The $4.5 million in appropriations received since FY 2001 has allowed the USACE to complete a *'Landscape Level Aquatic Resource Delineation'* and *'Functional Assessment'* to determine the value of waters and wetlands within these watersheds. During the last two fiscal years the USACE did not receive any funding for the SAMP and all efforts were put on hold. The District has teamed up with the Riverside County Transportation and Land Management Agency, the Riverside County Resource Conservation Authority and the Riverside County Transportation Commission to assist the USACE with the final stages of the SAMP which include the completion of the draft EIR/EIS, the development of the expedited permits and the development of the conservation/mitigation areas. The goal is to have the SAMP completed by end of 2008.

- Summary Report of Watershed Stakeholder meetings and agendas.

The Permittees are working with other stakeholder groups to leverage funds for regional planning objectives including:

Prop 13/40/50/84 Grant Funds – Working cooperatively with San Diego County, Bureau of Reclamation and other stakeholders to implement a Santa Margarita River Watershed Management Plan. In support of this, the Permittees partnered with Rancho California Water District and other stakeholders to develop an Upper Santa Margarita River IRWM. The Permittees are pursuing several million dollars in Proposition 84 IRWM grants under this IRWM which was adopted on July 31, 2007. The development of the Upper Santa Margarita Watershed IRWM is the epitome of watershed planning and a huge step, and effort, by the watershed stakeholders.

Santa Margarita Executive Management Team – Partnering with the Bureau of Land Management and other Santa Margarita watershed stakeholders to develop water quality models to help assess pollutant problems and sources within the Santa Margarita watershed. This group is currently coordinating the implementation of the 13267 Lagoon Monitoring Order for the Santa Margarita River, continuing discussions on the ongoing development and expansion of the Santa Margarita River Watershed Model, and preparing a study to collect data to support an Numeric Nutrient Endpoint analysis of the Santa Margarita River.

Mission Resource Conservation District – Partnering with local upper Santa Margarita stakeholders through the MRCD to implement watershed education, monitoring, and clean up programs. The MRCD coordinates the annual Santa Margarita Watershed Clean Up Event with support from the Permittees.

- Summary Report of status of WQMP BMP Guidance

District and County staff are working on the development of expanded treatment control BMP design guidance with focus placed on low impact development concepts, such as landscape based BMPs. In addition, an FAQ, Watershed Impairment Map, and updated template were created for the development and plan checking community. The District has also initiated a retrofit of our Riverside compound to conduct LID BMP testing and demonstration. Construction is scheduled to begin in late 2008. See Appendix G - Section 7, Special Studies for more information.

Additionally, the Permittees are continuing to work with the SMC and others to develop numeric hydromodification guidance as required by permit requirement F.2.b)(9). The District has partnered with the SMC and SCCWRP to pursue grant funds to undertake the necessary studies. The next steps will be determined based on the result of the grant applications. An Annual Report summarizing these studies is included in Appendix B.

- Continue to support development of regional science and other studies to further understand and mitigate water quality impairments

  SUMMARY OF EFFECTIVENESS ANALYSIS: The Permittees continue to participate in the development of science necessary to better manage the NPDES MS4 Stormwater Programs. The Permittees are core members of the Southern California Monitoring Coalition, have supported SCCWRP on independent studies of natural background concentrations for bacteria, and District staff (Linda Garcia) Co-Chaired the CASQA Stormwater Monitoring and Science Subcommittee. The Permittees are also working with local watershed stakeholders to develop models of the watershed to assess sources of pollution and possibly test the effectiveness of proposed BMPs.

  Specific studies such as the lab intercalibration studies and Bioassessment Protocol studies currently being conducted by the SMC have directly addressed our goal of standardizing monitoring and sampling analysis protocols. The water quality model being developed in conjunction with the BuRec is expected to provide a useful tool for assessing BMP effectiveness. The coordination with SCCWRP on the natural background bacteria study and the BuRec's efforts to evaluate natural conditions in the Santa Margarita watershed address our goal of better understanding ambient water quality conditions.

  - Annual Status Reports of ongoing studies

    Appendix G - Section 7, Special Studies, contains a summary of the current status of all special monitoring studies the Permittees are participating in.

- Public Education and Outreach

  EFFECTIVE ANALYSIS ASSESSMENT. The metrics being collected for the Public education program are presented below. Due to the need to establish a baseline condition, and due to the fact that this is the section full year of the Watershed SWMP and Permittee Individual SWMP implementation, a detailed effectiveness analysis of this component is not provided. However, the Permittees would note that overall website hits have been steadily increasing over the fiscal year and it appears that knowledge regarding our program is increasing. In addition, the collection of survey data preliminarily indicates significant knowledge of stormwater related issues among the general public. More detailed analysis will be provided in future annual reports as trends can be extrapolated. Please note that the Permittees implement a consistent public education program across the County, with specific modifications to focus on watershed issues as necessary. To this end, many of the metrics provided below are Countywide as it is consistent with the implementation of the Public Education Program. It is also infeasible to collect many of these metrics at a finer resolution. SMR specific metrics are provided where appropriate.

- Provide summary report of on-going program modifications

  In fiscal year 2006-2007 the Permittees implemented the following program improvements to the "Only Rain Down the Storm Drain Program":

  - Completion of an evaluation of the effectiveness of Permittee training programs. Possibly initiating development of recommended enhancements.

  - An update of the Outdoor Activities Brochure to ensure that it adequately addresses issues related to mobile operators, power washers and carpet

cleaners. Additional resource information and phone numbers, as well as legislative mandates will be added.

- Implementation of a reliable tracking mechanisms for website hits and calls to the 1-800 hotline.

- The Number of Urban Runoff Complaints received through hotlines

The 1-800 hotline call counter was not functioning during the reporting period. However, the Permittees are working to correct this issue. Normally, complaint calls are routed to County Code Enforcement for action or referral to the appropriate Permittee. Although calls were routed, they were not tracked by the Counter.

The District received fifty-nine (59) complaints. Forty-five (45) were referred to County Code Enforcement or Environmental Health for follow-up, two (2) were referred to the City of Temecula, two (2) were referred to the City of Murrieta, one (1) was referred to County Building and Safety Code Compliance, one (1) was referred to County Parks and Open Space District and one (1) was referred to County Haz Mat. There are no complaints that are currently being investigated by District staff. In addition, the Riverside County Fire Department HazMat team responded to 117 events within the County that potentially impacted the MS4.

It should be noted that complaints received by the District came through phone lines, e-mail requests, and/or mail. Sources of the complaints directed to the District are currently not tracked.

- Training

EFFECTIVENESS ANALYSIS ASSESSMENT: Metrics for training participation are presented below. In addition, the comprehensive analysis of the effectiveness of our training programs was evaluated and is included in The Assessment and Enhancement Analysis of the NPDES Training Program, August 2006 in Appendix B.

The Number of Permittee staff receiving Riverside County NPDES training for activities related to DAMP implementation

  - Summary statistics on testing results

Testing results are included in the Assessment and Enhancement Analysis of the NPDES Training Program, August 2006 in Appendix B.

0001055

- Waste Collection and Watershed Clean-Up Events

EFFECTIVENESS ASSESSMENT: The Permittees continue to collect data on waste collection and watershed clean up events. The Permittees' trash collection programs increased their collection by over 20% looking at same sites. Including the additional rural collection site, it increased collection by 118%. There appears to be increase knowledge and continued demand for HHW/ABOP facilities. Some of the increases can be accounted for with population growth. Other factors include continued outreach and advertising. The Watershed Clean Up event also continues to generate interest and press coverage. This portion of the program appears to be effective and warranted.

  - Annual summary report of materials removed/collected

During FY 2006-2007, eleven (11) HHW collection events were held within the SMR. Also there were forty-two (42) ABOP events staged at the County's Transportation Maintenance Yard in Murrieta and serviced a total of 1,483 participants. Approximately 109,226 pounds of HHW were collected. Additionally, approximately 61,054 pounds of HHW were collected in the rural HHW collection event. Approximately 372 participants attended the event. The ABOP facility was open for a total of 42 Saturdays, servicing 1,713 participants. Approximately 83,355 pounds of ABOP wastes were collected. A detailed breakdown of the HHW and ABOP waste streams is included as Appendix E.

	FY04-05	**FY05-06**	**FY06-07**	**FY07-08**	**FY08-09**
HHW Participants	1,238	1,460	1,483		
HHW Collected (lbs)	78,000	93,700	109,226		
ABOP Participants	1,490	1,740	1,713		
ABOP Collected (lbs)	63,000	89,400	83,355		
HHW Rural Participants		350	372		
HHW Rural Collected (lbs)		76,500	61,504		
Total Participants	**2,728**	**3,550**	**3,568**		
Total Collected (lbs)	**141,000**	**259,600**	**254,085**		

Santa Margarita Watershed Clean Up Event

The Watershed Clean Up was held on October 14, 2006, and the Permittees hauled away 18 tons of trash and debris in support of the event. To encourage the public to keep their communities clean, the District purchased and gave away storm water related promotional items and brochures.

- Annual summary report of public outreach conducted as part of collection/removal events

  During the Watershed Clean Up event, each of the participants and event organizers received outreach material. The volunteers are made up of those who need to complete community service hours; part of their rehabilitation; Boy and Girl Scout Project; environmental groups' family environmental enthusiasts; etc.

J.2 Long Term Measures of Effectiveness

The objective of the Watershed SWMP is to maintain and/or improve the quality of Receiving Waters within the SMR by mitigating impacts of Constituents of Concern in urban runoff using regional programs, while considering economic, social and environmental resource limitations. As identified in Appendix S, Provision K.2.m. of the DAMP, the Permittees' long-term effectiveness analysis will be incorporated into future ROWD as part of the long-term strategy to measure the effectiveness of the Watershed SWMP. Measurable metrics necessary to assess long-term effectiveness are collected as part of the short-term effectiveness measures program.

K. Proposed Revisions to the Watershed SWMP

The Permittees have identified two issues that may require Revision of the SMR Permit and/or DAMP:

- The necessary revisions to the Monitoring and Reporting Program identified in Section I of this Watershed Annual Report.

- Modification of the DAMP/SWMP as determined by the Toxicity Reduction Evaluation Summarized in Section I of the Watershed Annual Report and as discussed in Appendix G. The Toxicity Reduction Evaluation will determine sources, and potential BMPs, for potential pyrethroid pesticide toxicity detected in Murrieta and Temecula Creeks.

In addition, as part of the ROWD, the Permittees will likely recommend substantial revisions to the Permit requirements for the layout of the Watershed Annual Report. The Permit requires substantial duplication of reporting, which either increases the volume of the report, or requires substantial cross-referencing. In either case, it is confusing to write, and likely confusing to read.

The Permittees are also developing a revised Post-Construction LID BMP Design Handbook. Proposed revisions to the program based on these documents, or at least progress reports on these efforts, will be included in future Annual Reports.

APPENDIX A

MEETING AGENDA AND NOTES

SANTA ANA/SANTA MARGARITA MANAGEMENT STEERING COMMITTEE

RIVERSIDE COUNTY STORMWATER MANGEMENT PROGRAM
MANAGEMENT STEERING COMMITTEE
SANTA ANA & SANTA MARGARITA REGIONS

MEETING AGENDA

(Lunch Served)
11:30 a.m.* – 12:30 p.m. January 18, 2007
Room A
Riverside County Administrative Office, Fourth Floor
4080 Lemon Street, Riverside, CA 92501

* meeting to begin at 11:30 a.m. or immediately following the WRCOG TAC meeting should it end later than 11:30

1. Welcome and Self Introduction – Dusty Williams, RCFC&WCD

2. Approval of September 21, 2006 Meeting Notes and review January 18, 2007 Agenda – Dusty Williams, RCFC&WCD

3. Santa Ana/Santa Margarita Program Status – Jason Uhley, RCFC &WCD
   - Audits
   - Annual Reports
   - ROWD

4. TMDL Development - Jason Uhley, RCFC&WCD
   - Lake Elsinore and Canyon Lake Nutrient TMDL
     - 2007/2008 TMDL Cost Share Budget
   - Middle Santa Ana River Watershed Bacteria Indicator TMDL
     - Tentative Agreement

5. Next Meeting Date – March 15, 2007

P8/111793

RIVERSIDE COUNTY STORMWATER MANAGEMENT PROGRAM
MANAGEMENT STEERING COMMITTEE
SANTA ANA/SANTA MARGARITA REGIONS

MEETING MINUTES
for
September 21, 2006

I. ***Attendees:***

Jason Uhley	RCFC & WCD
Charlene Warren	RCFC & WCD
Dusty Williams	RCFC&WCD
Gary Christmas	Riverside County Executive Office
Alan Kapanicas	City of Beaumont
Asad Korgan	City of Corona
Chris Vogt	City of Moreno Valley

II. ***Welcome and Self Introductions – Dusty Williams RCFC&WCD***

Dusty Williams welcomed attendees to the MSC meeting and asked that everyone review the sign-in sheet (passed around table) to verify that the correct information for primary and alternate representatives are listed. Dusty then discussed the purpose and requirements of the MSC meeting noting that city representatives are required to attend 3 of the 4 meetings per fiscal year. The September 21, 2006 meeting is the first meeting of the 2006/2007 fiscal year.

III. ***Approval of February 16, 2006 Meeting Minutes, May 18, 2006 Summary sent via email and Review September 21, 2006 Agenda – Dusty Williams RCFC&WCD***

Dusty briefly reviewed the agenda items, informing attendees that Jason Uhley would provide further detail on the items. The May 18, 2006 MSC meeting was cancelled and an executive summary was sent via email to City Managers and the County Executive Office in lieu of the meeting. Everyone was given credit for attending the May 18th meeting.

Alan Kapanicas made mention that be believed Joe Afluki was in attendance at the February 16, 2006 MSC meeting. The sign-in sheet for the February meeting did not reflect Joe's signature. An attempt will be made by Charlene Warren to further clarify his attendance.

Handouts Provided:

- Agenda for September 21, 2006
- Minutes for February 16, 2006
- Executive Summary for May 18, 2006 (meeting canceled, exec.summary sent in lieu of)

IV. ***Regional Board MS4 Program Audits – Jason Uhley***

Jason reported on the audits conducted by the Santa Ana Regional Board noting that the audits were near completion and that there would likely be NOV's and ACL's issued for some cities. Dusty added that NOVs and ACLs can be appealed if issued. Results of the audits will be released simultaneously for all cities. Jason then discussed last year's audits, issues with Tetra Tech's philosophy of auditing, and San Bernardino County audits.

V. *TMDL Development – Jason Uhley*

- **Lake Elsinore/Canyon Lake Nutrient TMDL**
  Jason informed attendees that there was an agreement entered into by all entities that were named in the TMDL. He noted that all cities except for the City of Beaumont have signed the Implementation Agreement. City Managers should have received a copy of the Agreement in May 2006. Alan asked that Jason forward him the Agreement for signature. Jason stated that he would send the document directly to Alan via email. The group then engaged in discussion on the following items:

  - Fish Kills/Algae problems in Lake Elsinore Lake
  - Chemistry of Lake
  - Amount of Nutrients Allowed
  - Implementation Agreement (City of Beaumont still needs to sign the Agreement)
  - Regional Board Pressing Cities on TMDL Implementation
  - Water Quality of the Lake (better now than in past years)
  - Consultant Tim Moore of Risk Science retained to assist Permittees with TMDL
  - BMPs needing to be addressed
  - Numeric Values
  - Cities contributions towards TMDL Task Force
  - Benefits of Wetlands ($600,000 grant received)

  ***The Nutrient Total Maximum Daily Load for Canyon Lake and Lake Elsinore (TMDL) was adopted in October 2004 and has been approved by the State and Federal governments. The TMDL regulates discharge of nutrients to Lake Elsinore/Canyon Lake. Stakeholders include MS4 Permittees, California Department of Transportation (CalTrans), March Air Reserve Base Joint Powers Authority (March JPA), California Department of Fish and Game, Western Riverside County Agriculture Coalition on behalf of AG and dairy operators, Lake Elsinore and San Jacinto Watershed Project Authority (LESJWA), Eastern Valley Municipal Water District (EVMWD) and Eastern Municipal Water District (EMWD).*

- **Middle Santa Ana River Watershed Bacteria Indicator TMDL** – Jason noted that the TMDL was adopted by the Regional Board in August 2005 and is awaiting EPA approval. The TMDL affects the cities of Corona, Norco, and Riverside. The first task due for the TMDL is the Implementation Agreement which should be before City Managers in January 2007. Jason also added that a $600,000 grant had been received to be used primarily for monitoring efforts of the TMDL. Attendees then engaged in a brief discussion of the following items regarding the TMDL:

  - Natural Sources and Exceedances of Bacteria
  - Formation of a Storm Water Quality Standards Task Force (SWQSTF)
  - Recreational Uses and Water Contact Recreation
  - Ecoli
  - Monitoring and Jurisdiction of Federal Lands
  - Requirements of Lake Elsinore TMDL (public education and enforcement)
  - Septic Systems Management Plans (possible solutions to be looked at)

VI. *Santa Ana Permit Renewal*

Jason reported on the status and efforts of the permit renewal process. The current Permit expires October 25, 2007. Items of discussion included:

- Federal Law Requirements
- Report of Waste Discharge (ROWD) due April 25, 2007
- Consultant to begin work on the Permit by the end of September
- Possible Mandatory Inspection for Construction BMPs
- Additional Monitoring
- Municipal Maintenance
- The need for Cities to become more Proactive
- Discussion that Regional Board may combine Riverside/San Bernardino County Permits
- Differences in Riverside/San Bernardino Permits
- Coordination of Public Education Efforts in the 2 Counties

VII. *New Agenda Items/ Schedule Next Meeting*

There were no new agenda items requested for future meetings. Jason verified future meeting dates which are November 16, 2006, February 17th, May 17th, and September 20th 2007. Dusty thanked everyone for attending and adjourned the meeting.

NEXT MEETING IS SET FOR:
THURSDAY, November 16, 2006 - [redacted]
AT
RIVERSIDE COUNTY EXECUTIVE OFFICE, FOURTH FLOOR
4080 Lemon Street, Riverside, CA 92501

Visit the StormWater/Clean Water Protection Program website at:
http://www.co.riverside.ca.us/depts/flood/YouCanHelp.asp.
The Site contains a variety of useful stormwater program information including links to other stormwater management programs and related web sites.

Bob Bohan	City of Canyon Lake
Ati Eskandari	City of Corona
John Davidson	City of Hemet
Kent Wegelin	City of Moreno Valley
Farida Naceem	City of Murrieta
Jeff Allred	City of Norco
Barry McClellan	City of San Jacinto

II. ***Welcome and Self Introductions – Steve Stump RCFC&WCD***

Steve Stump welcomed everyone to the meeting and initiated self introductions.

III. ***Approval of September 21, 2006 Meeting Minutes, May 18, 2006 and Review January 18, 2007 Agenda – Jason Uhley RCFC&WCD***

It was noted that under agenda item V (TMDL Development), Eastern Valley Municipal Water District (EVMWD) should be Elsinore Valley Municipal Water District (EVMWD). The correction was made.

Handouts Provided:

- Agenda for January 18, 2007
- Minutes for September 21, 2006
- Draft Lake Elsinore and Canyon Lake Task Force Budget – January 17, 2007 version
- City of Calimesa Notice of Violation (NOV) letter from CRWQCB Santa Ana Region

IV. ***Regional Board MS4 Program Audits – Jason Uhley***

Audits - Jason Uhley explained the purpose of the audits conducted by the Santa Ana Regional Board and the City of Calimesa's NOV. Copies of the NOV were provided in the handouts. Jason also noted that there may possibly be more NOVs issued as well as Administrative Civil Liabilities (ACLs). He recommended that should any other cities receive an NOV, they take the matter seriously. The District's assistance is available to the cities regarding audit response.

Annual Reports – Jason noted that the Santa Ana Annual Report was submitted to the Regional Board on time.

ROWD – Jason advised the group that the current Permit expires October 26, 2007. He then discussed the strategy being taken in regards to the Permit renewal. The Permit reapplication or Report of Waste Discharge (ROWD) is due April 25, 2007. It is expected that the Regional Board will want to enhance local documentation of the Permit compliance programs, enhance controls on new developments, and enhance Permit reporting requirements. Jason also added that data requested from the cities for the ROWD was received and should the District require any additional information, NPDES representatives and/or City Managers would be contacted.

V. ***TMDL Development – Jason Uhley***

- **Lake Elsinore/Canyon Lake Nutrient TMDL - 2007/2008 TMDL Cost Share Budget**
  Jason reviewed the cost share budget handout provided to the group. A brief discussion ensued. Jason then discussed the following items:

  - Cost Sharing Methodology
  - Basin Plan limitations affecting compliance
  - City's compliance obligations

  Jason also noted that he will continue to pursue grant dollars and that to date approximately 2 million dollars have been obtained for TMDL efforts. Budget information was provided in the agenda packets distributed to attendees during the meeting. Tim Moore of Risk Sciences has been contracted to assist with developing compliance programs of the TMDL.

- **Middle Santa Ana River Watershed Bacteria Indicator TMDL** –
  Jason noted that a tentative TMDL Task Force Agreement was submitted to the Permittees for legal counsel review. Comments are due March 1, 2007. Jason advised the group that the next meeting would be February 1, 2007 – 2:00 p.m. at SAWPA.

  Tentative Agreement - Jeff Allred raised concerns regarding agreement cost for the City of Norco. Jason reviewed the basis for the cost share, noted recent corrections to the cost share allocation, and recommended the City's send a representative to the next TMDL meeting to raise any remaining concerns.

VI. ***Compliance Assistance Program (CAP)*** - Jason summarized the purpose and status of the CAP Program. The CAP Program provides surveys of businesses and food facilities in the County conducted by the County Department of Environmental Health on behalf of the Permittees. Jason informed the group that the Regional Board may want a major expansion of the program. He then noted that Environmental Health was also no longer interested in continuing the program once the current contract ended in 2009 and that each city would need to develop their own inspection programs in its place. Jason offered to hold a workshop to help the cities develop programs. Joe Aklufi, Ati Eskandari, Kent Wegelin, Mike Shetler, and Jason engaged in further discussion regarding the CAP Program's deficiencies, costs, value, and the desire of several cities to have Environmental Health continue the inspection program services. Alex Gann agreed to follow up with Environmental Health regarding possible alternatives.

VII. ***New Agenda Items/ Schedule Next Meeting***

There were no new agenda items requested for the next meeting. Jason verified future meeting dates, which are May 17th, and September 20th 2007. Dusty thanked everyone for attending and adjourned the meeting.

NEXT MEETING IS SET FOR:
THURSDAY, March 15, 2007 - *12:00 P.M. (Tentative)*
AT
RIVERSIDE COUNTY EXECUTIVE OFFICE, FOURTH FLOOR
4080 Lemon Street, Riverside, CA 92501

Visit the StormWater/Clean Water Protection Program website at:
http://www.co.riverside.ca.us/depts/flood/YouCanHelp.asp.
The Site contains a variety of useful stormwater program information including links to other stormwater management programs and related web sites.

P8/112705

RIVERSIDE COUNTY STORMWATER MANGEMENT PROGRAM
MANAGEMENT STEERING COMMITTEE
SANTA ANA & SANTA MARGARITA REGIONS

MEETING AGENDA

(Lunch Served)
11:30 a.m.* – 12:30 p.m. May 17, 2007
Room C/D
Riverside County Administrative Office, Fourth Floor
4080 Lemon Street, Riverside, CA 92501

* meeting to begin at 11:30 a.m. or immediately following the WRCOG TAC meeting should it end later than 11:30

1. Welcome and Self Introduction – Dusty Williams, RCFC&WCD

2. Review May 17, 2007 Agenda and Approval of March 15, 2007 Meeting Minutes – Dusty Williams, RCFC&WCD

3. Santa Ana/Santa Margarita Program Status – Jason Uhley
   - Legislative Update
   - Permit Renewal Update
   - Draft General Construction Permit
   - Unification of the Santa Margarita Permit

4. TMDL Development - Jason Uhley
   - Lake Elsinore and Canyon Lake Nutrient TMDL – Compliance Plan for In-Lake Treatment
   - Middle Santa Ana River Watershed Bacteria Indicator TMDL - Agreement

5. Approve Next Fiscal Year's MSC Meeting Schedule
   - Proposed MSC meeting dates August 16th, October 18th, February 21st* and April 17th*

*Tentative meeting dates pending WRCOG 2008 schedule

P8/113877

RIVERSIDE COUNTY STORMWATER MANAGEMENT PROGRAM
MANAGEMENT STEERING COMMITTEE
SANTA ANA/SANTA MARGARITA REGIONS

MEETING MINUTES
for
March 15, 2007

I. ***Attendees:***

Benjie Cho	RCFC&WCD
Jason Uhley	RCFC & WCD
Charlene Warren	RCFC & WCD
Alex Gann	Riverside County Executive Office
Mike Shetler	Riverside County Executive Office
Joe Aklufi	City of Beaumont
David Lane	Calimesa
Lori Moss	City of Canyon Lake
Asad Korgan	City of Corona
Duane Baker	City of Hemet
Farida Naceem	City of Murrieta
Jeff Allred	City of Norco
Tom Boyd	City of Riverside
Barry McClellan	City of San Jacinto
Aldo Licitra	City of Temecula
John Pourkazemi	City of Temecula

II. ***Welcome and Self Introductions – Jason Uhley RCFC&WCD***

Jason Uhley welcomed everyone to the meeting and initiated self introductions. He noted that Dusty Williams and Steve Stump were attending CEAC Conference in Monterey, CA and would not be attending the meeting.

III. ***Review March 15, 2007 Agenda and Approval of January 18, 2007 Meeting Minutes – Jason Uhley RCFC&WCD***

The January 18, 2007 meeting minutes were approved. There were no items added to the March 15, 2007 agenda.

Handouts Provided:

- Agenda for March 15, 2007
- Minutes for January 18, 2007
- Legislative Highlights
- City of Norco Notice of Violation (NOV) letter from CRWQCB Santa Ana Region
- Mid-Year: Lake Elsinore and Canyon Lake Task Force Budget

IV. ***Regional Board MS4 Program Status – Jason Uhley***

Industrial/Commercial Compliance Assistance Program – Mike Shetler informed the MSC that County Building and Safety will be heading a new business licensing program for unincorporated Riverside County. The business license program will help to identify all of the businesses that require NPDES inspections in the unincorporated portions of the County. The program will develop a database which will be used by a new classification of inspectors that are solely dedicated to NPDES stormwater inspections. The intent of the program is to ultimately replace

the Industrial/Commercial Compliance Assistance Program since this program is no longer sufficient in the Santa Margarita Region of Riverside County.

Mike Shetler reported that the Department of Environmental Health will continue the CAP Program, which provides surveys of businesses and food facilities on behalf of Permittees in the incorporated areas. Aldo Licitra inquired as to how long the program will continue and was informed by Mike Shetler that it would continue at least until the next Permit cycle. Jason thanked Mike Shetler and Alex Gann for meeting with the Environmental Health Department.

Legislative Update – Jason provided attendees a legislative update. AB739, a Bill that would require the SWRCB to develop a comprehensive framework for assessing the effectiveness, as measured by receiving water quality, of stormwater management programs undertaken in accordance with those laws was highlighted. Jason noted that the District and CASQA are concerned that the use of monitoring data is not feasible for this purpose due to extreme variations in the natural systems that we are trying to measure. Jason noted that Geoff Brosseau, CASQA's Executive Director is in communication with the Assemblyman and working to educate him regarding an alternative approach based on CASQA Program Effectiveness Framework.

Jason also noted that Prop 84 was passed last year. Prop 84 is a 5 billion dollar water quality bond. District staff intends to pursue these grants dollars to offset costs for implementing TMDLs for Lake Elsinore, Canyon Lake, and the Santa Margarita Region.

Permit Renewal Update – Jason informed attendees that the Santa Ana Permit application was currently being prepared and is due to the Regional Board April 27, 2007. He discussed Permit renewal process, which includes negotiations with Board staff, followed by Permit workshops before the Regional Board and ultimately Permit adoption. He then informed the group to expect that in the next permit each city would be required to maintain an individual Local Implementation Plan which will describe how it complies with the Permit requirements. The Draft Permit will be released to Permittees and City Managers via email March 15, 2007. Comments on the Permit application package are due back to Jason by April 2, 2007.

Jason noted that the Santa Ana Regional Board issued a NOV to the City of Norco. A brief discussion regarding the release of NOVs ensued. Lori Moss indicated that the City of Canyon Lake was also issued an NOV and will forward it to Jason. Jason asked that the cities copy the District on all of the NOV response letters to the Regional Board. Jeff Allred, City Manager of Norco added that he was taking the NOV very seriously and will provide a thorough response letter to the Regional Board and will also forward the letter to Jason. Jason added that the Districts NPDES Section is available to assist Cities with addressing NOV responses and other issues, if necessary.

V. *TMDL Development – Jason Uhley*

- **Lake Elsinore/Canyon Lake Nutrient TMDL - 2007/2008 TMDL Cost Share Budget**
  Jason reviewed the LE/CL TMDL cost share budget handout provided to the group. A brief discussion ensued.

- **Middle Santa Ana River Watershed Bacteria Indicator TMDL**
  Jason reported that EPA is due to approve the TMDL at any time. A grant has been obtained to assist in the development of the TMDL.

VII. ***New Agenda Items/ Schedule Next Meeting***

There were no new agenda items requested for the next meeting. Jason informed the group the last meeting for the fiscal year was set for May 17th and advised them that it is a requirement that a city representative for each city attends 3 of the 4 meetings per fiscal year. A summary of attendance will be forwarded to City Managers.

NEXT MEETING IS SET FOR:
THURSDAY, May 17, 2007 - *12:00 P.M. (Tentative)*
AT
RIVERSIDE COUNTY EXECUTIVE OFFICE, FOURTH FLOOR
4080 Lemon Street, Riverside, CA 92501

Visit the StormWater/Clean Water Protection Program website at:
http://www.co.riverside.ca.us/depts/flood/YouCanHelp.asp.
The Site contains a variety of useful stormwater program information including links to other stormwater management programs and related web sites.

P8/113872

RIVERSIDE COUNTY STORMWATER MANAGEMENT PROGRAM
MANAGEMENT STEERING COMMITTEE
SANTA ANA & SANTA MARGARITA REGIONS

MEETING AGENDA

(Lunch Served)
11:30 a.m.* – 12:30 p.m. September 20, 2007
Room C/D
Riverside County Administrative Office, Fourth Floor
4080 Lemon Street, Riverside, CA 92501

* meeting to begin at 11:30 a.m. or immediately following the WRCOG TAC meeting should it end later than 11:30

1. Welcome and Self Introduction – Dusty Williams, RCFC&WCD

2. Review September 20, 2007 Agenda and Approval of May 17, 2007 Meeting Minutes - Dusty Williams, RCFC&WCD

3. Santa Ana/Santa Margarita Program Status - Jason Uhley
   - Legislative Update - Senate Constitutional Amendment 12 (SCA 12)
   - CASQA Conference Update
   - Draft General Construction Permit
   - Permit Renewal Update
   - Audits/NOVs

4. TMDL Development - Jason Uhley
   - Lake Elsinore and Canyon Lake Nutrient TMDL
   - Middle Santa Ana River Watershed Bacteria Indicator TMDL
   - Canyon Lake Bacteria Indicator TMDL

5. New Agenda Items/Schedule Next MSC Meetings
   - October 18th, February 21st* and April 17th*

*Tentative meeting dates pending WRCOG 2008 schedule

P8/115178

RIVERSIDE COUNTY STORMWATER MANAGEMENT PROGRAM
MANAGEMENT STEERING COMMITTEE
SANTA ANA/SANTA MARGARITA REGIONS

MEETING MINUTES
for
May 17, 2007

I. ***Attendees:***

Benjie Cho	RCFC&WCD
Charlene Warren	RCFC & WCD
Jason Uhley	RCFC & WCD
Alex Gann	Riverside County Executive Office
Mike Shetler	Riverside County Executive Office
Joe Aklufi	City of Beaumont
Casey Daily	City of Calimesa
Lori Moss	City of Canyon Lake
Asad Korgan	City of Corona
Duane Baker	City of Hemet
Farida Naceem	City of Murrieta
Jeff Allred	City of Norco
Tom Boyd	City of Riverside
Barry McClellan	City of San Jacinto
Aldo Licitra	City of Temecula

II. ***Welcome and Self Introductions – Jason Uhley RCFC&WCD***

Jason Uhley welcomed everyone to the meeting and initiated self introductions of attendees.

III. ***Review May 17, 2007 Agenda and Approval of March 15, 2007 Meeting Minutes – Jason Uhley RCFC&WCD***

Aldo Licitra (Temecula) noted that he and Farida Naceem (Murrieta) were in attendance at the March 15, 2007 meeting. Though the March 15, 2007 meeting minutes did reflect their attendance, the document titled "Attendance at FY 2006-2007 NPDES Santa Ana/Santa Margarita MSC Meetings and Future MSC Meetings" did not reflect their attendance. Corrections will be made. Tom Boyd (Riverside) inquired about his attendance at the September 21, 2006 meeting. Lori Moss (Canyon Lake) also inquired about her attendance at the September 21, 2006 meeting, in which she was then representing the City of Murrieta. Subsequent to the meeting, records were reviewed and there was no record of Tom's or Lori's attendance at the September 21, 2006 meeting. There were no items added to the May 17, 2007 agenda.

Handouts Provided:

- Agenda for May 17, 2007
- Minutes for March 15, 2007
- Bills 2007-2008 Legislative Session Legislative Highlights
- Preliminary Draft General National Pollution Discharge Elimination System Permit for Construction Activities Letter dated May 4, 2007 to Ms. Song Her/Clerk of the Board, SWRCB
- Final Version (4/17/07) Agreement to Form the Middle Santa Ana River Watershed TMDL Task Force

IV. *Santa Ana/Santa Margarita Program Status – Jason Uhley*

Legislative Update – Jason provided a brief update on Legislative Bill SCA 12. Senate Constitutional Amendment 12 (SCA 12) would propose to the people of the State of California an amendment to the Constitution of the State adding exemptions for fees and charges for stormwater and surface water drainage to the sewer, water, and refuse collection fee or charge exemptions already included in Proposition 218. This bill would make it easier for cities to fund and comply with new and increasingly stringent Federal Clean Water Act National Pollutant Discharge Elimination System (NPDES) stormwater permit requirements adopted by the California Regional Water Quality Control Boards. If passed by the legislature, this Amendment would be placed before the voters for approval. This bill is virtually identical to ACA 10 and ACA 13, which were prior efforts to amend Proposition 218.

Permit Renewal Update – Jason reported that the Report of Waste Discharge (ROWD) Permit Application for the Santa Ana Watershed was submitted to the Regional Board April 30th. Jason added that after the Regional Board releases their draft of the MS4 Permit, the Permittee representatives will have monthly, possibly weekly, discussions with the Regional Board. It is important that the cities dedicate staff to reviewing and commenting on the draft permits and proposed revisions to the draft Permit, as these programs can have significant fiscal consequences for the cities.

Jason provided an update on the audits conducted by the Santa Ana Regional Board noting that the next audits due to be released are the County of Riverside and the City of Lake Elsinore.

Draft General Construction Permit – Jason provided an update on the draft General Construction Permit. He informed City Managers that the Permit affects any construction project that disturbs more than one acre of land. The draft Permit released in March by the State Board included a number of changes that could be significant for the cities. Jason discussed the changes with the and further discussion ensued among the group on the following items:

- Revision of SWPPP requirements
- Notice of Intent (NOI) submittal changes
- Proposed 90-day public review process for SWPPPs
- The inclusion of Hydromodification and active treatment requirements in the draft Permit
- District comment letter submitted to the State Board on behalf of Permittees
- Tentative adoption date for the Permit is near the end of 2007

Unification with Riverside County MS4 Permits – Jason noted that the Chairwoman of the SWRCB approached Jason regarding combination of the Santa Ana, Santa Margarita and Colorado Region Permits. Jason expressed his thoughts on this issue, noting that although there are significant administrative inefficiencies with the current regulatory structure, he recommended that the County continue to work with three separate permits so as to ensure that each Permit addresses the unique needs of their respective watersheds. He further stated that should anyone have any thoughts on how to further approach this issue to please contact him.

V. *TMDL Development – Jason Uhley*

Lake Elsinore/Canyon Lake Nutrient TMDL – Compliance Plan for In-Lake Treatment

This TMDL is starting to move into the implementation phase. Tim Moore with Risk Sciences, a consultant for the TMDL, will be releasing a coordinated implementation strategy on behalf of the TMDL dischargers for Regional Board approval. In the meantime other implementation tasks are

under way such as the installation of the aeration system in Lake Elsinore, dredging Canyon Lake, development of a San Jacinto nutrient management plan and other discharger specific tasks.

Middle Santa Ana River Watershed Bacteria Indicator TMDL - Agreement
This TMDL affects the cities of Riverside, Corona, Norco and the County of Riverside. It has been adopted by the State and is awaiting EPA approval. Jason informed the group there is an Agreement to form the Middle Santa Ana River Watershed TMDL Task Force (Agreement included in agenda packet) that has been released to Permittees for approval by City Managers. Jason asked that the cities review and approve the Agreement as soon as possible. He further discussed costs associated with the TMDL.

VII. ***Approve Next Fiscal Year's MSC Meeting Schedule***
Jason thanked everyone for their attendance adding that the May 17, 2007 MSC meeting was the last meeting for the fiscal year. He then proposed the future MSC meeting dates for August 16th, October 18th, February 21st and April 17th. By a show of hands the meeting dates were approved.

VIII. ***New Agenda Items/Schedule Next Meeting***
There were no new agenda items requested for the next meeting.

NEXT MEETING IS SET FOR:
THURSDAY, August 16, 2007 - *11:30 A.M. (Tentative)*
AT
RIVERSIDE COUNTY EXECUTIVE OFFICE, FOURTH FLOOR
4080 Lemon Street, Riverside, CA 92501

Visit the StormWater/Clean Water Protection Program website at:

The Site contains a variety of useful stormwater program information including links to other stormwater management programs and related web sites.

P8/115175

SOUTHERN CALIFORNIA STORMWATER MONITORING COALITION (SMC)

ANNUAL MONITORING REPORT 2006-2007

Stormwater Monitoring Coalition
Of Southern California

September 2, 2007

INTRODUCTION

As a result of the increasing regulatory focus and the lack of scientific knowledge base, both stormwater regulators and municipal stormwater management agencies throughout southern California have developed a collaborative working relationship. The goal of this relationship is to develop the technical information necessary to better understand stormwater mechanisms and impacts, and then develop the tools that will effectively and efficiently improve stormwater decision-making. As individuals and agency representatives, there was early recognition that these issues are oftentimes not localized, but typically cross watershed and jurisdictional boundaries. This relationship culminated in a formal letter of agreement, signed in 2000, by all of the Phase I municipal stormwater NPDES lead permittees and the NPDES regulatory agencies in southern California to create the Stormwater Monitoring Coalition (SMC) (Table 1).

The SMC has been so successful that the member agencies have decided to renew the letter of agreement for another five years. Moreover, the organization's appeal has been recognized by others and is resulting in four new member agencies. The new agencies include Caltrans, the City of Los Angeles, the State Water Resources Control Board, and the US Environmental Protection Agency. The SMC welcomes these new members and looks forward to working together.

Table 1. List of member agencies in the Stormwater Monitoring Coalition.

California Regional Water Quality Control Board, Los Angeles Region[1]
California Regional Water Quality Control Board, San Diego Region[1]
California Regional Water Quality Control Board, Santa Ana Region[1]
California Department of Transportation, Caltrans
City of Long Beach[1]
City of Los Angeles, Watershed Protection Division
County of Orange, Public Facilities and Resources Dept.[1]
County of San Diego Stormwater Management Program[1]
Los Angeles County Department of Public Works[1]
Riverside County Flood Control and Water Conservation District[1]
San Bernardino County Flood Control District[1]
Southern California Coastal Water Research Project[1]
State Water Resources Control Board
US Environmental Protection Agency, Office of Research and Development
Ventura County Watershed Protection District[1]

[1] original SMC member agency

The first project supported by the SMC was to develop a five-year Research Agenda. The research agenda, published in 2001, consisted of 15 unique projects developed around three main foci: 1) developing a regional monitoring infrastructure; 2) understanding stormwater runoff mechanisms and processes; and 3) assessing receiving water impacts. The SMC has made tremendous progress implementing the Research Agenda. Nine of the 15 projects have been started and nearly all have been completed. Each of these projects has, in one form or another, influenced stormwater management. Three examples of the SMC's influence include: 1) the project on evaluating microbial

source tracking (MST) has led to a significant change in how MST is conducted in southern California; 2) the project on indicators of peak flow directly influenced the development of peak flow criteria in Los Angeles; 3) the project to establish standardized data formats has led to language in multiple stormwater NPDES permits requiring electronic data submittal. The SMC is currently developing an agreement to update and revise the research agenda. This will provide vision and direction to the SMC for the next five years.

Not only does the collaborative nature of SMC projects represent value in terms of improved effectiveness of management activities, but value in terms of cost efficiency to its member agencies. All of the completed SMC projects have been on time and on (or under) budget. The cost of the studies is divided among multiple agencies rather than each agency trying to support individual isolated projects. In addition, the SMC has been successful in attracting outside resources and agency support. For example, all but a single project has attracted additional funds amounting to well over $700,000. In addition, we have received in-kind assistance from inland wastewater dischargers, environmental groups, universities, and regulatory or stormwater agencies that are not currently SMC members. The power of collaboration should magnify as the SMC continues to be successful in accomplishing its goals. Below is a list of the project accomplishments during the 2006-07 Fiscal Year.

PROJECT ACCOMPLISHMENTS

Building A Regionally Consistent and Integrated Freshwater Stream Bioassessment Monitoring Program

Status: 95% complete
Project budget: $280,000

Assessment of freshwater biological communities represents a potentially powerful tool for evaluating the effects of discharges in southern California creeks and streams. Bioassessments integrate the effects of multiple stressors, including chemical pollutants and physical alterations in receiving waters. The value of biological assessments is that they are closer to many of the defined beneficial uses of receiving waters (i.e. aquatic life, warm water habitat, cold water habitat) than chemically-derived water quality objectives.

The goal of this study is to build a regionally consistent bioassessment monitoring program. This project will be completed in three phases including: 1) building a monitoring infrastructure; 2) calibrating and validating a regional assessment tool; and 3) designing an integrated, coordinated regional monitoring program. The first phase focuses on creating a monitoring infrastructure so that multiple agencies are properly trained, data are collected in comparable manners, and data can be efficiently shared. The second phase focuses on developing an assessment tool that is robust enough to be used by all agencies across the region. This will enable a consistent approach for evaluating the status of freshwater biological communities and provide the answers

regarding community impacts to managers in meaningful and understandable terms. The third phase focuses on creating a study design that most efficiently answers specific questions of interest at large regional scales. Addressing some questions at regional scales can provide cost efficiency for addressing reference condition, cumulative impacts, and when nested within a local sampling design, provides unparalleled information for providing context to local monitoring data.

Our main collaborator on this project is the California Department of Fish and Game (CDF&G). The project is 50% funded by the SWRCB, whose main desire is to ensure integration with the Surface Water Ambient Monitoring Program (SWAMP). This will provide further value to SMC member agencies. To help accomplish this project, an SMC Technical Subcommittee has been formed.

All three phases have been implemented by the SMC. The first goal towards monitoring infrastructure is complete. SMC member agencies have used training, workshops, field audits, enhanced laboratory quality assurance activities, and written or collated information management and field protocol documents. Of particular note, SMC member agencies have helped to create an important network of laboratory taxonomists called the Southwestern Association of Freshwater Invertebrate Taxonomists that will be important in standardizing and ensuring the quality of laboratory identifications. The second task to evaluate an assessment tool is nearing completion. The southern California index of biological integrity (SC IBI) was being tested in 15 low gradient streams of varying levels of impact. It was clear from this study that the IBI is not the best assessment tool for describing impact in these habitats. The low gradient project was so successful that the Working Group helped SCCWRP and CDFG to prepare a State Consolidated Grant proposal to test the SC IBI in another important habitat; non-perennial streams. Finally, the Working Group has designed an integrated, collaborative Regional Watershed Monitoring program. The goal of the Regional Watershed Monitoring program is to increase the effectiveness of existing NPDES monitoring programs by integrating among permittees and SWAMP to achieve a large-scale assessment of watershed condition. The cost of implementing this program would be negligible because the Working Group identified significant redundancies and inefficiencies in existing monitoring programs that could be reprogrammed towards a regional design. Finally, the Working Group has found additional partners to help contribute to the regional monitoring program including the Wetland Recovery Project (WRP), other RWQCBs, and other NPDES permittees.

This project is in its final phases. The written workplan should be completed within the next quarter and a regional watershed monitoring program could be implemented as soon as 2008.

Laboratory Intercalibration Study
Status: 35% complete
Project budget: $60,000

One goal of the southern California Stormwater Monitoring Coalition (SMC) is to compile monitoring data from separate monitoring programs to make regionwide assessments. The SMC has begun integrating their monitoring programs by agreeing on goals, objectives, and study designs as part of their development of a southern California Model Monitoring Program ftp://ftp.sccwrp.org/pub/download/PDFs/419_smc_mm.pdf. As part of the model monitoring program, 11 analytical laboratories that perform chemical analysis of runoff samples for SMC member agencies conducted an intercalibration study to assess interlaboratory variability and enhance comparability.

The laboratory intercalibration study quantified the range of variability both within and among laboratories that SMC member agencies can expect when examining their own data, or combining data with other agencies. It was successful because the laboratories worked together to minimize interlaboratory variability through the use of performance-based limits for accuracy, precision, and sensitivity. The intercalibration study also defined a series of protocols for specific analytical techniques where performance-based guidelines needed to be enhanced with methodological consistency to ensure comparability. Finally, the intercalibration and resulting guidelines/protocols were documented in a Laboratory Guidance Manual for SMC member agency laboratories <ftp://ftp.sccwrp.org/pub/download/PDFs/420_smc_chem.pdf>.

The laboratory Guidance Manual and intercalibration effort, however, was incomplete in three areas. The first area was the need to repeat the intercalibration periodically as new laboratories, or new personnel at existing laboratories, come along. The second area was the need to intercalibrate on additional constituents. The original laboratory calibration focused on suspended solids (TSS), nutrients, and trace metals. Organic constituents such as chlorinated hydrocarbons (CHC), organophosphorus pesticides (OP), and polycyclic aromatic hydrocarbons (PAH) were not included. Third, the integration of the laboratory performance-based guidelines were insufficiently integrated into monitoring programs. While the Laboratory Manual could be used as citation for monitoring agencies or regulatory compliance, no specific permitting or contractual language was provided for SMC member agencies.

The goal of this project is to complete the three areas of missing information to make the Laboratory Guidance Manual an ongoing and effective document. It will involve three steps: 1) repeat the laboratory intercalibration for TSS, nutrients, and trace metals; 2) initiate an intercalibration for organic constituents and toxicity; and 3) create draft contract language for integration into stormwater monitoring programs. A technical Working Group consisting mostly of laboratory managers has been formed to assist in the study.

The SMC has successfully finished the first task of the study. The intercalibration of TSS, nutrients, and trace metals was based on customized certified reference materials just for our project and runoff samples from different land use types. Gratifyingly, most of the laboratories that participated previously successfully completed the second iteration. An objective laboratory scoring system, which consists of letter scores for each analyte, has been developed and is being used for the contract language in task 3.

Pending formal agreement signatures, the working group is prepared to implement the toxicity testing element of the intercalibration.

Bacterial Reference Watershed Study
Status: 90% complete
Project budget: $165,000 + in-kind services

High fecal indicator bacteria levels are one of the most common surface water impairments in southern California. Frequent exceedences of bacterial water quality standards have resulted in development of Total Maximum Daily Loads (TMDL) as a regulatory mechanism to address bacterial contamination in several southern California watersheds.

Current water quality standards for freshwater use fecal coliforms or E. coli as an indicator of fecal contamination because their presence is well correlated with the many waterborne disease-causing organisms or pathogens. However, fecal coliforms and E. coli are naturally present in the intestines of warm-blooded. Consequently, fecal contamination of surface waters can result from numerous sources of fecal pollution, including human sewage, manure from livestock operations, indigenous wildlife and urban runoff. In undeveloped areas wildlife, such as small and large mammals and birds, have the potential to be a significant source of fecal bacteria to surface waters.

In recognition of the potential for natural sources to affect bacteria levels in surface waters, several TMDLs either allow or require development of numeric targets that account for natural bacteria levels. For example, the Malibu Creek Bacteria TMDL requires responsible jurisdictions to monitor unimpaired streams in the local watershed during dry weather, dry winter weather, and wet weather for at least one full year in order to develop a representative numeric target for allowable bacteria exceedence days. Several similar studies are currently being considered or proposed in Ventura, Los Angeles, Orange, and San Diego counties; however, there is currently no coordination between these proposed studies.

The objective of this project is to assess natural bacteria levels in numerous streams throughout southern California in order to provide a regional characterization of background bacteria concentrations. Bacterial indicators were measured from unimpaired streams in 12 southern California watersheds weekly for one full year. These data were used to investigate background levels, frequency of exceedences of relevant water quality standards, and spatial and temporal patterns.

This project is a partnership of numerous SMC agencies who are participating via in-kind contributions. Three regional water quality control boards, six storm water agencies, and several cities cooperated on field data collection and laboratory analysis. Following laboratory and field intercalibration, samples were collected weekly between May 2006

and May 2007. Overall, the 30-day geometric mean exceedences of freshwater standards were 2% for *E. coli* and 14% for *enterococci*. There were clear seasonal patterns with exceedences being most common during July and August. Data collection and analysis for this project is complete, with a project report expected in December 2007.

Hydromodification Study
Status: 10% complete
Project budget: $1,137,440

The process of urbanization has the potential to affect stream courses by altering watershed hydrology. Development and redevelopment can increase the amount of impervious surfaces on formerly undeveloped landscapes. This reduces the capacity of remaining pervious surfaces to capture and infiltrate rainfall and, as a result, a larger percentage of rainfall becomes runoff during any given storm. In addition, runoff reaches the stream channel much more efficiently, so peak discharge rates postdevelopment are higher compared to predevelopment for an equivalent rainfall event. This process has been termed hydromodification.

Hydromodification can result in adverse effects to stream habitat, surface water quality, and water supply. The stream erosion that results from the increased peak flow can threaten infrastructure, homes, and businesses. Intermittent and ephemeral streams that possess riparian and wetland habitat are at particular risk from effects of hydromodification. Streams in semi-arid regions are especially vulnerable to urbanization due to a prevalence of sand bed channels, lack of vegetative reinforcement, and relatively large net changes in water and sediment supply associated with stormwater runoff. Recent studies by the SMC have indicated that intermittent and ephemeral streams in southern California degrade at lower levels of watershed urbanization than streams in the eastern US.

In response to the effects of hydromodification, state and local agencies are developing standards and management approaches to control and/or mitigate the effects of hydromodification on natural and semi-natural stream courses. Successful implementation of these regulatory programs requires development of tools to better assess hydromodification effects and develop appropriate mitigation and management strategies.

The goal of this project is to develop a series of tools supporting implementation of hydromodification management measures that could be used to better protect the physical, chemical, and biological integrity of streams and their associated beneficial uses. This project will provide tools to answer the following questions: 1) Which streams are at the greatest risk from the effects of hydromodification? 2) What are the anticipated effects in terms of increased erosion, sedimentation, or habitat loss, associated with increases in impervious cover? 3) What are some potential management measures that could be implemented to offset hydromodification effects and how effective are they likely to be?

This project is being conducted in collaboration with researchers from Colorado State University, Fort Collins. In May 2007, we held an initial Technical Advisory Committee meeting for the project, which was attended by over 30 scientists and managers. Based on the results of this meeting, we refined our scope of work and produced the Project Work Plan and Quality Assurance Project Plan (QAPP). Field reconnaissance of sampling sites was completed during the summer of 2007, resulting in the identification of 18 sites where model calibration data will be collected, and an additional 15 sites where data will be collected for development of the screening tools. Field data collection will occur in Fall 2007. Finally, we have continued to coordinate this project with similar efforts being conducted by several county stormwater programs, CASQA, and the Water and Land Use Partnership (WALUP).

Low Impact Development Study
Status: 10% complete
Project budget: $1,000,000 ($400,000 SMC plus $600,000 State Prop 40 Grant)

The Low Impact Development Guidance (LID) Study is being conducted with funding from the State Water Resource Control Board's Consolidated Grants Program, under the Urban Runoff Program of Proposition 40. A proposal was submitted by the County of San Bernardino on behalf of the SMC for the LID Project known as "LID Guidance and Training for Southern California."

The LID Project will develop a comprehensive program to incorporate LID strategies and techniques into the planning and design of public and private sector projects. The LID Project will develop a model program for localities in California that are interested in adopting LID strategies and techniques. This will include determining the key technical and institutional issues that must be addressed for successful implementation, pilot projects that demonstrate the effectiveness of LID, and training and outreach to help solidify an implementation strategy to ensure large-scale and long-term success.

The grant funded portion of the project must be completed by September 2008. This will require a two-year work effort that is organized into the following funding areas:

1. **Pilot Project Planning and Design**. *Establish design criteria and site selection*
2. **Monitoring.** *Implementation and demonstration of technology*
3. **Outreach and Training.** *Reporting and facilitation of wide-spread programmatic implementation*

The SMC will provide the required 25% matching funds ($200,000) for the grant funded tasks. These tasks include preparing a literature review, conducting a series of training workshops, and developing a field monitoring program for LID features. The Literature Review has been completed and the final report will be made available through the California Stormwater Quality Association Website and the SMC website when operational.

A Technical Advisory Committee has been established and they reviewed the Literature Review and provided guidance on the initial tasks for the project. The TAC will meet as needed to advise the project as it proceeds.

Training workshops are in preparation. Several potential field monitoring sites have been identified, and Stantec Consulting has been hired to develop the monitoring program and select monitoring sites.

Once the grant-funded tasks are completed, the SMC will continue to fund (approximately $200,000) and manage the project for three additional years that will primarily require field monitoring and analysis of LID features.

Stormwater Monitoring Coalition Steering Committee
Meeting Agenda
September 11, 2006
10:00 a.m. – 2:30 p.m.
at
Southern California Coastal Water Research Project
7171 Fenwick Lane
Westminster, CA 92683

1. Introductions

2. Agreements
   a. Renewal of SMC Master Agreement D06-049 and addition of new parties – Chris Crompton (Orange County)
   b. Low Impact Development (LID) and peak flow follow-up grant status Matt Yeager (SB County Flood)/ Eric Stein (SCCWRP)
   c. Toxicity amendment to laboratory intercalibration study – Ken Schiff (SCCWRP) District has funds allocated

3. Existing project updates
   a. Bioassessment project and grant submittal status – Ken Schiff
   b. Laboratory intercalibration project – Ken Schiff
   c. Reference watershed project – Eric Stein

4. Presentation and ranking of proposed projects for 2006-07
   a. Update of SMC Research Agenda – Ken Schiff
   b. California Sustainable Watershed/Wetlands Information Manager (CalSWIM) - UCI (Dr. Grant)
   c. Other committee member projects Susan Zielski, Sea Grant program

5. Other items
   a. Follow-up on SMC web site - may make this a component of a larger project
   b. Committee member items

6. Next Meeting

Minutes of the
Stormwater Monitoring Coalition of Southern California

September 11, 2006

Attendees:	
Arne Anselm	Ventura County Watershed Protection Division
Art Barnett	Southern California Coastal Water Research Project
Mike Borst	US EPA Office of Research and Development
Valerie Connor	State Water Resources Control Board
Chris Crompton	County of Orange
Karl Dreher	Caltrans
Terry Fleming	US EPA Region IX
Linda Garcia	Riverside County Flood Control District
Stan Grant	University of California Irvine
Ken Schiff	Southern California Coastal Water Research Project
Youn Sim	Los Angeles County Dept of Public Works
Bob Stein	City of Newport Beach
Eric Stein	Southern California Coastal Water Research Project
Mark Smythe	Santa Ana Regional Water Quality Control Board
Xavier Swammikannu	Los Angeles Regional Water Quality Control Board
Jason Uhley	Riverside County Flood Control District
Joann Weber	San Diego County Dept. Environmental Health
Steve Weisberg	Southern California Coastal Water Research Project
Matt Yeager	San Bernardino County Flood Control District
Charlie Yu	City of Los Angeles
Susan Zaleski	University of Southern California Sea Grant

1. Introductions

Chris Crompton began the meeting at 10:20 AM with roundtable introductions. The objectives of the day included: 1) introductions; 2) existing agreements; 3) existing projects; 4) presentation and ranking of proposed projects for 2006-2007; 5) other items; and 6) next meeting date.

2. Agreements

There were four agreements for discussion. The first agreement was for the renewal of the original SMC agreement (No. D99-072). The new agreement was similar to the last agreement in terms of structure and function including a Steering Committee, subsequent implementation agreements, a lifespan of five years, and the addition of four new member agencies. Most member agencies found the agreement acceptable or acceptable with minor changes. Lawyers at two agencies expressed larger concerns. Chris had made the requested changes, distributed the revised agreement, and discussed the alterations with the group. Timing urgency was expressed by more than one member agency. The SMC agreed to two action items:

- Chris is to distribute the latest version electronically
- Member agencies are to provide legal review of the new agreement and respond to Chris. Any counsel that has major issues should contact Chris directly

The second and third agreements were for assessing the effectiveness of low impact site development BMPs and the hydromodification study. A consolidated grant proposal was submitted for both projects and award notifications won't be announced until October 2006. The SMC agreed to the action item:

- Wait and see if the projects receive grant funding

The fourth potential agreement was to amend an existing agreement for laboratory intercalibration studies to include toxicity testing. Ken Schiff had distributed a written Scope of Work prior to the meeting. After some clarification of project tasks and objectives, the SMC agreed to fund the study, including the addition of three new agencies. The SMC agreed to two action items:

- Chris will prepare the amendment
- Member agencies will begin the process of allocating funds to the study

Matt Yeager made a brief presentation to the SMC based on his experiences in preparing proposals for outside funding for SMC projects. Although the SMC has completed numerous successful projects, most had been administered by SCCWRP. SCCWRP will not be able to administer all SMC projects so other member agencies are going to have to assume some additional responsibilities. SMC member agencies have several limitations, however, including restricted staff time to identify grant opportunities and write proposals, limited expertise, inability to receive and distribute funds, manage subcontracts, and have management commit to multi-year programs. Matt recommended that the SMC form a subcommittee that can track grant opportunities, identify partnerships, coalesce expertise, and provide marketing. Such a subcommittee could either be written into the next SMC Agreement or through the use of hired consultants. The SMC agreed to the action item:

- Chris, Xavier, Matt and Linda will form a subcommittee to explore ideas for resolving these issues

3. Existing project updates

The agenda item on existing projects covered three studies. The first existing project was the bioassessment study co-funded by our project partners at the SWRCB and LACSD. The project has three main goals; 1) build monitoring infrastructure among SMC member agencies; 2) evaluate and enhanced assessment tools; and 3) create a regional monitoring program for southern California watersheds. While the Technical Working Group had taken a short hiatus for summer, progress on the study was significant. Task 1 was estimated to be 95% complete. Task 2 was estimated to be 70% complete. Task 3 was estimated to be 30% complete. During the summer, SCCWRP had created a monitoring inventory in order to determine if there were monitoring redundancies or inefficiencies

that could be used to improve individual programs and at the same time identify potential resources for implementing the regional program. The SMC agreed to the action item:

- Ken will prepare a progress report at the next meeting

The second existing project was the laboratory intercalibration study. The goal of this study was to continue periodic intercalibration studies and develop common contractual language for the member agency contract analytical laboratories. Ken distributed the final letter of invitation for contract laboratories. The SMC agreed to two action items:

- Ken will provide an electronic version of the letter to SMC member agencies for distribution to their contract laboratories
- Ken will post the letter to the SCCWRP web site and distribute to non-contractor laboratories in the region

The third existing project was for the reference watershed study. Eric Stein presented the results from the initial phase of the study. More than 31 wet weather site-events and 53 dry weather site-events were sampled between 2004 and 2006 and analyzed for a long list of constituents including TSS, nutrients, trace metals, and bacteria. Eric summarized his presentations in four conclusions: 1) concentrations in runoff from natural areas were generally one to two orders of magnitude lower than in urban areas; 2) concentrations in dry weather runoff from natural areas were generally below water quality standards for all constituents; 3) concentrations in wet weather runoff from natural areas generally exceeded water quality standards for bacteria; and 4) concentrations in wet weather runoff from natural areas generally did not exceed water quality standards for trace metals or nutrients. The SMC agreed to the action item:

- Provide feedback on the draft report when it is brought before the project technical committee in November

4. Presentation and ranking of proposed projects for 2006-07

The next agenda item was on developing new project ideas for the upcoming fiscal year. Ken began the discussion by providing the status of project on the Research Agenda. Of the 15 projects listed, 10 were either completed or in progress. At least nine projects were identified and evaluated based upon five criteria (Table 1). They eventually were combined into three broad categories. These included:

a) Renew the 5-year Research Agenda.
The goal of this project is to revise and update the research based on progress to date, new questions or issues to be addressed, and incorporating the needs of the new member agencies.

b) Biological based projects
The goal of these projects is to address biological based endpoints related to stormwater management. Several biological based projects were suggested including

a Tiered Aquatic Life Use (TALU) study, Regional biological monitoring, nutrients and algae, and bioaccumulation.

c) Information technology (IT) based projects
The goal of these projects is to address information storage, retrieval, analysis, and training for member agencies. Several IT based projects were suggested including an SMC web site, CalSWIM, SWAMP data accessibility, evaluating BMP effectiveness in receiving waters (using a computer model), and training-based information sharing.

The SMC agreed to three action items:

- Ken, Chris and Karl will lead the research agenda proposal
- Ken, Val, Terry, Art and Jason will lead the biological based projects
- Chris, Susan, Stan, Rusty Fairey (SWAMP/MLML), and Bob will lead the IT based project

Each group will prepare an oral presentation for the next meeting that should include a description of the problem, how each project will address the problem, generalized tasks or steps, and a rough cost estimate and timeline.

5. Other items

The last agenda item was on other topics and covered one item. The SMC member agencies asked for a copy of this year's Annual Report. Member agencies agreed to review the document electronically so that it can be completed by October 31st. The SMC agreed to the action item:

- Ken will prepare a draft Annual Report and distribute it to the SMC no later than October 15th

6. Next meeting

The next meeting was scheduled for 10:00 to 12:30 on December 5, 2006 tentatively located at SCCWRP. The meeting adjourned at 2:45 PM.

$50k
Hydromod study status?
TALU scope - SEU not able to assist at this time

Table of proposed projects for next FY.

	Project Name	Project Proponent	On existing Research Agenda	Linked to an Existing SMC study?	Time to Completion?	Additional Partners?	Immediacy?
1	Tiered Aquatic Life Use	Group	Yes	Yes	1 – 3 yr	SWRCB, EPA	High
3	Training based Information Sharing	Susan Zalesky	Yes	Yes	1 – 2 yr	Sea Grant	Med High
3	Renew the Research Agenda	Ken Schiff	No	Yes	1 yr	CASQA	High
3	CalSWIM	Stan Grant	Yes	No	1 - 3 yr	No	Med
2	SWAMP Expansion	Val Connor	Yes	Yes	1 – 3 yr	SWRCB	High
1	Evaluate BMP Effectiveness on Receiving Waters	Bob Stein	Yes	No	1 - 2 yr	City of Newport Beach	High

6. Next Meeting

Minutes of the
Stormwater Monitoring Coalition of Southern California

December 5, 2006

Attendees:	
Arne Anselm	Ventura County Watershed Protection Division
Mike Borst	US EPA Office of Research and Development
Chris Crompton	County of Orange
Terry Fleming	US EPA Region IX
Bruce Fujimoto	State Water Resources Control Board
Linda Garcia	Riverside County Flood Control District
Stan Grant	University of California Irvine
Mike McCann	San Diego Regional Water Control Board
Kevin Murphy	California State University Sacramento (Caltrans)
Jamie Rinehart	Malibu Watershed
Ken Schiff	Southern California Coastal Water Research Project
Youn Sim	Los Angeles County Dept of Public Works
Eric Stein	Southern California Coastal Water Research Project
__ Soloman	Los Angeles Regional Water Quality Control Board
Joann Weber	San Diego County Dept. Environmental Health
Steve Weisberg	Southern California Coastal Water Research Project
Matt Yeager	San Bernardino County Flood Control District
Shoukofe Marishi	City of Los Angeles

Chris Crompton began the meeting at 10:10 AM. The objectives of the day included: 1) introductions; 2) existing project updates; 3) existing agreements; 4) update on proposed projects; 6) other items; and 7) next meeting date.

The agenda item on existing projects covered three studies. Ken presented the progress on the first project, the bioassessment study co-funded by our project partners at the SWRCB and LACSD. The project has three main goals; 1) build monitoring infrastructure among SMC member agencies; 2) evaluate and enhance assessment tools; and 3) create a regional monitoring program for southern California watersheds. The Technical Working Group had made great progress thus far completing the first goal. Ken presented some results from the second goal indicating that the SoCal Index of Biological Integrity (IBI) was working marginally well in low gradient habitats. An evaluation of methods showed that sampling technique had less influence than natural variation in low gradient habitats. The third goal, the design of a Regional Watershed Monitoring Program, was making the most progress. Ken showed initial monitoring designs created by the Technical Working Group and the SMC encouraged further progress.

The second existing project was the laboratory intercalibration study. The goal of this study was to continue periodic intercalibration studies and develop common contractual language for the member agency contract analytical laboratories. Ken noted that the first meeting of the Intercalibration Working Group was scheduled for next week. The SMC agreed to the following action item:

- SMC member agencies will ensure that their contract laboratories are participating in the study

The third existing project was the reference watershed study. Eric Stein had presented the results of the study at the last meeting. A draft report had been distributed and the SMC member agencies had participated in a review meeting the previous week. The final report is expected in January. The SMC spin-off study on bacterial levels in reference watersheds was proceeding on schedule. The SMC agreed to the action item:

- Provide feedback on the draft report no later than Dec 15th

There were three agreements for discussion. The first agreement was renewal of the master SMC agreement (No. D99-072). The new agreement was similar to the last agreement in terms of structure and function including an Executive Committee, subsequent implementation agreements, a lifespan of five years, and the addition of four new member agencies. Chris distributed the 3rd draft and discussed the following changes that were made at the request of signatory agencies; 1) remove EPA from the agreement and create a separate agreement that will be suitable to their legal counsel; and 2) minor editorial changes and clarifications. The SMC agreed to two action items:

- Chris will distribute the latest version electronically
- Member agencies should email confirmation of the revised agreement, including any updates of signature pages, no later than January 15, 2007

The second agreement was the amendment of the existing agreement for laboratory intercalibration studies to include toxicity testing. The SMC agreed to initiate the study in the summer of 2007 since a number of member agencies needed the information for either NPDES permit or TMDL requirements. All member agencies agreed to fund this study with the City of Long Beach paying half-share. The SMC agreed to the following action item:

- The City of Los Angeles and Caltrans will check their resources for joining into the agreement

The third agreement was for assessing the effectiveness of low impact site development BMPs and the hydromodification study. The County of San Bernardino had received notification of award for a Prop 50 consolidated grant proposal. The State contract was now being ratified within the County. In the meantime, San Bernardino is bringing the LID Center under contract to assist in the study. There was some discussion regarding the SWRCB's LID Project. It was obvious the two projects had different, but complimentary audiences. Matt is looking for study sites and acquiring additional partners including CASQA and Santa Clara. Timing is an issue for this study. The Grant will expire within two years, but the SMC project may go as long as 3-5 years. The SMC agreed to the action item:

- Chris will work with Matt to finalize the agreement
- All member agencies need to verify their participation in the study

The next agenda item was on developing new projects for the upcoming fiscal year. At the last meeting, the SMC Executive Committee had outlined four basic groups of projects that were to be brought before the SMC today. Ken began with a description of

a new project to renew the SMC Research Agenda. After some discussion, the Executive Committee agreed that this was an important project because it sets the direction of the SMC for the next 5 years. They also agreed on a format for a workshop to develop the new research agenda, which included integrating other organizations with similar needs and desires (i.e., CASQA, Caltrans, etc.). The SMC agreed to the action item:

- Ken should prepare a written scope of work outlining the research agenda project

The second group of projects for consideration was information technology-based studies. Stan Grant outlined a capacity building grant he had delivered to the US EPA for building the next version of CalSWIM. Stan agreed to keep the SMC apprised of the grant status. Terry Fleming suggested a second information technology project. He would like to implement the standardized data transfer formats (SDTFs) developed by the SMC during the model monitoring program so he can integrate member agency monitoring data with SWAMP, ultimately improving 305b and 303d listing decisions. Moreover, Terry had resources to support SCCWRP to assist in this effort. After some discussion, the SMC agreed to:

- Conduct a half-day meeting with the model monitoring committee to update the SDTF
- SCCWRP will work individually with the member agencies to ensure data upload to SWAMP
- Terry will report back to the SMC how the data were utilized by SWMP and the SWRCB

The third group of projects for consideration was biologically based projects. Ken led this agenda item with recommending implementation of the Regional Watershed Monitoring program. He described a process whereby existing monitoring inefficiencies could be exchanged for funding the majority of the regional program. This program would then get leveraged against the SWAMP program since the RWQCB staff responsible for SWAMP was a part of the SMC Technical Working Group designing the study. The SMC agreed to:

- Ken should write up a scope of work for the next meeting
- A presentation of the San Gabriel River watershed-wide monitoring program will be presented to demonstrate the increased effectiveness of monitoring information after trading off inefficient effort.

The last potential new project was the hydromodification study. Eric presented the project goals, which included: 1) identifying the most at-risk streams; 2) determining the largest effects; 3) developing management tools for minimizing these effects; and 4) training SMC staff to use the tools. The project had received a Prop 50 consolidated grant proposal. Eric described his need for the SMC, which included a Technical Advisory Committee and to focus additional effort, if needed. After some discussion, the SMC Executive Committee. The SMC also agreed to:

- Send Eric names of staff via email for the Hydromodification Technical Advisory Committee

The last agenda item was on other topics and covered one item. Chris reiterated the need for an SMC web site. The SMC agreed to the action item:

- Chris will check to see if Orange County server can host the web site

The next meeting was scheduled for 10:00 to 1:00 on March 6 or 13, 2007 tentatively located at Riverside County. The meeting adjourned at 12:45 PM.

Stormwater Monitoring Coalition Steering Committee
Meeting Agenda
March 6, 2007
10:00 a.m. – 12:30 p.m. (Pacific Time)

Conference Call In: 888.296.6500 guest code:425157

1. Introductions

2. Status of SMC website – Ken Schiff (SCCWRP)/Chris Crompton (Orange County)

3. SMC participation in committee to develop procedures and guidance for stormwater toxicity in the Los Angeles Region – Xavier Swamikannu (Los Angeles Regional Board)

4. Agreements
   a. Renewal of SMC Master Agreement D06-049 and addition of new parties – Chris Crompton
   b. EPA participation agreement with SMC – Mike Borst (EPA)
   c. Toxicity amendment to laboratory intercalibration study – Chris Crompton
   d. Low Impact Development (LID) - Matt Yeager (SB County Flood)/ Chris Crompton
   e. Update of SMC Research Agenda – Ken Schiff /Chris Crompton

5. Existing project updates
   a. Bioassessment project – Ken Schiff
   b. Laboratory intercalibration project – Ken Schiff
   c. Reference watershed project – Eric Stein (SCCWRP)
   d. Pilot project on electronic data reporting – Terry Fleming (EPA)

6. Update on proposed projects for 2006-07
   a. Update on biological based project – Ken Schiff
      San Gabriel River collaborative watershed monitoring program
   b. Update on hydromodification project – Eric Stein
   c. Other committee member projects

7. Other items
   a. Committee member items

8. Next Meeting

Stormwater Monitoring Coalition Steering Committee
Meeting Agenda
June 5, 2007
10:00 a.m. – 12:30 p.m. (Pacific Time)
at
Riverside County Flood Control and Water Conservation District

Conference Call In: 888.296.6500 guest code:425157

1. Introductions

2. Status of SocalSMC website – Chris Crompton (Orange County)
   In process of buying domain name. May add to Research Agenda to fund website devlpt.

3. SMC participation in meeting to develop procedures and guidance for stormwater toxicity in the Los Angeles Region – Ken Schiff (SCCWRP) and Xavier Swamikannu (Los Angeles Regional Board)

4. LID project status – Matt Yeager (SB County Flood)

5. Hydromodification project status – Eric Stein (SCCWRP)

6. Agreements
   a. Renewal of SMC Master Agreement D06-049 and addition of new parties – Chris Crompton SWRCB has given approval; can now process execution by the other SMC members. Wants execution w/in 2 mos
   b. Status of review of Low Impact Development (LID) Agreement D06-051 - Chris Crompton Chris asking for comments w/in 2 wks. (6/19)
   c. EPA participation agreement with SMC – Mike Borst (EPA) EPA is working on a separate MOU w SMC. May have a document by Sept
   d. Update of SMC Research Agenda Agreement D07-025 – Chris Crompton Requests comments by 7/1
   e. Toxicity amendment to laboratory intercalibration study – Chris Crompton Still in progress. Draft will be sent out blwn now + the Sept mtg.

7. Ongoing project updates
   a. Bioassessment project – Ken Schiff
   b. Laboratory intercalibration project – Ken Schiff
   c. Pilot project on electronic data reporting – Ken Schiff
      Issue w using SMC's data transfer format for 305(b) + 303(d) reporting

8. Other items
   Committee member items

9. Next Meeting September, 10-2:30, 9/18 (pending room availability)

Vaikko Allen	Contech
Darwin Dizon	Contech

II. *Introductions*

Tom Rheiner announced that he will be moving to the Federal Projects department within the District. Benjie Cho will be replacing Tom as the Santa Ana Permit Manager. Tom noted that he would still be available to assist Permittees with any questions and concerns and acknowledged Regional Board staff and Permittees for their supportive work efforts in making the program a success. Tom then welcomed everyone to the meeting and initiated the self introduction of attendees.

III. *Agenda Changes*

There were no changes to the agenda.

IV. *Review of Minutes: April 27, 2006*

Corrections will be made to reflect that Jessica Chin and Linda Garcia were in attendance at the April 27, 2006 meeting. The meeting minutes did not list them as being present. *Note:* Please be sure to sign in at the meeting to receive credit for your attendance.

Handouts and Materials Provided:

- Agenda, Minutes, Roster
- Caltrans Water Quality Newsflash 06-22 through 06-25
- Powerpoint Slides – Tom Rheiner
- Initial Draft 2006 Basin Plan Triennial Review Priority List
- Stormwater Quality Standards Task Force Phase II print out – Phase/Summary, Phase II, Agenda & Meeting Notes (information retrieved from website: http://www.sawpa.org/projects/planning/stormwater2.htm)
- Risk Science – Example of Implementation Targets for Narravtive Pathogen Objectives
- CONTECH – Stormwater Treatment Product Overview brochure

V. *Announcements*

A. ***CASQA Meeting Update*** – Tom informed attendees of the CASQA 2006 Conference which offers a full program of training workshops, presentations and exhibits for holders of municipal, industrial and construction NPDES stormwater permits. The conference is being held at the Radisson Hotel, in Sacramento from September 25th – 27th. For more information please visit the CASQA website at: http://www.casqa.org/.

B. ***Next MSC Meeting Sept 21, Nov 16, 2006*** – Future meeting dates for the MSC are September 21st and November 16th. The May 18, 2006 meeting was cancelled and a one-page executive summary will be sent to City Managers via email to provide them an update on the current activities of the NPDES program.

C. ***June 21, 2006 WQMP Training ~ Murrieta*** – Tom announced that AEI-CASC conducted WQMP training in the City of Murrieta which had an attendance of approximately 60 people. Marianna Hernandez inquired about construction training in which Tom informed her that it would need to be coordinated with Brown and Caldwell who has been contracted to conduct construction training for Permittees. Tom added that, should any of the cities feel the need for further training for their staff, to please contact NPDES staff.

VI. *Public Education Program – Florence Mowrer*

There was no public education report available, however, Tom provided a brief update on the efforts of the public education department noting that the Riverside Corona Resource

Conservation District (RCRCD), Steve Groner, and Mission Resource Conservation District (MRCD) contracts for public education outreach services are being renewed by the District. Tom also noted that the public education billboard that was put up in October 2005 is still posted off of the 60 freeway in Riverside.

VII. ***TMDL Progress Report – Tom Rheiner***

A. ***Lake Elsinore/Canyon Lake Nutrient TMDL Update*** – The TMDL workgroup met May 17th and June 13th. Items of discussion included the Delphi Process, legacy loads, and background conditions. Tom informed Permittees that the contract agreement has been circulated to stakeholders for action by their respective Boards/Councils. Also, the language for the contract agreement has been finalized. Tom asked Permittees which of them had calendared the item to be taken to their Boards or Councils for review. The City of Moreno Valley and Riverside stated that the item had been calendared for their cities. No other cities commented. Tom asked that Permittees seek to get a date as to when the item will go before their council.

B. ***Middle Santa Ana River Bacteria Indicator TMDL Update*** – This TMDL was adopted at the August 26, 2006 Regional Board meeting and was approved by State Board in May 2006. It is now awaiting approval by EPA. The workgroup met to discuss the TMDL May 18th. The June 15th meeting was cancelled. There were no questions from the group. For more information on the TMDLs please see the powerpoint slides provided at the meeting.

C. ***San Diego Lagoons TMDL/Investigation Order*** - Linda Garcia discussed with attendees the efforts relating to this item. Several lagoons in San Diego County are on the 303(d) list for bacteria indicators, siltation, and/or nutrients. In advance of conducting TMDL studies, the San Diego Regional Board is issuing an Investigation Order that includes monitoring requirements to support models developed by Tetra Tech. Comments on the Investigation Order are due June 23, 2006.

VIII. ***Santa Ana/Santa Margarita Region Programs –Tom Rheiner***

A. ***Stormwater Quality Standards Task Force Update*** – Tom Rheiner discussed the efforts to regulate beneficial use in REC 1 and REC 2 facilities noting that the Task Force met June 15th. Tom further discussed the goal to reevaluate REC 1 in the Santa Ana Region Watershed, progress status, how the issue affects Riverside County MS4 Permittees, technical memos, Phase III near-term products, and next steps. Attendees engaged in further discussion regarding REC 1 and REC 2 issues.

IX. ***Open Discussion***

A. ***Santa Ana Regional Board*** – Keith Elliott stated that the Blue Ribbon Panel workshop conclusions will be available in July 2006.

B. ***San Diego RWQCB*** – Not present.

C. ***U.S. EPA – Region IX*** – Not present.

D. ***Round Table*** – No comments.

X. ***New Agenda Items / Schedule Next Meeting***

The next NPDES TAC Meeting is scheduled for July 27, 2006. If there are any questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

XI. ***Contech Stormwater Solutions Presentation – Vaikko Allen***

Vaikko Allen of Contech Stormwater Solutions conducted a presentation on stormwater treatment services provided by Contech.

Please visit the StormWater/CleanWater Protection Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

Jessica Chin	City of Riverside
Aldo Licitra	City of Temecula
Dell Ross	Resource Conservation District–Southwest County
Rosanna Lacarra	PBS&J

II. *Introductions*

Jason Uhley announced that Tom Rheiner was no longer the Santa Ana Permit Manager and has been transferred to the District's Federal Projects Section. These duties have been assigned to Benjie Cho, who Jason introduced to the group. Benjie gave a brief self introduction. Jason then announced that Juan Martinez will no longer be working in the public education department and congratulated him on his promotion. Jason thanked Juan for his assistance in the public education department and asked that should Permtitees have any requests for public education materials, they request them ahead of time, due to the fact that Flo will be shorthanded.

III. *Agenda Changes*

There were no changes to the agenda.

IV. *Review of Minutes: June 22, 2006*

It was documented in the meeting minutes that Linda Nixon (City of Hemet) was in attendance at the June 22, 2006 meeting, when in fact she was not. Corrections were made.

Handouts and Materials Provided:

- Agenda, Minutes, Roster
- Caltrans Water Quality Newsflash #s 06-26 through 06-30
- Email Message from John Carmona of the Colorado Regional Board dated, June 7, 2006 Re: Sanitary Sewer Overflow Information
- July 27, 2006 Public Education Information Report
- 2005-2006 Stormwater/Cleanwater Protection Program-Santa Ana River Watershed Report
- Statewide Waste Discharge Requirements (WDR)
- CASQA 2006 Conference Draft Agenda
- Draft Letter to Gerard Thibeault Re: Report of Compliance with Lake Elsinore /Canyon Lake TMDL, Board Order No. R8-2004-0037 (Permittees only)

V. *Announcements*

A. ***CASQA Meeting Update~Sept 25-27 Conference*** – Copies of the draft agenda for the CASQA 2006 Conference were distributed to attendees. Jason reviewed the topics of the agenda with attendees. The CASQA 2006 Conference offers a full program of training workshops, presentations and exhibits for holders of municipal, industrial and construction NPDES stormwater permits. The conference is being held at the Radisson Hotel, in Sacramento from September 25th – 27th. For more information please visit the CASQA website at: http://www.casqa.org/.

B. ***Next MSC Meeting Sept 21, Nov 16, 2006*** – Future meeting dates for the MSC are September 21st and November 16th. The May 18, 2006 meeting was cancelled and a one-page executive summary was sent to City Managers via email on June 28, 2006, providing them an update on current activities of the NPDES program.

C. ***Numeric Effluent Limits Update*** – Jason provided an update on the SWRCB numeric effluent limits hearing. Items of discussion included:

- Upcoming CASQA Workshop to review CASQA Blueprint for Municipal Permits
- Issues raised by the NGOs, Dischargers, and RWQCB and SWRCB staff.

D. ***Sanitary Sewer Overflow Permit*** – Benjie gave an update on the Sanitary Sewer Overflow (SSO) Permit. He discussed background SSO information, action items, training information, and key requirements and guidelines. For more detailed information, please refer to the Statewide Waste Discharge Requirements (WDR) handout distributed at the meeting. Benjie inquired as to the interest of the Permittees in having the Southern California Alliance of Publicly Owned Treatment Works (SCAP) provide a presentation on the SSO Permit to educate Permittees who operate sanitary sewer systems. The contact person for information on WDR is Ken Tyson who can be reached at 951.320.2028.

E. ***NPDES Training*** – Jason discussed the upcoming NPDES Annual Training. He noted that an effective analysis was currently being drafted and several items related to the training classes are being analyzed. Training classes were being scheduled, based on preliminary discussions with CDM, the consultant performing the effectiveness evaluation. Benjie provided a schedule of tentative dates for training. Once the training schedule has been finalized, an email notice will be sent to Permittees. Mike Roth inquired as to why the effective analysis was being conducted. Jason informed him that it is to make sure that Permittees are meeting Permit requirements and to see how effective the classes are in educating attendees. Results of the effective analysis will be included in the Annual Report.

E. ***WQMP Revisions*** – Jason informed attendees that there were several de minimus revisions made to the Water Quality Management Plan (WQMP) which will be posted on the District's website at the end of week of June 22, 2006. Permittees will be provided copies of the updated WQMP via CD at the August 24, 2006 NPDES TAC meeting, along with a list of the revisions. Several attendees engaged in a brief discussion regarding issues surrounding the revisions of the WQMP. Tina asked that Permittees make efforts to notify the general public in their cities of the revised WQMP. Jason advised attendees that there were no substantial revisions to the WQMP. The WQMP has been approved by the Board and any substantial revisions would need to be approved by them. Changes were limited to correcting web links, footnote references, and reorganization of a table currently contained in the Best Management Practices (BMP) Design Handbook to make it consistent with a table in the WQMP pro per. More significant revisions to the BMP Handbook are being proposed and will be provided to the Permittees for review at a future date.

VI. ***Public Education Program – Florence Mowrer***

Flo provided attendees an update on the efforts of the public education department. Items of discussion included:

- Household Hazardous Waste Collection Schedule
- Curb Markers
- All Public Outreach Requests
- 800 Toll Free Results
- Inventory Update
- New Promotional Backpacks (samples available for Permittees)
- New Promotional Butts Out Cigarette Container (samples available for Permittees)
- 2007 Calendars
- Riverside Corona Resource Conservation District (RCRCD) Report
- Mission Resource Conservation District (MRCD) Report

- Steve Groner & Associates
- Perris Fair scheduled for October (help is needed from Permittees to assist with event)

Phoung Hunter inquired as to how Moreno Valley School District (MVSD) can be included in the presentations. Flo advised her that she would check with MRCD and RCRCD in efforts to have MVSD included. Please see public education report for more detailed information on these items.

VII. ***TMDL Progress Report – Tom Rheiner***

A. ***Lake Elsinore/Canyon Lake Nutrient TMDL Update*** – The TMDL workgroup met May 17th and June 13th. The Agreement was approved by the Lake Elsinore Technical Advisory Committee (TAC) members and was in process of formal adoption by member agency legislative boards. It was mentioned that SAWPA has issued Bills for the fiscal year.

In accordance with Task 7 of the TMDL, the District provided the Regional Board with a list of recommended changes to the Drainage Area Management Plan (DAMP) and WQMP necessary to comply with the Total Maximum Daily Load (TMDL). In addition, the letter also addressed the District's plan to obtain compliance with the TMDL and a schedule of activities. The letter was reviewed by Permittee staff and the final version was then emailed to them.

B. ***Middle Santa Ana River Bacteria Indicator TMDL Update*** – This TMDL was adopted at the August 26, 2006 Regional Board meeting and was approved by State Board in May 2006. It is now awaiting approval by EPA. Jason informed everyone that he was currently working on the Cooperative Agreement to form a Task Force similar to the Lake Elsinore TMDL Task Force.

C. ***San Diego Lagoons TMDL/Investigation Order*** – Several lagoons in San Diego County are on the 303(d) list for bacteria indicators, siltation, and/or nutrients. In support of developing a TMDL, the San Diego Regional Board has issued an Investigation Order that requires watershed stakeholders to collect monitoring data needed to support models to be developed by Tetra Tech on behalf of the Regional Board. District and Santa Margarita Permittee staff will need to coordinate with San Diego County and Camp Pendleton to further develop the approach and cost sharing.

VIII. ***Santa Ana/Santa Margarita Region Programs – Tina Tuason/Jason Uhley***

A. ***Annual Report Update*** – It was announced that Annual Report season is nearing and the District will be getting a head start on the compling of the reports. Tina has scheduled to release the reporting forms for the Santa Margarita Region on August 1, 2006. The forms are due back to Tina by September 31, 2006. Annual reporting forms for the Santa Ana Region will be released at the end of August and are due back to Benjie in October.

IX. ***Open Discussion***

A. ***Santa Ana Regional Board*** – Keith Elliot offered the Regional Board's assistance with training should Permittees need it. Please contact Keith for further information. Also, the Regional Board has released the schedule of dates for the 6 cities who have been issued audits.

B. ***San Diego RWQCB*** – Not present.

C. ***U.S. EPA – Region IX*** – Not present.
D. ***Round Table*** – No comments.

X. *New Agenda Items / Schedule Next Meeting*
The next NPDES TAC Meeting is scheduled for August 24, 2006. If there are any questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

Please visit the StormWater/CleanWater Protection Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

II. *Introductions*

Jason Uhley welcomed everyone to the meeting and initiated self introductions.

III. *Agenda Changes*

Agenda item V (Public Education Program) was moved up to agenda item IV. Presentation by Arlene Chun on draft revised WQMP template was added to the agenda. Bureau of Reclamation was added to agenda as item VII-B (Santa Ana/Santa Margarita Region Programs).

IV. *Review of Minutes: July 27, 2006*

Item VII-B of the July 27, 2006 minutes, Middle Santa Ana River Bacteria TMDL Update read that the TMDL was adopted at the August 26, 2006 Regional Board meeting. The correct adoption date is August 26, 2005.

Handouts and Materials Provided:

- Agenda, Minutes, Roster
- Caltrans Water Quality Newsflash #s 06-31 through 06-34
- June 2006-July 2007 Household Hazardous Waste Collection Program schedule
- Southern California Heritage Gardening Guide DVD

V. *Public Education Program – Florence Mowrer*

Flo provided attendees an update on the efforts of the public education department. Items of discussion included:

a. Trash Task Force Meeting – On August 31st, Flo, the Public Informations Specialist, attended Supervisor Ashley's Riverside County Trash Task Force Stakeholders Meeting to discuss combining our intra-county agency efforts to combat illegal dumping (solids and liquid waste) problems in Riverside County. The program is comprised of four committees: legislative, site maintenance, enforcement and public outreach/education. County Public Informations Officer, Ray Smith, leads the public outreach subcomittee group that the public information specialist is an affiliate of.
b. Household Hazardous Waste Collection Schedule – The schedule has been released and was provided to attendees at the meeting.
c. Garden Guide DVD – The District's public education department has networked with Metropolitan Water District and Southern California Water agencies for public education purposes. Flo received several hundred DVDs that will be used to help support the public education home garden care presentations. DVDs were made available to attendees.
d. Posters – Stormwater Pollution Prevention Week (September 18th through the 24th) posters were made available at the meeting for Permittees.
e. Starting August 25, 2006 there will be a new assistant in the public education department to assist Flo.
f. Flo attended a learning standards workshop to help establish better presentations for elementary kids.
g. The 2007 calendars are being processing. Flo advised Permittees that if they had a specific event they would like to have published in the calendar to please inform her. By suggestion of Steve Dondalski the calendars will include the rainy wet season dates. To allow for complete coverage of all watersheds, the calendar will reflect October 1st through May 31st as the rainy wet season dates.

h. Backpack Promotional - Flo is waiting to hear back from schools on the affect that the backpacks has had on the elementary school children.

VI. ***WQMP Template – Arlene Chun***

Arlene gave a Powerpoint presentation on the WQMP template and discussed the changes that were made. Permittees will be emailed the template for their review. Comments on the template will be due back a week after they are sent, then posted on the District's website once the template is finalized.

V. ***Announcements***

A. ***CASQA Meeting Update~Sept 25-27 Conference*** – Jason discussed the upcoming CASQA conference scheduled for September 25-27th in Sacramento CA. Hotel rooms and reservations were discussed.

B. ***Next MSC Meeting Sept 21, Nov 16, 2006*** – Jason advised attendees of the upcoming (Management Steering Committee) MSC Meeting on September 21, 2006. The focus of the meeting will be Audits and TMDLs.

C. ***Numeric Effluent Limits Update*** – CASQA held a conference in Brea, CA to address numeric effluent limits and the Blue Ribbon Panel. Benjie briefed attendees on the events of the conference. Items of discussion included NGO s negotiations, the four stages Permittees will have to progress through to meet water quality objectives. Those stages included, reiterative approach, reiterative approach with benchmarks, technology based effluent limits, and water quality based effluent limits. Jason then discussed the basis behind the recent numeric effluent limits issues advising Permittees of the requirements that will need to be met in the event that this item moves forward.

D. ***Sanitary Sewer Overflow Permit*** – Permittees were informed of the updated SSO contact list posted on the District's website.

E. ***NPDES Training*** – Permittees discussed upcoming NPDES annual training dates, online registration, class size reduction, and registration forms that will be sent the week of August 28th. There will be no email, phone, fax registrations for these trainings classes. Training dates will be scheduled for the month of October.

F. ***WQMP Workgroup*** – This workgroup was formed to address WQMP Implementation. An objective of the workgroup is to develop an FAQ that would help Permittees and the development community to address the WQMP requirements. The first draft of the FAQ has been released to several Permittees who attended the workgroup meeting. It will be released to the remaining Permittees and a follow up meeting will be scheduled to assess responses to any questions and comments.

G. ***Microbial Source Training*** - PBS&J held a lunch and learn session at the District on August 22, 2006. The topic covered was microbial source assessments. Those who attended the lunch and learn session were asked to complete an evaluation, providing their feedback on the class. Discussion on future lunch and learn sessions were discussed.

H. ***CASQA Numerical Effluent Method Workshops*** – Discussed in item C above.

I. ***Audits*** – Keith Elliot noted that the Regional Board audits will be complete once the County, Canyon Lake, and Lake Elsinore audits have been conducted. As an FYI Jason briefly discussed an article in the Inland Valley Bulletin regarding the audits, San Bernardino County, and the Regional Board.

J. ***Annual Report Reporting Forms*** – The Santa Margarita Region Annual Reporting forms were sent out to Pemittees on August 2, 2006 and are due back September 15, 2006. The Santa Ana Region annual reporting forms will be sent out to Permittees September 1, 2006 and are due back September 30, 2006.

VII. ***TMDL Progress Report – Tom Rheiner***

A. ***Lake Elsinore/Canyon Lake Nutrient TMDL Update*** – The Lake Elsinore/Canyon Lake TMDL meeting was held August 23, 2006. The primary points of discussion was the Implementation Agreement and compliance. Jason advised Permittees that there are still entities and cities who needed to sign the Implementation Agreement. He then reported on the water quality of Lake Elsinore noting that the water quality in Lake Elsinore is good at this point, biominipulation to achieve compliance, carp removal from the Lake, nutrient targets and concentrations, and impairments. Tim Moore of Risk Sciences is assisting with the efforts of this TMDL.

B. ***Middle Santa Ana River Bacteria Indicator TMDL Update*** – Jason advised the group that there was not much to report on regarding this TMDL however, it has been approved by the State and a draft Implementation Agreement has been prepared for the TMDL. Jason also informed Permittees that a task force will need to be formed to support this TMDL.

C. ***San Diego Lagoons TMDL/Investigation Order*** – Jason provided an update on the status of this TMDL. Items of discussion included; requirements of the TMDL, 13267 letters to be sent to all discharges of the lagoon, data collection necessary to develop the TMDL, Bureau of Reclamation's interest in developing the TMDL, extension of timelines, and Regional Board efforts in regards to moving forward on the nutrient and TDS TMDL for various waterbodies within the Santa Margarita Watershed.

VIII. ***Santa Ana/Santa Margarita Region Programs – Tina Tuason/Jason Uhley***

A. ***Stormwater Quality Standards Task Force Update*** – A meeting has been scheduled. Meeting information will be sent to Permittees via email.

IX. ***Open Discussion***

A. ***Santa Ana Regional Board*** – No comments.
B. ***San Diego RWQCB*** – Not present.
C. ***U.S. EPA – Region IX*** – Not present.
D. ***Round Table*** – No comments.

