evidence of water piping through dam or berm via rodent holes.
27	Insects (Wasps, Hornets, Bees)	Insects (wasps, hornets, bees) interfere with maintenance activities. Excessive or nuisance levels.
	D. Drainage Problems	
	Standing Water/Excessive Ponding/Soggy Soil	Water is observed within the BMP (between storms) and appears not to drain freely or soil is excessively soggy. Excessive ponding of water within vegetated swale or other BMP.
29	Mosquito Habitat	Suitable habitat exists for mosquito production (e.g., standing water for more than 72 hours in areas accessible to mosquitoes).
30	Empty Cell	First cell of wet pond does not hold water.
31	Unlevel Berm Surface	Unlevel internal berm dividing wet pond cells

Potential Inspection Results with Definitions

ID	Inspection Results	Definitions
III. Detention and Infiltration (Extended Detention Basin, Wet Pond, Wetland, Exfiltration Trench, Infiltration Basin, Infiltration Trench, Retention/Irrigation) continued		
E. Unique to Certain BMPs		
32	Uneven or Clogged Flow Spreader	Flow spreader uneven or clogged so that flows are not uniformly distributed across the BMP
33	Oil Sheen on Water (Wet ponds)	Prevalent and visible oil sheen.
34	Damaged/Missing Bars (Debris Barriers)	Bars are missing, loose, bent out of shape, or deteriorating due to excessive rust.
35	Leaking or Malfunctioning Irrigation System	Irrigation system leaking or malfunctioning.
36	Embankment Settlement Lower Than Design Elevation	Embankment settlement four inches lower than the design elevation.
IV. Structural, Non-landscaped Based (Drain Insert, Hydrodynamic Separator, Media Filter, Porous Pavement, Vortex Separator, Wet Vault, Water Quality Inlet, Underground Detention Systems)		
A. General		
37	Mosquito Habitat	Suitable habitat exists for mosquito production (e.g., standing water for more than 72 hours in areas accessible to mosquitoes).
38	Access Cover Damaged/Difficult to Remove/Not in Place	Cover cannot be opened, corrosion/deformation of cover; maintenance person cannot remove cover using normal lifting pressure; cover is missing or only partially in place.
39	Deteriorating Paint or Protective Coating	Part or parts that have a rusting or scaling condition and have affected structural adequacy.
40	Locking Mechanism Not Working	Mechanism cannot be opened by one maintenance person with proper tools. Bolts into frame have less than 1/2 inch of thread (may not apply to self-locking lids).
B. Ineffective Filter Material, Liners and/or Membranes		
41	Sediment Accumulation	Sediment depth exceeds acceptable levels (varies between BMPs)
42	Ineffective Media Insert/Filter Media	Media inset/filter media ineffective in doing intended function and needs to be replaced; filter is beyond the typical average life of product.
43	Rock Lining Out of Place/Missing (Sand Filters)	Soil beneath the rock lining is visible.
44	Visible Liner with Holes or Damaged	Liner is visible and has more than three 1/4-inch holes in it or is damaged.
45	Compromised Membrane or Roof Structure	Membrane or roof structure is compromised by either roots and/or water discharge.
46	Short Circuiting	Flows do not properly enter filter cartridges (media filters); seepage/flows occur along the vault walls and corners (sand filters); Sand eroding near inflow area (sand filters); flows become concentrated over one section of the sand filter rather than disperse (sand filters).
C. Pipe or Pipe Joint Problems		
47	Damaged Pipes	Any part of the piping that is crushed, deformed, damaged, in need of repair or any other failure to the piping; protective coating is damaged.
48	Missing Debris Barrier/Not Attached to Pipe	Entire barrier is missing or is not attached to pipe.
49	Sediment in Drain Pipes/Cleanouts	Drain pipes and/or cleanouts are full of sediment and/or debris.
50	Joints Between Tanks/Pipe Section	Any openings or voids allowing material to be transported into facility.
51	Tank Pipe Bent Out of Shape	Any part of tank/pipe is bent out of shape more than 10 % of its design shape.
D. Underground Vaults/Containers, Chambers, Tanks Issues		
52	Sediment Accumulation	Sediment depth exceeds acceptable levels (varies between BMPs), 20 % of the diameter of the pipe/design depth or interferes with proper BMP function.
53	Vault Structure Damage	Vault structures which are observed to have cracks in walls, bottom damage to frame and/or top slab.
54	Damaged Baffles and/or Weir	Baffles which are corroded, cracked, warped and/or showing signs of failure as determined by maintenance person. Weir is observed to be damaged by maintenance person.
55	Access Ladder Damage	Ladder is corroded or deteriorated, not functioning properly, not securely attached to structural wall, missing rungs, has cracks and/or is misaligned.
56	Oil Accumulation (Water Quality Inlet, Vortex Separator)	Oil accumulations that exceed 1-inch at the surface of the water.
57	Blocked, Damaged or Plugged Air Vents	One-half of the cross section of a vent is blocked at any point or the vent is damaged.
E. Unique to Certain BMPs		
58	Damaged Coalescing Plates (Water Quality Inlet)	Plate media broken, deformed, cracked and/or showing signs of failure.
59	Clogged Porous Pavement	By visual inspection, little or no water flows through pavement during heavy rain storms, usually causing ponding; clogging due to debris, organic matter and sediment.
60	Damaged Internal Walls (Sand Filter Media)	Internal walls are corroded, cracked, warped and/or showing signs of failure as determined by maintenance person.
61	Prolonged Flows (Sand Filter Media)	Sand is saturated for prolonged periods of time (several weeks) and does not dry out between storms due to continuous base flow or prolonged flows from detention facilities.
V. Other		
62	Other	Inspection results which are not defined by one of the listed fields.

City of Cupertino

FY 07- 08 Annual Report

Section 5

Construction Inspection

Cupertino

Activity	Const PS-5			9/08 AR and	Public Works Engineering
Inspection Tracking	Const PS-5	City will include a summary of the year's written inspection notices and follow-up actions in each year's annual report.	The City uses an Access database to collect and track compliance activities and pre-wet season inspections. **The inspections summary table is attached immediately following this section.**	9/08 AR and ongoing	Public Works Engineering
Staff training	Const PS-6	Hold annual training for building dept. and public works staff.	The Senior Civil Engineer and Environmental Programs Manager attended the SCVURPPP Construction Inspection workshop on December 5, 2007. The City's Civil Engineering Consultant and a Building Inspector attended the SCVURPPP session on the State General Construction Permit on April 30, 2008 in San Jose. On June 10, 2008, the Environmental Programs Manager conducted in-house inspection training for Building staff. Topics included: goals of the construction inspection program, the Construction Inspection Performance Standard, available contractor educational materials, enforcement tools, outside audits (process and outcomes), and City coordination. Also discussed were additional proactive inspections, and strategy for an "all eyes" participation in reporting potential violations. The Public Works Inspector attended erosion control training in December 2006 and will attend the November 2008 session.	11/08	Public Works Engineering
Effectiveness Evaluation	Const PS-8	Review and evaluate the effectiveness of city efforts.	See below	9/08 AR and ongoing	Public Works Dept.

EVALUATION

There were no significant administrative changes to Cupertino's Storm Water Construction Site Inspection program during FY '07-'08. However, over the

Cupertino

past few years, as a result of continued coordination and annual staff training, Building inspectors are handling more of the on-site violations and minor problems. The Public Works Inspector is still responsible for pre-construction meetings at larger jobs, to make sure erosion control measures are installed and maintained.

In FY'07-'08, there were only 23 documented construction site incidents, down from 40 the previous year. The primary reason for this reduction is that most of the construction jobs in Cupertino are being done by contractors familiar with working in the City. New Building inspection staff are being reminded to document enforcement and follow-up actions.

Following the training meeting on 6/10/08, where referral of potential incidents by internal staff was encouraged as part of "all eyes" in the field participation, a mud-tracking incident involving a San Jose site (on the Cupertino border) was reported to the Env Prog Mgr. San Jose construction inspection staff was contacted; San Jose staff provided immediate follow-through; the contractor cleaned the site.

	Date	Inspector	Resolved	Facility Name	Address	Description	Incident Reporting Source	Incident Type	Incident Source	Enforcement Action	Inspector s Notes
1	07/20/07	Stream	Yes		10281 Phar Lap	Red concrete dust in gutter. Instructed worker to clean gutter and not to wash into the storm drain.	Citizen Complaints	saw cut slurry	Construction Sites	Warning Notice	Drove by later and all was cleaned up.
2	08/24/07	Rieden	Yes	921 Ferngrove	921 Ferngrove	cement/concrete washed down curb and gutter	Citizen Complaints	un-hardened cement discharge	Construction Sites	Verbal Notice	Building Dept follow up was cleaned up on 8/28/07. Complaint not filed until 8/27/07.
3	08/28/07	Greef	Yes	921 Ferngrove		Washed out concrete in gutter	Citizen Complaints	equipment cleaning	Construction Sites	Warning Notice	8-30-07- cleanup verified
4	09/04/07	Rieden	Yes	Yamagami Nursery	SE corner of Bollinger and DeAnza	Onsite grading with no erosion control to prevent tracking on City R-O-W. This is a City of San Jose project but trucks dragging mud on Cupertino R-O-W.	Interdepartmental	tracking soil	Construction Sites	Verbal Notice	Followed up with City of San Jose. Contacted Rich Furtado with South Bay Const and he confirmed he would have the street swept.
5	10/30/07	Gregory	Yes	Residence	22285 S. Deanza Cir.	large dirt pile not covered in front yard	Illicit discharge inspectors	inadequate BMPs	Residential	Warning Notice	contractor covered dirt pile up with visqueen and installed flasher unit signs
6	11/15/07	Gregory	Yes	Residence	10241 Scenic Blvd.	sand and gravel in street	Illicit discharge inspectors	inadequate BMPs	Residential	Warning Notice	sand and gravel pile cleaned up
7	12/04/07	Gregory	Yes		21708 Alcazar	sand pile in street flowing into gutter	Illicit discharge inspectors	landscaping material dumping	Public facilities and Utilities	Warning Notice	owner cleaned sand pile
8	12/11/07	Gregory	Yes	Residence	22159 Rae Lane	landscaping materials dumped in street	Illicit discharge inspectors	landscaping material dumping	Residential	Warning Notice	superintendent -Augustine had crew clean up street
9	01/09/08	Rieden	Yes	PG&E SubStation	California Oak Way	Tracking of mud from substation project onto California Oak Way	Interdepartmental	tracking soil	Construction Sites	Verbal Notice	street was swept within 48 hours
10	01/22/08	Rieden	Yes	PG&E SubStation	California Oak Way	tracking mud from site	Citizen Complaints	tracking soil	Construction Sites	Verbal Notice	Again, swept roadway

11	02/19/08	Greef	Yes	20905 Jollyman		Clean dirt out of street, no mud in storm drain.	Illicit discharge inspectors	inadequate BMPs	Construction Sites	Warning Notice	cleaned up several days later.
12	02/25/08	Stream	Yes				Illicit discharge inspectors	inadequate BMPs	Construction Sites	Warning Notice	Drove by the next day. Everything was cleaned up.
13	03/05/08	Greef	Yes		10655 Flora Vista	dirt in gutter	Illicit discharge inspectors	storm drain inlet protection	Construction Sites	Warning Notice	cleaned up a few days later.
14	03/07/08	Gregory	Yes		10106 Carmen Rd.	gravel and dirt pile in gutter	Illicit discharge inspectors	inadequate BMPs	Construction Sites	Verbal Notice	cleaned up
15	03/13/08	Greef	Yes		10465 Moretti	dirt in street	Illicit discharge inspectors	storm drain inlet protection	Construction Sites	Warning Notice	left second note 3-31-08. No response by 4-1-08. Contacted IC/ID Insp. Barragan contacted renter, had material removed. Issue resolved by 4-9-08
16	04/01/08	Gregory	Yes	Residence	10380 Creston Dr.	dirt-debris-landscaping materials in gutter	Illicit discharge inspectors	landscaping material dumping	Residential	Warning Notice	drove by on 4-14-08 gutters cleaned up
17	04/07/08	Rieden	Yes	Shell Station	Stevens Creek at Blaney	contractor boring hit waterline	Interdepartmental	water line breaks	Construction Sites	Verbal Notice	cleanup and repair within 24 hours
18	04/08/08	Gregory	Yes	Residence	21228 Alcarzar	dirt-gravel-landscaping materials in gutter	Illicit discharge inspectors	landscaping material dumping	Residential	Verbal Notice	drive by 4-14-08 gutters cleaned up
19	05/14/08	Gregory	Yes	Residence	10181 Stonydale	dirt pile in street and gutter	Illicit discharge inspectors	landscaping material dumping	Residential	Warning Notice	pile of dirt cleaned up and street swept up
20	05/22/08	Gregory	Yes	Residence	10890 Santa Teresa Dr	large dirt pile on driveway-dirt in gutter	Illicit discharge inspectors	inadequate BMPs	Residential	Warning Notice	Re-checked FY08-09, resolved 8/12/08.
21	06/10/08	Stream	No	Residence	7418 Stanford Pl.	Dust and dirt in gutter	Other	misc. incidents	Residential	Verbal Notice	
22	06/13/08	Winter	Yes	Residence	7418 Stanford Place	Dirt in gutter, sidewalk and driveway	Illicit discharge inspectors	misc. incidents	Residential	Warning Notice	Areas cleaned up.
23	06/13/08	Gregory	Yes	Residence	835 Lily	dirt pile in gutter	Illicit discharge inspectors	inadequate BMPs	Residential	Warning Notice	Re-checked FY08-09, resolved 8/13/08.

Public Information & Participation

San' ^lara Valley Urban Runoff Pollution Prevention Program
FY '-2008 Annual Report: General Tasks
Cupertino

P.S. Id.	*Activity*	*FY07-08 Tasks*	*Status / Comments*	*Due Date*	*Responsible Party*
Public Information and Participation					
PI/P	On-going public Information program	Staff will continue to use a variety of outreach avenues to educate the diverse cultural audiences in the City. See following PI/P table for detail of activities.		Ongoing	Public Works Dept.

General Outreach

Activity	Level of Implementation	Evaluation
NPS literature distribution to the general public at City facilities: • Library • City Hall lobby • Quinlan Community Ctr. • Planning/ Building Dept. counter • Backyard Compost workshops	**NPS Prgm. literature:** *Pests Bugging You?, Home Maintenance Tips*, eight construction trifolds, *Blueprint For a Clean Bay* booklet, IPM pest-specific factsheets, pool water brochure, *A Vision For Our Watershed,* **HHW Prgm literature:** HHW brochure (for residents), small business hazardous waste brochure, Diazinon flyer, *Alternatives to Household Chemicals, Mercury and Universal Waste brochure (for residents and businesses)* **Valley Trans. Agency literature**: bus maps and schedules **Air District** and **Rideshare literature:** Spare-the-Air brochures; transportation-alternatives brochures	This material is easily obtained from the agencies or is copied by staff internally. The materials continue to be taken by the public at a pace where a weekly visit to each site is necessary.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2007-2008 Annual Report: General Tasks
Cupertino

Activity	Level of Implementation	Evaluation
Rideshare Week and Bike-to-Work Day: Encourage participation among City employees and the general public	E-mail messages: Email messages to employees in May for Bike-to-Work Day. Cupertino's Bicycle/Pedestrian Commission supports energizer stations at the Quinlan Community Center, Apple Computer, and Hewlett Packard sites. Articles in Scene newsletter: Articles were published in the May City newsletter, the Scene, for Bike-to-Work Day.	The email message, sent out April 30, 2008 serves to remind employees about this environmentally friendly form of transportation and the related activities occurring on Bike-to-Work Day. A few City staff members participate, but most drive as they have other activities or live too far from work. According to the Cupertino Bicycle and Pedestrian Commission, 152 bicycle commuters traveled northbound and 119 southbound. The total of 271 bicyclers was an 18 percent increase from last year's Bike to Work Day of 230 bicyclers. 97 bicyclers stopped this year at the Energizer Station on Stelling Road in front of Quinlan Center; 87 reported their planned roundtrip mileage for the day—an average of 29 roundtrip miles on a day that would set a record high temperature. Both Apple and HP had energizer stations for their employees who biked to work.
HHW display at Quinlan Community Center	General HHW display set up 3 wks prior to Cupertino HHW event on 8/25/07. Articles in July Scene newsletter. Articles and ads in the Cupertino Courier and San Jose Mercury News West Valley Section (Cupertino is included in this section)	The County now surveys the HHW customers about how they became aware of the program- and sorts the data by city. In the most recent data available, FY 07-08, residents found out about the program this way: • By calling the garbage company: 25% • By reading the City's newsletter: 38% • By reading the local newspaper: 6% • From a flyer: 6% • From the City's website: 12% • By calling the City: 8% HHW Website: 4%

Activity	Level of Implementation	Evaluation
HHW display at Quinlan Community Center		We can conclude that our City newsletter, the Scene, is a valuable outreach tool. We will continue to buy ads in the local paper and present a display of what typical HHW products can be taken to a HHW event just before our major August HHW event.
NPS literature distribution to residents at Cupertino HHW event	The County's HHW staff distributes the following pieces, at the events, on behalf of the City of Cupertino: Alternatives to Household Chemicals, Santa Clara County HHW brochure, Upcoming Citywide Garage Sale, Computer and TV Recycling, Donation Agency List, On Call Disposal Days, Nearby Recycling Centers, Donation Agency List E-Waste Recycling locations, Backyard Compost Workshop Classes. An event was held in Cupertino on 8/25/07.	We are assuming that those users of the HHW event are environmentally conscious, and are probably the kind of people who are interested in stormwater related literature.
Audubon Fair; literature provided to Park and Rec staff to distribute at fair.	Alternatives To Household Chemicals, Home Maintenance Tips brochure, and various IPM fact sheets distributed on 10/20/07 at McClellan Ranch.	According to the City's naturalist, who staffed the event, approximately 450 attended. Brochures were available to those in attendance.
Auto Pollution Display at Quinlan Community Center	Display featuring "Cars Pollute Water Too", Vehicles are the Largest Source of Pollution in the Bay Area", and "Keeping it All in Tune". Literature will be provided explaining impact of copper pollution from brake pads as well as general information regarding auto pollution.	Activity was slated for Winter 07-08. However, due to many internal staff changes, this task was not completed. Task has been slated for Fall 2008.
Water quality protection literature distribution to residents at Cupertino HHW event	Literature in the HHW Program's Used Oil recycling bag: *Pests Bugging You, Home Maintenance Tips, Grow It!,* HHW Program logo on pencil and shop rag, all of the IPM pest-specific fact sheets, and a Mercury-pollution prevention fact sheet.	Literature was literature was distributed at the City-wide Shredding Day event on April 26, 2008, held at City Hall Plaza. The event allows residents to bring confidential documents for shredding and recycling. It is very popular among residents. The City will have these events more frequently in FY08-09.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2007-2008 Annual Report: General Tasks
Cupertino

Activity	Level of Implementation	Evaluation
Mercury Bulb Disposal Display at Quinlan Community Center	Information on HHW Mercury Bulb proper disposal and drop-off.	Mercury Display at Quinlan Community Center was included in the Household Hazardous Waste Display in August 2007 & Pesticide & Watershed Pollution Display through the month of April 2008. Advertised new fluorescent bulb drop off locations on the City's website, and the Cupertino Scene Newsletter.
Website & City TV Channel: Include NPS information in City's website & City Channel, especially information on the Santa Clara Water Districts new Creekwise approach for creek side property owners.	The City's environmental division website links from other agencies as City staff becomes aware of them.	Ongoing As the public becomes more accustomed to using websites, this tool becomes a valuable and easy to use method of educating the public. The City aired "Don't Trash California" 52 times on the City's TV Channel during FY 07/08.
Watershed Education & Outreach Campaign: Conduct or participate in local activities that are coordinated with the Watershed Education & Outreach campaign. Evaluate the effectiveness of PI/P projects by direct or indirect means, as appropriate.	Staff attends WE&O campaign planning meetings and reviews and critiques work plans and campaign products.	Participated in City's Shred It Event on April 26, 2008, which also included a Thermometer Mercury Exchange Event, staffed by the County HHW program. Approximately 76 Mercury Thermometers were collected and exchanged with digital non-mercury thermometers. *It was decided to add more Mercury Thermometer Exchange events next year in collaboration with the County HHW and the City of San Jose Watershed Protection program. Additional events will b e addressed in the FY 08/09 Annual Report.* Outreach materials distributed included Home Maintenance Tips, County U-Waste Brochure, Safe Medicine Disposal Flyers, IPM fact sheets, pencils, Pens, Got Bugs Magnets, Activity Books, Kids Guide to Backyard Bugs, Grow It Guide, HHW brochure, Pools and Spas Brochure, Reusable Bags, and Fly Swatters.

Watershed Education & Outreach Campaign: Conduct or participate in local activities that are coordinated with the Watershed Education & Outreach campaign. Evaluate the effectiveness of PI/P projects by direct or indirect means, as appropriate.	Staff attends WE&O campaign planning meetings and reviews and critiques work plans and campaign products.	Participated in Tarp Giveaway event on April 5, 2008 at Zanker Landfill for the Anti-Litter campaign. Distributed over 600 tarps.
Watershed Education & Outreach Campaign: Conduct or participate in local activities that are coordinated with the Watershed Education & Outreach campaign. Evaluate the effectiveness of PI/P projects by direct or indirect means, as appropriate.	Staff attends WE&O campaign planning meetings and reviews and critiques work plans and campaign products.	City held a booth at a local Environmental Fair at Los Gatos High School on April 12, 2008. Outreach material included Carwash brochures, Grow It Guides, Pesticide Flyers, Anti Litter, Got Bugs, Used children's book to educate on the difference of storm drain and sanitary, Safe Disposal of Mercury, Pest Control, and distributed reusable grocery bags.
Watershed Education & Outreach Campaign: Conduct or participate in local activities that are coordinated with the Watershed Education & Outreach campaign. Evaluate the effectiveness of PI/P projects by direct or indirect means, as appropriate.	Staff attends WE&O campaign planning meetings and reviews and critiques work plans and campaign products.	Participated in a Car Wash Event held on May 21, 2008 at Robertsville Classic Carwash in Los Gatos. Distributed Outreach material on proper car washing, and coupons for future car washes at participating locations.

Newsletter, newspaper articles, ads:

- 3/08: Batteries Collected at Curbside, Compost Classes & Free Compost Available to City residents, Pest Control Info, Reduce Pollution Tips, Air District Incentive Rebate Program

- 4/08: Mercury Thermometer Exchange Event on 4/26/08, Computer Recycling, Compost Classes & Compost available for City residents, Fluorescent Compact Light Bulb benefits, Universal Waste Disposal (Electronic, Fluorescent, Mercury, Cell Phones, Batteries), IPM pest specific fact sheets available; Spring Native Plants to help reduce global warming
- 5/08: watch use of soap when washing cars; creek cleanup date set; bike-to-work day, Compost Classes & Compost available to Cupertino residents, Pest Control Info, Household Hazardous Waste Disposal Info, Tips on how to be Green (Save Water, Use less Power, Garden Green, Spare the Air)
- 6/08: Draining Pools, Automobile Maintenance Outreach, Watershed Watch – Littering info, Mercury products in home, Prescription & Over the Counter Prescription Drop Off Locations

Evaluation: The Scene, the City's newsletter provides an easy way for staff to inform local residents and businesses about issues of civic concern. The Scene is mailed to 26,000 postal customers – all residences and businesses in the City.

Cupertino Courier articles:

Article on the countywide Household Hazardous Waste Program 8/25/07 disposal event in Cupertino (8/8/07)

Batteries can be recycled at no charge 2/6/08

Electronics Recycling Event is Scheduled – Advertising Apple Computer's E-Waste event on April 19, 2008 (4/16/08)

Cupertino Hosts Events at Earth Day Event – advertising a Mercury Thermometer Exchange event on 4/26/08. (4/23/08)

Courier ads:

Household hazardous waste event ads before the August '07 HHW event (8/1/07,8/8/07, 8/15/07)
Mercury Pollution - Fluorescent Bulb Recycling Take Back Locations. Ads submitted by the County and paid jointly by the cities, and in conjunction with PG&E (1/16/08, 1/23/08, 1/30/08, 2/13/08, 2/20/08)
Watch Out for Mercury Pollution – Free Bulb Drop Off Locations in coordination with HHW add Watershed Watch: 4/9/08
Mercury Thermometer Exchange Event on April 26, 2008 (4/9/08, 4/16/08, 4/23/08)

S.J. Mercury articles: Articles and ads in the Mercury are usually submitted by the Program and paid for jointly by the cities.

Targeted Outreach

Activity	Level of Implementation	Evaluation
City staff: • Building inspectors • Public Works inspector and plan checker • Planning Dept. planners • NPS inspector (in Public Works) • Corp yard & street dept staff • Public Works staff managing golf course	See Training Activities Table, for details about specific trainings. NPS literature distributed, as appropriate E-mails: • Did not send an email to employees regarding	**General remarks:** Trainings regularly provide an informal forum for staff to discuss any recent concerns about operations. The City believes that employees understand stormwater concerns as evidenced by the number of public incidents reported by staff, the types of informed questions asked by staff, and the tradition of on-going training for

maintenance contract and managing structural pesticide spraying contract • City employees for general info on less-toxic alternatives for their own home use, and info on not using pesticides on the job, if unauthorized (detail in the Pesticide Workplan)	how to dispose of batteries properly at City facilities. Information will be disseminated in August 2008. Battery containers are placed in specific areas at City facilities, and most employees are aware of battery recycling and proper disposal. • Did not provide City Staff of less toxic alternatives to pesticides and inviting them to get more info and see display. Information will be disseminated in August 2008. • Sent 4/30/08 informing them of Bike to Work Day • Approximately 12 Spare the Air emails sent to employees informing them of Spare the Air Days	many years. **Building Dept:** Focus: performance standard, construction BMPs and source control BMPs, inspection notices. **PW and Planning Plan Checkers:** Focuses: C-3, Group 1, 2A & 2B, HMP Pesticide Control, website information, construction permit and MRP. **Corp Yard and Street Dept training:** Focus: Topics included corporation yard operations and maintenance, vehicle and equipment cleaning, dumping incidents, pest management, and universal waste recycling and disposal. In addition, building inspectors, planners, public works inspector and the City's storm water inspector attended Program-sponsored training events. Continue to focus on mercury-containing products for trainings with Bldg. inspectors and Public Works maintenance staff.
City contractors: Require PCOs, contracted for work on City facilities, to use pest control methods consistent with our IPM policy Require these PCOs to attend training workshops, as appropriate. (See Pesticide workplan for details.)	See "Training Activities" Contract specifications require an IPM approach.	The City's contractor for Blackberry Farm has attended accredited courses through the Continuing Education Center for Pest Management. He maintains his license as a Pest Control Advisor. The City's pest management policy and SOPs are reviewed with the contractor annually for compliance.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2007-2008 Annual Report: General Tasks
Cupertino

Activity	Level of Implementation	Evaluation
Creek cleanup volunteers	*Scene* articles	Article in May '08*Scene* newsletter Cupertino will be sponsoring its 1st Creek Clean Up event on 9/20/08 in conjunction with Coastal Clean Up Day.
Nursery customers and staff: Pt-of-sale IPM campaign (2 stores: Yamagami's Nursery and Summer Winds Garden Ctr.)	IPM Partnership trainer to speak at both nurseries to train staff. Program pest-specific IPM fact sheets displayed at both nurseries for customer education and to assist the staff in selling the less-toxic products.	By EOA staff. Set up by EOA staff and Program contractor in the Spring. This is a very efficient way to be sure the nurseries get uniform and effective training and up-to–date information on new products.
Auto Repair Shops	Education of shop mgrs. during bi-annual inspections by City Bldg. Dept staff; staff use Program literature, if necessary. Continue to add the discussion of proper disposal of mercury-containing products (esp. switches and relays).	Auto repair shop inspections are conducted bi-annually and were completed in FY 07-08. See inspection table in IND Section 2.
Restaurant education	Restaurant posters are distributed at inspections by County health inspectors, or by City NPS inspector, if responding to problems. County health inspector routinely inspects all restaurants annually, and inspects on an "on-complaint" basis. Additionally, the City's inspector provides a copy of a restaurant worker tri-fold (available in English, Spanish, Vietnamese, or Chinese) explaining proper restaurant cleaning behavior, as needed. Health Dept. inspectors are now also distributing the recently acquired "Don't Set a Table for Pests" brochure.	The County continues to distribute posters to new restaurants that don't have them. When the City's NPS inspector responds to spills or illegal discharge problems at restaurants, he provides verbal guidance, written violation notices, and often leaves a program brochure, cards or poster. The illustrations on the IC/ID cards are helpful for situations where there is a language barrier. The Chinese version of the tri-fold is helpful in our community, which has a high percentage of Chinese speaking people, and many Chinese restaurants.

Activity	Level of Implementation	Evaluation
Development Community	Literature distributed at Planning/Bldg counter: • 8 construction tri-folds • Blueprint for a Clean Bay booklet • Small business haz waste brochure • City's post-construction matrix • stormdrain stencils • Pest Resistant Plant list • Pesticide Control Measures for Development Projects • Landscape Maintenance Techniques for Pest Reduction • Construction BMP sheet—is required to be incorporated in all building plan sets. • Mercury and Universal Waste brochure for businesses Website information: **Construction Requirements** California Stormwater Quality Assoc. (CASQA) Construction BMP Handbook California Stormwater Quality Assoc. (CASQA) Development BMP Handbook State Water Resource Control Board (SWRCB) NPDES Construction Permit Website Blueprint For a Clean Bay Cupertino Muni Code 9.18.040 Discharge to SD prohibited 9.18.090 Storm Water Prevention Plan (SWPPP) Best Management Practice (BMP) Plan Sheet Cupertino Muni Code 9.18.040 Discharge to SD prohibited 9.18.090 Storm Water Prevention Plan (SWPPP)	An important piece distributed by public works and building depts. is our formal Construction BMP sheet. The sheet is attached to all plans that move through the planning and bldg depts. No plans are finalized without it. It is made clear to the project applicant that the information must be conveyed to all subcontractors and that they are responsible for their sub's behavior on the site. The sheet will provide evidence that the NPS concerns were explained to the applicant in case of violations during construction. Many C.3 related documents are on the City's website. The information is easily accessible and in one place for developers, engineers and architects, as well as City employees.

Activity	Level of Implementation	Evaluation
	Development Requirements SCVURPPP Guidebook of Site Design Examples SCVURPPP C.3 Manual Cupertino Stormwater Guidelines for C.3 project Stormwater Management Facility Easement Agreement Stormwater Management Facilities Operation and Maintenance Agreement Pesticide Control Measures For Development Projects Screening Projects for C.3 Requirements Cupertino Notice to Contractors and Developers about C3 "Deemed Complete" Memo (modified) for Development Community Impervious Surface Calculation Worksheet Cupertino Permanent BMP Matrix Hydromodification Applicability Map Cupertino Muni. Code Title 9.18.100 Perm SW Poll. Prev. Measures Requirements	
Problem contractors in the field	Primarily verbal. Program's specific activities cards. Violation notices. Construction tri-folds.	Specific activity cards are available to give to violators in the field on an as-needed basis.
Residents living near creeks	Water District's Stream Care Guide and new Creekwise Guide for creekside property owners (available at Planning counter.)	No feedback from residents, but the guides continue to be taken from the counter display area. Useful to have a piece that addresses the special responsibility of residents that live near creeks.
Environmental groups, local—City staff to provide IPM fact sheets to Audubon Society for their center and for their annual event.	The following pieces of literature are provided: Pests Bugging You, Alternatives To Household Chemicals, Home Composting Literature and Workshop information, Home Maintenance Tips brochure, and various IPM factsheets.	These pieces of information are displayed and available year round at the Audubon Society Center. They are also featured and displayed at their annual event in October.

Activity	Level of Implementation	Evaluation
Provide info on IPM workshop opportunities to school districts and sanitary district. (See Pesticide Workplan for details.)	IPM sheets. Info on IPM websites	Nareesh Duggal of Santa Clara County contacts these groups as trainings become available. A training conference was held on 11/12/07 at the San Jose convention center.
Outreach to local commercial businesses to encourage the use of pest-resistant plants in landscape. Included in Planning Dept. applicant packet (Pesticide Workplan for details.)	Pest-resistant plant list is distributed through the Planning Dept. application packet.	Ongoing

Public Participation

Activity	Communication Vehicle	Goal
Participate in regional creek cleanup event (if creeks in Cupertino need cleaning). Publicize cleanup.	Article submitted to May '08 Scene City did not host a creek cleanup site in May 2008.	The Water district bought ads in the Courier and mailed out reminders to last year's volunteers. A site is hosted at the Stevens Creek reservoir, adjacent to the City limits. City staff found this to be a better use of the volunteers' time, as we have not found any creeks in need of cleaning in Cupertino. Staff did identify Calabazas Creek @ Creekside Park as a site that has enough litter to make a cleanup that would benefit water quality. Planning was started for an event in coordination with Coastal Clean Up Day. The City's event will be co-sponsored with Cupertino's Whole Foods Market.
Effective in cleaning up creek as well as raising awareness of trash problems in community.	Volunteers pick up trash along both creek and nearby streets at McClellan Ranch through the City's Creek Education Program.	Forty 4th – 8th graders helped clean the Stevens Creek at McClellan Ranch Park.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2007-2008 Annual Report: General Tasks
Cupertino

School/Education Outreach

Activity	Communication Vehicle	Goal
Creek Education project available to all 3rd grade teachers, including combo teachers and shared position teachers in the Cupertino Union School District: about 100 classes (half are in Cupertino; remaining schools in cities of San Jose, Sunnyvale, Santa Clara, Saratoga, Los Altos) participated this year. Teachers are trained to teach the creek ed. unit to their own classes, and co-lead creek field trip for students.	Teachers are trained to teach the creek ed. unit to their own classes, and co-lead creek field trip for their students; City's Park & Rec naturalist teaches the teachers. City provides two docents for creek tours. 3-hr training workshops for teachers; 2-wk curriculum for students taught by teachers, w/ half-day creek field trip.	This program is very popular with our school district and the teachers. We started the program in 1995, and continue to refine it as needed. During a half hour review of general NPS and creek concepts that precedes the actual creek walk, our docents have the opportunity to observe whether each teacher has, in fact, spent time in the classroom preparing the students for the field trip. Typically, almost all of the students are familiar with the concepts. This past year we had approximately 1918 students, 101 teachers, and 357 parent volunteers participate in our program.
Respond to school group requests for tours, workshop, field trips, as possible	The City's Park and Rec staff naturalist assists the students of Monta Vista High School to regularly perform water quality monitoring and research in Stevens Creek (the City's principal creek, 2 blocks from the high school).	In general, creek and water quality studies have become more common in schools, without the intervention of the City. However our City's naturalist is well known among local teachers as a science resource, and is often informally drawn into school projects. Since she is the lead docent in our 3rd-grade creek program, she is already very aware of stormwater and watershed issues, and shares that info with the teachers and students.
Continue to encourage 6th -grade teachers in the Cupertino Union School District to attend the Wacky Watershed teacher-training workshops. (Trainings will assist teachers in including watershed curriculum in their science classes.	E-mails and phone calls to the District's science curriculum advisor.	The City's Park and Rec. Naturalist is contacted by the City of San Jose's Water Watershed Staff in regard to upcoming workshops. Cupertino hosted a workshop at McClellan Ranch in Oct. 07.

City of Cupertino

FY 07- 08 Annual Report

Section 7

Pesticide Management

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
I. Municipal Pesticide Use				
Goal I.A. *Eliminate all unnecessary municipal pesticide use (particularly organophosphate (OP) pesticide use) and implement Integrated Pest Management (IPM) techniques.*				
I.A.1	Track pesticide use on municipally owned property. (PS #9). The results are reported in the AR.	City collected pesticide-use information from four groups that apply pesticides on city property: • Streets Dept. (on medians) • Parks Dept. (In the parks) • Facilities maintenance (grounds surrounding city buildings) • Golf course All of these departments submit copies of the monthly County Ag reports along with the City's Pesticide-use form (identifying the pest targeted pest, whether the pesticide used was on the approved list for City of San Francisco, and comparing use from the reported year with that of previous year). This is an effective tool for noting any changes in pesticide use. No organophosphates pesticides are being used.	Ongoing	Corp Yard Supervisor & Director; Parks & Rec Spvsr
I.A.3	Continue to refine and implement SOPs and BMPs for implementing the IPM policy. (PS #3).	The City has developed pest-specific and location-specific SOPs for pest management operations at city facilities. No changes in IPM procedures were implemented in FY07-08.	Ongoing	Service Yard Spvsr & Dir; Parks & Rec Spvsr
I.A.4	Update URMP with Pest Mgmt. changes.	SOPs are updated as needed. No changes were made to the Cupertino's IPM SOPs in FY 07-08.	Ongoing	Envt'l Div
I.A.5	Continue to ensure that any contractor employed to conduct pest control and pesticide application on municipal property engages in pest control methods consistent with the IPM policy adopted	The City employs two contractors for pest management: 1. Rude PM Complete Pest Service (for structural and building grounds control): The	Ongoing	Corp Yard Supervisor & Director, Parks & Rec Spvsr

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2007-2008 Annual Report - Pest Management

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
	by the agency (PS #6).	principal has completed the SOPs that he follows when controlling ants, rats, and cockroaches. His work will continue to be monitored by the City's Facilities Supervisor. 2. Professional Turf Management (contractor for maintenance of the municipal golf course grounds). Specific IPM requirements are called out in the contract. A City Parks and Recreation Supervisor (Don McCarthy) monitors their work. Forty three pest-specific SOPs have been jointly established by the contractor, the City's in-house Pest Control Advisor, City Environmental staff, and the City's Recreation Supervisor. Annual meeting between Env Programs Mgr. and City's Contractor and Recreation Supervisor took place in April 2008. Discussion included a review of SOPs. No changes were deemed necessary in FY 07-08.		Facility Supervisor Chris Orr
I.A.6	Conduct annual, City facility search of chemical storage areas for pesticides no longer legal for application, and properly dispose of them. (PS #10)	City staff conducted their annual search and no illegal pesticides were found.	Annually	Corp Yard Supervisor & Director, Park & Rec
MM I.A.1.	Document completion of tasks in annual reports. Use pesticide-tracking process to document pesticide use.	A summary report on pesticide use is included, following this document. It compares use in FY 07-08 to use the previous year.	07-08 AR and ongoing	Corp Yard Spvsr & Dir, Park & Rec

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
Goal I.B. *Raise awareness of all municipal employees and train employees who apply pesticides for the municipality about the municipality's IPM Policy and/or IPM techniques as appropriate.*				
I.B.1	Ensure that employees who apply pesticides for the agency obtain the appropriate County Ag and DPR- required training (PS #5a).	The annual in-house training was conducted on 2/4/08 by a private company, Target Specialty, for all City employees who are certified or licensed to apply pesticides.	Annually	Corp Yard Supervisor & Dir., Park & Rec
I.B.2	Provide annual training on the IPM Policy, SOPs, and BMPs, and the latest IPM techniques to employees within departments responsible for pesticide application (PS #5b).	This topic was discussed in the staff training/meeting held at the Service Yard on Feb. 21, 2008. Appropriate staff is trained individually by the City's Pest Control Advisor and when specific pest problems occur.	2/08 and annually	Corp Yard Supervisor & Director, Park & Rec & Envt'l Div
I.B.3	Annually inform employees who are not authorized to apply pesticides, that they cannot use over-the-counter pesticides in the workplace (PS #5c)	This information was not provided to staff via email in FY07-08, due to staff changes. However it was last provided to staff in April 2007 and will be provided in August of 2008.	Scheduled annually via email	Envt'l Div
MM I.B.1.	Document and evaluate effectiveness of annual staff training.	Staff reports that annual training is effective because it provides updates and reinforcement of IPM methods as well as opportunities for staff to share challenges and successes with other agencies and private business applicators. From discussions with the City's Pest Control Advisor and Contractor PCA, the industry trend is focused on IPM and is the main topic of discussion in their professional meetings and trainings. City Staff are well aware of the City's IPM policy and continue to report examples of IPM practices in the field such as baiting, expanded mulching with tree chips to completely eliminate pesticide	Ongoing	Envt'l Div

Santa Clara Valley Urban Runoff Pollution Prevention Program

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
		use in suitable areas, and replacing disease prone plants and trees with pest resistant alternatives.		
II. Public Education and Outreach				
Goal II.A. *Increase awareness of IPM so target audiences recall less toxic pest management messages and adopt IPM behaviors. Target audiences include residential pesticide users, professional pest control businesses, customers of professional pest control businesses, pesticide retailers, school districts, and other special districts (PS # 7).*				
II.A.1	Assist with local implementation of the Watershed Education & Outreach (WE&O) Campaign, which targets the general public and includes messages about less-toxic pest control and proper disposal.	City staff participates in the Program's Watershed Education & Outreach group and the Pesticide User Outreach Group. Cupertino's website has a link to the Program's IPM page at www.mywatershedwatch.org and a link to the Our Water – Our World (OWOW) campaign website: www.ourwaterourworld.org Cupertino staff provided support for the implementation of the Program's *"Watch out for Toxic Pesticides"* campaign.	Ongoing	Envt'l Div
II.A.2	Assist Prgm in developing simple, effective, targeted messages regarding proper pesticide use and disposal, effects on water quality, and IPM.	The Environmental Programs Manager and /or Environmental Programs Assistant reviewed each IPM message, print ad and radio ad in 07-08 and provided comments to the WEO group and the consultant.	Ongoing	Envt'l Div
II.A.4	Identify and attend local community events and distribute outreach material. 1. Distribute literature at Backyard Compost workshops 2. Install an IPM-products and literature display in the Community Center in spring 2008.	Cupertino encourages composting to improve the soil and, therefore, the health of plants. Healthy plants are resistant to pests and disease. The soil organisms that are created by composting aerate the soil, feed the plants, create healthier food, and slow erosion. Residents can build healthy soil and reverse soil compaction by learning to compost at one of five classes held each fall at Cupertino's McClellan Ranch. If	1. 5 workshops/yr in fall 2. April 2008	Envt'l Div

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
		residents are not able to make their own, they can pick up free compost from the City, offered two mornings per week, to replenish their gardens. Literature is provided for compost teachers (five compost workshops were held in Cupertino during Oct and Nov FY 07-08). Staff continues to stock IPM fact sheets at the Community Ctr. and the City library during the month of April. 'Pest Bugging You?' *Grow It* Guides, and *Bay Begins* brochures are provided in the City Hall lobby and at the City Hall building counter.		
II.A.6	Check links, on the Cupertino's website, to any IPM website related to the WE&O campaign.	Cupertino added a PDF on landscaping for pest reduction to the City's website in FY07-08.	Review annually for updates	Envt'l Div
II.A.9	Continue to fund BASMAA Regional Media Relations Campaign[1] featuring pitches to Bay Area media and responses to breaking news on pesticide-related topics.	Cupertino helped to fund BASMAA projects in 07-08, including transit and theatre ads developed by the Regional Media Relations Campaign. Program staff attended meetings and provided direction and comments from the Watershed Education & Outreach group members. BASMAA also manages the *Our Water Our World Program Campaign.*	Ongoing	N.A.
II.A.10	City staff to provide IPM-related press releases to local media—using Program generated materials if they are developed.	An IPM-related article appeared in the April and May 2008 issues of the City newsletter, the Scene, about pest specific fact sheets that are available for residents.	Annually, as appropriate	Envt'l Div

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
	components of a "Pesticide User Outreach" project targeting residential and commercial users	Program staff for the retail nursery IPM outreach. Cupertino's Program assessment dollars helped fund the OWOW Consultant's training of 60 SummerWinds' employees, and training of 8 employees at Yamagami's Nursery in Cupertino. In FY07-08 SummerWinds corporate launched their own line of "Earth Friendly Products", with more shelf space dedicated to less-toxic products. A SummerWinds merchandizing manager asked her to critique the new product selection. The consultant for the OWOW campaign was also asked to provide suggestions for the earth friendly section of their website. The OWOW Program received prominent mention. Although the economy has been tough on nursery sales this year, an increase in less-toxic product business was noticed in FY07-08.		
II.A.13	Inform local elementary and high school districts, and local sanitary district, of any pertinent opportunities for IPM training.	Naresh Duggal, of the IPM Program at the Office of Executive – Administration for Santa Clara County, contacts these groups as trainings become available. The last Santa Clara County conference was scheduled for Dec 2006.	As future workshops are announced	Envt'l Div
II.A.14	Internal outreach on IPM to encourage employees to use IPM techniques away from work: 1. Set up display of less-toxic products and IPM literature at Corporation Yard and City Hall. 2. Distribute IPM fact sheets electronically to city employees through e-mail.	Throughout April, IPM fact sheets were displayed in City Hall. A Pesticide, Watershed Pollution & Mercury display was at Cupertino's Quinlan Center from 4/2/08 – 5/1/08. See photo of display attached at the end of this report section.	Spring 2008	Envt'l Div
MM II.A.1.	Document or estimate numbers of residents reached by outreach efforts and media advertising	Articles in the City's monthly newsletter (The Scene) are reportedly read by 87% of residential households, or about 16,677 households. (The City performs a telephone survey every 3 years).	Annually, for AR	Envt'l Div

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
		An article on pesticide fact sheets was published in the April and May issues of the City's newsletter. More residents are requesting *Grow It* fan guides which include information from all of the IPM fact sheets. *Grow It* guides were given, by request, to each member (approx 20) of the Cupertino Las Madres group (play and support group for mother or father and baby) in April 2008.		
Goal II.B. *Educate pesticide retailers and consumers about less toxic pest control products and promote the sale of such products.*				
II.B.1	Continue to fund and participate in the BASMAA Regional IPM Partnership	BASMAA Regional IPM Partnership is partially funded through the City's Program assessment.	Ongoing	Envt'l Div
II.B.2	Continue to support the IPM Store Partnership Program.	Cupertino staff participates in the Pesticide User Sub-group meetings and helps fund and promote the employee IPM training program.	Annually In Spring '08	Envt'l Div
MM II.B.1.	Assist Program in documenting number of participating stores, materials distributed, employees trained, and cost-effectiveness of the IPM Store Partnership Program.	Two Cupertino stores are IPM partners and have conducted employee IPM training in FY07-08 (for SummerWinds employees on 2/5 and 2/6/2008, and for Yamagami's employees on 3/5/08).	Annually	Envt'l Div
III. Pest Control Operators (PCOs) ***Goal III.A.*** *Minimize pesticide use by PCOs contracted for structural pest control and landscape maintenance.*				
III.A.4	Require PCOs contracted for municipal applications to use pest control methods consistent with the municipality's IPM policy (through contract specifications). Specifically, require contractors to: a) follow the agency's IPM policy, BMPs, and SOPs; b) provide evidence of current IPM training, when feasible; and c) provide documentation of pesticide use on agency property to the agency in a timely manner.	IPM specifications and training requirements are included in the contract for Cupertino's golf course maintenance contractor. An overview of the IPM policy, BMPs and SOPs takes place during annual discussions or meetings between City staff and contractors. Monthly pesticide use reports are submitted to the Environmental Programs Division and a summary is provided following this pesticide	Ongoing	Corp Yard Supervisor & Director, Parks & Rec & Envt'l Div

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
		management report table.		
MM III.A.1.	Document pesticide use by PCOs on municipal property.	Pesticide use forms have been submitted to the City's Environmental Div for consolidation. See pesticide use comparison table, following this section.	In the Annual Report	Corp Yard Supervisor & Director, Park & Rec
Goal III.B. *Require all PCOs to implement Best Management Practices (BMPs).*				
III.B.2	Require PCOs contracted by municipalities to implement BMPs through contract specifications.	See III.A.4, above.	Ongoing	Corp Yard Supervisor & Director, Park & Rec
MM III.B.1.	Document efforts to complete the above actions.	See III.A.4, above.	In the Annual Report	Corp Yard Supervisor & Director, Park & Rec
IV. Commercial Businesses ***Goal IV.A.*** *Determine the extent of commercial business employees' use of pesticides (i.e., pesticide applications not performed by a licensed PCO) and conduct appropriate outreach regarding less toxic pest management.*				
IV.A.2	Assist in implementation of education programs that target commercial businesses, per recommendations developed in Program work plan—with restaurant focus.	The Pesticide User Outreach group, which Cupertino staff participates in, addresses educational outreach to commercial business IPM outreach currently includes: restaurants and retail nurseries and new development: The Program has provided the County Health Dept. restaurant inspectors with copies of "*Don't Set a Table for Pests*" brochure that inspectors are distributing to new or remodeled food facilities throughout the County. The City's IC/ID Inspector also inspects restaurants and distributes appropriate educational material. The fact sheet, *Landscape Maintenance*	Ongoing	Envt'l Div

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
		Techniques for Pest Reduction and the Program's pest-resistant plant list are included in the City's development applicant information packet.		
MM IV.A.1.	Document outreach efforts targeting businesses.	In FY 07-08, the County Health inspectors visited 188 food facilities in Cupertino and conducted 682 inspections. They distributed pest control outreach materials to restaurants who hadn't already received the information. This procedure is discussed in training meetings conducted every 2 years between Cupertino, West Valley and DEH inspection staff.	At the end of each Fiscal Year	Envt'l Div
V. Household Hazardous Waste Collection				
Goal V.A. *Provide pesticide disposal services through household hazardous waste (HHW) collection programs for all residents and small businesses, and encourage use of these programs.*				
V.A.1	Ensure that adequate pesticide disposal services exist for residents and conditionally exempt small quantity commercial generators.	In addition to services that are available to residents and small businesses because the City participates in the Countywide HHW program, Cupertino provides funding so that an HHW event is held within the City each year in August.	Ongoing	Envt'l Div
V.A.3	Work with HHW collection agencies to support, enhance, and help publicize programs for proper pesticide disposal (PS #7).	The City supports the County HHW program in developing and publicizing their programs. The Environmental Programs Mgr participates in the HHW Ad Hoc group and is a member of CA Product Stewardship Council, which promotes extended producer responsibility and Cradle-to-Cradle (producer take-back of material for re-use, as opposed to disposal of toxic materials.)	Ongoing	Envt'l Div
V.A.5	Provide hazardous waste disposal information to residents, through city newsletter articles, ads in	City printed ads about HHW services in the local newspaper, *The Cupertino Courier*, on 7/7/07,	Periodically	Envt'l Div

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
	local newspaper and flyers at City library, community center, and City Hall.	8/1/07, 8/8/07, and 8/15/07. Displays in the community center, and library flyers also advertised HHW services for residents and small business hazardous waste disposal programs. (See table of media ads in PIP section).		
MM V.A.1.	Document that household hazardous waste collection programs adequately serve residents and businesses and that any exchange programs do not exchange organophosphate or banned pesticides.	The City provided enough funding to the County HHW program to service the disposal needs of all of the households that choose to use the service. Over 1,000 households (or 6% of the residential households in the City) have opted to use HHW. The County HHW program does not re-distribute any organophosphate or banned pesticides.	Annually	Envt'l Div
VII. New Development				
Goal VII.A *Minimize pesticide use at new and redevelopment sites.*				
VII.A.2	Consider pest-resistant landscaping and design features in the design, landscaping, and environmental reviews of proposed development projects. (C.9.d.ii.)	As part of annual urban runoff training for Planning and Public Works staff, the Environmental Programs Mgr had informal discussions with Planners and PW Engineer reminding them to encourage pest resistant landscaping for new development sites. All applicants for a development permit are given information on pesticide-resistant plants. Each applicant is also given *Landscape Maintenance Techniques for Pest Reduction* and the City's list of pesticide control measures to be incorporated into the site design. Cupertino's Permanent BMP Selection Matrix for C.3 projects includes a reference to pest-resistant plantings.	Ongoing	Envt'l Div & Planning Dept.

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
VII.A.4	Collect information and report a summary of types of pesticide reduction measures required for development projects and the percentage of projects for which pesticide reduction measures were required. (C.3.n.5)	All projects (100%) are given a copy of the document "*Pesticide Control Measures for Development Projects*", listing six different control measures. Planners include a COA for all C3 projects requiring a landscaping plan to include pesticide reduction measures.	In the Annual Report	Envt'l Div & Planning Dept.
MM VII.A.1.	Summarize types of pesticide reduction measures required (such as by conditions of approval) for new development and significant redevelopment projects, and the percentage of new development and significant redevelopment projects for which pesticide reduction measures were required. (C.3.n.)	See VII.A.4, 100% of projects receive Pesticide Control Measures and C3 Projects incorporate pesticide resistant landscaping in the COAs, such as the use of drought resistant and native plants, which are less susceptible to infestations.	In the Annual Report	Envt'l Div & Planning Dept.
VIII. Monitoring and Science				
Goal VII.A. *Participate in coordinated monitoring efforts to support pesticide TMDL development and implementation.*				
VIII.A.1	Continue financial support of the Regional Monitoring Program (RMP) through city contribution to Program budget.	The City continues to help fund the RMP through the annual assessment to the Program.	Annually	Envt'l Div
X. Review and Revision of Work Plan				
Goal X.A. *Implement a work plan that includes appropriate goals, actions, and monitoring mechanisms to reduce pesticide-related toxicity in urban runoff.*				
X.A.1.	Review and continuously improve the goals, actions, and monitoring mechanisms of the work plan considering results of self-evaluations, comments from Water Board staff and other interested parties, and results of local performance review meetings, if any.	The Pesticide Work Plan provides a complete array of goals that can be enhanced by addressing feedback from the general public and from municipal staff. The *Grow It* guide is very popular, a sellout item at every event and welcomed by nurseries and gardening stores for their customers. *Grow It* should be reprinted for more distribution. The OWOW campaign, with	Annually	Envt'l Div

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2007-2008 Annual Report - Pest Management

Cupertino

Program Work Plan Task	Task Description	Status / Comments	Due Date (mo/yr)	Responsible Party
		consultant, Annie Joseph, has been successful in bringing nurseries on board, as evidenced by SummerWind's announcement of their own line of earth friendly products in 07-08. The majority of the people attending public events are willing engage in discussion about gardening without using toxic chemicals and willing to try good housekeeping tips to fight pests such as ants and spiders rather than pulling out a can of spray to eliminate them. Many folks relay their own stories about how risky pesticides are for people and pets. They tell how they avoid pesticide use and share stories about alternative methods that work for them. While there have not been any recent comments on the Pest Management Plan from Water Board staff, there are ongoing improvements that are considered in discussions among the Pesticide User Outreach work group (such as the Green Gardener training program for residential landscape maintenance workers) that keep the work plan fresh and productive.		
MM X.A.1.	Revise work plan to include any continuous improvement items. Report on completion of work plan tasks in Annual Report.	Under the current NPDES permit, the work plan does not appear to need revision; however it will be re-evaluated upon adoption of the MRP.	Annual work plan updates are submitted in March.	Envt'l Div

Pesticide & Watershed Pollution Display @ City of Cupertino's Quinlan Center during the month of April 2008

City of Cupertino FY '07-'08
IPM Practices Summary

IPM Policy:
The City of Cupertino adopted an IPM policy (10-7-02) that calls for city employees and city contractors to use reduced-risk Integrated Pest Management (IPM) techniques, giving preference to reasonably available non-pesticide alternatives, and reduced-risk pesticides. Each Department, that is responsible for pest control, was tasked with developing a plan to ensure the long-term prevention or suppression of pest problems, while reducing or eliminating the need for chemical pest controls (to the maximum extent feasible), with minimum negative impact on human health, non-target organisms, and the environment.

Guidelines for Chemical Treatment:

- If corrective action is necessary, non-chemical physical and biological treatments are selected before choosing chemical treatments, wherever possible.
- Products that are included in the City of San Francisco's "Reduced Risk Pesticide List" are used to alleviate pest problems. The applicator must consult with the City's Pest Control Advisor, and get approval, before applying any chemical product that is not on the list.
- The use of bait stations is favored over spraying or the use of broadcasted pesticide applications.
- City staff and city contractors avoid the use of Toxicity Category I pesticides (the label's signal word is "Danger").
- No products containing Clopyralid, Diazinon or Chlorpyrifos (Dursban) are allowed to be used by city staff or a city contractor on city property or property maintained by the city.

SOPs:
Forty-two (42) pest-specific and site-specific standard operating procedures (SOPs) have been established for typical pest control situations on City property. During FY07-08, revisions were made to the SOPs regarding aphid control for Raywood Ash trees on Bubb Rd and Tulip trees on Stevens Creek medians and at Memorial Park and Jollyman Park. The City's pest control advisor determined that these types of trees will not be planted on City property. If the trees are severely infested they will be replaced with a more pest resistant kind of tree, rather than be injected with pesticide.

Availability of data on pesticides used:
Stormwater staff consolidated the annual pesticide use data. A summary table follows the pest management report table.

Reduction in pesticide use:

- The City's Contractor for the golf course at Blackberry Farm reported using gopher traps instead of chemical controls.
- The City's streets department utilized natural biological controls to eradicate a whitefly infestation in Cupertino's Rancho Rinconada neighborhood. Parasite wasps and ladybugs were released into the infested area May '05 to August '06. No further problems have been reported since that time.
- The City's Contractor is removing diseased trees in lieu of treating with insecticides. This is an ongoing practice.

- In the winter, the City's Contractor is whipping greens to remove dew on days that mowing is not required in order to prevent diseases from forming.
- The City's Contractor is physically removing tulles in lakes instead of using chemicals.
- The City's Contractor is physically removing weeds on greens; no spraying is needed.
- The City's Contractor is fertilizing the fairways in order to strengthen the grass plants, which minimizes the amount of herbicides needed.
- The City's Contractor is using larger amounts of organic fertilizers to create a healthier plant and reduce dependency on fungicides.

Continued IPM practices:

- Chlorpyrifos, Clopyralid, and Diazinon are no longer used.
- No pyrethroids were used in 07-08.
- City does not use copper algaecides in the pond at the golf course.
- The City's contractor is hand-pulling English Daisies on greens only. This practice has virtually eliminated English Daisy growth.
- City crews are using less herbicide on school property since installing drip irrigation systems. This practice is ongoing.
- Pentachloronitrobenzene (PCNB) (not on the SF list) use will be permitted on the golf course greens in the short-term for pink show mold control. This fungicide is specific to pink snow mold. We currently prefer its limited use to the use of a more broad-spectrum fungicide such as Heritage (on the SF list). Other alternatives will continue to be researched.
- Thiophanate-methyl (on the SF list) (in Scotts ProTurf Systemic Fungicide) may be used for fungus control on the golf course greens against Dollar Spot and works on pink snow mold.
- The Pentachloronitrobenzene and the Thiophanate-methyl are rotated to eliminate pesticide resistance.
- The golf course contractor will continue to use canola oil instead of petroleum oil as a pesticide sticker.
- Roundup (Glyphosate) (on the SF list) continues to be the pesticide used in the greatest quantity on city property. It is used for spot spraying in the medians to get the root of the weeds as they are emerging.
- City crews are chipping tree limb trimmings and using them for mulch to keep weeds down in parks on dirt areas. In these areas, spraying is not necessary because the 5" layer of chips decompose and a new layer of chips are added. A new trail is maintained by using all chips from the site, none are disposed. The practice of using wood chips instead of pesticide is being expanded on City property.
- The City's Contractor for the golf course at Blackberry Farm reported culturally using organic fertilizers (less inorganic), vertically mowing to break up disease patterns, using less nitrogen so less disease and less watering.
- He is using bark chips and compost for weed control under trees instead of using pre-emergence herbicides as well as using compost with an organic fertilizer on the tees.
- City's Contractor has replaced many Monterey Pine trees on the golf course with native California redwood, because they are pest resistant.
- The City's Contractor reported killing weeds around the lake at the golf course by lowering the water level and using a weed eater and by physically hand removing.
- City Pest Control Advisor plans to use lower quantities of non-SF-approved pesticides.
- A total of .15 lbs of Trifuralin (manufacturer name Snapshot) was used during 07-08 Pendimethalin (which is on the reduced-risk list) is now available in micro encapsulated form so that it does not have a strong odor; it will be used as an alternative to Trifuralin in the future.

Pest Management Training

Cupertino employees:

Certified Pest Control Applicators

The following Cupertino employees are Certified Pest Control Applicators (they are members of the Pesticide Applicators Professional Association, which tracks their 20 hours of required training for every two-year period.): Bill Bridge, Shawn Tognetti, John Bisely, Karl Olsen, Mike Laitila, Chris Mertens, Brian Gathers, Cliff Mabutas, Gordon Jensen, John Hetland, Marc LaBrie, Mike Drake, Russ Polito, Mike Loomis, Cindy Martinez, Roger Winslow, Todd Hembree, Abe Cariaga, Ralph Garcia, Diane Mahan, Jesus Moreno, Peter Terada, Jonathan Ferrante.

Cupertino's certified pest control applicators attended in-house pest management training conducted by Target Specialty on Feb 4, 2008.

Cupertino's Pest Control Advisor

The city's Pest Control Advisor (PCA), Diane Mahan, attends trainings regularly to maintain her status as a PCA. She is a member of the California Association of Pest Control Advisors, which tracks her 40 hours of training required for each two-year period.

City contractors:

The City's structural pest control contractor, Keith Reuter, of RPM, attends the monthly meetings of the Pest Control Operators Association of CA where discussions on IPM take place. He also attends training to satisfy the Structural Pest Control Board requirements to maintain his license.

The City's golf course maintenance and pest control contractor is Don Naumann of Professional Turf Management. Don is a PCA who is required to have 40 hours of training during each two-year period.

Pesticide Use Comparison
FY 07-08

The following table summarizes the use of specific pesticide products on city property in the fiscal years 06-07 and 07-08.

These totals combine data from all Divisions.

Active Ingredient	Target Pest	In SF list?	Locations	FY 06-07	FY 07-08
Chlorothalonil	Fungus	Yes	Golf	19.2 lbs	0
Cyfluthrin:	Ants	Yes	Facilities	1.5 lbs	0
Dicomba	Weeds	Yes	Golf	0	21.8 lbs
Digliocolamine	Weeds	Yes	Golf	0	0
Dithiopyr:	Weeds	No	Medians	0	0
Fipronil:	Ants	Yes	Facilities	4.0 oz	.250 lbs
Flutonill	Fungus	Yes	Golf	2.10 lbs	0
Fluridone	Weeds	Yes	Golf	0	.500 lbs
Glyphosate	Weeds	Yes	Various	60.971 lbs	71.254 lbs

FY 07- 08 Annual Report

Section 8

Mercury Pollution Prevention

Cupertino

Mm Program Work Plan Task	Activity	CI Item Source[1]	FY07-08 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
Mercury Control Program						
I. Municipal Use of Mercury-Containing Products						
Goal I. Eliminate all unnecessary municipal use of mercury-containing products and establish proper disposal methods for products that cannot be eliminated.						
I.F	Implement guidelines for mercury reduction	C.9.c	City will continue to implement the Guidelines for Mercury-Containing Products Reduction and Management and Mercury Virtual Elimination Policy.	Guidelines are being implemented on an ongoing basis. Cupertino's Env Prog Mgr is part of the Program's Mercury Pollution Prevention Outreach Ad Hoc Task Group.	Ongoing	Public Works
I.F.1	Train staff in Mercury spill cleanup	C.9.c	Train corporation yard staff and facilities maintenance staff in correct procedures to clean up: a. A broken fluorescent lamp b. A broken thermometer or thermostat	Last year, 2/1/07, the annual Corp Yard training included specific instruction on proper handling of fluorescent bulbs for the streets, parks maintenance, facilities and other corporation yard staff. One maintenance staff person coordinates with a contractor for handling, recycling and disposal of used products. Therefore, training was not repeated in FY07-08. In FY08-09, the Environmental Programs Mgr will meet with staff in charge of the universal waste disposal contract, to evaluate the City's procedures.	Annually or as needed for new staff	Facilities Mgr in Coordination with Environmental Programs Mgr
I.F.2	Annual survey of mercury-containing products used by city staff.	C.9.c	City staff to annually report on: 1. The number of lamps recycled. 2. Any other Hg-containing product that is used by city staff.	City staff has reported the following fluorescent bulbs were collected for proper disposal or recycling of universal waste: four 2-ft , sixty 3-ft, four hundred twenty three 4-ft,sixteen 8-ft, four 10-ft bulbs,	Reported in FY 07-08 based on 3 loads of	

[1] Place where continuous improvement item identified, either Annual Report, URMP, Work Plan, Review, or Program (task approved by the Management Committee for all co-permittees, if applicable, such as performance standard revisions).

Santa Clara Valley Urban Runoff Pollution Prevention Program

Mm Program Work Plan Task	Activity	CI Item Source[1]	FY07-08 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
				204 CFLs, 48 U-bends and 474 HIDs for a total of 1,233 bulbs and HID lamps. In addition, the City collects batteries from City employees and from City facilities. A total of 226 lbs of batteries were recycled in FY07-08. These numbers were based on averages for months at the beginning and end of the year, since the City calls for a pick-up of bulbs and batteries about every 5 months and these pick-ups don't fall exactly within the fiscal year. No other mercury containing products were reported.	bulbs	
MMI	Document completion of tasks	C.9.c	Document completion of tasks in annual reports. Use mercury-containing product reporting guidelines. The goals of the guidelines for Mercury Containing Products Reduction and Management are to work towards the virtual elimination of mercury from controllable sources that may affect urban runoff due to agency operations; and establish proper recycling and disposal methods for products that cannot be eliminated.	1. Cupertino staff has been implementing SCVURPPP's mercury reduction guidelines since Cupertino's City Council adopted a policy requiring the virtual elimination of mercury from controllable sources, affecting urban runoff from municipal operations in March 2004. 2. High priority mercury-containing products are no longer in use. The city stormwater staff has determined city maintenance staff is using only low- or no- mercury bulbs. No mercury switches or relays are in use. 3. City maintenance staff has followed a specific protocol for disposal of fluorescent tubes. They are collected as universal waste and sent to a recycling facility for mercury recovery. 4. Corp yard staff has been trained on	Annually, In AR	Public Works

Cupertino

Mm Program Work Plan Task	Activity	CI Item Source[1]	FY07-08 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
				mercury policy and what to do if a fluorescent tube breaks. 5. Articles were placed in the City's newsletter regarding locations for proper disposal of fluorescent bulbs. 6. A mercury thermometer exchange was held at Cupertino City Hall as part of document 'Shredding Day' on April 26, '08. Brochures containing info on proper disposal of fluorescent bulbs were distributed at the event and at City facilities and library; and at other local events i.e. 'Get Your Green On' at LG High School on 4-19-08. 7. Countywide HHW Program held a collection event at De Anza College on August 25, 2007. See section V.C		
II. Household Hazardous Waste Collection **Goal II.** Provide mercury-containing products disposal services through household hazardous waste (HHW) collection programs for residents and small businesses, and encourage use of these programs.						
II.B	Provide HHW Program services	C.9.c	Provide mercury-containing products disposal services for residents and small businesses.	The City has provided adequate funding to ensure hazardous waste disposal services are available for Cupertino residents since 1992. Over 1,000 customers or 6% of Cupertino households are funded to attend the HHW program. Residents can also drop-off spent fluorescent lamps and thermometers at a number of designated locations in the county. In April 2008, the City began discussions with the City's garbage company to pursue offering	Ongoing

Cupertino

Mm Program Work Plan Task	Activity	CI Item Source[1]	FY07-08 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
				quarterly environmental days which would include the collection and recycling of used fluorescent bulbs and batteries.		
II.D	Document products disposed at HHW Program	C.9.c	Implement guidelines for documenting and reporting quantities of mercury-containing products disposed.	The HHW County-wide Program collected 496,484 feet (124,121 pounds) of fluorescent bulbs from 30 retail drop-off locations in FY07-08. This is more than a 40% increase from FY 06-07. And, in FY 06-07 County-wide retail partners collected 353,694 feet (88,423 pounds) of bulbs, an increase of 30% over the FY 05-06 quantities. This shows that public participation in proper universal waste disposal is increasing rapidly with awareness. The HHW Program also collected: • 1,295 lbs of elemental Hg (e.g. thermostats, thermometers) • 100,100 lbs of household batteries • And 370 mercury containing thermometers at five thermometer exchange events The County does not collect City-specific data.	Ongoing, AR	Public Works
III. Monitoring and Science **Goal III.** Participate in coordinated monitoring efforts to support mercury TMDL development and implementation, including assessment of air pollution sources of mercury and concentrations of mercury in sediment.						
III.A	Financial support for RMP.	C.9.c	Assist Program to continue to provide financial support for the Regional Monitoring Program (RMP). Support the Program's continued	The City provides funding and support for the RMP through Program assessments and review of meeting summaries through the Management Committee.	Ongoing	

Cupertino

Mm Program Work Plan Task	Activity	CI Item Source[1]	FY07-08 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
			participation in the RMP steering committee and technical review committee.			
III.B	Assist Prgm in support of regional plan to collect data for the Hg TMDL	C.9.c	Assist Program to provide financial and staff support for a coordinated regional plan to collect data for the mercury TMDL, as defined in the RWQCB/BACWA/BASMAA MOU.	The City supported CEP activities (formerly TMDL MOU) via Program staff participation until the Work Group disbanded in 2008. Cupertino will continue to support Program staff's participation in regional collaborative projects through BASMAA.	Ongoing	Program and City's Env Progr Mgr
V. Public Education and Outreach **Goal V.** Increase awareness of proper disposal of mercury-containing products and available non-mercury containing alternatives. Target audiences include residential, commercial, and industrial users and municipal employees.						
V.A.	Mercury control program outreach activities:	C.9.c	Assist the Program in developing various outreach programs to educate target audiences about proper disposal of mercury-containing products and alternative non-mercury containing products. Outreach programs will include, but may not be limited to, the following subtasks: (see below).	Environmental Programs Manager participates in the Mercury Pollution Prevention Outreach Work Group and ensures Cupertino's support of outreach campaigns, including helping to staff events that provide education and materials for residents, businesses and municipal staff. City staff helps with the review of outreach products associated with the Mercury Pollution Prevention Outreach Work Group media campaign.	Ongoing	Env Programs staff
V.A.1	Residential – Fluorescent light recycling outreach	C.9.c	Continue our fluorescent light recycling outreach program to educate residential users and encourage proper disposal of fluorescent lights. Primarily articles in the Scene, and fliers in Quinlan Community Center and the Library.	Articles on proper disposal of fluorescent tubes and compact bulbs were included in four editions of the City's newsletter (Oct, Feb, May and June). Cupertino also partnered with the County, PG&E and Dept of Environmental Health to place 6 ads in the Cupertino Courier from	Ongoing	Env Programs staff

Santa Clara Valley Urban Runoff Pollution Prevention Program

				Jan 16, 2008 through Feb 20th, 2008, promoting retailer partners for their take-back programs of fluorescent bulbs for proper recycling. In addition, one ad was placed in the local community newspaper, on April 9th by the City in collaboration with HHW and the Program's Watershed Watch Campaign. Information on mercury pollution prevention and HHW drop off events was distributed and discussed with participants at the Environmental Fair on 4/19/08 at Los Gatos High School. HHW disposal brochures (with fluorescent tubes, thermostats, and thermometers listed) and flyers with drop-off locations are routinely distributed at the city's library, community center, senior center and city hall lobbies and at the countywide HHW events. An HHW Event, including the collection of fluorescent bulbs, was held on 8/25/07. Articles advertising the event included one in the City's July newsletter, as well as one article in the 8/8/07 edition of the Cupertino Courier newspaper. Three ads were placed in the local community newspaper, during the month of August. HHW Display was set up at community center for three weeks before the August 25th HHW Event.		

Cupertino

Mm Program Work Plan Task	Activity	CI Item Source[1]	FY07-08 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
				Main page of City website as well as the Environmental Programs page has links to proper fluorescent bulb recycling and disposal information. Article on curbside battery recycling included in the City's March newsletter. Courier article providing information on free battery collection was published on 2/6/08. The Countywide Household Hazardous Waste Program continued the residential and small business fluorescent light-recycling program at a total of 30 hardware stores throughout the County. See Section II.D.		
V.A.2	Small businesses—Fluorescent light recycling outreach	C.9.c	Continue to assist the Program in implementing a fluorescent light recycling outreach program to educate small businesses and CESQGs and encourage proper disposal of fluorescent lights. Publish articles in the Scene, and distribute fliers at the Planning/Building lobby, addressing Universal Waste exemption.	Cupertino staff has participated in planning sessions about business disposal. The Program's Mercury Pollution Prevention Work Group conducts discussions regarding the implementation and expansion of the residential and small business fluorescent light-recycling program. Brochures for small businesses fluorescent light recycling and disposal are on display and available at City facilities. Articles on proper disposal information of fluorescent tubes and bulbs are mentioned above in response to task V.A.1.	Ongoing	
V.A 3	Auto shops outreach	C.9.c	Coordinate with city inspectors to integrate mercury outreach into their routine auto repair shop inspections.	In FY07-08, the Inspectors did not distribute the brochures, "What Responsible Businesses Need to Know	Ongoing

				About Mercury and Universal Waste" (developed by the County's HHW program). Staff training on the message will be conducted early in FY08-09 and brochures will be distributed to auto repair shops via pro-active IC/ID or IND inspections following the staff training.		
V.A.4	City employees outreach	C.9.c	A. Train corporation yard staff and facilities maintenance staff in correct procedures to clean up mercury containing products: 1. A broken fluorescent lamp 2. A broken thermometer or thermostat B. Send e-mail notice to employees reminding them about spent battery collection bin in copier room.	Corp yard staff was trained in FY06-07on the mercury policy and how to handle the cleanup of broken fluorescent tubes. Fluorescents are rarely broken except when bulbs give out and break as they are replaced. Currently, broken fluorescent tubes are cleaned-up by, Facilities Maintenance. The Environmental Programs Manager will meet with Facilities Maintenance worker and the City's Haz Mat specialist early in FY08-09 to review procedures for handling broken fluorescent bulbs and evaluate the services provided by the City's current contractor for fluorescent bulb and tube disposal. The City's collection bin in the copier room is being used regularly by employees to safely dispose of spent batteries. A notice will be emailed to all employees in September 2008, reminding staff to use the collection bin.	Ongoing	
V.B	Outreach materials	C.9.c	Assist Program to develop or adapt existing mercury outreach materials, as needed, for outreach programs. Submit article to Scene concerning any	City staff reviewed all workplan goals and outreach products that were proposed by the Program's Mercury Pollution Prevention Outreach AHTG.	Ongoing	

Cupertino

			mercury information made available to city staff.	Articles developed by staff for Cupertino's newsletter, the *Scene*, are listed above in response to task V.A.1.		
V.C	Community events	C.9.c	The County HHW Prgm at HHW disposal events, on behalf of the city, distributes Hg outreach materials.	HHW Collection Event was held at De Anza College on 8/25/07. Packets of outreach material concerning mercury containing products and safe disposal of toxic materials were distributed to Cupertino residents by HHW staff on behalf of the City of Cupertino.	Ongoing	
V.C	Community events	C.9.c	Additional community events held by City of Cupertino, or educational outreach tables hosted by Cupertino staff at another agency's local area event.	Thermometer Exchange Event held at Cupertino City Hall on 4/26/08. Articles announcing the thermometer exchange were included in the Scene (City's newsletter) in March and April as well as two thermometer exchange ads placed in the Cupertino Courier on April 16th and 23rd. Cupertino's Environmental Programs Manager hosted a table at the 'Get Your Green On' Fair on April 19th at Los Gatos High School. Solar thermometers, HHW booklets listing partnering stores that take back spent fluorescent bulbs, and mercury pollution prevention flyers were given to and talked about with attendees.	Ongoing

MM V.B	Document and evaluate activities	C.9.c	**Monitoring Mechanism V.B.** In the Annual Report, document and evaluate each outreach activity, including the target audience and number of residents and/or businesses reached.	The countywide HHW program served 26,958 residents during 07-08 through 56 events held at 2 permanent facilities and 15 temporary sites. The number of drop-offs from small businesses totaled 568. See sections II.D for amounts collected.	Ongoing	
MM V.C	Evaluate success of outreach efforts	C.9.c	**Monitoring Mechanism V.C.** Assist Program to survey local public attitudes and behavior to evaluate the success of outreach efforts and the saturation of outreach messages (coordinate survey with Watershed Watch Campaign Survey).	Survey conducted by Program in 2003. Final evaluation report was included in the Program's FY 03-04 Annual Report. In 07-08 two questions on fluorescent bulb disposal were included in Watershed Watch spot surveys at public events. The results are summarized below: **10/16/07 Pumpkins in the Park** event, 100 people completed surveys: 1. True or False? It is illegal to dispose of used fluorescent light bulbs in the trash or recycling bin. 88 said True and 12 said False. 2. Where does the water flowing into storm drains go? 19 people said, a) "To the waste water treatment plant". 81 people responded, b) It flows untreated to local creeks and Bay. **10/28/07 Happy Hollow Park Zoo event:** 1. True or False? It is illegal to dispose of used fluorescent light bulbs in the trash or recycling bin. 89 said True and 14 said False. 2. Where does the water flowing into storm drains go? 19 people said, a) "To the waste water treatment plant". 81 people responded, b) It flows untreated to our local creeks and Bay.	Completed in 2003, and as needed

Copper and Nickel Action Plan

Cupertino

Program Work Plan Task	Activity	FY07-08Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
CB-1. Vehicle Washing Operations					
Goal: Reduce copper discharges from vehicle washing operation.					
CB-1.1	Refer mobile cleaners to training	Refer mobile surface cleaners to BASMAA online training and recognition program.	Mobile surface cleaners were referred to BASMAA online training and recognition program at http://www.basmaa.org/recognition/ If access to the Web is not available, Cupertino refers surface cleaners to City of San Jose. San Jose staff will provide live trainings upon request. No requests for live training were made in FY 07-08.	Ongoing	Public Works
CB-1.2	Distribute list of trained cleaners	Distribute most recent list of trained mobile cleaners to interested parties, and to city staff who contract for cleaning services.	City staff refer interested parties to the BASMAA website where they can view a current list of trained mobile surface cleaners by specifying the County and leaving all other search fields blank. http://www.basmaa.org/recognition/certify/index.cfm?fuseaction=verify&navID=133&contentId=130	Ongoing	Public Works
CB-1.3	Outreach materials	Continue to distribute Home Maintenance Tips brochure at City facilities and city events (contains general remarks on residential car washing).	All of Cupertino's brochures, 'Home Maintenance Tips for a Clean Bay' were distributed in FY07-08. Staff will check with Program to see if more are available.	Ongoing	Public Works
CB-1.4	Website for outreach	Update information about copper brake pad dust for the stormwater section of City's website, with a link to the SCVURPPP copper brake pad report. Add general information about residential car washing to the city's website.	SCVURPPP's information regarding copper brake pads is provided via a link to on the City's website at http://www.cupertino.org/city_government/departments_and_offices/environmental_services/pollution_prevention/index.asp	Review annually	Public Works
CB-1.5	Scene article	Add information about copper brake pad dust to the annual article on home car washing in the City's newsletter, the Scene.	An article on proper car washing was published in the May '08 *Scene* and an article on automobile maintenance, involving brake pad dust was included in	June '08 Scene	Public Works

Santa Clara Valley Urban Runoff Pollution Prevention Program

			the June '08 *Scene*.		
CB-1.6	Non-profit car washes	City provides brochures to non-profits about how to properly conduct a car wash event.	In June 2008 Cupertino's Environmental Program Mgr and IC/ID Inspector purchased items and put together a Car Wash Kit and guidelines for Cupertino non-profit groups to borrow when they hold car wash fundraiser events. Guidelines for 'How to Hold a Fund-Raising Car Wash' are on the City's website at: http://www.cupertino.org/downloads/index.asp?Type=Pdf&Name=How%20to%20hold%20a%20Car%20Wash&Location=es_Carwash_brochure.pdf .	Ongoing	Public Works
CB-1.7	City vehicles	Continue to maintain car wash systems for City vehicles at the corporation yard.	City vehicles are taken to a commercial car wash where the water discharges to the sanitary sewer. Equipment is cleaned in recycled water, on-site using best management practices.	Ongoing	Public Works
CB-1.8	Gas station car washing	Verify that all gas stations/repair shops understand and comply with restrictions concerning washing cars on-site.	Verification is done during the vehicle service facility inspections. See section 2. IND of this report. Cupertino staff worked the Program's Watershed Watch Car Wash Event on May 21, 2008 at Classic Carwash in Los Gatos. Outreach material on proper car washing, and discount coupons for car washes at partnering locations, were distributed.	During Routine Industrial Inspections and as part of public outreach events	Industrial Inspector
CB-1.9	Auto sales car washing	Verify that all auto sale operations understand and comply with restrictions concerning washing cars on-site.	Currently, there are no auto sales businesses in Cupertino. Any new businesses of this nature would receive stormwater pollution prevention education and be inspected as a vehicle service facility.	N/A	Industrial Inspector

CB-3. Industrial Copper Control					
Goal: Control copper in discharges of stormwater from targeted industrial sources					
CB-3	Industrial inspection program	Continue industrial inspection of vehicle service facilities and other future permitted sites.	The City inspects vehicle service facilities once every two years (see inspection data in Section 2, IND of this report).	Ongoing Inspection Routine	Industrial Inspector
CB-6/7. Reducing Traffic Congestion/Promoting Alternative Transportation					
CB-6/7	Auto Pollution Display at Quinlan Community Center	Display featuring "Cars Pollute Water Too", Vehicles are the Largest Source of Pollution in the Bay Area", and "Keeping it All in Tune". Literature will be provided explaining impact of copper pollution from brake pads as well as general information regarding auto pollution.	"Cars Pollute Water Too", "Maintaining the Bay," "Keeping it All in Tune" and reduce driving literature provided at Quinlan and other City facilities throughout the year. Auto pollution display including information on copper brake pad dust will be provided at Quinlan in Fall 2008.	Ongoing	Public Works
CB-8. Incorporate watershed protection in planning procedures					
Goal: Classify and assess watersheds, and improve institutional arrangements for watershed protection					
CB-8.2	CEQA changes	Continue using SCVURPPP CEQA guidance as part of C.3.m implementation.	No changes were made to CEQA guidance in FY 07-08.The City will continue to evaluate its CEQA review process and note any changes in that year's Annual Report.	Ongoing	
CB-11. Street sweeping controls & stormdrain system O&M					
Goal: Improve street sweeping controls and stormdrain system O&M					
CB-11.1	Street sweeping	Follow Program guidance regarding the collection and reporting of street sweeping data. Provide data for Annual Report.	Cupertino staff used Program's guidance and standard forms for tracking the City's street sweeping data.	Data collected throughout the year	Public Works
Trash Work Plan	Street sweeping data	Continue to collect street sweeping data and provide data to Program for a street sweeping effectiveness evaluation.	Street sweeping data was collected monthly and provided to Program in July '08 to help evaluate Program-wide effectiveness.	Annually in July	Public Works
CB-11.2	Evaluate Street sweeping and	Evaluate need for improvement of current street sweeping and storm drain system O&M	Street sweeping occurs twice every month and all catch basins are cleaned on a two	Evaluate Annually	Public Works

Santa Clara Valley
Urban Runoff
Pollution Prevention Program

FY 2007-2008 Yearly Record Keeping Form

Agency: City of Cupertino

Completed by: Lauren Tacke, Environmental Programs Assistant **Date:** July 17, 2008

STREET SWEEPING	Volume of material collected (cubic yards)	Miles swept* (curb miles)
1. Sweeping		
Residential Areas:		
Broom	1,886	6,542.07
Regenerative Air		
Vacuum		
Commercial Areas:		
Broom	706	1,809.4
Regenerative Air		
Vacuum		
Industrial Areas:		
Broom		
Regenerative Air		
Vacuum		
Other Areas Swept: (e.g., parking lots, major arterials)		
Broom	344	474
Regenerative Air		
Vacuum		
TOTAL	2,945	8,825.6

2. Have there been any changes in your street sweeping program?
(efforts to have parked cars removed, changed sweeping frequency, new equipment, significant downtime, etc.)

