This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1595] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1596]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1597] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1595] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1596] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1597] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1598] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1599]

[1598] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1599] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1600] A description of the Visual Trash Assessment Approach[1601] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1602]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1603] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1600] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1601] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1602] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1603] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1604]
    a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

    b. A preliminary jurisdictional map(s) identifying the following:

        i. Priority Land Use areas discharging to the storm drain network ; and
        ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

    i. All Priority Land Use areas discharging to the storm drain network;
    ii. The corresponding storm drain network;
    iii. Proposed locations of all certified Full Capture Systems[1605] and,
    iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

    i. An updated jurisdictional map(s) identifying the following:
        a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
        b) The corresponding storm drain network; and
        c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
        d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1604] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1605] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Margaret Silveira:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1606] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1607] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1608] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1609] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1606] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1607] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1608] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1609] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1610] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1611]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1612] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1610] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1611] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1612] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1613] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1614]

[1613] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1614] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1615] A description of the Visual Trash Assessment Approach[1616] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1617]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1618] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1615] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1616] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1617] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1618] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1619]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1620] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1619] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1620] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Scott De Leon:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1621] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1622] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1623] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1624] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1621] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1622] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1623] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1624] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1625] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1626]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1627] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1625] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1626] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1627] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1628] will achieve Full Capture System Equivalency.[*]

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1629]

[1628] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1629] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1630] A description of the Visual Trash Assessment Approach[1631] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1632]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1633] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1630] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1631] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1632] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1633] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1634]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1635] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1634] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1635] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Joan Phillipe:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1636] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1637] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1638] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1639] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1636] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1637] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1638] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1639] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1640] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1641]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1642] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1640] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1641] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1642] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1643] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1644]

[1643] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1644] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1645] A description of the Visual Trash Assessment Approach[1646] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1647]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1648] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1645] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1646] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1647] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1648] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1649]
    a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

    b. A preliminary jurisdictional map(s) identifying the following:

        i. Priority Land Use areas discharging to the storm drain network ; and
        ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

    i. All Priority Land Use areas discharging to the storm drain network;
    ii. The corresponding storm drain network;
    iii. Proposed locations of all certified Full Capture Systems[1650] and,
    iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

    i. An updated jurisdictional map(s) identifying the following:
        a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
        b) The corresponding storm drain network; and
        c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
        d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1649] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1650] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Timothy Kiser:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1651] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1652] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1653] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1654] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1651] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1652] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1653] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1654] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1655] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1656]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1657] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1655] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1656] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1657] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1658] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1659]

[1658] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1659] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1660] A description of the Visual Trash Assessment Approach[1661] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1662]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1663] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1660] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1661] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1662] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1663] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1664]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1665] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1664] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1665] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Britton Snipes:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1666] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1667] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1668] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1669] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1666] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1667] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1668] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1669] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1670] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1671]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1672] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1670] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1671] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1672] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1673] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1674]

[1673] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1674] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1675] A description of the Visual Trash Assessment Approach[1676] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1677]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1678] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1675] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1676] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1677] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1678] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1679]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1680] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1679] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1680] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Bernie Schroeder:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1681] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1682] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1683] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1684] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1681] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1682] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1683] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1684] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1685] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1686]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1687] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1685] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1686] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1687] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1688] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1689]

[1688] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1689] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1690] A description of the Visual Trash Assessment Approach[1691] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1692]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1693] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1690] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1691] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1692] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1693] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1694]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1695] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1694] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1695] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Robert Jensen:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1696] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1697] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1698] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1699] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1696] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1697] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1698] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1699] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1700] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1701]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1702] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1700] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1701] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1702] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1703] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1704]

[1703] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1704] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1705] A description of the Visual Trash Assessment Approach[1706] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1707]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1708] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1705] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1706] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1708] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1709]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1710] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1709] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1710] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear APRIL WOODEN:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1711] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1712] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1713] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1714] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1711] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1712] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1713] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1714] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1715] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1716]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1717] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1715] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1716] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1717] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1718] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1719]

[1718] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1719] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1720] A description of the Visual Trash Assessment Approach[1721] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1722]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1723] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1720] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1721] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1722] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1723] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1724]
    a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

    b. A preliminary jurisdictional map(s) identifying the following:

        i. Priority Land Use areas discharging to the storm drain network ; and
        ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

    i. All Priority Land Use areas discharging to the storm drain network;
    ii. The corresponding storm drain network;
    iii. Proposed locations of all certified Full Capture Systems[1725] and,
    iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

    i. An updated jurisdictional map(s) identifying the following:
        a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
        b) The corresponding storm drain network; and
        c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
        d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1724] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1725] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear David Boesch:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1726] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1727] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1728] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1729] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1726] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1727] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1728] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1729] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1730] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1731]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1732] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1730] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1731] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1732] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1733] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1734]

[1733] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1734] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1735] A description of the Visual Trash Assessment Approach[1736] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1737]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1738] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1735] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1738] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1739]
    a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

    b. A preliminary jurisdictional map(s) identifying the following:

        i. Priority Land Use areas discharging to the storm drain network ; and
        ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

    i. All Priority Land Use areas discharging to the storm drain network;
    ii. The corresponding storm drain network;
    iii. Proposed locations of all certified Full Capture Systems[1740] and,
    iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

    i. An updated jurisdictional map(s) identifying the following:
        a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
        b) The corresponding storm drain network; and
        c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
        d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1739] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1740] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Rick Forstall:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1741] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1742] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1743] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1744] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1741] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1742] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1743] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1744] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1745] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1746]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1747] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1745] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1746] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1747] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1748] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1749]

[1748] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1749] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1750] A description of the Visual Trash Assessment Approach[1751] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1752]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1753] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1750] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1751] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1752] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1753] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1754]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1755] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1754] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1755] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Charlie Swimley:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1756] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[1757] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1758] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1759] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1756] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1757] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1758] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1759] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1760] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1761]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1762] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1760] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1761] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1762] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1763] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1764]

[1763] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1764] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1765] A description of the Visual Trash Assessment Approach[1766] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1767]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1768] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1765] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1766] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1767] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1768] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1769]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1770] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1769] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1770] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Troy Brown:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1771] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1772] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1773] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1774] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1771] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1772] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1773] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1774] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1775] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1776]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1777] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1775] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1776] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1777] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1778] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1779]

[1778] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1779] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1780] A description of the Visual Trash Assessment Approach[1781] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1782]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1783] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1780] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1781] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1783] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1784]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1785] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1784] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1785] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Mark Houghton:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1786] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1787] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1788] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1789] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1786] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1787] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1788] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1789] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1790] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1791]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1792] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1790] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1791] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1792] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1793] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1794]

[1793] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1794] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1795] A description of the Visual Trash Assessment Approach[1796] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1797]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1798] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1795] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1796] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1797] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1798] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1799]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1800] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1799] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1800] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Stephen Salvatore:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1801] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1802] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1803] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1804] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1801] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1802] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1803] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1804] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1805] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1806]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1807] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1805] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1806] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1807] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1808] will achieve Full Capture System Equivalency.[*]

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1809]

[1808] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1809] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1810] A description of the Visual Trash Assessment Approach[1811] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1812]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1813] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1810] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1811] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1813] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1814]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1815] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1814] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1815] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Brandon Nakagawa:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1816] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1817] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1818] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1819] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1816] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1817] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1818] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1819] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1820] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1821]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1822] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1820] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1821] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1822] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1823] will achieve Full Capture System Equivalency.[*]

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1824]

[1823] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1824] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1825] A description of the Visual Trash Assessment Approach[1826] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1827]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1828] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1825] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1826] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1827] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1828] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1829]
    a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

    b. A preliminary jurisdictional map(s) identifying the following:

        i. Priority Land Use areas discharging to the storm drain network ; and
        ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

    i. All Priority Land Use areas discharging to the storm drain network;
    ii. The corresponding storm drain network;
    iii. Proposed locations of all certified Full Capture Systems[1830] and,
    iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

    i. An updated jurisdictional map(s) identifying the following:
        a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
        b) The corresponding storm drain network; and
        c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
        d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1829] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1830] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Kevin Werner:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1831] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1832] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1833] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1834] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1831] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1832] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1833] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1834] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1835] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1836]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1837] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1835] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1836] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1837] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1838] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1839]

[1838] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1839] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1840] A description of the Visual Trash Assessment Approach[1841] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1842]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1843] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1840] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1841] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1842] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1843] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1844]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1845] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1844] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1845] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Tammy Alcantor:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1846] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1847] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1848] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1849] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1846] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1847] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1848] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1849] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1850] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1851]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1852] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1850] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1851] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1852] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1853] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1854]

[1853] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1854] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1855] A description of the Visual Trash Assessment Approach[1856] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1857]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1858] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1855] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1856] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1857] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1858] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1859]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1860] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1859] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1860] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear James Lindley:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1861] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1862] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1863] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1864] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1861] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1862] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1863] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1864] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1865] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1866]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1867] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1865] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1866] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1867] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1868] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1869]

[1868] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1869] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1870] A description of the Visual Trash Assessment Approach[1871] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1872]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1873] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1870] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1873] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1874]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1875] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1874] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1875] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear David Melilli:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1876] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1877] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1878] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1879] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1876] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1877] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1878] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1879] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1880] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1881]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1882] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1880] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1881] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1882] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1883] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1884]