X. ***New Agenda Items / Schedule Next Meeting***

Jamie Aderhold requested that he conduct a presentation at the end of the October meeting. The next NPDES TAC Meeting is scheduled for September 28, 2006. If there are any

questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

Please visit the StormWater/CleanWater Protection Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

Meeting Minutes
for
September 28, 2006

I. Attendees:

Benjie Cho	Riverside County Flood Control District
Linda Garcia	Riverside County Flood Control District
Florence Mowrer	Riverside County Flood Control District
Penny Nanney	Riverside County Flood Control District
Charlene Warren	Riverside County Flood Control District
Tina Tuason	Riverside County Flood Control District
Jason Uhley	Riverside County Flood Control District
Steve Dondalski	Riverside County Building & Safety
Doug Thompson	Riverside County Environmental Health
Mike Shetler	Riverside County Executive Office
Claudia Perez	Riverside County Transportation
Keith Elliott	Santa Ana Regional Board
John Wilder	City of Beaumont
Michele Colbert	City of Corona
Jeff Potts	City of Corona
Linda Nixon	City of Hemet
Phuong Hunter	City of Moreno Valley
Kent Wegelin	City of Moreno Valley
Lori Askew	City of Norco
Michael Morales	City of Perris
Sandy Caldwell	City of Riverside
Jessica Chin	City of Riverside

II. *Introductions*

Jason Uhley welcomed everyone to the meeting and initiated self introductions.

III. *Agenda Changes*

There were no changes to the agenda.

IV. *Review of Minutes: July 27, 2006*

There were no changes to the meeting minutes.

Handouts and Materials Provided:

- Agenda, Minutes, Roster
- Caltrans Water Quality Newsflash #s 06-35 through 06-38
- Public Education Information Report – September 28, 2006
- National Pollution Prevention Week
- RCRCD Flyer – Dates to Remember 2006
- Handout of Public Education Gazebo Design

V. *Announcements*

A. ***CASQA Meeting Update~Sept 25-27 Conference Workshop, Awards (Sacramento Radisson Hotel)*** – Jason Uhley, Benjie Cho, Tina Tuason, Linda Garcia, and Linda Nixon reported on their attendance and activities of the workshop. Items of discussion included:

- MS4 Permit Monitoring
- Environmental Communities
- Public Education
- Planning
- Effective Analysis (Source and Treatment Control)
- Best Management Practices (BMPs) and BMP Lake Design
- Numeric Effluent Limits
- Blue Ribbon Panel and State Litigation
- Hydromodification
- Bigger Detention Basins
- Bacteriodes, E coli, and Beneficial Uses
- Los Angeles County's Study on Ground Water and Infiltration (Nutrients and Pathogens)
- Low Impact Development (LID) Concepts
- Presentation given by Celeste Cantu
- White Paper released by CASQA
- Caltrans Studies
- Santa Margarita Region need for Hydromodification Plan Development

B. ***Next MSC Meeting - Sept 21, Nov 16, 2006*** – Jason informed Permittes that during the September 21st MSC meeting, City Managers were put on notice that an Request for Qualification (RFQ) would be released, the (Report of Waste Discharge) ROWD would be due in April 2007, and there would be cost increases related to the (Total Maximum Daily Load) TMDLs. City Managers were also informed that the city

audits conducted by the Regional Board had been reviewed and comment letters would be sent for all cities simultaneously.

C. ***NPDES Training – Schedule Set/ Class Size Update*** – Permittees engaged in a lenghty discussion regarding upcoming NPDES annual training dates, online registration, class size reduction, the implementation of more classes that will be available, Building Industry Association (BIA) training services, and consultant costs for conducting training. There will be no email, phone, or fax registrations for these trainings classes. Training dates will be scheduled for the month of October. Jason noted that the comment letter from CDM who conducted a effective analysis on District training classes would be released to Permittees for their input. Training will be offered again in the Spring of 2007.

D. ***WQMP Workgroup Meeting October 5, 2006 at 3:30 p.m*** – Permittees were advised that a revised draft Frequently Asked Questions (FAQ) had been released via email and their input on the document was needed. The next workgroup meeting will be held October 5, 2006 at the District.

E. ***Audits ~ County Audit Update*** – Maria Macario updated the Permittees on the status of the audit that was being conducted by the Regional Board. There was a brief discussion regarding San Bernardino County audits.

F. ***Annual Report – Reporting Forms due September 30th*** – Permittees were informed that the Santa Margarita Region annual reporting forms were sent to Pemittees August 2, 2006 and were due to back to Tina September 15, 2006. The Santa Ana Region annual reporting forms were sent to Permittees September 1, 2006 and are due to Benjie September 30, 2006. Benjie noted that it was his hope to have the Industrial/Commercial summary forms back to Permittees by the end of the day on September 28, 2006.

VI. *Public Education Program – Florence Mowrer*

Flo provided attendees an update on the efforts of the public education department. Items of discussion included:

- Final Draft of Gazebo Design (Permittee assistance needed in okaying the design. Flyer examples of the gazebo were provided to attendees)
- Costs
- Perris Home & Garden Fair
- Scheduled Clean-ups
- HHW Schedule
- Southern California Fair Oct 7th – 15th (Permittee help needed at event)
- City of Lake Elsinore information inquiries in efforts to obtain their own gazebo through www.greatgazebo.com
- Rotating Displays available for Permittee use (contact Flo for issuance)

For more detailed information, please refer to the September 28, 2006 Public Education Information Report distributed at the meeting.

VII. ***TMDL Progress Report – Jason Uhley***

A. ***Lake Elsinore/Canyon Lake Nutrient TMDL Update ~ September 20th Meeting Update*** – Jason informed Permittees that this TMDL is likely to be effective in December 2006 or January 2007. Tim Moore of Risk Sciences has been assisting the Permittees with revising the REC 1 standards. Jason further discussed costs for monitoring, ecoli regulation, implementation agreement, and efforts of the Storm Water Quality Standards Task Force (SWQSTF) in relation to the TMDL. He then informed Permittees that Hope Smythe had received the District's Task 7 Compliance letter dated August 1, 2006. A $600,000 grant has been obtained by the Task Force which will be used to install wetlands that may augment ongoing biomanipulation efforts.

B. ***Middle Santa Ana River Bacteria Indicator TMDL Update ~ Next meeting is October 3, 2006 from 1:30 to 4:00 p.m.*** – A $600,000 grant to conduct bacteria source assessment and implement pilot BMPs has been received. Jason provided a brief update on the status of this TMDL noting that the TMDL will be approved by Environmental Protection Agency (EPA) shortly and that a draft Task Force agreement will soon be released to formalize coordinated efforts associated with TMDL implementation and monitoring.

C. ***San Diego Lagoons TMDL/Investigation Order ~ September 22nd NNE Presentation Update*** – Jason provided an update on the status of the 13267 order. Items of discussion included; requirements of the 13267 letter (require collection of data necessary to establish a TMDL). Due to the time frame in which the Regional Board gave to complete these tasks, the District and other dischargers named in the order requested a hearing before the San Diego Regional Board to request more time to complete the tasks. The hearing has been scheduled for October 11, 2006.

VIII. ***Santa Ana/Santa Margarita Region Programs – Tina Tuason/Jason Uhley***

A. ***Stormwater Quality Standards Task Force Update*** – The Task Force met with EPA and the State Board in September to discuss the proposed SWQSTF amendments to the REC 1 Water Quality Standards. The State Water Resource Control Board (SWRCB) and EPA were generally supportive of the effort. Jason noted that revised REC 1 standards may possibly be in effect by July 2007. The next Task Force meeting is October 12, 2006. Permittees were invited to attend the meeting.

IX. ***Open Discussion***

A. ***Santa Ana Regional Board*** – No comments.

B. ***San Diego RWQCB*** – Not present.

C. ***U.S. EPA – Region IX*** – Not present.

D. ***Round Table*** – No comments.

X. ***New Agenda Items / Schedule Next Meeting***

The next NPDES TAC Meeting is scheduled for October 26, 2006. If there are any questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

Please visit the StormWater/CleanWater Protection Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

II. ***Introductions***
Jason Uhley welcomed everyone to the meeting and initiated self introductions.

III. ***Agenda Changes***
There were no changes to the agenda.

IV. ***Review of Minutes: September 28, 2006***
There were no changes to the meeting minutes.

Handouts and Materials Provided:

- Agenda, Minutes, Roster
- Caltrans Water Quality Newsflash #s 06-39 through 06-43
- RCFC NPDES Training Summary Report for October 13, 2006

V. ***Announcements***

A. ***Next MSC Meetings – November 16th, February 15th, & May 17th***
Jason Uhley announced that the meetings dates for future MSC meetings adding that NPDES Permittees will now be included in the email notifications sent to City Managers regarding the MSC meetings. The primary focus of the November 16, 2006 MSC meeting will be the Middle Santa Ana TMDL and cities audits.

C. ***NPDES Training – Schedule Set/ Class Size Update*** – Benjie Cho informed attendees that the training sessions went well. There was an email sent to Permittees regarding lessons that were learned and things that need to be worked on for future training in regards to the online registration process. Aldo Licitra forwarded comments regarding changes he would like to see in future training classes to Benjie.

D. ***WQMP Update*** – Permittees were advised that a revised draft Frequently Asked Questions (FAQ) had been released via email and their input on the document was needed. The deadline for comments was set for November 2, 2006. Marianna Hernanadez asked that Benjie forward her the email as she did not receive the initial email sent to Permittees. The next workgroup meeting will be held October 5, 2006 at the District.

E. ***Audits ~ County Audit Update*** – Mike Roth announced that the audit reports wouldn't be available until the new year (2007).

F. ***Annual Report Update*** – Jason reported that Tina Tuason was currently working on compiling the Santa Margarita Region Annual Report. Benjie added that the District has received most of the annual reporting information from the cities in the Santa Ana Region. Benjie added that an email request sent the earlier part of the week of October 23rd, requesting Permittees to forward an electronic version of their MS4 locations. He advised Permittees that should there be problems with them providing the electronic copy, that it is best to provide the information to him in hardcopy now rather than electronic copy later. Any questions, please contact Benjie.

G. ***Available Funding*** – Dell Ross informed attendees that he had recently became aware of the fact that there was funds available in a trust to be used for enforcement of lake

and basin projects. He stated that should Permittees become aware of any projects that may be worth while needing restoration in efforts to save the creeks, this money may be used for those purposes. Dell also made mention that the Regional Board had reached an agreement with Mr. Johnson who had been found to be in violation of providing false intentional information to obtain a permit.. The case is no longer being handled as a lawsuit, nor will there be a fine.

VI. ***Public Education Program – Florence Mowrer***

Flo provided attendees an update on the efforts of the public education department. Items of discussion included:

- Permittee email address confirmations
- Flo's last day working is November 3rd, return date is unknown
- Permittee Inventory

Jason asked that Permittees send thier request for public education materials through the NPDES website. The District is working to get an assistant on board to aid in the public education efforts during Flo's absence.

VII. ***TMDL Progress Report – Jason Uhley***

A. ***Lake Elsinore/Canyon Lake Nutrient TMDL (EVMWD)*** ~ Jason announced that the next meeting is November 9th from 2 to 4:30 p.m. He added that he was asked by Hope Smyth to give a presentation on the August 1st submittal that was made on behalf of Permittees. The presetation will provide a presentation

VII.

TMDL Progress Report – Jason Uhley

A. ***Lake Elsinore/Canyon Lake Nutrient TMDL (EVMWD)*** ~ Jason announced that the next meeting is November 9th from 2 to 4:30 p.m. He added that he was asked by Hope Smyth to give a presentation on the Permittees TMDL Task 7 Compliance plan submitted to the RWQCB on August 1, 2006. Jason noted the presentation will discuss the basic MS4 Permit requirements, TMDL requirements, and the specifics of the Permittees plan.

B. ***Middle Santa Ana River Bacteria Indicator TMDL Update ~ Next meeting is November 30, 2006 from 1:30 to 4:00 p.m.*** – Jason provided a brief update on the status of this TMDL noting that the TMDL will be approved by Environmental Protection Agency (EPA) shortly and that a draft Task Force agreement will soon be released to formalize coordinated efforts associated with TMDL implementation and monitoring. He added that a $600,000 grant to conduct bacteria source assessment and implement pilot BMPs has been received and Permittees will soon need to develop a Task Force. Tim Moore of Risk Sciences will work as the consultant to assist Permittees with the efforts of this TMDL

C. ***San Diego Lagoons TMDL/Investigation Order ~ September 22nd NNE Presentation Update*** – There was a workshop provided to the the San Diego Regional Board by District staff. A task force will need to be formed to implement the TMDL.

VIII. ***Santa Ana/Santa Margarita Region Programs – Tina Tuason/Jason Uhley***

A. ***Stormwater Quality Standards Task Force Update*** (SAWPA) Next meeting is November 9, 2006 from 9:30 to 1:00 p.m. – Jason discussed EPA issues related to this TMDL, REC uses, and the finalizing of the proposed ammendment language.

IX. ***Open Discussion***

A. ***Santa Ana Regional Board*** – No comments.

B. ***San Diego RWQCB*** – Not present.

C. ***U.S. EPA – Region IX*** – Not present.

D. ***Round Table*** – No comments.

X. ***New Agenda Items / Schedule Next Meeting***

The next NPDES TAC Meeting is scheduled for November 16, 2006. If there are any questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

XI. ***Vendor Presentation – J2A Environmental***

Jamie Aderhold from J2A Environmental conducted a presentation on trident curb screens and a new monitoring tool for illegal dishcarges.

Please visit the StormWater/CleanWater Protection Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

II. *Introductions*

Jason Uhley welcomed everyone to the meeting and initiated self introductions. Bob Collocott informed Permittees that Julie Quinn of URS would be assisting him with working efforts of the NPDES Program.

III. *Agenda Changes*

Jason added item F under agenda item V (Announcements), a brief peresentation provided by the County on their new license program.

IV. *Review of Minutes: October 26, 2006*

There were no changes to the meeting minutes. Minutes were approved.

Handouts and Materials Provided:

- Agenda, Minutes, Roster
- Caltrans Water Quality Newsflash #s 06-44 through 06-46
- Trident Curb Screen brochure
- Filterra Stormwater Bioretention Filtration System brochure (presentation provided by Will Harris)
- ROWD Data Request Sheet
- Letter to City Managers - Request for ROWD Information January 5, 2007 Deadline

V. *Announcements*

A. ***Next MSC Meetings – January 18th, March 15th, & May 17th***

Jason announced that the November 16, 2006 MSC meeting was canceled. He added that Permit Managers will begin to be notified via emial of the MSC meetings.

B. ***On-line Training Registration Demonstration Update*** – Benjie Cho discussed the E-Ply on-line training presentation provided to District NPDES staff by Rebecca Guill of AEI-CASC. Jason noted that he had not received any negative feedback regarding the on-line training and expects to continue its use. Future changes that may be implemented to the on-line training program, costs associated with the training, and the District's IT Departments efforts of implementing the on-line training application were also discussed.

C. ***WQMP Update on District Website (WQMP, FAQ, Template and Summary of Changes)*** – Benjie informed attendees that all changes regarding the WQMP had been made to the District's website in which the revised document was sent to Permittees via email. Phoung Hunter addressed her concern with discrepancies in the WQMP FAQ. Permitees were advised to forward any comments they may have regarding the WQMP to Benjie.

D. ***Audits ~ County Audit Update*** – Jason informed the group that he had no recent information regarding the audits but expects to receive a letter from the Regional Board in January 2007. Jason then briefly discussed that local implementation and tracking of post construction BMPs which were two items being discussed in the San Bernardino County Permit.

E. ***Annual Report ~ Santa Ana Report due November 30th***
Benjie announced that he was currently working on the report and it will be submitted on time.
Jason noted that the CASQA meeting will be held November 17, 2006 in Ontario and recommended that Permittees attend.

F. ***New County Program*** – Mike Shetler reported on the new Business Registration and Licensing Program approved by Riverside County Board of Supervisors. Items of discussion included:

- Program requirements expected to be in effect January 1, 2007
- Building and Safety to act as the lead department of the program
- A move from the CAP Program to an actual Inspection and Enforcment program for the County
- Permittees need to begin evaluating how they will conduct their inspection programs
- Permit Renewal & Fees

Sandy Caldwell announced that the City of Riverside won 1st place in the nation for the best Pre-treatment Program. Congratulations went out to the City of Riverside.

VI. ***Public Education Program – Florence Mowrer***

A. County Mail Slug – Jason updated Permittees on the efforts of the public education program noting that the for the last 2 years every piece of mail sent by Riverside County is stamped with the Stormwater logo for public education impression purposes. Due to changes of how County mail will begin to be sent there will be now be costs incorporated should Permittees decided to continue to use this program. Permittees were asked to consider their thoughts whether or not the program should be continued. Questions and comments can be forwarded to Jason via email.

VII. ***TMDL Progress Report – Jason Uhley***

A. ***Middle Santa Ana River Bacteria Indicator TMDL Update***
Next Meeting – November 20 , 2006 from 1:30 to 4:00 p.m. – Attendees were provided an update on the efforts of this TMDL. Items of disucssion included:

- Grants in the works
- Identifying Souces of Contamination
- Pilot BMPs
- Implementation Agreement
- Future Grant Pursual for TMDL Compliance
- The use of Prop 84 Money

San Bernardino County will be forwarding Jason comments in which Jason will then begin finalizing the Implementation Agreement. Jason added that he had given a presentation on Permittees Proposal for Compliance at the November 9, 2007 Lake Elsinore TMDL meeting.

A. ***San Diego Lagoons TMDL/Investigation Order*** – Jason informed attendees that the Order has been issued in the Santa Margarita Region by the San Diego Regional Board in which they have requested that data be collected to establish the TMDL. District staff is currently in the process of collecting the necessary data. Dell Ross informed attendees that he was looking to establish a grant watershed council and may find the need to come to Permittees for letters of support in regards to these efforts. Jaime Aderhold recommended that Dell contact the person who is the head of Bayona Creek for assistance in his efforts. Jaime added that he would email Dell the contact information.

VIII. ***Santa Ana/Santa Margarita Region Programs***

A. ***Stormwater Quality Standards Task Force Update ~ Next meeting November 30, 2006 from 9:30 a.m. to 1:00 p.m.*** - Jason provided an update on the status of the Stormwater Quality Standards Task Force. The next meeting will focus on water quality objectives and cost implication. The following items were discussed:

- Task Force Efforts
- REC 1 Waterbody Use
- San Sevaine Channel & Appropriate Standards in Tributary Streams
- Current Basin Plans
- EPA Participation
- Treatment Systems
- Bacterial Contamination in the Watersheds
- Basin Plan Amendment Language

IX. ***Report of Waste Discharge/Permit Renewal Workgroup***

A. ***URS Presentation*** – Prior to Bob and Julie giving their presentation Jason briefly discussed with Permittees the following items regarding the Permit renewal process:

- Permit expires October 2007
- ROWD due April 2007
- Bob Collacott of URS will be assisting with preparation of Permit Renewal
- San Bernardino and Riverside County Permit will be processed simultaneously by Regional Board
- Incorporating the TMDL Requirements into the Permit
- LIP and Post Construction BMPS

Bob discussed with Permittees the permit renewal process of the current Permit due to expire October 2007 advising them of several things that would need to be updated during the Permit renewal process. He noted that basic information will need to begin being gathered such as the current status of Permittee land uses, area permitting, Permittee comments on the existing Santa Ana Permit, and the Riverside County DAMP. Information should be submitted by January 5, 2007. Benjie will be coordinating these efforts with Permittees. Julie will then take the information and incorporate it into the ROWD.

Julie provided Permittees with background information on her education and work history. She then discussed the following items regarding the ROWD. Please refer to the handout provided at the meeting for more detailed information (ROWD Data Request).

- Land use
- Developments up to 2012
- Current population information
- MS4 System and maps
- GIS Maps
- BMPs

B. ***Permit Renewal Workgroup Meeting – December 5, 2006 10:00 a.m. to 12:00 noon***
Benjie advised Permittees of the Permit renewal workgroup meeting in which Permittees will discuss continuous efforts of the Permit renewal process. Jason then summarized tasks needing to be completed by Permittees.

X. ***Open Discussion***

A. ***Santa Ana RWQCB*** – No comments.
B. ***San Diego RWQCB*** – Not present.
C. ***U.S. EPA – Region IX*** – Not present.
D. ***Round Table*** – No comments.

X. ***New Agenda Items / Schedule Next Meeting***
There will be no meeting in the month of December. The next NPDES TAC Meeting is scheduled for January 25, 2007. If there are any questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

XI. ***Vendor Presentation – Filterra Bioretention/Filtration System Presentation***
Will Harris of Filterra conducted a presentation on Bioretention/Filtration Systems.

Please visit the StormWater/CleanWater Protection Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

Meeting Minutes
for
January 25, 2007

I. Attendees:

Benjie Cho	Riverside County Flood Control District
Arlene Chun	Riverside County Flood Control District
Linda Garcia	Riverside County Flood Control District
Florence Mowrer	Riverside County Flood Control District
Penny Nanney	Riverside County Flood Control District
Penny Skog	Riverside County Flood Control District
Tina Tuason	Riverside County Flood Control District
Charlene Warren	Riverside County Flood Control District
Jason Uhley	Riverside County Flood Control District
Mike Shetler	Riverside County Executive Office
Keith Elliot	CRWQCB – Santa Ana Region
Adam Fischer	CRWQCB – Santa Ana Region
Mike Roth	CRWQCB – Santa Ana Region
Maria Macario	CRWQCB – Santa Ana Region
Michele Colbert	City of Corona
Jeff Potts	City of Corona
Linda Nixon	City of Hemet
Phuong Hunter	City of Moreno Valley
Kent Wegelin	City of Moreno Valley
Lori Askew	City of Norco
Larry Page	City of Perris
Michael Morales	City of Perris
Sandy Caldwell	City of Riverside
Jessica Chin	City of Riverside
Hal Schillinger	Kristar
Jeff Brandt	Fish & Game
Gene McCarren	Tell Brother

II. *Introductions*

Jason Uhley welcomed everyone to the meeting and initiated self introductions.

III. *Agenda Changes*

Jason changed agenda item IV (F) from Calimesa NOV to Status of ROWD.

IV. *Review of Minutes: November 16, 2006*

There were no changes to the meeting minutes. Minutes were approved.

Handouts and Materials Provided:

- Agenda, Minutes, Roster
- Caltrans Water Quality Newsflash #s 06-48 through 07-02
- NPDES Cost Sharing Summary Fiscal Year 06-07 & 07-08 dated 1/18/2006
- NPDES Public Information Report for January 25, 2007
- Mission Resource Conservation District (MRCD) January 25, 2007 Report
- Riverside Corona Resource Conservation District (RCRCD) January 18, 2007 Report

V. *Announcements*

A. *Next MSC Meetings – March 15th & May 17th*

Benjie Cho provided an summary of the January 18, 2007 MSC Meeting. Items of discussion included:

- Cost Sharing (handouts provided to Permittees and MSC attendees)
- Implementation Agreement
- Middle Santa Ana Fees (tentative at this point)
- Moreno Valley's sample ordinance to be provided to the other cities
- CAP Program – Jason announced that Environmental Health is no longer willing to participate in the CAP Program which assists Permittees with inspections. Jason noted that a workshop will possibly be established to help Permittees implement their inspection programs.
- A meeting will be held with Executive Office staff, TLMA, and Environmental Health to discuss the transistion of the CAP Program.

B. ***On-line Training Registration Demonstration Update*** – Benjie updated the group on the efforts of the on-line training noting that District staff continues to work on implementing their own in house website.

C. ***Audits ~ County Audit Update*** – Jason provided an update on the audits conducted by Regional Board staff in which the City of Calimesa was issued a NOV. The City of Calimesa is in the process of responding to the NOV. He then noted that in speaking with Regional Board staff he learned that they were working on getting their responses out to San Bernardino County who was audited prior to Riverside County and is uncertain as to when the next comments letters will be sent.

D. ***CASQA General Meeting Update*** – Benjie provided an summary of the items discussed at the CASQA meeting which included:

- State issues update provided by Gary Wolfe of the State Water Board

- Industrial Permit ready for comment in the summer 2007
- Construction Permit ready for comment in late February 2007
- LA County speaking of using action levels for Permit compliance
- TMDLs
- Central Valley Enforcement Compliance
- Objective Based Permit
- Blue Ribbon Panel
- Current Standards
- Numeric Effluent Limits
- Target Exceedances
- Data Set Concerns
- Water Quality Objectives

E. ***Annual Report ~ Santa Ana Report due November 30th*** Benjie announced that the Santa Ana Annual Report was submitted to the Regional Board on time. The Annual Report was provided to Permittees on CD during the meeting.

F. ***Status of ROWD*** – Permittees were provided an update on the statusof the ROWD. Jason informed the group that a meeting with Regional Board staff was scheduled for January 22, 2007 to discuss their goals and objectives regarding the ROWD. Discussion of the meeting included:

- Findings of Regional Board audits and concerns that they may have
- Findings of Permit to promote Regional BMPs
- Local Implementation plans to be developed by the cities
- New Development Review process
- CEQA 401 BMPs
- WQMPs
- The use of bonds to help ensure compliance
- Enforcement issues
- State laws and restrictions
- Better documentation of programs by the cities
- IC/ID (the need of municipal employees being out in the field looking for spills)

VI. ***Public Education Program – Florence Mowrer***

Flo provided attendees an update of the public education efforts and introduced Penny Skog, the new assistant to the District's public education department. Reports from RCRCD and Mission RCD were provided to attendees, as well as the monthly public information report.

A. ***Billboard Advertising*** – As discussed by Public Education Sub-Committee members, staff will be transferring the $19, 793.00 allocated for the 2007 calendars to be used to purchase additional billboard advertisements.

B. ***School Outreach Program*** – Please see MRCD and RCRCD reports provided during the meeting.

C. ***Earth Day Flyer*** – Work has begun to set the articles in place for the 2007 Earth Day flyer due to be released in April.

D. ***2007 Calendar*** – Due to the fact that the 2007 calendars were not released for bid in time they were not produced. Other items Flo discussed were:

- Block Grants
- Mail Slugs
- New Home Garden Guide
- New home garden spray promotional item in the works
- List of businesses for Riverside County
- Moreno Valley's request of school outreach information

Please see the public information report and the reports from MRCD and RCRCD provided during the meeting for more detailed information.

VII. ***TMDL Progress Report – Jason Uhley***

A. ***Middle Santa Ana River Bacteria Indicator TMDL Update***
Next Meeting – 1:30 to 4:00 p.m. February 1st, March 1st, April 19th, May 31st – Attendees were provided an update on the efforts of this TMDL. Jason reported that for the cities of Norco, Corona, and Riverside, there is a draft agreement in the works and will be available February 1st at the meeting. Other items of disucssion included:

- Hand Swales
- Bacteria Inserts
- Tentative Cost Share
- $700,000 grant obtained by SAWPA for source BMPs
- The use of existing BMPs to be used as test beds

B. ***San Diego Lagoons TMDL/Investigation Order*** – Jason noted that a study is being conducted in Santa Margarita Region regarding nutrient impacts.

VIII. ***Santa Ana/Santa Margarita Region Programs***

A. ***Stormwater Quality Standards Task Force Update ~ Next meeting 9:30 a.m. to 1:00 p.m. February 1st, March 1st, April 19th, May 31st*** - Benjie provided an update on the status of the Stormwater Quality Standards Task Force. The following items were discussed:

- E. coli and numeric standards
- Limited REC uses, REC use in terms of channels, and REC 1, 2, 3, and 4 uses
- Cameras being setup in the channels
- Issues of no support of science
- Following what is in the Basin Plan
- Basin Plan analysis and evaluation
- Task Force review of 7 different channels and future channel review efforts
- Regional treatment and waterbody
- EPA Guidance
- CDM selected as the sole source contractor for Middle Santa Ana TMDL

B. ***Santa Margarita Individual SWMP Updates*** – Tina Tuason informed Permittees to be sure that anything reported in the Annual Report be reported in the Individual SWMPs as well.

IX. ***Report of Waste Discharge/Permit Renewal Workgroup***

A. ***URS Presentation*** – Bob Collacott asked that Permittees who had not submitted comments on the ROWD to please provided them as soon as possible as he is hoping to submit the first draft to the District by February 2, 2007. Bob further discussed the following items:

- Local Implementation Plans
- TMDL requirements
- Changes in the CAP Program
- Redline docment of the existing 2002 MS4 Permit of the Santa Ana Region to identify changes
- Workgroup efforts

B. ***Permit Renewal Workgroup Meeting – February 6, 2007***
Next workgroup meeting is February 6, 2007 at 10:30. All Permittees were invited to attend.

C. ***Michael Adackapara Meeting Status Update***

X. ***Open Discussion***

A. ***Santa Ana RWQCB*** – No comments.
B. ***San Diego RWQCB*** – Not present.
C. ***U.S. EPA – Region IX*** – Not present.
D. ***Round Table*** – Jason informed attendees that there would be a special presentation on composting.

X. ***New Agenda Items / Schedule Next Meeting***
The next NPDES TAC Meeting is scheduled for February 22, 2007 If there are any questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

Please visit the StormWater/CleanWater Protection Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

Al Javier	EMWD
Jaime Aderhold	J2A Environmental
Rosanna Lacarra	PBS&J
Bob Collacott	URS Corporation
Dell Ross	EMARCD

II. *Introductions*

Benjie Cho welcomed everyone to the meeting and initiated self introductions. Jaime Aderhold introduced Wally Trenca of Fresh Tree Technologies (brochures provided). Dan Noble introduced himself and gave a brief introduction of the presentation he would be providing at the end of the February 22nd TAC meeting. Joe McCormick of CEC introduced himself and briefly described the services offered by his company (brochures provided).

III. *Agenda Changes*

Benjie added items C, D, and E to agenda item IV – Announcements.

IV. *Review of Minutes: January 25, 2007*

There were no changes to the meeting minutes. Minutes were approved.

Handouts and Materials Provided:

- Agenda, Minutes, Roster
- Email Printout Re: Water Quality Newsflash discontinued
- Brochures provided by Fresh Tree Technologies
- Brochures provided by Resource Trends
- Brochures provided by CEC

V. *Announcements*

Benjie made the following announcements:

A. ***Next MSC Meetings – March 15th & May 17th***

B. ***County Compliance Assistance Program (CAP) Update*** – Riverside County Environmental Health has agreed to continue the CAP Program in the incorporated portions of the county until the end of the next Permit term, which should assist Permittees with their commerical and industrial inspections.

C. ***New Director of State Board*** – The California State Water Resource Control Board now has a new Executive Director replacing Celeste Cantu.

D. ***Caltrans Water Quality NewsFlash*** – The Caltrans Water Quality NewsFlash has been discontinued. A brief discussion regarding the discontinuance among the group ensued.

E. ***San Jacinto IRWM Grant*** – Jason Uhley announced that Permittees would be receiving a copy of a project application form for the IRWM grant via email. The purpose of the form is to identify water resource projects, watershed management projects, water quality, flood control, and supply projects needing improvement in cities within Riverside County. Jason added that Permittees should think along the lines of long term goals of Regional BMPs, TMDLs, septic systems, etc., when assessing projects needing improvement. Steve Carter of Tetra Tech will be assisting Permittees with work efforts of the IRWM grant.

VI. *Public Education Program – Benjie Cho*

The District's Public Education Department will be participating in the following upcoming events:

- Riverside Raincross Walk – February 24th
- Riverside Celebrates Trees - March 10th
- Supervisor Tavaglione's Youth Summit – March 14th
- Walk With The Animals – March 24th
- Riverside Flower Show and Garden Tour–April 14-15th

VII. *TMDL Progress Report – Benjie Cho*

A. ***Middle Santa Ana River Bacteria Indicator TMDL Update - Next Meeting – 1:30 to 4:00 p.m. February 1st, March 1st, April 19th, May 31st*** – Benjie provided an update on the Middle Santa Ana River Bacteria Indicator TMDL. The strategy for compliance with the grant included:

- Selecting Tim Moore as a sole source contractor to coordinate activities to ensure compliance with the grant
- Selecting existing BMPs to be used as test beds for performance evaluations
- Develop a monitoring strategy to identify the sources of pollutants

Jason noted that a revised final draft of the Middle Santa Ana River TMDL Implementation Agreement will be made available to Permittees at the March 22nd TAC meeting. It is expected that EPA will approve the TMDL by the end of February 2007.

B. ***San Diego Lagoons TMDL/Investigation Order*** – There was no information provided on this agenda item.

C. ***Lake Elsinore/Canyon Lake TMDL*** – Benjie noted that District staff is in the process of implementing actions for the TMDL. Tim Moore of Risk Sciences (consultant assisting Permittees with TMDL) is scheduled to provide an Instream Management Plan for both lakes. Due to issues with stream aeration treatment, the Instream Management Plan will be provided slightly later than expected. Tim will be identifing problems regarding the lakes at the next LESJWA TAC meeting.

VIII. *Santa Ana/Santa Margarita Region Programs*

A. ***Stormwater Quality Standards Task Force Update ~ Next meeting 9:00 a.m. - 12:30 p.m. March 1st and 9:00 a.m. – 1:00 p.m. April 19th, May 31st*** – Benjie briefly discussed the REC use changes currently proposed by stakeholders for the triannual Basin Plan review.

Jason added that additional camera locations are being looked at in Riverside County to conduct a Use Attainability Analysis. Possible camera location include Sunnyslope Channel, Anza Channel, Arlington Channel, and Perris Valley Channel. Once it is determined which channels will be selected, associated city representatives will be contacted to coordinate implementation.

IX. ***Report of Waste Discharge/Permit Renewal Workgroup***

A. ***Permit Renewal Workgroup Meeting February 6th and 20th Update*** – Bob Collacott advised the group that the current MS4 Permit will expire in October 2007 and discussed the approach being taken towards the renewal of the Permit. The following items were discussed:

- ROWD will be distributed to Permittees for their review at the March 22nd, TAC meeting
- ROWD due to be submitted no later than April 27, 2007
- The general strategy to move the details of the Permit to implementation plans such as the DAMP and subsequently into local implementation plans
- Removing completed studies or one time reporting requirements and general "clean-up" of the Permit text
- A proposed Redline version of the 2002 MS4 Permit will be submitted along with the ROWD to the Santa Ana Regional Board
- Address program changes such as the CAP Program

X. ***Open Discussion***

A. ***Santa Ana RWQCB*** – No comments

B. ***San Diego RWQCB*** – Not present

C. ***U.S. EPA – Region IX*** – Not present

D. ***Round Table*** – No comments

XI. ***New Agenda Items / Schedule Next Meeting***

The next NPDES TAC meeting is scheduled for March 22, 2007 If there are any questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

XII. ***Resource Trends Presentation – Dan Noble***

Dan Noble conducted a presentation on products and services provided by Resource Trends

Please visit the StormWater/CleanWater Protection Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

II. *Introductions*

Jason Uhley welcomed everyone to the March 22, 2007 NPDES Santa Ana/Santa Margarita Techincal Committee Meeting and initiated the self introductions of attendees.

III. *Agenda Changes*

- 303d List was added under agenda item ***V - Announcements***.
- Misc. was added under agenda item ***VI – Public Education***

IV. *Review of Minutes: February 22, 2007*

Changes to the minutes will be made and documented to reflect Farida Naceem's attendance at the February 22, 2007 meeting. (1st page, item ***I - Attendees***:).

Handouts and Materials Provided:

- March 22, 2007 Agenda, February 22, 2007 Minutes, Roster
- Public Information Report – March 22, 2007
- RCRCDs Santa Ana River Watershed Stormwater/Cleanwater Protection Program Public Education Monthly Report – March 2007
- State of Michigan's Report Suspicious Connections or Dumping! (flyer)
- Fingerprint America Child Identification (flyer)
- Riverside County MS4 Permit Findings from the Audit/Draft
- Draft General Permit PowerPoint Slides
- CASQA 2006 Annual Report

V. *Announcements*

A. *Summary of MSC Meeting Mintues/Next MSC Meeting – Tentatively May 17th*

Jason provided a summary of items discussed during the March 15, 2007 MSC Meeting which included:

- CAP Program status
- Audits conducted by Regional Board/ NOVs issued by Regional Board
- ROWD/Permit Renewal
- TMDL Development/07-08 TMDL Cost Share Budget
- Tentative Agreement

Permittees were advised that the May 17th MSC Meeting may be rescheduled due to a possible conflict of City Manager's attending a separate meeting.

B. *Audit Update* – The Santa Ana Regional Board has released two additional audits for the cities of Canyon Lake and Norco.

C. *EPA Audit Guidance* – EPA has developed a EPA Audit Guidance. The document has been forwarded to Permittees for their review. The document will be also be made available at the April 26, 2007 NPDES Santa Ana/ Santa Margarita TAC Meeting.

D. *303d List* - Maria Macario announced that the State Board has listed their 2006 303d List. Please see Santa Ana Regional Board website for more information.

VI. ***Public Education Program – Florence Mowrer***

Flo reviewed the March 22, 2007 Santa Ana/Santa Margarita Public Education Information Report where she discussed the following items:

A. ***IC/ID Brochure*** – The State of Michigan has provided the District's public education department use of their IC/ID brochure file. The brochure will be customized to reflect State and County regulations.

B. ***Car Care Revision*** – The Public Education Sub-Committee has been in the process of reviewing revisions to be made to the Car Care Guide.

C. ***Billboard Update*** – Valley Way off the 60 freeway facing East and I-10 north lane ¼ mile west of County Line in Calimesa have been two locations identified for billboard advertising the "Only Rain Down the Storm Drain" Program. Permittees support utilizing the 2007 Calendar funds to purchase the billboard(s).

D. ***New Promotionals*** – The public education department now has red aluminum carabiner keychains available. Fingerprint America Child I.D. kits and U-Mix-It Spray bottles (for both house and garden earth friendly recipes) are on order.

E. ***Events*** – The Synagro Free Composting Giveaway is scheduled for April 7th.

F: ***Misc.***- Facility signs have been ordered for placement on all Municipal properties where receiving waters are collected. Each sign states that the water flows seen in that particular area are from water discharges, hopefully from rain.

For more detailed information on the above items, please refer to the Public Education Information Report provided during the March 22, 2007 SA/SM TAC Meeting.

VII. ***TMDL Progress Report – Jason Uhley***

A. ***Middle Santa Ana River Bacteria Indicator TMDL Update - Future Meeting – 1:30 to 4:00 p.m. April 19th & May 31st*** – Jason informed the group that the Draft Agreement is near completion and will be forwarded to Stakeholders March 23, 2007. Permittees (Cities of Corona, Norco, and Riverside) were asked to submit the Agreement to their legal counsel and submit comments within 2 weeks. It was noted that SAWPA is proposing to be the 1st agency to accept the Agreement. Jason then added that a grant for approximately $650,000 was obtained to help conduct urban source assessment for the TMDL and discussed issues surrounding the intended use of the grant dollars (ie; DNA technology). He noted that stakeholders are currently reevaluating the source assessment study.

B. ***Lake Elsinore/Canyon Lake TMDL*** – Jason informed attendees that budget approval and proposal for three plans are currently in development (new lake sediment reduction for Lake Elsinore, sediment treatment plan for Canyon Lake, and pollutant trading plan for the watershed) and due to be submittted to the Regional Board sometime in the next few weeks.

C. ***San Diego Lagoons TMDL/Investigation Order – Lagoons TMDL NNE Study Bureau Workgroup*** - The San Diego Regional Board issued a 13267 letter in April/May of 2006 requiring stakeholders in various watersheds of the San Deigo region to undertake a study

to help collect data necessary to develop a TMDL to help protect the Lagoons. The order was challenged by the Stakeholders which lead the Regional Board to hold a public hearing. A decision was made to allow SCCWRP to act as the inter-mediator between stakeholders and the Regional Board in regards to the TMDL. Linda Garcia spoke on the actions of the meetings held to discuss the TMDL in which she addressed the concerns of the Regional Board and options both stakeholders and Regional Board staff are looking at in terms of developing the TMDL. Other items of discussion included:

- Numeric Nutrient Endpoint Study for the Santa Margarita River
- EPA protocol for evaluating appropriate numeric targets for nutrient-impaired waterbodies
- Draft study being conducted by Tetra Tech and due to Regional Board by end of April 2007 (issues to be addressed in draft study)
- Water rights/Water supply
- Discharge of waste water
- Nutrients that are hard to treat and hard for Permittees to comply with
- Wet/Dry weather events and targets
- EPA basis for testing

VIII. ***Santa Ana/Santa Margarita Region Programs – Benjie Cho***

A. ***Stormwater Quality Standards Task Force Update ~ Future Meetings 9:30 a.m. - 1:00 p.m. April 19th & May 31st*** – Jason announced future meeting dates for the Stormwater Quality Standards Task Force and briefly discussed REC uses, basin plans, and regional treatment controls. Jason recommended that Permittees make an effort to attend these informative meetings.

B. ***Update on Orange County Stormwater Permit*** – On April 11th the San Diego Regional Water Control Board held a hearing on the proposed Orange County Permit (Tentative Order No. R9-2007-0002). The main concerns that Orange County has with the proposed permit are requirements for site specific versus regional treatment BMPs, unsubstantiated prescriptions (street sweeping optimization based upon traffic counts, duplicative sewer collection system oversight, etc.), and legal/policy issues. Discussion on additional comment periods and future permit hearings ensued during the hearing (please see the San Diego Board website for specific dates). Board adoption for the proposed permit is scheduled for August 2007. Brandi Outwin shared her thoughts and concerns on the Permit and advised Permittees to contact Jeremy Haas or herself should they have questions and or concerns about the permit.

Jason made note that the Whitewater Permit was currently in negotiation and a draft of the Permit would be available April 2007. Also, CVWDs Pathogen TMDL draft has been released.

C. ***Santa Margarita IRWM Grants Update – March 2nd, 10:00 a.m. at CSUSB***
Permittees were informed that there would be a IRWM grant workshop held March 2, 2007 at 10:00 at CSUSB. Jason discussed with Permittees the following items regarding IRWMs:

- Purpose of IRWMs
- Pursual and benefits of IRWM grants
- Priority and importance of IRWM projects

- Interest, participation, and cost of developing an IRWM document
- Approval of Prop 84 and Planning grants

Jason advised Permittees to begin reviewing the needs of their cities in terms of potential projects (short and long term) that could benefit from IRWMs. Jason noted that there was currently no IRWM plans for the Santa Margarita and Whitewater regions. However, SAWPA is in the process of revamping the IRWM for those in the Santa Ana Watershed and who are not part of the San Jacinto Watershed.

D. ***Presentation on Draft General Construction Permit*** – Tina gave a summary presentation on the Preliminary Draft General Construction Permit (Order No. 2007-XX-DWQ). The proposed permit is substantially different than the current General Construction Permit, which it will replace upon adoption. The presentation and follow-up e-mail sent to Permittees identifies the significant changes to the Permit. A public workshop will be held on April 17th in the Rancho Cucamonga Civic Center. Permittees were encouraged to attend the workshop.

IX. ***Report of Waste Discharge/Permit Renewal Workgroup – Benjie Cho***

A. ***Closed Session Meeting March 22, 2007*** – Jason made note that a meeting was scheduled for 11:30 a.m. following the Santa Ana/Santa Margarita TAC meeting to discuss the Draft ROWD.

X. ***Open Discussion***

A. ***Santa Ana RWQCB*** – No comments

B. ***San Diego RWQCB*** – No comments

C. ***U.S. EPA – Region IX*** – Not present

D. ***Round Table*** – Jason welcomed Brandi Outwin of the San Diego Regional Board. Brandi is the current NPDES representative for the Board.

XI. ***New Agenda Items / Schedule Next Meeting***

The next NPDES TAC meeting is scheduled for March 22, 2007 If there are any questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

Please visit the StormWater/CleanWater Protection Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

NEXT MEETING IS SET FOR:

THURSDAY April 26, 2007 10:00 A.M.
AT

Meeting Minutes
for
April 26, 2007

I. Attendees:

Benjie Cho	Riverside County Flood Control District
Florence Mowrer	Riverside County Flood Control District
Tina Tuason	Riverside County Flood Control District
Jason Uhley	Riverside County Flood Control District
Charlene Warren	Riverside County Flood Control District
Doug Thompson	Riverside County Environmental Health
Marianna Hernandez	Riverside County Transportation
Keith Elliott	CRWQCB – Santa Ana Region
John Wilder	City of Beaumont
Bob French	City of Calimesa
Michele Colbert	City of Corona
Jeff Potts	City of Corona
Linda Nixon	City of Hemet
Phuong Hunter	City of Moreno Valley
Kent Wegelin	City of Moreno Valley
Lori Askew	City of Norco
Sandy Caldwell	City of Riverside
Jessica Chin	City of Riverside
Mike Emberton	City of San Jacinto
Jaime Aderhold	J2A Environmental
Eric Strahan	CONTECT Stormwater Solutions
Del Ross	EMARCD

II. *Introductions*

Jason Uhley welcomed everyone to the April 26, 2007 NPDES Santa Ana/Santa Margarita Techincal Committee Meeting and initiated the self introductions of attendees.

III. *Agenda Changes*

There were no changes to the agenda.

IV. *Review of Minutes: March 22, 2007*

There were no changes to meeting minutes. Minutes were approved.

Handouts and Materials Provided:

- April 26, 2007 Agenda, March 22, 2007 Minutes, Roster
- Audit Policy Interpretive Guidance (January 1997, Office of Regulatory Enforcement U.S. Environmental Protection Agency)
- Trident Curb Screen flyer
- RCRCDs Santa Ana River Watershed Stormwater/Cleanwater Protection Program Public Education Monthly Report – March 2007
- Earthday brochure
- Santa Ana Watershed Stormwater Classroom Presentations summary handout

V. *Announcements*

A. ***Summary of MSC Meeting Mintues/Next MSC Meeting – May 17th***

Jason announced that the next MSC meeting was scheduled for May 17th. He noted that the League of California Cities Legislative Action Days is also scheduled for the same week and City Managers may be attending this event. He asked that Permittees communicate with their City Managers to ensure that the alternate person can attend the MSC meeting in place of the City Manager if they are unable to attend the MSC meeting. City Managers are required to attend 3 of the 4 meetings per fiscal year.

B. ***Construction Permit April 17th Update*** – The Construction Permit has been proposed for renewal. The State Board held a workshop on the Permit in Rancho Cucamonga April 17th. Jason provided attendees a brief summary on the details of the workshop. A draft comment letter is being prepared by District staff which will be forwarded to Permittees for their comments. Comments are due to the State Board on May 4th.

C. ***Department of Water Resources visit to Santa Margarita Region*** – Jason reported on the Department of Water Resources' visit to the Santa Margarita Region to discuss proposed Prop 84 IRWM projects for the Santa Margarita Region. The stakeholders in the Riverside County Santa Margarita Region are working to develop an IRWM plan and are looking to obtain a planning grant to assist in this effort. Jason added that San Diego County Water Authority had already initiated an IRWM plan for the lower portion of the watershed, however San Diego County Water Authority does not want to integrate their part of the watershed with the upper part of the watershed, causing complications for DWR. Dell Ross added that it appears that Rancho California Water District will be the lead agency on the IRWM and briefly discussed stakeholders efforts regarding the IRWM.

D. ***Hydromodification Test Sites in Santa Ana and Santa Margarita Regions*** – Permittees were informed that both the Santa Ana and Santa Margarita Region Watersheds requires them to develop a hydromodification plan. The WQMP identifies that Permittees' propose to comply with this requirement by coordinating with SCCRWP on a Southern California Study of hydromodification, including the level of impacts in the watersheds,

what types of watersheds are susceptable to hydromodification, and identifying potential management measures for hydromodification. Jason informed attendees that SCCWRP had received a $500,000 grant from the State to conduct a hydromodification study and are looking for test areas to evaluate low gradiant streams in unimpacted environments. Permittees will be kept updated as these efforts progress. Jason added that he would look into having Eric Stein who is leading this effort to give a presentation at a future SA/SM TAC meeting.

E. ***Training Update*** – Benjie reported that the Annual NPDES Spring training classes were in progress and asked Permittees for their thoughts and comments on how the training was being conducted. He also added that an additional WQMP training class had been opened in the Desert area. There were no comments from Permittees.

F. ***Audit Update*** – Jason reported that there had been no audit reports issued since Canyon Lake. Keith added that the Regional Board was first focusing on San Bernardino County and would then focus on Riverside County.

G. ***Field Trip*** - Jamie Aderhold announced that there would be a field trip to Hamilton Bull, a large Los Angeles County flood control facility May 1st at 10 a.m. and extended an invitation to Permittees.

VI. ***Public Education Program – Florence Mowrer***

Flo reviewed the March 22, 2007 Santa Ana/Santa Margarita Public Education Information Report. The she discussed the following items:

A. ***IC/ID Brochure*** – The IC/ID brochure file is currently in its draft stage.

B. ***Car Care Revision*** – The Public Education Sub-Committee has been in the process of reviewing revisions to be made to the Car Care Guide.

C. ***Billboard Update*** – Flo reported that she was currently working with SGA in efforts to refine the billboards that will be posted at Valley Way off the 60 freeway facing East and I-10 north lane ¼ mile west of County Line in Calimesa.

D. ***New Promotionals*** – Permittees will be informed when new promotionals arrive.

E. ***Events*** – Flo announced the following events.

- Dos Lagos - April 21st
- Living Desert - April 21st
- Car Care in Perris - April 27th
- Temecula Garden Show - April 28th
- Pollution Prevention – September 17th - 23rd

Flo asked that Permittees inform Charlene Warren of any staffing changes (names of city representatives for NPDES program, email addresses etc.) to ensure she is sending updated public education information to the appropriate persons. Keith Elliott and Flo ensued in a brief discussion regarding the home garden show in Temecula.

VII. *TMDL Progress Report – Jason Uhley*

A. *Middle Santa Ana River Bacteria Indicator TMDL April 19th Update*

- **Future Meeting – May 31st at 9:30, July 12th & August 23rd 1:30 to 4:00 p.m.**
  Jason reported that the TMDL Task Force Agreement had been approved by SAWPA and recommended that Permittees take the Agreement to their Board for approval. SAWPA will be issuing invoices upon completion of the Agreement. Riverside County and the District will be taking the Agreement to their Board on June 5th.
- **Tour of Santa Ana Monitoring Stations April 11th**
  Jason reported that SAWPA obtained a Prop 50 grant that will assist with the funding of the TMDL monitoring program. District staff along with with CDM conducted a tour of the tentative Santa Ana monitoring stations on April 11th to help establish monitoring stations for the TMDL.

B. *Lake Elsinore/Canyon Lake TMDL*

- **Future Meeting – 1:30-4:00 p.m. May 29th**
  Attendees were informed that Tim Moore would be presenting a draft plan for the inlake sediment remediation tasks required in the TMDL May 29th at EVMWD. Jason noted that Tim presented the plan at the LESJWA TAC meeting. Jason then briefly discussed ramifications of the plan. It was recommended that Permittees attend the meeting and ask questions about the plan to help ensure that the plan being put together is functionable, makes sense, and protects water quality.

- **San Jacinto Septic System Management Plan**
  Jason added that he is expects to receive an updated draft of the San Jacinto Septic System Management Plan from Tetra Tech at the end of the April.

- **Canyon Lake Pathogen TMDL**
  Bill Rice presented the draft Canyon Lake Pathogen TMDL at the LESJWA TAC meeting. He briefly discussed water quality objectives, REC uses, wet weather, and lake compliance issues surrounding the Canyon Lake Pathogen TMDL. The tentative schedule is to hold a workshop for the TMDL in August 2007 and possible adoption in December 2007. Hope Smythe has agreed to meet with Permittees to further discuss the tentative draft Canyon Lake Pathogen TMDL. There were no questions/comments from Permittees.

C. *San Diego Lagoons TMDL/Investigation Order*

- ***Lagoons TMDL NNE Study Bureau Workgroup*** - Jason tabled this item until an update was available from Santa Margarita Region Permittees and District staff who were attending a meeting at the San Diego Regional Board regarding this item.

VIII. *Santa Ana/Santa Margarita Region Programs – Benjie Cho*

A. *Stormwater Quality Standards Task Force Update*

- ***Future Meetings 9:30 a.m. - 1:00 p.m. May 31st*** – The May 31st meeting was cancelled and the next meeting will be held June 27th. Topics of most recent meeting were deciding where to install the cameras the next time around, reaches, and REC uses.
- ***ROWD*** – The document will be sent via email to Permittees April 26th. Permittees were asked to review the document and provide substantial comments only.

B. ***Orange County Stormwater Permit Update*** – Tina Tuason reported on her attendance at the April 11th public workshop in Mission Viejo. Issues with the Permit included, active treatment requirements, unsubstainiated prescriptions (such as enhanced street sweeping requirements), sewer collection system oversight, and financing and reporting of programs. Permittees have been told by the San Diego Board that the OC Permit will serve as a model for Riverside County.

IX. ***Report of Waste Discharge/Permit Renewal Workgroup – Benjie Cho***

A. ***ROWD due April 27, 2007*** – The ROWD will be submitted to the Santa Ana Regional Board April 30th .

X. ***Open Discussion***

A. ***Santa Ana RWQCB*** – Keith posed questions and discussion ensued among Permittees regarding the methodology of having BMPs protect landscaping areas under construction.

B. ***San Diego RWQCB*** – No comments

C. ***U.S. EPA – Region IX*** – Not present

D. ***Round Table*** – No comments

XI. ***New Agenda Items / Schedule Next Meeting***

The next NPDES TAC meeting is scheduled for May 24, 2007. If there are any questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

Please visit the StormWater/CleanWater Protection Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

Frank Tolerico	CONTECH Stormwater Solutions
Del Ross	EMARCD

II. *Introductions*

Jason Uhley welcomed everyone to the May 24, 2007 NPDES Santa Ana/Santa Margarita Techincal Committee Meeting and initiated the self introductions of attendees.

III. *Agenda Changes*

Items F and G were added under agenda item V – Announcements.

IV. *Review of Minutes: April 26, 2007*

There were no changes to meeting minutes. Minutes were approved.

Handouts and Materials Provided:

- May 24, 2007 Agenda, April 26, 2007 Minutes, Roster
- ASCE San Bernardino & Riverside Counties Branch Stormwater Committee 2007-2008 Annual Dinner Program

V. *Announcements*

A. *May 17th MSC Meeting Update* - Jason reported on the May 17th MSC meeting. Key items of discussion at the MSC the meeting were:

- Middle Santa Ana River TMDL status update
- Santa Ana Permit renewal process and submittal of the ROWD for the Santa Ana Region
- Impacts of the Construction Permit on public works projects
- The 2007-08 FY MSC meeting schedule was approved (August 16th, October 18th, February 21st, and April 17th).

B. *Department of Water Resources visit to Santa Margarita Region*

Jason provided an update on the efforts of IRWM grant pursual. The Department of Water Resources (DWR) will review and award grant proposals. DWR would like this grant process to facilitate calaboration among stakeholders, however San Diego County has made it clear that they would not like to integrate their plan with interests in the Riverside County portion of the watershed. Stakeholders, led by Rancho California Water District, in the Riverside County Santa Margarita Region are working to develop an IRWM plan that will address needs of the upper watershed. The first stakeholder meeting for the IRWM plan was held May 23rd. The stakeholders are working toward obtaining approval of the plan by July 2007 in efforts to take advantage of Prop 50 implementation dollars that will be available August 1st. This plan will make the Upper Watershed available for future Prop 84 planning and implementation dollars in the near future.

C. *Hydromodification Test Sites in Santa Ana and Santa Margarita Regions* – Jason discussed the need to address hydromodification caused by new development on existing receiving waters and streams. The current Permit requires some mitigation for hydromodification, however future permit requirments may necessitate a more comprehensive look at the causes and impacts of hydromodification as well as developing productive mitigation methods. Jason stated that a 2-tier approach had been developed which includes developing a low impact design manual (LID) and participating with the SCCWRP study to develop tools that can be used to develop region specific Hydromodifation Management Plans (HMPs). Marianna Hernandez inquired as to what type of sites will be evaluated for the study. Jason stated that they would be looking at sites where there are emerging development with 5-15% impervious area, low gradient streams, with sandy substrates. Brief discussion ensued among the group regarding

progress reports and tech memos associated with the study, grant time schedule, site assessment, and monitoring and tool development. Benjie Cho has been designated as the District's contact person for this effort.

D. ***Training Update*** – Benjie reported that the Annual NPDES Spring training classes were complete. He added that he was waiting for an additional attendee sign-in sheet and once received, Permittees would be forwarded all training sign-in sheets, to be used as docmentation of their staff attendance.

E. ***Audit Update*** – Maria Macario announced that the audits were being finalized. Keith Elliott added that the City of Beaumont's audit report would be the next report released.

F. ***ASCE*** – Bill Flores announced that ASCE will begin to hold the Stormwater Committee 2007-2008 Annual Dinner Program for the ASCE San Bernardino and Riverside Counties branch and is open to all Permittees. He discussed several topics of the future meetings and added that he would send an electronic version of the meeting information to Benjie for further distribution among interested parties. The program will begin September 19, 2007. Please see handout provided during the meeting for more information.

G. ***Court Ruling*** - Dell Ross reported that the County of Los Angeles and other Permittees filed a claim with the Commission on State Mandates seeking reimbursement for two new provisions in their 2001 MS4 Permit. The Commission denied the claims, holding that Government Code Section 17516(c) specifically excludes reimbursement for state mandates issued by the State [or] Regional Board. However, the Permittees filed a declaratory relief action in superior court, claiming that Section 17516(c) was unconstitutional on its face. Both the trial court and Court of Appeals agreed with the Permittees, and the matter has now been remanded back to the Commission for a factual determination of whether the reimbursement claims fall within Art. XIII B, §6.

VI. ***Public Education Program – Florence Mowrer***

There was no public education report available for the month of May. Jason informed Permittees that the household spray bottles had arrived and to contact Penny Skog for their supply of spray bottles. Sample spray bottles were displayed during the meeting.

VII. ***TMDL Progress Report – Jason Uhley***

A. **Middle Santa Ana River Bacteria Indicator TMDL April 19th Update**

- **Future Meeting – May 31st at 9:30**
- **Tour of Santa Ana Monitoring Stations April 11th Update** – There was no discussion on this item. Please see April 26, 2007 meeting minutes for previous update information.

Jason informed Permittees that the Middle Santa Ana Task Force Agreement was approved by SAWPA in April 2007 and Permittees in the Middle Santa Ana Region would need to agenditize approval of the Agreement. The District and County of Riverside will be seeking approval of the Agreement June 5th.

Jason added that a grant was obtained from the State to evaluate sources of bacterial contamination as well as to identify potential BMPs to mitigate the impacts of that contamination. He then informed Permittees that Kristar had extended an offer to Permittees to install a catch basin insert or upflow filter in one of their city's existing catch

basins in exchange for having the system tested as part of the grant effort. Permittees were asked to contact Jason if they were interested in Kristar's offer.

B. **Lake Elsinore/Canyon Lake TMDL**

- **Future Meetings – May 29th from 1:30 p.m. - 4:00 p.m.**
  Permittees involved with the Lake Elsinore/Canyon Lake TMDL were advised to attend the May 29th meeting where Tim Moore would be presenting his draft plan for inlake sediment.
- **San Jacinto Septic System Management Plan** – Jason stated that a draft scope of work was released for the San Jacinto Septic System Management Plan and had received comments from all cities except Riverside. Jason asked that the City of Riverside review and provide comments as soon as possible.

C. **San Diego Lagoons TMDL/Investigation Order**

- **Lagoons TMDL NNE Study Bureau Workgroup** – Jason reported that the Bureau for the Santa Margarita Lagoon had released a draft agreement to be reviewed by legal council. Linda Garcia of the District has had the Agreement approved by the County of Riverside's County Council. Linda noted that there would be a teleconference with SCWRRP May 24th to discuss efforts of the TMDL. Monitoring and cost sharing issues were briefly discussed.

VIII. ***Santa Ana/Santa Margarita Region Programs – Benjie Cho***

A. **Stormwater Quality Standards Task Force Update**

- **Future Meetings – June 27th from 1:30 p.m. to 4:00 p.m.** - The purpose of the June 27th meeting will be to finalize camera locations for next years monitoring efforts.

B. **Orange County Stormwater Permit Update** – Brandi Outwin informed the group that the San Diego Regional Board received approximately 320 written comments on the Permit. She added that comments were being reviewed and a meeting was scheduled for August 8th in which all comments will have been addressed. The Board will also be making a determination on the Permit at the meeting. Permittees were advised to contact Brandi should they have any questions.

IX. ***Report of Waste Discharge/Permit Renewal Workgroup – Benjie Cho***

The Santa Ana Region ROWD was submitted April 27th. Keith Elliott stated that he had completed and submitted an administrative completeness review of the ROWD to Milasol Gaslan for further review. Keith briefly discussed 122.26(d), a item of concern that would be addressed in the Regional Board's response letter.

X. ***Open Discussion***

A. ***Santa Ana RWQCB*** – No comments

B. ***San Diego RWQCB*** – Brandi stated that she was working on last years Annual Reports and hopes to have her review complete by the end of June. She added that should Permittees desire informal feedback on the report to feel free to contact her.

C. ***U.S. EPA – Region IX*** – Not present

D. ***Round Table*** – Jason stated that SAWPA would be having their watershed kickoff meeting for their IRWM program April 24th at 3:30 p.m. at the Inland Empire Utilities Agency. He briefly discussed SAWPAs efforts and recommended that Permittees attend the meeting.

XI. ***New Agenda Items / Schedule Next Meeting***

The next NPDES TAC meeting was scheduled for June 28, 2007. If there are any questions or items for the next meeting agenda, please contact the Flood Control District's NPDES Section at 951.955.4375. Suggestions are always welcome.

Please visit the StormWater/CleanWater Protection Program website at: http://www.floodcontrol.co.riverside.ca.us. The site contains a variety of useful stormwater program information including links to other stormwater management programs and related websites.

NEXT MEETING IS SET FOR:

THURSDAY July 26, 2007 10:00 A.M.
AT
RIVERSIDE COUNTY FLOOD CONTROL DISTRICT
1995 Market Street
Riverside, CA 92501

The June 28th meeting was cancelled on June 20th

Q.11--How do you address Pollutants of Concern?

Q.12--What is a Receiving Water?

Q.13--Where can the latest 303(d) List of Impaired Waters be found?

Q.14--What are "proximate Receiving Waters"?

Q.15--Where can you find Hydrologic Unit Basin Numbers?

Q.16--When are Hydrologic Conditions of Concern addressed?

Q.17--What are "animal wastes" as defined in Footnote 3 of WQMP Exhibit B?

Q.18--What is meant by "the handling and placement of any wastes" in Section 4.6 of the WQMP?

Q.19--What is meant by "bmp start-up dates" in Section 4.6 of the WQMP?

Q.20--What are options for "High/Medium" effectiveness BMPs for bacteria/pathogen indicators necessary to address 303(d) listings and TMDLs in the Santa Ana and San Jacinto Watersheds? (4.5.3 page 25)

Q.21--Does a Commercial/Industrial or Residential Development with parking lots and/or streets incorporated into the development need to address all pollutants associated with each of the aforementioned development categories identified in WQMP Exhibit B?

Q.22--If a development includes multiple WQMP development types or land uses such as a Commercial Shopping Center with one or more satellite restaurants, does the entire development have to address the combined Pollutants of Concern identified for both development categories in WQMP Exhibit B?

Q.23--Is a Registered Engineer's stamp required on the preliminary and/or final project-specific WQMP?

Q.24--Should an owner's certification be required on a preliminary and/or final project-specific WQMP?

Q.25--What elements of a project-specific WQMP should be included in a project-specific WQMP submittal?

Q.26--Can pollutants associated with development categories in WQMP Exhibit B be addressed solely through site design and/or source control BMPs?

Q.27--Issue: Is roof runoff a pollutant? Does it need to be treated?

Q.28--What controls on property or titles are necessary to ensure that site design BMPs are not abandoned or destroyed by future property owners?

Q.1--What is a project-specific WQMP and why would I need one?

WQMP is the acronym for Water Quality Management Plan. A project-specific WQMP is a plan for managing the quality of stormwater or urban runoff that flows from a developed site after construction is completed and the facilities or structures are occupied and/or operational. A Project-Specific WQMP describes the Site Design, Source Control and Treatment Control Best Management Practices (BMPs) that will be implemented and maintained throughout the life of a project and is used by property owners, facility operators, tenants, facility employees, maintenance contractors, etc. to prevent and minimize water pollution that can be caused by stormwater or urban runoff. Municipalities in Riverside County require new developments and significant development projects to prepare and implement Project-Specific WQMPs as part of a federal and state regulatory program to reduce or eliminate water pollution caused by runoff flowing from storm water drainage systems into receiving waters. Note that project-specific WQMPs are required only in the Santa Ana and Santa Margarita Watersheds. Projects in the Whitewater Watershed are currently not subjected to WQMP requirements, but instead use Supplement A to the 1993 Drainage Area Management Plan (DAMP). A Project-Specific WQMP must be based upon the Riverside County Model WQMP, which can be found at
http://www.floodcontrol.co.riverside.ca.us/districtsite/downloads/NPDES/WQMP%20complete.pdf.
Return to top

Q.2--When is a preliminary Project-Specific WQMP required?

A preliminary Project-Specific WQMP maybe required as part of the project application for discretionary project approval. Developers should check with the local Permittee to determine when the Preliminary Project-Specific WQMP is required. Final Project-Specific WQMPs must be approved prior to issuance of building and grading permits.

Section 1 of the WQMP states that Project-Specific WQMPs are required prior to the first discretionary project approval or permit. Section 1 of the WQMP allows the Permittees to require a preliminary Project-Specific WQMP prior to discretionary approval and a final project-specific WQMP, in substantial conformance with the preliminary Project-Specific WQMP, prior to the issuance of building or grading permits.

Due to the interrelationship between project layout and lot layouts with site, source and treatment control BMPs, many Permittees require a preliminary Project-Specific WQMP as part of the initial project application package for a development proposal and consider project applications incomplete until a preliminary Project-Specific WQMP is submitted.
Return to top

Q.3--How does a WQMP differ from a SWPPP?

SWPPP is the acronym for Stormwater Pollution Prevention Plan. For construction that will disturb one acre or more, a SWPPP is required for compliance with the California General Permit for Stormwater Discharges Associated with Construction Activity. The focus of a construction SWPPP is to manage soil disturbance, non-stormwater discharges, construction materials, and construction

wastes during the construction phase of a project. The focus of a WQMP is to manage the quality of urban runoff after construction is completed.
Return to top

Q.4--What are Best Management Practices (BMPs)?

For purposes of a Project-Specific WQMP, there are three types of BMPs:

(1) **Site Design BMPs** – Project features that are designed or incorporated into a project to minimize the increase in stormwater runoff from the developed project site. Examples of Site Design BMPs include the use of porous asphalt or pavers, minimizing the use of decorative concrete, and directing roof drains to landscaped areas.

(2) **Source Control BMPs** – Activities or structures aimed at eliminating or minimizing contact between pollutant sources and rainfall or stormwater/urban runoff. Examples of Source Control BMPs include education, sweeping, litter collection, canopies over fueling islands, awnings or tarps to cover materials stored outdoors.

(3) **Treatment Control BMPs** – Engineered devices or systems incorporated into the project's drainage system to remove pollutants from runoff before the runoff leaves the project site. Examples of Treatment Control BMPs include vegetated swales, infiltration trenches, detention/retention basins, catch basin filters, and vortex separators.

More information about BMPs can be found at: www.cabmphandbooks.com.
Return to top

Q.5--What projects require a Project-Specific WQMP?

All projects that require discretionary approval and that are considered Significant Redevelopments or New Developments require a Project-Specific WQMP. Preliminary Project-Specific WQMPs must be approved prior to tentative use/map approvals by the appropriate administrative or legislative body. Siting, maintenance and funding commitments made in the Preliminary Project-Specific WQMP must be recognized by the site owner prior to this approval.
Return to top

Q.6--My project is in the Santa Margarita Region[1], does it require a Project-Specific WQMP?

Mark **yes** in the checklist if projects is a new development that meets the project categories or locations in question,
or
Mark **yes** in the checklist if your redevelopment* projects creates, adds or replaces** at least 5,000 square feet of impervious surfaces on an already developed site for the project categories or locations in question

If any question is answered "Yes," your project requires a Project-Specific WQMP.
If all questions are answered "No," your project does **NOT** require a Project-Specific WQMP.

Does your proposed project include:	**Yes**	**No**
1. Housing subdivisions of 10 or more dwelling units. This category includes single-family homes, multi-family homes, condominiums, and apartments.		
2. Commercial developments greater than 100,000 square feet. This category is defined as any development on private land that is not for heavy industrial or residential uses where the land area for development is greater than 100,000 square feet. The category includes, but is not limited to: hospitals; laboratories and other medical facilities; educational institutions; recreational facilities; municipal facilities; commercial nurseries; multi-apartment buildings; car wash facilities; mini-malls and other business complexes; shopping malls; hotels; office buildings; public warehouses; automotive dealerships; airfields; and other light industrial facilities		
3. Automotive repair shops (SIC codes[2] 5013, 5014, 5541, 7532-7534, or 7536-7539.)		
4. Restaurants (SIC code 5812), where the land area for development is greater than 5,000 square feet. Restaurants where land development is less than 5,000 square feet shall meet all SUSMP requirements except for structural treatment BMP and WQMP volume sizing and flow rate requirements		
5. Hillside developments that creates 10,000 square feet or more of impervious area including developments in areas with known erosive soil conditions or where natural slope is 25 % or more		
6. Parking Lots 5,000 square feet or more of impervious area		
7. Retail gasoline outlets of 5,000 square feet or more with projected average daily traffic of 100 or more vehicles per day.		
8. Street, roads, highways, and freeways, which include any paved surface that is 5,000 square feet or greater used for the transportation of automobiles, trucks, motorcycles, and other vehicles.		
9. Environmentally Sensitive Areas (ESAs). All development located within or directly adjacent to or discharging directly to an ESA (where discharges from the development or redevelopment will enter receiving waters within the ESA), which either creates 2,500 square feet of impervious surface on a proposed project site or increases the area of imperviousness of a proposed project site to 10% or more of its naturally occurring condition. "Directly adjacent" means situated within 200 feet of the ESA. "Discharging directly to" means outflow from a drainage conveyance system that is composed entirely of flows from the subject development or redevelopment site, and not commingled with flows from adjacent lands.		

* Significant Redevelopment includes, but is not limited to:

- the expansion of a building footprint or addition or replacement of a structure;
- structural development including an increase in gross floor area and/or exterior construction or remodeling;
- replacement of impervious surface that is not part of a routine maintenance activity;
- land disturbing activities related with structural or impervious surfaces.
- Where Significant Redevelopment results in an increase of less than 50 percent of the existing impervious surfaces of an existing developed site, and the existing developed site received its discretionary land use approvals prior to the adoption of the WQMP (7/13/05 in Santa Margarita Region), the WQMP would apply only to the addition, and not the existing development.

** Replacement not part of routine maintenance activity is considered a significant development.

[1] Projects in the Santa Ana Watershed have different requirements see question 7. Projects in the Whitewater Watershed are not subjected to WQMP requirements, but instead use Supplement A to the 1993 Drainage Area Management Plan (DAMP).

[2] Information regarding SIC codes can be found at http://www.osha.gov/pls/imis/sicsearch.html

Return to top

Q.7-- My project is in the Santa Ana Region[1], does it require a Project-Specific WQMP?

If any question is answered "Yes," your project requires a Project-Specific WQMP. If all questions are answered "No," your project is does **NOT** require a Project-Specific WQMP.		
Does your proposed project include:	**Yes**	**No**
1. All **Significant Redevelopment projects;** defined as the addition or creation of 5,000 or more square feet of impervious surface on an existing developed site. This includes, but is not limited to: • construction of additional buildings and/or structures, • extension of the existing footprint of a building, • construction of impervious or compacted soil parking lots. • Where Significant Redevelopment results in an increase of less than fifty percent of the existing impervious surfaces of an existing developed site, and the existing developed site received its discretionary land use approvals prior to the adoption of the WQMP (12/31/2004 in Santa Ana Region; 7/13/05 in Santa Margarita Region), the WQMP would apply only to the addition, and not the existing development. Significant Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, the original purpose of the constructed facility or emergency actions required to protect public health and safety;		
2. Residential development of 10 units or more, including Single Family and Multi-Family Dwelling Units, Condominiums, or Apartments		
3. Industrial and commercial development where the land area represented by the proposed map or permit is 100,000 square feet, or more, including, but not limited to, non-residential developments such as hospitals, educational institutions, recreational facilities, mini-malls, hotels, office buildings, warehouses, light industrial, and heavy industrial facilities;		
4. Automotive repair shops (with standard industrial classification ("SIC") codes[2] 5013, 7532, 7533, 7534, 7537, 7538, and 7539).		
5. Restaurants (SIC Code 5812) where the project site is 5,000 square feet, or more.		
6. Hillside developments that creates 10,000 square feet or more of impervious area including developments in areas with known erosive soil conditions or where natural slope is 25 % or more		
7. Parking lots of 5,000 square feet or more of impervious surface exposed to storm water. Parking lot is defined as a site or facility for the temporary storage of motor vehicles.		
8. Developments creating 2,500 square feet, or more, of impervious surface that is adjacent to (within 200 feet) or discharging directly into areas designated in the Basin Plan as waters supporting habitats necessary for the survival and successful maintenance of plant or animal species designated under state or federal law as rare, threatened, or endangered species (defined in the Basin Plan as "RARE") or waterbodies listed on the CWA Section 303(d) list of Impaired Waterbodies within the Permit Area.		

[1] For projects in the Santa Ana Watershed; additional requirement exist for the San Diego (a.k.a. Santa Margarita) watershed, see question 6. Projects in the Colorado River (a.k.a. Whitewater River) Watershed are not subjected to WQMP requirements, but instead use Supplement A to the 1993 Drainage Area Management Plan (DAMP).

[2] Information regarding SIC codes can be found at http://www.osha.gov/pls/imis/sicsearch.html

Return to top

Q.8--Where can I find additional information on preparing my Project-Specific WQMP?

Information packets are generally available upon request at most municipal Planning or Public Works Departments. Guidance documents and a template can also be downloaded from the Riverside County Flood Control website, http://www.floodcontrol.co.riverside.ca.us/districtsite/default.asp. Follow the links to the Stormwater Program. Additional information can be found on the applicable City's website.

Return to top

Q.9--What is an Environmentally Sensitive Area?

Generally, these are areas "in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which would easily be disturbed or degraded by human activities and developments" (California Public Resources Code §30107.5). Examples are Areas of Special Biological Significance as designated by the State Water Resources Control Board, areas identified in Habitat Conservation Plans as supporting endangered or threatened species, and receiving waters that are designated as being impaired. More information about Environmentally Sensitive Areas can be found at http://www.rcip.org/conservation.htm
Return to top

Q.10--What are Pollutants of Concern?

Pollutants of Concern are potential pollutants associated with Urban Runoff that are related with the type of development (land use) and legacy pollutants such as pesticides, nutrients, or hazardous substances in the site's soils as a result of past uses. See Exhibit B of the WQMP a more detailed description of pollutant and their sources.
Return to top

Q.11--How do you address Pollutants of Concern?

If the development/project includes pollutants of concerns not associated with a 303(d) listing for proximate receiving waters, then a combination of Site Design, Source Control and Treatment Control BMP would be used to address Pollutants of Concern.

If the development/project includes pollutants of concern associated with a 303(d) listing for proximate receiving waters, then Treatment Control BMPs must be of HIGH or MEDIUM effectiveness as stated on Table 3 of the Riverside County WQMP manual or any other reasonable source approved by the Permittee.
Return to top

Q.12--What is a Receiving Water?

Generally, a receiving water is a surface waterbody or watercourse such as a canyon drainage, spring, creek, river, lake, estuary, lagoon, bay, surface reservoir, or ocean. A receiving water can be ephemeral, perennial, or intermittent in nature. Waters of the U.S. are always Receiving Waters. Developments must address water quality impacts to proximate receiving waters.
Return to top

Q.13--Where can the latest 303(d) List of Impaired Waters be found?

The most recent 303(d) list can be downloaded at
http://www.waterboards.ca.gov/tmdl/303d_lists.html?counter=2723

The table below contains the 303(d) listed waterbodies, impairing pollutants, and tributary Hydrologic Units as proposed on the 2006 – 303(d) list. This list should remain in effect until 2008. Project pollutants of concern should be compared to impaired waterbody/pollutant tables below to determine if the proposed project impacts impaired waterbodies.

SAR & SMR - 303(d) listed Waterbodies with Tributary Hydrologic Units

Based on the 2006 - 303(d) list of waterbody impairments

Region	Impaired Waterbody	Hydrologic Sub Area Name	Hydrologic Unit No.	Impairment	Tributary Hydrologic Unit Numbers
8	Canyon Lake (Railroad Cyn Reservoir)	Perris Valley	802.11	***Nutrients****, **Bacteria & Viruses** (Pathogens)	802.11-15, 802.21-23
8	Chino Creek Reach 1	Chino Split	801.21	**Nutrients**	801.21
8	Elsinore, Lake	Elsinore	802.31	***Nutrients****, PCBs, Unknown Toxicity	802.11-15, 21-23, 31-32
8	Fulmor Lake	Gilman Hot Springs	802.21	**Bacteria & Viruses** (Pathogens)	802.21-23
8	Mill Creek (Prado Area)	Chino Split	801.21	**Nutrients, Turbidity** (Total Suspended Solids)	801.21
8	Santa Ana River, Reach 3	Chino Split	801.21	**Bacteria & Viruses** (Pathogens)	801.21, 25-27, 31-35
8	Santa Ana River, Reach 4	Riverside	801.27	**Bacteria & Viruses** (Pathogens)	801.27
9	Santa Margarita Lagoon	Lower Ysidora	902.11	**Nutrients** (Eutrophic)	902.11-13, 21-22, 31-35, 41-44, 51-52, 61-63, 81-84, 71-74, 91
9	De Luz Creek	De Luz Creek	902.21	**Metals** (Iron & Manganese)	902.21
9	Long Canyon	Redec	902.83	**Turbidity** (Total dissolved solids)	902.83, 84, 91
9	Murrieta Creek	Wolf Creek	902.52	**Metals** (Iron, Manganese), **Nutrients** (Nitrogen, Phosphorus)	902.31-35, 41-44, 51-52, 61-63, 71-74, 81-84, 91

9	Rainbow Creek	Gavilan	902.22	**Metal** (Iron) **Nutrient** (Sulfates), **Turbidity** (Total Dissolved Solids)	902.23
9	Sandia Creek	Gavilan	902.22	**Metal** (Iron, Manganese), **Nutrients** (Nitrogen, Sulfates), **Turbidity** (Total Dissolved Solids)	902.22
9	Santa Margarita River (upper)	Gavilan	902.22	**Nutrients** (Phosphorus)	902.22, 31-35, 41-44, 51-52, 61-63, 71-74, 81-84, 91
9	Temecula Creek	Pauba	902.51	**Nutrients** (Nitrogen, Phosphorus), **Turbidity** (Total Dissolved Solids)	902.51, 61-63, 71-74, 81-84, 91

*TMDL's have been established that remove these constituents from the 303(d) list, but these constituents must be mitigated to meet the objectives of the TMDL.

Return to top

Q.14--What are "proximate Receiving Waters" for Pollutant of Concern?

TMDL's typically require regulation of impairing pollutants, for 303 (d) listed waterbodies, through all hydrologic conditions. Therefore, Proximate Receiving Waters for Pollutant of Concern analysis are all receiving waters between the project and either the ocean or natural/engineered hydrologic barriers that prevent pollutant transport for events up to 100 year flood conditions. Terminus proximate Receiving Waters in the Santa Ana and Santa Margarita 100-year Watersheds are listed below:

Santa Margarita Watershed: All downstream receiving waters to the Ocean. These potentially include Murrieta Creek, Temecula Creek, Long Canyon Creek and the Santa Margarita Lagoon

San Jacinto Watershed: All downstream receiving waters to Lake Elsinore, potentially including the San Jacinto River and Canyon Lake

Santa Ana Watershed (excluding the San Jacinto Watershed): All downstream waters to Prado Dam, potentially including the Santa Ana River, Reach 3.

Whitewater Watershed: All downstream receiving waters to the Salton Sea, potentially including the Coachella Valley Stormwater Channel and the Whitewater River.

Return to top

Q. 15--Where can you find Hydrologic Unit Basin Numbers?

The most recent Basin Plan Maps identifying Hydrologic Unit Basin Numbers may be downloaded at:

Santa Ana Watershed: http://www.waterboards.ca.gov/santaana/
Santa Margarita Watershed: http://www.waterboards.ca.gov/sandiego/
Whitewater Watershed: http://www.waterboards.ca.gov/coloradoriver/

Santa Ana Region Hydrologic Numbers		Santa Margarita Region Hydrologic Numbers		White Water Region Hydrologic Numbers	
801.13	Santa Ana Narrows	901.25	Upper San Juan	708.10	Warren
801.21	Chino Split	901.40	San Mateo Canyon	709.10	Copper Mountain
801.25	Temescal	902.21	DeLuz Creek	709.20	Dale Valley

		903.21	Pala	723.10	Brawley
				725.00	East Salton

Return to top

Q.16--When are Hydrologic Conditions of Concern addressed?

Section 4.4 of the WQMP identifies three conditions under which hydrologic condition of concern would not need to be addressed. Conditions A and B exempt projects discharging to publicly maintained MS4 systems and projects less than one acre in size. Condition C exempts projects with runoff flow rates, volumes, velocity and durations less than the pre-development condition for 2-year and 10-year 24 hour rainfall events.

Note that Hydrologic Conditions of Concern address impacts runoff events from de minimus runoff events through the 10-year 24-hour rainfall event. Therefore, proximate Receiving Waters for Hydrologic Conditions of Concern are the waterbodies that may be impacted under these conditions. Generally, stream systems with 20 square miles or greater tributary area can be considered a final terminus for HCOC analysis.
Return to top

Q.17--What are "animal wastes" as defined in Footnote 3 of WQMP Exhibit B?

Facilities with animal wastes include pet stores, veterinary clinics, animal shelters, zoos, and other facilities handling live animals. Facilities processing animal bi-products are also included such as restaurants, meat packing facilities, grocery stores, etc.
Return to top

Q.18--What is meant by "the handling and placement of any wastes" in Section 4.6 of the WQMP?

Certain source control and treatment control BMPs may collect waste that is classified as hazardous, or whose transport and disposal is otherwise limited by state or federal law. Two examples are: (1) depending upon the land uses in the drainage area of a detention or retention basin, the accumulated sediment may have characteristics that restrict its disposal; (2) in some applications, catch basin filter inserts may accumulate enough pollutants (e.g., metals, petroleum hydrocarbons) to warrant restricted disposal. Operation and Maintenance procedures should address how these wastes will be collected, stored, transported and disposed.
Return to top

Q.19--What is meant by "BMP start-up dates" in Section 4.6 of the WQMP?

Section 4.6 of the WQMP requires the project proponent to address "BMP start-up dates", or dates when BMPs are expected to become functional, to assist with determining compliance with Section 2.2 of the WQMP. Section 2.2 of the WQMP states that Permittee conditions of approval must require the project proponent describe the mechanism for funding the long-term operation and maintenance of the BMPs requiring long-term maintenance prior to the issuance of building or grading permits. In addition conditions of approval must require guarantee of BMP construction and installation prior to building or grading permit close-out or issuance of certificate of occupancy or certificate of use, as applicable. The Permittees must verify that maintenance and operations

entities are aware of when their obligations begin and to ensure that BMPs are effectively functioning prior to closing out a development project.
Return to top

Q.20--What are options for "High/Medium" effectiveness BMPs for bacteria/pathogen indicators necessary to address 303(d) listings and TMDLs in the Santa Ana and San Jacinto Watersheds? (4.5.3 page 25)

Section 4.5.3 of the WQMP requires that sites that are tributary to 303(d) listed waterbodies require Post Construction BMPs capable of reducing 303(d) listed pollutants of concern with at least a "Medium" removal efficiency per Table 3 of the WQMP. The San Jacinto River watershed tributary to Canyon Lake and the Santa Ana River watershed are 303(d) listed for bacteria/pathogen indicators and will require BMPs that are rated at least "Medium" removal efficiency for bacteria.

The Riverside County WQMP Table 3 - Treatment Control BMP Selection Matrix designates Infiltration BMPs and Filtration Systems, including sand and media filters, as High or Medium pollutant removal efficiency for bacteria.

Additional BMPs with high and/or medium bacteria reduction effectiveness are cited by CASQA in documents like the "2003 Stormwater Best Management Practices Handbook for New Development and Redevelopment" and Caltrans studies like the "April 2006 Treatment BMP Technology Report". These studies identify acceptable alternative BMPs. Underground filtration systems may also be an option given sufficient support for removal efficiency from manufacturers.

Based on Caltrans' 2006 Treatment BMP Technology Report, the most effective BMPs (based on pathogen removal and cost) are Biofiltration strips, followed by Infiltration Basins, then Dry Weather Flow Diversions. These BMPs are all approved by Caltrans.

BMP Type	Pathogen Removal	Confidence	Benefit	Cost	Confidence
Biofiltration Strips	High	High	High	Low	High
Infiltration Basin	High	Med	High	Low	High
Dry Weather Flow Diversions	High	Med	High	Low	Low

Caltrans cites other BMPs that were costly but had a high-medium pathogen removal with high-medium confidence, which include:

1. Infiltration Trenches*
2. Wet Basin*
3. Dual Media Austin Filter
4. Wetland Systems
5. Disinfection – Ozone
6. Several below Grade Infiltration products
7. Porous Asphalt Pavement
8. Austin Sand Filter*
9. Delaware Sand Filter*
10. Filtration Bed

*Caltrans approved BMPs
Return to top

Q.21--Does a Commercial/Industrial or Residential Development with parking lots and/or streets incorporated into the development need to address all pollutants associated with each of the aforementioned development categories identified in WQMP Exhibit B?

No. Most commercial and residential developments incorporate parking lots and roads, streets and highways. WQMP Exhibit B identifies various Types of Developments or Land Uses as separate development categories with unique Pollutants of Concern. The Pollutants of Concern for parking lots and roads, streets and highways are not necessarily subsets of other types of development types or land uses. For example, WQMP Exhibit B indicates that Commercial/Industrial Development potentially have organic compounds in runoff IF solvents will be used or stored by the project in a way that exposes solvents to precipitation or runoff. However, parking lots are identied as ALWAYS having organic compounds as a potential pollutant of concern (in the form of petroleum hydrocarbons).

The studies used to identify pollutants in runoff for the Type of Development (Land Use) identified in WQMP Exhibit "B" considered all aspects of the typical land use (including parking lots and roads) when defining the pollutants associated with that type of development or land use category. Therefore, if construction of parking lots and/or roads are a condition of approval for the map or permit for which discretionary approval is sought and are hydrologically interconnected, the encompassing development category (i.e. Commercial/Industrial development type or land use) would define the Pollutants of Concern. Hydrologically independent development categories for that same map or permit should address all Pollutants of Concern associated with the hydrologically independent development type or land use category in Model WQMP Exhibit B. As always, there are exceptions to every rule, and project applicant should consider and describe in the Project-Specific WQMP the unique circumstances that may influence the Pollutant of Concern identified for a specific project based upon the development category or combination of categories that are appropriate. For example, a Permittee may require that a commercial automobile parts store shall address petroleum hydrocarbons (organic compounds), which are not associated with the commercial/industrial development category in the Exhibit B of the WQMP, but are associated with parking lots, due to the increased likelihood of automotive repair activities occurring in the customer parking areas and automobiles in need of maintenance utilizing the customer parking area.

For other development type or land use mixes of a map or permit for which discretionary approval is sought, such as commercial shopping center with satellite restaurants and/or automotive repair shop pads, the project-specific WQMP should specifically consider Potential Pollutants associated with each separate development type or land use.
Return to top

Q.22--If a development includes multiple WQMP development types or land uses such as a Commercial Shopping Center with one or more satellite restaurants, does the entire development have to address the combined Pollutants of Concern identified for both development categories in WQMP Exhibit B?

Yes. Those portions of the commercial development containing hydrologically interconnected development categories must address all pollutants of concern associated with the hydrologically interconnected development categories. Where it is feasible to address certain pollutants, such as pathogens, at the source with a proactive site and source control prospective, the need to address

pathogens in downstream treatment control BMPs would not be required. In other cases, it may be feasible to grade the overall site in such a manner to allow localized treatment of specific Pollutants of Concern can be addressed.
Return to top

Q.23--Is a Registered Engineer's stamp required on the preliminary project-specific WQMP?

Yes, however this requirement can be waived for preliminary WQMPs at the discretion of the Permittee. Preliminary project-specific WQMPs contain details such as lot layout, drainage control, site grading, and BMP footprint. These project features are integral to final lot layout and must necessarily be determined with some level of confidence prior to discretionary approval for the map or permit by the appropriate legislative or administrative body. Therefore, a Registered Engineer shall stamp and sign the preliminary project-specific WQMP as well as the final project-specific WQMP to ensure accuracy of calculations. A Registered Engineer's stamp is always required on the final project-specific WQMP.
Return to top

Q.24--Is an owner's certification be required on a preliminary project-specific WQMP?

Yes, however this requirement can be waived for preliminary WQMPs at the discretion of the Permittee. The owner's certification page is located in the WQMP Exhibit A, Project-Specific WQMP template. Preliminary WQMPs contain design details and developer commitments regarding operation, maintenance and funding of post-construction BMPs. Preliminary project-specific WQMPs must be approved prior to discretionary approval for the map or permit by the appropriate administrative or legislative body. Siting, maintenance and funding commitments made in the Preliminary project-specific WQMP should be recognized by the site owner prior to this approval. Consequently, the owner should be required to sign the preliminary and final project-specific WQMP. An owner's certification is always required on a final project-specific WQMP.
Return to top

Q.25--What elements should be included in a project specific WQMP submittal?

Page 8 of the Model WQMP specifies the main elements of a preliminary project specific WQMP:

1) Project description and site characterization
2) Identification of Pollutants and Hydrologic Conditions of Concern
3) Identification of Site Design BMPs to be incorporated
4) Identification of Source Control BMPs to be incorporated
5) Selection, preliminary sizing and siting of applicable post-construction BMPs
6) Preliminary Operation and Maintenance Program, including responsible parties
7) Proposed funding source for O&M

The level of detail in a preliminary project-specific WQMP will depend on the level of detail known about the overall project design the time project approval is sought. The level of detail associated with a Preliminary project-specific WQMP should be sufficient to:

- Identify the major features of the development, including the location of activities, storage areas, or other features that could expose Urban Runoff to pollutants.
- Identify impacts of developments
- Ensure that applicable BMPs are reasonably incorporated into site layout and appropriately sized.
- Ensure that a reasonable and feasible operations and maintenance mechanism is proposed and that identified maintenance parties are committed to participation (for example, if public maintenance is proposed, ensure that public maintenance agencies have committed to the proposal)
- Ensure that a feasible and acceptable funding mechanism has been proposed.

Return to top

Q.26--Can pollutants associated with development categories in WQMP Exhibit B be addressed solely through site design and/or source control BMPs?

Yes. Section 7 of the WQMP, under Condition A, indicates that Treatment Control BMP requirements may be eliminated, with the approval of the local jurisdiction, if Site Design and Source Control BMPs are demonstrated to effectively eliminate discharges of Pollutants of Concern for the Flow Based Design or Volume Based Design criteria. Equivalency can be demonstrated for all pollutants associated with a site, or specific individual pollutants associated with a site.

For example, parking lots are identified as expected sources of pathogens (non-human sources would be considered natural background). However, the source of pathogens may vary with the land use associated with the parking lot. If a parking lot is associated with a real estate office, the only urban source of pathogens is likely to be trash dumpsters. If those trash dumpsters were covered, maintained in enclosed areas that divert stormwater around the dumpster enclosure, and had non-stormwater flows diverted to sewer, then pathogens could be considered addressed for that parking lot. Other pollutants, such as trash, nutrients and oil and grease may still need to be addressed would still need to be addressed with other site, source or treatment control BMPs.

Return to top

Q.27--Issue: Is roof runoff a pollutant? Does it need to be treated?

Yes. Roof runoff is a part of the encompassing Development Type or Land Use (i.e. Commercial/Industrial) in WQMP Exhibit "B". Roof runoff has been found to contain pollutants associated with aerial deposition and various materials used to construct roofs and appurtenant roof infrastructure (air conditioners, vents, roofing material). Roof runoff, particularly from commercial and industrial buildings, has been demonstrated to significantly exceed zinc and copper water quality objectives in certain circumstances. This is of particular concern as zinc and copper have been identified on the draft 2004 303(d) list as impairing Beneficial Uses for

Murrieta Creek. By architectural design, roofs may be either hydrologically independent to the encompassing Development Type or Land Use or hydrologically interconnected to the same.
Return to top

Q.28--What controls on property or titles are necessary to ensure that site design BMPs are not abandoned or destroyed by future property owners?

Site Design BMPs may need to be recorded on final maps as easements to ensure that their functionality is not hindered by future property owners. For example, an easement could be in place to protect a gravel-lined water quality swale along a driveway, a setback from a natural watercourse or a water quality pond that is integrated in to the site design of a project. Covenants, HOAs, POAs, CC&Rs may also be used to describe locations of site design BMPs and limitations on the use of areas incorporating site design BMPs (e.g., areas utilizing open-jointed paving materials or permeable surfaces, such as pervious concrete, porous asphalt, unit pavers, and granular materials or landscaped buffer areas between sidewalks and streets).

WORK GROUPS

Riverside County

2006-07 NPDES Pre-Storm Season Meeting

August 10, 2006

MEETING AGENDA

1. Welcome to all the first time attendees and to those who joined us during our previous pre-storm season meeting. This is our second annual pre-storm season meeting. We thank you for taking time out of your busy schedule to join us!
2. Our meeting structure today will be very informal.
3. Logistics of the meeting room. Parking validation is available before you leave.
4. Plan to wrap our meeting up at 12:00 PM or sooner.
5. Opening comments and summary of "The 2005-06 Storm Season for the County of Riverside"- Steve Dondalski.
6. Comments concerning "The NPDES Consultant's Point Of View For The 2005-06 Storm Season"- Mike Malone (Geopacifica).
7. Open discussion featuring all attendees.
8. Meeting summary.
9. Riverside County Flood Control is once again offering no-cost NPDES Training covering the following subject matter: Construction Inspection, Industrial/Commercial Facility Training and Water Quality Management Plan Training. Training sessions will be held at the Flood Control District in Riverside, in Temecula or in Palm Springs. The training sessions are being offered the first three weeks of October. If you are interested please let me know and I will be happy to provide registration information and exact dates and locations. Seating is usually limited so the sooner you register the better.
10. California Storm Water Quality Association (CASQA) will offer NPDES Training September 25-27, 2006 in Sacramento, CA this year. Pre-register for the training at: http://stormwaterconference.com/. Last year CASQA training was held at Ontario, CA.
11. Meet the same time next year for our next Pre-Season NPDES Meeting ?