Most Residential streets are marked with signs noting parking restrictions on the days that the sweeper cleans that area.

LEAF REMOVAL

Volume of leaves removed by City/Town crews:_____ cubic yards

Leaves bagged by residents and picked up by your City/Town:_____ bags

Check box if you have a yard waste collection program: ■ Volume of yard waste collected: **7,360.39 Tons**

Check box if you do not have a leaf removal program other than routine street sweeping or yard waste collection: ☐

* Report total miles covered by sweepers including areas operated in tandem or repeated.

Section 10

Trash Inventory and Management

San' ^lara Valley Urban Runoff Pollution Prevention Program
FY -2008 Annual Report: General Tasks
Cupertino

P.S. Id.	*Activity*	*FY07-08 Tasks*	*Status / Comments*	*Due Date*	*Responsible Party*
Trash Inventory and Management					
Trash Work Plan	Trash mgmt practices	Assist Program in implementing Pilot Demonstration Projects, which focuses on assessing control measure effectiveness.	In FY07-08, as part of the City of Sunnyvale's Storm Drain Inlet Capture System Pilot Program, by agreement with Cupertino's Environmental Programs Mgr, Sunnyvale installed and has maintained one S/D capture system in Cupertino at Homestead Rd and Stelling Rd, near a McDonald's restaurant and close to Homestead High School. See	Report in 07-08 AR Ongoing	Public Works Dept.
Trash Work Plan	Trash mgmt practices	Continue identifying and prioritizing trash problem areas in urban streams and waterways and other potential sources that may contribute trash to those areas. Identification and prioritization should be based on criteria provided by Program staff during FY 06-07.	Trash evaluations completed 6/12/08. Two sites were identified to be taken off the problem list based on evaluations on Program's criteria, evaluations on 6/12 and comparison with site history. Staff began conducting field trips to determine additional trash problem areas.	Report in 9/08 AR Ongoing	Public Works Dept.
Trash Work Plan	Trash mgmt practices	Identify and continue implementing trash control measures, where practical and feasible, to reduce trash.	City staff performed KAB assessments at problem sites, considered improved Mgmt actions and conducted any necessary cleanup	Ongoing	Public Works Dept.
Trash Work Plan	Trash evaluations	Track existing trash management practices to evaluate effectiveness. Effective methods may include using the Program's Urban Rapid Trash Assessment protocol (Version 1.0) and/or the KAB litter index in a subset of high priority trash problem areas.	Effectiveness of trash management was evaluated in previous problem areas in June 2008, with 2 sites identified for removal from the list. Using the KAB litter index, majority of sites received a low rating, indicating low priority trash problem area.	Report in 9/08 AR Ongoing	Public Works Dept.
		Provide Co-permittee specific information on trash management practices implemented in our jurisdiction, using the Program's standardized reporting form entitled Trash Problem Area Activity Report (to be used for Program-wide reporting), as appropriate.	City staff performed KAB trash evaluations and reported results to the Program for all previously identified problem sites.		Public Works Dept.
Trash Work Plan	Trash evaluations	Submit Urban Rapid Trash Assessment Survey Forms, Trash Item Tally Sheets and any other data collection tool to Program staff, as appropriate.	KAB trash assessment data, for Cupertino's previously-selected problem sites, was provided to the Program in July 2008. Cupertino staff did not conduct any Urban Rapid Trash Assessments in FY07-08.	FY 07-08 Ongoing	Public Works Dept.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2007-2008 Annual Report: General Tasks
Cupertino

P.S. Id.	*Activity*	*FY07-08 Tasks*	*Status / Comments*	*Due Date*	*Responsible Party*
Trash Work Plan	Trash mgmt practices	Assist Program staff in developing long-term trash management strategy for reducing trash in urban streams and waterways and other potential sources that may contribute trash to those areas.	The Env Programs Mgr participates in SCVURPPP's Trash Management Ad Hoc Task Group. Within the group and via MC meetings, long term trash management strategies are discussed, considered and identified. In Fy07-08 San Jose and Sunnyvale installed trash capture systems as a pilot program. Installation of one device in Cupertino was approved. Routine maintenance of all pilot treatments has been documented and reviewed at MC meetings to help determine future strategy.	FY 07-08 Ongoing	Public Works Dept.
Trash Work Plan	Trash mgmt practices	Begin implementation of long-term trash management strategy for each high priority watershed defined within the technical memorandum entitled *Prioritization of Trash Problem*. This strategy will be provided within the technical memorandum entitled *Long-Term Trash Management Strategy*, which will be developed during FY 07-08.	In Fy07-08, City's Public Works staff continued to work with Cupertino's Illegal Discharge Inspector on implementation of long-term trash management for existing priority areas. PW staff also conducted field trips and coordinated with Water District staff to identify new priority locations in the Calbazas Creek watershed to be addressed in FY 08-09.	FY 07-08 Ongoing	Public Works Dept.
Trash Work Plan	Trash mgmt practices	Assist Program in developing Trash Fact Sheets, as appropriate.	SCVURPPP's Trash Tool box was developed in FY 07-08. Env Prog Mgr participated in Trash Ad Hoc Task Group where sections of the Tool Box were previewed and comments were provided before its release to the public. In April '08 the Program's Trash Evaluation and Management fact sheet was released. Cupertino's MC representative reviewed and voted to approve the fact sheet for distribution. In fall of 2008, SCVURPPP's Trash Management fact sheet will be added to Cupertino's website.	As needed	Public Works Dept.
	WE&O Outreach	Participate in the WE&O outreach ad hoc group, and two of its subgroups: the Schools outreach group and the IPM group.	Environmental Programs staff participated in these groups in FY 07-08 and will continue to participate in FY08-09.	Ongoing	Public Works Dept.
	WE&O Core Group	Review WMI meeting minutes and materials.	The MC is briefed on WMI meetings and meeting summaries. WMI meeting minutes and materials are distributed by the Program and reviewed by the City's Environmental Programs Manager.	Ongoing	Public Works Dept.

#	Date	Site ID	Watershed	Location	Assessment Tool	Score	Trash Management Activities	Comments
	June 12, 2008	1A	Stevens Creek	N. Tantau and Vallco Pkwy., vacant lot; private property	KAB	1	This site needs to be monitored as two separate sites (!A & 1B). Little trash was observed.	Not in a waterway. Found very small quantities of paper, glass and plastic litter in one area.
	June 12, 2008	1B	Stevens Creek	Stevens Creek Blvd. and Tantau. Near VTA bus stop and across the street from Subway and Roasted Coffee Bean	KAB	2	This site needs to be monitored as two separate sites (!A & 1B). Fair amount of trash observed. Staff assessed trash types and cleared trash from site. Should be monitored for future clean-up.	Illegal dumping-stormdrain located by corner of Stvns. Creeek and N. Tantau. Over 40 cigarette butts, plastic wrappers and pieces of paper found, mostly around bus stop, despite 2 available trash receptacles. Trash and leave debris observed in SD. Large amount of trash was collected.
	June 12, 2008	2	Stevens Creek	Homestead and Mary Ave. adjacent to high school; private property	KAB	1	Very little litter observed. Should be monitored to determine if it should remain on the list.	Not in a waterway. No trash observed.
	June 12, 2008	3	Stevens Creek	Disney Lane at entrance to Fairgrove Eichler neighborhood and back entrance to Hyde Jr. High by track; private property	KAB	3	Fair amount of litter observed along in gutter, and along the school yard entrance. Over 30 cigarette butts and 40 plastic/paper food wrappers/containers	Littering near school yard – trash, paper, food containers. SD further down the road. Fair amount of trash was collected.
	June 12, 2008	4	Stevens Creek	Ann Arbor and Ann Arbor Ct., close to City park; private property	KAB	1	No Trash was observed. Should be monitored to determine if it should remain on the list.	Not in a waterway. Could not find a single piece of trash

#	Date	Site ID	Watershed	Location	Assessment Tool	Score	Trash Management Activities	Comments
	June 12, 2008	5	Stevens Creek	Sommerset Park at Stokes and Dempster, owned and maintained by City.	KAB	1	Small amount of plastic bags, bottle caps, plastic wrappers found. Trash was observed on opposite/unreachable side of 6ft chain link, cyclone fence that is in front of railroad tracks. The park itself appeared free from trash. This is a City maintained site.	Not in a waterway. Site should be monitored at railroad for clean-up Reachable trash was removed from area
	June 12, 2008	6	Stevens Creek	Park Circle East & West, horseshoe of apartments, private property. Located behind shopping center that contains Target and several other stores/restaurants.	KAB	3	Staff assessed litter type and cleaned the area. Significant quantities of cigarette butts/boxes, food wrappers, tissues, glass bottles and aluminum cans observed. Continue to monitor this site, provide cleanup and consider outreach to apartment residents.	Illegal dumping –trash, food wrappers and paper products. Trash was observed in stormdrain on Alves and Park Circle West. Large quantity of trash was removed. Staff is reviewing whether this is a result of loose trash on garbage pickup day.

Staff Training Summary Table

City of Cupertino
Stormwater Pollution Prevention Program

FY '07-'08 Annual Report

Staff Training Summary

Training Event	Date	Participants
Construction Inspectors: Construction Site Management Workshop	12/05/07	Attended by the Senior Civil Engineer and the Environmental Programs Manager, Cheri Donnelly, for the City of Cupertino.
Annual Pesticide Training – Dept. of Pesticide Regulation	2/4/08	Pesticide Handlers Safety training – training is required for handlers (as Qualified Applicators Certified, these employees are required, by the State, to attend 20 hours of training in a 2-year period)
Corporation Yard/Streets staff: Pub Agency - Corp Yard Annual in-house training for Public Works staff: Topics included corporation yard operations and maintenance including spill response, pesticide use & management, fuel dispensing areas, vehicle/equip washing, chemical use & storage and mercury disposal. A portion of the video entitled "Preventing Pollution – Guidelines for contractors and maintenance crews" was shown.	2/21/08	Public Works corp yard staff, including on-call staff, facilities, streets, grounds and vehicle maintenance personnel, and supervisors.
Building inspectors: Const In-house training regarding performance standard, construction BMPs, source control BMPs and inspection notices.	6/10/08	Cheri Donnelly, Public Works conducted in-house training for Building and Construction Inspection staff.
Park & Rec staff; Golf Course contractor: Pest Mgmt Mtg to review golf course IPM SOPs, permitted pesticides, potential for less-toxic pesticide use, performance standards.	4/4/08	Don McCarthy, Park and Rec Dept.; Don Naumann, contractor for Blackberry Farm Golf Course, Cheri Donnelly, Public Works, Env Programs Mgr
Co. Health Dept: IND Annual meeting with Dept of Environmental Health, restaurant inspection program. Topics included violations, inspection procedures, referrals, pesticide mgmt., public education materials, and future training needs.	4/22/08	Michael Cervantes, DEH Supervisor; Cheri Donnelly, City of Cupertino, and Jack Lovell and Kelly Carroll WV Communities Program staff; DEH Food Facility Inspectors.
Public Works staff that apply pesticides: Target Specialty Seminar	5/22/07	15 public works employees attended.
Public Works Planning: Implementing Stormwater Requirements in New Development and Redevelopment Projects (SCVURPPP)	6/3/08	Cheri Donnelly, Environmental Programs Manager, the Public Works Senior Civil Engineer and an Assistant Planner attended SCVURPPP's C3 Workshop.
Public Works Engineering and IC/ID	6/3/08	Cheri Donnelly, Environmental Programs

City of Cupertino
Stormwater Pollution Prevention Program
FY '05-'06 Annual Report
Training Activities

Inspector: BMP O&M Inspections of permanent Stormwater facilities at C3 regulated New Development and Redevelopment Projects (SCVURPPP)		Manager, the Public Works Inspector and the IC/ID Inspector attended SCVURPPP's BMP O&M Inspection session of the C.3 workshop.
Planning & Engineering staff: Annual in-house training regarding C.3. requirements and upcoming MRP requirements.	6/25/08	Planning Staff, Assistant Public Works Director, Sr Civil Engineer, Public Works Engineering Inspector and Cheri Donnelly, Public Works Env Programs Mgr, attended.
City's Pest Control Advisor: As a Pest Control Advisor, this supervisor is required, by the State, to attend 40 hrs. of PCA training in a two-year period.	On-going	Diane Mahan, PW Streets supervisor, and City's PCA, courses include IPM.

Mr. Bruce H. Wolfe
REGIONAL WATER QUALITY CONTROL BOARD
San Francisco Bay Region
1515 Clay St., Suite 1400
Oakland, CA 94612

SUBJECT: CITY OF LOS ALTOS URBAN RUNOFF MANAGEMENT PROGRAM FY 2007-2008 ANNUAL REPORT

Dear Mr. Wolfe:

This report is submitted by the City of Los Altos, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a. of the Program's reissued municipal storm water National Pollutant Discharge Elimination System (NPDES) Permit (Order No. 01-024). The report summarizes activities performed during FY 2007-2008 in accordance with the City of Los Altos' Urban Runoff Management Plan (URMP) submitted to the Regional Board on September 1, 1997 and updated in October 2000 and September 2004, and the performance standards contained therein.

Contents of Report

The goals of this Annual Report are to: 1) concisely document implementation of our URMP and FY 07-08 work plan during the past fiscal year; 2) evaluate program results for continuous improvement; and 3) share this information with other Co-permittees, municipal decision-makers, and the public. To accomplish these goals, the City of Los Altos Annual Report contains the following sections:

I. Cover Letter

II. Certification Statement

III. Self-Evaluation and Work Plan Completion Matrix:

- IC/ID Elimination Activities
- Industrial/Commercial Discharger Control Program
- Public Agency Activities
  - i. Public Streets, Roads and Highways Operation and Maintenance
  - ii. Corporation Yard Operation and Maintenance
  - iii. Storm Drain System Operation and Maintenance
- New Development and Redevelopment Planning Procedures
- New Development and Redevelopment Construction Inspection
- Pest Management Activities
- Mercury Pollution Prevention Activities
- Other Water Quality and Watershed Management Requirements
  - i. Trash Management
  - ii. Copper Action Plan
  - iii. Nickel Action Plan
- Public Information/Participation
- Annual Report and Work Plan
- Staff Training
- Revised 04/05 Annual Report page pursuant to Board comment

Program Highlights and Accomplishments

During FY 2007-2008 the City of Los Altos continued to implement our Urban Runoff Management Plan (URMP) to the maximum extent practicable. The activities implemented for each element of the City's URMP are described in Chapter 6 of the Santa Clara Valley Urban Runoff Pollution Prevention Program's Urban Runoff Management Plan. Some brief highlights of our many accomplishments during FY 2007/2008 are described below.

The city continues to aggressively inspect all construction sites for proper installation of storm water runoff best management practices. These inspection were conducted at approximately 300 major remodel/rebuilding construction sites during the last rainy season. The City informs each of property owners and many of their contractors for these projects initially by letter explaining the necessity of protecting their property from allowing contaminated storm runoff from their property. This letter included detailed suggestions to help prevent erosion of sediments from the site. Prior to the beginning of the rainy season, our inspector visited each one of these sites and reiterated to the contractors what the requirements that city will be expecting to see at their sites. Between mid-October to April, our inspector was able to visit most all of these sites on a monthly basis, especially those with

high priority for potential erosion. During this time, citations were issued for those that did not have proper controls in place. By the end of the rainy season, the City was able to witness properly maintained erosion controls at most all of private construction sites.

Over the concern that potentially unused pharmaceuticals were being improperly disposed, the city of Los Altos became the first city in the Bay Area offer a service that a police officer would be available to pick up any unused pharmaceuticals from residents upon request. Also the city's police department offers a drop off point for this material. Since its implementation, the city has collected approximately 50 pounds of material that could have been improperly disposed of.

The City continues to be one of the leaders in the Bay Area in source control at its development or redevelopment sites. The city continues to require the incorporation of site design source controls and treatment into all of its projects, regardless of size. During the fiscal year the city required approximately 50 new single family rebuilding projects to contain their drainage on site by having them make every attempt to incorporated site design measures to allow stormwater flow to infiltrate into the ground and then directed over landscaped area prior to discharge in the city's streets and not allow any connections to the city's storm drain system. This helped reduce the flow in the city's system as well as treat the storm water on site prior to any discharge.

Continuous Improvement Activities

The City continues to address challenges encountered in implementation of improvements to its Urban Runoff Management Plan with existing staff. Overall, staff believes that the program is being implemented consistently throughout the City and is effective in reducing pollution of the local creeks. The largest challenge facing the City in its effort to comply with the permit, as with other cities, continues to be having only minimal funding and few staff available for its programs. Since Los Altos has no storm drain fee, funding for this program must comes from our General Fund. This would appear to become more of a challenge with the eventual adoption of the proposed Regional Permit that will replace the city's current permit.

The city is beginning to see a much bigger effort than originally anticipated to track the evolving number of major private development/redevelopment projects that the city is responsible for tracking, inspection and enforcement of storm water treatment. It appears this effect will be further escalated when the proposed Regional Permit becomes effort. The city sees this as a major financial challenge that it must face in the near future.

In summary, the City continues to be committed to the implementation of its Urban Runoff Management Plan. As with previous fiscal years, this has proven again to be a challenge with limited staffing levels, less funding availability and increased work effort to comply with the Program. In the coming year the City will continue to strive to increase its level of effort dedicated to the Santa Clara Valley Urban Runoff Pollution Protection Program.

I welcome your review of this Annual Report and any comments that you might have to offer that would help the City improve the managing of the program. If you have any questions regarding the materials submitted, please contact me at (650) 947-2624

Very truly yours,

Larry Lind
Associate Civil Engineer

ILLICIT CONNECTION & ILLEGAL DUMPING ELIMINATION ACTIVITIES

FY 2007-2008 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
1	Continue to provide training as required on ICID activities	Los Altos will continue to provide information and training to Engineering, Planning, Building Inspection and Public Safety personnel with a focus on new personnel. Each Department holds regular meetings for which the subject of ICIDs is discussed. Staff will be encouraged to attend formal training as it becomes available.	The City of Los Altos continues to provide training to city staff ICID issues. For example, the city sent personnel to SCVURPPP training workshop, "Construction Site Management Workshops," in December at the Quinlan Center in Cupertino. City personnel learned what to look for during stormwater inspections of commercial and industrial facilities that are under construction.	Community Development & Public Works Department
2	Continue to evaluate and improve response and documentation of illegal dumping activities	Los Altos uses the police department to respond to reports of illegal dumping. Their response is also coordinated with the URP Coordinator. These responses would be documented by the officer's police report.	During the FY the city primarily used the police department to respond to reports of illegal dumping and the Engineering Division inspector or engineer as a backup. The police department maintains documentation of those incidents and the engineering department maintains a master list. During FY 07-08, PD recorded four responses that relate to potential illegal dumping. Each of the incidents was properly addressed. The sewer maintenance department continues to respond to sewer overflows. The city has a crew on standby 24 hours a day and therefore can respond to these quickly. During FY 07-08, city crews addressed only three sewer overflows, which were properly cleaned up before entering any storm drain systems. During the FY, the city also continued most all construction sites regardless of size to assure they have proper BMPs installed and maintained	Public Works Department

3	Sanitary Sewer System	Los Altos has adopted a new Sewer System Master Plan and has begun the implementation to comply with the States SSMP and to help prevent system overflows	The Sanitary Sewer Master Plan was adopted on 1 August 2005. In 2008 The City completed and adopted its Sewer System Management Plan (SSMP) required by both regional and the State boards. In accordance with the recommendations in the city's Sanitary Sewer Master Plan that was adopted in 2005, the City is designing the first seven sewer repair projects. In addition, Los Altos awarded the third Sewer Root Foaming contract in May 2008 which will complete the treatment to the entire system within three years as recommend by the Master Plan. Los Altos will begin retreating the entire system beginning next FY. The City will continue to raise the sewer rates as necessary to fulfill the recommendations of the Master Plan.	Public Works & Community Development Departments
4	Evaluate IC/ID activities in FY 2007-2008 and explore opportunities to increase program effectiveness.	Report results in the FY 2007-2008 Annual Report.	See "ICID Program Evaluation" and "ICID Report Data" below.	Public Works Department

Santa Clara Valley Urban Run Pollution Prevention Program
FY 2007-2008 Annual Report

Municipality: City of Los Altos ***Attachment B***

ICID Program Evaluation FY 2007/2008
It seems this program continues to be working very well. More people seem to be aware of the need to prevent illegal discharges from entering the storm drain systems. With a full time inspector, the city was able to better police this issue, including the continued program of attempting to inspect over 300 single-family construction sites in Los Altos. This increase enforcement shows a noticeable improvement in the number of contractors that automatically provide the proper BMPs and also maintain them. Even then without the presence of an inspector, many still do not maintain a properly controlled site. Though the city Police Department still respond to emergencies and address those responses according, most of enforcement responsibility continues to be that of Engineering Division with its full time inspector since many are minor in natural. This continues to allow better follow-up to verify continued compliance and better record keeping and free up the Police to other, more pressing issues. The City of Los Altos continues to implement recommendations from this Sewer Master Plan to minimize overflows, which continue to show a reduction for two consecutive years. This Master Plan has placed the city in advanced compliance with the State's and Regional Boards requirement to have a Sewer System Management Plan These mandates are required of every owner of sewer collection systems and the city's Master Plan has placed the city well ahead of the deadlines from each of these mandates. The city completed this document in 2008, one year a head of schedule though the city has been implementing the recommendation in this plan for well over a year. Though the city still believes it is capable of responding to any event, it continues to struggle with the documentation necessary for any of these incidents. Staff will continue to work with the police department in their documentation and follow-up actions on these incidents.

INDUSTRIAL/COMMERCIAL DISCHARGER CONTROL PROGRAMS

FY 2007-2008 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
1	Inspection of Vehicle Service Facilities	Los Altos will continue to coordinate and support the program conducted by the Palo Alto Regional Water Quality Treatment Plant. Palo Alto conducts annual inspections of all vehicle service facilities in Los Altos. The City will document and conduct follow-up on any storm water discharge violations identified in these inspections.	During October and November 2007 the City of Palo Alto inspected 14 vehicle service facilities in Los Altos. None were found with any violations and all facilities were given the Clean Bay Business award. During the year, there were no other reports on discharges from any of these facilities.	URP Coordinator

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
2	Inspection of Food Service Facilities	Los Altos will continue to coordinate and support the County of Santa Clara Department of Environmental Health's annual inspections of all 101 food service facilities in the City. The City will document and conduct follow-up on any storm water discharge violations identified in these annual inspections	During the year Santa Clara County Department of Environmental Health (DEH) conducted 214 individual inspections of 118 food services facilities in Los Altos. During inspections, DEH makes sure that the wastewater is being deposited in the mop sink. DEH reminds the facility of the importance of using the mop sink and instruct them to not put wastewater outside or to wash mats outside. They also inspect and report on the storage of oil, grease and garbage, which is usually exterior to the facility. They provide guidance and proper handling and cleanup of those areas. During the FY 07/08, DEH reported two areas of concern. . Follow-up visit showed that the situation had been corrected. During the year, the city issued a warning letter two restaurants that had dumped or washed something in the back of their facility. Follow up inspections by the city continued at all these facilities.	URP Coordinator & Code Enforcement Officer
3	Inspection of Other Commercial Facilities	Los Altos has very limited Commercial Facilities (and no Industrial facilities), but is prepared to inspect any of these other listed categories of commercial facilities should a complaint be filed and take necessary action if required.	No violations or complaints were filed during the fiscal year.	URP Coordinator & Code Enforcement Officer

Industrial/Commercial Program Evaluation FY 2007/2008

The incidents under this item continue to be limited and those that do occur are minor. Only two were found during the FY 07/08 inspections, which were properly addressed. Based on this low number, it would appear that this program is working well. Biggest reason, obviously, is the lack of industrial/commercial facilities in the city. The city could further increase the frequency of the inspections, but it is difficult to justify since there are no reportable violations or potential violations.

1	BMP for street and road operations and maintenance	Los Altos will continue to assure that BMPs are applied at all of its street maintenance operations. Will evaluate its SOP for this maintenance annually and update as deemed necessary.	Crews continue to be trained on utilizing BMP's from the CASQA Stormwater Best Management Practice Handbook for Municipal Operations. For example, for sawcutting and sidewalk grinding, which is a sizable task for city staff, the SOPs include vacuuming up excessive material and slurry before reaching storm drains. City staff did not find any improvements it could make to SOPs during the fiscal year.	Public Works Maintenance Department
2	BMP training	Los Altos will continue to provide training on an as needed basis to its municipal staff in the use of appropriate BMPs. Will provide monthly discussions with maintenance staff on the implementation of BMPs. Staff will be encouraged to attend any formal training if available.	City maintenance crews received a wide range of training during the year. See "Staff Training" list at the end for this report of a list of training attended by the various maintenance staff. In addition, maintenance staff met quarterly during the FY to discuss upcoming programs. At these meetings staff is reminded of the implementation of BMPs required for these programs.	Public Works Department

Public Streets, Roads & Highway O&M Program Evaluation FY 2007/2008
Roads and streets operations follow BMPs for storm water protection. There have been no complaints or incidents of discharge to the storm system due to Street Division operations. Crews completed 49.5 hours in road shoulder work to ensure proper drainage and spent 282 hours during the fall leaf pickup program in support of the annual street sweeping program. Due to past shoulder activities, the level of effort to ensure proper drainage has decreased. They picked up over 251 cubic yards of leaves during this time, which reduced the load that would have entered the storm drain system. The city plans to continue these programs and will continue to evaluate means for improvements.

FY 2007-2008 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
1	Storm Water Pollution Prevention Plan	Los Altos will evaluate and continue to improve the plan as necessary.	During FY 07-08, staff continued to ensure all elements of SWPPP were followed. Silt sacks were inspected quarterly and replaced as needed. Again there were no spills in the Municipal Service Center that required containment.	Public Works Department
2	Evaluate O&M activities in FY 2007-2008 and explore opportunities to increase program effectiveness	Report results in the FY 2007-2008 Annual Report.	See "Corporation Yard O&M Program Evaluation" section below.	URP Coordinator

Corporation Yard O&M Program Evaluation FY 2007/2008

During FY 07-08, the Municipal Service Center was awarded its Clean Bay Business Certificate and a plaque for 15 consecutive years of outstanding achievement in maintaining the corporation yard. Automotive and shop personnel also passed the Hazardous Material Program compliance inspection by the Santa Clara County Department of Environmental Health. Automotive personnel completed 1944 hours on vehicle maintenance and shop personnel spent 91 hours for regulatory compliance in handling petroleum products and hazardous materials. Crews continue fueling at local gas stations and do not maintain any fueling processes. The four-year-old wash pad has been successful in receiving wastewater and putting it into the sewer system after going through a separator. Regulatory compliance has been maintained in emptying the separator on a quarterly basis and crews continue to utilize of the wash pad for cleaning maintenance equipment. The City continues to exceed compliance with all environmental requirements within its corporation yard.

PUBLIC AGENCY ACTIVITIES STORM DRAIN SYSTEM O & M FY 2007-2008 Work Plan Self Evaluation Matrix				
Item No.	**Activity**	**FY 07-08 Work Plan Tasks**	**FY 07-08 Accomplishments**	**Responsible Party**
1	Storm Drain O & M & Training	Los Altos will continue to train staff & implement and improve BMPs and SOP for the storm drain system operation and maintenance activities. Will evaluated its SOP for this maintenance task annually and update as deemed necessary.	Staff followed the guidance in the CASQA Handbook on Municipal Stormwater Best Management Practice for storm drain maintenance. Entire storm drain system was inspected and all catch basins were cleaned where needed. All material was disposed of properly. Maintenance Staff received annual training from the city's URPPP Coordinator. No updates were deemed necessary for the SOPs. Staff anticipates a Storm Drain Master to be established in the near future.	Public Works Department
2	Reporting of Observed ICID Evidence	Los Altos will continue to train and require staff to notify appropriate personnel when incidents or unusual contaminants are observed during routine maintenance. Eventually this information is forwarded to the Police Department where it will be documented and considered for enforcement.	The City of Los Altos continues to provide guidance and training to their staff personnel. During routine maintenance staff training, field crews are instructed on what illegal discharges are and are told to report them to their supervisor or to the city's Code Enforcement Officer for follow-up action.	Public Works Department

Storm Drain System O&M Program Evaluation FY 2007/2008

O&M activities for storm drain maintenance were very successful this year. Crews were able to clean all of the storm drain system prior to the rainy season and we experienced very little storm drain problems during the rainy season. Staff continued to implement the method of cleaning and inspecting the storm drain system through the GIS quadrant system (63 quadrants) instead of our 10 maintenance zones. This method has improved the work schedule and completeness of this operation. Typical storm related drainage problems were in locations where there is no storm drain system.

NEW DEVELOPMENT & REDEVELOPMENT PLANNING PROCEDURES (C.3)
FY 2007-2008 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
C.3.b Development Project Approval Process				
Goal: To modify Los Altos' development project approval processes, for both private and public development project, to incorporate the requirement of Provision C.3				
1	Continue to train Los Altos staff in planning, building, and engineering division on the latest developments of the C.3. provisions and goals	Los Altos staff will attend Program workshops as they become available.	Private Projects: Though projects initially begin within the Planning Department, the Engineering Division continues to deal with verify compliance with the City's NPDES permit. Most "large" projects for the city are primary just rebuilds of single-family residences. The Engineering Division reviewed approximately one hundred of these projects during the FY and comments were made to assure that the design provided property source control measures in accordance with the Permit. During the FY Los Altos approved no building plans for significant development/redevelopment projects. But there are seven such projects pending. Public Projects: As noted in the Staff Training Summary at the end of this Annual Report, Staff involved in the design and review of all Public Projects, as well as Private Projects, attended all Program sponsored training on C.3. During FY 2007/2008 there were no significant development/redevelopment public projects implemented by the City and there are not any that is planned in the near future.	Community Development & Public Works Department

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
2	Continue to review policies, procedures, and/or conditions of approval to incorporate Group 1 & 2 requirements	Los Altos will modify documents as necessary for Group 1 and Group 2 projects.	Private and Public Projects: The city of Los Altos believes that its policies, procedures and/or conditions of approval are adequate for significant development/redevelopment projects, but the city will continue to review the process and make adjustment as necessary.	Community Development & Public Works Department
C.3.e. Operation and Maintenance of Treatment BMPs				
Goal: To develop and implement local agency operation and maintenance (O&M) verification programs to help ensure the proper maintenance of stormwater treatment measures on public and private property.				
1	Group 1 and 2 project BMPs.	Continue to evaluate procedure for logging information about treatment BMPs installed at any approved Group 1 and Group 2 projects, and for maintaining a list or database of properties, treatment BMPs, and responsible operators	During the FY Los Altos approved no building plans for significant development/redevelopment projects. But there are seven such projects pending. The Engineering Division continues to document the information necessary for these projects. This also includes all necessary inspections and annual reporting.	Community Development & Public Works Department
2	O&M Agreement	Los Altos will review the procedures and document language and make improvements as deem necessary.	During the FY Los Altos approved no building plans for development/redevelopment projects. But there are seven such projects pending. The City of Los Altos will continue to evaluate existing and any new agreements and make improvements as determined necessary.	Community Development & URP Coordinator

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2007-2008 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
3.	Group 1 and Group 2 project BMP O&M verification inspection.	Currently the City of Los Altos will conduct O&M verifications of treatment measures all Group 1 and Group 2 projects at least annually.	During FY 2007-2008 the City of Los Altos conducted a BMP verification inspection at its only Group 1 project. The result of that inspection is contained in the "Treatment BMP Activity Report FY 2007-2008" that follows.	Community Development & URP Coordinator
4	Evaluate and report on the City of Los Altos' Treatment BMPs Operation and Maintenance Verification program	Report on the evaluation of the treatment BMPs O&M verification program conducted during FY 2006-2007 in the Annual Report, including organizational structure, evaluation of effectiveness, and planned improvement to the program. Include a list or summary of treatment BMPs inspected during the year, inspection results, and any required follow-up and correction	For further information on the organization structure on the operation and maintenance verification program see pages 16 and 17 of the City of Los Altos 2003/2004 Annual Report. During FY 2007-2008 the City of Los Altos conducted a BMP verification inspection at its only Group 1 project. The result of that inspection is contained in the "Treatment BMP Activity Report FY 2007-2008" that follows.	Community Development & URP Coordinator
C.3.f. Hydromodification Management Plan				
Goal: To manage increases in runoff peak flow and volume for Group 1 projects, where such increases may cause increased erosion of creek beds and banks or related impact, through implementation of a hydromodification management plan (HMP)				
1	Hydromodification Management Plan (HMP)	Continue the implementation of HMP requirements for Group 1 and Group 2 as required.	Based on the requirements established in city ordinance regarding implementing the requirements of the HMP, the city had no projects that must implement any hydromodification management.	URP Coordinator

Santa Clara Valley Urban Run Pollution Prevention Program
FY 2007-200 nnual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
C.3.g. Waiver and Compensatory Mitigation Program				
Goal: Establish a program under which a project proponent may request a waiver from treatment BMP requirements due to impracticability, with a provision to provide an equivalent water quality benefit to the same receiving water (that allows participation in regional solutions)				
1	Local waiver program.	Continue to evaluate the need for a local waiver program. Los Altos is not anticipating the need for any waiver requests.	The Program has not made substantive progress on waivers but the city had no need for a waiver project and is available to provide assistance as required.	URP Coordinator
C.3.h. Alternative Certification of Stormwater Treatment Measures				
Goal: Establish a procedure for a signed certification form a Civil Engineer or a Licensed Architect of Landscape Architect that project plans meet the requirement set forth in Provisions C.3.d and C.3.f.				
1	Alternative Certification of Stormwater Treatment Measures	In lieu of conducting a detailed review to verify the adequacy of the measures required pursuant to Provisions C.3.d and C.3.f, the City of Los Altos may elect to accept a signed certification from a Civil Engineer or a Licensed Architect or Landscape Architect registered in the State of California that the project plans meet the criteria established by the Permit.	After dealing with its second significant development/redevelopment project, the City of Los Altos now plans to set up a fee structure that will require a developer to pay for a city consultant to certify their designs. When the building plans are submitted, the City requires a submittal of what is called a Storm Water Management Plan stamped by a registered engineer. This Plan explains what BMPs, along with other control measures, that are being proposed in the design plans, why they are being proposed and all the necessary calculations to support the design. The city will forward this and the building plans to the a Civil Engineer or a Licensed Architect or Landscape Architect registered in the State of California to certify that the project plans meet the criteria established by the Permit.	Community Development & URP Coordinator

C.3.k. Source Control Measures				
Goal: Require source control measures for new redevelopment projects to limit pollutant generation, discharge and runoff to the maximum extent practicable.				
1	Source Control Measures.	Los Altos will continue to implementation of source control measures. Los Altos will continue to implement source control regardless of the size of the project to the maximum extent practicable	Private Projects: The City of Los Altos continues to implement source control as delineated in its 2004 Urban Runoff Management Plan. Since the city is primary residential community, there we no new multi-residential or new commercial building permits issued during the FY. Public Projects: During the time frame between July 1, 2007 and June 30, 2008 the city of Los Altos awarded seven small construction projects. None of these projects fell under the definition of a significant development/redevelopment project. Other than construction BPMs that were applied, these projects did not allow any opportunity to apply such things as source control, etc. However, Los Altos will continue to evaluate Planning Procedures Performance Standard and will implement source control measures on public projects as necessary. C.3.m. Water Quality Review Processes				
Goal: To ensure that water quality impacts and appropriate mitigation measures are identified as part of environmental review of proposed projects.				
1	CEQA checklists and other environmental review documents	Continue to review CEQA checklists and other environmental review documents and modify documents as needed.	The City of Los Altos' current checklist sufficiently addresses water quality impacts for significant development/redevelopment projects.	Community Development
C.3.n. Reporting Requirements				
Goal: To meet the Provision C.3. reporting requirements, and plan for anticipated data needs, and begin collecting and tracking required data on development projects as needed.				
1	Group 1 and Group 2 projects.	Continue to collect and report information on all Group 1 and Group 2 projects in accordance with the reporting forms parts 1 and 2 in the City of Los Altos Planning Procedures Performance Standard.	See "New Development-Planning Procedures Report Data" that follows.	URP Coordinator
2	Pesticide reduction measures for Group 1 and Group 2 projects in the City of Los Altos	Continue to collect and report (including percentage projects for which pesticide reduction measures were required) information on pesticide reduction measures required all Group 1 and Group 2 projects in the City of Los Altos	See "New Development-Planning Procedures Report Data" that follows.	Community Development, Public Works Department
3	Evaluate and record C.3 activities.	Evaluate and record C.3 activities in FY 2007-2008 including all information recorded on Group 1 and 2 projects. Note opportunities to increase program	See "New Development-Planning Procedures Program Evaluation" that follows	Community Development, Public Works Department & URP Coordinator

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2007-2008 Annual Report

Municipality: City of Los Altos ***Attachment B***

New Development-Planning Procedures Program Evaluation FY 2007/2008
Public Projects: During the time frame between July 1, 2007 and June 30, 2008 the city of Los Altos awarded seven small construction projects. None of these projects fell under the definition significant development/redevelopment projects. All projects dealt with some kind of repair to facilities. Other than construction BPMs that were applied, these projects did not allow any opportunity to apply such things as source control, etc. However, the City of Los Altos continues to review all public projects with respect to all C.3 requirements. Due to lack of large projects, the city is unable to really evaluate the program as it relates to public projects. Private Projects: During the time frame between July 1, 2007 and June 30, 2008 the City of Los Altos approved no building plans for significant development/redevelopment projects. But there are seven such projects pending. .As in the past, the City of Los Altos continues to work with all applicants to limit the amount of storm water runoff from private property. Most developers are familiar with these city requirements and the design to retain storm water on site for land disposal is now shown on most designs that are submitted for approval. Though this program has been in effect for some time, it is nearly impossible to measure the impact on the flows in the city storm drain system due to very limited projects.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2007-2008 Annual Report

Municipality: City of Los Altos ***Attachment B***

Site Design Measures Guidance and Standards Development Action Summary			
Site Design Question	**Proposed Action (9/15/03)**	**Personnel Involved in the Discussion**	**Summary of Action Taken (6/30/08)**
Policies to Limit Site Impervious and Incorporate Post-Construction BMPs Into Development Projects			
1. Is the minimum sidewalk width allowed in the community 4 feet or less?	The City of Los Altos has very minimum sidewalks throughout the city. The City standard width is 4 feet unless it can be justified otherwise through usage calculations or to match existing adjacent walkways. Less width would affect ADA requirements. Since Los Altos is built out and will not have any large development, it is anticipated that there is no need to put this in writing.	Public Works (Engineering) & Community Development (Planning)	During FY 07/08 the City of Los Altos had no new concrete sidewalks installed. This is because the city is mainly built out and the residents are also resistant to their installation. Los Altos plans to continue to evaluate new sidewalks on a case-by-case basis and provide directions in the form of the conditions of approval. Los Altos has also document the minimum width in their Standard Plans and Specification, which is currently being developed by a consultant for the city.
2. Are sidewalks generally sloped so they drain to the front yard or park strip rather than the street?	The City of Los Altos will work with the Program as appropriate. Los Altos will require that sidewalks drain to a soil area on a case-to-case basis. Since Los Altos is built out, and will not have any large development, it is anticipated that most sidewalks will remain as currently constructed.	Public Works (Engineering) & Community Development (Planning)	During FY 07/08 the City of Los Altos had no new concrete sidewalks installed. Los Altos will continue to evaluate new sidewalks on a case-by-case basis for drainage and provide directions in the form of the conditions of approval
3. Are the use of benign roof materials promoted?	Through the design review process, the City reviews building materials, including roof materials, and encourages the use of benign roofing materials such as wood shake or tile. The City has required that project sponsors change roofing materials and/or colors to lessen impacts. During this FY the city will adopt an ordinance to prohibiting copper in roofing systems similar to Palo Alto's ordinance	Community Development (Planning) & Public Works (Engineering)	The City of Los Altos is still evaluating the need for an ordinance prohibiting copper roofing systems. Los Altos feels this can be done without an ordinance and will try and discourage applicants from using copper on their projects. With the cities policy of not allowing direct discharges to the storm drain system has minimize the impact of copper discharges.

Site Design Measures Guidance and Standards Development Action Summary (Cont.)			
Site Design Question	**Proposed Action (9/15/03)**	**Personnel Involved in the Discussion**	**Summary of Action Taken (6/30/08)**
4. Does the community encourage inclusion of turf play yards or courtyards that also serve as infiltration areas or overflow parking areas?	Yes, they are encouraged on a case-by-case basis, when large projects are proposed. City has copies of BASMAA's Start at the Source to help encourage such ideas. City of Los Altos will provide a link on local website to SCVURPPP and/ BASMAA website containing electronic copy of BASMAA's Start at the Source.	Public Works (Engineering) & Community Development (Planning)	The City of Los Altos continues to maintain a link on its website to SCVURPPP website containing electronic copy of BASMAA's Start at the Source
5. Is the minimum radius allowed for cul-de-sacs less than 35 feet?	Since Los Altos does not expect to have many, if any, new cul-de-sacs, Los Altos plans to take each on a case-by-case basis and provide the minimum radius agreed upon by the appropriate agencies. Los Altos will also continue to work with the program and other jurisdictions regarding this matter. Will review matter with the Santa Clara County Fire Department for their input	Public Works (Engineering)	During FY 07/08 the City of Los Altos did not have any new cul-de-sacs installed mainly because the city is built out. Los Altos will continue to evaluate any new cul-de-sac on a case-by-case basis for requiring a minimum radius as part of the conditions of approval.
6. Are there established design criteria or guidance for swales that can provide stormwater quality treatment (i.e., dry ponds, biofilters, or grass swales)?	City of Los Altos will consider revising the current version of its municipal code this FY by removing the prohibition for the use of reservoirs and simply stating that the device will be subject to approval by the City Engineer to insure flexibility. City of Los Altos will consider any treatment BMP presented in the handbooks on a case-by-case basis.	Public Works (Engineering)	City of Los Altos has not revised its municipal code, but still plans to do so.

Municipality: City of Los Altos ***Attachment B***

Site Design Measures Guidance and Standards Development Action Summary (Cont.)			
Site Design Question	**Proposed Action (9/15/03)**	**Personnel Involved in the Discussion**	**Summary of Action Taken (6/30/08)**
7. Are model shared parking agreements provided?	The City does not have a model shared parking agreement, but it currently has an existing parking agreement with a local restaurant. Also the City does have a mechanism to allow cooperatively operated parking facilities. The agreements are reviewed on a case-by-case basis by staff and the City Attorney. Also, the City has allowed a business to rent parking spaces in the public parking plaza during the evening to help satisfy their parking requirement.	Public Works (Engineering) & Community Development (Planning)	No further action was required. During FY 07/08 there were no cases where parking agreements became an issue.
8. If mass transit is provided nearby, is the parking ratio reduced?	All multi-family and mixed-use projects are required to provide affordable housing. The City grants development incentives for all projects with affordable housing. Incentives can include a reduction in the amount of parking. When considering a reduction in parking, proximity to mass transit would be a primary consideration	Community Development (Planning)	During FY 07/08 the city did not have any multi-family or mixed-use projects.
9. Is the minimum driveway width specified in the community 9 feet or less (one lane) or 18 feet (two lanes)?	The driveway widths in certain residential districts and commercially operated public parking facilities can be reduced subject to approval of an alternative design by the architectural and site control committee. The City prefers this approach rather than changing the standards because it allows flexibility and it allows the City to determine the appropriate width based on site conditions.	Community Development (Planning)	During FY 07/08 there were no cases where driveway width really became an issue.

Santa Clara Valley Urban Run Pollution Prevention Program
FY 2007-2008 Annual Report

Municipality: City of Los Altos ***Attachment B***

Site Design Measures Guidance and Standards Development Action Summary (Cont.)			
Site Design Question	**Proposed Action (9/15/03)**	**Personnel Involved in the Discussion**	**Summary of Action Taken (6/30/08)**
Drainage Design Requirements			
1. Does the municipality promote limiting runoff to pre-development levels (e.g. through detention or retention, limits on impervious surface area, etc.)?	The City of Los Altos plans to adopt an ordinance to require developer to comply with Provision C.3 of the NPDES permit, which would limit runoff to pre-development level. As a matter of conditions of approval, Los Altos requires limiting runoff from single-family redevelopment not covered by the permit. It is anticipated that this ordinance will be enacted prior to the implementation of the C3 provisions in Oct 2003.	Public Works (Engineering) & Community Development (Planning)	The City of Los Altos has adopted an ordinance that requires developers to comply with Provision C.3 of the NPDES permit limiting runoff to pre-development levels. The City of Los Altos also continues to limit runoff on all of its projects, regardless of size.
2. Are there design criteria for stormwater best management practices?	Will review and implement procedures on a case by case basis for projects as they become available like implementing appropriate best management practices shown in the New Development and Redevelopment handbook by CSQA as a matter of conditions of approval.	Public Works (Engineering) & Community Development (Planning)	The City of Los Altos continues to use those BMPs that are defined in California Stormwater Quality Association *Stormwater Best Management Practice Handbook for New Development and Redevelopment.*
Natural Resource Protection/Restoration			
1. Is the minimum buffer width (from top of bank) 75 feet or more in a stream buffer ordinance/policy/guidelines?	The City works with the Santa Clara Valley Water District, and when necessary requires a biotic study, to determine the appropriate buffer for projects adjacent to a creek. Most of the lots in Los Altos adjacent to the creek are residential. Requiring a 75-foot buffer from top of bank is not practical in most cases, as it would render most lots unusable.	Community Development (Planning)	The City of Los Altos has adopted the provisions of the Water Resources Protection Collaborative and will issue permits based on the requirements of Santa Clara Valley Water District.

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2007-2008 Annual Report

Municipality: City of Los Altos ***Attachment B***

Site Design Measures Guidance and Standards Development Action Summary (Cont.)			
Site Design Question	**Proposed Action (9/15/03)**	**Personnel Involved in the Discussion**	**Summary of Action Taken (6/30/08)**
2. Does the stream buffer ordinance specify enforcement and education mechanisms?	The City's Environmental Committee continues to discuss appropriate creek protection measures and ways to educate the public. Will obtain and include information from the Marin County Stormwater Pollution Prevention Program efforts on creek side approaches.	Community Development (Planning)	The City of Los Altos has adopted the provisions of the Water Resources Protection Collaborative and will issue permits based on the requirements of Santa Clara Valley Water District.
3. Is land conservation, impervious cover reduction, or other types of water quality protection a major goal or objective to the open space design guidance?	City staff understands the importance of water quality protection and makes sure impacts are evaluated and appropriate protection measures are included in project approvals as a long-standing city policy on source control. The City adopted a new General Plan in November 2002. This document and current development policies encourages the conservation of natural features	Community Development (Planning)	The City continues to follow its General Plan.
4. Are flexible site design criteria available for developers that preserve open space and utilize cluster design options (e.g., setbacks, road widths, lot sizes)?	The City's approach is to consider road width modifications on a case-by-case basis to determine the appropriate width for the specific site being developed. All new residential streets in the City of Los Altos will be 10 minimum lane widths.	Public Works (Engineering)	There were no new streets being proposed during FY 07/08.

Santa Clara Valley Urban Rur Pollution Prevention Program
FY 2007-200 Annual Report

Municipality: City of Los Altos ***Attachment B***

Site Design Measures Guidance and Standards Development Action Summary (Cont.)			
Site Design Question	**Proposed Action (9/15/03)**	**Personnel Involved in the Discussion**	**Summary of Action Taken (6/30/08)**
5. Are open space areas encouraged to be consolidated into larger units?	It is City policy to encourage protection of creeks, creek side area and riparian habitat in their natural state while ensuring public safety and preserving valuable natural resources. For example, the City has plans for a bike path along the Hetch-Hetchy right-of-way in conjunction with the development of the Resident Inn/Office Complex on El Camino Real.	Community Development (Planning)	City of Los Altos continues to follow its policy.
6. Does a minimum percentage of open space near sensitive areas have to be managed in a natural condition?	The City continues to work with the Santa Clara Valley Water District and other appropriate agencies to establish buffers near sensitive areas. The appropriate buffer varies based on site conditions. Based on the recommendation of the Santa Clara Valley Water District and a biotic assessment, the City recently required a 25 foot buffer as a condition of approval for a subdivision abutting a creek. The width of the buffer was based on the needs of the site. We prefer this approach to establishing a minimum percentage that may or may not be appropriate for a site. .	Community Development (Planning)	The City of Los Altos has adopted the provisions of the Water Resources Protection Collaborative and will issue permits based on the requirements of Santa Clara Valley Water District.
7. Does the community encourage minimization of impervious surface areas in recreational open space areas?	The newly adopted General Plan includes policy language that encourages the minimization of impervious surface areas. This policy and requirements in the conditions of approval works well for the City and at this time no additional guidance or policy language is deemed necessary. However, the City will continue to evaluate if addition policy language would be beneficial.	Community Development (Planning)	The City of Los Altos continues to enforce the policy from the General Plan.

Site Design Measures Guidance and Standards Development Action Summary (Cont.)			
Site Design Question	**Proposed Action (9/15/03)**	**Personnel Involved in the Discussion**	**Summary of Action Taken (6/30/08)**
8. Does your municipality encourage distinct low-impervious buffers between cities (e.g., greenbelts, open space, wild land corridors, agricultural areas)?	Given the existing built out environment of the city and the continual housing needs pressure, this is not really practical to create low-impervious buffers between the cities. The westerly and southwesterly border between Palo Alto, Los Altos Hills and the County is Adobe Creek, and on the easterly border with Sunnyvale is Steven Creek which in itself already serves as a pervious buffer.	Community Development (Planning)	No further action was required.
9. Is there flexibility to meet regulatory or conservation restrictions (density compensations, buffer averaging, transferable development rights, off-site mitigation) offered to developers?	The City recently updated the General Plan. The policies in the General Plan were evaluated and determined to be appropriate for Los Altos.	Community Development (Planning)	The City of Los Altos continues to enforce policies in the General Plan

Site Design Measures Guidance and Standards Development Action Summary (Cont.)			
Site Design Question	**Proposed Action (9/15/08)**	**Personnel Involved in the Discussion**	**Summary of Action Taken (6/30/08)**
Policies to Limit Auto Use/Promote Alternative Transportation			
1. Does the municipality promote comprehensive pedestrian and bike trail corridors through a well-connected network of streets and pathways?	The City of Los Altos completed a citywide Bicycle Transportation Plan in February 2002. The City meets monthly with its Bicycle/Pedestrian Advisory Committee (BPAC) to discuss means to pursue the goals of this Plan and also to improve pedestrian access within the City and into adjacent communities.	Public Works (Engineering)	The City of Los Altos continues to pursue the goals of the Plan with the BPAC, which is a subcommittee of the city's Traffic Commission that was established by City Council. For example, The BPAC is working on the feasibility study to connect the Stevens Creek Trail between Mountain View and Cupertino.
2. Does the municipality promote neighborhood greenbelts with walkways and bike paths?	The City continues to seek opportunities for bikeways and pathways. The City recently awarded a contract as part of the safe routes to school program to install bike improvements along Berry Avenue. Also, the city has obtained easements along the Hetch-Hetchy right-of-way to use the area for a bike path. As opportunities arise, the City will continue to obtain easements in order to complete this plan for the Hetch-Hetchy.	Public Works (Engineering) & Community Development (Planning)	The City continues to seek opportunities for bikeways and pathways. For example, during FY 07/08 the city awarded a feasibility study to connect the Stevens Creek Pedestrian/Bicycle Trail between Mountain View to Cupertino though Los Altos.
3. Do street standards promote street layouts that reduce overall impervious surface area and/or trip length?	The City Council was concerned that many of the streets in Los Altos that did not have curb and gutters were becoming too wide because the residence were allowed to paved their shoulders. Therefore in November 2001 they passed a shoulder paving policy that restricts the width of the street plus the paved shoulders not to exceed 19 feet from the street centerline and also requires new street trees in the shoulder area as part of any new work. It was hoped that this would promote landscaping further out toward the edge of the streets into the public right of way.	Public Works (Engineering) & Community Development (Planning)	The City of Los Altos continues to enforce the Shoulder Paving Policy established by City Council in November 2001.

Site Design Question	**Proposed Action (9/15/07)**	**Personnel Involved in the Discussion**	**Summary of Action Taken (6/30/08)**
Policies to Promote Regional/Watershed-based Planning and Zoning			
1. Are watershed-based zoning options (e.g. overlay districts, performance zoning, incentive zoning, imperviousness overlay zoning, or planned development zoning) available?	The City's PUD ordinance (Chapter 14.62) allows flexibility from development standards and can be used for this purpose	Community Development (Planning)	No further action was required.

NEW DEVELOPMENT & REDEVELOPMENT CONSTRUCTION INSPECTION
FY 2007-2008 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
1	Construction Site Inspections	Los Altos will continue to review and revise SOPs and the City's legal authority related to violations as required, as well as conduct construction site inspections, and identify continuous improvements. Public projects contain contractual provision requiring the use of BMPs. Los Altos will continue to enforce and improve these provisions.	Public Projects: During the time frame during FY 07/08 the city of Los Altos awarded seven small construction projects. Projects dealt with some kind of repair. Of these, only two were under construction during the raining season. Therefore the city had no problem assuring that all proper construction BMPs were in place and properly maintained. Private Projects: During FY 07/08 the city continued to inspect all construction projects, regardless of size even though this exceeds that required by the permit. Though it is impossible to visit all location on a regular basis, the city feels that due to the large number of rebuilds in the city that this equates to a rather large development and therefore they all should install and maintain some degree of construction BMPs.	Community Development & Public Works Department

Santa Clara Valley Urban Run' Pollution Prevention Program
FY 2007-2008 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
2	Construction BMPs and Control Measures	Los Altos will continue to implement BMPs and other storm water requirements developed through the application process. For Public projects, the contract documents will include the necessary BMPs and control measures applicable for each specific project.	Public Projects: During the time frame during FY 07/08 the city of Los Altos awarded seven small construction projects. Projects dealt with some kind of repair. Of these, only two were under construction during the raining season. Therefore the city had no problem assuring that all proper construction BMPs were in place and properly maintained. The City of Los Altos feels that its current practice is sufficient, but will continue to review this process. Private Projects: Plans of major remodels and rebuilds submitted to the Community Development Department for permitting were reviewed by the Engineering Division. Though none of these projects approved during FY 2007/2008 were determined to have the potential for significant erosion from construction activities, the City still assures that all applicable construction BMPs and Control Measures requirements are being included in the project plans. Prior to the rainy season, the property owners for each of the projects under construction in the city were sent a letter providing each with details of the primary BMPs that were expected to be installed at each location to protect erosion of sediments from their construction site and also informing them that city inspections would be conducted during the rainy systems to assure they are properly installed and maintained. This letter indicated that a citation would be issued for those construction sites that did not install and properly maintain these BMPs. City continued attempting to inspect all construction projects, regardless of size even though this exceeds that required by the permit.	Community Development & Public Works Department

FY 2007-2008 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
3	Rainy Season Construction Inspections	Los Altos will continue to conduct construction site inspections for adequacy of storm water quality control measures. The sites will be those that have an active permit from the building department and construction at public facilities. Continue to conduct monthly inspections at these sites during wet season. In addition, Los Altos will continue to inspect each site prior to the beginning of the wet season to assure all have adequate storm water quality control measures.	Public Projects: During the time frame during FY 07/08 the city of Los Altos awarded seven small construction projects. Projects dealt with some kind of repair. Of these, only two were under construction during the raining season. Therefore the city had no problem assuring that all proper construction BMPs were in place and properly maintained Private Projects: The City of Los Altos developed a list of over 300 construction projects that had any kind of site work. Except for three, all projects were single-family major remodels or rebuilds. Though none of these projects approved during FY 2007/2008 were determined to have the potential for significant erosion from construction activities, the City still assures that all applicable construction BMPs and Control Measures requirements are being included in the project plans. And prior to the rainy season, the property owner for each of the projects under construction in the city were sent a letter providing each with details of the primary BMPs that were expected to be installed at each location to protect erosion of sediments from their construction site and also informing them that city inspections would be conducted during the rainy systems to assure they are properly installed and maintained. This letter indicated that a citation would be issued for those construction sites that did not install and properly maintain these BMPs	Community Development & Public Works Department
4	Staff Training and Educational Material Library.	Los Altos will continue to require inspectors to attend annual workshops and training, as well as providing internal training prior to each rainy season.	Public/Private Projects: City design engineers and construction and maintenance inspectors attended the December 3, 2007 training at Cupertino on "Construction Site Management"	Community Development & Public Works Department

Santa Clara Valley Urban Rur Pollution Prevention Program
FY 2007-200. nnual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
5	Construction Inspection	Evaluate Inspection activities conducted in FY 2007-2008 and explore opportunities to increase program effectiveness and report the results in the Annual Report	See "New Development-Construction Inspection Program Evaluation" section below.	Community Development & Public Works Department

New Development-Construction Inspection Program Evaluation FY 2007/2008

Private Projects: During FY 07/08, the Engineering Division conducted construction inspections of over 300 private projects, almost all being single family homes being rebuilt, to assure these project had and maintained construction BMPs. Thought each project could not be inspected monthly, all were inspected prior to the rainy season and most all were inspected two to three times during the year. Seven citations were issued for not installing BMPs or for poorly maintained BMPs on site. In general, contractors installed and properly maintained their sites. But it was clear that without constant inspections, BMPs would not be properly maintenance at many sites, let alone even installed. The City plans to continue with this inspection process during FY 08/09.

Public projects: The city had only seven small construction contracts during the year. All were finished within 2-4 months and only two were under construction during the raining season. All construction inspectors are trained in the application of applicable BMPs. For example, catch basins near sites are protected with filter fabric to prevent debris for entering the storm drain system and fiber rolls are installed around all sites. For public projects, the city has no problem with complying with its permit.

PEST MANAGEMENT
(Provision C.9.d of the Permit)
FY 2007-2008 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
Municipal Pesticide Use				
Goal 1.A. Eliminate all unnecessary municipal pesticide uses (particularly organophosphate (OP) pesticide use) and implement Integrated Pest Management (IMP) techniques.				
1	Pesticide Use on Municipally Owned	Continue to track pesticide use on municipally owned property, continue to review IPM policy requiring the use of IPM techniques in the agency's operations, minimization of pesticide use, continue to review standard operating procedures (SOPs) and best management practices (BMPs) for implementing the IPM policy, continue to conduct a periodic agency-wide search of chemical storage areas for pesticides no longer legal for application, and properly dispose of any such pesticides pursuant to appropriate waste disposal regulations, and will continue to conduct internal outreach on less toxic pest control to employees who do not necessarily purchase or apply pesticides during the course of their work (to encourage employees to use IPM techniques away from work).	The City continued to record all pesticide application and submit this documentation on a monthly basis to the Santa Clara County Department of Pesticide Regulation. No pesticide violations or other related concerns were reported during the year.	URP Coordinator & Public Works Maintenance Department

Santa Clara Valley Urban Run('ollution Prevention Program
FY 2007-2008 ,.,nual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
2	Documentation	Los Altos will document municipal pesticide use and activities in the FY 2007/2008 Annual Report.	The city continues to maintained a detailed record of all pesticide used by maintenance staff.	URP Coordinator
Goal 1 B. Raise awareness of all municipal employees and train employees who apply pesticides for the municipality about the municipality's IPM Policy and/or IPM techniques as appropriate.				
1	Pesticide Applicator Training	Los Altos will continue to ensure that employees who apply pesticides for the agency obtain the appropriate training as required by the County Agricultural Commissioner and the State Department of Pesticide Regulation (DPR). Los Altos employees are trained every January in order to maintain its operator ID number	All Parks Division employees involved with pesticide application received annual training, like the January training to maintain their operator ID number, in the proper use, handling, mixing, storage, and application of Roundup Pro and Surflan AS (the only two pesticide used by city staff). In January 2008, Parks Division passed Santa Clara County Department of Pesticide Regulation annual inspection including our training documentation.	Public Works Maintenance Department
2	Pesticide Applicator Training	Los Altos will continue to provide annual training on the appropriate portions of the IPM Policy, SOPs, and BMPs, and the latest IPM techniques to employees within departments responsible for pesticide application. Los Altos' IPM Policy states that the City will conduct training at least once a year on Pest Management.	12 Parks Division employees involved with pesticide spraying receive annual training conducted at the Municipal Service Center. Training was conducted by certified spray applicator regarding IPM Policy, BMP's, and SOP's. Training is summarized in the Staff Training list at the end of this Annual Report. Training is expected to be expanded to include all Maintenance Services personnel.	Public Works Maintenance Department

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2007-2008 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
3	Employee Training	Los Altos will continue annually to inform employees who are not authorized and trained to apply pesticides that they cannot use over-the-counter pesticides in or around the workplace, consistent with the IPM Policy. Los Altos' IMP Policy states that the City will conduct training at least once a year informing employees of the use of pesticides in the work place.	Staff was unable to conduct formal internal outreach to employees, but supervisor personnel are continually monitor the public spaces and there were unauthorized use of pesticides reported during the fiscal year	Public Works Maintenance Department
4	Documentation.	Los Altos is required to provide similar documentation to the Santa Clara County Department of Pesticide Regulations. Los Altos will provide the required information in the FY 2007/2008 AR.	Training is listed in the Staff Training list at the end of this Annual Report.	Public Works Maintenance Department

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
Public Education and Outreach				
Goal II.A. Increase awareness of IPM so target audiences recall less toxic pest management messages and adopt IPM behaviors. Target audiences include residential and commercial users, pesticide retailers, municipal employees, and special districts (PS #6)				
1	Watershed Education & Outreach (WE&O) Campaign	Continue to support the Watershed Education & Outreach (WE&O) Campaign, which will target the general public and include messages about less-toxic pest control and proper disposal. The Campaign will include extensive media campaign with South Bay English- and Spanish- language TV and radio stations.	As documented in the Public Information Participation section of this Annual Report, the City of Los Altos continues to support the Watershed Education & Outreach Campaign.	URP Coordinator
2	BASMAA Regional Media Relations Campaign	Continue to fund BASMAA Regional Media Relations Campaign featuring pitches to Bay Area media and responses to breaking news on pesticide-related topics. Los Altos will continue to fund the Program for BASMAA baseline projects, including Regional Media Relations Campaign.	The City of Los Altos continues to fund and support the efforts of the BASMAA Regional Media Relation Campaign through the Program.	URP Coordinator
3	Pesticide User Outreach	Continue to assist Program with implementation of local components of a "Pesticide User Outreach" project targeting residential and commercial users	The City of Los Altos continued to assist the Program with the implementation of public outreach. .	URP Coordinator

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 2007-2008 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
4	IPM Outreach	Continue to provide information on less toxic pest control (e.g., IPM techniques, municipal IPM policies, model contract language, training opportunities, etc.) to neighboring special districts (e.g., open space districts, vector control districts, and school districts) as appropriate. Program to assist with materials. Los Altos will distribute applicable information as required	The only neighboring districts are the school district and the City of Los Altos did not provide them information on less toxic pest control. Los Altos would provide assistance to them if necessary.	URP Coordinator
5	Outreach Evaluation	Document or estimate numbers of residents reached by outreach efforts and media advertising. Los Altos will document this outreach effort in its FY 2007/2008 Annual Report	See "FY 07-08 Accomplishments" for Item No. 2 under "Public Information/Participation" section of this report for the accomplishment for this task. It is difficult to say exactly how many residents it reaches though most of the people seem to be interested in reducing the risk from pesticides.	URP Coordinator
Goal II.B. Educate pesticide retailers and consumers about less toxic pest control products and promote the sale of such projects.				
1	BASMAA Regional IPM Partnership	Los Altos will continue to fund and participate in the BASMAA Regional IPM Partnership. Program funds BASMAA baseline projects, including Regional IPM Partnership.	The City of Los Altos still continues to fund and participate, as necessary, in this program. As a benefit of this program, the city is able to receive updated and to replenishes its IPM fact sheets	URP Coordinator

Santa Clara Valley Urban Run' Pollution Prevention Program
FY 2007-2008 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
2	IPM Store Partnership Program	Los Altos will continue to implement cost-effective elements of the IPM Store Partnership Program, as identified in the work plan developed by the Program. Create and provide fact sheets and other materials to pesticide retailers to facilitate point-of-purchase outreach. Visit stores as necessary to ensure ongoing participation. Los Altos will continue working with the City of Palo Alto on this program.	See "FY 07-08 Accomplishments" for Item No. 2 under "Public Information/Participation" section of this report for the accomplishment for this task.	URP Coordinator
3	IPM Store Partnership Program	Los Altos will continue to assist Program to document number of participating stores, materials distributed and employees trained. Los Altos will continue to assist Palo Alto and will documentation the cost evaluation as required.	The City of Los Altos was available to provide assistance as necessary.	URP Coordinator
Pest Control Operators (PCOs)				
Goal III.A. Minimize pesticide use by PCOs contracted for structural pest control and landscape maintenance.				
1	Municipal PCOs	Continue to have PCOs contracted for municipal applications to use pest control methods consistent with the municipality's IPM policy (through contract specifications).	Staff was unable to conduct formal internal outreach to employees, but supervisor personnel are continually monitor the public spaces and there were unauthorized use of pesticides reported during the fiscal year	Public Works Maintenance Department
2.	Municipal PCOs	Document the pesticide use by the PCOs on municipal property in the FY 2007/2008 Annual Report, as necessary	Training is listed in the Staff Training list at the end of this Annual Report.	URP Coordinator

FY 2007-2008 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
Goal III.B. Require all PCOs to implement Best Management Practices (BMPs)				
3	Municipal PCO BMPs	Continue to require PCOs contracted by municipalities to implement BMPs through contract specifications.	All pesticide work is done through open purchase order. Contract language and city policy stipulates that the PCO utilities proper BMPs. Parks Supervisor advises contractors of the City of Los Altos IPM program.	Public Works Maintenance Department
4	Documentation.	Document efforts to complete the above actions in the FY 2007/2008 Annual Report.	The city maintained a detailed record of all pesticide used by maintenance staff.	URP Coordinator
Commercial Businesses				
Goal IV.A. Determine the extent of commercial business employees' use of pesticides (I.E., pesticide applications not performed by a licensed PCO) and conduct appropriate outreach regarding less toxic pest management.				
1	Commercial Business Outreach Work Plan.	Assist Program to provide outreach on less toxic pest control to target businesses in the South Bay, as appropriate and cost-effective.	The city of Los Altos continued to be available to assist the Program on outreach to the businesses in the South Bay.	URP Coordinator

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
Household Hazardous Waste Collection				
Goal V.A. Provide pesticide disposal services through household hazardous waste (HHW) collection programs for all residents and small businesses, and encourage use of these programs.				
1	Small Quantity Commercial Generators.	Continue to ensure that adequate pesticide disposal services exist for residents and conditionally exempt small quantity commercial generators.	The City of Los Altos residents have access to the household hazard waste collection services available through the County Household Hazardous Program. This program includes an appointment-based drop-off at various weekly events held throughout the county including one event held in the City of Los Altos at the Egan School on April 12, 2008. At this event, there were 216 participants from the City of Los Altos, 22 from the Town of Los Altos Hill and 288 from other locations in Santa Clara County	Public Works Department
2	Pesticide Disposal	Continue to work with HHW collection agencies to support, enhance, and help publicize programs for proper pesticide.	The City of Los Altos attends monthly meetings with the Technical Advisory Committee, which consists of cities in the Santa Clara County. Los Altos is also a member of the HHW subcommittee, which meets quarterly. In conjunction with this committee the city provide technical advice and funding to help support the Santa Clara County Household Hazardous Waste web site.	Public Works Department

FY 2007-2008 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
3	Hazardous Waste Disposal Outreach	Continue to provide hazardous waste disposal information to residents, through distribution of materials (e.g., utility bill insert, city newsletter, community events, etc.) or advertising in local media	HHW collection is advertised in the annual mailer sent out to all solid waste customers of the Los Altos Garbage Company in October 2007 and thru telephone response to queries, and through the County's solid waste website at sscgov.org. The annual household hazardous waste pickup in Los Altos is advertised in the local paper, the Los Altos Town Crier. In May 2007, the City's Environmental Commission was tasked by the City Council to provide input on a new RFP for solid waste collection, with HHW program participation and diversion of HHW being one of the primary service objectives. The City's HHW and recycling programs are also advertised in a tabbed section of the SBC Yellow Pages, and advertised in the Countywide recycling website: Recyclestuff.org	Public Works Department
4	Documentation	Document that household hazardous waste collection programs adequately serve residents and businesses (conditionally exempt small quantity generators) in its FY 2007/2008 Annual Report	Based on customer feedback at local events, 72% of participants rate the HHW program as "Good" or "Excellent". Data from the FY 07 indicate over 97% reported they received adequate information when they called the appointment line to schedule their HHW drop-off. Additionally, Los Altos Police Department had no reports of hazardous waste abandoned during the fiscal year. Communiqué feedback from residents also commends the efficiency of the HHW program.	URP Coordinator

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
New Development **Goal VI.A.** Minimize pesticide use at new and redevelopment sites.				
1	Pest-resistant Landscaping and Design Features	Los Altos will encourage developers and contractors to consider pest resistant landscaping and design features. Los Altos will report the percentage of new development and redevelopment project for which pesticide reduction measures were required in Annual Report	Private Projects: The City continues to encourage project applicants to use pest resistant landscaping and have information available for project sponsors to help them achieve this goal. The City of Los Altos had no significant development/redevelopment project approved during the FY. All projects were rebuilding or additions to single family residences. The limited commercial projects are typically remodels in the built-out areas of the city and therefore have very limited, if any, for landscaping. Public Projects: There were no public projects during FY 07/08 that fell in the category of a significant development or redevelopment, nor any new project that had landscaping.	Community Development Department
Monitoring and Science **Goal VII.A.** Participate in coordinated monitoring efforts to support pesticide TMDL development and implementation.				
1	Regional Monitoring Program (RMP)	Assist in the financial support of the Regional Monitoring Program (RMP)	City of Los Altos continues to provide a share of cost to the Program for this effort.	URP Coordinator

Review and Revision of Work Plan				
Goal X.A. Implement a Work Plan that includes appropriate goals, actions and monitoring mechanisms to reduce pesticide-related toxicity in urban runoff.				
1	Continuous Improvement	Revise work plan and add continuous improvement items.	The City of Los Altos believes that the current workplan submitted in March 2008 fulfills this requirement.	URP Coordinator

Santa Clara Valley Urban Rur Pollution Prevention Program
FY 2007-2008 Annual Report

Municipality: City of Los Altos ***Attachment B***

Pest Management Program Evaluation FY 2007/2008
The City of Los Altos has a very small pesticide program and we believe we have good control to minimizing pesticides in urban runoff. Improvements could be made in the area of use of more pest resistant landscaping in private projects, but since the city is built out, this extra effort probably would not have much of an impact. The City still could always use assistance/information on pest resistant landscaping since staff is not well trained on the development of this type of landscaping. Staff continues to monitor and comply with Pest Management Program and utilizes IPM policy to determine best procedure for pest control. Through annual training of Maintenance Division personnel on Public Work's IPM policies and practices and following BMP's and SOP's in the safe use and application of pesticides. Public Works had no citations or complaints this year. All City pesticide applications are documented with Santa Clara County Department of Pesticide Regulation. All contract spraying was completed with a recommendation from a PCA who was advised of our IPM policy before making a recommendation. The city will continue to train Public Works personnel on Public Work's IPM policy The Household Hazardous Waste program seems to work well and remain unchanged from last year's report. California's AB939 allows jurisdictions to set tipping fees at jurisdiction's landfill's to include a fee to support Household Hazardous Waste collection, and disposal or recycling. Santa Clara County has set this fee at $1.85 / ton of municipal waste and it remains unchanged from last year. As with the previous year, this generates enough revenue for Los Altos resident's HHW disposal costs of $39,160.45, or about 322 households. This funding level is intended to provide "free" disposal of HHW to 3% of the city's households. Actual participation by Los Altos is estimated at 9%, and the City provided augmentation of $82,000 (estimated) from the Solid Waste Fund in 2007/2008 so that all residents of Los Altos who desire to use the HHW collection program can do so at no direct cost to the resident. The City rarely experiences abandoned waste incidents, and when it occurs, the Maintenance Division responds. There are areas that might need improvement, such as very limited participation by multi-family unit dwellers and families where English is not spoken in the home.