[1883] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1884] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1885] A description of the Visual Trash Assessment Approach[1886] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1887]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1888] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1885] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1886] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1887] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1888] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1889]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1890] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1889] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1890] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Royce Cunningham:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1891] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1892] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1893] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1894] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1891] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1892] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1893] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1894] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1895] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1896]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1897] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1895] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1896] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1897] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1898] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1899]

[1898] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1899] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1900] A description of the Visual Trash Assessment Approach[1901] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1902]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1903] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1900] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1901] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1902] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1903] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1904]
    a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

    b. A preliminary jurisdictional map(s) identifying the following:

        i. Priority Land Use areas discharging to the storm drain network ; and
        ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

    i. All Priority Land Use areas discharging to the storm drain network;
    ii. The corresponding storm drain network;
    iii. Proposed locations of all certified Full Capture Systems[1905] and,
    iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

    i. An updated jurisdictional map(s) identifying the following:
        a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
        b) The corresponding storm drain network; and
        c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
        d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1904] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1905] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Daryl Jordan:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1906] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1907] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1908] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1909] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1906] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1907] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1908] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1909] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1910] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1911]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1912] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1910] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1911] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1912] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1913] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1914]

[1913] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1914] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1915] A description of the Visual Trash Assessment Approach[1916] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1917]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1918] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1915] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1916] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1917] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1918] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1919]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1920] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1919] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1920] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Bryan Whitemyer:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1921] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1922] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1923] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1924] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1921] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1922] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1923] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1924] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1925] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1926]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1927] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1925] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1926] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1927] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1928] will achieve Full Capture System Equivalency.[*]

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1929]

[1928] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1929] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1930] A description of the Visual Trash Assessment Approach[1931] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1932]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1933] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1930] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1933] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1934]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1935] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1934] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1935] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Matt Machado:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1936] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1937] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1938] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1939] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1936] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1937] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1938] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1939] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1940] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1941]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1942] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1940] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1941] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1942] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1943] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1944]

[1943] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1944] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1945] A description of the Visual Trash Assessment Approach[1946] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1947]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1948] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1945] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1946] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1947] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1948] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1949]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1950] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1949] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1950] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Marisela Garcia:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1951] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1952] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1953] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1954] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1951] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1952] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1953] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1954] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1955] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1956]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1957] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1955] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1956] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1957] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1958] will achieve Full Capture System Equivalency.[*]

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1959]

[1958] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1959] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1960] A description of the Visual Trash Assessment Approach[1961] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1962]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1963] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1960] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1963] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1964]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1965] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1964] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1965] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Gary Hampton:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1966] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1967] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1968] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1969] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1966] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1967] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1968] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1969] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1970] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1971]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1972] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1970] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1971] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1972] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1973] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1974]

[1973] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1974] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1975] A description of the Visual Trash Assessment Approach[1976] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1977]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1978] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1975] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1976] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[1977] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[1978] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1979]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1980] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1979] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1980] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Koosun Kim:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1981] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1982] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1983] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1984] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1981] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1982] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1983] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1984] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[1985] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[1986]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[1987] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[1985] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[1986] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[1987] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[1988] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[1989]

[1988] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[1989] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[1990] A description of the Visual Trash Assessment Approach[1991] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[1992]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[1993] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[1990] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[1993] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[1994]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[1995] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[1994] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[1995] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Rod Butler:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1996] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [1997] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[1998] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[1999] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[1996] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[1997] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[1998] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[1999] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2000] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2001]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2002] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2000] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2001] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2002] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2003] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2004]

[2003] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2004] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2005] A description of the Visual Trash Assessment Approach[2006] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2007]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2008] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2005] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2006] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2007] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[2008] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2009]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2010] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2009] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2010] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Raul Mendez:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2011] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2012] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2013] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2014] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2011] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2012] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2013] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2014] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2015] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2016]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2017] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2015] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2016] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2017] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2018] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2019]

[2018] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2019] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2020] A description of the Visual Trash Assessment Approach[2021] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2022]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2023] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2020] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2021] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2023] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2024]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2025] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2024] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2025] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Diana Langley:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2026] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2027] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2028] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2029] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2026] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2027] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2028] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2029] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2030] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2031]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2032] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2030] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2031] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2032] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2033] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2034]

[2033] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2034] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2035] A description of the Visual Trash Assessment Approach[2036] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2037]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2038] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2035] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2036] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2037] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[2038] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2039]
    a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

    b. A preliminary jurisdictional map(s) identifying the following:

        i. Priority Land Use areas discharging to the storm drain network ; and
        ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

    i. All Priority Land Use areas discharging to the storm drain network;
    ii. The corresponding storm drain network;
    iii. Proposed locations of all certified Full Capture Systems[2040] and,
    iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

    i. An updated jurisdictional map(s) identifying the following:
        a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
        b) The corresponding storm drain network; and
        c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
        d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2039] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2040] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Guadalupe Rivera:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2041] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2042] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2043] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2044] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2041] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2042] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2043] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2044] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2045] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2046]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2047] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2045] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2046] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2047] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2048] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2049]

[2048] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2049] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2050] A description of the Visual Trash Assessment Approach[2051] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2052]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2053] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2050] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2051] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2053] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2054]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2055] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2054] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2055] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Denix Anbiah:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2056] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2057] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2058] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2059] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2056] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2057] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2058] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2059] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2060] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2061]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2062] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2060] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2061] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2062] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2063] will achieve Full Capture System Equivalency.[*]

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2064]

[2063] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2064] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2065] A description of the Visual Trash Assessment Approach[2066] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2067]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2068] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2065] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2066] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2068] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2069]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2070] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2069] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2070] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Paul Navazio:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2071] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2072] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2073] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2074] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2071] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2072] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2073] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2074] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2075] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2076]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2077] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2075] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2076] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2077] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2078] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2079]

[2078] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2079] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2080] A description of the Visual Trash Assessment Approach[2081] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2082]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2083] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2080] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2081] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2082] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[2083] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2084]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2085] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2084] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2085] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Panos Kokkas:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2086] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2087] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2088] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2089] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2086] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2087] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2088] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2089] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2090] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2091]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2092] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2090] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2091] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2092] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2093] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2094]

[2093] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2094] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2095] A description of the Visual Trash Assessment Approach[2096] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2097]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2098] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2095] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2096] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2098] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2099]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2100] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2099] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2100] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Robert Clarke:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2101] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2102] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2103] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2104] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2101] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2102] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2103] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2104] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2105] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2106]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2107] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2105] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2106] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2107] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2108] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2109]

[2108] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2109] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2110] A description of the Visual Trash Assessment Approach[2111] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2112]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2113] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2110] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2111] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2112] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[2113] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2114]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2115] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2114] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2115] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Michael Lee:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2116] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2117] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2118] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2119] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2116] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2117] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2118] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2119] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2120] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2121]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2122] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2120] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2121] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2122] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2123] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2124]

[2123] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2124] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2125] A description of the Visual Trash Assessment Approach[2126] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2127]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2128] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2125] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2126] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2127] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[2128] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2129]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2130] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2129] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2130] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear David Lamon:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2131] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2132] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2133] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2134] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2131] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2132] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2133] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2134] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2135] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2136]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2137] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2135] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2136] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2137] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2138] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2139]

[2138] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2139] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2140] A description of the Visual Trash Assessment Approach[2141] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2142]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2143] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2140] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2141] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2142] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[2143] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2144]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2145] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2144] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2145] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Daniel Wilkins:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2146] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2147] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2148] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2149] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2146] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2147] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2148] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2149] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2150] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2151]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2152] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2150] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2151] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2152] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2153] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2154]

[2153] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2154] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2155] A description of the Visual Trash Assessment Approach[2156] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2157]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2158] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2155] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2156] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2158] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2159]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2160] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2159] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2160] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear David Boesch:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2161] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2162] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2163] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2164] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2161] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2162] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2163] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2164] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2165] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2166]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2167] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2165] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2166] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2167] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2168] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2169]

[2168] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2169] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2170] A description of the Visual Trash Assessment Approach[2171] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2172]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2173] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2170] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2171] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2172] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[2173] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2174]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2175] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2174] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2175] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Frank Robinson:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2176] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2177] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2178] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2179] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2176] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2177] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2178] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2179] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2180] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2181]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2182] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2180] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2181] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2182] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2183] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2184]

[2183] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2184] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2185] A description of the Visual Trash Assessment Approach[2186] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2187]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2188] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2185] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2186] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2188] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2189]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2190] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2189] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2190] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Kevin Blakeslee:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2191] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2192] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2193] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2194] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2191] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2192] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2193] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2194] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2195] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2196]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2197] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2195] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2196] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2197] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2198] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2199]

[2198] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2199] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2200] A description of the Visual Trash Assessment Approach[2201] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2202]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2203] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2200] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2201] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2202] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[2203] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2204]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2205] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2204] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2205] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Michael Blay:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2206] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2207] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2208] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2209] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2206] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2207] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2208] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2209] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2210] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2211]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2212] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2210] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2211] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2212] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2213] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2214]

[2213] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2214] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2215] A description of the Visual Trash Assessment Approach[2216] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2217]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2218] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2215] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2216] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2217] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[2218] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2219]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2220] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2219] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2220] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Brian Gengler:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2221] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2222] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2223] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2224] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2221] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2222] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2223] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2224] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2225] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2226]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2227] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2225] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2226] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2227] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2228] will achieve Full Capture System Equivalency.[*]