BORN LOSER
by Art & Chip Sansom

SANTA MARGARITA PRE-MEETING
OCTOBER 26, 2006
AGENDA

1. **Number of Facilities within the CAP Program**

2. **Number of Annual Report required for submittal**

   Submittal Requirement shall include two (2) hard copies and a CD version. The hard copies should be three-hole punched and binded.

   Reminder: Submittals to include certifications for both Watershed and Individual Annual Reports.

3. **Annual Report deadline submittal to Flood**

   Please submit your report by Monday, October 30th. Similar to last year, we want to submit all the reports together.

4. **Executive Summary**

   Discussion on effectiveness assessment introduction

5. **Open Discussion**

SANTA MARGARITA RIVER EXECUTIVE MANAGEMENT TEAM (SMREMT)

SMR Watershed Efforts Meeting

Date: August 8, 2006
Time: 10:00 – 11:00 a.m.
Place: U.S. Bureau of Reclamation

Expected Participants:
Bill Steele, U.S. Bureau of Reclamation
Nicole Rowan, CDM (teleconference)
Jason Uhley and Linda Garcia, Riverside County Flood Control District

Objective:
Summarize SMREMT efforts from a management perspective and describe anticipated future activities.

Key points:

1. History of SMR watershed model development and calibration
   a. Concerns with water quality calibrations?

2. Communication with the SDRB
   a. Receptiveness to a stakeholder-driven TMDL
   b. Concerns about using a model other than what they are familiar with
   c. Comparisons between BASINS (HSPF?) and WARMF – Are some of the perceived limitations of the WARMF model really limitations?

3. What will the District be getting out of participation in the modeling effort?
   a. Short-term benefits
   b. Long-term benefits
   c. Potential costs in money and monitoring requirements

4. What level of participation is the SMREMT getting from other stakeholders?

5. Future activities

Proposed Meeting Agenda

Santa Margarita River Watershed
Total Maximum Daily Load Development

1:00 – 3:30 p.m. August 15, 2006

Rancho California Water District Board Room
42135 Winchester Rd
Temecula, CA 92590
(951) 296-6900

Meeting Purpose: To determine how the process the U.S. Bureau of Reclamation has led to address watershed water management issues over the past five years can be expanded to include additional stakeholders focusing on scientifically based TMDL development in the Santa Margarita River Watershed.

1. Welcome, Introductions and Agenda Review (15 minutes)

2. Process that Led to Today's Meeting (10 minutes)

3. TMDL Process Overview (15 minutes)

4. RWQCB discussion of Coastal Lagoon TMDL Process and California Numeric Nutrient Endpoints (30 minutes)

5. Importance of Stakeholder Involvement (15 minutes)

6. Brief Overview of Watershed Efforts (20 minutes)
   A. Santa Margarita River Watershed Urban Runoff Management Plan and Watershed Management Plan - San Diego County
   B. MS4 Permits
   C. Framework Monitoring Plan
   D. Santa Margarita Watershed Water Supply Augmentation, Water Quality Protection and Environmental Enhancement Program Phase 3A
   E. Santa Margarita Watershed Water Supply Augmentation, Water Quality Protection and Environmental Enhancement Program Phase 3B
   F. Questions and Discussion of Other Efforts

7. Recommendations and Brainstorming on how stakeholder involvement can improve TMDL process. (25 minutes)

8. Feedback and Next Steps (20 minutes)

Santa Margarita River Water Quality Monitoring Group

Agenda

10:00-12:00 PM
Wednesday, November 15, 2006

1. Introductions (5 min)

2. Purpose of Meeting (5 min)

3. Review Mission and Goals as previously established by group (10 min)

4. Discuss Water Quality and Quantity Monitoring Programs (30 min)
   - Discussion at a general level, with details to come later (Who, What, When, Where, Why?)

   a. Ongoing Programs
   b. Planned
   c. Discontinued

5. Review Draft Monitoring Needs Matrix (20 min)
   -This was developed in 2004-5 by SDSU and Camp Pendleton with input from several other agencies in the watershed and several regional research organizations

6. Plan next meeting date(s) and agenda(s) (10 min)

Some initial thoughts for future discussion:

-Review #4 above in greater detail (constituents, frequency, methods, etc.)
-Review the group's 2001 Framework Monitoring Plan
-Review monitoring aspects of the goals contained in the SMR Watershed Management Plan of 2005
-Review sampling requirements for improving the existing watershed model (WARMF)
-Explore ways to better share information between participants
-Explore ways to collaborate across agencies to "lighten the load"
    -cost sharing?
    -streamlining programs?
-Review monitoring requirements of the MS4 programs
-Discuss how various planning groups in the watershed fit together
    -Water Quality Monitoring Group
    -Proposed Watershed Council
    -Executive Management Team

- -Watermaster Steering Committee
- -SMR-SLR Joint Powers Authority
- -others
- -Watershed Tour

Meeting Agenda

Santa Margarita River Watershed
Watershed Water Quality Management

1:30 – 3:30 p.m. January 16, 2007

U.S. Bureau of Reclamation
Southern California Area Office
27708 Jefferson Avenue, Suite 202
Temecula, CA 92590
(951) 695-5310

1. Welcome, Introductions and Agenda Review (5 minutes)
2. Presentation by Camp Pendleton on their recent data collection program (10 minutes)
3. Update on the Lagoon TMDL effort (10 minutes)
4. Discussion of the Proposed Phase 4 Study (45 minutes)
5. Break (5 minutes)
6. Cost Sharing Discussion on Phase 4 (15 minutes)
7. Santa Margarita Watershed Council Overview (10 minutes)
8. Water Quality Monitoring Efforts (10 minutes)
9. Next meetings (5 minutes)
    a. Discussion of Cost sharing
    b. Next EMT Meeting

Santa Margarita River Water Quality Monitoring Group

Agenda for January 2007 Meeting

When: 1:30-3:30 PM, Wednesday, January 17, 2007
Where: US Bureau of Reclamation Conference Room, Temecula

1. Introductions (5 min)

2. Review Agenda (5 min)

3. Review Draft Monitoring Needs Matrix (30 min)
   -This was developed in 2004-5 by SDSU and Camp Pendleton with input from several other agencies in the watershed and several regional research organizations

4. Review Framework Monitoring Plan (30 min)

5. Discuss the following monitoring programs (30 min)
   a. MS4
   b. Rainbow Creek TMDL monitoring
   c. Volunteer WQ Monitoring – Home-2-Ocean Program
   d. SDSU program at SMER
   e. Investigation Order for Estuary TMDL

6. Discuss precipitation monitoring requirements throughout watershed

7. Plan next meeting date(s) and agenda(s) (5 min)

DRAFT

Potential Discussion items for March & May 2007 WQMG Meetings:

1. Discuss overall watershed-wide monitoring needs

    a. Review Stetson's recent comparative analysis of sampling recommendations contained within last 15-years worth of plans and programs
    b. Review sampling requirements for improving/calibrating the Bureau's existing watershed model (WARMF)
    c. Review Camp Pendleton's new WQ monitoring program
    d. Discuss how MS4 sampling programs fit into the mix

2. Discuss requirements and potential for a centralized repository of monitoring data.
    a. SDSU?
    b. Project Clean Water?
    c. Other?

3. Review SDSU's web-based database of watershed studies.

4. Review TNC's geomorphic assessment of main stem of river (Stetson 2001)

5. Plan Watershed Tour

Agenda For Santa Margarita River Water Quality Monitoring Group

Date: June 12, 2007
Time: 10:00 - 11:45 AM

Location: USBR office in Temecula
27708 Jefferson Avenue, Suite 202
Temecula, CA
Phone: (951) 695-5310

1. Introductions

2. Discuss Water Quality Monitoring - Ongoing and Planned

a. Latest Version of Estuary Monitoring per Investigation Order (USBR Lead)
b. Monitoring with Federal Funding (USBR Lead)
-Main Stem
-Upper Watershed
c. Discuss how will these two programs should relate/reinforce one another? (Scott lead)
d. What is the next step? Discussion of additional upstream and tributary monitoring needs. (Scott lead)

3. Review content and Capabilities of SDSU's online database of watershed studies and information (SDSU Lead)

4. Discuss Precipitation Monitoring Requirements - Current, Planned, and Additional Needed (UCSD Lead)

a. What do we get by installing more stations?

5. Set next Meeting & Adjourn

Items for Future Meetings:

1. Review the Mission of the Group - Editing Needed?
2. Review the Goals of the Group - Any Changes/Additions Needed?
3. Plan watershed tour
4. Discuss Implications of SMR Geology upon Water Quality 5. Discuss reference conditions - What is the "background" water quality? What do we know? What do we suspect, but needed to research?
6. Review comments on document disseminated at previous meeting: Review of Perceived Threats to the Santa Margarita River Watershed.

Please let me know if you have any questions. I look forward to seeing you soon.

Regards,
Scott Thomas, Ph.D.
Senior Scientist
Stetson Engineers, Inc.
PO Box 6645
Diamondhead, Mississippi 39525

(415) 457-1638 (fax)

MISSION RESOURCE CONSERVATION DISTRICT (MRCD)

INTEGRATED REGIONAL WATER MANAGEMENT

(IRWM)

Memorandum

To: *Perry Louck, Rancho California Water District*
Jason Uhley, Riverside County Flood Control District

From: *Wendy Katagi, Camp Dresser & McKee*

Date: *May 31, 2007*

Subject: *Santa Margarita Watershed IRWMP Stakeholder Workshop #1, Minutes*

Participants

Bruce Posthumus	CA Regional Water Quality Control Board
Jeremy Haas	CA Regional Water Quality Control Board
Wendy Katagi	**Camp Dresser & McKee**
Shea Petry	**Camp Dresser & McKee**
Stephanie Roberts	**Camp Dresser & McKee**
Dan Rodrigo	**Camp Dresser & McKee**
Farida Naceem	City of Murrieta
Aldo Licitra	City of Temecula
Alex Gann	**County of Riverside**
Micheal Shetler	County of Riverside
Mary Larson	Department of Fish and Game, Fishery Restoration Grants Program
Holly Sheradin	**Department of Fish and Game, Fishery Restoration Grants Program**
Greg Krzys	**Department of the Interior, US Bureau of Reclamation**
Mike Nusser	**Eastern Municipal Water District (EMWD)**
Behrooz Mortazavi, Ph.D.,P.E.	**Eastern Municipal Water District (EMWD)**
Phil Miller	Eastern Municipal Water District (EMWD)
Del Ross	EDAC
Vicki Long	**Elsinore/Murrieta/Anza Resource Conservation District (EMARCD)**
Bob Wheeler	**Elsinore/Murrieta/Anza Resource Conservation District (EMARCD)**
Charolette Fox	Elsinore/Murrieta/Anza Resource Conservation District (EMARCD) and League of Women Voters
Pam Nelson	**Elsinore/Murrieta/Anza Resource Conservation District (EMARCD)**

Judy Mitchell	Mission Resource Conservation District (MRCD)
Benjie Cho	Riverside County Flood Control (RCFC)
Tina Tuason	**Riverside County Flood Control (RCFC)**
Jason Uhley	**Riverside County Flood Control (RCFC)**
Tim Barr	**Rancho California Water District (RCWD)**
Perry Louck	**Rancho California Water District (RCWD)**
David Gibson	San Diego Regional Water Quality Control Board
George Sutherland	Trout Unlimited, South Coast Chapter
Christine Medak	U.S. Fish and Wildlife Service
Daniel Sulzer	**US Army Corps of Engineers**
Bill Steele	**US Bureau of Reclamation**
Samantha Marcum	US Forest and Wildlife Service
Jack Safely	**Western Municipal Water District (WMWD)**

I. Welcome and Introductions

1. The meeting was called to order and there were introductions of all participants.

2. Perry Louck of Rancho California Water District and Jason Uhley of the County of Riverside thanked everyone for being a part of this IRWMP development. Perry Louck provided background on the process leading up to this point.

II. Project Overview and Schedule Milestones

1. Wendy Katagi of CDM presented the background of the project and the IRWMP process and announced that Stakeholder Meeting #2 is planned for June 13, 2007 from 9am -11:30 pm and Stakeholder Meeting #3 is on June 25 from 1-3:30. CDM stated that they will be available to help with the project nomination process and reviewed the handouts.

III. Stakeholder Process and Workshops

1. Perry Louck stated that the lower section of the Santa Margarita watershed that is located in San Diego County will be participating in the San Diego IRWMP process.

2. Wendy Katagi reviewed the concepts of integration of water resources, IRWMP objectives and eligible projects. The Proposition 50 guidelines state that $64 million dollars will be available for projects, but only $25 million is available for the region including all of San Diego County and the Santa Margarita Region.

3. A stakeholder asked if Proposition 50 monies will be available to be used for planning. Daniel Cozad of IPM, Inc. responded that they cannot be used but Proposition 84 monies can.

IV. Data Needs and Coordination

1. Daniel Cozad stated that the regulatory bodies should be deciding on projects that are in the area, but not the state.

2. Dan Rodrigo of CDM facilitated a brainstorm session on the vision statement and objectives. Notes from this discussion follow.

Keywords for Vision Statement

1) "Improve" (resources)

2) "Identify (resources); recharge areas, esp. natural and man-made

3) Caltrans-green design

4) Allow for growth of economy (Riverside County)

5) "Preserve and Enhance" (endangered habitat and species and critical habitat

6) Sustainability and cost (reduce pumping cost and reduce secondary energy impacts

7) Avoiding development in floodplains (tie to land use)

8) RCD-targets for habitat restoration

9) Ensure compliance with existing landscape planning efforts (e.g. MSHCP)

Issues to include in the Vision Statement

1) Improve water use efficiency; Reduce per capita water demand

2) Preserve/enhance environmental corridors and sensitive and critical habitats

3) Reduce dependency on imported water

4) Increase use of recycled water

5) Identify and protect natural and man-made recharge areas

6) Developing solutions based on economics implementation, and regional benefits

7) Improved Flood Protection

8) Promote integrated stormwater management

9) Promote low impact development

10) Protect and improve water quality

11) Evaluate appropriateness of existing water quality standards

12) Promote sustainability of agriculture

13) Evaluate relative costs and benefits of natural uses, man-made solutions

14) Removal of non-native species and restoration of native

15) Increase open space

16) Promote public education and outreach

17) Enhancing fish habitats

18) Attain salt balances

19) Provide for reliable water supply

20) Improve partnerships

21) Seek multi-benefit, multipurpose projects

22) Maximize outside funding

23) Seek "win-"win" solutions

Objectives to include in the IRWMP

1) Water Supply

2) Water Quality

3) Environment

4) Flood Control

5) Open Space

6) Reduce fish passage impediments

7) Keep in-stream flow to support fish

8) Monitoring and evaluating of fish habitat health

9) BMPs-Water Quality

10) Water Conservation

11) Urbanizing rural areas (septic systems, Anza), Discontinuity of systems and data (Water Quality sampling)

    a. recognize

    b. monitor

    c. watershed dysfunction

Questions

2) Prop 50-no planning only **implementation;** planning grant application

3) How do we coordinate with San Diego County? When it goes to the State?

    a. Preliminary discussion-sub-regional plan

    b. Reference: existing adopted plans

3. CDM compiled all of the ideas and created a draft vision statement. The group agreed that every objective needed at least one target to be able to measure the objective's success.

4. The vision statement will include language that addresses improving water supply reliability, enhancing natural resources, "healthy" watersheds, habitats, balance and regional planning and multiple benefits.

5. A stakeholder added that previous IRWMP and other types of water management plans have only addressed problems that deal with water. He stated that the problem may actually be in water but the cause is from land use or some other contributing factor. Land use design should be integrated with the plan this time.

6. Another stakeholder suggested integrating Caltrans green design standards.

7. A stakeholder suggested using terms from Proposition 50.

8. Some objectives of the IRWMP are to:

   a. Reduce dependence on imported water

   b. Increase use of recycled water

   c. Identify and protect imported water

9. A stakeholder commented that he thought all the previously listed objectives fall under the broader category of conservation

10. Additional objectives are:

    a. Improve Flood Protection

    b. Promote integrated Stormwater

    c. Sustainable agriculture

    d. Evaluate relative costs and benefits of natural vs. maintained

    e. Removal of non-native grasses, esp. invasive non-native

    f. Increase open space, name some species

    g. Promote public education and outreach

    h. Enhance fish habitat

    i. Attain salt balance

    j. Provide for reliable water supply

    k. Improve partnerships

    l. Seek multi-benefits, multi-purpose projects

    m. Seek "win-win" solutions

11. CDM presented the vision statement to the stakeholder group and they commented and made suggestions to improve the vision statement.

V. Overview of Governance Structure

1. Daniel Cozad discussed governance. He stated that there will be a stakeholder advisory committee open to agencies and organizations interested in participating.

VI. Next Steps

1. Stakeholder Meeting #2 is planned for June 13, 2007 from 9am -11:30 pm and Stakeholder Meeting #3 is on June 25 from 1-3:30.

2. Submit projection nomination forms to Wendy Katagi of CDM, Katagiwr@cdm.com by June 12, 2007. Project interviews will be conducted to help project proponents complete forms prior to June 12, 2007.

3. Perry Louck and Jason Uhley thanked everyone for their involvement in the process.

4. The meeting was adjourned at 3:20 pm.

Memorandum

To: *Perry Louck, Rancho California Water District*
Jason Uhley, Riverside County Flood Control District

From: *Wendy Katagi, Camp Dresser & McKee*

Date: *June 14, 2007*

Subject: *Santa Margarita Watershed IRWMP Stakeholder Workshop #2, Public Hearing Intent to Adopt IRWMP held on June 13, 2007, Minutes*

Participants

Meeting attendees are shown in bold.

Bruce Posthumus	CA Regional Water Quality Control Board
Jeremy Haas	CA Regional Water Quality Control Board
Jennifer Jones	**Camp Dresser & McKee**
Wendy Katagi	**Camp Dresser & McKee**
Shea Petry	**Camp Dresser & McKee**
Stephanie Roberts	Camp Dresser & McKee
Dan Rodrigo	**Camp Dresser & McKee**
Karen Schwarz	**Camp Dresser & McKee**
Farida Naceem	**City of Murrieta**
Aldo Licitra	City of Temecula
Alex Gann	County of Riverside
Micheal Shetler	**County of Riverside**
Mary Larson	Department of Fish and Game, Fishery Restoration Grants Program
Holly Sheradin	**Department of Fish and Game, Fishery Restoration Grants Program**
Greg Krzys	Department of the Interior, US Bureau of Reclamation
Mike Nusser	**Eastern Municipal Water District (EMWD)**
Behrooz Mortazavi, Ph.D.,P.E.	Eastern Municipal Water District (EMWD)
Phil Miller	Eastern Municipal Water District (EMWD)
Del Ross	EDAC
Vicki Long	**Elsinore/Murrieta/Anza Resource Conservation District (EMARCD)**
Bob Wheeler	Elsinore/Murrieta/Anza Resource Conservation

	District (EMARCD)
Charolette Fox	**Elsinore/Murrieta/Anza Resource Conservation District (EMARCD) and League of Women Voters**
Pam Nelson	**Elsinore/Murrieta/Anza Resource Conservation District (EMARCD)**
Judy Mitchell	Mission Resource Conservation District (MRCD)
Bob Hewitt	**Natural Resources Conservation Service**
Benjie Cho	Riverside County Flood Control (RCFC)
Tina Tuason	**Riverside County Flood Control (RCFC)**
Jason Uhley	**Riverside County Flood Control (RCFC)**
Tim Barr	Rancho California Water District (RCWD)
Perry Louck	Rancho California Water District (RCWD)
Gail Egenco	**Riverside Land Conservancy**
David Gibson	San Diego Regional Water Quality Control Board
Christine Moen	**Southwestern Riverside County Mulit-Species Reserve**
George Sutherland	**Trout Unlimited, South Coast Chapter**
Christine Medak	U.S. Fish and Wildlife Service
Daniel Sulzer	US Army Corps of Engineers
Doug McPherson	**US Bureau of Reclamation**
Bill Steele	US Bureau of Reclamation
Samantha Marcum	US Forest and Wildlife Service
Fakhri Manghi	**Western Municipal ater District**
Jack Safely	Western Municipal Water District (WMWD)

I. Welcome and Introductions

1. Dan Rodrigo of CDM opened the meeting with a welcome and introduction of everyone attending the meeting.

2. It was explained to the group that the meeting doubles as a public hearing to satisfy the requirement of notice of intent to prepare an Integrated Resources Watershed Management Plan (IRWMP). Comments made during the meeting will be recorded and minutes will be prepared for public record.

II. Project Overview and Background

1. Wendy Katagi discussed the Public Workshop process that is being held as part of the IRWMP planning process. Workshops are as follows:

   - Workshop 1 - Discuss IRWMP process, vision, regional objectives, and governance structure (completed)

- Workshop 2 - Hearing of intent to prepare an IRWMP, review vision, regional objectives, projects, and IRWMP progress - June 13, 2007 (9:00 a.m. to 11:30 a.m.)
- Workshop 3 - Project ranking and integration, review of IRWMP progress - June 25, 2007 (1:00 p.m. to 3:30 p.m.)
- Workshop 4 - Hearing of intent to adopt an IRWMP, IRWMP presentation - July 13, 2007 (1:00 p.m. to 3:30 p.m.)

2. The Public Draft IRWMP is expected to be available July 1, 2007.

3. The final Proposition 50 guidelines for Phase 2 were recently released and are available at:
http://www.swrcb.ca.gov/funding/irwmgp/docs/final_r2_irwm_guide_psp.pdf
The schedules for the Proposition 50 expedited phase 2 and Proposition 84 were presented to the group. Proposition 50 phase 2 projects are to focus on implementation oriented projects.

II. Review of Vision Statement and Objectives

1. Dan Rodrigo facilitated a discussion on the vision statement and IRWMP objectives. After Stakeholder Workshop #1, three vision statements were drafted and emailed to the group for feedback. Based on the responses, a new vision statement was crafted and presented to the stakeholder group at the meeting. More discussion ensued at Stakeholder Workshop #2. The agreed upon vision statement is:

   "The Integrated Regional Water Management Plan will take a balanced and consensus-based approach that will provide for the protection and sustainability of the upper Santa Margarita Watershed's water resources, natural resources, and habitats."

2. The stakeholder group discussed and approved the nine Objectives and Sub-objectives that will be included in the IRWMP. Revised objectives are as follows:

   1. Develop a More Reliable and Diverse Portfolio of Water Supplies

   - Continue to implement water conservation efforts to reduce water consumption for the region

- Continue to develop cost-effective, sustainable local water supplies such as groundwater, surface water, and recycled water in order to reduce dependency on imported water
- Manage drought response to increase water supply reliability through implementation of water districts' urban water management plans, drought management plans
- Construct, operate and maintain an efficient water supply infrastructure, including water conveyance, treatment, storage and distribution
- Consider climate change in the evaluation of future water supply options

2. **Promote Economic, Social, and Environmental Sustainability**

- Account for expected economic growth, societal quality of life, and environment enhancement when developing water resources projects
- Equitably address disadvantaged community needs
- Promote sustainable practices for agriculture
- Reduce energy usage and greenhouse gas emissions in operations of water supply, stormwater, wastewater facilities
- Promote green building construction and low impact development to reduce water consumption and effectively manage runoff
- Prioritize integrated projects that provide multiple benefits
- Seek cost-effective, long term solutions to meet watershed objectives
- Seek "win-win" solutions that emphasize partnerships and collaboration, maximize benefits, and minimize or resolve conflicts

3. **Improve Water Quality**

- Develop and implement projects that improve water quality both upstream and downstream, with emphasis on point source control and implementing best management practices
- Evaluate appropriateness of existing water quality standards

- Reduce runoff through projects that implement best management practices
- Minimize hydromodification of the watershed as development increases
- Reduce water quality impacts of septic tanks
- Reduce salt loading with a goal of salt balance in the watershed and groundwater basin
- Monitor health of aquatic organisms in watershed

4. **Restore, Enhance and Maintain Habitats and Open Space**

- Increase activities that enhance aquatic and terrestrial habitats, and protect endangered, threatened and key species
- Support efforts to acquire, manage, and preserve open space for habitat and groundwater recharge areas
- Support projects to interconnect wildlife corridors
- Reduce invasive species and enhance native biological diversity
- Increase restoration of degraded aquatic habitats

5. **Manage Flood Plain Impacts**

- Promote regional, interconnected programs of flood plain management that incorporate environmental and economic and flood management impacts
- Reduce impacts on community from flooding

6. **Promote Appropriate Recreational Opportunities**

- Seek recreational opportunities and access to waterways for recreational activities that do not adversely impact sensitive habitat and other beneficial uses of water

7. **Promote Appropriate Land Use Planning**

- Identify and protect groundwater recharge areas from development and potential introduction of contaminants

- Review land use at a regional level to reduce impacts on water resources and natural environment
- Support the location of new development outside of flood prone areas and preserve flood plain as open space

8. **Increase Stakeholder Involvement and Stewardship**

- Increase diversity of actively participating stakeholders in the watershed, and develop partnerships with tribal governments
- Enhance public outreach, awareness, and education to promote stewardship of water resources programs

9. **Maximize Implementation of Water Resources Projects**

- Identify and support projects with long-term regional benefits
- Prioritize projects that have the greatest likelihood of rapid, successful implementation
- Seek outside funding from federal, state, and regional grants, loans, and other programs

3. A suite of water resource management strategies was presented to the group. The plan objectives and the projects reflect the water resource management strategies. The more strategies that the plan and individual project addresses, the more highly the projects will be evaluated.

4. The San Diego County regional management plan can be found on the internet at http://www.projectcleanwater.org/html/sdirwm.html. Originally, the State wanted to see the upper Santa Margarita watershed, south Orange County and San Diego County as one super-region. However, key regional water managers in San Diego have listed reasons in their plan why they have excluded Southern Orange County and Riverside County from their plan. Advance notice of this led the upper Santa Margarita region to come together and develop its own plan. The upper Santa Margarita IRWMP will note the importance of a watershed-wide approach including interrelationships between upstream, downstream, and instream features as well as connections with adjoining regions.

III. Governance Update and Stakeholder Advisory Committee Interest

1. Daniel Cozad presented a governance update. A draft Memorandum of Understanding (MOU) between the responsible agencies has been prepared and reviewed by legal council. The MOU authorizes a Chartered Stakeholder Advisory Committee for the Santa Margarita IRWM Planning effort.

2. The Stakeholder Advisory Committee (SAC) will be a group of stakeholders who have a significant interest in the watershed. Members on the SAC will represent the region as a whole, not only the interests of the organization from which the member comes.

3. Daniel invited stakeholders to consider participating in the SAC. If interested, please notify Daniel and submit a letter of commitment and agreement to the terms of the SAC charter and rules, similar to the example that Daniel provided. A final SAC charter will be available by July 1st. **Please notify Daniel of your interest in participating in the SAC by July 1st, and forward him a formal letter of commitment by July 12th,**. An MOU will be adopted by the end of June.

IV. Overview of Nominated Projects

1. Wendy Katagi led a discussion on nominated projects. Project proponents had the opportunity to explain their organization, and to give a brief overview of their project(s) and explain which water management strategies that project(s) address. A member of the following agencies/organizations presented projects. Project names and descriptions can be found on the "Project Readiness Matrix" provided at the meeting.

   - Rancho California Water District
   - Western Municipal Water District
   - Elsinore Murrieta Anza Resource Conservation District
   - Santa Margarita Ecological Reserve
   - Southwestern Riverside County Multi-Species Reserve
   - Riverside Land Conservancy
   - Riverside County Flood Control and Water Conservation District
   - Western Riverside County Regional Conservation Authority

- US Bureau of Reclamation
- Trout Unlimited

2. CDM will coordinate with project proponents prior to the next meeting to continue developing the project nomination forms. At the next meeting, the water management strategies of each project will be presented and the group discussion will focus on prioritizing the projects.

3. There is a need to identify representatives from disadvantaged communities who could be involved in the stakeholder effort. Disadvantaged communities should also be identified in the project proposals.

4. Alternative energy programs, new or existing, can also be identified as IRWMP projects.

V. Next Steps

1. Stakeholder Meeting #3 is planned for June 25, 2007 from 1pm -3:30 pm.

2. Wendy Katagi and Dan Rodrigo thanked everyone for their involvement in the process.

3. The meeting as a public hearing was formally closed at 11:30am.

Memorandum

To: *Perry Louck, Rancho California Water District*
Jason Uhley, Riverside County Flood Control District

From: *Wendy Katagi, Camp Dresser & McKee*

Date: *June 26, 2007*

Subject: *Santa Margarita Watershed IRWMP Stakeholder Workshop #3 held on June 25, 2007, Minutes*

Participants

Meeting attendees are shown in bold.

Elena Mafla	**Anza Valley Municipal Advisory Council**
Bruce Posthumus	CA Regional Water Quality Control Board
Jeremy Haas	CA Regional Water Quality Control Board
Jennifer Jones	**Camp Dresser & McKee**
Wendy Katagi	**Camp Dresser & McKee**
Shea Petry	**Camp Dresser & McKee**
Stephanie Roberts	Camp Dresser & McKee
Dan Rodrigo	**Camp Dresser & McKee**
Karen Schwarz	**Camp Dresser & McKee**

Steve Brown	**City of Temecula**
Aldo Licitra	**City of Temecula**
Alex Gann	County of Riverside
Micheal Shetler	**County of Riverside**
Mary Larson	Department of Fish and Game, Fishery Restoration Grants Program
Holly Sheradin	Department of Fish and Game, Fishery Restoration Grants Program
Greg Krzys	Department of the Interior, US Bureau of Reclamation
Mike Nusser	**Eastern Municipal Water District (EMWD)**
Behrooz Mortazavi, Ph.D.,P.E.	Eastern Municipal Water District (EMWD)
Phil Miller	Eastern Municipal Water District (EMWD)
Del Ross	EDAC
Vicki Long	**Elsinore/Murrieta/Anza Resource Conservation District (EMARCD)**
Bob Wheeler	Elsinore/Murrieta/Anza Resource Conservation

	District (EMARCD)
Charolette Fox	**Elsinore/Murrieta/Anza Resource Conservation District (EMARCD) and League of Women Voters**
Pam Nelson	**Elsinore/Murrieta/Anza Resource Conservation District (EMARCD)**
Judy Mitchell	Mission Resource Conservation District (MRCD)
Bob Hewitt	Natural Resources Conservation Service
Benjie Cho	Riverside County Flood Control (RCFC)
Tina Tuason	**Riverside County Flood Control (RCFC)**
Jason Uhley	Riverside County Flood Control (RCFC)
Tim Barr	Rancho California Water District (RCWD)
Perry Louck	**Rancho California Water District (RCWD)**
Gail Egenes	**Riverside Land Conservancy**
David Gibson	San Diego Regional Water Quality Control Board
Christine Moen	Southwestern Riverside County Mulit-Species Reserve
George Sutherland	**Trout Unlimited, South Coast Chapter**
Christine Medak	U.S. Fish and Wildlife Service
Daniel Sulzer	US Army Corps of Engineers
Doug McPherson	US Bureau of Reclamation
Bill Steele	US Bureau of Reclamation
Samantha Marcum	US Forest and Wildlife Service
Fakhri Manghi	**Western Municipal ater District**
Jack Safely	Western Municipal Water District (WMWD)

I. Welcome and Introductions

1. Dan Rodrigo of CDM opened the meeting with a welcome and introduction of everyone attending the meeting.

2. Dan reminded the group that the plan serves a dual purpose: (1) to meet the Prop 50 funding cycle, projects must be constructed within 3 years; (2) to serve as a long term watershed management plan that will help to secure funding from the Prop 84 funding cycle

3. Daniel Cozad, IPM stated that Prop 50 passed many years ago: Specifically says that acquisition can only be funded under Prop 50 if incidental to the project. Prop 84 reflects a different division of funds; monies are guaranteed to various regions and projects can reflect a larger set of water management strategies.

4. Approximately $25M earmarked for the San Diego region. This Plan is within the San Diego region.

II. Overview of IRWMP Progress Update

1. Wendy Katagi gave an overview of the IRWMP progress. This IRWM plan is only for the upper portion of the Santa Margarita watershed. The lower portion of the watershed is included in the San Diego IRWM plan. However, the Upper Santa Margarita Watershed Planning Region does evaluate watershed-wide issues such as ecosystem restoration, fisheries, and water quality so that the IRWMP benefits adjoining regions.

   - Workshop 1 - Discuss IRWMP process, vision, regional objectives, and governance structure (completed)
   - Workshop 2 - Hearing of intent to prepare an IRWMP, review vision, regional objectives, projects, and IRWMP progress - June 13, 2007 (completed)
   - Workshop 3 - Project ranking and integration, review of IRWMP progress - June 25, 2007 (completed as of 6/26/07, subject of minutes)
   - Workshop 4 - Hearing of intent to adopt an IRWMP, IRWMP presentation - July 13, 2007 (1:00 p.m. to 3:30 p.m.)

2. The Public Draft IRWMP is expected to be available July 1, 2007 on the Rancho California Water District website. A notice will be emailed to the stakeholder list when the document is available. The document will be available for public review for a 30-day comment period. All stakeholders are encouraged to review and comment on the Plan during the review period.

III. Overview and Discussion of Planning Targets

1. Dan Rodrigo facilitated a discussion on the Planning Targets which will be included in Section 3 of the IRWMP. A handout of the draft version of Section 3 was provided to the group. However, the Planning Targets are not yet included in this section, as they will be developed based on the results of today's discussion.

2. Objectives are the reasons why we are doing something. Planning Targets are how we will achieve the objective. Also may provide a metric (numeric target) that should be achieved.

3. The stakeholder group discussed and approved Planning Targets for each of the nine IRWMP Objectives. Planning Targets to be included in the Plan are as follows:

   1. Develop a More Reliable and Diverse Portfolio of Water Supplies

- Water agencies in the region will develop 0ver 114,000 acre-feet/yr of additional local supply by 2030
- Imported water dependency will be reduced by 25% from conservation and local supply development by 2030
- Diversity of supplies will include:
  - Expanded groundwater
  - New brackish desalination of groundwater
  - New recycled water, including demineralization to improve water quality
  - Conjunctive use storage (surface and groundwater)
  - Water transfers

2. **Promote Economic, Social, and Environmental Sustainability**

- Support the Riverside County's Integrated Project program that supports the region's general plan, transportation plan and multi species habitat conservation plan
- Provide reliable and high quality water supply to support the region's current and projected population and economy
- Protect the region's quality of life, specifically the balance between urban growth, rural lifestyle, and agriculture and open space
- Evaluate and implement renewable energy for water projects, which will help meet the state's goal of reducing greenhouse gas emissions to 1990 levels by 2020, consistent with AB 32

3. **Improve Water Quality**

- Review water quality standards to ensure appropriateness for the region, matching quality to intended use of water
- Comply with TMDLs that are being developed to meet beneficial uses for region

- Implement projects to remove water bodies from the 303(d) impaired list
- Maintain a salt concentration of 500 ppm or less in the watershed's drinking water sources
- Implement state regulations (AB 885) for septic tank management and review
- Mitigate significant nutrient and contaminant impacts to groundwater

4. **Restore, Enhance and Maintain Habitats and Open Space**

- Add approximately 70,000 acres of permanent habitat reserve lands to support Riverside County's MSHCP
- Remove approximately 3 acres of invasive species per year for a total of 9 acres
- Develop reliable, cost effective water supply projects for agriculture in order to maintain open space and increase wildlife corridors
- Native planting, monitoring and maintenance, inventory and mapping included in the 9 acres of invasive removal

5. **Manage Flood Plain Impacts**

- Complete Murrieta Creek Flood Control, Habitat Restoration and Recreation Project by 2030
- Plan and construct flood management projects to protect public health and safety, as identified in the Riverside County Flood Control District Master Drainage Plans
- Plan and construct multi-use flood management projects that incorporate combinations of open space, parks, flood control, groundwater recharge, and habitat protection, with specific goal of increased implementation of these types of projects

6. **Promote Appropriate Recreational Opportunities**

- Support increasing the current ratio of parklands/ recreational open space of 5 acres per 1,000 residents to 8 to 10 acres

- Implement recreational projects for Lake Skinner and Diamond Valley Reservoir, as identified by the Metropolitan Water District of Southern California

7. **Promote Appropriate Land Use Planning**

   - Support increased residential densities by:

     - Establishing minimum densities in residential zones

     - Requiring cities that all new tracts of 20 homes or more have one-fourth of the parcels be 14% smaller than existing code minimum

   - Support mixed use development by providing incentives and density bonuses, and modifying zoning codes

   - Ensure general plans provide for adequate job-related land uses

   - Evaluate and implement hydromodification and low impact development

   - Support the development of appropriate targets for new development within the flood plain

8. **Increase Stakeholder Involvement and Stewardship**

   - Currently there are 30 different stakeholder organizations involved in the IRWMP process, the goal is to increase stakeholder involvement by adding at least:

     - Local tribal lands

     - CALTRANS

     - Wineries, avocado and citrus growers

     - Building developers

     - Disadvantaged community representatives

   - Promote targeted education and training to support watershed goals

   - Support the future development of a Santa Margarita Watershed Council

9. **Maximize Implementation of Water Resources Projects**

- Regional projects will be prioritized higher when they are well integrated and meet three or more of the State's water management strategies
- Seek multiple sources of funding, such as regional, state and federal
- Provide adequate local match funding
- Seek projects that provide "win-win" solutions and minimize conflict

4. During the discussion of Objective 6, it was suggested that Paul Frandsen of the Riverside County Trails Commission be contacted. It is possible that the Commission has specific targets for development of new trails which could be incorporated into the IRWMP Planning Targets section.

In Response to Questions:

What is AB 885?
Assembly Bill No. 885 (AB 885) was passed in 2000 by the California Legislature for the purpose of requiring further controls over **On-Site Wastewater Treatment System (OWTS) Regulations**. The bill required the SWRCB to develop regulations to implement the new requirements. The State Water Resources Control Board developed a public process to gather input on the contents of the regulations. Draft regulations were posted to the State Water Board website in spring 2007. Information on AB 885 can be found on the State Water Board Website: http://www.swrcb.ca.gov/ab885/index.html

- *For Objective 3 Planning Targets, will the words mitigate and significant be defined? "Mitigate significant nutrient and contaminant impacts to groundwater"*

The IRWMP will develop a baseline for monitoring water quality pollutants of concern, such as nutrients and other contaminants. Once this baseline has been set, a monitoring program can be established with specific targets or thresholds for pollutants concentrations, where the words, "mitigate and significant" can be more specifically defined. This subject is a data gap that will be defined in the future work plan for updating the IRWMP.

Who qualifies as a disadvantaged community? Wildomar may have a low income area.
A disadvantaged community is an area that where the household annual income is 80% less than the median household income based on 2000 census data for this region (or approximately $37,994). It is important to identify water-related projects that will benefit disadvantaged communities because separate funds have been set aside in Prop 84 for these projects.

III. Governance Update and Stakeholder Advisory Committee Interest

1. Daniel Cozad presented a governance update. A draft Memorandum of Understanding (MOU) between the responsible agencies has been prepared, reviewed, and will be signed by the agencies on June 26-27.

2. In the draft MOU the word "Charter" has been changed to "organizing statement".

3. The Stakeholder Advisory Committee (SAC) will be a group of stakeholders who have a significant interest in the watershed. This group will facilitate the process of revising the IRWMP so that it meets the Proposition 84 guidelines. The group will help prioritize projects and advise the MOU responsible agencies on projects and relevant topics of interest in the watershed.

4. Daniel invited the stakeholders to consider participating in the SAC. The intent is for one representative, and an alternate, per organization to be a part of the SAC. If interested, send Daniel a letter of participation. At the last meeting, Daniel distributed an example letter; however, a few minor changes have been made since then. The new version of the example letter was redistributed to the group, and is attached to these meeting minutes. Please forward Daniel a formal letter of participation by July 13th. These letters will be included in the Final IRWMP.

IV. Discussion of Project Prioritization and Integration

1. Wendy Katagi led a discussion on the priority projects, the prioritization process, and integration. The group reviewed the information provided on the meeting handouts.

2. One project has been added to the Prop 50 projects since the last workshop. RCWD has submitted a solar power project which entails the installation of solar photo voltaic panels at RCWD's Santa Rosa Water Reclamation Facility for an expected generation of 1.8 to 2.0 million kWh annually. As such, this project reduces energy use and greenhouse gas emissions. As an enhancement to Project B, this project will benefit agriculture and associated disadvantaged communities.

3. Another change since the last workshop is that the restoration focused projects have been put together as one larger, more robust, regional project that could be managed by one organization, likely the County of Riverside. These projects were put together because collaboration will enhance resource management in the watershed as well as streamline required project management and reporting.

In Response to Questions:

Is it projected that in the future there will be more agricultural land?
Perry Louck of RCWD explained that there are no projections for new agriculture in the region. If there were to be new agriculture, it would likely be in the eastern portion of the watershed.

How does EMARCD propose programs for sustainable agriculture?
Perry Louck stateg that RCWD has a number of pilot projects in the vineyards. There are also potential partnerships with the Bureau of Reclamation and other entities that may be appropriate under Proposition 84.

If a project is not included in the Plan for Prop 50 funding, ,can it still be included in the Plan for Prop 84?
Yes, Projects can be added to the IRWMP when it is being revised to meet the Prop 84 guidelines. There will be a call for projects under Prop 84 in the future.

Is it too late to add the Anza groundwater study to the list of Prop 50 projects; it is a ready project and has matching funds from USGS.
Unfortunately, planning/studies cannot be funded under Proposition 50, only implementation projects can be included. However, Proposition 84 has planning/studies funds available; planning for Proposition 84 projects will begin in the next few months. This project is already included in the IRWMP as a Proposition 84 project.

V. Next Steps

1. Stakeholder Meeting #4 is planned for July 13, 2007 from 1pm -3:30 pm. This is a public hearing on the intent to adopt an IRWMP for this region.

2. Wendy Katagi and Dan Rodrigo thanked everyone for their involvement in the process.

3. The meeting adjourned at 3:30 pm.

On Organization Letterhead

Re: Integrated Regional Water Management Planning – Stakeholder Advisory Committee Letter of Participation

_____ accepts its appointment to the Stakeholder Advisory Committee for the Santa Margarita Integrated Regional Water Management Planning effort. We are a stakeholder with significant water supply, water quality, habitat, conservation, recycled water, recreation, open space, disadvantaged community, agricultural, or _____ other interests in the Santa Margarita Watershed. We support and will continue participating as a stakeholder in the Rancho California Water District (RCWD), Riverside County Flood Control and Water Conservation District (RCFC&WCD), and County of Riverside led IRWM Planning effort. We will assist and provide information and in-kind assistance to the committee and the County, RCFC&WCD and RCWD for the Region.

We will provide our best efforts and advice on goals, priorities, projects and opportunities for integration along with our fellow committee members in supporting the entire region. We will abide by the terms of the Organizing Statement and rules developed by the Committee.

Because of the amount of planning already completed by the County and RCWD, the rapid timeline for completion of this effort, and the cooperative working relationship we have with RCWD; we endorse the planning effort and support the IRWM plan being prepared by the County and RCWD.

Sincerely

Name

I. Welcome and Introductions

1. Dan Rodrigo of CDM opened the meeting with a welcome and introduction of everyone attending the meeting. Dan reminded the group that the plan serves a dual purpose: (1) to meet the Prop 50 funding cycle, projects must be constructed within 3 years and (2) to serve as a long term watershed management plan that will help to secure funding from the Prop 84 funding cycle. The purpose of this meeting was to present the draft plan to the stakeholder group, in an open public forum in which public comments could be received and recorded.

2. Perry Louck of Rancho California Water District (RCWD) thanked everyone for participating in the development of the Plan and introduced Brian Brady, RCWD Director, to the group.

II. Presentation on Draft IRWMP

Dan Rodrigo presented the Draft IRWMP. It was noted that the plan was completed in a very short amount of time. The aggressive timeframe was able to be achieved because of the existing planning efforts in the region and the active stakeholder participation. The following highlights of items that were discussed

1. Although the Upper Santa Margarita is the focus of the Plan, the underlying goal was to represent the watershed in its entirety, without the countyline being a barrier. Stakeholders from the entire watershed were invited to participate in the workshops.

2. *Water supply:* It was noted that all the recycled water is being used for urban irrigation.

3. *Regional Description:* The region is changing from a retirement center to a region of employment.

4. *Watershed features*: The watershed characteristics were highlighted with multiple maps showing habitat conservation areas, wildlife corridors, urban core (Murrietta and Temecula), surrounded by agricultural lands, significant recreation (Lake Skinner, Diamond Valley Lake), and disadvantaged communities.

5. *Public outreach and stakeholder involvement*: Through the project solicitation process and workshops a stakeholder group specifically interested in restoration and land acquisition has formed. Several workshops were conducted throughout the planning process:

   - Workshop 1 - Discuss IRWMP process, vision, regional objectives, and governance structure – May 23, 2007

   - Workshop 2 - Hearing of intent to prepare an IRWMP, review vision, regional objectives, projects, and IRWMP progress - June 13, 2007

   - Workshop 3 - Project ranking and integration, review of IRWMP progress - June 25, 2007

   - Workshop 4 - Hearing of intent to adopt an IRWMP, IRWMP presentation - July 13, 2007 (subject of meeting minutes)

6. The Public Draft IRWMP was posted at Rancho California Water District's website (http://www.ranchowater.com/alerts.aspx) on June 29, 2007. The document will be available for public review for a 30-day comment period ending on July 30, 2007. All stakeholders are encouraged to review and comment on the Plan during the review period. Comments should be submitted to Wendy Katagi,

CDM at Katagiwr@cdm.com, 213-457-2132 (phone), 213-627-8295 (fax), CDM, 523 W. Sixth Street, Suite 400, Los Angeles, CA 90014.

7. Daniel Cozad of Integrated Planning and Management, Inc presented a Governance update. Riverside County approved the MOU on June 26, 2007. RCWD Board of Directors approved the agreement on July 12, 2007. Daniel has received many Stakeholder Advisory Committee (SAC) participation letters and welcomes more stakeholders to write letters and join the SAC.

8. Dan Rodrigo reviewed the visioning process and vision statement with the group, which is:

   "The Integrated Regional Water Management Plan will take a balanced and consensus-based approach that will provide for the sustainability of the upper Santa Margarita Watershed's water and natural resources, and protection of habitats."

   The goals and targets for water management that were developed for the plan were discussed. During the development of the targets, it was realized that some targets were easily quantified, while others require more data to be made available before numerical metrics can be established. Other items discussed were the nine objectives that the stakeholders created, Short-Term and Long-Term Regional Goals, and maintaining a regional governance structure/forum for reviewing implementation items such as planning targets as data becomes available.

9. Another outcome of the stakeholder workshops was the creation of a watershed council, consistent with California Water Plan

10. The Plan includes several projects, which were prioritized based on readiness, number of water management strategies achieved, partnerships/integration, whether the projects met the Plan's goals. If a project was deemed not eligible for Proposition 50, Chapter 8 funding, it was included as a potential Proposition 84 project. The result of the prioritization process is 7 highly integrated projects that address regional planning objectives, priorities, and targets. The total request is approximately $7.4 million

11. An overview of the projects identified for Prop 50, Chapter 8 implementation grant funding was provided.

12. The IRWMP will provide benefits to other regions through implementation of water management strategies and projects.

III. Open Public Hearing on Draft IRWMP

Brian Brady of Rancho California Water District reiterated that the MOU was approved by the RCWD Board of Directors, and that the Board is appreciative of this planning effort. He opened the Public Hearing on the intent to adopt and IRWMP for the Upper Santa Margarita watershed planning region. The meeting was advertised in local papers. The following public comments were made.

1. Charlotte Fox, the League of Women Voters, gave positive comments in support of the IRWMP. Since the 1920's the organization has studied these issues and is happy that the Plan identifies specific actions for the watershed.

2. George Sutherland, Trout Unlimited, has been working for 20 years on restoration efforts in San Mateo Creek and was involved in prior watershed efforts in the Santa Margarita region. He highlighted the 2006 report to congress for fisheries restoration in the US. The report stated that over the years $525M has been given to the western US to restore fisheries. He is hopeful that Federal funds will still be available for fisheries restoration and that there will be opportunities to work with the agencies and water districts. Mr. Sutherland stated, "If it is good for the fish it is good for the people. "

3. Pam Nelson, EMARCD, explained that over the past years the organization has been trying to figure out how to become involved in this watershed's planning effort and is extremely happy to have found this venue.

Mr. Brady closed the public hearing at 1:55 p.m.

III. Department of Water Resources remarks on Proposition 50, Chapter 8 and Proposition 84 eligibility and process

Tracie Billington, DWR, presented the group with an update on Propositions 50 and 84.

1. DWR is working on an update to the State Water Plan, to be available in 2009. DWR is holding workshops; the next one will be July 25, 2007 at MWD, Los Angeles from 8:30 a.m. to 12:00 p.m. Everyone is welcome to attend to discuss regional issues that should be discussed in the State Water Plan.

2. Proposition 50, Chapter 8 has $64 million remaining. Of the remaining funds, at least $43 million must be awarded to projects in Southern California. Evaluation and distribution of the funds is a joint effort between SWRCB and DWR. The IRWM Plans are due August 1 at 5pm. .

3. Proposition 84 has $1 billion in identified funds. Funds are allocated to 11 regions in California, with $91M allocated to the San Diego subregion. A fact sheet is available that discusses the funding regions. One intention of the fact sheet is to

highlight that this region is included in the San Diego region. Money will be awarded competitively, such that if there are various plans in a given region, then the the parties leading those plans will need to compete for funding.

4. Specific monies are set aside for interregional projects, Thirty million dollars are set aside for planning grants. Companion funds for regional flood management planning are available and should be requested via a consolidated grant application with IRWM planning money.

5. Proposition 1E is funding for storm water flood management planning. In order to be eligible, projects must be coupled with flood management projects.

In Response to Question from Drew Irby, Trout Unlimited:
It is rumored that there are issues with Proposition 84 and that the funding may be suspended. Is this true?
Ms. Billington explained that the budget process is being discussed at high levels within the State and DWR is waiting for the outcome. More information will be available once the budget passes. Then the legislation guidelines will be drafted. Ms. Billington is hopeful that the guidelines and some planning money will be distributed in this fiscal year. She mentioned a groundwater planning grant program, which disperses small grants on the order of $250k for groundwater projects.

IV. Next Steps

1. The IRWMP and regional application will be submitted by the August 1, 2007 deadline. The total request in this IRWMP is $7.4M. It is everyone's hope that the region will be called back for Step 2 of the Implementation Grant program.

2. Continue to develop planning and implementation project nominations to prepare for Proposition 84.

3. Continue outreach to disadvantaged communities and other targeted groups.

4. Enact administration of IRWMP program and establish formation of Santa Margarita Watershed Council

5. Please submit your comments on the Draft IRWMP no later than July 30, 2007 to Wendy Katagi, CDM, Katagiwr@cdm.com.

Section 1
Introduction

1.1 Background and Purpose

In 1972, provisions of the federal Water Pollution Control Act, also referred to as the Clean Water Act (CWA), were amended so that discharge of pollutants to waters of the United States from any point source is effectively prohibited, unless the discharge is in compliance with a National Pollutant Discharge Elimination (NPDES) permit. The 1987 amendments to the CWA added Section 402(p), which established a framework for regulating municipal, industrial, and construction stormwater discharges under the NPDES program.

On November 16, 1990, USEPA published final Phase I regulations that established application requirements for stormwater permits for municipal separate storm sewer systems (MS4s) serving a population of over 100,000 and certain industrial facilities, including construction sites greater than 5 acres. These regulations were revised in July 1998 (USEPA, 1998). On December 8, 1999, USEPA published the final Phase II regulations for communities under 100,000 and operators of construction sites between 1 and 5 acres (USEPA, 1999).

In California, the principal legislation for controlling stormwater pollutants is the state Porter-Cologne Act (Water Code 13000, et seq.), which requires development of Basin Plans for drainage basins within California. These basin plans serve as a blueprint for protecting water quality within the various watersheds and are used to identify more specific controls for discharges (e.g., wastewater treatment plant effluent, urban runoff, and agriculture drainage). Specific controls are implemented through permits called Waste Discharge Requirements (WDRs). In California, the federal NPDES stormwater permitting program is administered by the State Water Resources Control Board (SWRCB) through the nine Regional Water Quality Control Boards (RWQCBs) by issuing joint Waste Discharge Requirements and NPDES permits. SWRCB and RWQCBs use three types of NPDES permits to regulate stormwater discharges.

Riverside County is in a very unique situation compared to other areas in the state, as the County falls within the jurisdiction of three of the nine RWQCBs; they are: the Santa Ana Region, the Colorado River Basin Region, and the San Diego Region. To meet CWA Section 402(p) requirements, Phase I MS4s are required to implement a stormwater management program. This compliance is required under a Municipal NPDES Permit. The Riverside County Flood Control and Water Conservation District (District) is the Principal Permittee for the NPDES Permits shown in Table 1.

Table 1
Municipal NPDES Permits for Riverside County

Regional Water Quality Control Board Region	Permit Number	Description
Santa Ana	ORDER NO. R8-2002-0011 NPDES NO. CAS 618033	Waste Discharge Requirements for the Riverside County Flood Control and Water Conservation District, the County of Riverside, and the Incorporated Cities of Riverside County within the Santa Ana Region Areawide Urban Runoff
San Diego Basin	ORDER NO. R9-2004-001 NPDES NO. CAS010876	Waste Discharge Requirements for Discharges of Urban Runoff from the Municipal Separate Storm Sewer Systems (MS4s) Draining the County of Riverside, the City of Murrieta, the City of Temecula and the Riverside County Flood Control and Water Conservation District Within the San Diego Region
Colorado River Basin	ORDER NO.01-077 NPDES NO. CAS617002	National Pollutant Discharge Elimination System (NPDES) Permit and Waste Discharge Requirements for Riverside County Flood Control District, Owner/Operator, County of Riverside, Owner/Operator, Coachella Valley Water District, Owner/Operator, and Incorporated Cities Of Riverside County Within the Whitewater River Basin, Owners/Operators, for the Discharge of Whitewater River Watershed Storm Water, Riverside County

All three Permits have specific training requirements for the various areas within the County's NPDES Program, including New Development/WQMP, Construction, Industrial/Commercial Inspections, and Municipal Facilities and Activities. The training requirements of each Permit are summarized in Table 2.

The purpose of this project was to conduct an assessment and enhancement analysis of the District's NPDES Training Program. The results of the assessment and enhancement analysis, and recommendations for potential improvements are included in the following sections.

Table 2
RIVERSIDE COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT
NPDES TRAINING PROGRAM REQUIREMENTS

	Santa Ana River Region Permit (Santa Ana RWQCB)	**Santa Margarita River Region Permit** (San Diego RWQCB)	**Whitewater River Region Permit** (Colorado River RWQCB)
New Development/Planning Review Staff		Implement an education program that includes **annual training** of planning and development review staffs (and Planning Boards and Elected Officials, if applicable) to ensure they have an understanding of: (1) Federal, state, and local water quality laws and regulations applicable to development projects; (2) The connection between land use decisions and short and long-term water quality impacts (i.e., impacts from land development and urbanization); and (3) How impacts to receiving water quality resulting from development can be minimized (i.e., through implementation of various source control and treatment control BMPs)	Item D.2.: "Continue to provide NPDES related workshops for in-house staff training. Training for staff shall include implementation and administration of the Riverside County WQMP as it applies to classes of Permittee employees. Employee classes expected to administer WQMP requirements include Planning Department staff, Industrial/Commercial Inspectors and Construction Inspectors
Municipal Inspection Program **Construction Sites**	Train staff involved in inspecting construction sites **on an annual basis prior to the start of the rainy season**. Training will address the requirements of the following: a) The Storm Water Ordinances, resolutions and codes; b) The MS4 Permit, the approved Water Quality Management Plan (WQMP), and the Drainage Area Management Plan (DAMP); c) The General Construction Permit; d) Storm Water Pollution Prevention Plans (SWPPPs); e) Selection and maintenance of appropriate Best Management Practices (BMPs) for construction sites, including erosion and sediment control f) The Enforcement/Compliance Strategy (E/CS)	Implement an education program that includes **annual training** for construction, building, and grading review staff, and inspectors to ensure that they have, at a minimum, an understanding of: (1) Federal, state, and local water quality laws and regulations applicable to construction and grading activities; (2) The connection between construction activities and water quality impacts (i.e., impacts from land development and urbanization); (3) How erosion can be prevented; (4) How impacts to receiving water quality resulting from construction activities can be minimized (e.g., through implementation of various source control and treatment control BMPs); and (5) How to assess construction sites for adequate BMP implementation and compliance with local codes, ordinances, and permits, and this Order	Section E.1.a.5 Develop and conduct a training program for field personnel (including -field workshops) to conduct inspections. Training programs may include development of appropriate field manuals, training materials, and field sampling techniques *and procedures*
Municipal Inspection Program **Industrial Facilities**	Train staff involved in conducting compliance surveys/inspections of industrial facilities **on an annual basis**. Training will address the requirements of the following: a) The Storm Water Ordinance; b) The MS4 Permit and the DAMP; c) The General Industrial Activities Storm Water Permit and any other permit issued to industrial facilities within the Permit Area by the State or Regional Board; d) The E/CS; e) Pollution prevention plans; and f) Implementation of appropriate BMPs for industrial facilities	Train staff responsible for conducting inspections of industrial facilities at least **once a year.** Permittees are encouraged to conduct training programs and provide compliance assistance to industrial/commercial facility owners, operators, and employers	Section E.1.a.5 Develop and conduct a training program for field personnel (including -field workshops) to conduct inspections. Training programs may include development of appropriate field manuals, training materials, and field sampling techniques and procedures
Municipal Inspection Program **Commercial Facilities**	Training to staff that is involved in the compliance surveys/inspections of commercial facilities **on an annual basis**. Staff training will address the requirements of the following: a) The Storm Water Ordinance; b) The MS4 Permit and the DAMP; c) The General Industrial Activities Storm Water Permits and any other permit issued to a commercial facility within the Permit Area by the State or Regional Board; d) The EC/S; e) Pollution prevention plans; and f) Implementation and maintenance of appropriate BMPs for commercial sites	Train staff responsible for conducting inspections of commercial facilities at least **once a year**. Permittees are encouraged to conduct training programs and *provide compliance assistance to industrial/commercial facility owners, operators,* and employers	Section E.1.a.5 Develop and conduct a training program for field personnel (including -field workshops) to conduct inspections. Training programs may include development of appropriate field manuals, training materials, and field sampling techniques and procedures
Municipal Facilities Programs and Activities	Training to the public agency staff and to contract field operations staff on fertilizer and pesticide management, model maintenance procedures and other pollution control measures	While this permit section does not specifically require training, the task of inspecting implies a need to conduct training for inspection staff. Staff will inspect all municipal facilities and activities annually. Inspectors shall include an assessment of BMP implementation and effectiveness. Based upon site inspection findings, each Permittee shall implement all follow-up actions necessary to comply with the MS4 Permit.	Section E.1.a.5 Develop and conduct a training program for field personnel (including -field workshops) to conduct inspections. Training programs may include development of appropriate field manuals, training materials, and field sampling techniques and procedures. Section d.7.iv (page 19): Landscape personnel trained

0001237

1.2 Project Scope

The scope of this training program assessment included the following major tasks:

- Review existing training program. This task included reviewing materials from the District's existing training program and other training programs, identifying training audiences, and discussing the objectives of the assessment with the District's Watershed Permit Manager.

- Perform enhancement analysis. This task included performing an analysis to determine if the existing materials properly address the three Riverside County NPDES MS4 permit requirements, if the training programs effectively teach practical skills and provide materials that will assist Permittee staff in performing their jobs in a manner consistent with the NPDES MS4 permit requirements, if the training programs are effectively reaching their audience, if the training delivery methods are appropriate to the audience, if other training methods would be more appropriate, or would supplement current methods, and other potential issues with the existing training. The enhancement analysis then included identifying preliminary recommendations for program enhancements.

- Prepare a summary and recommendations report. This task involved preparing a report of findings and recommendations.

1.3 Project Goals and Objectives

Working with the District, it was determined that it was necessary to have a clear understanding of the program training objectives, the outcomes the District and Co-Permittees hope to achieve through the training, and the information (and level of learning) the Program wishes to disseminate. This understanding would help lay the foundation for recommendations to enhance the training program and develop effective training modules. During the project's kick-off meeting, CDM staff met with the District's Watershed Permit Manager to determine the goals and objectives of the evaluation.

The District's NPDES Training Program goals are:

- Comply with the NPDES Permits

- Increase and maintain knowledge of municipal employees in a measurable manner

- Change behavior of employees to the protect water quality

- Protect beneficial uses of receiving waters in Riverside County

The objectives of the training program evaluation were to:

- Identify if the training program complies with the requirements of the Permits
- Recommend enhancements to the training program for greater effectives in content, delivery, and cost
- Identify any deficiencies (if applicable) and review other municipal training programs such as those of Orange County and San Bernardino County to determine if their programs can address the deficiencies
- Identify the potential of regionalizing the training efforts with other Counties

1.4 Report Organization

This report consists of three sections and appendices. Each section is briefly described below:

Section 1 - Provides the background and purpose of the project, the project scope, and the organization of the report.

Section 2 - Describes the review of the existing NPDES Training Program.

Section 3 - Describes the analysis of the training program and recommendations for potential program improvements.

Section 2
Review of Existing Training Program

2.1 Data Collection

As part of this task, CDM collected the following materials for review:

- Existing Riverside County NPDES Permits
- Riverside County (District) NPDES Training Program materials, including copies of handouts to participants, training evaluation forms for Spring 2006 and Fall 2005 , and copies of the presentation slides used during the training sessions
- Orange County NPDES training presentations
- Presentations from the introductory workshops to the California Stormwater Quality Association (CASQA) Best Management Practice Handbooks
- San Bernardino County training – training was evaluated by accessing County's training website, and going through the training modules, at http://www.atcintranetu.com/iusbcounty/login.asp. The County of San Bernardino also provided printouts of the WQMP training presentations.
- California Department of Transportation (Caltrans) NPDES training presentations
- District training attendance records
- Current training costs for the District's training program

2.2 Riverside County Training Components

Currently, the District training is organized in sessions or courses specific to each of the program areas specified in the Permits: Industrial/Commercial, New Development/WQMP, Construction, and Municipal Facilities. These course titles include:

- Industrial and Commercial Pollution Control
- Municipal Facilities and Activities Pollution Control
- Construction Site Pollution Control
- Water Quality Management Plans

2.2.1 Organization of Training Sessions

CDM staff attended the District's Spring 2006 NPDES training sessions as observers on March 29 and 30, to become familiar with the training presentations, evaluate the training for compliance with the Permits, identify training audiences, evaluate effectiveness of the training delivery, and evaluate the receptiveness of the audience to the training. Observations of the various training sessions follow.

All training courses have been offered for at least four rounds, except for the newest course, WQMP Training, which has been offered in two rounds of training. The training courses are typically delivered in the Fall and in the Spring of each year.

In the latest offering, the District conducted its Spring 2006 NPDES training on March 20 and 22, and also on March 29 and 30. The scheduled training sessions and the total number of participants in each class are listed in Table 3 below.

Table 3
RCFCWCD Spring 2006 NPDES Courses

Date	Time	Training course	No. of participants	
			Signed	Attended
March 20, 2006	8:00 a.m. – 11:00 a.m.	Construction Site Activities	94	87
March 20, 2006	1:00 p.m. – 4:00 p.m.	Municipal Facilities and Activities	79	65
March 22, 2006	8:00 a.m. – 12:00 p.m.	New Development/WQMP	38	36
March 22, 2006	1:00 p.m. – 4:00 p.m.	Industrial/Commercial Facilities & Activities	33	34
March 29, 2006	8:00 a.m. – 11:00 a.m.	Municipal Facilities and Activities	80	65
March 29, 2006	1:00 p.m. – 4:00 p.m.	Construction Site Activities	81	86
March 30, 2006	8:00 a.m. – 11:00 a.m.	Industrial/Commercial Facilities & Activities	47	42
March 30, 2006	1:00 p.m. – 5:00 p.m.	New Development/WQMP	47	45
		TOTAL	499	460

Training sessions are delivered by District consultants with on-going knowledge and experience in storm water issues and NPDES programs. Training delivery is typically lecture style with use of PowerPoint slides and slide handouts. Some limited hands-on exercises are completed in small groups in the WQMP training course. The other three training courses,

Industrial/Commercial, Municipal Facilities and Activities, and Construction, do not have hands-on exercises.

During the spring 2006 NPDES training, nearly 500 people signed up to attend the training. A total of 460 participants actually attended the various NPDES training courses offered by the District. With the exception of a limited number of individuals working as consultants for a City, all of the attendees were staff from the County and various Cities throughout the County.

Attendees were from various departments such as Code Enforcement, Code Compliance, Waste Management, Environmental Services, Environmental Health, Flood Control, Building and Safety, Engineering, Public Works, Transportation, Planning, Maintenance, Parks, and Construction. The background of the attendees vary widely from employee staff who are new to the various County and/or City departments involved in the different program areas, others that have no previous NPDES or storm water experience, to others who are experienced in working in stormwater and conducting inspections.

Each of the four training courses contains an introductory module that highlights various federal, state, and local water quality laws and regulations, NPDES Permits under which Riverside County and its cities are regulated, requirements of the Permits for each of the programs, water quality impacts, pollutants, and specific responsibilities of the municipal staff. Each introductory module is similar to the others, but has been customized slightly for each of the program areas (New Development/WQMP, Construction, Industrial/Commercial, and Municipal).

In past training sessions, the District trainers have distributed a post-course survey to all participants after the completion of each training session. Participants are asked to complete the survey and provide their opinions of the training with regards to the material, clarity of the information, length of the training, knowledge of the presenters, room setup, and others. The surveys only ask for course satisfaction, but not how trainees would implement the many things they learned.

The training courses delivered during the Spring 2006 were the first ones to have participants take a quiz at the end of each training course. Results of these quizzes have not been provided by the District and have not been reviewed at this time.

2.2.2 Comparison to Other Training Programs

The training presentations from the various sources were compared to San Bernardino and Orange County training programs to determine potential areas of improvement to the District's training program. During this comparison, it was determined that the Construction training portion of the

District training has good information, but needs to be enhanced with more example photographs of construction site BMPs that have been implemented on construction projects, either properly or not, so that these examples can be discussed in class.

San Bernardino County

San Bernardino County also has used classroom-based delivery in the past. During the last couple of years, they decided to migrate to Computer-Based Training (CBT) delivery of the training via the Internet, in which participants walk through the training modules on their own time and at their computer. The training modules used in this training are the same ones that were developed in PowerPoint for the class-room training, and were not designed for true CBT and with adult learning techniques in mind.

San Bernardino believes that the training is effectively reaching the audience but is also looking into ways to refresh the training with new technology, newer photos, and discussion items. Training effectiveness is assessed through a "knowledge check" (basically a test), but the County is also looking for ways to improve this assessment. With regards to the effectiveness assessment, their representative stated that no participant has answered more than 75% correct of their knowledge check. San Bernardino staff did comment that their training has not been enhanced or improved since its inception, and they would like to find ways to enhance it with discussions, add videos (as needed), and ways to engage the audience.

Orange County

The County of Orange arranges their NPDES training using the same classroom-based delivery as the District. Training is also provided in modules for the four program elements of the NPDES program. Classes are scheduled by the County, are delivered by consultants, and vary in sizes from 30 to over 80 participants. Orange County does not do testing of training attendees and presently does not have a way to assess the effectiveness of the training. Representatives from the County of Orange have stated that they would be interested in participating in development of a joint training program with other counties.

Section 3
Analysis, Recommendations, and Cost Considerations

3.1 Analysis

By reviewing the various data compiled and attending the District's training sessions, CDM determined that the current training materials properly address the requirements of all three Permits. They address background information on the Federal, state, and local water quality laws and regulation, including the Clean Water Act; the MS4 Permits; Storm Water Ordinances; the Drainage Area Management Plan (DAMP); Storm Water Pollution Prevention Plans (SWPPPs) for industrial and construction activities; the connection between land use decisions and short and long-term water quality impacts from land development and urbanization; how impacts to receiving water quality resulting from development can be minimized through implementation of BMPs; selection and maintenance of appropriate Best Management Practices (BMPs) for industrial, commercial, and municipal facilities, and for construction sites; the Enforcement/ Compliance Strategy (E/CS); and provide general guidance on fertilizer and pesticide management, model maintenance procedures and other pollution control measures.

The existing training modules for the various program areas do a good job in teaching practical skills and provide materials that assist Permittee staff in performing their jobs in a manner consistent with Permit requirements. The presentations have good graphics and photos, and are delivered by consultants that have good knowledge of the regulations, the Permits, the various program elements, and BMPs. Black and white handouts of the presentations are also provided to the participants, together with printouts of any other information such as exercises.

The present training delivery method of the having a PowerPoint slides and the training being presented or delivered by a live person seems to be appropriate for the audience that attends the training and seems to effectively reach the audience. Participants that have little to no experience in the storm water arena were observed to be more engaged and asked more questions. Participants with more experience in storm water were observed to be "tuning out" at the beginning of the training sessions (during the first hour or so) when the background information was discussed, as they have heard the message before, but were more engaged when questions were asked and they provided good input and comments.

The existing training program has a post-course survey that is distributed to all participants after the completion of each training session. Participants are asked to complete the survey and provide their opinions of the training. The

present surveys only ask for course satisfaction, but not how trainees would implement the many things they learned. According to a California Stormwater Quality Association (CASQA) report , most NPDES programs use surveys as a method of determining effectiveness of training.[1]

3.2 Recommendations for Potential Improvements

CDM made the following observations and developed the recommendations proposed from examination of the training material and attendance at training sessions. If the recommendations are implemented they would positively enhance the overall effectiveness of the current training programs:

Decrease class size

The number of persons that are allowed to attend each training session is large. As shown previously in Table 1, the smallest attendance number for one of the Spring 2006 training sessions was 34 people. Adult learning theory suggests that adult learners benefit most when they are actively engaged. Interactive exercises are most successful within smaller group sizes. Previous training experience has shown that class sizes between 20 and 30 people maximum allow for more effective training. Attendance of over 30 people potentially leads to a lecture format and participants may not necessarily get the message or may decrease participation during the lecture. This class size reduction would require increasing the number of class training offerings.

Conduct separate training for those with previous training or experience

Training is recommended to be delivered in separate sessions to groups of people with previous experience (focus groups), or that have previously been trained, separately from new staff or those new to the NPDES program areas. By separating training in this manner, more time could be spent on discussing scenarios that experienced staff see in the field and how they resolve issues with use of BMPs, instead of having more experienced attendees "tune out." These focus group meetings can be facilitated by a District staff or by one of the consultants who are presently delivering the training and can also be used to provide updates on new permits and/or regulations. For those new to the NPDES storm water training, more time could be spent discussing regulatory requirements and the impact of storm water pollution so attendees establish a comprehensive background understanding of the NPDES program.

Increase use of breakout sessions/ hands-on exercises

If class size reduction is difficult to accomplish because of the limited number of training sessions available due to costs and logistics, the use of more breakout sessions for smaller focus group (composed of more experienced attendees) discussion and/or hands-on exercises can be implemented to

[1] Stormwater Program Effectiveness Assessment Survey Summary Report, July 2005. Prepared for CASQA by Eisenberg, Olivieri and Associates, Inc. and Larry Walker Associates.

minimize the disadvantages of a large group training environment. Use of small focus groups will provide more class interaction and groups can discuss real case examples, such as those situations encountered by an inspector at an industrial or commercial facility and what actions were taken to resolve the situation. As discussed above, these focus group discussions can be facilitated by a District staff or by one of the consultants who are presently delivering the training.

Develop a common introductory NPDES component

Each of the four training courses currently contains an introductory component that highlights various federal, state, and local water quality laws and regulations, NPDES Permits under which Riverside County and its cities are regulated, requirements of the Permits for each of the programs, water quality impacts, pollutants, and specific responsibilities of the municipal staff. Each introductory module is similar to the others, but has been slightly customized for each of the program areas (New Development/WQMP, Industrial/Commercial, Municipal, and Construction). Developing a common introductory NPDES module is recommended for simplification.

Reduce length of training session

On average, the duration of each of the four introductory portions of the four training courses was observed to be approximately one hour in duration. By separating those previously trained from new attendees, the training sessions for the experienced attendees can be shortened by simply not repeating the introductory NPDES material. Attendees can be trained on specific topics immediately without having to re-train on the introductory material.

Conduct a pre- and post-training assessment (Benchmarking)

A single post-training test is currently administered for each of the four training courses. The WQMP training course used a combination of true/false and multiple choice questions. The Commercial/ Industrial Facilities Inspection BMP training offered in Spring 2006 also included 20 questions (11 multiple choice/9 true or false).

The current structure of the training does not allow for determining if the training leads to application of the knowledge gained by participants. A way to enhance tracking the effectiveness of the training would be to give a test before the training starts (pre-assessment) and another after the training session (post-assessment). Comparing the results of both the pre- and post-training tests would assist the District in determining if the message is being delivered appropriately. Pre and post tests can be a quick way of measuring learning, but they do not measure how participants are implementing the concepts during their day to day operations.

Another potential enhancement could be that, three to six months after the training, participants can be queried again to see if the knowledge they gained

from the training is being assimilated and applied by the participants as they perform their responsibilities related to the NPDES program. Self-reporting does not fully provide an accurate measure of effectiveness and should also be compared to feedback provided by environmental managers responsible for overseeing components of municipal NPDES programs as well as compared to inspection records or reported incidents of spills or discharges. In addition, evaluation forms could be developed that may identify the impact of the training with questions about what participants are going to do differently as a result of the training.

Vary Content Delivery Method

Delivery of the training via an instructor-led classroom session is viewed as being appropriate to the audience, especially when it comes to the detailed training of the various program areas. In fact, post-course evaluations of attendees show a majority of participants prefer classroom-based training followed by video-based and DVD-based training as the next preferred from of training deliver.

A potential enhancement would be to introduce a short course in a computer-based training (CBT) environment that first takes the introductory NPDES material and develops the introductory training modules either in an Internet on-line system, or within a CD-ROM delivery method initially (to reduce initial implementation costs for transitioning from live instructor-led training courses to a CBT course). The introductory NPDES training should be developed by a firm experienced in CBT and adult learning, with cooperation and input from staff experienced in NPDES and stormwater issues. The result would be one training module that is appropriately designed for adult learning, effectively deliver the introductory NPDES information, and encourage participation of the trainees by use of interactive mini quizzes. Assessment types could include multiple choice or true/false tests. After completing the introductory NPDES computer-based introductory modules, the trainee would then be cleared to take an instructor-lead classroom training that goes directly into more "hands-on" NPDES training.

The cost to develop the computer-based introductory training modules can be shared with other counties, as the modules can be customized to each County/Permit requirements. By implementing this CBT, the duration of the current instructor-led classroom training sessions could be shorter and more time could be used to discuss specific details of each program area and to encourage discussion and participation among the attendees. Additional details of CBT are discussed in Appendix A.

During telephone conversations with representatives of San Bernardino and Orange counties, they stated that they think that developing an introductory module in a CBT environment is an excellent idea. If the introductory module is developed in a computer-based environment, it is possible that the District

would benefit from contributing with San Bernardino and Orange Counties for this development, as they have expressed interest in collaborating in such a project. The introductory module could then be developed in a way that most of the information would be consistent across all three counties, and only specific information would be modified to customize them for a specific County and/or Permit. Representatives from the other counties also like the idea of separating participant in groups of beginners and more experience participants, and facilitating sessions with the more advanced participants. Orange and San Bernardino counties presently do not separate training participants into new and experienced NPDES staff.

Add more photos to presentations

The various training modules should add real-life photos and examples of Best Management Practices (BMPs) that are being employed at various residential developments, construction sites, and municipal, industrial, and commercial facilities, which the presenters could use to encourage the participation of attendees and discuss examples to determine whether the BMP is being implemented properly or not. The District could request electronic versions of these photos from the various co-permittees, who are probably already gathering a collection of photos from the many inspections they have already conducted. These photos do not necessarily need to be examples of good and/or effective implementation of BMPs, but also of incorrect implementation of BMPs. Course activities could then include discussion about the proper or improper use of BMPs in a group or smaller focus group discussion, and could also include case studies of applied BMPs.

Creative instruction

Another way to potentially enhance the classroom training would be to use some of those staff that have attended the training previously to co-teach and share their experiences in their specific program area(s). This approach may also result in reducing costs to the District by using consultants to deliver just some and not all of the training.

Supplemental Training Methods

Other training methods that should be considered to supplement the existing classroom type training, is the use of field visits with the groups. This type of activity would provide the participants with the opportunity to visits various facilities such as construction sites, industrial/commercial facilities, and other facilities, and be able to discuss inspection procedures and proper implementation of BMPs. Field visits can be especially good for the advanced, multi-year trainees. Issues that can arise with supplementing training with site visits may be the time that it would take District staff to find an appropriate site and coordinate the visit, and additional time and cost that would be incurred by the participants traveling to the site(s).

Tracking Training Effectiveness

It is recommended that the District considers developing a web-based tracking database application. Such a database can be designed to track training attendance, assessments, and any other information deemed necessary by the District, and could also be designed to print out certificates of participation. A database could also be used to demonstrate to the Regional Board that training is occurring and provide them with reports of attendance.

A much more sophisticated and advanced way of tracking training would be the acquisition and implementation of a Learning Management System (LMS). A LMS is a software platform that provides additional features such as the ability to perform participant registration, response tracking, and recordkeeping. A LMS stores the training modules and additionally has multiple data tracking functions to keep track of enrollment, course completion, training time, correct responses, etc.

Implementation of a LMS can be relatively costly and time consuming to initiate implementation; but, when fully implemented, provides distinct advantages due to its ability to track information. For example, once a participant completes a module and has answered all the "mini quizzes" correctly, the system would allow the trainee to register for more detailed instructor-led NPDES training. In addition, a LMS can be used for other types of training throughout the County. A LMS is not necessary to conduct a web-based training program but would provide additional enhancements to web-based training.

3.3 Cost Considerations

- Developing the introductory module in a CBT environment would require initial costs to transform existing introductory NPDES training content and develop it into an interactive CBT (delivered via CD-ROM). The cost to develop the introductory module on CD-ROM would be potentially $35,000 to $70,000 for a 1-hr module. The final cost would depend on the desired level of interactivity, the extent of use of graphics, and the level of testing and tracking that is built into the training. This estimate also assumes each of the four NPDES program elements includes similar/overlapping content which provides for cost savings. The cost of developing part (the introductory module) of all of the training to a CBT environment could be shared between the District and the counties of San Bernardino and Orange. Also, there is the potential of applying and obtaining a grant for the development of the training.

- In 2004, the consultant costs for development and presentation (2 sessions/6-8 hours each) of training modules (New Development/WQMP training - $16,000; Construction, Industrial/Commercial, and Municipal

Facilities and Activities was approximately $25,000.) In 2006, consultant fees for each training module cost approximately $4,000.

- On-going or additional expenses incurred by the District, such as staff time spent in setup , coordination, review, facility fees, copies of handouts, refreshments, beverages, snacks, etc. have not been estimated.

- Reducing the number of participants per class (20 to 30 participants per class) would potentially increase the District's costs of providing training, since more training sessions of each of the four program elements may be required.

- Acquisition of a Learning Management System (LMS) software and implementation to enable a full web-delivered CBT could cost anywhere from $500,000 to over $1 million. This cost could also be higher depending on the system selected and if computer infrastructure modifications or upgrades are needed.

3.4 Other Considerations

- Depending on the implementation of web-delivered CBT, the refresher classroom training could be delivered by a trainer via the Internet. Trainees may then take the course in groups or individually over the Internet.

- Depending on interest and potential shared funding among the three Counties (San Bernardino, Orange, and Riverside), purchasing a Learning Management System (LMS) and upgrading the CBT to one that is delivered through the LMS via the Internet, could become more affordable if costs were share. A LMS system provides additional benefits: tracking enrollment/participation, record keeping, and web-based system capability.

Appendix A
Computer-Based Training (CBT)

Computer-Based Training (CBT) can be delivered in multiple delivery methods. A CBT program can be delivered via a CD-ROM; online, self-paced training (asynchronous training); or online, instructor-lead (synchronous training). CBT methods are further discussed below. CBT offers several distinct advantages:

- Trainees can take courses tailored to their specific job assignment rather than attending "en-mass" instructor led training.
- CBT courses can be distributed over a wide geography, potentially saving time and money.
- Trainees are free to take the training when and where they please and at a pace that suits their learning needs.
- Self assessments or mini-quizzes can be given to the trainee periodically throughout the course to reinforce concepts. This makes the training more interactive. The CBT can be designed to prohibit the user to advance until all the questions in the mini quiz are answered correctly (or set "pass" rate). At the completion of the course, a quiz can test for overall comprehension and passing this quiz would be a requirement of receiving a course certificate. This helps improve the effectiveness of delivery and better measure that the user is meeting the learning objectives.
- Incorporation of multi-media (e.g. audio, video, customized graphics) further enhances the learning environment and presentation of the material. Material can be organized differently without the restrictions of typical PowerPoint presentations (e.g. "pop-ups" containing information which would normally be shown in a separate slide). Hand out and reference materials can be made accessible at any time, and trainees can print them out if necessary.
- Instructor-led training time is reduced. In this case, each program area would be reduced by at least one hour per session. This would make each session a maximum of 2 hours duration (3 hours for the New Development/WQMP training).

CD-ROM Delivery Method

The participant would utilize a computer and insert the CD-ROM and follow the course at a self-paced manner. The participant can take the self-paced introductory modules on a computer, at their own convenience, and reduce overall training time by eliminating time spent traveling to attend training and time away from the office. Throughout the course, the training could include mini assessments quizzes. At the completion of the course, the participant can

be linked to an email or website that updates a database to show completion of the course.

Delivery of training via this CD-ROM method would not provide a means to determine the length of time a participant took to complete the course. Another, drawback of this delivery method is that it is challenging to manage new releases of the training. The CD version of the training would potentially be difficult to control as new updated training versions are developed and distributed. The administrator of the training would need to ensure participants are utilizing the latest CD-ROM versions.

Online Self-Paced Delivery Method

CBT can also be delivered within a web-based online environment in which the course content is maintained. A participant could log into a website and take the training course online at his own pace, at one sitting, or log out and return to the training at a later time. Similar to the CD-ROM delivery method, the content could be designed to be very interactive with assessments paced throughout the course. Course version would not be a factor as in the case of CD-ROM delivery method. Users can take only the modules that are applicable to their specific job assignment rather sit through lengthy instructor led training.

The introductory modules can be developed in such a way that a "mini quiz" is given to the participant periodically (every 4-5 screens) to reinforce concepts. This makes the module interactive. The system would not allow the user to advance to the next screen until all the questions in the mini quiz are answered correctly (or set "pass" rate), to ensure that the information is being effectively delivered, and that the user understands the concepts.

The duration of the detailed instructor lead training for each program area would be reduced by at least one hour per session. This would make each session a maximum of 2 hours duration (3 hours for the New Development/WQMP training).

If desired, the introductory modules can be developed to potentially provide Continuing Education Units (CEUs) or Professional Development Hours (PDHs). In this case, IACET requirements are stringent and include assessments/tests and a passing score.

Online Instructor-Led Delivery Method

This delivery method is similar to the online self-paced method except that the course would be lead and thus paced by the instructor. Participants would call into a conference telephone line and listen to the course instructor while following online via a website.

Summary of Training Participants' Narrative Comments on Training

	WQMP	Industrial/Commercial	Municipal	Construction Site
D. The most useful information for me was:				
	All (5)	Everything (2)	Everything (9)	Presentation (5)
	Hands on project (8)	BMPs in industrial sites	Maintenance yard challenges	Local agency liabiities
	Scope/coverage requirements (3)	Examples for inspections (4)	Overall materials (2)	EC and SC (6)
	Conditions of approval	Review of municipal permit (2)	Landscape / graffitti procedures	Erosion prevention
	Concepts	Handouts	Municipal facility plans	BMP Examples
	Handouts and Exhibits (4)	New enforcement actions	Only rain in the drain	SWPPP design
	Process and BMP use information	Personal experiences	Containment	Presenter and video
	303(d) - Canyon Lake		Case studies	Everything (5)
	WQMP		Fueling and maintenance	Drain protection
	Triad Approach		Pool water and steam cleaning	Preparing for rain events
				Sediment basins for sed. control
				Keeping me current
				Handouts and presentation (5)
				Definitions concerning NPDES
				Local ordinances
				Information and laws
				Pollution and control examples
				Photos of Good Vs Bad
				Videos
E. The least useful information for me was:				
	Copy of slides	Good overview, but too broad	Illicit connections	Housekeeping
	The test	Mobile washing info not accurate	Permits and requirments (2)	SWPPP preparation information
	Information on SMR Watershed	Fine schedule is not one I use	Graffitti	Information presented by FCD
				On-site BMPs
				Tracking controls

Riverside County
Storm Water - Clean Water Program
Fall 2005 Training Evaluation

Summary of Training Participants' Narrative Comments on Training

	WQMP	Industrial/Commercial	Municipal	Construction Site
F. What type of additional information would you like to see presented in the class:				
	Phase II training for folks that	Examples - dealing w/ violators	I felt the class was complete	More erosion control
	Coordination with Code Enfmt.	Enforcement information	New alternative methods	More pollution prevention
	Spanish handouts (2)	Mobile cleaning technologies	CD	More on FCD education materials
	More photos	Copies of permits	More on trash	Focus on BMP implementation
	WQMP information	Field inspector names/contacts		Compare BMP methods
	Comparisons between methods	Inspection case studies		
G. Additional Comments:				
	Add technical BMP design to class	Good information but needed	Class was very motivational	Covered material too fast
	Provide class updates	Information was sufficiently	Allow 8 hours not 4 hours for class	Good presentation (2)
	Project review process information	Presenter was clear and concise	Site specific examples	
	Improved my understanding of	Presenter was mono tone	Road maintenance examples	
	Allow more time for the class	Some writing on slides was too	Sewer maintenance examples	
	Room was too small for the class	Presentation was too short	Good job	
	The final acronymns	More breaks		
	Very good	Too many acronyms		
	Slower for staff w/o drainage exp.	Presenter must know all permits		
	Add more on water quality issues	Presenter avoided enforcement		
	Answers vague due to breadth of			
	Go slower			
H. What is your specific area of expertise:				
	Co-permitee	Residential Under New	Street Clean up	Inspection
	MS4	Construction BMPs (2)	Water Discharge	Parks
	NPDES Coordinator	Permit Coordination	Administrative	Local Bldg Official
	Planning (4)	Lanfill, Transfer Stations	Storm Water Program Coordinator	Maint. Svc
	WQMP Plan Check (4)	Storm Water Program Coordinator	Public Workes / Streets	SWPPP
	Storm Water Project Coordinator	NPDES Requirements	Waste Oil / Fuel	Storm Water Coordinator
	SWPPP	Code Enforcement	Irrigation	Code Enforcement (2)
	BMP verification	Illegal Discharges	Herbicide Application Sensitive	SWPPP Inspector (7)
	Construction		Field Insp & Sampling for EMWD	Discharge
	Grading Permits		Generalist	Drainage
				Sampling

5.0	Municipal Employee Training	5
6.0	Prevention Measures	6
7.0	Incident Summary	7

1.0 Summary

This report addresses the Riverside County Fire Department's Hazardous Materials Response Team activities for the period of July 1, 2006 to June 30, 2007. The report details program development, public outreach efforts, municipal staff training, runoff prevention measures, and call summary. Hazardous Material Response Team activities included in this report were actual hazardous material releases that potentially threatened the watersheds of the Santa Ana, Santa Margarita, and Whitewater Rivers overseen by the Riverside County Flood Control and Water Conservation District.

2.0 Introduction to the Hazardous Materials Response Team

The 2006/2007 Annual Report on Hazardous Materials Emergency Response Team Activities summarizes responses to environmental emergencies for the purpose of controlling the release of toxic materials and minimizing the impact on public safety and the environment. The Riverside County Fire Department Hazardous Materials Response Team, established in 1986, continues with its mission of providing service within Riverside County through a partnership program that combines the efforts from Cal Fire/Riverside County Fire Department and the Hazardous Material Branch of Riverside County Environmental Health.

The Hazardous Materials Response Team responds to environmental emergencies within the County of Riverside and proves mutual aid to Imperial County. An additional responsibility of the HMRT is oversight and coordination of the NPDES Storm Water Discharge Permit for Riverside County Fire Department facilities. The HMRT oversees maintenance and implementation of the Storm Water Pollution Prevention Program (SWPPP) for county fire stations and facilities which includes the implementation of Best Management Practices (BMPs) municipal employee training and Riverside County Fire Fighting Agencies BMPs.

Riverside County Fire Department is one of the largest fire departments within California in both geographic coverage and firefighting personnel, providing emergency service to Riverside County and the cities of Banning, Beaumont, Calimesa, Coachella, Desert Hot Springs, Indian Wells, Indio, La Quinta, Moreno Valley, Palm Desert, Perris, Rancho Mirage, San Jacinto, and Temecula. The Riverside County Fire Department operates 94 fire stations with over 1200 employees.

3.0 Program Management and Development

With the continued development and population growth of Riverside County, total numbers of emergency incidents are increasing. Riverside County Fire Department is committed to meeting the demand for public service and has developed plans and contingencies for continued expansion through placement of new facilities and additional personnel. With the increase in the total number of emergency incidents, there is a related increase in Hazardous Materials related incidents. The Hazardous Material Response Team is meeting this increase in service with the following program developments:

- FY 2001/2002, this year saw the development of two dedicated Hazardous Materials Response Teams, consisting of five Firefighter/Hazardous Material Technicians per team. Team One is located in Winchester, CA and Team Two is located in Palm Desert, CA.

- FY 2002/2003, the purchase of three new hazardous materials response vehicles, consisting of two support trucks, and a tractor-trailer main unit. The main unit was assigned to Hazmat Team 1 and one support truck is assigned to each team. There have been additional purchases of equipment and monitors to ensure a full compliment of tools for both teams.

- FY 2003/2004, two Mass Decontamination Response Trailers, capable of treating 200 patients per hour, were purchased with grant money and placed in-service for both teams. A change in the designators for the Hazardous Materials Response Teams was made; "Hazmat 1" and "Hazmat 2" became "Hazmat 34" and "Hazmat 81", to reflect the geographic locations of the Hazmat Response teams, improving communications and organization.

- FY 2004/2005, participating fire departments within Riverside County developed Best Management Practices (BMPs) that are intended to be used by fire fighting agencies for urban runoff management. These BMPs are a requirement of the Riverside County Municipal Stormwater permit (section XI.B) adopted by the Santa Ana Regional Water Quality Control Board (SARWQCB). Due to an operational need the two response teams were combined into one team and separated into three locations.

- FY 2005/2006, the Hazardous Materials Response Team was reorganized into two distinct teams, Hazmat 34 at Winchester Fire Station 34 and Hazmat 81 at North Bermuda Dunes Fire Station 81. Daily on duty staff is 10 Hazardous Materials Specialists providing service to the county.

- FY 2006/2007, approximately $25000.00 was expended on Vetter air bags to replace older complements and add to the capabilities of Hazmat 81. Vetter air bags are a significant tool that can be used to occlude accidental discharges from impacting the storm water system. Further developments, the installation of MDTs (mobile data terminals) in all front line fire equipment, and Riverside County environmental health officer vehicles. This allows for improvements in locating and responding to incidents, orthographic mapping of incidents and integrating technology which the ability to access the Health Department's Business Response Plans. A $400,000 purchase has been approved to replace the main Hazmat Response Team vehicle at Station 81 and it is scheduled to be placed in service in FY 2007/2008.

4.0 Public Education

The Hazardous Materials Response Team is available for public education, and dedicates time to provide information and education regarding environmental safety and Storm Water Pollution Prevention. Both teams have participated in public relation and education events during FY 2006/2007 on an average of 1- 2 per month. Hazmat Response Team personnel are made available to provide information and education through direct public contact, and materials. These events have included:

- The Riverside County Fair held annually at Indio, CA.
- Educational presentations at public schools, grades K through 12.
- Safety fairs held at the cities of La Quinta, Hemet, Perris, Moreno Valley, and Temecula.
- Public events within Riverside County.

Public information and education is provided through materials that the Hazardous Materials Response Team hands out during the various events that are attended during the year and information that team members provide during equipment displays.

- "Household Hazardous Waste Collection Site Schedule" (schedule) Riverside County Environmental Health.
- "Household Hazardous Waste" (pamphlet), Stormwater Cleanwater Protection Program.

- "Stormwater Pollution, What You Should Know" (pamphlet) Stormwater Cleanwater Protection Program.
- "Stormwater Pollution, Outdoor Cleaning Activities" (pamphlet) Stormwater Cleanwater Protection Program.
- "Storm Drains Flow directly to our Waterways" (poster) Stormwater Cleanwater Protection Program.

5.0 Municipal Employee Training

Successful Storm Water Pollution Prevention is dependent upon a standard operation policy and effective education of department employees. Team members from the Hazardous Material Response Team are available to train and educate the approximately 1200 Riverside County Fire Department personnel on the Storm Water Pollution Prevention Program and the National Pollution Discharge Elimination System. In previous years, the training was conducted at individual fire stations, or during employee orientation at Clark Training Center.

To comply with NPDES permit requirements for municipal employee training, and to ensure a consistent training program, Riverside County Fire Department produced a video training program that is distributed to all 95 fire department facilities to compliment the SWPPP manuals that are available for reference at the facilities. Employees are encouraged to view the program on an annual basis. The training covers BMPs, (best management practices) that apply to municipal facilities.

Fire Station/Municipal Facility Activities

- Dispensing of Fuel.
- Vehicle and equipment parking and storage.
- Vehicle and equipment maintenance.
- Vehicle and equipment washing and cleaning.
- Leak and spill cleanup.
- Landscape, garden, and general maintenance and cleaning.
- Loading, handling, storage of chemicals, oil, trash, and debris.