MERCURY POLLUTION PREVENTION PROGRAM
(Provision C.9.c of the Permit)
FY 2007-2008 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
Municipal Use of Mercury-Containing Products				
Goal I. Eliminate all unnecessary municipal use of mercury containing products and establish proper disposal methods for products that cannot be eliminated.				
1	Mercury Policy.	Los Altos will continue to implement its policy for mercury-containing product reduction and management.	The City of Los Altos does not have a written mercury policy policy, but has been managing its usage and disposal for some time. For example, when florescent lights are replaced, the old ones are collected and are periodically manifested to a proper disposal site. Last FY the City of Los Altos had 46 eight-foot tubes, 228 four-foot tubes and 90 two-foot tubes picked up by a recycling contractor. New lights are low mercury florescent type. From a city operation standpoint these lights are probably the largest and about the only source of mercury.	URP Coordinator
2	Documentation on Mercury Policy	Los Altos will summarize effort in the FY 2007-2008 Annual Report including the quantities of mercury-containing products disposed from City building and departments at hazardous waste collection facilities.	Aside from the fluorescent lighting in most of the city buildings, the only other known mercury sources are mercury thermostats in 5 of 11 city buildings and mercury switches in the cities two sewer pump stations. When the lights burn out, these florescent light tubes are replaced with low mercury tubes. Last FY the City of Los Altos had 46 eight-foot tubes, 228 four-foot tubes and 90 two-foot tubes picked up by a recycling contractor.	URP Coordinator

FY 2007-2008 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
Household Hazardous Waste Collection **Goal II.** Provide mercury-containing products disposal services through household hazardous waste (HHW) collection programs for residents and small businesses, and encourage use of these programs.				
1	Disposal Services	Continue to provide mercury-containing products disposal services for residents and small businesses.	The City of Los Altos supports the County's HHW program which includes mercury collection and collection of "universal waste" i.e. florescent light tubes that contain mercury. This year is the second year of a program that added a free collection service for participating retailers who agreed to act as repositories for fluorescent lamps. The local hardware store participates, and additionally collects and holds alkaline batteries for turn in to the county-approved contractor for disposal (batteries) and recycling (fluorescent bulbs). The Regional Water Quality Control Plant managed a free thermometer exchange for residents desiring to obtain mercury-free thermometers to replace older thermometers. The HHW collection events also take mercury thermometers, fluorescents, and batteries.	Public Works
2	Fluorescent light recycling program	Los Altos will continue to assist the Program and also continue to work with local agencies to develop and publicize fluorescent light recycling program	Addressed in Disposal Services above. Also, a contract supplier, who provides on-call pickup of bulbs when enough are collected at the Municipal Services Center, recycles municipally generated fluorescents.	
3	Documenting and Reporting Guidelines	Continue documenting and reporting quantities of mercury-containing products disposed in Annual Reports.	The City is unable to report on the quantities from the city since it is collected and disposed of aggregately with other Santa Clara County cities by the county's HHW Program	Public Works

FY 2007-2008 Annual Report

Municipality: City of Los Altos ***Attachment B***

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
Monitoring and Science **Goal III.** Participate in coordinated monitoring efforts to support mercury TMDL development and implementation, including assessment of air pollution sources of mercury and concentrations of mercury in sediment.				
1	Regional Monitoring Program (RMP)	Continue financial support of the Regional Monitoring Program (RMP). Continue to support the RMP steering committee and technical review committee. Continue to support the coordinated regional plan to collect data for the mercury TMDL, as defined in the RWQCB/BACWA/BASMAA MOU.	The City of Los Altos continues to provide financial support for the Regional Monitoring Program. Also the City of Los Altos continues to provide comments as necessary for the program regarding the issue of mercury TMDL.	URP Coordinator
Public Education and Outreach **Goal:** Increase awareness of proper disposal of mercury-containing products and available non-mercury containing alternatives. Target Audiences include residential, commercial and industrial users and municipal employees.				
1	Development of Outreach Material	Los Altos will continue to support the program in the development of outreach materials.	The city of Los Altos continued to support the Program efforts during the FY to develop partnerships with various retail stores to provide free fluorescent lamps drop-off sites for residents. The city has implemented the service in two of the city's hardware stores.	URP Coordinator
2	Distribution of outreach material	Los Altos will continue to distribute outreach material and document each activity in Annual Report	The City of Los Altos continued to support the program in the development and distribution of various fact sheets, newsletter articles, press releases, newspaper ads, etc.	URP Coordinator

Santa Clara Valley Urban Rur Pollution Prevention Program
FY 2007-200 nnual Report

Municipality: City of Los Altos ***Attachment B***

Mercury Pollution Prevention Program Evaluation FY 2007/2008
Due to the limited amount of mercury products within the city buildings, it is difficult to provide a practical evaluation of this program. The largest and about the only source of mercury within the city's buildings is fluorescent light tubes. During FY 08/09 the City of Los Altos had approximately 350 tubes picked up by a recycling contractor. There is one hardware store in the city, and it collects fluorescents and batteries from residents. The City continues to review this program to areas of improvements

Trash Management				
6	Pilot Demonstration Project	City of Los Altos will assist the Program in implement a \pilot demonstration project which focuses on documenting type and volume of trash that can potentially be conveyed through the storm drain system.	The City of Los Altos is a member of the Trash AHTG working on assisting the Program in the development and implementation of this pilot project during the FY. .	URP Coordinator
7	Trash Evaluation	City of Los Altos will continue to use Program guidance to develop a strategy to conduct trash evaluation within the city as applicable. This will include an evaluation in a subset of identified trash problems areas. Will revise trash problem areas list on an as needed basis. Submit date to Program as appropriate.	The City of Los Altos is a member of the Trash AHTG working on the development of the Trash Program. Through this task group, the City of Los Altos has assisted the Program during FY 07/08 to facilitate documentation and evaluation of existing task management practice. This includes discussions, reviews and approvals as this program continues.	URP Coordinator
8	Trash Problem Areas	City of Los Altos will continue to identify and to implement of trash control measures where necessary, practicable and feasible to reduce trash.	During FY 07/08 the City of Los Altos inspected each of its eight identified hot spots. Data is summarized at the end of this "Trash Management" section. The preliminary evaluation of the results of these inspections is summarized in the "Other Water Quality & Watershed Management Programs Evaluation".	URP Coordinator
9	Strategy to Reduce Trash	The City of Los Altos will continue to assist Program in developing a long-term effective strategy for reducing trash in urban streams and waterways. Implement the strategy as appropriate is developed.	As a member of the Trash AHTG, the City of Los Altos continues to assist the Program in the development of an effective strategy for reducing trash.	URP Coordinator
10	Trash Fact Sheets	Los Altos will work with the Program to review existing and new guidance documents relevant to trash management and identify potential revisions, as appropriate.	As a member of the Trash AHTG, the City of Los Altos continued to assist the Program in the development of Fact Sheets for trash management.	URP Coordinator

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
	Copper Action Plan Tasks			
9	Vehicle Washing Operations (CB-1)	• Continue to distribute outreach materials on proper vehicle/equipment washing at City department counters and public events, and post on City website.	Los Altos continues to dedicate counter space accessible to the public at City Hall for these various brochures like "The Bay Begins at Your Front Door". Los Altos also continues to provide for a link on its web page that the public can also use to access information.	URP Coordinator
		• Continue to submit data regarding vehicle washing outreach activities and effectiveness evaluation in annual reports.	This is difficult for Los Altos to quantify other than to say, from observation; there have been only rare incidents of vehicle washing both during construction operation and residential car washing.	URP Coordinator
		• Continue to require source control measures for Group 1 new development and redevelopment projects that will conduct vehicle/equipment washing and maintenance activities (consistent with Permit Provision C.3.k).	During the FY, Los Altos did not have new significant development/redevelopment or any project, that involved vehicle/equipment washing and maintenance activities.	URP Coordinator
		• Continue to inspect industrial/ commercial facilities, which conduct vehicle/equipment washing activities on-site (this includes auto-related businesses). Ensure that BMPs for vehicle/equipment washing are implemented. Provide an effectiveness evaluation of inspection/compliance with BMPs	All fourteen auto businesses in Los Altos are formally inspected annually. During the year, city staff is aware that these discharges are not allowed and will report such incidents to the Code Enforcement Officer or the URP Coordinator.	URP Coordinator

Nickel Action Plan Tasks				
15	Measures to control nickel discharges from construction sites (NB-1)	• Continue to implement Construction Inspection Performance Standards (see Construction Inspection work plan section).	The City of Los Altos continues to implement the procedures that are defined in it URMP Construction inspection PS, both for private, as well as, public projects.	Community Development & Public Works
		• Continue to have inspectors attend Regional Board/Program workshops on construction site management and learn latest erosion/sediment control techniques	As noted in the training section of this Annual Report, city inspectors, planners and engineers have attended the Program construction workshop.	
		• Continue to attend Program workshops on post-development stormwater BMPs (C.3.)	As noted in the training section of this Annual Report, the city sends engineers and planners to these workshops.

Other Water Quality & Watershed Management Programs Evaluation FY 2007/2008
Monitoring-The City of Los Altos continues to work with the Program on this task. Since the effort is by the Program, they have provided an evaluation of this task. PCB-Dioxin- The City of Los Altos continues to work with the Program on this task. Since the effort is by the Program, they have provided an evaluation of this task. Watershed Measures- The City of Los Altos continues to work with the Program on this task. Since the effort is by the Program, they have provided an evaluation of this task. Sedimentation- The City of Los Altos continues to work with the Program on this task. Since the effort is by the Program, they have provided an evaluation of this task. Trash Program-The City of Los Altos continues to work with the Program on this issue as a member of its Adhoc committee. The city continued to assess eight previously selected trash problem areas within the city. The city has a program to inspect these areas and conduct any necessary cleanup on at least a monthly basis. Even after this further assessment, it continues to appear that Los Altos may not have a significant trash problem. This may be due to the lack of industrial and commercial areas. Therefore the city would prefer to direct limited assessment resources to other areas, but the city will continue to be a member of the trash committee and continue to provide support to the Program to further comply with its permit. Copper Action Plan-The city continues to address various tasks as defined by the Action Plan. Due to lack of industrial and commercial areas, this leaves most of the effort to residential areas and to schools. The city continues to discourage the use of exterior copper in their construction though most contractors continue to use copper in their construction projects. The city continues to have an aggressive street sweeping and storm drain cleaning programs. This may explain why there appears to be a lack of persistent trash problem areas throughout the city. The city continues to address inquiries from pool owners on their discharges. The city has room to improve alternate modes of transportation other than cars by improving its pedestrian access and its bicycle facilities. Both are included in the General Plan and future Capital Improvement Projects. The City of Los Altos also continues to work with the Program on this task. Nickel Action Plan-The primary effort for the city under this Action Plan deals with discharges from construction sites. City inspectors aggressively assure that there is no or minimal discharges from any of its constructions sites. Though the inspectors attend various training sessions, very little, if any, addresses what the nickel sources are that might be coming from construction sites. The City of Los Altos also continues to work with the Program on this task

PUBLIC INFORMATION/PARTICIPATION (Provision C.4)				
FY 2007-2008Work Plan Self Evaluation Matrix				
Item No.	**Activity**	**FY 07-08 Work Plan Tasks**	**FY 07-08 Accomplishments**	**Responsible Party**
1	Distribution of all current Program BMPs and literature	Los Altos will continue to promote and maintain a request line for public information materials. Continue to distribute public information materials to the City libraries, Public Works Engineering help desk, building and planning department desks, at the Municipal Service Center and Chamber of Commerce. Keep records on the usage of this material	The City of Los Altos continued with the distribution of the public information within the various public buildings in the City of Los Altos that promotes the use of less toxic pesticides and other environmental issues include the proper draining of swimming pool water. Los Altos does not provide this information at its libraries due to the lack of available space. Los Altos also hosted a table at several of its weekly Farmers Market event held during the summer months and provided handouts that deal with environmental issues. The city continues to maintain information on its web page on how residents could help to reduce pollutants into the environment including how to prevent sewer overflows.	URP Coordinator

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
2	IPM Store Partnership	Los Altos will continue participation in IPM Store Partnership Program with the City of Palo Alto by providing funding and participating to supply various outreach information to the two nurseries and the two hardware stores in the City of Los Altos. Monitor effort to realize the goals of this program	The Our Water, Our World (OWOW) program, a partnership between water quality agencies within the Palo Alto service region and local hardware and garden stores, encourages the use of less-toxic gardening techniques and products. Los Altos partner stores are Los Altos Garden Supply, Los Altos Nursery, and Rancho Hardware. During FY 07/08 IPM outreach more specific to Los Altos also included the following activities: • With the assistance of EOA staff, kept fact sheets stocked at City Hall and the partner stores; kept shelf talkers at stores updated. • Los Altos partnered with the City of Los Altos Elephant Pharmacy store to collect and properly dispose of used pharmaceuticals. • Staffed Los Altos Farmers' Market with displays, including IPM issues and proper disposal of used pharmaceuticals, pesticides and other wastes • In April 2008 helped fund Palo Alto to host a display on Our Water, Our World at the Los Altos Hills Earth Day event. • Funded PA to conducted seven separate media outreach on various issues dealing with potential storm water contamination.	URP Coordinator

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
3	Watershed Education & Outreach Campaign.	Los Altos will continue to encourage municipal staff to participate in Watershed Education & Outreach campaign as the events are scheduled	The URP Coordinator continues to monitor the efforts of the Program's Watershed Education & Outreach campaign and provide suggestion as required. Inform city staff of various outreach opportunities.	URP Coordinator
4	Evaluate the effectiveness of PIP projects	Los Altos will continue to review and will attempt to assess the effectiveness of all PIP projects at the local municipal staff level.	See "Public Information/Participation Program Evaluation" section below.	URP Coordinator
5	Web page	Los Altos will continue to maintain URP issues on its city web page.	The city continues to maintain a web page on stormwater issues including links to the SCVWD, BASMAA and SCVURPPP as well as information for the prevention of sewer overflows.	Community Development, Public Works Department
6	Articles in the Communiqué	Los Altos will continue prepare and contribute articles of interest to the City's publication called the Communiqué. The Communiqué is published up to three times annually.	The newsletter is published by the city three times a year and is mailed to every address in the city. Unfortunately this is a rather small newsletter, but the city provided small articles on urban storm water runoff issues. For example, one article was on the source of pollution that might get into a storm drain from a typical residential property and how to avoid the discharge of that source.	URP Coordinator
7	Storm Drain Stenciling	Los Altos will continue to be point of contact with the City's schools and organization that are interested in stenciling storm drain catch basing. Provide support and materials for each event of which they are typically 3-4 per year	The city implemented a process where city employees install permanent plastic stencils. This is being done at the same time the catch basins are cleaned.	URP Coordinator

Public Information/Participation Program Evaluation FY 2007/2008
The City of Los Altos continues to believe that distribution of material at Los Altos partner stores each year has an impact positive. City stores such as the Los Altos Garden Supply and Los Altos Nursery continue to get more usage of the various facts sheets than those stocked at city hall. This is also true for such events as the city's Farmers Market. Primary reason is the exposure audience is more conducive to these fact sheets than the visitors to city hall. On March 31, 2008 the city of Los Altos launched a program that allows residents to contact the police department to have them pick up and dispose of pharmaceutical. Since the start of this program, the city has collected about 50 pounds of useable pharmaceutical material. Additionally the Elephant Pharmacy offers as an addition collection point.

LOS ALTOS HILLS

CALIFORNIA

September 10, 2008

Mr. Bruce Wolfe
Regional Water Quality Control Board
San Francisco Bay Region
1515 Clay St., Suite 1400
Oakland, CA 94612

Subject: Town of Los Altos Hills Urban Runoff Management Program
FY 2007-2008 Annual Report

Dear Mr. Wolfe:

This report is submitted by Town of Los Altos Hills, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a. of the Program's reissued municipal storm water NPDES Permit (Order No. 01-024). The report summarizes activities performed during FY 2007-2008 in accordance with the Town of Los Altos Hills' Urban Runoff Management Plan (URMP) submitted to the Regional Board on September 1, 1997 and updated in October 2000 and September 2004, and the performance standards contained therein.

Contents of Report

The goals of this Annual Report are to: 1) concisely document implementation of our URMP and FY 07-08 work plan during the past fiscal year; 2) evaluate program results for continuous improvement; 3) comply with permit requirements; and 4) share this information with other Co-permittees, municipal decision-makers, and the public. To accomplish these goals, the report contains the following sections:

I. Contents of report;
II. Program highlights and accomplishments;
III. Summary of continuous improvement activities;
IV. Attachments:
   A. Certification Statement
   B. Self-Evaluation and Work Plan Completion Matrix
      - IC/ID Elimination Activities
      - Public Streets, Roads and Highways Operation and Maintenance
      - Corporation Yard Operation and Maintenance
      - Rural Public Works Activities
      - Storm Drain System Operation and Maintenance
      - New Development Planning Procedures
      - Construction Inspection
      - Pesticide Management Activities
      - Mercury Pollution Prevention Activities

Program Highlights and Accomplishments

We feel that the Program continued to be effective in meeting our Program goals. Though there are only nineteen full time staff in the Town of Los Altos Hills, the staff has been working with team effort to implement our URMP and FY 07-08 Work Plan to the maximum extent practicable.

In FY07-08 the Public Works staff has developed a Policy to Require the Virtual Elimination of Mercury in Municipal Operations for the Town of Los Altos Hills. The new Policy has been approved by the City Council in September 2006.

The Town of Los Altos Hills did not encounter any significant problems or incidents during the past year. The Town had 18 incidents of sanitary sewer overflow in FY07-08. Most of the sewer overflow happened on the street and the lands of private property. The surface of the overflow locations were cleaned immediately.

Continuous Improvement Activities

The Town of Los Altos Hills was able to accomplish several of the work plan goals in the past year and will continue to improve in outside staff training, public outreach and increased public awareness of Program goals.

This year, Public Works staff inspected 45 construction sites of private development and four public works projects. The pre-rainy season and rainy season inspections were effective in getting construction sites to install proper BMPs. The inspection coverage of the sites was adequate because it focused on the erosion/sediment controls. The Town of Los Altos Hills did not take any enforcement actions this year since the contractors followed the instructions or warning of the inspector. The inspector always inspected the sites after each verbal warning to make sure compliance was achieved. The contractors on Public Works projects have done a good job in erosion/sediment control.

Thank you for your review of this Annual Report and we welcome any comments that you might have. If you have any questions regarding the materials submitted, please contact Richard Chiu at (650) 941-7222 ext 228.

Very truly yours,

Richard Chiu

Richard Chiu, P.E.

Illicit Connection/Illegal Discharges Report Data, Town of Los Altos Hills				
Type of Pollutants	**Number of Incidents**	**General Location**	**Reports by citizens or employees**	**Follow-up action**
Sanitary sewer manhole overflow or main broken	18	On the streets or sewer easement of the private property	Reported by residents/staff.	Town's contractors cleaned the sewer main and stopped the overflow or backup. The contractor also cleaned up the surface area. SSOs were reported to the Regional Water Board.
Sanitary sewer lateral cleanout overflow	11	On the private property and adjacent to public right of way	Reported by residents/staff.	Private contractors or plumbers rodded the sewer lateral and stopped the overflow or backup. The contractors or plumbers also cleaned up the surface area. The Town has a log of all the incidents and SSOs were not reported to the Regional Water Board.

Staff Training Summary

Date and Location	Topic and Description	Sponsored or Held By	Attendees / Department
June 14,2007 Quinlan Community Center, Cupertino	Annual C.3. Workshop: Implementing Stormwater Requirements in New Development and Redevelopment Project	SCVURPPP	John Chau, Assistant Engineer from Public Works

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 07-08 Annual Report

Municipality: Los Altos Hills

P.S. Id.	Activity	CI Item Source[1]	FY 07-08 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
Illicit Connection & Illegal Dumping Elimination Activities						
ICID-2	Staff Training	URMP	Conduct annual training for urban runoff inspector and on-call staff.	Town did not conduct annual training on this subject. We will start internal training for FY 08-09.	On-going	Public Works
			Review and evaluate effectiveness	This year the Town of Los Altos Hills has no reported incidents of construction site waste discharged to the storm drain system. During this period, there were 18 sanitary sewer overflow from manholes on the public sewer main system.	On-going	Public Works
Industrial/Commercial Discharger Control Programs						
	None in the Town of Los Altos Hills					
Public Streets, Roads, and Highways Operation and Maintenance						
PSRH-3	Staff Training	URMP	Conduct annual training for Public Works Maintenance staff.	Town did not conduct annual training on this subject. We will start internal training for FY 08-09	On-going	Public Works
	Street Sweeping	URMP	Sweep streets with catch basins once a month. Collect the types of street sweeping data and make it available to Program staff.	The selected streets are swept once a month all year round. The entire length of 455 miles have been swept. About 16 CY of material per month was collected from street sweeping.	On-going	Public Works

Sar 'ara Valley Urban Runoff Pollution Prevention Program
FY ... 08 Annual Report

Municipality: Los Altos Hills

P.S. Id.	Activity	CI Item Source[1]	FY 07-08 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
			Review and evaluate effectiveness	Town's maintenance crew performed street curb, swale, and shoulder cleaning work prior to rainy season and picked up piles of leaves to keep the street drainage system clean. Crew also clean underground storm drain pipes.	On-going	Public Works
Rural Roads						
New	Rural Roads O&M Performance Standards	C.5	Implement the Performance Standards. Sweep streets according to the schedule mentioned in above section.	The Town has incorporated the Performance standards into URMPs.	Annually	Public Works
			Review and evaluate effectiveness	There was one new rural road designed or constructed this year. The public works constructions on rural sites have been inspected to make sure that erosion and sediment controls were maintained.	On-going	Public Works
Storm Drain System Operation and Maintenance						
SD	Storm Drain Maintenance	URMP	All tasks are routine and on-going.	All routine tasks have been conducted continually.	On-going	Public Works
SD	Reporting of Observed ICID Evidence	URMP	Report to Program for the ICID data annually.	Maintenance crews were trained to call Code Enforcement Officer to report ICIDs.	On-going	Public Works
	Storm Drain Maintenance	URMP	Evaluate and ensure that contractors use appropriate BMPs when conducting such activities as street painting, storm drain O&M, etc.	We have evaluated and ensured that contractors use appropriate BMPs when conducting such activities as street painting, storm drain O&M, etc.	On-going	Public Works

FY 07-08 Annual Report

Municipality: Los Altos Hills

P.S. Id.	Activity	CI Item Source[1]	FY 07-08 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
New	Collect and report the following for all projects that must implement treatment measures: BMPs, site design, and source control measures used, sizing criteria, O&M responsibility mechanism and responsible party	C.4.n.4	A system will be in place to collect the information in case such a project is proposed	Los Altos Hills does not expect to have any Group 1 new development or redevelopment projects. Group 2 single family homes are exempted.	ongoing	Public Works
New	Reporting, staff training, review conditions of approval	C.3.n.5	Collect information and report a summary of types of pesticide reduction measures required for development projects, and the percentage of projects for which pesticide reduction measures were required.	The Public Works staff has attended C3 workshop related to this issue.	In progress	Public Works
New Development -- Construction Inspection						
Const -6	Staff Training	URMP	Conduct annual training for Public Works staff.	We did not attend training conducted by the Program on December 07. Staff attended the training in 2005.	ongoing	Public Works
Const -5		Program (Revised PS)	Inspect all construction sites before and during rainy season per Performance Standard. Los Altos Hills will include a summary of the year's written inspection notices (for sites with inadequate erosion/sediment controls) and follow-up actions in the FY 07-08 AR.	This year Public Works inspector inspected **45** construction sites of private development and **4** public works construction projects. **9** of the private construction sites appeared to have erosion/sediment control problems prior to the 1st or 2nd inspections.	ongoing	Public Works.

San ara Valley Urban Runoff Pollution Prevention Program
FY 0. 08 Annual Report

Municipality: Los Altos Hills

P.S. Id.	Activity	CI Item Source[1]	FY 07-08 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
			Review and evaluate effectiveness	The typical problems were that site access roads were not covered by the crushed rocks and mud were tracked to the streets; the soil stockpiles were not covered by the plastic sheets; and fiber rolls were not installed. After 1st or 2nd inspections and the warnings given to the contractors, the problems on those sites were corrected. Construction inspection before and during rainy season is very effective to correct the inadequate erosion/sediment controls		Public Works
Pest Management Program						
I. Municipal Pesticide Use						
Goal I.A. Eliminate all unnecessary municipal pesticide use (particularly organophosphate (OP) pesticide use) and implement Integrated Pest Management (IPM) techniques.						
		MM I.A.1	Document completion of tasks in annual reports. Use pesticide tracking process to document pesticide use.	The contractors hired by the Town monitored and recorded all pesticide use on Town owned properties on a monthly basis. Town no longer contract with anyone to spray pesticide for weed control.	Annually;	Public Works
Goal I.B. Raise awareness of all municipal employees and train employees who apply pesticides for the municipality about the municipality's IPM Policy and/or IPM techniques as appropriate.						
		I.B.3	Periodically (at least annually) inform employees who are not authorized and trained to apply pesticides that they cannot use over-the-counter pesticides in or around the workplace, consistent with the IPM Policy (PS #4c).	The employees are informed annually.	At least Annually	Public Works

Santa Clara Valley Urban Runoff Pollution Prevention Program
FY 07-08 Annual Report

Municipality: Los Altos Hills

P.S. Id.	Activity	CI Item Source[1]	FY 07-08 Tasks	Status / Comments	Due Date (mo/yr)	Responsible Party
II. Public Education and Outreach						
Goal II.A. Increase awareness of IPM so target audiences recall less toxic pest management messages and adopt IPM behaviors. Target audiences include residential and commercial users, pesticide retailers, municipal employees, and special districts. (PS #6)						
		II.A.14	Conduct internal outreach on less toxic pest control to employees who do not necessarily purchase or apply pesticides during the course of their work (to encourage employees to use IPM techniques away from work).	Town has Environmental Design and Protection Committee and Open Space Committee who promote less toxic pest and weed control in the Town.	Annually	Public Works
III. Pest Control Operators (PCOs)						
Goal III.A. Minimize pesticide use by PCOs contracted for structural pest control and landscape maintenance.						
		III.A.4	Require PCOs contracted for municipal applications to use pest control methods consistent with the municipality's IPM policy (through contract specifications). Specifically, require contractors to: a) follow the agency's IPM policy, BMPs, and SOPs; b) provide evidence of current IPM training, when feasible; and c) provide documentation of pesticide use on agency property to the agency in a timely manner (PS#6).	Town required the Contractors, to follow the current IPM policy. They received current IPM training and provided documentation of pesticide use on Town property. The weed control service is designed using the IPM philosophy to suppress and control the most common weed species. The pesticide usage has not changed over the past year and past few years.	Ongoing	Public Works
Goal III.B. Require all PCOs to implement Best Management Practices (BMPs).						
		III.B.2	Require PCOs contracted by municipalities to implement BMPs through contract specifications. (See Action III.A.4, above.) (PS #6)	The Town implemented BMPs for work in the Town.	Annually	Public Works
		MM III.B.1	Document efforts to complete the above actions.		Annually	Public Works

WEST VALLEY CLEAN WATER PROGRAM

September 15, 2008

Mr. Bruce Wolfe
Regional Water Quality Control Board
San Francisco Bay Region
1515 Clay St., Suite 1400
Oakland, CA 94612

Subject: FY2007-2008 Annual Report for
West Valley Communities Urban Runoff Management Program

Dear Mr. Wolfe:

This report is submitted by the West Valley Cities of Campbell, Monte Sereno, Saratoga, and the Town of Los Gatos, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a. of the Program's reissued municipal storm water NPDES Permit (Order No. 01-024). The report summarizes activities performed during FY2007-2008 in accordance with the West Valley Communities' Urban Runoff Management Plan (URMP) submitted to the Regional Board on September 1, 2004 and the performance standards contained therein.

Contents of Report

The goals of this Annual Report are to: 1) concisely document implementation of URMP and FY07-08 Workplan; 2) evaluate program results for continuous improvement; 3) comply with permit requirements; and 4) share this information with other Co-permittees, municipal decision-makers, and the public. This report includes the following sections:

I. Preface
   - Table of Contents
   - Transmittal Letter with Program Highlights
   - Certification Statement

PROGRAM HIGHLIGHTS AND ACCOMPLISHMENTS

During FY07-08, the West Valley Communities of Campbell, Los Gatos, Monte Sereno, and Saratoga continued efforts to implement their URMP to the maximum extent practicable.

- Established municipal programs, such as Storm Drain Maintenance and Cleaning, are working at mature, efficient levels and continue to indicate that overall pollution prevention efforts seem to be working, because less pollution is residing in or even reaching the storm drain system.
- The West Valley Communities also continue to benefit from its joint and robust public information program through the WV Clean Water Program (WV CWP). The WV CWP has built relationships with local schools and provides in-class stormwater pollution prevention presentations with a 3-D interactive 'Enviroscape' model. The hands-on presentation is very well received and after working with the model, the students are keenly aware of the connection between themselves and pollution making its way into creeks and the Bay. Very encouraging is an observed increase in student's willingness to participate in protecting the local creeks through their own clean-up efforts. One 'success' that can be attributed to a connection with the schools, is when water quality issues became of such interest to a student that it becomes integrated into a school project - a science fair entry. This student, who utilized the WV CWP as a resource for information, was recognized for his storm water pollution project all the way up to the State level of competition!
- The West Valley Communities remain committed to the watershed approach for preventing urban runoff pollution. Through the WV CWP, the WV Communities actively participate in SCVURPPP's many task groups, WEO and Trash Task Groups, as well as other related programs like the Silicon Valley Anti-Litter Campaign (SVALC).
- The proposed MRP was the focus of Managers and Staff discussions throughout FY07-08. Staff participated in many discussions through both SCVURPPP and professional associations in anticipation of the RWQCB's release of a Tentative Order in December 2007. Additional Staff effort was invested in meetings with SCVURPPP and peer groups for collaborative and coordinated topical submittal of comments on the draft Tentative Order, and in preparation for participation in the March 2008 RWQCB Hearing.
- Planning Staff continued participation with the SCVWD Water Collaborative through FY0708, and subsequently passed the Collaborative's work product 'Standards and Guidelines' for development along creeks early in 2008.
- Through WV CWP, the WV Communities continued to provide significant support for implementation of the "Green Gardener" program. In FY0708 the program was successful in completing its inaugural session at full capacity – in both English and Spanish!

Thank you in advance for your review of this Annual Report. Should there be any questions regarding the materials submitted, please contact me at 408.354.4734.

Respectfully,

Kelly Carroll

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
	WVCWP Inspector Training	d. Inspector Training IC/ID Inspector will attend workshops on various measures and methods to improve water quality and protect creeks from negative urban effects.	Two hour US EPA Stormwater Program's Webcast Series on July 11, 2007. Topics covered included detecting and eliminating illicit discharges and to correct all illicit connections. On December 11, 2007, Public Agencies IPM Exchange seminar/field trip, in regard to ants and squirrels at the Palo Alto STP and Golf Course. Site Training on May 1, 2008 for the National River Cleanup Day (May 17, 2008). Topics covered included Site Coordinator Tip Sheet, Volunteer Orientation Script, Waiver of Liability Form, and Data Reporting Guidelines. Urban Runoff Inspection Training with Fire Department personnel on June 10, 2008. The training, conducted by the Sr Hazardous Materials Specialist, covered the NPDES Permit with SF Bay RWQCB, and the cooperative efforts with County Fire, City of Campbell, Town of Los Gatos, and City of Saratoga. Other topics covered "Storm Drain, not Sewer Drain", Haz Mat permit, types of URP Facilities, how to perform the inspection, and how to contact WVCWP Inspector (business cards were distributed).	WV Inspector
	Municipal Staff Training	Municipal staff Training Conduct training & evaluation meeting between Storm Water Discharge Inspector and City staff, to improve interdepartmental procedures.	Provide Annual Street Maintenance and Storm Drain Supervisor Training on June 20, 2008. Topics covered included Current Municipal NPDES Permit Requirements, contacting and working with the WV Inspector on ICID calls and municipal responsibility for following up with clean up of pollution in the SD system, and Future MRP Requirements. Provide Annual Urban Runoff Food Facility Inspection Program training meeting with SC Co. DEH inspectors and City of Cupertino representatives; a total of twenty (20) people attended on April 22, 2008. The power point presentation covered topics including restaurant inspections, dumpster problems, WVSD's FOG (Fats, Oil and Grease), the inspector's referral process including IC/ID, IND, and NTC (Notice to Comply), and Fluorescent Light Bulb/Battery-safe disposal information. The	WV Inspector

IC/ID Program Evaluation: Los Gatos

IC/ID Training

The multiple trainings that the WVCWP staff and the municipal staff, attended have been quite effective in building relationships with the Fire Dept., DEH, and the Municipalities. Inspectors from the Fire Dept., DEH, and the Municipalities, continue to look for possible stormwater violations while they are on their field inspections. If the Inspectors from the Fire Dept., DEH, and the Municipalities, observe any potential stormwater violations they immediately contact the WVCWP Inspector. All interagency referrals are documented in the IC/ID reporting section.

Trend Analysis for Town of Los Gatos

In FY04-05 forty-eight (48) reported incidents were investigated; thirty-seven (37) were actual violations. The most common incident source was construction sites, which accounted for eleven (11) violations. Seven (7) landscape material dumping incidents accounted for the number one IC/ID incident type reported in Los Gatos in FY04-05. This was followed by six (6) grey water discharges (some categorized as miscellaneous incidents) and four (4) violations for vehicle washing. Three (3) food facility incidents, three (3) tracking soil incidents, and three (3) saw cutting slurry discharges were also reported. Construction related violations (especially if landscaping is included) are clearly the most prevalent type of IC/ID problem facing the Town. A close working relationship between Town staff and the West Valley Inspector accounts for more reporting of these incidents. Nevertheless, smaller construction projects are evident everywhere throughout the Town and most landscaping projects are not required to have permits so they bypass one opportunity the Town has to educate contractors. To achieve maximum compliance by contractors at small construction or landscaping project sites in Los Gatos, the West Valley Inspector continued to conduct drive-by observations and (where potential violations are noticed) inspections were conducted, accompanied by verbal notices and construction (educational) brochures.

In FY05-06 twenty-five (25) reported incidents were investigated; of which 15 were actual violations. Additionally, the Inspector conducted follow up visits to three (3) of these sites to ensure on-going compliance. Out of the 25 reports, Los Gatos Public Works staff initiated 11 referrals. The West Valley Inspector continued to conduct proactive vehicle shop and restaurant inspections, particularly at those sites which have had violations in the past. Six (6) reports originated from Los Gatos' primary incident source, construction sites. In addition, three (3) landscape material dumping violations were reported. Five (5) accidental spills and five (5) allowable discharges were the most commonly reported incident types, but neither of these types of incidents represents an intentional violation. Three (3) automotive facility violations represent one less vehicle related incident than was reported in the previous year. Three (3) food facility violations were also noted but two of the reports were for a grocery store (Safeway) rather than an actual restaurant. Other incident types were: one (1) report of PG & E cutting down a tree near a creek; one (1) underground storage tank release; and one (1) grey water discharge. The only notable trend was the need for continued outreach to contractors on smaller remodel projects as well as outreach and education for landscapers. The problems related to vehicle shops and restaurants have remained manageable at about three (3) violations each year, as long as the proactive inspection programs continue to provide an additional means of education.

In FY06-07 twenty-six (26) reported incidents were investigated; of which 23 were actual violations. A majority of the violations took place at food facilities (8), construction sites (7) and commercial places (4). Verbal notices were issued for 24 incidents, while 2 warning notices were issued to a restaurant. The West Valley Inspector continued to conduct proactive inspections at restaurants and vehicle shops, particularly at those sites which have had violations in the past. City staff conducts proactive inspections at construction sites. The other sources of reports were citizen complaints or referral by City staff and other agencies. Two (2) allowable discharges were reported, but these do not represent an intentional violation. The only notable trend is the need for continued outreach to workers at construction sites and food facilities. The WVCWP inspector will continue proactive inspection jointly with the Fire Department Inspectors and municipal staff to provide education and outreach as appropriate.

In FY07-08 the West Valley IC/ID inspector responded to forty (40) reports of potential violations in Los Gatos and thirty four (34) follow ups. Three (3) of these

were in a Commercial area, eighteen (18) Food Facility, seventeen (17) Automobile Facility, ten (10) Construction Site, sixteen (16) Residential, nine (9) Public Facility, and one (1) Other. This is an increase in incident related activity, up from twenty six (26) in FY06-07. The West Valley inspector provided outreach and educational materials as appropriate.

Two (2) of these incidents were referred to another agency for Enforcement Action. One was a restaurant problem which was referred to S.C. Co. DEH. This problem has been resolved with the cooperation of the restaurant violators, DEH, and the WVCWP inspector. The other incident involved illegal dumping of paint thinner in an unincorporated area. This has been referred to S.C. Co.

Under the heading Incident Status five (5) remain open to be resolved in FY08-09. At the time of this report, July 2008, four (4) of these have been resolved. The last one, which may be a broken sprinkler, should be resolved shortly.

ICID Date	Contact Name (Resp Party)	Facility Address	ICID Incident Report Source (Origin)	ICID Incident Source	ICID Incident Type	ICID Enforcement Action	Findings (Comments)	Status	Compliance Date
Accidental spills									
10/19/2007	South Bay Towing	615 University Ave. Los Gatos, CA 95030	Illicit discharge inspectors	Automotive Facilities	Accidental spills	Verbal Notice	Absorbent substance left in back on street. Talked to Griselda: she said she would have someone clean it up. Very cooperative. (See IND 2/1/08)	2nd Inspection Required	12/21/2007
7/12/2007	Car accident	16061 Shannon Rd. @ Short Rd., Los Gatos	Other agency	Other/unknown	Accidental spills	No Action	Car went into drainage ditch Haz Mat, Fire responded. Fire put absorbent pads down at site to soak up oil. LG Pub. Wks. picked up and cleaned up site.	Incident - Resolved	7/12/2007
8/9/2007	Los Gatos High School Pool	20 High School St., Los Gatos	Other agency	Public facilities and Utilities	Accidental spills	No Action	Chlorine spill. No injuries. Approx. 20 gals. Haz mat team, Fire, was there. A small amount made it to SD. Cleaned out. Nothing to creek. All cleaned up. Pictures were taken. Hasa,Inc. delivery. Hose broke off causing spill. Pool opened same day. All OK.	Incident - Resolved	8/9/2007
Allowable discharge									
6/3/2008	Resident	105 Fancher Ct., Los Gatos	Interdepartmental	Residential	Allowable discharge	Verbal Notice	Chuck called. Kevin Rohani requested that Chuck & Jack investigate excessive runoff in the area of Ashler & San Benito. Traced water in gutter all the way to this residence. Worse culprit.	2nd Inspection Required	6/3/2008
Complaint not found									
1/24/2008	Nadereh Navai	15400 Winchester Blvd. #37, Los Gatos 95030	Citizen Complaints	Construction Sites	Complaint not found	Verbal Notice	Neighbor, Emma Vargo, #38, phone 482-4527, called Roy. Said her neighbor dumped paint down SD. I got name of painter from Mr. Navai. Rofino Painting. They told me they do not wash paint down SD. They do it over grass.	2nd Inspection Required	1/24/2008
10/10/2007	LeBoulanger, Posh Bagel, LG Coffee, and Blendz	145, 125, 101, and 81 W. Main St., Los Gatos	Interdepartmental	Food Facilities	Complaint not found	No Action	Roy, Code Enforce, LG reported a citizen had reported grease on ground to the rear of above addresses (all same bldg.). He did an inspection and found no violations. Asked me to follow up. I checked it out on 11/20/07. All OK.	2nd Inspection Required	11/20/2007
12/27/2007	Safeway Store	470 N. Santa Cruz Av., Los Gatos	Illicit discharge inspectors	Commercial	Complaint not found	No Action	Lid to tallow bin closed. Dumpster lid closed. Looks good!	Incident - Resolved	12/27/2008
8/24/2007	Dan	135 Olivia (or Livia ?) Dr., Los Gatos	Citizen Complaints	Other/unknown	Complaint not found	No Action	Call was on my cell phone, said, large complex, old, backs up to LG Creek, water comes out of 2" pipe, 2 times a night, 300 to 500 gals. Cannot find either Olivia or Livia, Must be a hoax.	Non-Incident	8/24/2008
Dumping – non-hazardous									
11/21/2007	Residence	220 Montclaire Rd. Los Gatos, CA	Other	Construction Sites	Dumping – non-hazardous	No Action	Pile of debris in front yard has been cleaned up. House is being remodeled. OK now. Pictures were taken.	Incident - Resolved	11/21/2007
Dumpster discharge									
9/19/2007	Safeway Store	470 N. Santa Cruz Av., Los Gatos 95030	Illicit discharge inspectors	Food Facilities	Dumpster discharge	Verbal Notice	Drive by. Problems in past. Same today. Food scraps and odor around garbage crusher in back . Got Store Mgr, Jason Crivello. Very cooperative. Very nice. Cleaned it up right away.	Incident - Resolved	9/19/2007

IC/ID Inspections

ICID Date	Contact Name (Resp Party)	Facility Address	ICID Incident Report Source (Origin)	ICID Incident Source	ICID Incident Type	ICID Enforcement Action	Findings (Comments)	Status	Compliance Date
Equipment cleaning									
2/13/2008	Naser Asgari, owner contractor	16370 Shannon Rd., Los Gatos 95032	Interdepartmental	Construction Sites	Equipment cleaning	Verbal Notice	Brett Calhoun, SCVWD, called. Saw him washing buckets used for grout work into street gutter. Made him stop; called me. Went out 02/14/08, no one home. Went back 02/15/08. All OK now. We educated him.	Incident - Resolved	2/15/2008
3/20/2008	Residence	321 University Av., Los Gatos	Interdepartmental	Construction Sites	Equipment cleaning	No Action	Chuck, LG, reported white powder substance in street gutter. I met with Rolando Hernandez, Zicovich Builders. House remodel. Washed sheet rock tools near driveway. Mostly in a dirt area. Some runoff down driveway to street	Incident - Resolved	3/21/2008
Food Facility Oil & grease discharge									
8/11/2007	Taco Bell & KFC Restaurants	16150 Los Gatos Blvd., Los Gatos	Other agency	Food Facilities	Food Facility Oil & grease discharge	No Action	Fire reported a tallow spill (grease), from grease interceptor. Police and Fire responded. Town staff also responded for clean up. All OK now.	Incident - Resolved	8/11/2007 (IND)
8/28/2007	Tandoori & Kamakura Restaurants	133 & 135 N. Santa Cruz Av., Los Gatos	Other agency	Food Facilities	Food Facility Oil & grease discharge	Verbal Notice	Nicole Jorgensen, DEH, issued her report. Large SD grate in back w/standing water, debris, garbage, grease in it and on surrounding pavement. She advised both restaurants not to allow water or debris to enter SD and to keep the area clean.	2nd Inspection Required	11/8/2008 (IND)
8/28/2007	Tandoori and Kamakura Restaurants	133 & 135 N. Santa Cruz Av., Los Gatos	Illicit discharge inspectors	Food Facilities	Food Facility Oil & grease discharge	Referral for Enforcement	Met at rear parking lot w/Nicole Jorgensen, DEH, Cheri Donnelly, Program Director, Delia, Office Asst. & Jack, WVCWP. Discussed this recent incident plus on going problems at this location, which has gone on for years (odor, food scraps, grease, boxes).	2nd Inspection Required	11/8/2008 (IND)
8/30/2007	Tandoori & Kamakura Restaurants	133 & 135 N. Santa Cruz Av., Los Gatos	Illicit discharge inspectors	Food Facilities	Food Facility Oil & grease discharge	Verbal Notice	I had a positive phone conversation w/Mani Kadir, owner of Tandoori Restaurant. Told me he is willing to spend up to $1,000 to professionally clean up the area. If more than $1,000 he will work w/landlord. Pictures taken to document.	2nd Inspection Required	11/8/2008 (IND)
9/20/2007	Tandoori & Kamakura Restaurants	133 & 135 N. Santa Cruz Av., Los Gatos	Illicit discharge inspectors	Food Facilities	Food Facility Oil & grease discharge	Warning Notice	Inspected back parking area. Conditions as bad as ever (odor, food scraps, litter). Took pictures. Notified DEH and town. On 9/24/07, mailed NTC#1914 to Tandoori and NTC#1915 to Kamakura. Yellow copy mailed to Mary, Town of Los Gatos.	2nd Inspection Required	11/8/08 (IND)
Landscape material dumping									
10/21/2007	Residence	220 Montclaire Rd. Los Gatos	Illicit discharge inspectors	Residential	Landscape material dumping	Verbal Notice	Demolition pile left uncovered in front of house. Took picture to document.	2nd Inspection Required	10/21/2008
10/3/2007	L.E.Pflughaupt, residence	252 Montclair Rd., Los Gatos 95032	Illicit discharge inspectors	Residential	Landscape material dumping	No Action	Landscaping job completed. Outstanding work and cooperation. They even installed two large sumps (a filtration system for runoff from roof and yard). Mr. Pflughaupt requested a letter, which I wrote and mailed, copied to Sam Tarverdi, Campbell Landscape.	Incident - Resolved	10/3/2007
2/21/2008	Residence	244 Montclair Rd., Los Gatos	Illicit discharge inspectors	Residential	Landscape material dumping	No Action	Gorilla hair on embankment in front looks OK. We thought it might need a barrier at street gutter.	Incident - Resolved	2/21/2008

Re: Illegal dumping of Debris (yard clippings, pool drains, dirt, litter) into Storm Drain Ditch

Dear Property Owners,

I am contacting your neighborhood due to illegal dumping of various items into the storm drain ditch located between the homes on Montclair and Old Adobe. This was discovered by Town crews during this week's annual storm drain clean-up. An inspector from the West Valley Clean Water program left door hangers to inform your neighborhood of the issue. This letter is to provide you with information on the purpose of storm drains and to ask for your assistance in helping to keep it clean from illegal substances.

This storm drain ditch (V-ditch) is to carry rain water to a main drainage channel. It is in a public utility easement and is maintained annually by Town crews. Its purpose is to collect rain water that flows from your homes' roofs and backyards, which then flows into the creek and ultimately into San Francisco Bay. No other substances are allowed to be placed on this easement, including dirt, garbage, pool or spa drainage or yard clippings, as all of these are untreated and can pollute the waterways and harm wildlife.

This combination of silt, herbicides, debris and pool/spa chemicals is of great concern. State, regional and local regulations and ordinances concerning pollution of the creeks and bay consider these activities an illegal use of the storm drain system. We need your help to maintain access and to help keep the storm drain system clear. **We need your help** to keep the storm drain clean:

- please **inform your gardeners** to discontinue dumping trimmings over the fence. Inform them to **use the yard waste bins** provided by the Garbage Company,
- review your pool/spa drainage system and **redirect pool/spa drainage to your sanitary sewer clean-out**
- inform your family members to **make sure everyone is informed** and
- if you observe **illegal dumping, please call (408) 828-4658** the West Valley Clean Water Program

We truly need everyone's cooperation to keep our storm drain and creeks clean. For more information about this issue, please contact the West Valley Clean Water Program at (408) 354-5385.

Sincerely,

Kevin Rohani, P.E.
Interim Director

cc: Cheri Donnelly, West Valley Clean Water Program

	URMP	a. Joint Inspections of Retail Food Facilities Continue inspection program w/ DEH. All facilities will be inspected a minimum of once per year. Report inspection results in Annual Report. WVCWP IC/ID Inspector will conduct follow-up and distribute BMP materials per DEH referrals. Continue to evaluate data management for improvements.	**LOS GATOS:** Approximate number of *food handling* facilities in Los Gatos is 217. In FY 07-08, all 217 food handling facilities in Los Gatos were inspected; most of them were inspected 2 or 3 times by Santa Clara County Environmental Health Specialists (inspectors).	Insp'ns conducted by SCC DEH WVCWP Inspector by referral
	URMP	b. Training & Evaluation Conduct annual joint training meeting with Cupertino and SCC DEH to evaluate Inspection Program and make improvements. Annual meeting per agreement.	On April 22, 2008 the WVCWP inspector conducted the annual WV Cities, Cupertino, and DEH inspector training meeting.	Annual Meeting WVCWP to coord. w/ Cupertino & DEH
	Continued from FY01-02 Pilot Program	c. WVCWP Restaurant Inspection Program Continue implementation of proactive inspection program targeting medium to large-scale restaurants. *Medium to large-scale* restaurants are defined as, restaurants with 6 or more employees and/or ones that routinely handle large quantities of grease.	**LOS GATOS:** The WVCWP Inspector conducted 8 additional inspections of food related facilities which have had previous stormwater issues. Approx. 48 *medium to large-scale* restaurants in Los Gatos	WV Inspector
	Continued from Restaurant Inspection Pilot	d. Support West Valley Sanitation District's Fats, Oils and Grease Program Expand scope of restaurant inspections to focus on grease trap maintenance. During	WVCWP manager and Inspectors met with DEH representatives to re-emphasize the importance of tracking grease maintenance records. WVCWP Inspector continued to alert restaurants about regularly maintaining grease	WV Inspector

FY 2007-2008 ANNUAL REPORT

		pro-active visits, the WVCWP Inspector will look at grease trap cleaning records. Any food facility without records will be referred to the West Valley Sanitation District for follow up.	interceptors and the need for record keeping.	
	URMP	e. Joint Inspections of Ind/Comm Facilities Based on terms of revised 6/30/06 Agreement with Fire Dept. The inspection frequency goal is 100%. The total number of facilities by business category inspected will be included in the annual report.	**LOS GATOS:** Renewed Joint inspection contract with the Santa Clara County Fire Department for a 5 year period, through July 2011. The SCCFD will inspect specific facilities, provide inspection forms, referrals for potential stormwater violations, and provide an annual inspection list. Approximate number of inspected facilities in Los Gatos is 91.	Inspections & data tracking conducted by SCC Fire WVCWP Inspector by referral
	URMP	g. Training & Evaluation Conduct annual joint meeting/training w/ SCC Fire to evaluate inspection reporting and confirm distribution of materials. Determine training topics, if needed, on the West Valley Fire Dept Inspection Agreement.	On June 10, 2008, the Fire Dept. conducted the annual Urban Runoff Inspection training program with Fire Dept. personnel and the WVCWP staff. On March 13th, 2008 the WVCWP Manager and the SCCFD met for the annual review of the joint inspection program, contract, and training topics.	Annual Mtg w/ WVCWP & Sr Haz Mat Specialist/ IND Inspectors
	URMP	h. NOI Filers Provide updated list of NOI Filers to SCC Fire.	**LOS GATOS:** The list of NOI sites, 4 in Los Gatos, was sent electronically to the Fire Dept on 4-21-08.	WV Inspector
	Continued from Vehicle Shop Inspection Pilot	i. WVCWP Vehicle Shop Inspection Program Continue to pro-actively inspect vehicle maintenance and car wash facilities as part of IC/ID inspection program. Suggest alternatives and promote improved car washing methods for auto businesses during IC/ID inspections. Document potential problems through resolution and submit to Program for Annual Report.	**LOS GATOS:** In FY07-08 the West Valley Inspector conducted 3 pro-active inspections of vehicle shops in the Town of Los Gatos. He also followed up on automotive shop referrals from the Fire Dept's facility inspections. The follow up inspections reported by the Fire Dept as potential violations have been moved to ICID (section 1) of this report.	WV Inspector

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Industrial/Commercial Program Evaluation

Fire Dept Inspections of Industrial / Commercial Facilities:

Of the 91 facilities inspected by the Fire Dept., no potential or actual violations were found and reported to the WVCWP for follow up. The list of violations is provided to WVCWP at the end of each fiscal year. The West Valley Inspector will schedule a training meeting with the Fire Dept Haz Mat Specialist in FY 08-09 to discuss further inspections of sites with reported violations during FY 07-08. The sites with previous violations will be prioritized for inspections at the beginning of FY 08-09.

After a steady stream of improvements and more communication between Fire Dept and WVCWP staff, the inspection program is prepared for maximum efficiency for the West Valley Cities in FY 08-09. When Saratoga was added to the Fire Dept Inspection Agreement for Campbell and Los Gatos (7/1/02), all West Valley facility inspections were coordinated under one umbrella. Monte Sereno does not conduct IND inspections because it has NO industrial or commercial facilities. Since 2001, WVCWP staff has met with Fire Dept staff at least twice a year to discuss standardized reporting, documentation and follow-up.

The West Valley Inspector's pro-active vehicle shop inspection program is designed to supplement Fire Dept facility inspections. Shop owners are made to realize the City's responsibility for making sure that the sites are in compliance with water quality requirements. The Inspector has made a positive impact with his visits and the distribution of educational materials depicting the right way to keep equipment, vehicle parts, and service areas covered, and all vehicle wash water managed properly. In a few cases the Inspector's meetings with vehicle shop owners have led to the facility's purchase of a wastewater capture system (noted in previous annual reports).

Annual Food Facility Inspection Training Meeting

Of the 217 facilities inspected by the DEH, no potential or actual violations were found and reported to the WVCWP for follow up. The Supervising Environmental Health Specialist at DEH had left and DEH was not always able to make the referrals to WVCWP due to staff shortage. However DEH has hired new staff and this will improve the coordination between DEH and WVCWP in FY 08-09.

On April 22,2008, DEH representatives met with the WVCWP Manager and Inspector. The importance of reporting all potential West Valley stormwater violations to the West Valley inspector was re-emphasized. Other topics covered at this meeting were (1) Updated contact information (2) How to report urban runoff violations to municipal inspectors to ensure accurate tracking and follow up (3) Feedback on the effectiveness of outreach and educational handouts (4) Reminder to distribute pesticide reduction fact sheets called "Don't Set a Table for Pests" to restaurants.

During FY 07-08 the West Valley Inspector continued a more aggressive effort to alert restaurants to the need for regular grease interceptor maintenance and record keeping. The WVCWP Inspector and the West Valley Sanitation District's Director of Operations continue to have discussions regarding grease interceptor maintenance records and related issues. The Sanitation District is notified if the records are not available. At the April 22, 2008 meeting, the West Valley Inspector again suggested that Environmental Health Specialists look for grease trap maintenance records during their restaurant inspections.

PUBLIC AGENCY ACTIVITIES: Operations and Maintenance

FY 2007-2008 Work Plan Self Evaluation Matrix

Storm Drain Operations and Maintenance

Source	Task Source	FY07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
	2004 URMP	Annual Storm Drain Cleaning Continue contract w/ WVSD. Continue schedule/cycle for inspection and cleaning of storm drain system (two year cycle for residential & one year cycle for commercial/industrial); Public Works staff will clean high leaf drop and other noted areas more frequently and as needed.	LOS GATOS: West Valley Sanitation District (WVSD) performs systematic storm drain cleaning and inspection annually. Half of the Town's storm drains in residential areas are cleaned and inspected each year. Arterials and commercial/industrial areas are done annually. Town maintenance staff provides additional cleaning in high leaf drop areas and to remove storm debris from all inlets and grates as needed.	PW Director, WVSD per contract; Pub Works Supt coord in-field operations
		Trash Reduction Public Works Maintenance Division and/or WVCWP staff will provide additional cleanup of trash problem spots discovered by staff or reported by the public.	LOS GATOS: During inspections and cleaning of storm drain structures, WVSD staff notes catch basins that require additional cleaning. The data provides indications of trash problem areas by storm drain locations. Reports for the Town of Los Gatos included 49 structures that received additional cleaning due to excessive amounts of leaves and debris requiring 203.5 hours of Los Gatos maintenance staff time.	Town's WV Rep & Maint Supt coord in-field operations
	2004 URMP	Training - Annual WVSD/ Oper. & Maint. Meeting Annual WVSD & WVCWP / Operations & Maintenance. Supervisors meeting: evaluate status of annual storm drain cleaning and provide training on maintenance issues. Rural public works BMPs & SOPs may be reviewed as part of the annual WVCWP Street Maintenance Supervisors meeting.	The annual WV Storm Drain Op & Maintenance Supervisor's workshop was held on June 20, 2008 at Campbell Community Center. See Training Table for staff attendance. Staff from WVSD, WVCWP, and the other WV Communities also participated. Topics included: • The WVCWP Program Assistant presented on the current NPDES Permit requirements and the possible future requirements of the MRP. • The Environmental Specialist from the City of Sunnyvale gave a presentation on Sunnyvale's storm drain catch basin insert pilot program. WVSD Storm Drain structure cleaning & debris findings for each city will be used to help identify additional trash problem areas.	Mtg lead by WVSD; Attend by Pub Works Supt/Supvrs; Hosted by WVCWP

		Annual S/D & Streets Oper. & Maint. Meeting WVSD & WVCWP Storm Drain and Street Maintenance Operation & Maintenance Supervisors meeting. - evaluate status of annual storm drain cleaning and provide training on maintenance issues. Rural public works BMPs and Street Sweeping BMPs may be included in this workshop.	LOS GATOS: The annual WV Storm Drain Op & Maintenance Supervisor's workshop was held on June 20, 2008 at Campbell Community Center. See Training Table for staff attendance. Staff from WVSD, WVCWP, and the other WV Communities also participated. Topics included: • The WVCWP Program Assistant presented on the current NPDES Permit requirements and the possible future requirements of the MRP. • The Environmental Specialist from the City of Sunnyvale gave a presentation on Sunnyvale's storm drain catch basin insert pilot program.	Mtg lead by WVSD; Attend by Pub Works Supvsrs/ Supt. Hosted by WVCWP
	C/I item -Source Control Measure	Storm Drain Stencils or Signage Continue to replace and/or upgrade storm drain stencils or signage on storm drains or catch basins, as needed. Stencils will be replaced with the type of stencil most appropriate for the location.	LOS GATOS: The number of storm drains inlets in the Town is approximately 1,200. Signage is replaced when no longer legible or bent when metal signs are used. Thermoplastic storm drain stencils are being applies selectively.	Public Works Maintenance Division; Maint Worker II for signs & Lead Maint Worker for stencils
Street Sweeping/ Pavement Management				
	URMP - Street Sweeping	a. Street Sweeping Program Residential swept monthly; arterials and commercial /industrial areas once weekly; commercial/ downtown at least once/week (with Town's regenerative air sweeper). A standard broom sweeper is used for additional cleanup in heavy leaf drop areas; other noted areas cleaned more frequently and as needed (construction zones - swept by responsible party).	LOS GATOS: The Town of Los Gatos has approximately 110 miles of curbed streets, which are swept on a three (3) week schedule. All sweeping is conducted with Town equipment operated by Town staff. In heavy leaf drop areas, a front-end loader/dump truck crew removes leaves prior to street sweeping. All residents and businesses are required to utilize large recycling bins for leaves and other yard waste as part of their trash collection service.	Street Sweeping Staff LG has its own sweeper – they bought a new one a few years ago

Wkrs.) Leader: Jack Lovell, WVCWP Inspector Topics Covered Included: Review of SWPPP, Proper Spill Handling/Cleanup, Secondary Containment, Vehicle Washing, Training, Record Keeping, and Storage of Pesticides, Street Sweeping Data, E-waste Drop-off Sites, Requirements concerning Disposal and Record Keeping for Products Containing Mercury.	PW Dir coord. Staff training

Public Agency Activities: Operations and Maintenance Evaluation

Storm Drain Maintenance: In FY07-08, West Valley Sanitation District (WVSD) provided its third enhanced annual report to the cities on storm drain cleaning. Since June 2007 the reports have listed the structures that were inspected and cleaned with the maintenance crew's findings. A total of 1,254 structures were inspected.

- Of those inspected, 808 were found without any debris and were noted as "clean."
- Of those inspected, 446 had some visible debris upon inspection.
- Of those 446 that had visible debris, 49 had 10 pounds or more of debris and required cleaning
- Of the 49 storm drains that required cleaning, 41 required excessive/additional (50Lbs+) cleaning

Crews noted the weight and type of debris removed. Descriptors for solids removed are: leaves/paper, mud/dirt, foreign object, rocks/stone, sand/gravel, oil/soap and roots etc. The reports are generated from a database of numbered storm drain locations with the street names. The WVSD reports were distributed at the annual Storm Drain workshop on 6-20-08 and will be reviewed by WV cities as they determine future management actions for trash problem areas.

Storm Drain Stencils: The Town's decision to go back to using painted stencils for most applications, and using thermoplastic storm drain stencils in selected areas, is working very well. The Town decided to use thermoplastic stencils in selected areas because they are reflective, they adhere well to coarse and uneven surfaces and can withstand heavy traffic. The downside of using thermoplastic stencils is the cost (about $250 per stencil, installed) and they must be applied to a horizontal surface, preventing their visibility from a distance. Santa Clara County staff asked the WVCs for a recommendation on where to purchase metal plaques similar to those previously installed by the West Valley Cities. West Valley reported that municipal staff have discontinued application of the metal plaques because the sharp edges have a potential to get caught in street sweepers and bend, creating a potential to injure pedestrians or bicyclists. Replacing the plaques was also a problem. When plaques came loose or were removed, concrete chunks crumbled from the curb with the screws (used for attaching the plaques) making replacement in the same spot impossible.

Street Sweeping: The Town collected 3,996.5 cubic yards of debris in FY07-08. The Town generally sweeps the downtown commercial area weekly, and more often as needed. Therefore, the number of commercial curb miles swept will vary from year to year. The Town's a new regenerative air PM10 sweeper appears to collect more dirt and debris per mile swept than the old sweeper.

Lc atos

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

In FY05-06, the Town of Los Gatos provided training to all the West Valley Cities by presenting their new Street Sweeper at a WVCWP workshop in June 2006. The Town's PW Superintendent answered questions from other municipal staff about cost and maintenance and gave a brief talk on why this model of sweeper was selected. The regenerative air sweeper is certified to pick up more, and generate fewer, small particles, which account for 5% to 7% of the material on the average street but contain over 60% of the pollutants targeted by EPA under the Clean Water Act. (Statistics were provided by Ranger Kidwell-Ross, speaker for World Sweeper.com at a street sweeping workshop held on 5-8-06 in San Jose).

Yard Waste - Curbside Collection and Recycling: The West Valley yard waste recycling program reduces the amount of debris that gets into the storm drain, since leaves are collected in oversized bins rather than being stored in the street. In FY 07-08, the total yard waste collected rose sharply from the previous two years for all West Valley cities. The reason for the increase is due to the garbage collection service's reporting methods. The totals were given for all diverted waste. Totals for yard waste recycled were not provided. The WVCWP asked the garbage collection company to provide separate yard waste totals for FY 08-09.

Training Evaluation: The WVCWP Storm Drain Maintenance Workshop (6/20/08) drew more staff participation this year. Municipal staff evaluated the workshop as having "All useful and pertinent information." Another response noted, "Today a new topic was covered about full capture. I would like to learn new BMP's in the future". It was evident that BMPs are being used by municipal staff but there was some frustration among street and park maintenance workers because they don't have enough authority to convince residents and private contractors to keep pollutants from reaching the storm drain system. The WVCWP Inspector offered his card to all attendees and requested that they report any incidents to him for immediate follow-up. One challenge is to catch the violator in the act of allowing pollutants into the storm drain system. By the time the incident, or the result of the incident, is seen it is often too late to stop it. The maintenance crews are generally called to clean up spills. Attendees requested continued updates on the MRP requirements for storm drain maintenance and street sweeping practices. Several of the attendees stayed after the workshop for additional discussion among the cities.

Corporation Yard SWPPPs: Los Gatos Corp Yard Walk-Thru

May 29, 2008

7:30 – 8:30 am

Attendance: 19 Town Staff Attended (2 Superintendents, 1 Facility Mgr., 1 Mechanic, 15 Maint. Wkrs.)

Leader: Jack Lovell, WVCWP Inspector

Topics:

- Review SWPPP
- Proper Spill Handling/Cleanup
- Secondary Containment
- Vehicle Washing
- Disposal of and Record Keeping of Products Containing Mercury (Mercury Booklet)
- Pesticides; Training, Record Keeping, and Storage
- Street Sweeping Data
- E-Waste Drop Off now at Goodwill Drop Off Sites
- Sign In Log; including name and job title
- Reminder of Upcoming Street Maint. & Storm Drain Supvs. Training on June 20.
- Took Pictures to Document

Rural Public Works Activities				
Source	**Task Source**	**FY07-08 Work Plan Tasks**	**FY 07-08 Accomplishments**	**Responsible Party**
Rural Public Works Perf Std	Rural Public Works Perf Std	Performance Standards Implementation Evaluate the effectiveness of Rural Public Works BMPs used on applicable maintenance activities (if any) regarding: a) management and/or removal of large woody debris and live vegetation from stream channels; b) stream bank stabilization projects; c) road construction, maintenance, and repairs in rural areas to prevent and control road-related erosion; and d) environmental permitting for rural public works activities. Report on these activities in the Annual Rpt.	LOS GATOS: During the 2007-2008 reporting year, the Town of Los Gatos complete the resurfacing of the roadways in the hillside areas on Jackson St, Oakhill Way, Grove St, Central Ave. Orchard St. Completed creek clean up and live vegetation removal in creek basins along Smith Creek, Almedra Creek, and along Shannon Rd and the West Main St. trouble spot invert.	Maint Supt and staff, Report to WVCWP for annual report
Training	FY07-08 Work Plan	Appropriate municipal staff or contracted staff will receive annual training on the use of current BMPs and SOPs, as noted in the performance standard. BMPs and SOPs may be reviewed as part of the annual WVCWP Street Maintenance Supervisors meeting.	LOS GATOS: All Rural Public Works efforts performed in 2007-2008 were performed by licensed contractors who by contract met and conformed to all BMP's and SOPs noted in the performance standards. BMPs and SOPs were reviewed as part of the annual WVCWP Street Maintenance Supervisors meeting and four (4) Los Gatos maintenance staff attended.	PW Dir coord. w/ Maint Supt and Maint Staff

Rural Public Works Activities Program Evaluation

Stormwater BMPs are discussed in pre-construction meetings with contractors; the Town inspects all contracted rural public works work in its jurisdiction and ensures the use of stormwater quality and erosion control BMPs. No CIPs involving Rural Public Works were conducted this year. Maintenance work included clearing of shoulders to prevent erosion and debris runoff during the rainy season. When future construction of Rural Public Works takes place, measures will be implemented for erosion prevention. All CIP projects involving rural road work includes specific guidelines on stormwater BMP's as a part of the bid package and construction documents.

Yard Waste Recycled

FY05-06: An annual total of **9,250.7 tons** of yard waste was picked up by garbage collection service.

FY06-07 Residents and businesses recycled 4,052.4 tons of yard waste using Waste Management garbage collection service from July '06 to the end of January '07. In March the West Valley Cities changed contractors; the total amount of yard waste recycled using West Valley Collection and Recycling from 3/1 to 6/30 2007 was reported as 2,046 tons for a combined **total of 6,098.4 tons.**

FY07-08: An annual total of **19,236 tons** of diverted waste was picked up by garbage collection service. *

* Diverted waste totals are not representative of yard waste collected. Diverted waste totals include all waste that is diverted from landfills. The WVCWP asked the garbage collection company to submit separate totals for yard waste collected for FY 08-09.

FY 2007-2008 ANNUAL REPORT

C.3.e Operation and Maintenance of Treatment BMPs				
BMP Inspection Program O&M Verification	Permit C.3.e.iii	Provide details of O&M verification program in each annual report. Note organizational structure, evaluation of effectiveness, and proposed improvements. List or summarize treatment BMPs inspected during the year, inspection results, and required follow-up through resolution.	LOS GATOS: The Town has not yet conducted any BMP O&M inspections. Los Gatos has two regulated C.3 projects still under construction. After a project is completed, the Town Engineering Inspector will perform annual BMP inspections. Any enforcement issues will be referred to the Los Gatos Code Enforcement Officer for further action.	Public Works Engineering staff
Training & Evaluation	Work Plan	Training & Evaluation Continue to provide training to inspectors and data managers on O&M verification program requirements. Discuss evaluation of effectiveness and planned improvement to the program	Annual C. 3. Workshop: "Sharing Experience with Implementation of Stormwater Requirements at Development Projects" Tuesday, June 3, 2008 Topics included: shared experiences of O&M Inspection programs by two municipalities See Also: Training Table below for list of Workshops, Training, seminars or meetings which municipal staff attended	SCVURPPP and WVCWP to provide training or present Training Opportunities to Municipal Staff
			LOS GATOS: Admin analyst in PPW shared O&M verification program w/ Dept. Management team for discussion at Dept. Staff Meeting	Town's WV Rep, WVCWP
C.3.f Hydromodification Management Plan				
HMP – Hydrograph Modification Mngmt Plan	C.3.f	Continue implementing the HMP as part of requirements for qualified Group 1 projects that may cause increased erosion or other related impacts.	LOS GATOS: The Town implemented the HMP for Group 1 projects on 10-20-05. There were no HMP-regulated projects in FY07-08. Due to the nature of expected developments, the Town does not expect many projects will be subject to these requirements over the next few years. However, Public Works staff will continue to track regional implementation of the HMP.	Associate Civil Engineer
Training		Continue to provide incremental training on HMP requirements to City staff after adoption of the MRP via SCVURPPP workshops and/or WVCWP in-house staff training.	To stay informed of the most recent HMP developments, the WVCWP Mgr participates in the C3PO AHTG meetings. Proposed revisions to the HMP were reviewed during the West Valley Communities' round table discussions regarding the draft MRP in December 06 and June 07. To stay informed of the most recent HMP developments, the WVCWP Mgr attended HMP Briefing Meeting September 18th, 2007.	SCVURPPP Eng Div Plan. Div WVCWP to coordinate

Los Gatos

FY 2007-2008 ANNUAL REPORT

HMP Reporting	C.3.f.viii	Summarize development and implementation status for projects incorporating HMP measures and provide details to WVCWP staff for Annual Report.	LOS GATOS: There were no HMP-regulated projects in FY07-08.	Town's WV Rep & Assoc. Civil Engineer
C.3.g Waiver and Compensatory Mitigation Program				
Waiver Program or Alternate Compliance	Permit C.3.g.	Currently Municipality does not offer an alternate compliance option to developers of Group 1 or Group 2 projects. No changes are expected to this approach in FY 07-08 unless regional watershed projects become available to support.	LOS GATOS: Currently Municipality does not offer an alternate compliance option to developers of Group 1 or Group 2 projects. No changes are expected to this approach in FY 07-08 unless regional watershed projects become available to support.	Eng Div
C.3.h Alternate Certification				
Alternate Certification reporting	Permit C.3.h	Report on all projects that are certified by someone other than municipal staff and the mechanism for ensuring outside certifiers are qualified.	LOS GATOS: The Town does not certify C.3 compliance for private projects. Typically projects listed in the project annual report tables, part 1 and part 2, would be certified according to the following procedure: the project applicant is responsible for having all stormwater measures certified for adequacy, according to the requirements of Provisions C.3.d & C.3.f and C.3.h. Additionally, the Town uses the lists of qualified civil engineers approved by the City of Sunnyvale and BASMAA to determine who is allowed to certify C.3 compliance for private development projects.	Town's WV Rep
C.3.l General Plan Update				
General Plan	Permit C.3.l	At next planned update, revise General Plan to reflect principles and policies to address requirements for development projects.	LOS GATOS: The Town's General Plan was revised in 2000. The General Plan updates are scheduled every ten years. (2010)	Assoc Planner & Town's WV Rep
C.3.n Reporting Requirements				
C3 Project Reporting	Permit C.3.n.i.	Report details required by the Permit for all Group 1 and Group 2 projects that received final approval for construction during FY07-08. E.g. list project name, location, type, deemed complete date, final approval date prior to grading, project size, amt impervious	LOS GATOS: See the attached table, Part 1 of the Los Gatos New and Redevelopment Projects Reporting Forms.	PW Engr. Div. Staff to collect data

		surface, watershed, developer name and S/W measures and treatments used.		
C3 Project Reporting	Permit C.3.n.ii.	For Group 1 and Group 2 projects, provide details in the annual report on the S/W treatments used, the sizing criteria, O&M verification status, any follow-up action, site design measures used, source control measures used and pesticide reduction measures required.	LOS GATOS: See the attached table, Part 2 of the Los Gatos New and Redevelopment Projects Reporting Forms.	Town's WV Rep provide data to WVCWP staff
Report Pesticide Reduction Measures	NPDES Permit Provision C.3.n.iii	For Group 1 and Group 2 projects, report on the percentage of projects for which pesticide reduction measures were required.	LOS GATOS: Los Gatos has an irrigation efficiency ordinance to promote use of less water and minimize runoff that can carry pesticides/fertilizers into local waterways. Town Code 26.40.030– encourages protection and preservation of native species, natural areas, and designs to minimize irrigation runoff. The Town's "Hillside Design Guidelines' limit the amount of non-native plants that can be used in new developments. A pesticide reduction fact sheet is given to all project applicants.	Assoc. Civil Engr. & Assoc Planner provide info to WVCWP staff

Planning Procedures Evaluation

Town Public Works staff continues to coordinate reviews with the Community Development Department to ensure that all development projects have written conditions to meet storm water quality requirements. In addition, Public Works staff assists developers and their design team members with C.3 technical and legal issues (specifically the BMP O&M agreement).

The Town's Public Works Director has followed the development of proposed MRP requirements with assistance and analysis by the Sr. Engineering Technician and the Public Works Analyst. Town staff, as part of West Valley monthly meetings, continues to examine and discuss feasible ways to implement some of the more challenging C.3 requirements proposed in the draft MRP.

In FY07-08 the Town of Los Gatos participated in the Water Resources Protection Collaborative. The Collaborative was enacted in an effort to clarify and streamline local permitting for streamside activities, representatives from the water district, cities, the county and business, agriculture, streamside property owner and environmental interests created a partnership known as the Water Resources Protection Collaborative. The approach makes a clear distinction regarding governance. Municipal organizations will continue to exercise their land use authority. The Collaborative developed model Guidelines and Standards which will serve as a basis for the District and municipal organizations to implement as appropriate. Each municipal organization will develop and apply these standards as needed for their jurisdiction. The Town of Los Gatos adopted these guidelines in early 2008.

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Training Summary: Planning Procedures

Training Description	Date	Attendees
HMP Briefing Meeting **By**: WVCWP/ SCVURPPP **Speakers:** EOA/ SCVURPPP **Topics covered included:** Background on Current HMP Applicability Map, Water Board and Co-Permittee Concerns, Discussion of Alternatives for Map Revisions, Discussion of Impacts in Specific Areas, and Next Steps.	September 18, 2007	**WVCWP (1)** Manager **Campbell (1)** Sr. Engineer **Los Gatos (1)** Engineer **Monte Sereno (1)** Engineer **Saratoga (1)** Engineer
HMP Update at WV Meeting **By:** WV CWP **Speakers**: WV Pgm Manager **Topics covered included**: Background on Current HMP and proposed HMP requirement in MRP, Water Board and Co-Permittee Concerns.	September 25, 2007	**WVCWP (1)** Manager **Campbell (1)** Sr. Engineer **Saratoga (1)** PW Analyst
Reining in the Rain: Watershed-Friendly "Low Impact Development" Site Design, Permeable Pavements, Planning and Funding Strategies for Stormwater Management **By:** Coastal Commission **Speakers**: A. Wanger, CA Coastal Commission; T. Lawrence, Center for Water & Land Use, UC Davis Ext; J. Bicknell, EOA/CASQA, B. Wolfe, SF RWQCB; Mitch Avalon, Contra Costa PW; A. Youngs, CA-NV Cement Assn; B. Milar, CA Asphalt Pavement Assn; D. Smith, Interlocking Concrete Pavement Institute **Topics covered:** Resource-Based Land Use and Planning, Low Impact Development-the How's and Why's, LID Stormwater Treatment and Hydromodification Management, Regional Perspective on LID Regulation & Implementation, LID and Flood Control. Afternoon session TRACK A workshop: Permeable Pavements *plus* Stormwater NPDES Compliance or TRACK B workshop: Learn, Plan, and Act on Local LID.	April 23, 2008 (Oakland, CA)	**WVCWP (2)** Manager Program Assistant
Reining in the Rain: Watershed-Friendly "Low Impact Development" **By**: Coastal Commission **Speakers**: E. Neale, Resource Conservation District of Santa Cruz County; A. Wanger, CA Coastal Commission; T. Lawrence, Center for Water & Land Use, UC Davis Ext; E. Berntsen, SWB/Stormwater Section; R. Fatoohi, Santa Cruz County; A. Youngs, CA-NV Cement Assn; B. Milar, CA Asphalt Pavement Assn; D. Smith, Interlocking Concrete Pavement Institute; R. Ketley, City of Watsonville; B. Markowitz, EarthCraft Design; S. Peterson/ J. Janceki, Janecki & Assoc, Inc; R. Cooper/ P. Hasse, Fall Creek Eng, Inc **Topics covered**: Resource-Based Land Use and Planning, Low Impact Development-the How's and Why's, LID Stormwater Treatment and Hydromodification Management, Regional Perspective on LID Regulation & Implementation, LID and Flood Control. Afternoon session TRACK A workshop: Permeable Pavements or TRACK B workshop: Implementing LID Locally	April 25, 2008 (Santa Cruz, CA)	**Saratoga (2)** Public Works Analyst Building Inspector

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

CONSTRUCTION INSPECTIONS

FY 2007-2008 Work Plan Self Evaluation Matrix

Source	WP Task	Work Plan Tasks	Accomplishments	Responsible Party
	URMP	Staff Training Participate in and support RWQCB and Program- sponsored workshops on erosion control and construction BMPs; support distribution of related materials.	WVCWP Manager participated in the C3PO AHTG meetings to present summarized information at West Valley monthly meetings and encourage feedback, as appropriate, from West Valley Co-permittee's. Los Gatos' Sr Engineering Technician and an Associate Planner attended C3PO meetings in FY07-08 to keep the Town's Community Development and Engineering staff informed about C.3 project implementation from the other Santa Clara co-permittees and to stay informed about any updates to planning procedures requirements. Building Inspector attended Annual C. 3. Workshop: "Sharing Experience with Implementation of Stormwater Requirements at Development Projects", Tuesday, June 3, 2008	WVCWP to coord w/ SCVURPPP; inspectors to attend training
	URMP	Construction Inspections Continue construction site inspections and follow-up for stormwater issues (i.e., mud tracking, mat'l storage, housekeeping, etc.). Document sites inspected and note any violations through final resolution. Report violations to WVCWP for Annual Report.	Town Code Sec. 12.20.010 et seq., requires erosion and sediment control materials to be onsite by October 1st and in place before October 15th. Once-a-week inspections, and additional inspections during and after every major storm, are carried out by Town Engineering staff on all sites with active grading permits. During FY06-07 the Town had 21 active grading permits. Engineering Inspectors check for erosion control, proper materials storage and disposal and other construction-related Best Management Practices.	Eng & Bldg Inspectors WV Inspector by referral

Los Gatos

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

FY0607 Construction Inspection Evaluation Los Gatos

Construction Site Evaluation:

FY 07-08		FY 06-07	
Complaint not found	1	Accidental Spills	1
Non-Haz Mat'l - uncovered	1	Allowable Discharge	1
Grey water/washwater	3	Dirt Tracking	2
Water Line	1	Outside of Town's Jurisdiction	2
BMP Maint	1		6
	7		

The Construction Inspection Program currently works well due to coordinated efforts between the Town's engineering inspectors and the WVCWP Inspector. Potential incidents reported by other agencies or citizens, are inspected and re-inspected until resolution is achieved. Six ICID reports were found to be at construction sites during FY0708, and this is comparable to last year, when the WVCWP Inspector responded to six (6) construction-related incident calls for the Town. Both of the dirt tracking sites were revisited in FY-07-08. The number of incidents in Los Gatos has dropped from seventeen (17) in FY04-05 to seven (7) in FY05-06 and then to (4) in FY06-07 (within the Town's jurisdiction). Two incidents in FY06-07 were outside the Town's jurisdiction, totaling six incident calls for FY06-07. However, the number of reported incidents may increase when WVCWP's half-time Inspector has time for drive-by inspections to watch for minor remodeling jobs, which do not require a permit. Smaller home improvement jobs i.e. painting, landscaping, re-flooring, re-tiling and concrete replacement, etc. can go unnoticed, but do contribute to stormwater violations. In FY06-07 the WVCWP inspector spent most of his time responding to incident calls and conducting pro-active inspections of restaurants and vehicle maintenance facilities.

Construction Site & Erosion Control Training – Three of the Town's Public Works Engineering staff attended a WVCWP training meeting on June 27, 2007, which was planned for Saratoga construction inspection staff. Town staff asked to be included to ensure stormwater training for their new Engineering Inspector. During FY06-07 the WVCWP Mgr made it a priority to provide additional training on construction inspection requirements and to encourage self evaluations of municipal inspection programs. Several WV meetings and municipal training sessions were held to discuss BMPs, URMP requirements and documentation of inspection activities. Early in FY06-07 it was determined that inspectors would benefit from a review of documentation requirements. Continued public outreach efforts and further training and communication among municipal inspection staff and the WV Stormwater Inspector have served to develop a coordinated and effective construction inspection program in Los Gatos.