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2229]

[2228] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2229] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2230] A description of the Visual Trash Assessment Approach[2231] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2232]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2233] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2230] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2231] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2232] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[2233] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2234]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2235] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2234] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2235] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Brad Merrell:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2236] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2237] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2238] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2239] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2236] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2237] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2238] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2239] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2240] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2241]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2242] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2240] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2241] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2242] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2243] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2244]

[2243] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2244] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2245] A description of the Visual Trash Assessment Approach[2246] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2247]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2248] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2245] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2246] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2248] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2249]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2250] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2249] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2250] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Ruben Duran:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2251] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2252] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2253] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2254] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2251] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2252] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2253] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2254] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2255] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2256]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2257] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2255] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2256] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2257] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2258] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2259]

[2258] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2259] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2260] A description of the Visual Trash Assessment Approach[2261] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2262]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2263] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2260] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2261] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2262] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[2263] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2264]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2265] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2264] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2265] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear William Brunet:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2266] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2267] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2268] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2269] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2266] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2267] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2268] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2269] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2270] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2271]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2272] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2270] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2271] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2272] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2273] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2274]

[2273] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2274] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2275] A description of the Visual Trash Assessment Approach[2276] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2277]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2278] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2275] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2276] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2277] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[2278] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2279]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2280] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2279] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2280] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Yazmin Arellano:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[2281] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2282] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters of the State. For Phase II MS4 permittees that have regulatory authority over Priority Land Uses,*[2283] the Trash Provisions require implementation of the prohibition through requirements incorporated into the Phase II MS4 Permit and/or through monitoring and reporting orders, by June 2, 2017. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions,[2284] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the State Water Board and appropriate Regional Water Quality Control Board (Regional Water Board).

[2281] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[2282] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order No. 2013-0001-DWQ, NPDES No. CAS000004.

[2283] All terms marked with an asterisk '*' are defined in Enclosure, *Trash Provisions Glossary*.

[2284] Chapter IV.A.5.a.(1)B of the ISWEBE Plan and Chapter III.L.4.a.(1)B of the Ocean Plan.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for municipal permittees to plan for implementation of actions to achieve the water quality standard for trash. Further, the water quality standard expected to be achieved pursuant to the Trash Provisions may allow each water body impaired by trash and already on the Clean Water Act section 303(d) list to be removed from the list, or each water body subsequently determined to be impaired by trash to not be placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.) In those cases, the specific actions that will be proposed by the municipal permittees in response to this Order substitute for some or all of the actions that would otherwise be required consistent with waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) This Order nevertheless allows municipal permittees to select specific proposed actions to meet the federal requirements.

Non-municipal MS4 permittees, referred to as non-traditional MS4 permittees, are not subject to this Order. Non-traditional MS4 permittees generally do not have significant areas of Priority Land Uses under their authority. Therefore, this Order is not being issued to non-traditional MS4 permittees. Non-traditional MS4 permittees that generate substantial amounts of trash[2285] may be issued a separate Water Code section 13383 Order with requirements for Priority Land Uses and/or any additional specific land uses within their jurisdiction.

The Trash Provision requires Phase II MS4 permittees with regulatory authority over Priority Land Uses to select a method of compliance with the trash prohibition. Through this Order, the State Water Board requires Phase II traditional MS4 permittees to determine and report their selection of either the following Track 1 or Track 2 compliance methods:[2286]

1. **Track 1:** Install, operate, and maintain Full Capture Systems* for the storm drain network that capture runoff from the Priority Land Uses in their jurisdiction.

   Phase II MS4 permittees that select the Track 1 compliance method may discover that there are locations within their storm drain network where full capture systems cannot be implemented, or are better implemented within another land use area. The Trash Provisions allow a Phase II MS4 permittee with regulatory authority over Priority Land Uses to request, from the appropriate Regional Water Board Executive Officer, to substitute one or more Priority Land Uses with equivalent alternate land uses*[2287] within the MS4 permittee's jurisdiction.

2. **Track 2:** Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* within either the jurisdiction of the MS4 permittee or the jurisdiction of the MS4 permittee and contiguous MS4 permittees. The MS4 permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls. Permittees choosing Track 2 must

[2285] Chapter IV.A.3.d of ISWEBE Plan or Chapter III.L.2.d of the Ocean Plan.

[2286] Chapter IV.A.3.a. of the ISWEBE Plan and Chapter III.L.2.a. of the Ocean Plan.

[2287] See definition of Priority Land Uses in enclosed *Trash Provisions Glossary*.

demonstrate that the approach[2288] will achieve Full Capture System Equivalency.*

To ensure the compliance method selection is completed accurately, the State Water Board, through this Order, requires the traditional Phase II MS4 permittees to complete and submit the following:

1. **Jurisdictional Maps.** Traditional Phase II MS4 permittees must develop jurisdictional maps identifying Priority Land Use areas, the corresponding storm drain network and associated drainage areas, and proposed locations for certified Full Capture System installations.

   Permittees selecting the Track 1 compliance method and are proposing alternative land uses shall identify the alternative land uses on the jurisdictional map and the corresponding priority land uses being substituted.

   Permittees selecting the Track 2 compliance method may determine the locations or land uses within their jurisdictions to implement any combination of controls that achieve Full Capture System Equivalency. Therefore, the permittee shall also identify on the jurisdictional maps the selected locations or land uses where a combination of controls, which are identified in Track 2 above, will be implemented to achieve Full Capture System Equivalency.

   The State Water Board recognizes that field surveys may be necessary to ensure the accuracy of jurisdictional map development. Therefore, this Order requires Phase II MS4 permittees to provide preliminary jurisdictional maps within three months from the date of this Order, and final jurisdictional maps within eighteen months from the date of this Order.

   These jurisdictional maps will assist review of the compliance method selection by the State Water Board and Regional Water Boards and also support development of appropriate permit requirements in a future Phase II MS4 permit reissuance.

2. **Trash Assessments.** Traditional Phase II MS4 permittees that elect the Track 2 compliance method must conduct and submit trash assessments to identify existing levels of trash generation.

   Through this Order, the State Water Board directs Traditional Phase II MS4 permittees selecting Track 2, at a minimum, to conduct a trash assessment of the Priority Land Use areas, even if they subsequently select other locations or land uses within their jurisdiction to implement any combination of controls that meet Full Capture System Equivalency. If proposing to select locations or land uses other than Priority Land Uses, the permittee must also assess trash levels at those locations or land uses and provide a justification demonstrating that the selected locations or land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses. State or Regional Water Board approval may be based on the proposed trash assessments and corresponding justification.[2289]

[2288] The MS4 permittee may determine which controls to implement to achieve compliance with the Full Capture System Equivalency. It is, however, the State Water Board's expectation that the MS4 permittee will elect to install Full Capture Systems where such installation is not cost-prohibitive. (Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan).

[2289] In accordance with Permitting Authority's discretional authority under Chapter IV.A.3.d. of the ISWEBE Plan or Chapter III.L.2.d. of the Ocean Plan.

The Trash Provisions provide two example trash assessment approaches for permittees to demonstrate Full Capture System Equivalency when a permittee selects the Track 2 compliance method. Phase II MS4 permittees may use alternative methods to demonstrate Full Capture System Equivalency. One alternative method currently implemented in the San Francisco Bay region is the Visual Trash Assessment Approach, an accepted assessment approach based on on-land visual trash assessments.[2290] A description of the Visual Trash Assessment Approach[2291] is enclosed in this Order and may be used by Phase II MS4 permittees to meet the requirement for a baseline assessment.

Information resulting from the trash assessments is necessary to develop appropriate requirements and provisions in the future Phase II MS4 Permit reissuance, including:
(1) Establishing a baseline for compliance tracking and determinations,
(2) Establishing interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit,[2292]
(3) Evaluating the permittees' planned implementation of Full Capture System Equivalency, and in
(4) Approving the implementation plan.

Permittees that select the Track 1 compliance method through implementation of certified Full Capture Systems in all storm drains that capture runoff from all Priority Land Use areas are not required to conduct trash assessments. Through the Track 1 compliance method, the State Water Board provides a streamlined compliance pathway with annual progress reporting of Full Capture System installation.

3. **Implementation Plan.** The implementation plan required by this Order in clause 3 below is subject to approval by the State Water Board Executive Director and/or the corresponding Regional Water Board Executive Officer.[2293] A request for an equivalent alternative land use identified on the jurisdictional map, section 1 above, must be submitted within the implementation plan and approved by the Regional Water Board Executive Officer prior to installation and implementation of certified Full Capture Systems or Full Capture System Equivalency trash controls.

[2290] The State Water Board-funded an evaluation (through Proposition 84 grant funds) of the on-land visual trash assessment method as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[2291] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

[2292] Chapter IV.A.5.a.(2) and (3) of ISWEBE Plan or Chapter III.L.4.a.(2) and (3) of the Ocean Plan.

[2293] Chapter IV.A.5.a.(1)B of the ISWEBE Plan or Chapter III.L.4.a.(1)B of the Ocean Plan

Pursuant to Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[2294]
   a. A letter to State Water Board identifying the permittee's selected compliance option, (Track 1 or Track 2) as defined in this Order; and

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Priority Land Use areas discharging to the storm drain network ; and
      ii. The corresponding storm drain network that receives discharges from Priority Land Use areas.