6.0 Prevention Measures

Members of the Hazardous Materials Response Team were involved in the development of best management practices (BMPs) that are used by participating Riverside County fire fighting agencies for urban runoff management. These best management practices were a requirement of the Riverside County Municipal Storm Water Permit (section XI.B) adopted by the Santa Ana Regional Water Quality Control Board in 2004.

The Riverside County Fire Chief's Association adopted the fire department activities to provide guidance to firefighting personnel for management of urban runoff. The BMPs, when followed, minimize discharges of runoff to the municipal separate storm sewer system (MS4) associated with firefighting activities such as fire training, emergency scene spills, discharges and firefighting.

The following Emergency and Non-emergency Firefighting Activities were addressed:

- Discharges associated with fire training activities.
- Discharges associated with post-emergency fire fighting activities.
- Discharges associated with activities conducted at fire department facilities.
- Discharges associated with emergency fire fighting activities.
- Stormwater NPDES training of fire department employees.

7.0 Incident Summary

From July 2006 through June of 2007, Hazardous Materials Response Teams, Hazmat 34 and Hazmat 81, responded to a total of **580** hazardous material related incidents. **117** of these incidents were a threat or potential threat to the stormwater system of Riverside County Flood Control and the Santa Ana, Santa Margarita and Whitewater watersheds.

- Hazardous Materials Fires **6**
- Clandestine Drug Lab **1**
- Illegal Dumping **55**
- Spills at Fixed Facilities **6**
- Spills from Mobile Property and Equipment **49**

Total **117**

The average length of time spent on a hazardous materials related incident is two hours. Based on **117** flood control related incidents, the Hazardous Materials Response Team provided **406** service hours to the Riverside County Flood Control District.

Incident Date	Incident Number	Station PRA	Watershed	Type of Hazmat

APPENDIX D

TRAINING ATTENDANCE SHEETS AND FLYERS

NPDES

STORMWATER QUALITY TRAINING FOR

I.) Construction
II.) Industrial / Commercial
III.) Municipal
IV.) Water Quality Management Plan (WQMP)

NO FEE TRAINING

Training: The Riverside County National Pollutant Discharge Elimination System (NPDES) Municipal Separate Storm Sewer Systems (MS4) Permits require annual training. The Santa Ana Regional Water Quality Control Board (RWQCB) Permit also requires new employees to receive training within six months of hire.

TO REGISTER: ***INTERNET ACCESSS IS REQUIRED TO REGISTER.*** *Please have all of the information below ready and register on-line at* www.eplyevents.com/riversidenpdes. *To help maintain class sizes you can only register 1 applicant for each log-in.* **Registration deadline is September 22, 2006**. **Seating is limited, so register early!**

- ATTENDEE'S NAME
- MUNICIPALITY
- DEPARTMENT
- CONTACT
- PHONE#
- EMAIL
- CLASS THEY WISH TO ATTEND
- FAX #

Overflow classes will be held in at the Murrieta City Hall. **The overflow class location will be closed unless reservations fill up in the other sessions. Hopefully we'll have a good idea if we need to open the class well in advance of the 15th of September. If classes do fill up we can open some of the Murrieta classes and extend the registration deadline. This should provide advance notice for any cancellations that may take place for our Murrieta locations.*

WHO SHOULD ATTEND:

I.) Construction Training is for building and construction staff that conducts:

- Construction Site Inspections / Enforcement
- Public Works Construction Activities
- Grading/Building Permit review staff (should attend 1 class, either WQMP or Construction, which ever is newest)
- Any staff reviewing or preparing construction project SWPPPs.

II.) Industrial Commercial Training is for health, building and code enforcement staff that conducts:

- Industrial/Commercial Site Inspections / Enforcement for Water Quality Ordinances

III.) Municipal Training is for municipal maintenance workers in:

- Building Services
- Parks Department
- Fleet Services
- Warehouse/Receiving Personnel
- Building & Grounds Maintenance

IV.) WQMP Training is for:

- Planning staff
- Engineering staff
- Plan Review and Plan Check staff
- Grading/Building Permit review staff (should attend 1 class, either WQMP or Construction, which ever is newest)
- Post-construction BMP inspectors interested in learning about the BMP design basis

I.) *CONSTRUCTION TRAINING*

WORKSHOP TOPICS:

- NPDES Regulatory Framework Overview
- Overview of General Construction Permit
- Site Inspection Responsibilities
- Enforcement Options
- Erosion/Sediment Control Best Management Practices (BMPs)
- Municipal Stormwater Permit Requirements
- Runoff Sampling and Analysis
- Post Construction BMPs
- Constituents of Concern in Urban Runoff from Construction Site Activities
- Storm Water Pollution Prevention Plans (SWPPP)

	Date and Time	Location
1	**Monday, October 2, 2006 - Half-Day Training (AM)** 9:00 A.M. – 12:00 A.M.	**Riverside County Flood Control & Water Conservation District** 1995 Market Street – Conference Room 1 Riverside, CA 92501 Phone: 951.955.1200
2	**Monday, October 16, 2006 - Half-Day Training (PM)** 1:00 P.M. – 4:00 P.M.	**Riverside County Flood Control & Water Conservation District** 1996 Market Street – Conference Room 1 Riverside, CA 92501 Phone: 951.955.1201
3	**Thursday, October 12, 2006 -** Half-Day Training (AM) 9:00 A.M. – 12:00 P.M.	**Palm Springs Convention Center** 277 N. Avenida Caballeros - Parking at the NE corner of Amado Rd. and Alvarado Rd. Palm Springs, CA 92262 Phone: 800.333.7537
4	**Tuesday, October 17, 2006 -** Half-Day Training (PM) 1:00 P.M. – 4:00 P.M.	**Palm Springs Convention Center** 277 N. Avenida Caballeros - Parking at the NE corner of Amado Rd. and Alvarado Rd. Palm Springs, CA 92262 Phone: 800.333.7537
5	**Tuesday, October 10, 2006 - Half-Day Training (PM)** 1:00 P.M. – 4:00 P.M.	**Murrieta City Hall*** 26442 Beckman Court - City Counsel Chambers (Street parking and entrance is through the rear of the building) Murrieta, CA 92562 Phone: 951.461.6075
6	**Wednesday, October 18, 2006 - Half-Day Training (AM)** 9:00 A.M. – 12:00 P.M.	**Murrieta City Hall*** 26443 Beckman Court - City Counsel Chambers (Street parking and entrance is through the rear of the building) Murrieta, CA 92562 Phone: 951.461.6076

II.) INDUSTRIAL / COMMERCIAL TRAINING

WORKSHOP TOPICS:

- NPDES Regulatory Framework Overview
- Overview of General Industrial Activities Storm Water Permit (GIASP)
- Municipal Stormwater Permit Requirements
- County and City Stormwater Ordinances
- Protocols for Industrial/Commercial Facilities Inspections
- Drainage Area Management Plan (DAMP) and Enforcement/Compliance procedures
- Pollution Prevention Plans (PPPs)
- Best Management Practices (BMPs)
- Constituents of Concern in Urban Runoff from Industrial/Commercial Facilities

	Date and Time	Location
1	**Tuesday, October 3, 2006 - Half-Day Training (AM)** 8:00 A.M. – 11:00 A.M.	**Riverside County Flood Control & Water Conservation District** 1996 Market Street – Conference Room 1 Riverside, CA 92501 Phone: 951.955.1201
2	**Monday, October 23, 2006 - Half-Day Training (PM)** 1:00 P.M. – 4:00 P.M.	**Riverside County Flood Control & Water Conservation District** 1997 Market Street – Conference Room 1 Riverside, CA 92501 Phone: 951.955.1202
3	**Wednesday, October 11, 2006 -** Half-Day Training (PM) 1:00 A.M. – 4:00 A.M.	**Palm Springs Convention Center** 277 N. Avenida Caballeros - Parking at the NE corner of Amado Rd. and Alvarado Rd. Palm Springs, CA 92262 Phone: 800.333.7536
4	**Thursday, October 19, 2006 -** Half-Day Training (AM) 9:00 P.M. – 12:00 P.M.	**Palm Springs Convention Center** 277 N. Avenida Caballeros - Parking at the NE corner of Amado Rd. and Alvarado Rd. Palm Springs, CA 92262 Phone: 800.333.7537
5	**Thursday, October 5, 2006 - Half-Day Training (PM)** 1:00 P.M. – 4:00 P.M.	**Murrieta City Hall*** 26443 Beckman Court - City Counsel Chambers (Street parking and entrance is through the rear of the building) Murrieta, CA 92562 Phone: 951.461.6076
6	**Monday, October 9, 2006 - Half-Day Training (AM)** 8:00 A.M. – 11:00 P.M.	**Murrieta City Hall*** 26444 Beckman Court - City Counsel Chambers (Street parking and entrance is through the rear of the building) Murrieta, CA 92562 Phone: 951.461.6077

III.) MUNICIPAL TRAINING

WORKSHOP TOPICS:

- NPDES Regulatory Framework Overview
- Municipal Stormwater Permit Requirements
- Best Management Practices
- Pollution Prevention Plans
- Storage & Disposal of Chemicals
- Vehicle Cleaning & Maint.
- Pesticides & Fertilizers
- Painting Activities
- Landscape Maintenance
- Outdoor Loading Activities
- Pavement & Parking Lot Cleaning
- Parks Maintenance Activities
- Constituents of Concern in Urban Runoff from Municipal Facilities and Activities

	Date and Time	Location
1	**Monday, October 2, 2006 - Half-Day Training (PM)** 1:00 P.M. – 4:00 P.M.	**Riverside County Flood Control & Water Conservation District** 1996 Market Street – Conference Room 1 Riverside, CA 92501 Phone: 951.955.1201
2	**Monday, October 16, 2006 - Half-Day Training (AM)** 9:00 P.M. – 12:00 P.M.	**Riverside County Flood Control & Water Conservation District** 1997 Market Street – Conference Room 1 Riverside, CA 92501 Phone: 951.955.1202
3	**Thursday, October 12, 2006 -** Half-Day Training (PM) 1:00 P.M. – 4:00 P.M.	**Palm Springs Convention Center** 277 N. Avenida Caballeros - Parking at the NE corner of Amado Rd. and Alvarado Rd. Palm Springs, CA 92262 Phone: 800.333.7535
4	**Tuesday, October 17, 2006 -** Half-Day Training (AM) 9:00 P.M. – 12:00 P.M.	**Palm Springs Convention Center** 277 N. Avenida Caballeros - Parking at the NE corner of Amado Rd. and Alvarado Rd. Palm Springs, CA 92262 Phone: 800.333.7536
5	**Tuesday, October 10, 2006 - Half-Day Training (AM)** 9:00 A.M. – 12:00 P.M.	**Murrieta City Hall*** 26443 Beckman Court - City Counsel Chambers (Street parking and entrance is through the rear of the building) Murrieta, CA 92562 Phone: 951.461.6076
6	**Wednesday, October 18, 2006 - Half-Day Training (PM)** 1:00 P.M. – 4:00 P.M.	**Murrieta City Hall*** 26444 Beckman Court - City Counsel Chambers (Street parking and entrance is through the rear of the building) Murrieta, CA 92562 Phone: 951.461.6077

IV.) WQMP TRAINING

WORKSHOP TOPICS:

- National Pollutant Discharge Elimination System (NPDES) Regulatory Overview
- Constituents of Concern in Urban Runoff from New Development & Significant Re-development
- Solutions Overview
- Best Management Practices (BMPs) for:
  - ✓ Site Design
  - ✓ Source Control
  - ✓ Treatment Control
- Implementing the Water Quality Management Plan (WQMP) Guidance Documents

	Date and Time	Location
1	**Tuesday, October 3, 2006 - Half-Day Training (PM)** 12:00 P.M. – 4:00 P.M.	**Riverside County Flood Control & Water Conservation District** 1997 Market Street – Conference Room 1 Riverside, CA 92501 Phone: 951.955.1202
2	**Monday, October 23, 2006 - Half-Day Training (AM)** 8:00 A.M. – 12:00 P.M.	**Riverside County Flood Control & Water Conservation District** 1998 Market Street – Conference Room 1 Riverside, CA 92501 Phone: 951.955.1203
3	**Wednesday, October 4, 2006 - Half-Day Training (PM)** 1 P.M. – 5:00 P.M.	**Murrieta City Hall** 26443 Beckman Court - City Counsel Chambers (Street parking and entrance is through the rear of the building) Murrieta, CA 92562 Phone: 951.461.6076
4	**Thursday, October 12, 2006 - Half-Day Training (PM)** 1:00 A.M. – 5:00 P.M.	**Murrieta City Hall** 26445 Beckman Court - City Counsel Chambers (Street parking and entrance is through the rear of the building) Murrieta, CA 92562 Phone: 951.461.6078
5	**Thursday, October 5, 2006 - Half-Day Training (AM)** 8:00 A.M. – 12:00 P.M.	**Murrieta City Hall*** 26444 Beckman Court - City Counsel Chambers (Street parking and entrance is through the rear of the building) Murrieta, CA 92562 Phone: 951.461.6077
6	**Monday, October 9, 2006 - Half-Day Training (PM)** 12:00 A.M. – 4:00 P.M.	**Murrieta City Hall*** 26444 Beckman Court - City Counsel Chambers (Street parking and entrance is through the rear of the building) Murrieta, CA 92562 Phone: 951.461.6077

D Glossary and Acronyms

G-1.0 INTRODUCTION

In July, 2004 the San Diego Regional Water Quality Control Board (SDRWQCB) issued Monitoring and Reporting Program No. R9-2004-001, NPDES Permit No. CAS0108766 for the Discharges of Urban Runoff from the Municipal Separate Storm Sewer Systems (MS4s) Draining the County of Riverside, the City of Murrieta, the City of Temecula and the Riverside County Flood Control and Water Conservation District (RCFCD) within the Santa Margarita Watershed in the San Diego Region (MRP). The goals are identified in section I of the MRP and the management questions that the MRP is designed to address are listed in section IIA of the MRP.

Per the requirements of the MRP, the RCFCD developed and implemented a monitoring program based on the program outline in the MRP and the guidance in the Model Monitoring Program for Municipal Separate Storm Sewer Systems in Southern California (SMC, 2004). The Model Monitoring Program was prepared by the Southern California Stormwater Monitoring Coalition (SMC), which consists of Permittees, Regional Water Quality Control Boards, citizen's groups, Southern California Coastal Watershed Research Project (SCCWRP), private consultants, and other agencies.

The RCFCD established water quality monitoring stations throughout the Santa Margarita Region (SMR). The monitoring stations are generally located at the downstream end of a major MS4 to allow for detection of illicit discharges, characterization of flows, and a better understanding of the water quality as prescribed in the MRP.

This Monitoring Annual Report is designed to meet the requirements of MRP Section III, Reporting Program, Part B, Receiving Waters Monitoring Reporting Requirements. This report presents the results of the Riverside County MS4 program for 2006-2007, the third year of the program. It contains the following components:

- Description of each receiving water monitoring station
- Description of monitoring methods
- Monitoring results
- Methods used to evaluate the data
- Discussion of results and analyses of each Monitoring Program Component

The fourth year (2007-2008) report will contain, in addition to the above information:

- Discussion of any long-term trends that can be detected from existing data
- Recommendations for future monitoring
- Recommendations for modification to individual or watershed SWMPs.

As stated in the MRP,

> *"Receiving Waters Monitoring consists of: 1) **Core Monitoring** requirements to address on-going, site specific need, such as estimating pollutant loads and assessing trends; 2) **Regional Monitoring** to address watershed-wide issues; and 3) **Special Studies** to address specific research or management issues."*

This report presents the results of the Core Monitoring at the stations throughout the SMR, which includes dry weather and illicit discharge monitoring, wet weather sampling, mass loading sampling, toxicity testing, bioassesments, and Toxicity Identification Evaluations (TIEs) and Toxicity Reduction Evaluations (TREs). In addition to the Core Monitoring, the RCFCD participates in Regional Monitoring

and Special Studies. Regional Monitoring initiatives are discussed under the results and analyses of each Monitoring Program Component heading. Special Studies are discussed in Section 7. Also included in this report are precipitation and fire information, and recommended immediate actions based on the data collected to date.

G-2.0 DESCRIPTION OF MONITORING METHODS FOR EACH TYPE OF MONITORING

The Consolidated Monitoring Program (CMP) contains a description of monitoring methods for each type of monitoring, including but not limited to:

- Monitoring equipment
- Sampling procedures
- Quality Assurance/quality control (QA/QC) procedures
- Laboratory analytical methods including the method detection limits (MDLs)

The CMP identifies monitoring elements common to the MS4 permits applicable to Riverside County by the Colorado River, San Diego and Santa Ana Regional Water Quality Control Boards. Watershed-specific appendices include specific MS4 permit provisions. The CMP was revised in 2004 to include the provisions for the recently adopted Board Order R9-2004-001, Santa Ana Region TMDL requirements, and other recent amendments to the Monitoring and Reporting Programs (MRP) of other MS4 permit regions within the County. The CMP is reviewed and updated annually based on program findings and changes in program needs, including TMDL development and implementation. The draft CMP outlines four objectives:

1. Develop and support an effective MS4 management program.

2. Identify those Receiving Waters, which, without additional action to control pollution from Urban Runoff, cannot reasonably be expected to achieve or maintain applicable Water Quality Standards.

3. Characterize pollutants associated with Urban Runoff and assess the influence of Urban land uses on Receiving Water quality.

4. Analyze and interpret the collected data to identify trends, if any, both to prevent impairments through the implementation of preventative BMPs and to track improvements based on the MS4 management program.

These objectives support the goal of the MS4 Urban Runoff management program, which is to manage the quality of Urban Runoff within the Permittee's jurisdictions to prevent impacts on Receiving Waters. These objectives are also a superset of the Model Monitoring Program core management questions developed by the Southern California Stormwater Monitoring Coalition.

The CMP includes the following sampling types:

- Dry Weather
- Wet Weather
- Bioassessment
- Toxicity
- Special Studies

In addition, the CMP contains:

- Health and Safety Guidance
- Field Reconnaissance Guidance

- Water Chemistry Guidance
- Toxicity Guidance
- Bioassessment Guidance
- Special Study Guidance
- Sampling Procedures
- Monitoring Costs
- Quality Assurance/Quality Control Procedures
- Data Collection and Analysis Procedures

Discussion previously contained in the Monitoring Annual Report regarding these standardized guidance and procedures is now provided in the CMP. The CMP will continue to be updated and referred to in this Monitoring Annual Report.

During the first storm event of the monitoring period, samples collected at the Triad stations are to be analyzed for the complete list of priority pollutants (40 CFR 122, Appendix D). For the remaining wet and dry weather monitoring events, samples are to be analyzed for the parameters listed in Table 1 of the MRP, reproduced below as Table G-1. The detected analytical results are provided in Table G-12 in Section 7.1 of this report.

Table G-1 Triad Station – Analytical Parameters

Trace Metals	**Pesticides**
Total Cadmium	Diazinon
Total Chromium	Chloropyrifos
Total Copper	Other OP Pesticides
Total Nickel	
Total Lead	**Conventionals**
Total Zinc	Temperature
Nutrients	pH
Ammonia (NH_3)	Hardness
Total Kjeldahl Nitrogen (TKN)	Specific conductance
Nitrate (NO_3)	Dissolved oxygen
Total phosphorus	MBAS
Bacteria	**PAHs**
Total coliform	
Fecal coliform	**Volatiles** (dry weather only)
E. coli	
	Total suspended solids

Per the MRP, monitoring of the tributary stations consists of the collection of grab samples during the first storm event, an additional storm event and two dry weather events. The samples will be analyzed for the Constituents of Concern listed in Table G-2. Constituents of Concern for 2006-2007 were those constituents that exceeded the BPO or CTR values in 2005-2006. In addition, hardness is included so that CTR values may be calculated.

Table G-2 Tributary Stations – Constituents of Concern

Physical Properties	**Trace Metals**
Turbidity (Field)	Copper
Turbidity (Lab)	Iron
Color	Manganese
Total Hardness	**Pesticides**
Total Dissolved Solids (TDS) (Field)	Chlorpyrifos (ELISA)
Total Dissolved Solids (TDS) (Residue)	Diazinon
Nutrients	**Bacteriological**
Total Nitrogen (as N)	Total Coliform
Total Phosphorus (as P)	Fecal Coliform
	E. coli

In addition to the Constituents of Concern listed in Table G-2, the laboratory analyzed for a number of parameters not mandated by the MRP and not requested by the District. As required by the MRP, results for the analyses of these parameters are displayed graphically in Attachment A and are summarized in Section G-6.0.

G-3.0 DESCRIPTION OF EACH MONITORING STATION

The SMR includes only the upper portion of the Santa Margarita River watershed. The SMR is further subdivided into the Temecula Creek and Murrieta Creek sub-watersheds. The Murrieta Creek sub-watershed is further subdivided into five smaller urbanized sub-watersheds tributary to Murrieta Creek (Empire Creek, Long Canyon Creek, Santa Gertrudis Creek, Warm Springs Creek, and Wildomar Channel). The confluence of Murrieta Creek and Temecula Creek, which forms the Santa Margarita River, occurs just upstream of the Riverside County line.

The MRP requires Triad Monitoring (chemistry, bioassessment, and toxicity) on both Temecula Creek and Murrieta Creek just upstream of their confluence. An additional Triad station known as Cole Creek is located west of, and tributary to, Murrieta Creek. It is used to establish reference water quality conditions for an un-urbanized watershed. Due to a lack of flow in Cole Creek during summer, Adobe Creek was alternatively used to collect reference condition dry weather flows as it is fed part of the year by rising ground water. Monitoring of four Tributary stations (chemistry only) at major MS4 outfalls tributary to Murrieta Creek and Temecula Creek is also required.

A map showing the locations of the CMP Triad and Tributary stations is provided as Figure 1. Station names corresponding to the station numbers shown on the maps are provided in Table G-3. Table G-3 also provides a summary of the location and character of current and past CMP stations, and notes when samples were collected at each station. Table G-4 contains an additional summary of the land use acreages and percentages for several major drainage areas tributary to the Santa Margarita River. Descriptions for each Triad and Tributary CMP station are provided. The descriptions for each station contain location information, photographs, and background information on the monitoring site. They also contain two maps, one showing the location of the drainage or subdrainage area and the other depicting the land uses within the area.

Below is the legend for the maps within this section.

G-3.1 Station Name: Temecula Creek below Pala Road (Lower Temecula Creek)

Hydstra Reference #: 777

Location:

Latitude	33°28'26.4" N
Longitude	117°07'46.1" W
Elevation	1,008 ft
Thomas Bros Pg	979B3

Classification: Receiving Water - Triad

Type of Channel: Natural River

Receiving water: Santa Margarita River

Directions to the site:
Drive south on the I-215 freeway and exit at SR 79 South/Old Town Front Street. Go west of the freeway and turn left at the first stoplight. Turn left about 100 feet past the stop light onto a gravel/dirt road. Turn right, before the yellow EMWD gate. Drive to the dirt road that goes left and up. Go about 100 feet and turn right onto the dirt road. Go about 1,700 feet and drive to where the dirt road meets up with the gravel road. Follow the gravel road to the L3437 Pala II Pump Station. Park just past the pump station. Walk to the east and sample water from the stream flow just under the bridge.

Temecula Creek at Pala Road dry except when there is a significant storm event. No aquatic habitat exists in this reach. Conditions for benthic invertebrates tend to be poor at best. Primary flow at this location is rising groundwater. Vail Lake lies approximately 18 miles upstream of the Pala Road Crossing and traps some of the Temecula Creek storm flows; discharges from Vail Lake flow into infiltration basins above Butterfield Stage Road. The soil profile in this 18-mile reach of Temecula Creek consists of deep alluvium with a high infiltration rate. Non-significant storm flows infiltrate prior to reaching the Santa Margarita River. Less than 5% of this watershed tributary to this station is urbanized and within the Permittee's jurisdiction. Any urban drainages to Temecula Creek flow into a 100-foot-wide vegetated strip that is approximately 13,000 feet long and starts approximately 3½ miles upstream of this sampling location.

Temecula Creek Drainage Area

Total drainage area - 232,403.90 acres, of which 175,757.29 acres are within Riverside County.

Land uses by frequency:

Land Use	%
Exempt Public Properties	36.62
Rural Residential	33.20
Preserves Open Space	16.22
Agriculture	8.84
Streets	2.52
Urban Residential	1.53
Parks & Recreation	0.61
Commercial	0.43
Industrial	0.03

G-3.2 Station Name: Murrieta Creek at Temecula (Lower Murrieta Creek)

Hydstra Reference #: 778

Location:

Latitude	33°28'47.0" N
Longitude	117°08'34.8" W
Elevation	1,030 ft
Thomas Bros Pg	978J2

Classification: Receiving Water - Triad

Type of Channel: Natural River

Receiving water: Santa Margarita River

Directions to the site:
Exit Rancho California Road from Interstate 15. Drive west of the freeway and turn left to Front Street. Turn right to Main Street. Turn left to Pujol Street. When Pujol Street goes from asphalt to a dirt road, drive about 500 feet and turn left at the two (2) yellow vertical bollards. CAUTION: A 4-Wheel drive is recommended when driving in this area. Drive straight toward the creek. The picture shows the sampling location which is approximately 100 feet upstream of the RCWD blow-off and approximately 600 feet upstream of the USGS gage house. Note: During storm events, sampling is conducted at the USGS Gage House, upstream of the USGS Weir due to safety.

Lower Murrieta Creek at is a receiving water station. It is located within Murrieta Creek, which is earthen at this location (except for a weir at the USGS gauge). It is the most downstream station within Murrieta Creek. Atributary to the Santa Margarita River, flows during dry weather at this station consist of rising groundwater that begins approximately ½- to ¼-mile from Murrieta Creek's confluence with the Santa Margarita River. There is an active USGS flow gauge at this station.

This sampling site is 0.4 miles upstream of the confluence of Temecula Creek and Murrieta Creek. The soil profile here indicates bedrock at the surface. The flow seen in the photo above is supplied by the mandated RCWD blow off just 100 yards upstream of the gauge and sampling point.

Murrieta Creek Drainage Area

Total drainage area - 98,685.42 acres

Land uses by frequency:

Land Use*	%
Rural Residential	33.21
Preserves Open Space	16.56
Exempt Public Properties	13.60
Agriculture	12.64
Urban Residential	11.39
Streets	8.92
Commercial	2.05
Industrial	0.91
Parks & Recreation	0.72

* Land use area represents portion of watershed below Lake Skinner.

G-3.3 Station Name: Cole Creek

Hydstra Reference #: 188

Location:

Latitude	33°32'37.1" N
Longitude	117°15'47.5" W
Elevation	1,700 ft
Thomas Bros Pg	957D1

Classification: Reference - Triad

Type of Channel: Natural Creek

Receiving water: Murrieta Creek

Directions to the site:
See following pages for detailed directions to the sampling location.

Cole Creek was added to the CMP in 2000 as a reference station. It is located within the Santa Rosa Plateau Ecological preserve and is a natural channel. Cole Creek is a tributary to Murrieta Creek. The Creek at the sampling location only flows when there is a significant winter storm event. The tributary watershed is plateau grassland meadows with a few ranch residences also in the watershed. Approximately 3% of the upper end of the watershed tributary to this station contains urban land uses.

Driving directions to Cole Creek:
Exit the 15 Freeway at Clinton Keith Road and drive west (southwest) of the freeway. Drive about 4 miles and turn left into the "Santa Rosa Plateau Ecological Reserve Visitor Center". You will see this sign at the entrance.

You will also see this sign at the entrance to the Santa Rosa Plateau. When you drive past the sign, park on the left side of the gravel parkway in front of or near the sign that says "Granite Loop Trail".

Walk down the "Granite Loop Trail". It is advisable to use a walking stick; just in case of any critters…namely snakes. Continue walking this trail to the picnic tables.

When you get to this picnic area, continue walking the trail past the picnic tables and slightly to the right. Walk about 500' past the picnic tables and take small path to the left off of the main trail. Walk the foot trail and keep the small drainage area to your left as you walk. Continue walking this trail until the small drainage area meets up with Cole Creek. Turn right at this confluence and walk south parallel to Cole Creek until you start seeing big rocks on the banks (slopes) of Cole Creek.

You will see this metal box that contains the gage sensor. The staff gage for Cole Creek is down the slope from this box.

There is a staff gage on both sides of Cole Creek. You can sample at this gage if there are higher flows. Be careful with footing if there are rapid flows in this area.

This picture just shows some of the bigger rocks that are in Cole Creek where the water will flow over and around. Be careful with footing on these rocks.

These rocks are located about 200 feet south (upstream) of the staff gage. During lower flows, it is recommended to sample water that runs over and around these rocks.

Cole Creek Sub-drainage Area

Total drainage area - 5,733.53 acres

Land uses by frequency:

Land Use	%
Parks & Recreation	60.05
Exempt Public Properties	23.00
Streets	6.81
Preserves Open Space	5.21
Urban Residential	3.24
Agriculture	1.70
Industrial	0.00
Commercial	0.00
Rural Residential	0.00

G-3.4 Station Name: Redhawk Channel Downstream of Overland Dr.

Hydstra Reference #: 768

Location:

Latitude	33°28'34.6" N
Longitude	117°05'40.8" W
Elevation	1,040 ft
Thomas Bros Pg	979F3

Classification: Outfall - Tributary

Type of Channel: Earthen

Receiving water: Temecula Creek

Directions to the site:
Exit Highway #79 East (to Indio) from Interstate 15 freeway. Turn right to Redhawk Parkway. Turn left to Overland. Turn left into first driveway and park there. Property belongs to County of Riverside Fire Department. Walk across the street and through the swing gate. Sampling location is just south (upstream) of the concrete lined channel. The picture shows the sampling location.

Redhawk Channel Downstream of Overland Drive is an outfall station. The sampling location is in an earthen reach of the channel just upstream of the rip-rap side sloped, soft bottomed channel. Dry weather flows appears to be from a natural spring in a tributary contained within an upstream golf course. Also, reclaimed water from RCWD used to irrigate a park channel side slope nearby adds to dry weather flows. A tributary to Temecula Creek, non-storm runoff from the channel infiltrates into Temecula Creek within a few hundred feet of the confluence. While approximately 23% of the tributary watershed is urbanized, it should be noted that over 50% of the watershed is outside of the jurisdiction of the permittees.

Redhawk Channel Sub-drainage Area

Total drainage area - 1,582.38 acres

Land uses by frequency:

Land Use	%
Urban Residential	22.78
Rural Residential	22.43
Preserves Open Space	15.06
Exempt Public Properties	13.85
Streets	11.59
Parks & Recreation	7.24
Agriculture	7.06
Industrial	0.00
Commercial	0.00

G-3.5 Station Name: Lateral A of Santa Gertrudis Channel - Temecula

Hydstra Reference #: 774

Location:

Latitude:	33°31'28.0" N
Longitude:	117°9'50.0" W
Elevation	1,045 ft
Thomas Bros Pg	958F4

Classification: MS4

Type of Channel: Concrete Trapezoidal

Receiving water: Murrieta Creek

Directions to the site:
Exit Winchester Road from Interstate 15. Drive west of the freeway and turn right on to Jefferson Avenue. Drive about 450 feet and turn left into the access gate on the north side of the channel. The sampling point is off the bridge at Jefferson Street. The channel slope is too steep to climb in and out without a ladder. Note: It is twenty-two feet from the water line to the bridge rail during dry conditions.

Santa Gertrudis Channel (774) is an outfall station tributary to Murrieta Creek. It is a concrete lined trapezoidal channel. Significant non-storm flows are provided from well blow offs into the channel that tend to occur in the mornings and evenings. One well blow off valve and outlet owned and operated by RCWD is located adjacent to the confluence of Santa Gertrudis and Murrieta Creeks. These daily blow offs can each release several CFS of water for short durations of time. Non-storm flows tend to infiltrate within a few hundred yards of the confluence with Murrieta Creek. Sediment and vegetation tends to accumulate near the confluence of Santa Gertrudis Channel and Murrieta Creek due to aggradation of Murrieta Creek.

More than half of the watershed tributary to the Santa Gertrudis station is controlled by the dam that forms Skinner Lake. Storm flows in Santa Gertrudis and the downstream reach of Murrieta Creek are therefore lower than they would be under natural conditions. There is an active USGS flow gauge at this station.

Santa Gertrudis at the USGS Station

Total drainage area – 18,461.81 acres

Land uses by frequency:

Land Use	%
Rural Residential	39.15
Agriculture	19.21
Preserves Open Space	17.43
Streets	8.09
Exempt Public Properties	7.74
Urban Residential	6.07
Commercial	1.82
Industrial	0.35
Parks & Recreation	0.13

G-3.6 Station Name: Long Canyon Creek near Murrieta Creek

Hydstra Reference #: 780

Location:

Latitude	33°30'38" N
Longitude	117°09'40" W
Elevation	1,005 ft
Thomas Bros Pg	958G5

Classification: Outfall - Tributary

Type of Channel: Rip-Rap Trapezoidal Channel

Receiving water: Murrieta Creek

Directions to site: Exit Winchester Road from Interstate 15. Drive west of the freeway and turn left on to Jefferson Avenue. Drive about 900 feet and turn right on to Overland Drive. Turn left on to Commerce Center Drive. Drive about 230 feet and turn right into the access gate. Dry weather samples can be taken in the channel with hip boots and a backpack. Wet weather sampling should be conducted off of the Commerce Center Drive Bridge with a rope and bucket.

Long Canyon Channel Outlet at Murrieta Creek

Long Canyon (780) is an outfall station tributary to Murrieta Creek. It is a rip-rap trapezoidal channel. Non-storm flows from Long Canyon Channel tend to infiltrate within a few hundred feet of the confluence.

Long Canyon Creek Sub-drainage Area

Total drainage area - 2,347.96 acres

Land uses by frequency

Land Use	%
Urban Residential	31.82
Preserves Open Space	20.83
Streets	15.42
Commercial	9.61
Rural Residential	9.39
Agriculture	7.62
Exempt Public Properties	2.83

Parks & Recreation	0.42

G-3.7 Station Name: Warm Springs Creek near Murrieta

Hydstra Reference #: 397

Location:

Latitude	33°31'56" N
Longitude	117°10'34" W
Elevation	1,040 ft
Thomas Bros Pg	958E3

Classification: MS4

Type of Channel: Concrete side-sloped, soft bottom trapezoidal

Receiving water: Murrieta Creek

Directions to the site:
Exit Winchester Road from Interstate 15. Drive west of the freeway and turn right on to Jefferson Avenue. Drive about 1 mile and turn left on to Eastman Drive. Turn right on to Adams Avenue. Drive about 250 feet and turn left on to dirt access road located south of the stream. Dry weather sampling can be performed downstream of the Adams Avenue bridge. Wet weather sampling should be conducted from the Adams Avenue Bridge using a bucket and rope. Note that it is 18 feet from the streambed to the bridge rail.

Warm Springs (397) is an outfall monitoring station. Warm Springs Channel is a concrete side-sloped, soft bottom channel tributary to Murrieta Creek. Flow in Warm Springs Channel only occurs during storm events. There may also be sediment aggradations near the confluence of Warm Springs and Murrieta Creeks.

Warm Springs Sub-Drainage Area

Total drainage area – 27,021.48 acres
Land uses by frequency:

Land Use	%
Rural Residential	32.99
Agriculture	17.78
Preserves Open Space	16.13
Exempt Public Properties	12.83
Urban Residential	10.38
Streets	7.97
Parks & Recreation	0.76
Commercial	0.69
Industrial	0.46

G-3.8 Station Name: Adobe Creek

Hydstra Reference #: 848

Location:

Latitude	33°30'48.10" N
Longitude	117°16'04.40" W
Elevation	1,749 ft.
Thomas Bros Pg:	957 D5

Classification: Reference Triad

Type of Channel: Natural Stream

Receiving water: Sandia Canyon to Santa Margarita River

Adobe Creek is a dry weather reference receiving water station located within the Santa Rosa Plateau. The Creek is tributary to De Luz Creek. During dry weather, flows at this station consist of rising groundwater.

Directions to site: From the RCFC District, drive east on the 60 Freeway and connect with the 215 Freeway southbound. Exit at Clinton Keith Road. Turn right at the end of the off ramp heading west on Clinton Keith Road. Continue past the 15 Freeway and past the Murrieta city limits. When you get to the area of the Santa Rosa Plateau Ecological Reserve, Clinton Keith Road will head at a 90° turn to the right. Before turning to the right, there is a gate to the left that enters the Plateau Reserve. There is a number combination lock on this gate – 2020. After entering past this gate, the dirt road will come to a tee. Turn right and continue the dirt road for about 1 mile, follow the signs that say "Adobe Ranch". Park at the "Ranch house".

- There is a foot trail that goes to the north of the Ranch; walk this trail past the "windmill" to the Adobe Loop Trail. Follow the sign that takes you on to the Adobe Loop Trail.

- Be careful of mountain lions!

- Continue to walk along the foot trail along the Adobe Loop Trail.

This bridge crosses over the Adobe Creek.

- Walk approximately 80' past the bridge to the sampling site.

- This is the sampling location.

848 - Adobe Creek Sub-Drainage Area

Total drainage area – approximately 393.59 acres

G-4.0 PRECIPITATION WITHIN THE SANTA MARGARITA WATERSHED

Annual precipitation amounts for the four weather stations (Wildomar, Murrieta Creek, Temecula Creek, and Skinner Lake) located in the Santa Margarita watershed and the watershed averages are presented in Table G-5 below.

Table G-5 Annual Rainfall (inches)

Year Ending*	Murrieta Creek	Skinner Lake	Temecula	Wildomar	Watershed Average
1993	29.82	28.39	36.10	31.86	31.54
1994	11.42	12.96	15.60	10.97	12.74
1995	25.64	20.57	27.60	23.29	24.28
1996	8.50	8.09	9.10	8.84	8.63
1997	10.98	10.77	13.60	10.13	11.37
1998	27.61	24.92	31.90	28.41	28.21
1999	5.75	7.04	8.20	6.28	6.82
2000	9.60	7.51	10.10	8.34	8.89
2001	11.70	9.75	13.70	12.64	11.95
2002	3.80	3.05	3.80	3.06	3.43
2003	18.10	13.81	16.05	18.10	16.52
2004	9.09	6.96	7.80	8.12	7.99
2005	34.82	25.33	33.75	34.55	32.11
2006	7.17	7.70	9.84	8.36	8.27
2007	2.60	2.53	3.43	2.61	2.79

*Fiscal Year (July 1 – June 30)

Table G-6 presents the annual average rainfall and other information for the four weather stations. Note that quality control of reporting routines used to generate these reports has led to a modification of totals reported in prior reports.

Table G-7 presents the annual rainfall as a percent of normal for each of the four stations and the watershed as a whole. Percent of normal is calculated using the current year rainfall (Table G-5) and dividing it by the annual average rainfall (Table G-6). In this analysis, if the current year rainfall equals the annual average rainfall the result would be 100%. For example, in 2005 the Skinner Lake station received 25.33/12.43 = 204% or approximately 2 times the annual average rainfall. In contrast the 2007 season brought only 20% or 1/5 the annual average rain fall and is classified as a dry year.

Table G-8 presents the daily total rainfall from July 1, 2006 to June 30, 2007 for each of the four reference stations. Daily totals are for 24-hour intervals ending at 0800 of the date indicated.

Table G-6 Average Annual Precipitation at Each Station

Name	Station ID	Annual Average Rainfall (In.)	Number of Years	Location
Murrieta Cr	128	15.41	40	7S/3W-18
Skinner Lake	205	12.43	60	7S/2W-10
Temecula	217	15.73	51	8S/3W-12
Wildomar	246	14.06	98	7S/4W-2

Table G-7 Percent (%) of Normal = Current Year / Average Year

Year Ending*	Murrieta Creek	Skinner Lake	Temecula	Wildomar	Watershed	Result
1993	194%	228%	229%	227%	219%	wet

Sum represents total for each month. Total represents total cumulative rainfall for the fiscal year through the end of the month.

G-5.0 FIRES WITHIN THE SANTA MARGARITA WATERSHED

Several significant fires occurred during the FY 2006-2007 reporting period. Fires impact a watershed for several years after their initial burn due to loss of ground cover and chemical changes in the soil. Naturally occurring elements that are usually retained by forest vegetation and soils can be washed away during storm events, in addition to large amounts of sediment. Daniel Cozad, former Deputy General Manager of the Santa Ana Watershed Project Authority, stated[1], "Normally, the forest filters water naturally absorbing nitrates, phosphorus and other elements. Because of the fires, more contaminants will reach stream channels.... Increasingly, rain will cause rocks and soil that usually trap particulate matter on the forest floor to fill watercourses, washing pollutants such as lead, mercury, copper, zinc and phosphorus into debris basins and groundwater."

As it takes several years for ashes and sediments displaced by forest fires to be washed down, fires that occurred in previous years could be a significant source of elevated levels of pollutants. Table G-9 presents pertinent information about the fires that occurred in 2006-2007, including the dates the fires started, their location, and the number of acres that were burned. The District continues to track fires within the County of Riverside in order to document potential future impacts to receiving water(s).

The figures on the following pages show the locations of the fires and the CMP stations that could show water quality impacts from them. Fire names shown on the maps that are not listed in Table G-9 occurred after June 30, 2007.

Fires that occurred upstream of the Skinner and Vail Reservoirs would not substantially impact downstream water quality due to limited to no discharge, although airborne deposition may still pose impacts to downstream water courses. Fires that occurred downstream of the Skinner and Vail Reservoirs can potentially impact downstream water quality by introducing fire retardant components, sediments, and/or organic debris.

[1] "Forest Burned, Filter Broken – Water quality suffers after fires", by Daniel Cozad, California Forests, Winter 2004, pgs. 6-7.

G-6.0 DESCRIPTION OF MONITORING RESULTS

G-6.1 Sampling Events and Core Monitoring

Sampling Events

The MRP requires that wet-weather samples be collected during the reporting period:

- From the first storm event that produces sufficient flow to collect a composite sample at triad stations;
- From the first storm event and an additional storm event at tributary stations; and
- From any two additional storm events at triad stations.

The MRP specifies that a monitoring year, for the purposes of collecting wet and dry weather samples, begins July 1 and ends June 30 of the following year.

The RCFCD has developed guidance on when wet weather samples should be collected. Two National Weather Service weather forecasts are monitored by the RCFCD:

- The normal 7-day National Weather Service forecast for the possibility of a rain event, and
- When within 3 days of a storm, the Quantitative Precipitation Statement (QPS), to determine how much rain is predicted to fall in 6-hour increments over the next 24-hour period and in 24-hour blocks for the following two days.

The antecedent moisture condition (AMC) of the watershed is also evaluated. The AMC is a subjective measure of runoff potential. AMC I represents low runoff potential, such as from a dry watershed. AMC II represents moderate runoff potential. AMC III represents high runoff potential, such as a watershed saturated from previous rain events. Based on the QPS and AMC, the following guidelines are used to determine when to mobilize for a wet weather event:

- AMC I and QPS of ½ inch of precipitation in 24 hours
- AMC II and QPS of $^{3}/_{8}$ inch of precipitation in 24 hours
- AMC III and QPS of ¼ inch of precipitation in 24 hours

These guidelines may be modified based on field experience.

Table G-10 summarizes the storm parameters for the dates samples were collected, including the QPS total amount of rain that fell during the storm.

Table G-10 Upper Santa Margarita Watershed Sampling Events

Start Date	24-hr QPS (in.)	Total Rain(in.)*	Event Type
12/16/2006	0.40	0.12	Wet weather – Tributaries sampled. Triads visited, not sampled.
2/22/2007	0.69	0.23	Wet weather – Triads and Tributaries visited, not sampled
04/20/2007	0.38	0.49	Wet weather – Triads and Tributaries sampled

Notes:

*Average of the four rain gauges listed in Table G-6

Table G-11 summarizes the event dates and types of samples collected for each station.

Table G-11 Sampling Event Summary at each Location

Station Type	Location	09/14/06 (dry)	10/17/06 (dry)	12/16/06 (wet)	03/20/07 (dry)	04/20/07 (wet)	05/10/07 (dry)
Triad	Adobe Creek (848)		X				X
	Cole Creek (188)						
	Temecula Creek (777)		X			X	X
	Murrieta Creek (778)		X			X	X
Tributary	Lat.A of Santa Gert. Chan (774)			X		X	
	Long Canyon (780)			X		X	
	Redhawk Channel (768)	X		X	X	X	
	Warm Springs Creek (397)			X		X	

Notes:
X indicates sample collected, blank spaces indicate no flow at the site.

Core Monitoring

Core Monitoring stations were established to generate data to answer water quality management questions established in Section II.A. of the MRP and to achieve the goals listed in Section 1 of the MRP. Several of these management questions are also reflected in the design of the CMP.

G-6.1.1 Core Monitoring – Triad Stations

Triad stations are those that were monitored for chemical parameters, toxicity, and bioassessment. The Triad stations were:

- Station No. 777: Lower Temecula Creek
- Station No. 778: Lower Murrieta Creek at the USGS Weir
- Station No. 188: Cole Creek
- Station No. 848: Adobe Creek

During 2006–2007, water quality samples were collected at Triad stations 777 and 778 during one wet weather monitoring event and two dry weather events. Stations 188 and 848 were reference stations that were selected by the RCFCD to be representative of natural, undeveloped conditions. Due to their accessibility and flow, the RCFCD selected the Cole Creek station (188) for wet weather sampling and the Adobe Creek station (848) for dry weather sampling. During 2006-2007, two samples were collected during dry weather events at Adobe Creek. An attempt was made to collect a sample from Cole Creek during wet weather, but no sample was collected due to insufficient flow.

During the first storm event of the reporting period, samples collected at the Triad stations were analyzed for the complete list of priority pollutants (40 CFR 122, Appendix D). For the remaining wet and dry weather monitoring events, samples were analyzed for the parameters listed in Table G-1. The detected analytical results are provided in Table G-12.

G-6.1.2 Core Monitoring – Tributary Stations

Tributary stations were established to generate data to identify specific sources of pollution. The Tributary stations were selected to be representative of urban/urbanizing drainage areas and included:

- Station No. 774: Lateral A of Santa Gertrudis Channel near Temecula
- Station No. 780: Long Canyon Creek, near the confluence with Murrieta Creek
- Station No. 768: Redhawk Channel, near the confluence with Temecula Creek
- Station No. 397: Warm Springs Creek near Murrieta

Four dry weather and two wet-weather sampling events were monitored at the Tributary stations during the 2006-2007 reporting period. Wet weather samples were analyzed for the Constituents of Concern in Table G-2. Dry weather samples were collected and analyzed as described in the Illicit Connection/Illicit Discharge (IC/ID) discussion in Section 7.3.5. The detected analytical results are provided in Table G-12.

G-6.1.3 Analytical Laboratories

Wet and dry weather samples were collected by the District under Chain-of-Custody procedures and were submitted to E.S. Babcock & Sons (an analytical laboratory certified by the National Environmental Laboratory Accreditation Conference, Certificate No. 0201CA, Environmental Laboratory Certification No. 1156) for analysis. Babcock & Sons utilized the standard methods called for in the CMP. Toxicity and Bioassessment samples were sub-contracted by Babcock and Sons to Aquatic Bioassay & Consulting Laboratories, Inc., and some toxicity samples were sub-contracted to Nautilus Environmental. Diazinon and Chlorpyrifos analyses were performed by Aqua-Science Environmental Toxicology Consultants, Davis, CA.

G-6.2 Data and Data Products

G-6.2.1 Actual Data

The detected analytical results for Triad and Tributary stations are provided in Table G-12.

Chemical data are summarized in graphs contained in Attachment A (electronic version only). Water column toxicity testing was conducted during each wet weather sampling event at each of the Triad stations during the reporting period. The results of the water column toxicity testing are discussed for each Triad station in Section G-6.2.4 and are presented in Table G-17 and Table G-18. Bioassessment monitoring was conducted at the Triad stations bi-annually. Bioassessment data are summarized in Section G-6.2.5, Table G-19.

G-6.2.2 Identification of Parameters Detected Above BPO and CTR Objectives

Parameters detected above BPO and CTR objectives are indicated by bold-faced font in Table G-12. Table G-13 presents the percentage of each parameter that was detected above a Basin Plan Objective (BPO) and Table G-14 presents the percentage of each parameter that was detected above a California Toxics Rule Criterion Continuous Concentration (CTR). The CTR values for the dissolved metals were adjusted for hardness according to the CTR. The corresponding figures that display these results are provided as graphs in Attachment A (electronic version only).

It should be noted that the Policy of Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California (SWRCB Res. No. 2000-015) states:

> *"This Policy does not apply to regulation of storm water discharges. The SWRCB has adopted precedential decisions addressing regulation of municipal stormwater discharges in Orders WQ 91-03, 91-04, 96-13, 98-01, and 99-05".*

Data comparison with CTR limits in this report is provided for information purposes only.

There were a number of instances where the analytical result was reported as non-detect, or less than the laboratory's established Reporting Detection Limit (RDL). For some of the results, the RDL was greater than the CTR. Therefore, some samples with results listed as non-detects may actually have concentrations that exceed the CTR or BPO. The District will continue to work with the analytical laboratory to achieve an RDL that is less than the CTR or BPO, as appropriate.

G-6.2.3 Estimated Mass Loadings

Estimated instantaneous mass loads were calculated for detected parameters at the Triad stations. The load was calculated by multiplying the concentration for the constituent by the flow rate. The flow rates for Adobe Creek and Temecula Creek were estimated in the field. The flow rate for Murrieta Creek is the average flow for the day calculated from USGS 15 minute interval flow data. The estimated instantaneous mass load results are displayed in Table G-15.

Annual mass loadings (lbs) were estimated for Adobe Creek, Temecula Creek and Murrieta Creek. The estimated annual mass loadings (lbs) are displayed in Table G-16. The annual mass loading at each Triad station was calculated by multiplying the average of the detected concentrations by the total annual flow volume. The annual flow volume, in cubic feet, was calculated based on the hydrology data available. The annual flow volume at Murrieta Creek was calculated using annual USGS 15-minute-interval flow data. The total flow volume at Adobe Creek for 2007 was estimated based on the assumption that total volume is proportional to the rainfall amount. The total annual rainfall for 2005 was compared to the total annual rainfall for 2007 to determine a ratio. This ratio was applied to the total flow volume for 2005 for Adobe Creek to estimate a total flow volume for 2007. The annual flow volume of Temecula creek was estimated based on the assumption that the flow of the Santa Margarita River is equal to the flow of Temecula Creek, Murrieta Creek, and discharge from the Rancho California Water District (RCWD) discharge. The USGS Gage below the confluence of Temecula and Murrieta Creeks is downstream of the RCWD discharge. Total annual flow for the Santa Margarita River was calculated using USGS daily average flow data. Total annual flow for the RCWD was calculated from the daily total flow provided by RCWD. The total annual flow of Temecula Creek was calculated by subtracting the flow volumes of Murrieta Creek and the Rancho California pipe from the flow volume of Santa Margarita.

Annual mass loadings were not calculated for Cole Creek because Cole Creek was not sampled during this monitoring season.

G-6.2.4 Toxicity Testing Results

G-6.2.4.1 Toxicity

Monitoring for toxicity was initiated at the Triad stations in 2005 – 2006, making this the second full season of toxicity monitoring. Toxicity is expressed in toxic units (TU) for both acute and chronic toxicity. In this program, the organisms used to measure acute toxicity were the amphipod *Hyalella azteca* and the water flea *Ceriodaphnia dubia*. Survival is the acute endpoint used for both of these test organisms. Acute toxicity units are calculated as follows:

$$TU_a = 100/LC_{50}, \text{ where}$$

The LC_{50} is the concentration of sample expected to cause an adverse effect to 50 percent of the test organisms. The LC_{50} is extrapolated from the results of the toxicity test and cannot be calculated if no toxicity is observed. Therefore, TU_a values range from a lower limit of 0.0 (in the case of no mortality) to values much greater than 1.0 (in the case of very high mortality). If there is less than 50 percent mortality in the undiluted sample (i.e. LC_{50} >100 percent sample), acute toxicity units are calculated as follows:

$$TU_a = \log(100 - \%\text{survival in undiluted sample}) / 1.7$$

The organism used to measure chronic toxicity in samples collected from the Triad stations was the freshwater green algae *Pseudokirchneriella subcapitata* (formerly known as *Selenastrum capricornutum*). Growth inhibition is the endpoint used to measure chronic toxicity. Toxicity is determined using a NOEC, or No Observed Effect Concentration value. The NOEC is the highest concentration tested where no toxicity is observed. The NOEC is used to calculate the TU_c value, which can range from a lower limit of 1.0 (in the case of no toxicity) to values much greater than 1.0 (in the case of a very high toxicity). Chronic toxicity units are calculated as follows:

$$TU_c = 100 / NOEC$$

No toxicity was observed in either the chronic *Pseudokirchneriella* test or the acute *Ceriodaphnia* test for any sample tested. However, statistically reduced survival in at minimum the highest two concentrations tested for both Lower Temecula Creek and Lower Murrieta Creek samples indicate a toxic response with the acute *Hyalella* test. No sample was collected from the reference site, Cole Creek, during this season of testing. A summary of toxicity testing results is presented in Table G-17. A summary of the raw data and statistical results for the toxicity testing is presented in Table G-18.

Table G-17 Toxicity Testing Results in Toxicity Units

Sample Sites and Collection Dates	Acute Toxicity *Hyalella*	Acute Toxicity *Ceriodaphnia*	Chronic Toxicity *Selenastrum*
L. Murrieta Creek, 4/20/07	2.95	0.41	1.00
L. Temecula Creek, 4/20/07	6.32	0.00	1.00

The current year of toxicity testing exhibited results similar to those obtained during the previous monitoring and reporting cycle. Toxicity of *Hyalella* was noted in both creek samples collected; neither of the other two test species exhibited a response. As with the prior year, microscopic protozoans were observed in the samples and infesting dead *Hyalella*. The cause of toxicity to *Hyalella* at both Temecula and Murrieta Creek sample locations was evaluated further by performing Toxicity Identification Evaluations (TIEs), with results and a discussion provided in Section G-6.4.3.

G-6.2.5 Bioassessment Data and Analysis

Bioassessments consisting of a combined evaluation of physical habitat quality and macroinvertebrate assemblages were conducted at the three designated triad stations. Physical habitat quality was assessed using U.S. Environmental Protection Agency (USEPA) Rapid Bioassessment Protocols (RBPs)[3]. Biological sampling and laboratory procedures for the bioassessment surveys followed the California Stream Bioassessment Procedure (CSBP)[4].

The three stream bioassessment sites were located within the upper Santa Margarita River watershed, defined as that portion of the Santa Margarita River above the confluence of Murrieta and Temecula Creeks. Two of the sampling locations were selected based upon their proximity to urban development, with one in Murrieta Creek and the other in Temecula Creek. Adobe Creek was selected as the reference site due to the absence of flow in Cole Creek during dry periods.

The Murrieta Creek site, at an elevation of 987 feet, is located below the gauging station in southern Temecula where Highway 79 crosses the I-15 just before its confluence with Temecula Creek. The

4 CSBP. Harrington, J.M. 1999. California stream bioassessment procedures. California Department of Fish and Game, Water Pollution Control Laboratory. Rancho Cordova, CA.

Murrieta Creek site is located in a section of bedrock just downstream from a portion of the creek recently (2004) graded as a result of an Army Corps of Engineers project (Murrieta Creek Phase I Project). Physical habitat at the sampling site fluctuates dramatically from primarily bedrock to deep sand. The Temecula Creek site, at an elevation of 968 feet, is located just west of the I-15 Freeway overpass, before its confluence with Murrieta Creek. During both sampling events of the season, creek flow was subsurface approximately 100 yards upstream of the I-15 Freeway. During the fall 06 sampling event, the 100-meter reach sampled was just east of the overpass. However, due to an influx of vegetation in the creek, the spring 2007 sampling occurred west of the overpass with the eastern most portion of the 100-meter reach located at the overpass.

The Adobe Creek site, at an elevation of 1,614 feet, is located in a small ravine just below its spring fed source in the Santa Rosa Plateau Reserve in an open and relatively undisturbed area.

Bioassessment data for this reporting period were collected on October 17, 2006 and May 10, 2007. Data collected during the previous reporting period on May 23, 2006 have been included in this report for comparison of the effect of dry weather flows over the summer of 2006 on IBI and habitat metrics. These data and the qualitative stream ratings are presented in Table G-19. Mean stream habitat characteristics for each collection event are presented in Table G-20. Analysis and interpretation of these metrics is contained in Section G-6.4.2. The Southern California Index of Biological Integrity (So CA IBI) developed by Ode et al. (2005)[5] was used to evaluate and rank the individual sites.

G-6.2.6 Graphical Summaries of Data

Graphical summaries of the chemical and toxicity data collected between 1993 and 2007 from the Santa Margarita watershed are provided in Attachment A in the electronic version only, due to the large amount of data.

G-6.3 Methods used to evaluate data

Monitoring data were evaluated by comparing analytical results to regulatory goals, including BPO[6], and the CTR Continuous Concentration Criterion (CCC)[7]. Site by site summaries and comparisons of results at the monitoring stations for wet and dry weather are discussed in the following sections.

Chemical and bacteriological monitoring has been conducted on various Tributary and Triad stations intermittently since 1993. Bioassessment monitoring was initiated at Murrieta Creek and Adobe Creek in the 2003-2004 reporting period. Toxicity and bioassessment monitoring at all of the Triad stations, including Temecula Creek, was initiated in 2004-2005. This is the third year of monitoring for which all three Triad stations are being monitored for chemistry, toxicity, and bioassessment. Chemicals that exceed available CTR CCC and/or BPO levels are summarized briefly in this section.

Persistent exceedances are defined, per the MRP, as the exceedance of relevant BPO or CTR objectives by 20% for three sampling events.

Follow up actions for the Triad stations were determined as per the MRP and the Model Monitoring Program. Both documents contain a matrix that provides the follow-up action based on findings of persistent exceedances of water quality objectives, evidence of toxicity, and indications of benthic alteration. These three criteria, and the action called for by the combination of the results, are presented for each Triad station.

All analytes measured during this and the previous reporting period were compared to Basin Plan Objectives or California Toxics Rule criteria as required in the Monitoring and Reporting Program Board Order R9-2004-01.

G-6.3.1 Site-by-site summaries and comparisons of results at Triad and Tributary stations for wet and dry weather.

G-6.3.1.1 Individual Station Analyses – Triad Stations

Cole Creek/Adobe Creek – 188/848

Both Cole Creek and Adobe Creek are established reference sites to be used as a basis for comparison for this study. Cole Creek was added to the CMP as a reference site during the 2000-2001 season and Adobe Creek was added during the 2004-2005 study and reporting period. Adobe Creek is sampled during the dry seasons for both chemistry and bioassessment. Cole Creek is an ephemeral stream that routinely ceases flow during the dry season. Cole Creek is used as the reference station for chemistry and toxicity during wet weather events due to wet weather safety and access issues at Adobe Creek.

7 U.S. Environmental Protection Agency. National Recommended Water Quality Criteria. 2004

Dry Weather Monitoring Results at Adobe Creek - 848

Dry weather flows at Adobe Creek arise from natural springs in the headwaters. Samples were collected during two dry weather events, October 17, 2006 and May 10, 2007. During the first dry weather event, turbidity (field) and total phosphorus were detected above the BPO by more than 20%. During the second dry weather event, no pollutants were detected above the respective BPO or CTR levels. Historical measurements also indicate no exceedances of these two constituents since sample collections began in 2004. The bioassessment results ranked the physical habitat as "Optimal" in both October 2006 and May 2007. The biological integrity (IBI score) was ranked as "Good" for both sampling periods.

Wet Weather Monitoring Results at Cole Creek -188

An attempt was made to sample Cole Creek during wet weather, but no sample was collected due to insufficient flow.

Triad Site Summary

Adobe Creek has good physical habitat and no indication of benthic alteration. This is the first time turbidity and total phosphorus have been above BPO limits at this site, thus it is not possible to determine if the exceedances observed during this reporting period should be classified as persistent, based on the MRP criteria of a 20% exceedance of BPO or CTR objectives for 3 or more sampling events.

Table G-21 Cole Creek/Adobe Creek Dry Weather Triad Analysis

Chemistry	Toxicity	Bioassessment	Recommended Action
No persistent detections exceedances	Toxicity sampling was not conducted in dry weather during 2006-2007	No indication of benthic alteration	No action necessary.

Table G-22 Cole Creek/Adobe Creek Wet Weather Triad Analysis

Chemistry	Toxicity	Recommended Action
No wet weather sample collected.		

Murrieta Creek – 778

Murrieta Creek has been monitored for chemical constituents during wet and dry sampling events since 1995. This is the third season for which Murrieta Creek has been classified as a Triad station and for which all three lines of evidence have been collected. Bioassessment evaluations were initiated in November 2003 and toxicity in the reporting period of 2004-2005. Dry weather flows in Murrieta Creek tend to originate from a natural spring located just upstream of its confluence with Temecula Creek.

Dry Weather Monitoring Results

Two dry weather events on October 17, 2006 and May 10, 2007 were sampled during this monitoring period. The field measurement for pH during the first dry event was measured at 8.7, less than 20% above the BPO, but the lab measured pH at 8.0, within the BPO range. Chlorpyrifos was detected at a concentration below the CTR criteria during the first dry weather sampling event. There were no analytical parameters detected above the BPO or CTR during the second dry weather sampling event. Chlorpyrifos has been analyzed for this site since August 1999. The highest chlorpyrifos level found during any dry weather event was 0.11 µg/L, which occurred in September 1999.

The physical habitat score for both the bioassessments conducted in October 2006 and May 2007 remained consistent at 129 and 133 respectively (indicating "Sub-Optimal" habitat). However, sharp decrease was noted in the IBI score from 35.8 to 15.7. This decrease changed the qualitative category of the macrobenthic community from "Poor" to "Very Poor", primarily due to an increase in both non-insect and tolerant taxa.

Wet Weather Monitoring Results

Samples were collected from one wet weather event on April 20, 2007 during this monitoring period. No constituents were above BPO or CTR water quality criteria for this sampling event.

Both *Pseudokirchneriella* and *Ceriodaphnia* bioassay tests showed no toxicity. The *Hyalella* acute test, however, exhibited toxicity (2.95 TUs). A TIE initiated to determine the cause of *Hyalella* toxicity identified pyrethroid pesticides, and is discussed further in Section G-6.4.3.

Triad Site Summary

Persistent toxicity has been observed for *Hyalella*, and TIEs have identified pyrethroid pesticides (note that chlorpyrifos is not a pyrethroid pesticide) as a class of toxicants responsible for observed effects. Additional testing will be required in the future to determine consistency of this outcome, and to identify the specific toxic compounds.

Bioassessment scores classify Murrieta Creek as having sub-optimal habitat with poor to very poor benthic community structure.

Table G-23 Murrieta Creek Dry Weather Triad Analysis

Chemistry	Toxicity	Bioassessment	Recommended Actions
No persistent exceedances	Toxicity sampling was not conducted in dry weather during 2006-2007	"Sub-Optimal" habitat and "Poor" to "Very Poor" benthic community	Conduct TIE to identify* contaminants of concern, based on TIE metric, initiate TRE

Table G-24 Murrieta Creek Wet Weather Triad Analysis

Chemistry	Toxicity	Recommended Actions
No persistent exceedances	No toxicity with *Pseudokirchneriella* or *Ceriodaphnia*. Persistent toxicity with *Hyalella*	Conduct TIE to identify* contaminants of concern, based on TIE metric, initiate TRE

* Based on findings initiated during prior year's annual report.

Temecula Creek - 777

Temecula Creek has been monitored for wet and dry weather sampling events since 1995. The primary source of dry weather flows at the Temecula Creek station is rising groundwater just east of, and adjacent to, the I-15 Freeway.

Dry Weather Monitoring Results

Two dry weather events were sampled during this monitoring period. During the first dry weather sampling event on October 17, 2006, fecal coliform was detected above the BPO by 20% or more. In addition, the pesticide chlorpyrifos was detected at a concentration below the CTR criteria on October 17, 2006. There were no analytical parameters detected above the BPO or CTR objectives during the second dry weather sampling event. The two bioassessment events of October 2006 and May 2007 ranked the physical habitat as "Marginal" and the biotic integrity as "Poor". No toxicity testing was conducted on dry weather samples.

Wet Weather Monitoring Results

One wet weather event, April 20, 2007, was sampled during this monitoring period. No constituents were detected above the objectives. Historical data shows that metals have been commonly found in wet weather samples from this site and occasionally at levels exceeding current water quality objectives.

No toxicity was observed in either the *Pseudokirchneriella* chronic or the *Ceriodaphnia* acute test. The sample was acutely toxic to *Hyalella* with a TU value of 6.32. A TIE was subsequently initiated to determine the cause of toxicity to *Hyalella*. The TIE identified pyrethroid pesticides, and is discussed further in Section G-6.4.3.

Triad Site Summary

Metals have exceeded the objectives in the past. Detections this season were below the BPO and CTR objectives.

Persistent toxicity has been observed to *Hyalella* (four of five samples collected since 2005) and TIEs have identified pyrethroid pesticides as a class of toxicants responsible for observed effects. Additional testing will be required in the future to determine consistency of this outcome, and identify the specific toxic compounds.

Bioassessment scores classify Temecula Creek as having "Marginal" habitat with "Poor" benthic community structure.

Table G-25 Temecula Creek Dry Weather Triad Analysis

Chemistry	Toxicity	Bioassessment	Recommended Action
No persistent exceedances	Toxicity sampling was not conducted in dry weather during 2006-2007	"Marginal" habitat and "Poor" benthic community	Conduct TIE to identify* contaminants of concern, based on TIE metric, initiate TRE

Table G-26 Temecula Creek Wet Weather Triad Analysis

Chemistry	Toxicity	Recommended Action
No persistent exceedances	No toxicity with *Pseudokirchneriella* or *Ceriodaphnia*. Consistent toxicity with *Hyalella*.	Conduct TIE to identify* contaminants of concern, based on TIE metric, initiate TRE

* Based on actions initiated as part of prior year's annual report.

G-6.3.1.2 Individual Station Analyses – Tributary Stations

Long Canyon Creek – 780

Dry weather flows at the Long Canyon Creek station generally infiltrate into the creek bed within a few hundred yards of the confluence with Murrieta Creek. Rarely, if ever, do dry weather flows discharge into the receiving water. The Long Canyon Creek station was monitored for the first time during the 2004–2005 reporting period.

Dry Weather Monitoring Results

Ponded water was found at the Long Canyon station on September 14, 2006 and March 20, 2007. Field measurements for turbidity were above the BPO by more than 20%, and pH was above the BPO during the first dry weather event. Samples were not collected for laboratory analysis due to ponded conditions and absence of flow.

Wet Weather Monitoring Results

Two wet weather events were sampled during this monitoring period on December 16, 2006 and April 20, 2007. Color, turbidity, total nitrogen, total phosphorus, iron, and manganese were measured at levels above the respective BPO by more than 20% during both of the wet weather monitoring events. Chlorpyrifos and MBAS were detected above the CTR and BPO, respectively, by more than 20% on December 16, 2006. On April 20, 2007, fecal coliform was greater than the BPO, and dissolved copper was greater than the CTR objective by more than 20%. Chlorpyrifos was detected below the CTR objective. Fecal coliform bacteria have often been measured above water quality standards during wet weather events, generally exhibiting their highest level during the first collection of each year.

Redhawk Channel - 768

The predominant source of dry weather flow in the Redhawk Channel is rising groundwater from headwaters within the Redhawk Golf Course, supplemented by dry weather urban runoff from upstream developments. These flows generally infiltrate into the channel bed within a few hundred yards of the confluence with Temecula Creek. Rarely, if ever, do dry weather flows discharge into the receiving water. Wet and dry weather event monitoring have occurred at the Redhawk Channel since 1995.

Dry Weather Monitoring Results

Ponded water was observed at Redhawk Channel on September 14, 2006. A grab sample was taken on March 20, 2007. In both cases, the field pH exceeded the BPO with results of 9.4 and 9.8 pH units, respectively. On March 20, 2007, the field measurement for turbidity exceeded the BPO with a result of 51.7 NTU. Samples were collected for laboratory analysis. Color, pH, TDS (residue), total nitrogen, and total phosphorus exceeded the BPO by more than 20%. On September 14, 2006, fecal coliform exceeded the BPO by more than 20%, and iron exceeded the BPO by less than 20%.

Wet Weather Monitoring Results

During 2006-2007, there were two wet weather sampling events on December 16, 2006 and April 20, 2007. During both sampling events, exceedances of greater than 20% of the respective BPO were observed for color, turbidity, total nitrogen, total phosphorus, iron, and manganese. On December 16, 2007, chlorpyrifos was detected above the CTR objective. During the second storm event, fecal coliform concentrations were detected above the BPO more than 20%, and chlorpyrifos was detected below the CTR objective.

Santa Gertrudis Channel - 774

Dry weather flow in the Santa Gertrudis Channel combines with discharges of various groundwater pumping (well blow-offs) into the channel. These co-mingled flows generally infiltrate into the channel bed within a few hundred yards of the confluence with Murrieta Creek. Rarely, if ever, do dry weather flows discharge into the receiving water. Wet and dry weather monitoring have occurred at the Santa Gertrudis Channel since 1993.

Dry Weather Monitoring Results

Ponded water was observed at Santa Gertrudis Channel on September 14, 2006. The field pH exceeded the BPO with a result of 8.7 pH units. Samples were not collected for laboratory analysis due to ponded conditions and absence of flow.

Wet Weather Monitoring Results

Two wet weather sampling events were collected on December 16, 2006 and April 20, 2007 during the 2006 - 2007 monitoring period. During both wet weather monitoring events color, total nitrogen, total phosphorus, iron, and manganese were measured at levels above the BPO by more than 20%. During the first storm, turbidity and chlorpyrifos were detected above the BPO and CTR objectives, respectively, by more than 20%. During the second storm, fecal coliform was measured above the BPO, and dissolved lead was measured above the CTR objective by more than 20%. Chlorpyrifos was measured below the CTR objective.

Warm Springs Creek - 397

Dry weather flows in Warm Springs Creek generally infiltrate into the Creek bed within a few hundred yards of the confluence with Murrieta Creek. Rarely, if ever, do dry weather flows discharge into the

receiving water. Warm Springs Creek was recently established as a Tributary station, and monitoring began in 2004.

Dry Weather Monitoring Results
Warm Springs Creek was dry during dry weather sampling events in 2006-2007.

Wet Weather Monitoring Results
During the 2006-2007 reporting period, there were two wet weather events sampled on December 16, 2006 and April 20, 2007. During both sampling events, exceedances of the BPO by more than 20% were recorded for color, total nitrogen, total phosphorus, iron, and manganese. Chlorpyrifos was detected above the CTR objective by more than 20% on December 16. On April 20, 2007, fecal coliform exceeded the BPO by more than 20%.

G-6.3.2 Rough Estimates of the Relative Contribution of Urban Runoff to Total Pollutant Loads

The hydrologic characteristics of runoff in the SMR differ significantly between dry weather and storm events. The source and chemical characteristics of storm flows primarily represent non-urban sources, which constitutes the majority of the watershed. During dry weather, flow consists of localized urban runoff and rising groundwater. Virtually all of the dry weather urban runoff infiltrates into the creek bed prior to entering Receiving Waters. The most significant source of dry weather flow is rising groundwater.

During wet weather, the contribution of urban runoff to Murrieta and Temecula Creeks appears to be a small portion of the total flow. The flow data collected to date, although consistent with Permit requirements, are insufficient (see the assumptions in Section G-6.2.3) for calculating accurate loads for the creeks or the tributary contributors. The Permittees, in conjunction with the Bureau of Reclamation, are in the process of developing a model for the watershed that may be able to be used to better calculate load contributions.

G-6.3.3 Maps of Potential Sources of Pollutants

Section G-3.0 of the Monitoring Annual Report includes descriptions of each station, including tributary land uses. Until more data are collected, land uses can best indicate potential sources of pollutants. For example, industrial and transportation land uses are likely contributors of metals, while agricultural land uses may be the source of nutrients or pesticides. Chlorpyrifos has been detected at most of the stations, possibly indicating that it does not come from a single source.

G-6.4 Discussion of Results and Analyses of each Monitoring Program Component

G-6.4.1 Discussion of Pollutants of Concern and Their Potential Sources

Pollutants of concern are those constituents that persistently exceed BPO or CTR objectives at the receiving water (Triad) stations. This section discusses pollutants that were detected at levels greater than Basin Plan, or CTR objectives by 20% or more for either the dry or wet weather sampling events. Sample results that were detected above the objectives are identified in Table G-12. Attachment A includes graphs of all historical (1993-2006) water quality data collected at both the Triad and Tributary stations. Due to its size, Attachment A is only provided in the electronic format for this report.

The following constituents were detected above the objectives at the Tributary or Triad stations during 2006-2007:

- Chlorpyrifos
- Color
- Copper, dissolved
- Fecal coliform
- Iron
- Lead, dissolved
- Manganese
- MBAS
- Nitrogen
- pH (field)
- Phosphorous
- Total Dissolved Solids (residue)
- Turbidity

Most of these constituents exceeded the objective in multiple samples from multiple sites, however, dissolved copper, dissolved lead, MBAS, and TDS (residue) each exceeded the objective only once during the season.

Table G-27 summarizes the extent of the constituents of concern resulting from the 2006-2007 fiscal year.

Table G-27 also lists the priority given to the constituent in the 2005-2006 Watershed SWMP, and the priority assigned for future monitoring efforts. Priority was assigned based on the following criteria:

- Low: Constituents that were not detected above the objectives at the receiving water (Triad) Stations
- Medium: Constituents detected intermittently at Triad and Tributary Stations
- Medium: Constituents detected persistently at Triad and Tributary Stations and also in the reference stream locations.
- High: Constituents detected persistently above the objectives by more than 20% at Triad and Tributary Stations.

Table G-27 Summary of Constituents of Concern

Constituent	Objective Exceedances			06-07 Ranking	Established Priority
	Triad	Tributary	Reference		
Chlorpyrifos	No	Detected above CTR intermittently at all tributary stations during both dry and wet weather	No	Low	N/A
Color	No	Detected intermittently above BPO during wet weather at all tribs	No	Low	N/A
Dissolved Copper	No	Detected above CTR at one wet weather event at Long Canyon	No	Low	Monitor
Fecal Coliform	Detected above the BPO at Temecula Creek during one dry weather event	Detected above BPO at all tributaries during wet weather	No. However fecal coliform has been detected in excess of BPO in prior years.	Medium	Monitor
Iron	No	Detected intermittently above BPO during wet and dry weather at all tributaries.	No	Low	N/A
Lead, dissolved	No	Detected above BPO at one wet weather event at Santa Gertrudis	No	Low	N/A
Manganese	No	Detected above BPO during wet weather events at all tribs	No	Low	N/A
MBAS	No	Detected above BPO during one wet weather event at Long Canyon	No	Low	N/A
Nitrogen	No	Detected above BPO during wet weather events at all tributaries and during one dry weather at Redhawk.	No	Low	Focus Effort
pH	One field measurement outside of BPO at Murrieta Creek, although lab measurement complied	Detected above BPO intermittently during dry weather at all tributaries.	No	Low	N/A
TP	No	Detected above BPO at all tributaries during wet weather and during dry weather at Redhawk	Yes	Low	Focus Effort
TDS	No	Detected above BPO during dry weather at Redhawk	No	Low	Focus Effort (sediment controls)
Turbidity	No	Detected above BPO during wet weather at all tributaries and during dry weather at Long Canyon and Redhawk	Detected above BPO at Adobe during dry weather	Low	Focus Effort (sediment controls)

Based on the current year's monitoring data, no changes to the established priorities are recommended. Discussions of the Constituents of Concern and their possible sources are provided in the following sections.

G-6.4.1.1 Chlorpyrifos (ELISA)

Chlorpyrifos is an organophosphate pesticide. USEPA reports it as one of the most widely used organophosphate insecticides in the United States. It is used on more than 40 agricultural crops, in non-agricultural settings as a termiticide, in homes, lawns, and offices, and on pet collars.

At the Tributary stations, concentrations of chlorpyrifos were detected with levels ranging from 0.0212 µg/l to 0.1007 µg/l in wet and dry weather sampling events. Chlorpyrifos was measured above the CTR objective at all Tributary stations during the first wet weather sampling event, and below the CTR at all Tributary stations during the second event. At the Triad stations, concentrations of chlorpyrifos were detected with levels ranging from 0.0087 µg/l to 0.0201 µg/l in dry weather sampling events. Chlorpyrifos was detected at the reference station (Adobe Creek) at a concentration of 0.02 µg/l, indicating that chlorpyrifos may be widespread throughout the watershed and not attributable to a point source. Chlorpyrifos does not appear to be a constituent of concern at the Triad stations.

G-6.4.1.2 Color

There are numerous natural sources of color in water including breakdown of minerals (especially those containing iron or manganese compounds) or vegetable matter, humus, peat, tannins, algae, weeds, and protozoa. Waters flowing through erodible soils, such as those found in the Santa Margarita River watershed, are likely to have a detectable color concentration.

Color results ranged from 35 to 80 units at all Tributary stations during both wet weather events. Color does not appear to be a constituent of concern at the Triad stations.

G-6.4.1.3 Copper, dissolved

Sources of copper in storm water may include industrial (i.e., corrosion of copper and brass tubing, pipes, and roofing), copper compounds used for algae control in reservoirs, brake pad wear, and geologic formations. Transportation land uses may be a significant source of copper as a result of tire and brake pad wear.

Dissolved copper was detected at a concentration of 7.3 µg/l at the Long Canyon Tributary station during the wet weather event on April 20, 2007. Adjusted for hardness, the CTR objective was 4.0 µg/l. No other exceedances of dissolved copper were detected during the 2006-2007 season. Total and/or dissolved copper were detected below the objectives in most samples, indicating a non-point source for copper. Copper does not appear to be a constituent of concern at the Triad stations.

G-6.4.1.4 Fecal Coliform Bacteria

Coliform organisms are intestinal bacteria that are in excretions from humans, mammals, amphibians, and birds. They are also found, primarily in the non-fecal forms, on fibrous and vegetable matter in the water. The urban areas within the watershed are relatively new and have modern municipal waste water treatment systems, so human waste is not a likely source of fecal coliform bacteria in stormwater. However, urban areas can increase the levels of bacteria from natural sources. For example, pet waste and bird droppings may wash untreated into a storm drain, instead of infiltrating the ground.

Fecal coliform bacteria were detected at levels above the BPO at all Tributary stations during the wet weather monitoring event on April 20, 2007 and during a dry weather monitoring event at the Redhawk Station. At the Triad stations, fecal coliform bacteria were detected at a level above the BPO at the Temecula Creek station during a dry weather monitoring event.

G-6.4.1.5 Iron

Iron may be found naturally from the corrosion of iron in soil, mineral deposits, and iron-bearing ground water. Industrial sources may include pickling operations, and corrosion from iron pipes and other materials.

Levels of iron above the regulatory objective have been noted in the past at all Tributary stations. During the 2006 – 2007 monitoring period, iron was detected at all Tributary stations at levels above the BPO, ranging from 1.3 to 28 mg/L, during both wet weather events. The greatest concentrations were measured during the wet weather sampling events at Redhawk Channel on December 16, 2006. Iron was measured at 10% above the BPO during one dry weather event at Redhawk Channel. Iron does not appear to be a constituent of concern at the Triad Stations.

G-6.4.1.6 Lead, dissolved

Natural sources of lead in water include leaching from mountain limestone and galena. Industrial sources of lead include mining effluents. Fires may release lead in soil and mineral deposits. Residual lead from the use of leaded gasoline remains in the environment[8]. Streets and parking lots, which accumulate pollutants generated from motor vehicles that are washed-off during storm events, have been identified as major sources of copper, lead, and zinc in storm water runoff from urban areas[9].

Dissolved lead was detected at the Santa Gertrudis Creek station at a concentration above the CTR objective during the wet weather event on April 20, 2007. Lead does not appear to be a constituent of concern at the Triad Stations.

G-6.4.1.7 Manganese

Potential sources of manganese include manufacture of dry-cell batteries, glass and ceramics, paints and varnished, inks and dyes, and its use in agriculture to enrich manganese-deficient soils.

Manganese was detected at levels above the BPO by 20% or more at all Tributary stations during both wet weather events. The BPO is 0.05 mg/L, and concentrations ranged from 0.067 mg/L to 0.43 mg/L. The highest concentration was at Redhawk Channel on December 1, 2006. Manganese does not appear to be a constituent of concern at the Triad stations.

G-6.4.1.8 MBAS

Soaps, detergents, emulsifiers, wetting agents, and penetrants are the primary sources of MBAS. These surfactants lower the surface tension or other interfacial properties of their solvents. This allows dirt to be removed from clothing and for greater absorptions of pesticides into their target organisms.

---

8 A recent presentation noting that residual lead in the environment can be traced to the past use of leaded gasoline was given at the 2006 CASQA Conference. "Sources of Dissolved and Particule-Bound Constituents in Highway Run-off", Peter G. Green, H.M.Hwang, M. Kayhanian and T.M.Young.

9 U.S. Environmental Protection Agency (USEPA), 1983, Results of the National Urban Runoff Program, Volume 1 - Final Report, Water Planning Division, Washington DC, NTIS Publication No. 83-185552.

The MBAS concentration at the Long Canyon Tributary station exceeded the BPO by more than 20% during the wet weather event on December 16, 2006. MBAS was detected at concentrations below the BPO in all other samples from Tributary stations. MBAS was detected at a low level in one dry weather sample from the Murrieta Creek Triad station. MBAS does not appear to be a constituent of concern at the Triad stations.

G-6.4.1.9 Nitrogen

Nitrogen is present in natural and polluted waters as ammonia, organic nitrogen, nitrites, and nitrates. The total concentration of nitrogen is not as important as the form in which it exists. Organic nitrogen, amino acids, and ammonia may inhibit biological growth whereas nitrates stimulate phytoplankton. Nitrates are an essential fertilizer for plant life. Potential uses of nitrogen may include field application of fertilizer, livestock wastes, and irrigated agriculture. Nitrates may also be present in groundwater as a result of excessive application of fertilizer or cesspool or septic tank leachate. Total Kjeldahl nitrogen may indicate the presence of treated effluent or manure-based wastes.

Total nitrogen was detected above the BPO by more than 20%, with concentrations ranging from 2.3 mg/L to 5.5 mg/L at all Tributary stations during both wet weather events. Total nitrogen was detected above the BPO at Redhawk Channel during two dry weather events. Nitrogen in other forms was detected below the BPO at Tributary stations during both wet and dry sampling events. Nitrate and Kjeldhal nitrogen were not detected or were detected at levels below the BPO at the Triad stations. Nitrogen does not appear to be a constituent of concern at the Triad stations.

G-6.4.1.10 pH

pH is an indicator of pollution. Natural waters and treated sewage are usually neutral or slightly alkaline (pH above 7.0), but many industrial wastes are strongly acidic (pH below 7.0) or alkaline. Acid wastes include tan liquors, acid dyes, coal-mine drainage, sulfite waste liquors, pickling liquors, and some brewery wastes. Alkaline wastes include masonry wastes, soda- and sulfate-pulp rinse waters, laundry wastes, and bottle wash waters.

Field measurements of pH were above the BPO of 8.5 pH units during the dry weather sampling at the Tributary stations, but within the BPO range during wet weather. The highest measurements were 9.4 and 9.8 pH units at the two dry weather events at Redhawk Channel. Laboratory results for both of these samples were 9.0 pH units. pH was measured in the field at 8.7 pH units at one dry weather event at Murrieta Creek. The laboratory result was below the BPO at 8.0 pH units. pH does not appear to be a constituent of concern at the Triad stations.

G-6.4.1.11 Phosphorous

Phosphorus in nature is found in the form of phosphates in several minerals and it is a constituent of fertile soils, plants, and the protoplasm, nervous tissue and bones of animals. It is an essential nutrient for plant and animal growth. However, excessive phosphorus may lead to an overabundance of algae growth.

Phosphorous was detected above the BPO by more than 20%, at concentrations ranging from 0.31 mg/L to 0.94 mg/L, at all Tributary stations during both wet weather events. At Redhawk Channel, phosphorous was detected above the BPO during two dry weather events. Phosphorous was detected below the BPO at Murrieta Creek and Temecula Creek. Phosphorous was detected above the BPO at the Adobe Creek Triad station during the dry weather event on October 17, 2006, indicating that natural sources may be a contribute to phosphorous in the receiving waters.

G-6.4.1.12 Total Dissolved Solids (TDS)

In natural waters the dissolved solids consist mainly of carbonates, bicarbonates, chlorides, sulfates, phosphates, and possibly nitrates of calcium, magnesium, sodium, and potassium with traces of iron, manganese and other substances. Sources of dissolved solids may include chemical wastes, dissolved salts, acids, alkalis, or drainage waters from irrigated land. Evaporation increases TDS and throughout the monitoring program it has been noted that concentrations tend to be higher during dry weather.

At Redhawk, TDS (residue) was measured above the BPO by less than 20% during two dry weather events. TDS does not appear to be a constituent of concern at the Triad stations.

G-6.4.1.13 Turbidity

Turbidity in water is attributable to suspended and colloidal matter, which diminishes light penetration. Increased turbidity may also indicate the presence of pathogens. Natural sources of turbidity include microorganisms or organic detritus; silica or other mineral substances including zinc, iron, and manganese compounds; and clay or silt. Erosion, as well as domestic sewage and industrial wastes, may also lead to increased turbidity.

Turbidity was detected at all Tributary stations during both wet weather events (except for one sample from each event) above the BPO at concentrations ranging from 54 NTU to 220 NTU. Field turbidity measurements were also above the BPO during dry weather events at the Long Canyon and Redhawk Channel Tributary Stations. Field measurements indicated that turbidity was detected at a level above the BPO at Adobe Creek during the dry weather event on October 17, 2006, however, the laboratory result was below the BPO.

G-6.4.2 Interpretation of Bioassessment Metric Values

The results of the current bioassessment data sets are presented in Table G-19 and Table G-20. The Upper Santa Margarita watershed is a dynamic system with large seasonal variations in flow. In addition, the variability inherent in biological assessment data necessitates that a suitably sized database be established in order for meaningful long-term trends in biological conditions to be realized. This is the third season in which all three Triad sites have been sampled for bioassessment. The overall IBI metric score for data collected during this reporting period was calculated using the updated Southern California Index of Biological Integrity developed by Ode et al. (2005)[10]. The seven individual biological metrics comprising the overall Southern California Index of Biological Integrity score were evaluated using a different method than in the previous annual report. The 2005-2006 annual report bioassessment metrics were calculated by pooling data from individual field replicates for each site to obtain a single metric value. Bioassessment metric values for the current reporting period were determined by calculating a mean value of the individual field replicates. The method used for the current report better takes into account the natural variability of field biological assessment data. Comparisons of the 2006-2007 dataset with the previous sets were performed on a limited basis due to this difference in calculation methods of the individual metrics. However, in order to determine the impacts of dry weather flow on IBI metrics, the May 2006 metrics from the prior reporting period were recalculated using the updated method. Biological metric scores from prior sampling events will be recalculated for comparison when the more integrative long-term analysis is performed following the 2007-2008 season. Several apparent differences existed among the data sets that are noteworthy, but it should be noted that these observations are drawn from a limited data set and may not be representative of long-term trends.

10 Ode, P.R., A.C. Rehn, and J.T. May. 2005. A quantitative tool for assessing the integrity of Southern Coastal California Streams. Env. Man. Vol. 35, No. 4, pp. 493-504.

G-6.4.2.1 Relationships between Dry Weather Flows and IBI and Habitat Metrics

Murrieta Creek

Habitat quality scores at Murrieta Creek remained similar at 126 (sub-optimal) and 129 (sub-optimal), and the IBI scores increased only slightly from 34.3 (poor) to 35.8 (poor) during the dry weather flow period of May 2006 to October 2006. Given that the physical habitat quality score remained stable, it is not surprising that the IBI score remained stable as well. No important changes in individual physical habitat parameters were observed. Although the overall IBI scores did not change much, a significant percentage increase was observed for mean percent tolerant taxa and mean percent non-insect taxa, both considered negative stream characteristics. This was primarily offset by increases in number of EPT taxa and number of predator taxa, both considered positive stream characteristics. One notable difference in mean habitat characteristics was the continued transition in substrate composition from fines to bedrock after heavy sedimentation following the 2004 winter storms. Mean percent fines decreased from 79 to 15 to 3 percent over the three sampling periods encompassing October 2005 to October 2006, while mean percent bedrock increased from 0 to 55 to 87 percent over the same period.

Temecula Creek

Over the dry weather flow period of summer 2006, the habitat quality scores increased slightly from 72 (marginal) to 83 (marginal), while the IBI score remained the same at 32.9 (poor) for both the May 2006 and October 2006 sampling periods. None of the individual physical habitat quality parameters changed dramatically, with the largest increases occurring in vegetative protection and velocity/depth regime. Similar to Murrieta Creek, although the overall IBI score did not change, a substantial percent increase in mean percent tolerant taxa and mean percent non-insect taxa was observed. However, this was largely offset by increases in number of coleopteran taxa and percent intolerant individuals, both considered positive stream characteristics. One clear change in habitat characteristics was a shift in the substrate composition from 50 to 78 percent fines over the summer 2006. The source of the fine sediment is unclear.

Adobe Creek

The physical habitat score at this reference station increased from 131 (sub-optimal) to 152 (optimal) between May 2006 and October 2006. This change was largely related to increases in the riffle frequency and velocity/depth regime. Both riffle frequency and velocity/depth regime scores decreased during the October 2004 and May 2005 sampling periods largely as a result of increased sedimentation from upstream sources of erosion. Since then, scores for these habitat quality parameters have been increasing, and are now reaching the "sub-optimal" category not seen since the April 2004 sampling event. The IBI metric scores remained relatively stable, decreasing slightly from 64.4 (good) to 62.9 (good) over this dry weather flow period. Increases in percent tolerant taxa and percent non-insect taxa were also observed in Adobe Creek, although the magnitude of the change was slightly less than that observed in the other two triad sites.

G-6.4.2.2 Relationships between Wet Season and Dry Weather IBI and Habitat Scores

Murrieta Creek

The physical habitat quality score at Murrieta Creek remained relatively stable, increasing four points from 129 (sub-optimal) to 133 (sub-optimal). The IBI scores, however, decreased substantially from 35.8 (poor) to 15.7 (very poor) during the wet season period of October 2006 to May 2007. Very little rain fell during the winter of 2006-2007 and as a result, very low flows were observed across all sites of this sampling event. Although the overall physical habitat quality score increased slightly, the channel flow status score decreased 10 points, decreasing two qualitative categories from "sub-optimal" to "poor". As a result of the low flow conditions, average riffle length, width, and depth also decreased. The largest biological metric contributors to the decrease in the overall IBI score were increases in all three parameters considered negative stream characteristics: percent collector individuals, percent tolerant taxa, and percent non-insect taxa. In addition, a 50-percent decrease in the mean number of EPT taxa was also observed over this same period.

Temecula Creek

Over the 2006-2007 wet season, Temecula Creek exhibited a slight increase physical habitat quality score from 83 (marginal) to 87 (marginal). The IBI score decreased from 32.9 (poor) to 25.7 (poor). Two of the three negative stream characteristics, percent collector individuals and percent non-insect taxa, increased during this period. Conversely, the mean number of predator taxa increased from 1.3 to 7.0.

Adobe Creek

Both the IBI and physical habitat quality scores remained the same over the 2006-2007 wet season at 62.9 (good) and 152 (optimal), respectively. This stability and consistently high ranking in IBI and habitat quality scores may be attributed to the fact that Adobe Creek's habitat consists of a headwater stream with a small tributary area containing relatively little development. Overall, the individual physical habitat quality parameters remained stable with the exception of channel flow status, which also exhibited a decrease due to low flow conditions.

G-6.4.2.3 Overall Trends of Bioassessment Data

Biological Metrics (IBI scores)

The reference site, Adobe Creek, exhibited a relatively stable IBI score over all three sampling periods from May 2006 to May 2007, ranging from 62.9 to 64.4. Murrieta Creek and Temecula Creek were also stabile between May and October 2006, but the IBI scores for both creeks were lower in May 2007. One potential cause for the lower scores is the decrease in flow observed during the 2006-2007 season, which is attributable to the very low rainfall during the season. Little urban runoff is tributary to these sites during dry weather; the flows are almost exclusively caused by rising groundwater. Examining the individual metrics comprising the overall IBI score reveals some potential trends. Of the biological metrics considered negative stream characteristics, the percent of collector individuals consistently increased across all Triad sites during spring sampling events, while decreasing during fall events. This trend is particularly pronounced, however, at both Temecula and Murrieta Creeks when compared to the reference site and may speak to the fact that Temecula and Murrieta Creek watersheds represent a much larger land area. This may be partially due to spring storms washing greater amounts of fine sediments and organic debris downstream where collectors utilize it. Fine sediments in increasing amounts can be harmful to benthic macro-invertebrate communities by covering and filling interstitial areas of boulder, gravel, and cobble that aquatic insects utilize. Relatively little change was observed in the percent collector individuals at Adobe Creek over the three sampling periods and may speak to a more stable, less

erodible habitat. In addition, the percent non-insect taxa showed a substantial increasing trend at both Temecula and Murrieta Creeks, steadily increasing from 5.3 to 35.1 and 9.0 to 48.7 percent over the three sampling periods, respectively. Percent tolerant taxa also exhibited an increasing trend at Murrieta Creek, steadily increasing from 6.7 to 31.5 percent over the three periods.

Of those biological metrics considered positive stream characteristics, none of the lower watershed sites, including Temecula and Murrieta Creek, exhibited a noteworthy trend, generally oscillating back and forth with no observable pattern. The mean number of EPT taxa increased with each sampling event at Adobe Creek, while the percent intolerant individuals increased over the summer of 2006 and then remained steady in the spring of 2007.