The Town plans to update the plan sheet, Blueprint for a Clean Bay. Due to Engineering Dept staff changes this did not happen in FY06-07. Additional staff time was spent reorganizing, hiring and training. With the new State General Permit expected in 2007, the update of Blueprint for a Clean Bay will be considered for FY07-08, but will be contingent upon the amount of staff time needed for review and implementation of the new MRP.

Source	WP Task	FY07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
A. SCV PROGRAM - PROJECTS/SUPPORT				
	NPDES Permit, Provision C.4, C.9 & Pest Mgt Plan (PMP)	a. Watershed Education and Outreach Campaign Help to develop/implement ongoing watershed education and outreach campaign. WVCWP Mgr assists via WEO Ad hoc Task Group. Participate in campaign development and special projects, e.g. community events. Campaign will include funding for educational programs at the Alviso Ed Center and funding for ZunZun performances in local schools. See SCVURPPP FY07-08 Watershed Watch Work Plan for details.	WVCWP Pgm Mgr assists via participation in the Watershed Education and Outreach Ad Hoc Task Group. WVCWCP helped plan and implement the Watershed Watch campaign, aimed at IPM and Mercury Pollution Prevention, in the fall of 2007. *Watershed Watch Media Campaign* The FY07-08 campaign featured ongoing IPM and Mercury ads in community newspapers. The WV communities, (along with 3 other cities and the County Integrated Waste Mgmt Division) contributed additional funds towards local media buys. WVCWP regularly provided staff support for Program outreach events. *Haunt the Hollow Halloween Event on Sunday 10/28/07* 1 WVCWP staff member & 1 WVCWP volunteer assisted at this event wearing costumes, they handed out educational materials and gave visitors an opportunity to complete a watershed survey. The survey had two questions one regarding fluorescent light disposal and the other pertaining to the treatment or lack of treatment of water that flows down the storm drain. The completed surveys were collected and tallied. Surveys with contact information were entered in a drawing. Two winners each received two tickets to Gilroy Gardens. The theme park is a Watershed Watch partner.	WVCWP Staff

Public Information/Participation Program EVALUATION - *SCV Program Projects/Support*

Pesticide User Outreach - STORE PARTNERSHIP:
Managers of Summerwinds Garden Center in Campbell have shown their interest in less toxic products. Summerwinds' store management chose to participate in the IPM store partnership. A consultant representing SCVURPPP's Watershed Watch and OWOW campaigns worked with the Campbell store to increase shelf space and display exposure for the promotion of less-toxic products.
SCVURPPP's Watershed Watch procured a partnership with: local nursery (Yamagami's), 2 car wash companies (w/ total of at least 6 locations), paint store (Kelly Moore) and local park/zoo (Happy Hollow) to participate in annual Discount Card Program. The Watershed Watch Discount Cards were distributed by SCVURPPP to patrons of Classic Car washes over 2hrs on four consecutive Wednesdays in May/June. WV CWP distributed Cards at the April 26 National River Clean-up Day (75 cards), Los Gatos Public Works Open House (30 cards) and to PW Staff who attended the annual SD & Street Maintenance Supervisors Training Meeting (20 cards).

B. WVCWP PROJECTS

GENERAL OUTREACH

General	NPDES Permit, Provision C.4 and C.9	a. Distribute Materials. Distribute public information materials at civic centers, libraries, building and planning department counters and similar venues. Maintain a website (and phone request line) for public requests and distribution of materials.	July 9, 07 contacted Nancy Higgins, instructor for Community Education course on organic gardening for residents. Delivered materials for 2 classes, one in Campbell and one in Los Gatos. Provided 2 Site Design Guidelines books featuring pervious surfaces for driveways and patios and rain gutter downspouts directed to landscaping. Provided Grow It Guides, OWOW pocket guides for natural pest control and other about 40 – 50 copies of smaller ed material. Nancy requested an Enviroscape Presentation for her adult ed classes. Will arrange is time is permitted away from AR ********** Haunt the Hollow EVENT 10-28-07 1 Master Gardener; 150 HHW English; 11 Mercury; 300 Environmental News Quiz; 30 Gutter Getters; 2 Diazinon; 20 Our Water Our Word Magnets; 50 Watershed Watch Discount Car Wash Coupons	WVCWP Staff

General	NPDES Permit, Provision C.4 and C.9	b. Participate in Local Community Events Promote watershed messages by participating in local community events (e.g., farmers market, festivals, creeks clean-ups, etc.).	September 30, 2008 Silicon Valley Roller Girls Carwash Fundraiser Hamilton Ave, Campbell The WVCWP Inspector distributed the carwash kit and ensured proper installation and use during the Silicon Valley Roller Derby Girls Carwash. ********** April 19, 2008: Town of Los Gatos Green Event, by WV Greenleaf Committee Table Hosted by volunteer resident to distribute information on WVCWP. Materials distribute included; Water bottles (10), Grow it! Guides (28), Clean it! Guides (38), Clean Creek Pencils (13), No Dumping Pencils (25), Gutter	WVCWP Staff and available Municipal Staff

			Getters (10), Mercury Pamphlets (25), Pest or Pal Children's Activity Book (12), Watershed Kits (23), Paint Sticks (45), Thermometers (17), Pledge pins (2), Cartoon T-Shirts (6). ********** Saturday September 15, 2007 International Coastal Cleanup Day San Tomas Aquino Creek Clean up @ Westmont High Host Clean-up Event, coordinate volunteers, distribute information, collect trash surveys. ********** Watershed Watch Campaign – Car Wash Promotion Delta Queen Classic Car Wash 981 E. Hamilton Avenue, Campbell Wednesday, June 4th 7-9 am WVCWP Staff participated in the event at the Classic Carwash. The WVCWP staff handed out approximately 40 Watershed Watch Discount Cards.	
			Saturday April 12, 2008 Great American Pick-up and Keep California Beautiful Campbell Clean up Event @ Los Gatos Creek Park For more information visit http://www.ci.campbell.ca.us/General/CommunityCleanup/CommunityCleanup.htm	Municipal Staff WVCWP Staff
			Los Gatos Public Works Open House Thursday 22nd, May 2008, Los Gatos Corporation Yard Approximately 20 students from Village School's kindergarten class and 34 students from St. Mary's attended the Open House. The WVCWP gave a presentation on watersheds and pollution prevention. Topics covered included mercury, copper, car washing and littering. Approximately 15 T-shirts, 25 water bottles, 20 gutter getters, and 5 activity books were distributed.	Municipal Staff WVCWP Staff
			Saturday September 29th , 2007 Saratoga Commuity Creek Cleanup Event Host Clean-up Event, coordinate volunteers, distribute information, collect trash surveys.	Municipal Staff WVCWP Staff

Los Gatos

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

General	NPDES Permit, Provision C.4 and C.9	c. Prepare Newsletter Articles/ Press Releases Prepare and contribute articles/ press releases of interest to the City newsletter and/or local media. Topics such as HHW disposal, pesticides, mercury, trash and copper/nickel will be promoted.	A front page article entitled "Maintaining Your Pool and Spa" was circulated to all Monte Sereno residents in August of 2007. ********** In August 2007 Monte Sereno circulated a newsletter that highlighted the dangers of toxic pesticides, such as diazinon. **********In the Fall of 2007 the Town of Los Gatos distributed their community newsletter, *Vista*, to all Los Gatos residents. The Newsletter gave details on Los Gatos' effort to be more "green", as well as revisions to Los Gatos' general plan, which will address stormwater issues. ********** SCV URPPP "Watch out for mercury pollution!" advertisement appeared in the March 18th, 2008 and the April 8th 2008 editions of the Saratoga News, Los Gatos Weekly & Campbell Reporter. ********** Campbell website published article on 'Keep California Beautiful Creek Clean-up Event', which occurred on April 12, 2008. ********** Article entitled "Green Leaf hoping to blossom in 2008" News articles on Beneficial Bugs – IPM, HHW cartoon, Car Washing & Car Washing cartoon. Printed in Spring Edition City of Saratoga newsletter for all residents "The Saratogan". ********** Article entitled "Green Leaf hoping to blossom in 2008" appeared in the January 15th, 2008 edition of the Saratoga News. The article noted the combined efforts of local citizens in a continued effort to expand the local Green Leaf Committee. ********** SCVURPPP advertisement entitled "Watch Out For Toxic Pesticides" appeared in the Saratoga News, Los Gatos Weekly, & Campbell Reporter on June 3rd, 2008.	Municipal Staff WVCWP Staff

			********** WVCWP prepared news articles on Beneficial Bugs – IPM, HHW cartoon, Car Washing & Car Washing cartoon. Printed in Summer edition of City of Saratoga newsletter for all residents "The Saratogan". ********** West Valley Communities' Solid Waste Franchisor (garbage & recycle hauler) publishes a quarterly newsletter and distributes to all residents. Topics in Spring 2008: Donate, recycle or sell (garage sales) usable goods rather than tossing; Drop off e-waste, Proper disposal of batteries, fluorescent bulbs, aerosol cans & paint cans; Green Waste; 10 Simple Ways to Celebrate Earth Day; Less Toxic options for Cleaning ('Clean Green').	
			Related Articles posted by Others: Advertisements for the "International Cleanup Day" appeared in the Saratoga News, LG Weekly & Campbell Reporter during August/September 2007, funded via Creek Connections Action Group ********** News article appeared in the Los Gatos Observer entitled "Los Gatos Family Raises $9000 for Cole Family" on October 26th, 2007. The article gave credit to the Town of Los Gatos and the WVCWP for their efforts to prevent run-off from the carwash from entering the storm drain system. ********** Advertisement "A bright Idea" appeared in the February 19, 2008 edition of the Los Gatos Weekly Times (and other local newspapers). The Advertisement gave tips/locations for fluorescent lighting recycling. Sponsored by PG&E, SCC DEH, SCC HHW ********** News article entitled "Campbell's A Lot Cleaner Thanks To The Efforts Of Volunteers" was on the front page of the Campbell Reporter on April 18th, 2008. The article was based upon an interview with Campbell Staff and highlighted the efforts of Campbell's residents in the 6th annual clean-up event.	

Los Gatos

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

			********** Advertisements for the "National River Cleanup Day" appeared in the Saratoga News, LG Weekly & Campbell Reporter during May 2008, funded via Creek Connections Action Group ********** Advertisement for E-waste collection at Rolling Hills Middle School appeared in the October 9th, 2007 edition of the Los Gatos Weekly Time. ********** News article entitled "Got e-waste? Dump it for free." appeared in the February 19, 2008 edition of the Los Gatos Weekly Times. The article described the electronic waste event that was scheduled to take place on February 23rd in the Whole Foods parking lot in Los Gatos. ********** Newspaper article entitled "Get Your Green On" appeared in the April 15th, 2008 edition of the Saratoga News. The article gave information on the upcoming Los Gatos Environmental Festival to be held on April 19th, 2008. ********** A news article entitled "Garage Sale to feature 220-plus sites" appeared in the May 13th, 2008 edition of the Los Gatos Weekly Times and advertisement in May 6, 2008 Saratoga News. The article/ ad highlighted the upcoming, Community-wide, garage sale that will have an impact on trash reduction efforts. ********** News article entitled " Local Mayors Think Globally, Act Locally With Green Leaf Effort" appeared in the July 10th, 2008 edition of the Saratoga News	
General	CI Item	d. WVCWP Web-Site Maintain and promote cleancreeks.org website; continue to expand and update the site with new educational material and up-to-date topics for the public on HHW, pest management, and other pollutant reduction activities, e.g. for mercury, trash,	Promote WVCWP website (www.cleancreeks.org) via distribution of the popular recycled (blue-jean and money) pencils with imprintedwebsite address and a watershed protection message, at community events and classroom presentations. WWW.cleancreeks.org was included on all outreach materials i.e., flyers, the community event banner, and	WVCWP Staff

		& copper /nickel	written or email responses to public inquiries and calls. WVCWP posts information about Trash Cleanups for National River Clean Up Day and Coastal Clean Up Day on the website Home Page to announce these events. Mercury and Copper issues were featured prior to the April E-waste event. The "Take Action" page was revised to include links to the UC Davis IPM site for residents interested in less toxic pest control. In addition, the page now highlights the question of home and garden chemicals' safety, with links to sites on toxicity information.	
			The City of Campbell posted "Top Ten Development Tips to Protect Creeks" in February of 2008 to its municipal information page for developers; Campbell also updated posts for stormwater checklist and construction trifolds.	
			Los Gatos posted several pages and links related to 'Los Gatos Beautiful' Events (in conjunction with Earth and Arbor Days) – posted on home page late winter/early spring 2008; Updated links to Electronic Recycling events and new link to 'grow greener' tips.	

Los Gatos

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

CITIZEN PARTICIPATION				
Public Partici-pation	Trash Monitoring Work Plan	e. Creek Clean-ups Continue implementation of trash monitoring activity during Creek Clean-ups. Conduct a minimum of two clean-up events per yr (i.e. on Coastal Clean-up Day and National Rivers Day).	San Tomas Aquino Creek Clean up @ Westmont High Saturday September 15, 2007 International Coastal Cleanup Day ********** Saratoga Creek Cleanup Event Saturday September 29th , 2007 ********** Great American Pick-up and Keep California Beautiful Campbell Clean up Event Saturday April 12, 2008 ********** National Rivers Day Lexington Reservoir Cleanup @ Lexington Reservoir Launch Ramp Lot Saturday May 17th , 2008 ********** Add'l Citizen Participation: Cleanup of Saratoga-Sunnyvale Rd from Big Basin Way to Herriman (Sar High School) by resident who has collected 8 bags of trash on 3 Saturdays; WVCWP agreed to make presentation for student's class at Argonaut School and a preview of the Watershed presentation at a school assembly in 07-08 school year	WVCWP Staff
Public Partici-pation	Creek Keepers Campaign started FY00-01	f. "Creek Keepers" Program training Provide training on trash tallying and highlight current trash pollution issues for students and volunteers when they participate in a cleanup event.	Volunteers at the following events were trained on Trash Monitoring. Volunteers proceeded in groups, with some participants filling out the monitoring forms, while their partners picked up the litter: San Tomas Aquino Creek Clean up @ Westmont High Saturday September 15, 2007 International Coastal Cleanup Day Saratoga Creek Cleanup Event Saturday September 29th , 2007 Lexington Reservoir Cleanup @ Lexington Reservoir Launch Ramp Lot Saturday May 17th , 2008	WVCWP Staff

			In conjunction with National Rivers Day	
TARGETED OUTREACH & SCHOOLS				
Target Schools	Expand Outreach to Teachers and Students	g. Schools Outreach: Watershed Ed. Curriculum Continue to build on 5th grade curriculum for WVCWP classroom watershed presentations, consistent with state required education standards. Expand outreach efforts by developing scripts based on state standards, or text books, for other grade levels in response to teacher interest. Evaluate effectiveness and appeal by soliciting teachers' & students' evaluations.	Development of an appropriate script for Kindergarten students was a focus of the 07-08 outreach efforts. The interactive presentations developed for the Kindergarten classes were well-received by teachers and students. Cumberland Elementary, Sunnyvale 10-30-07 30 5th grade students participated in demonstrations and activities. ********** Casa Di Mir Montessori School, Campbell – Presentations for 6-12 year-olds on 2-13-08 ********** Queen of Apostles Private Elementary School – Presentations for 4th and 5th grade science classes on 4-4-08; 70 students, approximately 35 4th graders and 35 5th graders, from the science classes, participated in Enviroscape presentations ********** St. Mary's School, Los Gatos –Presentations for kindergarten classes on 5-6-08; 40 students, approximately 20 in each section.	WVCWP Staff
Target Schools	Based on feedback from Teachers and Students	h. Provide Watershed Education in classrooms Conduct water quality protection education or presentations in local schools, using *Enviroscape* and/or other methods to engage students in Watershed campaign messages. Improve presentation format based on teacher/student feedback.	Cumberland Elementary, Sunnnyvale 10-30-07 30 5th grade students participated in demonstrations and activities. Using 2 simple models, Two WVCWP staff, working with Environmental Volunteers docents, demonstrated the role of the Water Cycle and a participated in an experiment showing how water evaporates and how condensation occurs by using a hot plate, salt water and ice cubes. Second demonstration was a water density kit with a experiment using an egg to show the difference in density between fresh and salt water. ********** Casa Di Mir Montessori School, Campbell – Presentations for 6-12 year-olds on 2-13-08; Approximately 50 students	WVCWP Staff by arrangement w/ Teachers

Los Gatos

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

			between ages 6-12 participated in Water Conservation Day at Casa Di Mir Montessori School. The Director of the Federation of Fly Fishers gave a presentation on water resources and conservation. Montessori School invited the WVCWP to present on watersheds. The WVCWP gave two presentations about urban run-off, pollutants and trash in the Southern San Francisco Bay watershed. The Enviroscape was used to demonstrate urban run-off. ********** Queen of Apostles Private Elementary School – Presentations for 4th and 5th grade science classes on 4-4-08; 70 students, approximately 35 4th graders and 35 5th graders, from the science classes, participated in Enviroscape presentations to learn about reduction of pesticides, proper car washing techniques, erosion control, litter prevention and trash cleanup, safe disposal of HHW. Two separate presentations were given with approximately 35 students in each. School staff videotaped the presentations. The WVCWP distributed 20 T-shirts, 70 pencils, 4 hats, 5 visors, 2 water bottles, 10 "No Dumping" placards, and 4 gutter getters. ********** St. Mary's School, Los Gatos –Presentations for kindergarten classes on 5-6-08; 40 students, approximately 20 in each section. Two Enviroscape presentations were given to educate the students about reduction of pesticides, proper car washing techniques, erosion control, litter prevention and trash cleanup, safe disposal of HHW. The WVCWP distributed 3 T-shirts, 40 pencils, 10 magnets, 4 puzzles, and 20 paint sticks. Approximately 5 mercury brochures were also given to the teachers.	
			<u>Additional School Outreach:</u> Los Gatos Public Works Open House Thursday 22nd, May 2008 Los Gatos Corporation Yard Approximately 20 students from Village School's kindergarten class and 34 students from St. Mary's Elementary School attended the Open House. WVCWP	Municipal Staff WVCWU Staff Support

			gave a presentation on watersheds and pollution prevention. Topics covered included mercury, copper, car washing and littering. Approximately 15 T-shirts, 25 water bottles, 20 gutter getters, and 5 activity books were distributed. ********** SCVURPPP/ Watershed Watch sponsored ZunZun Assemblies 9/26/07 Village Sch, Cmbl, 223 Students 12/6/07 Capri Sch, Cmbl, 640 Students 4/16/08 Casa di Mir Montessori, Cmbl, 115 Students 4/28/08 Campbell Christian, Cmbl, 220 Students 5/29/08 Prospect High Sch SpEd, Stga, 125 Students	
TARGETED OUTREACH				
Targeted Business	Permit Provision C.4	i. Education – Businesses Distribute BMP materials during WVCWP inspections of food facilities and automotive businesses. Discuss relevant educational material with businesses cited for potential stormwater violations.	WV Inspector distributed 40 pool & Spa BMP brochures to Leslie's pool & spa retail outlets during Sept 2007, as a follow-up to newsletter article published by MS. The WVCWP Inspector distributed BMP materials to all restaurants and food facilities that were visited in FY 07-08. Material distributed included: Posters that depict proper mat washing techniques (Good Cleaning Practices' Poster & packet), informational pamphlets on grease and food scraps (WVSD/ SJ POTW FOG program poster), and information on pest control (Don't Set Table for Pests). The WVCWP inspector also distributed educational material to local businesses that may partake in activities that could affect stormwater quality (i.e. 'Vacu-boom' Brochure). This past year there was a focused effort to raise awareness of Mercury pollution and so 'What you don't know about Mercury' packets were handed out at every facility visited.	WVCWP Inspector

Public Information/Participation Program EVALUATION – WVCWP PROJECTS

San Tomas Aquino Creek Clean up @ Westmont High Event Summary
Saturday September 15, 2007; In conjunction with International Coastal Cleanup Day

Summary of Survey completed by Volunteers:
(Based on 30 volunteer response sheets)
Most common pieces of trash collected: Cigarette butts, paper bags, food wrappers, and glass.
Least common pieces of trash collected: Plastic bottles, rubber.
Most Unusual pieces of trash collected: Spray paint cans, bicycle seat, insulation, soccer ball, credit card,
Comments by volunteers
"It was a great experience."
WVCWP Contributions:
Approximately 50 pencils; 25 pairs of gloves; Snacks and drinks for all volunteers.
Results:
30 volunteers worked at the cleanup for 4 hours each. At a minimum wage of $8.00 an hour this would have cost $960 in temporary labor.
19 bags of recyclables = 77 lbs (estimated)
27 bags of trash = 115 lbs (estimated)
Total collected = 192 lbs (estimated)

****

Saratoga Creek Cleanup Event Summary
Saturday September 29th, 2007

Hosting Agency(s): WVCWP; City of Saratoga
Summary of Survey completed by Volunteers:
(Based on 8 volunteer response sheets)
Est. Number of recyclables collected: 6 Bags

Est. Number of trash collected: 43 Bags
Most common pieces of trash collected: Beverage containers, Liquor bottles, and food wrappers.
Least common pieces of trash collected: Metal, cloth, wood, rubber.
Most Unusual pieces of trash collected: Filing cabinet, Oven, and a 30' pipe.
Comments by volunteers
"This Location was so dirty we should do it every 2-3 months."
Items for participating volunteers
10 T-shirts – for all participants; Pencils; 10 pairs of gloves.
Results:
16 volunteers worked at the cleanup for 4 hours each. At a minimum wage of $8.00 an hour this would have cost $512 in temporary labor.
Results were not weighed.

****

Campbell Clean up Event Summary:
Saturday April 12, 2008; In conjunction with Great American Pick-up and Keep California Beautiful
Participating Agencies & Dignitaries
Campbell City Manager, Dan Rich; Campbell Council Member, Dan Furtado; VTA; CalTrans; Volunteer Center of Silicon Valley; Campbell Maintenance Crew Workers; WV Clean Water Program
Summary of Survey completed by Volunteers:
(Based on 29 volunteer response sheets)
Most common pieces of trash collected: Cigarette butts, plastics, paper, glass.
Least common pieces of trash collected: Metal, cloth, wood, rubber.
Most Unusual pieces of trash collected: Luggage, dead birds, dollar bill, shower drain, credit cards, hubcap, rug, unopened/ full juice bottle, hanger, T-shirt, tires, car bumper, and a bicycle.
Comments by volunteers
"It was great exercise!" ; "The water seems twice as dirty as the trails."; "There is too much litter on the ground. People should be responsible for their own trash!"; "I had a great time, see you at the next event!"
Comments by Director of "Volunteer Center of Silicon Valley"
Stephen Quigley (Executive Director) said that he had been visiting various "clean-up" events; noticing an average of 30-40 volunteers per site, he was, however, pleased to find that the Campbell site had approximately 100 volunteers.
Comments by CalTrans
Some areas were *just* cleaned (the week prior) by their Adopt-a-highway/ or other work crew.
Give Away Bags for volunteers
Approximately 70 Bags were handed out; each with a content of:
A pencil, Recycle bag, Volunteer stickers, Flower packet (plant a butterfly garden), Solar/Mercury-Free Thermometer + Mercury brochure, "Stop Junk Mail" brochure, HHW brochure, Oil Rag, Adopt a Creek brochure, Certified Recycle Centers flyer/list, Bio-Hazard Disposal list, E-Waste Recycle list
Other items for participating volunteers
100 T-shirts – for all participants; 8 water bottles for those who shared what they found after the event; 25 Temporary tattoos to the students who participated (from a Campbell school, St. Mary's School of Los Gatos, & other younger children)
WVCWP Contributions:
50 mercury brochures; 50 mercury free thermometers; 50 pencils
* Many Thanks to Group Event Coordinator; Diana Johnson (Who mentioned; it is possible that there may be an article, on the event, by The Campbell Reporter.)
* And a Special Thanks to California's Bottle/Can and Phone Recycling Centers, who provided grants from CRV funds to support this event.

Lexington Reservoir Cleanup @ Lexington Reservoir Launch Ramp Lot: Saturday May 17th , 2008
In conjunction with International Coastal Clean-up Day
Participating Agencies
Santa Clara County Parks, WV Clean Water Program

Summary of Survey completed by Volunteers: (Based on 29 volunteer response sheets)
Most common pieces of trash collected: Paper, plastics, and glass.
Least common pieces of trash collected: Metal, cloth, wood, rubber.
Most Unusual pieces of trash collected: Car seat, tire, street cone.
Give Away Bags for volunteers: Approximately 70 Bags were handed out;
WVCWP Contributions:25 mercury brochures; 25 T-shirts
Results: 35 volunteers worked at the cleanup for 4 hours each. At a minimum wage of $8.00 an hour this would have cost $1,120 in temporary labor. Assuming 20 lbs per bag: 5 bags of recyclables = 100 lbs; 45 bags of trash = 900 lbs; Total collected = 1,000 lbs
Comments by volunteers
"I never knew there was so much trash down here!"
"The water seems twice as dirty as the trails."
"The Police should put the people who litter in jail."

Keep Los Gatos BEAUTIFUL

April is Keep Los Gatos Beautiful Month!

Help celebrate the beauty of our community this April by participating in one of many exciting events taking place in Los Gatos. For more information, click on the link below.

Keep Los Gatos Beautiful 2008

Every April, we celebrate Keep Los Gatos Beautiful Month with a series of events sponsored by the Town and local services organizations. The events focus on protecting, restoring and preserving our local environment. We encourage you and your family to participate.

Keep Los Gatos Beautiful is sponsored by the Town, and funded in part through a state beverage container grant. Please help celebrate our beautiful community by participating in the Keep Los Gatos Beautiful events. If you would like more information, please contact:

Monica Renn

Los Gatos: Growing Greener Together

The Town of Los Gatos has been certified as a Green Business. This program, coordinated by ABAG, is a partnership of environmental agencies that assists, recognizes and promotes business and government agencies who operate in a more environmentally responsible way. The key goals of the program are to promote resource conservation and pollution prevention.

This April, to promote and encourage our own green business practices, we have launched a new Green Business Campaign, *Los Gatos: Growing Greener Together.* Each month we will feature a specific green theme. Town employees will be sent an email highlighting some of our Green Business commitments that relate to the month's theme and offering tips on how to be green at work and at play. These tips and green practices will be available on our website as well. We

Keep Los Gatos BEAUTIFUL

Celebrate the Beauty of Our Community During Keep Los Gatos Beautiful Month!

Children's Earth Day Celebration

Saturday, April 5, 3:00pm

Children 4 and up are invited to celebrate Earth Day at the Los Gatos Public Library in the Children's Room with Wild Things, Inc. Come learn about and see animals from different parts of the world.

Farmers Market

Sunday, April 6, 13, 20 & 27

8:00am - 12:30pm

Visit the following exhibits at Farmers Market during the Month of April:

il 6

- Santa Clara County Home Composting Education Program

April 13

- West Valley Collection and Recycling

April 20

- Valley Transportation Authority
- Los Gatos Parks Commissioners with new Los Gatos Parks & Trails Maps

April 27

- Santa Clara County Household Hazardous Waste Program and Thermometer Exchange

Bring your mercury thermometer in a Ziploc-type bag and exchange it for a free non-mercury thermometer. Thermostats can be dropped off, but not exchanged.

Farmers Market is located on Montebello Way at the corner of Main Street and North Santa Cruz Avenue.

Keep Los Gatos Beautiful is sponsored by the Town of Los Gatos (partially funded through State Beverage Container Grant funds.

Refresh A Planter Box Day

Saturday, April 19, 9:00am

Join the Los Gatos Community Foundation Beautification Committee at the Plaza to pick up trash, pull weeds and clean planters on North Santa Cruz Avenue. Bring gloves, garbage bags and walking shoes. Contact Sue Dinga at smdinga@aol.com

Get Your Green On

Saturday, April 19

10:00am - 4:00pm

West Valley Green Leaf invites you to attend this community event promoting a greener way of life. Come and learn more about green building, driving and living from local vendors, guest speakers and community groups. The event will be held on the front lawn of Los Gatos High School. Contact Zsa Zsa Taylor at

ptaylor365@aol.com

55+ Program Plant Swap

Wednesday, April 23

9:00am - 2:30pm

Adults 55+ are invited to share or swap plant starts, seeds and bulbs at the Los Gatos Neighborhood Center, 208 E. Main Street. Please bring seeds and bulbs in a Ziploc-type bag and plant starters in containers all clearly labeled. Contact Lynnette Vega at (408) 354-2360

Tree City USA & Arbor Day Celebration

Friday, April 25, 1:00pm

The Town of Los Gatos has been named *Tree City USA* by the National Arbor Day Foundation for the 28th year in a row! This award represents the commitment of the Town to preserve and enhance its urban forests.

Join us as we celebrate National Arbor Day and this special recognition with a tree planting ceremony at Daves Avenue Elementary School, 17770 Daves Avenue, Los Gatos. For more information, contact Parks and Public Works at (408) 399-5777

Los Gatos Trail Clean Up

Saturday, April 26

9:00am - 12:30pm

Leadership Los Gatos Class of 2007/2008 and West Valley Green Leaf invite you and your family to participate in this fun Los Gatos Trail Clean Up event.

Meet at the amphitheater behind Borders Books at 9:00am for coffee and pastries. Garbage bags and trail maps marked with areas of interest to clean will be provided. There will be prizes awarded to the participants with the most creative work gloves, hats and boots. Contact Christine Currie at

threegreencommunities@gmail.com

Los Gatos: Growing Greener

As a certified Green Business, the Town is committed to practicing resource conservation and pollution prevention as a standard in our offices. Join us as we kick off, "Los Gatos: Growing Greener," a campaign designed to encourage and promote our green business commitments within our Town offices and throughout the Los Gatos Community. Each month a theme will be introduced on our website with hints on how to make greener choices both at work and at play. Join us as we all grow a little greener together! Visit www.losgatosca.gov/green

Free Electronic Waste Recycling Events

Saturday, April 5
9:00am-4:00pm
Happy Hollow Zoo
1300 Senter Road, San Jose
For more information,
Visit www.hhpz.org

Saturday, April 19
9:00am - 2:00pm
Apple Computer, Inc.
1500 De Anza Blvd., Cupertino

Bring old TVs, computers, monitors, printers, CD players, fax machines, copiers and other electronics. No household appliances will be accepted.

Bring Your Own Bag

Save Money, Reduce Waste & Make A Difference

- According to the EPA, over 380 billion plastic bags, sacks and wraps are consumed in the U.S. each year
- If Californians cut their plastic bag waste in half, it would save over two thousand barrels of oil a day
- Less than 5 percent of shoppers in the U.S. shop with reusable bags
- 1 reusable shopping bag can replace hundreds of single use bags over its lifetime

The following Los Gatos grocery stores offer incentives to shoppers who bring their own bags:

Trader Joe's
Raffle ticket given to enter a $50 monthly drawing

Whole Foods
5¢ credit per reusable bag or a donation to local organization

Nob Hill
5¢ credit per reusable bag

Safeway Stores
3¢ credit per reusable bag

This Keep Los Gatos Beautiful information is also available on the Town's website at:

10 Tips for Greener Living

1. *Install water efficient showerheads & sink faucets*
2. *Bring your own reusable shopping bag to the store*
3. *Carpool to work, school or social functions*
4. *Take your name off unwanted catalog mailing lists*
5. *Shop at local establishments and buy local products*
6. *Compost your kitchen & garden waste*
7. *Only run your dishwasher when it is fully loaded*
8. *Switch to compact fluorescent light bulbs*
9. *Remove unnecessary articles from your car, each 100 lbs of weight decreases fuel efficiency by 1%*
10. *Donate or sell your unwanted items instead of throwing them away...Consider participating in the Community Garage sale*

WEST VALLEY CLEAN WATER PROGRAM

October 12, 2007

Attn: Tom Babb
Department of Pesticide Regulation (DPR)
Pest Management and Licensing
1001 I Street, 3rd Floor, MS-3A
Sacramento, CA 95812-4015

Dear Mr. Babb:

A Proposal for the Santa Clara Valley Green Gardener Training program is being submitted to the DPR Alliance Grant Program by the County of Santa Clara in cooperation with the Santa Clara Valley Urban Runoff Pollution Prevention Program (SCVURPPP). As a member of SCVURPPP, The West Valley Clean Water Program, on behalf of the cities of Campbell, Monte Sereno, Saratoga and the Town of Los Gatos, will provide in-kind staff time as a management team member. This staff time is allotted for the grant period from January 2008 through June 2010 to assist with implementation of this proposal, should it be approved by DPR.

The West Valley Communities support a number of public outreach and education programs which help to prevent storm water pollution and fulfill the requirements of their NPDES Storm Water Discharge Permit. Clean Water Program staff use every opportunity to communicate with the public about Integrated Pest Management (IPM) strategies and benefits. The goal of the proposed program is to provide training to landscape maintenance workers and landscape professionals who may not be aware of the less-toxic methods they can use through IPM techniques. This proposal will provide an opportunity to reach currently underserved businesses and provide outreach to residents regarding the importance of employing landscape maintenance workers who understand and use IPM to promote local storm water pollution prevention efforts.

If you have questions regarding the support of the West Valley Clean Water Program staff for this project, please contact me at (408) 316-1233.

Sincerely,

Cheri C. Donnelly

Cheri C. Donnelly

West Valley Recycles! Spring 2008

BILL PAY THE EASY WAY

West Valley Collection & Recycling has made it easier than ever to pay your bill. Choose the method that works best for you:

Mail: Make your check payable to West Valley Collection & Recycling. Be sure to include the payment stub to get credit for your payment right away. Use the pre-addressed envelope included with your bill.

In Person: We accept payments at our office Monday through Friday from 8 AM - 4:30 PM.

Deliver checks to:
West Valley
Collection & Recycling
1333 Old Oakland Road
San Jose, CA 95112

Pay Online Your Bill Online: Visit our new online payment system at www.wasteconnections.com, click on "Online Bill Pay" and follow a few simple instructions. You must have your current invoice and credit card or debit card information available.

Home banking customers continue to use the remit address:
West Valley
Collection & Recycling
Dept. 1439
Los Angeles, CA 90084-1433

You must have your current invoice available.

Have questions about your recycling service?

Ask Randy

Q: I recycle regularly, but does it really make a difference?

A: Recycling has a huge impact on our environment! Consider the aluminum can-what most people recycle most. More aluminum goes into beverage cans than any other product and if it is thrown away it will still be a can 500 years from now. Yet a recycled aluminum can will be back on the shelf as a new can in as little as 60 days. Now consider this: Recycling one aluminum can saves enough energy to run a TV for three hours—or the equivalent of a half a gallon of gasoline. Keep on recycling!

Spring Cleaning: A Place for Everything.

It's spring. Birds are singing, flowers are blooming and houses are filled to the brim with clutter—the aftermath of a long, cold, winter. From basements to bedrooms to backyards, everything could use a good spring-cleaning. Here are some ideas to make the job easy and environmentally friendly. First, organize what is not trash into labeled piles: sell, donate, recycle. Next, get to work:

- Have a garage sale or even better, organize a neighborhood garage sale.
- Donate your gently used clothing, books, furniture and working appliances to a local thrift store benefiting charity. Some organizations provide pick-up service, and all of them should provide you with a donation receipt to use as a write off on your income taxes.
- Recycle items that can't be reused.
- Request a bulky item pick-up. WVC&R will remove items placed at your curb for a small fee. Just call customer service at **(408) 283-9250** and we will pick up these items on your next collection day.
- Drop off your e-waste. The televisions, computer stuff, and vintage VCRs that didn't get picked up at the big garage sale can be dropped off at our facility. Check out **westvalleyrecycles.com** or call **(408) 283-9250** for a list of acceptable items, hours of operation and directions.
- Batteries, fluorescent light bulbs, non-empty aerosol cans and paints do not belong in our landfill. Check out **westvalleyrecycles.com** ewaste and universal drop off for more information.

IMPORTANT TO NOTE:

WEST VALLEY COLLECTION & RECYCLING, LLC

E-Waste Drop Off Event

E-Waste Drop Off Events will be taking place in West Valley cities soon. Please go to www.westvalleyrecycles.com to find the event in your community. Drop off E-waste such as computers, computer monitors, hard drives, TV's and VCR's absolutely FREE.

Clean Green Waste

Keep your yard trimmings "Green" and your recyclables clean by keeping all garbage out of your green waste and recycling cart. Garbage contaminates recyclable materials.

00080953

RESIDENTIAL

West Valley Recycles! Spring 2008

10 Simple Ways to Celebrate Earth Day – Every Day.

In honor of Earth Day: Ten simple things anyone can easily do to pay tribute to the Earth and care for the earth's environment.

1. REDUCE

Skip the bottled water. It's expensive, and it produces large amounts of waste. Use a reusable water bottle when possible and filter your tap water for drinking, save money and make a big difference.

2. REUSE

Most products we buy cause greenhouse gas emissions during production and distribution. Take your lunch in a reusable lunch box instead of a disposable one. Reuse grocery bags and just say no to disposable utensils.

3. RECYCLE, RECYCLE, RECYCLE

Of course, you already know that recycling saves energy and reduces greenhouse gas emissions. But did you know this? If the recycling rate for aluminum and steel cans, plastic #1, glass, newspaper and corrugated cardboard increased just 10%, 3.9 million more tons of materials would be recycled, saving enough energy to power 1.5 million homes for one year. Check out the recycling how-to page at **www.westvalleyrecycles.com**

Okay, those were pretty easy; why not try some of these?

4. BUY RECYCLED

Purchasing recycled products completes the recycling loop. By buying recycled, you play an important role in making the whole process a success. As consumers demand more environmentally sound products, manufacturers will have to meet that demand by producing high quality recycled products.

5. WALK OR RIDE YOUR BIKE TO WORK OR SCHOOL

Save money on gas and parking while improving your health and dropping pounds. Stop and smell the roses. If you live too far from your office, explore telecommuting, public transportation or carpooling.

6. SWITCH TO CFLs

Switch to the "twisty bulbs," called compact fluorescents or CFLs. These replace incandescent, halogen and other lights around your house to use up to 80% less energy. But remember: All fluorescent lamps and tubes are hazardous waste and must be taken to an authorized recycling facility. Call West Valley Collection and Recycling customer service at **(408) 283-9250** for information.

7. SWITCH IT OFF

Almost 40% of the electricity used to power your home electronics is consumed while they are in standby mode.

Hook up your home computer system and accessories to a power strip that can be switched off each night.

8. PLANT A TREE

A single tree will absorb one ton of carbon dioxide over its lifetime. Shade provided by trees can reduce your air conditioning bill by 10 to 15%. Pretty cool.

9. START A COMPOST PILE

Yard trimmings and food residuals account for 23% of the U.S. waste stream. Natural composting began with the first plants on earth and has been going on ever since. As vegetation falls to the ground, it decays, providing nutrients needed for plants, animals, and microorganisms. It's that simple.

Go to **www.reducewaste.org** to find the 2008 Home Composting Workshop Schedule.

10. MAKE EVERY DAY EARTH DAY

Check out the links page at **www.westvalleyrecycles.com** for events, drop-off sites, how-to workshops and environmental happenings all year round.

Clean Green

Spring. Let in the fresh air. Quick! Because the levels of pollutants indoors can be up to 100 times higher than outdoors, according to the U.S. EPA. Indoor air pollution is due in large part to volatile organic compounds (VOCs) that evaporate from cleaning products that can trigger health problems like allergies and asthma.

Try these simple ingredients you might already have around the house for earth friendly cleaning—like baking soda, vinegar, lemon juice, hydrogen peroxide and borax. They're powerful, safe, and less expensive than chemical alternatives.

- For glass, use a mixture of half white vinegar and half water.
- Baking soda and cornstarch make good carpet deodorizers.
- Clean mildew and mold with a mixture of lemon juice or white vinegar and salt.
- A paste of baking soda, salt, and hot water makes a great oven cleaner.
- Instead of using a store-bought drain cleaner, which likely contains lye, hydrochloric acid and sulfuric acid, try pouring a quarter cup of baking soda down the clogged drain, followed by a half cup of vinegar. Close the drain tightly until fizzing stops, then flush with boiling water.

041206

Why You Want These Bugs in Custody

Most insects found in your garden don't harm plants. In fact, 97% of the insects you see fall into this category! Such insects are called "beneficials" because they benefit the garden by pollinating plants, improving soil, and eating the pests that really harm plants. These hard-working "beneficials" can be a gardener's best friend by keeping problem pests under control naturally, without the use of harmful chemicals.

Making a Positive Identification

Before you stomp on or spray any unfamiliar bugs in your garden, make sure you know the good guys from the bad guys. Remember that most insects go through several changes during their life cycle, so the young (larva or nymph) may look totally different from the adult. And, keep in mind, it is often the "young" of the insect that eats the most pests. This brochure will help you to identify some of the most common beneficials (both adults and their young) found in local gardens. Here are some tips for attracting and keeping beneficials in your garden:

- **Go Undercover:** Provide beneficials with shelter and over-wintering sites by covering bare dirt with an organic mulch like leaves or bark. Remember to leave a small area of exposed soil to encourage solitary native bees that are "ground-nesters."
- **Lure Them Out of Hiding:** Include a variety of different pollen and nectar-rich plants to provide beneficials with a food source – in addition to pests.
- **Crack Down on Crime:** Pesticides (particularly broad-spectrum pesticides that don't target single pests) kill the beneficials as well as true garden pests. Protect beneficial insects by not using pesticides! These chemicals can also run off gardens and lawns with rain and over-watering, entering storm drains – a direct route to local creeks and other bodies of water – where they can harm water quality and wildlife. For information on pesticide alternatives, go to www.OurWaterOurWorld.org.

Bringing in the FBI: Flowers for Beneficial Insects

Most beneficial insects need to supplement their diets with pollen and nectar. You can attract them to your garden, and encourage them to stay and hunt for pests, by offering them a variety of nectar and pollen-rich flowers. Plants with daisy-like flowers or plants with clusters of multiple small flowers are especially attractive to beneficials. Choose a diversity of plants that bloom at different times so that the beneficials can feed throughout the year. Many common garden plants suited to our Mediterranean climate will attract beneficials, including oregano, alyssum, borage, dill, angelica, cosmo, tansy, calendula and rosemary.

Here are some California native plants guaranteed to draw in many of the 10 most wanted

Having a Good Defense

Many native plants have developed **natural defenses** to ward off insect pests and diseases. These defenses can eliminate the need for pesticides and reduce maintenance costs. Because native plants have adapted to grow in our specific climate, they often require very little care once established and are generally more tolerant of drought. The diversity of natives available offers gardeners great choices for both fragrant flowers and beautiful foliage – and provides food and habitat for our native birds, wildlife, butterflies, and beneficial insects.

Early Fall is an ideal time to plant natives. The cool weather and rainfall will help young plants establish a healthy root system before colorful Spring blooms emerge.

The 10 'Most Wanted' Bugs in Your Garden

Guilty of: Controlling garden pests without the need for toxic chemicals

Reward: A healthy, sustainable garden that saves money and resources and protects the health of families, pets and the environment

ASSESSING THE LINE-UP

Here are rap sheets and mug shots on ten beneficial bugs that consume large numbers of pests or pollinate plants. Do not attempt to apprehend them... just let them serve time in your garden!

Lacewing larva and aphid

Green Lacewing

Aliases: Aphid wolf, aphid lion.
Wanted For: Aggressively devouring aphids, thrips, mealybugs, scale, spider mites, leafhoppers and insect eggs.
Family History: Adult green lacewings feed on nectar, pollen, and honeydew – at dawn and dusk. Juveniles are voracious predators known to eat up to 20 or 30 aphids a day.
Sightings: Last seen around nectar-producing plants like sunflowers, tansy and buckwheat.

Soldier beetle larva

Soldier Beetle

Aliases: Leatherwings.
Wanted For: Attacking and feeding on aphids and other soft-bodied insects.
Family History: Adults feed on pollen and insect pests on plants. The larva (or "young") hunt for pests in leaf litter and soil.
Sightings: Known to feed on the pollen of flowers like goldenrod and milkweed while waiting for its prey. Reports of sightings appear in early spring, shortly after aphids begin hatching.

Dragonfly nymph

Dragonfly

Aliases: Mosquito hawk, darner.
Wanted for: Preying on unsuspecting flying insects like mosquitoes, flies and midges.
Family History: The dragonfly's excellent eyesight, strong jaws and agile flight make it a deadly predator able to catch prey in mid-air. Dragonfly larvae (nymphs) live in water and are also efficient hunters eating mosquito larvae and other insects, snails and even small fish.
Known Accomplices: Often seen in the company of its relative, the damselfly, another insect predator. Don't be fooled: when at rest, dragonflies hold their wings outstretched while damselflies fold their wings closed over their bodies.
Sightings: Last seen near garden ponds, streams and other bodies of water.

Bumblebee nest cells cut open to show developmental stages

Bee

Aliases: European honeybee, bumblebee. (Also includes hundreds of native bee species including leafcutter and orchard bees.)
Wanted For: Pollinating the flowers of many of our ornamental, fruit and vegetable plants.
Family History: Specially equipped for moving large quantities of nectar and pollen, honeybees are usually found in colonies in hives. Most native bees are masters at eluding notice and often live alone in ground nests. Bee populations are diminishing due to pesticide use, and loss of habitat.
Sightings: Usually seen in gangs in the vicinity of flowers high in nectar and pollen including asters, sunflowers, mints, lavender, rosemary and sages.

Syrphus larva eating brocolli aphids

Syrphid Fly

Aliases: Hoverfly, flower fly.
Wanted For: Hunting down aphids, mealybugs and other pests, and for pollinating plants.
Family History: Adults are known to be important pollinators. The larvae suck the juices out of their victims. A single larva can consume hundreds of victims a month.
Sightings: Larvae are usually found under leaves in the company of aphids. Adults have been seen lurking around ceanothus, sunflowers, feverfew and other nectar-rich flowers.
Master of Disguise: With their yellow and black stripes the adults appear to be bees. They have only one set of wings and can't sting. The larva look like fat, legless caterpillars.

Ground beetle larva

Ground Beetle

Aliases: Predacious ground beetle, and carabids, among others.
Wanted For: Conspiring to eat many soil-dwelling pests like slugs, snails, cutworms and root maggots.
Family History: Fast-moving predator, armed with strong jaws. Generally dark brown or black with long legs, and shiny, hard front wing covers that sometimes have a metallic sheen. Usually hunts at night. Reported to be able to consume its body weight in food each day. Larva also feed on soil insects.
Sightings: Usually sighted hiding in soil or under rocks, dried leaves and mulch.

Parasitoid wasp cocoons on caterpillar

Parasitic Wasp

Aliases: Trichogramma, Braconid, Hyposoter and Ichneumon, among others.
Wanted For: Parasitizing the eggs of cutworms, cabbage loopers, codling moths, tomato hornworms, aphids, whiteflies, scales and other pests.
Family History: These tiny, notorious wasps lay their eggs on or inside of pests or insect eggs and the larva eat the pest. Can be tracked by the tell-tale signs they leave behind, like tiny, white cocoons on caterpillars, or "aphid mummies," – the tan, dried up husks of aphids stuck to a leaf.
Sightings: Suspected of foraging for nectar on tiny flowers like alyssum, yarrow, tansy, and clover.

Orb weaver spider

Juveniles closely resemble adults

Spider

Aliases: Funnel weavers, crab spiders, and golden orb spiders, among others.
Wanted For: Trapping and bugnapping a wide variety of insect pests.
Family History: The most deadly natural enemy of pests, spiders are skilled predators. They may hunt with webs or track their victims on the ground and on plants. Can be identified as arachnids, with eight legs and two body parts.
Sightings: All over your garden, and on front porches near lights.
Warning: Spiders are thought of as fearsome creepy crawlers but very few have a bite that is harmful. Always wear gloves when cleaning garages, debris, woodpiles, storage areas or piles of clutter.

Ladybug larva and pupa

Ladybeetle

Aliases: Ladybug, ladybird beetle, seven-spotted ladybeetle.
Wanted For: Gorging on soft-bodied insects like aphids, scale, thrips, mealybugs and spider mites.
Family History: Both adults and larva eat large numbers of pests. It is believed that one ladybug can devour 5,000 aphids in its lifetime. Most common suspect is red with black spots – but watch for many other species in a variety of colors, with or without spots.
Warning: Be on the lookout for a ladybug look-alike: the spotted cucumber beetle! This green beetle with black spots feeds on crops and foliage.
Sightings: Known to loiter on nectar-rich flowers like yarrow, clover and tansy.

Tachinid fly eggs on a caterpillar

Tachinid Fly

Aliases: Diptera.
Wanted For: Attacking unsuspecting caterpillars and beetles.
Family History: Disguised as a hairy housefly, this parasitic insect lays its eggs on caterpillars, grubs and other insects. When the eggs hatch, the young (larva) tunnel into their victims and eat them.
Sightings: Often seen stealing the nectar and pollen of tansy, milkweed and Queen Anne's Lace.

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Training Summary: Public Information / Participation

Training Description	Date	Attendees
The Ebbs and Flows of Wetlands Protection **Presenter:** Dr. John Callaway, University of San Francisco professor of environmental studies explores wetland protection since the enactment of the Clean Water Act San Jose State University Campus Martin Luther King Library Rooms 255/257 150 E. San Fernando St. San José, California **Sponsored by**: the Ecological Society of America, in affiliation with San José State University and the South Bay Salt Pond Restoration Project **Topics**: ▪ Benefits of wetlands to watersheds/ water quality; ▪ Evolution of way we design marshes in restoration (16,000 acre project salt ponds) using **Adaptive Mgmt** – applying scientific method using a range of approaches, use the evaluation of the methods used to make the next step decision ▪ Challenges to restoration: mercury in existing sediments, opening up the tidal barrier can cause a chemical change that may increase entrance of mercury to the food web; sediment issues and subsidence and sediment deficit; relative distribution of marshes; invasive and nuisance species; flood control; groundwater withdrawal ▪ Important dates for wetland protection	August 5, 2007 Sunday, August 5, 2007, 2:30 - 4 pm	**WVCWP (1)** Program Manager
Creek Cleanup Training **Speaker:** WVCWP Manager **Topics:** Training on handling creek cleanups was given to 1 new part – time staff member.	September 11, 2007	**WVCWP (2)** Manager Program Assistant

Los Gatos

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Training Description	Date	Attendees
Environmental Volunteer Training **Training for**: EV Presentation **Topics:** Two WVCWP staff practiced demonstrations and activities. Using 2 simple models, demonstrating the role of the Water Cycle with an experiment showing how water evaporates and how condensation occurs by using a hot plate, salt water and ice cubes. Second demonstrating, water density kit with experiment using an egg to show the difference in density between fresh and salt water. Learning hands-on activities and grade-appropriate presentations for teaching: ▫ Demonstrate the role of the Water Cycle ▫ How water evaporates and condensation occurs ▫ Water density kit ▫ Difference in density between fresh and salt water	10-29-07	**WVCWP (2)** PIP Outreach Coordinator Program Manager
Enviroscape Presentation Training **Speaker:** WVCWP Manager **Topics:** WVCWP Program Manager provided training to 2 new staff members on use of the Enviroscape and on making presentations.	February 12, 2008	**WVCWP (3)** Manager Program Assistant Program Staff
Creek Cleanup Training National River Cleanup Day (May 17, 2008) **Speaker:** Heidi McFarland, SCC **Topics:** Site Coordinator Tip Sheet, Volunteer Orientation Script, Waiver of Liability Form, and Data Reporting Guidelines.	May 1, 2008	**WVCWP (1)** Inspector

PESTICIDE MANAGEMENT ACTIVITES

FY 2007-2008 Work Plan Self Evaluation Matrix

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
	SCVURPPP PMP (I.A.1.)	Summary of Use Track and report use of pesticides on municipally owned property.	Pesticides applied by municipal staff are reported monthly to the State of CA Dept. of Pesticide Regulation with copies of monthly reports forwarded to WVCWP for tracking purposes. Pesticide use by the municipal Pest Control contractor (PCO) are also forwarded to WVCWP. IPM practices are listed in the Evaluation section at the end of this Matrix.	Parks Maint Supt & Facilities Mgr
	SCVURPPP PMP (I.A.3.) PS #3	Implement BMPS Continue to Implement IPM practices as Best Management Practices (BMPs) for any pesticide used by staff or contractors. Report on use of IPM practices on municipal property.	During 07-08, the WVC continued to implement the Pest Management Performance Standard (PMPS). "Standard Operating Procedures for Pesticide Management" are being followed by staff and contractors. BMPs in general continue to be effective. WVC work with contractors to find the least-toxic method to treat resistant pest problems. The WVC use less-toxic pest management methods in municipal facilities (parks & buildings) whenever practicable, based upon budget and effectiveness. *See "Evaluation" section below for details on IPM implementation.*	WVCWP & Town's WV Rep coord w/ Parks Supt & Facilities Mgr
	SCVURPPP PMP (I.A.6.)	Banned Pesticides Inventory If any pesticides have been banned w/in the past FY (per EPA, State &/or local requirements), conduct an agency-wide search of chemical for these pesticides. Properly dispose of these banned substances pursuant to appropriate waste disposal regulations.	Staff reviewed the list of banned pesticides for the FY and found none of the pesticides used by the Town were identified on the list. No further action was required.	PW Supt/ Parks Supt

Los Gatos

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

	SCVURPPP PMP (I.B.1.) PS#5.a	Training for Applicators Ensure that employees who apply pesticides for the agency obtain the appropriate training as required by the County Agricultural Commissioner and the State Department of Pesticide Regulation (DPR)	The Annual Pesticide Safety Training was held on May 13, 2008. Dennis Merrill, president of *Killroy/ Sensitive Solutions Pest Control* gave the presentation. 14 Town of LG maintenance workers attended.	Parks Supt
	SCVURPPP PMP (I.B.2.) PS#5.b	Staff Training for Applicators Attend and/or conduct annual training which reviews appropriate portions of the IPM Policy, BMPs, and relevant IPM techniques for employees within departments responsible for pesticide application.	Town of LG staff have regularly attended locally available IPM trainings in past years. Last year 4 Public Works staff received training at the **3rd Annual Regional IPM Training** on November 14, 2006. SOPs, BMPs and new IPM techniques are conveyed to additional staff through tailgate meetings.	Parks Maint Supt/ Parks Maint staff WVCWP to provide training
	SCVURPPP PMP (I.B.3.) PS#5.c	Municipal Staff Education Inform employees who are not authorized and trained to apply pesticides that they cannot use over-the-counter pesticides in or around the workplace.	All Town employees received this information via e-mail on August 6, 2007. The e-mail included information on the Town's Stormwater Permit and IPM Plan.	Town's WV Rep; WVCWP to provide notice
	SCVURPPP PMP (II.A.1.)	Watershed Ed. & Outreach Campaign (WE&O)[1] Attend WEO and IPM work groups. Continue to assist with development of strategy for a campaign and training program (in Spanish & English) designed for staff of very small landscape businesses (typically 1-8 employees) mainly serving homeowners.	WVCWP Program Manager participates in the IPM Ad Hoc Task Group on behalf of the WVC. Project implementation and projects for consideration, which are discussed in the AHTG, are presented to City staff for appropriate follow-through. WVCWP contributed additional funds to the SCVURPPP's IPM ad campaign. This allowed the IPM ad to appear in the three (3) weekly community newspapers for six (6) weeks in the spring. (Campbell Reporter, Los Gatos Weekly, Saratoga News). WVCWP was very involved with the development of the new training program for small landscape businesses – from concept, to grant proposal, to implementation of a	WVCWP Staff

[1] Funded by all Co-permittees each year.

			successful class series. The first set of classes were held from Feb- April 2007 – one in English and one in Spanish; Both classes were attended at capacity (40 students) and had waiting lists. Positive media coverage about the class was received in local ethnic and San Jose community newspapers. The classes are being listed in the Fall session and projected to be full. Since many WV residents employ small landscape contracting firms, it is hoped that these classes will have an impact on reducing residential pesticide use in the WVC. See "Evaluation" below, for details	
	SCVURPPP PMP (II.A.4.)	Community & School Opportunities Identify opportunities and attend community events/school classrooms to demonstrate reasons for, and methods of, less toxic pest control.	Information on the importance of reducing pesticide use, and the toxic effects of pesticide runoff, is included in all WVCWP educational presentations at schools. IPM information, and HHW brochures detailing proper pesticide disposal, are distributed at a variety of venues. In FY 07-08, WVCWP participated in helping to develop a new brochure on reducing pesticide use and employing beneficial bugs. WVCWP the directed funds toward an order of the Beneficial Bugs brochure for use as a handout. See PI/P Section for further details on outreach for less toxic pest control.	WVCWP Staff
	SCVURPPP PMP (II.A.5.)	Community Material Distribution Participate in public sale events at local hardware store(s). Provide watershed protection information and reminders (gifts) to community by walking aisles of the gardening center with gift basket full of handouts during the sales.	WVCWP staff distributed material via different delivery methods at a variety of community events, including: Haunt the Hollow EVENT 10-28-07 Summer Winds Nursery (Campbell) 8-9-07 Orchard Supply Hardware (Saratoga) 8-5-07 Ace Hardware Garden Center Los Gatos 9- 11-07 Town of Los Gatos Green Event, 4-19-07 Great American Pick-up (Campbell) 4-19-07	WVCWP Staff

Los Gatos

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

			See PI/P Section for details about community events and various IPM and Pesticide-related materials which were distributed.	
	SCVURPPP PMP (II.A.6.)	Web Site As new information is available, update web site to provide easy access to information on IPM and reduction of pesticide use.	In FY 07-08 WVCWP staff worked on development of a new "Take Action" page, which will include a variety of IPM and pesticide information links. The page will be uploaded in FY 08-09.	WVCWP Staff
			Town of Los Gatos: The Town website includes a paragraph on Garden Chemicals, and also on Overwatering, and its impact on carrying pollutants to the stormdrain.	Town's WV Rep
	SCVURPPP PMP (II.A.13.)	Special Districts Invite neighboring special districts (e.g. sanitary, open space districts, and school districts) to attend WVCWP sponsored IPM workshops, when workshops are offered.	Information on newly-available Ecowise training was forwarded to the PCOs used as municipal contractors by WVC (Kilroy Pest Control/Sensitive Solutions and West Valley Spray): http://www.ecowisecertified.org/ Contractors also received an invitation to a Regional IPM Contracting Workshop (November 6, 2007) in Oakland Due to numerous trainings/meeting for municipal staff concerning the Municipal Regional Permit, WVCWP was not able to sponsor an IPM training this year.	WVCWP Staff
	SCVURPPP PMP (II.A.14.)	Conduct internal IPM outreach Provide all City/ Town staff with information on environmentally safer, integrated pest management to encourage employees to use IPM methods away from work. Email announcements as appropriate & display IPM materials at City/ Town Hall.	A new e-mail notice covering this subject was created by WVCWP staff The notice contains links to *Our Water, Our World*; *UC Davis IPM site*; *Universities' Pesticide Info Network*; and *Pesticide Action Network database*. It is being e-mailed to all municipal employees in Summer 2008. In addition, IPM material is available for pick-up by employees at Municipal Offices.	WVCWP to provide notice / Town's WV Rep to distribute as appropriate
	SCVURPPP PMP (III.A.1)	Pest Control Operators Maintain database of licensed structural and landscape maintenance PCOs within WVC for outreach purposes.	The database of West Valley PCOs has been compiled; over 75% of them are based in the City of Campbell.	WVCWP staff

	SCVURPPP PMP (III.A.4)	Track and Report PCO Use of Pesticides Require PCOs contracted by municipality to implement BMPs through contract specifications and track and report PCO use of pesticides on municipal property.	The Town requires its contractor for Pesticide application, Killroy, to follow all required application BMPs as a term in their contract. Killroy provides the Town with all required documentation of pesticide application performed by Killroy. Invoices for all pesticides applied by PCOs have been provided to WVCWP for tracking purposes.	Parks Supt / Facility Mgr / PW Dir assist w/ contracts
	SCVURPPP PMP (IV.A.2.)	Commercial Business Education Continue ICID Inspector's education program targeting retail food facilities through distribution of "Don't Set a Table for Pests".	The WVCWP Inspector distributes outreach material on less toxic measures to use for pest control in food service businesses - *"Don't Set a Table for Pests"* - during his Restaurant Inspection activities. In FY 07-08, restaurant staff in the Town of Los Gatos received a total of **18** of these.	WVCWP Inspector
	SCVURPPP PMP (V.A.3.)	Promote HHW Collection Work with HHW collection agencies to support, enhance, and help publicize programs for proper pesticide disposal.	All WVC contribute funds to the County HHW disposal program, enabling residents and small businesses to drop off pesticides at HHW sites. WVCWP Program Manager participated in the SCVURPPP and HHW Program Work Group. Work Group is exploring means of coping with growing demand at facilities due to increased awareness about proper disposal.	WVCWP / PW & Community Services Dept. staff to assist
			TOWN OF LOS GATOS: The Town's website give information on proper pesticide disposal via HHW on its "FAQ" page.	WVCWP / PW & Community Services Dept. staff to assist
	NPDES Permit Provision C.3.n	1. New Development/ IPM Planning Procedures 2. New Development/ Reporting 3. New Development Training for staff responsible for Environmental Reviews	See Planning Procedures Section 4 Pesticide Management measures related to New Development (C.3) have been incorporated into the Planning Procedures element of the Work Plan in order to facilitate delegation of responsibilities to appropriate departments and staff.	Town's WV Rep, PW Dir, Comm Dev Dir and Planners

Pesticide Management Activities Evaluation

PESTICIDE USAGE REDUCTION MEASURES – Pest Specific

Los Gatos invested in an Irrigation Upgrade Project at Bachman Park to replace its outdated irrigation system. The new irrigation system has been designed with input from the Santa Clara Valley Water District, and will have watersaving devices to irrigate the lawn in a much more efficient manner. The existing irrigation system's efficiency rating was 5%. The new system will be closer to 100% efficient.

This project will have an impact on eliminating any runoff problems at this park, thereby helping to avoid any possible problems of fertilizers and pesticides running off into nearby creeks. An article on these efforts was printed in the municipal newsletter, *the Los Gatos Vista,* to help raise public awareness concerning the issue of efficiency in lawn irrigation.

Los Gatos is implementing IPM in the following situations:

YELLOWJACKETS:

- Los Gatos uses traps as the main means of control.
- Parks staff uses steam cleaning on picnic tables to prevent attracting wasps & ants.

WEEDS:

- Los Gatos uses a chipper to create mulch from green waste; this mulch is used for weed control wherever possible.
- Los Gatos continues to arrange to receive free wood chippings from PG&E tree-trimming contractor. Mulch is used to reduce weed growth on roadsides, median islands, parking lot landscaping and in parks.
- Staff hand-pull weeds where feasible.
- Los Gatos purchased a flail mower to mow weeds in large areas.

RODENTS:

- Rats & mice are trapped by contractor (baits used as last resort).

INVASIVE SPECIES:

- Various species along Los Gatos Creek are hand-pulled by Native Plant Society volunteers.
- Scotch Broom is cut down by Parks staff and volunteers supervised by staff.

SCALE INFESTATION ON TULIP TREES

- Parks staff sprays trees with low concentration detergent & water

RESULTS OF PESTICIDE USE REVIEW FY 06-07:

Los G s

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

- Los Gatos staff has eliminated the use of any OP pesticides for the past 6 years (and in preceding years minimal OPs were used: such as .475 oz of diazinon for ant control in FY 01-02). Avoidance of OP use has been achieved through use of IPM practices and through seeking out less-toxic pesticides.
- The Town is making an effort to stress prevention (prevent weed growth, prevent pest infestations) where possible. Los Gatos is moving into use of IPM and engineered, rather than chemical, controls as much as possible given budget and staff limitations.
- In Town facilities, sanitation is being stressed as a means to prevent pest infestations (ants, mice, etc.) so that chemical controls will not be needed.
- Over the past several years, the Public Works Dept. has instituted improved methods of weed control in some parks and roadsides, such as the arrangement for free wood chips which are used as mulch to prevent weed growth.
- Los Gatos invested in purchase of a flail mower for staff to use in mowing weeds in large areas.
- Volunteers work with the Public Works Dept. to trim back brush along the LG Creek Trail, and to remove invasive species.

MEMORANDUM

Parks and Public Works Department

To: All Town of Los Gatos Staff

From: Kevin Rohani, Interim Director

Re: **USE OF PESTICIDES ON TOWN PROPERTY – Annual Reminder**

Date: August 6, 2007

Pesticide use by Town of Los Gatos is tracked by the California Water Board as part of the Town's Stormwater Permit requirements. This staff-wide message is required annually by the permit. It is important that all Town staff be informed of and to comply with the Stormwater Permit's requirements concerning pesticide use. Please read and follow the instructions, as appropriate.

Use of Pesticides

The Town of Los Gatos adopted an Integrated Pest Management(IPM) Policy and IPM Plans to address eliminating or removing various pests from Town property. The IMP Plans include strategies for controlling pests (such as mice, ants and wasps) using the least toxic methods possible.

The California Water Board's Stormwater Discharge Permit requires municipalities to reduce pesticide use. One of the goals of the policy is to ensure that pesticides that are purchased are applied only by staff who received training in pesticide use, and in less toxic pest control measures. By adhering to these plans, we meet the permit requirements and help to provide a healthier environment for staff and the public

<u>To help meet this goal, staff members should:</u>

- Only staff licensed as "Pest Control Advisors" may order, purchase and apply pesticides (including over-the-counter pesticides) for use on Town property.
- To request removal of pests (such as mice, ants or wasps) from Town property, contact the Public Works Office 399-5770 to initiate a work request.
- Responsibly dispose of any existing pesticide containers on Town property through the Town's Hazardous Waste program. Contact Bruce Smith at 399-5778.
- If any pesticides are currently stored in any Town facilities (such as ant or wasp sprays), and you are not a "Pest Control Advisor", discontinue any further pesticide applications and dispose of the containers responsibly, as listed above.

Thank you for your help in our efforts to protect employee health and local water quality.

If there are any questions about this procedure or the NPDES permit, please contact Mary Gillespie-Greenberg, Administrative Analyst at (408) 399-5776.

MERCURY POLLUTION PREVENTION ACTIVITES

FY 2007-2008 Work Plan Self Evaluation Matrix

Source	WP Task	Work Plan Tasks	Accomplishments	Responsible Party
	Mercury Plan (I.E.)	Reduction of Hg Containing Products Continue implementing phase-out of mercury-containing products (MCPs). Phase-out will coincide with replacement of MCPs on an as-needed basis.	Reduction of mercury-containing products is being implemented. Research on alternative products has been conducted through the WVCWP. Non-mercury or low-mercury replacements are being used wherever feasible e.g., thermostats and fluorescent bulbs. At the WVCWP-sponsored meeting with DEH in April 2008, each member in the audience was given the booklet, "What You Don't Know About Mercury". Discussion followed as to how and where to dispose of Mercury Containing Products, including fluorescent bulbs, thermometers, and batteries. In the back of the booklet there is a list of approved drop-off locations in our area. Record keeping for MCPs was also discussed.	WVCWP & Town's WV Rep; Street Maint Supt & Facilities Mgr to report data
		Provide Pub Works Supvsr and Facilities Maintenance Manager with a reminder notice.	**LOS GATOS:** Los Gatos adopted a mercury elimination policy during FY 03-04 and has continued to phase out Mercury Containing Products, with the exception of fluorescent bulbs. The WVCWP Stormwater Inspector conducted a training on disposal & discontinuation of Mercury Containing Products during the Annual Corp Yard Walk-Thru Training on May 29, 2008. The Training was attended by **19** Town of LG staff members. Topics covered included: • What are Mercury Containing Products (MCPs)? • Requirements for MCPs • Proper Disposal of MCPs • E-waste Drop-off Sites • Record-keeping for MCP Disposal	WVCWP & Town's WV Rep; Street Maint Supt & Facilities Mgr to report data

Los Gatos

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

	Mercury Plan (II.B.)	Mercury Containing Product Disposal Services Provide funding and participate in County HHW collection program for residents and small businesses	The WVC support the County HHW collection program through funding, outreach activities (material distribution, website notices, etc.), and sponsorship of local E-waste collection events. HHW drop-off information was distributed to Bay Area & WVC residents at several community events in FY07-08. Disposal of fluorescent bulbs was covered in classroom presentations. In FY 07-08, the focus was on investigating proposals related to adoption of an extended producer responsibility (**EPR**) resolution. All WVC adopted an EPR Resolution during FY 07-08. See Evaluation Section (below) for details.	Pub Works Director/ Town Manager
			LOS GATOS: Los Gatos hosted an HHW Thermometer Exchange at the Farmers' Market at Plaza Park on April 27, 2008. Santa Clara County Household Hazardous Waste Program exchanged mercury thermometers for the electronic variety. The Town's website has added an entire new page for HHW. It gives details on the State's "Hazardous Waste Law", rules for disposal of E-Waste, and a "Waste Recycling Options" chart. The Town's municipal newsletter, *LG Vista – Fall 2007*, presented a long article on HHW. The article listed drop-off spots for different types of batteries, and for fluorescent lamps.	Pub Works Director/ Town Manager
	Mercury Plan (II.C.)	Track Disposal of Mercury Containing Products Continue documenting the quantities of mercury-containing fluorescent bulbs disposed from City/ Town buildings and departments at hazardous waste collection facilities. The quantities of disposed product will be reported in annual report	**LOS GATOS:** The Town Facilities Manager continued documenting and reporting quantities of mercury-containing products disposed of by the Town as hazardous waste in FY 07-08. Mercury-containing products (primarily fluorescent bulbs) are returned bulb for bulb to the lighting vendor. The Town disposed of: 114x - U-shaped and compact lamps	Facilities Manager & Streets Maint Supt

			509x - 4-ft lamps 38x - 8-ft lamps Bins for recycling used batteries are distributed throughout Town departments so that batteries don't end up in the trash. All battery bins are disposed of through HHW.	
	Mercury Plan (II.F)	Fluorescent Light Recycling Campaign Continue participation in the Mercury Ad Hoc Task Group and support ongoing implementation of an outreach program to about recycling fluorescent bulbs.	The WVCWP Manager helped develop local campaigns and outreach messages through SCVURPPP's Mercury Ad Hoc Task Group. WVCWP provided funding for SCVURPPP's Mercury ad to appear in the 3 weekly local newspapers for 6 weeks in Fall 2007 (Campbell Reporter, Los Gatos Weekly, Saratoga News).	SCVURPPP & WVCWP to coordinate w/ HHW staff

Mercury Pollution Prevention Activities Evaluation

Efforts to Enact "Extended Producer Responsibility" Requirements:

At its November meeting for the 4 West Valley Communities, WVCWP hosted a presentation by Rob D'Arcy of Santa Clara County HHW on "Extended Producer Responsibility" – targeting producers of products with HHW, including mercury containing products such as E-Waste. HHW was seeking to have co-permittees pass resolutions supporting EPR. The goal of EPR is to shift California's product waste management system from one that is government-funded and taxpayer-financed to one that relies on producer responsibility. This will also help in removing more of these products from the waste stream.

All WV Cities passed resolutions supporting Extended Producer Responsibility in FY 07-08.

Community Involvement in E-Waste Recycling

Over the past several years, there have been a number of E-waste events held by various entities (schools, scout groups, etc.), thereby reducing the need for WVCWP to sponsor E-waste events. This is a certain measure of success for previous public outreach efforts related to Mercury and E-waste – residents are now taking on the task of organizing these events, and handling safe disposal of mercury containing products. This is a demonstration of the effective partnerships that can develop between municipal efforts and their residents, and which can be especially effective in smaller communities.

WEO AHTG Advertising

Through its Watershed Education Outreach ad hoc task group, SCVURPPP published mercury ads in newspapers serving the Santa Clara Valley. In an effort to ensure reaching a maximum number of WV residents, WVCWP funded and arranged for printing of the ads in 3 local weekly papers, for a 6 week run. This meant an extra 18 ads aimed at West Valley residents. The ads ran in the *Campbell Reporter*, the *Los Gatos Weekly*, and the *Saratoga News*.

COPPER ACTION PLAN/NICKEL ACTION PLAN

FY 2006-2007 Work Plan Self Evaluation Matrix

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
Vehicle Washing Operations	CB-1	As part of the West Valley Industrial Commercial Inspection Program, promote improved car washing methods at auto businesses. Provide info on alternative arrangements for businesses with possible compliance problems. (Section 2.i of this work plan - Industrial Inspection Program)	The Stormwater Discharge Inspector distributes vehicle washing outreach materials during pro-active inspections and in relation to any actual or suspected vehicle washing incident. The Inspector is able to answer questions and offer suggestions with the help of visuals. A WVCWP-created fact sheet provides information on wastewater capture systems for automotive facilities. The fact sheet was designed to provide small-scale automotive facilities (those that find installing a full-fledged wash rack cost-prohibitive) with examples of inexpensive treatment technologies and distributor information. This method of outreach has been very effective.	WVCWP Inspector
Vehicle Washing Operations	CB-1	Place outreach material on proper vehicle/equipment washing at municipal counters, post offices, libraries and public events. Update WVCWP website to include copper information.	The Car Wash Kit flyer is posted in WVC Municipal Offices. For FY07-08, WVCWP home page featured a graphic highlighting car washing, and a link to a printable PDF with information on proper car washing, and water quality degradation from improper washing. The link also gives information on obtaining the free Car Wash Kit for Car Wash Events (this graphic is sometimes temporarily swapped out for publicizing events, such as a WV E-waste event). www.cleancreeks.org http://www.cleancreeks.org/imagesnew/carwashweb.pdf Currently, the WVC do not have any comprehensive outreach material on copper so in FY 07-08 WVCWP staff worked on a draft copper outreach piece (tri-fold), including car washing info. The piece will be distributed for WVC feedback in FY 08-09. Once finalized, it can be distributed	WVCWP staff

Los Gatos

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

			to the public and posted on the website.	
			LOS GATOS: Town of Los Gatos website includes 2 pages with car washing info: Car Wash Fundraising Events: http://www.town.los-gatos.ca.us/index.asp?NID=176 Car Washing at home: http://www.town.los-gatos.ca.us/index.asp?NID=922	Town's WV Rep
Vehicle Washing Operations & Pool/ Spa Maint.	CB-1 & CB-12	In classroom presentations, introduce impacts of copper on aquatic life; teach proper methods of car washing and pool & spa drainage using the Enviroscape watershed model.	WVCWP's classroom presentations are scripted to include hands-on activities so that students can watch pollutants, such as copper from car-washing activities & pool draining, flow directly to waterways. In addition to recommending the use of commercial car-wash facilities, WVCWP encourages washing on a gravel or lawn area where wash water is captured and infiltrated. Students also learn about runoff from car wash fundraisers and the need to borrow the WVCWP Car-Wash Kit for any such event. Proper Pool Draining instruction includes photos of a Sanitary Sewer Cleanout, and other graphics about pool & spa drainage. School presentations in FY 07-08 included: *Casa Di Mir Montessori School, Campbell – Presentations for 6-12 year-olds on 2-13-08* *Queen of Apostles Private Elementary School – Presentations for 4th and 5th grade science classes on 4-4-08* *St. Mary's School, Los Gatos –Presentations for kindergarten classes on 5-6-08*	WVWCP staff

Vehicle Washing Operations	CB-1	Promote use of Car Wash Kit. Provide kit; provide training to charity car wash organizers. Document use in A/R. Solicit feedback from participants.	In FY 07-08, a 220 word "Car Washing" article for municipal newsletters was created. The article will run in "The Saratogan" Summer 2008 issue (FY 08-09), and hopefully in additional municipal newsletters in Spring 09. **October 13 & 14, 2007** The WVCWP Carwash Kit was used at a very large fundraiser at Fisher Middle School, LG. Two WVCWP staff attended in order to educate event organizers on Car Wash Kit set up, and spoke to other interested residents The fundraiser was very well-attended (may have raised $10,000) and many attendees were educated about the Car Wash Kit. 100 Car Wash brochures were distributed. The entire event received extensive media coverage. **September 30, 2007** The Car Wash Kit was also used at the Silicon Valley Roller Girls Carwash Fundraiser in Campbell. The Stormwater Inspector gave instruction about set-up and use of the Kit, and education about carwash runoff. The WVCWP Stormwater Discharge Inspector is available to provide instruction on use of the WVCWP car-wash kit for local fundraising events. He usually attends the events to offer guidance and to help publicize the *West Valley Clean Water Program*. The kit uses about 400 ft. of hose and 300 ft. of extension cord. The car wash kit works extremely well, but can be difficult to set up. Photos of the kit in action are used for classroom presentations.	WVWCP staff
Vehicle Washing Operations	CB-1	Within the development project permit process for Group 2 projects, require source control measures at facilities that will conduct vehicle/ equipment washing and maintenance activities (consistent with Permit requirements).	Los Gatos did not have any regulated projects in FY07-08 that would conduct vehicle/equipment washing and maintenance activities.	Comm. Dev. Dir, Assoc. Civil Eng, and Town's WV Rep

Los Gatos

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Vehicle Washing Operations	CB-1	Include recommended source controls for vehicle washing in the Town's corporation yard SWPPP and continue to train staff to use BMPs.	Source control BMPs are included in the SWPPP. Corp Yards BMP training is covered annually in the Corp Yard Walk Through (see Public Agency Activities section). Municipal staff follow best management practices and continue to ensure that vehicle wash systems in the Corp Yards prevent wash water runoff. Municipal staff viewed the BASMAA training video in 2006. Public Works Maintenance Staff viewed the video as part of a Tailgate discussion on the topic in October 2007.	Town's WV Rep and Public Works staff
Industrial Copper Control	CB-3	Continue joint Inspections with Fire Dept., targeting industrial sources for copper, e.g. metal plating and metal finishing facilities.	The Town has an agreement with the SCC Fire Dept to conduct urban runoff inspections for machine shops and metal manufacturing facilities. Annual meetings are held between the WVCWP Manager and Inspector and the Fire Dept Haz Mat Specialist to ensure excellent communication and prompt follow-up to potential and actual violations. For Los Gatos inspection data, **see IND section** of this report.	SCVC Fire Dept.
Reducing Traffic Congestion	CB-6/7	Within the development permit process, encourage pedestrian oriented design practices (trails) and planning that will accommodate bicyclists (paths).	The West Valley communities encourage best design practices wherever practicable. These small communities tend not to have large developments conducive to requiring alternative transportation within the permitting process. However, the cities and the Town encourage alternatives transportation through other means: For several years, the cities of Monte Sereno and Saratoga, and Town of Los Gatos, have been working with CalTrans on improving bicycle and walking features along the stretch of Hwy 9 that links these 3 municipalities. The stretch is heavily used by bikers and walkers, and improvements would overcome current safety problems, thereby encouraging greater pedestrian/bicycle use of this transportation corridor. In June of 2008, several agencies gathered on Highway 9 in Saratoga to announce nearly $500,000 of unused bond money that can be used to improve safety along this corridor.	Comm. Dev. Dir, Assoc. Civil Eng, and Town's WV Rep

			Improvements will include a T-intersection that will make cars more visible to bicyclists and a street light at Austin Way & Hwy 9. Caltrans estimates the project will be completed in approximately 2 years. The Silicon Valley Leadership Group CEO discovered the unused bicycle improvement money while reading through documents from the California Transportation Commission. Agencies involved in these improvements include Town of Los Gatos, Cities of Monte Sereno and Saratoga, CalTrans, Valley Transportation Authority, Calif. Transportation Commission. In addition, other improvements will be funded by State Bicycle and Pedesterian Improvement grant funding. Bicycle and pedestrian facilities along Hwy 9 from Los Gatos to Saratoga will be improved through a multi-year project. The first phase will improve the bicycle route system to reduce hazards and improve safety for bicyclists along this route. Phase I work was carried out during FY 07-08.	
			LOS GATOS: The Town of Los Gatos is working on improving pedestrian access to 2 schools. Work has begun on the "**School Route Evaluation and Design Project**". Grant funding will be solicited to carry out the pedestrian improvements; by improving pedestrian access, many daily car trips – which deliver children to school – will be eliminated. Through this project, Town staff are evaluating pedestrian access near Fisher and Van Meter Schools, and preparing a concept design for construction of pedestrian facilities. This evaluation identifies infrastructure needs and provides cost estimates for future budgetary purposes. It will also be used as supporting documentation when pursuing competitive grant funding. The Town publicized this project, and highlighted the need	Comm. Dev. Dir, Assoc. Civil Eng, and Town's WV Rep

Los Gatos

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

			for traffic reduction, in its Fall 07 Municipal Newsletter – the *Los Gatos Vista*.	
Water-shed assessm't and protection	CB-8	Consider watershed protection in all CEQA actions.	Los Gatos has adopted the CEQA review guidance from SCVURPPP, as documented in the June 2004, *C.3 Stormwater Handbook*, to address water quality as part of the C.3.m implementation.	Assoc Planner, Assoc. Civil Eng, and Town's WV Rep
Water-shed assessm't and protection	CB-8	Continue to receive training and develop understanding of the Hydromodification Management Plan (HMP) and implement HMP Permit requirements on qualifying projects.	In September 2007, municipal engineers from the WVC attended trainings presented by SCVURPPP/ EOA staff on the HMP, including proposed applicability maps. Some additional HMP training was received at the June 3, 2008 SCVURPPP workshop. See Planning Procedures Training Summary for details.	Town's WV Rep and Eng Division
Water-shed assessm't and protection	CB-8	Continue to Implement Guidelines & Standards developed by the Water Resources Protection Collaborative for watershed protection. Support new Collaborative issues for watershed protection as they arise.	Campbell, Los Gatos and Saratoga have participated in, and invested significant staff time in, the Water Resources Protection Collaborative. Los Gatos adopted the "Guidelines and Standards" in FY06-07	Pub Works Dir/ Community Dev Dir
Street sweeping	CB-11	Conduct regular street sweeping, evaluate efforts and collect data for Annual Report. Los Gatos has its own Street Sweeper – Continue to maintain effective street sweeping equipment.	The West Valley communities conduct street sweeping in residential areas and more frequent sweeping in commercial areas. Sweeping data is collected and noted in Public Agency Activities (Section # 3) of this report. The Town of Los Gatos is using a new regenerative air sweeper which it purchased several years ago. The regenerative sweeper has proven to be an effective vehicle for the sweeping of streets in the Town of Los Gatos. Due to the increased capacity (from the previous vehicle) it requires fewer trips to dump debris and has required significantly less maintenance to operate.	St. Sweepg staff; P W Specialist to collect data Pub Works Maint Supt
Outreach on Pool, Spa maint'nce	CB-12	Continue to distribute Pool & Spa maintenance brochure via agency counters, website and during IC/ID inspections.	WV Inspector distributed 40 Pool & Spa brochures to Leslie's pool & spa retail outlets during Sept 2007. Pool & Spa brochures are available at all WVC municipal offices.	WVCWP with Municipal Staff

			LOS GATOS: Town website features complete information on pool & spa draining via a link to the Pool & Spa brochure, and information on its Stormwater page "it is OK to drain pools and spas into the sewer system (hook up to your clean-out or washer outlet) but **absolutely do not drain spa or pool water into the curb/storm drain system** as the treated water contaminates creek and bay water" http://www.town.los-gatos.ca.us/index.asp?NID=176	WVCWP & Town's WV Rep
Use of copper architecture	CB-21	Within the development permit process, continue to limit and discourage use of copper architecture. Inform applicants about the negative water quality impacts related to the use of copper roofing, rain gutters and other copper architecture.	Los Gatos is drafting a Residential Design Guideline that will seek to discourage architects and homeowners from using copper by informing them of its environmental implications. The Guideline is scheduled for adoption in August 2008.	Community Dev Dir & Planning Commission, Assoc. Planner
Green Building	CB-21	Provide information about negative impacts of copper architecture and alternative materials via link on West Valley Clean Water website.	Currently, WVCWP and WVC do not have any good outreach material on architectural copper, so in FY 07-08 WVCWP staff worked on creating a draft of a comprehensive copper outreach piece (tri-fold), including architectural copper info. The piece will be distributed for WVC feedback in FY 08-09. Once finalized, it can be distributed to the public and posted as a downloadable PDF on the website.	WVCWP staff
Nickel Action Plan Tasks				
Control Measures for Constr Sites	NB-1	Continue to implement Construction Inspection Performance Standards (Section 5, Construction Inspection section of this work plan).	See Construction Inspection (Section #5) of this report.	
Training on Control Measures for Constr sites & New Dev	NB-1	Attend Construction site management workshops sponsored by Water Board and SCVURPPP for latest erosion/sediment control techniques and continue to attend workshops on post development Stormwater treatment BMPs.	See Construction Inspection Training (Section #5T) of this report.	