2. Permittees Selecting Track 1: By **December 1, 2018**, submit electronically via SMARTS, an updated jurisdictional map(s) identifying the following:

   i. All Priority Land Use areas discharging to the storm drain network;
   ii. The corresponding storm drain network;
   iii. Proposed locations of all certified Full Capture Systems[2295] and,
   iv. Proposed equivalent alternative land uses, documentation demonstrating that the substitution of equivalent alternative land uses has been approved by the appropriate Regional Water Board Executive Officer, and corresponding storm drainage network, if applicable.

3. Permittees Selecting Track 2: By **December 1, 2018,** submit electronically via SMARTS, the following:

   i. An updated jurisdictional map(s) identifying the following:
      a) All Priority Land Use areas and selected locations and land uses, other than the Priority Land Uses area, discharging to the storm drain network;
      b) The corresponding storm drain network; and
      c) Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture System Equivalency;
      d) Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all Priority Land Uses, and for other selected locations or land uses within the MS4s jurisdiction if proposing to implement any combination of controls in locations other than Priority Land Uses; **and**

[2294] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[2295] A list of Certified Full Capture Systems is located at: http://www.waterboards.ca.gov/water_issues/programs/stormwater/municipal.shtml

ii. An Implementation Plan that includes the following:

a) The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
b) The rationale for how Full Capture System Equivalency will be demonstrated;
c) If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine trash levels, a description of the methodology used and rationale of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach; and
d) If proposing to select locations or land uses other than Priority Land Uses, a rationale demonstrating that the alternative land uses generate trash at rates that are equivalent to or greater than the Priority Land Uses.

The Legally Responsible Person identified in SMARTS must sign and certify all submittals required by this Order, with the following certification:

> *"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action including civil liabilities for late or inadequate reports consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini of the Division of Water Quality at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

Trash Policy Implementation For Traditional Phase II MS4 Permittees

[1] "Priority Land Uses" are generally defined as high density residential (10 developed dwelling units/acre), industrial, commercial, mixed urban, and public transportation stations. See Glossary of the Trash Amendments for a complete definition.

[2] As Permitting Authority, State Board exercises its authority (Trash Amendments) to require that permittees choosing Track 2 at a minimum assess the Priority Land Uses areas, even if they subsequently select other Locations or Land Uses within their jurisdiction to implement any Combination of Controls that meet Full Capture Equivalency (Trash Amendments).

[3] A "Combination of Controls" is any combination of Full Capture Systems, Multi-Benefit Projects, other treatment controls, and/or institutional controls that achieve Full Capture System Equivalency at applicable storm drains.

[4] "Full Capture System Equivalency" is the Trash Load that would be reduced if Full Capture Systems were installed, operated, and maintained for all inlets that capture runoff from the relevant areas.

[5] Permittees requesting to substitute "Equivalent Alternate Land Uses" for Priority Land Uses must obtain Regional Board approval prior to SMARTS submittal. The total trash generated from the Equivalent Alternate Land Uses must be equivalent to or greater than the Priority Land Uses for which substitution is requested.

This glossary is an excerpt of the Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California, and the California Ocean Plan.

Full Capture System: A treatment control*, or series of treatment controls, including but not limited to, a multi-benefit project* or a low-impact development control* that traps all particles that are 5 mm or greater, and has a design treatment capacity that is either:

a) of not less than the peak flow rate, Q, resulting from a one-year, one-hour, storm in the subdrainage area, or
b) appropriately sized to, and designed to carry at least the same flows as, the corresponding storm drain.

[Rational equation is used to compute the peak flow rate: Q = C x I x A, where Q = design flow rate (cubic feet per second, cfs); C = runoff coefficient (dimensionless); I = design rainfall intensity (inches per hour, as determined per the rainfall isohyetal map specific to each region, and A = subdrainage area (acres).]

Prior to installation, full capture systems* must be certified by the Executive Director, or designee, of the State Water Board. Uncertified full capture systems will not satisfy the requirements of these Trash Provisions*. To request certification, a permittee shall submit a certification request letter that includes all relevant supporting documentation to the State Water Board's Executive Director. The Executive Director, or designee, shall issue a written determination approving or denying the certification of the proposed full capture system or conditions of approval, including a schedule to review and reconsider the certification. Full capture systems certified by the Los Angeles Regional Water Board prior to the effective date of these Trash Provisions and full capture systems listed in Appendix I of the Bay Area-wide Trash Capture Demonstration Project, Final Project Report (May 8, 2014) will satisfy the requirements of these Trash Provisions, unless the Executive Director, or designee, of the State Water Board determines otherwise.

Full Capture System Equivalency: The trash* load that would be reduced if full capture systems were installed, operated, and maintained for all storm drains that capture runoff from the relevant areas of land (priority land uses*, significant trash generating areas*, facilities or sites regulated by NPDES permits for discharges of storm water* associated with industrial activity, or specific land uses or areas that generate substantial amounts of trash, as applicable). The full capture system equivalency* is a trash load reduction target that the permittee quantifies by using an approach, and technically acceptable and defensible assumptions and methods for applying the approach, subject to the approval of permitting authority*. Examples of such approaches include, but are not limited to, the following:

(1) Trash Capture Rate Approach. Directly measure or otherwise determine the amount of trash captured by full capture systems for representative samples of all similar types of

* Defined within this document.

land uses, facilities, or areas within the relevant areas of land over time to identify specific trash capture rates. Apply each specific trash capture rate across all similar types of land uses, facilities, or areas to determine full capture system equivalency. Trash capture rates may be determined either through a pilot study or literature review. Full capture systems selected to evaluate trash capture rates may cover entire types of land uses, facilities, or areas, or a representative subset of types of land uses, facilities, or areas.

With this approach, full capture system equivalency is the sum of the products of each type of land use, facility, or area multiplied by trash capture rates for that type of land use, facility, or area.

(2) Reference Approach. Determine the amount of trash in a reference receiving water in a reference watershed where full capture systems have been installed for all storm drains that capture runoff from all relevant areas of land. The reference watershed must be comprised of similar types and extent of sources of trash and land uses (including priority land uses and all other land uses), facilities, or areas as the permittee's watershed. With this approach, full capture system equivalency would be demonstrated when the amount of trash in the receiving water is equivalent to the amount of trash in the reference receiving water.

Institutional Controls: Non-structural best management practices (i.e., no structures are involved) that may include, but not be limited to, street sweeping, sidewalk trash* bins, collection of the trash, anti-litter educational and outreach programs, producer take-back for packaging, and ordinances.

Low-Impact Development Controls: Treatment controls that employ natural and constructed features that reduce the rate of storm water runoff, filter out pollutants, facilitate storm water storage onsite, infiltrate storm water into the ground to replenish groundwater supplies, or improve the quality of receiving groundwater and surface water. (See Water Code § 10564.)

Multi-Benefit Project: a treatment control* project designed to achieve any of the benefits set forth in section 10562, subdivision (d) of the Water Code. Examples include projects designed to: infiltrate, recharge, or store storm water for beneficial reuse; develop or enhance habitat and open space through storm water and non-storm water management; and/or reduce storm water and non-storm water runoff volume.

Municipal Separate Storm Sewer System (MS4): Same meaning set forth in 40 Code of Federal Regulations section 122.26(b)(8).

Preproduction Plastic: Same meaning set forth in section 13367(a) of the Water Code.

Priority Land Uses: Those developed sites, facilities, or land uses (i.e., not simply

* Defined within this document.

zoned land uses) within the MS4 permittee's jurisdiction from which discharges of trash* are regulated by these Trash Provisions* as follows:

(1) High-density residential: all land uses with at least ten (10) developed dwelling units/acre.
(2) Industrial: land uses where the primary activities on the developed parcels involve product manufacture, storage, or distribution (e.g., manufacturing businesses, warehouses, equipment storage lots, junkyards, wholesale businesses, distribution centers, or building material sales yards).
(3) Commercial: land uses where the primary activities on the developed parcels involve the sale or transfer of goods or services to consumers (e.g., business or professional buildings, shops, restaurants, theaters, vehicle repair shops, etc.)
(4) Mixed urban: land uses where high-density residential, industrial, and/or commercial land uses predominate collectively (i.e., are intermixed).
(5) Public transportation stations: facilities or sites where public transit agencies' vehicles load or unload passengers or goods (e.g., bus stations and stops).

Equivalent alternate land uses: An MS4 permittee with regulatory authority over priority land uses may issue a request to the applicable permitting authority* that the MS4 permittee be allowed to substitute one or more land uses identified above with alternate land uses within the MS4 permittee's jurisdiction that generates rates of trash that is equivalent to or greater than the priority land use(s) being substituted. The land use area requested to substitute for a priority land use need not be an acre-for-acre substitution but may involve one or more priority land uses, or a fraction of a priority land use, or both, provided the total trash generated in the equivalent alternative land use is equivalent to or greater than the total trash generated from the priority land use(s) for which substitution is requested. Comparative trash generation rates shall be established through the reporting of quantification measures such as street sweeping and catch basin cleanup records; mapping; visual trash presence surveys, such as the "Keep America Beautiful Visible Litter Survey"; or other information as required by the permitting authority.

Permitting Authority: The State Water Board or Regional Water Board, whichever issues the permit.