Physical Habitat Quality Metrics

An upward trend was observed in the physical habitat quality score for all three Triad sites. Adobe Creek increased from 133 to 152 during the summer of 2006, and then remained stable at 152 during the last sampling period. Over the course of the three sampling periods Temecula Creek increased its habitat quality score from 72 to 87, however was still categorized in the "Marginal" class. Murrieta Creek saw the smallest increase in habitat quality score increasing a total of seven points from 126 to 133. Decreased channel flow scores were noted across all sites, except Temecula Creek (which consistently scores low channel flow) in the spring of 2007. These low channel flow scores are more than likely due to the 2006-2007 rainy season being one of the driest on record with approximately 25% of the normal amount of rainfall. Murrieta Creek has shown increased sediment deposition scores improving from 5 in May and October 2005 to 16 in May 2007, due to a decrease in sediment. This site was covered in fine sediment as a result of an upstream grading project during the winter of 2004. The sediment deposition score has been recovering since then as the sediment works its way out of the system. Since monitoring began in Temecula Creek, sediment deposition scores have been low, with a high of 7 during the first monitoring period in October 2004. Sediment deposition scores since then have been lower ranging from 1 to 3. Instream cover has paralleled this trend with its highest score of 12 in October 2004 and declining since then to 5 in May 2007. Embeddedness scores for Temecula Creek have also consistently remained low from the resulting sedimentation. The bed of Temecula Creek is broad and sandy, and sediment movement is not unexpected. Adobe Creek has seen an increasing trend in instream cover and velocity/depth regime over the past five sampling periods. Regression analysis revealed no statistically significant relationships between overall physical habitat quality scores and IBI scores. However, the individual physical habitat metric of channel flow status did correlate well with IBI scores at Murrieta Creek ($r^2 = 0.9955$, $p = <0.0427$). Interestingly, this relationship was an inverse one. However, because of the small sample size (n=3), the overall confidence in this result is low. Additional samples will improve the confidence of statistical tests if the additional samples decrease the variability of the results.

Much of the degradation in the biological community of Murrieta and Temecula Creeks seen in the spring of 2007 could be the result of low flow conditions and not the result of any overall decrease in physical habitat quality. It is also possible that the decreased benthic community IBI score could have been the result of a short-term exposure to impaired water quality. The storm occurring three weeks prior to the spring sampling event caused high toxicity to *Hyalella azteca* during bioassay testing. It appears that the degradation of these creeks is not the result of a general decrease in habitat quality, due to the physical habitat score actually increasing slightly over this same period.

G-6.4.3 Discussion of any TIEs that Were Conducted and the Potential Sources of Toxic Pollutants

Toxicity monitoring at Temecula Creek and Murrieta Creek was initiated in 2004 using three species, *Ceriodaphnia*, *Selenastrum*, and *Hyalella*. During the 2004-2005 and 2005-2006 reporting periods, toxicity to Hyalella was observed in 1 of 3 and 3 of 4 stormwater collections respectively, for both Temecula and Murrieta Creeks. During the 2006-2007 reporting period, 1 of 1 stormwater collections

resulted in toxicity to Hyalella. Toxicity was not observed to either Ceriodaphnia or Selenastrum in any of the eight samples collected over the last 3 annual reporting cycles. Dry weather samples have not been tested for toxicity to date. Toxicity testing during the 2005-2006 season categorized the toxicity in both creeks as persistent.

The Monitoring and Reporting Program No. R9-2004-001 (MRP), Section II.A. I. 4, states,

> *"When results from the chemistry, toxicity, and bioassessment monitoring indicate urban runoff-induced degradation, Permittees shall evaluate the extent and causes of urban runoff pollution in receiving waters and prioritize management actions to eliminate or reduce sources. Toxicity Identification Evaluations (TIEs) shall be used to determine the cause of toxicity, and Toxicity Reduction Evaluations (TREs) shall be used to identify sources and implement management actions to reduce pollutants in urban runoff causing toxicity."*

A TIE was completed on July 7, 2007 of the data collected during the 2006-2007 reporting period in accordance with Table 2 in the MRP, and identified pyrethroids as a potential source of toxicity and biological degradation of both Murrieta and Temecula Creeks. Bioassessments at both of these creeks have indicated "Fair" to "Poor" benthic communities and physical habitats ranging from "Suboptimal" to "Marginal". Pyrethroid pesticides are not currently measured in either creek. During the four wet weather collection events between 2005 and 2007, measured analytes do not appear to exhibit a relationship with toxicity.

Due to limited rainfall during the 2006-2007 reporting period, only a single TIE was able to be conducted. A single TIE assessment of pyrethroids as the source of toxicity is not sufficient to verify the persistence of pyrethroids as the sole source of toxicity. Further, additional data collection is necessary to characterize likely sources of pyrethroid toxicity.

Further, methods to measure pyrethroid TIE methods have proven challenging because method development requires the ability to measure low concentrations of the toxicant, which remains a challenge for pyrethroids. Phase II TIE Methods are not yet available. However, TIE methods for pyrethroids are progressing well and moving towards standardization (Pesticides in Urban Surface Water Annual Review of New Scientific Findings 2007, San Francisco Estuary Project, June 2007, pg. 7). A detailed discussion of the TIE procedures and results follows.

Acute testing using the two freshwater species *Ceriodaphnia dubia* and *Hyalella azteca* and chronic testing using the freshwater alga *Pseudokirchneriella capricornutum*, was performed on two stormwater samples collected April 20, 2007. Samples were identified as A7D1961-01 and A7D1961-02, hereafter referred to as Temecula Creek and Murrieta Creek, respectively.

A summary of results for the initial toxicity tests can be found in Section G-6.2.4. Toxicity tests initiated on April 21, 2007 indicated no toxicity to either *Ceriodaphnia* or *Pseudokirchneriella*, but a reduction in *Hyalella* survival was noted in all concentrations of Temecula Creek and in the two highest concentrations of Murrieta Creek. In 2005-2006, similar toxicity was noted, and upon inspection of those samples, microorganisms were found both in the samples and infesting dead *Hyalella*. It was suspected that the microorganisms might have been the cause of toxicity. Prior to initiating the current round of tests, the samples were observed under a 400X microscope and microorganisms larger than 10 microns were observed. To address this, an aliquot of each sample was filtered to 10 microns to remove native microorganisms and tested concurrently with untreated sample for the *Hyalella* tests. Although visible microorganisms were removed, toxicity was similar to that in the unfiltered sample.

To further investigate potential effects of microorganisms to *Hyalella*, follow-up tests were initiated on April 27, 2007 with samples filtered further to a screen size of 0.45-microns, small enough to remove

most bacteria. A summary of these results is presented in Table G-28. By the initiation date of this second round of testing, the toxicity of both samples appeared to have decreased as evidenced by increased survival in the unmanipulated (baseline) samples from zero percent during the initial screens to 30 and 40 percent for Temecula Creek and Murrieta Creek, respectively. Both filtration treatments decreased toxicity further, exhibiting a positive relationship with filter pore size. This result supports the hypothesis of microorganisms as a possible cause of toxicity. Filtration of the samples, however, can also physically remove toxicants bound to particulates, as well as organic toxicants that may adsorb to the filter material.

Table G-28 Summary of *Hyalella* TIE Results Investigating Microorganism Toxicity

Treatment	Temecula Creek		Murrieta Creek	
	Mean 72hr Survival (%)	Mean 120hr Survival (%)	Mean 72hr Survival (%)	Mean 120hr Survival (%)
Lab Control	100	100	100	100
100% Sample Unfiltered (Baseline)	80	30	100	40
100% Sample 10-micron filtered	90	70	100	70
100% Sample 0.45-micron filtered	100	100	100	100

To further investigate effects due to microorganisms versus toxicants removed by filtration, two additional sets of treatments were performed: 1) addition of piperonyl butoxide (PBO) to identify whether organophosphorous (OP) or pyrethroid pesticides may be contributing to toxicity; and 2) a chlorination/dechlorination treatment to eliminate microorganisms prior to testing.

Piperonyl Butoxide Treatment

Both OP and pyrethroid pesticides have been identified as toxicants of concern in local watersheds, as well as other watersheds throughout California (Sheipline, 1993[11] and Wheelock et al, 2004[12]). *Hyalella* are known to be extremely sensitive to both classes of pesticides. Based on this information, treatments were selected to identify if these compounds may be responsible for the observed effects to Hyalella in the samples from the Santa Margarita Watershed. Both classes of compounds are non-polar and have a high affinity for particulates and propensity to sorb to solid surfaces. PBO was added to both filtered (0.45-micron) and unfiltered samples at two concentrations. Piperonyl butoxide added to a sample can perform a dual function by reducing toxicity due to organophosphorous pesticides, while increasing the toxicity of pyrethroid pesticides. Results for these treatments are shown in Table G-29.

11 Sheipline, R. 1993. Background information on nine selected pesticides. California Regional Water Quality Control Board. Sacramento, CA, USA.

12 Wheelock, C.E., J.L. Miller, M.J. Miller, S.J. Gee, G. Shan, B.D. Hammock. 2004. Development of toxicity identification evaluation procedures for pyrethroid detection using esterase activity. Environ. Tox. Chem. Vol. 23(11): 2699-2708.

Results from this round of testing showed further diminished baseline toxicity in Murrieta Creek, while the toxicity of Temecula Creek remained relatively unchanged from the previous round. The addition of PBO dramatically increased the toxicity of both samples. Based on complete removal of toxicity in the 0.45-micron filtration treatments from the previous round of testing, it appears that addition of PBO to the post-filtered sample enhanced its toxicity. Both of these treatments suggest toxicity due to pyrethroid pesticides. At this point, it appears that any toxicity removed by filtration is due to the adsorption of a pesticide to the filter or particulates.

Table G-29 Summary of *Hyalella* TIE Results Investigating Pesticide Toxicity

	Temecula Creek		Murrieta Creek	
Treatment	**Mean 48hr Survival (%)**	**Mean 96hr Survival (%)**	**Mean 48hr Survival (%)**	**Mean 96hr Survival (%)**
Lab Control	100	90	100	90
0.45 micron filtered w/ 100 ug/L PBO Control	80	60	80	60
50 ug/L PBO Control	100	100	100	100
100 ug/L PBO Control	35	20	35	20
100% Sample (Baseline)	95	25	100	75
0.45 micron filtered w/ 100 ug/L PBO	85	45	75	60
50 ug/L PBO	10	0	20	0
100 ug/L PBO	10	0	0	0

Chlorination Dechlorination Treatment

A final treatment was performed on May 10, 2007 to further address whether microorganisms may be related to observed toxic effects with *Hyalella*. The samples and a method control were spiked to 2.0 mg/L sodium hypochlorite for 30 minutes, then dechlorinated prior to initiation. Although some toxicity was present in the baseline samples, results from this round of testing displayed further diminished toxicity in both samples. Increased toxicity was observed in the chlorination/dechlorination treated samples; however, based on similar results seen in the method control it is likely that most of the increased toxicity observed was due to the treatment procedure itself.

Carboxyl esterase / PBO Treatments

A final set of treatments were performed with the two samples to confirm the suspicion of a pyrethroid pesticide(s) causing toxicity. One of three preserved C-18 columns for each sample was eluted with 100% methanol. The elutions were then treated with carboxyl esterase enzyme (CEE) and piperonyl

butoxide (PBO) to determine the relative contribution of toxicity due to pyrethroid and/or organophosphorous pesticides. CEE is an enzyme that has been found to be an effective inhibitor of pyrethroid pesticide toxicity. Carboxyl esterases are enzymes that hydrolyze ester-containing compounds (e.g., pyrethroids) into relatively non-toxic products. As mentioned earlier, PBO can either reduce the toxicity of an organophosphorous pesticide or increase the toxicity of a pyrethroid pesticide.

A summary of results is provided in Table G-30. The untreated baseline elutions, concentrated 2 times, were less toxic than expected (85 and 70 percent survival for elutions from Temecula and Murrieta Creeks, respectively) given the magnitude of toxicity in the original samples. This reduction in toxicity is likely explained by a combination of toxicant dissipation over time during holding and partial inefficiencies related to the elution process itself. The samples were originally collected on April 20 and preserved on the C18 columns used for this evaluation as a contingency on May 1. Given the hydrophobicity of many contaminants (especially pyrethroids), toxicity may have partially dissipated due to binding of toxicants to particulates in the sample and/or the sample container itself prior to preservation on the C-18 column. Second, elution of C-18 columns with methanol is typically not 100 percent efficient at removing highly non-polar toxicants off the column. The elution efficiency can vary depending on the toxicant(s) in question and potential interference from other organics in the sample.

Despite incomplete recovery of toxicity, the TIE results were fairly definitive. In both samples the PBO treatment increased toxicity dramatically. This is a fingerprint for pyrethroids, as PBO is known to enhance pyrethroid toxicity. In addition, the CEE treatment, which reduces toxicity due to pyrethroid pesticides, enhanced survival in the Murrieta elution from 70 to 90 percent. Unfortunately, although survival was increased in the CEE treatment of the Temecula Creek elution, it was minimal due to the high survival already present in the unmanipulated baseline elution.

A bovine serum albumin (BSA) treatment was added to the testing suite as a control for the CEE treatment. Due to the proteinaceous nature of the carboxyl esterase enzyme carrier, it can act as a binding site for organic constituents in the sample. Therefore, it is possible that any reduction in toxicity observed may be the result of addition of the protein matrix itself binding up organic toxicants present, and not a product of the enzyme activity specifically. BSA is an enzyme-free proteinaceous matrix that serves as a control for this. Although increased mortality was noted in the 0.5 U/ml BSA method control as well as the samples, mortality in the 0.25 U/ml BSA treatments of both samples mimicked that in the untreated baseline methanol elutions. Thus, the protein matrix did not reduce toxicity of the samples, suggesting the response for the CEE treatment was related to the carboxyl esterase enzyme itself.

These results currently provide multiple lines of evidence that toxicity in Samples A7D1961-01 and A7D1961-02 is related to pyrethroid pesticide(s). Additional Phase II/III methods would be needed to positively ID specific pesticides.

At the present time, based on the limited studies performed, results suggest that the toxicity to *Hyalella* observed in these Santa Margarita samples is most likely due to a pyrethroid pesticide. The relatively rapid decline in toxicity in the samples is consistent with this hypothesis because these compounds have a high affinity for plastic surfaces and will adhere to the sides of a holding container. In addition, based on an in-house study and literature review, *Hyalella* are much more sensitive to pyrethroid pesticides than either *Ceriodaphnia* or *Pseudokirchneriella*.

G-6.4.4 Discussion of the development, implementation and results of any TREs

A TIE was conducted during the 2006-2007 reporting period in accordance with Table 2 in the MRP (see Section G-6.4.3), and identified pyrethroids as a potential source of toxicity and biological degradation of both Murrieta and Temecula Creeks.

After receiving the TIE results on July 7, 2007, the RCFCD initiated work on developing a TRE. The District is currently preparing a scope of work to conduct a TRE to identify the source of the pyrethroid toxicity consistent with the requirements of the permit. However, in anticipation of the necessary requirements to further characterize sources for the TRE, additional dry weather toxicity data collection and direct pyrethroid sampling of dry weather flows (and follow up TIEs if necessary) have already been initiated. A first set of samples were collected on October 16, 2007. This TRE study is being designed to answer the following management questions:

1. Is the pyrethroid toxicity persistent in the receiving waters?
2. Does the toxicity occur during dry weather?
3. Are there any obvious sources of illicit discharges of pyrethroids that can be abated by the Permittees?
4. What are the likely sources of pyrethroid toxicity in the Santa Margarita Watershed?
5. What potential management measures are available to mitigate the impacts of pyrethroid pesticide application?

It is anticipated that the draft scope of work will be finalized by the end of October, 2007. Implementation of the Work Plan will be initiated in early 2008.

G-6.4.5 Discussion of any relevant information or conclusions from the Illicit Discharge Monitoring Program

In accordance with Section II. B. of the MRP, sixteen locations throughout the Santa Margarita watershed are monitored during dry weather for illicit connections and illicit discharges (IC/IDs). Four locations are monitored by each of the four Permittees (the County of Riverside, the City of Murrieta, the City of Temecula, and the RCFCD). Follow up actions due to IC/ID monitoring results are detailed in the individual Permittee Annual Reports.

Per the Permit, each Permittee performs illicit discharge monitoring at each of its designated four IC/ID stations. At each inspected site, general information was recorded, such as time since and quantity of the previous rainfall, and an estimation of flow and visual observations. If flow or ponded water was observed at a station and there were at least 72 hours of dry weather, field screening was conducted for the following constituents: specific conductance, turbidity, pH, temperature, and dissolved oxygen. If the results of the field screening indicate a potential illicit discharge, a sample is collected for laboratory analysis.

Section II. B. 3. of the MRP requires the Permittees to develop numeric criteria for field screening and analytical monitoring results that will trigger follow-up investigations to identify the source causing the exceedances of the criteria. RCFCD has determined the following criteria, which the Cities and County also generally follow:

- *Specific Conductance >25% higher than WQO*
- *Total Dissolved Solids >25% higher than WQO*
- *Turbidity >25% higher than the long-term average*

- *pH below 6 or above 9.5*
- *Dissolved Oxygen below 4 mg/L*

During the 2006-2007 reporting period, dry weather observations were conducted. Results are presented in Table G-31 below. Results for the four Tributary stations monitored by the RCFCD are also presented in Table G-12.

Table G-31 IC/ID Investigations Conducted by Co-Permittees

IC/ID Station Name	Date	TDS (g/L)	Sp. Cond. (µmhos/cm)	Turbidity (NTU)	pH	T (°C)	DO (mg/L)

G-6.4.6 Discussion of the Progress Towards Answering the Management Questions Listed in Section II.A. of the MRP and Achieving the Goals Listed in Section 1 of the MRP.

The purpose of the monitoring program, as defined in Section I of the MRP, is to meet the following goals:

- Assess compliance with the Order No. R9-2004-001
- Measure and improve the effectiveness of the SWMPs
- Assess the chemical, physical, and biological impacts to receiving waters resulting from urban runoff
- Characterize urban runoff discharges
- Identify sources of specific pollutants
- Prioritize drainage and sub-drainage areas that need management actions
- Detect and eliminate illicit discharges and illicit connections to the MS4, and
- Assess the overall health of the receiving waters.

Section II.A.I of the MRP states:

> *"In order to achieve the above goals, the triad and tributary Core Monitoring requirements are intended to generate water quality data that will build on existing data to begin answering the following management questions:*
>
> - *Are conditions in receiving waters protective, or likely to be protective, of beneficial uses?*
> - *What is the extent and magnitude of the current or potential receiving water problems?*
> - *What is the relative urban runoff contribution to the receiving water problems?*
> - *What are the sources of urban runoff that contribute to receiving water problems?*
> - *Are conditions in receiving waters getting better or worse?"*

Discussion of progress achieved to address these goals and questions as a result of data presented in this report follows.

Assess compliance with Order No. R9-2004-001

This report is intended to meet the requirements of Section III. B. of the MRP.

Measure and improve the effectiveness of the SWMPs

As stated in Section III B. 1. d) of the MRP, the fourth year Monitoring Report shall include:

- A discussion of any long term trends that can be detected from existing data
- Recommendations for future monitoring
- Recommended modifications to Individual or Watershed SWMPs

Actions to improve the effectiveness of the program based on the data collected to date are provided in Section G-8.0.

Assess the chemical, physical, and biological impacts to receiving waters resulting from urban runoff

Chemical, toxicity, and bioassessment data have been collected for three years under the MRP. Due to the high variability in storm water and dry weather urban runoff, only limited conclusions about the impacts to receiving waters can be drawn. The composite data collected under the MRP, and the data to

be collected during the fourth year, are the foundation of a data set that may be analyzed to meet this goal. Table G-27 also summarizes the Permittees' analysis of data to date and identifies those pollutants that the Permittees target as part of their urban runoff program.

Characterize urban runoff discharges

Four Tributary stations are being monitored under the current program to characterize urban runoff. IC/ID investigations are being conducted to identify sources of flow and pollutants. A TRE is also being conducted to assess potential urban contributions of detected toxicity in receiving waters. Data collected to date indicate non-point sources of the constituents of concern.

Identify sources of specific pollutants

Due to the high variability in storm water and the limited number of storms monitored under the MRP, data collected to date are insufficient to distinguish between natural and urban sources of pollutants. The TRE currently being conducted and continued monitoring will provide further information. Constituents of concern have been identified, and their likely sources are described in Section G-6.4.1. Turbidity and total phosphorous have been detected at the reference stations (Adobe Creek and Cole Creek). These findings indicate natural sources for these constituents.

Prioritize drainage and sub-drainage areas that need management action

Results to date indicate that the constituents of concern appear throughout the watershed. The initial number of samples collected and variability inherent in stormwater prevent prioritizing of specific areas. The TRE being developed may contribute to the identification of drainage areas that need specific management action. At this time, due to the small size of the watershed, limited number of residents within the watershed, and homogeneity of pollutants of concern, the Permittees continue to implement progress uniformly across the watershed.

Detect and eliminate illicit discharges and illicit connections to the MS4

Sixteen stations within the Santa Margarita watershed are monitored regularly for illicit connections and illicit discharges. Results of the IC/ID monitoring and any follow-up investigations are addressed in each Permittee's Annual Report.

Assess the overall health of the receiving waters

Significant progress has been made in characterizing the health of Murrieta and Temecula Creeks and the Santa Margarita watershed. In the Upper Santa Margarita watershed, 94% of the land area is comprised of non-urban (rural residential, agriculture, state lands, federal lands and tribal lands) land uses.[13] Section 2.4 of the Riverside County Drainage Area Management Plan (DAMP) for the Santa Ana and Santa Margarita Regions contains a detailed discussion of population, land use, climate, hydrology, geology, and water quality within the SMR. Key points from this discussion include:

- Over 50% of the Upper Santa Margarita River watershed has been controlled since 1949 by the construction of Vail Dam and by the Skinner Reservoir in 1974, which created significant storage capacity in the upper watershed.[14] Due to this storage capacity, peak flow rates during major flow events below these facilities in Murrieta and Temecula Creeks for both

13 County of Riverside Assessor, 2002.

14 Phillip Williams & Associates, Santa Margarita Watershed Study: Hydrology and Watershed Processes, October 26, 1998, p. 14.

existing and future land use conditions will be lower than under natural conditions (assuming average storage conditions in the reservoirs).[15] Modifications to the hydrology of the watershed caused by Vail Dam and the Skinner Reservoir may affect stream sedimentation. Physical habitat conditions may change substantially in response to storm flows, and areas of aggregation and degradation of the stream courses will be observed. These processes may be reflected at the bioassessment stations.

- The climate of the SMR is considered Mediterranean, characterized by warm dry summers and cool rainy winters. Precipitation amounts range from less than 10 inches per year near Vail Reservoir to over 40 inches west of Palomar Observatory. However, shading from the coastal ranges forming the western boundary of the watershed lead to substantially less precipitation throughout valley areas of this inland watershed.

- Runoff in the receiving waters is primarily due to rainfall. Almost all streams are ephemeral, only flowing during and immediately after rainfall events. A handful of mountainous streams are fed by groundwater and flow through parts of the summer. Rising groundwater near the confluence of Murrieta and Temecula Creeks also provides a small perennial base flow to the Santa Margarita River.

- Due to lack of flow, significant aquatic habitat is limited to a few locations.

Beneficial uses of the Upper Santa Margarita watershed are presented in Table G-32.

Table G-32 Beneficial Uses of Upper Santa Margarita Watershed

Beneficial Use	Murrieta Creek	Cole Canyon	Warm Springs Creek	Santa Gertrudis Creek	Long Valley	Temecula Creek	Santa Margarita River
Municipal and Domestic Supply	X	X	X	X	X	X	X
Agricultural Supply	X	X	X	X	X	X	X

Cold Freshwater Habitat							X
Wildlife Habitat	X	X	X	X	X	X	X
Rare, Threatened or Endangered Species							X

The USEPA has indicated that major potential sources creating impacts to the Upper Santa Margarita watershed include urban runoff/storm sewers as well as unknown point sources. In the Upper Santa Margarita watershed, Murrieta Creek has been listed as impaired because of high levels of total phosphorous. However, phosphorous was only detected at Murrieta Creek during one dry weather event

15 Phillip Williams & Associates, Santa Margarita Watershed Study: Hydrology and Watershed Processes, October 26, 1998, p. 20.

during the 2006-2007 season, and the concentration was below the BPO. This may be a result of the variability in storm water runoff or of improving water quality. The upper Santa Margarita watershed experienced significant fires during the fall of 2003, as well as fires in 2004, 2005, and 2006. In addition, the wet season of 2004-2005 had rainfall greater than 200% of the annual average (see Section G-4.0). The combined effect of the fires and storms likely contributed to the variability in the levels of contaminants of concern for the monitored events under the MRP.

Constituents of concern for the watershed, as determined by data collected under the MRP, are presented in Section G-6.4.1.

Toxicity among the lower watershed sites was consistent with previous results. Toxicity was associated with storm water at Temecula and Murrieta Creeks and appears to be a chronic condition, as seven of the last eight samples have exhibited acute toxicity to *Hyalella azteca*. Toxicity Identification Evaluations on Temecula and Murrieta Creeks indicated a pyrethroid pesticide to be the probable cause of toxicity.

A complete historical bioassessment evaluation is unavailable due to the differences in IBI calculation methods of past data. The latest bioassessment results in May 2007 indicate a drop in the overall biological integrity (represented as the IBI score) at all sites. The reduction is possibly related to the low-flow conditions and not water quality impairment. However, the continuously degraded "poor" IBI bioassessment results at Murrieta Creek may indicate anthropogenic inputs. Temecula Creek was categorized as having a "poor" benthic macroinvertebrate community. Chronic "marginal" physical habitat conditions may contribute to this assessment, particularly in relation to sedimentation. However, Temecula Creek upstream of this location is a broad sandy wash and sediment movement is an expected natural variable. Chemical exceedances have been noted in Temecula Creek, however it is difficult to differentiate between the conditions attributable to chemical and physical stressors. Adobe Creek has consistently scored high IBI and physical habitat quality scores. Bioassessment analysis will continue and a more integrative historical assessment of data will be performed following the 2007-2008 cycle.

Bioassessment results for the reference station Adobe Creek were "good" during this reporting period. However, physical habitat quality scores for Murrieta Creek and Temecula Creek are classified as "sub-optimal" and "marginal", respectively, and biological conditions at were "poor" at both sites. Murrieta Creek and Temecula Creek are classified as "impaired" based on all three lines of evidence of the Triad approach, as analyzed under the current requirements of the MRP.

A poor relationship between the biological condition of the stream and the physical habitat quality at Murrieta Creek indicates that water quality may be the driver of the chronic biological impairment. Specifically, the physical habitat quality at Murrieta Creek is currently within 17 points of being categorized as "optimal" and appears to have improved continuously over the last five sampling periods. However, the IBI score has remained relatively stable at "poor." The TIE conducted indicated a pyrethroid pesticide(s) as the likely cause of toxicity.

Bioassessment data also categorized Temecula Creek as having "poor" biological integrity. Similar to Murrieta Creek, physical habitat quality scores have generally increased while biological integrity scores have remained low. The only constituent found to be in exceedance of their criteria in samples collected concurrent to the October 2006 bioassessment sampling event was fecal coliform bacteria. The decrease in the IBI score in the spring of 2007 compared to previous bioassessments at Temecula Creek may have been a result of low flow conditions. Samples were also toxic to *Hyalella* in the wet weather sample collected three weeks prior to the bioassessment event.

A more informative dataset will be produced after the 2007-2008 reporting period by re-analyzing historical bioassessment data in light of the new Southern California IBI assessment metrics, and comparing the results to four complete years of analytical data for constituents of concern, and two years

of toxicity data followed up with a TRE to identify the probable cause(s) of toxicity. Also, in order to conduct a thorough Triad Approach as outlined in the MMP, commencing in the 2007-2008 monitoring year, all three assessments (Bioassessment, Chemistry, and Toxicity) will be conducted during dry weather sampling events and analysis will separately be conducted of dry and wet weather conditions to allow for better characterization of conditions.

G-7.0 SPECIAL STUDIES

Required Special Studies

Special studies are intended to address specific research or management issues that are not addressed by the routine core monitoring program. The Permittees have conducted the following special studies as directed by the Executive Officer:

Numeric Criteria to Control Runoff from New Developments

The Permittees developed numeric criteria for controlling the volume, velocity, duration and peak discharge rate of runoff from new developments (required in section F.2.b(9) of Order No. 2004-001) to minimize erosion of natural stream channels and impacts to instream habitat. Since July 2005, the Permittees have implemented the SUSMP, which establishes numeric criteria for Priority Development Projects. Each permittee's details of implementation are described in each respective individual SWMP.

To develop final numeric criteria in compliance with the Permit, the Permittee's have also initiated the following special studies:

LID BMP Testing and Evaluation Facility: In October 2007, the Santa Ana Watershed Project Authority (SAWPA) awarded the District a Proposition 13 grant to construct a LID testing and demonstration facility. This $1.2 million dollar project will be implemented in cooperation with the SMC and will be constructed at the District's offices in Riverside. The facility will be used to monitor the performance of LID features in the field, to illustrate LID features in training workshops, and to assist in the development of technical guidance regarding LID features. The BMPs include porous pavements, bioswales, and water quality planters. The BMPs will be designed based on the current state of science and will specifically incorporate mechanisms to allow both inflow and effluent water quality and flow volume measurements. The results of the study will be used to establish numeric criteria for crediting flow reductions to developments that implement these BMPs. The project is proposed to initiate construction in September 2008. Monitoring duration will be dependent on power analyses conducted as part of the development of the final monitoring plan. Data will be coordinated with the SMCs overarching LID BMP evaluation project.

SCCWRP Hydromodification Study: The District continues to participate in SCCWRPs efforts to develop regional design criteria for hydromodification.

Through the Southern California Coastal Water Research Project and Colorado State University, the Santa Margarita Permittees are participating in a Hydromodification Study. This special study is addressing the following questions:

- Which streams are at the greatest risk of effects of hydromodification?
- What are the anticipated effects, in terms of increased erosion, sedimentation, or habitat loss associated with increases in impervious cover?
- What are some potential management measures that could be implemented to offset hydromodification effects?

The Hydromodification Study will produce three tools for use by MS4 Program managers:

- Screening tool to evaluate whether a project is likely to be of concern for hydromodification.

- Effects tool to evaluate the expected magnitude or intensity of the effects of hydromodification.
- Mitigation tools to guide mitigation and management measures.

The District used a specific site selection criterion to identify 14 locations in the Santa Ana and Santa Margarita Watershed for consideration as part of the Study. SCCWRP staff visited each of these sites and made assessments on the appropriateness of each location. Sites were characterized as either *Modeling* or a *Screening sites*. *Modeling sites* will be physically surveyed and will be used to determine how a particular stream will react for a variety of hypothetical situations. *Screening sites* will be used to identify the significant thresholds between stream types. Out of the fourteen (14) possible sites, five (5) monitoring sites were selected as modeling sites based on their value toward the goals of this study. In addition, the District has identified at least 5 possible screening sites, but the final number of sites will be determined by SCCWRP's staff.

Unfortunately, the sites identified within the Santa Margarita watershed were eliminated by SCCWRP staff because the sites did not meet specific study criteria. The District has been assured by SCCWRP staff that the sites available in this study will provide enough data to be representative of the specific conditions in the Santa Margarita watershed. The SCCWRP staff has conducted a gap analysis to ensure that all of the various watershed conditions necessary to complete the study are analyzed. Therefore, Santa Ana and other watershed sites will act as surrogates for Santa Margarita sites. The District offered the most number of sites of any municipality in the study and providing comprehensive support for implementing project tasks. The District plans to continue to actively participate with this effort.

Toxicity Identification Evaluation (TIE)

Toxicity monitoring at Temecula Creek and Murrieta Creek was initiated in 2004 using *Ceriodaphnia*, *Selenastrum*, and *Hyalella*. During the 2004-05 and 2005-06 reporting periods, toxicity to *Hyalella* was observed in 1 of 3 and 3 of 4 stormwater collections respectively, for both Temecula and Murrieta Creeks. During the 2006-07 reporting period, 1 of 1 stormwater collections resulted in toxicity to *Hyalella*. Toxicity was not observed to either *Ceriodaphnia* or *Selenastrum* in any of the eight samples collected over the last 3 annual reporting cycles. Dry weather samples have not been tested for toxicity to date. Toxicity testing during the 2005-06 season categorized the toxicity in both creeks as persistent.

The MRP Section II. A. I. 4, states:

> *"When results from the chemistry, toxicity, and bioassessment monitoring...indicate urban runoff-induced degradation, Permittees shall evaluate the extent and causes of urban runoff pollution in receiving waters and prioritize management actions to eliminate or reduce sources. Toxicity Identification Evaluations shall be used to determine the cause of the toxicity, and Toxicity Reduction Evaluations shall be used to identify sources and implement management actions to reduce pollutants in urban runoff causing toxicity."*

A TIE was completed on July 7, 2007 of the data collected during the 2006-2007 reporting period in accordance with Table 2 in the MRP, and identified pyrethroids as a potential source of toxicity and biological degradation of both Murrieta and Temecula Creeks. Bioassessments at both of these creeks have indicated "Fair" to "Poor" benthic communities and physical habitats ranging from "Suboptimal" to "Marginal". Pyrethroid pesticides are not currently measured in either creek. During the four toxic wet weather collection events between 2005 and 2007, measured analytes do not appear to exhibit a relationship with toxicity.

Due to limited rainfall during the 2006-2007 reporting period, only a single TIE was able to be conducted.

A single TIE assessment of pyrethroids as the source of toxicity is not sufficient to verify the persistence of pyrethroids as the sole source of toxicity. Further, additional data collection is necessary to characterize likely sources of pyrethroid toxicity.

Further, methods to measure pyrethroid TIE methods have proven challenging because method development requires the ability to measure low concentrations of the toxicant, which remains a challenge for pyrethroids; Phase II TIE Methods are not yet available. However, TIE methods for pyrethroids are progressing well and moving towards standardization (Pesticides in Urban Surface Water Annual Review of New Scientific Findings 2007, San Francisco Estuary Project, June 2007, pg. 7).

Toxicity Reduction Evaluation

After receiving the TIE results on July 7, 2007, the District initiated work on developing a TRE. The District is currently developing a TRE to identify the source of the pyrethroid toxicity consistent with the requirements of the permit. However, in anticipation of the necessary requirements to further characterize sources for the TRE, additional dry weather toxicity data collection and direct pyrethroid sampling of dry weather flows (and follow up TIEs if necessary) have already been initiated. A first set of dry weather pyrethroid, toxicity samples were collected at the TRIAD stations on October 16, 2007. This study is being designed to answer the following management questions:

1) Is the pyrethroid toxicity persistent in the receiving waters?
2) Does the toxicity occur during dry weather?
3) Are there any obvious sources of illicit discharges of pyrethroids that can be abated by the Permittees?
4) What are the likely sources of pyrethroid toxicity in the Santa Margarita Watershed?
5) What potential management measures are available to mitigate the impacts of pyrethroid pesticide application?

Implementation of the TRE will begin in 2007-2008 and interim results will be submitted as part of the 2007-2008 Annual Report.

Investigation Order No. R9-2006-0076

The San Diego Regional Board issued Investigation Order No. 1 R9-2006-0076 (Order) to address, in part, impairment of the Santa Margarita Lagoon by eutrophication. This Order was issued to stakeholders in the watershed tributary to the lagoon and requires the development of water quality monitoring data to develop TMDLs and load and wasteload allocations and reductions.

During fiscal year 2006-2007, the Santa Margarita Region Permittees have participated with other parties named in the Order in the development of a monitoring program workplan. The workplan will guide the collection of monitoring data needed to characterize dry weather flow and storm flow influenced water quality in order to complete development of TMDLs and load and wasteload allocations and reductions and will address the applicable questions presented in item A.1 of the Order. Monitoring commenced in October 2007.

Additional Special Studies

In addition the special studies directed by the Executive Officer of the San Diego Regional Board, the Santa Margarita MS4 Permittees supported the implementation of the following special studies.

Development of Local Pesticide Regulatory Activities

Through CASQA, the Permittees are supporting a special study to develop local regulatory activities to more effectively control pesticide usage to protect receiving waters. This study is being conducted under a grant from the State Water Resources Control Board, and is also funded by the San Francisco and Central Valley Regional Water Quality Control Boards.

Laboratory Inter-calibration

Through the SMC, the Riverside County Permittees are supporting the implementation of laboratory inter-calibration studies for toxicity, chemistry and bioassessment. The goal of this three-year special study is to ensure quality and comparability among SMC analytical laboratories. This study will develop two basic products: a laboratory guidance manual and standard language for proposals and contracts.

Standardization of Toxicity Testing Methods

The toxicity testing methods described in the MS4 permits issued to the San Diego, Orange County and Riverside County Permits issued by the San Diego Regional Board are all different. In addition, there are differences between toxicity testing methods described in the MS4 permits issued to Riverside County by the San Diego, Santa Ana and Colorado Regional Boards. The Santa Margarita Region MS4 Permittees are participating in a special study to coordinate development of standard toxicity testing methods to facilitate implementation of the requirements and to provide more comparable data between MS4 permit areas. This study will develop minimum monitoring criteria, conduct inter-calibration testing and develop a toxicity testing guidance manual.

Index of Biological Integrity for Low Gradient Streams

Through the SMC, the Permittees are participating in the development of an index of biological integrity (IBI) that is appropriate for Low Gradient Streams. The southern California (SC IBI) was tested in 15 low gradient streams of varying levels of impact. It was clear from this study that the IBI is not the best assessment tool for describing impact in these habitats. The low gradient project was so successful that the Working Group helped SCCWRP and CDFG to prepare a State Consolidated Grant proposal to test the SC IBI in another important habitat; non-perennial streams.

Regional Watershed Monitoring Program

Through the SMC, the Permittees participated in the development of the Regional Watershed Monitoring Program. The Regional Watershed Monitoring Program addresses three questions of importance to regulated agencies, regulatory organizations, and public:

1. What is the condition of streams in Southern California?
2. What are the major stressors to aquatic life?
3. Are conditions in locations of special interest getting better or worse?

Each of these questions is answered by a different component of the monitoring program. Together, these components determine the spatial and temporal extent of impacts, their magnitude, and potential causes.

The first question addresses the magnitude and spatial extent of impacts of all streams in the region using a probabilistic sampling design. The goal will be to achieve an estimate of impacted stream miles at varying severity of impairment. In addition, the spatial extent of impact will be compared among watersheds and land uses. At each site, multiple indicators will be used to assess the ecological health of

the stream including water chemistry, aquatic toxicity, benthic macroinvertebrate community structure, algal biomass, and physical habitat.

The second question addresses the stressors that affect the health of streams in Southern California. The goal of this component is to build upon the data collected in the first component to develop a relative risk index (Van Sickle et al. 2006). The response variables will focus on ecological health endpoints such as biological measures of assemblage metrics or indices (i.e., IBI or O/E).

The third question addresses the temporal changes in stream health at locations of primary interest to managers. The goal is to assess if stream health is improving, degrading, or remaining static over time. To answer this question, a network of long-term monitoring sites will be established across the region. At each site, water chemistry and toxicity will be evaluated at least annually during dry weather.

G-8.0 ACTIONS

Data collected to date indicate that several actions are called for to improve the monitoring program and respond to the monitoring results. These actions may be taken immediately, with the goal of improving the monitoring program before final recommendations are made after the fourth year of effort.

Continue the TRE
A Toxicity Reduction Evaluation was begun in the spring of 2007 with the TIE. The TRE is described in Section G-6.4.4.

Sample Toxicity During Dry Weather Bioassessment Events
Toxicity is currently being sampled for at the Triad stations during wet weather events, but the bioassessments occur during dry weather. However, according to the Model Monitoring Program, the three components of the Triad approach (chemistry, toxicity, and bioassessment) should be conducted at the same time. Bioassessments can not be conducted during wet weather due to safety concerns and the planning necessary. Beginning with the 2007-2008 season, toxicity sampling will be conducted during dry weather, at the same time as the bioassessments and dry weather chemistry sampling event are conducted. Thus, the Triad approach will be conducted during dry weather. Wet weather monitoring will focus on toxicity and chemistry. This action will modify the current program to be consistent with Model Monitoring Program approach.

Section G-2.0 and Section I of the Watershed Annual Report identify actions based on Pollutants of Concern and recommend activities to be conducted jointly by the Permittees to address the identified water quality problems.

Attachment A

Station Fact Sheets

Digital Copies Only

Attachment B

Summary of SMR
Monitoring Program Parameters Analyzed

Ambient Air Temperature (#1017, °C; #1018, °F) No BPO

Air temperature can affect water temperature, which can, in turn affect the concentration of dissolved oxygen and un-ionized ammonia. Drinking water standards for fluoride are based on maximum daily air temperatures. Benthic organisms may not thrive as well in warmer climates.

Ammonia-nitrogen (#1051) No BPO for total ammonia
BPO = 0.025 mg/l for unionized ammonia

Ammonia may be found naturally in surface or ground waters from the decomposition of nitrogenous organic matter, being one of the constituents of the complex nitrogen cycle. Rivers known to be unpolluted have very low ammonia concentrations, generally less than 0.2 mg/L as N. Ammonia may be discharged in industrial wastes. Ammonia is also a component of fertilizer, and its presence may indicate agricultural use or over-application in domestic and recreational areas. In water, ammonia occurs in two forms, which together are called the total ammonia nitrogen. Chemically, these two forms are represented as ionized ammonia (NH_4) and un-ionized ammonia (NH_3). This is important to know, since NH_3, unionized ammonia, is the form that is toxic. Water temperature and pH will effect which form of ammonia is predominant at any given time in an aquatic system.

Arsenic (#1070) BPO = 0.05 mg/l
CTR = 0.15 mg/l

Elemental arsenic may be found to a small extent in nature mostly as the arsenides of true metals or pyrites. Its major use, however, is as a component of pesticides (insects, weeds, fungi) and as a wood preservative.

Bacteria; Fecal coliforms (#1075) BPO = 2,000 MPN

Fecal coliform organisms are intestinal bacteria that originate in excretions from humans, mammals, amphibians, and birds.

Bacteria; Total coliforms (#1085) No BPO

Includes all coliforms, including the non-fecal forms on fibrous and vegetable matter in the water.

Bacteria; *E. coli* (#1077) No BPO

Escherichia coli is a specific strain of bacteria that is one of the main species of bacteria that live in the lower intestines of mammals and is of special concern to human health.

Beryllium (#1120) BPO = 0.004 mg/l

Beryllium is relatively rare and not likely to occur in natural waters. Industrial uses of beryllium include metallurgy and electrodes for neon signs.

Cadmium (#1145) BPO = 0.005 mg/l
CTR = 0.25 µg/l

Cadmium has many industrial uses, including metallurgy, electroplating, ceramics, pigmentation, photography, and textile printing. Cadmium salts are sometimes employed as insecticides and antihelminthics.

Chlorpyrifos (#1178) CTR = 0.041 µg/l
0.02 µg/l (WQ objective set by US DF&G)

Chlorpyrifos is an organophosphate pesticide. USEPA reports it as one of the most widely used organophosphate insecticides in the United States. It is used on more than 40 agricultural crops, in non-agricultural settings as a termiticide, in homes, lawns, and offices, and on pet collars.

Chromium, all valences (#1180) BPO = 0.05 mg/l

Chromium wastes can occur in both the hexavalent and trivalent forms. Potential industrial sources include metal pickling and plating operations, aluminum anodizing, cooling water antifouling, textile dyeing, ceramic and glass manufacturing, photography, and in the manufacture of paints, dyes, explosives, ceramics, and paper.

Color (#1195) BPO = 20 units

There are numerous natural sources of color in water including breakdown of minerals (especially those containing iron or manganese compounds) or vegetable matter, humus, peat, tannins, algae, weeds, and protozoa. Sources may include irrigation return water and chemicals. It can be expected that waters flowing through erodible soils, such as those found in the Santa Margarita River watershed, will have a detectable color concentration.

Conductance, specific (#1200, field; #1205, lab) No BPO

Specific conductance measures the ion concentration of water. Increased conductivity increases the osmotic pressure of water, which can be harmful to aquatic organisms. Natural inland waters usually contain small quantities of mineral salts in solution, but waters containing brine, chemical, and agricultural irrigation wastes may have excessive levels of specific conductance.

Copper (#1210) No BPO
CTR = 9 µg/l

Copper salts are not commonly found in natural surface waters. Potential industrial sources of copper may include corrosion of copper and brass tubing, copper compounds used to control undesirable plankton organisms, alloy production, electrical wiring, pipes, roofing, and many purposes where its conductivity or corrosion resistance are important. Copper salts are also used in insecticides and fungicides and many industrial processes.

Cyanide, total (#1215) No BPO
CTR = 5.2 µg/l

Cyanides may be found in effluents from metal cleaning and electroplating processes, and from chemical industries. Cyanide concentrations are usually well below the CTR, and are often below the detection limit (RDL = 5 µg/l). Cyanide has not been monitored since 1994.

Detergent – MBAS (#1225) BPO = 0.5 mg/l

Surface-active agents such as soaps, detergents, emulsifiers, wetting agents, and penetrants lower the surface tension or other interfacial properties of their solvents. This allows dirt to be removed from clothing and for greater absorptions of pesticides into their target organisms.

Diazinon (#1227) No BPO
0.16 µg/l (WQ objective set by US DF&G)

Diazinon is an organophosphate pesticide. The USEPA reports it as one of the most widely used organophosphate insecticides in the United States. It is used on more than 60 agricultural crops, in non-

agricultural settings as a termiticide, and in homes, lawns, and offices. Its use is considered a risk to humans, birds, and other forms of wildlife.

Discharge Level (Hydron # 232) No BPO

Also known as the flow rate, high discharge rates may cause erosion in an earthen channel. Discharge is used along with chemical concentration to calculate the mass loading. In a well-defined channel, the water level, along with the rating curve, can be used to calculate the flow rate.

As discussed in the main body of this Section, outfall discharge rates during dry weather are very low to nonexistent during dry weather, and there are almost no flows in the receiving waters. At the bottom of the watershed, approximately ¼ - ½ mile from their confluence with the Santa Margarita River, surfacing bedrock forces groundwater to rise, creating perennial flows. Where there are dry-weather flows, there has not been a significant change over time. Observing trends in flows near the bottom of the watershed are confounded by the continual addition of imported flows and well blowoff by the Rancho California Water District.

Wet weather flows depend on the size and duration of the storm, the antecedent moisture condition (e.g., moisture content of the soil prior to the storm), and the rate at which the rain falls.

Hardness, total (as $CaCO_3$) (#1265) No BPO

Total hardness measures the concentration of the following ions (converted to an equivalent concentration of $CaCO_3$):

Ca^{+2} HCO_3^- Mg^{+2} SO_4^{-2} Na^+ Cl^- K^+

Analyses of specific ions are included elsewhere in this section. Hardness in water may be caused by the natural accumulation of salts (primarily calcium and magnesium ions) from contact with soil and geological formations. Potential sources may include irrigation return flows. Imported water may also be a source of elevated hardness levels, for example, Colorado River Water has an average hardness of 250-300 mg/L, which is considered hard water.

Iron (#1285) BPO = 0.3 mg/l
CTR = 1.0 mg/l

Iron may be found naturally from the corrosion of iron in mineral deposits and iron-bearing ground water. Industrial sources include pickling operations and corrosion from iron pipes and other materials.

Lead (#1290) No BPO
CTR = 2.5 µg/l

Lead is a harmful substance that can lead to neurological damage. Natural sources of lead in water include leaching from mountain limestone and galena. Potential industrial sources of lead may include legacy pollution from use in motor fuels and use in solder in electronics and piping.

Manganese (#1305) BPO = 0.05 mg/l

Potential sources of manganese may include manufacture of dry-cell batteries, glass and ceramics, paints and varnished, inks and dyes, and in agriculture to enrich manganese-deficient soils.

Mercury (#1310) BPO = 0.002 mg/l
CTR = 0.77 µg/l

Mercury can appear in the metallic state in some natural waters, but the ionic form is most harmful to aquatic life. Potential industrial sources of mercury may include use in scientific and electrical instruments, in dentistry, in solders, in the manufacture of lamps and batteries, and in the improper disposal of thermostat switches and old thermometers and manometers.

Nickel (#1320) BPO = 0.1 mg/l
CTR = 0.052 mg/l

Nickel, in its pure metal form, is not a problem as it is not soluble in water. However, many nickel salts are highly soluble in water. Nickel salts can by a by-product of many industrial uses, such as the metal-plating industry.

Nitrogen: Nitrate (N) (#1340) No BPO

Nitrates are an essential fertilizer for plant life, and are therefore rarely found in natural surface waters at elevated concentrations. Nitrates may also be present in groundwaters as a result of excessive application of fertilizer or cesspool or septic tank leachate. Potential uses of nitrogen may include field application of fertilizer, livestock wastes, and irrigated agriculture.

Nitrogen: Total (N) (#1355) BPO = 1 mg/l

Nitrogen is present in natural and polluted waters as ammonia, organic nitrogen, nitrites, and nitrates. The total concentration of nitrogen is not as important as the form in which it exists. Organic nitrogen, amino acids, and ammonia may inhibit biological growth whereas nitrates stimulate phytoplankton. The various components of total nitrogen are discussed under separate headings.

Nitrogen: total Kjeldahl (N) (#1360) No BPO

High total Kjeldahl nitrogen concentrations may indicate the presence of treated effluent or manure-based wastes.

Odor (#1375) No BPO

Natural sources of odor in water include living microscopic organisms and decaying vegetation, including weeds, bacteria, fungi, actinomycetes, algae, and decaying organic matter. Sources that may generate odor-causing wastes include: petroleum, gasoline, and rubber; chemicals and dyes; and milk products, and other food products.

Odor is reported in terms of "threshold odor number" (TON), which is calculated from the amount of sample in the most diluted portion giving perceptible odor. The threshold odor number equals the volume of the dilution divided by the volume of the sample in the dilution.

It is frequently difficult, if not impossible, to identify the specific cause of an odor or taste, as many substances may cause what appears to be the same effect, or because mixtures of substances may be involved. Chemicals responsible for tastes and odors may include halogens, sulfides, ammonia, turpentine, phenols and cresols, picrates, various hydrocarbons and unsaturated organic compounds, mercaptans, tar and tar oils, hydrocarbons, detergents, pesticides, and innumerable others, many of unknown identity.

Oil & Grease (#1380) No BPO

Oil and grease in water may coat aquatic life and create undesirable odors. Potential industrial sources of oil and grease may include machining operations and garages.

Oxygen, dissolved (#1435) BPO = 5 mg/l

Dissolved oxygen concentration is a function of the temperature and salinity of the water. Increasing temperature or salinity decreases the oxygen-holding capacity of water. Dissolved oxygen is not constant in a natural system, as organisms, chemical reactions, and physical conditions use or generate oxygen at various rates. As dissolved oxygen levels decrease, aquatic life suffers or dies, and in the absence of oxygen, anaerobic decomposition may lead to unfavorable odors and colors in the water.

Oxygen; field saturation (#1445) No BPO

Oxygen saturation is a function of air oxygen pressure, water temperature, and dissolved solids present. Oxygen solubility is higher in fresh waters than in saline waters.

pH (#1705, field; #1710, lab) BPO = 6.5 to 8.5 units

pH is not a pollutant in itself, but an indicator of pollution. Natural waters and treated sewage are usually neutral or slightly alkaline, but many industrial wastes are strongly acidic or alkaline. Acid wastes include tan liquors, acid dyes, coal-mine drainage, sulfite waste liquors, pickling liquors, and some brewery wastes. Alkaline wastes may include masonry wastes, soda- and sulfate-pulp rinse waters, laundry wastes, and bottle wash waters.

Phenolic Compounds (#1459) BPO 1.0 µg/l

Phenols are widely used as disinfectants, in the manufacture of synthetic resin, medical, and industrial compounds, and as a reagent for chemical analyses. Potential sources of phenolic wastes may include the distillation of wood, coke ovens, oil refineries, chemical plants, sheep dips, and human and animal refuse.

Phosphorus, total (P) (#1485) BPO = 0.1 mg/l

Phosphorus in nature is found in the form of phosphates in several minerals and it is a constituent of fertile soils, plants, and the protoplasm, nervous tissue and bones of animals. It is an essential nutrient for plant and animal growth. Excessive phosphorus may lead to an overabundance of algae growth.

Selenium (#1520) BPO = 0.05 mg/l
CTR = 5 µg/l

Selenium is found in some soils as ferric selenite or calcium selenate. It may also be found in decayed plant tissue. Industrial sources of selenium include pigmentation in paints, dyes, and glass production; as a component of rectifiers, semiconductors, photo-electrical cells, and other electrical apparatus; as a supplement to sulfur in the rubber industry; as a component of alloys; and for insecticide sprays. Selenium may also be found in the municipal sewage from industrial communities.

Silver (#1535) BPO = 0.1 mg/l

Industrial sources of silver include manufacture of jewelry and silverware, in alloys, for electroplating, and in the processing of food and beverages. Silver nitrate is used in photography, ink manufacture, electroplating, coloring porcelain, and as an antiseptic.

Solids, total dissolved (#1625) BPO = 750 mg/l

In natural waters the dissolved solids consist mainly of carbonates, bicarbonates, chlorides, sulfates, phosphates, and possibly nitrates of calcium, magnesium, sodium, and potassium with traces of iron, manganese and other substances. Potential sources of dissolved solids may include chemical wastes, dissolved salts, acids, alkalis, or drainage waters from irrigated land

Solids, total suspended (#1630) No BPO

In natural waters, suspended solids consist normally of erosion silt, organic detritus, and plankton. Sources of suspended solids include industrial and domestic wastes, increased erosion from cleared or cultivated land, gravel washings and dusts that are blown into streams.

Temperature, field (#1655, deg. C; #1660, deg. F) No BPO

Water temperature in natural waters is influenced by ambient air temperature, vegetative cover, nature of bed material (*e.g.*, gravel vs. sand), and stream depth. Many industrial and agricultural wastes lead to raising of water temperatures, as does concrete-lining of streams. Increased water temperature may result in decreased oxygen capacity, generation of anaerobic zones, and fungal growth.

Thallium (#1665) BPO = 0.002 mg/l

Thallium salts are used as poisons for rodents, as ant bait, and are used in dyes and pigments in fireworks, in optical glass, and as a depilatory.

Turbidity (#1690, field; #1695, lab) BPO = 20 NTU

The turbidity of a water sample is a measure of the extent to which the intensity of light passing through is reduced by the suspended matter. Turbidity in water is attributable to suspended and colloidal matter, which diminishes light penetration. Increased turbidity may also indicate the presence of pathogens. Natural sources of turbidity include microorganisms or organic detritus; silica or other mineral substances including zinc, iron, and manganese compounds; and clay or silt. Erosion may also lead to increased turbidity as well as domestic sewage and industrial wastes, such as mining, dredging, logging, and pulp and paper manufacturing.

Zinc (#1700) No BPO
CTR = 120 µg/l

Potential industrial sources of zinc and zinc salts may include galvanizing, alloy manufacture, for electrical purposes, in printing plates, dye manufacture and the dyeing process, paint pigments, cosmetics, pharmaceutics, dyes, and insecticides.

Attachment C

Historical Water Quality Data

Source: Bulletin No. 57, Santa Margarita River Investigation, Vol. I, State of California Dept. of Public Works, Division of Water Resources, June 1956, pgs. 89-90

Historical data that exceed current BPOs are marked with a box around the value.

Santa Margarita River (Upper)	Low	18	Miles	Phosphorus	Unknown point source	

MS4 (Municipal Separate Storm Sewer System) – An MS4 is a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, natural drainage features or channels, modified natural channels, man-made channels, or storm drains): (i) Owned or operated by a State, city town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or designated and approved management agency under Section 208 of the CWA that discharges to Waters of the U.S.; (ii) Designated or used for collecting of conveying storm water; (iii) Which is not a combined sewer; (iv) Which is not part of the POTW as defined at 40 CFR 122.2.

Historic and current developments make use of natural drainage patterns and features as conveyances for Urban Runoff. Urban streams used in this manner are part of the municipalities MS4 regardless of whether they are natural, man-made, or partially modified features. In these cases, the urban stream is both an MS4 and a receiving water.

"non-point source" - Non-point source refers to diffuse, widespread sources of pollution. These sources may be large or small, but are generally numerous throughout a watershed. Non-point sources, include but are not limited to urban, agricultural or industrial area, roads, highways, construction sites, communities served by septic systems, recreational boating activities, timber harvesting, mining, livestock grazing, as well as physical changes to stream channels, and habitat degradation. Non-point source pollution can occur year round any time rainfall, snowmelt, irrigation, or any other source of water runs over land or through the ground, picks up pollutants from these numerous, diffuse sources and deposits them into rivers, lakes and coastal waters or introduces them into ground water.

"non-storm water" – Non-storm water consists of all discharges to and from a storm water conveyance system that do not originate from precipitation events (i.e., all discharges from a conveyance system other than storm water). Non-storm water includes illicit discharges, non-prohibited discharges and NPDES permitted discharges. An illicit discharge is defined at 40 CFR 122.26(b)(2) as any discharge to a MS4 that is not composed entirely of storm water except discharges pursuant to a separate NPDES permit and discharges resulting from emergency fire fighting activities.

NPDES (National Pollutant Discharge Elimination System) – Permits issued under Section 402(p) of the CWA for regulating discharge of pollutants to Waters of the U.S.

"nuisance" – As defined in the Porter-Cologne Water Quality Control Act a nuisance is "anything which meets all of the following requirements:

1) Is injurious to health, or is indecent, or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property.
2) Affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal.

3) Occurs during, or as a result of, the treatment or disposal of wastes."

Order

In the Santa Margarita Region: Order No. 98-02 (NPDES No. CAS0108766), currently in revision.

Permit Area -

In the Santa Margarita Region: "The permitted area is delineated by the Santa Ana RWQCB-SDRWQCB boundary line on the north, the SDRWQCB-Colorado River Basin RWQCB boundary line on the east, and the County of Riverside boundary line on the south and west."

"point source" – Any discernible, confined, and discrete conveyance, including, but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operations, landfill leachate collection systems, vessel, or other floating craft from which pollutants are or may be discharged.

"pollutant" – A pollutant is broadly defined as any agent that may cause or contribute to the degradation of water quality such that a condition of pollution or contamination is created or aggravated.

"pollution" – As defined in the Porter-Cologne Water Quality Control Act, pollution is the alteration of the quality of the Waters of the U.S. by waste, to a degree that unreasonably affects either of the following: A) the waters for beneficial uses; or 2) facilities that serve these beneficial uses. Pollution may include contamination.

POTW – Publicly-Owned Treatment Works

Principal Permittee - Riverside County Flood Control and Water Conservation District.

Rainy Season – October 1 through May 31st of each year.

RCFC&WCD - Riverside County Flood Control and Water Conservation District

"receiving water(s)" – The Waters of the U.S. that includes surface and ground waters.

Receiving Water(s) - The receiving waters within the Permit Area

Receiving Water Limitations – Receiving Water Limitations are requirements included in Orders issued by a Regional Board to assure that the regulated discharges do not violate water quality standards established in the Basin Plan at the point of discharge to Waters of the U.S. Receiving Water Limitations are used to implement the requirement of CWA Section 301(b)(1)(C) that NPDES permits must include any more stringent limitations necessary to meet water quality standards.

Receiving Water Quality Objectives - Water quality objectives specified in a Basin Plan for Receiving Waters.

Regional Board - California Regional Water Quality Control Board, San Diego Region

Riverside County - Territory within the geographical boundaries of the County.

"sediment" – Soil, sand, and minerals washed from land into water. Sediment resulting from

anthropogenic sources (i.e. human induced land disturbance activities) is considered a pollutant. This Order regulates only the discharges of sediment from anthropogenic sources and does not regulate naturally occurring sources of sediment. Sediment can destroy fish-nesting areas, clog animal habitats, and cloud waters so that sunlight does not reach aquatic plants.

SMR - Santa Margarita River Watershed within Riverside County

"source control BMPs" – In general, activities or programs to educate the public or provide low cost non-physical solutions, as well as facility design or practices aimed to limit the contact between pollutant sources and storm water or authorized non-storm water. Examples include: activity schedules, prohibitions of practices, street sweeping, facility maintenance, detection and elimination of illicit connections and illegal dumping, and other non-structural measures. Facility design examples include providing attached lids to trash containers, or roof or awning over material and trash storage areas to prevent direct contact between water and pollutants. Additional examples are provided in Section 4 of Supplement A to the **DAMP** dated April 1996.

State Board - California State Water Resources Control Board

"storm water" – Runoff from urban, open space, and agricultural areas consisting only of those discharges that originates from precipitation events. Storm water is that portion of precipitation that flows across a surface to the MS4 or receiving waters. Examples of this phenomenon include: the water that flows off a building's roof when it rains (runoff from an impervious surface); the water that flows into streams when snow on the ground begins to melt (runoff from a semi-pervious surface); and the water that flows from a vegetated surface when rainfall is in excess of the rate at which it can infiltrate into the underlying soil (runoff from a pervious surface). During precipitation events in urban areas, rain water picks up and transports pollutants through storm water conveyance systems, and ultimately to Waters of the U.S.

TDS - Total dissolved solids.

TMDL (Total Maximum Daily Load) – TMDL is the maximum amount of a pollutant that can be discharged into a water body from all sources (point and non-point) and still maintain water quality standards. Under CWA Section 303(d), TMDLs must be developed for all water bodies that do not meet water quality standards after application of technology-based controls.

"toxicity" – Adverse responses of organisms to chemicals or physical agents ranging from mortality to physiological responses such as impaired reproduction or growth anomalies.

TSS - Total suspended solids.

Urban Runoff – Urban Runoff includes those discharges from residential, commercial, industrial, and construction areas within the Permit Area and excludes discharges from feedlots, dairies, farms, and open space. Urban Runoff discharges consist of storm water and non-storm water surface runoff from drainage sub-areas with various, often mixed, land uses within all of the hydrologic drainage areas that discharge into the Waters of the U. S. In addition to Urban Runoff, the MS4s regulated by this Order receive flows from agricultural activities, open space, state and federal properties and other non-urban land uses not under the control of the Permittees. The quality of the discharges from the MS4s varies considerably and is affected by, among other things, past and present land use activities, basin hydrology, geography and geology, season, the frequency and duration of storm events, and the presence of past or present illegal and allowed disposal practices and illicit connections.

The Permittees lack legal jurisdiction over storm water discharges into their respective MS4s from agricultural activities, California and federal facilities, utilities and special districts, Native American tribal lands, wastewater management agencies and other point and non-point source discharges otherwise permitted by or under the jurisdiction of the Regional Board. The Regional Board recognizes that the Permittees should not be held responsible for such facilities and/or discharges. Similarly, certain activities that generate pollutants present in Urban Runoff are beyond the ability of the Permittees to eliminate. Examples of these include operation of internal combustion engines, atmospheric deposition, brake pad wear, tire wear, residues from lawful application of pesticides, nutrient runoff from agricultural activities, and leaching of naturally occurring minerals from local geography.

USEPA - United States Environmental Protection Agency

Waste Discharge Requirements – As defined in Section 13374 of the California Water Code, the term "waste discharge requirements" is the equivalent of the term "permits" as used in the Federal Water Pollution Control Act, as amended. The Regional Board usually reserves reference to the term "permit" to Waste Discharge Requirements for discharges to surface Waters of the U.S.

Water Code - California Water Code

Waters of the U.S. – Waters of the U.S. can be broadly defined as navigable surface waters and all tributary surface waters to navigable surface waters. Groundwater is not considered to be a Waters of the U.S. As defined in 40 CFR 122.2, the Waters of the U.S. are defined as: (a) All waters, which are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide; (b) All interstate waters, including interstate "wetlands;" (c) All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, "wetlands," sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds the use, degradation or destruction of which would affect or could affect interstate or foreign commerce including any such waters: (1) Which are or could be used by interstate or foreign travelers for recreational or other purposes; (2) From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or (3) Which are used or could be used for industrial purposes by industries in interstate commerce; (d) All impoundments of waters otherwise defined as Waters of the U.S. under this definition: (e) Tributaries of waters identified in paragraphs (a) through (d) of this definition; (f) The territorial seas; and (g) "Wetlands" adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs (a) through (f) of this definition. Waters of the U.S. do not include prior converted cropland. Notwithstanding the determination of an area's status as prior converted cropland by any other federal agency, for the purposes of the CWA, the final authority regarding CWA jurisdiction remains with the USEPA.

"water quality objectives" – Numerical or narrative limits on constituents or characteristics of water designated to protect designated beneficial uses of the water [California Water Code Section 13050 (h)]. California's water quality objectives are established by the State/Regional Water Boards in the Water Quality Control Plans.

As stated in the Porter-Cologne requirements for discharge (CWC 13263): "(Waste discharge) requirements shall implement any relevant water quality control plans that have been adopted, and shall take into consideration the beneficial uses to be protected, the water objectives reasonably required for that purpose, other waste discharges, the need to prevent nuisance, and the provisions of Section 13241."

Numeric or narrative limits for pollutants or characteristics of water designed to protect the beneficial

uses of the water. In other words, a water quality objective is the maximum concentration of a pollutant that can exist in a Receiving Water and still generally ensure that the beneficial uses of the Receiving Water remain protected (i.e., not impaired). Since water quality objectives are designed specifically to protect the beneficial uses, when the objectives are violated the beneficial uses are, by definition, no longer protected and become impaired. This is a fundamental concept under the Porter Cologne Act. Equally fundamental is Porter Cologne's definition of pollution. A condition of pollution exists when the water quality needed to support designated beneficial uses has become unreasonably affected or impaired; in other words, when the water quality objectives have been violated. These underlying definitions (regarding beneficial use protection) are the reason why all waste discharge requirements implementing the federal NPDES regulations require compliance with water quality objectives. (Water quality objectives are also called water quality criteria in the CWA.)

"water quality standards" – are defined as the water quality goals of a waterbody (or a portion of the waterbody) designating beneficial uses (e.g., swimming, fishing, municipal drinking water supply, etc.,) to be made of the water and the water quality objectives or criteria necessary to protect those uses.

"watershed" – That geographical area which drains to a specified point on a watercourse, usually a confluence of streams or rivers (also known as drainage area, catchments, or river basin).

1.0 EXECUTIVE SUMMARY

This annual report represents the current status of the stormwater management program for the City of Temecula (City). This report covers the reporting period between July 1, 2007 and June 30, 2008. Each section addresses individual programs that were implemented in order to comply with the requirements of the National Pollution Discharge Elimination System (NPDES) Municipal Separate Storm-Sewer System (MS4) Permit (Permit) issued to the Santa Margarita River (SMR) watershed permittees of Riverside County.

The Permit was issued on July 14, 2004 by the San Diego Regional Water Quality Control Board (Board). Throughout this Permit term, the City has collected a considerable amount of data representing measurable metrics for the purpose of establishing baseline values that are intended to be used as the basis for the long-term effectiveness assessment. This data is presented in each section of this report and demonstrates the City's significant investment, positive accomplishments, and commitment in allocating resources to the stormwater program.

In addition to the facts and figures presented throughout this report, the City believes that other indicators provide a good indication of positive results. For example, field observations show that the City's persistent emphasis on education and enforcement is the most contributing factor in promoting and increasing compliance. For example, at active construction sites, superintendents are now enhancing their compliance efforts in order to avoid receiving fines, and have a broader understanding of the NPDES requirements as a result of all of the City's educational efforts. City inspectors have also become proficient at addressing BMP implementation issues due to all of the educational opportunities provided throughout the year.

The City has also observed an increase in awareness among the residential sector of the impacts caused by non-stormwater discharges. This has become quite apparent through a significant increase in the number of Service Order Requests (complaints that were forwarded to City Hall) that the City addressed this reporting period. These observations provide the City with positive feedback indicating that the education and enforcement components of the program are effective.

In addition, in-house support has increased significantly. The program now has full support throughout other City departments, which in turn translates into better cooperation and increased coordination among these departments. For example, the Engineering, Planning, Community Services, and Fire departments now work closely together to ensure that WQMP requirements are addressed early-on into each project to avoid design conflicts during the application and plancheck processes. In essence, the Stormwater Unit has now become a City-wide Stormwater Program.

The City is also partnering with local water districts to address excess irrigation runoff from residential areas, and with the principle permittee to enhance the regional monitoring efforts. As such, the City's limited resources are focusing on a purpose-driven strategy in order to allocate resources in areas requiring the most attention.

In addition to the above accomplishments, the following items represent the significant changes, highlights, and observations noted during the current reporting period.

- The City witnessed a significant decline in the number of issued grading permits and conditioned Water Quality Management Plans (WQMPs).
- The number of construction inspections and citations increased.
- Updates were made to the Grading Ordinance, Grading Manual, and standard ESC notes.
- The program was enhanced to include Wet-weather inspections at City-owned, non-construction, vacant properties.
- The program was also enhanced to include stricter Wet-weather inspections at City-owned construction projects.
- The California Stormwater Quality Association (CASQA) Best Management Practices (BMP) Handbook was adopted as the City's set of BMP standards.
- The City completed all High, Medium, and Low-priority business inspections.

2.0 INTRODUCTION

The information contained herein is presented in the same format as that outlined in Section III of the Monitoring and Reporting Program (MRP) of the City's Permit. Each section addresses individual components of the Permit and summarizes the progress accomplished during the reporting period. These sections include the City's Development Planning process, Construction program, Municipal program, Industrial and Commercial program, Residential program, Education program, and Illicit Discharge Detection and Elimination Program (IC/ID), respectively.

This Annual Report specifically responds to the Permit's reporting requirements and identifies the program's progress and effectiveness. This report will be the third year that the new Permit programs are fully implemented and effectiveness data is collected to establish baseline conditions. The Permit also requires the Permittees to develop a long term strategy for addressing the effectiveness of each jurisdiction's Storm Water Management Plan (SWMP). The SWMP represents each jurisdiction's set of written policies and procedures for each component outlined in the Permit. To that end, the Permittees have developed a long term strategy to evaluate the effectiveness of the SWMPs.

The long term strategy for the program effectiveness assessment (PEA) will be conducted at two levels described below. It should be noted that a PEA requires the initial establishment of a set of baseline conditions using measurable metrics. These baseline conditions can then be used to establish measurable goals based on the measured metrics. Thereafter, effectiveness can be evaluated by comparisons of successive years of measurable metrics against the baseline data and measurable goals.

At the first level, or Annual Assessment Level, the PEA will focus on an annual assessment of program implementation and Permit compliance. These assessments will be addressed by completing the Annual Reporting Forms, which will confirm program implementation, Permit compliance, and collection of measurable metrics. These assessments are included at the end of each Annual Report section. Inferences about the compliance of each program (new development, construction, IC/ID, etc.) will predominantly be drawn from both direct and indirect measures of progress for each program.

At the second level, or Long Term Level, the Permittees will collectively evaluate the measurable metrics to assess potential changes in knowledge and behavior, load reductions and improvements in Receiving Water Quality. This long-term analysis will be conducted as part of the Report of Waste Discharge (ROWD). The results of this long-term assessment will be evaluations of the need to make significant programmatic revisions to the Permit compliance programs, as necessary, to protect Beneficial Uses of Receiving Waters. This level will place more emphasis on using direct measures of progress (monitoring data, long term trend analysis) and will support the review and any revisions to the Drainage Area Management Plan (DAMP) and Individual SWMPs using information from the measurable metrics that have been collected.

Where the period of evaluation is characterized by the implementation of new program requirements, determinations of program effectiveness will initially be limited to confirmation of program implementation and collection of measurable metrics until baseline conditions can be properly established. Further, it must be recognized that direct measures related to long term program effectiveness may not be available within the timeframe of the Third Term Permit. This arises because:

- Baseline water quality conditions are not readily established;
- Water quality changes in response to program implementation are likely to be very slow; and
- Establishing a link between receiving water condition and program activities is difficult at the watershed scale when programs are being implemented incrementally with the development/redevelopment cycle.

While program effectiveness assessment is a key step in the iterative process of program implementation, it should be realized that effectiveness assessment itself is a part of the management process that is also evolving. Assessing program effectiveness is recognized as a challenge for program managers across California, and the City of Temecula is supporting the effort of the California Stormwater Quality Association (CASQA) to develop guidance in this area at a statewide level.

3.0 DEVELOPMENT PLANNING PROGRAM

1) Description of any amendments to the General Plan or the development project approval process:

General Plan – There were no modifications to the General Plan during this reporting period.

Development Projects – There were no modifications to the development project approval process during this reporting period.

2) Number of grading permits issued:

TABLE 3-1

Fiscal Year	Permits Issued
2007 – 2008	28
2006 – 2007	38
2005 – 2006	62
2004 – 2005	76

Attachment A includes the list of grading permits issued during this reporting period.

3) Number of developments conditioned to meet WQMP requirements:

TABLE 3-2

Fiscal Year	Projects Requiring a WQMP (1)	Projects Conditioned for a WQMP (2)	Finalized WQMPs (4)
2007-2008	15	5	17
2006-2007	25	14	15
2005-2006	31	31	5
2004-2005	Not Applicable	30 (3)	Not Applicable

(1) These values show all proposed projects requiring WQMPs at the application stage.
(2) The difference between "Projects Requiring a WQMP' and 'Projects Conditioned for a WQMP' is that many projects became inactive prior to reaching the conditioning stage or were delayed into the next reporting period.
(3) These projects required treatment BMPs prior to the start of the WQMP Program.
(4) Most of these projects had been conditioned during the previous reporting periods.

A WQMP tracking log is included in Attachment A and lists all projects, both private and public, requiring a WQMP. In addition, a tally of all WQMPs accepted, to-date, by the City is also included. This tally provides a monthly breakdown, by land-use category (residential, business, municipal), of the number of WQMPs that have been accepted.

4) Attach one example of a development project that was conditioned to meet WQMP requirements and a description of the required BMPs:

Attachment A includes an approved COA for a new development that was conditioned with the WQMP requirement. The project consisted of expanding the parking lot of an existing Kaiser

medical office building site. The WQMP requirement is referenced in line-items 17, 64, and 65 under the 'General Requirements' section. The BMPs consisted of a perimeter infiltration swale located along the frontage of the site, and another within a landscape median in parking lot itself. Each swale was designed with a catch basin inlet to prevent potential flooding. These inlets were required to be protected with filters to prevent larger trash and debris from exiting the site.

5) Description of any updates to the environmental review process:

There have been no updates to the City's CEQA process during this reporting period.

6) Description and number of municipal employee training efforts conducted during the reporting period:

a) Training:

TABLE 3-3

Training Dates	Training Description (1)	Number of Staff Attended
3/27/08	LID Workshop	1
4/22/08	LID Workshop	3
12/5/07	Annual WQMP Refresher	19
11/28/07	Annual WQMP Refresher	1
9/10/07	CASQA Conference	2
6/27/07	LID Workshop	1
9/25/06	CASQA Conference	1
6/21/06	Annual WQMP Refresher	26
10/3/05	CASQA Conference	2
5/4/05	Annual WQMP Refresher	19
12/15/04	Annual WQMP Refresher	1
12/10/04	Annual WQMP Refresher	3

(1) – 'Annual Refresher' refers to the sessions conducted by the Principle Permittee.

A copy of the City's NPDES Training Log is included in Attachment A.

b) Summarize any additional education and outreach activities conducted for project applicants, contractors, developers, property owners, and/or other responsible parties in support of the Development Planning Component:

The City's WQMP requirement began on July 1, 2005. WQMP notification flyers continued to be posted at the Public Works and Planning counters throughout this reporting period and on the City's web site. The City's website also includes the County-wide WQMP design

handbook, a downloadable project-specific WQMP template, WQMP checklists, and links to CASQA's BMP handbooks.

7) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The information provided in tables 3-1, 3-2, and 3-3 represents measurable data that the City collected in order to begin establishing baseline values that will be used as the basis for the long-term effectiveness assessment as required in the MS4 Permit.

Due to the current economic conditions throughout this region, the City witnessed a decline in the number of issued grading permits by 35% and conditioned WQMPs by 64% during this reporting period. The City continued to capture all projects meeting the WQMP requirements. This is due to the fact that the City established an across-the-board minimum threshold for applying WQMP requirements of 5,000 square feet of impervious surface, and 2,500 square feet if the project is located within an Environmentally Sensitive Area (ESA). This threshold is more restrictive than that of the MS4 Permit and has been effective in preventing development projects from circumventing the WQMP requirements. Since the beginning of the current Permit term, the City has captured 70 development projects meeting the City's more restrictive WQMP criteria. In addition, as Table 3-3 demonstrates, City staff have been attending workshops, conferences, seminars, and annual refresher courses to ensure that projects correctly identify and address their treatment needs.

4.0 CONSTRUCTION PROGRAM

1) Number of inspections conducted:

TABLE 4-1

Fiscal Year	Private	Public	Total Inspections Conducted
2007 – 2008	2949	145	3,094
2006 – 2007	*	*	2,976
2005 – 2006	*	*	2,154
2004 – 2005	*	*	1,647

* Previous tallys did not differentiate between private versus public projects.

Attachment B includes the tally of Total NPDES Construction Inspections performed during this reporting period. This list is based on the City's monthly NPDES Inspection Frequency Sheets, of which September's set is provided in Attachment B. These sheets provide a project-by-project break-down of the number of inspections conducted during the month and grouped by project priority (high, medium, low), and enforcement actions.

2) Number and type of enforcement actions related to construction sites:

TABLE 4-2

Enforcement Action	Private Projects			Public Projects		
	05-06	06-07	07-08	05-06	06-07	07-08
Verbal Warning	268	633	630	16	43	55
Written Warning	414	116	132	18	7	3
Fines	66	22	71	1	2	1
Stop Work Authority	0	*	*	0	*	*
Permit Revocation/Certificate of Occupancy Denial	0	*	*	0	*	*
Referral to SDRWQCB	0	*	*	0	*	*

* These measures were not required.

3) Description of modifications made to the construction and grading approval process:

During this reporting period, enhancements to this component included the following:

1) Updates to the City's existing Grading Ordinance and Grading Manual. These revisions will go into effect by the end of the current calendar year. These updates include revisions to the NPDES Chapter and will reflect successful and reasonable field practices observed since the previous round of revisions.

2) Updates to the City's existing standard Erosion and sediment Control Notes. These revisions will go into effect by the end of the current calendar year. These updates will reflect successful and reasonable field practices observed since the previous round of revisions.

3) Wet-weather inspections at City-owned, non-construction, vacant properties. It must be noted that the MS4 Permit does not specify inspection obligations at sites that do not require grading, building, or State permits, are vacant, or do not have any ongoing or immediately proposed construction activities. As such, the City implemented this enhancement to the program to further ensure adequate protection of our local waterways. The task primarily consisted of identifying all city-owned vacant properties within and immediately surrounding the City limits, determining which properties required erosion and sediment controls, installing BMPs where deemed necessary, and establishing an inspection frequency schedule as that outlined in the MS4 permit. Currently, BMPs have been implemented at sites that could potentially cause sediment releases.

4) Wet-weather inspections at City-owned construction projects. The City placed an added emphasis on ensuring adequate protection at City-owned active construction projects.

5) Updates to the NPDES Inspection Frequency sheets. These sheets now consolidate all active municipal construction projects into a single section to ensure adequate inspection coverage of these types of projects.

6) Adopting the CASQA BMP Handbook. The CASQA BMP Handbook for Construction Activities now serves as the City's uniform set of standards for construction BMPs.

4) Description and number of municipal employee training efforts conducted during the reporting period.

a) Training

TABLE 4-3

Training Dates	Training Description	Number of Staff Attended
3/18/08	International Erosion Control Association Seminar	2
2/29/08	BIA SWPPP Workshop	1
1/17/08	Annual ESC Refresher	13

8/22/07	Inland Erosion's Annual SWPPP Seminar	20
10/18/06	Annual ESC Refresher	29
9/28/05	Annual ESC Refresher	3
8/29/05	Inland Erosion's Annual SWPPP Seminar	15
5/3/05	Annual ESC Refresher	7
3/2/05	Annual ESC Refresher	2
8/18/04	Inland Erosion's Annual SWPPP Seminar	30

A copy of the City's NPDES Training Log is included in Attachment A.

b) Summarize any additional education and outreach activities conducted for project applicants, contractors, developers, property owners, and/or other responsible parties in support of the Construction Component:

1) As of September 6, 2007, the City began hand-delivering the City's annual NPDES notification letter to each active construction site currently inspected for NPDES compliance. This letter is a formal notification to all active projects obligating each one to: 1) implement pollution prevention measures year-round, 2) install additional wet-weather BMPs by October 1st, and 3) adhere to the State General Construction Permit, if applicable. All of the active sites that were listed on the September 2007 NPDES Inspection Frequency Sheets, included in Attachment B, were provided a notification letter. At a minimum, approximately 90 letters were delivered to field superintendents. These included both private and public projects. Additional letters were also forwarded to contractors working at these sites. A copy of this letter is included in Attachment B. The City's latest letter (dated August 25, 2008) added the requirement for enhanced protection at developments that were abandoned or have become partially inactive.

2) The City also participated with the Building Industry Association's (BIA) annual all-day Construction Stormwater Compliance Workshop on February 29, 2008 in riverside as a keynote speaker. The City distributed BIA's flyers for this workshop to all active projects in Temecula.

3) The City also distributed Inland Erosion's flyer for their Annual Erosion Compliance Seminar on August 22, 2007.

5) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The information provided in tables 4-1, 4-2, and 4-3 represents measurable data that the City collected in order to begin establishing baseline values that will be used as the basis for the long-term effectiveness assessment as required in the MS4 Permit.

Overall, the City improved this component from the previous reporting period by increasing inspections by approximately 4%. The issuance of citations increased by 300%. Additional data is required to determine if increased inspections correlate to an increase or a decrease in citations.

The City also continued to make every attempt to contact owners of inactive projects to repair, replace, and/or enhance the BMPs at their sites. Unfortunately, many owners walked away from their projects, which in turn began delaying crucial compliance efforts. It should be noted that the City also identified vacant parcels that were not construction projects. Although these vacant parcels fall outside of the Permit's construction component, the City actively pursued the responsible parties in efforts to minimize any discharges. Unfortunately, the City's resources are finite and the time required for effective BMP implementation at these sites have extended beyond expectations by the City as well as by the Regional Board.

All in all, field observations indicated that the development community, in general, has become more knowledgeable with the NPDES requirements throughout this Permit term.

5.0 MUNICIPAL PROGRAM

1) Number of inspections conducted at existing Municipal facilities:

The City conducts inspections at all facilities owned or maintained by the City. Inspection frequencies vary between facility category. A detailed listing of these categories is presented in Appendix B of the SWMP. For example, the corporate yard, fire stations, City Hall, and other buildings are maintained daily; parks and landscaped areas are maintained weekly; catch basins and open channels are inspected twice annually; and inspections for streets, curbs, and gutters are addressed weekly through the street sweeping program.

2) Number and type of enforcement actions related to municipal construction sites:

TABLE 5-1

Enforcement Action	Active Construction Projects		
	05-06	06-07	07-08
Verbal Warning	16	43	55
Written Warning	18	7	3
Fines	1	2	1
Stop Work Authority	0	(1)	(1)
Permit Revocation/Certificate of Occupancy Denial	0	(1)	(1)
Referral to SDRWQCB	0	(1)	(1)

(1) These measures were not required.

3) Number of catch basins that were inspected and the number that were cleaned:

TABLE 5-2

	Total on GIS Map (1)	Total in the City (2)	City-Maintained Catchbasins	Minimum Number Inspected (3)	Number Cleaned
2007-2008	1975	1901	1,600	3,200	1,828
2006-2007	1,964	*	1,600	3,200	1,974
2005-2006	*	*	*	3,928	2,946

* Not Available.

(1) Consists of all catch basins located within the City limits and in future surrounding annexation areas.

(2) Consists of all catch basins (city, Caltrans, HOA, etc.) located within the City limits only.
(3) Catch Basins are inspected twice per fiscal year.

All of the 1,600 city-maintained catchbasins currently documented on the City's GIS map were visited twice during the reporting period. Many catchbasins required cleaning during both visits, while others did not. The City maintains a monthly catch basin maintenance log that lists dates, locations, and number of catch basins maintained. Maintenance includes inspections, cleaning, and stencil replacement if required. These stencils are placed at the top of each catchbasin opening and state "Only Rain In The Drain". An example of the monthly log is included in Attachment C.

4) Assessment of the amount and type of debris removed from catch basins, streets, and open channels, including identification of areas that generate the most pollutants:

TABLE 5-3

Facility	Type of Debris	Approx. %	Problem Areas that Generate Most Pollutants
Catch basins (1)	Anthropogenic Litter Green Waste Sediment	25 70 5	Residential and Commercial Total Removed: 180 CY
Street Sweeping (3)	Litter and Sediment	100	Total Removed: 1,761 Tons(2)
Open Channels (1)	Anthropogenic Litter Green Waste Sediment	7 3 90	Natural channels Total Removed: 4,000 CY

Notes:
(1) – These figures are provided by the Maintenance Division of the PW Department.
(2) – This figure is provided by Temecula Community Services Department's "City of Temecula Tonnage Report".
(3) – Street sweeping areas consist of all paved city-maintained streets. Currently, street sweeping is conducted on 283 miles of paved streets.

5) Assessment of effectiveness of BMPs implemented for municipal facilities and activities:

TABLE 5-4

BMP Code	Description	Used	Notes
SC-10	Non-Stormwater Discharges	☒ Yes ☐ No	
SC-11	Spill Prevention, Control and Clean-up	☒ Yes ☐ No	
SC-20	Vehicle and Equipment Fueling	☐ Yes ☒ N/A	Fueling is conducted offsite
SC-21	Vehicle and Equipment Cleaning	☒ Yes ☐ No	Oil/Water Separator and Stormcepter systems collect all discharges.
SC-22	Vehicle and Equipment Repair	☐ Yes ☒ N/A	Repairs are conducted offsite
SC-30	Outdoor Loading/Unloading of Materials	☒ Yes ☐ No	
SC-31	Outdoor Liquid Container Storage	☒ Yes ☐ No	Stored in water-tight bins.
SC-32	Outdoor Equipment Maintenance	☐ Yes ☒ N/A	Repairs are conducted offsite
SC-33	Outdoor Storage of Raw Materials	☒ Yes ☐ No	New facility has been constructed to cover all maintenance equipment
SC-34	Waste Handling and Disposal	☒ Yes ☐ No	
SC-35	Safe Alternative Products	☒ Yes ☐ No	
SC-40	Contaminated or Erodible Areas	☒ Yes ☐ No	
SC-41	Building and Grounds Maintenance	☒ Yes ☐ No	
SC-42	Building Repair and Construction	☒ Yes ☐ No	
SC-43	Parking/Storage Area Maintenance	☒ Yes ☐ No	
SC-44	Drainage System Maintenance	☒ Yes ☐ No	
SC-60	Housekeeping Practices	☒ Yes ☐ No	
SC-61	Safe Alternative Products	☒ Yes ☐ No	
SC-70	Road and Street Maintenance	☒ Yes ☐ No	
SC-71	Plaza and Sidewalk Cleaning	☒ Yes ☐ No	
SC-72	Fountain and Pool Maintenance	☒ Yes ☐ No	
SC-73	Landscape Maintenance	☒ Yes ☐ No	
SC-74	Drainage System Maintenance	☒ Yes ☐ No	
SC-75	Waste Handling and Disposal	☒ Yes ☐ No	
SC-76	Water and Sewer Utility Maintenance	☐ Yes ☒ N/A	Provided by RCWD and EMWD

6) Description and number of municipal employee training efforts conducted during the reporting period.

a) Training:

TABLE 5-5

Training Dates	Training Description	Number of Staff Attended
01/17/08	Annual Refresher	29

10/18/06	Annual Refresher	7
04/27/06	Annual Refresher	20
09/26/05	Annual Refresher	4
05/03/05	Annual Refresher	16
10/21/04	Annual Refresher	8

A copy of the City's tracking log for staff training is included in Attachment A.

b) Summarize any additional education and outreach activities conducted for municipal staff in support of the Municipal Component:

The City's field crews undergo continuous informal training throughout the year, on an as-needed basis, as they encounter field conditions requiring BMPs.

7) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The information provided in tables 5-1, 5-2, 5-3, 5-4, and 5-5 represents measurable data that the City collected in order to begin establishing baseline values that will be used as the basis for the long-term effectiveness assessment as required in the MS4 Permit.

Overall, education was the key element to this component. The City improved this component by empowering the field crews to conduct their own NPDES field inspections. This allowed them to claim ownership for adequate BMP implementation at each of their sites. This action allowed the team members to increase their level of awareness and expertise in implementing BMPs.

6.0 INDUSTRIAL/COMMERCIAL PROGRAM

1) Number of inspections conducted:

TABLE 6-1

	Category			
	High Priority	Medium Priority	Low Priority	Total Inspections
2007-2008	73	141	147	361
2006-2007	266	61	96	423
2005-2006	252	52	1	305

The City completed all of the annual high, medium, and low-priority inspections this reporting period. These inspections uncovered various facilities that were in different stages of compliance. Each active facility was provided educational materials (brochures), a completed written inspection, a brief explanation of the State and City requirements, and suggestions for BMP implementation. The inspection forms served to document the current conditions at each facility, including any deficiencies observed and areas for improvement. An example of completed inspection forms is included in Attachment D. Follow-up visits were also conducted at specific sites to ensure that these were actively pursuing total compliance. The City's current prioritized inventory of industrial and commercial facilities and the current inspection forms are located in Appendix D of the SWMP.

2) Number and type of enforcement actions taken:

TABLE 6-2

Enforcement Action	05-06	06-07	07-08
Education and Information (1) (3)	305	380	325
Verbal Warning (1) (3)	305	380	325
Written Warning (1) (3)	305	380	325
Fines	8	1	(2)
Business License Denial	(2)	(2)	(2)
Referral to SDRWQCB	(2)	(2)	(2)

1) Education, verbal and written warnings are all addressed through the NPDES Inspection forms. As such, these numbers will be the same for the specific reporting period.
2) These measures were not required.
3) The inspections revealed that approximately 10% of the businesses moved, closed, or had become home-based at the time of the inspections. As such, the number of enforcement actions is less than the total number of inspections.

4) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The information provided in tables 6-1 and 6-2 represents measurable data that the City collected in order to begin establishing baseline values that will be used as the basis for the long-term effectiveness assessment as required in the MS4 Permit.

Overall, the City improved this component by completing all of the inspections at each of the inspection priority (high, medium, low) facilities. This cross-section of inspections appears to have been a contributing factor in downgrading enforcement actions to simply verbal and written notices. The collective inspection efforts between the City's business inspection program and the County's Department of Environmental Health (specifically, Haz Mat and Food Services groups) also appear to have encouraged business owners to minimize, and in many instances prevent, discharges and the accumulation of trash and debris. As a result, these repeated inspections have caused the business community, in general, to become aware of the City's NPDES requirements since the start of the business inspection program back in 2005.

7.0 RESIDENTIAL PROGRAM

1) A description of residential areas that were focused on during the past year:

Throughout the previous reporting periods, the City focused on residential areas that had recently been granted occupancies. For the most part, these new neighborhoods generated construction-related discharges due to improvements (pools, patios, hardscape, and other activities requiring a city permit) incurred by the new homeowners. In this annual report, all enforcement actions related to permitted construction activities throughout the residential areas have been shifted to Section 4, under the Construction Program.

For the current reporting period, the City focused on high priority residential activities within existing residential areas that could potentially contribute a significant pollutant load to the MS4. According to the MS4 permit, these activities consist of automobile repair, maintenance, washing, parking; garden care; disposal of household waste, pet waste, and green waste; and any other residential source that may contribute a significant pollutant load to the MS4. As such, NPDES staff addressed all concerns and complaints associated with the activities listed above. Each concern or complaint was logged into the City as a Service Order Request (SOR). Each SOR was addressed within 24 hours. Follow-up visits were conducted on an as-needed basis within 72 hours. These SORs were received from throughout the City and did not provide any indication of any specific residential areas requiring special attention. The City's existing residential efforts are presented in Section 9.0 of the SWMP under Residential Sources.

2) Number and type of enforcement actions taken:

TABLE 7-1

Enforcement Action	07-08
Education and Information	(1)
Verbal Warning	(1)
Written Warning (2)	12
Fines	4

(1) Brochures and verbal warnings were provided on an as-needed, drive-by basis.
(2) Written Warnings were issued when responsible parties could not be contacted.

3) An assessment of program effectiveness based on the measurable goals established in the SWMP:

The information provided in tables 7-1 and 7-2 represents measurable data that the City collected in order to begin establishing baseline values that will be used as the basis for the long-term effectiveness assessment as required in the MS4 Permit.

TABLE 7-2

	Residential SORs Received	Trash/Recyclables/Green Waste (Tons)
2007-2008	72	52,277
2006-2007	41	53,692
2005-2006	28	54,429
2004-2005	Not documented	Not documented

Overall, the City continued improving this component from the previous reporting period by further educating staff responsible for collecting SOR information to identify incoming calls associated with NPDES issues. All calls associated with NPDES issues are now being documented as formal written Service Order Requests. As such, staff have increased their base knowledge with the NPDES requirements.

4) Additional Comments/Information:

Public outreach was implemented through the following information and events:

1) Newsletter, Magazines, Flyers. The City's "Inside Temecula" newsletter, "Guide to Leisure Living Activities" guide, "CityWide Clean-up" flyers, and Household Hazardous Waste Collection" flyers were distributed to all City residents during the reporting period. Information pertaining to stormwater, recycling, hazardous waste disposal, community clean-up events, greenwaste management, landscape maintenance, street sweeping, etc. were provided. Relevant sections from the newsletter, guides, and flyers are included in Attachment E.

2) City-Sponsored Clean-Up Events. The City sponsored two community clean-up events on October 20, 2007 and on May 17, 2008.

3) County-Sponsored Household Hazardous Waste Collection Events. City-Hall served as the location for three clean-up events on September 15, 2007, January 19, 2008, and on May 17, 2008.

8.0 EDUCATION PROGRAM

1) Description of education efforts conducted by the Permittee (not collectively with other Permittees) during the previous year:

TABLE 8-1

Audience	Measures
Permittee Departments and Personnel	Number of Permittee employees trained for: • Construction Inspection: * • Industrial/Commercial Inspection: * • Municipal Facilities and Activities: * • Development Planning: * * - City staff are provided with informal in-house training on an individual and as-needed basis. These one-on-one opportunities are not formally documented. However, all formal classroom-type workshops are conducted and documented thru the regional education program administered by the Principle Permitee and paid with contributions from all permittees.
Construction Site Owners and Developers	Outreach: 1) Distributed the City's annual NPDES notification letter to all active projects. 2) Distributed BIA's annual workshop flyer to all active projects. 3) Distributed Inland Erosion's annual workshop flyer to all active projects.
Industrial/ Commercial Owners and Operators	Outreach: 1) Conducted inspections at 361 businesses. 2) Provided educational brochures and written inspection notices at each active facility.
Residential Community, General Public, Other Public Agencies and Students	Number of Media Impressions: • Newspaper: Refer to Watershed Report • Mailings: All outreach material was hand-delivered. • Radio/TV: Refer to Watershed Report • Web Site: In place. • Billboards: Refer to Watershed Report • Brochures: Distributed but not documented Classroom Presentations: 54 presentations were conducted at 6 elementary schools in Temecula during this reporting period. The City contributes funds for NPDES-related presentations at elementary schools. These

	presentations are conducted by the Mission Resource Conservation District through the Principle Permittee. Public Education Events: 1) City-sponsored "City-Wide Cleanup'. 2) County-sponsored 'Household Hazardous Waste Collection'. 3) Earth Day at the Promenade Mall. 4) Temecula Wine and Balloon Festival.