Los Gatos

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Copper/Nickel Action Plan Evaluation

Car Wash Outreach - Evaluation:

Additional WVCWP staff have been trained in use of the Car Wash Kit. This will enable increased outreach efforts, as it ensures that staff will be available to set up the Kit at Car Wash fundraising events, and to instruct event organizers in use of the kit. The kit was used successfully at several events in FY 07-08. A *"Clean" Car Washing* article was created, and will run in the Summer issue of the Saratoga municipal newsletter. Depending upon space available, it will run in other WVC newsletters in 2009. In addition, WVCWP staff worked on developing new Car Wash outreach strategies for FY 08-09.

Pool and Spa Maintenance - Evaluation:

In Fall FY 07-08, WVCWP initiated a new outreach effort involving placing Pool & Spa brochures at the major swimming pool retail chain in the area. This fall, staff will return to the stores and check on the status of the brochures, and whether this was an effective form of outreach.

The **Town of Los Gatos'** standard Conditions Of Approval for new homes with a pool were revised in FY 06-07 to require a sanitary sewer clean-out within 10 feet of the pool equipment, and a pervious landscaped area for pool filter washout. After input from the West Valley Sanitation District, the Town is modifying the Condition to require notification of WVSD prior to discharge. The location of the clean-out must be proximate to the pool equipment.

Promotion of Pedestrian Trails And Bike Paths - Evaluation:

The WVC of Los Gatos, Monte Sereno and Saratoga have invested extensive efforts into improving the stretch of State Highway 9 which runs from Saratoga, through Monte Sereno, and into Los Gatos (appx. 4 miles). This stretch is heavily traveled by local residents, and many have expressed an interest in using it for walking and biking, if it were a safer route. In fact, it currently receives a high degree of bike traffic, and some pedestrian traffic. The Cities and Town have worked closely with CalTrans on developing strategies for improving safety on this stretch. Funding has been obtained from various sources and Phase 1 of the improvements was started in FY 07-08.

Street Sweeping - Evaluation:

The West Valley cities continued their street sweeping programs. Campbell and Saratoga are using both vacuum sweepers and broom sweepers, based upon conditions. Los Gatos and Monte Sereno are both swept using regenerative air sweepers. By using vacuum and regenerative air sweepers, all WVC are making concerted efforts to remove fine particulates, including copper, from their roadways.

	Program's Trash Work Plan	Long-Term Management Strategy Participate in Trash Ad Hoc Task Group and assist Program staff in developing (and revising per the MRP) long-term trash management strategy for reducing trash in urban streams and waterways and other potential sources that may contribute trash to those areas.	The West Valley Clean Water Program Mgr attended the Trash AHTG meetings and provided feedback from West Valley cities on implementation strategy and tools. Topics this year included issues related to Structural Treatment Control, 303(d) listings and Trash Problem Areas at various creek sites. Reviewed drafts of 'Trash Evaluation & Management Fact Sheet, 2nd Edition'.	WVCWP Mgr to participate in AHTG and coordinate WVC efforts
	Program's Trash Work Plan	Additional Task – not in 07-08 Workplan Participate in Creek Connection Action Group (CCAG) developing long-term trash management strategy for reducing trash in waterways. Address other potential sources which may contribute trash to waterways.	WVCWP Program Manager participated in policy planning meetings held by Heidi McFarland, Santa Clara County Parks Dept, to discuss various proposed projects and overall trash issues. CCAG coordinates the 2 annual county-wide cleanup events. These strategy meetings were aimed at addressing the bigger picture of trash generation.	WVCWP staff attends meetings
	Program's Trash Mgmt Strategy	Implement Trash Management Strategy Begin implementation of long-term trash management strategy for each high priority watershed defined within the technical memorandum entitled *Prioritization of Trash Problem Areas*. This strategy will be provided within the technical memorandum entitled *Long-Term Trash Management Strategy*, which will be developed during FY07-08.	The *Long-Term Trash Management Strategy*, as developed in FY 2007-2008, consists of 3 main points: • Identify Trash Problem Area & Sources • Evaluate & Implement Enhanced Trash BMPs • Assess Effectiveness of BMPs Over Time WVCWP and West Valley Communities staff continued to use assessment tools to identify where Trash Problem Areas, and Trash Sources, existed. Over the past several years, using these tools, it was determined that some sites had at first appeared to be problem areas, but after initial cleanup, the Trash problem did not recur. These sites were then removed from the Trash Problem area list so	WVCWP and Town's WV Rep coordinate with Parks and Pub Works staff

Los Gatos

Santa Clara Valley Urban Runoff Pollution Prevention Program

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
			that resources could be devoted to other sites and other BMPs. For WVCWP, part of the Trash Management Strategy is to address vehicular generation of litter, and illegal dumping. By participating in the Silicon Valley Anti-Litter Campaign, WVCWP was involved in the initiation of a hotline allowing drivers to report license numbers of vehicles which they see littering. For illegal dumping, a strategy of directly contacting property owners near any sites where dumping occurs was initiated several years ago, and has continued. In FY 07-08, 25 homeowners near Smith Creek in Los Gatos were contacted. Current BMP methods are in the process of being evaluated. BMPs include ongoing methods such as street sweeping, increased use of trash cans for the public, increased scheduling of trash pickup by Municipal staff, institutional regulations such as requiring clean up after events by event permittees, increased communication with Cal Trans, etc. (see Management Practices row, below) Staff will continue to observe the results of BMP implementation in order to assess their effectiveness.	
	Program's Trash Work Plan	Pilot Demonstration Assist Program in implementing Pilot Demonstration Projects which focus on assessing control measure effectiveness.	The West Valley Clean Water Program Mgr attended the Trash AHTG meetings and provided input on behalf of West Valley cities regarding potential pilot demonstrations. The Pilot Demonstration program has been well-publicized. Regular updates to SCV URPPP Management Committee have been given on installation and first wet season results. The Pilot Demonstration was included in the SCVURPPP 'Trash Management and Evaluation, 2nd Ed' document, circulated in May 2008. At the annual WVCWP Streets Maintenance Supervisors' meeting, WV Communities staff and WV Sanitation District	SCVURPPP, City of Sunnyvale, City of San Jose Public Works Dir, Town's WV Rep & WVCWP Mgr

			staff viewed a presentation by City of Sunnyvale on Sunnyvale's current experience with the Pilot program.	
			Los Gatos: No "Full Capture" treatment devices were installed in FY 07/08 in Los Gatos	Public Works Dir, Towns' WV Rep & WVCWP Mgr
	Trash Work Plan	Evaluations Continue to conduct trash evaluations in a subset of local trash problem areas using the Programs Urban Rapid Trash Assessment (RTA) protocol and/or the KAB Litter index.	WVCWP staff used SCVURPPP's standardized reporting forms to assess trash problems. WVCWP staff conducted **21** assessments at the identified sites and listed problem areas in West Valley communities. The number of assessments included: Campbell **5** -- Los Gatos **3** -- Monte Sereno **5** and Saratoga **4.** Although such monitoring usually is limited to drive-by evaluations of a site, several assessments were conducted simultaneously with removal of trash and debris by WVCWP staff.	WVCWP Staff
			LOS GATOS: Town Public Works Maintenance Staff conducted windshield surveys of all identified hot spots in the Town of Los Gatos. All trash visible during the windshield surveys was collected and properly disposed of.	WVCWP and Town's WV Rep coordinate with Parks and Pub Works staff
	Trash Work Plan	Identify and Prioritize Problem Areas Continue to identify and prioritize trash problem areas based on criteria provided by Program staff during FY 06-07.	Identification & prioritization are determined by: • monitoring previously identified problem areas, • using volunteer monitoring during cleanup events at problem sites, • keeping records of areas where Trash has been noted, or illegal dumping has been noted. If the site is noted repeatedly, then identifying it as a Problem Area will be considered. As noted in FY06-07, a few sites were taken off the Priority List, since several years of monitoring demonstrated that	WVCWP staff, Town's WV Rep and Parks & Pub Works staff

Los Gatos

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
			trash there was less of an issue than was originally believed. It was decided that staff resources should be concentrated on problem sites in order to be effective. Clean site conditions at the site for the WVCWP biannual Creek Cleanup (San Tomas Aquino Creek at Westmont High School) resulted in removing that site from this year's National River Clean-up Day site list.	
	Technical Memo: *Trash Mgmt Effective-ness Strategy (FY06-07)*	Evaluate Trash Management Measures Track existing trash management practices to evaluate effectiveness. Selected effectiveness methods may include using the Program's Urban Rapid Trash Assessment protocol (Version 1.0) and/or the KAB Litter Index in a subset of high priority trash problem areas.	WVCWP staff used SCVURPPP's standardized reporting forms to identify trash problems. When completed by staff, these forms provide data on trash monitoring and management activities at the listed problem sites. Completed forms are used for review to determine effectiveness of trash management practices. Discussion was initiated on determining a better means of training on use of trash evaluation tools, in order to ensure standardization among staff and among co-permittees. One Trash Management Measure/ Evaluation Method involves Creek Cleanups and Monitoring. Over several years of Creek Cleanups and monitoring, WVCWP has been able to cut back on cleanups at 2 sites, due to lack of trash at the sites. La Rinconada Park, along Smith Creek in Los Gatos, is a creekside park with a tennis court, lawn area, picnic/ bbq area, playground and a ½ mile long creekside trail. After several cleanups, 1 final cleanup was held, at which there was basically nothing for the volunteers to pick-up, nor monitor. Monitoring showed that construction & remodeling activities for several homes nearby may have been contributing to the trash. Trash included wrappers from construction materials, and food wrappers, etc. probably from construction workers. Once the construction was completed, trash was generally not being generated. San Tomas Aquino Creek, at Westmont High School in Los	WVCWP Mgr to participate in AHTG and coordinate WVC efforts

			Gatos, has been the site of biannual Creek Cleanups for some years. The last cleanup was held here in Sept 2007. In Spring 2008 an assessment of the site was conducted. This determined that there was minimal trash, and the regularly-scheduled May Cleanup was cancelled, since there would be virtually nothing for the volunteers to pick up or monitor. The site will be evaluated again in fall and at that time, if there doesn't appear to be a regular generation of trash, a recommendation on whether to continue clean-ups at the site will be made. In these instances, it appears that the Creek Cleanups have been an effective Trash Management Measure, and may provide an opportunity to focus efforts in another area (bmp implementation) or other approaches to reducing trash generation.	
			LOS GATOS: • Miles Ave Parking lot (near Los Gatos Creek Trail) - Town has HHW facilities at Corp Yd here – if anyone finds HHW (paint cans, car batteries,etc) on LG Creek Trail, they can be deposited here. • If a dumping incident is observed, any caller will be directed to Public Works; PW staff will handle trash pick up • In Downtown Plaza area WVCR (contractor) empties trash cans 4 times per week M,W,F and Sat am. • Town also requires Rotary Club and business sponsors to empty cans after "Jazz in the Plaza" event on Wednesday nights. • Farmer's Market program is required to pick up trash following Farmer's Market on Sundays. • Town picks up trash on Sat am and pm. Town picks up trash on Sunday am.	Town's WV Rep, Parks & Maint Superintendents & WVCWP staff

			• Los Gatos trail cleanup is once a month. Now they are finding pet waste bags (from dog walking) tied to the fence. The Town is working on a management plan to address the issue. • Town trimmed trees because of a homeless site between University and Santa Cruz Avenues. • Annually Town cleans S/Ds (including Trash) as part of Storm preparation • Yard waste dumped into storm drain ditch in LG neighborhood (Montclair St. area) was handled as an IC/iD incident. Town of LG sent IC/ID notices to 25 homes in the surrounding area. Town staff cleared the debris. SEE IC/ID ELEMENT In addition, the Town is making efforts to reduce the overall level of trash generated by residents. Town of Los Gatos in conjunction with the City of Monte Sereno, and the Santa Clara County Recycling and Waste Reduction Program conducted their annual "Community Garage Sale" aimed at reducing trash by promoting the theme of reuse. The event was conducted on May 17, 2008. The Town also held a "Second Chance Week" October 15-19, 2008 where residents were encouraged to give unused blankets and clothing for donation to local homeless shelters and support organizations. This was a trash reduction strategy again promoting the theme of reuse. Over a ton of donated goods, and 100 eyeglasses were collected. Donated items were distributed to various non-profit programs that will put them to use, such as Lions Club for eyeglasses.	
	Trash Problem Area Activity Report	Provide City/ Town Specific Information Provide Program staff with specific information on trash management	WVCWP staff used SCVURPPP's standardized reporting forms to provide data on trash monitoring and management activities at the listed problem sites.	Town's WV Rep & WVCWP staff

		Transfer data to trash tally sheets (element of Creek Keeper's Program). See PI/P (Section 6 of this Work Plan)	collect the data which helps identify trash sources. **9-15-07 SanTomas Aquino Creek** WVCWP held a cleanup event at Westmont High School in Campbell. Fifty volunteers spent several hours cleaning up the creek. They removed 46 bags of garbage. **9-29-07 Saratoga Creek at Big Basin Way** Joint WVCWP/ Saratoga staff cleanup. Some volunteers helped at this cleanup in Saratoga on Big Basin Way at Hwy 9 along the parking lot and down the bank, where possible. This was mainly staff with a small number of volunteer residents. A total of 49 bags of garbage and recyclables were collected. Monitoring showed that the trash source was a combination of littering and illegal dumping. Litter was mainly food wrappers and alcohol & beverage containers. A file cabinet, oven, and 30 ft pipe were removed from creek side. **9-29-07 Saratoga Creek at Wildwood Park** In addition to Big Basin Way, Wildwood Park in Saratoga was cleaned by a West Valley staff member and volunteers. Trash was collected and tallied. One bag of trash was removed. **5-17-08 National River Cleanup Day – Cleanup not needed at regular site - San Tomas Aquino Creek** at Westmont High School – site was very clean WVCWP's annual site for this event was determined to be a very clean site prior to May 17, and not appropriate for bringing in a large number of volunteers – i.e. there would hardly be anything to pick up. WVCWP conveyed this information to the County-wide group (Creek Connections Action Group) who concurred with the assessment. WVCWP staff instead supported the cleanup event at Lexington Reservoir Launch Ramp Lot in Los Gatos. This site was hosted by Santa Clara County Parks Dept.

			WVCWP staff participated as a Training opportunity in order to learn how SC County Parks host a site and handle the volunteer monitoring activities. SEE PI/P ELEMENT for additional info	
			LOS GATOS: Los Gatos has an ongoing volunteer "Adopt-a-Trail" program operating along the Los Gatos Creek Trail. Appx. 8 volunteers assemble every other month to collect trash along the trail (6 times during FY 2007-2008. A total of sixteen (16) bags of litter and debris were collected through this effort. The debris included plastic bottles, food wrappers, papers and plastic bags. In addition, a large-scale LG Creek Trail Cleanup was held on April 26, 2008 as part of "Keep Los Gatos Beautiful" month. The clean-up was led by LG High School Leadership Club, coordinated with Town of LG Volunteer Services Dept & Public Works Dept. The Cleanup was promoted via the LG website and Keep LG Beautiful flyers. The Trail Cleanup involved 34 volunteers (23 adults & 11 students, ranging in age from 4 to 17). All volunteers received info on proper e-waste disposal and local drop-off sites. Results of the cleanup were not tallied by experienced staff, so it is likely that the results are overstated, i.e. that bags with a small amount of trash were counted the same as 'full' bags (65 bags litter, 8 bags recycling). Los Gatos held a cleanup event on April 21, 2008. Fourteen (14) volunteers spent four (4) hours picking up roadside debris in the Los Gatos Downtown. They removed fourteen (14) bags of plant debris and litter from gutters, sidewalks, catch basins and planters. Though the majority of the debris collected was leaves and other organic material, paper, plastics, cans and bottles were

			also collected and properly disposed of.	

Trash Inventory & Management Evaluation

General Evaluation of Trash Problems

After several years of monitoring trash sites, WVCWP staff is familiar with the sites and the problems that need to be addressed. Two leading trash sources in West Valley communities are "Illegal dumping" and "vehicular litter" (found along highways, freeway-on-and-off-ramps, and smaller arterial roads). The type of litter that is retrieved is predominantly snack, food, beverage and other product packaging and cigarette butts. School lunch yards are another source of trash, and WVCWP regularly holds outreach activities at schools, including cleanups, to address this issue.

Limitations to improving litter control

Since a major source of trash in the WVC is 'vehicular litter', much of it is in CalTrans' jurisdiction, which means that the WVC often do not have direct control of addressing the litter problem. Cities would like to address litter on Highway medians and freeway on and off ramps, but those areas are under Caltrans jurisdiction. Increased communication and partnering with Caltrans are goals of the WV Communities. When a noticeable littering incident is brought to the attention of WVC/WVCWP, CalTrans is contacted and they have been responsive to removing the litter. It is hoped that WVCWP's participation in the Silicon Valley Anti-Litter Campaign *(formerly the SC County Trash Advisory Committee)* will be another means of helping to address, and conduct outreach to, vehicular littering. The first step in this process has been the initiation of a hotline allowing drivers to report vehicles which are observed in the act of littering.

In general, an impediment to more effective litter control is the common problem of lack of funding. Areas which could be helped by increased funding include:

- Cost of staff time for Stormwater Inspector, PW staff and Sheriff's Dept to patrol areas where illegal dumping occurs. Increased funding for patrols could have a big impact on trash in creeks in the WV Communities, where a number of roads border creeks in less-developed areas. Many of these roads are winding with little traffic, and appear to facilitate illegal dumping via their lack of passersby, who might otherwise deter a perpetrator.
- Cost of publicity for anti-littering campaigns and advertising creek clean-ups, community clean-ups, and e-waste recycling.
- Staff time to organize volunteer clean-ups and handle publicity.

Another major issue is homeless encampments. Placement of trash cans near homeless encampments has been discussed, but it has been determined that this can be seen as "encouragement" and then becomes a liability issue.

Dumpster Area Inspections & Education for Local Businesses

The WVCWP Inspector checks the dumpster areas of the downtown restaurants in each of the West Valley communities for signs of illegal dumping or debris around open dumpsters. He provides urban runoff education as needed, including the importance of keeping dumpster lids closed, and locked if necessary. This method of informal visits and issuing *Notices To Comply* has helped to reduce the amount of trash-related dumpster violations over the past years.

Outreach: Illegal Dumping

In a strategy to raise awareness of illegal dumping in neighborhoods, WVCWP responded aggressively to an illegal dumping incident in a Los Gatos residential area. Town of LG maintenance crews had discovered illegally dumped yard waste and trash behind houses on Montclair Rd. The site was examined by the

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party

WVCWP Inspector. The materials had been dumped near the stormwater drainage culvert, which ultimately feeds to Smith Creek.

WVCWP and Town of LG chose to raise awareness via a letter to residents, and doorhangers placed on doors in the neighborhood. Appx. 25 homes were directly contacted in this manner. These efforts were aimed at both educating residents that such dumping is illegal, and encouraging residents to call and report any such dumping they may see. This technique will continue to be used by WVC, if/when similar situations arise.

Educational Outreach to Students and Teachers in Local Schools

WVCWP staff responded to every opportunity to talk about trash and littering with students. The trash topic is always included in classroom Enviroscape presentations. Local students have been responsive to outreach efforts requesting volunteers at Clean-up events.

In FY 08-09, WVCWP will direct staff time to a new task of developing a structured Schoolyard Trash Cleanup Program with several pilot schools.

Creek Keeper Events – Volunteer Participation - Trash Identification, Tallying & Pick-up

The WVC are all small, but have been successful in promoting volunteer participation from residents. Volunteer involvement in various clean-ups has been a measure of the success of outreach programs. A number of residents have become actively involved in clean-ups, which is also perhaps an indication of the mindset of small town residents, who may be eager to make a difference in their community. WVCWP will make efforts to continue efforts to partner with residents in combating local Trash problems.

WVCWP has been particularly successful in recruiting student volunteers for creek cleanups and the task of trash tallying. Each event is opened with a brief talk on the trash problem affecting our creeks and Bay. The WVCWP's trash tally form was designed to be easy for students to use. Categories on the form reflect the trash types that are most often found in West Valley locations. In May 2008, 2 WVCWP staff members supported a Los Gatos cleanup site hosted by SC County Parks Dept; this allowed staff to gain a perspective on methods used by the Parks Dept. to train volunteers in Trash Monitoring activities.

Volunteers have been very enthusiastic about local clean-up events.

The **Los Gatos Creek Trail Cleanup** (April 26, 2008) was covered by 1 newspaper (*Los Gatos Weekly Times*) and 1 Internet outlet (*Los Gatos Observer*). Local merchants also donated items in support of the cleanup volunteers, including coffee and food. A give-away item of canvas grocery bags helped to reinforce the message of "reduce, reuse, recycle" by substituting reusable bags for throwaway bags – a common litter item.

The Downtown cleanup event on April 21st brought out 14 volunteers, who collected 14 bags of natural debris and fast food litter. The majority of the material was leaves and other organic matter, which are overlooked by other groups tasked with cleaning up after their events (such as Farmers' Market).

Overall Trash Management Evaluation

In general, WVC residents appear to be conscientious about litter and aware of how their actions have a direct impact on 'clean/green areas'. Many residents are also avid supporters of maintaining the environment because they utilize the amenities they gain from such surroundings – biking, hiking, natural scenery, etc. Some West Valley schools have student volunteer groups that conduct schoolyard clean ups, and some have even adopted stretches of their neighboring creeks. While WVCWP conducts anti-litter outreach activities for residents, the WVC still need to address litter from vehicular traffic and illegal dumping, which may not be originating with local residents, so it is hard to address via outreach efforts in the WVC.

In this light, the WVC's best chance for success in dealing with the trash problem is to partner with other agencies and work with a well-organized regional group. WVCWP staff have become actively involved in the Silicon Valley Anti-Litter Campaign *(formerly the SC County Trash Advisory Committee)*, especially the

Los Gatos

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
Educational Outreach sub-group. WVCWP has also worked on developing a working partnership with CalTrans. In its efforts to address litter problems by moving 'up' the trash stream, WVCWP will direct staff time in FY 08-09 towards developing a structured Schoolyard Cleanup Program with interested local schools. Staff will be contacting schools bordering creeks to determine interest, and developing a program which schools can institutionalize and implement on an on-going basis. It is hoped that initial efforts will prove successful, and the program can be expanded to include a number of schools. This would result in cleaner areas directly adjacent to creeks, less trash generated from school yards, and families with increased awareness of trash problems in their watershed. The goal is to move up from the creeksides, where public accessibility is limited - up the trash source line, and reduce the amount of trash that hits the ground through education and habit-forming guidance. New data management methods within the WV Sanitation District are allowing generation of more detailed reports on stormdrain inspection findings. The WVC are working with WVSD on stormdrain report analysis related to Trash, in order to improve identification of possible Trash sources and problem areas.

Cleanups are conducted annually when feasible. There are a few residential homes nearby but the site is not easily accessed because it is fenced off and locked. The school has adopted this stretch of Wildcat Creek.	Continue to work with teachers on presentations to promote anti-litter and anti-dumping activities. Coordinate annual cleanups with Urban RTA assessments, as feasible.
SA05	11/14/2007	125 ft stretch of Quito Rd. from Sobey Rd. (near Hwy 9) extending toward Bicknell Rd.	KAB	1	This is an additional site that was cleaned due to a noticeable increase of trash along Quito Rd. This site is in close proximity to San Tomas Aquino Creek.	Quito Rd is in Caltrans jurisdiction. WVCWP will provide cleanup as time permits due to the potential for trash ending up in nearby San Tomas Aquino Creek.

Urban Rapid Trash Assessment Worksheet

Santa Clara Valley Urban Runoff Pollution Prevention Program

WATERSHED/STREAM: Saratoga Creek DATE/TIME: 9-18-2007
MONITORING GROUP, STAFF: WVCWP and Saratoga staff STATION ID SA3
STATION NAME /LOCATION: Big Basin Way behind rest. and businesses

	CONDITION CATEGORY			
Trash Assessment Parameter	**Least Disturbed (Optimal Urban)**	**Sub optimal Urban**	**Marginal Urban**	**Poor**
1. Level of Trash	On first glance, little or no trash visible. Little or no trash evident when streambed and stream banks are closely examined for litter and debris, for instance by looking under leaves.	On first glance, trash is evident in low levels. After close inspection small levels of trash evident in stream bank and streambed.	Trash is evident in medium on first glance. Stream, bank surfaces, and riparian zone contain litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, clothing.	Trash distracts the eye on first glance. Stream, bank surfaces, and immediate riparian zone contain substantial levels of litter and debris Evidence of site being used frequently by people: many cans, bottles, and food wrappers, blankets, clothing.
SCORE	20 ▌ 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
2. Actual Number of Trash Items Found	0 to 100 trash items found based on a trash assessment of a 100-foot stream reach.	101 to 250 trash items found based on a trash assessment of a 100-foot stream reach.	251 to 500 trash items found based on a trash assessment of a 100-foot stream reach.	Over 500 trash items found based on a trash assessment of a 100-foot stream reach.
SCORE	20 19 18 17 16	15 14 ▌ 12 11	10 9 8 7 6	5 4 3 2 1 0
3. Transportable, Persistent, Buoyant Litter	Little or no (< 25 pieces) transportable, persistent, buoyant litter such as: hard or soft plastics, styrofoam, balloons, cigarette butts.	Low to medium presence (26-75 pieces) of transportable, persistent, buoyant litter such as: hard or soft plastics, styrofoam, balloons, cigarette butts.	Medium prevalence (76-200 pieces) of transportable, persistent, buoyant litter such as: hard or soft plastics, styrofoam, balloons, cigarette butts.	Large amount (>200 pieces) of transportable, persistent, buoyant litter such as: hard or soft plastics, balloons, styrofoam, cigarette butts;
SCORE	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	▌ 4 3 2 1 0
4. Biohazard, Toxic and Sharp Objects	B: Trash contains no medical waste, diapers, pet or human waste. No evidence of toxic substances such as chemical containers or batteries. Only 1 piece of broken glass or metal debris, if any, is present.	B: No toxic substances, but small presence (2-10 pieces) of sharp objects such as broken glass and metal debris.	Presence of **any one** of the following: hypodermic needles or other medical waste; used diaper, pet waste, or human feces; any toxic substance such as chemical containers, batteries, or fluorescent light bulbs. Medium to high prevalence (11-50 pieces) sharp objects.	Presence of **more than one** of the items described in the marginal condition category, and/or high prevalence of (> 50) sharp objects.
Site Accessibility	A: Access is difficult, restricted by locked gate or some other physical barrier like steep banks or thick riparian veg. Site reach does not appear to be used by people. Might be private property or protected watershed.	A: Access is limited and site reach does not appear to be used by people. No trails down to creek.	A: Public access to reach is fair to good but site does not appear to be used frequently, **or** private access is good without any public access.	A: Excellent reach access including trails down to and adjacent creek and creekside space for sitting down. Some evidence that reach is used frequently by the public (e.g. rope swings, many beer/soda cans and food wrappers left on the banks, etc.).

Urban Rapid Trash Assessment Worksheet

Santa Clara Valley Urban Runoff Pollution Prevention Program

	CONDITION CATEGORY			
Trash Assessment Parameter	**Least Disturbed (Optimal Urban)**	**Sub optimal Urban**	**Marginal Urban**	**Poor**
5. Illegal Dumping	D: No evidence of illegal dumping. No bags of trash, no yard waste, no household items placed at site to avoid proper disposal, no shopping carts.	D: Some evidence of illegal dumping. Limited vehicular access limits the amount of potential dumping, or material dumped is diffuse paper-based debris.	D: Presence of **one** of the following: furniture, appliances, shopping carts, bags of garbage or yard waste, coupled with vehicular access that facilitates in-and-out dumping of materials to avoid landfill costs.	D: Evidence of chronic dumping, with **more than one** of the following items: furniture, appliances, shopping carts, bags of garbage, or yard waste. Easy vehicular access for in-and-out dumping of materials to avoid landfill costs.
Illegal Littering	L: Any trash is incidental litter or carried downstream from another location.	L: Some evidence of litter within creek and banks originating from adjacent land uses	L: Prevalent in-stream or shoreline littering that appears to originate from adjacent land uses.	L: Large amountof litter within creek and on banks that appears to originate from adjacent land uses.
D-SCORE	10 9	8 7 6	5 4 3	1 0
L-SCORE	10 9	8 7 6	5 4 3	2 1
6. Accum-ulation of Trash	There does not appear to be a problem with trash accumulation from downstream transport. Trash, if any, appears to have been directly deposited at the stream location.	Some evidence that litter and debris have been transported from upstream areas to the location, based on evidence such as silt marks, faded colors or location near high water line.	Evidence that trash is carried to the location from upstream, as evidenced by its location near high water line, siltation marks on the debris, or faded colors.	Trash appears to have accumulated in substantial quantities at the location based on delivery from upstream areas, and is in various states of degradation based on its persistence in the waterbody. A large percentage of trash items have been carried to the location from upstream.

End of Day Totals

Estimate Length of creek section in miles, i.e. 1/10 mile, 1/8 mile	½ mile	Weight of recyclable trash	6 Bags
Number of bags of trash collected	49	Weight of non-recyclable trash	43 Bags

Questionnaire

1. Describe the stretch of creek monitored using descriptors of boundaries such as landmarks or cross streets. Only monitored 100 ft., cleaned approx. 400 ft of creek bank from Hwy 9 and Big Basin Way to Wildwood Park.

2. What types of trash were most commonly found? Beverage containers , liquor bottles, and food wrappers.

3. List the most unusual items found. Filing Cabinet, oven, and a 30ft pipe.

4. Rate from one to five how dirty or clean the creek was, with one being pristine clean.

Urban Rapid Trash Assessment Worksheet

Santa Clara Valley Urban Runoff Pollution Prevention Program

WATERSHED/STREAM: Shannon Creek DATE/TIME: 6-25-07
MONITORING GROUP, STAFF: WVCWP STATION ID LG02
STATION NAME /LOCATION: Hicks Rd at Shannon 2nd 100 ft.

	CONDITION CATEGORY			
Trash Assessment Parameter	**Least Disturbed (Optimal Urban)**	**Sub optimal Urban**	**Marginal Urban**	**Poor**
1. Level of Trash	On first glance, little or no trash visible. Little or no trash evident when streambed and stream banks are closely examined for litter and debris, for instance by looking under leaves.	On first glance, trash is evident in low levels. After close inspection small levels of trash evident in stream bank and streambed.	Trash is evident in medium on first glance. Stream, bank surfaces, and riparian zone contain litter and debris. Evidence of site being used by people: scattered cans, bottles, food wrappers, blankets, clothing.	Trash distracts the eye on first glance. Stream, bank surfaces, and immediate riparian zone contain substantial levels of litter and debris Evidence of site being used frequently by people: many cans, bottles, and food wrappers, blankets, clothing.
SCORE	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
2. Actual Number of Trash Items Found	0 to 100 trash items found based on a trash assessment of a 100-foot stream reach.	101 to 250 trash items found based on a trash assessment of a 100-foot stream reach.	251 to 500 trash items found based on a trash assessment of a 100-foot stream reach.	Over 500 trash items found based on a trash assessment of a 100-foot stream reach.
SCORE	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
3. Transportable, Persistent, Buoyant Litter	Little or no (< 25 pieces) transportable, persistent, buoyant litter such as: hard or soft plastics, styrofoam, balloons, cigarette butts.	Low to medium presence (26-75 pieces) of transportable, persistent, buoyant litter such as: hard or soft plastics, styrofoam, balloons, cigarette butts.	Medium prevalence (76-200 pieces) of transportable, persistent, buoyant litter such as: hard or soft plastics, styrofoam, balloons, cigarette butts.	Large amount (>200 pieces) of transportable, persistent, buoyant litter such as: hard or soft plastics, balloons, styrofoam, cigarette butts;
SCORE	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0
4. Biohazard, Toxic and Sharp Objects	B: Trash contains no medical waste, diapers, pet or human waste. No evidence of toxic substances such as chemical containers or batteries. Only 1 piece of broken glass or metal debris, if any, is present.	B: No toxic substances, but small presence (2-10 pieces) of sharp objects such as broken glass and metal debris.	Presence of **any one** of the following: hypodermic needles or other medical waste; used diaper, pet waste, or human feces; any toxic substance such as chemical containers, batteries, or fluorescent light bulbs. Medium to high prevalence (11-50 pieces) sharp objects.	Presence of **more than one** of the items described in the marginal condition category, and/or high prevalence of (> 50) sharp objects.
Site Accessibility	A: Access is difficult, restricted by locked gate or some other physical barrier like steep banks or thick riparian veg. Site reach does not appear to be used by people. Might be private property or protected watershed.	A: Access is limited and site reach does not appear to be used by people. No trails down to creek.	A: Public access to reach is fair to good but site does not appear to be used frequently, **or** private access is good without any public access.	A: Excellent reach access including trails down to and adjacent creek and creekside space for sitting down. Some evidence that reach is used frequently by the public (e.g. rope swings, many beer/soda cans and food wrappers left on the banks, etc.).
B SCORE	10 9	8 7 6	5 4 3	2 1 0
A SCORE	10 9	8 7 6	5 4 3	2 1 0

Urban Rapid Trash Assessment Worksheet

Santa Clara Valley Urban Runoff Pollution Prevention Program

	CONDITION CATEGORY			
Trash Assessment Parameter	**Least Disturbed (Optimal Urban)**	**Sub optimal Urban**	**Marginal Urban**	**Poor**
5. Illegal Dumping	D: No evidence of illegal dumping. No bags of trash, no yard waste, no household items placed at site to avoid proper disposal, no shopping carts.	D: Some evidence of illegal dumping. Limited vehicular access limits the amount of potential dumping, or material dumped is diffuse paper-based debris.	D: Presence of **one** of the following: furniture, appliances, shopping carts, bags of garbage or yard waste, coupled with vehicular access that facilitates in-and-out dumping of materials to avoid landfill costs.	D: Evidence of chronic dumping, with **more than one** of the following items: furniture, appliances, shopping carts, bags of garbage, or yard waste. Easy vehicular access for in-and-out dumping of materials to avoid landfill costs.
Illegal Littering	L: Any trash is incidental litter or carried downstream from another location.	L: Some evidence of litter within creek and banks originating from adjacent land uses	L: Prevalent in-stream or shoreline littering that appears to originate from adjacent land uses.	L: Large amountof litter within creek and on banks that appears to originate from adjacent land uses.
D-SCORE	10 9	8 7 6	5 4 3	2 1 0
L-SCORE	10 9	8 7 6	5 4 3	2 1 0
6. Accum-ulation of Trash	There does not appear to be a problem with trash accumulation from downstream transport. Trash, if any, appears to have been directly deposited at the stream location.	Some evidence that litter and debris have been transported from upstream areas to the location, based on evidence such as silt marks, faded colors or location near high water line.	Evidence that trash is carried to the location from upstream, as evidenced by its location near high water line, siltation marks on the debris, or faded colors.	Trash appears to have accumulated in substantial quantities at the location based on delivery from upstream areas, and is in various states of degradation based on its persistence in the waterbody. A large percentage of trash items have been carried to the location from upstream.
SCORE	20 19 18 17 16	15 14 13 12 11	10 9 8 7 6	5 4 3 2 1 0

End of Day Totals

Estimate Length of creek section in miles, i.e. 1/10 mile, 1/8 mile: 200 ft.

Number of bags of trash collected: 5

Weight of recyclable trash: _____

Weight of non-recyclable trash: 31

Questionnaire

1. Describe the stretch of creek monitored using descriptors of boundaries such as landmarks or cross streets. Top of creek bank listed as private property. Trash not visual when driving by.
2. What types of trash were most commonly found? Cans and paper
3. List the most unusual items found. Stereo and garbage can
4. Rate from one to five how dirty or clean the creek was, with one being pristine clean.

Annual Cleanup Program

West Valley Collection & Recycling (WVC&R) will collect an unlimited number of items from your curb at no additional cost for one day only.

Please have your items, containers and bundles curbside by

6 AM on Monday, February 18, 2008

WVC&R will collect:

- Items weighing up to 70 pounds (except as described below)
- Garbage in 32 gallon plastic bags, 32 gallon cans, and sturdy cardboard boxes (all small items must be contained)
- Tree prunings, branches and scrap wood up to 3" in diameter and 3' long in tied bundles weighing up to 70 pounds

WVC&R will not collect:

- 35, 65 or 95 gallon wheeled carts (they are awkward to lift manually)
- Concrete or Dirt (call Guadalupe Landfill 408.286.1670)
- Tires (call Guadalupe Landfill 408.286.1670)
- Items containing CFC's such as refrigerators (call WVC&R 408.283.9250)
- Hazardous Waste (call 408.299.7300 or visit www.hhw.org)
- E-Waste, Universal Waste, Motor Oil and Water Based Paints:
  - You can drop off TV's, Computers, household batteries, motor oil and water based paints at WVC&R's processing facility by appointment. For more information call customer service at 408.283.9250 or visit www.westvalleyrecycles.com
- Large items or containers over 70 pounds:
  - WVC&R will collect large items such as sofas and refrigerators for a fee. To schedule an appointment please call customer service at 408.283.9250

WVC&R makes it easy for you to donate your reusable items. For assistance locating local charitable organizations, visit www.westvalleyrecycles.com or call 408.283.9250.

Please remember to place recyclables in your recycling cart for your regular weekly collection.

To learn more about any of these programs visit www.westvalleyrecycles.com or call customer service at 408.283.9250.

CITY OF MILPITAS

455 EAST CALAVERAS BOULEVARD, MILPITAS, CALIFORNIA 95035-5479
GENERAL INFORMATION: 408-586-3000, TDD: 586-3013, www.ci.milpitas.ca.go

September 15, 2008

Mr. Bruce Wolfe
California Regional Water Quality Control Board
San Francisco Bay Region
1515 Clay St., Suite 1400
Oakland, CA 94612

Subject: Milpitas Urban Runoff Program
FY 07-08 Annual Report

Dear Mr. Wolfe:

This report is submitted by the City of Milpitas, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a. of the Program's reissued municipal storm water National Pollutant Discharge Elimination System (NPDES) Permit (Order No. 01-024). The report summarizes activities performed during FY 07-08 in accordance with the Milpitas Urban Runoff Management Plan (URMP) submitted to the Regional Water Quality Control Board (RWQCB) on March 1, 2007, and the performance standards contained therein. There were no comments issued by the RWQCB on FY 06-07, FY 07-08, FY 07-08 URMPs or FY 05-06 and FY 06-07 Annual Reports.

Contents of Report

The goals of this Annual Report are to: 1) document implementation of our FY 07-08 Work Plan during the past fiscal year, 2) evaluate program results for continuous improvement, and 3) share this information with other Co-permittees, municipal decision-makers, and the public. To accomplish these goals, the report contains the following sections:

1. Certification Statement
2. Acronyms
3. IC/ID Elimination Activities
4. Industrial/Commercial Discharge Control Program
5. Public Agency Activities
    - Public Streets, Roads & Highways O & M
    - Rural Roads Public Works O & M
    - Storm Drain O & M
    - Water Utility O & M
    - Other Public Agency Activities (Corp Yard, Parks, Ponds etc.)
6. New Development Planning Procedures
7. New Development Construction Activities
8. Public Information and Participation
9. Pest Management Activities
10. Mercury Pollution Prevention Activities
11. Copper Action Plan
12. Nickel Action Plan
13. Trash Inventory and Management

14. Staff Training Summary Table

Thank you for your review of this Annual Report. If you have any questions regarding the materials submitted, please contact Paramjit Uppal at (408) 586-3351 or me at (408) 586-3345.

Sincerely,

Kathleen Phalen, PE
Utility Engineer

CITY OF MILPITAS

Illicit Connection & Illegal Dumping Elimination (ICID) Activities – Self-evaluation Matrix

Implem. Id.	Activity	Item Source	Tasks Identified in FY 2007-2008 Work Plan	Status / Comments	Due Date (mo/yr)	Responsible Party (Lead)/ Coordinator
H-1	Service Requests	URMP page H-6	Review existing service requests (SOP 7-1)	This SOP will be reviewed as required.	Ongoing	Code Enforcement (Gloria Anaya)/ Utility Engineering (Paramjit Uppal)
H-2	Record Tracking	URMP page H-6	Hand-held devices to record inspection in the field.	Data from paper inspection forms is entered into the database. This practice will continue for the foresceeable future due to budget constrains.	Ongoing	Fire Department (Patti Joki) & Information Services Utility Engineering (Paramjit Uppal)
H-3	Utility Maintenance SOP on storm drain inspections	URMP page H-7	Revise and finalize Utility Maintenance SOP	SOP remains in draft format. Public Works Dept. staff routinely inspects all the storm water catch basins in 18 month cycles. In 07-08, a total of 3120 catch basins were inspected and 2492 of these were cleaned. Completion of the Utility Maintenance SOP (for storm drain and outfall inspection, coordination and referral activities if suspicious materials are found) is deferred due to lack of resources.	Ongoing	Utility Maintenance (Steve Smith)/ Utility Engineering (Paramjit Uppal)
H-4	Field Investigation, reporting and recording of Storm Water Infiltration Devices (SWIDs)	URMP page H-7	Train staff, document SWID locations, implement SWID inspection, and develop process for reporting and record keeping.	To date, no SWIDs are documented in City's or SCVWD's records. In the future, City will report any SWIDs that are found within the City to SCVWD using referral cards.	Ongoing	Utility Engineering (Paramjit Uppal)

H-5	Additional efforts with restaurants	URMP page H-7	Develop pollution prevention partnership with owners of food facilities to educate operators.	A special Task Force was convened a few years ago to inspect and meet major retail food stores and restaurants in shopping centers. The Task Force has been successful and has moved into a second phase, which is periodic inspection and handing out outreach materials as needed. The Fire Department Inspectors continue to inspect restaurants with grease interceptors every 3 years.	Ongoing	Utility Engr., Code Enforcement (Gloria Anaya), Fire Dept. (Patti Joki))
H-6	Effectiveness Evaluation	URMP page H-7	Conduct annual evaluation of the effectiveness of the program.	See evaluation text.	Ongoing	Fire Department (Patti Joki)/ Paramjit Uppal
H-7	Record Keeping/Reporting	URMP page H-7	Document and report IC/ID incidents using descriptive categories. Maintain records for reporting.	Staff maintains records by completing the Standard Incident Reporting Form. ICID incident reports were submitted electronically to the Program. Reports are also submitted to the RWQCB with the Annual Reports.	Ongoing	Fire Department (Patti Joki)/ Paramjit Uppal
H-8	Staff training	URMP page H-7	Staff will attend training sessions organized by the SCVURPP program	See Staff training Table at the end of this Report.	Ongoing	

Evaluation - ICID Elimination Activities

City staff, including the Fire Department, Building and Safety, and Engineering Divisions, responded to all reported ICID incidents. A summary of ICID incidents is provided in the attached ICID Enhanced Reporting Form. It categorizes each incident under the standard incident types.

All restaurants in Milpitas are inspected every three years by the Fire Department. The last inspection cycle was in FY 05-06. For the following two years, restaurants were inspected on the basis of complaints or report of spills. The next comprehensive inspection round is due in FY 08-09.

The City of Milpitas responds to all the incidents that are reported. Outreach for proper disposal of applicable materials, including vehicle fluids, is provided to the business community in all appropriate circumstances. The annual HazMat and Industrial/Commercial inspections, coupled with education and outreach has led to better understanding of ICID elimination activities.

There were no specific comments from the Regional Board on the Milpitas FY 05-06 or FY 06-07 Annual Reports. The Regional Board has not provided comments on the FY06-07, FY 07-08 or FY 08-09 Work Plans.

Main St., 10/11/07; Aspen Project			Deficiency Notice				Dirt off haul and stockpile, tracking of soil cleanup and stockpile erosion control needed. Tracking cleanup started, next day clean. Erosion control in process, traffic stopped till tracking completed.
Tracking Soil	Mike Marino										X			1666 S. Main St., 10/18/07; Aspen Project			Stop Work Notice				Stock pile must be reduced and erosion & tracking control implemented to the satisfaction of the City. Stop work lifted 11/01/07 maintenance must be ongoing.
Tracking Soil	Mike Mariano										X			1666 S. Main St., - 01/22/08; Aspen Project			Deficiency Notice				1) Protect stockpile & slopes w/plastic. 2) Clean around waddles and replace as necessary. Completed 01/23/08
Tracking Soil	Mike Mariano										x			1666 S. Main St., 01/24/08; Aspen Project	X						Instructed to continue covering slope as needed.
Tracking Soil	Mike Mariano										X			1666 S. Main St., 01/28/08; Aspen Project	X						Instructed contractor that he needs to apply erosion control measures to protect slope. Plastic cover applied 1/29/08, ongoing changes to pile, etc.
Tracking Soil	Mike Mariano										X			1666 S. Main St., 02/21/08; Aspen Project			Deficiency Notice				Observed tracking of dirt at entrance, directed workers to cleanup, cleanup & sweeping was completed 02/22/08.
Tracking Soil	Mike Mariano										X			1666 S. Main St., 02/23/08; Aspen Project			Deficiency Notice				Instructed contractor that repair or replace waddles are needed. Completed 02/25/08.
Tracking Soil	Lucinda Kraynick										X			10/12/2007; Main Street Streetscape Project 8165							Instructed contractor that West side of Main Street south of Weller Lane storm drain inlet needed fabric protection.
Tracking Soil	Lucinda Kraynick										X			1/3/2008; Main Street Streetscape Project 8165							Instructed contractor that it is necessary to pump water out of the low spot at station 14.
Tracking Soil	Lucinda Kraynick										X			1/22/2008; Main Street Streetscape Project 8165	X						Instructed contractor that they need to cap the FRP ducts in the mechanical pit in the south wing.
Accidental Spills	Clare Owen				X				X					12/18/2007; 1885 N. Milpitas Blvd; USA Gas Station	X						Truck driver was emptying waste oil tank to his truck. Valve malfunctioned causing about 20 gallon spill. Small amount may have entered a storm drain. Evergreen Oil Company stream cleaned driveway, flushed and sucked up section of affected storm drain.
Accidental Spills	Paul Inouye				X		X							3/26/2008; 1570 Gladding Ct; Custom Drywall		X					Cleaning wall texture from delivery truck, spill occurred and flowed to storm drain (hose broke on truck). Ordered to dry sweep parking lot and contact environmental company to clean up catch basin and storm drains. Completed.
Vehicle Washing	Paul Inouye				X		X							3/27/2008; 650 Hammond Ct; Pacific Motor Trucking	X						Informed Phil Atherton that Mobile Cleaners needs to contain all wash water from truck washing operation.
Food Facility Oil and Grease discharge waste	Patricia Joki	X								X				8/3/2007; Abel Plaza; Dakao Sandwiches & Tam Thanh Restaurant	X						Restaurant owners were informed of Urban Runoff Issues. Tallow Drum was moved further away from the storm drain. They were educated not to wash any equipment, utensils, mats, etc. outdoors and were asked to stencil storm drains.
Tracking Soil	Erik Forstreuter	X									X			1/3/2008; KB Homes - Thompson Ct	X						Mud tracked into the street on Thompson Ct. KB superintendent took immediate measures to have the street cleaned.

City of Milpitas

FY 2007-2008 Illicit Connection and Illegal Discharge Report Summary (a) and (c)

ICID Incident Type (b)	Reporting Source					Incident Source								Location Date and Responsible Party	Enforcement Action						Comments
	City Inspector	Inter-Department	Other Agency	Citizen	Other	Resi.	Ind.	Com.	Auto Facility	Food Facility	Const. Site	Public Facility	Other/ Unknown		Verbal (d)	Warning (e)	Adm. (f)	Adm. W/ Penalty or Fine (g)	Criminal (h)	Referral for Enforcement (i)	
Unhardened Cement Discharge	Erik Forstreuter	X									X			1/3/2008; KB Homes - Thompson Ct	X			X			Star Concrete washing truck out into the gutter. SWPPP filter not in storm grate. KB Homes superintendent was notified. Contractor cleaned the gutter and replaced filter. Driver was issued a traffic citation for depositing material in the gutter.
Tracking Soil	Erik Forstreuter	X									X			1/3/2008; KB Homes - Thompson Ct	X						Dirt in roadway and gutter from construction site on Thompson Ct. No haul plan from traffic Engineer. No dust control or sweeper. Job shut down. KB Homes superintendent was notified. Job resumed when approved haul plan and sweeper on site was provided.
Water Line Breaks	Steve Smith													Throughout the City on various dates;							A total of 59 potable water service line breaks and 22 main line breaks happen during FY 07/08. In cases where discharge occurred, we followed procedure to capture and dechlorinate to protect creeks.
Tracking Soil	Val Catunao			X				X						1350 S. Park Victoria Dr, 4/9/2008;	X						Contractor performing work at this address was observed pumping mud and silt onto parking lot and driveway and allowing material to enter the storm drain. Instructed contractor to discontinue practice of discharging water, slit and mud onto street / parking lot and into the storm drain. Contractor cleaned up and BMPs were provided to the contractor.
Food Facility Oil and Grease discharge waste	Val Catunao									X				275 Ranch Dr; 4/28/2008	X						Wash water was discharged onto parking lot and into storm drain. Restaurant Manager and Director of Facilities Management were directed to discontinue practice of allowing wash water from rear dock area, to discharge to parking lot and into storm drain. BMPs were provided.
Vehicle and equipment leaking	Val Catunao					X								837 Coyote St; 7/13/2007	X						Resident at this address was attempting to have vehicle towed to a repair garage. Vehicle leaked fuel when engine was running. When vehicle engine was off, no fuel leaked. Resident was instructed to have vehicle towed to a repair garage without turning the ignition on.
Food Facility Oil and Grease discharge waste	Val Catunao	X								X				279 W. Calaveras Blvd; 12/17/2007		X					1/4 inch grease covering ground of trash enclosure was observed. Performed inspection of site. Verified conditions. Contacted Lisa Lo and informed her of observations. Sent corrective action letter and BMPs. Carbon copied stores utilizing enclosure. Performed re-inspection to verify corrections have been performed. No corrections performed. Reinspected site again on 1/28/2008, all items addressed.

All violations were corrected in timely manner and work was performed satisfaction to City inspectors.

(a) Categories conform to those requested by Program
(b) Incident types include only those which were reported for this period
(c) Reporting person's identity is not provided to protect confidentiality
d) Verbal warning providing information for corrective action
e) Written letter providing information for corrective action
f) Official letter describing requirements and consequences
g) Administrative Action with assessment of fines
h) Legal Action
i) Refer case to agency with enforcement powers

Industrial/Commercial Discharger Control Programs – Self-evaluation Matrix

Implem. Id.	Activity	Item Source	Tasks Identified in FY 2007-2008 Work Plan	Status / Comments	Due Date (mo/yr)	Responsible Party (Lead)/ Coordinator
B-1	Field Inspection / Reporting of SWIDs	URMP page B-6	Determine known SWID locations, develop process for reporting, train staff, and implement.	There are no SWIDs documented in City's or SCVWD's records. In the future, City will report any SWIDs found within the City to SCVWD using standard Referral cards.	Ongoing	URMP Coordinator (Paramjit Uppal)
B-2	Violation documentation	URMP page B-6	Review of existing SOP to determine if additional elements should be incorporated.	Staff completed review. Urban Runoff Enforcement Process Flowchart was created by Utility Engineering in September 2003.	Completed	Fire Department (Patti Joki)/
B-3	Training in Enforcement	URMP page B-6	Staff to be trained in enforcement mechanisms.	Staff from Fire Dept.'s Haz Mat Unit routinely attend training sessions	Ongoing	Fire Department (Patti Joki)/ Paramjit Uppal (Utility Engineering)
B-4	Effectiveness evaluation	URMP page B-6	Conduct annual evaluation of the effectiveness of the program.	Done. See Evaluation text.	Ongoing	Fire Department (Patti Joki)/

Evaluation - Industrial Commercial Discharge Control Program

During the past reporting period, the Hazardous Materials and Environmental Services Unit continued to implement its comprehensive inspection program. A total of 314 inspections were completed in FY 07-08. The inspection reports are summarized in the two attached Enhanced Reporting Forms. There are 396 permitted facilities that are included in the Fire Department's annual HazMat inspection program. Some of these 396 HazMat facilities, such as the badminton court or cell phone towers, generally do not have urban runoff issues to report, and are inspected mainly for safety purposes. Fire Department's HazMat inspectors try to inspect most of the listed HazMat facilities at least once a year. However, due to staffing shortage and the steady increase in the number of new facilities every year, it is not always possible to complete the inspections strictly within the one-year time frame. Restaurants are inspected every three years.

The program's main emphasis is that of education and outreach to prevent illegal discharge. The Fire Department has been inspecting businesses for hazardous material code compliance since the early 1980's. Thus, businesses have been educated to use best management practices for many years. Owing to annual inspections, education and outreach, we have seen an increase in awareness regarding proper storage, transportation, use and disposal of applicable materials. There is also a growing awareness of the importance of protecting the Bay from unauthorized releases.

The inspection process identifies best management practice violations and allows time for compliance. All violations are followed up and resolved. When the responsible business fails to comply, enforcement action such as issuance of administrative, civil or criminal citations is taken. If a severe violation is observed, such as material disposal into a storm drain, then a higher level of enforcement action, such as referral to the City or District Attorney, may be taken. For this past fiscal year, no referrals were necessary.

There were no specific comments from the Regional Board on the Milpitas FY 05-06 or FY 06-07 Annual Reports. The Regional Board has not provided comments on the FY 06-07, FY 07-08 or FY 08-09 Work Plans.

EVALUATION – PUBLIC STREETS, ROADS AND HIGHWAYS O& M

The City's contract street sweeping program is managed by the Maintenance Division of the Public Works Department and funded by the Solid Waste collection program. Allied Waste Industries performs the street sweeping as part of its municipal solid waste services contract. In FY 07-08, a total of more than 10,444 miles were swept and 13,159 cubic yards of debris was collected. The volume of debris did not include leaves removed. Leaf removal program is implemented in the fall and winter months only.

Each established sweeping route is swept on the same day of the week. Residential, arterial, and commercial street sweeping is conducted two times a month. Industrial street sweeping is conducted four times a month. Open space areas and mountain roads that have no curb and gutter are not scheduled for routine sweeping, but are swept on an as-needed basis. On Monday and Friday, debris from the rural roads and the main arterial roads are collected.

The City conducts additional street sweeping in the period from early Fall into the winter months until leaf fall has been completed. During November and December, three primary areas are swept weekly to remove leaves. This practice effectively removes leaves, debris, and other pollutants, which would otherwise be washed into the storm drain system. Additional City crews are called upon to assist in the fall cleanup.

The City's contractor promptly removes street sweeping material and disposes of nearly all the materials at the Newby Island landfill. A significant amount of this material is taken to the compost area for beneficial reuse.

Milpitas has a highly effective street maintenance program. There are very few complaints. Complaints are promptly responded to ensure customer and community satisfaction. The City's field crews are trained annually to look for street sweeping BMP deficiencies in the field on a daily basis. Training is provided through Public Works Maintenance's Safety Program. Quarterly meetings are held to discuss BMP deficiencies and safety issues. BMP deficiencies are forwarded to the field employee's immediate supervisor and a service request is generated (record keeping and documentation) and directed to the appropriate department for resolution.

There were no specific comments from the Regional Board on the Milpitas FY 05-06 or FY 06-07 Annual Reports. The Regional Board has not provided comments on the FY 06-07, FY 07-08 or FY 08-09 Work Plans.

G-2-12	Identify rural PW facilities	URMP page G-2-8	Identify rural PW facilities under the City's jurisdiction.	Completed. Rural facilities include the streets and roads in the undeveloped or low density Hillside Area east of Piedmont Road including the ED Levin County Regional Park.	Ongoing	Public Works (David Gordillo) /Utility Engineering

EVALUATION – RURAL PUBLIC WORKS MAINTENANCE AND OPERATION

The rural roads are located in the part of City designated "Hillside." The City's General Plan designates the hilly undeveloped area east of Piedmont Road to be rural and recreational. There are 138.9 miles of City streets, of which rural roads are only 1.9 miles. Typically, open space areas and mountain roads that have no curb and gutter are not scheduled for routine sweeping, but are swept on an as-needed basis. Twice a week, Mondays and Fridays, debris is picked up by hand from the rural roads. These roads are not in the proximity of creeks. The dust swept by wind from these areas would typically accumulate in the City's valley floor areas, and would be removed during routine street sweeping.

The SCVURPP Program has established a definition for rural roads and provided guidelines on performance standards, BMPs and SOPs. The City's maintenance activities produce results consistent with the program guidelines. The public has long valued the natural ambience of the rural Hillside area and fully supports efforts to keep the area pristine.

There were no specific comments from Regional Board on the Milpitas FY 05-06 or FY 06-07 Annual Reports. The Regional Board has not issued comments on the FY 06-07, FY 07-08 or FY 08-09 Work Plans.

Evaluation - Storm Drain Operations and Maintenance

- Staff from police, fire, and public works continued to implement the City's SOP 8-6 titled "Response and Clean-up Guidelines for Hazardous and Non-Hazardous Material Releases including Discharges of Pollutants into Storm Drains and Water Courses (Urban Runoff Pollution Prevention)."

- City staff completed inspection and cleanup of the City's 78 outfalls in FY 03-04 and determined that ten needed repairs. Repairs of two were completed in FY 04/05 and remaining eight were completed in FY 05/06. City again inspected all 78 outfalls in FY 05/06 and found three that need repair. The outfalls were inspected in 06-07 and three more were determined to need repair. The six repairs are scheduled for October 2008. City staff inspected 78 outfalls in 07-08 and found that no additional repairs are needed.

- City staff performed the operation and maintenance tasks of the storm drain system; contractors were not used.

- Staff has not reported any problems with BMPS; no updates are planned at this time.

There were no specific comments from the Regional Board on the Milpitas FY 05-06 or 06-07 Annual Reports. The Regional Board has not issued comments on the FY 06-07, 07-08 or 08-09 Work Plans.

D-8	WUPPP	URMP page D-5	Implement pollution control measures identified in the WUPPP to manage chlorine, biocides, and algaecides and prevent erosion and sediments.	Staff has implemented pollution control measures.	ongoing	Public Works Maintenance (Steve Smith)/ Marilyn Nickel

Evaluation - Water Utility Operations and Maintenance

- Due to a shortage of staffing resources, we did not update the inventory of key discharges. However, no new facilities or activities have been incorporated and the previous inventory remains applicable.
- Contractors are typically utilized to fix major water line breaks and 3 water line breaks were contracted out in 07-08. There were no complaints about contractors not following BMPs to fix water line breaks.
- The first priority is to stop the flow of water.
- Staff has not reported any problems with BMPS; no updates are planned at this time.

There were no specific comments from the Regional Board on the Milpitas FY 05-06 or 06-07 Annual Reports. The Regional Board has not issued comments on the FY 06-07, 07-08 or 08-09 Work Plans.

	guidance locally	page E24	guidance, and compare them to the list of areas to address in Provision C.3.j. and other references such as "Start at the Source" and the "Development Policies Comparison" work sheet. Prepare and submit an analysis of local standards, identified opportunities for revision, and proposed revisions.	adopted in October 2005. Step 3 of Chapter 3 of the Guidebook addresses Design to Minimize Imperviousness through cluster development, optimizing the site layout, minimizing directly connected impervious area, detaining and retaining runoff throughout the site and through documentation of design.		(Tiffany Kunsman) Utility Engineering (Paramjit Uppal)
E-C.3.j.3	Site design guidance	URMP page E25	Oversee completion of and work with the BASMAA work group on the BASMAA project "Using Start at the Source to Comply with Development Standards," which will evaluate how site design measures can be used to meet the numeric design standards in Provision C.3.d.	City staff participated on Ad-Hoc committee to develop model documents. The analysis of the City design standards were submitted to the Program in September of 2003. The 3rd Edition of the C.3 Guidebook was adopted in October 2005. Step 3 of Chapter 3 of the Guidebook addresses Design to Minimize Imperviousness through cluster development, optimizing the site layout, minimizing directly connected impervious area, detaining and retaining runoff throughout the site and through documentation of design.	Completed	Program
E-C.3.j.4	Incorporate Site design guidance into local project approval process	URMP page E25	Incorporate any revised standards and guidance into local project approval process and "fully implement" the revised standards and guidance.	The results of b.2, together with b.1, c.4, c.7 & j.2 were incorporated into the 3rd Edition of the C.3 Guidebook, which was adopted in October 2005.The Guidebook, in Step 3 of Chapter 3 addresses Design to Minimize Imperviousness through cluster development, optimizing the site layout, minimizing directly connected impervious area, detaining and retaining runoff throughout the site and through documentation of design.	Completed	Planning (Tiffany Kunsman) Utility Engineering (Paramjit Uppal) Land Development (Fariborz Heydari) D & C (Jeff Leung)
E-C.3.k.1	Revise existing PS to include Source	URMP page E26	Revise the current Planning Procedures Performance Standard to include source	The revised Guidebook addresses source control requirements in Chapter 3, Step 6	Completed	Program

Im Id.	Activity	Item Source	Tasks Identified i FY 2007-2008 Work Plan	Status / Comments	Due Date (mo/yr)	ponsible Party (Lead)/ Coordinator
	Controls requirements		control requirements (complete as part of Action c.5.). Develop a model list of source control measures (in the form of conditions of approval), based on existing lists used by Co-permittees, examples in Provisions C.3.k. and other references, and include the list as an attachment to the revised performance standard. Products, Required by C.3.k (last paragraph): -- Draft conditions of approval for source control measures - 9/15/02 -- Model revised performance standard – 3/1/03	and provides a model list of source control measures in Appendix C including those that must be designed into the project at the outset, and those that comprise operational BMPs activities to be conditioned upon project approval.		
E-C.3.k.2	Revise existing PS	URMP page E26	Incorporate model revised Planning Procedures Performance Standard into local urban runoff management plans including effectiveness & evaluation.	Adopted above PS, and Source Control Measures are being implemented.	Completed	Planning (Tiffany Kunsman)
E-C.3.k.3	Develop work plan to include Source Control	URMP page E27	Develop a work plan for and begin implementation of source control measures requirements by including appropriate conditions of approval in Group 1 projects. Report status and provide examples of application of conditions in annual reports.	• Began including Conditions of approval (COA) for "Source Control" (City already picks from BMP matrix for all projects). Also included in City's C-3 Guidebook. • Source Control Measures are being implemented and included in Special Conditions of Approval. Also included in City's C.3 Guidebook. • The 3rd Edition of the C.3 Guidebook was adopted in October 2005. The guidebook outlines requirements for submittal of a Stormwater Control Plan with Group 1 and Group 2 projects. Development proposals must incorporate BMPs into project design at the outset, instead of conditioning the project approval after basic project design was already completed. • Beginning 10/6/05, City started	Completed Completed Completed	Planning (Tiffany Kunsman) Utility Engineering (Paramjit Uppal)

Implem. Id.	Activity	Item Source	Tasks Identified in FY 2007-2008 Work Plan	Status / Comments	Due Date (mo/yr)	Responsible Party (Lead)/ Coordinator
				requiring submittal of a Stormwater Control Plan with planning application submittal for Group 2A projects, such as plan to incorporate BMPs into project design. In August 2006, City will impose same requirements for Group 2B projects as identified in the C.3 Guidebook. • City staff continues to include conditions of approval, including a condition that project construction plans incorporate the BMPs in the approved Stormwater Control Plan.	Completed Completed and Ongoing	
E-C.3.l.1	Review General Plan (GP)	URMP page E28	Review current GP policies related to water quality and watershed protection and incorporate additional policies as needed to implement C.3 requirements. Refer to Provision C.3.l. for examples.	City updated its GP on January 17, 2006 to better implement the provisions of C3.	Completed	Planning (Tiffany Kunsman) Utility Engineering (Kathleen Phalen)
E-C.3.m.1	Review CEQA checklist	URMP page E28	Review CEQA initial study checklists and other environmental review documents and modify documents as needed to include questions that sufficiently address water quality impacts of projects (see example questions in Provision C.3.m.)	City, with consultant, reviewed CEQA checklist to address stormwater concerns; no revisions were needed.	Completed	Planning (Tiffany Kunsman)
E-C.3.n.1	Reporting	URMP page E28	Provide information described in Table 1 of Provision C.3. in annual reports	The City's C.3 Guidebook incorporates the Table 1 (of Permit) requirements.	Provided in Annual Reports	Planning (Tiffany Kunsman) Utility Engineering (Paramjit Uppal) Fire Department (Patti Joki)
E-C.3.n.2	Data management	URMP	Prepare summary of data to be collected to	The database is operational and staff has	Completed	Program

Imp Id.	Activity	Item Source	Tasks Identified in FY 2007-2008 Work Plan	Status / Comments	Due Date (mo/yr)	ponsible Party (Lead)/ Coordinator
		page E29	meet C.3. requirements and recommendations for data management (data base fields, stage in review process to request data, etc.)	been trained. See Staff Training Summary Table for details.		
E-C.3.n.3	Reporting	URMP page E29	Collect and report the following for all new and redevelopment projects[1] that are required to meet C.3. Required by C.3.n.1 -- project name, location, type (per C.3.c.), size (ac. or sq. ft.), and impervious surface area. For redevelopment projects, include area of land disturbance.	These projects are shown on the Reporting Form for Significant Development (included in this section).	Completed	Planning (Tiffany Kunsman) Utility Engineering (Paramjit Uppal, Pam Lowe) Land Development (Fariborz Heydari) Design & Construction (Jeff Leung) PW (Carol Randisi)
E-C.3.n.4	Reporting	URMP page E29	Collect and report the following for all projects that must implement treatment measures: BMPs, site design, and source control measures used, sizing criteria, O&M responsibility mechanism and responsible party for C.3 projects.	These projects are shown on the Reporting Form for Significant Development (included in this section).	Completed	Planning (Tiffany Kunsman) Utility Engineering (Paramjit Uppal) Design & Construction (Jeff Leung)
E-C.3.n.5	Effectiveness Evaluation	URMP page E30	Collect information and report a summary of types of pesticide reduction measures	Started collecting data – 7/02 Group 1 and Group 2A projects are	Ongoing	Utility Engineering

[1] Provision C.3.n. requires this information for all projects which meet the Group 1 and Group 2 definitions. Program staff request that Co-permittees consider collecting this information for all projects (and inform Program staff of their decisions), so that there is sufficient data to conduct the alternative project size analysis. As the approach to the alternative project size analysis is further developed, the data needs will be better defined and communicated to the Co-permittees.

Implem. Id.	Activity	Item Source	Tasks Identified in FY 2007-2008 Work Plan	Status / Comments	Due Date (mo/yr)	Responsible Party (Lead)/ Coordinator
			required for C.3 development projects, and the percentage of projects for which pesticide reduction measures were required. (Model conditions of approval for pest resistant landscaping features and practices and a reporting format for pesticide reduction measures are being prepared as part of Actions VII.A.1. and VII.A.4. of the Program's Pesticide Management Plan. Co-permittees are to begin to consider pest-resistant landscaping and design features in the design, landscaping and environmental reviews of development projects in FY 02-03, per Pesticide Management Plan Action VII.A.2.) Required by C.3.n.iii (Model COA 6/02)	reported in Significant Development Projects Table.		(Marilyn Nickel) Land Development (Fariborz Heydari) PW (Carol Randisi)

Evaluation – New Development Planning Procedures

The Planning, Engineering (Land Development, Design and Construction, Utility Engineering), and Building Divisions have coordinated to integrate the C.3 provisions into the City approval procedures. The City updated its Stormwater C.3 Guidebook in October 2005 to update O & M verification, Hydromodification, Group 2 definition and the waiver program.

General Plan Amendment: Staff updated the Open Space and Environmental Conservation Element of the General Plan as follows:

4.4 Water Quality and Conservation
For water supply, see Section 2.6: Public Utilities and Services.

Urban Runoff (Stormwater) Pollution Prevention

Urban runoff to Bay area creeks and San Francisco Bay contains pollutants that impair aquatic life. Bay fish contain elevated concentrations of mercury, PCBs, and other pollutants harmful to human health.

The California Regional Water Quality Control Board for the San Francisco Bay Region (Water Board) is responsible for enforcing the state's Porter-Cologne Water Quality Act and portions of the Federal Clean Water Act. The Water Board's *Water Quality Control Plan* (Basin Plan) identifies beneficial uses of San Francisco Bay and its tributaries and sets forth criteria and programs for protection of beneficial uses.

The Water Board has issued Municipal Stormwater Runoff National Pollutant Discharge Elimination System (NPDES) permits to Bay Area counties, water districts and municipalities. The permits mandate comprehensive programs to reduce urban runoff pollutants to the maximum extent practicable.

Milpitas, 12 other cities and towns in northern Santa Clara County, Santa Clara County, and the Santa Clara Valley Water District are Co-permittees under a single stormwater NPDES permit. The NPDES permit was issued in 1990 and reissued, with additional requirements, in 1995 and 2001.

Milpitas' *Urban Runoff Management Plan* details the City's comprehensive urban runoff pollution prevention program. To implement the plan, the City:

- Inspects municipal storm drains to eliminate illicit discharges and prevent illegal dumping.
- Inspects private industrial and commercial facilities and enforces requirements to implement Best Management Practices (BMPs) to reduce stormwater pollutants.
- Educates the public about stormwater pollution and prevention methods, and encourages public participation in program planning.
- Inspects construction sites and enforces requirements to implement BMPs to control erosion, sedimentation, and pollutants from construction activities.
- Requires applicants for development approvals to incorporate permanent pollution prevention measures into development projects.
- Advocates and employs Integrated Pest Management, an approach to pest management that relies on information about the life cycles of pests and their interaction with the environment. Pest control methods are applied with the most economical means and with the least possible hazard to people, property, and the environment.
- In cooperation with other agencies, monitors the occurrence and effects of stormwater pollutants in receiving waters.

The City has adopted Performance Standards for its pollution prevention activities. These Performance Standards are continuously improved, with an updated Performance Standard, or new Performance Standard, adopted each year.

Milpitas' *Urban Runoff and Watercourse Protection Ordinance* (Title XI, Chapter 16 of the Milpitas Municipal Code) expresses the City's authority to prohibit non-stormwater discharges to storm drains and to require residents and businesses to implement BMPs.

The 2001 reissued permit added more stringent requirements (Provision "C.3") to control runoff and runoff pollutants from new development. Applicable projects[1] must include facilities to treat runoff before it is discharged from the site. The City is required to inspect these facilities and ensure that they are operated and maintained in perpetuity.

In addition, the reissued permit requires the City to manage increases in peak runoff flow and increased runoff volume where necessary to prevent accelerated erosion of creek beds and banks.

In September 2005, the Milpitas Planning Commission agenda included the revision of the *Stormwater C.3 Guidebook* (adopted in September of 2003) to guide staff and applicants when implementing the new requirements.

Water Conservation

Prompted by the recent drought and water shortages, the City in 1993 adopted a Water Efficient Landscapes Ordinance and in 1994 adopted the Water Conservation Ordinance. The Ordinance seeks to promote conservation and efficient use of water by restricting new and rehabilitated landscaping for public agency projects, private commercial and industrial projects, and common-area landscaping in single-family and multifamily subdivisions and planned unit developments to maximum applied water allowances. It also requires preparation of landscape documentation packages for new and rehabilitated landscapes.

Recycled Water

The City of Milpitas desires to conserve potable water supplies and encourages the use of recycled water for appropriate uses. Potable water shall not be used for irrigation if recycled water is available except as specified in the City Municipal Code.

---

[1] Beginning October 15, 2003, the C.3 requirements are applied to projects that add or replace one acre or more of impervious surface. On or before October 20, 2005, the City will implement Group 2A which consists of an impervious area of 10,000 square feet on sites with a gas station, auto wrecking yard, loading docks and surface parking lots containing more than 10,000 square feet or more of impervious surface area, and vehicle or equipment maintenance areas, outdoor handling or storage of waste or hazardous materials, outdoor animal care, outdoor horticultural activities, and various other industrial and commercial uses where potential pollutant loading cannot be satisfactorily mitigated through other post-construction source control and site design practices. All other developments with impervious areas of 10,000 square feet or more will be required to implement C.3 requirements in accordance with the City's NPDES Permit. On or before August 15, 2006, this threshold is reduced to 10,000 square feet of impervious surface for all sites.

Guiding Principles

4.d-G-1. Assure reasonable protection of beneficial uses of creeks and South San Francisco Bay, and protect environmentally sensitive areas.

4.d-G-2. Comply with regulatory requirements pertaining to water quality.

4.d-G-3. Continuously improve implementation of stormwater pollution-prevention activities.

4.d-G-4. Mitigate the effects that land development can have on water quality.

4.d-G-5. Protect and enhance the quality of water resources in the Planning area.

4.d-G-6. Promote conservation and efficiency in the use of water.

Implementing Policies

4.d-P-1. Implement a comprehensive municipal stormwater pollution-prevention program in compliance with requirements of the Water Board's stormwater NPDES permit.

4.d-P-2. Minimize the use of pesticides that may effect water quality.

4.d-P-3. Work cooperatively with other cities, towns, and the Santa Clara Valley Water District to comply with regulations, reduce pollutants in runoff, and protect and enhance water resources in the Santa Clara Basin.

4.d-P-4. Where consistent with other policies, preserve, create, or restore riparian corridors and wetlands. Where possible, set back development from these areas sufficiently to maximize habitat values.

4.d-P-5. Where feasible, conform developments to natural landforms, avoid excessive grading and disturbance of vegetation and soils, retain native vegetation and significant trees, and maintain natural drainage patterns.

4.d-P-6. Where possible, avoid new outfalls to natural or earthen channels.

4.d-P-7. Applicable projects shall minimize directly connected impervious area by limiting the overall coverage of paving and roofs, directing runoff from impervious areas to adjacent pervious areas, and selecting permeable pavements and surface treatments.