Significant Trash Generating Areas: All locations or facilities within the Department's jurisdiction where trash* accumulates in substantial amounts, such as:

(1) Highway on- and off-ramps in high density residential, commercial, and industrial land uses (as such land uses are defined under priority land uses* herein).
(2) Rest areas and park-and-rides.
(3) State highways in commercial and industrial land uses (as such land uses are defined under priority land uses herein).
(4) Mainline highway segments to be identified by the Department through pilot studies and/or surveys.

* Defined within this document.

Storm Water: Same meaning set forth in 40 Code of Federal Regulations section 122.26(b)(13) (Nov. 16, 1990).

Treatment Controls: Structural best management practices to either (a) remove pollutants and/or solids from storm water* runoff, wastewater, or effluent, or (b) capture, infiltrate or reuse storm water runoff, wastewater, or effluent treatment controls* include full capture systems* and low impact development controls*.

Trash: All improperly discarded solid material from any production, manufacturing, or processing operation including, but not limited to, products, product packaging, or containers constructed of plastic, steel, aluminum, glass, paper, or other synthetic or natural materials.

Trash Provisions: The water quality objective for trash*, as well as the prohibition of discharge and implementation requirements set forth in Implementation of Water Quality Objectives of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, and Estuaries of California Plan.

* Defined within this document.

Recommended Trash Assessment Minimum Level of Effort for Establishing Baseline Trash Generation Levels

The following trash assessment minimum level of effort (TAMLE) is recommended by the State Water Resources Control Board (State Water Board) for establishing baseline trash generation levels in Priority Land Uses and/or other land uses and locations. The TAMLE is based on the findings of a recent Proposition 84 study (Tracking California's Trash) completed in 2016 that was funded by the State Water Board. The recommended TAMLE utilizes Tracking California's Trash On-land Visual Trash Assessment protocols to establish qualitative estimates of the amount of trash generated on street segments, sidewalks and adjacent land areas, and transported into the MS4. The complete protocol can be found here:

http://basmaa.org/Announcements/tracking-cas-trash-on-land-visual-assessments

The protocol has been extensively and successfully used by San Francisco Bay Area Phase I municipalities to establish baseline trash generation maps that serve as the starting point for demonstrating trash reductions into the MS4. Trash generation categories (A-Low, B-Moderate, C-High, and D-Very High) based on the levels of trash observed during assessments are assigned to adjacent land areas (e.g., priority land use areas), which are then illustrated on baseline trash generation maps. Each trash generation category has a corresponding trash generation rate that was established during the Bay Area Trash Generation Rate Study (BASMAA 2014) and confirmed during the recent Tracking California's Trash project (BASMAA 2016).

Establishing Baseline Trash Generation Maps

Consistent with the 13383 Order, Phase II MS4 permittees (Permittees) are directed to submit maps illustrating priority land uses and/or other land uses and locations that drain into their MS4. Connections from within priority land use private property must also be identified. These areas serve as the locations where trash reductions are mandated by the Trash Amendments. Additionally, Permittees selecting Track 2 are also directed to identify baseline trash generation levels for each priority land use and/or other selected land uses and locations.

Equipment and Methods

The TAMLE methodology is relatively simple and inexpensive to use, but provides a level of precision needed to accurately depict baseline trash generation. The protocol requires a minimum of two field crew members, both for objectivity and safety, each trained in the use of the TAMLE protocol. Very limited equipment is needed (i.e., clipboard, pencils/pens, digital camera preferably with GPS capabilities, and field forms and maps). Bright clothing or safety vests are also recommended for field crew members.

MS4 permittees employ the following steps to establish baseline trash generation levels via TAMLEs:

1. Assemble equipment needed to conduct the assessment including the field form delineating the assessment area and review trash assessment category definitions presented in the protocol.[1]

2. Once at the Priority Land Use area and other selected land use or locations to be assessed (hereinafter referred to as Assessment Area), safely walk at a normal pace on the sidewalk adjacent to the Assessment Area observing the levels of trash present on the street, sidewalk, and adjacent land areas that could be transported to the MS4. In areas where no sidewalk is present, assessments may be conducted by slowly driving adjacent to the Assessment Area and observing trash on the street and sidewalk.[2]

3. Collectively agree on the appropriate trash generation category to assign the Assessment Area and document the category observed on field data sheets and/or maps. Crew members should take at least one photograph per Assessment Area to document that the site was visited and to document the level of trash present.

4. Assessment results should be transferred to trash generation maps to illustrate baseline trash generation levels in the Assessment Areas. Color-coding maps based on the trash levels observed (Green=Low, Yellow=Moderate, Red=High, and Purple=Very High) during TAMLEs.

Frequency and Timing of Assessments

To accurately establish baseline trash generation levels for the Assessment Area, a minimum of two TAMLEs should be conducted on streets and sidewalks associated with each Assessment Area (BASMAA 2016). To the extent possible, assessments should be conducted during both the dry (April-September) and wet (October- March) seasons. So that baseline trash generation levels are not under-predicted, assessments should be conducted at timeframes when the greatest level of trash has accumulated on streets and sidewalks (e.g. directly before street-sweeping events). Additionally, in order to reduce the influence of recent rainfall-runoff events that may have washed street trash into storm drains, TAMLEs should only be conducted if less than 0.5 inches of rainfall has occurred in a 24 hour period, 48 hours prior to the assessment.

Estimated Resources Needed to Establish Baseline Generation Levels via TAMLEs

The extent of the Assessment Areas within each MS4 permittee's jurisdiction will govern the level of effort needed to establish the baseline trash generation levels using TAMLEs. The more Assessment Areas within a city/county, the more time and resources will be needed to conduct assessments and map the results. The following examples are based on the experience of MS4s in the San Francisco Bay Area and are given to provide rough estimates of the time that an MS4 permittee (small or moderate sized city) would need to expend to establish baseline trash generation levels in Assessment Areas using the TAMLE approach.

---

[1] Trash generation rates are: Low (0 – 5 gallons/acre/year); Moderate (5-10 gallons/acre/year); High (10-15 gallons/acre/year); and Very High (50-150 gallons/acre/year).

[2] This technique should only be used when automobiles are not parked on the street, which can obstruct the view of trash.

Task	Example #1 *Small-Sized Town/City* *(Pop = 12,500)*	Example #2 *Moderate-Sized City* *(Pop = 50,000)*
Assumptions		
PLU Area (acres)	*150*	*1500*
Assessment Length per PLU Area (feet per acre)	*75*	*75*
Hrs for two staff to conduct 1,000 ft assessment (including travel time)	*0.5*	*0.5*

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Mike Burghart:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[1] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[2] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[3] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[4] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

[3] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[4] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[5]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[6] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[5] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[6] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[7] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[8]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[9] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[10] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash and for baseline

---

[7] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[8] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[9] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[10] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[11]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[12]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[13]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[11] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[12] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[13] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      i. The rationale for how Full Capture System Equivalency will be demonstrated; and
      ii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Mike Stephens:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[14] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[15] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[16] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[17] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[14] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[15] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[16] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[17] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[18]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[19] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[18] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[19] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[20] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[21]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[22] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[23] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[20] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[21] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[22] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[23] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[24]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[25]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[26]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[24] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[25] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[26] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Laurence Furukawa Schlerith:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[27] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[28] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[29] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[30] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[27] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[28] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[29] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[30] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[31]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[32] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[31] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[32] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[33] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[34]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[35] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[36] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[33] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[34] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[35] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[36] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[37]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[38]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[39]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[37] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[38] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[39] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Chris Lytle:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[40] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[41] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[42] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[43] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[40] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[41] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[42] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[43] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[44]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[45] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[44] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[45] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[46] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[47]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[48] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[49] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[46] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[47] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[48] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[49] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[50]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[51]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[52]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[50] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[51] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[52] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Donna Placzek:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[53] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[54] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[55] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[56] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[53] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[54] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[55] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[56] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[57]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[58] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[57] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[58] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[59] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[60]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[61] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[62] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[59] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[60] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[61] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[62] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[63]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[64]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[65]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[63] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[64] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[65] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Mark Freiberg:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[66] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[67] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[68] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[69] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[66] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[67] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[68] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[69] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[70]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[71] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[70] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[71] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[72] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[73]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[74] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[75] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[72] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[73] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[74] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[75] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[76]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[77]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[78]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[76] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[77] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[78] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Gary Jensen:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[79] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[80] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[81] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[82] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[79] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[80] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[81] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[82] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[83]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[84] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[83] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[84] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[85] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[86]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[87] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[88] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[85] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[86] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[87] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[88] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[89]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[90]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[91]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[89] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[90] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[91] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Vincent Reed:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[92] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[93] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[94] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[95] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[92] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[93] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[94] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[95] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[96]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> <u>Track 1:</u> Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[97] or
>
> <u>Track 2:</u> Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

---

[96] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[97] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[98] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[99]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[100] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[101] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[98] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[99] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[100] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[101] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[102]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[103]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[104]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[102] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[103] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[104] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Joseph Lambert:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[105] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [106] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[107] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[108] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[105] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[106] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[107] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[108] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[109]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[110] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[109] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[110] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[111] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[112]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[113] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[114] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[111] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[112] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[113] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[114] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[115]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[116]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[117]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[115] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[116] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[117] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Kevin Chappell:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[118] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [119] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[120] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[121] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[118] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[119] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[120] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[121] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[122]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[123] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