2) Assessment of overall program effectiveness based on the measurable goals established in the SWMP:

The information provided in tables 8-1 and 8-2 represents measurable data that the City collected in order to begin establishing baseline values that will be used as the basis for the long-term effectiveness assessment required in the MS4 Permit.

TABLE 8-2

Total Staff Trained (Workshops conducted by the Principle Permittee)				
	New Development	Construction	Municipal	Commercial/ Industrial
2007-2008	20	33	29	1
2006-2007	(1)	29	7	(2)
2005-2006	26	18	24	1
2004-2005	23	39	24	1

(1) – Staff attended training within the calendar year but not within this specific reporting period.
(2) - The City contracted with AEI-CASC to conduct all business inspections. As such, municipal staff do not conduct these inspections.

Table 8-2 shows that City staff have been receiving formal training on an annual basis, at a minimum. Overall, the City continued maintaining a high level of attendance among each training category. Staff have also attended additional workshops hosted by other organizations such as CASQA, BIA, State Water Resources Control Board, universities, etc. These additional efforts are documented in each separate training table throughout this report. Various divisions are represented in each of these training categories; Land Development, Capital Improvement Projects, Public Works Maintenance, NPDES, Community Services, Code Enforcement, and Planning. Throughout this permit term, and through these workshops, the City has become increasingly aware of the NPDES requirements. This awareness has translated into increased efforts to achieve compliance as compared to previous permit terms. As such, the City will continue its current efforts into the subsequent reporting period.

9.0 ILLICIT DISCHARGE DETECTION AND ELIMINATION PROGRAM

1) Number of times City Hall was notified (calls, e-mail, walk-ins, etc.) during the reporting period, as compared to previous reporting periods.

TABLE 9-1

	NPDES Service Orders Requests
2007-2008	106
2006-2007	41
2005-2006	24
2004-2005	74

2) Number of illicit discharges, connections and spills reported and/or identified during the reporting period:

TABLE 9-2 (1)

	Illicit Discharges	Illicit Connections	Sewage Spills
2007-2008	60	1	0
2006-2007	22	0	2
2005-2006	24	0	0
2004-2005	74	0	2

(1) - Based on Service Order Requests (SORs)

3) Number of illicit discharges or connections investigated during the reporting period and the outcome of the investigations:

All SORs were addressed. Many of the discharges were related to irrigation breaks, or were no longer evident, or had been mitigated prior to the initial site visit. Many of the SORs were disputes between neighbors, while others were called-in as leaks from parked vehicles. Citations were issued against blatant discharges of paints, oils, cements, and pet waste.

4) Number and types of enforcement actions taken for illicit discharges or connections during the reporting period:

TABLE 9-3

Enforcement and Compliance Responses	Private Facilities	Public Facilities
Non-monetary penalties	54	0 (1)
Fines (Residential & Business)	6	0 (1)

(1) – There were no SORs associated with public facilities this reporting period.

5) Number and location of dry weather monitoring sites that were monitored during the reporting period:

Since the beginning of the current permit term, and in concurrence with Regional Board staff at the time of the permit issuance, the City of Temecula has been monitoring 4 sites. These sites consist of the following primary locations:

1. Empire Creek at the Del Rio bridge.
2. Pechanga Parkway stormdrain channel upgradient to the confluence into Temecula Creek.
3. Pechanga Creek at the Rainbow Canyon bridge.
4. Temecula Creek slightly upgradient to the confluence Murrieta Creek.

In addition, the Riverside County Flood Control District selected four separate sites throughout the City that are also monitored in like manner. Their sites consist of the following locations:

1. Long Canyon Wash at the Commerce Center Drive bridge.
2. Murrieta Creek at the USGS station at the end of Pujol street.
3. Redhawk Parkway stormdrain channel near the confluence with Temecula Creek.
4. Santa Gertrudis Creek at the Jefferson Avenue bridge.

The station locations were selected based on the following criteria:

- *Accessibility.* Per the Monitoring and Reporting Program, Part II.B.1.a, all of the stations are open channels, are readily accessible points to City staff, and are located downstream of potential illicit discharges.

- *Assessment of Illegal Discharges.* Since each station is located within a watercourse, these points represent confluences for storm drain lines, catch basins, improved channels, natural tributary drainage courses, outfalls, etc. As such, each location is a critical point in the drainage course of each sub-watershed within the City in which illegal discharges can readily be detected at a single location.

- *Integration with Principle Permittee's stations.* The City coordinated with the Principle Permitee to provide coverage necessary to adequately represent the entire MS4 (MRP II.B.1.a) throughout the City. As such, the City and Principle Permittee collectively monitor a total of eight stations throughout the City.

- *Establishing Numeric Criteria.* These stations were selected based on conditions at each site that would ensure consistency at each station each year. This approach was intended to establish baseline values that could be used in determining meaningful numeric criteria rather than collecting random data from random samples at random locations that have little to no connectivity.

The latest version of the City's Dry-Weather Illicit Discharge Monitoring Log is presented in Appendix E of the SWMP. The results of the field activities conducted during this reporting period are presented in Attachment F herein.

6) Summary of Illicit Discharge Monitoring Program results, including: 1) All inspection, field screening, and analytical monitoring results; 2) All follow-up and elimination activities; and 3) Any proposed changes to station locations and/or sampling frequencies:

TABLE 9-4

Date (1)	Location	Monitoring Results	Follow-up and Elimination Activities	Proposed Changes
August 27, 2007	Primary Locations	No indications of illicit discharges	None	No Changes Comment(s):
June 15, 2007	Primary Locations	No indications of illicit discharges	None	No Changes Comment(s):

(1) - Section II.B.1.a of the MRP requires two (at a minimum) sampling events between May 1 and September 30.

7) Assessment of the overall program effectiveness based on the measurable goals established in the SWMP:

Overall, all of the primary dry-weather monitoring locations were monitored, and all SORs were investigated. The City did not encounter any illicit connections into or at any of the monitoring locations, and all of the SORs resulted in either verbal, written, or monetary enforcement actions. Although the number of SORs increased by 259% from the previous reporting period, the number of citations remained the same. Additional data is obviously necessary to attempt to correlate the number of SORs with the number of illicit discharges, or citations with increases or decreases in compliance. To date, this data is inconclusive. The City is in the process of identifying either additional monitoring locations or alternate stations that will represent the upper portions of the City's drainage systems in order to enhance this component. This will further be addressed in the upcoming ROWD.

10.0 PUBLIC PARTICIPATION

1) A description of efforts to include the public in urban runoff management programs during the reporting period.

The City conducted various outreach efforts to the public this reporting period. The most visible programs consisted of the community clean-up activities on September 15, 2007, October 20, 2007, May 17, 2008, January 19, 2008, and on May 17, 2008. The less visible programs included personal contact with the public regarding pollution prevention. These opportunities were conducted thru the business inspections, responses to Service Order Requests, in-house meetings with project applicants, and field meetings with developers.

11.0 ASSESSMENT OF OVERALL SWMP EFFECTIVENESS

The SWMP continued to be implemented in its entirety this reporting period. Each section provides sufficient detail to successfully implement each of the components of the permit.

12.0 FISCAL ANALYSIS

1) A summary of the reporting period's expenditures and estimated budget for the upcoming reporting period.

Program Element	Fiscal Year 2006-2007		Fiscal Year 2007-2008		Fiscal Year 2008-2009 (Estimated)	
	Capital Expenditures	Capital Expenditures	Capital Expenditures	O&M/Admin Expenditure	Capital Expenditures	O&M/Admin Expenditure
Program Management (1)	--	118,261	--	122,747	--	126,836
Annual Fee for NPDES Permit from SWRCB	--	11,109 (actual invoice)	--	11,109 (actual invoice)	--	14,875
Implementation Agreement (I.A.) Shared Cost	--	129,769	--	130,173	--	163,768
Construction Inspections (2)	--	62,798	--	63,163	--	65,389
Development Planning (WQMP reviews)	--	12,224 (3a)	--	10,000 (3a)	--	30,000 (3b)
Industrial and Commercial Inspections (4)	--	51,791	--	70,000	--	60,000
IC/ID Program	--	1,000	--	1,000	--	1,000
Municipal Programs (PW Maint) (5)	--	150,000 (Dryer than average Wet-Weather Season)	--	400,000	--	400,000
Municipal Programs (TCSD) (6)	--	6,381,136	--	7,134,931	--	7,848,424
Public Outreach (i.e. classrooms, brochures, etc.)	--	Included in the I.A.	--	Included in the I.A.	--	Included in the I.A.
Monitoring Program	--	Included in the I.A.	--	Included in the I.A.	--	Included in the I.A.
Other (7)	--	30,000	--	30,000	--	30,000
Total (8)		**$566,952**		**$838,192**		**$891,868**
Grand Total	**$ 0**	**$6,948,088**	**$ 0**	**$7,973,123**	**$ 0**	**$8,740,292**

Notes:
(1) This cost reflects program administrator time.
(2) This costs reflects NPDES inspector time plus 10K vehicle expenses
(3a) This cost reflects out-sourced WQMP reviews
(3b) This cost reflects in-house staff time based on one WQMP per month.
(4) This cost reflects out-sourced inspection services
(5) This cost reflects drainage channel clearing and catchbasin maintenance.
(6) This cost reflects the operating budgets for refuse/recycling, street sweeping, landscape/slope programs through Temecula Community Services District.
(7) This cost reflects staff's time for formal classroom training, conferences, inspection forms, citation books, mailings, etc.
(8) This total does not include the refuse/recycling, street sweeping, landscape/slope programs.

2) A description of the source(s) of funds that were utilized during the previous fiscal year and the source(s) of funds proposed to meet the necessary expenditures for the subsequent year, including legal restrictions on the use of such funds.

Source of Funds	Percent of Program Funding	Restrictions on Use (if applicable)
General Fund	93	Allocations to other departments and divisions.
WQMP Review Fees	4	Based on project size
ESC Review Fees	3	Based on project's cost estimate

13.0 NON-STORM WATER DISCHARGES

Permittees shall report on any discharge category listed in Requirement B.2 of Order No. R9-2004-001 that was identified as a source of pollutants during the reporting period. For each identified category, the Permittee shall report whether it elected to prohibit the discharge or to require BMPs to reduce pollutants in the discharge to the MEP. If the discharge is not prohibited, the BMPs that will be implemented, or required to be implemented, shall be described in each SWMP Annual Report.

Category	Prohibited	BMP to be Implemented
Diverted stream flows	☐ Yes ☒ No	Not Applicable
Rising ground waters	☐ Yes ☒ No	Not Applicable
Uncontaminated ground water infiltration [as defined at 40 CFR 35.2005(20)] to MS4s	☐ Yes ☒ No	Not Applicable
Uncontaminated pumped ground water	☐ Yes ☒ No	Not Applicable
Foundation drains	☐ Yes ☒ No	Not Applicable
Springs	☐ Yes ☒ No	Not Applicable
Water from crawl space pumps (Identified as a source of pollutants when commingled with construction-related sediment).	☐ Yes ☒ No	Filtered through gravel-bag chevrons prior to entering a CB
Footing drains	☐ Yes ☒ No	Not Applicable
Air conditioning condensation	☐ Yes ☒ No	Not Applicable
Flows from riparian habitats and wetlands	☐ Yes ☒ No	Not Applicable
Water line flushing. (Identified as a source of pollution when commingled with construction-related sediment).	☐ Yes ☒ No	Filtered through gravel-bag chevrons prior to entering a CB
Landscape irrigation	☐ Yes ☒ No	Not Applicable
Discharges from potable water sources not subject to NPDES Permit No. CAG679001, other than water main breaks. (Identified as a source of pollutants when commingled with construction-related sediment).	☐ Yes ☒ No	Filtered through gravel-bag chevrons prior to entering a CB
Irrigation water	☐ Yes ☒ No	Not Applicable
Lawn watering	☐ Yes ☒ No	Not Applicable
Individual residential car washing	☐ Yes ☒ No	Not Applicable
Non-emergency fire fighting flows	☐ Yes ☒ No	Not Applicable
Dechlorinated swimming pool discharges	☐ Yes ☒ No	Not Applicable

14.0 RECEIVING WATER LIMITATIONS

This section includes the report required pursuant to Requirement C.2.a. of Order No. R9-2004-001, if applicable. Requirement C.2.a. states:

"Upon a determination by either a Permittee or the SDRWQCB that MS4 discharges are causing or contributing to an exceedance of an applicable water quality standard, the Permittee shall promptly notify and thereafter submit a report to the SDRWQCB that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report may be incorporated in the SWMP Annual Report unless the SDRWQCB directs an earlier submittal. The report shall include an implementation schedule. The SDRWQCB may require modifications to the report."

The City is not aware of any exceedances to any water quality standards in this area during the reporting period. Please refer to the watershed annual report for a detailed review of the monitoring data collected throughout the Santa Margarita River in Riverside County.

15.0 SUMMARY OF ADDITIONAL URBAN RUNOFF DATA

This section is a summary of all urban runoff related data not included in the annual monitoring report (e.g., special investigations).

The City of Temecula did not conduct any special investigations during this reporting period.

16.0 PROPOSED REVISIONS TO THE SWMP

This section includes proposed revisions to the Individual SWMP, including areas in need of improvement based on the assessment of effectiveness of each program component.

There were no significant programmatic changes to the City's SWMP during this reporting period. Attachment G includes a list of revisions that have been incorporated into the SWMP since July 1, 2005.

ACCEPTANCE OF CONDITIONS OF APPROVAL

I, Steve Rawlings, understand that Planning Application No. PA07-0337 has been approved with Conditions of Approval which are set forth in Exhibit A. I have read the Conditions of Approval contained in PC Resolution No. 08-20 and understand them. Through signing this ACCEPTANCE OF CONDITIONS OF APPROVAL, I agree and commit to the City of Temecula that I will implement and abide by the Conditions of Approval, including any indemnification requirements imposed by those conditions.

CITY OF TEMECULA

FINAL CONDITIONS OF APPROVAL

Planning Application No.:	PA07-0337
Project Description:	A Major Modification to an approved Development Plan to modify three building entrances, add a trash enclosure, and expand the parking lot to accommodate additional parking for a Kaiser medical facility located at 27309 Madison Avenue
Assessor's Parcel No.:	910-282-012 and 910-272-007
MSHCP Category:	Commercial
DIF Category:	Service Commercial
TUMF Category:	N/A
Approval Date:	May 7, 2008
Expiration Date:	May 7, 2010

PLANNING DEPARTMENT

Within 48 Hours of the Approval of This Project

1. The applicant/developer shall deliver to the Planning Department a cashier's check or money order made payable to the County Clerk in the amount of Sixty-Four Dollars ($64.00) for the County administrative fee, to enable the City to file the Notice of Exemption as provided under Public Resources Code Section 21152 and California Code of Regulations Section 15062. If within said 48-hour period the applicant/developer has not delivered to the Planning Department the check as required above, the approval for the project granted shall be void by reason of failure of condition (Fish and Game Code Section 711.4(c)).

2. The applicant shall review and sign the Acceptance of Conditions of Approval document that will be provided by the Planning Department staff and return the document with an original signature to the Planning Department.

General Requirements

3. The applicant and owner of the real property subject to this condition shall hereby agree to indemnify, protect, hold harmless, and defend the City with Legal Counsel of the City's own selection from any and all claims, actions, awards, judgments, or proceedings against the City to attack, set aside, annul, or seek monetary damages resulting, directly or indirectly, from any action in furtherance of and the approval of the City, or any agency or instrumentality thereof, advisory agency, appeal board or legislative body including actions approved by the voters of the City, concerning the Planning Application. The City shall be

deemed for purposes of this condition, to include any agency or instrumentality thereof, or any of its elected or appointed officials, officers, employees, consultants, contractors, legal counsel, and agents. City shall promptly notify both the applicant and landowner of any claim, action, or proceeding to which this condition is applicable and shall further cooperate fully in the defense of the action. The City reserves the right to take any and all action the City deems to be in the best interest of the City and its citizens in regards to such defense.

4. The permittee shall obtain City approval for any modifications or revisions to the approval of this project.

5. This approval shall be used within two years of the approval date; otherwise, it shall become null and void. By use is meant the beginning of substantial construction contemplated by this approval within the two year period, which is thereafter diligently pursued to completion, or the beginning of substantial utilization contemplated by this approval.

6. The Director of Planning may, upon an application being filed within 30 days prior to expiration, and for good cause, grant a time extension of up to 3 one-year extensions of time, one year at a time.

7. A separate building permit shall be required for all signage.

8. The development of the premises shall substantially conform to the approved site plan and elevations contained on file with the Planning Department.

9. Landscaping installed for the project shall be continuously maintained to the reasonable satisfaction of the Planning Director. If it is determined that the landscaping is not being maintained, the Planning Director shall have the authority to require the property owner to bring the landscaping into conformance with the approved landscape plan. The continued maintenance of all landscaped areas shall be the responsibility of the developer or any successors in interest.

10. The Conditions of Approval specified in this resolution, to the extent specific items, materials, equipment, techniques, finishes or similar matters are specified, shall be deemed satisfied by staff's prior approval of the use or utilization of an item, material, equipment, finish or technique that City staff determines to be the substantial equivalent of that required by the Conditions of Approval. Staff may elect to reject the request to substitute, in which case the real party in interest may appeal, after payment of the regular cost of an appeal, the decision to the Planning Commission for its decision.

11. Trash enclosures shall be provided to house all trash receptacles utilized on the site. These shall be clearly labeled on site plan.

12. Parking for the project shall be shared across the site, including parking spaces in all lots that are a part of the project.

13. If construction is phased, a construction staging area plan or phasing plan for construction equipment and trash shall be approved the Director of Planning.

Prior to Issuance of Grading Permits

14. A Parcel Merger must be filed and approved to the satisfaction of the Director of Public Works.

15. The following shall be included in the Notes Section of the Grading Plan: "If at any time during excavation/construction of the site, archaeological/cultural resources, or any artifacts or other objects which reasonably appears to be evidence of cultural or archaeological resource are discovered, the property owner shall immediately advise the City of such and the City shall cause all further excavation or other disturbance of the affected area to immediately cease. The Director of Planning at his/her sole discretion may require the property owner to deposit a sum of money it deems reasonably necessary to allow the City to consult and/or authorize an independent, fully qualified specialist to inspect the site at no cost to the City, in order to assess the significance of the find. Upon determining that the discovery is not an archaeological/cultural resource, the Director of Planning shall notify the property owner of such determination and shall authorize the resumption of work. Upon determining that the discovery is an archaeological/cultural resource, the Director of Planning shall notify the property owner that no further excavation or development may take place until a mitigation plan or other corrective measures have been approved by the Director of Planning."

Prior to Issuance of Building Permit

16. The applicant shall submit a photometric plan, including the parking lot to the Planning Department, which meets the requirements of the Development Code and the Palomar Lighting Ordinance. The parking lot light standards shall be placed in such a way as to not adversely impact the growth potential of the parking lot trees.

17. Three copies of Construction Landscaping and Irrigation Plans shall be reviewed and approved by the Planning Department. These plans shall conform to the approved conceptual landscape plan, or as amended by these conditions. The location, number, genus, species, and container size of the plants shall be shown. The plans shall be consistent with the Water Efficient Ordinance. The plans shall be accompanied by the following items:

    a. Appropriate filing fee (per the City of Temecula Fee Schedule at time of submittal).

    b. Provide a minimum five foot wide planter to be installed at the perimeter of all parking areas. Curbs, walkways, etc. are not to infringe on this area.

    c. A note on the plans stating that "Two landscape inspections are required: One inspection is required for irrigation lines and a separate inspection is required for final planting inspection."

    d. A note on the plans stating that "The contractor shall provide two copies of an agronomic soils report at the first irrigation inspection."

    e. One copy of the approved Grading Plan.

    f. Water usage calculations per Chapter 17.32 of the Development Code (Water Efficient Ordinance).

    g. Total cost estimate of plantings and irrigation (in accordance with approved plan).

    h. The locations of all existing trees that will be saved consistent with the tentative map.

i. A landscape maintenance program shall be submitted for approval, which details the proper maintenance of all proposed plant materials to assure proper growth and landscape development for the long-term esthetics of the property. The approved maintenance program shall be provided to the landscape maintenance contractor who shall be responsible to carry out the detailed program.

j. Specifications shall indicate that a minimum of two landscape site inspections will be required. One inspection to verify that the irrigation mainline is capable of being pressurized to 150 psi for a minimum period of two hours without loss of pressure. The second inspection will verify that all irrigation systems have head-to-head coverage, and to verify that all plantings have been installed consistent with the approved construction landscape plans. The applicant/owner shall contact the Planning Department to schedule inspections.

k. Precise Grading Plans consistent with the approved rough grading plans including all structural setback measurements.

l. All WQMP information and storm water treatment design details shall be shown on the construction landscape plans. If revisions are made to the WQMP and/or storm water treatment design that result in any changes to the conceptual landscape plans after entitlement, the revisions will be shown on the construction landscape plans, subject to the approval of the Director of Planning.

18. Construction Landscaping and Irrigation Plans shall specify that the hydro-seeded area will be temporarily irrigated.

19. All utilities shall be screened from public view. Landscape construction drawings shall show and label all utilities and provide appropriate screening. Provide a three foot clear zone around fire check detectors as required by the Fire Department before starting the screen. Group utilities together in order to reduce intrusion. Screening of utilities is not to look like an after-thought. Plan planting beds and design around utilities. Locate all light poles on plans and insure that there are no conflicts with trees.

20. Building Construction Plans shall include detailed outdoor areas including but not limited to trash enclosures and hardscape to match the style of the building subject to the approval of the Planning Director.

Prior to Release of Power, Building Occupancy or Any Use Allowed by This Permit

21. An applicant shall submit a letter of substantial conformance, subject to field verification by the Planning Director or his/her designee. Said letter of substantial conformance shall be prepared by the project designer and shall indicate that all plant materials and irrigation system components have been installed in accordance with the approved final landscape and irrigation plans. If a certificate of use and occupancy is not required for the project, such letter of substantial conformance shall be submitted prior to scheduling for the final inspection.

22. The applicant shall be required to screen all loading areas and roof mounted mechanical equipment from view of the adjacent residences and public right-of-ways. If upon final inspection it is determined that any mechanical equipment, roof equipment or backs of building parapet walls are visible from any portion of the public right-of-way adjacent to the project site, the developer shall provide screening by constructing a sloping tile covered mansard roof element or other screening reviewed and approved by the Director of Planning.

23. All required landscape planting and irrigation shall have been installed consistent with the approved construction plans and shall be in a condition acceptable to the Director of Planning. The plants shall be healthy and free of weeds, disease, or pests. The irrigation system shall be properly constructed and in good working order.

24. Performance securities, in amounts to be determined by the Director of Planning, to guarantee the maintenance of the plantings in accordance with the approved construction landscape and irrigation plan shall be filed with the Planning Department for a period of one year from final Certificate of Occupancy. After that year, if the landscaping and irrigation system have been maintained in a condition satisfactory to the Director of Planning, the bond shall be released upon request by the applicant.

25. Each parking space reserved for the handicapped shall be identified by a permanently affixed reflectorized sign constructed of porcelain on steel, beaded text or equal, displaying the International Symbol of Accessibility. The sign shall not be smaller than 70 square inches in area and shall be centered at the interior end of the parking space at a minimum height of 80 inches from the bottom of the sign to the parking space finished grade, or centered at a minimum height of 36 inches from the parking space finished grade, ground, or sidewalk. A sign shall also be posted in a conspicuous place, at each entrance to the off-street parking facility, not less than 17 inches by 22 inches, clearly and conspicuously stating the following:

> "Unauthorized vehicles parked in designated accessible spaces not displaying distinguishing placards or license plates issued for persons with disabilities may be towed away at owner's expense. Towed vehicles may be reclaimed by telephoning (951) 696-3000."

26. In addition to the above requirements, the surface of each parking place shall have a surface identification sign duplicating the Symbol of Accessibility in blue paint of at least three square feet in size.

27. All site improvements including but not limited to parking areas and striping shall be installed.

28. All of the foregoing conditions shall be complied with prior to occupancy or any use allowed by this permit.

OUTSIDE AGENCIES

29. The applicant shall comply with the recommendations set forth in the County of Riverside Department of Environmental Health's transmittal dated January 8, 2008, a copy of which is attached.

30. The applicant shall comply with the recommendations set forth in the Rancho California Water District's transmittal dated December 19, 2007, a copy of which is attached.

BUILDING AND SAFETY DEPARTMENT

General Requirements

31. All design components shall comply with applicable provisions of the 2007 edition of the California Building, Plumbing and Mechanical Codes; 2007 California Electrical Code; California Administrative Code, Title 24 Energy Code, California Title 24 Disabled Access Regulations, and the Temecula Municipal Code.

32. Submit at time of plan review, a complete exterior site lighting plans showing compliance with Ordinance No. 655 for the regulation of light pollution. All street-lights and other outdoor lighting shall be shown on electrical plans submitted to the Department of Building and Safety. Any outside lighting shall be hooded and directed so as not to shine directly upon adjoining property or public rights-of-way.

33. Obtain all building plans and permit approvals prior to commencement of any construction work.

34. Show all building setbacks.

35. Provide an approved automatic fire sprinkler system.

36. All building and facilities must comply with applicable disabled access regulations. Provide all details on plans.

37. Provide disabled access from the public way to the main entrance of the building.

38. Provide van accessible parking located as close as possible to the main entry.

39. Show path of accessibility from parking to furthest point of improvement.

40. Commercial and Industrial project trash enclosures, patio covers, light standards, and any block walls will require separate approvals and permits.

41. Signage shall be posted conspicuously at the entrance to the project that indicates the hours of construction, shown below, as allowed by the City of Temecula Ordinance No. 94-21, specifically Section G (1) of Riverside County Ordinance No. 457.73, for any site within one-quarter mile of an occupied residence. The permitted hours of construction are Monday through Friday 6:30 a.m. to 6:30 p.m., and Saturday from 7:00 a.m. to 6:30 p.m. No work is permitted on Sundays or Government Holidays.

Prior to Issuance of Building Permit

42. At plan submittal, restroom fixtures, number and type, are to be in accordance with the provisions of the 2007 edition of the California Plumbing Code.

43. At plan submittal, provide electrical plan including load calculations and panel schedule, plumbing schematic and mechanical plan applicable to scope of work for plan review.

44. Provide precise grading plan at plan check submittal to check accessibility for persons with disabilities.

45. Provide appropriate stamp of a registered professional with original signature on plans prior to permit issuance.

46. A pre-construction meeting is required with the building inspector prior to the start of the building construction.

COMMUNITY SERVICES DEPARTMENT

General Requirements

47. The developer shall contact the City's franchised solid waste hauler for disposal of construction debris. Only the City's franchisee may haul construction debris.

48. The Applicant shall comply with the Public Art Ordinance.

49. All parkways, landscaping, fencing and on site lighting shall be maintained by the property owner or maintenance association.

Prior to Issuance of Building Permit

50. The developer shall provide TCSD verification of arrangements made with the City's franchise solid waste hauler for disposal of construction debris.

FIRE PREVENTION

General Requirements

51. Final fire and life safety conditions will be addressed when building plans are reviewed by the Fire Prevention Bureau. These conditions will be based on occupancy, use, the California Building Code (CBC), California Fire Code (CFC), and related codes which are in force at the time of building plan submittal.

52. If construction is phased, each phase shall provide approved access and fire protection prior to any building construction (CFC, Chapter 5, Section 503.4).

53. The applicant shall comply with the requirements of the Fire Code permit process and update any changes in the items and quantities approved as part of their Fire Code permit. These changes shall be submitted to the Fire Prevention Bureau for review and approval per the Fire Code and is subject to inspection (CFC Appendix Chapter 1).

Prior to Issuance of Building Permit

54. Fire sprinkler plans shall be submitted to the Fire Prevention Bureau for approval. Three sets of sprinkler plans must be submitted by the installing contractor to the Fire Prevention Bureau. These plans must be submitted prior to the issuance of building permit.

55. Fire alarm plans shall be submitted to the Fire Prevention Bureau for approval. Three sets of alarm plans must be submitted by the installing contractor to the Fire Prevention Bureau. The fire alarm system is required to have a dedicated circuit from the house panel.

Prior to Release of Power, Building Occupancy or Any Use Allowed by This Permit

56. New and existing buildings shall have approved address numbers, building numbers or approved building identification placed in a position that is plainly legible and visible from the street or road fronting the property. These numbers shall contrast with their background. Commercial buildings shall have a minimum of 12-inch numbers with suite numbers being a minimum of six inches in size. All suites shall have a minimum of six-inch high letters and/or numbers on both the front and rear doors (CFC Chapter 5, Section 505.1 and City Ordinance 15.16.020 Section E).

57. A "Knox-Box" shall be provided. The Knox-Box shall be installed a minimum of six feet in height and be located to the right side of the fire riser sprinkler room (CFC Chapter 5, Section 506).

58. The applicant shall submit for review and approval by the City Fire Department a Hazardous Material Inventory Statement. A full hazardous materials inventory report and color coded floor plan is required for any building storing or using hazardous materials (CFC Chapter 28 though 44, Appendix Chapter 1 and City Ordinance 15.16.020).

59. Prior to the issuance of a Certificate of Occupancy or building final, the developer/applicant shall be responsible for obtaining underground and/or aboveground tank permits for the storage of combustible liquids, flammable liquids or any other hazardous materials from both the County Health department and Fire Prevention Bureau (CFC Chapter 34 and City Ordinance 15.16.020).

PUBLIC WORKS DEPARTMENT

General Requirements

60. Unless otherwise noted, all conditions shall be completed by the Developer at no cost to any Government Agency. It is understood that the Developer correctly shows on the site plan all existing and proposed property lines, easements, traveled ways, improvement constraints and drainage courses, and their omission may require the project to be resubmitted for further review and revision.

61. A Grading Permit for precise grading, including all on-site flat work and improvements, shall be obtained from the Department of Public Works prior to commencement of any construction outside of the City-maintained street right-of way.

62. An Encroachment Permit shall be obtained from the Department of Public Works prior to commencement of any construction within an existing or proposed City right-of-way.

63. All grading plans shall be coordinated for consistency with adjacent projects and existing improvements contiguous to the site and shall be submitted on standard 24" x 36" City of Temecula mylars.

64. The project shall include construction-phase pollution prevention controls and permanent post-construction water quality protection measures into the design of the project to prevent non-permitted runoff from discharging offsite or entering any storm drain system or receiving water.

65. A Water Quality Management Plan (WQMP) must be accepted by the City prior to the initial grading plan check. The WQMP will be prepared by a registered Civil Engineer and include site design BMPs (Best Management Practices), source controls, and treatment mechanisms.

Prior to Issuance of Grading Permits

66. A Grading Plan shall be prepared by a registered Civil Engineer and shall be reviewed and approved by the Department of Public Works. The grading plan shall include all necessary erosion control measures needed to adequately protect adjacent public and private property.

67. The developer shall post security and enter into an agreement guaranteeing the grading and erosion control improvements in conformance with applicable City Standards and subject to approval by the Department of Public Works.

68. A Soil Report shall be prepared by a registered Soil or Civil Engineer and submitted to the Director of the Department of Public Works with the initial grading plan check. The report shall address all soils conditions of the site, and provide recommendations for the construction of engineered structures and pavement sections.

69. The developer shall have a Drainage Study prepared by a registered Civil Engineer in accordance with City Standards identifying storm water runoff expected from this site and upstream of this site. The study shall identify all existing or proposed public or private drainage facilities intended to discharge this runoff. The study shall also analyze and identify impacts to downstream properties and provide specific recommendations to protect the properties and mitigate any impacts. Any upgrading or upsizing of downstream facilities, including acquisition of drainage or access easements necessary to make required improvements, shall be provided by the Developer.

70. Construction-phase pollution prevention controls shall be consistent with the City's Grading, Erosion & Sediment Control Ordinance and associated technical manual, and the City's standard notes for Erosion and Sediment Control.

71. The project shall demonstrate coverage under the State NPDES General Permit for Construction Activities by providing a copy of the Waste Discharge Identification number (WDID) issued by the State Water Resources Control Board (SWRCB). A Stormwater Pollution Prevention Plan (SWPPP) shall be available at the site throughout the duration of construction activities.

72. As deemed necessary by the Director of the Department of Public Works, the Developer shall receive written clearance from the following agencies: (a) Planning Department; (b) Department of Public Works.

73. The developer shall comply with all constraints which may be shown upon an Environmental Constraint Sheet (ECS) recorded with any underlying maps related to the subject property.

74. Permanent landscape and irrigation plans shall be submitted to the Planning Department and the Department of Public Works for review and approval.

75. The applicant shall comply with the provisions of Chapter 8.24 of the Temecula Municipal Code (Habitat Conservation) by paying the appropriate fee set forth in that Ordinance or by providing documented evidence that the fees have already been paid.

76. A flood mitigation charge shall be paid. The Area Drainage Plan fee is payable to the Riverside County Flood Control and Water Conservation District by either cashier's check or money order, prior to issuance of permits, based on the prevailing area drainage plan fee. If the full Area Drainage Plan fee or mitigation charge has already been credited to this property, no new charge needs to be paid.

Prior to issuance of Building Permit

77. Precise grading plans shall conform to applicable City of Temecula Standards subject to approval by the Director of the Department of Public Works. The following design criteria shall be observed:

    a. Flow-line grades shall be 0.5% minimum over P.C.C. and 1.00% minimum over A.C. paving.

    b. Driveway shall conform to the applicable City of Temecula Standard No. 207A.

    c. All street and driveway centerline intersections shall be at 90 degrees.

    d. Landscaping shall be limited in the corner cut-off area of all intersections and adjacent to driveways to provide for minimum sight distance and visibility.

78. The Developer shall construct the following public improvements in conformance with applicable City Standards and subject to approval by the Director of the Department of Public Works.

    a. Street improvements, which may include, but not limited to: curb and gutter and drive approaches

    b. Storm drain facilities

    c. Under grounding of proposed and existing utility distribution lines less than 34 KV.

79. The building pad shall be certified to have been substantially constructed in accordance with the approved Precise Grading Plan by a registered Civil Engineer, and the Soil Engineer shall issue a Final Soil Report addressing compaction and site conditions.

80. The Developer shall pay to the City the Public Facilities Development Impact Fee as required by, and in accordance with, Chapter 15.06 of the Temecula Municipal Code and all Resolutions implementing Chapter 15.06.

Prior to Release of Power, Building Occupancy or Any Use Allowed by This Permit

81. The project shall demonstrate that the pollution prevention BMPs outlined in the WQMP have been constructed and installed in conformance with approved plans and are ready for immediate implementation.

82. As deemed necessary by the Department of Public Works, the Developer shall receive written clearance from the following agencies:

    a. Rancho California Water District

    b. Eastern Municipal Water District

    c. Department of Public Works

83. Corner property line cut off shall be required per Riverside County Standard No. 805.

84. All public improvements shall be constructed and completed per the approved plans and City standards to the satisfaction of the Director of the Department of Public Works.

85. The existing improvements shall be reviewed. Any appurtenance damaged or broken shall be repaired or removed and replaced to the satisfaction of the Director of the Department of Public Works.

43200 Business Park Drive▪Temecula, CA 92590▪Mailing Address: P.O. Box 9033▪Temecula, CA 92589-9033
(951) 694-6411 ▪ Fax (951) 694-6475

September 6, 2007

To: Property Owners, Developers, Project Managers, Field Superintendents, and Contractors.

RE: National Pollution Discharge Elimination System (NPDES) requirements for construction sites.

The City of Temecula is requiring **Year-Round pollution prevention measures,** also known as Best Management Practices (BMPs), at every permitted construction site throughout the City. Illegal discharges must be prevented throughout your site and from entering and leaving any storm drain system. **Additional 'Wet-Weather' measures must also be implemented between October 1st and April 30th** in order to prevent erosion and sediment discharges.

In addition, compliance with the State General Construction Permit is required if your project disturbs, exposes, or stockpiles one acre or more of soil. If applicable, a Notice of Intent (NOI) must be filed with the State, proof of a Waste Discharge Identification (WDID) Number must be provided to the City, and a Storm Water Pollution Prevention Plan (SWPPP) must be onsite. The SWPPP must be implemented throughout the duration of the project, readily available to City and State inspectors, and updated as site conditions change.

At a minimum, the following requirements must be implemented at each site:

- All onsite and offsite flow-lines, inlets, outlets, streets, and gutters shall be free of sediment, construction materials, construction waste, and miscellaneous debris;
- Construction waste and miscellaneous debris shall be placed in enclosed trash bins. No wire mesh or damaged wood trash receptacles will be allowed. Prior to any forecasted rain, these bins shall be covered with a lid or plastic tarp;
- Wet-Weather erosion and sediment controls shall be installed and maintained throughout the entire site prior to October 1st;
- Prior to any forecasted rain, additional erosion and sediment control materials shall be stockpiled at various locations throughout the site for immediate implementation;
- Wash-out stations shall be provided for concrete, paints, stucco, etc. and shall be lined with plastic and located away from streets, sidewalk right-of-ways, and drainage inlets;

Printed on Recycled Paper

- Portable toilets shall be placed away from streets, sidewalks, flowlines, and drainage inlets;
- A combination of rock and shaker plates shall be installed at all construction access locations. Interior access points (driveways, staging areas, etc.) shall also have rock accesses;
- All completed slopes and inactive pads shall have BMP protection;
- All portable mixers shall have plastic under-liners with gravel bags placed on the down-hill side of the liners to contain discharges;
- Street sweeping shall be performed on all paved streets within the site and outside of all construction exits on a regular basis. A street sweeper shall also be operating during all hauling operations;
- Vacuum sweepers shall be used when street sweeping become ineffective;
- Water shall be filtered out from retention/desilting basins within 72-hours of collection;
- Erosion and Sediment Control plans and Standard Notes must be followed at all times;
- Project developer is responsible for all discharges from all site personnel, including subcontractors and landscapers.

City inspectors will conduct 'wet-weather' inspections beginning **October 1st** at each site. Failure to implement effective BMPs by October 1st will result in citations, Stop Work notices, suspension of business licenses, withholding of occupancies, and case referrals to the San Diego Regional Water Quality Control Board. If existing BMPs are inadequate, additional ones will be required by City inspectors.

Please call us at (951) 694-6411 if you have any questions regarding this information.

Sincerely,

Aldo Licitra

C. BEST MANAGEMENT PRACTICES (BMP) ASSESSMENT (Contd.):

		N/A	Yes	No	Comments
c.	Are inlets or flowlines free of landscape waste (tree or shrub trimmings, grass clippings, etc)?		/		
d.	Is landscape material (fertilizers, pesticides, etc) stored onsite/protected against runoff?		/		
C.3	**Materials and Wastes Areas**				
a.	Are all materials and activities protected from exposure to stormwater?			/	
b.	Are adequate trash containers provided? (covered, no leaks)		/		
	Are these areas free of litter and stains?		/		
c.	Are adequate recycling containers provided? (covered, no leaks)	/			
	Are these areas free of litter and stains?	/			
d.	Is service provided to prevent trash and recycling containers from overflowing?		/		
e.	Are adequate material storage areas provided (covered, secondary containment, limited access, properly labeled, free of stains)?			/	
f.	Is there an accessible spill response kit?	-3	/		
g.	Are reporting procedures readily available in the event of a release?		/		
h.	Are aboveground storage tanks (greater than 250 gallons) equipped with secondary containment?	/			
	If yes, is the secondary containment monitored for spills & leaks? How often?	/			
i.	Are loading and unloading areas free of litter and stains?		/		
j.	Are inlets, if any, protected/connected to santitary sewer?	/			
k.	Is run-on diverted from entering into these areas?	/			
C.4	**Equipment and Vehicle Areas**				
a.	Are common parking areas and driveways free of litter, stains, non-stormwater liquids?		/		
b.	Are vehicles and equipment stored indoors or under canopies?		/		
c.	Are vehicles and equipment maintained or repaired indoors?		/		
	If not, where?				
d.	Is runoff contained or treated at maintenance areas?		/		
e.	Is runoff contained or treated at fueling areas?	/			
f.	Is runoff contained or treated at wash areas?		/		
g.	Is run-on diverted from entering into these areas?		/		
C.5	**Other**				
a.	Is employee training provided / Information posted?		/		
b.	Specify the number of accidental releases within the past 12 months.	----	----	----	
c.	Does the facility have pollution prevention policies/procedures/plan?		/		
d.	Have all concerns been addressed?			/	If no, describe on Page 3.

NPDES Inspection For Commercial / Industrial Facilities

NPDES Program
43200 Business Park Drive, Temecula, CA.
(951) 694-6411
www.cityoftemecula.org

D. CORRECTIVE ACTIONS REQUIRED:

At 27598 ① Remove 5 gallon gas can from outdoor exposure - move inside flammable storage container

② Equipment at rear (Air compressor I think) needs a roof / cover.

At 27590 ① Store all vehicle washing soaps inside bermed area.

② Oil container storage area, has some containers just outside of secondary and roofed area. Remove those containers from outdoors.

For both: ① Sweep up all outdoor areas, to remove all landscaping wastes (dead leaves), and remove all old car body parts from behind trash enclosure area

— 60 days

E. CITY ACTION(S):

Explained Federal, State, City and County laws and ordinances prohibiting non-stormwater discharges.

Education information provided at time of inspection.

You can find BMPs at www.casqa.org (BMP Handbooks-Industrial and Commercial)

Information on General Industrial Permit can be found at www.waterboards.ca.gov/stormwtr/gen_indus.html

Verbal.

F. ACTIONS TAKEN:

[ ] No violations [✓] Verbal / Written Warning [ ] Citation Issued [ ] SDRWQCB Notified

Meetings are also available as streaming video on the city website at www.cityoftemecula.org.

City Wide Clean-Up for Temecula Residents Only

Saturday
October 20, 2007
8:00 AM to 2:00 PM

Location: Chaparral High School
27215 Nicolas Road
Temecula

Directions: From I15, travel East on Winchester Road, approximately 1.6 miles, to Nicolas Road

CR&R
RECYCLING AND REFUSE SERVICE

The City of Temecula and CR&R are sponsoring a program to help you dispose of household waste and large miscellaneous debris that can't be placed in your trash bins.

Proof of residency such as a California Driver's License, California ID Card, recent utility bill, or property tax statement is required.

How the Program Works

We will accept:

- Motor Oil
- Batteries (Lead/Acid Only)
- Anti-Freeze
- Large Bulky Items
- Green Waste
- Household Batteries
- Only 2 car batteries, per resident, per visit

Please do not bring:

- Chemicals
- Latex, Oil, or Water-based Paints
- Pesticides
- Empty Drums
- Solvents/Gasoline
- Other Hazardous Waste
- E-Waste
- Tires

National Preparedness Month

Get a kit, Make a plan, Be informed and Get involved!

The goal of the National Preparedness Month is to increase public awareness about the importance of preparing for emergencies and to encourage individuals to take action. Everyone should take some simple steps to make themselves and their families better prepared for emergencies including:

- Get a kit of emergency supplies that will allow you and your family to survive for at least seven days in the event an emergency happens. The kit should include basic items like water, food, battery-powered radio, flashlight and a first aid kit.
- Plan in advance what you and your family will do in an emergency. Your plan should include a communications plan and address sheltering-in-place and evacuation. Plan ahead and prepare for tomorrow!
- Learn more about different threats that could affect your community and appropriate responses to them.

For specific information on any of the above bullet points or for more information about the emergency plans that have been established in your area, go to www.ready.gov.

After preparing yourself and your family for possible emergencies, take the next step: get training in first aid and emergency response and get involved in preparing your community. Citizen Corps provides residents with opportunities to prepare, train, and support local emergency responders. For more information on the Temecula Citizens Corps or to get involved, visit www.tcctcam.org.

Winter Wonders for All

The winter season brings with it the anticipation of the holidays, a wonderful opportunity to spend time with family and friends and Temecula is a great place to start. Take a tour of the local vineyards, enjoy a late lunch or early dinner amongst the vines or at one of our many fine eateries in town, and end with an evening performance at the Old Town Temecula Community Theater. With our mild winter weather, it's never too cold outside to get out and enjoy your town!

For the "Foodie" in the Family

With winter brings the "good cheer" of the holiday party and also an abundant array of delicious drinks, snacks and sweets. Take "heart" in your party fare and bring a lighter-side dish to share.

Cranberry Apple Relish (from the makers of SPLENDA)

1 12 ounce bag Fresh Cranberries
1 cup Splenda No Calorie Sweetener, Granulated
1 cup water
3 Tablespoons Orange Juice Concentrate
1 medium Apple peeled, cored and diced
1/3 cup golden raisins

Directions:
Place cranberries, SPLENDA No Calorie Granulated Sweetener, water and orange juice concentrate in a medium saucepan. Bring to boil and boil 3-4 minutes until cranberries start to thicken and water is reduced by half. Remove from pan and place in a medium bowl. Cover and refrigerate 2 – 3 hours or overnight. Prior to serving add diced apples and half the raisins, stir and refrigerate until ready to serve. Just before serving sprinkle with remaining raisins. Serve chilled as an appetizer served over cream cheese with a basket of crackers, as a spread for piping hot rolls, as an accompaniment to roasted meats, poultry or ham, or a dessert topping for low calorie cheesecake.

For the Adventurer in the Family – Mountain Town Day Trip

Just a short drive from Temecula is the mountain town of Idyllwild, a quaint "high altitude" day trip destination. Idyllwild offers the "day tripper" an opportunity for outdoor adventure or a relaxing day strolling through the many mom and pop shops, the art galleries, or a stop for lunch at one of the many restaurants.

For the nature lover there is a visit to the Idyllwild Nature Center on Highway 243, followed by a stroll through the forest on one of the many marked trails. Further up the road on Highway 243 to the North of Idyllwild is Pine Cove and Lake Fulmor. Or for the true outdoorsman, travel northeast of town to Humber Park for hiking and rock climbing. And if there is snowfall this winter, Idyllwild is a great place to bring the family to build a snowman and toss the snowballs. For more information on Idyllwild visit www.idyllwild.com.

Lighting Up the Winter Night Sky

You will find twinkling holiday lights illuminating the sky all over Southern California during the winter holiday. Up and down the coast you can find many opportunities to enjoy a harborside Parade of Lights in boat harbors such as Huntington Beach, Newport Beach, Dana Point, San Diego and others. Del Mar Fair Grounds offers a drive-through exhibit of more than 400 lighted holiday displays. The Wild Animal Park opens up to their Annual Festival of Lights during the holiday season with larger-than-life lighted animal figures, toy soldiers, nutcrackers and more. Included are snow play areas, crafts and Santa. Surf the web for more information on these and other fun winter activities in Southern California.

Go "Green" For the Holidays

(from the "California Integrated Waste Management Board" website)
Give the gift of Green by decking the halls with less waste this year! It is estimated that between Thanksgiving and the New Year an extra million tons of waste are generated nationwide each week. In fact, 38,000 miles of ribbon alone is thrown out each year – enough to tie a bow around the Earth!

As part of its ongoing efforts to reach a Zero Waste California, the California Integrated Waste Management Board would like to help you cut the amount of trash you put out at the curb during the upcoming holiday season and is your one-stop site for all the simple steps you will need towards keeping holiday waste out of landfills. These pages are loaded with useful tips on reducing holiday waste. http://www.ciwmb.ca.gov/PublicEd/Holidays/ For more information, please call us at (916) 341-6000.

Winter Calendar of Events

December, 2007

Breakfast with Santa
Date: Saturday, December 08

CITY OF TEMECULA
Community Services Department

We're Here For You!

CSD Maintenance Division

The Maintenance Services Division is committed to ensuring an aesthetically pleasing and healthy City by providing safe, clean public areas. The Maintenance Services Program provides effective landscape and facility maintenance services to parks, slopes, medians, recreation facilities, and City Administration Offices. TCSD Maintenance Division also oversees the repair and maintenance of arterial and neighborhood streetlights. If you have a streetlight out in your neighborhood, you may call the Community Services Department at 694-6480, or use our web page at www.cityoftemecula.org

Household Batteries

Did you know that you can no longer throw your batteries into your trash bin? As of February 9, 2006, household batteries, such as ones in your children's toys, CD players and flash lights are now banned from the landfill. Household batteries have been labeled as "Universal Waste" which is subject to disposal restrictions.

What can you do with your batteries?

The City of Temecula has provided 6 permanent opportunities to properly dispose of your batteries at the following locations:

1. Lobby at City Hall located at 43200 Business Park Drive
2. Temecula Community Center (TCC) at 28816 Pujol Street
3. Mary Phillips Senior Center (MPSC) at 41845 6th Street
4. Community Recreation Center (CRC) 30875 Rancho Vista Road
5. Temecula Public Library located at 30600 Pauba Road
6. Grace Mellman Community Library located at 41000 County Center Drive

Lowe's Home Improvement Warehouse has offered to collect batteries from residents at no charge. Lowe's has put together a household battery collection program to benefit our community at both of their store locations in Temecula and Murrieta. The Temecula store is located at 40390 Winchester Road near Margarita Road. Lowe's Murrieta store is located at 24701 Madison Ave near Kalmia. For more information contact Janet Kitchel or Barbara Smith at 694-6480.

Riverside County also offers weekly antifreeze, vehicle and household batteries, oil (and filters), and paint (latex only) collections:
WHEN: Every NON-holiday Saturday (Subject to closure during inclement weather)
HOLIDAY CLOSURE DATES: Jan 19, Feb 16, May 24
TIME: 9:00am until 2:00pm
WHERE: 25315 Jefferson Avenue in Murrieta (North of Murrieta Hot Springs)
Maximum chemical load: 5 gallons or 50 lbs. (per trip). Some restrictions apply; contact Riverside County Waste Management at (951) 486-3200 for additional information.

Recycling

The City of Temecula strongly encourages all residents and businesses to recycle. Residents can call CR&R to request an extra recycling container at no charge. Discounted rates are provided for businesses that request a "recycled materials only" bin. For more information, contact CR&R at (800) 755-8112.

Bulky Item Pick-Up

Reminder! City of Temecula residents are allowed two FREE bulky item pick-ups annually (two items per visit). Please call CR&R at (800) 755-8112 and make arrangements in advance for the pick-up of these items.

Street Sweeping

Please be a good neighbor and remember not to park on residential streets on trash pick-up day and street sweeping day. Residential streets are swept the day after trash pick-up day. Keeping vehicles off the streets on these days allows efficient trash collection and street sweeping. Observing this simple request helps keep all of Temecula's neighborhoods looking their best!

Household Hazardous Waste (HHW)

To dispose of Household Hazardous Waste, Riverside County residents can attend a free "HHW" collection event:
WHEN: Jan 26, 2008 or May 10, 2008 (Subject to closure during inclement weather.)
TIME: 9:00am -2:00pm
WHERE: City Hall parking lot, 43200 Business Park Drive
Acceptable items include batteries (vehicle and household), household chemicals (bleach, ammonia, pesticides, motor oil, etc.) Miscellaneous waste (propane tanks, pool chemicals, etc..), paints, solvents, thinners, photo chemicals and non-empty aerosol cans, fluorescent lamps, thermostats, mercury-containing objects, e-waste (computers, monitors, televisions, etc.) and sharps. Maximum Chemical Load: 5 gallons or 50 lbs. (per trip). For more information, please contact Janet Kitchel or Barbara Smith in Community Services at 694-6480.

City Wide Clean Up

CR&R Inc. and the City of Temecula will be co-sponsoring the bi-annual City Wide Clean-up tentatively scheduled for one Saturday in the spring & fall. All City residents may dispose of e-waste, used motor oil, antifreeze, batteries, green waste as well as bulky items. This service is free to Temecula residents. (ID is required) The event will be held at Chaparral High School parking lot between 8am and 2pm. For more information, please contact Janet Kitchel or Barbara Smith in Community Services at 694-6480.

Holiday Schedule Trash Pick-Up

The holidays: New Year's Day, Memorial Day, 4th of July, Labor Day, Thanksgiving and Christmas. This is a reminder, that during the holidays, your trash collection will be delayed one day. For example, if your normal trash day is Monday, your trash will be collected on Tuesday, etc. If your normal trash day is Friday, your trash will be collected on Saturday. Holidays will also affect the street sweeping schedule. If the holiday occurs on Saturday or Sunday, your collection & street sweeping services may not change.

Christmas Tree Recycling

Curbside Christmas tree pick-up begins the first trash pick-up after Christmas and continues for two weeks. Please make sure that trees are free of all decorations and tinsel. Trees should be cut into 4 foot sections and not put in plastic bags.

Multi-Use Trails and Bikeways

- To report hazards on the trails or bike lanes please contact Public Works at 694-6411 or contact us on the City's website at www.cityoftemecula.org.
- If you have comments or suggestions that will help the City provide a better trail and/or bikeway system please contact Barbara Smith in Community Services at 694-6480 or contact can be made via the City's website at www.cityoftemecula.org.

- Batteries (vehicle and household)
- Household chemicals (bleach, ammonia, pesticides, motor oil, etc.)
- Miscellaneous waste (propane tanks, pool chemicals, etc.)
- Paints, solvents, thinners, photo chemicals and non-empty aerosol cans
- Fluorescent lamps, thermostats, mercury-containing objects

And

- E-waste (computers, monitors, televisions, etc.)
- Sharps (sharps containers will be provided at no charge while supplies last)

Did you know?

- Absolutely No Bulky Items Or Yard Waste
- This event is for Residential Use Only; business waste not accepted
- Container volume must not exceed 5 gallons
- Containers will not be returned

For more information, please contact Riverside County at
(951) 486-3200, (800) 304-2226 or go to www.rivcowm.org.

Household Hazardous Waste Collection Event

Saturday
January 19, 2008
9:00 am – 2:00 pm

This event is for Riverside County residents only and event will close during inclement weather or other hazardous conditions.

Free of charge to all Riverside County RESIDENTS

Location of Event: Temecula City Hall - Parking Lot
43200 Business Park Drive, Temecula, CA 92589

Acceptable Chemical Materials
limit of up to 5 gallons or 50 pounds per trip:

- Batteries (vehicle and household)
- Household chemicals (bleach, ammonia, pesticides, motor oil, etc.)
- Miscellaneous waste (propane tanks, pool chemicals, etc.)
- Paints, solvents, thinners, photo chemicals and non-empty aerosol cans
- Fluorescent lamps, thermostats, mercury-containing objects

And

- E-waste (computers, monitors, televisions, etc.)
- Sharps (sharps containers will be provided at no charge while supplies last)

REVISIONS TO THE SWMP

- SWMP Revisions List

Revisions to the SWMP since July 1, 2005

Table of Contents.

January 2006

- Modified format of Appendices.

Section 5.0 Municipal Facilities and Activities.

January 2006:

- Per RB meeting (Aug 31, 2005), included min. BMP source controls rather than generating P3s for each facility.
- Revised the inventory of City facilities to exclude non-jurisdictional facilities (i.e. police stations).

Section 7.0 Private Development Construction Activity.

January 2006:

- Per RB comment letter (Sep 28, 2005), included annual tally of inspections for every project.
- Included latest version of City's ESC standard notes.

Section 11.0 Monitoring Program.

January 2006:

- Included the City's dry-weather monitoring log.

April 2006:

- Revised the locations for the Pechanga Creek and Temecula Creek monitoring stations. The new locations are at the Rainbow Creek bridge and on Temecula creek, near the confluence with the Santa Margarita River.

Appendices.

January 2006

- Attachments were grouped into single appendices corresponding to their respective sections.
- Included city-facility source control table, dry-weather inspection log, annual tally of construction inspections, latest E&S notes, latest monthly construction inspection frequency sheet.

February 2006

- Updated the business inspection form (appendix D) to include complaint calls.

January 2008

- Updated the municipal facilities list (appendix B), updated the construction inspection list (appendix C), updated the business list (appendix D), and removed secondary sampling locations from the dry weather monitoring log (appendix E).

August 2008

- Revised Initial Checklist (Section 6.4.1) to emphasize 'Land Area for Development' in various categories as per the Permit text.

BOARD ORDER NO. R9-2004-001
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
SAN DIEGO REGION

I. EXECUTIVE SUMMARY

This Annual Progress Report describes the current status of the storm water management program for the City of Murrieta (City) for the Santa Margarita River Watershed. The reporting period is for fiscal years 2007 / 2008 beginning July 1, 2007 and ending June 30, 2008. Each section addresses individual programs that were implemented to comply with the requirements of the municipal separate storm sewer system permit (MS4 Permit) issued to the Santa Margarita Watershed Permittees by the San Diego Regional Water Quality Control board on July 14, 2004. The Permittees consist of the City of Murrieta, City of Temecula, County of Riverside, and Riverside County Flood Control and Water Conservation District.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER NO. R9-2004-001)

1) **Description of any amendments to the General Plan or the development project approval process:** None

2) **Number of grading permits issued:** 35

3) **Number of developments conditioned to meet SUSMP requirements:** Eight

4) **Attach one example of a development project that was conditioned to meet SUSMP requirements and a description of the required BMPs:** See Attachment 'A'

5) **Description of any updates to the environmental review process:** None

6) **Description and number of training efforts conducted during the reporting period (for staff, developers, contractors, etc.), including the number of staff trained.**

   a) **Training:**

Training	Training Description	Training Dates	Number of Attendees
New Development	Riv. Co. NPDES for Damp Implementation	12/5/07	12
		Total	**12**

   b) **Summarize the educational and outreach activities the Development Planning Component has conducted over the past year:** Provide WQMP check list to Applicants and require it to be completed for every project.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER NO. R9-2004-001), CONT.

7) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** The effectiveness is good. All projects are conditioned with WQMP's if applicable.

8) **Additional Comments/Information:**

Describe the major accomplishments of the Development Planning Component over the past year. (General Plan or ordinance revisions, procedure/approval process changes, SUSMP guidance material): there are no major accomplishments to make note of this year. There were no changes to the General Plan and the Environmental Review Process is the same.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Development Planning Component: review and update WQMP checklist

PLANNING COMMISSION
RESOLUTION NO. PLANNING COMMISSION-2007-10

A RESOLUTION OF THE PLANNING COMMISSION OF THE CITY OF MURRIETA ADOPTING A MITIGATED NEGATIVE DECLARATION AND APPROVING DEVELOPMENT PLAN 2006-1913 AND TENTATIVE PARCEL MAP 2006-1914 (TPM 34714) BY ELM-JEFFERSON LLC, TO CONSTRUCT AN OFFICE-INDUSTRIAL COMPLEX OF THREE 2-STORY OFFICE BUILDINGS AND TWO SINGLE-STORY INDUSTRIAL BUILDING TOTALING 160,807 SQUARE FEET ON A 10 ACRE PARCEL LOCATED ON THE EAST SIDE MADISON AVENUE, NORTH OF FIG STREET AND SOUTH OF GUAVA STREET, APN 910-160-006.

The Planning Commission of the City of Murrieta hereby resolves as follows:

SECTION 1. An application has been filed by ELM-JEFFERSON LLC (property owner), for the development an office-industrial complex comprised of three 2-story office and two single-story industrial buildings totaling 160,807 square feet and surface parking.

SECTION 2. The application was deemed complete under Section 16.48.040 of the Development Code on July 31, 2007, and is on file in the Planning Department.

SECTION 3. The project site is located in the Multiple Use – 2 (MU-2) zone, on the east side of Madison Avenue, north of Fig Street and south of Guava Street.

SECTION 4. An Initial Study was prepared for the project in accordance with Section 15070 with the Guidelines for the Implementation of California Environmental Quality Act (CEQA) [and the City's procedures for the implementation of CEQA], and a determination was made to prepare a Mitigated Negative Declaration to address aspects of the project that are within the scope of the General Plan EIR certified on June 21, 1994 and the Jefferson Avenue Business Corridor Master Development Plan environmental determination that were specifically unknown at that time.

SECTION 5. The Mitigated Negative Declaration was circulated for public review from September 6, 2007 to September 26, 2007. Comments received and responses to those comments are included with the Mitigated Negative Declaration.

SECTION 5. A public hearing was duly noticed for the Planning Commission meeting of September 26,, 2007, by mailing a notice to property owners within 500 feet of the perimeter of the property on September 5, 2007, publishing the notice in "The Californian" newspaper on September 6, 2007, and posting the site on September 10, 2007.

SECTION 6. A public hearing for this project was held by the Planning Commission on September 26, 2007, at which time reports, recommendations, and testimony were considered.

SECTION 7. Planning Commission of the City of Murrieta considered the written reports and materials submitted, public testimony given, and such other facts as are of record in these proceedings and makes following findings with regard to Development Plan DP0-2006-1913 in accordance with Section 16.56.040 of the Development Code:

1. The proposed use is allowed within the subject zoning district and complies with all applicable provisions of this development code.

   FACTS: The proposed office and industrial uses are permitted uses in the Multiple Use - 2 (MU-2) zone.

2. The proposed use would be consistent with the objectives, policies, general land uses, and programs of the general plan and any applicable specific plan.

   FACTS: The proposed office and industrial uses are consistent with Multiple Use land use designation of the General Plan. The proposed project meet the policies LU-1.3a, LU-1.3f and LU-1.3g, which allows a mixture of uses, with the MU-2 Area designated for freeway serving use, and prohibits residential development and the MU-2 Area.

3. The approval of the development plan permit and tentative parcel map for the proposed use is in compliance with the requirements of the California Environmental Quality Act (CEQA) and there would be no potentially significant negative impacts upon environmental quality and natural resources that could not be properly mitigated and monitored.

   FACTS: An Initial Study was prepared and a determination was made to prepare a Mitigated Negative Declaration which was circulated for review in compliance with the City's adopted guidelines for the implementation of the California Environmental Quality Act (CEQA). The Planning Commission has been presented with and has reviewed and considered the Mitigated Negative Declaration along with proposed mitigation measures.

4. The location, size, design, and operating characteristics of the proposed use would be compatible with existing land uses within the general area in which the proposed use is to be located.

   FACTS: The location, size, design, and operating characteristics of the proposed use would be compatible with existing land uses within the general area in which it is to be located in that the site is in the vicinity of I-15, and in the Jefferson Avenue Business Corridor, a Master Development Plan (MDP) for infrastructure improvements. The nature of the office and light industrial uses proposed also would be compatible with the nearby existing and proposed uses. The site is adjacent to the U.S. Border Patrol (Homeland Security) station.

5. The subject site is physically suitable for the type and density/intensity of the use being proposed.

   FACTS: The subject can accommodate the proposed three 2-story office building and two single-story industrial buildings at the permitted Floor Area Ratio for the MU-2 zone, and meet the minimum required parking in a surface lot. The site was designed so that each of the four parcels in the proposed subdivision will meet the parking and landscaping requirement for the MU-2 zone

6. There are adequate provisions for public access, water, sanitation, and public utilities and services to ensure that the proposed use would not be detrimental to the public convenience, health, safety, or general welfare.

FACTS: The proposed project will be subject to conditions of approval by all affected public agencies that will require the satisfactory construction and installation of all water, sewer, utilities, circulation, and flood control improvements to support the public convenience, health, safety, and general welfare. Development of the site will require improvements to Madison Avenue and to drainage for this area.

7. The proposed project is consistent with the Multi-Species Habitat Conservation Plan (MSHCP), which was adopted by the City of Murrieta City Council with Ordinance No. 289-03 on October 7, 2003.

   FACTS: The proposed project is not located in a criteria cell of the Multiple Species Habitat Conservation area. However, a survey for the burrowing owl was required and completed, which found no habitat or species present on the site.

SECTION 8. Planning Commission of the City of Murrieta considered the written reports and materials submitted, public testimony given, and such other facts as are of record in these proceedings and makes the following findings with regard to Tentative Parcel Map 2006-1914 (TPM 34714) in accordance with Section 16.94.080 of the Development Code:

1. The proposed Tentative Parcel Map is for a four-lot subdivision of a parcel. The map is consistent with General Plan, the Jefferson Avenue Business Corridor Master Development Plan, the Murrieta Municipal Code and the Subdivision Map Act and complies with all applicable requirements of state law and local ordinances.

   FACTS: The project is consistent with the Murrieta Municipal Code, Jefferson Avenue Business Corridor Plan, and the Subdivision Map Act related to land use, zoning, parcel size and width, landscaping, on-site parking, setbacks, and access.

2. The site of the proposed Tentative Parcel Map is physically suitable for the type and density of the proposed development, is in harmony in scale, height, bulk, density and coverage, and creates a compatible physical relationship to the surrounding properties for which this area has been planned.

   FACTS: The site is vacant parcel adjacent to vacant parcels in the south, east and west. Adjacent to the north of the site is the U.S. Border Patrol Station (Homeland Security). The 10 acre property will take access from Madison Avenue and Jordan Street. All necessary service facilities are available to service the site. Drainage, landscaping, parking and other related issues were addressed during the development review process by City staff and conditioned to comply with local, state and federal regulations.

3 The proposed Tentative Parcel Map is in compliance with the provisions of the California Environmental Quality Act.

   FACTS: An Initial Study was prepared and a determination was made to prepare a Mitigated Negative Declaration which was circulated for review in compliance with the City's adopted guidelines for the implementation of the California Environmental Quality Act (CEQA). The Planning Commission has been presented with, reviewed and considered the Mitigated Negative Declaration along with proposed mitigation measures.

SECTION 9. Planning Commission of the City of Murrieta hereby adopts the Mitigated Negative Declaration prepared for the proposed project including the recommended mitigation measures as shown in the document.

SECTION 10. Pursuant to the above findings, the Planning Commission of the City of Murrieta hereby approves Development Plan DPO-006-1913 and Tentative Parcel Map TPM-006-1914 subject to the following conditions:

DRAFT CONDITIONS OF APPROVAL
DEVELOPMENT PLAN DPO-006-1913
TENTATIVE PARCEL MAP TPM-006-1014

PLANNING DEPARTMENT

General:

1. The applicant shall defend (with attorneys approved by the City), indemnify and hold harmless the City of Murrieta, its agents, officers, and employees from any claims, damages, action, or proceeding against the City or its agents, officers, or employees to attack, set aside, void, or annul an approval of the City, its advisory agencies, appeal boards, or legislative body concerning this approval. The City will promptly notify the permittee of any such claim, action, or proceeding against the City and will cooperate fully in the defense.

2. Any fees due the City of Murrieta for processing this project shall be paid to the City within thirty (30) calendar days of final action by the approval authority. Failure to pay such outstanding fees within the time specified shall invalidate any approval or conditional approval granted. No permits, site work, or other actions authorized by this action shall be processed by the City, nor permitted, authorized or commenced until all outstanding fees are paid to the City.

3. Pursuant to Section 711.4 of the State of California Fish and Game Code, the applicant is required to pay a $64.00 handling fee and $1,800 certification fee. Said fees shall be paid to the Clerk/Recorder of the County of Riverside at the time the Notice of Determination is filed pursuant to Section 21152 of the Public Resources Code. If this fee is not paid, the approval of this project shall not be operative, vested, or final. In order to comply with State mandated time lines for filing of a Notice of Determination, the above fee must be delivered to the Planning Department within **two (2)** working days after the date of final approval.

4. The project approval is for a Development Plan for Elm-Jefferson LLC, to construct three 2-story office and two single-story industrial buildings totaling 160,807 square feet within the Multiple Use - 3 (MU-3) zone and all associated parking, access, and landscaping. All construction shall be in substantial conformance with approved plans, elevations and floor plans dated August 7, 2007 and the material and color board dated August 7, 2007. Any proposed change substantially different than the approved plan shall require an amendment to this approval in accordance with the Development Code.

5. The applicant shall pay all applicable mitigation fees or provide proof that all required fees have been paid in accordance with City policies and ordinances in effect at the time of permit issuance.

6. Tentative Parcel Map No. 34714 shall record within two (2) years from the date of the approval or it shall become null and void unless an extension of time is granted pursuant to City ordinance.

7. The project approval is for a four parcel subdivision that shall be in substantial conformance with the approved map (TPM 34714) dated August 7, 2007. Any proposed changes substantially different from this approval shall require an amendment to this approval.

8. The use of signs, pennants, banners, streamers, flags, or similar attention getting devices is prohibited, unless specifically approved by the Planning Division.

9. All commercial lots shall meet the Development Standards required by the Development Code for the Multiple Use – 2 (MU-2) zone.

10. Fencing/wall requirements shall meet the Development Standards required by the Development Code for the Multiple Use -2 (MU-2) zone, and are subject to review and approval by the Building & Safety and Planning Departments.

11. If during initial ground disturbance activities paleontological resources are encountered a qualified paleontological monitor shall be retained, and have the authority if necessary, to stop, redirect grading activities, and evaluate the significance of any paleontological resources discovered on the property. If significant paleontological resources are encountered, adequate funding shall be provided to collect, curate and report on these resources. A report shall be submitted to the City of Murrieta within 60 days from the completion of grading.

    The applicant shall contact the Pechanga Band of Luiseno Indians and work with them to develop a management plan for any resources that may be unearthed, and to afford the Band an opportunity to monitor ground disturbing activities and participate in the decisions regarding collection and curation of any such resources.

12. The applicant shall afford the Pechanga Band of Luiseno Mission Indians the opportunity to enter into an agreement to monitor ground-disturbing activities, and address the appropriate treatment and disposition of any cultural resources, and/or human remains found during such excavations.

13. If any cultural resources are encountered on the project site during grading or construction activities, a qualified archaeologist shall be consulted so that the significance of the resources can be evaluated. If resources are encountered a letter/report shall be completed by the retained archaeologist stating/identifying in detail the cultural resource find(s), and its/their final disposition. A copy of that letter/report shall be submitted to the City of Murrieta Planning Division within 60 days and upon review and approval shall be retained in the project file.

14. Prior to the execution of purchase and or tenant agreements being completed it shall be disclosed to the perspective tenant(s) the amount of parking provided for each unit and that City parking requirements could significantly restrict the use proposed. Additionally, the disclosure shall advise tenants to confirm with city requirements for the any use proposed. Any use requiring additional parking above that provided shall not be permitted.

15. No signs are approved pursuant to this project approval. Prior to the installation of any on-site advertising or directional signs, a signing plan shall be submitted to and approved by the Planning Department pursuant to the requirements of Section 16.38 of the City's Development Code.

16. No outdoor advertising display, sign or billboard (not including on-site advertising or directional signs) shall be constructed or maintained within the property subject to this approval.

17. The applicant or their successor-in-interest shall comply with the standards of the Jefferson Avenue Business Corridor Master Development Plan, or as approved by the City Engineer.

18. Drought tolerant and native plant species shall be preferred over non-drought tolerant and non-native species. However, the quantity and extent of those species shall depend on the project's climatic zones. Alternative types of low volume irrigation are encouraged to be used in order to conserve water.

19. In the event the development permitted under this permit, a) is found to be in violation of the terms and conditions of this permit, b) is found to have been obtained by fraud or perjured testimony, or c) is found to be detrimental to the public health, safety or general welfare, or is a public nuisance, this permit shall be subject to the revocation procedures in Section 16.82 of the Development Code.

20. Outside storage is not approved/permitted as part of this project.

21. The City is located within the Mt. Palomar Special Lighting Area, as defined in Section 16.18.110 of the Development Code, low pressure sodium vapor lighting or overhead high pressure sodium vapor lighting with shields or cut off luminaries, shall be utilized.

22. The permittee shall comply with all of the applicable requirements of the National Pollution Discharge Elimination System (NPDES) and shall conform to NPDES Best Management Practices for Stormwater Pollution Prevention Plans during the life of this permit.

23. This approval shall be used within two (2) years of approval date; otherwise, it shall become null and void and of no effect whatsoever. By use is meant the beginning of substantial construction contemplated by this approval within a two (2) year period which is thereafter diligently pursued to completion or to the actual occupancy of existing buildings or land under the terms of the authorized use. Prior to the expiration of the two-year period, the permittee may request a one (1) year extension of time request in which to use this Development plan. A maximum of three one-year extensions of time requests shall be permitted. Should the time period established by any of the extension of time requests lapse, or should all three on-year extensions be obtained and no substantial construction or use of this plot plan be initiated within five

(5) years of the effective date of the issuance of this Development plan, this Development plan shall become null and void.

24. All of the Conditions of Approval for DPO-006-1913 and TPM-006-1914 shall be shown on Building Plans submitted to the City Building & Safety Department for plan check.

Design and Lighting:

25. All mechanical equipment and vents (ground or rooftop) shall be screened from public view. Screening method and location shall be reviewed and approved by the Planning Department.

26. Prior to building permit issuance, the applicant shall screen ALL roof top equipment through the incorporation of a mansard or other full roof element to screen equipment 100%. A sight line diagram shall be provided in the building plans. In addition, details including the height of the roof-top equipment, roof deck height, and height of the parapet must be included in the plans prior to building permit issuance.

27. An interior room, with direct exterior access, shall be provided for the placement of main utility electrical switch gear distribution and roof access ladders.

28. Roof gutters and downspouts are not permitted on the exterior of the building unless satisfactorily integrated into the architecture as determined by the Planning Department prior to building permit issuance.

29. The City is located within the Mt. Palomar Special Lighting Area, as defined in Section 16.18.110 of the Development Code, low pressure sodium vapor lighting or overhead high pressure sodium vapor lighting with shields or cut off luminaries, shall be utilized.

30. All lighting fixtures shall be designed with shielding or cut-off fixtures to project in a downward manner to minimize glare and to not shine directly upon adjoining property or public rights-of-way. A detailed lighting study (photometric) shall be provided prior to building permit issuance to demonstrate compliance with this condition.

31. All parking lot lights and other outdoor lighting shall be shown on electrical plans submitted to the Department of Building and Safety for plan check approval and shall comply with the requirements of Development Code Section 16.18.100-Lighting and 16.18.110-Mt Palomar Lighting Standards.

32. All trash bins shall be stored in approved enclosures and screened in compliance with Sections 16.18.120 and 16.18.150 of the Murrieta Development Code. The location of the enclosures must be shown on the precise grade plan and shall provide a minimum of 48 square feet of refuse storage area (24 square feet for refuse and 24 for recycling).

33. Any retaining walls must adhere to the Development Code Sections 16.18.140, D., 4. (b) and 16.22.040. No retaining wall may exceed six (6) feet in height and any proposed wall over six (6) feet in height is subject to approval by the Planning Director.

Parking:

34. Parking is determined based on Development Code Section 16.34 which requires 1 space per 250 square feet for the first 5,000 square feet of gross floor area and 1 space per 350 square feet thereafter for Professional Offices. A minimum of 368 parking spaces is required. The project is required to provide 394 spaces as shown on the approved site plan

35. All parking shall be designed and improved pursuant to Section 16.34 of the Murrieta Development Code, and shall be in conformance with the approved plans.

36. A minimum of eighteen (18) bicycle rack spaces shall be provided in a convenient location to facilitate bicycle access to the project area a shown on approved plans. The bicycle racks shall be shown on project landscaping and improvement plans submitted for Planning Department approval, and shall be installed in accordance with those plans.

37. Parking spaces(s) for persons with disabilities shall be provided as shown on APPROVED PLANS. Each parking space reserved for persons with disabilities shall: (a) be identified by a permanently affixed reflective sign constructed of porcelain on steel, beaded text or equal, displaying the International Symbol of Accessibility; (b) not be smaller than 70 square inches in area; (c) be centered at the interior end of the parking space at a minimum height of 80 inches from the bottom of the sign to the parking space finished grade; and (d) have a surface identification sign duplicating the symbol of the accessibility in blue paint of at least 3 square feet in size.

38. A sign shall be posted in a conspicuous place at each entrance to the off-street parking area, not less than 17 inches by 22 inches, clearly and conspicuously stating the language provided by the Building and Safety Department regarding accessible parking.

39. A minimum of one (1) loading space shall be provided in accordance with Section 16.34.100 of the Development Code as shown on the approved plans. The loading space shall be surfaced with six (6) inches of concrete over a suitable base and shall not be less than 15 feet wide by 25 feet long, with 14 feet vertical clearance.

40. No compact parking spaces are permitted. Any parking spaces shown as compact must be revised to meet the current parking space requirements.

Proposed Uses:

41. This project is designed for office and industrial uses, therefore, no commercial uses will be allowed. In addition, the project was designed at a parking ratio of 1 space per 250 sq. ft. for the first 5,000 sq. ft. and 1 space per 350 sq. ft. thereafter, therefore, any uses that exceed that parking requirements shall not be permitted, e.g. medical offices, restaurants, etc.

42. MITIGATIONS MEASURES:

LAND USE

MITIGATION MEASURE 1-1

Prior to the issuance of a rough grading permit, a pre-construct survey for the burrowing owl shall be prepared by a qualified biologist on behalf of the developer. If burrowing owls are found on the site, the developer shall avoid or mitigate for this species according to the established protocols for the Multiple Species Habitat Conservation Plan.

UTILITIES

MITIGATION MEASURE 3-1

Prior to issuance of a grading permit developer shall submit a drainage report which demonstrates that the following performance standard will be fulfilled: the incremental increase in surface runoff generated on the site will be captured onsite and the volume of storm water released during storm events will not increase by an amount that could cause significant flood or erosion hazards to or exceed the capacity of downstream channels. This report shall be reviewed and approved by the City of Murrieta Public Works Department.

MITIGATION MEASURE 3-2

Prior to the approval of a grading permit, the developer shall demonstrate to the satisfaction of the Director of Public Works that onsite detention facilities are sufficient to detain nuisance flows during a 10-year, 24-hour storm event.

CIRCULATION

MITIGATION MEASURE 5-1

Prior to the issuance of a building permit, the developer shall pay the project fair share of future traffic signal improvements for the intersections of Murrieta Hot Springs Road and Madison Avenue.

MITIGATION MEASURE 5-2

Prior to the issuance of a building permit, the developer shall pay the applicable Transportation Uniform Mitigation Fee (TUMF).

BIOLOGICAL

MITIGATION MEASURE 7–1

Prior to the issuance of a grading permit project is required to pay the MSHCP mitigation fees.

MITIGATION MEASURE 7–2

Prior to the issuance of a rough grading permit, a pre-construct survey for the burrowing owl shall be prepared by a qualified biologist on behalf of the developer. If burrowing owls are found on the site, the developer shall avoid or mitigate for this species according to the established protocols for the Multiple Species Habitat Conservation Plan.

MITIGATION MEASURE 7–3

For all bird species, vegetation removal shall be conducted outside the avian breeding season (March-July) to avoid impacts to nesting birds. If vegetation clearance is conducted during the breeding season, a pre-construction bird survey will be required less than 7-days from vegetation disturbance activities. If passerine birds are found to be nesting or there is evidence of nesting behavior inside or within 250 feet of the impact area, applicant shall provide a 250-foot buffer around the nest where no vegetation disturbance would be permitted; for raptors the buffer would be increased to 500 feet and provide for a qualified biologist to closely monitor the nest until it is determined that the nest is no longer active, at which time vegetation removal could continue.

HAZARDS

MITIGATION MEASURE 13-1

Applicant shall remediate all spills or leakage of petroleum products during construction activities in compliance with applicable state and local regulations regarding cleanup and disposal of the contaminant released. The contaminated waste shall be collected and disposed of at an appropriately licensed disposal or treatment facility. This measure will be incorporated into the SWPPP prepared for the project development.

NOISE

MITIGATION MEASURE 14-1

All exterior construction activities shall be limited to the hours between 7 a.m. to 7 p.m. from Monday through Saturday. Construction shall not be allowed on Sunday or holidays, except during an emergency as identified in the City's Development Code.

MITIGATION MEASURE 14-2

The applicant shall respond to any noise complaints received for this project by measuring noise levels at the affected receptor. If the noise level exceeds an Ldn of 65 dBA exterior or an Ldn of 45 dBA interior at the receptor, the applicant will implement adequate measures to reduce noise levels to the greatest extent feasible, including portable noise barriers or scheduling specific construction activities to avoid conflict with adjacent sensitive receptors.

MITIGATION MEASURE 14-3

During construction, the contractor shall ensure all construction equipment is equipped with appropriate noise attenuation devices. (e.g. mufflers)

AIR QUALITY

MITIGATION MEASURE 15-1

The applicant shall require construction contractors to apply water to the disturbed portions of the project site at least three times per day. On days where wind speeds are sufficient to transport fugitive dust beyond the working area boundary, the contractors shall increase watering to the point that fugitive dust no longer leaves the property (typically a moisture content of 12%), and/or the contractor will terminate grading and loading operations.

MITIGATION MEASURE 15-2

The applicant shall comply with regional rules such as SCAQMD Rules 402, 403 and 404, which would assist in reducing short-term air pollutant emissions. These dust suppression techniques are summarized below.

a. **Portions of the construction site to remain inactive longer than a period of three months will be seeded and watered until grass cover is grown or otherwise stabilized in a manner acceptable to the City.**

b. **All onsite roads will be paved as soon as feasible or watered periodically or chemically stabilized.**

c. **All material transported offsite will be either sufficiently watered or securely covered to prevent excessive amounts of dust.**

d. **The area disturbed by clearing, grading, earth moving, or excavation operations will be minimized at all times.**

e. **Where vehicles leave the construction site and enter adjacent public streets, the streets will be swept daily or washed down at the end of the work day to remove soil tracked onto the paved surface.**

MITIGATION MEASURE 15-3

All material stockpiles subject to wind erosion during construction activities, which will not be utilized within three days, shall be covered with plastic, an alternative cover deemed equivalent to plastic, or sprayed with a nontoxic chemical stabilizer.

MITIGATION MEASURE 15-4

All vehicles on the construction site shall travel at speeds less than 15 miles per hour. This will be enforced by including this requirement in the construction contract between the City and the contracted construction company with penalty clauses for violation of this speed limit.

MITIGATION MEASURE 15-5

The contractor shall establish a car-pool program for construction employees which will include incentives with the goal of achieving a 1.5 persons per vehicle ridership for this construction project.

MITIGATION MEASURE 15-6

All engines will be properly operated and maintained. Proper tune for all diesel-powered vehicles and equipment in the South Coast Air Basin requires that fuel injection timing be retarded 2 degrees from the manufacturer's recommendation and use high pressure injectors.

MITIGATION MEASURE 15-7

All diesel-powered vehicles shall be turned off when not in use for more than 30 minutes and gasoline-powered equipment will be turned off when not in use for more than 5 minutes.

MITIGATION MEASURE 15-8

The construction contractor shall utilize electric or natural gas powered construction equipment in lieu of gasoline or diesel powered engines, where feasible and where economically competitive.

MITIGATION MEASURE 15-9

The project shall use power poles for electricity rather than temporary diesel or gasoline generators except in the event of emergency.

MITIGATION MEASURE 15-10

Low VOC coatings shall be used on all structures.

MITIGATION MEASURE 15-11

Low VOC asphalt shall be used on paved portions of the site.

Prior to recordation of the final map:

43. Developer(s) shall prepare a statement to be provided to the potential purchases of each Subdivided lot, and included in escrow for the sale thereof, indication the General Plan and zone designations for all properties abutting the Parcel Map boundaries, with direction to contact the City of Murrieta concerning questions concerning potential uses of undeveloped property and indicating that zoning may be subject to future change. The form of the letter shall be reviewed and approved by the City of Murrieta as a condition of the Parcel Map approval.

44. Any delinquent property taxes shall be paid prior to the recordation of the final map.

Prior to the issuance of each grading permit:

45. The applicant shall comply with the provisions of any existing City ordinance established as a mitigation measure for the Stephens Kangaroo Rat.

46. The project site shall be surveyed for burrowing owls by a qualified biologist no more than 30 days prior to the commencement of ground disturbance. In the event those burrowing owls inhabit the site and initiated nesting in a burrow, burrows will be avoided and protected in place until such time as the nesting home has fledged. Upon verification by a qualified biologist that owls are no longer nesting on the site the biologist will excavate and collapse the burrows.

47. Grading plans shall be reviewed by the Planning Department for compliance with the approved development plan. Grading plan check fee is an actual cost fee billed at $70.00 per hour. A deposit of $140.00 shall be paid at the time grading plans are submitted for plan check. Applicant is aware that the plan check fee is subject to change and that the fee in effect at the time of plan check submittal shall be applicable.

Prior to issuance of a building permit:

48. The proposed project lies within an area subject to an area wide Transportation Uniform Mitigation Fee (TUMF). This project shall be subject to the payment of these fees prior to the issuance of building permits unless exempted by ordinance. The fees shall be subject to the provisions of the enabling ordinance and based upon the fee schedule in effect at the time of building permit issuance.

49. The local postal delivery office shall review and approve all proposed postal delivery arrangements, including location and access to all mailboxes. The applicant shall provide the City with evidence of postal service approval.

50. If signs are proposed, a separate exhibit and appropriate fees must be submitted for review and approval by the Planning and Building Departments prior to installation.

51. All lighting shall comply with the City's lighting ordinance Section 16.18.110-Mount Palomar Lighting Standards.

52. The applicant shall obtain clearance from the Planning Department verifying that all pertinent conditions of the Tentative Map have been satisfied for the development in question.

53. Applicant shall obtain waste management approval of all solid waste pick-ups for the project.

54. All landscape and irrigation plans shall be consistent with Title 16.28 of the Murrieta Municipal Code.

55. Prior to building permit issuance the applicant shall obtain approval of addressing from the Planning Department.

LANDSCAPE ARCHITECT

Prior to the issuance of building permits:

56. Three copies of construction landscaping plans shall be submitted to the Planning Division and approved. A licensed Landscape Architect shall prepare the plans.

57. The above-described plans shall be in substantial conformance with the plans as approved by the City Landscape Architect, City Administrative Staff, Planning Commission and/or City Council. Notes, details, and specifications shall be included.

58. All landscape and irrigation plans shall be consistent with Title 16.28 of the Murrieta Municipal Code and the guide, "Planting Guide for Jefferson Avenue Business Corridor Master Plan".

59. All parking lot planting areas, curbing, irrigation, and bumper overhang shall be consistent with Title 16.34.070-H. of the Murrieta Municipal Code.

60. Landscape plans shall be drawn at a scale of 20 feet equal to 1 foot or larger. The City Landscape Architect will not accept plans drawn in 30 feet scale or smaller without prior approval.

61. No light fixture shall be designed for any location in a planting area, which would make it necessary to eliminate a tree. **All overhead light fixtures shall be identified on the grading or site plan prior to approval of the site plan.**

62. Plant materials shall be installed from container sizes consistent with Murrieta Municipal Code, page III-79, Table 3-5, Minimum Required Mix of Plant Materials and in accordance with the plant palette listed in the guide, "Planting Guide For Jefferson Avenue Business Corridor Master Plan."

63. All ground covers shall be installed from living plant materials. Spacing shall be such that 100% coverage is achieved within 2 years of the installation.

64. All planter areas shall be a minimum of 5 feet wide excluding curbs and required concrete strip adjacent to parking spaces (12" wide by 4" deep plus 6" wide curb or 12" wide by 12" deep integrally poured modified curb).

65. Permanent, evergreen shrubs capable of mature growth to between 3 feet and 4 feet high shall be designed to screen the parking spaces from public view.

66. All trash enclosures shall be covered with architectural treatment to blend with the buildings as approved by the Planning Division. The walls of the trash enclosure shall have a minimum 5-foot wide planting area. Flowering vines shall be trained on to the walls. Trees, shrubs and ground covers shall be included.

67. Planting areas adjacent to streets shall have trees provided at the rate of one for each 20 lineal feet of landscaped area. The street trees along Madison Avenue shall be informal groupings of *Arbutus 'Marina'* and *Lagerstroemia indica 'Biloxi'*.

68. Mature specimen trees in 36-inch and 48-inch boxes shall be supplied in sufficient quantity to provide variety and emphasis at the driveways and other main focal areas.

69. Above ground utility locations shall be approved with prior permission of the Planning Division. Building backflow prevention units shall be located in shrub areas outside of the City right-of-way. All double detector check and backflow assemblies shall be located in shrub beds clearly identified on the grading plan prior to approval of the grading plan. **On the grading plan it shall be noted that the detector check/backflow devices shall be painted a neutral/earth tone color and any pipes extending above ground shall be finished and painted to match the device.** The detector check shall be fully screened with approved shrubs. **The detector check and post indicator valves shall be located at least 10 feet away from any driveway.**

70. No planting area shall contain less than 5 feet of planting area. Planting areas shall be free of encroachment by wall footings, curbs, parking overhang and other obstructions. **No planting area shall be bisected by a handicap ramp that would make any planting area less than 5 feet in width.**

71. Canopy shade trees shall be located directly adjacent to all parking spaces at no farther than 25 feet on center in continuous planters or 36 feet on center in planter islands to provide the required percentage of parking spaces shaded at 15 years growth. **Shade trees shall not be located within 4 feet of any building.**

72. No building roof drain shall daylight into a planter area or splash block. Roof drains located at planter areas shall be adapted to convey excess water through the planter via drain pipes, which daylight through the curb into the adjacent gutter.

73. Landscaping, including approved dense plantings of evergreen shrubs capable of growth to at least 6 feet high, or as directed by the City of Murrieta Landscape Architect, shall be designed and installed in the planting area to screen the side and rear property walls adjacent to parking spaces to the satisfaction of the City Landscape Architect within 3 years.

74. Landscaping shall be incorporated and planned as an integral part of the overall project design around the building. Landscaping should not interfere with pedestrian or handicap accessibility. Pedestrian and handicap accessibility shall be designed not to interfere with landscaping required around the building. **Handicap ramps shall not be placed in planter areas, if it reduces the planted area to less than 5 feet wide at any point.**

75. All trees shall be double staked with rubber type ties nailed to the lodge pole stakes in at least two vertical locations.

76. A weather-based irrigation controller that measures evapo-transpiration shall be provided. Drip irrigation is required in all shrub areas and on all slope areas, including in the bio-swale.

77. A rain shut off device shall be installed connected with the irrigation controller.

78. All plantings shall be hydro-zoned according to WUCOLS III or the "City of Murrieta Guide To Trees, Shrubs, and Ground Covers." The maximum applied water allowance shall not exceed 25 percent of the local annual mean precipitation.

79. Landscaping shall be provided for lot 1 at 20.6%, for lot 2 at 15.8%, for lot 3 at 19.34% and for lot 4 at 16.1%.

80. No eucalyptus trees and other plant material that could freeze or use excessive water are allowed.

81. At least 5 feet of level planting area shall be provided along Madison Avenue between the parking spaces and the top of the bio-swale slope. At least 5 feet of level planting area shall be provided along Madison Avenue between the right of way and the top of the bio-swale slope.

82. All bio-swales shall be noted as "vegetated". No grass swales will be accepted. Provide at least 18 inches of soil over gravel in the bio-swales to support plant root growth.

83. All pre-plant and installation fertilizers shall be derived from organic sources of higher plant forms.

Prior to Construction:

84. The City Landscape Architect shall meet with the job site superintendent and the landscape contractor for a pre-job meeting. A copy of the soil fertility recommendations using organic fertilizer and soil amendments only shall be presented prior to the meeting. No landscaping shall occur prior to the meeting.

Prior to the issuance of occupancy permits:

85. Performance securities, in the amount determined by the City to guarantee the adequate maintenance of the landscaping materials and irrigation system in accordance with the approved plans for a period of one (1) year from the date of final clearance of the installed landscaping by the City, shall be posted with the Planning Department. Acceptable forms of security shall be limited to cash deposit, cash bonds, or irrevocable letters of credit. The performance securities shall be released one (1) year after final clearance of the installed landscaping by the City, upon written request by the owner, if the landscaping has been adequately maintained. A deposit to cover re-inspection of the landscape, at the current City rate shall be posted with the Planning Department prior to re-inspection for maintenance bond release.

86. All required landscaping and irrigation systems shall be installed in a condition acceptable to the City. The owner's Landscape Architect shall provide inspection of the landscaping. The owner's Landscape Architect shall provide the City with a Certificate of Compliance stating that the landscaping was installed per the approved plans. The City will review the Certificate of Compliance and conduct inspections to ensure that the landscape installation is in compliance with the approved landscape plans.

ENGINEERING CONDITIONS FOR DPO-006-1913:

The Engineering Division has completed our review of the project and provides the following comments and conditions:

GENERAL CONDITIONS

87. The applicant shall pay all applicable Development Mitigation Impact Fees, including but not limited to:

    A. Development Impact Fees, Ordinance 196-98 payable prior to issuance of building permit.

    B. Kangaroo Rat Fee, payable at issuance of grading permit.

    C. Riverside County Area Drainage Fees, payable at issuance of grading permit.

    D. Transportation Uniform Mitigation Fee (TUMF), payable at building permit issuance.

    E. MSHCP Fee, payable prior to issuance of a grading permit.

    Fees shall be based upon Office or Industrial Development Rates depending on building.

88. Prior to any work being performed in the public right of way, fees shall be paid and an encroachment permit shall be obtained from the Engineering Department. The applicant shall apply for an encroachment permit from the City for utility trenching, utility connection or any other encroachment onto public right-of-way. The applicant shall be responsible for the associated costs and arrangements with each public utility.

89. Prior to the issuance of building permits, unless other timing is indicated, the applicant shall complete all street improvement, signing, striping, and signal plans (if required) in conformance with all applicable City ordinances and standards, submit and obtain approval, post securities and execute agreements. Prior to occupancy, unless other timing is indicated, all public improvements shall be installed in accordance with all applicable City ordinances.

90. All construction equipment shall be properly maintained and tuned to reduce emissions.

91. Existing easements underlying proposed improvements shall either be vacated with the approval of the easement grantee or permission shall be obtained from said grantee for development within the easements.

GRADING

92. A project-specific water quality management plan (WQMP) shall be submitted to the Engineering Department for approval with the grading plan check application. The WQMP shall be approved by the Engineering Department prior to the issuance of a grading permit. The post-construction best management practices (BMPs) outlined in the approved project-specific WQMP shall be incorporated in the grading plans. A copy of the approved project-specific WQMP shall be provided to the Engineering Department and a copy shall be maintained by the applicant and kept on-site.

At the completion of the project, the applicant shall enter into a maintenance agreement for the post-construction BMPs. This agreement shall be based on the as-built WQMP BMPs and shall be recorded.

A copy of the as-built WQMP (approved WQMP updated to include any changes made during construction) shall be submitted to the Engineering Department prior to the release of grading and erosion control bonds. The applicant shall keep a copy of the as-built WQMP on-site at all times.

93. Prior to issuance of a grading permit and other construction activities, the applicant shall provide to the Engineering Department, a copy of the Notice of Intent (NOI) and waste discharge identification (WDID) number from the State Water Resources Control Board.

    An adequate storm water pollution prevention plan (SWPPP) shall be available to state and city public works inspectors at the construction site prior to commencing and throughout construction. The applicant shall be responsible for implementation, monitoring, operations and maintenance of the SWPPP until construction is complete and a Notice of Termination (NOT) has been filed with the State Water Resources Control Board.

94. All grading activities shall minimize dust through compliance with AQMD Rule 403 which requires watering during earth moving operations.

95. A soils investigation study shall be completed and approved prior to issuance of a grading permit. If the project is located within an earthquake fault zone, a third party review shall be required of the soils investigation report. All recommended measures identified in the soils report shall be incorporated into the project design. On the grading plan, identify all faults located within the project from the Fault Location Map. All plans and maps shall show seismic zones as well as the minimum fault setbacks. Notes shall be placed on all plans if the project is entirely within or outside the seismic zone as the case may be.

96. If appropriate, prior to issuance of any grading permit or ground disturbance, applicant shall obtain necessary approvals and permits from applicable Federal and State regulatory agencies. If the site contains regulated waters, the applicant shall obtain a 404 permit from the Corps of Engineers, a 401 certification from the Regional Water Quality Control Board, a section 1603 Department of Fish and Game stream bed alteration agreement, and file a Notice of Intent of ground disturbance with the State Water Resources Control Board.

97. Prior to commencing of any grading in excess of 50 cubic yards, paving in excess of 3,000 square feet, or alteration of existing drainage patterns, the applicant shall obtain a grading permit from the Engineering Department prior to issuance of a building permit. The developer shall have an approved grading permit prior to the commencement of any clearing or grading of the site.

98. Prior to hauling dirt or construction materials to any proposed construction site within this project, the developer shall submit to and receive approval from the City Engineer for the proposed haul route. The developer shall comply with all conditions and requirements the City Engineer may impose with regards to the hauling operation.

99. In instances where a grading permit involves import or export, the developer shall obtain approval of the import/export location by the City Engineer prior to obtaining a grading permit.

100. Permission from property owners shall be required for work located on adjacent properties. A notarized letter of permission shall be provided to the City prior to issuance of any permit.

101. Clean water measures shall be in place and designed per the guidelines provided in the latest edition California Storm Water Quality Best Management Practices Handbook.

102. Runoff discharge from the construction and fully developed site shall meet NPDES water quality requirements by implementing Best Management Practices (BMPs) on-site to prevent sediment, debris, oils, grease, and other pollutants from flowing through the public storm drain system. The plans shall specifically identify structural and non-structural BMPs that will be designed into and implemented on this project to reduce the discharge of pollutants into the storm drain system to the maximum extent practicable. Structural BMPs shall be provided on-site. Maintenance of BMPs shall be the responsibility of the applicant. Proof of a maintenance mechanism shall be provided prior to issuance of building permit.

103. Plant and irrigate all slopes greater than or equal to 3 feet in vertical height with ground cover to the satisfaction of the City Engineer. Slopes that exceed 15 feet in vertical height are to be planted with shrubs and/or trees.

FLOOD CONTROL

104. Suitable, drivable access shall be provided to the storm drain inlet accepting water from the eastern property boundary. Applicant shall provide sufficient hydrology and hydraulic calculations to show that ponding will not occur on the upstream property as a result of the proposed improvements.

105. The proposed storm drain crossing Madison Avenue shall be designed to discharge in the existing drainage course and sized to convey existing and proposed developed flows. No diversion will be allowed unless otherwise approved by the City Engineer. A notarized letter of permission shall be obtained from the property owner impacted by grading and discharge for the storm drain.

106. Grading or additional storm drain pipe may be necessary to prevent ponding on the southern property due to revisions to the existing storm drain crossing Madison Avenue. Letters of permission shall be obtained for grading or storm drain installation on adjacent properties.

107. Storm drain and detention pipes shall be designed to maintain a positive gradient of 0.5% unless otherwise approved by the City Engineer.

108. Applicant shall provide a drainage study prepared by a registered Civil Engineer identifying storm water runoff quantities expected from the site and upstream of the site. The study shall show all existing and proposed off-site public or private drainage facilities intended to discharge this runoff. The study shall include a capacity analysis

verifying the adequacy of said facilities. Runoff from the development or partial phase of development of the property shall not exceed the existing natural discharge quantities with respect to the following criteria:

A. Detention shall not be required for developments of less than one acre if the development uses volume based water quality measures.

B. For projects less than 10 acres, including those less than one acre NOT using volume based water quality measures shall analyze and mitigate the difference in developed and undeveloped runoff based on the 1-hour duration of the 10-year intensity storm. A simplified hydrograph method shall be used that simulates the hydrograph with a triangle. The Rational method flow rate shall be the top value of the triangle and the base width shall be two times the time of concentration (Tc). The difference in area between the developed condition triangle and the existing condition triangle represents the required storage volume. Both triangles shall use time of concentration from the developed condition. Based upon the storage volume head, the outlet structure shall have an outlet flow no larger than the existing flow rate.

C. Projects that are 10 acres or greater shall analyze for the 1,3,6 and 24-hour duration for the 2,5 and 10-year frequency storms.

The design of detention basins shall provide for the detention of nuisance flow. Development shall detain the year and duration incremental storm runoff developed and or increased by means of on-site detention. Detention techniques shall include, but not be limited to: Parking lot detention or on-site detention basin or other methods approved by the City Engineer. Detention shall not be required in the event facilities down stream from the point of discharge are shown to be designed for and have been constructed to convey the fully developed 100 year storm event. Evidence of a maintenance mechanism shall be provided for the basins prior to any building permit. If project discharges/connects to an off-site detention basin, provide permission to drain/connect correspondence from the owner of basin or system and provide corresponding calculations verifying adequacy of off-site basin. Off-site detention basins require a Declaration of Dedication.

109. Street storm flows shall not exceed top of curb for the 10-year storm event and must be contained within the street right-of-way for the 100-year storm event.

110. The applicant shall accept and properly dispose of all offsite drainage flowing onto or through the site.

111. If possible all drainage shall be conveyed onto public property. No cross lot drainage shall be permitted.

112. Applicant shall protect all downstream properties from damages caused by alteration of the drainage patterns, i.e., concentrations or diversion of flow. Protection shall be provided by constructing adequate drainage facilities including enlarging existing facilities and/or by securing a drainage easement. A maintenance mechanism shall be in place for any private drainage facilities constructed on-site or off-site prior to any building permit. Any grading or drainage improvements onto private off site or adjacent property shall require a written permission to grade and/or a permission to drain letter from the affected landowner.

TRANSPORTATION

113. Madison Avenue: Applicant shall dedicate right-of-way and construct half-street improvements per City of Murrieta Standard 103 Mod. A. Raised medians shall be required and shall extend either to the end of the property frontage or a minimum of 150-feet from the edge of the driveway closest to the end of the property frontage, which ever is greater, unless otherwise approved by the City Engineer.

114. Jordan Avenue: Applicant shall dedicate right-of-way and construct half-street plus one 12-foot lane per City of Murrieta Standard 111.

115. Street improvements to Madison Avenue and Jordan Avenue shall comply with the approved vertical alignment study for Madison Avenue. Vertical and horizontal transitions shall be constructed on either end of project frontage in conformance with the City design standards and as approved by the City Engineer.

Applicant shall improve the following intersections to provide, at a minimum, the following geometrics, or as approved by the Traffic Engineer:

116. Madison Avenue Driveway (south) Geometrics:

    NB: two through lanes
    SB: one through lanes
    EB: N/A
    WB: one right turn lane

    Driveway shall be right-in/right-out only. Access shall be controlled through the installation of raised median.

117. Madison Avenue Driveway (north) Geometrics:

    NB: two through lanes
    SB: one left turn lane, one through lane
    EB: N/A
    WB: one left/right turn lane

118. Jordan Avenue Driveway Geometrics:

    NB: one left/right turn lane
    SB: N/A
    EB: one through lane
    WB: one through lanes

119. Applicant shall pay 7.2% fair share contribution to improvements to the Murrieta Hot Springs Road and Madison Avenue intersection per the City's Capital Improvement Plan.

120. The southern driveway is intended to be a shared access driveway with the southern property. The proposed retaining wall will prevent access from the southern property. Applicant shall provide sufficient easement for the adjacent property to remove retaining walls and install driveway for access to the southern property or replace retaining walls with offsite grading onto the southern property. Grading offsite shall require a notarized letter of permission from impacted property owners.

121. Water and sewer facilities shall be constructed along project frontage and sufficient distance to provide service to the site in compliance with the JABCMP unless otherwise approved by the serving water and sewer districts.

122. Improvement plans shall be prepared by a Registered Civil Engineer based upon a centerline profile extending a minimum of 300 feet beyond the project boundaries at a grade and alignment as approved by the Civil Engineer.

123. Construct driveway approach improvements per City of Murrieta Standards.

124. Construct street lighting per City of Murrieta Standards.

125. Signage and landscaping shall be located so as not to interfere with sight distance per City of Murrieta Standards.

126. Prior to the issuance of any building permit, the applicant shall prepare and have approved signing and striping plans for all on-site, off-site and project frontage improvements as conditioned herein, unless otherwise determined by the City Engineer.

127. The applicant shall provide for the under grounding of all existing and proposed utility distribution facilities within the project unless exempt per the City of Murrieta Development Code. The applicant shall be responsible for the associated costs and arrangements with each public utility.

128. Install required water and sewer systems necessary to serve the project per the City of Murrieta Development Code.

129. All existing street and property monuments within or abutting this project site shall be preserved consistent with AB 1414. If during construction of onsite or offsite improvements monuments are damaged or destroyed, the applicant/developer shall retain a qualified licensed land surveyor or civil engineer to reset those monuments per City of Murrieta Standards and file the necessary information with the County Recorder's office as required by law (AB 1414).

ENGINEERING CONDITIONS FOR TPM-006-1914:

GENERAL CONDITIONS

130. The applicant shall pay all applicable Development Mitigation Impact Fees, including but not limited to:

    A. Development Impact Fees, Ordinance 196-98 payable prior to issuance of building permit.

    B. Kangaroo Rat Fee, payable at issuance of grading permit.

    C. Riverside County Area Drainage Fees, payable at issuance of grading permit.

    D. Transportation Uniform Mitigation Fee (TUMF), payable at building permit issuance.

    E. MSHCP Fee, payable prior to issuance of a grading permit.

    Fees shall be based upon Office or Industrial Development Rates depending on building.

131. Prior to any work being performed in the public right of way, fees shall be paid and an encroachment permit shall be obtained from the Engineering Department. The applicant shall apply for an encroachment permit from the City for utility trenching, utility connection or any other encroachment onto public right-of-way. The applicant shall be responsible for the associated costs and arrangements with each public utility.

132. Prior to the issuance of building permits, unless other timing is indicated, the applicant shall complete all street improvement, signing, striping, and signal plans (if required) in conformance with all applicable City ordinances and standards, submit and obtain approval, post securities and execute agreements. Prior to occupancy, unless other timing is indicated, all public improvements shall be installed in accordance with all applicable City ordinances.

133. All construction equipment shall be properly maintained and tuned to reduce emissions.

GRADING

134. A project-specific water quality management plan (WQMP) shall be submitted to the Engineering Department for approval with the grading plan check application. The WQMP shall be approved by the Engineering Department prior to the issuance of a grading permit. The post-construction best management practices (BMPs) outlined in the approved project-specific WQMP shall be incorporated in the grading plans. A copy of the approved project-specific WQMP shall be provided to the Engineering Department and a copy shall be maintained by the applicant and kept on-site.

    At the completion of the project, the applicant shall enter into a maintenance agreement for the post-construction BMPs. This agreement shall be based on the as-built WQMP BMPs and shall be recorded.

    A copy of the as-built WQMP (approved WQMP updated to include any changes made during construction) shall be submitted to the Engineering Department prior to the release of grading and erosion control bonds. The applicant shall keep a copy of the as-built WQMP on-site at all times.

135. Prior to issuance of a grading permit and other construction activities, the applicant shall provide to the Engineering Department, a copy of the Notice of Intent (NOI) and waste discharge identification (WDID) number from the State Water Resources Control Board.

    An adequate storm water pollution prevention plan (SWPPP) shall be available to state and city public works inspectors at the construction site prior to commencing and throughout construction. The applicant shall be responsible for implementation, monitoring, operations and maintenance of the SWPPP until construction is complete and a Notice of Termination (NOT) has been filed with the State Water Resources Control Board.

136. All grading activities shall minimize dust through compliance with AQMD Rule 403 which requires watering during earth moving operations.

137. A soils investigation study shall be completed and approved prior to issuance of a grading permit. If the project is located within an earthquake fault zone, a third party review shall be required of the soils investigation report. All recommended measures

identified in the soils report shall be incorporated into the project design. On the grading plan, identify all faults located within the project from the Fault Location Map. All plans and maps shall show seismic zones as well as the minimum fault setbacks. Notes shall be placed on all plans if the project is entirely within or outside the seismic zone as the case may be.

138. If appropriate, prior to issuance of any grading permit or ground disturbance, applicant shall obtain necessary approvals and permits from applicable Federal and State regulatory agencies. If the site contains regulated waters, the applicant shall obtain a 404 permit from the Corps of Engineers, a 401 certification from the Regional Water Quality Control Board, a section 1603 Department of Fish and Game stream bed alteration agreement, and file a Notice of Intent of ground disturbance with the State Water Resources Control Board.

139. Prior to commencing of any grading in excess of 50 cubic yards, paving in excess of 3,000 square feet, or alteration of existing drainage patterns, the applicant shall obtain a grading permit from the Engineering Department prior to issuance of a building permit. The developer shall have an approved grading permit prior to the commencement of any clearing or grading of the site.

140. Prior to hauling dirt or construction materials to any proposed construction site within this project, the developer shall submit to and receive approval from the City Engineer for the proposed haul route. The developer shall comply with all conditions and requirements the City Engineer may impose with regards to the hauling operation.

141. In instances where a grading permit involves import or export, the developer shall obtain approval of the import/export location by the City Engineer prior to obtaining a grading permit.

142. Permission from property owners shall be required for work located on adjacent properties. A notarized letter of permission shall be provided to the City prior to issuance of any permit.

143. Clean water measures shall be in place and designed per the guidelines provided in the latest edition California Storm Water Quality Best Management Practices Handbook.

144. Runoff discharge from the construction and fully developed site shall meet NPDES water quality requirements by implementing Best Management Practices (BMPs) on-site to prevent sediment, debris, oils, grease, and other pollutants from flowing through the public storm drain system. The plans shall specifically identify structural and non-structural BMPs that will be designed into and implemented on this project to reduce the discharge of pollutants into the storm drain system to the maximum extent practicable. Structural BMPs shall be provided on-site. Maintenance of BMPs shall be the responsibility of the applicant. Proof of a maintenance mechanism shall be provided prior to issuance of building permit.

145. Plant and irrigate all slopes greater than or equal to 3 feet in vertical height with ground cover to the satisfaction of the City Engineer. Slopes that exceed 15 feet in vertical height are to be planted with shrubs and/or trees.

FLOOD CONTROL

146. Suitable, drivable access shall be provided to the storm drain inlet accepting water from the eastern property boundary. Applicant shall provide sufficient hydrology and hydraulic calculations to show that ponding will not occur on the upstream property as a result of the proposed improvements.

147. The proposed storm drain crossing Madison Avenue shall be designed to discharge in the existing drainage course and sized to convey existing and proposed developed flows. No diversion will be allowed unless otherwise approved by the City Engineer. A notarized letter of permission shall be obtained from the property owner impacted by grading and discharge for the storm drain.

148. Grading or additional storm drain pipe may be necessary to prevent ponding on the southern property due to revisions to the existing storm drain crossing Madison Avenue. Letters of permission shall be obtained for grading or storm drain installation on adjacent properties.

149. Storm drain and detention pipes shall be designed to maintain a positive gradient of 0.5% unless otherwise approved by the City Engineer.

150. Applicant shall provide a drainage study prepared by a registered Civil Engineer identifying storm water runoff quantities expected from the site and upstream of the site. The study shall show all existing and proposed off-site public or private drainage facilities intended to discharge this runoff. The study shall include a capacity analysis verifying the adequacy of said facilities. Runoff from the development or partial phase of development of the property shall not exceed the existing natural discharge quantities with respect to the following criteria:

    A. Detention shall not be required for developments of less than one acre if the development uses volume based water quality measures.

    B. For projects less than 10 acres, including those less than one acre NOT using volume based water quality measures shall analyze and mitigate the difference in developed and undeveloped runoff based on the 1-hour duration of the 10-year intensity storm. A simplified hydrograph method shall be used that simulates the hydrograph with a triangle. The Rational method flow rate shall be the top value of the triangle and the base width shall be two times the time of concentration (Tc). The difference in area between the developed condition triangle and the existing condition triangle represents the required storage volume. Both triangles shall use time of concentration from the developed condition. Based upon the storage volume head, the outlet structure shall have an outlet flow no larger than the existing flow rate.

    C. Projects that are 10 acres or greater shall analyze for the 1,3,6 and 24-hour duration for the 2,5 and 10-year frequency storms.

    The design of detention basins shall provide for the detention of nuisance flow. Development shall detain the year and duration incremental storm runoff developed and or increased by means of on-site detention. Detention techniques shall include, but not be limited to: Parking lot detention or on-site detention basin or other methods approved by the City Engineer. Detention shall not be required in the event facilities down stream from the point of discharge are shown to be designed for and have been constructed to convey the fully developed 100 year storm event.

Evidence of a maintenance mechanism shall be provided for the basins prior to any building permit. If project discharges/connects to an off-site detention basin, provide permission to drain/connect correspondence from the owner of basin or system and provide corresponding calculations verifying adequacy of off-site basin. Off-site detention basins require a Declaration of Dedication.

151. Street storm flows shall not exceed top of curb for the 10-year storm event and must be contained within the street right-of-way for the 100-year storm event.

152. The applicant shall accept and properly dispose of all offsite drainage flowing onto or through the site.

153. If possible all drainage shall be conveyed onto public property. No cross lot drainage shall be permitted.

154. Applicant shall protect all downstream properties from damages caused by alteration of the drainage patterns, i.e., concentrations or diversion of flow. Protection shall be provided by constructing adequate drainage facilities including enlarging existing facilities and/or by securing a drainage easement. A maintenance mechanism shall be in place for any private drainage facilities constructed on-site or off-site prior to any building permit. Any grading or drainage improvements onto private off site or adjacent property shall require a written permission to grade and/or a permission to drain letter from the affected landowner.

TRANSPORTATION

155. Madison Avenue: Applicant shall dedicate right-of-way and construct half-street improvements per City of Murrieta Standard 103 Mod. A. Raised medians shall be required and shall extend either to the end of the property frontage or a minimum of 150-feet from the edge of the driveway closest to the end of the property frontage, which ever is greater, unless otherwise approved by the City Engineer.

156. Jordan Avenue: Applicant shall dedicate right-of-way and construct half-street plus one 12-foot lane per City of Murrieta Standard 111.

157. Street improvements to Madison Avenue and Jordan Avenue shall comply with the approved vertical alignment study for Madison Avenue. Vertical and horizontal transitions shall be constructed on either end of project frontage in conformance with the City design standards and as approved by the City Engineer.

The following intersections shall be improved to provide, at a minimum, the following geometrics, or as approved by the Traffic Engineer:

158. Madison Avenue Driveway (south) Geometrics:

NB: two through lanes
SB: one through lanes
EB: N/A
WB: one right turn lane

Driveway shall be right-in/right-out only. Access shall be controlled through the installation of raised median.

159. Madison Avenue Driveway (north) Geometrics:

NB: two through lanes
SB: one left turn lane, one through lane
EB: N/A
WB: one left/right turn lane

160. Jordan Avenue Driveway Geometrics:

NB: one left/right turn lane
SB: N/A
EB: one through lane
WB: one through lanes

161. Applicant shall pay 7.2% fair share contribution to improvements to the Murrieta Hot Springs Road and Madison Avenue intersection per the City's Capital Improvement Plan.

162. The southern driveway is intended to be a shared access driveway with the southern property. The proposed retaining wall will prevent access from the southern property. Applicant shall provide sufficient easement for the adjacent property to remove retaining walls and install driveway for access to the southern property or replace retaining walls with offsite grading onto the southern property. Grading offsite shall require a notarized letter of permission from impacted property owners.

163. Water and sewer facilities shall be constructed along project frontage and sufficient distance to provide service to the site in compliance with the JABCMP unless otherwise approved by the serving water and sewer districts.

164. Improvement plans shall be prepared by a Registered Civil Engineer based upon a centerline profile extending a minimum of 300 feet beyond the project boundaries at a grade and alignment as approved by the Civil Engineer.

165. Construct driveway approach improvements per City of Murrieta Standards.

166. Construct street lighting per City of Murrieta Standards.

167. Signage and landscaping shall be located so as not to interfere with sight distance per City of Murrieta Standards.

168. Prior to the issuance of any building permit, the applicant shall prepare and have approved signing and striping plans for all on-site, off-site and project frontage improvements as conditioned herein, unless otherwise determined by the City Engineer.

169. The applicant shall provide for the under grounding of all existing and proposed utility distribution facilities within the project unless exempt per the City of Murrieta Development Code. The applicant shall be responsible for the associated costs and arrangements with each public utility.

170. Install required water and sewer systems necessary to serve the project per the City of Murrieta Development Code.

171. All existing street and property monuments within or abutting this project site shall be preserved consistent with AB 1414. If during construction of onsite or offsite improvements monuments are damaged or destroyed, the applicant/developer shall retain a qualified licensed land surveyor or civil engineer to reset those monuments per City of Murrieta Standards and file the necessary information with the County Recorder's office as required by law (AB 1414).

BUILDING & SAFETY DEPARTMENT

General:

172. All structures shall comply with the current 2001 California Building Codes (CBC), and related Codes and Ordinances of the City of Murrieta. Three (3) sets of plans shall be submitted for a building permit, and shall include building data, building use/occupancy, construction type, allowable area increases and actual building square foot area, building setbacks, related building means of egress and ensuing egress discharge to the public right-of-way.

173. Required CBC, site facility accessibility components and details, unload areas, striping and HC parking symbol, accessible exterior routes of travel, as defined in Sec.1127B of the 2001 California Building Code (CBC); routes of travel, transition components etc., shall be provided between all commercial buildings, and each building to its own accessible trash enclosure and at least one exterior route shall be from the project site, to the public right-of-way, which shall be shown on an architectural site plan, and shall correlate with the civil designed precise grade plan. All design and details shall comply with California State guidelines as outlined in Title 24 California Building Code. The property owner shall be responsible for Federal ADA compliance.

174. Plans submitted during the permitting process, including but not limited to, site plan, precise grade plans and building architectural features, shall not vary substantially, from plans previously reviewed and Approved by the Planning, Engineering or other City Departments, without prior authorization form the Planning Manager, Public Works Director and/or Building and Safety Manager.

175. All exterior lighting shall be shown on building permit plans and shall comply with the City of Murrieta's MMC Sec.16.18.110, Mt. Palomar Lighting Pollution Control Standards.

176. A detailed Site Plan and correlating civil precise grade plan shall be submitted to the Building and Safety Department for site development review and Approval, prior to the issuance of a precise grading permit from the Engineering Division. Review for overall site features including trash enclosures construction details, exterior lighting compliance with the Mt. Palomar Lighting Pollution Control; site accessibility features, including exterior routes of travel, accessible transition components, grades and details.

Building Permit Application:

177. Plans submitted for building construction shall contain a full size copy of the Final Approved set of city departments Conditions of Approval.

178. Two sets of signed soil reports shall be submitted and correlate with building foundation design by reference. The report shall be from an individual licensed by the state to prepare such report, including compaction test results and verification of satisfactory placement, of any fill material used to support the foundation of any building or structure, in accordance with accepted engineering practice or, as recommended in any engineering geology preliminary report for any engineered grading design.

179. A sewer/ water permit shall be obtained from the City of Murrieta Building & Safety Department, for on-site (private) underground "wet" utilities for multi-building parcel development, unless dedicated easements and conveyance to local water/sewer districts is proposed. A deposit shall be paid to the Building and Safety Department at the time civil plans are submitted for plan review. Three (3) sets of civil plans shall be submitted for review, prior to grading permit Final. Maintenance agreements, reciprocal access and/or easements shall be recorded and verified prior to a Final building inspection and/or a building occupancy.

180. Separate permits shall be obtained from the City of Murrieta Building & Safety Department, for individual structures e.g., monument signs, building wall signs, masonry walls, retaining walls, temporary power etc. Temporary power and temporary wiring shall comply with Articles 230 and 305 of the 2001 California Electrical Code.

181. Separate permits shall be obtained from the City of Murrieta Building & Safety Department, for existing structures being relocated or, demolished.

Prior To Building Final:

182. Final permit approvals shall be obtained, and any outstanding fees shall be paid to all City Departments/Divisions which may include Fire, Planning, Engineering, Building & Safety, and the City Landscape Architect, prior to a tenant occupancy of a building permitted as a "shell only" building, a building shell "Notice of Inspection Completion", and the issuance of a Certificate of Occupancy from the City of Murrieta Building & Safety Division.

MURRIETA FIRE PROTECTION DISTRICT:

BUILDING PLAN SUBMITTAL

183. City of Murrieta Ordinance No. 546 establishes the installation of a fire protection sprinkler system in all buildings with fire flows calculated with a base of 1500 GPM or greater. The sprinkler system post indicator valve and fire department connection shall be located to the front of the project and no further than 40 feet from a super fire hydrant and on the same geographical side of any drive aisles. These appliances shall be located at a minimum of 25 feet from any building. A statement that the

building(s) will be automatically fire sprinklered must appear on the title page of the building plans.

184. Comply with all conditions for explosion venting and dust collecting addressed in the Uniform Building Code Section # 307.10. If applicable.

185. Plans must illustrate designated location of fire lanes. Contact Fire Prevention for recommended designations.

186. Fire sprinkler system shell conform to NFPA 13.

187. Minimum fire sprinkler density of .33 GPM/ 2500 SF is required even if high piled stock is planned.

188. If project is planned for Business condominium or changes to business condominium project addition conditions will apply.

189. Applicant must comply with conditions addressed in the California Administrative Code Titles 19 & 24.

190. Occupancy separation may be required as per the Uniform Building Code, Section 302.

191. All buildings within the City of Murrieta shall have fire retardant roofing with a Class "B" minimum rating. The developer must submit documented fire rated listings, supplied by the manufacturer, to the Fire Marshal if he/she chooses to use wood shingles.

PRIOR TO BUILDING PLAN RELEASE

192. A looped combination of an on-site/off-site fire protection water systems is required with (6" x 4" x 2-1/2" x 2-1/2") super fire hydrants. This system shall be designed and installed with no hydrant closer than 25 feet or no further than 165 feet from any portion of exterior walls as measured along vehicular travelways.

193. Fire Prevention has established a required minimum fire flow for protection of the above referenced project. Using UFC Table III-A for determining fire flows, 2850 GPM for a 4-hour duration at 20-PSI residual operating pressure must be available before any combustible material is placed on the job site. This fireflow is all inclusive of fire sprinkler system and inside / outside hose demand (Estimate only further clarification of square footages needed.)

194. Fire Flow Requirements have been based on UFC guidelines for the determination of fire flow requirements. Factors considered were Type V construction.

195. Applicant/Developer shall furnish one copy of the water system plans to the Fire Department for review. Plans shall conform to fire hydrant types, location and spacing, and, the system shall meet the fire flow requirements. Plans shall be signed/approved by the water company having jurisdiction and a registered engineer must provide the following certification statement.

"I hereby state that the design of the water system within this project is in accordance with the requirements prescribed by the Murrieta Fire Department as to hydrant type and spacing, and will provide fire flow of 2850 GPM if sufficient water is available at the point of connection."

196. City of Murrieta Fire Department requires all commercial buildings to provide flush mount Knox Box Access Systems and must be no higher than 6' off the finished ground to the right of front and rear doors as being faced. Must also be shown on architectural plans. Applications are provided by our Planning/Prevention Bureau.

GENERAL CONDITIONS

197. All standards, regulations and policies established for public safety and the protection of property established in City of Murrieta Development Code must be in compliance with the approval of all local authorities.

ACCESS REQUIREMENTS

198. The Applicant/Developer shall agree to make application and agreements with the Murrieta Fire Protection District, to install a strobe light monitor receiver with Knox key switch backup, on all electrically controlled gates for vehicular access, prior to occupancy of any structure within this project.

199. Secondary/alternate access points shall meet the requirements established for public safety and shall be installed prior to construction of this project.

200. Access will have a 56-foot turning radius capable of accommodating fire apparatus.

201. Access will be a minimum of 28 feet wide to accommodate fire apparatus.

202. Access will have a minimum of 13 foot 6 inches vertical clearance to accommodate fire apparatus.

203. Any dead end in excess of 150' requires an approved turnaround. Contact Fire Department for details.

204. All access requirements shall be in place and approved by Fire Prevention prior to release of building permits.

PRIOR TO OCCUPANCY

205. Install a supervised sprinkler water flow detection alarm system as per National Fire Protection Association pamphlet No. 71. Notification of alarm to be provided for all tenant spaces. These plans must be designed by a certified fire alarm specialist and submitted for Fire Prevention approval prior to installation.

206. Fire sprinklers may need to be relocated to provide adequate coverage when improvements are installed. Engineered drawings must be submitted to the Fire Department for approval prior to any system modification.

207. Portable Multi-purpose fire extinguishers with a minimum rating of 2A-10BC must be installed so that the top of the fire extinguisher is not more than 5' ft above and not less than 3'ft from the bottom of the extinguisher to the floor. (Title 19, 567.6) Contact a certified extinguisher company for proper placement of equipment.

208. Restaurants require a hood duct fire extinguishing system to be installed in accordance with National Fire Protection Association pamphlets No. 17 or No. 17A. Plans must be submitted to the Fire Marshal for approval prior to installation. A portable fire extinguisher with a minimum rating of 40BC (for saponification) and a type K fire extinguisher shall be installed in the kitchen area.

209. Applicant/Developer shall be responsible for obtaining underground tank permits from both the County Health and Fire Departments.

210. Federal law under SARA Title III (Right To Know Act) requires that facilities with hazardous materials must provide Material Safety Data Sheets to the local Fire Department, the local Emergency Planning Committee and the State Emergency Response Commission.

211. All buildings will comply with NFPA 704 placard requirements when applicable. Contact Fire Department for information.

212. Address directory shall be provided next to all major entranceways to this project. Al l buildings shall be clearly identified with designators 12" high with 1" strokes mounted on contrasting backgrounds. These designators shall be placed on all 4 sides of each building and show address locations and elevations on architectural plan.

213. All decorative materials must be flame resistive. Prior to release of occupancy, the Developer must submit manufactures State Fire Marshal's listings of all materials being used. Cloth and other flammables must display a label of the State Fire Marshal's seal of approval

214. Prior to release of above referenced project, the Developer/Applicant is responsible to provide all fire protection measures and information required by Fire Prevention. If any of these conditions are not met before, during or after completion of the proposed buildings, the Developer understands that he is in violation of City of Murrieta Ordinance No. 546 and/or the Uniform Fire Code, and Fire Prevention has the authority to disrupt or permanently stop the construction of the project.

215. A check or money order in the amount of (contact Fire Department for exact amount) shall be made payable to CITY OF MURRIETA FIRE DEPARTMENT for building plan review. Project number submitted by City of Murrieta Planning Department must be referenced in order to credit the appropriate project. Refer to Plan Check Fee/Mitigation Sheet attached to Building Plan Review letter.

216. Murrieta City Resolution requires that fire impact mitigation fees totaling (see planning department) per square foot, as part of the Development Impact Fee, must be paid prior to release of building permit. Contact Planning Department for exact amount.

PRIOR TO ANY BUILDING RELEASE, THE APPLICANT/ DEVELOPER SHALL SUBMIT APPROVED WATER PLANS AND PAY ALL REQUIRED FIRE FEE'S.

MURRIETA POLICE DEPARTMENT:

217. Video: Applicant shall install a video surveillance system capable of day and night viewing which encompasses all exterior common areas and every vehicle entry and exit point to the satisfaction of the Chief of Police or his designee. The minimum standards for the system must be a digital system with the capability to view in color and in a low-lux environment and must have the capability to be viewed over the internet by the Murrieta Police Department via a TCP/IP connection. The exterior system must be capable of capturing the front and rear license plates and vehicle occupant(s) within the parking lot to the satisfaction of the Chief or Police or his designee. Video surveillance records must be maintained by the property management company for at least one (1) year and made available to any law enforcement agency for viewing and/or copying within one (1) business day.

218. Building Numbering: Each building within the complex shall be separately identified by a letter and/or number. The number/letter must be visible from a distance of at least 100 feet and large enough (at least 12 inches in height and a contrasting color from the building) and appropriately placed to be clearly seen by emergency responders. The number/letter of the building shall also be marked with a reflectorized material (at least 24 inches in height) on the roof of the building which does not negatively impact the aesthetics of the project.

MURRIETA VALLEY UNIFIED SCHOOL DISTRICT:

219. Prior to the issuance of building permits, the applicant shall pay the school district the required mitigation fee in effect at the time of request.

END OF CONDITIONS

PASSED, APPROVED AND ADOPTED THIS 26th DAY OF September, 2007

Planning Commission, Chairperson

ATTEST:

Mary E. Lanier, Planning Director

I, Mary E. Lanier, Planning Director, City of Murrieta, California do hereby certify under penalty of perjury that the foregoing Resolution was duly adopted at a regular meeting of the Planning Commission on the 26th day of September, 2007 by the following roll call vote:

MOTION MADE BY COMMISSIONER COHEN

SECONDED BY COMMISSIONER FITZPATRICK

AYES:	BUTLER, FITZPATRICK, LANE, LUPRO AND COHEN
NOES:	NONE
ABSENT:	NONE
ABSTAINED:	NONE

Mary E. Lanier, Planning Director

2. CONSTRUCTION
(SECTION G of ORDER NO. R9-2004-001), CONT.

b) **Summarize any additional education and outreach activities conducted for project applicants, contractors, developers, property owners, and/or responsible parties in support of the Construction Component:** The City of Murrieta began hand-delivering the annual "Fist Notice to all Project Developments" to site owners, project managers and field superintendents, on August 20, 2007 notifying them of the annual requirement for implementation of wet-weather BMP's by October 1st to April 30th. Year round implementation and maintenance of the erosion and sediment control at the construction sites was also emphasized in this letter. A "Second Notice to All Project Developments" emphasizing the requirement and implementation of wet-weather BMP's was distributed on September 14, 2007.

5) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** The Construction program appears to be effective. Of the 554 inspections perform only 3 resulted in Citations and 2 notices to SDRWQCB.

6) **Additional Comments/Information:**

Describe the major accomplishments of the Constrution Component over the past year: Having a full-time employee able to monitor construction.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Construction Component: There are no new activities or improvements to implement at this time.

3. MUNICIPAL
(SECTION H.1 of ORDER NO. R9-2004-001)

1) **Number of inspections conducted at existing municipal facilities:** The municipal facilities are maintained on a daily basis. General housekeeping guidelines are used like covering construction material.

2) **Number and type of enforcement actions related to municipal sites:**

Enforcement and Compliance Responses	Number
Education and Information	0
Verbal warning	0
Written warning	0
Other:	0
Total	**0**

3) **Number of catch basins and inlets that were inspected and the number that were cleaned:**

	Number Inspected	Number Cleaned
Catch Basins and Inlets	1367	23

3. MUNICIPAL
(SECTION H.1 of ORDER NO. R9-2004-001), CONT.

4) **Assessment of the amount and type of debris removed from catch basins, streets, and open channels, including an identification of problem areas that generate the most pollutants:**

Facility	Type of Debris	Amount (tons)	Problem Areas that Generate Most Pollutants
Catch basins	Vegetative Litter	0.69	
	Anthropogenic Litter	0.28	
	Sediment	1.79	
	Other man-made debris		
Total		**2.76**	**tons (wet weight)**
Streets	Vegetative Litter	463	
	Anthropogenic Litter	185	
	Sediment	1,202	
	Other man-made debris		
Total		**1850**	**tons (wet weight)**
Open Channels	Vegetative Litter	36	
	Anthropogenic Litter	36	
	Sediment	36	
	Other man-made debris		
Total		**108**	**tons (wet weight)**
Facility Total		**1960.76**	**tons (wet weight)**

0001639

3. MUNICIPAL
(SECTION H.1 of ORDER NO. R9-2004-001), CONT.

5) **Assessment of effectiveness of BMPs that have been implemented for municipal facilities and activities:**

BMP Code	Description	Used	Notes
SC-10	Non-Stormwater Discharges	☒ Yes ☐ No	
SC-11	Spill Prevention, Control and Clean-up	☒ Yes ☐ No	Swift response and clean up of spills
SC-20	Vehicle and Equipment Fueling	☒ Yes ☐ No	Fueling stations have a barrier to contain spills
SC-21	Vehicle and Equipment Cleaning	☒ Yes ☐ No	Vehicle cleaning done at local car wash
SC-22	Vehicle and Equipment Repair	☒ Yes ☐ No	Repairs are done offsite and under contract
SC-30	Outdoor Loading/Unloading of Materials	☐ Yes ☒ No	
SC-31	Outdoor Liquid Container Storage	☒ Yes ☐ No	Secondary containment
SC-32	Outdoor Equipment Maintenance	☐ Yes ☒ No	
SC-33	Outdoor Storage of Raw Materials	☒ Yes ☐ No	
SC-34	Waste Handling and Disposal	☒ Yes ☐ No	
SC-35	Safe Alternative Products	☐ Yes ☒ No	
SC-40	Contaminated or Erodible Areas	☐ Yes ☒ No	
SC-41	Building and Grounds Maintenance	☒ Yes ☐ No	
SC-42	Building Repair and Construction	☒ Yes ☐ No	
SC-43	Parking/Storage Area Maintenance	☒ Yes ☐ No	
SC-44	Drainage System Maintenance	☒ Yes ☐ No	Filters, cleaning, & annual inspection
SC-60	Housekeeping Practices	☒ Yes ☐ No	
SC-61	Safe Alternative Products	☒ Yes ☐ No	Use bio-degradable cleaning solutions
SC-70	Road and Street Maintenance	☒ Yes ☐ No	Street sweeping and prompt pothole patching
SC-71	Plaza and Sidewalk Cleaning	☐ Yes ☒ No	
SC-72	Fountain and Pool Maintenance	☒ Yes ☐ No	
SC-73	Landscape Maintenance	☒ Yes ☐ No	Use organic fertilizers
SC-74	Drainage System Maintenance	☒ Yes ☐ No	Catch basins are labeled and numbered
SC-75	Waste Handling and Disposal	☒ Yes ☐ No	
SC-76	Water and Sewer Utility Maintenance	☐ Yes ☒ No	

Assessment of the effectiveness of BMPs that have been implemented for municipal facilities and activities.

They appear to be effective to the maximum extent practical.

0001640

3. MUNICIPAL
(SECTION H.1 of ORDER NO. R9-2004-001), CONT.

6) **Description and number of training efforts conducted over the last year (for municipal facility operators and/or inspectors).**

a) **Training:**

Training	Training Description	Training Dates	Number of Attendees
Municipal	Riv. Co. NPDES to DAMP Implementation	1/17/08	20
		Total	**20**

b) **Summarize the internal and external education and outreach activities the Municipal Component has conducted over the past year:** at Tailgate Safety Meetings discuss that construction material to be covered.

7) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** good housekeeping practices appear to be effective.

8) **Additional Comments/Information:**

9) **Describe the major accomplishments of the Municipal Component over the past year:** funding was set aside for the purchase of a future vacuum trailer. This will allow more effective cleaning of the catch basins.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Municipal Component: create a written procedure to monitor the municipal facilities

Other comments

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER NO. R9-2004-001), CONT.

1) **Number of inspections conducted:** City of Murrieta utilized the Compliance Assistance Program (CAP), which generates NPDES survey reports from inspections completed by the County of Riverside Hazardous Materials Department (HMMD) for businesses storing or handling hazardous materials and also from the County of Riverside Department of Environmental Health (DEH) for inspections of food establishments.

Category	Number of Inspections
Industrial Facilities	
High Priority Facilities	
Medium Priority Facilities	
Low Priority Facilities	61
Commercial Facilities	
High Priority Facilities	
Medium Priority Facilities	
Low Priority Facilities	48
(See Attachment 'B' for Inspection Sheets) Total	**0**

2) **Number and type of enforcement actions taken:**

Enforcement and Compliance Responses	Industrial	Commercial
Non-Monetary Penalties	0	0
Fines	0	0
Bonding Requirements	0	0
Permit Denial	0	0
Referral to SDRWQCB	0	0
Total	**0**	**0**

***OUTSIDE AREAS (Free of staining & debris; provides good housekeeping; maintained in a manner to prevent runoff.)**		**Requires follow up**	
1. CHEMICAL STORAGE * The outside storage area is kept to minimize the possibility of a release. Chemicals / materials are protected from precipitation / storm water runoff and the containers show no signs of leaking.	✓		
2. DUMPSTER * No liquids are leaking from dumpster; surrounding area is free of trash.	✓		
3. ABOVEGROUND TANKS * No ground staining, no spillage observed and no discharge to storm drain. Tanks are maintained to minimize the possibility of a release (secondary containment).	✓		
4. ONSITE STORM DRAIN* Protected from accidental discharge other than water.			✓
5. POWER WASH OR STEAM CLEAN* (discharge to sewer) Drains to oil/water separator connected to a sanitary sewer and not a septic system. Steam cleaning not discharged to parking lot, storm drain or soil.			✓
6. PARKING LOT / DRIVE WAY* Free of excess trash, chemical staining or liquids other than water.	✓		
7. OTHER* Non-storm water discharge (i.e. non-hazardous process discharge).			✓
8. MOP WATER TO SANITARY SEWER VIA CLARIFIER. Mop water is not dumped to the soil, parking lot, gutter, or other areas susceptible to storm water drainage.			✓
9. STORM WATER EDUCATIONAL BROCHURES GIVEN TO FACILITY OR POSTERS DISPLAYED FOR EMPLOYEES. If no, what informational material should be sent to the facility?			✓
10. IF A SWPPP IS REQUIRED, WAS IT AVAILABLE FOR REVEIW? See storm water handout for industrial facilities.			✓

CONTACT: Dianna O'Donnell	FACILITY#: PR0023474	SIC CODE: 5989

Compliance Areas	YES	NO	N/A
***OUTSIDE AREAS (Free of staining & debris; provides good housekeeping; maintained in a manner to prevent runoff.)**		**Requires follow up**	
1. CHEMICAL STORAGE * The outside storage area is kept to minimize the possibility of a release. Chemicals / materials are protected from precipitation / storm water runoff and the containers show no signs of leaking.	✓		
2. DUMPSTER * No liquids are leaking from dumpster; surrounding area is free of trash.	✓		
3. ABOVEGROUND TANKS * No ground staining, no spillage observed and no discharge to storm drain. Tanks are maintained to minimize the possibility of a release (secondary containment).			✓
4. ONSITE STORM DRAIN* Protected from accidental discharge other than water.	✓		
5. POWER WASH OR STEAM CLEAN* (discharge to sewer) Drains to oil/water separator connected to a sanitary sewer and not a septic system. Steam cleaning not discharged to parking lot, storm drain or soil.	✓		
6. PARKING LOT / DRIVE WAY* Free of excess trash, chemical staining or liquids other than water.	✓		
7. OTHER* Non-storm water discharge (i.e. non-hazardous process discharge).			✓
8. MOP WATER TO SANITARY SEWER VIA CLARIFIER. Mop water is not dumped to the soil, parking lot, gutter, or other areas susceptible to storm water drainage.	✓		
9. STORM WATER EDUCATIONAL BROCHURES GIVEN TO FACILITY OR POSTERS DISPLAYED FOR EMPLOYEES. If no, what informational material should be sent to the facility?	✓		
10. IF A SWPPP IS REQUIRED, WAS IT AVAILABLE FOR REVEIW? See storm water handout for industrial facilities.	✓

If additional information is required, contact the Storm Water/Clean Water Protection Program of the Cities and County of Riverside at (800) 506-2555.

StormWater
CleanWater
PROTECTION PROGRAM

mw 9/01

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER NO. R9-2004-001), CONT.

3) **Description and number of training efforts conducted over the last year (for industrial/commercial facility operators and/or inspectors).** attendance of Riverside County NPDES training for activities related to DAMP implementation

4)

a. **Training:**

Training	Training Description	Training Dates	Number of Attendees
Municipal	Riv. Co. NPDES to DAMP implementation	11/27/07	1
		Total	**1**

5) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** the City relies on the CAP, HMMD, and DEH inspection programs.

6) **Additional Comments/Information:**

Describe the major accomplishments of the Industrial Component over the past year: The Industrial Component appears to be in compliance.

Describe the major accomplishments of the Commercial Component over the past year: The Commercial Component appears to be in compliance.

Summarize the internal and external education and outreach activities the Industrial Component has conducted over the past year: The City relies on the CAP, HMMD, and DEH programs.

Summarize the internal and external education and outreach activities the Commercial Component has conducted over the past year: the City relies on the CAP, HMMD, and DEH programs

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER NO. R9-2004-001), CONT.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Industrial Component: continue training and propose additional inspection program.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Commerical Component: continue training and propose additional inspection program.

Other comments

5. RESIDENTIAL
(SECTION H.3 of ORDER NO. R9-2004-001)

1) **A description of residential areas that were focused on during the past year:** existing single family residences are the primary focus of Code Enforcement. The City currently performs inspections as they pass through the different areas as part of their daily trips to other sites and responds to phone calls as they are received. All new residential projects, before being accepted for maintenance by the City, are required to submit a video tape inspection of the storm drain and drainage system, ensuring no illicit connections or points of discharge. This process is a good precautionary step for the City involving new residential developments.

2) **Number and type of enforcement actions taken:**

Enforcement and Compliance Responses	Public Projects
Education and information	0
Verbal Warning	0
Written Warning	0
Notice of Non-Compliance	0
Administrative Compliance Order	0
Misdemeanor	0
Infraction (NPDES violations)	46
Citation	0
Referral to SDRWQCB	0
Total	**46**

3) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** good

4) **Additional Comments/Information:**

Describe the major accomplishments of the Residential Component over the past year: While on patrol, pro-active response to person illegally discharging, dumping, littering into the residential storm drains, is routinely addressed while on duty.

Summarize the internal and external education and outreach activities the Residential Component has conducted over the past year: internal training and public information pamphlets in the main entrance area to City Hall.

RESIDENTIAL
(SECTION H.3), CONT.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Residential Component: coordinate efforts with Construction department.

Other comments

6. EDUCATION
(SECTION I of ORDER NO. R9-2004-001)

1) **Description of education efforts conducted by the Permittee (not collectively with other Permittees) during the previous year:** I asked Mike Brooks if he had anything

Audience	Measures
Permittee Departments and Personnel	Number of Permittee employees trained for: • Construction Inspection: 9 • Industrial/Commercial Inspection: 1 • Municipal Facilities and Activities: 20 • Development Planning: 12
Construction Site Owners and Developers	Outreach events conducted: distribute first notice in August 2007 and second notice September 2007
Industrial/Commercial Owners and Operators	Industrial/Commercial outreach events conducted: None
Residential Community, General Public, Other Public Agencies and Students	Number of Media Impressions in: • Newspaper: None • Mailings: None • Radio/TV: None • Billboards: None • Other: Website • Materials: Pamphlets at main entrance area Number of classroom presentations: none by City Public Education events conducted: Annual Murrieta's birthday bash June 08 and Fireman's barbecue in April 08

2) **Assessment of overall program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** The City continued to provide training to municipal staff in specific categories (i.e. new development, construction, municipal activities and industrial / commercial) through the implementation agreement with Riverside County Flood Control & Water Conservation District.

3) **Additional Comments/Information:**

Describe the major accomplishments of the Education Component over the past year: None to report

6. EDUCATION
(SECTION I of ORDER NO. R9-2004-001)

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Education Component: propose adding educational information on the City's Public Access Television Channel.

Other comments

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER NO. R9-2004-001)

1) **Number of illicit discharges, connections and spills reported and/or identified during the reporting period:** Code Enforcement reported 46 NPDES related calls-for-service during the reporting period. The distinguishing between the different types of violations (illicit discharges, illicit connections, and spills) was not tracked. The Code Enforcement officer does address the concern either by follow-up telephone call or a site visit. Code Enforcement issued 53 citations / fines totaling $14,500.

   a) **Illicit Discharges (ID):**
   b) **Illicit Connections (IC):**
   c) **Spills (S):**

2) **Number of illicit discharges or connections investigated during the reporting period and the outcome of the investigations:** Code Enforcement reported 46 NPDES related calls-for-service during the reporting period. The distinguishing between the different types of violations (illicit discharges, illicit connections, and spills) was not tracked. The Code Enforcement officer does address the concern either by follow-up telephone call or a site visit. Code Enforcement issued 53 citations / fines totaling $14,500.

Type	Category	Substance	Outcome of Investigation
ID	Residential	Oil/Grease	
ID	Residential	Oil/Grease	
ID	Residential	Oil/Grease	
ID	Residential	Oil/Grease	
ID	Residential	Oil/Grease	
ID	Residential	Oil/Grease	

3) **Number and types of enforcement actions taken for illicit discharges or connections during the reporting period:**

Enforcement and Compliance Responses	Private Facilities	Public Facilities
Non-monetary penalties		
Stop work authority		
Fines	46	0
Financial Security (amount of Fines assessed)	$14,500	0
Permit/Business License Denial		
Total	**46**	**0**

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER NO. R9-2004-001), CONT.

4) **Number of times your agency's hotline was called during the reporting period, as compared to previous reporting periods.**

	Number of Calls	
	2006-07	**2007-08**
Water Pollution Hotline	84	46

5) **Number and location of dry weather monitoring sites that were monitored during the reporting period:** we could not locate the data from for our dry weather monitoring program. The City of Temecula stated that they performed dry weather testing with the City of Murrieta.

Number of Site(s): two

Location(s): California Oaks Channel and Catt Road

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER NO. R9-2004-001), CONT.

6) **Summary of Illicit Discharge Monitoring Program results, including: 1) All inspection, field screening, and analytical monitoring results; 2) All follow-up and elimination activities; and 3) Any proposed changes to station locations and/or sampling frequencies:** this information was not located.

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER NO. R9-2004-001), CONT.

7) **An assessment of overall program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** dry weather testing will be performed in April 2009 and September 2009 for the next reporting year and monitoring data will be included in next annual report.

8) **Additional Comments/Information:**

Describe the major accomplishments of the Illicit Discharge Detection and Elimination Component over the past year: None to report

Summarize the internal and external education and outreach activities the Illicit Discharge Detection and Elimination Component has conducted over the past year: None to report

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Illicit Discharge Detection and Elimination Component: gather, log and keep monitoring information in a designated area, created a method for distinguishing the different types of Illicit Discharges, and re-evaluate the amount the fine amounts.

Other comments

8. PUBLIC PARTICIPATION

1) **A description of efforts to include the public urban runoff management programs during the reporting period (i.e., river clean-ups, volunteer monitoring, Permittee council meetings related to the SWMP, etc.):** The City distributed educational and promotional material during the Fireman's barbecue April 08 annual birthday bash June 2008. In addition, the City is an active participant in the annual Santa Margarita River watershed clean up. **Attachment 'C'** has a flyer for next fiscal years event.

2) **Additional Comments/Information:**

Assessment of overall program effectivenss based on the measurable goals established in the Permittee's Individual SWMP: it is difficult to gauge if the Public is aware of the goals because they do not provide feedback.

Describe the major accomplishments of the Public Participation Component over the past year: None

Summarize the internal and external education and outreach activities the Public Participation Component has conducted over the past year: public information handouts at City events.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Public Participation Component: None to report

SANTA MARGARITA RIVER

WATERSHED CLEAN UP

November 1, 2008, 8am-12pm

The 26.2 mile watershed of the Santa Margarita River provides habitat for plants and animals in San Diego and Riverside Counties. Since 1995, volunteers have prevented over 1400 tons of trash from polluting our creeks and entering the Pacific Ocean.

8:00 am Report to one of the staging areas below to pick up
your free Clean Up T-shirt, garbage bags,
and directions to your clean up area.

12:00 pm Free barbecue for volunteers
at Perrit Park in Lakeland Village

Murrieta Staging Areas:

Santa Rosa Plateau Ecological Reserve, 39400 Clinton Keith Road
Murrieta Police Station, 24701 Jefferson Avenue

For more information, contact Carole Bell at (951) 677-6951x223 or cbell@tnc.org
Community Service Hours are available

Sponsored by: Supervisor Bob Buster, CR&R, WM and EMARCD

9. FISCAL ANALYSIS COMPONENT

Fiscal Analysis Component - each Permittee shall include an annual fiscal analysis, for each fiscal year covered by Order No. R9-2004-001, in its Individual Annual Report. This analysis shall evaluate the expenditures (such as capital, operation and maintenance, education, and administrative expenditures) necessary to accomplish the activities of the Permittee's Individual SWMP. The analysis shall include the following:

1) **A report of the previous reporting period's budget and a budget for the upcoming reporting period. To the extent possible, the budgets should be broken down by the following programs:**

Program Element	Fiscal Year 2007-2008		Fiscal Year 2008-2009	
	Capital Expenditures	O&M/Admin Expenditure	Capital Expenditures	O&M/Admin Expenditure
Program Management				
Annual Fee for MS4 NPDES Permit				
Implementation Agreement Shared Cost				
Construction Inspections	**(See**	**Attachment**	**'D')**	
Development Planning				
Industrial and Commercial Inspections				
Illicit Connections & Illegal Discharges Program				
Municipal Facilities and Activities				
Public Education & Outreach				
Monitoring Program				
Other				
Total	**$ 0**	**$ 0**	**$ 0**	**$ 0**

ATTACHMENT D

NPDES (Fund 052)

The National Pollutant Discharge Eliminant System is mandated by the federal government, which requires cities to clean up storm water runoff. Special assessments are collected from property owners on their property tax bills.

10. NON-STORM WATER DISCHARGES

Permittees shall report on any discharge category listed in Requirement B.2 of Order No. R9-2004-001 that was identified as a source of pollutants during the reporting period. For each identified category, the Permittee shall report whether it elected to prohibit the discharge or to require BMPs to reduce pollutants in the discharge to the MEP. If the discharge is not prohibited, the BMPs that will be implemented, or required to be implemented, shall be described in each Permittee's Individual SWMP Annual Report. Last year's responses are noted in red

Category	Prohibited	BMP to be Implemented
Diverted stream flows	☒ Yes ☐ No	Not Applicable
Rising ground waters	☒ Yes ☐ No	Not Applicable
Uncontaminated ground water infiltration [as defined at 40 CFR 35.2005(20)] to MS4s	☒ Yes ☐ No	Not Applicable
Uncontaminated pumped ground water	☐ Yes ☒ No	Analyze water sample for total suspended solids, specific conductance, semiviolatiles and volatiles by EPA method's 624 & 625
Foundation drains	☒ Yes ☐ No	Not Applicable
Springs	☒ Yes ☐ No	Not Applicable
Water from crawl space pumps	☐ Yes ☒ No	Filtered prior to pumped into a catch basin
Footing drains	☒ Yes ☐ No	Not Applicable
Air conditioning condensation	☒ Yes ☐ No	Not Applicable
Flows from riparian habitats and wetlands	☒ Yes ☐ No	Not Applicable
Water line flushing	☐ Yes ☒ No	Filtered prior to pumped into a catch basin
Landscape irrigation	☒ Yes ☐ No	Not Applicable
Discharges from potable water sources not subject to NPDES Permit No. CAG679001, other than water main breaks	☐ Yes ☒ No	Filter prior to pumped into a catch basin
Irrigation water	☒ Yes ☐ No	Not Applicable
Lawn watering	☒ Yes ☐ No	Not Applicable
Individual residential car washing	☒ Yes ☐ No	Not Applicable
Non-emergency fire fighting flows	☒ Yes ☐ No	Not Applicable
Dechlorinated swimming pool discharges	☒ Yes ☐ No	Use Flood Control handout

11. RECEIVING WATER LIMITATIONS

This section includes the report required pursuant to Requirement C.2.a. of Order No. R9-2004-001, if applicable.

Requirement C.2.a. states:

"Upon a determination by either a Permittee or the SDRWQCB that MS4 discharges are causing or contributing to an exceedance of an applicable water quality standard, the Permittee shall promptly notify and thereafter submit a report to the SDRWQCB that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report may be incorporated in the SWMP Annual Report unless the SDRWQCB directs an earlier submittal. The report shall include an implementation schedule. The SDRWQCB may require modifications to the report;"

Implement a dry weather monitoring and testing program and try to create a reasonable baseline for the applicable water quality standard, compare the data, and make an assessment.

12. ADDITIONAL URBAN RUNOFF DATA

This section is a summary of all urban runoff related data not included in the annual monitoring report (e.g., special investigations).

Additional data was not generated during this reporting period by the City of Murrieta

13. PROPOSED REVISIONS

This section includes proposed revisions to the Individual SWMP, including areas in need of improvement based on the assessment of effectiveness of each program component.

Provide more educational opportunities and monitoring.

BOARD ORDER NO. R9-2004-001
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
SAN DIEGO REGION

Executive Summary

The County of Riverside (County), the Riverside County Flood Control and Water Conservation District (District), Coachella Valley Water District (CVWD) and the twenty-six incorporated cities of Riverside County (Cities) operate Municipal Separate Storm Sewer Systems (MS4) that discharge stormwater and urban runoff pursuant to the following National Pollution Discharge Elimination System (NPDES) permits:

- Whitewater River Basin-MS4 Permit No. CAS617002, Whitewater River Basin Regional Water Quality Control Board Order No. R7-2008-001
- Santa Ana River-MS4 Permit No. CAS601833, Santa Ana Regional Water Quality Control Board Order No. R8-2002-0011 (pending renewal)
- Santa Margarita River Watershed-MS4 Permit No. CAS0108766 and San Diego Regional Water Quality Control Board Order No. R9-2004-001;

The County and District serve as the principle permittees and the twenty-six cities plus the Coachella Valley Water District are co-permittees within the three primary watersheds. Collectively the permittees are required as part of the MS4 permit process to develop and implement adaptable management programs to protect surface water quality and to report annually on progress with respect to specific compliance activities.

Demographics

Population

The County of Riverside was incorporated in 1893 out of parts of the San Diego and San Bernardino Counties in Southern California. It is bordered by the San Bernardino, San Diego, Orange, Imperial counties, and La Paz County, Arizona to the East. As of January 2008, with adjustments made for the newly incorporated cities of Menifee (Oct 2008) and Wildomar (July 2008) the California Department of Finance (DOF) estimates the population of Riverside County at 2,088,322 making it the fourth largest county of the fifty-eight counties in the state. This accounts for an increase of 56,700 people since 2007, or a 2.79% increase in population. The County provides governmental services to 5.48% of the state's population. Since the late 1990's the population of Riverside County has sky-rocketed due to of the availability of affordable housing.

Land Area

As well as having the fourth largest population, the County of Riverside is the fourth largest in land mass encompassing 7295.6 square miles. The region is predominantly made up of arid and semi-arid desert lands. Approximately 90% of the land area and one quarter of the population is in the unincorporated rural areas of the County; in comparison to three quarters of the population residing in the urban and suburban cities which accounts for 10% of the land area.

Land Use

Historically the primary land use for the region has been farming. The Coachella Valley is known for having one of the longest growing seasons in the nation. It is the primary producer of dates. Other agricultural products cultivated in the Coachella Valley include fruits and vegetables, especially table grapes, citrus fruits and peppers along with avocados, artichokes, beans, carrots, lettuce, peaches, persimmons, plums, prunes, spinach, strawberries, mangoes, tomatoes corn, cotton, grains (barley, oats and wheat, plus rice fields kept wet or moist in the Salton Sea area), and other vegetable crops. The Coachella Valley is one of the fastest growing areas in Riverside County because of affordable land and mild winter temperatures. Because of the mild winter weather the Coachella Valley has become the recreational Mecca for tennis, golf, and polo enthusiasts. It is also the annual winter-time destination for "snow-birds" (retired individuals who migrate to the desert to escape the harsh winters in the Mid-west and East.

The Central/South portion of Riverside County has been historically known as the "Agri-Empire" where potatoes and other vegetable corps were grown, it is also home to numerous dairy farms. In the Temecula Valley avocado, citrus and most recently vineyards that produce world renowned wines dot the foothills and the valley floor.

In Western Riverside County expansive citrus groves once flourished and by 1895, thanks to the amazingly sweet navel orange, Riverside was listed as the richest city per capita in the nation and the region was referred to as the "Orange Empire". Almost, one hundred years later, most of the orange groves have been replaced with affordable housing.

Salton Sea

The Salton Sea is the largest lake in California. It is jointly contained in Riverside and Imperial counties. The 40 mile long inland sea was formed by accident, and is now a briny agricultural sink. Before the sea formed, the area was a dry depression, below sea level, south of which was one of the most productive agricultural areas in the state. In 1905, an irrigation canal that brought Colorado River water to the valley was overwhelmed by high water from rains along the Colorado River watershed. Before the breach could be dammed the entire flow of the Colorado River drained into the Salton Sink, rapidly filling it up with water. Instead of evaporating over a period of years, today's Salton Sea is maintained, in large part, by agricultural runoff from irrigation practices in the Imperial Valley. Irrigation of these fertile valleys supports the Salton Sea and an industry that helps feed the world. Agricultural fields in the region join with the Salton Sea to support an ecosystem that attracts hundreds of species of birds and other wildlife. It is a crucial link in the Pacific Flyway, and a very important part of the Colorado River's delta.

Western Riverside County Multiple Species Habitat Conservation Plan

The Western Riverside County Multiple Species Habitat Conservation Plan (MSHCP) was adopted in June of 2003, and is a comprehensive, multi-jurisdictional Habitat Conservation Plan (HCP) focusing on conservation of species and their associated habitats in Western Riverside County. This Plan is one of several large, multi-jurisdictional habitat-planning efforts in Southern California with the overall goal of maintaining biological and ecological diversity within a rapidly urbanizing region. Large-scale The MSHCP allow Riverside County and its cities to better control local land-use decisions and maintain a strong economic climate in the region while addressing the requirements of the state and federal Endangered Species Acts.

The MSHCP Plan Area encompasses approximately 1.26 million acres (1,966 square miles); it includes all unincorporated Riverside County land west of the crest of the San Jacinto Mountains to the Orange County line, as well as the jurisdictional areas of the Cities of Temecula, Murrieta, Lake Elsinore, Canyon Lake, Norco, Corona, Riverside, Moreno Valley, Banning, Beaumont, Calimesa, Perris, Hemet, and San Jacinto. This HCP is one of the largest plans ever attempted. It covers multiple species and multiple habitats within a diverse landscape, from urban centers to undeveloped foothills and forests, all under multiple jurisdictions. It extends across many Bioregions as well, including the Santa Ana Mountains, Riverside Lowlands, San Jacinto Foothills, San Jacinto

Mountains, Agua Tibia Mountains, Desert Transition, and San Bernardino Mountains. It provides for a coordinated MSHCP Conservation Area and implementation program to preserve biological diversity and maintain the region's quality of life.

The MSHCP serves as an HCP pursuant to Section 10(a)(1)(B) of the federal Endangered Species Act of 1973 (FESA), as well as a Natural Communities Conservation Plan (NCCP) under the NCCP Act of 2001. The MSHCP is used to allow the participating jurisdictions to authorize "Take" of plant and wildlife species identified within the Plan Area. The United States Fish and Wildlife Service (USFWS) and California Department of Fish and Game (CDFG) (hereafter "Wildlife Agencies") have authority to regulate the Take of Threatened, Endangered, and rare Species. Under the MSHCP, the Wildlife Agencies will grant "Take Authorization" for otherwise lawful actions -- such as public and private Development that may incidentally Take or harm individual species or their Habitat outside of the MSHCP Conservation Area -- in exchange for the assembly and management of a coordinated MSHCP Conservation Area.

Coachella Valley Multiple Species Habitat Conservation Plan

The diverse desert landscape of the Coachella Valley provides habitat for dozens of plant and animal species, some found no where else in the world. One of the fastest growing areas in rapidly expanding Riverside County, the Coachella Valley has a projected population of up to 600,000 over the next 15 years. The Coachella Valley Multiple Species Habitat Conservation Plan (CVMSHCP) provides a regional vision for balanced growth to meet the requirements of federal and state endangered species laws, while promoting enhanced opportunities for recreation, tourism and job growth. The CVMSHCP aims to conserve over 240,000 acres of open space and protect 27 plant and animal species. By providing comprehensive compliance with federal and state endangered species laws, the CVMSHCP not only safeguards the desert's natural heritage for future generations, it allow for more timely construction of roads and other infrastructure that is essential to improving quality of life in the Coachella Valley.

The Coachella Valley Association of Governments (CVAG) serves as the lead agency for plan review and final consideration. Participants include Riverside County, the cities of Cathedral City, Coachella, Indian Wells, Indio, La Quinta, Palm Desert, Palm Springs, Rancho Mirage as well as Coachella Valley Water District and Imperial Irrigation District. The benefits of the plan include:

- Preservation of the Coachella Valley's native desert wildlife and creates a magnificent system of open space parks, trails and reserves,
- Safeguards significant habitat linkages and wildlife corridors that enable animals to move safely from one habitat area to another,
- Assures critical freeway and freeway interchange projects can be built without delays resulting from endangered species conflicts,

- Offers certainty for the business community ultimately making the Coachella Valley a more attractive place for businesses to relocate or expand,
- Ensures the continuation of the Fringe-Toed Lizard permit and provides long-term conservation for this endangered species.
- Approximately 25% of the land proposed for conservation (60,000 acres) has already been acquired.
- Expedites construction of all currently planned road projects in the Coachella Valley in the next 25 years, as well as construction and widening of regional roads such as Indian Avenue, Palm Drive, Gene Autry Trail, Airport Road, and Avenue 66.

The combined effort of the two MSHCPs will effectively preserves one third of the total land mass within Riverside County equating to 2,360 square miles of pristine meadows, forests and desert habitat.

Weather and Precipitation

The County of Riverside continues to suffer drought conditions in most of the watersheds. Rainfall is transitory caused by the different terrain with coastal mountains, fertile inland valleys, the Cleveland National Forest, and large expanses of arid desert at or below sea level. Above average rainfall was noted in the City of Temecula which is in the Santa Margarita Watershed, and yet only 64% of normal rainfall was noted in the City of Riverside (50 miles to the North) which is within the Santa Ana Watershed. Rainfall in the Whitewater River Basin watershed is limited to a very short period during the winter months and occasional late afternoon monsoonal moisture in the summer months. Of particular note was the observance of four tornados that touched down and cause minor damage near the City of Moreno Valley, May 22, 2008. See photo below of two tornados.

Two tornados near the City of Moreno Valley May 22, 2008-Press Enterprise

Rainfall for the 2007-2008 Season

The 2007-2008 season included periods of near normal rainfall mixed with long periods of very dry weather. The late summer and fall of 2007 was seasonally dry until the last day of November when a very wet storm dropped copious rainfall across the entire region. Many stations recorded their greatest daily precipitation of the season. The early winter held close to normal through January. Then the latter half of winter and spring turned out to be among the driest periods on record. What happened? No one knows for sure, but the best theory among the experts is that the La Niña prevailed, bringing California less than normal rainfall in general. During December and January, however, a Madden-Julian Oscillation (MJO) contributed to greater rainfall. Season totals indicate no discernable pattern; some stations recorded only two-thirds of seasonal rainfall while other stations recorded slightly above normal rainfall. In addition, most storms during the season did not produce uniform precipitation across the region. *Coast to Cactus Weather Examiner-National Weather Service-San Diego, Volume 15, Number 3, July 2008.*

Location	Rainfall	Normal	% of Normal
Riverside	6.87	10.72	64
Palm Springs	5.40	5.23	103
Temecula	16.52	13.09	126

Economic Outlook

The County has experienced rapid population and economic growth since 2000, increasing in population by over 30% from 2000-2007. Job and labor force growth was likewise strong, increasing by 3.6% and 3.7% annually, respectively on average from 1999-2006. However, employment growth slowed in 2007 to 1.4% and unemployment increased to 6.2%, compared to 5.0% in 2006, rising to 7.7% in May 2007. The construction and real estate-related sectors have seen significant job losses in the Riverside-San Bernardino region, shedding 13% and 4% respectively, in 2007.

The population and job growth fueled residential and commercial construction, resulting in extraordinary assessed value (AV) gains averaging 15.5% annually from fiscal 2002-2008. For fiscal 2009 AV growth slowed dramatically to just 1.5%, with gains from new construction and property sales ($20 billion) largely offset by the county assessor's reduction of the AV of over 200,000 properties ($16 billion). The County is projecting no AV increase through fiscal 2011. Residential construction in recent years was further supported by the availability of sub-prime mortgages and other new loan products, which are defaulting at record levels and pressuring home prices. Commercial and industrial real estate development has mitigated the decline in the housing market somewhat, but that sector is starting to soften as well, exhibiting lower absorption rates and rising vacancy rates.

On a positive note, several years of strong economic and tax base growth coupled with good cost controls enabled the county to steadily add to its fund balance while also building flexibility into its budget. Audited results for fiscal

2007 show a remarkable third year of a general fund surplus over $100 million, bringing the total fund balance to $571 million, or 26% of expenditures and transfers out. The county's 2007 fiscal year-end unreserved fund balance rose to $483 million, a strong 22% of expenditures and transfers out (up from 13% in fiscal 2005), providing an important financial cushion as the county adjusts to slower or negative revenue growth. As the outlook for the county's economy changed throughout fiscal 2008, the county took action to limit the long-term impact on its financial position. Fitch notes that the county's sound budgetary achievement while also including substantial capital and other one-time spending, also avoided incorporating unusually strong tax performance into recurring expenditures.

For fiscal 2008, the county projects a drawdown on reserves and designations of about $100 million, and the budget for fiscal 2009 includes the use of a net amount of about $63 million in reserves or designations. At these reduced levels, Fitch believes the reserve levels remain consistent with the rating category, although deterioration beyond the budgeted level could lead to a rating downgrade. Departments have already been directed to reduce their spending targets for fiscal 2010 by at least 8%. Fitch views the county's budget policies, which include a reserve for economic uncertainties sized at 15% of discretionary revenues and a contingency reserve at 4% of discretionary revenues, as positive and effective in retaining sound finances. Both are fully funded in its fiscal 2009 budget.

The county's tax base is diverse. The top 10 taxpayers contribute just 1.9% of property tax revenues; however, four of the top 10 taxpayers are homebuilders reflecting their important role in the economy. In spite of the current housing downturn, long term prospects for economic growth remain positive in the county due to the availability of affordable land and the county's location along major transportation corridors and near major seaports and a cargo-oriented airport.

The county's direct debt burden is low, equaling just $534 per capita and 0.45% of market value. Including overlapping debt, debt ratios remain moderate, with issuance offset by population and AV gains. Overall debt totals about $3,896 per capita and is about 3.3% of market value.

The county's pension system is well funded and the county took action in August 2007 to reduce its exposure to other post employment benefits (OPEB), eliminating the implicit subsidy to retirees and reducing its OPEB liability to about $50 million (with a $1.5 million annual required contribution (ARC)) from $237 million (with a $16 million ARC). In addition, the county has prudently set up an OPEB Trust with Cal-PERS and budgeted $10 million in fiscal 2008 and $5 million in fiscal 2009 to begin funding its OPEB liability. ***Source: Fitches Ratings, August 27, 2008.***

In an attempt to hold the line on county departmental spending the Riverside County Executive Office is recommending to the Board of Supervisors a minimum of a 10% reduction in budget for FY09/10. That is in addition to the 5% budget reduction already established for FY08/09.

Property tax assessed value projections

The Assessor-Clerk-Recorder reports continued declines in the residential home market and a significant reduction in the amount of new construction throughout the county. Sales data indicate that as of October 2008, market values have declined to the same levels as March 2003. This reduction in values, after adding current new construction, would indicate an assessment roll reduction. Early analysis indicates that 2009 assessed values could decline five percent. Property transfers are currently on line to exceed the 80,000 transfers for FY 08/09; almost 60 percent of those transfers involve foreclosure and bank owned property sales, which further reduce assessed values.

The Assessor's evaluation of the currently declining market indicates that over 321,000 properties are in the target range to be reviewed for possible reductions. This would include the 275,000 properties reviewed for FY 08/09 of which over 219,000 were reduced. Sales analysis as of October 2008 does not yet indicate a leveling of home values. Data suggest that property-tax revenue through FY 11/12 will not meet the current growth projections (represented by the dashed line in Graph 1) used to estimate revenue as part of the county's long-range budget plan. Therefore, we are lowering projections for assessed-value growth in the out years, as the heavy red line in Graph 1 represents, resulting in a projection of negative AV growth for FY 09/10.

Economic Development

Riverside County isn't immune from national economic challenges, but despite these challenges Riverside County has prospered in many areas. The health care, telecommunications, and education industries have expanded and continue to expand, communities within the county are still expected to have pockets of short-term growth, the Inland Empire's (Riverside and San Bernardino Counties') total personal income is estimated to increase 2.5%, and taxable retail sales are estimated to be $41 billion during this calendar year, $2 billion more than Orange County.

Housing in Riverside County is abundant and affordable. To create awareness of the buyer's market and EDA's housing programs EDA has launched www.RCHomeLink.com. This website offers information on valuable home programs and tools to help people find a home within Riverside County.

EDA recognizes the importance of keeping Riverside County a place with safe, healthy communities. One aspect of this means doing our part to turn Riverside County "green" by conserving the county's precious natural resources.

EDA has embraced the notion that efficiency is "green". EDA's divisions are managed in highly efficient ways including key factors such as budgets, resources, and time. Leadership in Energy and Environmental Design (LEED) criteria are being incorporated into the County's capital improvement projects.

With regard to sustainability, water-wise landscaping is being implemented into agency redevelopment projects. Already in the works, are several projects that use solar panels to increase energy efficiency and conservation. The use of solar paneling is a new effort to conserve energy and it will be increasingly implemented in future projects. ***-Robin Zempfer, Assistant County Executive Officer/EDA***

Decline in Residential Building Permits

Housing construction has come to a near standstill as builders and developers react to an unexpected severe drop in buying. The number of residential building permits is highly correlated to the inflow of domestic migration patterns and the housing production in the County. During the mid 1990's the number of residential building permits issued were low as a result of the economic downturn. After 2000 the number of building permits surged, driven by the high demand for affordable housing. However, with the sub-prime loan meltdown and an explosive foreclosure rate the number of residential building permits issued during 2007-2008 has plummeted to a low of 9,957 residential building permits. This is a significant drop from the 21,205 residential building permits that were issued in the previous twelve months, accounting for a 53% decrease.

> **Press Enterprise:** John Husing a local economist, in his annual economic forecast hosted by the Lake Elsinore Valley Chamber of Commerce, said

the sour housing market is at the heart of the Inland region's economic woes, which he called the worst in more than 40 years.

Not withstanding this time of economic uncertainty, the County's NPDES MS4 stormwater program through it intra-departmental approach will continue to monitor new development projects and provide inspections of those projects that are in-process throughout the county.

With the continued concern that housing projects may be abandoned, the County took steps to inform builders and developers of the requirement to maintain Best Management Practices (BMPs) for sediment and erosion control. Building inspectors have been out early to evaluate whether projects are in compliance with the stormwater requirements. Those projects where BMPs were determined to be inadequate were brought back into compliance.

Leadership in Energy and Environmental Design (LEED) Certification

The Leadership in Energy and Building Design (LEED ™) "green building" rating system is a nationally accepted benchmark for the design, construction and operation of green buildings. LEED gives building owners and operators the tools they need to have an immediate and measurable impact on their buildings' performance in five key areas:

- Sustainable site development,
- Water savings,
- Energy efficiency,
- Materials selection , and
- Indoor air quality.

The County of Riverside's Facilities Management Department and Economic Development Agency are on the cutting edge as it incorporates LEED criteria into capital improvement projects (CIP).

As an example, in November 2007, Riverside County's first LEED certified building held its grand opening. The Woodcrest Library, designed to blend into the natural landscape of the community, is a model of sustainable site development. Some of the "green" features designed into the new library and its site include low-water native landscaping, a permeable parking lot to reduce and utilize storm run-off, a water-wise demonstration garden, and a building design which uses and directs ambient lighting from roof and windows to reduce the use of artificial light.

Other significant projects that will include "green building" criteria include the new Transportation Land Management Agency Maintenance Yard in Jurupa and the County's proposed Hub Jail project that will house approximately 7,200 in-mates once the plan is built out.

Transportation Land Management Agency

Building and Safety Department

Business Registration and Licensing Program

In an attempt to augment the Compliance Assistance Program (CAP) performed by the Department of Environmental Health and move toward a more robust inspection program for industrial and commercial activities related to stormwater management, the County's Building and Safety Department has been tasked with developing an inspection program to address nuisance runoff, ensure maintenance of BMPs, and continued compliance with the MS4 permitting requirements in the unincorporated portions of the county.

Since the inception of the Business Registration and Licensing Program, over 10,000 businesses have been registered. The first round of inspections will be used to evaluate the risk and impact to stormwater flows and any contribution to urban runoff. Educational materials on BMPs and other stormwater related materials will be distributed to ensure that the regulated community is aware of their requirements under the MS4 permit. Violations observed during these preliminary inspections will be corrected by using progressive enforcement techniques including notice of violations, administrative enforcement and referral to the environmental crimes task force for recalcitrant and gross violators. Additionally, for the most egregious violators referrals will be made to the regional boards for enforcement assistance.

Excerpt from Ordinance 857 Section 13. ***Water Quality Inspections and Enforcement; Additional License Fees.*** A license inspector, code enforcement officer or peace officer employed by the County may enter free of charge, at any time, any place of business for which a business license is required by this ordinance and inspect the premises, grounds, facilities and structures located therein for compliance with water quality requirements imposed by Riverside County Ordinance Nos. 457 and 754, California Water Code §§ 13000 et seq. (Porter-Cologne Water Quality Control Act), Title 33 U.S.C. §§ 1251 et seq. (Clean Water Act) and any applicable state or federal regulations promulgated thereto, and any related administrative orders or permits issued in connection therewith. Failure to maintain the business premises, grounds, facilities and structures located therein in compliance with water quality requirements is a violation of this ordinance. The County may initiate enforcement actions against business license holders whose business premises are found upon inspection to be in violation of water quality requirements. The business license holder shall be liable to the County for an additional license inspection and enforcement fee based on the hourly rates provided in Section 10 of this ordinance.

The CAP will continue to be utilized by the cities until such time that the industrial/commercial inspection program is integrated through an MOU process with the County's Building & Safety Department or the cities independently establish their own inspection program.

In addition, Department of Code Enforcement staff has been trained to recognize violations of the NPDES Stormwater MS4 permit and are able to issue cease and desist orders and notices of violation for non-compliance matters.

Code Enforcement Department

The County of Riverside's Code Enforcement Department has taken a more hands-on approach to community policing and outreach. The Code Enforcement staff ascribes to the "Broken Window" theory, which holds that ignoring the little problems such as graffiti, litter, and shattered glass creates a sense of irreversible decline that leads people to abandon the community or to stay away. Partnerships with the Board of Supervisors, Economic Development Agency, Waste Management Department , Department of Environmental Health, Flood Control and Water Conservation District, community groups, trash haulers, Community Action, graffiti abatement and Sheriff's Department have lead to increased community awareness and has diminished blight throughout the unincorporated portions of the county. With programs that address community clean up & tire collection events, tackling issues such as inoperable/abandon vehicles, noise, illegal dumping, un-permitted grading, and substandard construction, all lead to a sense of community. The Code Enforcement Department has also implemented a community Improvement planning process in economically underserved communities throughout the County. The community improvement plan is used to address conditions that otherwise lead to blighted conditions. As examples "The Posting", a monthly newsletter and the community improvement plan for the community of Thermal is attached for your review.

Transportation Department

The County's Transportation department is an integral player as it relates to the construction and maintenance of publicly owned roads, right of ways, and MS4 facilities. One of the tools used by the Transportation Department to ensure compliance of MS4 facilities within a private development is through the formation of Landscape and Lighting Maintenance Districts (LLMDs). Each LLMD is responsible for ensuring that structural BMPs are routinely cleaned and maintained. The Transportation Department is the primary entity for cleaning and maintenance of publicly owned MS4's that are in their right of way. Another function of the Transportation Department is the mapping of MS4 facilities that are owned and operated by the Department. The County has completed the GIS mapping for the Santa Margarita Watershed and continues to finalize mapping in the Santa Ana Watershed. Once the mapping in the Santa Ana Watershed is completed they will be tasked with mapping the Whitewater River Basin Watershed. GIS mapping continues to be a fluid process and is modified as new areas are developed. Street sweeping is performed in some areas of the county depending on whether it is part of the LLMD, county provided, city provided, or part of a franchise trash hauler agreement.

Planning Department

The Planning Department is the entry point for private residential and commercial development review for the County unincorporated areas. State requirements for Notice of Intent (NOI) and Waste Discharge ID Number (WDID) and Notice of Termination (NOT) are checked for during the plan review process. Construction BMPs identified in Stormwater Pollution Prevention Plan (SWPPP) must be implemented. Through local ordinances aspects of the project SWPPP are inspected to ensure compliance with the MS4 requirements. Projects that meet minimum criteria are subject to the submission of a Water Quality Management Plan (WQMP), which is synonymous with a Standard Urban Stormwater Mitigation Plan (SUSMP). The draft WQMP is reviewed by the Riverside County Flood Control and Water Conservation District (District) for substantial conformity. Adjustments are called out and modifications are made to the WQMP prior to the final submission. The WQMP will address post construction BMPs, maintenance and monitoring.

Environmental Programs Division (EPD)

The Environmental Programs Division (EPD) is responsible for overseeing implementation programs for three regional habitat conservation plans and insuring consistency with the County's existing land development process. The EPD provides for an Expedited Review Process (ERP) for the Western Riverside County MSHCP

Expedited Review Process (ERP)

Property owners who intend to install a mobile home or build a single-family home on an existing legal lot will be required to go through the ERP if their property is located within a Criteria Cell established through the Riverside County MSHCP.

The initial ERP is free and will be conducted by trained staff within the Riverside County Environmental Programs Department. An ERP will determine the appropriate location of a building footprint and access roads. Habitat assessments for plant and/or animal species may also be required.

While the MSHCP does not prevent the construction of a single-family home or the installation of a mobile home on an existing legal lot, the results of the ERP may require that building footprints, access roads and other ancillary structures be located on the least sensitive portion of your property.

Habitat Evaluation and Acquisition Negotiation Strategy (HANS)

The HANS Process applies to property which may be needed for inclusion in the MSHCP Conservation Area or subjected to other MSHCP Criteria and shall be implemented by the County and those cities that have agreed to implement the HANS process.

Under the incentive-based MSHCP program, the Western Riverside County Regional Conservation Authority (RCA), the County, cities, or various State and federal agencies may obtain interests in property needed to implement the MSHCP over time (interest may be obtained in fee, conservation easement, deed restriction, land exchange, flood control easement or other type of interest acceptable to the RCA, the County, cities, acquiring state and/or federal agency, and property owner). Fee ownership of property may not be required. If it is determined that all or a portion of property is needed for inclusion in the MSHCP conservation area, various incentives may be available to the property owner in lieu of or in addition to monetary compensation in exchange for the conveyance of a property interest. These incentives may include, but shall not be limited to, the waiver and/or reduction of certain development fees, monetary compensation for entering into an option agreement, fast track processing, density bonuses, clustering, density transfers (and property reassessment and tax credits if determined to be feasible). The incentives are intended to provide a form of compensation to property owners who convey their property. As a property interest is obtained, it will become part of the MSHCP conservation area.

The establishment of Criteria Area boundaries is intended to facilitate the process by which the County or cities will evaluate property that may be needed for inclusion in the MSHCP conservation area. The Criteria Area is an area significantly larger than what will be the MSHCP Conservation Area, within which property will be evaluated using MSHCP conservation criteria. The Criteria Area is an analytical tool which assists in determining which properties to evaluate for acquisition and conservation under the MSHCP and does not impose land use restrictions.

The Process ensures that an early determination will be made of what properties are needed for the MSHCP conservation area, that the owners of property needed for the MSHCP conservation area are compensated, and that owners of land not needed for the MSHCP conservation area shall receive "Take Authorization" for covered species adequately conserved through the permits issued to the County and cities pursuant to the MSHCP.

Development of property outside of the MSHCP conservation area (both within and outside of the Criteria Area) shall receive "Take Authorization" provided that payment of a mitigation fee is made (or any credit for land conveyed is obtained) and compliance with *Section 6.0* of the MSHCP occurs. Payment of the mitigation fee and compliance with the requirements of *Section 6.0* are intended to provide full mitigation under the California Environmental Quality Act (CEQA), National Environmental Policy Act (NEPA), Federal Endangered Species Act, and California Endangered Species Act for impacts to the species and habitats covered by the MSHCP pursuant to agreements with the U.S. Fish and Wildlife Service, the California Department of Fish and Game and/or any other appropriate participating regulatory agencies and as set forth in the Implementing agreement for the MSHCP. However, it is recognized that the MSHCP cannot provide mitigation for projects regulated by entities or agencies not participating in the MSHCP.

All proposed discretionary Development projects within the Criteria Area shall be subject to review under the HANS process and monitored through a uniform computerized tracking system. However, the issuance of a grading permit or site preparation permit for an individual single family home or mobile home on an existing legal lot shall not be subject to review under the HANS process but shall be subject to review under the procedures described in the *Expedited Review Process for Single-Family Homes or Mobile Homes To Be Located on an Existing Lot Within the Criteria Area*. This HANS process will not be construed as a limitation on the County's or the cities' ability to approve or deny a development application except that a project consistent with this HANS process may not be denied solely because a development application does not comply with the MSHCP Conservation Criteria.

Community Health Agency

Department of Environmental Health

District Environmental Services (DES) Division

Changes in program delivery as it relates to the CAP are evolving. With the increased program implementation of the commercial industrial inspection program (CIIP) by the Department of Building and Safety, the CAP program will cease to exist in the unincorporated portions of the County. As the CIIP program becomes more proficient and accepted it is likely that an MOU agreement between the cities and the County will be signed to phase in the CIIP and phase out the CAP or the cities will institute their own CIIP.

Environmental Resources Management (ERM) Division

Local Enforcement Agency (LEA)

As part of the franchise trash haulers agreement some jurisdictions in the unincorporated portions of the county require mandatory trash pickup and street sweeping.

Sewage Spills and Septic Systems

All sewage spills greater than 1000 gallons are managed through the Department and reports are submitted to the affected Regional Water Quality Control Board. Smaller spills are handled on a case by case basis with reports on file with the department. Spill reports are also made to the Governor's Office of Emergency Services.

Septic system construction is managed through plan check activities. Septic system moratoriums in coordination with the Santa Ana Regional Water Quality Control Board have been instituted in Cherry Valley and Quail Valley where high groundwater has infiltrated an area and caused the failure of a septic system or

where high levels of metals, nitrates, nutrients or bacteria from septic systems may have contaminated a source of drinking water.

Hazardous Materials Management (HMM) Division

The Hazardous Materials Management Division inspects businesses that generate hazardous waste, store hazardous materials and/or operate underground storage tanks to store fuels, solvents, corrosive materials, or other hazardous constituents. They are also the primary emergency response mechanism along with the County Fire Department for on-highway spills and other hazardous materials incidents involving commercial and industrial facilities. The Division is also part of the Environmental Crimes Task Force which is a coordinated inter-agency environmental crime investigatory group comprised of local, state and federal agencies spearheaded by the Riverside County District Attorney's Office. This group takes on investigatory actions as it relates to environmental criminal activities that could result in a misdemeanor or felony conviction.

Capital Improvement Projects (CIP)

To ensure that all projects have adequate funding and all environmental requirements such as CEQA, stormwater management and air quality criteria are considered, the County Executive Office formed a Capital Improvement Projects Oversight and Review Committee. The makeup of the committee includes representatives from the Executive Office with finance, NPDES, construction expertise, Director of Facilities Management, Director of Economic Development Agency, Communications/Information Technology. All proposed CIPs must go through this review process.

The following departments within the County organizational structure have construction authority for CIPs:

Facilities Management (FM) Department

The Facilities Management (FM) Department awards contracts for construction, approves design, reviews projects for CEQA compliance and stormwater quality during the construction phase and WQMP post construction BMPs. Once the construction is completed they work with the departments in the development of facility pollution prevention plans. FM also provides maintenance of all county owned building and is responsible for management of BMPs. All future buildings, designed and constructed, will have elements of LEED and BMPs incorporated into the project.

Economic Development Agency/Redevelopment Agency (EDA/RDA)

The Economic Development Agency awards contracts for construction related to development and redevelopment. Contract language requires early on adoption

of LEED concepts, WQMP and post construction BMPs. In many instances EDA/RDA is the funding authority for new development construction destined to become CIPs. Depending on the project EDA/RDA staff act as project managers and oversee the overall project from preliminary design concepts, contract award, architectural and landscape design, construction, to final project completion. If the project is a building for county operations then FM takes over lead for deferred maintenance including management of post construction BMPs.

Regional Parks and Open Space District

The Riverside County Regional Park and Open-Space District was created by the electorate in November 1990 by a 64% vote and formed on January 29, 1991. The District is an independent agency governed by the Board of Supervisors, which sits as the District Board of Directors. The Park District presently employs approximately 100 staff who bring to their jobs a high degree of dedication to the public and a wide variety of skills and abilities.

At the present time, the district manages and operates more than 44,000 acres which includes forty parks, reserves, historic or archaeological sites and ninety miles of regional trails. The staff includes professionals in the fields of accounting and finance, biology, building and grounds maintenance, carpentry and construction, ecology, as well as environmental restoration.

Additional fields include historic preservation, interpretation, landscape architecture, museum and curatorial management, park planning, personnel administration, recreation, security, trails planning and construction, weddings and special events, wildlife habitat management, and a host of other disciplines.

Waste Resources Management Department

The mission of the Riverside County Waste Management Department is to provide for the protection of the general public health and welfare by efficient management of Riverside County's solid waste system through:

- provision of facilities and programs which meet or exceed all applicable local, State, Federal and land use regulations;
- utilization of up-to-date technological improvements;
- development and maintenance of a system that is balanced economically, socially and politically; and,
- economically feasible recovery of waste materials.

The Waste Management Department currently operates 6 landfills; an additional privately owned and operated landfill is located in Western Riverside County. In addition to the landfills there are 8 privately owned and operated transfer stations.

Recycling and Specialty Programs

Household Hazardous Waste (HHW)-Residential Program

The County of Riverside established the Household Hazardous Waste Program in October 1988 with the formation of a mobile community HHW collection program. This HHW program has evolved and is comprised of a combination of three permanent HHW collection centers, two Antifreeze, Battery, Oil and Paint (latex only) ABOP collection centers and temporary collection events at 16 locations throughout the County.

Conditionally Exempt Small Quantity Generator (CESQG) -Business Program

As an enhancement to the HHW program and to encourage small businesses to properly handle their hazardous waste the County provides the CESQG program as an affordable and legal solution for the proper disposal of hazardous waste. The program is on an appointment only basis and a hazardous waste disposal contractor comes to the business to ensure proper labeling and documentation is provided.

Universal and e-Waste

Universal Wastes are hazardous wastes that are generated by several sectors of society, rather than a single industry or type of business. Universal Wastes contain harmful chemicals, which, if put in the trash may harm people or the environment. E-waste include:

- ***Common Batteries*** - AA, AAA, C & D Cell and button batteries (e.g. hearing aid and watch batteries). Automotive type batteries are not Universal Waste. When they become waste, they are regulated under a different law.
- ***Fluorescent Tubes, Bulbs and Other Mercury Containing Lamps*** - Fluorescent light tubes and bulbs, Hi Intensity discharge (HID), metal halide, sodium and neon bulbs.
- ***Electronic Devices*** - Televisions, computer monitors computers, printers, VCR's, cell phones, telephones, radios, and microwave ovens.
- ***Mercury-Containing Devices*** - Thermostats, switches, thermometers, dental amalgam, pressure and vacuum gauges, novelty items, counterweights and dampers, and medical devices known as dilators.
- ***Non-Empty Aerosol Cans that Contain Hazardous Materials***. (Labeled Toxic, Flammable, or Corrosive)

Riverside County's Backyard Composting Program:

This program has been developed to aid the residents of Riverside County in composting their organic material, so that we can all recycle more and discard less.

Composting harnesses the natural process of decomposition by turning organic matter (such as fruit and vegetable wastes, grass clippings, leaves, and some animal manure's) into a useful product for your landscape or garden. Composting can also improve hard, depleted soils, so that flowers, vegetables, and fruit trees can thrive in a nutrient-rich environment. Composting also improves the soil by boosting its fertility, its moisture-holding capabilities, and its texture.

Composted material is actually rather expensive to buy. But anyone with a little extra room in a garden, a little extra time, and a good source of compostable materials can produce good, high quality compost in as little as 4 weeks - absolutely free! By composting, you return the earth's nutrients back to the soil, where your plants absorb them, thereby becoming healthier. Healthy plants are far more resistant to diseases and pests. Instead of throwing away your organic waste, compost them! You will cut down your trash collection service, and you will be prolonging the life of Riverside County's rapidly depleting landfill space!

Sharps

Hypodermic needles, lances, and other sharp material associated with medical treatment can be collected in sharps containers and brought to the HHW collection centers for proper disposal. Sharps containers can be obtained from your HHW collection center or local pharmacy.

Construction Activities

The Waste Management Department's construction and industrial activities include maintenance of county operated landfills and stabilization of closed landfills. This includes the requirement to prevent and mitigate stormwater or other discharges including sediment, solid waste and liquids from entering an MS4 system.

Flood Control and Water Conservation District (District)

The Control and Water Conservation District (District) operates and maintains major flood control facilities such as dams, flood basins, levees, open channels and major underground storm drains. In most cases, the District does not maintain storm drain inlets or pipes less than 36 inches in diameter. These smaller facilities are typically maintained by City or County Transportation Department crews. The engineering design of all projects constructed by the District is performed under the direct supervision of, one of the District's two design teams. They are responsible for coordinating all activities involved in moving projects forward from the conceptual planning phase to the actual start of construction

The construction section administers all District construction contracts and inspects the construction of all flood control projects to be accepted for operation and maintenance by the District.

In addition, as part of the plan review process for private development and CIPs within the county, the District's planning section review and make recommendations on WQMP submittals.

Local Ordinances

The County of Riverside has enacted the following ordinances to address stormwater issues and related activities. The text for each of the ordinances can be found at http://www.clerkoftheboard.co.riverside.ca.us/ords.htm

ORDINANCE 348
Land Use Ordinance of Riverside County
Amended through Ordinance No. 348.4574

ORDINANCE 427
Regulating Land Application of Manure
Amended through Ordinance No. 427.3

ORDINANCE 492
Regulating Food Establishments and Food Facilities
Amended through 492.9 and Incorporating by Reference Ordinance 725

ORDINANCE 541
Related to the Removal of Rubbish
Amended through Ordinance 541.5

ORDINANCE 615
Relating to Establishments where Hazardous Waste is Generated, Stored, Handled, Disposed, Treated or Recycled
Amended through Ordinance 615.3

ORDINANCE 617
Regulating Underground Storage Tank Systems containing Hazardous Substances
Amended through Ordinance 617.4

ORDINANCE 650
Regulating the Discharge of Sewage in the Unincorporated Areas of Riverside County
Amended through Ordinance 650.5 and Incorporating Ordinance No. 725

ORDINANCE 657
Regulating the Collection, Transfer, and Removal of Solid Waste
Amended through 657.6

ORDINANCE 689
Prohibiting the Unlawful Dumping of Trash
Amended through 689.1

ORDINANCE 725
Establishing Procedures and Penalties for Violations of Riverside County Ordinances and Providing for Reasonable Costs Related to Enforcement
Amended through 725.12 and Incorporating by Reference Ordinance 640.

ORDINANCE 745
Providing for the Comprehensive Collection and Disposal of Solid Waste in Specified Unincorporated Areas of Riverside County
Amended through Ordinance 745.2

ORDINANCE 754
Establishing Stormwater/Urban Runoff Management and Controls
Amended through Ordinance 754.2

ORDINANCE 772
Declaring as a Fire Hazard Abandoned or Neglected Orchards, Groves or Vineyards, and Ancillary weeds and Debris and Providing for their Abatement

ORDINANCE 812
Prohibiting the Land Application of Class B Sewage and Sludge
Amended through Ordinance 812.1 and Incorporating by Reference Ordinance 725

ORDINANCE 830
Regulating the Land Application of Class A Sewage Sludge For Agricultural Activities
Amended through Ordinance 830.1 and Incorporating by Reference Ordinance 725.

ORDINANCE 843
Regulating the Discharge of Waste into the Public Sewer System for the Highgrove Community

ORDINANCE 856
Establishing a Septic Tank Prohibition for Specified Areas of Quail Valley Requiring the Connection of Existing Septic systems to Sewer

ORDINANCE 857
Regarding the Establishment of a Business Registration and Licensing Program

ORDINANCE 859
Establishing Water-efficient Landscape Requirements
Amended through Ordinance 859.1

ORDINANCE 871
Prohibiting the Installation of Specified Septic Systems in Cherry Valley

Organizational Structure

The organizational structure for the County is decentralized yet collaborative in nature. The voting public elects the County Board of Supervisors. The Board of Supervisors appoints the County Executive Officer who appoints his Executive Team and County Department Heads. The Executive Office under the direction of the Chief Deputy County Executive Officer oversees the coordination of the NPDES stormwater Program and general government county departments. Those Departments designated in blue have construction authority. The Flood Control and Water Conservation District acts as the Principle Permittee along with the County Executive Office for the County departments. The Planning Department highlighted in blue is the intake point for private residential and commercial development projects. The departments highlighted in green have inspection authority. Those programs highlighted in yellow provide advisory and coordination roles. See organization chart on next page.

Organizational Chart

Concluding Remarks

The County of Riverside's NPDES Stormwater Program is a collaborative and evolving partnership between county departments, the District, CVWD, and the 26 participating co-permittees (cities), in coordination with the three Regional Water Quality Control Boards. Program consistency is the goal with the acknowledgement that differences in climate, hydrology, geology, and jurisdictional philosophy exist between the three primary watersheds. This unique program diversity with overlapping jurisdictional authority makes for an interesting regulatory dynamic.

The NPDES stormwater program staff believes that building partnerships between the public and private sector is vital for program implementation efforts to be effective. Lines of communication need to be open so that dialog on stormwater issues can be debated and consensus reached. It is difficult, at best, to educate the public on stormwater issues when most of the streams and channels in Riverside County are ephemeral and have been dry for almost three years.

Many of our local residents have never ventured beyond their community boundaries. As an example, many individuals in our multi-cultural communities have never been to the Pacific Ocean, seen lakes or rivers, or understand how an ecosystem works. To these community members the only interface with water resources is the faucet that delivers water to their sink and the toilet for discharging waste. They do not understand the underground infrastructure made up of pipes and channels that deliver drinking water to their homes or the two separate systems that handle stormwater and sewage. Many people have the misconception that the sanitary sewer and the stormwater system are the same. So, tried and true public education tools have been modified so that regionalism can be incorporated into the stormwater message.

New development and challenges from urban and industrial runoff continue to have an impact on stormwater program implementation. In this time of economic uncertainty, financing for the operation and long term maintenance of post construction best management practices (BMPs) and the use of low impact development (LID) techniques that are built to maximum extent practical (MEP) standards is difficult to achieve without some funding mechanism and maintenance entity. For existing development this is a daunting task because of the Proposition 218 mandate for a two thirds majority vote to approve a new tax.

As cities mature and areas for new development become scarce the challenge for in-fill projects through redevelopment will become a new reality. Each of these projects will have their own set of circumstances that will need to be confronted when new innovative and emerging stormwater technology is blended with existing infrastructure and as regulations become more stringent with time.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER NO. R9-2004-001)

1) **Description of any amendments to the General Plan or the development project approval process:** The County has taken steps to modify the plan review process for Capital Improvement Projects (CIPs) to more closely mirror that of industrial and commercial private development. The following steps have been taken:

   a) All CIP proposed projects over $100,000 are reviewed by the CIP review team where a determination is made whether stormwater quality will be impacted by the project.

   b) If proposed projects have an impact on stormwater quality and meet the criteria for a WQMP, the requirement for a WQMP will be included as part of the architectural design.

   c) Review of the WQMP will be provided by the Flood Control and Water Conservation District planning section or private third party evaluator.

   d) Inspection of SWPPPs, WQMPs and overall compliance of MS4 requirements for the CIP will be provided by either Facilities Management (FM), Environmental Compliance section, Economic Development Agency (EDA) Project Managers, or Building and Safety)Environmental Compliance(B&SEC section.

   e) FM, EDA, B&SEC staff have received training and will continue to receive training on NPDES stormwater requirements to ensure that quality inspections are performed on CIPs.

   f) Post construction BMPs for CIPs will be operated and maintained by Facilities Management maintenance staff for those buildings owned by the County.

2) **Number of grading permits issued:** 604 permits were issued for the Santa Margarita Watershed

3) **Number of developments conditioned to meet SUSMP requirements:** See Flood Control and Water Conservation District report for planning cases conditioned for Water Quality Management Plan (WQMP) or SUSMP requirements

4) **Attach one example of a development project that was conditioned to meet SUSMP requirements and a description of the required BMPs:** See Flood Control and Water Conservation District Report

5) **Description of any updates to the environmental review process:** None

6) **Description and number of training efforts conducted during the reporting period (for staff, developers, contractors, etc.), including the number of staff trained.**

   a) **Training:** See Flood Control and Water Conservation District Report on Training

Training	Training Description	Training Dates	Number of Attendees
	-	-	-

1. DEVELOPMENT PLANNING
(SECTION F of ORDER NO. R9-2004-001), CONT.

		Total	**-**

b) **Summarize the educational and outreach activities the Development Planning Component has conducted over the past year:** Each development project conditioned for approval is required to obtain copies of public education materials, sign an affidavit stating that they will distribute stormwater related materials to the property owners. The affidavit is filed with the development's individual file. In addition the county attempts to keep the general public and the development community (Building Industry Association) informed of all training and educational opportunities. There are numerous training partners include the University of California Extension, Building Industry Association, and private consultants. The County also provides a public information kiosk located at the Transportation Land Management Agency (TLMA) counter services area. Stormwater information is provided and NPDES requirements are posted.

7) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** Overall program effectiveness correlation is not well defined in the current SWMP. However, the following activities continue to be a priority:

a) Training continues to be a priority, with improved training quality, examples of emerging technology and accessibility to municipal employees being improved year to year

b) Low Impact Development (LID), hydromodification and LEED ™ certification and requirements for WQMP/SUSMP direct how landscape based post construction BMPs are incorporated into design criteria. The end result being that projects that have WQMP as part of the project design are better equipped to handle runoff such that some level of treatment is obtained for pollutants of concern and/or infiltration is achieved.

c) Work continues to progress on the Flood Control and Water Conservation District's plan to establish a fee based community facilities district. Until this mechanism is in place the County will continue to utilize lighting and landscape maintenance districts (LLMDs) or require Home Owners Associations (HOAs) and Property Owners Associations (POAs) to provide maintenance of post construction BMPs.

d) Since the 2007 audit by Regional Board staff the County has instituted an equivalent process for municipal capital improvement projects to ensure that WQMP requirements are included in the design of all new county infrastructure.

8) **Additional Comments/Information:**

1. DEVELOPMENT PLANNING
(SECTION F of ORDER NO. R9-2004-001), CONT.

Describe the major accomplishments of the Development Planning Component over the past year. (General Plan or ordinance revisions, procedure/approval process changes, SUSMP guidance material): Because of the economic downturn, drought conditions and reduction in construction activity, emphasis has been placed on incorporating drought tolerant landscaping and being water wise by reducing watering times and converting to micro-irrigation techniques. Ordinance 859.1 was enacted April 25, 2008 and specifies that new development shall have the following:

1) Landscaping has been installed in conformance with approved planting and irrigation plans;
2) Smart irrigation controllers are set according to an irrigation schedule;
3) The irrigation system has been adjusted to maximize irrigation efficiency and eliminate overspray and runoff; and
4) A copy of the irrigation schedule has been given to the property owner.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Development Planning Component: Refinement of the WQMP requirements will continue with the inclusion of inspection of post construction BMPs after they have been operating over a period time to ensure that they are working and providing adequate protection. This inspection element will be done by the Department of Building and Safety, Environmental Compliance Section.

1. DEVELOPMENT PLANNING
(SECTION F of ORDER NO. R9-2004-001), CONT.

Page left blank

2. CONSTRUCTION
(SECTION G of ORDER NO. R9-2004-001)

1) **Number of inspections conducted:** A total of 451 Single Family, 133 Tract and 20 Commercial NPDES inspections were conducted by the Department of Building and Safety, Environmental Compliance Division during the 2007-08 Storm Season.

   Table 1: 2007-08 Storm Season Construction Site Inventory, provides a complete list of all inspections conducted in all Water Board Regions of Riverside County.

   Attachment A: 2007-08 Storm Season Final Statistics, is included in this report as a summary of all construction sites inspected in Riverside County listed by the Regional Water Quality Control Board responsible, end of storm season compliance percentage, number of inspections conducted and the date of the last inspection.

2) **Number and type of enforcement actions related to construction sites:**

Enforcement and Compliance Responses	Private Projects	Public Projects
Non-monetary Penalties	--	--
Stop Work Authority [SFR= 17-(11-Remain, 6 Expired), Tr=1, Comm=0]	17	--
Fines	--	--
Financial Security	--	--
Permit/Certificate of Occupancy Denial	--	--
Referral to SDRWQCB [SFR= 17-(11-Remain, 6 Expired), Tr=1, Comm=0]	17	--
Total	**34**	**--**

   See Attachment B: 2007-08 Storm Season- Sites Where Enforcement Was Taken, for a detailed list of the sites where enforcement action was taken in Riverside County this storm season. The statistics provided in the table above were derived from this attachment.

3) **Description of modifications made to the construction and grading approval process:** The Department construction and grading approval process has not been significantly modified since our last annual report was filed. Standard NPDES Construction Notes are still required to be included on the County approved grading plans for projects with more than one acre of disturbance. Projects with less than one acre of disturbance are still required to install erosion and sediment controls, but not to the same extent as those projects involving more than one acre. The Department still ensures that proof of the filing of a NOI is provided when necessary and that the site WDID is noted.

2. CONSTRUCTION
(SECTION G of ORDER NO. R9-2004-001), CONT.

4) **Description and number of training efforts conducted during the reporting.**

a) **Training: Building and Safety**

Training	Training Description	Training Dates	Number of Attendees

FM and EDA staff	General Grading + NPDES Training	05/08/07	11

b) **Summarize any additional education and outreach activities conducted for project applicants, contractors, developers, property owners, and/or responsible parties in support of the Construction Component:**

2. CONSTRUCTION
(SECTION G of ORDER NO. R9-2004-001), CONT.

Building and Safety Department: During NPDES construction inspections, staff spends a substantial amount of time meeting with developers, owners etc., discussing the educational material that is available for the development of site SWPPPs and the installation and continued maintenance of site erosion and sediment control measures. Educational material such as brochures and posters are freely distributed for use and reference by all interested parties to assist with compliance of NPDES rules and regulations. Pre-storm season site inspections are conducted beginning in September of the year. Although pre-storm season inspections are conducted on single family residential, commercial and tract construction sites, the pre-season inspection is used to provide the smaller builder especially (single family residential builders, or owner-builders) with an ample amount of time to prepare for the upcoming rainy season. This storm season marks the second season in a row that pre-storm season inspections of single family residential projects will be conducted. Approximately 232 initial pre-storm season inspections were conducted during the 2007-08 Storm season. The number of initial inspections conducted indicates the number of builders and developers the County has assisted during our inspection process through our NPDES education outreach activities.

Transportation Department: For FY 07/08, fifty-eight (58) employees attended NPDES Construction training. The Transportation Department is very diligent in educating staff in NPDES in order to be in compliance with the NPDES requirements.

Facilities Management and Economic Development Agency: Inspection employees have attended training and continue to hone skills in NPDES stormwater requirements.

Regional Parks and Open Space District: Staff have attended construction training and are encouraged to attend additional training opportunities on site design, LID, hydromodification as it relates to park settings.

5) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:**

A. **Building and Safety:** The categories shown below provide the total number of construction projects disturbing one acre or more that were inspected for NPDES compliance by Riverside County during the 2007-08 Storm Season.

1) Single Family Residential (SFR)- 232

2) Commercial Projects (Comm.)- 10

3) Tract Projects (Tr)- 39

Transportation Department: For FY 07/08, the majority of the Transportation Department's new construction projects occurred in Santa Ana region and Whitewater region. Some of the construction projects are continuing from FY 05/06 and /or to the next FY 08/09. There were a total of five (5) construction projects in Santa Ana region, four (4) construction projects in Whitewater region, and one (2) construction projects in Santa Margarita region for FY 07/08.

The NPDES Construction Inspection Program requires that High priority projects be inspected once every two weeks. Medium priority projects are required to be inspected once each month,

2. CONSTRUCTION
(SECTION G of ORDER NO. R9-2004-001), CONT.

and Low priority projects are required to be inspected once during the wet season (October 1st thought May 31st).

6) **Additional Comments/Information:**

Describe the major accomplishments of the Constrution Component over the past year:

The figures provided in the table below represent the inspection accomplishments achieved regarding the Santa Margarita NPDES sites inspected, inspections conducted, sites finaled, expirations, Stop Work Orders Issued and Stop Work Order Remaining In Effect during the 2007-08 Storm Season.

Site Category	Number/Sites Inspected	Inspections Conducted	Sites Finaled	Sites Expired	Stop Work Orders Issued	Stop Work Orders That Remain In Effect
Single Family Residential	183	451	56	27	17	11
Commercial	10	20	3	-	-	-
Tract	39	133	8	4	1	-
TOTAL	**232**	**604**	**67**	**31**	**18**	**11**

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Construction Component:

Building and Safety:

- The Department has decided to use County staff to conduct NPDES Construction inspections instead of using the services of a consultant as previously done. It is felt that more control will be realized by using County staff for conducting NPDES inspections from the inspection time required and frequency of inspections aspects. Additionally based on the current economic down-turn being experienced and the desire and need to justify the retention of staff, retaining NPDES construction inspections in-house appears to be the only approach available at this time.

- As documented in Question 4., above County inspection staff has received a significant amount of training in order to be able to conduct construction inspections. Providing staff with every opportunity to conduct inspections uniformly has been stressed in order to ensure a coordinated approach is taken regarding the inspection process.

- The Riverside County Construction Inspection form has been modified to exclude the site estimate "percentage of compliance" that was used for a number of years and replacing it with a site "in compliance", "not in compliance" and "gross not in

2. CONSTRUCTION
(SECTION G of ORDER NO. R9-2004-001), CONT.

compliance" evaluation system instead. See Attachment C: NPDES Construction Inspection Form.

Transportation Department: Consultant companies have been utilized to conduct NPDES Construction and Municipal Inspections for FY 07/08. AEI-CASC, GeoPacifica and URS have provided services to the Transportation Land Management Agency-Transportation Department. Building and Safety Environmental Compliance staff provides NPDES Construction Inspections to new development in unincorporated areas of the County. For FY 08/09, URS will continue to assist the Transportation Department with construction inspections for public road construction activities.

Facilities Management and EDA: Environmental compliance and inspection staff for both departments have received training that is equivalent to that for inspections for new private development. This parallel track in training and inspection for CIPs signifies a commitment for NPDES stormwater program support.

Regional Parks and Open Space District: several employees have received training on construction BMPs so that for future parks projects NPDES stormwater requirements are taken into account.

3. MUNICIPAL
(SECTION H.1 of ORDER NO. R9-2004-001)

Number of inspections conducted at existing municipal facilities: The Transportation Department utilized consultant services to conduct Municipal site inspections. GeoPacifica and URS conducted site inspections for FY 07/08. There were (twelve) 12 Road Yards inspections and (eleven) 11 Material Sites inspections. During the inspections, the most common deficiencies were: oil/grease stain on the ground from leaking equipment pieces, needed repairs to existing berms, trash and debris needing removal on a more frequent basis, and additional protection to stockpiles

1) **Number and type of enforcement actions related to municipal sites:**

Enforcement and Compliance Responses	Number
Education and Information	-

3. MUNICIPAL
(SECTION H.1 of ORDER NO. R9-2004-001), CONT.

5) **Description and number of training efforts conducted over the last year (for municipal facility operators and/or inspectors).**

a) **Training: Transportation Department**

Training	Training Description	Training Dates	Number of Attendees
Riverside County – Flood Control	NPDES Municipal Training	11/27/07 4/15/08	2
		Total	**2**

Summarize the internal and external education and outreach activities the Municipal Component has conducted over the past year: Training has been offered by Flood Control and internal staff. All required staff attended training during FY 07/08. The department is very interested in educating staff in NPDES. For FY 08/09, the Transportation Department will send additional staff as appropriate for further training as more training opportunities become available.

An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP: Catch Basin Inspections and Cleaning were conducted during the dry season for FY 07/08 in Santa Margarita Region as required by the MS4 Permit.

6) **Additional Comments/Information:**

Describe the major accomplishments of the Municipal Component over the past year: Staff documented inspections and removed approximately 20.7 tons of litter. Dump tickets were collected to verify projected weight of debris removed from catch basins. In addition, each district Road Maintenance Supervisor and Assistant Supervisor visually inspects pipes, storm drain such as inlets, outlets, culverts, swales and channels frequently. Special attention is paid to the drainage facilities located within traditional or known problem areas

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Municipal Component: The Code Enforcement Department through their community improvement planning process and community cleanup activities have made significant progress toward removing blighted conditions from our rural communities. Through these programs the overall water quality is improved by trash removal and community awareness.

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER NO. R9-2004-001), CONT.

1) **Number of inspections conducted:**

Category		Number of Inspections	
Industrial Facilities	**DES**	**HAZMAT**	**B&S**

Medium Priority Facilities	0	60	110
Low Priority Facilities	589	34	101
Total	**589**	**257**	**325**

2) **Number and type of enforcement actions taken:**

Enforcement and Compliance Responses	Industrial	Commercial
Non-Monetary Penalties	--	--
Fines	--	--
Bonding Requirements	--	--
Permit Denial	--	--
Referral to SDRWQCB	--	--
Total	**0**	**0**

3) **Description and number of training efforts conducted over the last year (for industrial/commercial facility operators and/or inspectors).**

a. **Training for Building & Safety Department Staff:**

Training	Training Description	Training Dates	Number of Attendees
Detailed Training- AEI-CASC Engineering	WQMP Inspection and Plan Check	01/23/08	20
Construction Teamsters Training	HAZWOPER Recertification Annual Training	06/25/08	7
Special/Detailed Training-Building + Safety Staff	Inspection training specifically for Industrial/ Commercial NPDES Inspections	07/30/08	20
Special/Detailed Training-Building + Safety Staff	Inspection training specifically for Industrial/ Commercial NPDES Inspections	08/20/08	10

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER NO. R9-2004-001), CONT.

Special/Detailed Training- Building + Safety Staff	Inspection training specifically for Industrial/ Commercial NPDES Inspections	09/08/08	10
		Total	**67**

b. **Training for Department of Environmental Health Staff**

Training	Training Description	Training Dates	Number of Attendees
NPDES Training at Flood Control	Stormwater Compliance for NPDES	4/15/08	24
NPDES Training at Flood Control	Stormwater Compliance for NPDES	11/27/07	25
UST Training	Compliance with UST regulations to prevent unauthorized releases	5/20/08	24
Hazardous materials handler training	Compliance with hazardous materials storage regulations	10/17/07	29
		Total	**102**

4) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:**

The County of Riverside Industrial/Commercial NPDES Inspection Program (I/C NPDES IP) is brand new. Once Industrial/Commercial inspections are undertaken by this Department, an assessment of the effectiveness of our Program will be presented. The Department of Environmental Health has been providing assistance during the permit term as it relates to the Compliance Assistance Program (CAP). Overall, educational materials have been provided to the majority of industrial and commercial businesses that are inspected by the Department of Environmental Health's Hazardous Materials Management Division and the food establishments inspected by the District Environmental Services Division. In addition, to assist cities meet their inspection goal the CAP provides surveys that are sent to the NPDES stormwater coordinators for each of the cities except for the cities of Corona, Riverside and Moreno Valley which have industrial waste inspectors.

The Building and Safety I/C NPDES IP will focus on the county unincorporated areas and the CAP provided by the Department of Environmental Health will continues in the cities until such time that an MOU between the cities and B&SEC can be negotiated or each of the cities establish their own I/C NPDES IP.

The business community overall seems to be aware of general NPDES requirements with more sophistication at larger industrial/commercial facilities that have environmental compliance personnel on site.

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER NO. R9-2004-001), CONT.

5) **Additional Comments/Information:**

(A) Describe the major accomplishments of the Industrial Component over the past year:

The major accomplishment for the combined Industrial/Commercial Component this past year was the continued registration of approximately 10,000 businesses located in the unincorporated area of Riverside County. Since last reporting year the total of businesses registered has approximately doubled. Although the Environmental Health Department conducted what should be considered a majority of the Industrial/Commercial NPDES inspections reported in Question 1), above, Department of Building and Safety Environmental Compliance Division Inspectors began conducting NPDES inspections of sites. It is anticipated that a significant number of Initial NPDES Industrial/Commercial Inspections will be completed in time to be included in our next annual report.

(B) Describe the major accomplishments of the Commercial Component over the past year:

Please refer to Answer (A), above for the accomplishments of the Commercial Component.

(C) Summarize the internal and external education and outreach activities the Industrial Component has conducted over the past year:

The combined Industrial/Commercial internal, external educational and outreach activities centered around the training and readying of Environmental Compliance staff for beginning the Industrial/Commercial NPDES Inspections. As previously mentioned in Part 2.Construction, a significant amount of time and effort has been expended ensuring that inspection staff received proper training in order to be able to confidently conduct Industrial/Commercial NPDES Inspections. Being able to inspect Industrial/Commercial business sites uniformly was stressed since the same inspector may not be conducting a follow-up inspection of the site that he or she originally inspected.

(D) Summarize the internal and external education and outreach activities the Commercial Component has conducted over the past year:

Please refer to Answer (C), above for the educational and outreach activities of the Commercial Component.

(E) Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Industrial Component:

No new activities or improvements are being contemplated at this time. Refinements to our Industrial/Commercial NPDES Inspection Program may be required when field inspections by our Environmental Compliance Division staff begin in earnest.

4. INDUSTRIAL/COMMERCIAL
(SECTION H.2 of ORDER NO. R9-2004-001), CONT.

(F) Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Commerical Component:

Please refer to Answer (E), above for the new activities or improvements that will be implemented within the Commercial Component.

5. RESIDENTIAL
(SECTION H.3 of ORDER NO. R9-2004-001)

1) **A description of residential areas that were focused on during the past year:** The Flood Control and Water Conservation District, Code Enforcement Department and the Waste Management Department provide several programs to enhance residential involvement

   Flood Control District: The flood Control District provides various opportunities for public education throughout the year as well as follow-ups on complaints that are located within their right of way. See Flood Control and Water Conservation District Report

   Code Enforcement: Community Improvement Programs, Community Cleanup activities, Code complaint investigations and enforcement actions,

   Waste Management Department: Household hazardous waste community collection program for disposal of household generated hazardous waste such as paint, pesticides, batteries, solvents, universal waste, used oil, coolant, and other hazardous materials.

2) **Number and type of enforcement actions taken:** See attached Code Enforcement Actions Spread sheet for countywide activities.

Enforcement and Compliance Responses	Public Projects
Education and information	
Verbal Warning	
Written Warning	
Notice of Non-Compliance	
Administrative Compliance Order	
Misdemeanor	
Infraction	
Citation	
Referral to SDRWQCB	
Total	

3) **An assessment of program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** Educational materials are provided to new homeowners located in new housing tracts.

4) **Additional Comments/Information:** The Waste Management Department has taken over the Household Hazardous Waste (HHW) Community Collection Program and made significant

RESIDENTIAL
(SECTION H.3), CONT.

strides toward improving services to the residential community. A new state of the art HHW collection center in at the Robert Nelson Transfer Station in Riverside will be having its ribbon cutting ceremony on October 29, 2008. See handout for collection events located at various locations throughout the year..

Describe the major accomplishments of the Residential Component over the past year: Code Enforcement Community Improvement Plan and community cleanup activities. See newsletter attached.

Summarize the internal and external education and outreach activities the Residential Component has conducted over the past year: See Flood Control and Water Conservation District Educational Summary

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Residential Component:

As the Community Improvement Planning effort continues it is anticipated that significant progress will be made to empower residents to be more proactive in their communities and be informed on issues including pollution prevention and water quality.

6. EDUCATION
(SECTION I of ORDER NO. R9-2004-001)

1) **Description of education efforts conducted by the Permittee (not collectively with other Permittees) during the previous year:** See Report from Flood Control and Water Conservation District

Audience	Measures
Permittee Departments and Personnel	Number of Permittee employees trained for: • Construction Inspection: • Industrial/Commercial Inspection: • Municipal Facilities and Activities: • Development Planning:
Construction Site Owners and Developers	Outreach events conducted:
Industrial/Commercial Owners and Operators	Industrial/Commercial outreach events conducted:
Residential Community, General Public, Other Public Agencies and Students	Number of Media Impressions in: • Newspaper: • Mailings: • Radio/TV: • Billboards: • Other: • Materials: Number of classroom presentations: Public Education events conducted:

2) **Assessment of overall program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** See Flood Control & Water Conservation District Report

3) **Additional Comments/Information:**

1) **Describe the major accomplishments of the Education Component over the past year:** See Flood Control and Water Conservation District Report.

6. EDUCATION
(SECTION I of ORDER NO. R9-2004-001)

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Education Component:

The County departments' partner with the Flood Control and Water Conservation District on all educational opportunities and share costs and time at community events with their "Only Rain in the Drain" campaign.

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER NO. R9-2004-001)

1) **Number of illicit discharges, connections and spills reported and/or identified during the reporting period:**

   1) **Illicit Discharges (ID):** 25 Countywide
   2) **Illicit Connections (IC):** See Flood Control and Water Conservation District Report
   3) **Spills (S):** 3-Sewage Spills >1000 gallons in Santa Margarita Watershed

2) **Number of illicit discharges or connections investigated during the reporting period and the outcome of the investigations:**

Type	Category	Substance	Outcome of Investigation
ID	various	Various	25 cases countywide. Return to compliance and cleanup completed
ID	various	various	275 cases countywide of illegal dumping of various commodities and wastes reported by Code Enforcement and Environmental Health. Proper disposal accomplished and investigation continuing on 72 cases.
ID	POTW	sewage	3 cases-9/25/2007 51,000 gals 9/29/2007 75,000 gals 12/4/2007 50,000 gals Responsible party required cleanup and referrals made to SDRWQCB.

3) **Number and types of enforcement actions taken for illicit discharges or connections during the reporting period:** Countywide

Enforcement and Compliance Responses	Private Facilities	Public Facilities
Non-monetary penalties	25	3
Stop work authority

0001832

7. ILLICIT DISCHARGE DETECTION AND ELIMINATION
(SECTION J of ORDER NO. R9-2004-001), CONT.

7) **An assessment of overall program effectiveness based on the measurable goals established in the Permittee's Individual SWMP:** See Flood Control and Water Conservation District Report.

As IC\IDs are identified follow-up investigations are initiated and as appropriate progressive enforcement action is taken to ensure abatement of conditions. In difficult cases and need for additional regulatory authority RWQCB staff and other regulatory agencies are notified for assistance.

8) **Additional Comments/Information:**

Describe the major accomplishments of the Illicit Discharge Detection and Elimination Component over the past year: Continued enhancements in Code Enforcement and Building & Safety training to advance stormwater compliance.

Summarize the internal and external education and outreach activities the Illicit Discharge Detection and Elimination Component has conducted over the past year: See Flood Control and Water Conservation Report.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Illicit Discharge Detection and Elimination Component: As program matures higher level training for staff to identify complex stormwater issues will be introduced. Inspections of industrial commercial facilities with a focus on BMP O & M and site visits to ensure that IC/ID is disconnected from the storm drain system will be enhanced.

Reporting on monitoring results from the Flood Control and Water Conservation District does not effectively correlate with IC\ID investigations. With transition of Flood Control staff and bringing on of a sub contractor to provide support on monitoring will help to enhance how IC/ID will correlate with monitoring data, that can in turn be used to track sources of IC/ID activity and provide a better mechanism for enforcement.

8. PUBLIC PARTICIPATION

2) **A description of efforts to include the public urban runoff management programs during the reporting period (i.e., river clean-ups, volunteer monitoring, Permittee council meetings related to the SWMP, etc.):** See Flood Control and Water Conservation District Report.

3) **Additional Comments/Information:**

Assessment of overall program effectivenss based on the measurable goals established in the Permittee's Individual SWMP: Attendance at TAC, MSC, WQMP, CIP, WQMC, IRWMP, CASQA and other related meetings is a forum for open discussion, program coordination and countywide consistency.

4) **Describe the major accomplishments of the Public Participation Component over the past year:** See Flood Control and Water Conservation District Report.

5) **Summarize the internal and external education and outreach activities the Public Participation Component has conducted over the past year:** See Flood Control and Water Conservation District Report.

Summarize new activities or improvements to be implemented next year as a result of your self assessment of the Public Participation Component: See Flood Control and Water Conservation District Report.

9. FISCAL ANALYSIS COMPONENT

Fiscal Analysis Component - each Permittee shall include an annual fiscal analysis, for each fiscal year covered by Order No. R9-2004-001, in its Individual Annual Report. This analysis shall evaluate the expenditures (such as capital, operation and maintenance, education, and administrative expenditures) necessary to accomplish the activities of the Permittee's Individual SWMP. The analysis shall include the following:

1) **A report of the previous reporting period's budget and a budget for the upcoming reporting period. To the extent possible, the budgets should be broken down by the following programs:**

Program Element	Fiscal Year 2007-2008		Fiscal Year 2008-2009	
	Capital Expenditures	O&M/Admin Expenditure	Capital Expenditures	O&M/Admin Expenditure
Program Management		$725,000		$750,000
Annual Fee for MS4 NPDES Permit		$30,000		$40,000
Implementation Agreement Shared Cost		$150,000		$190,000
Construction Inspections		$485,000		$485,000
Development Planning		$30,000		$30,000
Industrial and Commercial Inspections		$175,000		$175,000
Illicit Connections & Illegal Discharges Program		$1,610,000		$1,610,000
Municipal Facilities and Activities		$174,900		$180,000
Catch basin Cleaning	$330,0000	$954,585		$796,272
GAIS mapping		$553,847		$359,483
Street Sweeping		$525,518		$681,753
Public Education & Outreach				
Monitoring Program		$685,000		
Other Roadside litter removal		$416,552		$2,106,250
Total	**$ 330,000***	**$6,515,402***	**$ 0**	**7,403,798***

* Direct costs only. The total does not include ancillary costs in combination with other related program activities, that is estimated between $17,000,000- $18,000,000.

9. FISCAL ANALYSIS COMPONENT
(CONT.)

2) **A description of the source(s) of funds that were utilized during the previous fiscal year and the source(s) of funds proposed to meet the necessary expenditures for the subsequent year, including legal restrictions on the use of such funds.**

Source of Funds	Capital Expenditures	Percent of Total Program Funding	Restrictions on Use (if applicable)
General Fund	22%	N/A	Catch basin cleanout, Inspection, MS4 mapping, road side litter removal
CSA 152		N/A	Benefit assessment for street sweeping
Gas Tax		N/A	Road maintenance activities
Development Revenue Fees		100%	WQMP review
Lighting landscape and Maintenance Distict		N/A	Designated areas within the LLMD
Developer Fees	100 %	N/A	Project specific
Capital Projects	2%	N/A	Project specific

3) **Additional Comments/Information:**

Overall, the direct and indirect cost for program implementation of NPDES related activities are in the range of $17,000,000-18,000,000 countywide. Program costs continue to increase while revenues and taxes are decreasing. Each watershed requires additional quantification of activities, tracking and need for funding with no additional projected income foreseen. In this period of economic recession, general fund dollars are diminishing with a projected 20% decrease anticipated in the County's general fund for the next 3 years. It is imperative that the County continues to closely monitor and contain program costs and work with the three Regional Boards to ensure economic considerations are taken into account when planning any new program requirements.

10. NON-STORM WATER DISCHARGES

Permittees shall report on any discharge category listed in Requirement B.2 of Order No. R9-2004-001 that was identified as a source of pollutants during the reporting period. For each identified category, the Permittee shall report whether it elected to prohibit the discharge or to require BMPs to reduce pollutants in the discharge to the MEP. If the discharge is not prohibited, the BMPs that will be implemented, or required to be implemented, shall be described in each Permittee's Individual SWMP Annual Report.

Category	Prohibited	BMP to be Implemented
Diverted stream flows	☐ Yes ☐ No	Not Applicable
Rising ground waters	☐ Yes ☐ No	Not Applicable
Uncontaminated ground water infiltration [as defined at 40 CFR 35.2005(20)] to MS4s	☐ Yes ☐ No	Not Applicable
Uncontaminated pumped ground water	☐ Yes ☐ No	Not Applicable
Foundation drains	☐ Yes ☐ No	Not Applicable
Springs	☐ Yes ☐ No	Not Applicable
Water from crawl space pumps	☐ Yes ☐ No	Not Applicable
Footing drains	☐ Yes ☐ No	Not Applicable
Air conditioning condensation	☐ Yes ☐ No	Not Applicable
Flows from riparian habitats and wetlands	☐ Yes ☐ No	Not Applicable
Water line flushing	☐ Yes ☐ No	Not Applicable
Landscape irrigation	☐ Yes ☐ No	Not Applicable
Discharges from potable water sources not subject to NPDES Permit No. CAG679001, other than water main breaks	☐ Yes ☐ No	Not Applicable
Irrigation water	☐ Yes ☐ No	Not Applicable
Lawn watering	☐ Yes ☐ No	Not Applicable
Individual residential car washing	☐ Yes ☐ No	Not Applicable
Non-emergency fire fighting flows	☐ Yes ☐ No	Not Applicable
Dechlorinated swimming pool discharges	☐ Yes ☐ No	Not Applicable

1) **Additional Comments/Information:** Ordinance 859.1 Water Efficient Landscape and Water Requirements became effective 4/25/2008.

0001837

11. RECEIVING WATER LIMITATIONS

This section includes the report required pursuant to Requirement C.2.a. of Order No. R9-2004-001, if applicable.

Requirement C.2.a. states:

"Upon a determination by either a Permittee or the SDRWQCB that MS4 discharges are causing or contributing to an exceedance of an applicable water quality standard, the Permittee shall promptly notify and thereafter submit a report to the SDRWQCB that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report may be incorporated in the SWMP Annual Report unless the SDRWQCB directs an earlier submittal. The report shall include an implementation schedule. The SDRWQCB may require modifications to the report;"

See Flood control and Water Conservation Report.

The County relies on the Flood Control and Water Conservation District to conduct water quality monitoring. The District advises the permittees of any pollutants of concern that have been identified and corrective actions are taken through a cost share agreement. This process is evolving and requires additional work. Flood Control staff have transitioned out of the program and new staff are being trained. In addition, a sub contractor is being brought on to perform a revised monitoring program that will enhance monitoring and enforcement for IC/ID which ultimately will be more protective of water quality.

12. ADDITIONAL URBAN RUNOFF DATA

This section is a summary of all urban runoff related data not included in the annual monitoring report (e.g., special investigations).

See Flood Control and Water Conservation District Report.

13. PROPOSED REVISIONS

This section includes proposed revisions to the Individual SWMP, including areas in need of improvement based on the assessment of effectiveness of each program component.

See Flood Control and Water Conservation District Report.

1) Enhancements to inspection of industrial commercial businesses by the Department of Building and Safety for unincorporated portions of the County. **Expected improvement or effectiveness:**

    a) Industrial/commercial education and awareness improved

    b) O & M of BMPs better managed

    c) Decrease in pollutants of concern coming off of industrial/commercial sites.

2) WQMP requirements for Capital Improvement Projects (CIPs) more closely monitored and mirror that of private commercial development. **Expected improvement or effectiveness:**

    a) BMPs included at inception of project (architectural design)

    b) O& M of BMPs better managed

    c) Decrease in pollutants of concern coming from CIPs

3) Continue to enhance GIS mapping to include post construction BMPs from new development and relationship to existing MS4 maps. **Expected improvement or effectiveness:**

    a) Better correlation of new BMPs with existing MS4 infrastructure.

    b) Use as a tool for potential impacts and planning purposes for BMP sizing criteria.

4) Assist new cities of Menifee and Wildomar as they transition from unincorporated area.

    a) Plan check and new development review taken over by cities.

Building and Safety Target List Of Commercial and Industrial Sites

Household Hazardous Waste or HHW, are unwanted materials that are flammable, reactive, poisonous, or corrosive. These items are banned from the landfill and must be disposed of at an HHW Collection Facility or event.

0001842

Common Acceptable Items include:

- Batteries
- Fluorescent Bulbs
- Electronic Devices
- Mercury-Containing Devices
- Sharps
- Paints and Thinners
- Cleaners
- Solvents
- Pesticides
- Yard Chemicals
- Automotive Fluids
- Small & BBQ Propane Tanks
- Swimming Pool Chemicals
- Hobby Chemicals

Items which CANNOT be accepted include:

- Ammunition
- Asbestos or Remediation Waste
- Compressed Gas Cylinders Greater Than 40 Pounds
- Explosives
- Infectious or Medical Waste, except Sharps
- Radioactive Waste
- Business Waste
- Waste Generated Outside of Riverside County.

Material must be secured from tipping, labeled and sealed during transport. State law limits the amount of waste to 5 gallons or 50 pounds per visit.

The Riverside County Waste Management Department Mission Statement

To provide for the protection of the general public health and welfare by efficient management of Riverside County's solid waste system through:

- Provision of facilities and programs which meet or exceed all applicable local, State, Federal and land use regulations;
- Utilization of up-to-date technological improvements;
- Development and maintenance of a system that is balanced economically, socially and politically; and
- Economically feasible recovery of waste materials.

Permanent HHW Facilities

Lake Elsinore City Maintenance Facility
521 N. Langstaff Street, near Sumner
Open 1st Sat. of the month, except in Dec. & Jan.
From 9:00 AM to 2:00 PM

Pedley Area - County Road Yard
6851 Van Buren Boulevard, near Clay Street
Open NON-holiday Sat's, from 9 AM to 2 PM

Beaumont Area *(Open in 2008)*
Lamb Canyon Landfill
16411 Lamb Canyon Road
Open NON-holiday Sat's, from 9 AM to 2 PM

Palm Springs Area *(Open in 2008)*
Wastewater Treatment Plant
4575 E. Mesquite Ave.
Open NON-holiday Sat's,
October - May from 9 AM to 2 PM
June - September from 7 AM to 12Noon

Riverside Area *(Open in 2008)*
East of Robert A. Nelson Transfer Station
1830 Agua Mansa Rd.
Open NON-holiday Sat's, from 9 AM to 2 PM

Temporary HHW Sites are set up

throughout the County and throughout the year. For locations, dates, and times, please call 1-800-304-2226 or visit www.rivcowm.org.

ABOP Locations, (or those that take ONLY Antifreeze, Batteries, Oil, and Paint)

Murrieta Area - County Road Yard
25315 Jefferson Avenue
Open NON-Holiday Sat's, from 9 AM - 2 PM

Palm Springs Area - Fire Dept. Training Area
3000 E. Alejo Road
Open NON-holiday Sat's,
October - May from 9 AM to 2 PM
June - September from 7 AM to 12 Noon

Recycle Park at Lamb Canyon Landfill

Recycle Park is designed to divert usable and recyclable materials from the waste stream, while also providing a location for disposing of Household Hazardous Waste and other items banned from the landfill. Though it is currently in the construction phase, once completed, it will feature:

Household Hazardous Waste Collection:
providing a new permanent facility for the area.

Consumer Electronics Drop-Off:
of unwanted televisions, computer, and other electronic devices.

Tire Drop Off:
from cars, passenger trucks, and RVs

Appliance Recycling:
for major appliances, including items with Freon.

Reuse Exchange Store:
where visitors can purchase used items.

Trash Disposal Pad:
which is an area where visitors can safely unload unusable refuse away from heavy equipment.

2008
County of Riverside Backyard Composting Program

Presented by
Riverside County Waste
Management Department
14310 Frederick Street
Moreno Valley, CA 92553
1) 486-3200 or (800) 366-SAVE
www.rivcowm.org

approximately 3 feet wide x 3 feet deep x 3 feet tall. Take the time to consider your options and the style of composting that is most convenient for you. Compost bins can either be homemade or purchased.

Biostack Bin

This bin is manufactured by Smith & Hawken. It stacks for easy turning of material, has large air slots that offer good ventilation, and the lid keeps the material from drying out or getting too wet. (28" x 28" x 34"h)

Price: $50.00

Presto Bin

This bin is a good inexpensive way to start composting. Bolt the bin together, fill it, and when you need to turn it, lift the bin up and scoop the material back in. (2.5' X 10' plastic sheet makes a round bin)

Price: $12.00

Volunteer Master Composters Needed!

Become a volunteer Master Composter with the Riverside County Backyard Composting Program!

You will be part of an elite group of Volunteer Master Composters who will:

*Help with all aspects of the program
*Become a home Compost Expert through the extensive 6 Saturday training course.
*Teach your family, friends, neighbors and fellow County residents "How to Compost"

Classes forming now. To sign up for the class or for more information please call: (951) 486-3200 or (800) 366-SAVE or visit www.rivcowm.org

0001845

Backyard Composting Program Description

The program will cover the following topics:

The Biology of Composting

How to compost

What to compost

How to use compost

Alternatives to composting

- Grass Cycling
- Vermicomposting

Tools that make composting easy:

- Bins
- Pitch Fork
- Gloves

EARTH DAY EVERYDAY

Protect Our Children and Our Future

SPRING GARDENING AND SUMMER FUN GREEN TIPS

Water Conservation

Here are a few tips to reducing your water use, yet producing a lush garden:

- Use drought tolerant (less thirsty) plants in your garden.
- Establish a two to four inch layer of mulch for better water penetration.
- Improve your soil by composting to aid the soil's ability to resist evaporation.
- Plant trees, they help to reduce plant and soil moisture loss.
- Group like plants.
- Plant grass only where you need it.
- Periodically check your irrigation system for leaks or breaks in the line.
- Use drip and low irrigation systems.

The Storm Drain Story:

When it rains, many pollutants and debris found on our streets, sidewalks, parking lots, driveways and gutters flow into the storm drain. The storm drain then receives these flows and discharges them into the nearest body of water (such as a stream, creek, pond, lake or river). Storm drain flows DO NOT go to treatment plants like the home waste water discharged into your sewer system does. Pollutants and debris such as aluminum cans, trash, pet waste, motor oil, fertilizer, green waste and paint are just a few of the contaminants found in the storm drain.

The following tips are offered to help you make the right choice for both your pocket and the environment.

- **Garden Chemicals**: Overuse of garden chemicals can be harmful to humans, aquatic and wildlife when mixed with water from either rain flows or over irrigation. Consider the many natural alternatives suggested at www.pesticide.org.
- **Sediments**: Soil runoff from flower or vegetable gardens, horse farms, or development that find their way into the storm drain can harm local aquatic habitants. Plant grass and other rapid growth to hold dirt particles together.
- **Yard Waste**: Lawn and garden clippings, if not swept up, are blown into the street and end up in the storm drains. The clippings then mix with other debris and over time create offensive curbside odors that in time will affect a stream or pond. Sweep up excess lawn clippings, leaves and other yard waste. Place green waste leftovers in a recycling bin or look into the benefits of composting.
- **Scoop the Poop!** Animal droppings contain bacteria and nutrients that flourish in water promoting the growth of algae in our streams and lakes. Pet waste is also the cause of spreading organisms such as salmonella and giardia that move from the animal into the environment through flies, insects, wind and dust. When walking your pet(s), use a trash bag to pick up the waste and dispose of it into a waste receptacle. (Bring extra bags to share with other dog owners)

Report any illegal storm drain disposal in your Riverside County Community to (800) 506-2555.

04545141M816

Last year, more than 24,000 residents have properly disposed of over 1,890,000 pounds of Household Hazardous Waste. Thank you for participating in this valuable Riverside County Program.

What Is Household Hazardous Waste?

Many products used in our home contain hazardous materials. Your home and garage may seem safe, but look again. To know whether or not a product is hazardous, check the label. **Unwanted products labeled Corrosive, Flammable, or Toxic warn of potential hazards** if the chemical product is misused, spilled or disposed of improperly. Typical products found throughout the house that may be hazardous are as follows:

BATHROOM

- Chlorine Bleach
- Deodorizer/ Air Freshener
- Disinfectant
- Nail Polish Remover
- Shoe Dye
- Mercury Thermometer
- Toilet, Tub & Tile Cleaner

GARDENING

- Fertilizer
- Fungicide
- Insecticides
- Pesticides
- Moss Killer
- Slug And Snail Poison
- Weed Killer/Herbicides

KITCHEN

- Microwave Oven
- Aerosol Cans
- Aluminum Cleaner
- Ammonia
- Drain Opener
- Floor Care Products
- Furniture Polish
- Oven Cleaner
- Rodent Poison

GARAGE

- Antifreeze
- Auto Batteries
- Transmission & Brake Fluid
- Carburetor Cleaner
- Chrome Polish
- Gas, Diesel Fuel
- Engine Degreaser
- Motor Oil
- Oil Filters

WORKSHOP

- Fiberglass & Epoxy Resins
- Glue
- Gun Cleaner
- Paint Latex/Oil Based
- Paint Stripper
- Paint Thinner/ Turpentine
- Photo Chemicals
- Varnish
- Wood Preservative
- Caulking
- Fluorescent Lamps

MISCELLANEOUS

- Artists' Paints
- Flea Powder
- All Batteries
- Kerosene/Lamp Oil
- Lighter Fluid
- Moth Balls/ Flakes
- Pool/Spa Chemicals
- Rug Cleaner
- Spot Remover w/Solvent
- Cell Phones
- TV's
- Computers
- Mercury Devices
- Consumer Electronics
- Sharps-Needles
- BBQ Propane Tanks

UNIVERSAL WASTES (a category of Household Hazardous Waste)

- Aerosol Cans (non-empty label toxic or flammable)
- Batteries (AA, AAA, C & D cell) all single use.
- Cell phone
- Computer
- Computer Monitor (up to 3)
- Dental amalgam
- Fluorescent Bulbs
- Fluorescent Tubes
- Microwave oven
- Printer
- Radio
- Telephone
- Thermometer
- Thermostat
- TV's and VCR's (up to 3)

CURRENT HHW SCHEDULE AVAILABLE HTTP://WWW.RIVCOWM.ORG OR 1-800-304-2226

RESTRICTIONS:

- County of Riverside residents only
- No explosives/ammunition
- No radioactive materials
- No tires
- No business or non-profit organization waste
- No appliances
- No medical waste
- No 30 or 55-gallon drums

CAUTION:

- You may bring up to **5 gallons** or **50 lbs.** of a chemical hazardous waste maximum per car/per trip.
- Container shall be marked and secured to prevent leaks. Do not mix waste products.
- Containers holding gasoline will not be returned.

HOUSEHOLD HAZARDOUS WASTE INFORMATION
HOTLINE 1-800-304-2226 For current schedule: WWW.RIVCOWM.ORG
RIVERSIDE COUNTY WASTE MANAGEMENT DEPARTMENT (951)486-3200

This insert has been funded through a cooperative effort from Riverside County Waste Management Department, the cities and County of Riverside Storm Water/Clean Water Protection Program, the California Department of Conservation, and the California Integrated Waste Management Board. Zero Waste - You Make It Happen!

CHANGING OIL TOO OFTEN?

Check your vehicles owner's manual to see what the manufacturer suggests for the oil change frequency.

- Contact your curbside trash service for curbside pick-up of used oil and filters.
- Recycle used oil and filter at Certified Collection Centers in your community.
- Never leave abandoned oil or other hazardous waste- IT'S ILLEGAL!

FREE 1.5 qt. Drainer Container

USED OIL CERTIFIED COLLECTION CENTERS
1-800-253-2687 OR WWW.CLEANUP.ORG

Free 15 qt. drainer containers are available at the HHW collection events and facilities while supplies last.

PROPER DISPOSAL OF MEDICATIONS

Most medications can be disposed of in regular trash. **Do Not Flush** unused medications down the toilet and into the waste water treatment system. Always remove personal identification from medication bottles and containers. Sharps and needles may be taken to a household hazardous waste event or facility.

LIQUID & PILLS

Empty medication into coffee grounds or kitty litter and dispose of with regular trash.

INHALER

Empty container by expelling all propellant. Dispose of small empty cylinder in trash.

SHARPS/NEEDLES

Must be placed and secured in an approved sharps disposal container and brought to any Household Hazardous Waste Event or Facility.
FREE approved containers are available at the HHW events, while supplies last.

BUSINESS HAZARDOUS WASTE

Businesses that need to dispose of hazardous waste must use a licensed hazardous waste transporter or contractor and retain documentation provided by the waste company. There are several methods of disposal for businesses. Resources are listed: http://www.rivcowm.org/hhw/disposal.html or (951) 486-3200.

- **Drop-off Universal Waste** — **For a list of hazardous waste contractors serving Riverside County http://www.rivcowm.org/hhw/transporters.html**
- **Mail-Back** — **Order prepaid shipping boxes for disposal of universal waste**
- **Pick-up** — **Hazardous Waste Transporters will pick-up at your site.**
- **CESQG Program** — **Cost effective County sponsored disposal program for Conditionally Exempt Small Quantity Generators www.rivcowm.org or (951) 486-3200.**

California Penal Code Section 374.8(b) Any person who knowingly causes any hazardous substance to be deposited on any road, street, highway, alley, or any land of another . . . is punishable by prison in county jail for not more than one year, or a fine of no less than $50 and not more than $10,000 or by both fine and imprisonment.

California Health and Safety Code Section 25189(c) Any person who intentionally disposes or causes the disposal of any hazardous or extremely hazardous waste at a point which is not authorized according to the provisions of this chapter shall be subject to a civil penalty of not less than one thousand dollars ($1,000) or more than twenty-five thousand dollars ($25,000) for each violation.

For more business waste regulations info: www.rivcoeh.org or www.dtsc.ca.gov

RECYCLE. IT'S GOOD FOR THE BOTTLE. IT'S GOOD FOR THE CAN.

To find a Beverage Container Recycler in your area, please call 1-800-RECYCLE or www.bottlesandcans.com.

?KNOW THE ANSWERS TO THE QUESTIONS?

REDUCE the use of Pesticides and Fertilizers and **REUSE** or share leftover chemicals and **RECYCLE** them safely.

False ***Storm drains and Sewers are one in the same system.***
Actually, they are different systems. Sewer systems capture all the waste water from the home washer, sink, bath, etc., and flows to a treatment plant. Street flows into the storm drain do not get treated and flow directly into the nearest body of water.

False ***Storm drains are designed to catch debris and all water that flows in the street.***
The primary purpose of storm drains is to carry rain water away from developed areas to prevent flooding. Debris and pollutants should be kept off the street.

False ***Riverside County is mostly desert and therefore has a limited number of creeks, rivers, lakes, streams, etc.***
Riverside County has sufficient number of creeks and streams and although you might not be able to see your nearest body of water, they are there. Water flows into a gutter or ditch that lead to a storm drain, feeding directly into a nearby water body.

False ***Residents that live on unimproved streets do not have to worry about harming their local environment by way of the storm drain.***
Pollutants can find their way through natural groundwater basins. Groundwaters are established from rain or snow that soaks into the ground or water in the sands and silt flowing underneath the earth's surface. Groundwater is literally defenseless to the pollutants that are discarded on the earth's porous surfaces.

False ***A small amount of polluted discharge into the storm drain will not impact the environment.***
Even small amounts of soap, fertilizers, oil and chemicals will harm an aquatic environment. Chemicals are still toxic and can kill or harm plants and animals.

True ***It is very important to report any illegal storm drain disposal in your Riverside County Community to 1-800-506-2555.***

GUIDELINES FOR PROPERLY MAINTAINING YOUR POOL, SPA AND FOUNTAIN WATER

Discharging pool waters into the sanitary sewer system.
Please check with your water agency for disposal guidelines or regulations. Requirements can differ from area to area.

The back flush from cleaning *Pool Filters* should be steered for disposal to a sanitary sewer, on-site septic tank, drainage field system or a seepage pit.

Chemical Storage and Handling: **Use only the amount of chemicals indicated on the package and store safely in a covered area.**

Proper Disposal of Pool Chemicals: **Bring unwanted pool or household chemicals to a Household Hazardous Waste Collection Event or offer the leftover to a friend. Call 1-800-506-2555 to obtain current dates and locations.**

Printed and delivered by the PennySaverUSA.com. (800)995-3333 04545141M816.4

ABOP Centers

Antifreeze, Batteries, Oil (and Filters), and Paint (Latex) ONLY
Collection Center
SATURDAY 9:00 am to 2:00 pm (see details for each)
LIMIT: 5 gallons or 50 lbs. (per trip)
CLOSED: During inclement weather and hazardous conditions.

RECYCLE USED OIL

NON-Holiday Saturdays. Oct - May 9:00 AM to 2:00 PM
NON-Holiday Saturdays. Jun - Sept 7:00 AM to 12:00 PM

RECYCLE **USED OIL FILTERS**

Proper Disposal of Medication and Sharps

Most medications are not considered hazardous waste and can be disposed of in regular trash. Remove personal information from containers before disposal.

Liquid.....Empty liquid medication onto absorbent paper towels or rags and throw IN TRASH.

Pill.....Crush pills, mix with coffee grounds or kitty litter, and dispose of mixture IN TRASH.

Inhaler.....Empty container, expel propellant, and toss empty cylinder IN TRASH.

Sharps/Needles.....Must be placed in a secure approved sharps container and brought to a Household Hazardous Waste collection for disposal. FREE Approved containers are available while supply lasts. If a container is not available, put sharps in rigid plastic jug (bleach bottle), tighten lid, secure with tape, and place label "SHARPS/NEEDLES".
ALWAYS BRING SHARPS TO HHW PERMANENT FACILITY OR TEMPORARY EVENT.

Small Business Hazardous & Universal Waste

Conditional Exempt Small Quantity Generator (CESQG) **1-800-952-5566**

What is a CESQG? Businesses that generate up to 27 gallons or 220 lbs. of hazardous waste, or 2.2 lbs of extremely hazardous waste per month are called CESQG's. These businesses are required to use a licensed hazardous waste hauler to manifest and transport their waste. The most common CESQG's are painters, print shops, auto shops, builders, churches, schools, non-profit groups and property managers.

What is the CESQG Program? This Program is a hazardous waste pick-up disposal service for eligible businesses/non-profit organizations in the County of Riverside. This Program provides small quantity generators with a legal and affordable way to dispose of their waste with all legal documentation provided as part of the service.

How do I get service? To arrange an appointment for the **CESQG** Program, call **1-800-952-5566**.
A disposal fee will be charged based on the type and amount of waste picked-up.

Storm Water Pollution Prevention - ONLY RAIN DOWN THE STORM DRAIN

What is the #1 reason water bodies such as creeks, rivers, and lakes get dirty? It's from pollutants that flow into storm drains then make their way to your favorite water recreational facility. The storm drain system is designed to prevent flooding and is not connected to a treatment facility.

Call **1-800-506-2555** to report storm drain disposal or obtain more information.
You can also email us at **flood.fcndes@co.riverside.ca.us** or visit **www.floodcontrol.co.riverside.ca.us**

Household Hazardous Waste Collection Program
July thru December 2008
What is Household Hazardous Waste?
All The Items Listed Below And More!

Household Hazardous Waste Collection Sites will take ALL Household Hazardous Waste

Before transporting waste to the collection event or facility, please use this checklist to make sure you have done the following:

- ☐ **Have I used up every product to the fullest extent possible?**
- ☐ **Have I offered good, usable products I can't use to my neighbor, family or friends?**
- ☐ **Have I kept the amount of chemical waste to less than 5 gallons or 50 pounds for transportation? (State Law maximum transportation limitation.)**
- ☐ **Are any of the containers leaking? (If they are, place them in a container or material that will not allow the leak to spread and place securely in the vehicle for safe transport.)**
- ☐ **Is the waste in its original container or is it properly labeled as to the contents? (The contents of the container must be the same as stated on the label. If not, cover up the label and write the name of its content.)**
- ☐ **Are the items placed in a sturdy container, such as cardboard or wooden box, for transporting? (Wrap glass bottles in newspaper to prevent breakage.) Containers with flammable liquid will not be returned.**
- ☐ **Is the box placed in the trunk of your car or in the bed of your pickup truck and secured to prevent movement? (Keep items away from passengers.)**

Follow directions once you reach the event site. You will be asked to turn off your motor and stay in your vehicle. The site staff will unload the material from your vehicle.

THIS EVENT IS FOR RESIDENTIAL USE ONLY. PHOTO DOCUMENTATION WILL BE MADE OF EXCESSIVE OR SUSPECTED NON-RESIDENTIAL LOADS COMING TO EVENT.

The following waste CANNOT be accepted at ANY Riverside County HHW collection facility:

Ammunition, Appliances, Asbestos or other Remediation Waste, Compressed Gas Cylinders greater than 40 pounds Explosives, Infectious or Medical Waste other than Home-Generated Sharps, Radioactive Waste, Non-Residentially Generated Waste, Waste Generated Outside of Riverside County.

If you have any of the above wastes please call (951) 486-3200 for assistance.

ACCEPTABLE MATERIALS

BATHROOM

*Chlorine Bleach	*Deodorizer/Air Freshener	*Disinfectant	*Mercury Devices
*Nail Polish Remover	*Shoe Dye	*Toilet, Tub & Tile Cleaner	*Hair Dye

KITCHEN

*Aerosol Cans	*Aluminum Cleaner	*Ammonia	*Drain Opener

What is a CESQG?
Businesses that generate small quantities of hazardous waste, 27 gallons or 220 lbs.,or 2.2 lbs. of extremely hazardous waste per month are called "Conditionally Exempt Small Quantity Generators", or CESQGs.

What is the CESQG Program?
The CESQG Program is a mobile hazardous waste pick-up disposal service for eligible businesses in the County of Riverside. Trained staff will come to your business and assist you in properly labeling and marking your hazardous waste for proper disposal. All legal documentation is provided as part of the service. By introducing this program, the County of Riverside provides small quantity generators with a ***legal and affordable*** solution to hazardous waste disposal.

Who can use this service?
The most common CESQGs in the County of Riverside are dry cleaners, painters, home improvement contractors, furniture refinishers, print shops,

CESQG Program

photo-finishing, auto shops, photographers, educational and vocational shops, builders, landscapers, non profit organizations, (including city governments/agencies, school districts and churches) and property managers, but there are many others. When you call, be ready to describe the types and amounts of waste your business generates in a typical month.

If you generate hazardous waste on a regular basis, you must:

- Telephone 1-800-952-5566
- Obtain an EPA ID # from the State by calling 1-800-618-6942
- Manage hazardous waste in accordance with all applicable local, state and federal laws and regulations.

How do I get service?
To arrange an appointment for the **CESQG Program, call 1-800-952-5566**. The CESQG Program coordinator will schedule your appointment based on geographical area. Be ready to describe the type and amount of hazardous waste your business is ready to dispose of, and the types and size(s) of containers that the waste is in.

What happens to your hazardous waste?
Hazardous waste collected by the CESQG Program is transported to a state permitted processing facility. The waste is further processed at this point and packaged for off-site recycling (oil filters, oil, latex paint, antifreeze, and batteries) or destructive incineration (pesticides, corrosives, flammables, oil based paint).

What if your business does not qualify?

Call the County of Riverside, Hazardous Materials Management Division for assistance with Hazardous Waste Generator Program at **(951) 358-5055**. If you reduce the amount of waste you generate each month to 27 gallons or less, you may qualify in the future.

Why is the County of Riverside collecting hazardous waste?
Small Quantity Generators often have difficulty disposing of small quantities of hazardous waste. Hazardous waste companies usually have a minimum amount of waste that they will pick up, or charge a minimum fee for service. Typically, the minimum fee exceeds the cost of disposal for the hazardous

waste. This leaves the small quantity generator in a difficult situation. Some respond by storing hazardous waste until it becomes economical for the hazardous waste transporter to pick it up, putting the business out of compliance by exceeding regulatory accumulation time limits. Other businesses simply store their hazardous wastes indefinitely, creating an unsafe work environment and exceeding accumulation time limits. Yet other businesses attempt to illegally dispose of their waste at household hazardous waste collection facilities, which are not legally permitted to accept commercial wastes, nor are prepared to provide legal documentation for commercial hazardous waste disposal. In answer to the problems identified above, the County of Riverside, Hazardous Materials Management Division instituted the Conditionally Exempt Small Quantity Generator Program. The program provides businesses and institutions the opportunity to dispose of small quantities of hazardous waste in an environmentally responsible manner at a fraction of the cost of direct contracting with a hazardous waste management firm. Some of the most common materials covered under the service are: solvents, flammable solids and liquids, detergents, propane tanks and aerosol cans. Car and truck products, such as motor oil, lubricants, oil filters, and antifreeze. Lawn care products, such as pesticides, herbicides, fungicides, and fertilizers. Paint and paint-related materials, such as stains, varnishes, roofing tar, adhesives, joint compounds, and other petroleum-based products. Photo-chemical liquids, acids, bases, neutral oxidizers, and swimming pool chemicals.

Payment for Services

The CESQG Program will prepare an invoice for your business at the time of service. Thedriver will ask you to sign and date the invoice. You must be prepared to make payment for these waste disposal services at the time of service. This invoice/receipt will serve as legal documentation of proper management of the hazardous waste generated by your business

Registration Fee $45.00 Per Appointment

Waste Stream	Cost to CESQG	Management Method
Flammable Liquids and Solids	$1.50/lb	Incineration
Pesticide Liquids and Solids	$1.50/lb	Incineration
Acid/Base Liquids and Solids	$1.50/lb	Incineration
Aerosols	$2.00/lb	Incineration
Oil Base Paint	$1.00/lb	Fuels Blending
Oxidizing Liquids and Solids	$2.50/lb	Incineration
Potassium Nitrate Fertilizers	$2.50/lb	Incineration
Non-RCRA Liquids	$1.50/lb	Incineration
Non-RCRA Solids	$1.50/lb	Incineration
Latex Paint	$0.50/lb	Recycling
Used Motor Oil	$1.00 gallon	Recycling
Used Oil Filters	$0.50 each	Recycling
Used Antifreeze	$2.00 gallon	Recycling
Lead/Acid Batteries	$0.50 each	Recycling
Small Alkaline, Ni-Cd or Sealed Lead Acid Batteries	$0.65/lb	Recycling
Empty drum disposal	$25.00 each	Recycling or landfill
Mercury	$14.00/lb	Recycling
Fluorescent Tubes	$0.25/foot	Recycling

All Other Wastes—Highly reactive, explosives, gas cylinders, biological, radioactives and asbestos are priced on a case by case basis (cost plus 10%).

Managing Universal Waste in California

DEPARTMENT OF TOXIC SUBSTANCES CONTROL

Rules for Managing Some Common Wastes

DTSC is one of six Boards and Departments within the California Environmental Protection Agency. DTSC's mission is to restore, protect and enhance the environment, to ensure public health, environmental quality and economic vitality, by regulating hazardous waste, conducting and overseeing cleanups, and developing and promoting pollution prevention.

State of California

California Environmental Protection Agency

Introduction

New laws adopted since 2000 created California's "Universal Waste Rule" to simplify how we manage many common hazardous wastes. The Department of Toxic Substances Control (DTSC) has developed this fact sheet to provide information about these laws.

What are universal wastes?

Universal wastes are hazardous wastes that are more common and pose a lower risk to people and the environment than other hazardous wastes. Federal and State regulations identify universal wastes and provide simple rules for handling, recycling, and disposing of them. The regulations, called the "Universal Waste Rule," are in the California Code of Regulations, title 22, division 4.5, chapter 23. All citations in this fact sheet refer to the California Code of Regulations, title 22, division 4.5, unless otherwise indicated.

All universal wastes are hazardous wastes and, without the new rules, they would have to be managed under the same stringent standards as other hazardous wastes. Also, universal wastes are generated by a wide variety of people rather than by the industrial businesses that primarily generate other hazardous wastes.

Not all waste products of a particular type are hazardous waste and universal waste. For example, waste thermometers that contain mercury are universal wastes but waste thermometers that contain alcohol are neither hazardous waste nor universal waste.

Hazardous Wastes
- Most are generated by industrial businesses
- Subject to detailed management standards

Universal Wastes
- Lower risk than other hazardous wastes
- Generated by a wide variety of people
- Reduced management requirements

Note: Wastes that do not contain hazardous substances are not universal wastes even if they are similar to universal wastes.

The energy challenge facing California is real. Every Californian needs to take immediate action to reduce energy consumption. For a list of simple ways you can reduce demand and cut your energy costs, see our web site at www.dtsc.ca.gov.

What items are designated as universal wastes?

The following items are universal wastes when they are no longer useful or are discarded:

1. **Mercury thermostats.** These thermostats contain small glass capsules of mercury, a shiny liquid metal, to make electrical contact. Modern electronic thermostats do not contain mercury.

2. **Batteries.** Universal waste batteries include rechargeable nickel-cadmium batteries, silver button batteries, mercury batteries, small sealed lead acid batteries (burglar alarm and emergency light batteries), most alkaline batteries, carbon-zinc batteries, and any other batteries that exhibit a characteristic of a hazardous waste (§§66261.20 through 66261.24).

   NOTE: Spent automotive-type lead acid storage batteries are not universal waste. They are hazardous wastes that require management as specified in chapter 16, article 7.

3. **Lamps.** Universal waste lamps include fluorescent tubes, high intensity discharge lamps, sodium vapor lamps, and any other lamps that exhibit a characteristic of a hazardous waste. Some fluorescent tubes will not be considered hazardous waste, or universal waste, until 2004. For more information regarding which tubes are currently considered hazardous and non-hazardous, call the information numbers listed at the end of this document.

The Four Hazardous Waste Characteristics

An unwanted material may be considered hazardous if it has any of the following properties:

Toxicity (poisonous)
Reactivity (can explode)
Ignitability (can catch fire)
Corrosivity (acidic or alkaline)

4. **Non-empty aerosol cans.** The Legislature added non-empty aerosol cans to the list of universal wastes in 2001. This fact sheet does not address management of non-empty aerosol cans. For information, see Health and Safety Code section 25201.16.

5. **Mercury switches.** Two different types of mercury switches are universal wastes:

   - Motor vehicle light switches that contain mercury. Health and Safety Code section 25214.6 designates motor vehicle light switches (automatic hood and trunk light switches) containing mercury as universal wastes once they are removed from vehicles. As of January 2005, vehicles that contain the switches will also be considered hazardous waste until the mercury light switches are removed.

   - Non-automotive mercury switches and products that contain them, when they are recycled as scrap metal. These switches include thermostats and tip switches in portable heaters, washing machine out-of-balance switches, silent wall switches, and other mercury-containing switches and products containing them. As of February 9, 2006, all discarded products that contain mercury switches will be universal wastes.

6. **Mercury thermometers,** including fever thermometers.

7. **Pressure or vacuum gauges** that contain mercury such as U tube manometers, barometers, and sphygmomanometers (blood pressure meters.)

8. **Dilators and weighted tubing.** These medical devices contain mercury.

9. **Rubber flooring** that contains mercury. Older gymnasium floors that were poured in place to form indoor tracks and gymnastic areas frequently contain mercury.

10. **Novelties** that contain mercury or mercury batteries such as some singing greeting cards, flashing athletic shoes, jewelry, and other devices. As of January 1, 2004, all novelties with added mercury are considered hazardous and universal wastes.

11. **Mercury gas flow regulators.** These older gas flow regulators are managed exclusively by natural gas utilities.

12. **Counterweights and dampers,** including devices that use pouches of high density mercury to dampen shaking on hunting bows and snow skis or to absorb recoil on shotguns.

13. **Dental amalgam** tooth filling materials including waste amalgam, bits and pieces from chairside traps, and spent wastewater filters.

14. **Consumer electronic devices**. Electronics that exhibit hazardous characteristics such as some cell phones, game consoles, and computers (ch. 11, art. 3).

15. **Cathode ray tubes.** Waste cathode ray tubes (CRTs), such as television picture tubes and non-flat panel computer monitors, are universal wastes with special management standards. This fact sheet does not address managing waste CRTs; see the DTSC fact sheet entitled Managing Waste Cathode Ray Tubes at: www.dtsc.ca.gov/LawsRegulationsPolicies/CRTs/index.html.

16. **Gauges.** Vacuum and pressure gauges that contain mercury, including blood pressure gauges, barometers, and manometers

Do these regulations apply to me?

If you generate universal wastes, you must comply with these regulations. However, two exemptions temporarily allow people to dispose of some universal wastes in the regular trash. *These exemptions only apply to waste lamps, thermostats, batteries, and consumer electronic devices.*

Households: Universal waste batteries, thermostats, lamps, and consumer electronic devices generated by people maintaining their private household are exempt. They may be disposed of in the trash unless forbidden by the local solid waste authorities. This exemption will end on February 8, 2006.

Conditionally exempt small quantity universal waste generators: The smallest commercial hazardous waste generators may temporarily dispose of their universal waste batteries, thermostats, lamps, and consumer electronic devices in the trash, unless forbidden by the local solid waste authorities. These exemptions will end on February 8, 2006. To qualify for this exemption, you must meet the following conditions:

From February 9, 2002 until February 8, 2004:

- Generate less than 100 kilograms (220 pounds) of total federally regulated hazardous waste, including all universal wastes (except CRTs) in any calendar month; and
- Generate less than 1 kilogram (2.2 pounds) of any waste identified as an acutely hazardous waste in chapter 11; and
- Remain in compliance with Code of Federal Regulations, title 40, section 261.5.

From February 9, 2004 until February 8, 2006:

- You must meet the above requirements, and
- During this period, you may dispose of no more than 30 universal waste lamps and no more than 20 pounds of universal waste batteries in the regular trash in any calendar month. Mercury thermostats must be recycled or disposed of as hazardous waste.

Temporary and Conditional Universal Waste Exemptions

are in place for batteries, thermostats, lamps, and consumer electronic devices ***only.*** *These exemptions do not apply to CRTs (TV and computer glass), non-empty aerosol cans, or most universal wastes containing mercury.*

Household universal waste is exempt until February 2006.

Small business universal waste is exempt until 2006, if certain conditions are met.

Permanent Household and Conditionally Exempt Small Quantity Universal Waste Generator exemption: Households and the smallest commercial universal waste generators only have to follow the recycling and hazardous waste disposal parts of the universal waste rule. They are not subject to rules for training, accumulation, packaging, their universal wastes.

Where may I send universal wastes?

Many universal wastes must be recycled. Except for households and small generators that are temporarily exempt, everyone must send the universal wastes listed below directly to an authorized recycling facility or to a universal waste consolidator for shipment to an authorized recycling facility.

Universal wastes that must be recycled:

- lamps
- mercury switches
- mercury thermometers
- mercury gauges
- dialators and weighted tubing
- gas flow regulators
- counterweights and dampers
- cathode ray tubes (TV and computer glass)

If you do not recycle these wastes, then you must manage them as hazardous waste rather than as universal waste. This includes notifying DTSC, using a manifest and a registered hazardous waste hauler, complying with shorter accumulation times, and shipping only to an authorized destination facility.

Universal Waste Category	Effective	Recycling Required?	Hazard
Novelty items with mercury	2004	No	Mercury
Lamps with mercury	Most Current All: 2004	Yes	Mercury
Vehicle light switches with mercury	2005	Yes	Mercury
Non-automotive mercury switches	2006	Yes	Mercury
Mercury thermostats	Current	No	Mercury
Mercury thermometers	Current	Yes	Mercury
Dental amalgam	Current	Yes	Mercury
Rubber flooring	Current	No	Mercury
Pressure or vacuum gauges	Current	Yes	Mercury
Dilators and weighted tubing	Current	Yes	Mercury
Gas flow regulators	Current	Yes	Mercury
Counterweights and dampers	Current	Yes	Mercury
Cathode ray tubes	Current	Yes	Lead
Consumer electronic devices	Current	No	Lead and other metals
Waste batteries	Current	No	Toxic and corrosive
Aerosol cans (non-empty)	Current	No	Reactive, Toxic and Ignitable

Send all other universal wastes to one of three types of destinations:

- another location for consolidation or storage:

  - a business with many locations can designate one location as the consolidation point for the universal wastes from all of its locations

  - universal wastes may be sent to a business that specializes in collecting, consolidating, and shipping universal wastes to a destination facility

- a hazardous waste recycling facility
- a hazardous waste land disposal facility for universal wastes that are not required to be recycled (see table on page 4.)

Unless you are exempt from these rules, you may **not** send universal waste to a municipal solid waste (garbage) landfill or to a non-hazardous waste recycling center.

Disposal at any unauthorized disposal site such as roadsides or ditches is illegal and a serious crime as well as a serious environmental threat.

What rules must I follow to manage my universal wastes?

Unless you are exempt, you must follow the rules for either *large quantity handlers of universal waste* or for *small quantity handlers of universal waste*.

Large quantity handlers of universal waste have more than 5,000 kilograms (5.5 tons) of universal waste at one place at one time. They must follow more stringent standards for handling their universal waste. Generally, only a universal waste collection business will accumulate that much universal waste at once.

Most individuals and businesses are small quantity handlers of universal waste. The rules they follow are in sections 66273.10 through 66273.21. A summary of the requirements is below; however, small quantity handlers of universal waste must comply with the full regulations, not just this short summary.

<u>If you are a small quantity handler of universal waste:</u>

- Send all universal waste to a facility authorized to collect, recycle or dispose of universal waste.
- Do not dispose of universal waste to the trash
- Do not accumulate more than 5,000 kilograms of universal waste at any one time.
- You do not need a hazardous waste identification number.
- Do not store universal waste for longer than one year after generating or receiving the waste. If you think you need more time, contact your Certified Unified Program Agency (CUPA) well before your oldest universal waste will be held for one year (§66273.15).
- Document the length of time you have accumulated universal waste from the date you accepted it from someone else, discarded it yourself after it was "used up," or decided to discard it (§66273.15(c)). The regulations contain several options for documenting accumulation time.
- Label or mark universal wastes, or containers or packages of universal waste, to identify their types. The regulations provide several options for labeling. The purpose of labeling is to ensure that emergency response personnel or an inspector can identify the universal waste (§66273.14).
- Generally, you may not treat universal waste except when cleaning up releases or managing specific wastes as provided in section 66273.13 (for example, removing mercury ampules from thermostats or removing electrolyte from batteries) (§66273.11). Treatment includes any activity that changes the characteristics of the waste.
- Clean up any releases such as leaking batteries or broken fluorescent tubes. Repackage the damaged universal waste and manage it as universal waste. Manage any other materials generated, such as cleanup supplies and contaminated soil, as hazardous wastes if they are identified as hazardous waste (§§66273.13 and 66273.17).
- Train employees in proper universal waste management including handling, packaging, storing and labeling the universal waste, as well as how to respond to releases (§66273.16). This training may be accomplished by simply giving employees written instructions or posting these instructions in the universal waste management areas of the building.

- Determine whether the universal waste is a hazardous material under the United States Department of Transportation (U.S. DOT) rules. For U.S. DOT hazardous materials, properly mark the packaging and placard the transportation vehicle. The applicable U.S. DOT regulations are in Title 49 Code of Federal Regulations, Parts 171 through 180 (§66273.18).
- Prepare proper shipping papers such as a bill of lading. A Uniform Hazardous Waste Manifest is not necessary for universal waste shipments (§66273.18).
- You may transport universal waste in your own vehicle or may use any common carrier allowed by U.S. DOT and California law to transport non-hazardous waste. You are not required to use a registered hazardous waste hauler to transport universal waste (§66273.18).
- Ship the universal waste to another small quantity handler of universal waste, a large quantity handler of universal waste, or a destination facility. When shipping or receiving universal waste, specific rules apply regarding accepting shipments containing hazardous wastes that are not universal wastes and shipments that are rejected (§66273.18).
- Keep records of all shipments and receipts of universal waste for three years (§66273.19).
- When sending universal waste outside the country, comply with regulations addressing universal waste export (§66273.20).

Disclaimer

This fact sheet does not replace or supersede statutes or regulations. All universal waste handlers must follow the hazardous waste control statutes and regulations, including the universal waste regulations, and must comply with the detailed standards applicable to their activities.

Printed on Recycled Paper

For further information about managing universal waste, please contact DTSC's regional Public and Business Liaisons at (800) 72TOXIC (1-800-728-6942) or visit www.dtsc.ca.gov.

UNIVERSAL WASTE
MAIL-BACK RECYCLING SERVICES

Onyx Environmental Services
https://www.onyxes.com/OnyxPak/index.jsp

Proper recycling is easy with OnyxPak. When you have lamps, ballasts, batteries, mercury devices or computer monitors to dispose of simply order an OnyxPak. OnyxPak makes it easy to recycle small quantities and to comply with today's changing regulations. Our prepaid packaging allows you to conveniently manage lighting and electronic waste. One price includes everything you need - packaging, freight, insurance, liability protection and certificates of recycling.

We stock a variety of fiber drums, boxes and pails that will meet your needs. Simply fill, seal and return via the prepaid shipping label. Your boxes, drums or pails will be delivered to one of four fully permitted Onyx facilities, where your waste will be recycled to the highest standards in the industry. That's compliance with confidence!

Benefits of OnyxPak

Low cost compliance. Price includes packaging, return shipping and recycling.

Minimize the need to sort, count and store lighting and electronic waste.

Easy process for recycling your lamps and ballasts. Simply go to our ordering page or call toll-free (800) 556-5267.

Access to recycling expertise. Customer service representatives are standing by, ready to assist you.

Receive confirmation that your lighting and electronic waste was recycled. Onyx will send you a certificate of recycling.

For larger or bulk quantities, we offer competitive pricing, containers and documentation for sorting, storing and shipping your lighting and electronic wastes. When it comes time to recycle, we'll even arrange for transportation.

Contact us today to request a bulk quote.

Lighting Resources, Inc.
http://www.lightingresourcesinc.com/hs_services.html

Corporate Offices
805 E. Francis Street
Ontario, CA 91761

DID YOU KNOW ?

Lighting Resources saves you money, time, non-compliance fines, and citations through regulatory and proper recycling of all light bulbs covered under 40CFR 273 Universal Waste Rule and the new regulations coming into enforcement on January 01, 2000.

We are the only vendor who handles your full fixtures, saving you time and money from sorting lamps and ballasts on the job site.

***Lighting Resources** isn't just fluorescent light bulbs anymore!*

We also help your facilities with many other types of Universal and Hazardous Waste for proper compliance, de-manufacturing, recycling, and incineration. Don't let your facility be exposed to non-compliance

Other waste streams managed:
All monitors for LEAD & CADMIUM, i.e., CRTs TV/Video, medical, electronic. All computer equipment. We accept all types of light bulbs, lumination devices, and batteries including: lithium, mercury, Ni-cad, magnesium, sealed lead acid, etc. We handle mercury switches--thermometers, blood pressure machines, mercury tubes, elemental mercury, fuses, and devices--as well as transformers, capacitors, starters and mercury seals, appliances, motors, compressors, freon, catalytic converters, cooler units, A/C units, etc.

How to save money, time, and NON-COMPLIANCE:

1. Fax our office for pickups and materials. We arrange transportation and freight within 1-2 days once shipments are ready.

2. We are the only company who has this program. You can **MAIL** your UHW to us. (Caution--some UHWs cannot be mailed.)

3. Send your wastes on your own carrier. Fax the Bill of Ladings to us so we can be prepared. We always confirm receipt of goods and provide Certificates of Recycling and proper disposal.

Call our office for any other waste, recycling, or incineration needs.

EPA

WHY RECYCLE

- Mercury is a toxic metal that is hazardous to both the environment and human health.
- An ounce of mercury contaminates a lake for centuries.
- 100 fluorescent lamps contain approximately 4 grams of mercury.
- Ballasts contain polychlorinated biphenyls (PCB's) which is a hazardous waste.
- Batteries contain heavy metals and corrosive components.
- Computer monitors contain toxic lead in the glass and circuits.

UNIVERSAL WASTE RULE (UWR)

The EPA issued the UWR in 1995 to reduce the amount of hazardous waste items entering municipal solid waste. It encourages recycling and proper disposal of certain wastes. Regulatory and administrative burdens for managing wastes were also streamlined. Numerous states have moved forward with the inclusion of electronic scrap (e-scrap) into the UWR. In addition, numerous states have banned monitors from landfills.

AERC PRE-PAID RETURN PROGRAM

AERC offers a comprehensive recycling service for commercial, institutional, municipal, and governmental waste generators.

1. Order Your Recycle Kit Order your kit by going to the RecycleKits website or by calling your AERC representative. You will need to know what quantities of the specific material you will be recycling. Prepayment includes recycling fees, container and FedEx freight. Certificates of Recycling and Process available upon request. AERC offers a comprehensive recycling service for commercial, institutional, municipal, and government waste generators.

2. Shipping Guidelines Put the material you're recycling into the designed container and follow the packaging instructions. Complete the enclosed labels and affix the prepaid shipping labels to the container.

FedEx Ground will not accept any package with the a PPRP label that has been changed, altered or tampered with in any way.

Give this package to the FedEx Ground driver during a routine delivery. Do not call FedEx Ground for a pickup if you are already set up for daily pick-ups. If you are not set-up for daily pick-ups you will need to call FedEx Ground as (888)777-6040 to schedule a pick-up.

3. AERC Recycles Your Waste AERC recycles your waste at one of its four fully permitted facilities. After your waste has been processed, a Certificate of Recycling or Process can be provided upon request.

ADVANTAGES OF AERC'S PPRP PROGRAM

- One price includes everything you need.
- Convenience for small quantity generators with storage limitations.
- Reduces the chances of facility contamination by minimizing volumes of waste on-site.
- Allows each facility to purchase recycling services based on its individual

needs.
- Allows for proper management with minimal handling of waste.
- Eliminates the need to fill out complicated shipping documents
- Reduces administrative burden without reducing control.
- Establishes standard operating procedures from facility to facility
- Allows one phone call to provide recycling services for the entire month, quarter or year.

ACCEPTABLE MATERIALS FOR AERC'S PRE-PAID RETURN PROGRAM

ACCEPTABLE *LAMPS* FOR THE PPRP PROGRAM

- Straight Fluorescent Lamps
- U-Tubes, Circular Lamps
- Shattershields, Coated Lamps
- High Intensity Discharge Lamps

ACCEPTABLE *BALLAST* FOR THE PPRP PROGRAM

- Non-PCB Lighting Ballast

ACCEPTABLE *BATTERIES* FOR THE PPRP PROGRAM

- Alkaline (non-mercury)
- NiCad (dry)
- Carbon Zinc (non-mercury)
- Nickel Iron
- Nickel Metal Hydride
- Zinc Air

ACCEPTABLE *ELECTRONIC SCRAP* FOR THE PPRP PROGRAM

- CPU's
- Monitors
- Keyboards
- Printers
- Miscellaneous wires and components

TV, MONITORS, CRT, AND CONSUMER ELECTRONICS RECYCLING

Computer monitors, Cathode Ray Tube (CRT) devices, televisions, etc. cannot be buried in landfills because of components that can damage our environment. These items need to be taken to a recycler for proper handling and recycling.

Working Computer Devices

Computer Components that are in good working condition, but no longer meet your current needs, may have another use to others. Local organizations that reuse and refurbish computer parts and electronics may be interested in your unwanted items. Please contact these programs to see if the items are acceptable for their reuse programs.

Students in Free Enterprise (SIFE)	(951) 785-2255	Riverside

Broken and Non-Working Monitors, TV, and CRT Devices

Components that are broken and don't have any usefulness, should be taken to a recycler or electronics recycling collection for disassembly and processing. Contact your city hall or waste hauler for special collection events in your area.

The Riverside County Waste Management Department has added electronics recycling collections to their current residential Household Hazardous Waste Events. For more information go to www.rivcowm.org or call (800) 304-2226.

The California Integrated Waste Management Board maintains a list of certified recyclers http://www.ciwmb.ca.gov/Electronics/Collection/

Goodwill - Magnolia Center	(951) 688-0035	Riverside
Goodwill - La Sierra	(951) 684-1160	Riverside
Goodwill - Cathedral City	(760) 202-1544	Cathedral City

Riverside County landfills will accept residential TV, monitors, CRT's, and other consumer electronic devices for recycling. Residents may bring in up to 2 CRT type devices per trip. A minimum fee of $8.00 will be charged for loads up to 800 lbs. or $31.91 per ton prorated for heavier loads (new fees effective 7/1/06). Electronic waste from businesses is not accepted at the landfills at this time. Please contact the handlers on the following list.

Large Quantity CRT Handlers

Computer Recyclers of America	(760) 599-9131
Chase Electronics, Inc.	(610) 449-8160
Edom Hill Transfer Station	(760) 251-3649
Electronics Partners Corp.	(415) 541-5346
Envirocycle	(909) 519-3276
E-Recycling of So. Cal.	(562) 634-8372

BUSINESS REGISTRATION AND LICENSING PROGRAM

In November 2006, the Riverside County Board of Supervisors approved Ordinance No. 857 creating a Business Registration and Licensing Program. The ordinance requires that businesses within the unincorporated area of Riverside County obtain a business license. The ordinance includes information regarding the contents of the application form, license issuance protocol, description of license fee, license inspections, water quality inspections and enforcement, and business license enforcement procedures.

The ordinance requires all businesses to register; however, some businesses are exempt from paying fees. Fee exemptions will be granted for various agricultural activities, certain residential businesses, places of worship, specific non-profit, and any business exempt by virtue of constitutional law.

Business license fees will not exceed the reasonable cost of providing an inventory of county businesses and the required registration information. No business license fee charged under the provisions of this ordinance shall be construed as a business license tax.

A business registration form designed to ascertain pertinent information regarding the businesses will be mailed to every known business within unincorporated area of Riverside County. In addition, businesses have the ability to access the County of Riverside's website for an on-line registration and payment system. For more information regarding business registration requirements, please contact the Business Registration and License Program Office at 951-955-1400, or on the website: www.rctlma.org.buslic

FEE EXEMPTIONS

Pursuant to Ordinance No. 857, some businesses are exempt from paying fees; however, they must register within 60 days of being notified by the County in order to maintain their exempt status. Exemptions apply to the following:

Residential Facility: Apartments, rooming houses, residential care homes, and family day care homes.

Church, Temple or Places of Worship: Churches, temples or other places of worship, for worship, religious education, or the social affairs of the religious group. **NOTE:** This exemption shall not apply to other activities, including, but not limited to, day schools, social service programs or Church-owned or operated business enterprises.

Home Occupations: Home occupations that are not subject to compliance with water quality restrictions. If your business affects water quality, it will not be exempt from the registration fee.

Agriculture: Agricultural pursuits consisting of the growing of crops, raising of livestock, and dairying, the purchase and storage of substances, materials, supplies, animal feeds and produce, and the marketing of farm products. **NOTE:** A business license shall be required in connection with any of the following: 1) retail nurseries, 2) retail greenhouses; and 3) wholesaling, processing, storage or manufacturing use which involves the collection of products of multiple farms or ranches .

Federal or State Law: Any businesses that are legally recognized as exempt by the U. S. Constitution or applicable statutes, or by the State of California.

Non-Profit Organizations: Any non-profit organizations that are legally recognized as tax exempt pursuant to the provisions of 26 U.S.C. Section 501 (c)(3).

Frequently Asked Questions?

0001899

WHAT IS THE PURPOSE OF THE BUSINESS REGISTRATION AND LICENSING PROGRAM?

This program provides a comprehensive inventory of businesses in unincorporated area of Riverside County, enhances public safety and helps achieve compliance with federal, state and local water quality regulations.

HOW DOES THE BUSINESS REGISTRATION PROGRAM BENEFIT BUSINESS OWNERS AND THE GENERAL PUBLIC?

There are a two major benefits to the business community and general public from the business registration program:

Public Safety

The program gives county law enforcement and fire personnel a better understanding of the business community and its processes and alerts them to potential hazards, making them more effective responding to protect residents and property. .

Water Quality

The business registration program requires that specific business types be identified, prioritized and inspected for storm water management requirements. It will ensure that those businesses have implemented best management practices to prevent illicit discharges into the storm water system that could ultimately harm water quality.

HOW MUCH WILL THE BUSINESS LICENSE COST?

License fees charged pursuant to this ordinance are as follows:

License fee (first year):	**$45**
Annual renewal fee:	**$30**
Change of name/ location:	**$30**
Duplic[illegible] license:	**$30**

WHO IS REQUIRED TO HAVE A LICENSE?

Every person conducting business as defined in Riverside County Ordinance 857 in unincorporated areas of Riverside County must obtain a business license. A separate license must be obtained for each physical location. Any person who does not obtain the required license is subject to the procedures and penalties set forth in the ordinance.

WHAT IF I OPERATE A MOBILE BUSINESS?

A business license is required for the following mobile businesses: mobile automobile or other motor vehicle washing; pest control services; mobile carpet; drape or furniture cleaning; concrete mixing or cutting; masonry; painting and coating; landscaping; pool and fountain cleaning; and portable toilet servicing.

WHAT IF MY BUSINESS ALSO CONDUCTS BUSINESS IN ANOTHER CITY OR COUNTY?

You might need a separate business license to conduct business in any city or county. Most California cities and counties have a business license ordinance. Each jurisdiction, however, has it's own filing fee and requirements. Check with the appropriate jurisdiction for its' fees.

HOW LONG IS THIS LICENSE GOOD FOR?

Your license is current for one calendar year from the effective date of license issuance. Renewal fees are due 30 days prior to the expiration date on the license.

DO STATE LICENSED CONTRACTORS NEED A BUSINESS LICENSE?

Any person licensed as a contractor by the State Contractors Board must obtain a business license if they are physically located within the unincorporated areas of the County.

DO I NEED A LICENSE IF I WORK OUT OF MY HOME?

Yes, home-based businesses also requir registration. Most home occupations are exemp from paying registration fees. The fee exemptio shall not apply to those home occupations that ar subject to comply with water quality requirement Please refer to the brochure's fee exemption sectio or go to our website at: www.rctlma.org/buslic.

IF I AM A NONPROFIT BUSINESS, DO I HAVE T REGISTER?

You are required to register, but are exempt fror paying fees if your organization is legally recognize as tax exempt pursuant to the provisions of Interna Revenue Code Section 501 (C) (3) and you exemption is filed within 60 days of notification c the County's registration requirement.

DO I NEED A LICENSE FOR GROWING OR PRODUCING AGRICULTURAL PRODUCTS?

Yes, all agricultural businesses must registe however, some agricultural activities may be exemp from fees. Refer to the fee exemption section o this brochure or go to www.rctlma.org/buslic.

WHAT IS THE APPLICATION PROCEDURE?

The process to obtain a business license takes onl a few minutes and may be completed by mail or o the web based registration system. Using th internet, go to the county business registratio website at: www.rctlma.org/buslic where you will fin online instructions, a registration application an convenient payment system.

IF I AM EXEMPT FROM FEES, DO I STILL HAVE T REGISTER?

Yes. Business that are exempt from paying fees st must register within 60 days of notification.

BUSINESS REGISTRATION AND LICENSING PROGRAM

James J. Miller
Director

January 31, 2007

Martha's Gift Shoppe
ATTN: ACCOUNTS PAYABLE
PO BOX 456
GOTHAM, CA 99999-9999

Dear Business Owner,

Your business has been identified as being located within the unincorporated area of the County of Riverside. The County has recently enacted Ordinance 857 requiring all businesses within the unincorporated areas to register and obtain a business license. The purpose of this program is to create a comprehensive inventory and data base of all businesses. This inventory will be used to assist the County in complying with Federal clean water regulations and to improve public safety services and economic development outreach to the business community.

Included with this letter are the Business License Application, a brochure about the program, the Declaration of Exemption, and a return envelope. **The first time filing fee for the Business License is $45 with an annual renewal fee of $30.** *Also, for your convenience, you can register and pay on line at www.rctlma.org/buslic*. All applications must be returned within 60 days of receipt of this letter or you may be subject to late filing fees.

If you have any questions, please contact the Business License and Registration Program Division at (951) 955-1400 or visit the web page at *www.rctlma.org/buslic*. Thank you.

Respectfully,

Ed Nicholls