4.d-P-8. Applicable projects shall incorporate facilities (BMPs) to treat stormwater before discharge from the site. The facilities shall be sized to meet regulatory requirements.

4.d-P-9. Applicable projects shall control peak flows and duration of runoff where required to prevent accelerated erosion of downstream watercourses.

4.d-P-10. Projects accommodating outdoor activities, including work areas, storage areas or other areas that are potential sources of stormwater pollutants, shall incorporate measures to control those pollutant sources to the maximum extent practicable.

4.d-P-11. Owners and operators of stormwater treatment facilities shall maintain those facilities and ensure they continue to be effective.

4.d-P-12. Construction sites shall incorporate measures to control erosion, sedimentation, and the generation of runoff pollutants to the maximum extent practicable. The design, scope and location of grading and related activities shall be designed to cause minimum disturbance to terrain and natural features. (Title II, Chapter 13 of the Municipal Code includes requirements for control of erosion and sedimentation during grading and construction.)

Required Actions

Milpitas Urban Runoff Management Program
(Details of implementation are in Title XI, Chapter 16 of the Municipal Code and in the Milpitas Urban Runoff Management Plan.)

4.d-A-1. Inspect commercial and industrial facilities and require BMPs.

4.d-A-2. Conduct surveillance and enforcement to reduce illegal dumping to storm drains.

4.d-A-3. Implement BMPs to minimize runoff pollutants during operation and maintenance of streets, roads, storm drains, and water supply mains and facilities.

4.d-A-4. Inspect construction sites and require erosion and sedimentation control and pollution-prevention BMPs.

4.d-A-5. Publicize and promote Integrated Pest Management and use Integrated Pest Management in maintenance of City parks and other facilities.

4.d-A-6. Update the Urban Runoff Management Plan as required in accordance with the Water Quality Control Board's Stormwater NPDES Permit.

Cooperative Efforts to Protect and Enhance Water Quality

4.d-A-7. Support and participate in the Santa Clara Valley Urban Runoff Pollution Prevention Program (SCVURPPP). Through SCVURPPP, support regional organizations and efforts, including the Bay Area Stormwater Management Agencies Association, to monitor and protect water quality in San Francisco Bay and its tributaries.

4.d-A-8. Coordinate with the Santa Clara Valley Water District to plan and implement multi-objective projects to reduce flood hazards, restore stream functions, and provide recreational resources along Berryessa Creek and other Milpitas creeks.

Development Requirements
(Details of implementation are in Title XI, Chapter 16 of the Municipal Code, the Milpitas Urban Runoff Management Plan, and the Milpitas Stormwater C.3 Guidebook.)

4.d-A-9. Provide guidelines to help applicants comply with stormwater requirements for new development.

4.d-A-10. Require developers of applicable projects to submit, with application for planning and zoning approval, a Stormwater Control Plan detailing the required stormwater pollution prevention and flow control measures incorporated into the project.

4.d-A-11. Require developers of applicable projects to prepare and submit, prior to final approval of construction, a Stormwater Control Operation and Maintenance Plan detailing maintenance requirements and methods for the stormwater treatment and flow control facilities incorporated into the project.

4.d-A-12. When conducting environmental reviews of proposed projects, evaluate water quality effects and identify appropriate mitigation measures.

4.d-A-13. Adopt and revise public works standards to minimize the impacts of development on water quality, provided that the new standards would also be consistent with other City policies.

4.d-A-14. Allow access to sites for City inspection of stormwater treatment and flow control facilities.

Other Activities: Staff also participated in program-level C3 Ad Hoc Committees to assist in the process of development of C3 provisions such as O & M Work Group and, Hydromodification Management Plan and the Development Review Process Work Group.

City management has worked with other Co-permittees in the development of a Waiver Program to address site impracticability, smart growth projects, and redevelopment areas pursuant to the Community Redevelopment Law (Health & Safety Code 330000 et. seq.), affordable and senior housing projects and brownfields that were approved by the RWQCB in June 2005. A Smart Growth Project pursued by the City is the adopted Milpitas Transit Area Specific Plan. The plan consist of a mixed-use Transit Oriented Development in close proximity to the future Montague BART Station and two light rail stations. The project will consist of 7,185 dwelling units, 800,000 square feet of office, 175,000 square feet of hotel and 500,000 square feet of retail.

The City has developed a database to incorporate the O & M verification program. With this database, the City will be able to track all projects with permanent BMPs and their status including an inspection schedule. City staff have been trained to use this database.

A City consultant has also reviewed and provided guidance for preliminary identification and analysis of stormwater management options for the City's Library expansion project in November 2004.

The City is diligently working on meeting C3 requirements.

There were no specific comments from the Regional Board on the Milpitas FY 05-06 or 06-07 Annual Reports. The Regional Board has not issued comments on the FY 06-07, 07-08 or 08-09 Work Plans.

Additional Information – New Development Planning Procedures

BMP O & M Verification Program – C.3.e: As part of developing and implementing a program to verify that required treatment BMPs are properly maintained over the life of the project, the City has developed a database to track C.3 activities including the Operation and Maintenance Program. In this database, project information such as property address, contact person, responsible party, BMPs installed, BMPs maintenance and inspection frequency required etc. will be entered. The City will also develop criteria to inspect a subset of prioritized treatment measures for appropriate operation and maintenance on an annual basis.

The City has reviewed Program-provided examples of operation and maintenance-related ordinance, policy and agreement language and had formulated language for special conditions, O & M plans and agreements for incorporation into the City's project approval process. The approval process (for Private and Public Projects) is shown below:

C3 Procedure – Private Projects

Function	#	Activity	Description	Lead Section
Planning Approval	1	Inform applicants of C3 requirements	Provide forms: • C3 Data Form • C3 Waiver Form, if applicable. • C3 Alternative Compliance Form, if applicable.	**Planning**
	2	Receive application	Assign Permit # in database.	**Planning***
	3	Review applications for completeness and applicability of C3 requirements	For projects with more than 10,000 SF of new impervious surface area (created, added, or replaced impervious surface, including roof area, streets, and sidewalk). Threshold of 10,000 SF became effective April 15, 2005.	**Planning*** **Land Development Engineering***
	4	Assign conditions of approval for permanent urban runoff controls	Permanent controls to manage storm water peak volume and quality are mandated. Site Design Measures guidelines are used to determine the appropriate BMP for the specific site conditions. BMPs may include vegetative swales, detention basins etc. In accordance with Hydromodification Management Plan, BMPs will be selected to control peak discharges.	**Land Development Engineering***
	5	Assign conditions of approval for long-term O&M of permanent controls	a. City oversight to insure proper operation and maintenance occurs is mandated. b. Approve O&M Plan. (O&M Plan not required if project has received C3 waiver.)	**Land Development Engineering***

	6	Assign conditions of approval for other C3 elements	a. Pesticide reduction (choose plantings and design landscape to minimize use and runoff of pesticides) b. Source control (includes plumbing several areas to sanitary such as restaurant mat washing, trash enclosures, swimming pools, vehicle wash areas, fire sprinkler test water, etc) c. Site design (includes minimize land disturbance, minimize impervious surface area, minimum impact street and parking lot designs, downspouts to bubble-ups, microdetention at landscapes).	**a. Planning*** **b. Land Development Engineering*** **c. Land Development Engineering* Planning***
	7	Plan check proposed permanent controls	Perform detailed plan check for hydrology, hydraulically-sized detention basins, and vegetative swales, etc. Coordinate with SWPPP, erosion control plan and grading plan. Verify conditions of approval in #4 are met. Plan check for conditions of approval in #5. May include review and recordation of CC&Rs for O&M responsibility. Plan check for conditions of approval #6a - pesticide reduction measures. Plan check conditions of approval #6b - site design measures. Plan check for conditions of approval #6c - source control measures.	**Land Development Engineering***
Construction & Inspection	8	Inspect and accept installation of permanent controls	Inspect construction of detention basins, swales, fossil filter inserts, etc. in accordance with plans. Grading, landscape and site drainage would also be inspected.	**Public Works Inspection***
Post-Construction	9	Long-term Permanent Controls O&M	Oversee and administer program to ensure that controls are annually maintained. Develop and maintain a database, coordinate inspection, and follow up with enforcement issues.	**Utility Engineering***

	10	Perform annual inspections of permanent controls	Inspect a subset annually to insure they are operated and maintained appropriately. (Annual inspection not required if project has received C3 waiver.)	**Public Works Inspection***
	11	Enforce O&M of permanent controls	Notify responsible City Department of needed O & M actions. Monitor for compliance. Elevate continuing noncompliance to City Manager if necessary.	**Public Works Inspection***
	12	Reporting	Report program status to RWQCB.	**Utility Engineering**

* Requires input into C3 PTWin (CRW once in operation) database.

C3 Procedure – Public Projects

Function	#	Activity	Description	Lead Section
Planning Approval	1	Establish project requirements as part of project scope.		
	1a	Assign conditions for design including permanent urban runoff controls to project.	Permanent controls to manage storm water volume and quality are mandated. These controls might include detention basins, infiltration areas such as swales, fossil filter inserts at catch basins, etc. or offsite treatment. Hydromodification Management Plan.	**Design & Construction Engineering or Special Projects Engineering***
	1b	Assign conditions for long-term O&M of permanent controls to project.	c. City oversight to ensure proper operation and maintenance occurs is mandated. d. Develop O&M Plan. (O&M Plan not required if project has received C3 waiver.)	**Design & Construction Engineering or Special Projects Engineering***

	1c	Assign conditions for other C3 elements to project.	a. Pesticide reduction (choose plantings and design landscape to minimize use and runoff of pesticides) b. Source control (includes plumbing several areas to sanitary such as restaurant mat washing, trash enclosures, swimming pools, vehicle wash areas, fire sprinkler test water, etc) c. Site design (includes minimize land disturbance, minimize impervious surface area, minimum impact street and parking lot designs, downspouts to bubble-ups, microdetention at landscapes and cisterns).	**Design & Construction Engineering or Special Projects Engineering* Planning***
	2	Complete application upon CIP approval by City Council	For projects with more than 10,000 SF of new impervious surface area (created, added, or replaced impervious surface, including roof area, streets, and sidewalk). Review for Waiver and Alternative Compliance. Include C3 provisions even if waiver applies. Assign Urban Runoff Certification # in database. Complete forms: • C3 Data Form • C3 Waiver Form, if applicable. • C3 Alternative Compliance Form, if applicable.	**Design & Construction Engineering or Special Projects Engineering***

	3	Plan check proposed permanent controls	Perform detailed plan check for hydrology, hydraulically-size detention basins and vegetative swales etc. Coordination with SWPPP, erosion control plan, and grading plan. Verify scope of work items are met. Plan check for conditions of approval. Plan check for conditions of approval - pesticide measures. Plan check conditions of approval - site design measures. Plan check for conditions of approval - source control measures.	**Design & Construction Engineering or Special Projects Engineering***
Construction & Inspection	4	Inspect and accept installation of permanent controls	Inspect construction of detention basins, swales, etc in accordance with plans. Grading, landscape and site drainage would also be inspected.	**Public Works Inspection***
Post Construction	5	Long-term Permanent Controls O&M	Oversee and administer program to insure that controls are annually maintained. Develop and maintain a database, coordinate inspection, and follow up with enforcement issues.	**Utility Engineering***
	6	Perform annual inspections of permanent controls	Inspect a subset annually to insure they are operated and maintained appropriately.	**Public Works Inspection***
	7	Enforce O&M of permanent controls	Notify responsible City Department of needed O & M actions. Monitor for compliance. Elevate continuing noncompliance to City Manager if necessary.	**Public Works Inspection***
	8	Reporting	Report program status to RWQCB.	**Utility Engineering***

* Requires input into C3 PTWin (CRW once in operation) database.

Alternative Certification of Adherence to Design Criteria for Stormwater Treatment Measures – C.3.h: No alternative certification was approved in FY 07-08.

F-6.B	Annual training	URMP page F-11	Provide annual training.	An Enforcement Response Plan was developed. City staff trained on revised Enforcement Response Plan in March 2006 and this will be an on going effort.	Annually or more frequently	Engineering and Building Division
F-6.C	Effective BMP and stormwater regulations	URMP page F-11	Inspectors will receive training and education on effective BMPs and stormwater regulations through workshops, literature reviews on environmental regulations, seminars and conferences conducted by Federal, State, and Local environmental organizations.	See Staff Training Summary at the end of this Report for information.	Ongoing - Program has scheduled info-sharing & training workshops	Engineering and Building Division
F-7.B	Distribution of new requirements	URMP page F-11	New materials will be developed and distributed when changes are made to the City's ordinances, conditions of approval, or other requirements for construction and post- construction BMPs.	C3 requirements were developed and information was provided to developers and contractors.	Ongoing	Engineering and Building Division

Evaluation - New Development Construction Procedures

City has been using a Construction Inspection Enforcement Response Plan since March 2006. This Plan includes newly developed documents such as Process Flow Chart, Urban Runoff Contractor Acknowledgement, Notice of Non-Compliance, Stop Work Notice, emergency Contractor Time and Materials Form, Deficiency Notice, updated SWPPP Checklist, and an updated City code.

City staff has been trained on this new Response Plan and other C3 requirements. City staff has also attended various training classes and workshops for these requirements. regulations.

The Special Project Team also held meetings to review the requirements and recommendations of preventing pollution from entering the storm water system, and to revise the City's "front end" specifications to reflect those principles, along with other construction practices. To that end the City's front-end specifications were revised to strengthen contractor requirements to perform in compliance with proper urban runoff practices, and to allow the City better tools to enforce contractor compliance with the specifications.

Public Works and Building inspectors coordinate to inspect and enforce construction related BMPs. They continue to improve developer and contractor understanding of requirements through education and staff's persistence. As noted on the ICID table, staff issued three citations with financial penalties to contractors. Developers and contractors have been increasingly more responsive to Storm Water Pollution Prevention Plan compliance.

There were no specific comments from the Regional Board on the Milpitas FY 05-06 or FY 06-07 Annual Reports. The Regional Board has not issued comments on the FY 06-07, FY 07-08 or FY 08-09 Work Plans.

I-8	Effectiveness Evaluation	URMP Page I-6	Develop an evaluation procedure to gauge public (contractors, developers) knowledge of program goals, and effectiveness of PIP activities.	See Evaluation text.	Ongoing	Utility Engineering (Vency Woo)

Evaluation of Public Information / Participation Program Effectiveness

The City measures its outreach effectiveness by the number of outreach activities performed, the quality and quantity of materials distributed, and level of business and citizen participation in city sponsored special events.

In fiscal year 07/08, staff continued to distribute BMP guidelines to residents, developers and contractors during project planning and construction. In addition, staff performed outreach activities by means of direct mailings (such as Annual Recycling Residential Newsletter and Annual Consumer Confidence Report), literature distribution at City owned facilities, announcements through city media such as the City website, television and radio stations, and placing periodic advertisements in the Milpitas Yellow Pages and the Milpitas Post, (a local newspaper published weekly). As a result, we continued to receive a high number of literature request forms and hotline phone calls.

City sponsored events such as the Family Day, the Milpitas Art & Wine Festival, the Annual Creek Clean Up event and the County Household Hazardous Waste drop off event continued to draw exceptional public participation and were excellent opportunities to educate and interact with a large number of residents.

The Kids in Creeks program was offered to all elementary school science specialists. The program provides tours of Berryessa Creek. Materials to test water samples, check water flow rates and learn about wildlife are provided by the City.

Summary of Evaluation of Public Information / Participation Program Effectiveness

Activity	Type of Outreach	Level of Implementation	Evaluation of Effectiveness
1. City facility literature distribution	General	Clean It, Grow It, Home Maintenance Tips, Keep Your Pool, Spa and Fountain Copper-free, Help Prevent Pollution of Our Creeks and Bay, Pests Bugging You, and Keeping it All in Tune	➢ 100 of each of these brochures were distributed at City facilities: City Hall, Senior Center, Community Center, Sports Center, Police Department, and Fire Department. ➢ Materials available to all permanent and temporary municipal employees. ➢ Distributed calendar/decals for city vehicles.
2. City Cable TV Channel 15 and 26 and Radio 1620 AM	General	Aired public service announcements on the City's Radio (1620 AM) and Cable TV (CTV 15 and CTV 26). Topics covered include: Mercury, IPM, Copper, HHW Recycling, Car Care Tips,	➢ 10,000 households subscribe to CTV 15 and CTV 26. Each TV PSA aired an average of 30 times per day. Announcements are periodically revised throughout the year. We also ran PSAs on our local radio station at the same frequency. However, we a unable to determine the number of

Activity	Type of Outreach	Level of Implementation	Evaluation of Effectiveness
		and Volunteer Opportunities.	residents reached through this effort. ➢ This year we continued airing pollution prevention videos. 15-30 second spots run in normal rotation at a frequency of 30x/day. The 10-15 minute videos air daily.
3. City of Milpitas Web site	General	Provide information on Urban Runoff, pollution prevention tips and programs	➢ The website was updated in 07/08 and is accessible to all City employees and 65,000 Milpitas residents as well as the general public. Information is made available throughout the year.
4. City sponsored events	General	Literature distribution and promotional products; pencils, decal calendars, sponges as well as educational displays	➢ Distributed 150 copies of each of the following brochures at City sponsored public events: • HHW Brochures • Home Maintenance for a Cleaner Bay • Creek and Watershed Map of Milpitas and North San Jose • Grow It's • Pests Bugging You • Brochure Request Forms • Oil Recycling Jugs • Funnels • Pencils • Sponges • No Dumping Calendars ➢ Coordinated with County for the Household Hazardous Waste Drop-off event located in Milpitas in June 2008.
5. Welcome to Milpitas-City of Milpitas City Information Catalog/ Magazine	General	Pollution Prevention Tips	➢ Placed advertisements in the Welcome to Milpitas (City Information Magazine) promoting proper disposal of fluorescent light bulbs.
6. Urban Runoff Hotline	General	Maintain hotline # (408) 586-2605 to provide pollution prevention tips and receive request for	➢ Staff checked the hotline daily and responded to questions and literature requests immediately.

Activity	Type of Outreach	Level of Implementation	Evaluation of Effectiveness
		information.	
7. Newsletters and Newspapers	General	Milpitas Post (A local newspaper published weekly), provide advertisements on special topic issues-automotive care, home repair, gardening, street sweeping etc.	➢ Advertisements were placed in the Milpitas Post announcing volunteer opportunities and special events such as Pollution Prevention Week, and the HHW drop off event. All advertisements included pollution prevention messages. ➢ Placed advertisements in the Milpitas Yellow Pages promoting proper disposal of fluorescent light bulbs.
8. Coordinate National Pollution Prevention Week	General	Distribute literature to the general public, display pollution prevention messages on City's web page, school outreach, residential door-hangers.	➢ Aired public service announcements on the City's cable television and radio stations. ➢ Placed advertisements in the local newspaper. ➢ Distributed a door hanger containing pollution prevention messages with focus on litter prevention and recyc[illegible] of mercury containing products, pesticides and other HHW items.
9. Solid Waste Activities	General	Joint effort with Solid Waste (Household Hazardous Waste Programs), messages in newsletters, etc.	➢ Combined outreach efforts with other departments whenever possible
10. Outreach Distribution	General	Use of reply card on Annual Consumer Confidence Report for residential customers, distribute BMP material and stormwater pollution prevention material to City owned facilities, place and distribute BMP materials at Household Hazardous Waste Collection Event and the Pollution Prevention Week events.	➢ The City received approximately 70 reply cards or information request forms. All calls and information request were answered expeditiously.
11. Residential	Targeted	Mass mailings, City	➢ The City's Annual Consumer

Activity	Type of Outreach	Level of Implementation	Evaluation of Effectiveness
		sponsored events	Confidence Report, including pollution prevention articles and a brochure request from, was mailed to all postal accounts in the City. ➢ Single Family residents were advised to keep leaves out of the storm drains during fall season via mail in October 2007. ➢ Residents were mailed a newsletter in January 2008, which contained messages: about used motor oil, brake and anti-freeze recycling, both curbside and referrals to local certified businesses; help keep street and the Bay clean; use the Yard Trimming Recycling Program to keep tree and brush debris of storm drains etc.
12. Retail Outlets	Targeted	Regional IPM Store Partnership Program	➢ The local Orchard Supply Hardware Store is participating in the IPM store partnership program. IPM brochures are available in a brochure rack.
13. Commercial/ Industrial Customers	Targeted	Target mailings to vehicle service shops, restaurants etc.	➢ Information was provided on request, during inspections or on as-needed basis ➢ Hazardous Materials inspectors distribute information in the field.
14. Special Interest Groups	Targeted	Provide information on request to target groups (garden clubs, auto enthusiasts, pool owners, handymen, construction workers, etc.)	➢ Information was provided on request, during inspections or on as-needed basis ➢ Mailed Rainy Season letter to developers. ➢ Keep your Pool, Spa, or Fountain Copper-Free was distributed to all pool permit applicants.
15. Industrial / Commercial Discharges	Targeted	'Industrial BMPs', 'Mobile Cleaner BMPs', 'Preventing Storm Drain Pollution' and other program material	➢ Information was provided on request, during inspections or on as-needed basis.
16. New	Targeted	'Blueprint for a Clean	➢ Information was provided on request,

Activity	Type of Outreach	Level of Implementation	Evaluation of Effectiveness
Development and Construction		Bay', 'BASMAA Recyclers and Disposal Services', 'BMPs for the construction industry (8 pamphlets)	during inspections or on as-needed basis. ➢ The Milpitas Stormwater C.3 guidebook was distributed to developers as needed. It is also located on the City's website. ➢ Distributed a 24X36 blueprint with construction BMPs with all public and private project applications.
17. Illicit connection and illegal dumping elimination	Targeted	IC/ID cards to be distributed to industrial and commercial facilities	➢ Information was provided on request, during inspections or on as-needed basis
18. Pesticide Discharges	Targeted	Training programs for municipal employees, public education and outreach programs for residential and commercial pesticide users and pest control operators	➢ IPM messages were placed on our website, Radio and CTV. ➢ See Staff Training Table. ➢ IPM articles were placed in various newsletters and newspapers. See numbers 5 and 8 above.
19. Municipal Employee Training	Targeted	Continue employee yearly training on runoff pollution prevention. Maintain Employee awareness through workshops, newsletters and meetings	➢ See Staff Training Table at the end of this Report.
20. School outreach program	Educational	Involve schools in creek clean up event and the Kids in Creeks education program; stipends to encourage teacher participation in Watershed Education Workshops	➢ 270 students participated in the Kids in Creeks program and were escorted on field trips to Berryessa creek where they performed water quality tests. ➢ Volunteers from various schools participated in the annual Creek Clean Up event. A total of 2.5 tons of debris was removed from Coyote, Tularcitos, and Berryessa Creek.
21. Coordinate	General	Advertise in Milpitas Post,	➢ Articles were placed in the Milpitas

Activity	Type of Outreach	Level of Implementation	Evaluation of Effectiveness
creek clean up and Household Hazardous Waste disposal events		schools, jointly with Santa Clara Valley Water District Coordinate for more citizen involvement on City events	Post. The event announcements also received priority placement on our website.
22. Watershed outreach and education	Watershed Outreach and Education	Materials will be distributed as necessary	➢ The City's website contains a link to the Watershed Watch website. ➢ The City of Milpitas helped staff Watershed Watch outreach events whenever possible.

There were no specific comments from Regional Board on the Milpitas FY 05-06 or FY 06-07 Annual Reports. The Regional Board has not issued comments on the FY 06-07, FY 07-08 or FY 08-09 Work Plans.

Evaluation – Pest Management

In FY 07-08 the City addressed pest management issues with an integrated approach. Pesticide use was incorporated as one management tool along with the application of cultural and mechanical control practices.

City staff licensed by the State as pesticide applicators have applied pesticides for the control of weeds and insects in landscaped areas around city buildings, in parks, in street medians, right-of-way areas, and in city street trees.

The City operates a Dog Park on leased land within Ed Levin County Park. The lease prohibits the use of pesticides and herbicides.

There were no specific comments from the Regional Board on the Milpitas FY 05-06 or 06-07 Annual Reports. The Regional Board has not issued comments on the FY 06-07, FY 07-08, or FY 08-09 Work Plans.

L-2 Mercury Management						
L-2 I.A	Survey	URMP L-2 Exhibit 'a', pg 1	Develop a process to survey the types of mercury-containing products used by the municipalities. Identify appropriate municipal personnel to conduct survey. For those products with a potential to enter stormwater runoff, identify possible alternatives or proper disposal procedures.	The surveys were completed and results were collected in February 2003.	Completed	PW Maint Loredo/ Marilyn Nickel
L-2 I.B	Survey	URMP L-2 Exhibit 'a', pg 1	Complete and report results of survey of mercury-containing products used by the municipalities.	The surveys were completed and results were collected in February 2003.	Completed	PW Maint Loredo/ Marilyn Nickel
L-2 I.C	Mercury Policy	URMP L-2 Exhibit 'a', pg 1	Develop guidelines for mercury policy requiring the virtual elimination of mercury from controllable sources in urban runoff from agency operations.	Final draft of model policy was approved in April 2003.	Completed	PW Maint Loredo/ Marilyn Nickel
L-2 I.D	Mercury Policy	URMP L-2 Exhibit 'a', pg 1	Adopt a mercury policy or ordinance requiring the virtual elimination of mercury from controllable sources in urban runoff from agency operations.	Final draft of model policy was approved in April 2003.	Completed	PW Maint Loredo/ Marilyn Nickel
L-2 I.E	Guidelines	URMP L-2 Exhibit 'a', pg 2	Develop guidelines for mercury-containing products reduction and management. These guidelines will include a schedule for the timely phase-out of mercury-containing products identified for virtual elimination as well as reporting requirements, possibly to track recycling, replacement, and reduction in use of mercury-containing products.	Final draft of guidelines was submitted in March 2003.	Completed	PW Maint Loredo/ Marilyn Nickel
L-2 I.F	Guidelines	URMP L-2 Exhibit 'a', pg 2	Implement guidelines developed under Action I.E	Staff followed mercury disposal guidelines.	Ongoing	PW Maint Loredo/ Marilyn Nickel
L-2	Technical	URMP	Assist HHW collection agencies with	Coordinated with County HHW Program	Completed	Util Engr

Trash Inventory and Management – Self-Evaluation Matrix

Implem. Id.	Activity	Item Source	Tasks Identified in FY 2007-2008 Work Plan	Status / Comments	Due Date (mo/yr)	Responsible Party (Lead)/ Coordinator
T-1	Revise and document existing trash problem areas list	URMP L-5 Page 1	Annually revise trash problem areas list on an as-needed basis. Revisions should be based on trash problem areas surveys and other relevant information.	Staff in Utility Engineering works with Public Works Dept., Neighborhood Services, and Solid Waste Sections to update and maintain a list of trash problem areas in the City. The 12 trash problem areas were inspected in 06-07 and were evaluated and reported to SCVURPPP in June 2007. As new information becomes available, staff will add them to the list of trash problem areas.	Ongoing	David Gordillo, Steve Smith (Public Works), Ralph Campa (Allied Waste), Gloria Anaya (Neighborhood Services), Paramjit Uppal (Utility Engineering)
T-2	Trash evaluations using RWQCB tools	URMP L-5 Page 1	Conduct trash evaluations using RWQCB's Rapid Trash Assessment protocol (Version 1.0) and/or the KAB litter index in a subset of trash problem areas	Staff evaluated 12 trash problem areas using the KAB Litter Index. Results were submitted to SCVURPP in June 2007.	Ongoing	Dave Gordillo, Steve Smith (Public Works), Paramjit Uppal (Utility Engineering)
T-3	Identify and prioritize trash problem areas and sources	URMP L-5 Page 1	Continue identifying and prioritizing trash problem areas in urban streams and waterways and other potential sources that may contribute trash to those areas.	Staff has submitted information on the trash problem areas to SCVURPP. The Program has documented and converted the locations into spatial coordinates using a GIS. Maps were generated showing the distribution of trash problem areas across major Santa Clara Basin Watersheds. Utility Engineering staff are working with Public Works, Solid Waste and Neighborhood Services to continue to identifying high priority trash problem areas.	Ongoing	Dave Gordillo, Steve Smith (Public Works), Ralph Campa (Allied Waste), Gloria Anaya (Neighborhood Services), Paramjit Uppal (Utility Engineering)

T-7	Pilot Demonstration Project	1-6-06 SCVURPP Memo	Assist SCVURPPP in implementing a Pilot Demonstration Project focusing on documenting type and volume of trash that can potentially be conveyed through the storm drain system.	Staff continued to support the SCVURPPP Program.	Ongoing	Dave Gordillo, Steve Smith (Public Works), Paramjit Uppal (Utility Engineering)
T-8	Survey forms and Tally sheets	1-6-06 SCVURPP Memo	Submit Urban Rapid Trash Assessment Survey Forms, Trash Item Tally Sheets and any other data collection tool to SCVURPPP program staff.	Staff gathered data from the different sections and submitted the information as well as results of evaluation using KAB Litter Index to SCVURPPP in a standardized format in June 2007.	Ongoing	Paramjit Uppal (Utility Engineering)
T-9	Trash Fact Sheets	1-6-06 SCVURPP Memo	Assist SCVURPPP to develop appropriate Trash Fact Sheets.	Staff worked with the SCVURPPP on this activity last year and will continue to support the Program.	Ongoing	Paramjit Uppal (Utility Engineering)

Evaluation – Trash Inventory and Management

This year, City of Milpitas continued the trash management activities in developed in previous years. The City identified 12 trash problem areas in FY 03-04 by conducting the Identification and Documentation of Known Trash Problem Areas Survey for problem areas in creeks, streets, parks and other land uses within urban areas. Data sources included trash complaint databases, maintenance and operation records, and existing lists of trash hot spots, employees' knowledge, and creek clean-up locations. The Program mapped these locations into GIS to facilitate future evaluations.

In June 2007, Utility Engineering staff visited the 12 identified trash problem areas to assess the current status and extent of the problem. Staff used the Keep America Beautiful (KAB) Litter Index tool kit survey and checklists, including the Windshield Survey, the Trash Item Tally Worksheet, and Neighborhood Spotters Checklist to characterize the quality and quantity of trash. Five sites had KAB Index ratings of 1 (no litter), two sites had ratings between 1 and 2 (less than slightly littered), three sites had ratings of 2 (slightly littered), and the remaining two sites had ratings between 2 and 3 (less than littered). No sites reached the top level of 4 (extremely littered).

In FY 07-08, City of Milpitas opted out from trash survey and did not do any assessment on trash in accordance with the Program memo dated January 18, 2008.

City of Milpitas trash reduction and abatement programs and services are effectively controlling trash. City services include:

- unlimited trash collection for single family residents,
- single-stream curbside recycling and no-cost recycling for businesses
- neighborhood clean-up events each spring and summer,
- free disposal of household items, remodeling debris, yard trims at Newby Island landfill;
- free household hazardous waste collection program;
- biweekly street sweeping;
- annual volunteer creek clean-up events;

City programs include:

- Utility Engineering - solid waste and yard waste recycling public outreach including annual promotional campaigns and school projects
- Public Works - litter control in parks, streets and right-of-way, landscaped areas, storm drain and catch basin cleaning,
- Planning - incentive programs such as the Annual Neighborhood Beautification Awards Program for residential and non-residential properties,
- Police - Abandoned Vehicle Abatement Program.
- Code enforcement - response to private property trash complaints,

The City values its neighborhood beautification efforts for their positive impacts on quality of life for the residents will continue its trash abatement efforts in the future.

There were no specific comments from Regional Board on the Milpitas FY 05-06 or FY 06-07 Annual Reports. The Regional Board has not issued comments on the FY 06-07, FY 07-08 or FY 08-09 Work Plans.

WEST VALLEY CLEAN WATER PROGRAM

September 15, 2008

Mr. Bruce Wolfe
Regional Water Quality Control Board
San Francisco Bay Region
1515 Clay St., Suite 1400
Oakland, CA 94612

Subject: FY2007-2008 Annual Report for
West Valley Communities Urban Runoff Management Program

Dear Mr. Wolfe:

This report is submitted by the West Valley Cities of Campbell, Monte Sereno, Saratoga, and the Town of Los Gatos, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a. of the Program's reissued municipal storm water NPDES Permit (Order No. 01-024). The report summarizes activities performed during FY2007-2008 in accordance with the West Valley Communities' Urban Runoff Management Plan (URMP) submitted to the Regional Board on September 1, 2004 and the performance standards contained therein.

Contents of Report

The goals of this Annual Report are to: 1) concisely document implementation of URMP and FY07-08 Workplan; 2) evaluate program results for continuous improvement; 3) comply with permit requirements; and 4) share this information with other Co-permittees, municipal decision-makers, and the public. This report includes the following sections:

I. Preface
   - Table of Contents
   - Transmittal Letter with Program Highlights
   - Certification Statement
   - List of Acronyms

II. Program Elements
   1. IC/ID Elimination Activities
   2. Industrial / Commercial Discharger Control Program
   3. Public Agency Activities
      - Storm Drain O & M
      - Street Sweeping
      - Corporation Yard
      - Rural Public Works
   4. New Development: Planning Procedures
   5. Construction Inspection
   6. Public Information & Participation
   7. Pesticide Management Activities
   8. Mercury Pollution Prevention Activities
   9. Copper Action Plan / Nickel Action Plan
   10. Trash Inventory and Management
   11. Water Quality Monitoring and Watershed Management

   Training Summaries are provided at the end of each element

CAMPBELL • LOS GATOS • MONTE SERENO • SARATOGA

PROGRAM HIGHLIGHTS AND ACCOMPLISHMENTS

During FY07-08, the West Valley Communities of Campbell, Los Gatos, Monte Sereno, and Saratoga continued efforts to implement their URMP to the maximum extent practicable.

- Established municipal programs, such as Storm Drain Maintenance and Cleaning, are working at mature, efficient levels and continue to indicate that overall pollution prevention efforts seem to be working, because less pollution is residing in or even reaching the storm drain system.
- The West Valley Communities also continue to benefit from its joint and robust public information program through the WV Clean Water Program (WV CWP). The WV CWP has built relationships with local schools and provides in-class stormwater pollution prevention presentations with a 3-D interactive 'Enviroscape' model. The hands-on presentation is very well received and after working with the model, the students are keenly aware of the connection between themselves and pollution making its way into creeks and the Bay. Very encouraging is an observed increase in student's willingness to participate in protecting the local creeks through their own clean-up efforts. One 'success' that can be attributed to a connection with the schools, is when water quality issues became of such interest to a student that it becomes integrated into a school project - a science fair entry. This student, who utilized the WV CWP as a resource for information, was recognized for his storm water pollution project all the way up to the State level of competition!
- The West Valley Communities remain committed to the watershed approach for preventing urban runoff pollution. Through the WV CWP, the WV Communities actively participate in SCVURPPP's many task groups, WEO and Trash Task Groups, as well as other related programs like the Silicon Valley Anti-Litter Campaign (SVALC).
- The proposed MRP was the focus of Managers and Staff discussions throughout FY07-08. Staff participated in many discussions through both SCVURPPP and professional associations in anticipation of the RWQCB's release of a Tentative Order in December 2007. Additional Staff effort was invested in meetings with SCVURPPP and peer groups for collaborative and coordinated topical submittal of comments on the draft Tentative Order, and in preparation for participation in the March 2008 RWQCB Hearing.
- Planning Staff continued participation with the SCVWD Water Collaborative through FY0708, and subsequently passed the Collaborative's work product 'Standards and Guidelines' for development along creeks early in 2008.
- Through WV CWP, the WV Communities continued to provide significant support for implementation of the "Green Gardener" program. In FY0708 the program was successful in completing its inaugural session at full capacity – in both English and Spanish!

Thank you in advance for your review of this Annual Report. Should there be any questions regarding the materials submitted, please contact me at 408.354.4734.

Respectfully,

Kelly Carroll

FY 2007-2008 ANNUAL REPORT

ILLICIT CONNECTION & ILLEGAL DUMPING ELIMINATION ACTIVITIES

FY 2007-2008 Work Plan Self Evaluation Matrix

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
	Program	a. ICID Standard Operating Procedure Updates Update SOPs and BMPs as changes occur per the Municipal Regional Permit and effectiveness evaluation. Provide staff training on revisions.	During the next FY the Illegal Discharge Enforcement Response Plan will be reviewed and updated if necessary.	WVCWP Manager
	URMP 2004	b. Response Program Continue to implement IC/ID Stormwater Discharge Inspector response program and evaluate for continuous improvement.	The WVCWP Inspector continues to conduct a centralized incident response and proactive restaurant and vehicle shop inspection program for the four West Valley communities. The Inspector follows up on all reports of potential stormwater violations and stormwater incident reports, including interagency referrals from Fire Dept. staff, DEH Inspectors, SCVWD, WVSD, and municipal staff.	WV Inspector
			MONTE SERENO: During FY 07-08 the WVCWP Inspector responded to 7 incident reports (3 residential, 3 construction related, and 1 public facility).	WVCWP Inspector
	IC/ID Perf Std	c. Standardized Reporting Report on incidents using categories consistent with SCVURPPP Program. Document follow-through to point of resolution or referral for enforcement action (penalty or fine).	All incidents are entered into the SCVURPPP Standard Database. Each incident is given a tracking number for documentation purposes. Multiple entries are made under the same tracking number to document all follow-up visits and actions.	WV Inspector
	WVCWP Inspector Training	d. Inspector Training IC/ID Inspector will attend workshops on various measures and methods to improve water quality and protect creeks from negative urban effects.	The IC/ID Inspector participated in the two hour US EPA Stormwater Program's Webcast Series on July 11, 2007. Topics covered included detecting and eliminating illicit discharges and to correct all illicit connections. On December 11, 2007, inspector attended the Public Agencies IPM Exchange seminar/field trip, in regard to ants and squirrels at the Palo Alto STP and Golf Course. Attended Site Training on May 1, 2008 for the National	WV Inspector

Monte Sereno

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

			River Cleanup Day (May 17, 2008). Topics covered included Site Coordinator Tip Sheet, Volunteer Orientation Script, Waiver of Liability Form, and Data Reporting Guidelines. Participated in Urban Runoff Inspection Training with Fire Department personnel on June 10, 2008. The training, conducted by the Senior Hazardous Materials Specialist, covered the County Permit with SF Bay RWQCB, and the cooperative efforts with County Fire, City of Campbell, Town of Los Gatos, and City of Saratoga. Other topics covered "Storm Drain, not Sewer Drain", Haz Mat permit, types of URP Facilities, how to perform the inspection, and how to contact WVCWP Inspector (business cards were distributed).	
	Municipal Staff Training	Municipal staff Training Conduct training & evaluation meeting between Storm Water Discharge Inspector and City staff, to improve interdepartmental procedures.	Assisted in WVCWP Street Maintenance and Storm Drain Supervisor Training on June 20, 2008. Topics covered included Current Municipal NPDES Permit Requirements, contacting and working with the WV Inspector on ICID calls and municipal responsibility for following up with clean up of pollution in the SD system, and Future MRP Requirements. The IC/ID Inspector conducted the annual Urban Runoff Food Facility Inspection Program training meeting with SC Co. DEH inspectors and City of Cupertino representatives; a total of twenty (20) people attended on April 22, 2008. The power point presentation covered topics including restaurant inspections, dumpster problems, WVSD's FOG (Fats, Oil and Grease), the inspector's referral process including IC/ID, IND, and NTC (Notice to Comply), and Fluorescent Light Bulb/Battery-safe disposal information. The cooperation and sharing of information involving all three agencies was emphasized.	WV Inspector

IC/ID Program Evaluation: Monte Sereno

IC/ID Training

The multiple trainings that the WVCWP staff, and the municipal staff, attended have been quite effective in building relationships with the Fire Dept., DEH, and the Municipalities. Inspectors from the Fire Dept., DEH, and the Municipalities, continue to look for possible stormwater violations while they are on their field inspections. If the Inspectors from the Fire Dept., DEH, and the Municipalities, observe any potential stormwater violations they immediately contact the WVCWP Inspector. All interagency referrals are documented in the IC/ID reporting section.

IC/ID Program Background

Monte Sereno is a strictly residential city with about 3,700 residents. It covers 1.5 square miles and is surrounded by the Town of Los Gatos. The only non-residential sites in the City are a public elementary school and City Hall.

The IC/ID reports in the City are primarily related to new or re-development of single family homes and landscaping projects or pool discharges. The Construction Inspection Engineer note that developers and contractors are very eager to maintain a good reputation both with municipal staff and with the residents. If an incident occurs, it is often the result of an accident or it is related to a construction site. The City Engineering Inspector says that all it generally takes is one word from municipal staff and the problem is addressed and resolved immediately.

Trend Analysis

In FY04-05 four (4) potential violations were investigated. Residential and construction sites were the incident sources for three (3) of the reported incidents. One (1) dumping report was not actually in the City's jurisdiction; it was trash noted on a median on Hwy 9, which is in Caltrans jurisdiction, although the City monitors the area because it does not have any other problem trash areas to address. The remaining three incidents were construction related. One involved a painter washing brushes where the runoff flowed to the street. Another was a result of pumping water from a hole dug for a swimming pool after it rained. Finally, a pile of dirt was left in the street during a landscaping job.

In FY05-06 the West Valley IC/ID inspector responded to eleven (11) reports of potential violations in Monte Sereno. Six (6) were considered non-incidents

Monte Sereno

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

because one (1) was an allowable discharge and five (5) were complaints not found (although one of those was categorized as a miscellaneous incident). One miscellaneous incident was due to a broken sprinkler, which was fixed immediately. Finally the four violations that were given a verbal notice were, two (2) grey water discharges, one (1) landscape material dumping; and one (1) tracking soil discharge.

In FY06-07 the West Valley IC/ID inspector responded to five (5) reports of potential violations in Monte Sereno, of which, two (2) were considered non-incidents as they were proactive inspections where no violations were observed. Of the three remaining incidents, two active incidents were stopped and given verbal notices. For the other incident, the source could not be determined. All proactive inspections included outreach which WVCWP counts as verbal notice.

In FY07-08 the West Valley IC/ID inspector responded to seven (7) reports of potential violations in Monte Sereno. Three (3) of these were Residential, three (3) Construction Site, and one (1) Public Facility. The West valley inspector provided outreach and educational materials during each of the 7 incident responses.

Under the heading Incident Status one (1) remains open to be resolved in FY08-09. This incident, which was a house remodel project, has been resolved by the time of this report, July 2008.

PUBLIC AGENCY ACTIVITIES: Operations and Maintenance

FY 2007-2008 Work Plan Self Evaluation Matrix

Source	Task Source	FY07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
Storm Drain Operations and Maintenance				
	2004 URMP	Annual Storm Drain Cleaning Continue contract w/ WVSD. Continue schedule/cycle for inspection and cleaning of storm drain system.	**MONTE SERENO:** WVSD performs systematic storm drain cleaning and inspection of storm drains annually. Because Monte Sereno is much smaller than the other 3 West Valley cities, and is strictly residential, all of the City's storm drain systems are inspected and cleaned each year (approximately 417 structures). The City's contractor will clean high leaf drop as called upon when needed.	City Manager & City Engineer to coordinate with WVSD per Agreement
	2004 URMP	Training - Annual WVSD/ Oper. & Maint. Meeting Annual WVSD & WVCWP / Operations & Maintenance. Supervisors meeting: evaluate status of annual storm drain cleaning and provide training on maintenance issues. Rural public works BMPs & SOPs may be reviewed as part of the annual WVCWP Street Maintenance Supervisors meeting.	The annual WV Storm Drain Op & Maintenance Supervisor's workshop was held on June 20, 2008 at Campbell Community Center. See Training Table for staff attendance. Staff from WVSD, WVCWP, and the other WV Communities also participated. Topics included: • The WVCWP Program Assistant presented on the current NPDES Permit requirements and the possible future requirements of the MRP. • The Environmental Specialist from the City of Sunnyvale gave a presentation on Sunnyvale's storm drain catch basin insert pilot program. WVSD Storm Drain structure cleaning & debris findings for each city will be used to help identify additional trash problem areas. **MONTE SERENO:** The WVCWP Assistant reported back to Monte Sereno's Inspector/Engineer	Mtg lead by WVSD; Attend by Pub Works Supt/Supvrs; Hosted by WVCWP City Engineer/Staff to attend
	C/I item -Source Control Measure	Storm Drain Stencils or Signage Continue to replace and/or upgrade storm drain stencils or signage on storm drains or catch basins, as needed. Stencils will be replaced with the type of stencil most appropriate for the location.	**MONTE SERENO:** Monte Sereno's storm drain signage is replaced if it becomes worn, or bent (if it is metal). The City uses thermoplastic stencils on all curb-less inlets.	City Engineer

Monte Sereno

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

		Street Sweeping/ Pavement Management		
	URMP - Street Sweeping	a. Street Sweeping Program By contract with Town of Los Gatos – all streets are swept quarterly. High leaf drop and other noted areas cleaned more frequently and as needed (i.e., residential construction zones - swept by responsible party).	**MONTE SERENO:** Monte Sereno hired a new sweeping contractor in Jan 2008. The contracted street sweeper for the City of Monte Sereno uses a PM10-certified regenerative air sweeper to sweep Monte Sereno's residential streets quarterly. All residents and businesses are required to utilize large recycling bins for leaves and other yard waste as part of their trash collection service.	By Contract
		b. Street Sweeping Data Collection		
	NPDES Permit	b. Street Sweeping Data Collection Require Town of Los Gatos staff (as contracting agent) to collect and review street sweeping data and provide number of curb miles swept and cubic yards of debris to WVCWP for each Annual Report. Solicit feedback from Street Sweeping contractor on effectiveness of the program.	**MONTE SERENO:** The City of Monte Sereno contracted with a new Street Sweeper during FY 07-08. Street sweeping data was collected from both sweeping contractors and provided to the SCVURPPP at the end of the fiscal year. See three-year comparison table in the evaluation section (below), for curb miles swept, debris collected and yard waste recycled.	Contractor
		c. Street Sweeping Training		
	FY07-08 Work Plan, RWQCB comments	c. Training As needed for improvement measures or new requirements, provide training on collection of street sweeping data to contracted agency (appropriate Los Gatos municipal staff).	**MONTE SERENO:** Training for municipal staff on street sweeping data collection requirements and preferred sweeping methods, was provided at WVCWP's June 20, 2008, Storm Drain Operation and Maintenance workshop. WVCWP Assistant informed, and provided additional Street Sweeping Data Collection Forms for the new contractor to the City of Monte Sereno's Engineer.	WVCWP to assist Los Gatos Pub Works staff
		Corporation Yard		
	URMP	a. SWPPP Review As needed, review and update the municipal Storm Water Management Pollution Protection Plan (SWPPP).	**MONTE SERENO:** The City of Monte Sereno does not have a corporation yard. The City does not have any City-owned vehicles.	
	URMP	b. Staff Training Provide annual training on BMPs in Storm Water Pollution Prevention Plan w/ Corp-Yard walk-thru	**MONTE SERENO:** The City of Monte Sereno does not have a corporation yard. The City does not have any City-owned vehicles.

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Public Agency Activities: Operations and Maintenance Evaluation

Storm Drain Maintenance In FY07-08, West Valley Sanitation District (WVSD) provided its third enhanced annual report to the cities on storm drain cleaning. Since June 2007 the reports have listed the structures that were inspected and cleaned with the maintenance crew's findings. A total of 417 structures were inspected.

- Of those inspected, 301 were found without any debris and were noted as "clean."
- Of those inspected, 116 had some visible debris upon inspection.
- Of those 116 that had visible debris, 11 had 10 pounds or more of debris and required cleaning
- Of the 11 storm drains that required cleaning, 9 required excessive/additional (50Lbs+) cleaning

Storm Drain Stencils: The engineering staff has continued to share feedback with the other WV cities regarding the most effective way to mark storm drain basins. All storm drain catch basins within Monte Sereno are appropriately signed for the inlet location. Because the number of storm drain inlets in Monte Sereno is small, the City was able to apply the more expensive thermoplastic stencils to all curbless drain inlets after a successful pilot was conducted. Thermoplastic signage was found to be more durable than painted stencils and it holds its color. Staff have also noted that thermoplastic stencils have endured a few years of street sweeping passes. The best feature of the thermoplastic stencils is that they are visible at night. The downside of using thermoplastic stencils is the cost (about $250 per stencil, installed) and they must be applied to a horizontal surface, preventing their visibility from a distance. Santa Clara County staff asked the WVCs for a recommendation on where to purchase metal plaques similar to those previously installed by the West Valley Cities. West Valley reported that municipal staff have discontinued application of the metal plaques because the sharp edges have a potential to get caught in street sweepers and bend, creating possible injury to pedestrians or bicyclists. Replacing the plaques was also a problem. When plaques came loose or were removed, concrete chunks crumbled from the curb with the screws (used for attaching the plaques) making replacement in the same spot impossible. If signage in Monte Sereno becomes worn, or bent (if it is metal), it is replaced with thermoplastic stencils or painted stencils depending on the location of the inlet.

Street Sweeping: The City collected **11.9 tons*** of debris in FY07-08. *Monte Sereno contracted with a new street sweeping contractor after July 2007. The new contractor did not report the cubic yards collected. The City of Monte Sereno was asked to have their contract report this in the next fiscal year.

Yard Waste - Curbside Collection and Recycling: The West Valley yard waste recycling program reduces the amount of debris that gets into the storm drain, since leaves are collected in oversized bins rather than being stored in the street. In FY 07-08, the total yard waste collected rose sharply from the previous two years for all West Valley cities. The reason for the increase is due to the garbage collection service's reporting methods. The totals were given for all diverted waste. Totals for yard waste recycled were not provided. The WVCWP asked the garbage collection company to provide separate yard waste totals for FY 08-09. In FY06-07, the total yard waste collected was down sharply from the previous two years for all West Valley cities. The reason for the decrease is not apparent without reviewing the data collected for the previous years and the garbage collection companies' tracking methods. There are a few factors that would contribute to the drop. 1) The data for February 2007 was not reported for West Valley cities due to a change in service contractors; 2) There might be a significant difference in methods used by the two different contractors to collect data; 3) City crews provide some additional, unscheduled leaf and tree limb removal, which is not tracked. 4) The annual weather might be a consideration because yard waste collection is determined by the amount of debris residents generate from yard maintenance and tree trimming. Some years have stormier weather producing more fallout from trees and a greater need to dispose of branch material. The new garbage & recycling company will be asked about their methods of tracking yard waste collection. The cities may request monthly totals to see if more consistent year-end totals can be obtained.

Monte Sereno

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Training Evaluation: The WVCWP Storm Drain Maintenance Workshop (6/20/08) drew more staff participation this year. Municipal staff evaluated the workshop as having "All useful and pertinent information." Another response noted, "Today a new topic was covered about full capture. I would like to learn new BMP's in the future". It was evident that BMPs are being used by municipal staff but there was some frustration among street and park maintenance workers because they don't have enough authority to convince residents and private contractors to keep pollutants from reaching the storm drain system. The WVCWP Inspector offered his card to all attendees and requested that they report any incidents to him for immediate follow-up. One challenge is to catch the violator in the act of allowing pollutants into the storm drain system. By the time the incident, or the result of the incident, is seen it is often too late to stop it. The maintenance crews are generally called to clean up spills. Attendees requested continued updates on the MRP requirements for storm drain maintenance and street sweeping practices. Several of the attendees stayed after the workshop for additional discussion among the cities

Rural Public Works Activities

Rural Public Works Perf Std	Rural Public Works Perf Std	Performance Standards Implementation Evaluate the effectiveness of Rural Public Works BMPs used on applicable maintenance activities (if any) regarding: a) management and/or removal of large woody debris and live vegetation from stream channels; b) stream bank stabilization projects; c) road construction, maintenance, and repairs in rural areas to prevent and control road-related erosion; and d) environmental permitting for rural public works activities. Report on these activities in the Annual Rpt.	**MONTE SERENO:** The model performance standard has been adopted. There were no rural public works projects (RPW) in FY 07-08. WVCWP staff developed a short PowerPoint presentation consisting of Rural Public Works (RPW) standards and BMPs for staff training. The presentation slides are sufficient at this time. The West Valley Cities have very few rural public works projects. If staff or municipal contractors begin to construct more RPW projects, WVCWP staff will take photographs of the sites and the BMPs to include in training presentations.	City Engineer
Training	FY07-08 Work Plan	Appropriate municipal staff or contracted staff will receive annual training on the use of current BMPs and SOPs, as noted in the performance standard. BMPs and SOPs may be reviewed as part of the annual WVCWP Street Maintenance Supervisors meeting.	**MONTE SERENO:** WVCWP Assistant attended and reviewed the Rural Public Works standards at the annual Streets and Storm Drains Workshop June 20th, 2008. The WVCWP Assistant reported back to Monte Sereno's Engineer on June 25th, 2008. The City Engineer oversees all contracted rural public works and is knowledgeable about BMP's and erosion procedures for RPW; therefore, specific training on this topic was not conducted in FY 07-08.	City Engineer

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Rural Public Works Activities Program Evaluation

Stormwater BMPs are currently discussed in pre-construction meetings with contractors; the City inspects all contracted work for rural public works in its jurisdiction and ensures the use of stormwater quality and erosion control BMPs. The rural public works project (RPW), on Withey Rd in Monte Sereno, was contracted out to McKenna Landscaping. McKenna has been a contractor for the City of Monte Sereno for several years and is familiar with the City's stormwater requirements for RPW. The City Engineer was on-site to further discuss the stormwater BMPs and erosion control measures. The project consisted of replacing a small area of eroded soil under a pipe and covering the area with netting for vegetation. Erosion control and RPW BMPs were implemented.

Curb Miles Swept	Monte Sereno	
FY05-06	**FY06-07**	**FY07-08**
Monte Sereno does not have any commercial streets or arterials. The City is strictly Residential **Annual Residential Total** **157 curb miles swept**	Monte Sereno does not have any commercial streets or arterials. The City is strictly Residential **Annual Residential Total** **183 curb miles swept**	**Residential: 28* curb miles** **Commercial & Arterials:** Monte Sereno does not have any commercial or industrial areas * Monte Sereno contracted with a new street sweeping contractor after July 2007. The new contractor did not report the curb miles swept. The City of Monte Sereno was asked to have their contract report this in the next fiscal year.

Debris Collected		
FY05-06	**FY06-07**	**FY07-08**
Monte Sereno does not have any commercial streets or arterials. The City is strictly Residential **Annual Residential Total** **120.5 cubic yards** of debris collected	Monte Sereno does not have any commercial streets or arterials. The City is strictly Residential **Annual Residential Total** **154 cubic yards** of debris collected	**Residential: 11.9 tons*** **Commercial & Arterials:** Monte Sereno does not have any commercial or industrial areas * Monte Sereno contracted with a new street sweeping contractor after July 2007. The new contractor did not report the cubic yards collected. The City of Monte Sereno was asked to have their contract report this in the next fiscal year.

Yard Waste Recycled

FY05-06: An annual total of **1,376.4 tons** of yard waste was picked up by garbage collection service during FY 05-06.

FY06-07: An annual total of **778.85 tons** of yard waste was picked up by garbage collection service during FY 06-07.

FY07-08: An annual total of **1,887 tons** of diverted waste was picked up by garbage collection service. *

* Diverted waste totals are not representative of yard waste collected. Diverted waste totals include all waste that is diverted from landfills. The WVCWP asked the garbage collection company to submit separate totals for yard waste collected for FY 08-09.

MONTE SERENO: On all permitted projects, native plants are recommended and plant selection is reviewed as part of landscape plan approval.	City Engineer provide data to WVCWP staff

Planning Procedures Evaluation

Site Design and Source Control measures are being required on all new development projects via Monte Sereno's "Residential Design Guidelines" and Monte Sereno's Site Development Permit requirements. The City continues to encourage stormwater measure, including flow controls, on all projects. Developers and property owners are receptive to the suggestions, making the process run very smoothly. BMPs most often required include the following, all are for single-family residential projects:

1. Rocky swales to energy dissipaters
2. Permeable pavement
3. Drywells, which overflow to vegetated area, were required (per City Engineer) on all residential development projects, where feasible (except where the ground water levels are too high).
4. Design to show post development flow does not exceed pre-development flow.

In FY 07-08 the City of Monte Sereno participated in the Water Resources Protection Collaborative. The Collaborative was enacted in an effort to clarify and streamline local permitting for streamside activities, representatives from the water district, cities, the county and business, agriculture, streamside property owner and environmental interests created a partnership known as the Water Resources Protection Collaborative. The approach makes a clear distinction regarding governance. Municipal organizations will continue to exercise their land use authority. The Collaborative developed model Guidelines and Standards which will serve as a basis for the District and municipal organizations to implement as appropriate. Each municipal organization will develop and apply these standards as needed for their jurisdiction. In early 2008 the City of Monte Sereno adopted these guidelines.

FY 2007-2008 ANNUAL REPORT

CONSTRUCTION INSPECTIONS

FY 2007-2008 Work Plan Self Evaluation Matrix

Source	WP Task	Work Plan Tasks	Accomplishments	Responsible Party
	URMP	Staff Training Participate in and support RWQCB and Program- sponsored workshops on erosion control and construction BMPs; support distribution of related materials.	**MONTE SERENO:** The WVCWP Manager and Program assistant attended the SCVURPPP's Construction Site Management and Erosion Control Workshop. The WVCWP Assistant reported to Monte Sereno's Engineer on June 25th, 2008.	WVCWP to coord training; Inspectors to attend
	URMP	Construction Inspections Continue construction site inspections and follow-up for stormwater issues (i.e., mud tracking, mat'l storage, housekeeping, etc.). Document sites inspected and note any violations through final resolution. Report violations to WVCWP for Annual Report.	**MONTE SERENO:** Monte Sereno inspected approximately 34 sites with active grading permits from October 1, 2007 to April 15, 2008 (all single-family dwellings not part of a larger common development). Municipal Code Section 9.04.120 requires erosion and sediment control materials to be onsite by October 1st and in place before October 15th or a "stop work order" will be issued. Periodic inspections are conducted by the City engineering staff including inspections before, during, and after every major storm event. Sites with potential problems are inspected at least once a week but not more than twice a week. Residents usually call to report an issue if erosion control is not installed correctly. See the construction inspection incident spreadsheet (following this table) for details.	City Engineer & Bldg Inspector

Monte Sereno

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Construction Inspection Evaluation Monte Sereno

Construction Site evaluation:

FY 07-08	
Tracking Soil	1
Grey Water Discharge	1
Landscape Material Dumping	1
	3

Previous Year FY 06-07	
Complaint Not Found	2
Paint Discharge	1
Slurry Discharge	1
	4

Reported Incidents:

This year the WVCWP Inspector responded to three (3) construction-related incident calls for Monte Sereno. All three of the incidents were proactive inspections by the WVCWP Inspector. The number of incidents in Monte Sereno has remained about the same since FY04-05 if you exclude the complaints that were not found in FY 05-06. There were three (3) incidents in FY04-05 and four (4) in FY05-06, four (4) again in FY06-07, and only three (3) in FY 07-08. Coordinated efforts between the City's Building and Engineering Inspectors and the WVCWP Inspector are working well. Engineering/erosion control inspectors have informed WVCWP staff that developers and contractors in the City are very eager to protect their good reputation with local residents and City staff. Any mention of a potential violation (verbal notice) from an inspector results in immediate action to comply. Monte Sereno, having a population of about 3,800 in a strictly residential community, has construction sites that are closely scrutinized by neighbors and inspectors. In addition, the WVCWP office is in Monte Sereno, which makes it easy for Clean Water Program staff to watch for potential problems on the way to and from work. Potential incidents are inspected and re-inspected (if necessary) until final resolution is achieved.

Construction Site Erosion Control Inspector Training:

Monte Sereno's Engineering Inspector meets annually with the WVCWP Manager to review NPDES permit requirements, the City's Construction Inspection Performance Standard, and the WVCWP IC/ID Inspection Program procedures.

Construction Inspection Program Evaluation:

Monte Sereno construction activities are well monitored and developers generally act responsibly and are aware of stormwater issues. No changes are planned for this program. Continued public outreach efforts and further training and communication between municipal inspection staff and the WV Stormwater Inspector will help maintain Mont Sereno's success in this area.

A. SCV PROGRAM - PROJECTS/SUPPORT				
	NPDES Permit, Provision C.4, C.9 & Pest Mgt Plan (PMP)	a. Watershed Education and Outreach Campaign Help to develop/implement ongoing watershed education and outreach campaign. WVCWP Mgr assists via WEO Ad hoc Task Group. Participate in campaign development and special projects, e.g. community events. Campaign will include funding for educational programs at the Alviso Ed Center and funding for ZunZun performances in local schools. See SCVURPPP FY07-08 Watershed Watch Work Plan for details.	WVCWP Pgm Mgr assists via participation in the Watershed Education and Outreach Ad Hoc Task Group. WVCWCP helped plan and implement the Watershed Watch campaign, aimed at IPM and Mercury Pollution Prevention, in the fall of 2007. *Watershed Watch Media Campaign* The FY07-08 campaign featured ongoing IPM and Mercury ads in community newspapers. The WV communities, (along with 3 other cities and the County Integrated Waste Mgmt Division) contributed additional funds towards local media buys. WVCWP regularly provided staff support for Program outreach events. *Haunt the Hollow Halloween Event on Sunday 10/28/07* 1 WVCWP staff member & 1 WVCWP volunteer assisted at this event wearing costumes, they handed out educational materials and gave visitors an opportunity to complete a watershed survey. The survey had two questions one regarding fluorescent light disposal and the other pertaining to the treatment or lack of treatment of water that flows down the storm drain. The completed surveys were collected and tallied. Surveys with contact information were entered in a drawing. Two winners each received two tickets to Gilroy Gardens. The theme park is a Watershed Watch partner.	WVCWP Staff

	NPDES Permit, Provision C.4, C.9 & Pest Mgt Plan (PMP)	b. Pesticide User Outreach Project Continue to provide funding and to participate in Our Water Our World IPM Store Partnership. Project scope will include items in Program's Pesticide Management Plan based on provision c.9.d of the Permit for outreach to residents, commercial businesses, and pest control operators.	Campbell Clean up Event Saturday April 12, 2008 In conjunction with Great American Pick-up and Keep California Beautiful For more information visit http://www.ci.campbell.ca.us/General/CommunityCleanup/CommunityCleanup.htm	WVCWP Staff
	NPDES Permit, Provision C.9.c.	c. Mercury Pollution Prevention Outreach Participate in the Program's Mercury Pollution Prevention Outreach Work Group and conduct local implementation of the Program's Mercury Pollution Prevention Plan including public education on: 1) negative health and environmental impacts of mercury, and 2) proper disposal of products containing mercury.	1-9-08: Three (3) HHW Mercury brochures were given to St Mary's 5th grade teacher, in Los Gatos to show students and parents some convenient drop-off locations for mercury bulbs and batteries. 1.25 hour long Watershed presentation was provided to 35 students by WVCWP staff with specific focus on the dangers of mercury waste in our watershed and the proper disposal of mercury containing items such as fluorescent bulbs. ********** Campbell Clean up Event Saturday April 12, 2008 In conjunction with Great American Pick-up and Keep California Beautiful For more information visit http://www.ci.campbell.ca.us/General/CommunityCleanup/CommunityCleanup.htm ********** St. Mary's School, Los Gatos –Presentations for kindergarten classes on 5-6 -08 ********** Urban Runoff Food Facility Inspection Program Annual Meeting April 22, 2008 9:00AM- 10:00AM Refer to IND Training for full summary.	WVCWP Staff

Public Information/Participation Program EVALUATION - *SCV Program Projects/Support*

Pesticide User Outreach - STORE PARTNERSHIP:
Managers of Summerwinds Garden Center in Campbell have shown their interest in less toxic products. Summerwinds' store management chose to participate in the IPM store partnership. A consultant representing SCVURPPP's Watershed Watch and OWOW campaigns worked with the Campbell store to increase shelf space and display exposure for the promotion of less-toxic products.
SCVURPPP's Watershed Watch procured a partnership with: local nursery (Yamagami's), 2 car wash companies (w/ total of at least 6 locations), paint store (Kelly Moore) and local park/zoo (Happy Hollow) to participate in annual Discount Card Program. The Watershed Watch Discount Cards were distributed by SCVURPPP to patrons of Classic Car washes over 2hrs on four consecutive Wednesdays in May/June. WV CWP distributed Cards at the April 26 National River Clean-up Day (75 cards), Los Gatos Public Works Open House (30 cards) and to PW Staff who attended the annual SD & Street Maintenance Supervisors Training Meeting (20 cards).

B. WVCWP PROJECTS

GENERAL OUTREACH

General	NPDES Permit, Provision C.4 and C.9	a. Distribute Materials. Distribute public information materials at civic centers, libraries, building and planning department counters and similar venues. Maintain a website (and phone request line) for public requests and distribution of materials.	July 9, 07 contacted Nancy Higgins, instructor for Community Education course on organic gardening for residents. Delivered materials for 2 classes, one in Campbell and one in Los Gatos. Provided 2 Site Design Guidelines books featuring pervious surfaces for driveways and patios and rain gutter downspouts directed to landscaping. Provided Grow It Guides, OWOW pocket guides for natural pest control and other about 40 – 50 copies of smaller ed material. Nancy requested an Enviroscape Presentation for her adult ed classes. Will arrange is time is permitted away from AR ********** Haunt the Hollow EVENT 10-28-07 1 Master Gardener; 150 HHW English; 11 Mercury; 300 Environmental News Quiz; 30 Gutter Getters; 2 Diazinon; 20 Our Water Our Word Magnets; 50 Watershed Watch Discount Car Wash Coupons	WVCWP Staff

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

CITIZEN PARTICIPATION				
Public Partici-pation	Trash Monitoring Work Plan	e. Creek Clean-ups Continue implementation of trash monitoring activity during Creek Clean-ups. Conduct a minimum of two clean-up events per yr (i.e. on Coastal Clean-up Day and National Rivers Day).	San Tomas Aquino Creek Clean up @ Westmont High Saturday September 15, 2007 International Coastal Cleanup Day ********** Saratoga Creek Cleanup Event Saturday September 29th , 2007 ********** Great American Pick-up and Keep California Beautiful Campbell Clean up Event Saturday April 12, 2008 ********** National Rivers Day Lexington Reservoir Cleanup @ Lexington Reservoir Launch Ramp Lot Saturday May 17th , 2008 ********** Add'l Citizen Participation: Cleanup of Saratoga-Sunnyvale Rd from Big Basin Way to Herriman (Sar High School) by resident who has collected 8 bags of trash on 3 Saturdays; WVCWP agreed to make presentation for student's class at Argonaut School and a preview of the Watershed presentation at a school assembly in 07-08 school year	WVCWP Staff
Public Partici-pation	Creek Keepers Campaign started FY00-01	f. "Creek Keepers" Program training Provide training on trash tallying and highlight current trash pollution issues for students and volunteers when they participate in a cleanup event.	Volunteers at the following events were trained on Trash Monitoring. Volunteers proceeded in groups, with some participants filling out the monitoring forms, while their partners picked up the litter: San Tomas Aquino Creek Clean up @ Westmont High Saturday September 15, 2007 International Coastal Cleanup Day Saratoga Creek Cleanup Event Saturday September 29th , 2007 Lexington Reservoir Cleanup @ Lexington Reservoir Launch Ramp Lot Saturday May 17th , 2008	WVCWP Staff

			In conjunction with National Rivers Day	
TARGETED OUTREACH & SCHOOLS				
Target Schools	Expand Outreach to Teachers and Students	g. Schools Outreach: Watershed Ed. Curriculum Continue to build on 5th grade curriculum for WVCWP classroom watershed presentations, consistent with state required education standards. Expand outreach efforts by developing scripts based on state standards, or text books, for other grade levels in response to teacher interest. Evaluate effectiveness and appeal by soliciting teachers' & students' evaluations.	Development of an appropriate script for Kindergarten students was a focus of the 07-08 outreach efforts. The interactive presentations developed for the Kindergarten classes were well-received by teachers and students. Cumberland Elementary, Sunnyvale 10-30-07 30 5th grade students participated in demonstrations and activities. ********** Casa Di Mir Montessori School, Campbell – Presentations for 6-12 year-olds on 2-13-08 ********** Queen of Apostles Private Elementary School – Presentations for 4th and 5th grade science classes on 4-4-08; 70 students, approximately 35 4th graders and 35 5th graders, from the science classes, participated in Enviroscape presentations ********** St. Mary's School, Los Gatos –Presentations for kindergarten classes on 5-6-08; 40 students, approximately 20 in each section.	WVCWP Staff
Target Schools	Based on feedback from Teachers and Students	h. Provide Watershed Education in classrooms Conduct water quality protection education or presentations in local schools, using *Enviroscape* and/or other methods to engage students in Watershed campaign messages. Improve presentation format based on teacher/student feedback.	Cumberland Elementary, Sunnyvale 10-30-07 30 5th grade students participated in demonstrations and activities. Using 2 simple models, Two WVCWP staff, working with Environmental Volunteers docents, demonstrated the role of the Water Cycle and a participated in an experiment showing how water evaporates and how condensation occurs by using a hot plate, salt water and ice cubes. Second demonstration was a water density kit with a experiment using an egg to show the difference in density between fresh and salt water. ********** Casa Di Mir Montessori School, Campbell – Presentations for 6-12 year-olds on 2-13-08; Approximately 50 students	WVCWP Staff by arrangement w/ Teachers

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

			between ages 6-12 participated in Water Conservation Day at Casa Di Mir Montessori School. The Director of the Federation of Fly Fishers gave a presentation on water resources and conservation. Montessori School invited the WVCWP to present on watersheds. The WVCWP gave two presentations about urban run-off, pollutants and trash in the Southern San Francisco Bay watershed. The Enviroscape was used to demonstrate urban run-off. ********** Queen of Apostles Private Elementary School – Presentations for 4th and 5th grade science classes on 4-4-08; 70 students, approximately 35 4th graders and 35 5th graders, from the science classes, participated in Enviroscape presentations to learn about reduction of pesticides, proper car washing techniques, erosion control, litter prevention and trash cleanup, safe disposal of HHW. Two separate presentations were given with approximately 35 students in each. School staff videotaped the presentations. The WVCWP distributed 20 T-shirts, 70 pencils, 4 hats, 5 visors, 2 water bottles, 10 "No Dumping" placards, and 4 gutter getters. ********** St. Mary's School, Los Gatos –Presentations for kindergarten classes on 5-6-08; 40 students, approximately 20 in each section. Two Enviroscape presentations were given to educate the students about reduction of pesticides, proper car washing techniques, erosion control, litter prevention and trash cleanup, safe disposal of HHW. The WVCWP distributed 3 T-shirts, 40 pencils, 10 magnets, 4 puzzles, and 20 paint sticks. Approximately 5 mercury brochures were also given to the teachers.	
			<u>Additional School Outreach:</u> Los Gatos Public Works Open House Thursday 22nd, May 2008 Los Gatos Corporation Yard Approximately 20 students from Village School's kindergarten class and 34 students from St. Mary's Elementary School attended the Open House. WVCWP	Municipal Staff WVCWU Staff Support

			gave a presentation on watersheds and pollution prevention. Topics covered included mercury, copper, car washing and littering. Approximately 15 T-shirts, 25 water bottles, 20 gutter getters, and 5 activity books were distributed. ********** SCVURPPP/ Watershed Watch sponsored ZunZun Assemblies 9/26/07 Village Sch, Cmbl, 223 Students 12/6/07 Capri Sch, Cmbl, 640 Students 4/16/08 Casa di Mir Montessori, Cmbl, 115 Students 4/28/08 Campbell Christian, Cmbl, 220 Students 5/29/08 Prospect High Sch SpEd, Stga, 125 Students	
TARGETED OUTREACH				
Targeted Business	Permit Provision C.4	i. Education – Businesses Distribute BMP materials during WVCWP inspections of food facilities and automotive businesses. Discuss relevant educational material with businesses cited for potential stormwater violations.	WV Inspector distributed 40 pool & Spa BMP brochures to Leslie's pool & spa retail outlets during Sept 2007, as a follow-up to newsletter article published by MS. The WVCWP Inspector distributed BMP materials to all restaurants and food facilities that were visited in FY 07-08. Material distributed included: Posters that depict proper mat washing techniques (Good Cleaning Practices' Poster & packet), informational pamphlets on grease and food scraps (WVSD/ SJ POTW FOG program poster), and information on pest control (Don't Set Table for Pests). The WVCWP inspector also distributed educational material to local businesses that may partake in activities that could affect stormwater quality (i.e. 'Vacu-boom' Brochure). This past year there was a focused effort to raise awareness of Mercury pollution and so 'What you don't know about Mercury' packets were handed out at every facility visited.	WVCWP Inspector

Public Information/Participation Program EVALUATION – WVCWP PROJECTS

San Tomas Aquino Creek Clean up @ Westmont High Event Summary
Saturday September 15, 2007; In conjunction with International Coastal Cleanup Day

Summary of Survey completed by Volunteers:
(Based on 30 volunteer response sheets)
Most common pieces of trash collected: Cigarette butts, paper bags, food wrappers, and glass.
Least common pieces of trash collected: Plastic bottles, rubber.
Most Unusual pieces of trash collected: Spray paint cans, bicycle seat, insulation, soccer ball, credit card,
Comments by volunteers
"It was a great experience."
WVCWP Contributions:
Approximately 50 pencils; 25 pairs of gloves; Snacks and drinks for all volunteers.
Results:
30 volunteers worked at the cleanup for 4 hours each. At a minimum wage of $8.00 an hour this would have cost $960 in temporary labor.
19 bags of recyclables = 77 lbs (estimated)
27 bags of trash = 115 lbs (estimated)
Total collected = 192 lbs (estimated)

****

Saratoga Creek Cleanup Event Summary
Saturday September 29th , 2007

Hosting Agency(s): WVCWP; City of Saratoga
Summary of Survey completed by Volunteers:
(Based on 8 volunteer response sheets)
Est. Number of recyclables collected: 6 Bags

Est. Number of trash collected: 43 Bags
Most common pieces of trash collected: Beverage containers, Liquor bottles, and food wrappers.
Least common pieces of trash collected: Metal, cloth, wood, rubber.
Most Unusual pieces of trash collected: Filing cabinet, Oven, and a 30' pipe.
Comments by volunteers
"This Location was so dirty we should do it every 2-3 months."
Items for participating volunteers
10 T-shirts – for all participants; Pencils; 10 pairs of gloves.
Results:
16 volunteers worked at the cleanup for 4 hours each. At a minimum wage of $8.00 an hour this would have cost $512 in temporary labor.
Results were not weighed.

****

Campbell Clean up Event Summary:
Saturday April 12, 2008; In conjunction with Great American Pick-up and Keep California Beautiful

Participating Agencies & Dignitaries
Campbell City Manager, Dan Rich; Campbell Council Member, Dan Furtado; VTA; CalTrans; Volunteer Center of Silicon Valley; Campbell Maintenance Crew Workers; WV Clean Water Program

Summary of Survey completed by Volunteers:
(Based on 29 volunteer response sheets)
Most common pieces of trash collected: Cigarette butts, plastics, paper, glass.
Least common pieces of trash collected: Metal, cloth, wood, rubber.
Most Unusual pieces of trash collected: Luggage, dead birds, dollar bill, shower drain, credit cards, hubcap, rug, unopened/ full juice bottle, hanger, T-shirt, tires, car bumper, and a bicycle.

Comments by volunteers
"It was great exercise!" ; "The water seems twice as dirty as the trails."; "There is too much litter on the ground. People should be responsible for their own trash!"; "I had a great time, see you at the next event!"

Comments by Director of "Volunteer Center of Silicon Valley"
Stephen Quigley (Executive Director) said that he had been visiting various "clean-up" events; noticing an average of 30-40 volunteers per site, he was, however, pleased to find that the Campbell site had approximately 100 volunteers.

Comments by CalTrans
Some areas were *just* cleaned (the week prior) by their Adopt-a-highway/ or other work crew.

Give Away Bags for volunteers
Approximately 70 Bags were handed out; each with a content of:
A pencil, Recycle bag, Volunteer stickers, Flower packet (plant a butterfly garden), Solar/Mercury-Free Thermometer + Mercury brochure, "Stop Junk Mail" brochure, HHW brochure, Oil Rag, Adopt a Creek brochure, Certified Recycle Centers flyer/list, Bio-Hazard Disposal list, E-Waste Recycle list

Other items for participating volunteers
100 T-shirts – for all participants; 8 water bottles for those who shared what they found after the event; 25 Temporary tattoos to the students who participated (from a Campbell school, St. Mary's School of Los Gatos, & other younger children)

WVCWP Contributions:
50 mercury brochures; 50 mercury free thermometers; 50 pencils
* Many Thanks to Group Event Coordinator; Diana Johnson (Who mentioned; it is possible that there may be an article, on the event, by The Campbell Reporter.)
* And a Special Thanks to California's Bottle/Can and Phone Recycling Centers, who provided grants from CRV funds to support this event.

Sam Tomas Aquino Creek Cleanup @ Westmont High: Saturday May 17th , 2008
In conjunction with International Coastal Clean-up Day
Rapid Trash Assessment of Location:
Trash assessment conducted on 4/16/08.
Scores are as follows: Level of Trash (17), Actual Number of Trash Items Found (18), Threat to Aquatic Life (16), Threat to Human Health (18), Illegal Dumping (8), Accumulation of Trash (18), Total Score=95.
Cleanup Cancelled due to the outstanding condition of the cleanup site.

****

Lexington Reservoir Cleanup @ Lexington Reservoir Launch Ramp Lot: Saturday May 17th , 2008
In conjunction with International Coastal Clean-up Day
Participating Agencies
Santa Clara County Parks, WV Clean Water Program

Summary of Survey completed by Volunteers: (Based on 29 volunteer response sheets)
Most common pieces of trash collected: Paper, plastics, and glass.
Least common pieces of trash collected: Metal, cloth, wood, rubber.
Most Unusual pieces of trash collected: Car seat, tire, street cone.
Give Away Bags for volunteers: Approximately 70 Bags were handed out;
WVCWP Contributions:25 mercury brochures; 25 T-shirts
Results: 35 volunteers worked at the cleanup for 4 hours each. At a minimum wage of $8.00 an hour this would have cost $1,120 in temporary labor. Assuming 20 lbs per bag: 5 bags of recyclables = 100 lbs; 45 bags of trash = 900 lbs; Total collected = 1,000 lbs
Comments by volunteers
"I never knew there was so much trash down here!"
"The water seems twice as dirty as the trails."
"The Police should put the people who litter in jail."

MAINTAINING YOUR POOL AND SPA

Did you know...that copper is a pollutant that threatens aquatic life in our creeks and in the Bay? Copper is used as an algaecide in pools, spas and fountains; and copper pipes are commonly used in pool plumbing. Draining pools, spas and fountains to storm drains can pollute creeks with copper, chlorine, sediments and other contaminants.

Did you know...that storm drains flow directly into our creeks and the Bay? Storm drains flow directly into our creeks and the Bay **without treatment.**

Did you know...that a properly maintained pool, spa and fountain will reduce the need for draining? Please make note of the following information.