---

[122] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[123] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[124] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[125]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[126] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[127] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[124] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[125] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[126] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[127] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[128]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[129]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[130]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[128] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[129] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[130] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Lewis Harrison:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[131] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [132] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[133] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[134] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[131] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[132] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[133] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[134] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[135]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[136] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[135] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[136] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[137] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[138]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[139] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[140] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[137] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[138] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[139] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[140] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[141]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[142]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[143]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[141] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[142] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[143] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Denis Mulligan:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[144] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [145] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[146] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[147] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[144] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[145] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[146] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[147] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[148]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[149] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[148] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[149] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[150] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[151]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[152] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[153] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[150] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[151] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[152] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[153] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[154]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[155]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[156]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[154] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[155] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[156] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Bob Eaton:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[157] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [158] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[159] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[160] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[157] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[158] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[159] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[160] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[161]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[162] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[161] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[162] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[163] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[164]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[165] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[166] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[163] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[164] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[165] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[166] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[167]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[168]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[169]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[167] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[168] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[169] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Elaine Forbes:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[170] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [171] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[172] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[173] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[170] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[171] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[172] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[173] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[174]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[175] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[174] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[175] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[176] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[177]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[178] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[179] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[176] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[177] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[178] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[179] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[180]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[181]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[182]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[180] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[181] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[182] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Robert Beck:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[183] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [184] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[185] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[186] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[183] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[184] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[185] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[186] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[187]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[188] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[187] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[188] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[189] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[190]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[191] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[192] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[189] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[190] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[191] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[192] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[193]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[194]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[195]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[193] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[194] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[195] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Patricia McFadden:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[196] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [197] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[198] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[199] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[196] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[197] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[198] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[199] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[200]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[201] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[200] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[201] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[202] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[203]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[204] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[205] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[202] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[203] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[204] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[205] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[206]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[207]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[208]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[206] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[207] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[208] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Stephen Chao:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[209] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[210] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[211] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[212] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[209] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[210] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[211] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[212] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[213]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[214] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[213] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[214] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[215] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[216]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[217] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[218] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[215] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[216] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[217] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[218] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[219]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[220]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[221]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[219] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[220] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[221] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Mike Giari:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[222] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[223] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[224] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[225] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[222] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[223] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[224] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[225] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[226]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[227] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[226] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[227] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[228] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[229]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[230] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[231] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[228] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[229] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[230] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[231] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[232]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[233]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[234]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[232] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[233] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[234] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Carolyn Gonot:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[235] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[236] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[237] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[238] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[235] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[236] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[237] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[238] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[239]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[240] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[239] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[240] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[241] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[242]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[243] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[244] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[241] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[242] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[243] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[244] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[245]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[246]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[247]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[245] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[246] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[247] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Adam Bayer:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[248] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[249] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[250] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[251] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[248] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[249] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[250] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[251] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[252]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[253] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[252] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[253] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[254] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[255]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[256] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[257] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[254] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[255] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[256] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[257] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[258]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[259]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[260]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[258] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[259] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[260] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Mike Stephens:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[261] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[262] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[263] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[264] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[261] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[262] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[263] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[264] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[265]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[266] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[265] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[266] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[267] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[268]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[269] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[270] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[267] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[268] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[269] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[270] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[271]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[272]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[273]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[271] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[272] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[273] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear JAMES DOWNS:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[274] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[275] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[276] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[277] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[274] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[275] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[276] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[277] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[278]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[279] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[278] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[279] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[280] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[281]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[282] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[283] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[280] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[281] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[282] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[283] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[284]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[285]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[286]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[284] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[285] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[286] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Isidro Farias:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[287] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[288] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[289] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[290] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[287] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[288] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[289] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[290] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[291]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[292] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[291] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[292] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[293] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[294]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[295] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[296] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[293] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[294] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[295] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[296] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[297]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[298]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[299]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[297] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[298] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[299] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Pamela Jeane:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[300] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[301] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[302] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[303] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[300] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[301] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[302] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[303] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[304]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[305] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[304] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[305] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[306] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[307]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[308] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[309] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[306] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[307] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[308] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[309] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[310]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[311]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[312]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[310] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[311] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[312] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Mario Pasquini:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[313] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[314] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[315] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[316] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[313] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[314] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[315] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[316] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[317]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[318] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[317] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[318] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[319] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[320]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[321] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[322] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[319] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[320] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[321] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[322] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[323]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[324]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[325]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[323] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[324] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[325] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear James Willison:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[326] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[327] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[328] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[329] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[326] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[327] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[328] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[329] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[330]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[331] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[330] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[331] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[332] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[333]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[334] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[335] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[332] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[333] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[334] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[335] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[336]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[337]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[338]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[336] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[337] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[338] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Mike Stephens:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[339] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[340] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[341] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[342] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[339] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[340] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[341] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[342] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[343]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[344] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[343] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[344] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[345] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[346]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[347] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[348] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[345] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[346] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[347] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[348] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[349]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[350]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[351]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[349] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[350] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[351] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Kelly Violini:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[352] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit) [353] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[354] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[355] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[352] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[353] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[354] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[355] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[356]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[357] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[356] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[357] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[358] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[359]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[360] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[361] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[358] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[359] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[360] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[361] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[362]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[363]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[364]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[362] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[363] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[364] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Kevin Pearce:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[365] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[366] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[367] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[368] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[365] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[366] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[367] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[368] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[369]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> <u>Track 1:</u> Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[370] or
>
> <u>Track 2:</u> Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

---

[369] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[370] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[371] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[372]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[373] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[374] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[371] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[372] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[373] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[374] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[375]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[376]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[377]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[375] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[376] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[377] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear David Ragsdale:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[378] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[379] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[380] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[381] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[378] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[379] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[380] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[381] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[382]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[383] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

---

[382] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[383] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[384] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[385]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[386] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[387] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[384] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[385] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[386] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[387] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[388]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[389]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[390]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[388] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[389] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[390] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Kathryn McQuaid:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[391] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[392] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[393] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[394] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[391] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[392] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[393] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[394] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[395]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[396] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[395] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[396] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[397] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[398]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[399] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[400] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[397] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[398] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[399] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[400] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[401]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[402]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[403]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[401] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[402] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[403] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Margaret Falkner:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[404] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[405] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[406] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[407] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[404] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[405] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[406] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[407] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[408]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[409] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

---

[408] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[409] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[410] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[411]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[412] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[413] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[410] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[411] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[412] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[413] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[414]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[415]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[416]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[414] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[415] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[416] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Bettina Mayer:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[417] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[418] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[419] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[420] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[417] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[418] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[419] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[420] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[421]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[422] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[421] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[422] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[423] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[424]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[425] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[426] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[423] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[424] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[425] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[426] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[427]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[428]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[429]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[427] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[428] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[429] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Michael Bradley:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[430] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[431] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[432] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[433] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[430] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[431] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[432] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[433] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[434]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[435] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

---

[434] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[435] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[436] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[437]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[438] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[439] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[436] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[437] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[438] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[439] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[440]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[441]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[442]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[440] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[441] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[442] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear marc fisher:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[443] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[444] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[445] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[446] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[443] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[444] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[445] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[446] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[447]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[448] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[447] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[448] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[449] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[450]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[451] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[452] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[449] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[450] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[451] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[452] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[453]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[454]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[455]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[453] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[454] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[455] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Richard Cote:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[456] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[457] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[458] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[459] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[456] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[457] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[458] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[459] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[460]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[461] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[460] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[461] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[462] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[463]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[464] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[465] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[462] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[463] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[464] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[465] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[466]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[467]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[468]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[466] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[467] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[468] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Scott Grieve:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[469] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[470] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[471] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[472] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[469] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[470] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[471] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[472] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[473]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[474] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[473] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[474] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[475] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[476]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[477] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[478] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[475] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[476] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[477] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[478] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[479]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[480]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[481]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[479] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[480] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[481] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Jack Fox:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[482] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[483] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[484] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[485] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[482] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[483] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[484] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[485] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[486]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[487] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[486] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[487] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[488] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[489]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[490] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[491] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[488] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[489] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[490] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[491] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[492]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[493]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[494]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[492] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[493] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[494] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Jean Marie Scott:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[495] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[496] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[497] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[498] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[495] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[496] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[497] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[498] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[499]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[500] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[499] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[500] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[501] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[502]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[503] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[504] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[501] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[502] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[503] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[504] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[505]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[506]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[507]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[505] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[506] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[507] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear David Kegebein:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[508] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[509] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[510] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[511] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[508] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[509] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[510] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[511] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[512]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[513] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[512] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[513] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[514] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[515]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[516] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[517] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[514] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[515] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[516] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[517] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[518]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[519]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[520]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[518] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[519] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[520] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Kevin Brady:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[521] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[522] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[523] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[524] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[521] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[522] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[523] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[524] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[525]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[526] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[525] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[526] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[527] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[528]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[529] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[530] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[527] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[528] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[529] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[530] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[531]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[532]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[533]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[531] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[532] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[533] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Colin Dimock:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[534] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[535] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[536] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[537] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[534] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[535] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[536] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[537] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[538]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[539] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[538] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[539] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[540] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[541]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[542] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[543] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[540] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[541] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[542] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[543] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[544]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[545]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[546]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[544] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[545] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[546] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Anthony Pepe:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[547] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[548] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[549] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[550] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[547] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[548] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[549] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[550] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[551]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[552] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[551] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[552] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[553] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[554]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[555] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[556] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[553] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[554] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[555] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[556] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[557]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[558]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[559]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[557] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[558] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[559] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Mark Miller:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[560] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[561] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[562] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[563] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[560] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[561] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[562] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[563] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[564]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[565] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