MAINTENANCE:

- Clean regularly, maintain proper chlorine levels and maintain water filtration and circulation.
- Manage pH and water hardness to minimize copper pipe corrosion that can stain your pool and end up in our creeks and the Bay.
- Minimize algae buildup to prevent the need for toxic algaecides.
- Ask your pool maintenance service for help resolving persistent algae problems without using copper algaecides.

CLEANING:

- Never clean a filter in the street, gutter or storm drain.
- Rinse cartridge filters onto a dirt area and spade filter residue into the soil.
- Keep backwash discharges out of the street and storm drain. Backwash sand and diatomaceous earth filters onto a dirt area. Dispose of spent filter materials in the trash.
- If you don't have a suitable dirt area, contact your waste water treatment authority at **408.945.3000** for instructions on discharging to the sanitary sewer.

Our thanks to Santa Clara Valley Urban Runoff Pollution Prevention Program for providing the text for this article. For more information call 1.866.WATERSHED (1.866.928.3774 extension 4) or visit online at www.MyWatershedWatch.org.

Looks pretty, doesn't it? But emptying your pool water into storm drains can seriously impact our creeks and the Bay.

COFFEE WITH THE MAYOR

You are invited to "Coffee with the Mayor" which is normally held on the third Friday of each month at 9:30am at City Hall. Use this opportunity to meet with the Mayor in an informal setting to discuss City or neighborhood issues. No appointment is necessary. Upcoming meetings are September 21, October 19 and November 16.

WEST VALLEY CLEAN WATER PROGRAM

October 12, 2007

Attn: Tom Babb
Department of Pesticide Regulation (DPR)
Pest Management and Licensing
1001 I Street, 3rd Floor, MS-3A
Sacramento, CA 95812-4015

Dear Mr. Babb:

A Proposal for the Santa Clara Valley Green Gardener Training program is being submitted to the DPR Alliance Grant Program by the County of Santa Clara in cooperation with the Santa Clara Valley Urban Runoff Pollution Prevention Program (SCVURPPP). As a member of SCVURPPP, The West Valley Clean Water Program, on behalf of the cities of Campbell, Monte Sereno, Saratoga and the Town of Los Gatos, will provide in-kind staff time as a management team member. This staff time is allotted for the grant period from January 2008 through June 2010 to assist with implementation of this proposal, should it be approved by DPR.

The West Valley Communities support a number of public outreach and education programs which help to prevent storm water pollution and fulfill the requirements of their NPDES Storm Water Discharge Permit. Clean Water Program staff use every opportunity to communicate with the public about Integrated Pest Management (IPM) strategies and benefits. The goal of the proposed program is to provide training to landscape maintenance workers and landscape professionals who may not be aware of the less-toxic methods they can use through IPM techniques. This proposal will provide an opportunity to reach currently underserved businesses and provide outreach to residents regarding the importance of employing landscape maintenance workers who understand and use IPM to promote local storm water pollution prevention efforts.

If you have questions regarding the support of the West Valley Clean Water Program staff for this project, please contact me at (408) 316-1233.

Sincerely,

Cheri C. Donnelly

Cheri C. Donnelly
Program Manager

West Valley Recycles! Spring 2008

BILL PAY THE EASY WAY

West Valley Collection & Recycling has made it easier than ever to pay your bill. Choose the method that works best for you.

Mail: Make your check payable to West Valley Collection & Recycling. Be sure to include the payment stub to get credit for your payment right away. Use the pre-addressed envelope included with your bill.

Drop it off: We accept payments at our office Monday through Friday from 8 AM – 4:30 PM. Deliver checks to:
West Valley
Collection & Recycling
1333 Old Oakland Road,
San Jose, CA 95112

Pay / View Your Bill Online: Visit our new online payment system at www.sanitecounec.ebiss.com, click on "Online Bill Pay" and follow a few simple instructions. You must have your current invoice and credit card or debit card information available.

Home banking customers continue to use the remit address:
West Valley
Collection & Recycling
Dept. 1483
Los Angeles, CA 90084-1483
You must have your current invoice available.

Have questions about your recycling service?

Ask Randy

Q: I recycle regularly, but does it really make a difference?

A: Recycling has a huge impact on our environment! Consider the aluminum can-what most people recycle most. More aluminum goes into beverage cans than any other product and if it is thrown away it will still be a can 500 years from now. Yet a recycled aluminum can will be back on the shelf as a new can in as little as 60 days. Now consider this: Recycling one aluminum can saves enough energy to run a TV for three hours—or the equivalent of a half a gallon of gasoline. Keep on recycling!

Spring Cleaning: A Place for Everything.

It's spring. Birds are singing, flowers are blooming and houses are filled to the brim with clutter—the aftermath of a long, cold, winter. From basements to bedrooms to backyards, everything could use a good spring-cleaning. Here are some ideas to make the job easy and environmentally friendly. First, organize what is not trash into labeled piles: sell, donate, recycle. Next, get to work:

- Have a garage sale or even better, organize a neighborhood garage sale.
- Donate your gently used clothing, books, furniture and working appliances to a local thrift store benefiting charity. Some organizations provide pick-up service, and all of them should provide you with a donation receipt to use as a write off on your income taxes.
- Recycle items that can't be reused.
- Request a bulky item pick-up. WVC&R will remove items placed at your curb for a small fee. Just call customer service at **(408) 283-9250** and we will pick up these items on your next collection day.
- Drop off your e-waste. The televisions, computer stuff, and vintage VCRs that didn't get picked up at the big garage sale can be dropped off at our facility. Check out **westvalleyrecycles.com** or call **(408) 283-9250** for a list of acceptable items, hours of operation and directions.
- Batteries, fluorescent light bulbs, non-empty aerosol cans and paints do not belong in our landfill. Check out **westvalleyrecycles.com** ewaste and universal drop off for more information.

IMPORTANT TO NOTE:

WEST VALLEY COLLECTION & RECYCLING LLC
1333 Oakland Road
San Jose CA 95112-9894

customerservice@westvalleyrecycles.com

E-Waste Drop Off Event

E-Waste Drop Off Events will be taking place in West Valley cities soon. Please go to www.westvalleyrecycles.com to find the event in your community. Drop off E-waste such as computers, computer monitors, hard drives, TV's and VCR's absolutely FREE.

Clean Green Waste

Keep your yard trimmings "Green" and your recyclables clean by keeping all garbage out of your green waste and recycling cart. Garbage contaminates recyclable materials.

West Valley Recycles! Spring 2008

10 Simple Ways to Celebrate Earth Day – Every Day.

In honor of Earth Day: Ten simple things anyone can easily do to pay tribute to the Earth and care for the earth's environment.

1. REDUCE

Skip the bottled water. It's expensive, and it produces large amounts of waste. Use a reusable water bottle when possible and filter your tap water for drinking, save money and make a big difference.

2. REUSE

Most products we buy cause greenhouse gas emissions during production and distribution. Take your lunch in a reusable lunch box instead of a disposable one. Reuse grocery bags and just say no to disposable utensils.

3. RECYCLE, RECYCLE, RECYCLE

Of course, you already know that recycling saves energy and reduces greenhouse gas emissions. But did you know this? If the recycling rate for aluminum and steel cans, plastic #1, glass, newspaper and corrugated cardboard increased just 10%, 3.9 million more tons of materials would be recycled, saving enough energy to power 1.5 million homes for one year. Check out the recycling how-to page at **www.westvalleyrecycles.com**

Okay, those were pretty easy; why not try some of these?

4. BUY RECYCLED

Purchasing recycled products completes the recycling loop. By buying recycled, you play an important role in making the whole process a success. As consumers demand more environmentally sound products, manufacturers will have to meet that demand by producing high quality recycled products.

5. WALK OR RIDE YOUR BIKE TO WORK OR SCHOOL

Save money on gas and parking while improving your health and dropping pounds. Stop and smell the roses. If you live too far from your office, explore telecommuting, public transportation or carpooling.

6. SWITCH TO CFLs

Switch to the "twisty bulbs," called compact fluorescents, or CFLs. These replace incandescent, halogen and other lights around your house to use up to 80% less energy. But remember: All fluorescent lamps and tubes are hazardous waste and must be taken to an authorized recycling facility. Call West Valley Collection and Recycling customer service at **(408) 283-9250** for information.

7. SWITCH IT OFF

Almost 40% of the electricity used to power your home electronics is consumed while they are in standby mode.

Hook up your home computer system and accessories to a power strip that can be switched off each night.

8. PLANT A TREE

A single tree will absorb one ton of carbon dioxide over its lifetime. Shade provided by trees can reduce your air conditioning bill by 10 to 15%. Pretty cool.

9. START A COMPOST PILE

Yard trimmings and food residuals account for 23% of the U.S. waste stream. Natural composting began with the first plants on earth and has been going on ever since. As vegetation falls to the ground, it decays, providing nutrients needed for plants, animals, and microorganisms. It's that simple.

Go to **www.reducewaste.org** to find the 2008 Home Composting Workshop Schedule.

10. MAKE EVERY DAY EARTH DAY

Check out the links page at **www.westvalleyrecycles.com** for events, drop-off sites, how-to workshops and environmental happenings all year round.

Clean Green

Spring. Let in the fresh air. Quick! Because the levels of pollutants indoors can be up to 100 times higher than outdoors, according to the U.S. EPA. Indoor air pollution is due in large part to volatile organic compounds (VOCs) that evaporate from cleaning products that can trigger health problems like allergies and asthma.

Try these simple ingredients you might already have around the house for earth friendly cleaning—like baking soda, vinegar, lemon juice, hydrogen peroxide and borax. They're powerful, safe, and less expensive than chemical alternatives.

- For glass, use a mixture of half white vinegar and half water.
- Baking soda and cornstarch make good carpet deodorizers.
- Clean mildew and mold with a mixture of lemon juice or white vinegar and salt.
- A paste of baking soda, salt, and hot water makes a great oven cleaner.
- Instead of using a store-bought drain cleaner, which likely contains lye, hydrochloric acid and sulfuric acid, try pouring a quarter cup of baking soda down the clogged drain, followed by a half cup of vinegar. Close the drain tightly until fizzing stops, then flush with boiling water.

041473

THIS PAGE INTENTIONALY LEFT BLANK

Why You Want These Bugs in Custody

Most insects found in your garden don't harm plants. In fact, 97% of the insects you see fall into this category! Such insects are called "beneficials" because they benefit the garden by pollinating plants, improving soil, and eating the pests that really harm plants. These hard-working "beneficials" can be a gardener's best friend by keeping problem pests under control naturally, without the use of harmful chemicals.

Making a Positive Identification

Before you stomp on or spray any unfamiliar bugs in your garden, make sure you know the good guys from the bad guys. Remember that most insects go through several changes during their life cycle, so the young (larva or nymph) may look totally different from the adult. And, keep in mind, it is often the "young" of the insect that eats the most pests. This brochure will help you to identify some of the most common beneficials (both adults and their young) found in local gardens. Here are some tips for attracting and keeping beneficials in your garden:

- **Go Undercover:** Provide beneficials with shelter and over-wintering sites by covering bare dirt with an organic mulch like leaves or bark. Remember to leave a small area of exposed soil to encourage solitary native bees that are "ground-nesters."
- **Lure Them Out of Hiding:** Include a variety of different pollen and nectar-rich plants to provide beneficials with a food source – in addition to pests.
- **Crack Down on Crime:** Pesticides (particularly broad-spectrum pesticides that don't target single pests) kill the beneficials as well as true garden pests. Protect beneficial insects by not using pesticides! These chemicals can also run off gardens and lawns with rain and over-watering, entering storm drains – a direct route to local creeks and other bodies of water – where they can harm water quality and wildlife. For information on pesticide alternatives, go to www.OurWaterOurWorld.org.

Bringing in the FBI: Flowers for Beneficial Insects

Most beneficial insects need to supplement their diets with pollen and nectar. You can attract them to your garden, and encourage them to stay and hunt for pests, by offering them a variety of nectar and pollen-rich flowers. Plants with daisy-like flowers or plants with clusters of multiple small flowers are especially attractive to beneficials. Choose a diversity of plants that bloom at different times so that the beneficials can feed throughout the year. Many common garden plants suited to our Mediterranean climate will attract beneficials, including oregano, alyssum, borage, dill, angelica, cosmo, tansy, calendula and rosemary.

Here are some California native plants guaranteed to draw in many of the 10 most wanted

Having a Good Defense

Many native plants have developed **natural defenses** to ward off insect pests and diseases. These defenses can eliminate the need for pesticides and reduce maintenance costs. Because native plants have adapted to grow in our specific climate, they often require very little care once established and are generally more tolerant of drought. The diversity of natives available offers gardeners great choices for both fragrant flowers and beautiful foliage – and provides food and habitat for our native birds, wildlife, butterflies, and beneficial insects.

Early Fall is an ideal time to plant natives. The cool weather and rainfall will help young plants establish a healthy root system before colorful Spring blooms emerge.

The 10 'Most Wanted'

Bugs in Your Garden

Guilty of: Controlling garden pests without the need for toxic chemicals

Reward: A healthy, sustainable garden that saves money and resources and protects the health of families, pets and the environment

ASSESSING THE LINE-UP

Here are rap sheets and mug shots on ten beneficial bugs that consume large numbers of pests or pollinate plants. Do not attempt to apprehend them... just let them serve time in your garden!

Lacewing larva and aphid

Green Lacewing

Aliases: Aphid wolf, aphid lion.
Wanted For: Aggressively devouring aphids, thrips, mealybugs, scale, spider mites, leafhoppers and insect eggs.
Family History: Adult green lacewings feed on nectar, pollen, and honeydew – at dawn and dusk. Juveniles are voracious predators known to eat up to 20 or 30 aphids a day.
Sightings: Last seen around nectar-producing plants like sunflowers, tansy and buckwheat.

Soldier beetle larva

Soldier Beetle

Aliases: Leatherwings.
Wanted For: Attacking and feeding on aphids and other soft-bodied insects.
Family History: Adults feed on pollen and insect pests on plants. The larva (or "young") hunt for pests in leaf litter and soil.
Sightings: Known to feed on the pollen of flowers like goldenrod and milkweed while waiting for its prey. Reports of sightings appear in early spring, shortly after aphids begin hatching.

Dragonfly nymph

Dragonfly

Aliases: Mosquito hawk, darner.
Wanted for: Preying on unsuspecting flying insects like mosquitoes, flies and midges.
Family History: The dragonfly's excellent eyesight, strong jaws and agile flight make it a deadly predator able to catch prey in mid-air. Dragonfly larvae (nymphs) live in water and are also efficient hunters eating mosquito larvae and other insects, snails and even small fish.
Known Accomplices: Often seen in the company of its relative, the damselfly, another insect predator. Don't be fooled: when at rest, dragonflies hold their wings outstretched while damselflies fold their wings closed over their bodies.
Sightings: Last seen near garden ponds, streams and other bodies of water.

Bumblebee nest cells cut open to show developmental stages

Bee

Aliases: European honeybee, bumblebee. (Also includes hundreds of native bee species including leafcutter and orchard bees.)
Wanted For: Pollinating the flowers of many of our ornamental, fruit and vegetable plants.
Family History: Specially equipped for moving large quantities of nectar and pollen, honeybees are usually found in colonies in hives. Most native bees are masters at eluding notice and often live alone in ground nests. Bee populations are diminishing due to pesticide use, and loss of habitat.
Sightings: Usually seen in gangs in the vicinity of flowers high in nectar and pollen including asters, sunflowers, mints, lavender, rosemary and sages.

Syrphus larva eating brocolli aphids

Syrphid Fly

Aliases: Hoverfly, flower fly.
Wanted For: Hunting down aphids, mealybugs and other pests, and for pollinating plants.
Family History: Adults are known to be important pollinators. The larvae suck the juices out of their victims. A single larva can consume hundreds of victims a month.
Sightings: Larvae are usually found under leaves in the company of aphids. Adults have been seen lurking around ceanothus, sunflowers, feverfew and other nectar-rich flowers.
Master of Disguise: With their yellow and black stripes the adults appear to be bees. They have only one set of wings and can't sting. The larva look like fat, legless caterpillars.

Ground beetle larva

Ground Beetle

Aliases: Predacious ground beetle, and carabids, among others.
Wanted For: Conspiring to eat many soil-dwelling pests like slugs, snails, cutworms and root maggots.
Family History: Fast-moving predator, armed with strong jaws. Generally dark brown or black with long legs, and shiny, hard front wing covers that sometimes have a metallic sheen. Usually hunts at night. Reported to be able to consume its body weight in food each day. Larva also feed on soil insects.
Sightings: Usually sighted hiding in soil or under rocks, dried leaves and mulch.

Parasitoid wasp cocoons on caterpillar

Parasitic Wasp

Aliases: Trichogramma, Braconid, Hyposoter and Ichneumon, among others.
Wanted For: Parasitizing the eggs of cutworms, cabbage loopers, codling moths, tomato hornworms, aphids, whiteflies, scales and other pests.
Family History: These tiny, notorious wasps lay their eggs on or inside of pests or insect eggs and the larva eat the pest. Can be tracked by the tell-tale signs they leave behind, like tiny, white cocoons on caterpillars, or "aphid mummies," – the tan, dried up husks of aphids stuck to a leaf.
Sightings: Suspected of foraging for nectar on tiny flowers like alyssum, yarrow, tansy, and clover.

Orb weaver spider

Juveniles closely resemble adults

Spider

Aliases: Funnel weavers, crab spiders, and golden orb spiders, among others.
Wanted For: Trapping and bugnapping a wide variety of insect pests.
Family History: The most deadly natural enemy of pests, spiders are skilled predators. They may hunt with webs or track their victims on the ground and on plants. Can be identified as arachnids, with eight legs and two body parts.
Sightings: All over your garden, and on front porches near lights.
Warning: Spiders are thought of as fearsome creepy crawlers but very few have a bite that is harmful. Always wear gloves when cleaning garages, debris, woodpiles, storage areas or piles of clutter.

Ladybug larva and pupa

Ladybeetle

Aliases: Ladybug, ladybird beetle, seven-spotted ladybeetle.
Wanted For: Gorging on soft-bodied insects like aphids, scale, thrips, mealybugs and spider mites.
Family History: Both adults and larva eat large numbers of pests. It is believed that one ladybug can devour 5,000 aphids in its lifetime. Most common suspect is red with black spots – but watch for many other species in a variety of colors, with or without spots.
Warning: Be on the lookout for a ladybug look-alike: the spotted cucumber beetle! This green beetle with black spots feeds on crops and foliage.
Sightings: Known to loiter on nectar-rich flowers like yarrow, clover and tansy.

Tachinid fly eggs on a caterpillar

Tachinid Fly

Aliases: Diptera.
Wanted For: Attacking unsuspecting caterpillars and beetles.
Family History: Disguised as a hairy housefly, this parasitic insect lays its eggs on caterpillars, grubs and other insects. When the eggs hatch, the young (larva) tunnel into their victims and eat them.
Sightings: Often seen stealing the nectar and pollen of tansy, milkweed and Queen Anne's Lace.

PESTICIDE MANAGEMENT ACTIVITES

FY 2007-2008 Work Plan Self Evaluation Matrix

Source	Task Source	Work Plan Tasks	Accomplishments	Responsible Party
	SCVURPPP PMP (I.A.1.)	Summary of Use Track and report use of pesticides on municipally owned property.	Monte Sereno did not apply ANY pesticides on municipal property in FY 07-08, so no usage reports were filed.	City Manager/ Facility Mgr
	SCVURPPP PMP (I.A.3.) PS #3	Implement BMPS Continue to Implement IPM practices as Best Management Practices (BMPs) for any pesticide used by staff or contractors. Report on use of IPM practices on municipal property.	During 07-08, the WVC continued to implement the Pest Management Performance Standard (PMPS). "Standard Operating Procedures for Pesticide Management" are being followed by staff and contractors. BMPs in general continue to be effective. WVC work with contractors to find the least-toxic method to treat resistant pest problems. The WVC use less-toxic pest management methods in municipal facilities (parks & buildings) whenever practicable, based upon budget and effectiveness. *See "Evaluation" section below for details on IPM implementation.*	City Manager/ Facility Mgr
	SCVURPPP PMP (I.A.6.)	Banned Pesticides Inventory If any pesticides have been banned w/in the past FY (per EPA, State &/or local requirements), conduct an agency-wide search of chemical for these pesticides. Properly dispose of these banned substances pursuant to appropriate waste disposal regulations.	Monte Sereno does not purchase or store its own pesticides.	City Manager/ Facility Mgr

Monte Sereno

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

	SCVURPPP PMP (I.B.1.) PS#5.a	Training for Applicators Ensure that employees who apply pesticides for the agency obtain the appropriate training as required by the County Agricultural Commissioner and the State Department of Pesticide Regulation (DPR)	No employees apply pesticides. In case of the need for pest control, a licensed Pest Control Operator will be called in.	City Manager
	SCVURPPP PMP (I.B.2.) PS#5.b	Staff Training for Applicators Attend and/or conduct annual training which reviews appropriate portions of the IPM Policy, BMPs, and relevant IPM techniques for employees within departments responsible for pesticide application.	Monte Sereno has limited staff (9 including part-time personnel). Other than 2 buildings for City Hall, Monte Sereno does not have public buildings or parks. The City does not regularly use pesticides, and no pesticides are ever applied by staff.	WVCWP to coord with Facilitiy Mgr
	SCVURPPP PMP (I.B.3.) PS#5.c	Municipal Staff Education Inform employees who are not authorized and trained to apply pesticides that they cannot use over-the-counter pesticides in or around the workplace.	City Facilities Manager reviewed City policy with all staff in July 2007.	City Mgr to deliver/ WVCWP to provide notice
	SCVURPPP PMP (II.A.1.)	Watershed Ed. & Outreach Campaign (WE&O)[1] Attend WEO and IPM work groups. Continue to assist with development of strategy for a campaign and training program (in Spanish & English) designed for staff of very small landscape businesses (typically 1-8 employees) mainly serving homeowners.	WVCWP Program Manager participates in the IPM Ad Hoc Task Group on behalf of the WVC. Project implementation and projects for consideration, which are discussed in the AHTG, are presented to City staff for appropriate follow-through. WVCWP contributed additional funds to the SCVURPPP's IPM ad campaign. This allowed the IPM ad to appear in the three (3) weekly community newspapers for six (6) weeks in the spring. (Campbell Reporter, Los Gatos Weekly, Saratoga News). WVCWP was very involved with the development of the new training program for small landscape businesses –	WVCWP Staff

[1] Funded by all Co-permittees each year.

			from concept, to grant proposal, to implementation of a successful class series. The first set of classes were held from Feb- April 2007 – one in English and one in Spanish; Both classes were attended at capacity (40 students) and had waiting lists. Positive media coverage about the class was received in local ethnic and San Jose community newspapers. The classes are being listed in the Fall session and projected to be full. Since many WV residents employ small landscape contracting firms, it is hoped that these classes will have an impact on reducing residential pesticide use in the WVC. See "Evaluation" below, for details	
	SCVURPPP PMP (II.A.4.)	Community & School Opportunities Identify opportunities and attend community events/school classrooms to demonstrate reasons for, and methods of, less toxic pest control.	Information on the importance of reducing pesticide use, and the toxic effects of pesticide runoff, is included in all WVCWP educational presentations at schools. IPM information, and HHW brochures detailing proper pesticide disposal, are distributed at a variety of venues. In FY 07-08, WVCWP participated in helping to develop a new brochure on reducing pesticide use and employing beneficial bugs. WVCWP the directed funds toward an order of the Beneficial Bugs brochure for use as a handout. See PI/P Section for further details on outreach for less toxic pest control.	WVCWP Staff
	SCVURPPP PMP (II.A.5.)	Community Material Distribution Participate in public sale events at local hardware store(s). Provide watershed protection information and reminders (gifts) to community by walking aisles of the gardening center with gift basket full of handouts during the sales.	WVCWP staff distributed material via different delivery methods at a variety of community events, including: Haunt the Hollow EVENT 10-28-07 Summer Winds Nursery (Campbell) 8-9-07 Orchard Supply Hardware (Saratoga) 8-5-07 Ace Hardware Garden Center Los Gatos 9- 11-07 Town of Los Gatos Green Event, 4-19-07 Great American Pick-up (Campbell) 4-19-07	WVCWP Staff

Monte Sereno

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

			See PI/P Section for details about community events and various IPM and Pesticide-related materials which were distributed.	
	SCVURPPP PMP (II.A.6.)	Web Site As new information is available, update web site to provide easy access to information on IPM and reduction of pesticide use.	In FY 07-08 WVCWP staff worked on development of a new "Take Action" page, which will include a variety of IPM and pesticide information links. The page will be uploaded in FY 08-09. **MONTE SERENO:** City staff are making plans to incorporate IPM and Pesticide information on the City website during FY 08-09	WVCWP Staff Facilities Manager
	SCVURPPP PMP (II.A.13.)	Special Districts Invite neighboring special districts (e.g. sanitary, open space districts, and school districts) to attend WVCWP sponsored IPM workshops, when workshops are offered.	Information on newly-available Ecowise training was forwarded to the PCOs used as municipal contractors by WVC (Kilroy Pest Control/Sensitive Solutions and West Valley Spray): http://www.ecowisecertified.org/ Contractors also received an invitation to a Regional IPM Contracting Workshop (November 6, 2007) in Oakland Due to numerous trainings/meeting for municipal staff concerning the Municipal Regional Permit, WVCWP was not able to sponsor an IPM training this year.	WVCWP Staff
	SCVURPPP PMP (II.A.14.)	Conduct internal IPM outreach Provide all City/ Town staff with information on environmentally safer, integrated pest management to encourage employees to use IPM methods away from work. Email announcements as appropriate & display IPM materials at City/ Town Hall.	A new e-mail notice covering this subject was created by WVCWP staff The notice contains links to *Our Water, Our World*; *UC Davis IPM site*; *Universities' Pesticide Info Network*; and *Pesticide Action Network database*. It is being e-mailed to all municipal employees in Summer 2008. In addition, IPM material is available for pick-up by employees at Municipal Offices.	City Mgr to distribute as appropriate/ WVCWP to provide IPM materials

Mon. ereno

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

	SCVURPPP PMP (III.A.1)	Pest Control Operators Maintain database of licensed structural and landscape maintenance PCOs within WVC for outreach purposes.	The database of West Valley PCOs has been compiled; over 75% of them are based in the City of Campbell.	WVCWP staff
	SCVURPPP PMP (III.A.4)	Track and Report PCO Use of Pesticides Require PCOs contracted by municipality to implement BMPs through contract specifications and track and report PCO use of pesticides on municipal property.	Monte Sereno did not have ANY pesticides applied on municipal property in FY 07-08, so no usage reports were filed.	City Manager/ Facility Mgr
	SCVURPPP PMP (IV.A.2.)	Commercial Business Education Continue ICID Inspector's education program targeting retail food facilities through distribution of "Don't Set a Table for Pests".	Monte Sereno is a solely residential city, so no commercial material was distributed.	
	SCVURPPP PMP (V.A.3.)	Promote HHW Collection Work with HHW collection agencies to support, enhance, and help publicize programs for proper pesticide disposal.	All WVC contribute funds to the County HHW disposal program, enabling residents and small businesses to drop off pesticides at HHW sites. WVCWP Program Manager participated in the SCVURPPP and HHW Program Work Group. Work Group is exploring means of coping with growing demand at facilities due to increased awareness about proper disposal.	
	NPDES Permit Provision C.3.n	1. New Development/ IPM Planning Procedures 2. New Development/ Reporting 3. New Development Training for staff responsible for Environmental Reviews	See Planning Procedures Section 4 Pesticide Management measures related to New Development (C.3) have been incorporated into the Planning Procedures element of the Work Plan in order to facilitate delegation of responsibilities to appropriate departments and staff. Pesticide Management Activities Evaluation

PESTICIDE USAGE REDUCTION MEASURES – Pest Specific

The City of Monte Sereno has extremely limited Municipal facilities (2 small buildings with 1 parking lot in back and landscaping in front) – less than ¼ acre total of landscaped area.

A landscaping contractor cares for City property, and is instructed to avoid use of pesticides. When gopher damage appears, the gophers are trapped. Weeds are hand-pulled.

MERCURY POLLUTION PREVENTION ACTIVITES

FY 2007-2008 Work Plan Self Evaluation Matrix

Source	WP Task	Work Plan Tasks	Accomplishments	Responsible Party
	Mercury Plan (I.E.)	Reduction of Hg Containing Products Continue implementing phase-out of mercury-containing products (MCPs). Phase-out will coincide with replacement of MCPs on an as-needed basis.	Reduction of mercury-containing products is being implemented. Research on alternative products has been conducted through the WVCWP. Non-mercury or low-mercury replacements are being used wherever feasible e.g., thermostats and fluorescent bulbs. At the WVCWP-sponsored meeting with DEH in April 2008, each member in the audience was given the booklet, "What You Don't Know About Mercury". Discussion followed as to how and where to dispose of Mercury Containing Products, including fluorescent bulbs, thermometers, and batteries. In the back of the booklet there is a list of approved drop-off locations in our area. Record keeping for MCPs was also discussed.	City Mgr/ Facilities Mgr WVCWP to send notice
			MONTE SERENO: The City's contractor is knowledgeable about replacement and safe disposal of mercury containing products. (He has been distributing brochures on MCPs to his other customers, especially those who use large numbers of fluorescent lamps).	City Mgr/ Facilities Mgr WVCWP to send notice
	Mercury Plan (II.B.)	Mercury Containing Product Disposal Services Provide funding and participate in County HHW collection program for residents and small businesses	The WVC support the County HHW collection program through funding, outreach activities (material distribution, website notices, etc.), and sponsorship of local E-waste collection events. HHW drop-off information was distributed to Bay Area & WVC residents at several community events in FY07-08. Disposal of fluorescent bulbs was covered in classroom presentations. In FY 07-08, the focus was on investigating proposals related to adoption of an extended producer responsibility	City Mgr

Monte Sereno

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

			(**EPR**) resolution. All WVC adopted an EPR Resolution during FY 07-08. See Evaluation Section (below) for details.	
			MONTE SERENO: The small city offices have a large poster in the entrance: "Watch Out for Mercury", with County HHW information listed. The same poster is mounted in the City Post Office.	City Mgr
	Mercury Plan (II.C.)	Track Disposal of Mercury Containing Products Continue documenting the quantities of mercury-containing fluorescent bulbs disposed from City/ Town buildings and departments at hazardous waste collection facilities. The quantities of disposed product will be reported in annual report	**MONTE SERENO:** 26x - 4 ft fluorescent lamps were collected from the City's building and taken to HHW for disposal in FY 07-08. Employees store used batteries in the City's file room for later drop-off at HHW.	City Mgr/ Facilities Mgr
	Mercury Plan (II.F)	Fluorescent Light Recycling Campaign Continue participation in the Mercury Ad Hoc Task Group and support ongoing implementation of an outreach program to about recycling fluorescent bulbs.	The WVCWP Manager helped develop local campaigns and outreach messages through SCVURPPP's Mercury Ad Hoc Task Group. WVCWP provided funding for SCVURPPP's Mercury ad to appear in the 3 weekly local newspapers for 6 weeks in Fall 2007 (Campbell Reporter, Los Gatos Weekly, Saratoga News).	SCVURPPP & WVCWP to coordinate w/ HHW staff

Mercury Pollution Prevention Activities Evaluation

Efforts to Enact "Extended Producer Responsibility" Requirements:

At its November meeting for the 4 West Valley Communities, WVCWP hosted a presentation by Rob D'Arcy of Santa Clara County HHW on "Extended Producer Responsibility" – targeting producers of products with HHW, including mercury containing products such as E-Waste. HHW was seeking to have co-permittees pass resolutions supporting EPR. The goal of EPR is to shift California's product waste management system from one that is government-funded and taxpayer-financed to one that relies on producer responsibility. This will also help in removing more of these products from the waste stream.

All WV Cities passed resolutions supporting Extended Producer Responsibility in FY 07-08.

Community Involvement in E-Waste Recycling

Over the past several years, there have been a number of E-waste events held by various entities (schools, scout groups, etc.), thereby reducing the need for WVCWP to sponsor E-waste events. This is a certain measure of success for previous public outreach efforts related to Mercury and E-waste – residents are now taking on the task of organizing these events, and handling safe disposal of mercury containing products. This is a demonstration of the effective partnerships that can develop between municipal efforts and their residents, and which can be especially effective in smaller communities.

WEO AHTG Advertising

Through its Watershed Education Outreach ad hoc task group, SCVURPPP published mercury ads in newspapers serving the Santa Clara Valley. In an effort to ensure reaching a maximum number of WV residents, WVCWP funded and arranged for printing of the ads in 3 local weekly papers, for a 6 week run. This meant an extra 18 ads aimed at West Valley residents. The ads ran in the *Campbell Reporter*, the *Los Gatos Weekly*, and the *Saratoga News*.

COPPER ACTION PLAN/NICKEL ACTION PLAN

FY 2006-2007 Work Plan Self Evaluation Matrix

Activity	Source	Work Plan Tasks	Accomplishments	Responsible Party
		Monte Sereno has no Ind/Comm	Monte Sereno has no Ind/Comm –Indicate 'No Ind/Comm in Monte Sereno Table	
Vehicle Washing Operations	CB-1	As part of the West Valley Industrial Commercial Inspection Program, promote improved car washing methods at auto businesses. Provide info on alternative arrangements for businesses with possible compliance problems. (Section 2.i of this work plan - Industrial Inspection Program)	The Stormwater Discharge Inspector distributes vehicle washing outreach materials during pro-active inspections and in relation to any actual or suspected vehicle washing incident. The Inspector is able to answer questions and offer suggestions with the help of visuals. A WVCWP-created fact sheet provides information on wastewater capture systems for automotive facilities. The fact sheet was designed to provide small-scale automotive facilities (those that find installing a full-fledged wash rack cost-prohibitive) with examples of inexpensive treatment technologies and distributor information. This method of outreach has been very effective.	WVCWP Inspector
Vehicle Washing Operations	CB-1	Place outreach material on proper vehicle/equipment washing at municipal counters, post offices, libraries and public events. Update WVCWP website to include copper information.	The Car Wash Kit flyer is posted in WVC Municipal Offices. For FY07-08, WVCWP home page featured a graphic highlighting car washing, and a link to a printable PDF with information on proper car washing, and water quality degradation from improper washing. The link also gives information on obtaining the free Car Wash Kit for Car Wash Events (this graphic is sometimes temporarily swapped out for publicizing events, such as a WV E-waste event). www.cleancreeks.org http://www.cleancreeks.org/imagesnew/carwashweb.pdf Currently, the WVC do not have any comprehensive outreach material on copper so in FY 07-08 WVCWP staff worked on a draft copper outreach piece (tri-fold), including	WVCWP staff

Monte Sereno

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

			car washing info. The piece will be distributed for WVC feedback in FY 08-09. Once finalized, it can be distributed to the public and posted on the website.	
Vehicle Washing Operations & Pool/ Spa Maint.	CB-1 & CB-12	In classroom presentations, introduce impacts of copper on aquatic life; teach proper methods of car washing and pool & spa drainage using the Enviroscape watershed model.	WVCWP's classroom presentations are scripted to include hands-on activities so that students can watch pollutants, such as copper from car-washing activities & pool draining, flow directly to waterways. In addition to recommending the use of commercial car wash facilities, WVCWP encourages washing on a gravel or lawn area where wash water is captured and infiltrated. Students also learn about runoff from car wash fundraisers and the need to borrow the WVCWP Car-Wash Kit for any such event. Proper Pool Draining instruction includes photos of a Sanitary Sewer Cleanout, and other graphics about pool & spa drainage. School presentations in FY 07-08 included: *Casa Di Mir Montessori School, Campbell – Presentations for 6-12 year-olds on 2-13-08* *Queen of Apostles Private Elementary School – Presentations for 4th and 5th grade science classes on 4-4-08* *St. Mary's School, Los Gatos –Presentations for kindergarten classes on 5-6-08*	WVWCP staff
Vehicle Washing Operations	CB-1	Promote use of Car Wash Kit. Provide kit; provide training to charity car wash organizers. Document use in A/R. Solicit feedback from participants.	In FY 07-08, a 220 word "Car Washing" article for municipal newsletters was created. The article will run in "The Saratogan" Summer 2008 issue (FY 08-09), and hopefully in additional municipal newsletters in Spring 09. **October 13 & 14, 2007** The WVCWP Carwash Kit was used at a very large fundraiser at Fisher Middle School, LG. Two WVCWP staff attended in order to educate event organizers on Car Wash Kit set up, and spoke to other interested residents	WVWCP staff

			The fundraiser was very well-attended (may have raised $10,000) and many attendees were educated about the Car Wash Kit. 100 Car Wash brochures were distributed. The entire event received extensive media coverage. **September 30, 2007** The Car Wash Kit was also used at the Silicon Valley Roller Girls Carwash Fundraiser in Campbell. The Stormwater Inspector gave instruction about set-up and use of the Kit, and education about carwash runoff. The WVCWP Stormwater Discharge Inspector is available to provide guidance on use of the WVCWP car-wash kit for local fundraising events. He usually attends the events to offer guidance and to help publicize the *West Valley Clean Water Program*. The kit uses about 400 ft. of hose and 300 ft. of extension cord. The car wash kit works extremely well, but can be difficult to set up. Photos of the kit in action are used for classroom presentations.	
Vehicle Washing Operations	CB-1	Within the development project permit process for Group 2 projects, require source control measures at facilities that will conduct vehicle/ equipment washing and maintenance activities (consistent with Permit requirements).	Monte Sereno is strictly residential and does not have any commercial facilities conducting vehicle washing/maintenance.	
Vehicle Washing Operations	CB-1	Include recommended source controls for vehicle washing in the City's corporation yard SWPPP and continue to train staff to use BMPs.	Monte Sereno has no Corp Yard	
Industrial Copper Control	CB-3	Continue joint Inspections with Fire Dept., targeting industrial sources for copper, e.g. metal plating and metal finishing facilities.	Monte Sereno is strictly residential – does not have any commercial/ industrial facilities subject to these inspections	SCVC Fire Dept.
Reducing Traffic	CB-6/7	Within the development permit process, encourage pedestrian oriented design	The West Valley communities encourage best design practices wherever practicable. These small communities	

Monte Sereno

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Congestion		practices (trails) and planning that will accommodate bicyclists (paths).	tend not to have large developments conducive to requiring alternative transportation within the permitting process. However, the cities and the Town encourage alternatives transportation through other means: For several years, the cities of Monte Sereno and Saratoga, and Town of Los Gatos, have been working with CalTrans on improving bicycle and walking features along the stretch of Hwy 9 that links these 3 municipalities. The stretch is heavily used by bikers and walkers, and improvements would overcome current safety problems, thereby encouraging greater pedestrian/bicycle use of this transportation corridor. In June of 2008, several agencies gathered on Highway 9 in Saratoga to announce nearly $500,000 of unused bond money that can be used to improve safety along this corridor. Improvements will include a T-intersection that will make cars more visible to bicyclists and a street light at Austin Way & Hwy 9. Caltrans estimates the project will be completed in approximately 2 years. The Silicon Valley Leadership Group CEO discovered the unused bicycle improvement money while reading through documents from the California Transportation Commission. Agencies involved in these improvements include Town of Los Gatos, Cities of Monte Sereno and Saratoga, CalTrans, Valley Transportation Authority, Calif. Transportation Commission. In addition, other improvements will be funded by State Bicycle and Pedesterian Improvement grant funding. Bicycle and pedestrian facilities along Hwy 9 from Los Gatos, through Monte Sereno, to Saratoga will be improved through a multi-year project. The first phase will improve the bicycle route system to reduce hazards and improve safety for bicyclists along this route. Phase I work was carried out during FY 07-08.	

			MONTE SERENO: The Engineering Department is currently working with the Los Gatos/Monte Sereno Police, Daves Avenue School and Los Gatos Union School District to improve traffic safety and pedestrian crossings at the Daves School location. Mid-block bulb-outs will be installed on Daves Ave along with a new crosswalk to facilitate safe crossing and encourage pedestrian and bicycle traffic.	City Mgr / City Planner
Water-shed assessm't and protection	CB-8	Consider watershed protection in all CEQA actions.	All WVC have adopted the CEQA review guidance from SCVURPPP, as documented in the June 2004, *C.3 Stormwater Handbook*, to address water quality as part of the C.3.m implementation.	City Mgr / City Planner/ Asst City Engr
Water-shed assessm't and protection	CB-8	Continue to receive training and develop understanding of the Hydromodification Management Plan (HMP) and implement HMP Permit requirements on qualifying projects.	In September 2007, municipal engineers from the WVC attended trainings presented by SCVURPPP/ EOA staff on the HMP, including proposed applicability maps. Some additional HMP training was received at the June 3, 2008 SCVURPPP workshop. See Planning Procedures Training Summary for details.	City Engineer
Water-shed assessm't and protection	CB-8	Continue to Implement Guidelines & Standards developed by the Water Resources Protection Collaborative for watershed protection. Support new Collaborative issues for watershed protection as they arise.	Monte Sereno adopted the "Guidelines and Standards" in FY07-08. They are currently being incorporated into the City's new *Residential Design Guidelines.*	City Mgr
Street sweeping	CB-11	Conduct regular street sweeping, evaluate efforts and collect data for Annual Report.	The West Valley communities conduct street sweeping in residential areas and more frequent sweeping in commercial areas. Sweeping data is collected and noted in Public Agency Activities (Section # 3) of this report. The West Valley cities do not hesitate to change sweeping contractors if the equipment being used does not measure up to municipal standards.	
		Provide quarterly street sweeping by contract w/ the Town of Los Gatos, evaluate efforts and collect data for Annual	In FY 07-08, Monte Sereno contracted with a new street sweeping firm and currently is not using Town of Los Gators as its contractor. The current contractor uses a	Facility Mgr/ LG PW Specialist for Monte Sereno

Monte Sereno

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

		Report.	PM10-certified regenerative air sweeper to sweep Monte Sereno's residential streets quarterly.	
Outreach on Pool, Spa maint'nce	CB-12	Continue to distribute Pool & Spa maintenance brochure via agency counters, website and during IC/ID inspections.	WV Inspector distributed 40 Pool & Spa brochures to Leslie's pool & spa retail outlets during Sept 2007. Pool & Spa brochures are available at all WVC municipal offices.	WVCWP with Municipal Staff
			MONTE SERENO: MS featured proper pool & spa drainage as a front-page article in its municipal newsletter.	
Use of copper architecture	CB-21	Within the development permit process, continue to limit and discourage use of copper architecture. Inform applicants about the negative water quality impacts related to the use of copper roofing, rain gutters and other copper architecture.	All WV cities discourage copper architecture with the exception of Los Gatos, which is drafting a Residential Design Guideline that will seek to discourage architects and homeowners from using copper by informing them of its environmental implications.	City Mgr / City Planner/ City Engr
Green Building	CB-21	Provide information about negative impacts of copper architecture and alternative materials via link on West Valley Clean Water website.	Currently, WVCWP and WVC do not have any good outreach material on architectural copper, so in FY 07-08 WVCWP staff worked on creating a draft of a comprehensive copper outreach piece (tri-fold), including architectural copper info. The piece will be distributed for WVC feedback in FY 08-09. Once finalized, it can be distributed to the public and posted as a downloadable PDF on the website.	WVCWP staff
Nickel Action Plan Tasks				
Control Measures for Constr Sites	NB-1	Continue to implement Construction Inspection Performance Standards (Section 5, Construction Inspection section of this work plan).	See Construction Inspection (Section #5) of this report.	
Training on Control Measures for Constr sites & New Dev	NB-1	Attend Construction site management workshops sponsored by Water Board and SCVURPPP for latest erosion/sediment control techniques and continue to attend workshops on post development Stormwater treatment BMPs.	See Construction Inspection Training (Section #5T) of this report.	

Copper/Nickel Action Plan Evaluation

Car Wash Outreach - Evaluation:

Additional WVCWP staff have been trained in use of the Car Wash Kit. This will enable increased outreach efforts, as it ensures that staff will be available to set up the Kit at Car Wash fundraising events, and to instruct event organizers in use of the kit. The kit was used successfully at several events in FY 07-08. A *"Clean" Car Washing* article was created, and will run in the Summer issue of the Saratoga municipal newsletter. Depending upon space available, it will run in other WVC newsletters in 2009. In addition, WVCWP staff worked on developing new Car Wash outreach strategies for FY 08-09.

Pool and Spa Maintenance - Evaluation:

In Fall FY 07-08, WVCWP initiated a new outreach effort involving placing Pool & Spa brochures at the major swimming pool retail chain in the area. This fall, staff will return to the stores and check on the status of the brochures, and whether this was an effective form of outreach.

Promotion of Pedestrian Trails And Bike Paths - Evaluation:

The WVC of Los Gatos, Monte Sereno and Saratoga have invested extensive efforts into improving the stretch of State Highway 9 which runs from Saratoga, through Monte Sereno, and into Los Gatos (appx. 4 miles). This stretch is heavily traveled by local residents, and many have expressed an interest in using it for walking and biking, if it were a safer route. In fact, it currently receives a high degree of bike traffic, and some pedestrian traffic. The Cities and Town have worked closely with CalTrans on developing strategies for improving safety on this stretch. Funding has been obtained from various sources and Phase 1 of the improvements was started in FY 07-08.

Street Sweeping - Evaluation:

The West Valley cities continued their street sweeping programs. Campbell and Saratoga are using both vacuum sweepers and broom sweepers, based upon conditions. Los Gatos and Monte Sereno are both swept using regenerative air sweepers. By using vacuum and regenerative air sweepers, all WVC are making concerted efforts to remove fine particulates, including copper, from their roadways.

TRASH INVENTORY & MANAGEMENT

FY 2007-2008 Work Plan Self Evaluation Matrix

Source	WPActivity	Work Plan Tasks	Accomplishments	Responsible Party
	Program's Trash Work Plan	Long-Term Management Strategy Participate in Trash Ad Hoc Task Group and assist Program staff in developing (and revising per the MRP) long-term trash management strategy for reducing trash in urban streams and waterways and other potential sources that may contribute trash to those areas.	The West Valley Clean Water Program Mgr attended the Trash AHTG meetings and provided feedback from West Valley cities on implementation strategy and tools. Topics this year included issues related to Structural Treatment Control, 303(d) listings and Trash Problem Areas at various creek sites. Reviewed drafts of 'Trash Evaluation & Management Fact Sheet, 2nd Edition'.	WVCWP Mgr to participate in AHTG and coordinate WVC efforts
	Program's Trash Work Plan	Additional Task – not in 07-08 Workplan Participate in Creek Connection Action Group (CCAG) developing long-term trash management strategy for reducing trash in waterways. Address other potential sources which may contribute trash to waterways.	WVCWP Program Manager participated in policy planning meetings held by Heidi McFarland, Santa Clara County Parks Dept, to discuss various proposed projects and overall trash issues. CCAG coordinates the 2 annual county-wide cleanup events. These strategy meetings were aimed at addressing the bigger picture of trash generation.	WVCWP staff attends meetings
	Program's Trash Mgmt Strategy	Implement Trash Management Strategy Begin implementation of long-term trash management strategy for each high priority watershed defined within the technical memorandum entitled *Prioritization of Trash Problem Areas*. This strategy will be provided within the technical memorandum entitled *Long-Term Trash Management Strategy*, which will be developed during FY07-08.	The *Long-Term Trash Management Strategy,* as developed in FY 2007-2008, consists of 3 main points: • Identify Trash Problem Area & Sources • Evaluate & Implement Enhanced Trash BMPs • Assess Effectiveness of BMPs Over Time WVCWP and West Valley Communities staff continued to use assessment tools to identify where Trash Problem Areas, and Trash Sources, existed. Over the past several years, using these tools, it was determined that some sites had at first appeared to be problem areas, but after initial cleanup, the Trash problem did not recur. These sites were then removed from the Trash Problem area list so that resources could be devoted to other sites and other	WVCWP staff

			BMPs. For WVCWP, part of the Trash Management Strategy is to address vehicular generation of litter, and illegal dumping. By participating in the Silicon Valley Anti-Litter Campaign, WVCWP was involved in the initiation of a hotline allowing drivers to report license numbers of vehicles which they see littering. For illegal dumping, a strategy of directly contacting property owners near any sites where dumping occurs was initiated several years ago, and has continued. In FY 07-08, 25 homeowners near Smith Creek in Los Gatos were contacted. Current BMP methods are in the process of being evaluated. BMPs include ongoing methods such as streetsweeping, increased use of trash cans for the public, increased scheduling of trash pickup by Municipal staff, institutional regulations such as requiring clean up after events by event permittees, increased communication with Cal Trans, etc. (see Management Practices row, below) Staff will continue to observe the results of BMP implementation in order to assess their effectiveness.	
	Program's Trash Work Plan	Pilot Demonstration Assist Program in implementing Pilot Demonstration Projects which focus on assessing control measure effectiveness.	The West Valley Clean Water Program Mgr attended the Trash AHTG meetings and provided input on behalf of West Valley cities regarding potential pilot demonstrations. The Pilot Demonstration program has been well-publicized. Regular updates to SCV URPPP Management Committee have been given on installation and first wet season results. The Pilot Demonstration was included in the SCVURPPP 'Trash Management and Evaluation, 2nd Ed' document, circulated in May 2008. At the annual WVCWP Streets Maintenance Supervisors' meeting, WV Communities staff and WV Sanitation District staff viewed a presentation by City of Sunnyvale on Sunnyvale's current experience with the Pilot program.	SCVURPPP, City of Sunnyvale, City of San Jose _____ WVCWP Mgr to coordinate WVC efforts

	Trash Work Plan	Evaluations Continue to conduct trash evaluations in a subset of local trash problem areas using the Programs Urban Rapid Trash Assessment (RTA) protocol and/or the KAB Litter index.	WVCWP staff used SCVURPPP's standardized reporting forms to assess trash problems. WVCWP staff conducted **21** assessments at the identified sites and listed problem areas in West Valley communities. The number of assessments included: Campbell **5** -- Los Gatos **3** -- Monte Sereno **5** and Saratoga **4.** Although such monitoring usually is limited to drive-by evaluations of a site, several assessments were conducted simultaneously with removal of trash and debris by WVCWP staff.	WVCWP staff
	Trash Work Plan	Identify and Prioritize Problem Areas Continue to identify and prioritize trash problem areas based on criteria provided by Program staff during FY 06-07.	Identification & prioritization are determined by: • monitoring previously identified problem areas, • using volunteer monitoring during cleanup events at problem sites, • keeping records of areas where Trash has been noted, or illegal dumping has been noted. If the site is noted repeatedly, then identifying it as a Problem Area will be considered. As noted in FY06-07, a few sites were taken off the Priority List, since several years of monitoring demonstrated that trash there was less of an issue than was originally believed. It was decided that staff resources should be concentrated on problem sites in order to be effective. Clean site conditions at the site for the WVCWP biannual Creek Cleanup (San Tomas Aquino Creek at Westmont High School) resulted in removing that site from this year's National River Clean-up Day site list.	WVCWP staff
	Technical Memo: *Trash Mgmt Effective-ness Strategy (FY06-07)*	Evaluate Trash Management Measures Track existing trash management practices to evaluate effectiveness. Selected effectiveness methods may include using the Program's Urban Rapid Trash Assessment protocol (Version 1.0) and/or the KAB Litter Index in a subset of high	WVCWP staff used SCVURPPP's standardized reporting forms to identify trash problems. When completed by staff, these forms provide data on trash monitoring and management activities at the listed problem sites. Completed forms are used for review to determine effectiveness of trash management practices. Discussion was initiated on determining a better means of	WVCWP Mgr to participate in AHTG and coordinate WVC efforts

		priority trash problem areas.	training on use of trash evaluation tools, in order to ensure standardization among staff and among co-permittees. One Trash Management Measure/ Evaluation Method involves Creek Cleanups and Monitoring. Over several years of Creek Cleanups and monitoring, WVCWP has been able to cut back on cleanups at 2 sites, due to lack of trash at the sites. La Rinconada Park, along Smith Creek in Los Gatos, is a creekside park with a tennis court, lawn area, picnic/ bbq area, playground and a ½ mile long creekside trail. After several cleanups, 1 final cleanup was held, at which there was basically nothing for the volunteers to pick-up, nor monitor. Monitoring showed that construction & remodeling activities for several homes nearby may have been contributing to the trash. Trash included wrappers from construction materials, and food wrappers, etc. probably from construction workers. Once the construction was completed, trash was generally not being generated. San Tomas Aquino Creek, at Westmont High School in Los Gatos, has been the site of biannual Creek Cleanups for some years. The last cleanup was held here in Sept 2007. In Spring 2008 an assessment of the site was conducted. This determined that there was minimal trash, and the regularly-scheduled May Cleanup was cancelled, since there would be virtually nothing for the volunteers to pick up or monitor. The site will be evaluated again in fall and at that time if there doesn't appear to be a regular generation of trash, a recommendation on whether to continue clean-ups at the site will be made. In these instances, it appears that the Creek Cleanups have been an effective Trash Management Measure, and may provide an opportunity to focus efforts in another area (BMP implementation) or other approaches to reducing trash generation.	
	Program's Trash Work Plan	Management Practices Continue to identify and implement trash	Control measures in addition to scheduled/systematic control measures	WVCWP to collect data & coord w/ City Mgr.

		control measures, where practical and feasible, to reduce trash and debris.	• notify Caltrans when exceptional litter or debris problems are noticed along highways/freeways and around on-ramps • conduct removal of trash and litter as needed at sites within municipal jurisdiction • remove trash (where feasible) at some sites in Caltrans' jurisdiction • monitor identified problem areas • hold volunteer cleanup events at problem sites, when feasible • highlight litter problems during classroom presentations • WVC IND inspectors and construction site inspectors watch for litter and illegal dumping. Inspectors will consider an accumulation of debris at a site to be a stormwater violation and refer such sites to the WVCWP Stormwater Discharge Inspector. Systematic Control Measures • Trash collection is mandatory for WV residents - via WV Collection & Recycling (WVC&R) • WVC&R holds annual free, curbside Waste Collection days for items weighing up to 70 lbs, wood scraps and other items not usually allowed under weekly collection guidelines • All WVC conduct streetsweeping, with extra sweeping for areas of high trash generation (downtowns) and high leaf drop.	
			MONTE SERENO: City is using grant money to put trash cans at bus stops. The City is making efforts to reduce the overall level of trash generated by residents. In conjunction with the Town of Los Gatos and the Santa Clara County Recycling and Waste Reduction Program the City conducted their annual "Community Garage Sale" aimed at reducing trash by promoting the theme of reuse. The event was held on May 17, 2008.	WVCWP to collect data & coord w/ City Mgr.

Monte Sereno

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

	Trash Problem Area Activity Report	Provide City/ Town Specific Information Provide Program staff with specific information on trash management practices implemented within the City's jurisdiction using program-wide standardized reporting forms.	WVCWP staff used SCVURPPP's standardized reporting forms to provide data on trash monitoring and management activities at the listed problem sites. ***Trash Problem Area Evaluation Results*** for each West Valley city, as provided by the Program, are included at the end of this report section.	WVCWP staff
	Program's Trash Work Plan	Submit Annual Report Data Submit Urban Rapid Trash Assessment Surveys, Trash Item Tally Sheets and any other data collection tool to Program staff.	Trash Assessment forms for WV cities were submitted to SCVURPPP in July 2008 for Program-wide analysis and reporting.	WVCWP staff
	SCC Trash Advisory Committee – Education sub-group	Support (TAC) Trash Advisory Committee Continue to attend Santa Clara County TAC meetings with SC County, City of San Jose and the Office of Education. Assist in development and implementation of a five-year outreach plan targeting 16 – 24 yr-olds. *Note: This committee has been renamed as the* "Silicon Valley Anti-Litter Campaign"	WVCWP Program Manager attends General meetings and Education sub-committee meetings. City of Campbell Public Works Director is Co-Chair of the finance sub-committee and a Campbell City Council Member is Co-Chair of the cleanup event subcommittee. The group and sub-committees are going forward with parallel objectives: • Host clean-up events in support of 'Keep America Beautiful' campaign • Design, purchase & distribute window clings reminding drivers to report 'litterbug' sightings (SC County) • Host telephone hotline & website to accept litterbug sightings and generate a letter to vehicle owner stating their vehicle was reported as creating litter on the streets (roads & highways, parking lots, etc) • Fund/ solicit support for purchase & distribution of tarps to vehicles w/ uncovered solid waste; distribution is mainly at landfills w/ their cooperation • Begin work on 5-year plan/ strategies, including a request for needed & desired funding	WVCWP Staff
Citizen Participation	See PI/P – Citizen Participation	Monitoring/Citizen Participation Continue to promote citizen participation program to monitor trash near local creeks.	WVCWP staff conducted 3 trash monitoring / Cleanup events with student and citizen volunteers. The volunteers at all clean-up events were taught to participate in groups and learned how to	WVCWP Staff

		Transfer data to trash tally sheets (element of Creek Keeper's Program). See PI/P (Section 6 of this Work Plan)	use the WVCWP trash tally forms to collect the data which helps identify trash sources. **9-15-07 SanTomas Aquino Creek** WVCWP held a cleanup event at Westmont High School in Campbell. Fifty volunteers spent several hours cleaning up the creek. They removed 46 bags of garbage. **9-29-07 Saratoga Creek at Big Basin Way** Joint WVCWP/ Saratoga staff cleanup. Some volunteers helped at this cleanup in Saratoga on Big Basin Way at Hwy 9 along the parking lot and down the bank, where possible. This was mainly staff with a small number of volunteer residents. A total of 49 bags of garbage and recyclables were collected. Monitoring showed that the trash source was a combination of littering and illegal dumping. Litter was mainly food wrappers and alcohol & beverage containers. A file cabinet, oven, and 30 ft pipe were removed from creek side. **9-29-07 Saratoga Creek at Wildwood Park** In addition to Big Basin Way, Wildwood Park in Saratoga was cleaned by a West Valley staff member and volunteers. Trash was collected and tallied. One bag of trash was removed. **5-17-08 National River Cleanup Day – Cleanup not needed at regular site - San Tomas Aquino Creek** at Westmont High School – site was very clean WVCWP's annual site for this event was determined to be a very clean site prior to May 17, and not appropriate for bringing in a large number of volunteers – i.e. there would hardly be anything to pick up. WVCWP conveyed this information to the County-wide group (Creek Connections Action Group) who concurred with the assessment. WVCWP staff instead supported the cleanup event at Lexington Reservoir Launch Ramp Lot in Los Gatos. This site was hosted by Santa Clara County Parks Dept. WVCWP staff participated as a Training opportunity in order to learn how SC County Parks host a site and handle the volunteer monitoring activities. SEE PI/P ELEMENT for additional info

Santa Clara Valley Urban Runoff Pollution Prevention Program

FY 2007-2008 ANNUAL REPORT

Trash Inventory & Management Evaluation

General Evaluation of Trash Problems

After several years of monitoring trash sites, WVCWP staff is familiar with the sites and the problems that need to be addressed. Two leading trash sources in West Valley communities are "Illegal dumping" and "vehicular litter" (found along highways, freeway-on-and-off-ramps, and smaller arterial roads). The type of litter that is retrieved is predominantly snack, food, beverage and other product packaging and cigarette butts. School lunch yards are another source of trash, and WVCWP regularly holds outreach activities at schools, including cleanups, to address this issue.

Limitations to improving litter control

Since a major source of trash in the WVC is 'vehicular litter', much of it is in CalTrans' jurisdiction, which means that the WVC often do not have direct control of addressing the litter problem. Cities would like to address litter on Highway medians and freeway on and off ramps, but those areas are under Caltrans jurisdiction. Increased communication and partnering with Caltrans are goals of the WV Communities. When a noticeable littering incident is brought to the attention of WVC/WVCWP, CalTrans is contacted and they have been responsive to removing the litter. It is hoped that WVCWP's participation in the Silicon Valley Anti-Litter Campaign *(formerly the SC County Trash Advisory Committee)* will be another means of helping to address, and conduct outreach to, vehicular littering. The first step in this process has been the initiation of a hotline allowing drivers to report vehicles which are observed in the act of littering.

In general, an impediment to more effective litter control is the common problem of lack of funding. Areas which could be helped by increased funding include:

- Cost of staff time for Stormwater Inspector, PW staff and Sheriff's Dept to patrol areas where illegal dumping occurs. Increased funding for patrols could have a big impact on trash in creeks in the WV Communities, where a number of roads border creeks in less-developed areas. Many of these roads are winding with little traffic, and appear to facilitate illegal dumping via their lack of passersby, who might otherwise deter a perpetrator.
- Cost of publicity for anti-littering campaigns and advertising creek clean-ups, community clean-ups, and e-waste recycling.
- Staff time to organize volunteer clean-ups and handle publicity.

Another major issue is homeless encampments. Placement of trash cans near homeless encampments has been discussed, but it has been determined that this can be seen as "encouragement" and then becomes a liability issue.

Dumpster Area Inspections & Education for Local Businesses

The WVCWP Inspector checks the dumpster areas of the downtown restaurants in each of the West Valley communities for signs of illegal dumping or debris around open dumpsters. He provides urban runoff education as needed, including the importance of keeping dumpster lids closed, and locked if necessary. This method of informal visits and issuing *Notices To Comply* has helped to reduce the amount of trash-related dumpster violations over the past years.

Outreach: Illegal Dumping

In a strategy to raise awareness of illegal dumping in neighborhoods, WVCWP responded aggressively to an illegal dumping incident in a Los Gatos residential area. Town of LG maintenance crews had discovered illegally dumped yard waste and trash behind houses on Montclair Rd. The site was examined by the WVCWP Inspector. The materials had been dumped near the stormwater drainage culvert, which ultimately feeds to Smith Creek.

WVCWP and Town of LG chose to raise awareness via a letter to residents, and doorhangers placed on doors in the neighborhood. Appx. 25 homes were directly contacted in this manner. These efforts were aimed at both educating residents that such dumping is illegal, and encouraging residents to call and

report any such dumping they may see. This technique will continue to be used by WVC, if/when similar situations arise.

Educational Outreach to Students and Teachers in Local Schools

WVCWP staff responded to every opportunity to talk about trash and littering with students. The trash topic is always included in classroom Enviroscape presentations. Local students have been responsive to outreach efforts requesting volunteers at Clean-up events.

In FY 08-09, WVCWP will direct staff time to a new task of developing a structured Schoolyard Trash Cleanup Program with interested pilot schools.

Creek Keeper Events – Volunteer Participation - Trash Identification, Tallying & Pick-up

The WVC are all small, but have been successful in promoting volunteer participation from residents. Volunteer involvement in various clean-ups has been a measure of the success of outreach programs. A number of residents have become actively involved in clean-ups, which is also perhaps an indication of the mindset of small town residents, who may be eager to make a difference in their community. WVCWP will make efforts to continue efforts to partner with residents in combating local Trash problems.

WVCWP has been particularly successful in recruiting student volunteers for creek cleanups and the task of trash tallying. Each event is opened with a brief talk on the trash problem affecting our creeks and Bay. The WVCWP's trash tally form was designed to be easy for students to use. Categories on the form reflect the trash types that are most often found in West Valley locations. In May 2008, 2 WVCWP staff members supported a Los Gatos cleanup site hosted by SC County Parks Dept; this allowed staff to gain a perspective on methods used by the Parks Dept. to train volunteers in Trash Monitoring activities.

Volunteers have been very enthusiastic about local clean-up events. Interested Monte Sereno residents are likely to volunteer at Town of Los Gatos or City of Saratoga cleanup events.

Overall Trash Management Evaluation

In general, WVC residents appear to be conscientious about litter and aware of how their actions have a direct impact on 'clean/green areas'. Many residents are also avid supporters of maintaining the environment because they utilize the amenities they gain from such surroundings – biking, hiking, natural scenery, etc. Some West Valley schools have student volunteer groups that conduct schoolyard clean ups, and some have even adopted stretches of their neighboring creeks. While WVCWP conducts anti-litter outreach activities for residents, the WVC still need to address litter from vehicular traffic and illegal dumping, which may not be originating with local residents, so it is hard to address via outreach efforts in the WVC.

In this light, the WVC's best chance for success in dealing with the trash problem is to partner with other agencies and work with a well-organized regional group. WVCWP staff have become actively involved in the Silicon Valley Anti-Litter Campaign *(formerly the SC County Trash Advisory Committee)*, especially the Educational Outreach sub-group. WVCWP has also worked on developing a working partnership with CalTrans.

In its efforts to address litter problems by moving 'up' the trash stream, WVCWP will direct staff time in FY 08-09 towards developing a structured Schoolyard Cleanup Program with interested local schools. Staff will be contacting schools bordering creeks to determine interest, and developing a program which schools can institutionalize and implement on an on-going basis. It is hoped that initial efforts will prove successful, and the program can be expanded to include a number of schools. This would result in cleaner areas directly adjacent to creeks, less trash generated from school yards, and families with increased awareness of trash problems in their watershed. The goal is to move up from the creeksides, where public accessibility is limited - up the trash source line, and reduce the amount of trash that hits the ground through education and habit-forming guidance.

New data management methods within the WV Sanitation District are allowing generation of more detailed reports on stormdrain inspection findings. The WVC are working with WVSD on stormdrain report analysis related to Trash, in order to improve identification of possible Trash sources and problem areas.

5. Illegal Dumping	D: No evidence of illegal dumping. No bags of trash, no yard waste, no household items placed at site to avoid proper disposal, no shopping carts.	D: Some evidence of illegal dumping. Limited vehicular access limits the amount of potential dumping, or material dumped is diffuse paper-based debris.	D: Presence of **one** of the following: furniture, appliances, shopping carts, bags of garbage or yard waste, coupled with vehicular access that facilitates in-and-out dumping of materials to avoid landfill costs.	D: Evidence of chronic dumping, with **more than one** of the following items: furniture, appliances, shopping carts, bags of garbage, or yard waste. Easy vehicular access for in-and-out dumping of materials to avoid landfill costs.
Illegal Littering	L: Any trash is incidental litter or carried downstream from another location.	L: Some evidence of litter within creek and banks originating from adjacent land uses	L: Prevalent in-stream or shoreline littering that appears to originate from adjacent land uses.	L: Large amountof litter within creek and on banks that appears to originate from adjacent land uses.
D-SCORE	10 9	8 7 6	5 4 3	1 0
L-SCORE	10 9	8 7 6	5 4 3	2 1
6. Accum-ulation of Trash	There does not appear to be a problem with trash accumulation from downstream transport. Trash, if any, appears to have been directly deposited at the stream location.	Some evidence that litter and debris have been transported from upstream areas to the location, based on evidence such as silt marks, faded colors or location near high water line.	Evidence that trash is carried to the location from upstream, as evidenced by its location near high water line, siltation marks on the debris, or faded colors.	Trash appears to have accumulated in substantial quantities at the location based on delivery from upstream areas, and is in various states of degradation based on its persistence in the waterbody. A large percentage of trash items have been carried to the location from upstream.

4. Biohazard, Toxic and Sharp Objects	B: Trash contains no medical waste, diapers, pet or human waste. No evidence of toxic substances such as chemical containers or batteries. Only 1 piece of broken glass or metal debris, if any, is present.	B: No toxic substances, but small presence (2-10 pieces) of sharp objects such as broken glass and metal debris.	Presence of **any one** of the following: hypodermic needles or other medical waste; used diaper, pet waste, or human feces; any toxic substance such as chemical containers, batteries, or fluorescent light bulbs. Medium to high prevalence (11-50 pieces) sharp objects.	Presence of **more than one** of the items described in the marginal condition category, and/or high prevalence of (> 50) sharp objects.
Site Accessibility	A: Access is difficult, restricted by locked gate or some other physical barrier like steep banks or thick riparian veg. Site reach does not appear to be used by people. Might be private property or protected watershed.	A: Access is limited and site reach does not appear to be used by people. No trails down to creek.	A: Public access to reach is fair to good but site does not appear to be used frequently, **or** private access is good without any public access.	A: Excellent reach access including trails down to and adjacent creek and creekside space for sitting down. Some evidence that reach is used frequently by the public (e.g. rope swings, many beer/soda cans and food wrappers left on the banks, etc.).

Santa Clara Valley Urban Runoff Pollution Prevention Program

	CONDITION CATEGORY			
Trash Assessment Parameter	**Least Disturbed (Optimal Urban)**	**Sub optimal Urban**	**Marginal Urban**	**Poor**
5. Illegal Dumping	D: No evidence of illegal dumping. No bags of trash, no yard waste, no household items placed at site to avoid proper disposal, no shopping carts.	D: Some evidence of illegal dumping. Limited vehicular access limits the amount of potential dumping, or material dumped is diffuse paper-based debris.	D: Presence of **one** of the following: furniture, appliances, shopping carts, bags of garbage or yard waste, coupled with vehicular access that facilitates in-and-out dumping of materials to avoid landfill costs.	D: Evidence of chronic dumping, with **more than one** of the following items: furniture, appliances, shopping carts, bags of garbage, or yard waste. Easy vehicular access for in-and-out dumping of materials to avoid landfill costs.
Illegal Littering	L: Any trash is incidental litter or carried downstream from another location.	L: Some evidence of litter within creek and banks originating from adjacent land uses	L: Prevalent in-stream or shoreline littering that appears to originate from adjacent land uses.	L: Large amountof litter within creek and on banks that appears to originate from adjacent land uses.
D-SCORE	9	8 7 6	5 4 3	2 1 0
L-SCORE	10 9	8 7	5 4 3	2 1 0
6. Accum-ulation of Trash	There does not appear to be a problem with trash accumulation from downstream transport. Trash, if any, appears to have been directly deposited at the stream location.	Some evidence that litter and debris have been transported from upstream areas to the location, based on evidence such as silt marks, faded colors or location near high water line.	Evidence that trash is carried to the location from upstream, as evidenced by its location near high water line, siltation marks on the debris, or faded colors.	Trash appears to have accumulated in substantial quantities at the location based on delivery from upstream areas, and is in various states of degradation based on its persistence in the waterbody. A large percentage of trash items have been carried to the location from upstream.

Annual Cleanup Program

West Valley Collection & Recycling (WVC&R) will collect an unlimited number of items from your curb at no additional cost for one day only.

Please have your items, containers and bundles curbside by

6 AM on Monday, February 18, 2008

WVC&R will collect:

- Items weighing up to 70 pounds (except as described below)
- Garbage in 32 gallon plastic bags, 32 gallon cans, and sturdy cardboard boxes (all small items must be contained)
- Tree prunings, branches and scrap wood up to 3" in diameter and 3' long in tied bundles weighing up to 70 pounds

WVC&R will not collect:

- 35, 65 or 95 gallon wheeled carts (they are awkward to lift manually)
- Concrete or Dirt (call Guadalupe Landfill 408.286.1670)
- Tires (call Guadalupe Landfill 408.286.1670)
- Items containing CFC's such as refrigerators (call WVC&R 408.283.9250)
- Hazardous Waste (call 408.299.7300 or visit www.hhw.org)
- E-Waste, Universal Waste, Motor Oil and Water Based Paints:
  - You can drop off TV's, Computers, household batteries, motor oil and water based paints at WVC&R's processing facility by appointment. For more information call customer service at 408.283.9250 or visit www.westvalleyrecycles.com
- Large items or containers over 70 pounds:
  - WVC&R will collect large items such as sofas and refrigerators for a fee. To schedule an appointment please call customer service at 408.283.9250

WVC&R makes it easy for you to donate your reusable items. For assistance locating local charitable organizations, visit www.westvalleyrecycles.com or call 408.283.9250.

Please remember to place recyclables in your recycling cart for your regular weekly collection.

To learn more about any of these programs visit www.westvalleyrecycles.com or call customer service at 408.283.9250.

Training Summary: Watershed Management

Training Description	Date	Attendees
SCVWD Laguna Seca wetlands and historical ecology **Speaker:** KQED-TV staff **Topics:** Focuses on work by SFEI and the Santa Clara Valley Water District in San Jose, including the rediscovery of the once grand and surprisingly recoverable Laguna Seca wetlands complex.	Tuesday July 11th, 2007	**WVCWP (1)** Manager
The Ebbs and Flows of Wetlands Protection **Speaker:** Dr. John Callaway **Topics:** Wetlands restoration/protection in the San Francisco Bay Area.	August 5, 2007	**WVCWP (1)** Manager
Clean Watersheds Webcast (NPDES) **Speaker:** Nikos Singelis (Office Wastewater Management U.S. EPA) **Topics:** This webcast will described how to get local stormwater capital needs incorporated into the 2008 Clean Watersheds Needs Survey (CWNS). The Needs Survey is the basis for a detailed Report to Congress on the nation's water infrastructure needs. This Report is widely read and referred to in Congress and is used in funding and policy deliberations. In addition, the information in this Report is frequently used by state and local decision makers. Although stormwater has been a category in the Needs Survey for some time, very few communities have reported their stormwater infrastructure needs.	October 22nd, 2007	**WVCWP (1)** Manager **Los Gatos (1)** Planning Assistant
National Park Service Road Maintenance Workshop **Speakers:** Bruce Badzik (National Park Service), Laura Speare (San Francisco Estuary Project), Tyler Ledwith (Workshop Coordinator), Steve Ortega (Environmental Compliance, National Park Service), Tyler Ledwith, Darren Fong (Aquatic Biologist, National Park Service). **Topics:** Roads and Watersheds, Salmon Habitat Needs, Effects of Roads on Watersheds and Salmon, Regulations and Permitting, Routine Road Maintenance BMPs, Unpaved and Paved Roads, Sediment & Erosion Control, Ditches & Road Shoulder, Side Casting & Spoils Disposal,	November 7, 2007	**WVCWP (1)** Manager

Fire Department • Fire and Environmental Protection Division • 500 Castro St., City Hall – 4th Floor
Mountain View, CA 94041-2010 • 650-903-6378 • FAX 650-903-6101

September 15, 2008

Mr. Bruce Wolfe, RWQCB Executive Officer
Regional Water Quality Control Board
San Francisco Bay Region
1515 Clay St., Suite 1400
Oakland, CA 94612

Subject: City of Mountain View's Urban Runoff Management Program
FY 2007-2008 Annual Report

Dear Mr. Wolfe:

This report is submitted by the City of Mountain View, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a. of the Program's reissued municipal storm water NPDES Permit (Order No. 01-024). The report summarizes activities performed during FY 2007-2008 in accordance with the City of Mountain View's Urban Runoff Management Plan (URMP) submitted to the Regional Board on September 1, 1997 and updated in September 2004, and the performance standards contained therein.

Contents of Report

The goals of this Annual Report are to: 1) concisely document implementation of our URMP and FY 07-08 work plan during the past fiscal year; 2) evaluate program results for continuous improvement; 3) comply with permit requirements; and 4) share this information with other Co-permittees, municipal decision-makers, and the public. To accomplish these goals, the report contains the following sections:

I. Contents of report;
II. Program highlights and accomplishments;
III. Summary of continuous improvement activities;
IV. Attachments:
   A. Certification Statement
   B. Self-Evaluation and Work Plan Completion Matrix
      - ICID
      - IND/COMM Inspections
      - Street, Roads, and Highways
      - Corporation Yards
      - Rural Public Works
      - Storm Drain O&M
      - Water Operations
      - New Development Planning Procedures

- New Development Construction Inspection
- Pest Management
- Mercury Pollution Prevention
- Copper/Nickel
- Trash Inventory and Management

C. List of Acronyms, Abbreviations, and Definitions
D. Treatment BMPs Inspection Activity Report for FY 07-08
E. Pesticide Use Evaluation for FY 07-08

Program Highlights and Accomplishments

The City's Urban Runoff Management Plan URMP describes activities that are implemented to control storm water runoff pollution. During FY 07-08, the City continued efforts to implement its URMP to the maximum extent practicable. Attachment B provides self-evaluation for each element in the City's URMP. Highlights of the City's FY 07-08 URMP accomplishments are listed below:

- The City responded to 70 ICID incidents, which resulted in the issuance of 6 warning notices, and 1 administrative action with a penalty. The penalty citation was issued for $183.
- The City continued its restaurant inspection and outreach program, conducting 73 restaurant inspections, which were fewer inspections than past years. The City is currently undergoing recruitment to fill vacant positions and the goal is to train incoming inspectors to perform the restaurant inspections, which also include fire and life safety inspections.
- The City implemented the enhanced data collection and reporting requirements for the ICID and Industrial inspection programs.
- In addition to the restaurant inspections, the City conducted 189 industrial/commercial inspections and re-inspections (this figure does not include restaurants and hazardous materials facilities) during FY 07-08.
- The City conducted training for streets, parks, water, wastewater, fleet services, and facilities personnel, as well as Planning Division staff, and managers from Public Works, Community Development, City Manager's Office, and the City Attorney's office.
- The City implemented its PIP program, which included school outreach, publications, and public events, and multi-cultural outreach.
- The City reviewed 127 projects for storm water related items.
- The City implemented its C.3 requirements, which included approval of 4 new projects. These projects included required runoff BMPs.
- The City initiated its treatment BMP inspection program.
- The City implemented its database that will be used to permit stormwater treatment BMPs, as well as track inspection and maintenance activities for those BMPs.
- The City conducted 120 construction site inspections, and issued 15 written notices.
- The City implemented its IPM Policy and IPM Plan.
- The City utilized a database for tracking pesticide use.

Continuous Improvement Activities

The City is committed to seeking URMP areas for improvement. The current continuous improvement items are listed below:

- The City will continue to implement its enhanced restaurant inspection program.
- The City will continue to work to improve implementation of the C.3 requirements, including use of the database to issue permits for operating and maintaining stormwater treatment BMPs.
- The City will closely monitor development of the Municipal Regional Permit to identify areas that may need to be modified to comply with any new requirements.
- The City will continue to evaluate and implement improvements to the IPM Plan, and pesticide management program.

Thank you for your review of this Annual Report. If you have any questions regarding the materials submitted, please contact me at (650) 903-6225.

Sincerely,

Eric Anderson, Urban Runoff Coordinator

cc. Sue Ma, RWQCB

ICID Program Evaluation

During FY 07-08, the City responded to 70 ICID incidents, which are comparable to past years' results (92 incidents in FY 02-03, 89 incidents in FY 03-04, 74 incidents in FY 04-05, 80 incidents in FY 05-06, and 68 if FY 06-07). The breakdown of the types of incidents, potential source, sources of reports, and follow-up and enforcement actions are summarized in the attachment to this section of the annual report. During FY 07-08 the City responded to 2 more than during FY 06-07. Evaluation of the "Incident Type" data showed that the City responded to 13 fewer "accidental spills", 22 more "vehicle and equipment leaking" incidents. The disparity in results for these types of incidents is due to a change in reporting. In years past, vehicle accidents were listed as "accidental spills," but were reported in the database as "vehicle and equipment leaking." Combining those types shows that there were 28 incidents, compared to 19 in FY 06-07.

Additionally, in FY 07-08, there were 4 fewer "gray water" incidents, and 4 fewer sanitary sewer overflow incidents in FY 07-08 compared to FY 06-07. The remaining incident types were consistent (+/- 2) during FY 07-08 when compared to FY 06-07.

During FY 07-08, the City continued its restaurant inspection program to address restaurant-related ICID incidents. This will be discussed further in the IND section of the annual report.

During FY 07-08, the City continued using a data management system called Firehouse. Use of this new database has enabled the Environmental Protection Division to have greater access to incident records.

Review of the data does not provide useful information regarding the distribution of ICID incidents. The incidents appear to be randomly occurring throughout the City.

FY 2007-2008 ANNUAL REPORT

Municipality: City of Mountain View

Industrial/Commercial Program Evaluation
During FY 07-08, the City implemented its Industrial/Commercial inspection program. The data above summarizes the City's actions. Common types of problems found are spills and leaks, housekeeping, training requirements, secondary containment needs, and equipment washing. During FY 05-06 the City conducted 32 automotive facility inspections, which was lower than past years, because only automotive facilities that were permitted to discharge to the sanitary sewer were inspected due to a staffing shortage. The inspections evaluated sanitary sewer discharges and stormwater issues. During FY 06-07, the City resumed inspections of all automotive facilities as an inspector was hired, and 166 automotive facility inspections were completed. During FY 07-08, 143 automotive facility inspections were completed. This number is lower than last year since auto inspections will begin after June for the 2008 inspection cycle. During FY 07-08, the City conducted 73 restaurant inspections. The restaurant inspections include Fire and Life Safety as well as Environmental inspection items. Combining the fire and environmental inspection items was implemented to provide more efficient inspection service, but requires more time to complete each inspection. The City is in the process of recruiting an additional inspector position, which would provide additional inspection services at restaurant facilities. This City anticipates filling the position in FY 08-09. During FY 07-08, The City did not collect penalties related to commercial and industrial inspections.

Corporation Yard O&M Program Evaluation

During FY 07-08, the City conducted training (March 13, 2008) for all MOC operations and maintenance employees regarding the Environmental Compliance Plan. The training mostly covered hazardous materials issues, such as storage, and incident response, spill mitigation, and reporting.

The City continued its contract for SWPPP inspections and monitoring for the MOC. Quarterly dry weather inspections and monthly wet weather inspections did not result in discoveries of new pollutant sources or new BMPs that may be needed. The project to construct a roof over the bulk storage area was completed in FY 07-08. The Annual Report for the MOC SWPPP is available for review upon request.

Rural Public Works Program Evaluation

The City of Mountain View is urbanized, so most of the Rural Public Works Performance Standards do not apply. The standards describing work performed along or across stream channels may be applicable depending on the project. The City's Public Works specifications require contractors to install erosion controls, and City contacts require contractor to obtain the necessary permits for working in and along watercourses.

FY 2007-2008 ANNUAL REPORT

Municipality: City of Mountain View

Storm Drain System O&M Program Evaluation
During FY 07-08, the City's Wastewater Section continued to maintain storm drains by cleaning catch basins using a vacuum truck. The Wastewater Section also stencils storm drains throughout the City. Wastewater conducts preventative maintenance on the City's sanitary sewer system, which reduces sewer overflow incidents. In cases where sewer overflows occur, Wastewater will unplug the sewer, and vacuum the spilled sewage. These incidents are reported in the ICID data. During FY 07-08, the City reports a decreased number of sewage overflows from 20 to 16 incidents. Wastewater also responds to other types spill incidents, when needed. Training during FY 07-08 focused on incident response, preventing spills from reaching the storm drain or the sanitary sewer drain, chemical handling, and how to handle abandoned wastes. The Public Services Department's Safety and Training Manager coordinated the training, and the urban runoff Coordinator assisted with the training presentation. Training in conjunction with the Safety and Training Manager is a good way to present multiple topics to the employees without impacting operations.

NEW DEVELOPMENT PLANNING PROCEDURES (C.3)

FY 2007-2008 Work Plan Self Evaluation Matrix

Item No.	Activity	FY0 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
C.3.a Performance Standard Implementation Goal: To modify Mountain View's URMP to include revised model Planning Procedures Performance Standards that incorporate Provision C.3 requirements.				
NDP - all	**a.1.** Incorporate revised model Planning Procedures Performance Standards into local urban runoff management plans.	The City will review the Program-developed model Planning Procedures Performance Standards when completed. If acceptable, the City will incorporate the model Planning Procedures Performance Standard into its Urban Runoff Management Plan.	The Program's model Performance Standard and Supporting Documents for Planning Procedures for New Development and Redevelopment are adopted and included in the City's URMP.	FD
C.3.b Development Project Approval Process Goal: To modify Mountain View's development project approval processes, for both private and public development project, to incorporate the requirement of Provision C.3				
NDP – 1	**b.1.** Assess current stormwater-related requirements in Co-[illegible]	1) Conditions of Approval will be revised to list Group 2 projects when the deadlines are determined.	1. The City's Conditions of Approval require stormwater treatment controls for Group 2B projects.	FD CDD PW

	permittee's development review process, for public and private projects, and identify additional steps or tools required at each stage of the process to meet C.3. requirements.	2) Develop guidance document to assist developers and City staff implement the C.3 requirements.	2. The City's guidance document outlining the C.3 requirements is updated to describe the threshold for Group 2B projects.	
NDP – 1	**b.2.** Develop new or modify existing review policies, ordinances, procedures, and/or conditions of approval to incorporate Group 1 requirements (based on results of tasks under C.3.c. through C.3.m.)	Policies, ordinances, procedures, and/or conditions of approval are required to implement the C.3 requirements. Revisions are incorporated as necessary to reflect changing requirements.	In October 2004, the Mountain View City Council adopted a new section (Sec. 35.32.23) of the ordinance, titled "Permanent stormwater pollution prevention measures." This ordinance section requires implementation of the C.3 requirements, the City's stormwater Quality Guidelines, and inspection and maintenance responsibilities. Standard Operating Procedures are included in the URMP. The conditions of approval require C.3 controls for Group 2B projects. The guidance document outlines C.3 requirements for developers. The City's guidance document was revised to include Group 2B requirements.	FD CDD PW
NDP - 10	**b.3.** Train Co-permittee staff in planning, building, and engineering departments on the	The City will train Planning, Building, and Engineering staff on all changes to the development review process, and the use of tools, such as check sheets and updated materials. Staff training will be performed either in-house, or as	City staff attended SCVURPPP C.3 training workshops – see Staff Training Table. In January 2008, the Urban Runoff Coordinator met with Directors and Managers from Community Development Department and Public Works to discuss proposed Municipal Regional Permit requirements that may change implementation of the	FD CDD PW

	C.3. provisions and goals, the required changes in the approval process, and the use of appropriate tools.	part of a Program-wide effort.	C.3 provision. Urban Runoff Coordinator provided a C.3 training presentation to Planning division staff.	
C.3.c Requirements for Group 1 and Group 2 Projects Goal: Prepare to require proponents of Group 1 projects to design and implement stormwater treatment BMPs or reduce stormwater pollution to the maximum extent practicable. Participate in development of the proposal for an alternative Group 2 project definition and prepare to implement C.3 requirements for Group 2 projects as needed				
NDP – 12	**c.1.** Develop and implement a procedure to request and log the type, size, and impervious area of every project (and extent of redevelopment if applicable) for determination of applicability of Group 1 (and later Group 2) requirements.	1. An impervious surface data sheet was developed for preliminary information about the types of projects that occur in Mountain View. 2. The impervious surface data collection sheet may be modified for use in the guidance document as a way to determine applicability of the C.3 requirements.	Impervious surface data collection sheets are required to be submitted with the Stormwater Management Plan required by the City's guidance document. Impervious surface calculation sheets may also be required during the Planning review process to determine if the project meets the C.3 threshold.	FD CDD PW
NDP – 12	**c.2.** Develop a method for determining	1. For Group 1 projects, Community Development Applications received on or after October 15, 2003 will be	1. The City determined that group 1 project applications received on or after October 15, 2003 were subject to C.3 requirements. For	FD CDD PW

	whether a private project was "deemed complete" by 7/15/03, or documenting that a public project was funded and scheduled for construction by 10/15/03.	subject to the City's C.3 implementation program outlined in the guidance document. 2. For public projects, the City will document projects funded and scheduled for construction by 10/15/03, which will be exempted from C.3 requirements.	Group 2A, the date was October 2005, and for Group 2B, the date was August 2006. 2. For Group 1, C.3 requirements were included on public projects funded and scheduled for construction by 1/15/2004. For Group 2A, the date was October 2005, and for Group 2B, the date was August 2006.

SANTA CLARA VALLEY URBAN RUNO.. POLLUTION PREVENTION PROGRAM

FY 2007-2008 ANNUAL REPORT

Municipality: City of Mountain View

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
C.3.e. Operation and Maintenance of Treatment BMPs				
Goal: To develop and implement local agency operation and maintenance (O&M) verification programs to help ensure the proper maintenance of stormwater treatment measures on public and private property.				
NDP – 8	**e.1.** Develop and implement a procedure for logging information about treatment BMPs installed at approved Group 1 projects, and for maintaining a list or database of properties, treatment BMPs, and responsible operators.	The City's Fire and Environmental Protection Division currently maintains a database of facilities that have stormwater treatment BMPs. The database is set up to print out annual letters requiring the facility contact to submit proof of BMP maintenance.	During FY 06-07, the City developed a database system that will be used to issue a permit to stormwater treatment system operators. The permit will list maintenance requirements, and required reporting and submittals. The database will also be used to issue annual maintenance verification letters, and to track inspection and maintenance activities. The database was completed at the end of FY 06-07 and use of the database began in FY 07-08. Permits were issued to 11 facilities. The first mailout requiring submittal of maintenance records will occur in September 2008.	FD RBF
NDP – 8	**e.2.** Adapt model O&M agreement language to meet agency-specific needs and requirements and incorporate into the project review and	The City will review the model O&M agreement language that will be developed by the Program, and is due 12/02. If acceptable, the O&M agreement language will be incorporated into the project review and approval process as appropriate.	A final O&M agreement has been developed. Completed O&M agreements are required as part of the Stormwater Management Plan review and approval.	FD

	approval process.			
NDP – 8	**e.3.** Develop local programs for inspection of a subset of prioritized treatment BMPs to verify that the responsible party is performing required O&M.	The City will utilize the O&M verification system that is currently in place for treatment BMPs. The current system is to send annual maintenance letters to all facilities with treatment BMPs requiring submittal of maintenance certification. Additionally, treatment BMPs that are considered to be a priority for inspections will be inspected annually.	During FY 07-08, the City inspected 9 sites that have stormwater treatment controls. The results from these inspections were submitted to SCVURPPP for reporting. During FY 08-09, the City will continue inspecting stormwater treatment facilities and the inspection results will be entered into the C.3 database.	FD
NDP - 12	**e.4.** Report on BMP O&M verification program.	The City will report on the progress of the BMP O&M verification program during the Annual Reporting process. The annual reports will include effectiveness evaluation and planned program improvements.	As previously stated, the City developed a new permitting, maintenance tracking, inspection tracking, and reporting database that started implementation in FY 07-08. FY 08-09 will be the first year of full implementation for the database tracking system.	FD
C.3.f. Hydromodification Management Plan (HMP) Goal: To manage increases in runoff peak flow and volume for Group1 projects, where such increases may cause increases erosion of creek beds and banks or related impacts, through implementation of a HMP.				
NDP – 1	**f.1.** Upon adoption by the Regional Board, begin implementation of HMP requirements for Group 1 projects that may cause	The City will review the HMP requirements. If acceptable, the HMP requirements will be implemented	HMP requirements have been incorporated into the City's C.3 implementation process and into the guidance document.	FD CDD PW

	increased erosion of other related impacts.			
C.3.h. Alternative Certification				
Goal: To allow a professionally qualified person to certify the adequacy of design of stormwater treatment measures.				
NDP	**h.1.** Alternative certification	The City will develop an internal procedure to allow alternative certification of the adequacy of design of stormwater treatment measures.	The City requires an engineer's certification stating that the treatment controls designed for the project meet the City's Guidelines and requirements.	FD CDD PW
C.3.g. Waiver and Compensatory Mitigation Program				
Goal: Establish a program under which a project proponent may request a waiver from treatment BMP requirements due to impracticability, with a provision to provide an equivalent water quality benefit to the same receiving water (that allows participation in regional solutions).				
NDP – 1	**g.1.** Develop local waiver program, perform legal review, and incorporate provisions in project review process	The City will review the model waiver and compensatory mitigation program that will be developed by the Program, and is due 3/03. If acceptable, the waiver and compensatory mitigation program will be incorporated into the project review and approval process as appropriate.	At this time, the City does not have a waiver and compensatory mitigation program since there is not a system to allow for participation in regional solutions. The City will consider a waiver and compensatory mitigation program if a viable opportunity becomes available.	
NDP - 12	**g.2.** Tracking information for reporting on waivers granted, including project data, reasons for and terms of the waiver, and the alternative benefit	If an acceptable waiver and compensatory mitigation program is adopted, the City's Fire and Environmental Protection Division will update the new development tracking database to include the requested waiver information.	Waiver tracking program is not applicable at this time.	

	project and completion date.			
C.3.j. Site Design Measures Guidance and Standards Development				
Goal: To incorporate site design measures that reduce water quality impacts into local design standards and encourage their use in project designs to meet C.3. requirements.				
NDP – 4	**j.1.** Review existing local design standards and guidance, and compare them to the list of areas to address in Provision C.3.j. and other references such as "Start at the Source" and the "Development Policies Comparison" work sheet. Prepare and submit an analysis of local standards, identified opportunities for revision, and proposed revisions.	1. Review list of recommended site design measures to reduce water quality impacts using references, including the NPDES Permit and "Start at the Source." 2. Compare the list of recommended site design measures with existing City standards and guidance. 3. Identify opportunities for revisions to City standards that will incorporate site design measures to reduce water quality impacts. 4. Prepare and submit an analysis of the revisions proposed to be incorporated into the City's project review process, including schedule for revisions and implementation	The City's C.3 guidance document references site design measures. The City's C.3 guidance document also provides reference to the SCVURPPP C.3 Handbook, and the Start at the Source" Design Guidance Manual.	CDD FD

NDP – 4	**j.2.** Incorporate the revised standards and guidance into local project approval process and "fully implement" site design measures and guidance.	The revisions recommended from action j.2. will be incorporated and implemented during FY 04-05.	Site design measures are encouraged during review and comments on project Stormwater Management Plans.	CDD FD
C.3.k. Source Control Measures				
Goal: Require source control measures for new redevelopment projects to limit pollutant generation, discharge and runoff to the maximum extent practicable.				
NDP – 4	**k.1.** Revise conditions of approval to include the source control measures recommended in Provision C.3.k.	The City will review the model list of source control measures that will be developed by the Program. If acceptable, the City's Conditions of Approval will be revised to include the required source control measures.	Source control measures are required in Project Planning Conditions of Approval, and are also included in plan check review sheets that are required to be completed and submitted for review during the plan review process.	FD

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
C.3.l. Update General Plans				
Goal: Include water quality and watershed protection principles and policies in General Plans to the extent necessary to provide the basis for implementation of the measures required by Provision C.3.				
NDP - 1	**l.1.** Review current General Plan	The current City General Plan Policy has been reviewed, and pursuant to Goal F. Policy 16 of the Environmental	During FY 07-8, the City started its "General Plan Visioning" process, which included public workshops to obtain public input on the General Plan revisions that	CA FD

	General Plan policies related to water quality and watershed protection, and incorporate additional policies as shown in C.3.I. as appropriate.	Goal F, Policy 16 of the Environmental Management Chapter is shown to adequately address the principles and policies that are needed to implement Provision C.3.	obtain public input on the General Plan revisions that will be developed in FY 08-09. Consideration will be given to low impact development in the General Plan.	
C.3.m. Water Quality Review Processes Goal: To ensure that water quality impacts and appropriate mitigation measures are identified as part of environmental review of proposed projects.				
NDP - 3	**m.1.** Review CEQA initial study checklists and other environmental review documents and modify documents as needed to include questions that sufficiently address water quality impacts of projects.	1. Review and evaluate the examples of CEQA Water Quality Review questions that are listed in C.3.m. 2. Compare the examples in C.3.m. to the City's existing CEQA and other environmental review documents. 3. Revise CEQA and other environmental review documents as necessary.	The City reviewed the example Water Quality Review questions listed in C.3.m, and determined that the City's existing CEQA check list adequately addresses the questions in a manner that is consistent with the SCVURPPP memo, dated October 17, 2003.	FD CDD
C.3.n. Reporting Requirements Goal: To meet the Provision C.3. reporting requirements, and plan for anticipated data needs, and begin collecting and tracking required data on development projects as needed.				

ACHMENT B

SANTA CLARA VALLEY URBAN RUNOFF POLLUTION PREVENTION PROGRAM

FY 2007-2008 ANNUAL REPORT

Municipality: City of Mountain View

NDP – 12	**n.1.** Provide information from Table 1 of Provision C.3 in Annual Reports	Tables will be included in Annual Reports.	See project reporting tables (Part 1 and Part 2) that are included in this report.	CDD PW
NDP - 8	**n.3.** Collect information and report a summary of types of pesticide reduction measures required for development projects, and the percentage of projects for which pesticide controls were required.	The City will continue to review and evaluate pesticide reduction measures for possible implementation. The City currently requires the following pesticide reduction measures for landscaping on new projects: • No steep slopes (>10%) • Use of mulches • Selecting plants appropriate for the climate zone • Irrigation systems that reduce runoff	No new pesticide reduction measures were added during FY 07-08. The Fire and Environmental Protection Division placed the pesticide reduction conditions on 37 Development Review Plans during FY 07-08.	FD CDD

Regional Board Comments on New Development Planning Procedures in FY 2006-2007 Annual Report		
Item	**RWQCB Comment**	**City of Mountain View Response**
No comment	NA	NA

New Development Planning Procedures Program Evaluation

During FY 07-08, the City implemented the C.3 requirements using its existing development review process. Information regarding the requirements is provided to applicants early in the planning process. The City revised its Conditions of Approval, and the C.3 guidance document, titled "Stormwater Quality Guidelines Development Project," to reflect Group 2B requirements. The Fire and Environmental Protection Division places conditions of approval on projects requiring applicants to prepare and submit a Stormwater Management Plan for applicable projects. The information required in the Stormwater Management Plan is listed in the City's Stormwater Quality Guidelines document. The Stormwater Management Plan includes information about the treatment controls that will be installed or used to comply with the requirements. The Plan also describes the O&M requirements. During the plan review phase of the process, building plans and the Stormwater Management Plan are checked to verify that the conditions and requirements are met. Plans are approved and a building permit will be issued when the conditions and requirements are met.

During FY 07-08, the City placed the C.3 Planning Condition on 23 projects. Most of the projects that had the C.3 condition are still in the Planning phase and have not submitted building plans to the City. The City approved four private projects that included stormwater treatment controls. Controls for these projects included swales, mechanical treatment devices, bioretention, and Filterra tree wells. There were no public projects that required stormwater treatment controls in FY 07-08. Conditions were placed on all projects that Maintenance Agreements would be entered and recorded prior to final occupancy.

A number of previously reported projects were completed during FY 07-08 and the City initiated its inspections and O&M verification program. A summary of the BMP inspections is included in Attachment D. During FY 07-08, the City implemented a database that will be used to issue permits to BMP operators, and to track inspection and maintenance activities.

The City reviewed 127 projects for potential stormwater related impacts and requirements.

The Tables below provide information on the three projects that were approved during FY 07-08.

No comments	NA	NA

ACHMENT B

SANTA CLARA VALLEY URBAN RUNOFF POLLUTION PREVENTION PROGRAM

FY 2007-2008 ANNUAL REPORT

Municipality: City of Mountain View

New Development-Construction Inspection Program Evaluation
During FY 07-08, the City continued to implement an effective construction inspection program. The City conducted 120 construction site inspections and issued 15 written notices. Most notices were for minor violations with corrective actions. The majority of the inspections were conducted at small project sites. Fewer written notices were issued in FY 07-08 because most of the projects were at an advanced stage of construction and had fewer issues than earlier stages. Also, some projects either stopped work or were slowed significantly due to economic factors. These projects were still inspected, but problems were not identified. The City currently has a few moderately sized projects, which are the priority sites for inspections. Most of the construction inspection items identified were housekeeping issues that were corrected, such as sweeping, replacing filters, and adding rock to the construction driveway. Pre-winter inspections were conducted and information was distributed, which seemed to help maintain compliance throughout the winter. The City will continue to implement its construction inspection program. Pre-winter inspection and information distribution is important for achieving compliance, and will be conducted again in FY 08-09.

PEST MANAGEMENT (Provision C.9.d of the Permit)				
FY 2007-2008 Work Plan Self Evaluation Matrix				
Item No.	**Activity**	**FY 07-08 Work Plan Tasks**	**FY 07-08 Accomplishments**	**Responsible Party**
Municpal Pesticide Use				
Goal 1.A. Eliminate all unnecessary municipal pesticide use (particularly organophoshate (OP) pesticide use) and implement Integrated Pest Management (IMP) techniques.				
I.A.1	Record Keeping and Tracking	Develop and implement a process for tracking pesticide use on municipally owned property (PS #8). Include in the process reporting and justification for the use of OP pesticides and BMPs employed during OP pesticide use.	Pesticide use tracking database was used during FY 07-08. Pesticide use data for FY 07-08 is available on request.	FD, CSD, SGL, and PCO
I.A.2	IPM Policy	Adopt an IPM policy and/or ordinance requiring the use of IPM techniques in the agency's operations, minimization of pesticide use, and the restricted use of organophosphate pesticides only when their use is justified and adverse water quality impacts are minimized (PS #2).	City's IPM Policy was adopted by the City Council on September 10, 2002.	FD, CSD, SGL
I.A.3	IPM Plan	Develop and implement standard operating procedures (SOPs) and best management practices (BMPs) for implementing the IPM policy. (PS #3).	Final IPM Plan was completed in June 2003. IPM Plan includes SOPs and BMPs. The Plan was implemented during FY 07-08.	FD, CSD, SGL, CM

.CHMENT B

SANTA CLARA VALLEY URBAN RUNOFF POLLUTION PREVENTION PROGRAM

FY 2007-2008 ANNUAL REPORT

Municipality: City of Mountain View

		BMPs will include special precautions to reduce water quality impacts when applying pesticides.		
I.A.4	Performance Standards	Update local URMPs to incorporate/adapt the model Pest Management Performance Standard, including a description of the legal authority (IPM policy/ordinance, contract language), work plan elements, BMPs, and SOPs needed for implementation. (Program FY 01-02 Work Plan)	Program's Model PS is adopted and included in the City's URMP.	FD
I.A.5	Contract PCOs	Develop and implement a process to ensure that any contractor employed to conduct pest control and pesticide application on municipal property engages in pest control methods consistent with the IPM policy adopted by the agency (PS #5).	City's PCO contract did not go for bid during FY 07-08. City's purchasing Division was notified of the IPM Policy and will be informed that future IPM requirements will be included when new PCO Contract is solicited. IPM Policy and Plan have been provided to the City's PCO contractor.	FD, purchasing
I.A.6	Chemical storage area inspection	Conduct a periodic agency-wide search of chemical storage areas for pesticides no longer legal for application per EPA, State, and/or local requirements, and properly dispose of any such pesticides pursuant to appropriate waste disposal regulations.	During FY 07-08, the Fire Department evaluated Citywide chemical inventories. No OP pesticides were identified.	FD
MM I.A.1	Annual report	Document completion of tasks in annual reports. Use pesticide-tracking process to document pesticide use.	Pesticide use data will be used in the effectiveness evaluation section of the annual report.	FD

. CHMENT B

SANTA CLARA VALLEY URBAN RUNOFF POLLUTION PREVENTION PROGRAM

FY 2007-2008 ANNUAL REPORT

Municipality: City of Mountain View

Goal 1.B. Raise awareness of all municipal employees and train employees who apply pesticides for the municipality about the municipality's IPM Policy and/or IPM techniques as appropriate.

I.B.1	Employee Training	Ensure that employees who apply pesticides for the agency obtain the appropriate training as required by the County Agricultural Commissioner and the State Department of Pesticide Regulation (DPR) (PS #4a).	All City pesticide applicators receive training required by the County and State.	CSD, SGL
I.B.2	IPM Training	Provide annual training on the appropriate portions of the IPM Policy, SOPs, and BMPs, and the latest IPM techniques to employees within departments responsible for pesticide application (PS #4b).	During FY 07-08, the City's pest control operators attended various training courses as part of job requirement for continuing education. IPM techniques are included in these continuing education courses. In past years, City staff attended the regional IPM training conference, which was not offered in FY 07-08.	FD. CSD, SGL
I.B.3	Training	Periodically (at least annually) inform employees who are not authorized and trained to apply pesticides that they cannot use over-the-counter pesticides in or around the workplace, consistent with the IPM Policy (PS #4c).	Departments have been informed to contact the PCO for pest problems. Training conducted by the Safety and Training Manager and the Urban Runoff Coordinator on March 13, 2008 reviewed the Environmental Compliance Plan for the Operations and Maintenance Divisions. This training covered incident response (including spills), chemical handling, emergency response, and handling abandoned waste. The over-the-counter pesticide prohibition was also discussed.	FD, CSD, PS
I.B.4	Training Workshop	Assist with and send staff to a workshop on least-toxic pest control methods and pesticide management BMPs. (Program FY 01-02 Work Plan)		NA

ACHMENT B

SANTA CLARA VALLEY URBAN RUNOFF POLLUTION PREVENTION PROGRAM

FY 2007-2008 ANNUAL REPORT

Municipality: City of Mountain View

Item No.	Activity	FY07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
Public Education and Outreach				
Goal II.A. Increase awareness of IPM so target audiences recall less toxic pest management messages and adopt IPM behaviors. Target audiences include residential and commercial users, pesticide retailers, municipal employees, and special districts (PS #6)				
II.A.1	WE&O Outreach	Assist with local implementation of the Watershed Education & Outreach (WE&O) Campaign[1], which will target the general public and include messages about less-toxic pest control and proper disposal (Program FY 01-02 Work Plan).	The City supports WE&O Outreach through Program participation. The City distributed IPM and less toxic pest control information at various public events, such as the Art and Wine Festival, Arbor Day Fair, and downtown Thursday Night Live. The Community Outreach Coordinator also distributed Pest control fact sheets in English and Spanish.	FD, CM
II.A.10	Local Outreach	Prepare and pitch IPM stories and press releases to local media.	During FY 07-08, the City did not prepare IPM articles.	FD
II.A.12	IPM Outreach	Assist with implementation of local components of a "Pesticide User Outreach" project[2] targeting residential and commercial users (see Program FY 01-02 Work Plan).	City supports this item through Program Participation.	FD
II.A.13	IPM Outreach	Provide information on less toxic pest control (e.g., IPM techniques, municipal IPM policies, model contract language, training opportunities, etc.) to neighboring special districts (e.g., open space districts, vector control districts,	The City did not provide information to neighboring special districts. City supports outreach through regional effort.	FD

[1] Funded by all Co-permittees in FY 01-02.
[2] Funded by all Co-permittees in FY 01-02.

		and school districts) as appropriate		
MM II.A.1	Annual report	Document or estimate numbers of residents reached by outreach efforts and media advertising	Through distribution of IPM materials at community events, the City educated approximately 2,500 residents.	FD
Goal II.B. Educate pesticide retailers and consumers about less toxic pest control products and promote the sale of such projects.				
II.B.1	IPM Outreach	Continue to fund and participate in the BASMAA Regional IPM Partnership[3]. (Program FY 01-02 Work Plan)	City addressed this item through Program participation.	FD
II.B.2	IPM Outreach	Continue to implement cost-effective elements of the IPM Store Partnership Program. Create and provide fact sheets and other materials to pesticide retailers to facilitate point-of-purchase outreach. Visit stores as necessary to ensure ongoing participation. (Program FY 01-02 Work Plan)	The City continued its support of the Our Water Our World program during FY 07-08. Three stores in Mountain View participated in the program.	FD
II.B.3	IPM Outreach	Assist Program to offer IPM training opportunities to pesticide retailer employees through coordination with Master Gardener-taught educational programs.	This item addressed through Program participation.	FD
MM II.B.1	IPM Outreach	Document number of participating stores, materials distributed and employees trained. Evaluate the cost-effectiveness of the IPM Store	Three stores continued participation in the OWOW program. Pest fact sheets, and shelf talkers provided at the stores.	FD

[3] Funded by all Co-permittees in FY 01-02.

SANTA CLARA VALLEY URBAN RUNOFF POLLUTION PREVENTION PROGRAM

FY 2007-2008 ANNUAL REPORT

Municipality: City of Mountain View

		Partnership Program each year		
Pest Control Operators (PCOs) **Goal III.A.** Minimize pesticide use by PCOs contracted for structural pest control and landscape maintenance.				
III.A.4	PCO operations	Require PCOs contracted for municipal applications to use pest control methods consistent with the municipality's IPM policy (through contract specifications). Specifically, require contractors to: a) follow the agency's IPM policy, BMPs, and SOPs; b) provide evidence of current IPM training, when feasible; and c) provide documentation of pesticide use on agency property to the agency in a timely manner (PS#5).	IPM Policy and Plan was provided to the City's contract PCO, Bay Valley Pest. Bay Valley submits records of pesticide applications to the City. Another landscape contractor applies small amounts of category III herbicides in accordance with the City's IPM policy. The contractor has been notified of the IPM policy.	FD
MM III.A.1	Record keeping and tracking	Document pesticide use by PCOs on municipal property	During FY 07-08, records of pesticide applications by Bay Valley were submitted to the City. These records were included in the pesticide database. Pesticide use data for FY 07-08 is available on request. Pesticide use by a landscaping company contracted by the City to perform minor work at public Parks had not been tracked in previous years. The City's pesticide use tracking process was updated to include pesticides applied by the contractor. This is a small amount of pesticide use, and is included in the FY 07-08 pesticide summary.	

. CHMENT B

SANTA CLARA VALLEY URBAN RUNOFF POLLUTION PREVENTION PROGRAM

FY 2007-2008 ANNUAL REPORT

Municipality: City of Mountain View

Goal III.B. Require all PCOs to implement Best Management Practices (BMPs)				
III.B.2	PCO Contracts	Require PCOs contracted by municipalities to implement BMPs through contract specifications (see Action III.A.4., PS #5)	PCO contract was not up for renewal during FY 07-08. IPM Policy was provided to City's purchasing Division for inclusion in future contracts.	
MM III.B.1	Reporting	Document efforts to complete the above actions	Purchasing Division was advised of requirement to include IPM in City pest control operations.	FD, FASD

Commercial Businesses				
Goal IV.A. Determine the extent of commercial business employees use of pesticides (I.E., pesticide applications not performed by a licensed PCO) and conduct appropriate outreach regarding less toxic pest management.				
IV.A. 1	Commercial Outreach	Develop and implement education programs that target commercial businesses, per recommendations developed in Program work plan.	No commercial outreach regarding IPM was conducted in FY 07-08. City supports regional outreach efforts.	NA
MM IV.A. 1	Commercial Outreach	Document outreach efforts targeting businesses, as recommended in the work plan to be developed by the Program	No commercial outreach regarding IPM was conducted in FY 07-08. City supports regional outreach efforts.	NA
Household Hazardous Waste Collection				
Goal V.A. Provide pesticide disposal services through household hazardous waste (HHW) collection programs for all residents and small businesses, and encourage use of these programs.				
V.A.1	HHW	Ensure that adequate pesticide disposal services exist for residents and conditionally exempt small quantity	The City participates in the Santa Clara County HHW Program. Businesses are also eligible to participate in the Palo Alto small quantity program.	PW – Solid Waste

		commercial generators.		
V.A.3	HHW	Work with HHW collection agencies to support, enhance, and help publicize programs for proper pesticide disposal (PS #7).	The Public Works Department, Solid Waste Division publicizes HHW information in the Resource newsletter.	PW – Solid Waste
V.A.5	HHW Outreach	Provide hazardous waste disposal information to residents, through distribution of materials (e.g., utility bill insert, city newsletter, community events, etc.) or advertising in local media	HHW information included in the City's Resource newsletter.	PW- Solid Waste
MM V.A.1	Reporting	Document that household hazardous waste collection programs adequately serve residents and businesses and that any exchange programs do not exchange organophosphate or banned pesticides.	The City participates in the Santa Clara County HHW Program. Documentation regarding the ability to serve the residents and the prohibition against exchanging OP pesticides or banned pesticides is available from the County HHW Program.	SC County HHW
New Development **Goal VI.A.** Minimize pesticide use at new and redevelopment sites.				
VII.A.1	New Development	Have appropriate municipal staff coordinate with Program to identify landscaping techniques less likely to attract pests, including a list of pest-resistant plants, and develop model conditions of approval for pest resistant landscaping features and practices. (Required to meet NPDES Permit Provision C.9.d.ii. and Draft Permit	During FY 07-08, the City used planning conditions to minimize irrigation runoff, which also reduces pesticide runoff. Standard condition also directs developers to select appropriate plants for the location and in accordance with the appropriate climate zones.	FD

		Provision C.3.k.)		
VII.A.2	New Development Review	Consider pest-resistant landscaping and design features in the design, landscaping, and environmental reviews of proposed development projects. (NPDES Permit Provision C.9.d.ii.)	During FY 07-08, the City used planning conditions to minimize irrigation runoff, which also reduces pesticide runoff. Standard condition also directs developers to select appropriate plants for the location and in accordance with the appropriate climate zones.	FD
VII.A.3	Training	Train staff responsible for design review on pest-resistant landscaping techniques and model conditions of approval and the importance of minimizing pesticide use in runoff from development sites (NPDES Permit Provision C.9.d.ii.).	No new pesticide reduction conditions were added, so no additional training was conducted.	FD
VII.A.4	Tracking	Develop and propose enhanced reporting format for documenting use of pesticide reduction measures at development sites. (Draft Permit Provision C.3.n.)	No action on this item during FY 07-08.	FD
MM VII.A.1	Reporting	Summarize types of pesticide reduction measures required (such as by conditions of approval) for new development and significant redevelopment projects, and the percentage of new development and significant redevelopment projects for which pesticide reduction measures were required (Draft Permit Provision C.3.n.).	During FY 07-08, the following conditions were required to control irrigation runoff, which also reduces pesticide runoff: 1. Require no steep slopes exceeding 10%; use mulch as cover; plants with low water requirements; appropriate plants for climate zone. 2. Efficient irrigation systems, including; multiprogramable timers; rain shutoff devices; drip irrigation, and flow reducers.	FD

MERCURY POLLUTION PREVENTION PROGRAM
(Provision C.9.c of the Permit)
FY 2007-2008 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
MPP Pro-gram	Adoption of City mercury reduction policy.	The City adopted a mercury policy in FY 03-04, requiring the virtual elimination of mercury from controllable sources in urban runoff from agency operations.	In June 2004, the City finalized Administrative Instruction No: 16-01, which established a Mercury Control Program. The Mercury Control Program includes: a procedure for the elimination of mercury-containing products to the maximum extent practicable; maximum recycling of fluorescent lights; participation in a household hazardous waste collection program for residential disposal of mercury-containing products; and public outreach.	FD
MP Task I.F	Implement guidelines for mercury-containing products reduction and management	The City will implement measures to reduce the quantity of mercury-containing products, and manage essential mercury-containing products.	No major mercury reduction measures were identified for FY 07-08. Mercury-containing switches will be removed at the time of replacement. Fluorescent lights are hauled for disposal.	PW
MP Task II.D	Documentation and reporting of mercury-containing products disposal	The City will implement measures for documenting and reporting quantities of mercury-containing products disposed.	The City maintained fluorescent light disposal records. During FY 07-08, the City recycled: 390 – 2 ft tubes, 645 – 3 ft tubes, 1428 – 4 ft tubes, 24 – 6 ft. tubes, 30 – 8 ft tubes, 718 U-tube lamps, and 563 compact lights	PW

SANTA CLARA VALLEY URBAN RUNOFF POLLUTION PREVENTION PROGRAM
FY 2007-2008 ANNUAL REPORT

Municipality: City of Mountain View

MP Task V.A	Mercury Disposal Outreach	The City will assist with program efforts to provide outreach to educate small business and small quantity generators about fluorescent light recycling programs.	Information about HHW and small business waste disposal programs is included in the City's Resource newsletter, which is mailed to all residents and businesses three times a year.	
MPP Pro-gram	HHW Collection	No specific tasks. City to continue HHW efforts through participation in the Santa Clara County HHW Collection Program.	City continued participation in the Santa Clara County HHW collection program. The City of Mountain View collaborated with the City of Palo Alto to offer fluorescent light and mercury thermometer drop-off services to residents.	PW

Regional Board Comments on Mercury Pollution Prevention Program in FY 2006-2007 Annual Report

Item	RWQCB Comment	City of Mountain View Response
No Comments.	NA	NA

Mercury Pollution Prevention Program Evaluation

During FY 07-08, the City implemented its Mercury Control Program. The Mercury Control Plan establishes a policy for reducing mercury-containing products at City facilities, through identification of mercury-containing parts and devices at City facilities, and the gradual phase-out of those parts and devices. The City supports the County-wide HHW and small quantity generators programs.

The City is in the process of developing a demolition ordinance and management process for requiring removal of mercury-containing materials on projects in Mountain View.

COPPER ACTION PLAN/NICKEL ACTION PLAN

FY 2007-2008 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
CB-1	Vehicle Washing Operations	• Public outreach and education efforts to reduce vehicle wash discharges, including brochure distribution, and mobile cleaners information • Provide car wash kit to charity car wash organizers and educate on the use of the kits. • Inspect auto businesses regarding car wash requirements, and prohibited storm drain discharge. • Continue to maintain car wash systems for City vehicles at the Corp yard and Fire Stations. • Require vehicle wash systems draining to the sanitary sewer as source control measures for projects, where the control is applicable. • Submit data regarding vehicle washing outreach activities and	During FY 07-08, the City provided a car wash kit to local charities conducting car washes. The car wash kit is used to divert car wash water from storm drains. The City also maintained 7 City car wash facilities (2 at the Corporation Yard, 1 at the Golf Course Maintenance facility, and 4 at Fire Stations). The vehicle service facility inspection program verifies that fleet washing water is not draining into the storm drain system. Vehicle facility operators are also notified about vehicle washing requirements, including rental operations. Vehicle BMP information is provided to residents at City outreach facilities, including the Art and Wine Festival, and Arbor Day.	FD

		effectiveness evaluation in annual reports.		
CB-3	Industrial Copper Control	Continue Industrial Inspection program, including NOI sites such as plating and metal finishing facilities, vehicle service facilities, and other permitted sites.	The City conducted its industrial facility inspection program. Details are provided in the Industrial/Commercial Discharges Control Program section of this report. Inspections involve observing outdoor areas where spills or equipment discharges could release pollutants including copper and nickel into the storm drain system. The City's Environmental Protection Division also provided oversight of a metal plating facility closure. The facility had operated in Mountain View for a number of years and discontinued operations. This closure reflects a steady change in the land use and industrial community make up within the City.	FD
CB-6/7	Reducing Traffic Congestion/Promoting Alternative Transportation	Review the results of the Development Policies Comparison Project Report, particularly Section VI., Policies to Limit Auto Use/Promote Alternative Transportation, in the Policy, Code, and Ordinance Worksheet, and investigate updating local development rules to promote better transportation-related design practices and alternative modes of transportation.	The City of Mountain View has actively supported public transportation projects including and extensive bike trail system, light rail station, and promotion of transit-oriented development. During FY 07-08, the City completed an expansion of its Stevens Creek Trail system.	Community Development Department
CB-8	Watershed Protection Measures	• General Plan revisions will be considered during the next City-wide GP revision, which currently is not scheduled.	During FY 07-08, the City began the process of obtaining public input for its General Plan revision.	

		• CEQA revisions related to stormwater are currently being evaluated as described in the C.3 Work Plan. Guidance from SCVURPPP and the City of San Jose addressing water quality review in CEQA will be reviewed and implemented, if acceptable. • HMP implementation will be incorporated upon completion of the document. • Continue C.3 implementation efforts	The City's existing CEQA document adequately addresses water quality review issues. The City has a condition requiring eligible projects to comply with HMP requirements. The City does not expect HMP projects to be submitted for review. See New Development – Planning Procedures.	
CB-11	Street Sweeping	• City will continue to implement street sweeping program. • City will continue "Clean Sweep" program designed to secure access to heavily impacted streets that have a lot of cars typically parked throughout the day. • Maintain effective street sweeping equipment. • Continue to collect and report street sweeping information including mile swept and material removed for annual reports. • Continue to manage street	See Streets and Roads Maintenance Section for more details.	

		sweeping solids. • Continue to maintain storm drain catch basins • Attend SCVURPPP training workshops, if provided. • Evaluate need for improvement in FY 03-04 annual report.		
CB-12	Copper from Pools and Spas	• City will respond to complaints of pool/spa discharges. • Assist Program development of pool brochure. • City will distribute outreach materials.	The City responded to 3 pool discharge incidents. The City supports regional outreach efforts. The Program completed mailing of the new Program pool brochure.	FD
CB-21	Architectural Copper	Review study and ordinance from Palo Alto and consider feasibility of limiting the use of these materials.	The City does not currently limit the use of architectural copper materials.	
NB-1	Discharges from Construction Sites	Continue to implement Construction Inspection Performance Standards and other tasks in Construction Inspection element of the Work Plan.	See the Construction Inspection section of this report for more details.	FD

TRASH INVENTORY AND MANAGEMENT

FY 2007-2008 Work Plan Self Evaluation Matrix

Item No.	Activity	FY 07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
Water Quality and Water-shed Mgt.	Trash Investigations and Plan Development	The City will support the Program's effort to develop a Trash Work Plan. The Work Plan will characterize the trash problem, identify trash hot spots, identify on-going efforts to reduce trash, and provide documentation regarding trash complaints/incidents.	The City conducted trash abatement activities, including sponsoring two creek cleanups, and maintenance of parks, roadways, and the Stevens Creek Trail. City Public Services employees also respond to trash dumping incidents, and coordinated cleanup of a homeless encampment along Stevens Creek. The City also worked with the Stevens Creek/Permanente Creek Watershed Council and the Santa Clara Valley Water District to clean a trash hot spot along Stevens Creek that occurred when a tree branch fell across the creek and caused an accumulation of litter that was filtered by the tree. The City did not complete trash assessments during FY 07-08.	FD PW

No comments	NA	NA

SANTA CLARA VALLEY URBAN RUNO.. POLLUTION PREVENTION PROGRAM

FY 2007-2008 ANNUAL REPORT

Municipality: City of Mountain View

Other Water Quality & Watershed Management Programs Evaluation

Current trash control efforts include two City-sponsored creek cleanups a year. These cleanup events occurred on Stevens Creek and Permanente Creek. A local organization, Friends of Stevens Creek Trail, with some support from the City also conducted creek cleanups throughout the year. City Community Services Department personnel and Shoreline Park Rangers also patrol Stevens Creek Trail and remove trash as needed. After conducting volunteer creek clean-ups for a number of years, it appears that the amount of trash removed during these events is decreasing.

During FY 07-08, the City expanded its Stevens Creek Trail system. During construction of the extended trail, a number of homeless encampments were removed from the bank of Stevens Creek. The City also coordinated cleanup of a dumpsite that occurred when a number of homeless people were notified of the encampment removal. Additionally, the City identified and coordinated cleanup of a trash hot spot that occurred when a tree fell across the creek and caused the accumulation of a trash raft. The trash raft was cleaned through efforts by the City, volunteers from the Stevens/Permanente Watershed Council, and the Santa Clara Valley Water District.

City Community Services Department employees maintain City parks, including litter removal. City Public Services Department personnel also respond to trash dumping incidents that may occur throughout the City.

The City did not participate in trash assessments during FY 07-08.

			promoting the event and staffing a drop-off location for residents to dispose of unwanted pharmaceutical products.	
PIP – 1-4	Targeted Outreach – Multicultural Outreach	Continue to support the City's multicultural outreach program, which is designed to provide information regarding various topics to non-English speaking people.	During FY 07-08, the multicultural outreach program distributed pollution prevention information at public events. Spanish brochures and fact sheets for vehicle BMPs and pesticide information are distributed through the multi-cultural outreach program.	CM
Educational Programs				
PIP – 1-4	PIP Master Plan – Education Activities	Continue to conduct PIP education activities.	During FY 07-08, the City sponsored a school education and outreach program along with the City of Palo Alto. In total, 30 school presentations were made to 695 students in Mountain View. The presentations were made to 2nd-8th grade groups. A summary of the school outreach program is available upon request. The City also conducted employee training activities, which are summarized in the Staff Training Table.	FD
Citizen Participation				
PIP – 1-4	PIP Master Plan – Citizen Participation	Continue to conduct PIP citizen participation activities.	During FY 07-08, the City sponsored two creek cleanup events, where citizens removed trash and debris from local creeks. The City also staffed information booths at the Mountain View Art and Wine Festival, the Arbor Day Fair, and 4 downtown Thursday Night Live events. The primary messages at those events were IPM and pesticide reduction, pharmaceutical disposal, Mercury reduction, and vehicle sources.	FD

Public Information/Participation Program Evaluation

General Outreach:

During FY 07-08, articles in the Resource newsletter advertised HHW, creek clean-up, pharmaceutical disposal, and mercury thermometer drop-off events. The City continued storm drain stenciling activities. The City also displayed BMP brochures at City facilities.

Targeted Outreach:

Vehicle BMP brochures were provided for distribution at local auto parts stores. Three hardware and garden stores in Mountain View also participated in the Our Water, Our World program, which promotes use of less toxic pesticides. The City also participated in a pharmaceutical take-back program, which allowed residents to drop off unwanted pharmaceutical products. The City also distribute information at public events, such as the Art and Wine Festival, the Arbor Day Fair, and 4 summer downtown Thursday Night Live events, which is one night per month when Castro St. in Mountain View is closed for entertainment. City staff also worked at the Program booth for the Home Show.

The multicultural outreach program seems to be an effective method to provide information in different languages. However, limited multi-language outreach materials are available. The City supports regional efforts to produce multi-language materials.

The City also continued distribution a fact sheet describing oil recycling options for apartment tenants. This piece was translated into a Spanish language version.

A CHMENT B

SANTA CLARA VALLEY URBAN RUNOFF POLLUTION PREVENTION PROGRAM

FY 2007-2008 ANNUAL REPORT

Municipality: City of Mountain View

Education Activities:

The City's participation in the school education program was conducted through funding the Palo Alto Program. Mountain View commends the education consultant, and the City of Palo Alto for developing and implementing an outstanding program, and for educating students in Mountain View about water pollution issues.

A summary of employee training efforts is listed below.

Citizen Participation:

During FY 07-08, the City sponsored two volunteer creek cleanups and supported other cleanup efforts. These events successfully removed litter and debris from local waterways. The City also distributed information at public events. The effectiveness of information distribution at these public events is difficult to describe because a lot of people who visit the information booth are already informed about the issues, and some visitors seem to randomly collect free materials without considering the message.

Reigning in the rain – Low Impact Development	Urban Runoff Coordinator Public Works Engineer	Fire Department Public Works	April 2008	Oakland	Workshop describing technical information about Low Impact Design, including permeable pavement.
C.3 – Sharing Experience with implementation of stormwater requirements	FEPD inspectors	Fire Department	June 2008	Sunnyvale	Workshop to discuss experience with inspecting, maintaining and tracking activities associated with stormwater treatment controls.
C.3 – Training for Planning Division staff	FEPD Planning Division	Fire Department Planning Div.	June 2008	Mountain View	Workshop to discuss C.3 requirements and provide examples.

Staff Training Evaluation

During FY 07-08, staff received training on a number of topics, including spill response, storm drain pollution prevention, IPM practices, industrial inspections, construction inspections, and C.3 topics. The City strongly supports regional training efforts for IPM-related issues.

The City continued to train employees about stormwater pollution prevention. Stormwater pollution prevention training is coordinated and conducted with safety training assemblies, which seems to be a great method for streamlining different training requirements.

Attachment E

Pesticide Use Evaluation for FY 07-08

CITY OF MOUNTAIN VIEW
MEMORANDUM

DATE: August 15, 2008

TO: City of Mountain View's IPM Plan

FROM: Eric Anderson, Urban Runoff Coordinator

SUBJECT: Pesticide Use Evaluation for FY 07-08

The purpose of this memo is to provide an evaluation of the City of Mountain View's pesticide use data for the Fiscal Year 2007-2008 (FY 07-08). The City's FY 07-08 pesticide use data will be compared to pesticide use data from Fiscal Year 2002-2003 (FY 02-03), Fiscal Year 2003-2004 (FY 03-04), Fiscal Year 2004-2005 (FY 04-05), Fiscal Year 2005-2006 (FY 05-06), and Fiscal year 2006-2007 (FY 06-07) to identify possible trends in the City's pesticide use practices. The comparison and evaluation involve both the types and quantities of pesticides used at City facilities.

The pesticide use data is used to evaluate the City's implementation of its Integrated Pest Management (IPM) Policy, and IPM Plan. The City's IPM Policy was adopted by the City Council on September 10, 2002. The IPM Plan, which outlines the method for implementing the IPM Policy, was completed in June 2003.

The result of this evaluation will be to make recommendations for implementation of the IPM Plan during fiscal Year 2008-2009. This evaluation may also identify barriers to implementation of the IPM Policy and Plan. Pesticide use reports and evaluations are conducted annually. The pesticide use data and the evaluation will be included in Appendix 4 of the IPM Plan. The evaluation will also be included in the City's annual report to the Regional Water Quality Control Board. The annual report describes the City's Urban Runoff Management Program activities, and is required in the City's NPDES storm water permit.

The evaluation includes the following sections:

1. Description of the pesticide use tracking and reporting procedure and an evaluation of the procedure.
2. An evaluation of the use of prohibited pesticides at City facilities during FY 07-08 in comparison to past years.
3. A summary of the pesticide use data for FY 02-03, FY 03-04, FY 04-05, FY 05-06, FY 06-07, and FY 07-08.
4. A discussion of the pesticide use data for FY 02-03, FY 03-04, FY 04-05, FY 05-06, FY 06-07, and FY 07-08.
5. A summary and evaluation of overall pesticide use at City facilities.

Pesticide Use Tracking and Reporting Procedure

Data was collected from the Forestry and Roadway Landscaping Division (FRL), Shoreline Golf Links (SGL), and the City's contract pest control operators, Bay Valley Pest Control and TruGreen Landcare. FRL monitors and administers pesticide use for both FRL and the Parks Division. FRL and Shoreline Golf Links data were tracked using the required monthly report to the State Department of Pesticide Regulation, which includes the product name, registration number, quantity used, and a general description of the area where the application occurred. Bay Valley Pest Control's use data is tracked using the service invoices, which include the application date, product used, quantity used, target pest, and location. TruGreen Landcare submits its pesticide use data to FRL for collection and tracking.

All of the data is routed to the City's Fire and Environmental Protection Division, where the data is entered into the pesticide use tracking database. The database tracks products, date of application, quantities, and active ingredients applied. A comprehensive summary of pesticide use at City facilities during FY 07-08 was produced and is included in the City's IPM Plan.

During FY 06-07, a clove oil product that is exempt from pesticide registration requirements was used at City facilities. The system to track and report pesticide use was slightly modified to distinguish the use of this product. Tracking of this exempt product was continued during FY 07-08.

Prohibited Pesticides

The City's IPM Plan specifically prohibits use of the following pesticides: diazinon, chlorpyrifos, chlordane, dieldrin, and DDT. During FY 07-08, the City did not use or store prohibited pesticide products.

Summary of Pesticide Use Data

Summaries of pesticide use for FY 02-03, FY 03-04, FY 04-05, FY 05-06, FY 06-07, and FY 07-08 are shown in the tables below. Table 1 shows a comparison of the number of different Category I, II, and III pesticides that were used during the past reporting years. Summaries of pesticide use quantities are listed in Tables 2 and 3, which are shown on pages 4 and 5 of this report. Table 2 shows a comparison of the quantity of Category I, II, III, and non-regulated pesticides that were applied during the past six reporting years. The quantities shown in Table 2 include active and inert ingredients. Inert ingredients are typically emulsifiers or carriers that aid in delivery of the active ingredient, which is the material in a pesticide formulation that destroys the target pest or performs the desired function. Table 3 shows a comparison of the quantity of Category I, II, III, and non-regulated active ingredients that were applied during the past six reporting years.

Additionally, narrative analysis of the pesticide use data is provided for Category I, II, III, and non-regulated products, as well as an analysis of overall pesticide use trends.

Table 1 - Number of Different Pesticides Used:

Pesticide Category	Number of Different Pesticides Used					
	FY 02-03	FY 03-04	FY 04-05	FY 05-06	FY 06-07	FY 07-08
I	1	0	0	1	0	0
II	4	8	6	5	7	5
III	19	22	22	25	29	35
None	0	0	0	0	1	1
Total	**24**	**30**	**28**	**31**	**37**	**41**

NOTE: "None" indicates a pesticide used that is exempt from pesticide registration requirements

Category I Pesticide Use:

The IPM Plan bans the use of Category I pesticides at City facilities, except in cases where a pest outbreak poses an immediate threat to public health or significant economic loss will result if the banned product is not applied. Use of a Category I pesticide must be approved by the Community Services Director, or his/her designee. During FY 07-08, no Category I pesticides were used at City facilities.

Category II Pesticide Use:

The IPM Plan limits the use of Category II pesticides at City facilities. Category II pesticides may be used when a Pest Control Advisor recommends their use after non-chemical controls and Category III pesticides have been ineffective, or when Category II pesticides may be needed to prevent an outbreak that may cause a threat to public health or significant economic loss.

During FY 07-08, five Category II pesticides were applied at City facilities. A discussion of the Category II pesticide use is provided below:

Forestry and Roadway Landscaping Division

- During FY 07-08, the Forestry and Roadway Landscaping Division (FRL) applied 37 pounds of the insecticide "m-pede," which is a decrease from the 75 pounds applied during FY 06-07. This product is used to treat aphid infestations, primarily in trees, so amounts used will depend on yearly fluctuations in aphid populations.

Table 2 - Quantity of Pesticides Applied:

Pesticide Category	Quantity of Pesticides Applied (Pounds) and Percent Change Compared to FY 06-07 and 5-year Average								
	FY 02-03	FY 03-04	FY 04-05	FY 05-06	FY 06-07	5-Year Average	FY 07-08	% Change to Previous Year	% Change to 5-Year Average
I	144	0	0	340	0	97	0	0	-100%
II	556	512	265	373	452	432	147	-67%	-66%
III	1,777	2,155	3,310	5,420	3,287	3,190	3,658	+11%	+15%
None	0	0	0	0	47	9	136	+189%	+1,411%
Total 1*	**2,477**	**2,667**	**3,575**	**6,133**	**3,786**	**3,687**	**3,941**	**+4%**	**+7%**
Total 2 **	**2.477**	**2,667**	**3,575**	**6,133**	**3,739**	**3,687**	**3,805**	**+2%**	**+3%**

**Total 1 includes use of non-regulated, exempt Clove Oil product.*
*** Total 2 evaluates use not including non-regulated, exempt Clove Oil product.*

Table 3 - Quantity of Active Ingredients Applied:

Pesticide Category	Quantity of Active Ingredients Applied (Pounds) and Percent Change Compared to FY 06-07 and 5-year Average								
	FY 02-03	**FY 03-04**	**FY 04-05**	FY 05-06	**FY 06-07**	**5-Year Average**	**FY 07-08**	**% Change to Previous Year**	**% Change to 5-Year Average**
I	88	0	0	29	0	23	0	0	-100%
II	235	222	87	244	140	186	48	-66%	-74%
III	853	704	990	1,228	875	930	1,225	+40%	+32%
None	0	0	0	0	3	1	8	+167%	+700%
Total 1*	**1,176**	**927**	**1,078**	**1,588**	**1,018**	**1,140**	**1,281**	**+26%**	**+12%**
Total 2 **	**1,176**	**927**	**1,078**	**1,588**	**1,015**	**1,140**	**1,273**	**+25%**	**+12%**

**Total 1 includes use of non-regulated, exempt Clove Oil product.*
*** Total 2 evaluates use not including non-regulated, exempt Clove Oil product.*

Shoreline Golf Links

- During FY 07-08, SGL applied 83 pounds of the algaecide "K-tea," which is a decrease from 216 pounds applied in FY 06-07. K-tea is an algaecide that is used to control algae growth on golf course ponds. The amount of product that is used depends on the algae growth conditions and the amount of algae production in the ponds.
- During FY 07-08, SGL applied 17 pounds of the herbicide "Reward", which is a decrease from the 20 pounds applied in FY 06-07. While the use of Reward decreased slightly compared to last year, its overall use has increased compared to historical use of the product. Increased weed growth due to damage and seed dispersal by an increased population of geese and coots has led to increased demands for use of Reward.
- During FY 07-08, one Category II fungicide, Hoist, was used to control fungus on the golf course greens. SGL applied 6 pounds of the product. Overall, SGL used less Category II fungicide in FY 07-08 compared to FY 06-07.

In past years, annual variations in the use of the Category II products Banner Maxx, Reward, Buctril, Daconil, Trimec Plus, and Eagle have occurred due to the practice of rotating pesticide use over an annual or multi-year frequency. The City has made strides towards reducing use of these category II products. First, the product Banner Maxx has not been used since 2005. Also, two Category III products have replaced the product Trimec Plus. Lastly, the Category II formulations of the fungicides, Daconil and Eagle, have been replaced by Category III formulations of the same products.

Category III Pesticide Use:

Public Services and Community Services Departments

The IPM Plan promotes the use of less toxic methods for controlling pests at City facilities. If pesticides are needed, Category III pesticides should be used, unless these pesticides are ineffective, or Category I or Category II pesticides are needed to prevent an outbreak that may cause a threat to public health or significant economic loss. During FY 07-08, 35 different Category III pesticides were used at City facilities to address specific problems or situations. Three of the Category III pesticides had not been used at City facilities in the past.

Non-regulated/Exempt Products:

Bay Valley Pest Control

During FY 07-08, the City's contract pest control operator, Bay Valley Pest Control, used 136 pounds of a non-regulated and exempt product to control ants at City facilities, which is an increase from 47 pounds used in FY 06-07. The product is a clove oil based chemical that replaces a category III product that was previously used. Use of this

exempt product is consistent with the reduced-risk pesticide use goals included in the City's IPM Plan. Although this is a non-regulated product, use of this product was tracked in the pesticide use database, as reflected in summary Tables 2 and 3. Analysis of total pesticide use in Tables 2 and 3 reflect: 1) totals including use of the non-regulated clove oil product; and 2) totals not including use of the non-regulated product. For FY 06-07, including the non-regulated product in the database did not significantly impact the analysis of percent change in use.

Discussion of Pesticide Use Data

Total Pesticide Applications

For the purpose of the total pesticide use evaluation, the "Total 1" and "Total 2" in Tables 2 and 3 will be discussed. "Total 1" reflects all pest control applications, including non-regulated products. "Total 2" reflects only regulated pest control product applications, and excludes applications of Eco-exempt Clove Oil. "Total 2" is the most important data set for evaluation because it reflects the amount of regulated pesticides applied during FY 07-08.

The "Total 1" amount of pesticides applied during FY 07-08 increased by 4% compared to FY 06-07, and increased 7% compared to the 5-year average. The "Total 2" amount of pesticides applied during FY 07-08 increased by 2% compared to FY 06-07, and increased 3% compared to the 5-year average. The amount of Category III pesticides applied during FY 07-08 increased by 11% compared to FY 06-07, and increased 15% compared to the 5-year average. The amount of Category II pesticides applied during FY 07-08 decreased by 47% compared to FY 06-07, and decreased 66% compared to the 5-year average. No Category I pesticides were used in FY 07-08, nor were Category I pesticides used in FY 06-07. Lastly, 136 pounds of non-regulated and exempt pest control product were used at City facilities in FY 07-08, which is a 189% increase compared to FY 06-07.

Last year's pesticide use evaluation report, which compared FY 06-07 and FY 05-06 data, showed a 38% decrease in total pesticide use, a 39% decrease in Category III pesticide use, a 21% increase in Category II pesticide use, and a 100% decrease in Category I pesticide use. The comparison in last year's report is explained by evaluating the use data for FY 05-06, which resulted in the highest amount of products used during the six year that pesticide use data has been tracked. This increased use was due to warm winter months with late seasonal rains, which caused two distinct growing seasons.

Active Ingredient Applications

The "Total 1" amount of active ingredient applied during FY 07-08 increased by 26% compared to FY 05-06, and increased 12% compared to the 5-year average. The "Total 2" amount of active ingredient applied during FY 07-08 increased by 25% compared to FY 05-06, and increased 12% compared to the 5-year average. The amount of Category III active ingredient applied during FY 07-08 increased by 40% compared to FY 06-07,

and increased 32% compared to the 5-year average. The amount of Category II active ingredient applied during FY 07-08 decreased by 66% compared to FY 06-07, and decreased 74% compared to the 5-year average. No Category I pesticides were used in FY 07-08, nor were Category I pesticides used in FY 06-07. Lastly, 8 pounds of active ingredients from a non-regulated and exempt pest control product were used at City facilities in FY 07-08, which is a 167% increase compared to FY 06-07.

Last year's pesticide use evaluation report, which compared FY 05-06 and FY 06-07 data, showed a 36% decrease in total active ingredient use, a 29% decrease in Category III active ingredient use, a 43% decrease in Category II active ingredient use, and a 100% decrease in Category I active ingredient use. The comparison in last year's report is explained by evaluating the use data for FY 05-06, which resulted in the highest amount of products used during the six year that pesticide use data has been tracked. This increased use was due to warm winter months with late seasonal rains, which caused two distinct growing seasons.

Analysis of Pesticide Use Data

Review of the data for FY 07-08 shows a slight increase in total pesticide use and a moderate increase in total active ingredient applied, when compared to FY 06-07 and the average use over the past 5 years. Review of individual pesticide application information explains why the total pesticide use was consistent with past years, while the active ingredient applied increased. In FY 07-08, the increased use of two Category III products was responsible for the increased amount of active ingredient that was applied. These products, Pendulum and Tengard, have higher percentages, 89% and 91% respectively, than most products. The higher percentage of active ingredient accounts for the increased total active ingredient that was applied.

The trends of use data for Category I, II, and III pesticides show increased use of Category III and a non-regulated product, and decreased use of Category II pesticide products. No Category I pesticides were used in FY 07-08. The amount of Category III pesticides applied in FY 07-08 increased compared to FY 06-07 and the 5-year average. The amount of Category II pesticides applied in FY 07-08 decreased compared to FY 06-07 and the 5-year average. Consistent with the data for total pesticide use, evaluation of the active ingredient use data shows increased application of Category III active ingredients and decreased Category II active ingredients, when compared to FY 06-07 and compared to the 5-year average.

During FY 07-08, the City's Category III pesticide use was 96% of the total pesticide use for the year, which is higher than FY 06-07, when the City's Category III pesticide use was 87% of the total pesticide use for the year, and is the highest percentage of all reporting years. The percentages for FY 05-06, FY 04-05, and FY 03-04 had Category III percentages of 88%, 93%, and 82%, respectively. Increased use of Category III and exempt, non-regulated products data shows that the City has accomplished goals in the IPM Plan to utilize a reduced-risk pesticide use procedure.

The volume of pesticide use is heavily dependent on seasonal variations in pest and weed populations, which are typically the result of regional weather patterns. When pesticides are needed, the City will continue to evaluate and consider the least toxic pesticide solutions. The City will also continue to seek non-chemical solutions to pest incidents. The City's primary IPM technique is to maintain healthy landscape and turf through implementation of effective cultural practices. City staff also utilizes biological and organic controls, such as nematodes in turf areas and mulch around tree basins and planting beds, as well as physical and mechanical controls to help control pest problems.

An on-going condition that has resulted in damage to Shoreline Golf Links as well as increased pesticide use is the increased bird population inhabiting the course. Geese and coots populations at the golf course have steadily increased in recent years, and have presented a management problem for the City. To address this condition, the City is investigating measures to reduce these populations, including modifications to management of the golf course ponds, which would minimize habitat for these birds.

Recommendations to address pesticide use at City facilities are listed below:

1. Continue to train employees regarding the IPM Plan requirements for using Category I and Category II pesticides.
2. Continue to seek less toxic alternatives to the Category I and Category II pesticides that may be considered for use, although the alternatives are potentially more expensive and/or labor intensive.
3. Continue to use less toxic products to control pests. If less toxic alternatives are ineffective and the pest outbreak poses a public health or economic threat, propose use of a Category II pesticide, or lastly, a Category I pesticide.
4. Continue to track regional efforts to develop a list of approved pesticides that not only considers acute toxicity, but other factors such as carcinogenicity, reproductive toxicity, and potential groundwater contaminants.
5. Continue to develop program and budget recommendations to implement possible alternatives.

Summary

This report has provided an evaluation of the City of Mountain View's pesticide use data for FY 07-08. Data from FY 07-08 was compared to data from previous years. The comparison and evaluation involved both the types and quantities of pesticides used at City facilities. While the total amount of pesticide application increased slightly, the amount of Category II pesticide applications have decreased compared to both FY 06-07 and the 5-year average. During FY 07-08, use of an exempt, non-regulated pest control product was increased City facilities to control ants. Use of this type of exempt product is an example of reduced risk chemical use that is an important component of the City's IPM program. Staff will continue to evaluate and consider alternative or least toxic pesticide solutions for application whenever possible.

Dear Mr. Wolfe:

This report is submitted by the City of Palo Alto, in conjunction with the Santa Clara Valley Urban Runoff Pollution Prevention Program's Annual Report, pursuant to provision C.6.a. of the Program's municipal storm water NPDES Permit (Order No. 01-024). The report summarizes activities performed during FY 2007-2008 in accordance with the City of Palo Alto's Urban Runoff Management Plan (URMP) submitted to the Regional Board on September 1, 2004 and the performance standards contained therein.

Contents of Report

The goals of this Annual Report are to: 1) concisely document implementation of our URMP and FY 07-08 work plan during the past fiscal year; 2) evaluate program results for continuous improvement; 3) comply with permit requirements; and 4) share this information with other Co-permittees, municipal decision-makers, and the public. To accomplish these goals, the report contains the following sections:

I. Contents of report;
II. Program highlights and accomplishments;
III. Summary of continuous improvement activities;
IV. Attachments:

A. Certification Statements
B. List of Abbreviations and Acronyms
C. Annual Report
- IC/ID Elimination Activities
- Industrial/Commercial Discharger Control Program

- Public Agency Activities
  - Public Streets, Roads, and Highways O & M
  - Corporation Yard O & M
  - Rural Public Works O & M
  - Storm Drain O & M
  - Water Utility O & M
- New Development Planning Procedures
- Construction Inspection
- Public Information and Participation
- Pest Management Activities
- Mercury Pollution Prevention Activities
- Copper Action Plan/Nickel Action Plan
- Trash Inventory and Management
- Water Quality Monitoring
- Watershed Management Measures
- Staff Training Summary Table

Program Highlights and Accomplishments

The City of Palo Alto's Urban Runoff Pollution Prevention Program for FY 2007-08 included several notable accomplishments. The following programs and activities are described in the body of this Annual Report:

- Palo Alto has demonstrated continued leadership in the area of land development review. Staff in the Public Works, Utilities, and Planning Departments have been briefed on the C.3 requirements by the Management Committee representative and have attended Program training workshops. Presentations on C.3 design concepts and requirements have been made to the land development decision makers (Planning Commission, Architectural Review Board, City Council).

  The City of Palo Alto was the recipient of two **2007 Site Design Awards** for exemplary development projects. The Stanford/Palo Alto Community Playing Fields project was honored in the "Large Public Project" category for its stormwater infiltration sump, permeable pavement, and vegetated drainage swales. The 361-369 California Avenue development was recognized in the "Small Private Site" category for its permeable pavement plaza that also receives storm runoff from the building roof.

- Palo Alto Environmental Compliance staff imposed a substantial fine of $5,000 on an industrial facility for the accidental discharge of plating process rinse water to a local stream. This is a notably large fine for a stormwater violation, commensurate with the severity of the discharge.

- Trash management was and will continue to be another high-priority area for City storm water staff. Environmental Compliance staff spent a substantial amount of time during the year developing a reusable bag ordinance and styrofoam control regulations, including extensive outreach to and coordination with the entities to be regulated This regulatory effort is designed to reduce one of the primary sources of trash in the community. Staff also continued its focus on improving the coordination of the City's trash reduction activities with those of volunteer-based organizations like the San Francisquito Watershed Council. Staff worked to optimize volunteer clean-up events by identifying trash hot spots prior to the events, actively participated in several of the clean-up events, and followed up with the volunteer organizations to assess the effectiveness of the events.

- City staff has actively participated in many of the Program's Ad Hoc Task Groups (including Watershed Education & Outreach, Trash Management, and C.3 Provision Oversight (C3PO), and the Watershed Management Initiative, providing valuable input to Program endeavors and keeping informed of the current issues and policies relevant to storm water pollution prevention.

Continuous Improvement Activities

The following is a summary of the key continuous improvement activities to be pursued in the coming year:

Identified Improvement	Status	Schedule for Completion
Implement the City's Innovative Storm Drain Improvements project, providing rebates for rain barrels, cisterns, permeable pavements, green roofs to private and public projects.	The City's Storm Drainage Fund has $125,000 annual funding available for this rebate program. The rebate program was unveiled in August 2008.	August 2008 & ongoing
Implement a reusable bag ordinance for large grocery stores and Styrofoam control regulations for food vendors.	Scheduled for a City Council study session in November 2008 and Council adoption in December 2008.	December 2008
Work closely with the Program in study of potential trash reduction measures at storm water pump stations	Program has hired consultant to conduct study. City will participate actively in study, including volunteering for installation of pilot-scale trash control measures at City pump	June 2009

	stations.	
Consider implementation of the Water Resources Protection Collaborative's Guidelines and Standards (G&S) for Land Uses Near Streams for ministerial projects	The G&S have been incorporated into the zoning ordinance for discretionary projects; next step is to consider applying the G&S to ministerial projects.	June 2009

Thank you for your review of this Annual Report. If you have any questions regarding the materials submitted, please contact me at (650) 329-2129.

Very truly yours,

CITY OF PALO ALTO
FY 2007-2008 ANNUAL REPORT
ATTACHMENT A

Performance Standard Completion Certification Statement

"I certify, under penalty of law, that the City of Palo Alto has implemented all elements of the following performance standards, except as described in the Self-Evaluation Matrix in Attachment B of this FY 07-08 Annual Report, according to the policies and procedures described in the City of Palo Alto's Urban Runoff Management Plan dated September 1, 2004:

- Illicit Connection/Illegal Dumping Elimination Activities
- Industrial/Commercial Discharger Control Program
- Public Streets, Roads, and Highways O & M
- Rural Public Works O & M
- Storm Drain System O & M
- Water Utility O & M
- New Development Planning Procedures
- Construction Inspection
- Pest Management

Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, this information is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

ILLICIT CONNECTION & ILLEGAL DUMPING ELIMINATION ACTIVITIES

FY 2007-2008 Work Plan Self Evaluation Matrix

Item No.	Activity	FY07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
	Education and Outreach	Refer mobile cleaners to BASMAA's online training module for education and certification.	1. We have not had any requests for training since the online program was established at http://www.basmaa.org/. We will continue to offer personalized instruction as an option. 2. We continue to support BASMAA and the online training program.	Public Works Environmental Compliance
	Reporting and Record Keeping	Prepare Annual Report using enhanced reporting procedures adopted in December 2001.	Fats-Oils-Grease Access Database is complete and is currently used by Industrial Waste Investigator for all inspections. The database includes the storm water inspection component and automatically generates the ICID inspection report and database entry. Semi-annual reports to the Program have been produced and submitted as required and in a timely manner. Stormwater MS Access database (including entries for Construction, Complaint, and Dewatering) is complete and is currently being debugged. Other MS Access databases (Vehicle Service Facility Inspection, C.3, and Industrial) are under development to link all investigators' reports to the Program for required semi-annual Program reports. IC/ID Program Evaluation

We continue to receive illegal dumping reports from the public as well as from City employees. Awareness among City staff has improved over the past several years. Proactive members of the fire department, building inspection, planning code enforcement, street maintenance, storm water maintenance, utilities, and wastewater field operations crews have been a consistent source of referrals. This leads us to believe that there are more active observers out in the field each day beyond those employed directly within our program.

Construction activities still dominate the IC/ID incidents and continue to require outreach, education, and enforcement efforts. A large percentage of construction personnel appear to comprehend the rules and regulations about pollution to the storm water system. Aggressive monitoring and enforcement as well as information provided during the planning and permitting process appears to be effective. Problems and issues with dewatering of excavations at construction sites have improved as a result of recent modifications to the public works engineering, planning and building policies and permitting processes that require effective best management practices to be implemented.

The noticeable increase in efforts from our industrial waste staff and the wastewater collection system operations staff regarding identification, prioritization and prevention of sanitary sewer overflows (SSO) has been successful. The increased focus will continue to be applied to the use of source control measures to reduce the amount of blockage-causing grease discharged to the sanitary sewer system by food service facilities and to reduce on-site storage and cleaning issues. The wastewater operations field crews have improved their efforts to 1) identify problem locations in order to prioritize them for more frequent line cleaning, and 2) identify and document non-compliant facilities. Utility crews have also improved the identification of utility vaults that are receiving discharges from food service facilities that are not using effective BMP's in their operations. Due to these improved efforts, the number of SSOs is lower than in previous years.

INDUSTRIAL/COMMERCIAL DISCHARGER CONTROL PROGRAMS

FY 2007-2008 Work Plan Self Evaluation Matrix

Item No.	Activity	FY07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
	Food Service Facility Inspections	1. Continue to work with Statewide Fat-Oils-Grease (FOG) work group to develop measures to prevent sanitary sewer blockages caused by FOG discharges by food service facilities. 2. Share information/recommendations from FOG with Program co-permittees. 3. Continue to implement a rigorous FOG/restaurant program, including inspections, outreach and recordkeeping programs. 4. Distribute regionally-generated FOG control posters. 5. Continue to inspect food service establishments. Each inspection includes review of tallow bins, trash and outdoor cleaning, as they pertain to potential storm drain violations.	1. The Environmental Compliance Division shall continue FOG program investigations, notifying operators of violations, and to report findings with regard to storm water issues. 2. Environmental Compliance Division shall continue to host and maintain the Cal FOG website (http://www.calfog.org), which includes a collection of superior outreach materials from around the country. 3. Environmental Compliance Division did not develop a discharge permitting program for food service facilities due to resistance from the local Chamber of Commerce and resource constraints. Business licenses have been proposed for the City and will help with the tracking of food service facilities. However, the FOG Program includes a substantial number of restaurant inspections regardless of the status of a business license program. 4. FOG control posters are distributed at food service facilities, as needed during facility inspections. 5. Environmental Compliance Division continues to review pre-submittal documents and building	Public Works Environmental Compliance

Municipality: City of Palo Alto

			plans for compliance with storm water requirements and conditions of approval. ➢ Conducted 36 full initial FOG inspections at food service establishments (FSE) ➢ Conducted 349 stormwater inspections during full initial and follow-up FOG inspections at FSEs ➢ Issued 68 Compliance Directives to FSEs, 34 were stormwater related ➢ Issued 22 Notices of Noncompliance to FSEs, 11 were stormwater related ➢ Issued 2 Compliance Agreements that were initiated by sanitary sewer overflows and tallow bin spills that affected the storm drain system	
	Inspection of Facilities	Continue enforcement of the Sewer Use Ordinance, last updated in 2004.	Storm water inspections (80) were conducted at all facilities as part of the regular industrial waste inspection process. A draft update of the Sewer Use Ordinance has been prepared and includes several modifications of the storm water and the FOG program regulations. The ordinance will be submitted to the City Council for approval in early 2009.	Public Works Environmental Compliance
	Enhanced Reporting Procedures	1. Prepare Annual Report using enhanced reporting procedures adopted in December 2001. 2. Continue to utilize the updated reporting/database programs developed by RWQCP consultant for IND incident data entry and	Semi-annual reporting proceeds with complete and accurate documentation within the data system. The data system has been modified to allow for greater ease of use and additional ways of interpreting and presenting the data. The new access database program is complete and continued to be tested and debugged in the FY 07-08.	Public Works Environmental Compliance

Industrial/Commercial Program Evaluation

Stormwater evaluations are fully integrated into all inspection activities, forms and databases. These inspections help increase awareness at the facilities and stress that stormwater pollution prevention measures are an expectation of their operations. As a result, there are few significant stormwater issues found during inspections at permitted industrial facilities and relatively few at other regularly inspected commercial facilities such as photo shops, automotive facilities and dentists.

The City's Fats, Oils and Grease (FOG) program has been staffed with a full-time position since 2006. The Program was expanded in compliance with the SSMP mandate and now includes more rigorous inspections and enforcement. There has been improved compliance at many facilities. However, restaurants continue to be one of the more difficult facilities to educate and bring into compliance due to high employee turnover rates and the lack of knowledge and understanding of stormwater pollution prevention requirements. The cleaning of floor mats, tallow bins, dumpsters, and equipment are key problems. The wastewater operations group has also become more proactive in sewer line cleaning and videotaping and the gathered information is used to drive inspections, corrective actions and enforcement at these facilities.

PUBLIC AGENCY ACTIVITIES
PUBLIC STREETS, ROADS & HIGHWAY O & M
FY 2007-2008 Work Plan Self Evaluation Matrix

Item No.	Activity	FY07-08 Work Plan Tasks	FY 07-08 Accomplishments	Responsible Party
	Public Streets, Roads, and Highways Operations and Maintenance	Palo Alto Public Works Operations staff is continuing to implement all the elements of the Public Streets and Highways Operations and Maintenance Performance Standard, as contained in the City's Urban Runoff Management Plan, on an ongoing basis.	Any storm water pollution violations observed by field crews during the course of their work are reported to the Environmental Compliance staff for enforcement action.	Public Works Operations
	Staff Training	Provide annual training to Public Works Operations street maintenance crews.	All Public Works Operations staff (concrete crew, asphalt crew, signing/striping crew, storm drain maintenance crew, tree maintenance crew, etc.) received overview of BMPs and storm water pollution prevention training from Environmental Compliance staff at annual meeting. Ongoing training and feedback also takes place at individual crew tailgate meetings held every two weeks.	Public Works Operations
	Effectiveness Evaluation	Review and evaluate effectiveness of PS operations and maintenance program as part of Annual Report.	See effectiveness evaluation discussion below.	Public Works Operations

STREET SWEEPING DATA

See attached sheet for annual street sweeping data.

Public Works Operations staff reports storm water pollution violations to Environmental Compliance staff when violations are observed by field crews in the course of our daily operations or reported by residents. Environmental Compliance staff are supportive when violations are reported and take appropriate steps to follow-up with the responsible party to promote future compliance with storm water discharge regulations and BMPs. Field crews are familiar with source control BMPs described in the "California Stormwater BMP Handbook -- Municipal" that are kept in the Palo Alto Municipal Services Center Storm Water Pollution Prevention Plan (SWPPP). Ongoing BMPs are reviewed by individual work crews at bi-weekly tailgate meetings and evaluated for effectiveness and potential modification. The street maintenance crew's slurry recovery system & trailer is working well. The system has a long vacuum hose, a powerful motor, and large storage capacity for captured slurry.