---

[564] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[565] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[566] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[567]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[568] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[569] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[566] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[567] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[568] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[569] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[570]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[571]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[572]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[570] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[571] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[572] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Jeff Wood:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[573] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[574] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[575] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[576] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[573] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[574] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[575] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[576] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[577]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[578] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[577] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[578] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[579] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[580]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[581] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[582] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[579] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[580] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[581] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[582] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[583]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[584]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[585]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[583] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[584] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[585] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Anthony Malagrino:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[586] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[587] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[588] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[589] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[586] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[587] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[588] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[589] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[590]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[591] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

---

[590] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[591] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[592] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[593]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[594] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[595] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[592] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[593] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[594] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[595] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[596]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[597]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[598]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[596] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[597] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[598] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Mike Stephens:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[599] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[600] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[601] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[602] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

599 Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

600 National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

601 All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

602 Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[603]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[604] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

---

[603] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[604] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[605] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[606]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[607] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[608] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[605] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[606] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[607] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[608] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[609]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[610]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[611]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[609] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[610] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[611] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Jennifer Lindquist:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[612] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[613] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[614] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[615] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[612] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[613] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[614] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[615] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[616]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[617] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[616] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[617] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[618] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[619]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[620] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[621] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[618] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[619] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[620] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[621] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[622]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[623]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[624]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[622] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[623] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[624] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Daniel Shide:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[625] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[626] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[627] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[628] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[625] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[626] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[627] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[628] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[629]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[630] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[629] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[630] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[631] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[632]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[633] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[634] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[631] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[632] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[633] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[634] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[635]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[636]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[637]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[635] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[636] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[637] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Daniel Shide:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[638] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[639] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[640] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[641] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[638] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[639] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[640] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[641] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[642]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[643] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[642] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[643] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[644] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[645]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[646] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[647] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[644] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[645] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[646] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[647] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[648]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[649]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[650]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[648] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[649] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[650] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear michele nabors:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[651] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[652] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[653] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[654] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[651] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[652] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[653] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[654] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[655]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[656] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[655] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[656] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[657] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[658]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[659] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[660] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[657] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[658] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[659] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[660] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[661]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[662]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[663]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[661] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[662] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[663] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Mark McLoughlin:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[664] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[665] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[666] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[667] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[664] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[665] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[666] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[667] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[668]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[669] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[668] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[669] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[670] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[671]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[672] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[673] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[670] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[671] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[672] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[673] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[674]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[675]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[676]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[674] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[675] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[676] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Patrick Jacobs:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[677] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[678] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[679] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[680] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

677 Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

678 National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

679 All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

680 Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[681]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[682] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[681] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[682] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[683] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[684]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[685] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[686] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[683] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[684] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[685] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[686] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[687]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[688]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[689]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[687] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[688] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[689] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Donna Ogilvie:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[690] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[691] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[692] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[693] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

690 Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

691 National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

692 All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

693 Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[694]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[695] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

---

[694] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[695] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[696] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[697]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[698] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[699] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[696] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[697] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[698] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[699] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[700]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[701]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[702]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[700] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[701] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[702] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Brent McCaffrey:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[703] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[704] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[705] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[706] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[703] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[704] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[705] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[706] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[707]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[708] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[707] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[708] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[709] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[710]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[711] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[712] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[709] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[710] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[711] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[712] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[713]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[714]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[715]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[713] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[714] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[715] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Malachy Donohue:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[716] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[717] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[718] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[719] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[716] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[717] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[718] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[719] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[720]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[721] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[720] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[721] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[722] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[723]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[724] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[725] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[722] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[723] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[724] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[725] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[726]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[727]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[728]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[726] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[727] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[728] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Jeff Walley:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[729] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[730] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[731] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[732] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[729] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[730] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[731] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[732] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[733]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[734] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[733] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[734] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[735] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[736]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[737] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[738] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[735] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[736] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[737] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[738] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[739]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[740]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[741]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[739] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[740] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[741] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Marvin Pratt:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[742] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[743] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[744] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[745] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[742] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[743] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[744] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[745] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[746]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[747] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[746] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[747] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[748] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[749]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[750] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[751] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

[748] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[749] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[750] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[751] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[752]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[753]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[754]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[752] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[753] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[754] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Nader Shareghi:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[755] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[756] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[757] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[758] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[755] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. [756] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[757] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[758] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[759]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[760] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[759] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[760] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[761] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[762]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[763] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[764] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[761] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[762] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[763] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[764] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[765]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[766]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[767]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[765] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[766] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[767] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Ronald Rackley:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[768] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[769] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[770] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[771] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[768] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[769] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[770] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[771] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[772]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[773] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[772] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[773] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[774] will achieve Full Capture System Equivalency.*

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[775]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[776] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[777] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[774] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[775] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[776] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[777] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[778]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[779]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[780]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[778] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[779] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[780] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Paul Mewton:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[781] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[782] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[783] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[784] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[781] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[782] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[783] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[784] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[785]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[786] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[785] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[786] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[787] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[788]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[789] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[790] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[787] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[788] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[789] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[790] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[791]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[792]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[793]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[791] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[792] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[793] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Paul Siebensohn:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[794] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[795] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[796] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[797] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[794] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[795] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[796] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[797] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[798]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[799] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[798] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[799] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[800] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[801]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[802] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[803] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[800] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[801] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[802] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[803] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[804]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[805]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[806]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[804] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[805] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[806] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Michael Christensen:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[807] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[808] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[809] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[810] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[807] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[808] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[809] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[810] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[811]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[812] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[811] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[812] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[813] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[814]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[815] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[816] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[813] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[814] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[815] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[816] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[817]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[818]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[819]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[817] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[818] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[819] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Paul Gillingham:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[820] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[821] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[822] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[823] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[820] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[821] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[822] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[823] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:

> "A Permitting Authority may determine that specific land uses or locations (e.g. parks, stadia, schools, campuses, or roads leading to landfills) generate substantial amounts of trash. In the event the Permitting Authority makes that determination, the Permitting Authority may require the MS4 to comply with the Track 1 or Track 2 trash treatment requirements, as determined by the Permitting Authority, with respect to such land uses or locations."[824]

Through this Order, the State Water Board requires Phase II MS4 non–traditional permittees to determine and report to the State Water Board, locations and land uses within their jurisdiction that generate substantial amounts of trash. To comply with this Order, Phase II MS4 non-traditional permittees must submit an implementation plan for compliance with the trash prohibition as follows:

1. Select one of the two following compliance options provided in the Trash Provisions:[5]

> Track 1: Install, operate, and maintain Full Capture Systems* for all storm drains that capture runoff from the Priority Land Uses in the jurisdiction;[825] or
>
> Track 2: Install, operate, and maintain any combination of Full Capture Systems, Multi-Benefit Projects,* other Treatment Controls,* and/or Institutional Controls* (equivalent Full Capture Systems Best Management Practices) within either: (1) their own jurisdiction, or (2) their own jurisdiction and the jurisdiction of contiguous MS4 permittees. The Phase II MS4 non-traditional permittee may determine the locations or land uses within its jurisdiction to implement any combination of controls.

[824] See Chapter IV.A.4 of the ISWEBE and Chapter III.L.3 of the Ocean Plan.

[825] Selection of Track 1 is appropriate only if a Phase II MS4 non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

The State Water Board encourages MS4 permittees to install Full Capture Systems. Permittees selecting the Track 2 compliance option and not installing Full Capture Systems must demonstrate that the proposed implementation plan[826] will achieve Full Capture System Equivalency.[*]

2. Develop preliminary and final jurisdictional maps identifying land uses and other locations that generate substantial amounts of trash and the corresponding storm drain network and associated drainage areas. The final jurisdictional maps must include the selected locations or land uses where certified Full Capture Systems, or a combination of controls achieving Full Capture System Equivalency, are proposed to be installed. The State Water Board recognizes that the MS4 permittee must gather information from field surveys and trash assessments to develop final jurisdictional maps.

   The jurisdictional maps will assist the State and Regional Water Boards to identify land uses and locations that generate substantial amounts of trash for development of appropriate permit requirements in the future reissuance of the existing Phase II MS4 Permit.

3. If the Track 2 compliance option is selected, conduct and submit trash assessments to identify the land uses and locations that generate substantial amounts of trash and to identify the existing levels of trash generation. Information from the submitted trash assessment will be used by State Water Board staff to develop appropriate provisions in the Phase II MS4 Permit reissuance, including (1) a baseline for compliance tracking and determinations, and (2) interim milestones to demonstrate progress towards 100 percent compliance with the Trash Provisions within 10 years of the effective date of the implementing permit.[827]

   The State and Regional Water Boards will rely on the information from the trash assessments in evaluating the permittees' planned implementation of Full Capture System Equivalency, and in approving the implementation plan.

The Trash Provisions provide two example assessment approaches for permittees to demonstrate Full Capture System Equivalency. The Trash Provisions also allow permittees to select, submit, and use other methods to demonstrate compliance. One method currently in use in the San Francisco Bay region relies on the use of on-land visual trash assessment methods to demonstrate compliance with trash reduction goals. An evaluation of the on-land assessment method was recently funded by the State Water Board via a Proposition 84 grant.[828] This method, herein referred to as the Visual Trash Assessment Approach, is an acceptable methodology for reliably establishing baseline trash levels and detecting reductions in trash in MS4 discharges over time. A description of the Visual Trash Assessment Approach[829] is enclosed in this Order and may be used by Phase II MS4 non-traditional permittees to meet the requirement for determining land uses and locations that generate substantial amounts of trash

---

[826] The MS4 permittee must determine which controls to implement to achieve compliance with the Full Capture System Equivalency, where such installation is not cost-prohibitive. (See Chapter IV.A.3.a.(2) of the ISWEBE Plan and Chapter III.L.2.a.(2) of the Ocean Plan.)

[827] Chapter IV.A.5.a.(1) B.2 and 3 of the ISWEBE Plan or Chapter III.L.4.a.(1) B. 2 and 3 of the Ocean Plan.

[828] The on-land visual assessment method was evaluated as part of the Tracking California's Trash project conducted by the Bay Area Stormwater Management Agencies Association (BASMAA). The evaluation concluded that if visual assessments were conducted consistent with the protocol, the method could reliably establish baseline trash levels and detect progress in reducing trash in MS4 discharges over time.

[829] See Enclosure, *Recommended Trash Assessment Minimum Level of Effort.*

and for baseline trash generation rates. The State Water Board, in partnership with the California Stormwater Quality Association (CASQA), intends to develop and provide training to MS4 permittees on the Visual Trash Assessment Approach to further assist in the assessment of trash within their jurisdictions.

This Order is issued to implement federal law. The water quality objective established by the Trash Provisions serves as a water quality standard federally mandated under Clean Water Act section 303(c) and the federal regulations. (33 U.S.C. § 1312, 40 C.F.R. § 131.) This water quality standard was specifically approved by U.S. EPA following adoption by the State Water Board and approval by the Office of Administrative Law. This Order requests information necessary for MS4s to plan for implementation of actions to achieve the water quality standard for trash. Further, achievement of the water quality standard pursuant to the Trash Provisions will:

(1) allow water bodies impaired by trash to be removed from the Clean Water Act section 303(d) list, or
(2) prevent water bodies subsequently determined to be impaired by trash from being placed on the list, obviating the need for the development of a total maximum daily load (TMDL) for trash for each of those water bodies. (33 U.S.C. § 1313(d); 40 C.F.R. § 130.7.)

The requirements of this Order serve as compliance actions that would otherwise be required consistent with any waste load allocations in a trash TMDL. (40 C.F.R. § 122.44, subd. (d)(1)(vii)(B).) Phase II MS4 non-traditional permittees have discretion in selecting the specific compliance actions to meet the requirements of the Order.

The implementation plan required by this Order in clause 4 below is subject to approval by the appropriate Regional Water Board's Executive Officer.[830]

Pursuant to California Water Code section 13383, **IT IS HEREBY ORDERED THAT,** as a Permittee of the statewide Phase II MS4 permit, you shall:

1. By **September 1, 2017**, submit electronically via SMARTS:[831]

   a. A letter to the State Water Board identifying the permittee's selected compliance option as defined in this Order:[832]

   b. A preliminary jurisdictional map(s) identifying the following:

      i. Land uses and locations discharging substantial amounts of trash to the MS4(s); and
      ii. The corresponding MS4 network that conveys discharges from the land uses and locations.

[830] Chapter IV.A.5.a.(1)B of ISWEBE or Chapter III.L.4.a.(1)B.

[831] SMARTS stands for Storm Water Multiple Application and Report Tracking System and is an online database for dischargers to electronically file their permit documents. It can be accessed at: https://smarts.waterboards.ca.gov/smarts/faces/SwSmartsLogin.xhtml

[832] Selection of Track 1 is appropriate only if a non-traditional permittee determines that all areas within its jurisdiction generating substantial amounts of trash fit within the definition of Priority Land Uses.

2. By **December 1, 2018,** submit electronically via SMARTS the following:

   a. An updated jurisdictional map(s) identifying the following:

      i. All land uses and locations discharging substantial amounts of trash to the MS4 network;
      ii. The corresponding MS4 network;
      iii. Proposed locations of all certified Full Capture Systems and where any combination of controls will be implemented that will achieve Full Capture Equivalency;
      iv. Trash levels, using the methodology described in the attached recommended Visual Trash Assessment Approach or other equivalent trash assessment methodology, for all land uses and locations discharging substantial amounts of trash to the MS4 network; and

   b. An Implementation Plan that includes the following:

      i. The rationale for how the selected combination of controls will achieve Full Capture System Equivalency;
      ii. The rationale for how Full Capture System Equivalency will be demonstrated; and
      iii. If using a methodology other than the attached recommended Visual Trash Assessment Approach to determine (1) land uses and locations that discharge substantial amounts of trash, and (2) trash levels, a description of the methodology used and a justification of how the alternative methodology is equivalent to the recommended Visual Trash Assessment Approach.

3. Ensure that all electronic submittals, including supporting documentation, required by this Order are signed, certified and submitted to SMARTS by the Legally Responsible Person.

4. Ensure that any person signing a letter, implementation plan, and supporting documentation required by this Order makes the following certification:

   "I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

Failure to comply with this Order, or falsifying any information provided therein, may result in enforcement action, including civil liabilities for late or inadequate reports, consistent with Water Code section 13385.

Questions regarding this Order or any requests for assistance should be directed to Mr. Leo Cosentini at (916) 341-5524 or leo.cosentini@waterboards.ca.gov.

Sincerely,

Thomas Howard
Executive Director

WATER CODE SECTION 13383 ORDER TO SUBMIT METHOD TO COMPLY WITH STATEWIDE TRASH PROVISIONS; REQUIREMENTS FOR NON -TRADITIONAL SMALL MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) PERMITTEES

Dear Richard Fagan:

On April 7, 2015, the State Water Resources Control Board (State Water Board) adopted statewide Trash Provisions[833] to address the pervasive impacts trash has on the beneficial uses of our surface waters. Throughout the state, trash is typically generated on land and transported to surface water, predominantly through MS4 discharges. These discharges from Phase II MS4s are regulated through a statewide general permit (Phase II MS4 Permit)[834] pursuant to section 402(p) of the Federal Clean Water Act.

The Trash Provisions establish a statewide water quality objective for trash and a prohibition of trash discharge, or deposition where it may be discharged, to surface waters. For Phase II MS4 permittees that are regulated by the Phase II MS4 Permit, and have regulatory authority over Priority Land Uses,*[835] the Trash Provisions require the State Water Board to initiate implementation of the prohibition by June 2, 2017, through requirements incorporated into the Phase II MS4 Permit or through monitoring and reporting orders. The State Water Board does not anticipate amending the existing Phase II MS4 Permit within the time frame specified by the Trash Provisions. Therefore, the initial steps in planning for the implementation of the Trash Provisions are being required through this Order in accordance with Water Code section 13383, as specified in the Trash Provisions[836] and as further authorized by Clean Water Act section 308(a) and 40 Code of Federal Regulations part 122.41(h). The implementation plans submitted in response to this Order are subject to approval by the appropriate Regional Water Quality Control Board (Regional Water Board).

---

[833] Amendment to the Water Quality Control Plan for Ocean Waters of California to Control Trash (Ocean Plan) and Part 1 Trash Provisions of the Water Quality Control Plan for Inland Surface Waters, Enclosed Bays, And Estuaries Of California (ISWEBE Plan) to be adopted by the State Water Board. Documents may be downloaded from our website at http://www.waterboards.ca.gov/water_issues/programs/trash_control/documentation.shtml .

[834] National Pollutant Discharge Elimination System (NPDES) General Permit for Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s), Order 2013-0001-DWQ, NPDES No. CAS000004.

[835] All terms marked with an asterisk '*' are defined in the Enclosure to this letter titled *Trash Provision Glossary*.

[836] Chapter IV.A.5.a(1)B of the ISWEBE Plan and Chapter III.L.4.a(1)B of the Ocean Plan.

Priority Land Uses are defined as high density residential (10 developed dwelling units per acre), industrial, commercial, mixed urban, and public transportation stations. For traditional Phase II MS4 permittees, including cities, counties, and other census track areas, Priority Land Uses can be readily identified. Non-traditional Phase II MS4 permittees, such as military bases, hospitals, prisons, universities, and schools, may not have typical Priority Land Uses; therefore the application of the Priority Land Use definition is subject to interpretation for such permittees.

Non-traditional permittees may have land uses and locations that generate substantial amounts of trash, but do not clearly fit under the definition of Priority Land Use. The Trash Provisions allow interpretation as to how non-traditional permittees are to identify high density residential use, and whether a high rise dormitory, prison, army barracks, and/or hospital may or may not be a high density priority land use. In contrast, substantial amounts of trash may be generated at non-traditional permittee facilities that are not clearly defined as Priority Land Uses, such as parking lots and entrances at regulated parks, University on-campus student gathering areas, and recreation/sports areas.

To ensure that meaningful trash reduction is achieved at non-traditional facilities, and to ensure regulatory certainty with regard to what areas within non-traditional permittees' jurisdiction are regulated, the State Board is exercising its authority provided in the Trash Provisions that state:
