[10] As it did repeatedly below, Rancho Cucamonga maintains the 2002 permit violates section 402(k) of the Clean Water Act (33 U.S.C. § 1342, subd. (k)), because the permit does not include "safe harbor" language, providing that, if a permittee is in full compliance with the terms and conditions of its permit, it cannot be found in violation of the Clean Water Act. (*United States Public Interest Research Group v. Atlantic Salmon of Maine, LLC* (1st Cir.2003) 339 F.3d 23, 26; *EPA v. State Water Resources Control Bd.* (1976) 426 U.S. 200, 205, 96 S.Ct. 2022, 48 L.Ed.2d 578.) The trial court found there was no statutory right to a "safe harbor" provision to be included as the term of the permit. We agree.

This seems like much ado about nothing because 33 U.S.C. § 1342, subdivision (k), already affords Rancho Cucamonga the protection it seeks: "Compliance with a permit issued pursuant to this section shall be deemed compliance, for purposes of sections 1319 and 1365 of this title, with sections 1311, 1312, 1316, 1317, and 1343 of this title, except any standard imposed under section 1317 of this title for a toxic pollutant injurious to human health." Rancho Cucamonga does not cite any persuasive authority as to why this statutory protection had to be duplicated as a provision in the 2002 permit.

Furthermore, the 2002 permit complied with the State Board's Water Quality Order No. 99-05, a precedential decision requiring NPDES permits to omit "safe harbor" language used in earlier permits. A permit without "safe harbor" language was upheld in ****459***Building Industry, supra,* 124 Cal.App.4th at p. 877, 22 Cal.Rptr.3d 128. The trial court did not err.

10. *Maximum Extent Practicable*

Rancho Cucamonga protests that the 2002 permit's discharge limitations/prohibitions exceed the federal requirement that storm water dischargers should "reduce the discharge of pollutants to the maximum extent practicable." (33 U.S.C. § 1342, subd. (p)(3)(B)(iii).) The trial court, however, found there was no evidence presented that the 2002 permit ex-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ceeded federal requirements. Because there is no evidence, the issue presented is hypothetical and, therefore, premature. (*Building Industry, supra,* 124 Cal.App.4th at p. 890, 22 Cal.Rptr.3d 128.)

Additionally, as Rancho Cucamonga recognizes, *Building Industry* rejected the contention that a "regulatory permit violates federal law because it allows the Water Boards to impose municipal storm sewer control measures more ***1389** stringent than a federal standard known as 'maximum extent practicable.' [Citation.] [Fn. omitted.] [W]e ... conclude the Water Boards had the authority to include a permit provision requiring compliance with state water quality standards." (*Building Industry, supra,* 124 Cal.App.4th at p. 871, 22 Cal.Rptr.3d 128.) The *Burbank* case, allowing for consideration of economic factors when federal standards are exceeded, does not alter the analysis in this case where there was no showing that federal standards were exceeded and where there was evidence that economic factors were considered. Furthermore, like the permit in *Building Industry*, the 2002 permit contemplates controlling discharge of pollutants to the maximum extent practicable through a "cooperative iterative process where the Regional Water Board and Municipality work together to identify violations of water quality standards." (*Building, supra,* at p. 889, 22 Cal.Rptr.3d 128.) The 2002 permit does not exceed the maximum extent practicable standard.

11. *The Requirements of the 2002 Permit*

[11] Rancho Cucamonga lastly complains the requirements of the 2002 permit are "overly prescriptive," illegally dictating the manner of compliance and improperly delegating to the permittees the inspection duties of the State Board and the Regional Board. Rancho Cucamonga's arguments contradict the meaning and spirit of the Clean Water Act.

In creating a permit system for dischargers from municipal storm sewers, Congress intended to implement actual programs. (*Natural Resources Defense Council, Inc. v. Costle* (D.C.Cir.1977) 568 F.2d 1369, 1375.) The Clean Water Act authorizes the imposition of permit conditions, including: "management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator of the State determines appropriate for the control of such pollutants." (33 U.S.C. § 1342, subd. (p)(3)(B)(iii).) The Act authorizes states to issue permits with conditions necessary to carry out its provisions. (33 U.S.C. § 1342, subd. (a)(1).) The permitting agency has discretion to decide what practices, techniques, methods and other provisions are appropriate and necessary to control the discharge of pollutants. (*NRDC v. EPA* (9th Cir.1992) 966 F.2d 1292, 1308.) That is what the Regional Board has created in the 2002 permit.

Rancho Cucamonga's reliance on Water Code section 13360 is misplaced because that code section involves enforcement and implementation of state water quality law, (Wat.Code, § 13300 et seq.) not compliance with the Clean Water Act (Wat.Code, § 13370 et seq.) The federal law ****460** preempts the state law. (*Burbank, supra,* 35 Cal.4th at p. 626, 26 Cal.Rptr.3d 304, 108 P.3d 862.) The Regional Board must comply with federal law requiring detailed conditions for NPDES permits.

***1390** Furthermore, the 2002 permit does afford the permittees discretion in the manner of compliance. It is the permittees who design programs for compliance, implementing best management practices selected by the permittees in the DAMP report and approved by the Regional Board. Throughout the permit, the permittees are granted considerable autonomy and responsibility in maintaining and enforcing the appropriate legal authority; inspecting and maintaining their storm drain systems according to criteria they develop; establishing the priorities for their own inspection requirements; and establishing programs for new development. The development and implementation of programs to control the discharge of pollutants is left largely to the

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

permittees.

More particularly, we agree with the Regional Board that the permit properly allocated some inspection duties to the permittees. As part of their ROWD application for a permit, the permittees proposed to "Conduct Inspection, Surveillance, and Monitoring. Carry out all inspections, surveillance, and monitoring procedures necessary to determine compliance and noncompliance with permit conditions including the prohibition on illicit discharges to the municipal storm drain system." The ROWD also discussed continuing existing inspection programs.

Water Code section 13383 provides that as part of compliance with the Clean Water Act, the Regional Board may establish inspection requirements for any pollutant discharger. Federal law, either expressly or by implication, requires NPDES permittees to perform inspections for illicit discharge prevention and detection; landfills and other waste facilities; industrial facilities; construction sites; certifications of no discharge; non-stormwater discharges; permit compliance; and local ordinance compliance. (40 C.F.R. 122.26, subds. (d), (g); 33 U.S.C. § 1342, subd. (p)(3)(B)(ii).) Permittees must report annually on their inspection activities. (40 C.F.R. § 122.42, subd. (c)(6) (2005).)

Rancho Cucamonga claims it is being required to conduct inspections for facilities covered by other state-issued general permits. Rancho Cucamonga and the other permittees are responsible for inspecting construction and industrial sites and commercial facilities within their jurisdiction for compliance with and enforcement of local municipal ordinances and permits. But the Regional Board continues to be responsible under the 2002 NPDES permit for inspections under the general permits. The Regional Board may conduct its own inspections but permittees must still enforce their own laws at these sites. (40 C.F.R. § 122.26, subd. (d)(2) (2005).)

*1391 12. *Disposition*

Rancho Cucamonga is the only of the original 18 permittees still objecting to the 2002 NPDES permit. It has not successfully demonstrated that substantial evidence does not support the trial court's factual determinations or the trial court erred in its interpretation and application of state and federal law.

We affirm the judgment and order the prevailing parties to recover their costs on appeal.

ATTACHMENT NO. 21

City of Richmond v. Commission on State Mandates (1998) 64 Cal.App.4th 1190

City of Richmond v. Commission on State Mandates
Cal.App.1.Dist.
CITY OF RICHMOND, Plaintiff and Appellant,
v.
COMMISSION ON STATE MANDATES, Defendant and Respondent; DEPARTMENT OF FINANCE, Real Party in Interest and Respondent.
No. C026835.

Court of Appeal, Third District, California.
May 28, 1998.

SUMMARY

A city filed an administrative mandamus action against the Commission on State Mandates, seeking a determination that an amendment to Lab. Code, § 4707, making local safety members of the Public Employees' Retirement System (PERS) eligible for both PERS and workers' compensation death benefits, was a state mandate to which the city was entitled to reimbursement under Cal. Const., art. XIII B, § 6, which applies when a state law establishes a new program or higher level of service payable by local governments. The amendment eliminated local safety members of PERS from the coordination provisions for death benefits payable under workers' compensation and under PERS, whereby survivors of a local safety member of PERS who are killed in the line of duty receive both a death benefit under workers' compensation and a special death benefit under PERS, instead of only the latter. The trial court denied the petition, finding that the amendment created an increased cost but not an increased level of service by local governments. (Superior Court of Sacramento County, No. 96CS03417, James Timothy Ford, Judge.)

The Court of Appeal affirmed. The court held that although the amendment increased the cost of providing services, that could not be equated with requiring an increased level of service, and did not constitute a new program. Neither did the amendment impose a unique requirement on local governments that was not applicable to all residents and entities within the state. The amendment merely made the workers' compensation death benefit requirements as applicable to local governments as they are to private employers. Local entities are not entitled to reimbursement for all increased costs mandated by state law, but only those costs resulting from a new program or an increased level of service imposed upon them by the state. Although a law is addressed only to local governments and imposes new costs on them, it may still not be a reimbursable state mandate. The court also held that assembly bill analyses stating that the amendment was a reimbursable state mandate (Cal. Const., art. XIII B, § 6), were irrelevant to the issue. The Legislature has entrusted the determination of what constitutes a state mandate to the Commission on State Mandates, subject to judicial review, and has provided that the initial determination by Legislative Counsel is not binding on the commission. (Opinion by Morrison, J., with Puglia, P. J., and Nicholson, J., concurring.)

HEADNOTES

Classified to California Digest of Official Reports

(1) Administrative Law § 138--Judicial Review and Relief--Appellate Court-- Standard--Decision of Commission on State Mandates.
Under Gov. Code, § 17559, a proceeding to set aside a decision of the Commission on State Mandates on a claim may be commenced on the ground that the commission's decision was not supported by substantial evidence. Where the scope of review in the trial court is whether the administrative decision is supported by substantial evidence, review on appeal is generally the same. However, the appellate court independently reviews the superior court's legal conclusions as to the meaning and effect of constitutional and statutory provisions. The

question of whether a law is a state-mandated program or a higher level of service under Cal. Const., art. XIII B, § 6, is a question of law that is reviewed de novo.

(2a, 2b, 2c) State of California § 11--Fiscal Matters--Reimbursement for State Mandates--Workers' Compensation Death Benefits Payable to Local Safety Members.
An amendment to Lab. Code, § 4707, to eliminate local safety members of the Public Employees' Retirement System (PERS) from the coordination provisions for death benefits payable under workers' compensation and under PERS, whereby the survivors of a local safety member of PERS who is killed in the line of duty receive both a death benefit under workers' compensation and a special death benefit under PERS, instead of only the latter, did not mandate a new program or higher level of service on local governments, requiring a subvention of funds to reimburse the local government under Cal. Const., art. XIII B, § 6. Although the amendment increased the cost of providing services, that could not be equated with requiring an increased level of service, and did not constitute a new program. Neither did it impose a unique requirement on local governments that was not applicable to all residents and entities within the state. The amendment merely made the workers' compensation death benefit requirements as applicable to local governments as they are to private employers.

(3a, 3b) State of California § 11--Fiscal Matters--Reimbursement for State Mandates--Purpose.
Cal. Const., art. XIII B, § 6, which requires a subvention of funds to reimburse local governments when a state law mandates a new program or higher level of service on local governments, was intended to require reimbursement to local agencies for the costs involved in carrying out functions peculiar to government, not for expenses incurred by local agencies as an incidental impact of laws that apply generally to all state residents and entities. Although a law is addressed only to local governments and imposes new costs on them, it may still not be a reimbursable state mandate.
[See 9 Witkin, Summary of Cal. Law (9th ed. 1989) Taxation, § 123A.]
(4) Statutes § 43--Construction--Aids--Legislative Analysis--Reimbursement for State Mandates--Legislative Intent.
Assembly bill analyses of an amendment to Lab. Code, § 4707, making local safety members of the Public Employees' Retirement System (PERS) eligible for both PERS and workers' compensation death benefits, stating that it was a reimbursable state mandate (Cal. Const., art. XIII B, § 6), were irrelevant to the issue. The Legislature has entrusted the determination of what constitutes a state mandate to the Commission on State Mandates, subject to judicial review (Gov. Code, §§ 17500, 17559) and has provided that the initial determination by legislative counsel is not binding on the commission (Gov. Code, § 17575).

COUNSEL
Nossaman, Guthner, Knox & Elliott, Robert J. Sullivan, Stephen P. Wilman, John T. Kennedy and Scott N. Yamaguchi for Plaintiff and Appellant.
Dwight L. Herr, County Counsel (Santa Cruz), Ronald R. Ball, City Attorney (Carlsbad), Michael G. Colantuono, City Attorney (Cudahay), William B. Conners, City Attorney (Monterey), Jonathan B. Stone, City Attorney (Montebello), Daniel J. McHugh, City Attorney (Redlands), Jeffrey G. Jorgensen, City Attorney (San Luis Obispo), Brian Libow, City Attorney (San Pablo), Howard, Rice, Nemerovski, Canady & Falk and Richard C. Jacobs as Amici Curiae on behalf of Plaintiff and Appellant.

MORRISON, J.
Chapter 478 of the Statutes of 1989 (chapter 478) amended Labor Code section 4707 to eliminate loc-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

al safety members of the Public Employees' Retirement System (PERS) from the coordination provisions for death benefits payable under workers' compensation and under PERS. As a result, the survivors of a local safety member of PERS who is killed in the line of duty receives both a death benefit under workers' compensation and a special death benefit under PERS, instead of only the latter. This proceeding presents the question whether chapter 478 mandates a new program or higher level of service on local governments, requiring a subvention of funds to reimburse the local government under article XIII B section 6 of the California Constitution. We conclude that chapter 478 is not a state mandate requiring reimbursement and affirm the judgment.

Factual and Procedural Background

The workers' compensation system provides for death benefits payable to the deceased employee's survivors. (Lab. Code, § 4700 et seq.) There are also preretirement death benefits under PERS. (Gov. Code, § 21530 et seq.) There is a special death benefit under PERS if the death was industrial and the deceased was a patrol, state peace officer/firefighter, state safety officer, state industrial, or local safety member. (Gov. Code, § 21537.)Labor Code section 4707 provides a coordination or offset for workers' compensation death benefits when the special death benefit under PERS is payable. In such cases, no workers' compensation death benefit, other than burial expenses, is payable, except that if the PERS special death benefit is less than the workers' compensation death benefit, the difference is paid as a workers' compensation death benefit. The total death benefit is equal to the greater of the PERS special death benefit or the workers' compensation benefit, not the combination of the two death benefits.

Prior to 1989, Labor Code section 4707 provided in part: "No benefits, except reasonable expenses of burial ... shall be awarded under this division on account of the death of an employee who is a member of the Public Employees' Retirement System unless it shall be determined that a special death benefit ... will not be paid by the Public Employees' Retirement System to the widow or children under 18 years of age, of the deceased, on account of said death, but if the total death allowance paid to said widow and children shall be less than the benefit otherwise payable under this division such widow and children shall be entitled, under this division, to the difference." (Stats. 1977, ch. 468, § 4, pp. 1528-1529.) ***1194**

Chapter 478 amended Labor Code section 4707 to make technical changes, to provide the death benefit is payable to the surviving spouse rather than to the widow, and to add subdivision (b). Subdivision (b) of Labor Code section 4707 reads: "The limitation prescribed by subdivision (a) shall not apply to local safety members of the Public Employees' Retirement System." (Stats. 1989, ch. 478, § 1, p. 1689.)

In 1992, David Haynes, a police officer for the City of Richmond (Richmond), was killed in the line of duty. Officer Haynes was a local safety member of PERS. His wife and children received the PERS special death benefit; they also received a death benefit under workers' compensation.

Richmond filed a test claim with the Commission on State Mandates (the Commission), contending chapter 478 created a state-mandated local cost. FN1 Richmond sought reimbursement of the cost of the workers' compensation death benefit, estimated to be $295,432. As part of its test claim, Richmond included legislative history of chapter 478, purporting to show a legislative intent to create a reimbursable state mandate.

> FN1 " 'Test claim' means the first claim filed with the commission alleging that a particular statute or executive order imposes costs mandated by the state." (Gov. Code, § 17521.)

The Commission denied the test claim. It found that

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

chapter 478 dealt with workers' compensation benefits and case law held that workers' compensation laws are laws of general application and not subject to section 6 of article XIII B of the California Constitution. It noted the legislative history containing analyses that chapter 478 was a state mandate had been prepared before the issuance of *City of Sacramento v. State of California* (1990) 50 Cal.3d 51 [266 Cal.Rptr. 139, 785 P.2d 522].

Richmond filed a petition for a writ of administrative mandate under Code of Civil Procedure section 1094.5, seeking to compel the Commission to approve its claim. Both the Commission and the Department of Finance, as real parties in interest, responded. The court denied the petition, finding chapter 478 created an increased cost but not an increased level of service by local governments.

Discussion

I

(1) Under Government Code section 17559, a proceeding to set aside the Commission's decision on a claim may be commenced on the ground that the Commission's decision is not supported by substantial evidence. Where ***1195** the scope of review in the trial court is whether the administrative decision is supported by substantial evidence, our review on appeal is generally the same. (*County of Los Angeles v. Commission on State Mandates* (1995) 32 Cal.App.4th 805, 814 [38 Cal.Rptr.2d 304].) However, we independently review the superior court's legal conclusions as to the meaning and effect of constitutional and statutory provisions. (*City of San Jose v. State of California* (1996) 45 Cal.App.4th 1802, 1810 [53 Cal.Rptr.2d 521].) The question of whether chapter 478 is a state-mandated program or higher level of service under article XIII B, section 6 of the California Constitution is a question of law we review de novo. (45 Cal.App.4th at p. 1810.)

With certain exceptions not relevant here, "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service ...." (Cal. Const. art. XIII B, § 6, (hereafter referred to as section 6).)

In *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46 [233 Cal.Rptr. 38, 729 P.2d 202], the Supreme Court considered whether laws increasing the amount employers, including local governments, had to pay in certain workers' compensation benefits were a reimbursable "higher level of service" under section 6. The court looked to the intent of the voters in adopting the constitutional provision by initiative. (43 Cal.3d at p. 56.)Noting that the phrase "higher level of service" is meaningless alone, the court found it must be read in conjunction with the phrase "new program." The court concluded, "that the drafters and the electorate had in mind the commonly understood meanings of the term-programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state." (*Ibid.*)

(2a) Richmond contends chapter 478 meets both tests to qualify as a program under section 6. Richmond contends increased death benefits are provided to generate a higher quality of local safety officers and thus provide the public with a higher level of service. Richmond argues that providing increased death benefits to local safety workers is analogous to providing protective clothing and equipment for fire fighters. In *Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521 [234 Cal.Rptr. 795], executive orders requiring updated protective clothing and equipment for firefighters were found to be reimbursable state mandates under section 6. The executive orders applied only to fire protection, a pecu-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

liarly governmental function. The court noted that police and fire *1196 protection are two of the most essential and basic functions of local government. (190 Cal.App.3d at p. 537.)Richmond urges that since chapter 478 applies only to local safety members, it is also a state mandate directed to a peculiarly local governmental function.

In *Carmel Valley Fire Protection Dist. v. State of California, supra*,190 Cal.App.3d 521, the executive order required updated equipment for the fighting of fires. The use of this equipment would result in more effective fire protection and thus would provide a higher level of service to the public. Here chapter 478 addresses death benefits, not the equipment used by local safety members. Increasing the cost of providing services cannot be equated with requiring an increased level of service under a section 6 analysis. A higher cost to the local government for compensating its employees is not the same as a higher cost of providing services to the public. (*City of Anaheim v. State of California* (1987) 189 Cal.App.3d 1478, 1484 [235 Cal.Rptr. 101] [temporary increase in PERS benefit to retired employees which resulted in higher contribution rate by local government was not a program or service under section 6].) In *County of Los Angeles v. State of California, supra*,43 Cal.3d 46, the increase in certain workers' compensation benefits resulted in an increase in the cost to local governments of providing services. Nonetheless, the Supreme Court found no "higher level of service" under section 6. Similarly, a new requirement for mandatory unemployment insurance for local government employees, an increase in the cost of providing services, was not a "new program" or "higher level of service" in *City of Sacramento v. State of California, supra*,50 Cal.3d 51, 66-70.Chapter 478 fails to meet the first test of a "program" under section 6.

Richmond urges chapter 478 meets the second test of a program under section 6 because it imposed a unique requirement on local governments that was not applicable to all residents and entities within the state. (*County of Los Angeles v. State of California, supra*,43 Cal.3d 46, 56.)Richmond argues that only local governments have "local safety members" and chapter 478 required double death benefits, both PERS and workers' compensation, for this specific group of employees. By requiring double death benefits for local safety members, chapter 478 imposed a unique requirement on local government.

The Commission takes a different view of chapter 478. First, it argues that chapter 478 addresses an aspect of workers' compensation law, which, under *County of Los Angeles v. State of California, supra*,43 Cal.3d 46, is a law of general application to which section 6 does not apply. The Commission argues chapter 478 imposes no unique requirement; it merely *1197 eliminates the previous exemption from providing workers' compensation death benefits to local safety members. As such, chapter 478 simply puts local government employers on the same footing as all other nonexempt employers, requiring that they provide the workers' compensation death benefit. That chapter 478 affects only local government does not compel the conclusion that it imposes a unique requirement on local government. The Commission contends Richmond's view of chapter 478 is too narrow; the law must be considered in its broader context.

While Richmond's argument has surface appeal, we conclude the Commission's view is the correct one. Section 6 was designed to prevent the state from forcing programs on local government. (3a) "[T]he intent underlying section 6 was to require reimbursement to local agencies for the costs involved in carrying out functions peculiar to government, not for expenses incurred by local agencies as an incidental impact of laws that apply generally to all state residents and entities. Laws of general application are not passed by the Legislature to 'force' programs on localities." (*County of Los Angeles v. State of California, supra*,43 Cal.3d at pp. 56-57.) "The goals of article XIII B, of which section 6 is a part, were to protect residents from excessive taxa-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

tion and government spending. [Citation.] Section 6 had the additional purpose of precluding a shift of financial responsibility for carrying out governmental functions from the state to local agencies which had had their taxing powers restricted by the enactment of article XIII A in the preceding year and were ill equipped to take responsibility for any new programs. Neither of these goals is frustrated by requiring local agencies to provide the same protections to their employees as do private employers. Bearing the costs of salaries, unemployment insurance, and workers' compensation coverage-costs which all employers must bear-neither threatens excessive taxation or governmental spending, nor shifts from the state to a local agency the expense of providing governmental services. " (*Id.* at p. 61.)

Although a law is addressed only to local governments and imposes new costs on them, it may still not be a reimbursable state mandate. In *City of Sacramento v. State of California, supra*,50 Cal.3d 51, the Legislature enacted a statute requiring local governments to participate in the state's unemployment insurance system on behalf of their employees. Local entities made a claim for reimbursement. First, the Supreme Court found that like an increase in workers' compensation benefits, a requirement to provide unemployment insurance did not compel new or increased "service to the public" at the local level. (*Id.* at pp. 66-67.)The court next addressed whether the new law imposed a unique requirement on local governments.

"Here, the issue is whether costs *unrelated* to the provision of public services are *nonetheless* reimbursable costs of government, because they are ***1198** imposed on local governments 'unique[ly],' and not merely as an incident of compliance with general laws. State and local governments, and nonprofit corporations, had previously enjoyed a special *exemption* from requirements imposed on most other employers in the state and nation. Chapter 2/78 merely eliminated the exemption and made these previously exempted entities subject to the general rule. By doing so, it may have imposed a requirement 'new' to local agencies, but that requirement was not 'unique.' [¶] The distinction proposed by plaintiffs would have an anomalous result. The state could avoid subvention under *County of Los Angeles* standards by imposing new obligations on the public and private sectors *at the same time.* However, if it chose to proceed by stages, extending such obligations first to private entities, and only later to local governments, it would have to pay. This was not the intent of our recent decision." (*City of Sacramento v. State of California, supra*,50 Cal.3d 51, 68-69, italics in original.)

Richmond argues that Labor Code section 4707, prior to chapter 478, was not an exemption from workers' compensation, relying on *Jones v. Kaiser Industries Corp.* (1987) 43 Cal.3d 552 [237 Cal.Rptr. 568, 737 P.2d 771]. In *Jones,* the plaintiff, a city police officer, was killed in a traffic accident while on duty. His survivors brought suit against the city, contending it has created and maintained a dangerous condition at the intersection where the accident occurred. Plaintiffs argued their suit was not barred by the exclusivity provisions of workers' compensation because they did not receive a workers' compensation death benefit under Labor Code section 4707. The court rejected this argument. First, plaintiffs did receive a benefit under workers' compensation in the form of burial expenses. Further, Labor Code section 4707 was designed not to exclude plaintiffs from receiving workers' compensation benefits, but to assure they received the maximum benefit under either PERS or workers' compensation. (43 Cal.3d at p. 558.)

Under *Jones* v. *Kaiser Industries Corp., supra*,43 Cal.3d 552, one receiving a special death benefit under PERS rather than the workers' compensation death benefit is not considered exempt from workers' compensation for purposes of its exclusivity provisions, precluding a suit against the employer for negligence. This conclusion does not affect the analysis that chapter 478, by removing the offset provisions for employers of local safety members, merely makes local governments "indistinguishable

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

in this respect from private employers." (*County of Los Angeles v. State of California*, *supra*,43 Cal.3d at p. 58.)

(2b) Richmond's error is in viewing chapter 478 from the perspective of what the final result is, rather than from the perspective of what the law mandates. (3b) "We recognize that, as is made indisputably clear from ***1199** the language of the constitutional provision, local entities are not entitled to reimbursement for all increased costs mandated by state law, but only those costs resulting from a new program or an increased level of service imposed upon them by the state." (*Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 835 [244 Cal.Rptr. 677, 750 P.2d 318].) (2c) While the result of chapter 478 is that local safety members of PERS now are eligible for two death benefits and local governments will have to fund the workers' compensation benefit, chapter 478 does not mandate double death benefits. Instead, it merely eliminates the offset provisions of Labor Code section 4707. In this regard, the law makes the workers' compensation death benefit requirements as applicable to local governments as they are to private employers. It imposes no "unique requirement" on local governments.

Further, the view that the Legislature was proceeding by stages in enacting chapter 478 finds support in the history of the nearly identical predecessor to chapter 478, Assembly Bill No. 1097 (1987-1988 Reg. Sess.). Assembly Bill No. 1097 was passed in 1988, but was vetoed by the Governor. While the final version of Assembly Bill No. 1097 was virtually identical to chapter 478 in adding subdivision (b) to Labor Code section 4707 (Assem. Bill No. 1097 (1987-1988 Reg. Sess.) as amended Mar. 22, 1988), the bill was very different when it began. The initial version of Assembly Bill No. 1097 repealed Labor Code section 4707 in its entirety. (Assem. Bill No. 1097 (1987-1988 Reg. Sess.) introduced Mar. 2, 1987.) The next version made Labor Code section 4707 applicable only to state members of PERS. (Assem. Bill No. 1097 (1987-1988 Reg. Sess.) as amended June 15, 1987.) The final version left Labor Code section 4707 applicable to all but local safety members of PERS.

II

(4) As part of its test claim, Richmond included portions of the legislative history of chapter 478 to show the Legislature intended to create a state mandate. This history includes numerous bill analyses by legislative committees that state the bill creates a state-mandated local program.

Government Code section 17575 requires the Legislative Counsel to determine if a bill mandates a new program or higher level of service under section 6. If the Legislative Counsel determines the bill will mandate a new program or higher level of service under section 6, the bill must contain a section specifying that reimbursement shall be made from the state mandate fund, that there is no mandate, or that the mandate is being disclaimed. (Gov. Code, § 17579.)The Legislative Counsel found that chapter 478 imposed ***1200** a state-mandated local program. The enacted statute provided: "Notwithstanding Section 17610 of the Government Code, if the Commission on State Mandates determines that this act contains costs mandated by the state, reimbursement to local agencies and school districts for those costs shall be made pursuant to Part 7 (commencing with Section 17500) of Division 4 of Title 2 of the Government Code. If the statewide cost of the claim for reimbursement does not exceed one million dollars ($1,000,000), reimbursement shall be made from the State Mandates Claims Fund." (Stats. 1989, ch. 478, § 2, p. 1689.)

One analysis concluded this language was technically deficient because it does not contain a specific acknowledgment that the bill is a state mandate. Reimbursement could not be made until the Commission held a hearing on a test claim. The analysis concluded it "should not be a serious problem because the information provided in this analysis

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

could also be provided to the Commission on State Mandates if any local agency submits a claim for reimbursement to that Commission."

Another analysis suggested including an appropriation to avoid the necessity of the Commission having to determine that the bill was a mandate.

Richmond argues this legislative history shows the Legislature intended chapter 478 to be a state mandate and that it should be considered in making that determination. Amici curiae submitted a brief urging that case law holding that legislative history is irrelevant to the issue of whether there is a state-mandated new program or higher level of service under section 6 is wrongly decided. FN2 Amici curiae argue that the intent of the Legislature should control. They further note that the legislative history of chapter 478 shows that the initial opposition of the League of California Cities was dropped after the bill was amended to ensure reimbursement, and that the Governor signed the bill after he had vetoed a similar one that was not considered a state mandate. Amici curiae argue that to ignore the widespread understanding that the bill created a state mandate would undermine the legislative process.

> FN2 The California State Association of Counties, and the Cities of Carlsbad, Cudahy, Montebello, Monterey, Redlands, San Luis Obispo and San Pablo filed an amici curiae brief in support of Richmond.

In *County of Los Angeles v. Commission on State Mandates, supra,*32 Cal.App.4th 805, plaintiff sought reimbursement for costs incurred under Penal Code section 987.9 for providing certain services to indigent criminal defendants. Plaintiff argued the Legislature's initial appropriation of funds to cover the costs incurred under Penal Code section 987.9 was a final and ***1201** unchallengeable determination that section 987.9 constituted a state mandate. The court rejected this argument. "The findings of the Legislature as to whether section 987.9 constitutes a state mandate are irrelevant." (32 Cal.App.4th at p. 818.)

The court, relying on *Kinlaw v. State of California* (1991) 54 Cal.3d 326 [285 Cal.Rptr. 66, 814 P.2d 1308], found the Legislature had created a comprehensive and exclusive procedure for implementing and enforcing section 6. (*County of Los Angeles v. Commission on State Mandates, supra,*32 Cal.App.4th at pp. 818-819.)This procedure is set forth in Government Code section 17500 et seq. "[T]he statutory scheme contemplates that the Commission, as a quasi-judicial body, has the sole and exclusive authority to adjudicate whether a state mandate exists. Thus, any legislative findings are irrelevant to the issue of whether a state mandate exists, and the Commission properly determined that no state mandate existed." (32 Cal.App.4th at p. 819.)

In *City of San Jose v. State of California, supra,*45 Cal.App.4th 1802, 1817-1818, the court relied upon *County of Los Angeles v. Commission on State Mandates, supra,*32 Cal.App.4th 805, in rejecting the argument that the determination by Legislative Counsel that a bill imposed a state mandate was entitled to deference.

Amici curiae contend these cases are wrong because they ignore the cardinal rules of statutory construction that courts must construe statutes to conform to the purpose and intent of lawmakers and that the intent of the Legislature should be ascertained to effectuate the purpose of the law.

Amici curiae are correct that " 'the objective of statutory interpretation is to ascertain and effectuate legislative intent.' [Citation.]" (*Trope v. Katz* (1995) 11 Cal.4th 274, 280 [45 Cal.Rptr.2d 241, 902 P.2d 259].) Where such intent is not clear from the language of the statute, we may resort to extrinsic aids, including legislative history. (*People v. Coronado* (1995) 12 Cal.4th 145, 151 [48 Cal.Rptr.2d 77, 906 P.2d 1232].) Here, however, the issue is not the interpretation of Labor Code section 4707. The parties agree it requires that the survivors of local safety members killed due to an industrial injury re-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ceive both the special death benefit under PERS and the workers' compensation death benefit. Rather, the issue is whether section 6 requires reimbursement for the costs incurred by local governments under chapter 478. The Legislature has entrusted that determination to the Commission, subject to judicial review. (Gov. Code, §§ 17500, 17559.)It has provided that the initial determination by Legislative Counsel is not binding on the Commission. (*Id.*,§ 17575.) Indeed, the language of chapter 478 recognizes that the determination of whether the bill is a state mandate lies with ***1202** the Commission. It reads, "*if* the Commission on State Mandates determines that this act contains costs mandated by the state, ..." (Stats. 1989, ch. 478, § 2, p. 1689, italics added.) While the legislative history of chapter 478 may evince the understanding or belief of the Legislature that chapter 478 created a state mandate, such understanding or belief is irrelevant to the issue of whether a state mandate exists. (*County of Los Angeles v. Commission on State Mandates, supra*,32 Cal.App.4th 805, 819.)

Disposition

The judgment is affirmed.

ATTACHMENT NO. 22

City of Sacramento v. State of California (1990) 50 Cal.3d 51

City of Sacramento v. State
Cal.
CITY OF SACRAMENTO et al., Plaintiffs and Appellants,
v.
THE STATE OF CALIFORNIA et al., Defendants and Respondents
No. S006188.

Supreme Court of California
Jan 29, 1990.

SUMMARY

A city and a county filed claims with the State Board of Control seeking subvention of the costs imposed on them by Stats. 1978, ch. 2, which extended mandatory coverage under the state's unemployment insurance law to include state and local governments and nonprofit corporations. The board denied the claims, ruling that Stats. 1978, ch. 2, did not enact a state-mandated program for which reimbursement was required under Cal. Const., art. XIII B. On mandamus the trial court overruled the board and found the cost reimbursable, and the Court of Appeal affirmed. On remand, the board determined the amounts due on the claims originally submitted; however, the Legislature failed to appropriate the necessary funds for disbursement. The city then commenced a class action against the state on behalf of all local governments in the state. The complaint sought injunctive and declaratory relief barring enforcement of Stats. 1978, ch. 2, in the absence of state subvention; a writ of mandate directing that past, current, and/or future subvention funds be appropriated and disbursed, and/or that the Employment Development Department pay local agencies' past, current, and future unemployment insurance contributions from its own budget; and damages for past failures to reimburse. The trial court granted summary judgment for the state. (Superior Court of Sacramento County, No. 331607, Darrel W. Lewis, Judge.) The Court of Appeal, Third Dist., No. C002265, reversed.

The Supreme Court reversed the judgment of the Court of Appeal. The court held that the trial court did not err in granting summary judgment for the state on the ground that the local costs of providing unemployment insurance coverage were not subject to subvention under Cal. Const., art. XIII B, or parallel statutes (Rev. & Tax. Code, former §§ 2207, 2231, subd. (a); Gov. Code, §§ 17514, 17561, subd. (a)). The state had not compelled provision of new or increased "service to the public" at the local level, nor had it imposed a state policy "uniquely" on local governments. However, the court held, Stats. 1978, ch. 2, implemented a federal "mandate" within the meaning of Cal. Const., art. XIII B, and prior statutes restraining local taxation; thus, subject to superseding constitutional ceilings on taxation by state and local governments, an agency governed by Stats. 1978, ch. 2, may tax and spend as necessary to meet the expenses required to comply with that legislation. (Opinion by Eagleson, J., with Lucas, C. J., Mosk, Broussard, Panelli and Kennard, JJ., concurring. Separate concurring and dissenting opinion by Kaufman, J., concurring in the judgment.)

HEADNOTES

Classified to California Digest of Official Reports

(1) Property Taxes § 7.5--Constitutional Provisions; Statutes and Ordinances--Real Property Tax Limitation--Exemptions for Federally Mandated Costs.
To the extent that a "federally mandated" cost is exempt from prior statutory limits on local taxation, Cal. Const., art. XIII A, restricting the assessment and taxing powers of state and local governments, eliminates the exemption insofar as it would allow levies in excess of the constitutional ceiling.

(2) State of California § 7--Actions--Reimbursement to Local Governments for Unemployment Insurance Costs--Exhaustion of

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Remedies.
A class action by a city on behalf of all local governments in the state, against the state, in which it was alleged that Stats. 1978, ch. 2 (extending mandatory coverage under the state's unemployment insurance law to include state and local governments and nonprofit corporations), mandated a new program or higher level of service on local agencies for which reimbursement by the state of local compliance costs was required under Cal. Const., art. XIII B, was not barred by any failure of plaintiffs to exhaust their remedies. The city and a county had filed timely claims for reimbursement of expenses incurred, to comply with Stats. 1978, ch. 2. When the State Board of Control initially denied the claims, the city and the county pursued judicial remedies, culminating in a Court of Appeal opinion concluding that reimbursement was required. The board then upheld the claims. Insofar as the Legislature thereafter declined to appropriate the necessary funds for disbursement, the city and the county were authorized to bring an enforcement action.

(3a, 3b) State of California § 7--Actions--Reimbursement to Local Governments for Unemployment Insurance Costs--Remedies Available.
Cal. Const., art. XIII, § 32, precluding any suit to enjoin or impede collection of a tax, did not bar a class action brought by a city on behalf of all local governments in the state, against the state, in which it was alleged that Stats. 1978, ch. 2 (extending mandatory coverage under the state's unemployment insurance law to include state and local governments and nonprofit corporations), mandated a new program or higher level of service on local agencies for which reimbursement by the state of local compliance costs was required under Cal. Const., art. XIII B. The state contended that the only remedy open to the city was to pay its unemployment "taxes" and then seek a "refund" under the "exclusive" procedures set forth in the Unemployment Insurance Code. However, the city was not challenging, directly or indirectly, the validity or application of the unemployment insurance law as such, or the propriety of any "tax" assessed thereunder; rather, it claimed that all its costs of affording unemployment compensation to its employees were subject to a statutory and constitutional subvention that the state refused to make. For the same reasons, the city's claim for reimbursement for past expenses was not barred.

(4) Constitutional Law § 40--Distribution of Governmental Powers--Between Branches of Government--Judicial Power.
Under the separation of powers doctrine, the Legislature cannot be compelled to appropriate or authorize the disbursement of specific funds.
[See **Am.Jur.2d,** Constitutional Law, § 316.]
(5a, 5b, 5c) Judgments § 81--Res Judicata--Collateral Estoppel-- Public-interest Exception--Reimbursement to Local Governments for Unemployment Insurance Costs.
In a class action by a city on behalf of all local governments in the state, against the state, in which it was alleged that Stats. 1978, ch. 2 (extending mandatory coverage under the state's unemployment insurance law to include state and local governments and nonprofit corporations), mandated a new program or higher level of service on local agencies for which reimbursement by the state of local compliance costs was required under Cal. Const., art. XIII B, the state was not collaterally estopped from litigating the reimbursement issue. The city and a county had previously brought an action against the state, culminating in a Court of Appeal opinion concluding that reimbursement was required. The Legislature then declined to appropriate the necessary funds for disbursement. Even if the formal prerequisites for collateral estoppel were present, the public-interest exception to that doctrine governed, since strict application of the doctrine would foreclose any reexamination of the earlier holding, and the consequences of any error transcended those that would apply to mere private parties.

(6) Judgments § 81--Res Judicata--Collateral Estoppel--Questions of Law.
Generally, collateral estoppel bars a party to a prior

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

action, or one in privity with him, from relitigating issues finally decided against him in the earlier action. However, when the issue is a question of law rather than of fact, the prior determination is not conclusive either if injustice would result or if the public interest requires that relitigation not be foreclosed.

(7) State of California § 7--Actions--Reimbursement to Local Governments for Unemployment Insurance Costs--Summary Judgment--Effect of Failure of Moving Party to Challenge Prior Summary Adjudication of Issues.
In a class action by a city, on behalf of all local governments in the state, against the state, in which it was alleged that Stats. 1978, ch. 2 (extending mandatory coverage under the state's unemployment insurance law to include state and local governments and nonprofit corporations), mandated a new program or higher level of service on local agencies for which reimbursement by the state of local compliance costs was required under Cal. Const., art. XIII B, the trial court did not lack the power to grant summary judgment for the state on the authority of a newly decided California Supreme Court case. The trial court had previously granted the city's motion for summary adjudication of issues, and the state had failed to seek timely mandamus review of that prior, contrary order. However, failure to challenge a summary adjudication order by the discretionary avenue of writ review cannot foreclose a party from asserting subsequent changes in law that render such a pretrial order incorrect.

(8) Judgments § 68--Res Judicata--Identity of Parties--Class Action--Where Prior Action Involved Individual Claims.
In a class action by a city on behalf of all local governments in the state, against the state, in which it was alleged that Stats. 1978, ch. 2 (extending mandatory coverage under the state's unemployment insurance law to include state and local governments and nonprofit corporations), mandated a new program or higher level of service on local agencies for which reimbursement by the state of local compliance costs was required under Cal. Const., art. XIII B, res judicata did not preclude examination of an earlier Court of Appeal opinion, in an action by the city and a county, concluding that reimbursement was required. The issues presented in the current action were not limited to the validity of any finally adjudicated individual claims; rather, they encompassed the question of the state's subvention obligations in general under Stats. 1978, ch. 2.

(9a, 9b) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--State-mandated Programs--Unemployment Insurance Costs.
In a class action by a city on behalf of all local governments in the state, against the state, in which it was alleged that Stats. 1978, ch. 2 (extending mandatory coverage under the state's unemployment insurance law to include state and local governments and nonprofit corporations), mandated a new program or higher level of service on local agencies for which reimbursement by the state was required under Cal. Const., art. XIII B, the trial court did not err in granting summary judgment for the state on the ground that the local costs of providing such coverage were not subject to subvention under Cal. Const., art. XIII B, or parallel statutes (Rev. & Tax. Code, former §§ 2207, 2231, subd. (a); Gov. Code, §§ 17514, 17561, subd. (a)). The state had not compelled provision of new or increased "service to the public" at the local level, nor had it imposed a state policy "uniquely" on local governments. The phrase, "To force programs on local governments," in the voters' pamphlet relating to Cal. Const., art. XIII B, § 6, confirmed that the intent underlying that section was to require reimbursement to local agencies for the costs involved in carrying out functions peculiar to government, not for expenses incurred by local agencies as an incidental impact of laws that apply generally to all state residents and entities.
[See **Cal.Jur.3d,** State of California, § 78.]
(10) State of California § 11--Fiscal Matters--Reimbursement to Local Governments-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

-State-mandated Programs.
The concepts of reimbursable state-mandated costs in Cal. Const., art. XIII B, requiring that the state reimburse local governments for the costs of state-mandated new programs or higher levels of service, and Rev. & Tax. Code, former §§ 2207, 2231, are identical.

(11a, 11b, 11c) State of California § 11--Fiscal Matters-- Reimbursement to Local Governments--Federally Mandated Programs--Unemployment Insurance Costs.
Stats. 1978, ch. 2, extending mandatory coverage under the state's unemployment insurance law to include state and local governments and nonprofit corporations, implemented a federal "mandate" within the meaning of Cal. Const., art. XIII B, and prior statutes restricting local taxation; thus, subject to superseding constitutional ceilings on taxation by state and local governments, an agency governed by Stats. 1978, ch. 2, may tax and spend as necessary to meet the expenses required to comply with that legislation. In enacting Stats. 1978, ch. 2, the state simply did what was necessary to avoid certain and severe federal penalties upon its resident businesses; the alternatives were so far beyond the realm of practical reality that they left the state "without discretion" to depart from federal standards. (Disapproving, insofar as it is inconsistent with this analysis, the decision in *City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182 [203 Cal.Rptr. 258].)

(12) Constitutional Law § 11--Construction of Constitutions--Liberality and Flexibility.
Constitutional enactments must receive a liberal, practical commonsense construction that will meet changed conditions and the growing needs of the people. While a constitutional amendment should be construed in accordance with the natural and ordinary meaning of its words, the literal language of enactments may be disregarded to avoid absurd results and to fulfill the apparent intent of the framers.

(13) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--Federally Mandated Programs.
In determining whether a program is federally mandated, to exempt its cost from a local government's statutory taxation limit (Rev. & Tax. Code, § 2271), and to exclude any appropriation required to comply with the mandate from the constitutional spending limit of the affected entity (Cal. Const., art. XIII B, § 9, subd. (b)), the result will depend on the nature and purpose of the federal program; whether its design suggests an intent to coerce; when state and/or local participation began; the penalties, if any, assessed for withdrawal or refusal to participate or comply; and any other legal and practical consequences of nonparticipation, noncompliance, or withdrawal. The courts and the Commission on State Mandates must respect the governing principle of Cal. Const., art. XIII B, § 9, subd. (b): neither state nor local agencies may escape their spending limits when their participation in federal programs is truly voluntary.

EAGLESON, J.
In response to changes in federal law, chapter 2 of the Statutes of 1978 (hereafter chapter 2/78) extended mandatory coverage under the state's unemployment insurance law to include state and local governments and nonprofit corporations. Here we consider whether, in chapter 2/78, the state "mandate[d] a new program or higher level of service" on the local agencies, and must therefore reimburse local compliance costs under article XIII B

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

of the California Constitution and related statutes.

We conclude that the state is *not* required to reimburse the chapter 2/78 expenses of local governments. The obligations imposed by chapter 2/78 fail to meet the "program" and "service" standards for mandatory subvention we recently set forth in *County of Los Angeles* v. *State of California* (1987) 43 Cal.3d 46 [233 Cal.Rptr. 38, 729 P.2d 202] (hereafter *County of Los Angeles*). Chapter 2/78 imposes no "unique" obligation on local governments, nor does it require them to provide new or increased governmental services to the public. The Court of Appeal decision, finding the expenses reimbursable, must therefore be reversed.

However, our holding does not leave local agencies powerless to counter the fiscal pressures created by chapter 2/78. Though provisions of the Revenue and Taxation Code limit local property tax levies, and article XIII B itself places spending limits on both state and local governments, "costs mandated by the federal government" are expressly excluded from these ceilings. Chapter 2/78 imposes such "federally mandated" costs, because it was adopted by the state under federal coercion tantamount to compulsion. Hence, subject to overriding limitations on taxation rates (see, e.g., Cal. Const., art. XIII A), both state and local governments may levy and spend for their chapter 2/78 coverage obligations without reduction of the fiscal limits applicable to other needs and services.

I. Facts.

In 1972, and again in 1973, the Legislature enacted comprehensive schemes for local property tax relief. Though frequently amended thereafter, these statutes retained three principal features. First, they placed a limit on the local property tax rate. Second, they required the *state* to reimburse local governments for their costs resulting from state laws "which mandate ... new program[s] or ... increased level[s] of service" at the local level. Finally, they allowed local governments to exceed their property taxation limits to fund certain other nondiscretionary expenses, including "costs mandated by the federal government." (Stats. 1972, ch. 1406, § 14.7, pp.***58** 2961-2967; Stats. 1973, ch. 358, § 3, pp. 783-790; Rev. & Tax. Code, §§ 2206, 2260 et seq., 2271; former §§ 2164.3, 2165, 2167, 2169, 2207, 2231; Gov. Code, § 17500 et seq.)

Since adoption of the Social Security Act in 1935, federal law has provided powerful incentives to enactment of unemployment insurance protection by the individual states. In current form, the Federal Unemployment Tax Act (hereafter FUTA) (26 U.S.C. § 3301 et seq.) assesses an annual tax upon the gross wages paid by covered private employers nationwide. The tax rate, which has varied over the years, stands at 6.2 percent for calendar year 1990. (26 U.S.C. §§ 3301(1), 3306.)However, employers in a state with a federally "certified" unemployment insurance program may credit their contributions to the state system against up to 90 percent of the federal tax (currently computed at 6 percent for this purpose). (*Id.*, §§ 3302-3304.) A "certified" state program also qualifies for federal administrative funds. (42 U.S.C. §§ 501-503.)

California enacted its unemployment insurance system "on the eve of the adoption of the Social Security Act" in 1935 (*Steward Machine Co.* v. *Davis* (1937) 301 U.S. 548, 587-588 [81 L.Ed. 1279, 1291-1292, 57 S.Ct. 883, 109 A.L.R. 1293]; see Stats. 1935, ch. 352, § 1 et seq., p. 1226 et seq.) and has sought to maintain federal compliance ever since. Every other state has also adopted an unemployment insurance plan in response to the federal stimulus.

In 1976, Congress enacted Public Law number 94-566 (hereafter Public Law 94-566). Insofar as pertinent here, Public Law 94-566 amended FUTA to require for the first time that a "certified" state plan include coverage of the employees of public agencies. (Pub.L. No. 94-566 (Oct. 20, 1976) § 115(a), 90 Stat. 2670; 26 U.S.C. §§ 3304(a)(6)(A), 3309(a); see 26 U.S.C. § 3306(c)(7).) States which did not alter their unemployment compensation

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

laws accordingly faced loss of the federal tax credit and administrative subsidy.

The Legislature thereafter adopted chapter 2/78 to conform California's system to Public Law 94-566. Among other things, chapter 2/78 effectively requires the state and all local governments, beginning January 1, 1978, to participate in the state unemployment insurance system on behalf of their employees. (Stats. 1978, ch. 2, §§ 12, 24, 31, 36.5, 58-61, pp. 12-14, 16, 18, 24-27; Unemp. Ins. Code, §§ 135, subd. (a), 605, 634.5, 802-804.)

In November 1979, the voters adopted Proposition 4, adding article XIII B to the state Constitution. (1) **(See fn. 1.)**Article XIII B - the so-called "Gann limit" - restricts the amounts state and local governments may ***59** appropriate and spend each year from the "proceeds of taxes." (§§ 1, 3, 8, subds. (a)-(c).) FN1 In language similar to that of earlier statutes, article XIII B also requires state reimbursement of resulting local costs whenever, after January 1, 1975, "the Legislature or any state agency mandates a new program or higher level of service on any local government, ..." (§ 6.) Such mandatory state subventions are excluded from the local agency's spending limit, but included within the state's. (§ 8, subds. (a), (b).) Finally, article XIII B excludes from either the state or local spending limit any "[a]ppropriations required for purposes of complying with mandates of the courts *or the federal government* which, *without discretion*, require an expenditure for additional services or which *unavoidably* make the providing of existing services more costly." (§ 9, subd. (b) [hereafter section 9(b)], italics added.)

> FN1 Article XIII B is to be distinguished from article XIII A, which was adopted as Proposition 13 at the June 1978 election. Article XIII A imposes a direct constitutional limit on state and local power to *adopt and levy taxes*. Articles XIII A and XIII B work in tandem, together restricting California governments' power both to levy and to spend for public purposes. Moreover, to the extent "federally mandated" costs are exempt from prior *statutory* limits on local *taxation* (see *ante*, at pp. 57-58), article XIII A eliminates the exemption insofar as it would allow levies in excess of the constitutional ceiling.
> All further section references are to article XIII B of the California Constitution, unless otherwise indicated.

The City of Sacramento (City) and the County of Los Angeles (County) filed claims with the State Board of Control (Board) (see Rev. & Tax. Code, former § 2250 et seq.; see now Gov. Code, § 17550 et seq.) seeking state subvention of the costs imposed on them by chapter 2/78 during 1978 and portions of 1979. The Board denied the claims, ruling that chapter 2/78 was an enactment required by federal law and thus was not a reimbursable state mandate. On mandamus (Code Civ. Proc., § 1094.5; Rev. & Tax. Code, former § 2253.5; see now Gov. Code, § 17559), the Sacramento Superior Court overruled the Board and found the costs reimbursable. The court ordered the Board to determine the amounts of the City's and the County's individual claims, and also to adopt "parameters and guidelines" to be applied in determining "these ... and other claims" arising under chapter 2/78. (Rev. & Tax. Code, former § 2253.2; see now Gov. Code, §§ 17555, 17557.) FN2

> FN2 The claims for reimbursement were originally premised entirely on Revenue and Taxation Code section 2201 et seq. While the City's and the County's mandamus petitions were pending in superior court, article XIII B was adopted. The City and the County amended their petitions to include article XIII B as an additional basis for relief, and the case proceeded accordingly.

In *City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182 [203 Cal.Rptr. 258] (hereafter *Sacramento I*), the Court of Appeal affirmed. Among other things, the court concluded (pp.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

194-199) that chapter 2/78 ***60** imposed *state*-mandated costs reimbursable under section 6 of article XIII B, since the potential loss of federal funds and tax credits did not render Public Law 94-566 so coercive as to constitute a "[*mandate*] ... of the *federal* government" under section 9(b). (Italics added.) We denied hearing.

On remand, the Board determined the amounts due on the claims originally submitted by the City and the County. As required by the judgment, the Board also adopted "parameters and guidelines" for reimbursement of chapter 2/78 costs to all affected local agencies. However, during the 1984 session of the Legislature, no bills were introduced for reimbursement of pre-1984 costs, and bills to fund costs in and after 1984 failed passage.

From and after the decision in *Sacramento I*, the City paid "under protest" its quarterly billings from the Employment Development Department (EDD) for unemployment compensation. Each payment included a claim for refund of unemployment taxes pursuant to Unemployment Insurance Code section 1176 et seq. EDD responded to the refund claims by referring the City to its statutory subvention remedies.

Accordingly, in July 1985, the City began returning its quarterly billings unpaid. It thereupon commenced the instant class action in Sacramento Superior Court on behalf of all local governments in the state. Named as defendants were the State of California, the Governor, EDD, the state Controller and Treasurer, and the Legislature. The complaint sought (1) injunctive and declaratory relief barring enforcement of chapter 2/78 in the absence of state subvention; (2) a writ of mandate directing that past, current, and future subvention funds be appropriated and disbursed, and/or that EDD pay local agencies' past, current, and future unemployment-insurance contributions from its own budget; and (3) damages for past failures to reimburse.

Shortly after this suit was filed, the Legislature appropriated some chapter 2/78 funds for fiscal year 1984-1985 (Stats. 1985, ch. 1217, §§ 12, 17, subd. (b), pp. 4148, 4150), and it subsequently authorized limited funds in the 1986 Budget Act (Stats. 1986, ch. 186, § 2.00, p. 1006). On defendants' demurrer, the trial court later dismissed plaintiffs' claims for reimbursement for these post-1984 periods. [FN3] Thereafter, the trial court certified the suit as a class action and granted plaintiffs' motion for summary adjudication of issues based on *Sacramento I*.***61**

> FN3 The trial court also sustained the Legislature's demurrer without leave to amend and dismissed the Legislature as a party defendant. The Court of Appeal affirmed the dismissal in a separate proceeding. (See *City of Sacramento v. California State Legislature* (1986) 187 Cal.App.3d 393 [231 Cal.Rptr. 686].)

While the case remained pending at the trial level, we decided *County of Los Angeles*.There we held that article XIII B, and earlier subvention statutes, requires state reimbursement *only* when the state compels local governments to provide new or upgraded "programs that carry out the governmental function of providing *services to the public*, or ..., to implement a state policy, [the state] impose[s] *unique* requirements on local governments [that] do not apply generally to all residents and entities in the state." (43 Cal.3d at p. 56, italics added.)

Defendants in this case thereupon moved for summary judgment, urging that extension of unemployment insurance coverage to public employees satisfied neither reimbursement standard set forth in *County of Los Angeles*.The trial court agreed and awarded summary judgment.

The Court of Appeal reversed on two independent grounds. First, the court ruled that defendants were collaterally estopped by *Sacramento I* to relitigate the reimbursability of chapter 2/78 costs. Second, the court found that chapter 2/78 imposed "unique requirements" on local governments, within the meaning of *County of Los Angeles*, since the legis-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

lation was aimed solely at local agencies and subjected them to obligations from which they were previously exempt.

II. Jurisdiction; Plaintiffs' Exhaustion of Remedies.

(2) After we granted review, we asked the parties and amici curiae [FN4] to brief whether the current suit is jurisdictionally barred by any failure of plaintiffs to exhaust their remedies (see *Abelleira v. District Court of Appeal* (1941) 17 Cal.2d 280, 291-295 [109 P.2d 942, 132 A.L.R. 715]), or for any other reason. If so, the summary judgment for defendants against all plaintiffs was proper notwithstanding the merits of the subvention claim. In that event, the judgment of the Court of Appeal must be reversed without consideration of the substantive issues raised by the appeal.

> FN4 Amicus curiae briefs were filed on behalf of plaintiffs by (1) the League of California Cities, the Association of California Water Agencies, and the Fire District Association of California, and (2) the County of Los Angeles and the County Supervisors Association of California.

However, we find no failure to exhaust which would bar us from reaching the merits. Defendants concede plaintiffs exhausted all administrative remedies provided by the statutes governing subvention of state-mandated costs. The concession appears correct, at least as to the City and the County. These two agencies filed timely claims for reimbursement of expenses incurred to comply with chapter 2/78. When the Board initially denied the claims, the City and the County pursued judicial remedies culminating in ***62** *Sacramento I*. By direction of the judgment in *Sacramento I*, the Board ultimately upheld the City's and County's 1979 claims, determined their amount, and adopted "parameters and guidelines" for statewide reimbursement that were later included in the Board's government-claims report to the Legislature. (Rev. & Tax. Code, former §§ 2253.2, 2255, subd. (a).) These procedures exhausted the City's and the County's administrative and judicial avenues, short of this suit, to obtain redress on the claims adjudicated in *Sacramento I*. Insofar as the Legislature thereafter declined to appropriate the necessary funds for disbursement by the Controller, the City and the County were authorized to bring an enforcement action. (Rev. & Tax. Code, former § 2255, subd. (c); Gov. Code, § 17612, subd. (b); *County of Contra Costa v. State of California* (1986) 177 Cal.App.3d 62, 72 [222 Cal.Rptr. 750]; see *Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521, 548-549 [234 Cal.Rptr. 795].) [FN5]

> FN5 In 1986, the Legislature repealed sections 2250-2255 of the Revenue and Taxation Code. (Stats. 1986, ch. 879, §§ 37-48, p. 3047.) The Board's functions have been transferred to the Commission on State Mandates (Commission), but the procedures for administrative and judicial determination of subvention disputes remain functionally similar. (Gov. Code, §§ 17500 et seq., 17600 et seq.)

(3a) Defendants urge, however, that plaintiffs essentially are seeking resolution of a "tax" question - the validity *vel non* of their unemployment tax contributions - but have failed to satisfy the special procedures applicable to such cases. Defendants insist that because article XIII, section 32, of the California Constitution broadly precludes any suit to enjoin or impede collection of a tax (e.g., *Calfarm Ins. Co. v. Deukmejian* (1989) 48 Cal.3d 805, 838-841 [258 Cal.Rptr. 161, 771 P.2d 1247]; *Western Oil & Gas Assn. v. State Bd. of Equalization* (1987) 44 Cal.3d 208, 213 [242 Cal.Rptr. 334, 745 P.2d 1360]; *Pacific Gas & Electric Co. v. State Bd. of Equalization* (1980) 27 Cal.3d 277, 279-284 [165 Cal.Rptr. 122, 611 P.2d 463]), plaintiffs' claims for declaratory and injunctive relief are barred.

The only remedy constitutionally open to plaintiffs, defendants assert, is to pay their unemployment "taxes" and then seek a "refund" under the

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

"exclusive" procedures set forth in the Unemployment Insurance Code. (Unemp. Ins. Code, §§ 1176 et seq., 1241, subd. (a).) Insofar as plaintiffs' complaint *does* seek reimbursement for past contributions, defendants suggest, plaintiffs have not correctly pursued the Unemployment Insurance Code procedures.

We question, but do not decide, whether a *public entity's* contributions to the state unemployment insurance system can ever constitute a "tax" subject ***63** to article XIII, section 32. Even if so, defendants' claim lacks merit under the circumstances presented here.

"The policy behind [article XIII,] section 32 is to allow revenue collection to continue during [tax] litigation so that essential public services dependent on the funds are not unnecessarily disrupted. [Citation.] ...." (*Pacific Gas & Electric Co., supra*, 27 Cal.3d at p. 283.) The administrative "refund" procedures established by the unemployment insurance law are designed to ensure initial examination of unemployment tax disputes by the agency with specific expertise in that area.

However, plaintiffs attempt no challenge, direct or indirect, to the validity or application of the unemployment insurance law as such, or to the propriety of any "tax" assessed thereunder. Nor have plaintiffs bypassed the agency or procedures established to decide such disputes.

Rather, plaintiffs claim that *all* their costs of affording unemployment compensation to their employees are subject to a statutory and constitutional *subvention* which the state refuses to make. It is incidental that these costs happen to include what might be characterized as a "tax." As the subvention statutes require, plaintiffs City and County have pursued all available remedies before the agency (formerly the Board, now the Commission) created to decide *subvention* issues; that agency has upheld their submitted claims in full, but the necessary appropriations have been withheld.

Under these circumstances, the Legislature has concluded that a local entity should be forced to continue incurring the unfunded costs subject to "refund." Rather, the entity is expressly authorized to bring suit to declare such an unfunded mandate *unenforceable*. (Rev. & Tax. Code, former § 2255, subd. (c); Gov. Code, § 17612, subd. (b).) FN6

> FN6 Indeed, when the City filed protective claims for "refund" with EDD in the wake of *Sacramento I*, that agency consistently disclaimed authority to decide the subvention issue presented and "suggest[ed]" that the City pursue its remedies before the Commission.

The importance of such a remedy stems from the fundamental legislative prerogative to control appropriations. (4) Under the separation of powers doctrine, the Legislature cannot be compelled to appropriate or authorize the disbursement of specific funds. (*Mandel* v. *Myers* (1981) 29 Cal.3d 531, 540 [174 Cal.Rptr. 841, 629 P.2d 935].) Since the Legislature will have demonstrated its refusal to fund a particular mandate by the time a mandamus action is filed, the literal "tax refund" process urged by defendants may often be meaningless.

(3b) Insofar as plaintiffs also seek reimbursement for past expenses, similar considerations dictate that the governing statutes are those created ***64** to resolve subvention problems rather than garden-variety disputes over the unemployment insurance tax. FN7 We find nothing in the language, history, or purpose of article XIII, section 32, or of the unemployment insurance law, which bars the instant complaint. We therefore have jurisdiction to decide whether chapter 2/78 constitutes a reimbursable mandate.

> FN7 As we note above, courts are powerless to compel appropriations *per se*. However, that fact does not render a prayer for reimbursement of *past* costs wholly meaningless. California courts have previously recognized judicial power to fashion

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

other appropriate reimbursement remedies. (See, e.g., *Carmel Valley Fire Protection Dist., supra*, 190 Cal.App.3d at pp. 550-552; also cf. *Mandel, supra*, 29 Cal.3d at pp. 535-537, 539-552.) Such power is especially important where subvention is constitutionally compelled.

III. Collateral Estoppel; Res Judicata.

(5a) However, *plaintiffs* claim that because *Sacramento I* "finally" decided whether chapter 2/78 constitutes a reimbursable state mandate, the *state* and its agents are collaterally estopped from relitigating the issue here. The Court of Appeal agreed that the doctrine of collateral estoppel applies. Under the circumstances, we are not persuaded.

(6) Generally, collateral estoppel bars the party to a prior action, or one in privity with him, from relitigating issues finally decided against him in the earlier action. (*Clemmer v. Hartford Insurance Co.* (1978) 22 Cal.3d 865, 874 [151 Cal.Rptr. 285, 587 P.2d 1098].) "... But when the issue is a question of law rather than of fact, the prior determination is not conclusive either if injustice would result or if the public interest requires that relitigation not be foreclosed. [Citations.] ...." (*Consumers Lobby Against Monopolies v. Public Utilities Com.* (1979) 25 Cal.3d 891, 902 [160 Cal.Rptr. 124, 603 P.2d 41].)

(5b) Even if the formal prerequisites for collateral estoppel are present here, the public-interest exception governs. Whether chapter 2/78 costs are reimbursable under article XIII B and parallel statutes constitutes a pure question of law. The *state* was the losing party in *Sacramento I*, and also the only entity legally affected by that decision. Thus, strict application of collateral estoppel would foreclose any reexamination of the holding of that case. The state would remain bound, and no other person would have occasion to challenge the precedent.

Yet the consequences of any error transcend those which would apply to mere private parties. If the result of *Sacramento I* is wrong but unimpeachable, taxpayers statewide will suffer unjustly the consequences of the state's continuing obligation to fund the chapter 2/78 costs of local agencies. On the other hand, if the state fails to appropriate the funds to meet this *65 obligation, and chapter 2/78 therefore cannot be enforced (Rev. & Tax. Code, former § 2255, subd. (c); Gov. Code, § 17612, subd. (b)), the resulting failure to comply with federal law could cost California employers millions. FN8(7) **(See fn. 9.)**, (5c) Under these circumstances, neither stare decisis nor collateral estoppel can permanently foreclose our ability to examine the reimbursability of chapter 2/78 costs. FN9

FN8 For these reasons, this case is distinguishable from *Slater v. Blackwood* (1975) 15 Cal.3d 791 [126 Cal.Rptr. 225, 543 P.2d 593], cited by the Court of Appeal. *Slater*, a suit between private parties, held only that the "injustice" exception to the rule of collateral estoppel cannot be based *solely* on an intervening change in the law. (P. 796.) Here, as we note, overriding public-interest issues are involved.

FN9 By the same token, the state has not ignored available remedies or otherwise "waived" its right to argue the issues presented by this appeal. The state immediately raised the applicability of *County of Los Angeles* to this suit once our decision therein became final.
Plaintiffs claim the instant trial court had no power to grant summary judgment for defendants on authority of *County of Los Angeles*.Plaintiffs assert that because defendants failed to seek timely mandamus review of the prior, contrary order granting summary adjudication of issues in *plaintiffs'* favor, the issues decided by the earlier order must be "deemed established." (See Code Civ. Proc., § 437c, subd. (f).) We disagree. Failure to challenge a summary adjudication order by the

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> *discretionary* avenue of writ review cannot foreclose a party from asserting *subsequent* changes in law which render such a pretrial order incorrect.

(8) As below, plaintiffs also argue that reconsideration of *Sacramento I* is precluded by res judicata. They suggest that the prior litigation resolved not only the *legal issues* presented by this appeal, but all *claims* among the current parties as well.

Of course, res judicata and the rule of final judgments bar us from disturbing individual claims or causes of action, on behalf of specific agencies, which have been finally adjudicated and are no longer subject to review. (Code Civ. Proc., § 1908 et seq.; *Slater, supra*, 15 Cal.3d at p. 796;*Bernhard v. Bank of America* (1942) 19 Cal.2d 807, 810 [122 P.2d 892].) However, the issues presented in the current action are not limited to the validity of any such finally adjudicated individual claims. Rather, they encompass the question of defendants' subvention obligations *in general* under chapter 2/78. We therefore conclude that defendants may contend in this lawsuit that chapter 2/78 is not a reimbursable state mandate. FN10 We turn to the merits of that issue. ***66**

> FN10 Plaintiffs imply that because the original claims by the City and the County were filed decided as statutory "test claims" (Rev. & Tax. Code, former §§ 2218, 2253.2; see now Gov. Code, §§ 17555, 17557), the "cause of action" adjudicated therein encompasses *all* claims by *all* local agencies for *all* years. However, the obvious purpose of the statutory "test claim" procedure is to resolve the *legal issue whether particular state legislation creates a reimbursable mandate*, not to adjudicate every individual claim for reimbursement which may thereafter accrue. The "test claim" result has *precedential* effect for all subsequent claims, but res judicata effect only for the individual claims which were actually adjudicated.

IV. "New Program" or "Increased Service"?

(9a) As before, defendants urge that by extending unemployment insurance coverage to local government employees, the Legislature did not mandate a "new program" or an "increased" or "higher level of service" on local governments. Thus, they assert, the local costs of providing such coverage are not subject to subvention under article XIII B, section 6, or parallel statutes. (Rev. & Tax. Code, former §§ 2207, 2231, subd. (a); Gov. Code, §§ 17514, 17561, subd. (a).) The trial court granted summary judgment for defendants on this basis. Contrary to the conclusions reached by the Court of Appeal, the trial court's ruling was correct.

Our analysis is controlled by our decision in *County of Los Angeles*.There we determined that a general increase in workers' compensation benefits did not, when applied to local governments, constitute a reimbursable state mandate under article XIII B.

In so holding, we focused on the particular language of article XIII B, section 6, which requires state subvention of a local government's costs of any "new program" or "increased level of service" imposed upon it by the state. We dismissed the notion that, by employing the quoted phrases, the voters intended *all* local costs resulting from compliance with state law to be subject to mandatory reimbursement. Rather, we explained, "[t]he concern which prompted the inclusion of section 6 in article XIII B was the perceived attempt by the state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services which the state believed should be extended to the public. ..." (43 Cal.3d at p. 56.)

Under these circumstances, we reasoned, the electorate must have intended the undefined terms "new program" and "increased level of service" to carry their "commonly understood meanings ... - programs that carry out the governmental function of providing *services to the public*, or laws which, to

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

implement a state policy, impose *unique requirements* on local governments and do not apply generally to all residents and entities in the state." (43 Cal.3d at p. 56, italics added.)

Local governments' costs of complying with a general statewide increase in the level of workers' compensation benefits do not qualify under these standards, we concluded. As we noted, "... [w]orkers' compensation is not a program administered by local agencies to provide service to the public. (10) **(See fn. 11.)**Although local agencies must provide benefits to ***67** their employees ..., they are indistinguishable in this respect from private employers. ..." (43 Cal.3d at p. 58.) FN11

> FN11 While our discussion centered on the meaning of section 6 of article XIII B, it relied heavily on the legislative history of parallel provisions of the 1972 and 1973 property tax relief statutes. When article XIII B was adopted in November 1979, the Revenue and Taxation Code already required state subvention of local "[c]osts mandated by the state," defined as "any increased costs which a local agency is required to incur as a result of ... [¶] [a]ny law enacted after January 1, 1973, which mandates a *new program* or an *increased level of service* of an existing program." (Rev. & Tax. Code, former §§ 2207 [italics added], 2231, subd. (a).) However, a further statutory definition of "increased level of service" to include any state mandate "which makes necessary expanded or additional costs to a county, city and county, city, or special district" had been repealed in 1975. (*County of Los Angeles*, 43 Cal.3d at p. 55; see Rev. & Tax. Code, former § 2231, subd. (e), repealed by Stats. 1975, ch. 486, § 6, p. 999.) We found the repealer significant to the limited meaning of the statutory term "increased level of service" as later incorporated in article XIII B. (43 Cal.3d at pp. 55-56.) Our implicit conclusion, which we now make explicit, was that the statutory and constitutional concepts of reimbursable state-mandated costs are identical.

(9b) Similar considerations apply here. By requiring local governments to provide unemployment compensation protection to their own employees, the state has not compelled provision of new or increased "service to the public" at the local level. Nor has it imposed a state policy "unique[ly]" on local governments. Most private employers in the state already were required to provide unemployment protection to their employees. Extension of this requirement to local governments, together with the state government and nonprofit corporations, merely makes the local agencies "indistinguishable in this respect from private employers."

Plaintiffs nonetheless suggest there are several bases for reaching a different result here than in *County of Los Angeles*.None of the asserted distinctions has merit.

Plaintiffs first note the proponents' declaration in the voters' pamphlet that the purpose of article XIII B, section 6, was to prevent the state from "forcing" unfunded programs on local agencies. Plaintiffs invoke this pamphlet language for the proposition that any new cost "forced" on local governments by state law is subject to subvention.

The claim is directly contrary to our holding in *County of Los Angeles*.As we explained, "[i]n ... context, the [pamphlet] phrase 'to force *programs* on local governments' confirms that the intent underlying section 6 [of article XIII B] was to require reimbursement to local agencies for the costs involved in carrying out *functions peculiar to government*, not for expenses incurred by local agencies as an *incidental impact* of laws that apply generally to all state residents and entities. ... [¶] The language of section 6 is far too vague to support an inference that ... each time the Legislature ***68** passes a law of general application it must discern the likely ef-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

fect on local governments and provide an appropriation to pay for any incidental increase in local costs. ..." (43 Cal.3d at pp. 56-57, italics added.) FN12

> FN12 Indeed, our reasoning here was expressly foreshadowed in *County of Los Angeles*.There we observed: "The Court of Appeal reached a different conclusion in [*Sacramento I*], with respect to a newly enacted law requiring that all public employees be covered by unemployment insurance. Approaching the question as ... whether the expense was a 'state mandated cost,' rather than as whether the provision of an employee benefit was a 'program or service' within the meaning of the Constitution, the court concluded that reimbursement was required. To the extent that this decision is inconsistent with our conclusion here, it is disapproved." (43 Cal.3d at p. 58, fn. 10.)

Plaintiffs next urge the Court of Appeal's premise - that chapter 2/78 did impose a "unique" requirement on local agencies within the meaning of *County of Los Angeles*, since it applied only to them, and compelled costs to which they were not previously subject. Plaintiffs cite our recent decision in *Lucia Mar Unified School Dist.* v. *Honig* (1988) 44 Cal.3d 830 [244 Cal.Rptr. 677, 750 P.2d 318]. There we held, inter alia, that by requiring each local school district to contribute part of the expense of educating its handicapped students in state-run schools - a cost previously absorbed entirely by the state - the Legislature created a "*new* program" subject to subvention under article XIII B, section 6. As we observed, "although the schools for the handicapped have been operated by the state for many years, the program was *new insofar as [the local districts] are concerned* ...." (P. 835, italics added.)

Lucia Mar is inapposite here. The education of handicapped students was clearly a traditional governmental "service to the public," and it qualified as a "program" on that basis. This function had long been performed by the state, and the only issue was whether the belated shifting of the program's costs to local governments made it "new" for subvention purposes. A negative answer to that question would have undermined a central purpose of article XIII B, section 6 - to prevent the state's transfer of the *cost of government* from *itself* to the local level.

Here, the issue is whether costs *unrelated* to the provision of public services are *nonetheless* reimbursable costs of government, because they are imposed on local governments "unique[ly]," and not merely as an incident of compliance with general laws. State and local governments, and non-profit corporations, had previously enjoyed a special *exemption* from requirements imposed on most other employers in the state and nation. Chapter 2/78 merely eliminated the exemption and made these previously exempted entities subject to the general rule. By doing so, it may have imposed a requirement "new" to local agencies, but that requirement was not "unique." ***69**

The distinction proposed by plaintiffs would have an anomalous result. The state could avoid subvention under *County of Los Angeles* standards by imposing new obligations on the public and private sectors *at the same time*. However, if it chose to proceed by stages, extending such obligations first to private entities, and only later to local governments, it would have to pay. This was not the intent of our recent decision.

Next, plaintiffs complain that the new costs imposed on local governments by chapter 2/78 are too great to be deemed "incidental" within the meaning of *County of Los Angeles*.However, our decision did not use the word "incidental" to mean merely "insignificant in amount." Rather, we declared that the state need not reimburse local governments for expenses *incidentally imposed* upon them by laws of general application. In *County of Los Angeles*, we assumed that the expenses imposed *in common* on the private and public sectors by such a general law - as by the across-the-board increase in work-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ers' compensation benefits there at issue - might be substantial. Notwithstanding this possibility, we found the voters did not intend to require a state subsidy of the public sector in such cases. (43 Cal.3d at pp. 56-58.)

Finally, plaintiffs and their amici curiae urge us to overrule *County of Los Angeles*.They insist that our "program" and "unique requirement" limitations conflict with the language and purpose of article XIII B. First, they note that *nonreimbursable* state-mandated costs are expressly listed in subdivisions (a) through (c) of article XIII B, section 6. FN13 Under the maxim *inclusio unius est exclusio alterius*, they reason, further exceptions may not be implied. Second, they assert, our limiting construction allows the state to "force" many costly but unfunded requirements on local governments, which the latter must absorb without relief from their own article XIII B spending limits. This, they aver, cannot have been the voters' intent.

> FN13 Article XIII B, section 6, provides that the state shall provide a subvention of funds to reimburse a local agency for costs incurred by the agency "[w]henever the [state] mandates [on the agency] a new program or higher level of service ..., except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [¶] (a) Legislative mandates requested by the local agency affected; [¶] (b) Legislation defining a new crime or changing an existing definition of a crime; or [¶] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975."

These arguments misapprehend both the language of article XIII B, section 6, and our *County of Los Angeles* holding. Our reasoning in that case is not inconsistent with subdivisions (a) through (c) of section 6. Those paragraphs simply exclude certain state-imposed costs *even if they would otherwise be reimbursable under the "new program" or "increased service" *70 standards*. Subdivisions (a) through (c) do not purport to define what constitutes a "new program" or "increased level of service."

Moreover, the "program" and "service" standards developed in *County of Los Angeles* create no undue risk that the state will impose expensive unfunded obligations against local agencies' article XIII B spending limits. On the contrary, our standards require reimbursement whenever the state freely chooses to impose on local agencies *any* peculiarly "governmental" cost which they were not previously required to absorb.

On the other hand, as we explained in *County of Los Angeles*, extension of the subvention requirements to costs "incidentally" imposed on local governments would require the Legislature to assess the fiscal effect on local agencies of each law of general application. Moreover, it would subject much general legislation to the supermajority vote required to pass a companion local-government revenue bill. Each such necessary appropriation would, in turn, cut into the *state's* article XIII B spending limit. (§ 8, subd. (a).) We concluded that nothing in the language, history, or apparent purpose of article XIII B suggested such far-reaching limitations on legitimate state power. (43 Cal.3d at pp. 56-58.)

We remain persuaded by this reasoning. FN14 We decline to overrule *County of Los Angeles*.Under the teaching of that case, we hold that chapter 2/78 imposes no local costs which must be reimbursed pursuant to article XIII B, section 6, and parallel statutes.

> FN14 Nor do we agree that subvention depends on whether the "benefit" of a state-imposed local requirement falls principally at the state or local level. Attempts to apply such a "benefit" test to the myriad of individual cases could easily produce debates bordering on the metaphysical. Nothing in the language or history of article

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

XIII B, or prior subvention statutes, suggests an intent to force such debates upon the Legislature each time it considers legislation affecting local governments.

V. "Federal" Mandate?

(11a) This case proceeded through the Court of Appeal solely on the issue whether chapter 2/78 constitutes a reimbursable "state mandate," as defined in *County of Los Angeles*.After we granted review, and in the public interest, we also decided to reexamine a related holding contained in *Sacramento I* - that chapter 2/78 does not qualify as a "federal" mandate.

Proper application of the "federal mandate" concept has important implications beyond subvention. A "cost mandated by the federal government" is exempt from a local government's statutory taxation limit. (Rev. & Tax. Code, § 2271.)Moreover, an appropriation required to comply with a *71 federal mandate is excluded from the constitutional spending limit of any affected entity, state or local (Cal. Const., art. XIII B, § 9 (b)). Accordingly, we requested supplemental briefs on this question. FN15

FN15 For the reasons expressed in part III, *ante*, our consideration of this issue is not foreclosed by principles of collateral estoppel.

After due consideration, we reject *Sacramento I's* premise. We conclude that chapter 2/78 does impose "costs mandated by the federal government," as described in article XIII B and parallel statutes. FN16

FN16 In *Sacramento I*, both the parties and the Court of Appeal assumed that if a cost was "federally mandated," it was therefore *not* a "state mandated" cost subject to subvention. In other words, it was assumed, an expense could not be both "state mandated" and "federally mandated," even if imposed by the state under federal compulsion. It was in this context that *Sacramento I* addressed the "federal mandate" issue. (See also *Carmel Valley Fire Protection Dist., supra*, 190 Cal.App.3d at p. 543.) We here express no view on the question whether "federal" and "state" mandates are mutually exclusive for purposes of state subvention, but leave that issue for another day. We decide only that, insofar as an expense is "federally mandated," as described in the state Constitution and statutes, it is exempt from the pertinent taxation and spending limits.

Article XIII B, section 9(b), defines federally mandated appropriations as those "required for purposes of complying with mandates of ... the federal government which, *without discretion*, require an expenditure for additional services or which *unavoidably make the providing of existing services more costly*." (Italics added.)

As in *Sacramento I*, plaintiffs argue that the words "without discretion" and "unavoidably" require clear *legal* compulsion not present in Public Law 94-566. Defendants respond, as before, that the consequences of California's failure to comply with the federal "carrot and stick" scheme were so substantial that the state had no realistic "discretion" to refuse. FN17 In *Sacramento I*, the Court of Appeal adopted plaintiffs' narrow view. On reflection, we disagree.

FN17 Ironically, the local agencies here argue *against* a "federal mandate," with the state in opposition to that view. An anti-"federal mandate" position seems directly contrary to the local agencies' interests, since its acceptance would mean the agencies are not eligible for exemptions from their pertinent taxing and spending limits. However, all parties appear still bound by the premise of *Sacramento I* that if a cost is "federally mandated," it is ineligible for state subvention. As noted above (see fn. 16, *ante*), we do not decide that issue here.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Though section 9(b) seems plain on its face, we find a latent ambiguity in context. At the time article XIII B was adopted, United States Supreme Court decisions construing the Tenth Amendment *severely limited* federal power to dictate policy or programs to the sovereign states or their subdivisions. FN18 Indeed, by its early ruling that federal unemployment insurance *72 laws did not violate state sovereignty insofar as they merely employed a "carrot and stick" to induce state compliance (*Steward Machine Co.* v. *Davis, supra*, 301 U.S. 548, 585-593 [81 L.Ed. 1279, 1290-1294]), the high court helped set the stage for two generations of pervasive federal regulation by this indirect means. FN19

FN18 The Tenth Amendment to the United States Constitution provides: "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people."

FN19 The traditional categorical-aid provisions of the Social Security Act (e.g., 42 U.S.C. §§ 301 et seq. [old-age assistance], 601 et seq. [aid to needy families with dependent children], 1201 et seq. [aid to the blind], 1351 et seq. [aid to the permanently and totally disabled]), and statutes concerned with occupational safety and health (e.g., 29 U.S.C. § 651 et seq.), highways and mass transit (e.g., 23 U.S.C. § 101 et seq.), education (e.g., 20 U.S.C. § 241a et seq.), and air and water pollution (e.g., 33 U.S.C. §§ 1251 et seq., 1311 et seq.; 42 U.S.C. § 7401 et seq.) are but a few examples of federal laws imposing greater or lesser degrees of inducement to state and local compliance with federal policies and programs.

Just three years before article XIII B was adopted, the court struck down, on Tenth Amendment grounds, Congress's effort to extend the minimum-wage and maximum-hour requirements of the Fair Labor Standards Act directly to local government employees. (*National League of Cities v. Usery* (1976) 426 U.S. 833 [49 L.Ed.2d 245, 96 S.Ct. 2465].) Overruling earlier authority (see *Maryland* v. *Wirtz* (1968) 392 U.S. 183 [20 L.Ed.2d 1020, 88 S.Ct. 2017]), the court held in *Usery, supra*, that constitutional principles of federalism prohibit Congress from using its otherwise "plenary" commerce power against the "States as States," so as to interfere with the essential "attributes of [state government] sovereignty." (426 U.S. at pp. 840-855 [49 L.Ed.2d at pp. 250-260].) Accordingly, said the court, Congress could not "force directly upon the States its choices as to how essential decisions regarding the conduct of integral governmental functions are to be made. ..." (*Id.*, at p. 855 [49 L.Ed.2d at p. 259].)

Usery dealt with federal efforts to regulate sovereign units of government as employers. However, the court's rationale obviously applied with equal or greater force to direct federal regulation of state and local governments *as governments*. Under *Usery's* reasoning, it seems manifest that Congress's direct power to require or prohibit substantive governmental policies or programs by state or local agencies was greatly curtailed. Such power would interfere impermissibly with "integral governmental functions" and essential "attributes of [state] sovereignty. FN20 *73

FN20 *Hodel v. Virginia Surface Mining & Recl. Assn.* (1981) 452 U.S. 264 [69 L.Ed.2d 1, 101 S.Ct. 2352] later implicitly confirmed this premise. There, Virginia mine operators challenged a federal surface-mining regulatory scheme on grounds it displaced state authority and sovereignty. The federal law imposed minimum federal standards, to be enforced by federal or state officials at the state's choice, and allowed states to take over regulation by imposing equal or higher standards of their own. (30 U.S.C. §§ 1201 et seq., 1251-1254.)The court upheld the program,

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> noting it regulated private persons, not the "States as States. " Moreover, said the court, since states were not ordered to adopt their own surface-mining standards, "there can be no suggestion that the Act commandeers the legislative processes of the States by directly compelling them to enact and enforce a federal regulatory program. [Citations.] .... " (452 U.S. at pp. 286-288 [69 L.Ed.2d at pp. 22-24].)

After article XIII B's adoption, both the result and the reasoning of *Usery* were overruled in *Garcia v. San Antonio Metro. Transit Auth.* (1985) 469 U.S. 528 [83 L.Ed.2d 1016, 105 S.Ct. 1005]. In *Garcia*, a five-justice majority concluded that the political structure of the federal system, rather than rigid categories of inviolable state "sovereignty," constitutes state and local governments' primary protection against Congress's overreaching efforts to regulate them. (Pp. 547-555 [83 L.Ed.2d at pp. 1031-1037].)

However, this later development does not alter two crucial facts extant when article XIII B was enacted. First, the power of the federal government to impose its direct regulatory will on state and local agencies was *then* sharply in doubt. Second, in conformity with this principle, the vast bulk of cost-producing federal influence on government at the state and local levels was by inducement or incentive rather than direct compulsion. [FN21] That remains so to this day.

> FN21 The United States Constitution includes specific limitations on the subject-matter jurisdiction of state and local governments (art. I, § 10), imposes certain direct obligations and restrictions on the "States as States" (e.g., art. I, § 2, cls. 1, 4; art. I, § 3, cls. 1, 2; art II, § 1, cl. 2; art. IV, §§ 1, 2, cls. 1, 2; Amends. XIV, XV), and grants Congress power to prevent denial of certain constitutional rights by the states (Amends. XIII, XIV, XV). Obviously, however, these provisions account for only a minute portion of the costs incurred by state and local governments as a result of federal programs and regulations.

Thus, if article XIII B's reference to "federal mandates" were limited to strict legal compulsion by the federal government, it would have been largely superfluous. [FN22] (12) It is well settled that "constitutional ... enactments must receive a liberal, practical common-sense construction which will meet changed conditions and the growing needs of the people. [Citations.] ...." (*Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal.3d 208, 245 [149 Cal.Rptr. 239, 583 P.2d 1281].) While "[a] constitutional amendment should be construed in accordance with the natural and ordinary meaning of its words[,] [citation] [, t]he literal language of enactments may be disregarded to avoid absurd results and to fulfill the apparent intent of the framers. [Citations.]" (*Ibid.*)

> FN22 For this reason, federal cases cited by plaintiffs and their amici curiae for the proposition that Public Law 94-566 is not "coercive " (e.g., *County of Los Angeles, Cal. v. Marshall* (D.C. Cir. 1980) 631 F.2d 767 [203 App.D.C. 185];*State, etc. v. Marshall* (1st. Cir. 1980) 616 F.2d 240) are inapposite. Those decisions applied *Tenth Amendment* principles to determine whether Public Law 94-566 was constitutionally valid. Had Public Law 94-566 been struck down on this ground, it would *not* have resulted in local costs to which the "federal mandate" provisions of article XIII B might extend. Thus, applying the Tenth Amendment cases to determine whether a cost is "federally mandated " for purposes of article XIII B presents a problem in circular reasoning.

(11b) As the drafters and adopters of article XIII B must have understood, certain regulatory standards imposed by the federal government *74 under "cooperative federalism" schemes are coercive on the states and localities in every practical sense.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

The instant facts amply illustrate the point. Joint federal-state operation of a system of unemployment compensation has been a fundamental aspect of our political fabric since the Great Depression. California had afforded federally "certified" unemployment insurance protection to its workers for over 40 years by the time Public Law 94-566, chapter 2/78, and article XIII B were adopted. Every other state also operated such a system. If California failed to conform its plan to new federal requirements as they arose, its businesses faced a new and serious penalty - full, double unemployment taxation by both state and federal governments. Besides constituting an intolerable expense against the state's economy on its face, this double taxation would place California employers at a serious competitive disadvantage against their counterparts in states which remained in federal compliance.

Plaintiffs and their amici curiae suggest California could have chosen to terminate its own unemployment insurance system, thus leaving the state's employers faced only with the federal tax. However, we cannot imagine the drafters and adopters of article XIII B intended to force the state to such draconian ends.

Here, the state simply did what was necessary to avoid certain and severe federal penalties upon its resident businesses. The alternatives were so far beyond the realm of practical reality that they left the state "without discretion" to depart from federal standards. We therefore conclude that the state acted in response to a federal "mandate" for purposes of article XIII B. FN23 *75

FN23 The dissent cites two older cases for the premise that in antidebt and antispending measures, the exception recognized for "mandatory" costs and expenditures has traditionally been limited to obligations imposed by law. Neither cited decision is dispositive or persuasive here.
County of Los Angeles v. Byram (1951) 36 Cal.2d 694 [227 P.2d 4], and the cases therein cited, concern the constitutional provision (Cal. Const., former art. XI, § 18, see now art. XVI, § 18 (hereafter section 18)) which prohibits local governments, absent voter approval, from incurring debts or liabilities which exceed in any year the income or revenue provided for such year. Section 18 is *absolute on its face* and, unlike article XIII B, it contains *no express exception* for mandatory expenses. Though sometimes founded on contorted linguistic analyses (see, e.g., *City of Long Beach* v. *Lisenby* (1919) 180 Cal. 52, 56 [179 P. 198]), the *implied* exceptions to section 18, as recognized in *Byram* and other cases, arise from a rule of necessity and despite the absolute constitutional language. Such implied exceptions must, of course, be narrowly confined.
On the other hand, *County of Los Angeles v. Payne* (1937) 8 Cal.2d 563 [66 P.2d 658], also cited by the dissent, construed former Political Code section 3714, which limited a local government's annual expenditures to its previously adopted budget. Section 3714 *did* contain an express exception for "mandatory expenses *required by law*." (Italics added.) *Payne's* adherence to the explicit terms of the statutory exception is hardly remarkable.
In contrast with the measure considered in *Byram*,article XIII B and the Revenue and Taxation Code *do* expressly exempt "federally mandated " expenses from the pertinent taxation and appropriations limits. Unlike the measure construed in *Payne*, neither article XIII B nor the Revenue and Taxation Code expressly limit their exemptions to obligations " required by law." Article XIII B uses the broader terms "unavoidably " and "without discretion," suggesting recognition by the drafters and voters that forces beyond strict legal compulsion may produce expenses that are realistically involuntary. The Revenue and

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> Taxation Code explicitly includes coercive federal "carrot and stick" requirements within the federally "mandated" costs exempt from statutory property tax limits. (Rev. & Tax. Code, § 2206.)

Unlike the *Sacramento I* court, we deem significant the Legislature's persistent agreement with our construction. In 1980, after the adoption of article XIII B, it amended the statutory definition of "costs mandated by the federal government" to provide that these include "costs resulting from enactment of a state law or regulation where failure to enact such law or regulation to meet specific federal program or service requirements would result in *substantial monetary penalties* or *loss of funds* to *public or private persons* in the state. ..." (Rev. & Tax. Code, § 2206, italics added; Stats. 1980, ch. 1256, § 3, p. 4247.)

In *Sacramento I*, the Court of Appeal declined to apply this statutory amendment "retroactively" to article XIII B. (156 Cal.App.3d at pp. 197-198.) The Legislature immediately responded. In 1984 statutes enacted for the express purpose of "implement[ing]" article XIII B (see Gov. Code, § 17500), the Legislature reiterated its 1980 definition. (*Id.*, § 17513; Stats. 1984, ch. 1459, § 1, p. 5114.) FN24

> FN24 Plaintiffs suggest that by reenacting this language in the wake of *Sacramento I*, the Legislature "acquiesced" in the Court of Appeal's narrow definition of "costs mandated by the federal government." We are not persuaded. *Sacramento I* did not *construe* the statutory language; it simply found a postdated statute *irrelevant* to the proper interpretation of article XIII B. By later readopting its expanded definition in statutes designed to "implement" article XIII B, the Legislature expressed its disagreement with *Sacramento I*, not its acquiescence. Contrary to the implications of *Sacramento I*, legislative efforts to resolve ambiguities in constitutional language are entitled to serious judicial consideration. (See authorities cited *ante*.)

Plaintiffs contend that these statutory pronouncements deserve little interpretive weight since, among other things, they are "internally inconsistent." Plaintiffs stress the proviso in Revenue and Taxation Code, section 2206, and in Government Code, section 17513, that the phrase "' [c]osts mandated by the federal government' does *not* include costs which are specifically reimbursed or funded by the federal or state government or programs or services which may be implemented at the *option* of the state, local agency, or school district." (Italics added.)

We see no fatal inconsistencies. The first clause of the proviso merely confirms, as article XIII B itself specifies, that program funds voluntarily provided by another unit of government may not be excluded from the ***76** spending limits of recipient local agencies. (Compare art. XIII B, §§ 8, subd. (b), 9(b).) The second clause isolates a concern which we share - that state or local governments might otherwise claim "federally mandated costs " even where participation in a federal program, or compliance with federal " standards," is a matter of true choice. (Cf., e.g., *Carmel Valley Fire Protection Dist., supra*, 190 Cal.App.3d at pp. 542-544.) FN25

> FN25 In the *Carmel Valley* case, the state claimed, among other things, that local costs of purchasing protective clothing and equipment for firefighters, as required by regulations under the California Occupational Safety and Health Act, constituted a nonreimbursable "federal mandate " because the California standards merely "implemented" federal law. However, the evidence was contrary; a letter from the federal Occupational Safety and Health Administration disclaimed federal jurisdiction over California's political subdivisions and stated that state and federal standards were independent. (190 Cal.App.3d at pp. 543-544.) Examination of the pertinent

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> statutory scheme reinforces the view that compliance with federal standards in this area is "optional" with the state. Other than loss of limited federal administrative funds (29 U.S.C. § 672(g)), the only sanction for California's decision not to maintain a federally approved occupational safety and health system is that federal standards, administered by federal personnel, will then prevail within the state. (*Id.*, § 667(b)-(h).)

Given the variety of cooperative federal-state-local programs, we here attempt no final test for "mandatory" versus "optional" compliance with federal law. (13) A determination in each case must depend on such factors as the nature and purpose of the federal program; whether its design suggests an intent to coerce; when state and/or local participation began; the penalties, if any, assessed for withdrawal or refusal to participate or comply; and any other legal and practical consequences of nonparticipation, noncompliance, or withdrawal. Always, the courts and the Commission must respect the governing principle of article XIII B, section 9(b): neither state nor local agencies may escape their spending limits when their participation in federal programs is truly voluntary.

(11c) For reasons expressed above, we are satisfied under these standards that chapter 2/78 did implement a federal "mandate" within the meaning of article XIII B and prior statutes restricting local taxation. Hence, subject to superseding constitutional ceilings on taxation by state and local governments, an agency governed by chapter 2/78 may tax and spend as necessary to meet the expenses required to comply with that legislation. To the extent *Sacramento I* is inconsistent with our analysis, that decision is disapproved.

VI. Conclusion.

We have concluded that chapter 2/78 is a "federal mandate" which exempts affected state and local agencies from pertinent limits on their power to tax, appropriate, and spend. However, local governments' expenses *77 of complying with chapter 2/78 are not subject to compulsory state subvention, because chapter 2/78 imposed no new or increased "program or service," and no "unique" requirement, on local agencies. The contrary judgment of the Court of Appeal is reversed.

Lucas, C. J., Mosk, J., Broussard, J., Panelli, J., and Kennard, J., concurred.

KAUFMAN, J.,
Concurring and Dissenting.

I concur in the judgment. Given this court's decision in *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46 [233 Cal.Rptr. 38, 729 P.2d 202], I am compelled to agree that the obligation imposed on local governments by the 1978 state unemployment insurance legislation is not a "new program or higher level of service" within the meaning of article XIII B, section 6, of the California Constitution, and that for this reason the state is not constitutionally obligated to provide a subvention of funds to reimburse the unemployment insurance costs of local governments. I respectfully dissent, however, from the additional conclusion, stated in part V of the majority opinion, that these unemployment insurance costs are "mandates of ... the federal government" and therefore exempt from the state and local government appropriation limits of article XIII B and from property taxation limits imposed by statute. In reaching this additional conclusion the majority decides an issue not raised by the parties and completely outside the scope of this action. As so often happens when a court reaches beyond the confines of the case before it to render a gratuitous advisory opinion, the majority decides the issue incorrectly.

All too frequently in recent years (see, e.g., *S. G. Borello & Sons, Inc. v. Department of Industrial Relations* (1989) 48 Cal.3d 341, 345, fn. 1 [256 Cal.Rptr. 543, 769 P.2d 399]) this court, in its misguided zeal to provide enlightenment, has reached out to decide an issue not tendered by the parties. The majority's failure to exercise proper judicial re-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

straint in the instant case is another example of this trend and one I find particularly disturbing since it violates a fundamental and venerable tenet of judicial practice - i.e., "A court will not decide a constitutional question unless such construction is absolutely necessary." (*Estate of Johnson* (1903) 139 Cal. 532, 534 [73 P. 424]; accord, *People* v. *Williams* (1976) 16 Cal.3d 663, 667 [128 Cal.Rptr. 888, 547 P.2d 1000]; *Palermo v. Stockton Theatres, Inc.* (1948) 32 Cal.2d 53, 65 [195 P.2d 1].) The federal mandate issue which the majority here decides, because it turns on the proper construction of article XIII B, section 9, of our state Constitution, is a constitutional issue. Using this case to resolve that issue is, to my mind, indefensible.

To see just how far the majority has wandered from the issues essential to the proper resolution of this case, one need only point out that this action ***78** was not brought to settle a dispute about taxation or appropriation limits, nor has this court been informed that any such dispute exists. Rather, this action was brought to enforce the holding in *City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182 [203 Cal.Rptr. 258](*Sacramento I*), that the state is constitutionally obligated to reimburse the unemployment insurance costs of local governments. The governmental entities litigating this proceeding have not sought a judicial determination of the 1978 unemployment insurance legislation's effect on their statutory or constitutional taxing or spending limits, nor have they raised any issue regarding whether unemployment insurance costs are federally mandated for any purpose. The federal mandate issue was first injected into the case by this court when we requested additional briefing on the questions whether the unemployment insurance costs of local governments are federally mandated under article XIII B, section 9, of the state Constitution and, if so, whether this conclusion necessarily exempts the state from any obligation it might otherwise have to reimburse local governments for these costs.

The majority's federal mandate discussion does not even provide an alternative ground for the holding denying reimbursement of local governments' unemployment insurance costs, for the majority purports to decide whether unemployment insurance costs are federally mandated without deciding whether resolution of this issue has any bearing on entitlement to reimbursement (see maj. opn., *ante*, p. 71, fn. 16). The majority's only justification for deciding whether unemployment insurance costs are federally mandated is that the issue has " important implications" inasmuch as federally mandated costs are "exempt from a local government's statutory taxation limit (Rev. & Tax. Code, § 2271) " and "from the constitutional spending limit of any affected entity, state or local (Cal. Const., art. XIII B, § 9(b))." (Maj. opn., *ante*, pp. 70-71.) But the present case is an inappropriate vehicle for deciding these weighty issues since neither the state nor the local entities have any reason to contest the other's exemptions from spending or taxation limits. In other words, the parties now before us are not adverse on these issues and so have not defined and argued opposing points of view with the vigor and thoroughness essential to proper judicial resolution of complex legal questions, particularly those of constitutional magnitude. Those who might have argued in favor of including unemployment insurance costs in the taxing and spending limits - for example, the proponents of the initiative measure by which article XIII B was enacted - are not represented in this proceeding.

Were the issue properly presented in this case, I would conclude that the unemployment insurance costs are not federally mandated. The text of a constitution "should be construed in accordance with the natural and ordinary meaning of its words." (***79***Amador Valley Joint Union High Sch. Dist.* v. *State Bd. of Equalization* (1978) 22 Cal.3d 208, 245 [149 Cal.Rptr. 239, 583 P.2d 1281].) The language at issue here excludes from the definition of " appropriations subject to limitation" those appropriations " required for purposes of complying with *mandates* of the courts or the federal government which, *without discretion, require* an expenditure

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

for additional services or which *unavoidably* make the providing of existing services more costly. " (Cal. Const., art. XIII B, § 9, subd. (b), italics added.)

The meaning of this language is clear; to look beyond the text for some other meaning is both unnecessary and improper under accepted rules of constitutional interpretation. (See *State Board of Education* v. *Levit* (1959) 52 Cal.2d 441, 462 [343 P.2d 8]; *People v. Knowles* (1950) 35 Cal.2d 175, 182-183 [217 P.2d 1].) A "mandate" is "an order, command [or] charge." (*Xth Olympiad Com. v. American Olym. Assn.* (1935) 2 Cal.2d 600, 604 [42 P.2d 1023]; see also, *Morris* v. *County of Marin* (1977) 18 Cal.3d 901, 908 [136 Cal.Rptr. 251, 559 P.2d 606] ["mandatory duty" is "an obligatory duty which a governmental entity is required to perform"]; *Bridgman v. American Book Co.* (1958) 12 Misc.2d 63, 66 [173 N.Y.S.2d 502, 506] ["mandate" is "a command, order or direction ... which a person is bound to obey"].) The mandates to which the constitutional provision at issue refers are those "of the courts or the federal government." The coercive force of court mandates is, of course, the force of law. That "mandates of ... the federal government" are similarly limited to those obligations imposed by force of federal law is shown not only by the term "mandate" itself but also by the terms "without discretion " and " unavoidably," which plainly exclude any form of inducement using political or economic pressure rather than legal compulsion.

Laws limiting governmental appropriations and indebtedness have traditionally exempted two categories of expenditures: those required to meet emergencies and those required to satisfy duties or mandates imposed by law. (See, e.g., *County of Los Angeles v. Byram* (1951) 36 Cal.2d 694, 698-700 [227 P.2d 4];*County of Los Angeles* v. *Payne* (1937) 8 Cal.2d 563, 569-575 [66 P.2d 658];*State* v. *City Council of City of Helena* (1939) 108 Mont. 347 [90 P.2d 514, 516]; *Raynor v. King County* (1940) 2 Wn.2d 199 [97 P.2d 696, 707].) The latter category has been interpreted as including only those obligations compelled by force of law, as opposed to economic or political necessity or expedience. (See *County of Los Angeles v. Byram, supra,* at pp. 698-700; *County of Los Angeles* v. *Payne, supra,* at pp. 573-574.) Article XIII B of the California Constitution follows the pattern of other similar laws; it provides exemptions for emergency appropriations in section 3, subdivision (c), and for legal duties or "mandates" in section 9, subdivision (b). I see no basis for concluding that the term "mandate," which in the context of government debt and appropriation limitations has traditionally *80 meant a duty imposed by force of law, has suddenly acquired a novel and more expansive meaning in section 9. On the contrary, the drafters of section 9 appear to have taken pains to avoid any such interpretation.

As stated in *Sacramento I,* "The concept of federal mandates ... is defined in section 9 of article XIII B. Subdivision (b) of that section excludes from a governmental entity's appropriation limit '[a]ppropriations required for purposes of complying with mandates of ... the federal government which, *without discretion, require* an expenditure' by the governmental entity. (Italics added.) As contemplated by article XIII B, section 9, a federal mandate is one pursuant to which the federal government imposes a cost upon a governmental entity, and the entity has *no discretion* to refuse the cost. Chapter 2 [the 1978 unemployment insurance legislation] was not a federal mandate within this constitutional definition, as the State had the discretion to participate or not in the federal unemployment insurance system. " (*Sacramento I, supra,* 156 Cal.App.3d 182, 197, italics in original.) Giving the constitutional language its usual and ordinary meaning, I agree with the Court of Appeal that federal law "mandates" an expenditure only if the expenditure is legally compelled, and not if the federal law merely provides economic or political inducements, no matter how powerful or coercive. Since it is undisputed that the state was under no legal compulsion to enact the 1978 unemployment

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

insurance legislation, the burdens of that legislation are not " mandates of ... the federal government."

In support of its contrary conclusion, the majority reasons as follows: (1) when article XIII B of the California Constitution was drafted and enacted, the Tenth Amendment to the United States Constitution had been construed to prohibit Congress from imposing costs on state and local governments; (2) as a result, virtually all federal laws imposing costs on state and local governments did so through "carrot and stick" incentive programs rather than by direct legal compulsion; and (3) the exemption for "mandates of ... the federal government" must be construed to encompass at least some of these incentive programs because otherwise it would be almost entirely superfluous. I find each of these points highly questionable, if not demonstratively unsound.

First, the Tenth Amendment has never been interpreted as entirely prohibiting the federal government from imposing costs on state and local government. Rather, *National League of Cities v. Usery* (1976) 426 U.S. 833 [49 L.Ed.2d 245, 96 S.Ct. 2465] defined an exception to the broad sweep of Congress's commerce clause authority. Under this exception, "traditional governmental functions" of state and local governments were protected from direct and intrusive federal regulation. (426 U.S. at p. 852 [49 L.Ed.2d at pp. 257-258].) As explained in ***81***Garcia v. San Antonio Metro. Transit Auth.* (1985) 469 U.S. 528, 538-547 [83 L.Ed.2d 1016, 1025-1032, 105 S.Ct. 1005], the result was an inconsistent patchwork of decisions upholding or striking laws depending on whether the regulated activities were perceived by the court as being traditionally associated with state or local government or constituting " attributes of state sovereignty." Thus, a significant number of laws imposing costs on state and local governments survived Tenth Amendment scrutiny even before the decision in *Garcia v. San Antonio Metro. Transit Auth., supra.* (See, e.g., *EEOC v. Wyoming* (1983) 460 U.S. 226 [75 L.Ed.2d 18, 103 S.Ct. 1054] [holding state and local government employee retirement policies subject to federal age discrimination regulations]; see generally, Skover, *"Phoenix Rising" and Federalism Analysis* (1986) 13 Hastings Const.L.Q. 271, 286-288.)More importantly, however, I see no reason to assume that the drafters of article XIII B intended that the federal mandate exemption would have broad application, encompassing a large number of federal programs. Rather, construing the exemption narrowly seems entirely consistent with the probable intent of those who drafted the provision.

The test proposed by the majority for identifying those incentive programs which qualify as "mandates of ... the federal government" will require an extensive factual inquiry into the practical consequences of noncompliance with the federal law. It will be burdensome to apply and its outcome will be difficult to predict. Besides being wholly unnecessary to resolution of this case, and violating the probable intent of the voters who enacted article XIII B of the California Constitution, [FN1] the majority's discussion of the federal mandate issue is certain to generate more difficulties than it resolves. ***82**

FN1 Those voters no doubt will be upset to learn that their tax dollars will be dissipated in litigation to determine such metaphysical questions as whether a decision to participate in a federal program was "truly voluntary."

County of Los Angeles v. Commission on State Mandates (2003) 110 Cal.App.4th 1176

C

County of Los Angeles v. Commission on State Mandates
Cal.App. 2 Dist.,2003.

Court of Appeal, Second District, Division 7, California.
COUNTY OF LOS ANGELES, Plaintiff and Respondent,
v.
COMMISSION ON STATE MANDATES, Defendant and Appellant;
Department of Finance, Real Party in Interest and Appellant.
No. B156870.

July 28, 2003.

Background: County petitioned for writ of mandate, seeking to vacate decision of the Commission on State Mandates which denied county's test claim for costs associated with statute requiring local law enforcement officers to participate in two hours of domestic violence training. The Superior Court, Los Angeles County, No. BS06497,Dzintra I. Janavs, J., granted the petition. Commission appealed.

Holding: The Court of Appeal, Muñoz (Aurelio), J., sitting by assignment, held that statute did not mandate any increased costs and thus Commission was not required to reimburse county for its costs.

Reversed with directions.

Under constitution section requiring state to pay for increased costs associated with state mandates, "costs" does not necessarily equal every increase in a locality's budget resulting from compliance with a new state directive; rather, the state must be attempting to divest itself of its responsibility to provide fiscal support for a program, or forcing a new program on a locality for which it is ill-equipped to allocate funding. FN* Judge of the Los Angeles Superior Court assigned by the Chief Justice pursuant to article VI, section 6 of the California Constitution.

A 1995 amendment to Penal Code section 13519 FN1 requires local law enforcement officers to participate in two hours of domestic violence training. The issue on appeal is whether this amendment resulted in a reimbursable state-mandated program within the meaning of article XIII B, section 6 of the California Constitution for the time spent by local law enforcement officers in such domestic violence training, although such officers were already required to spend 24 hours in continuing education training and the domestic violence training could be included within this total.

FN1. Hereafter section 13519.

This administrative mandamus proceeding was commenced by the County of Los Angeles (County) on a "test claim" filed with and denied by the ***1179** Commission on State Mandates (Commission) for the County's costs incurred pursuant to section 13519. The trial court found that California Constitution article XIII B, section 6 required the state to reimburse the County for domestic violence training because the County's needs and priorities might be detrimentally affected when the state took away two hours of training by mandating that two specific hours of training occur. The trial court remanded the proceedings to the Commission to determine the amount of costs actually incurred by the County. We reverse.

FACTUAL BACKGROUND AND PROCEDURAL HISTORY

Article XIII B, section 6 of the California Constitution provides: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service...." (Cal. Const., art. XIII B, § 6.) The Commission is charged with hearing and deciding local agency claims of entitlement to reimbursement under article XIII B, section 6. (Gov.Code, § 17551, subd. (a).) Pursuit of such a claim is the exclusive remedy for this purpose (Gov.Code, § 17552), but the Commission's decisions are subject to review by administrative mandamus, under Code of Civil Procedure section 1094.5. (Gov.Code, § 17559, subd. (b).) A "test claim" is "the first claim, **423 including claims joined or consolidated with the first claim, filed with the commission alleging that a particular statute or executive order imposes costs mandated by the state." (Gov.Code, § 17521; see also *Kinlaw v. State of California* (1991) 54 Cal.3d 326, 328-329, 331-333, 285 Cal.Rptr. 66, 814 P.2d 1308.)

In 1995, section 13519, subdivision (e) was amended to provide: "(e) Each law enforcement officer below the rank of supervisor who is assigned to patrol duties and would normally respond to domestic violence calls or incidents of domestic violence shall complete, every two years, an updated course of instruction on domestic violence that is developed according to the standards and guidelines developed pursuant to subdivision (d). The instruction required pursuant to this subdivision shall be funded from existing resources available for the training required pursuant to this section. It is the intent of the Legislature not to increase the annual training costs of local government." [FN2]

FN2. The currently enacted version of this provision is found at section 13519, subdivision (g), and reads, "Each law enforcement officer below the rank of supervisor who is assigned to patrol duties and would normally respond to domestic violence calls or incidents of domestic violence shall complete, every two years, an updated course of instruction on domestic violence that is developed according to the standards and guidelines developed pursuant to subdivision (d). The instruction required pursuant to this subdivision shall be funded from existing resources available for the training required pursuant to this section. It is the intent of the Legislature not to increase the annual training costs of local government entities." (Stats.1998, ch. 701, § 1, designated the paragraph following subd. (a) as subd. (b) and redesignated the remaining subdivisions accordingly; in redesignated subd. (c), inserted par. (5), listing the signs of domestic violence as an instruction topic, and redesignated pars. (5) to (16) as pars. (6) to (17).)

*1180 Penal Code section 13510, [FN3] et seq. requires the State Commission on Peace Officer Standards and Training (POST) to promulgate regulations establishing minimum state standards relating to physical, mental, and moral fitness, and minimum training standards for law enforcement officers. Compliance with POST's requirements is voluntary. (Pen.Code, § 13510 et seq.) POST has a certification program for peace officers specified in sections 13510 and 13522 and for the California Highway Patrol. (Pen.Code, §§ 13510.1, subds.(a)-(c), 13510.3.)

FN3. Penal Code section 13510, subdivision (a), provides in relevant part: "For the purpose of raising the level of competence of local law enforcement officers, [POST] shall adopt, and may from time to time amend, rules establishing minimum standards relating to physical, mental, and moral fitness that shall govern the recruitment of any city police officers, peace officer members of a county sheriff's office, marshals or deputy marshals of a municipal court, peace officer members of a county coroner's office...."

On or about December 26, 1996, the County filed a "test claim" [FN4] pursuant to Government Code

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

section 17522 with the Commission.[FN5] The test claim alleged that **424 neither local police officers nor their agencies were given any choice with respect to compliance with section 13519. However, in order to implement the training, the County was required to redirect its officers from their normal work in order to attend the two-hour domestic violence training. The County alleged this substitution of the work agenda of the state for that of the local government violated California Constitution article XIII B, section 6. Furthermore, the County pointed to language in *1181Penal Code section 13519, subdivision (e), providing that, "The instruction required pursuant to this subdivision shall be funded from existing resources available for the training required pursuant to this section. It is the intent of the Legislature not to increase the annual training costs of local government entities."

FN4. The test claim also challenged the incident-reporting requirements of Penal Code section 13730, which imposed a new program upon local law enforcement agencies to include in the domestic violence incident report additional information regarding the use of alcohol and controlled substances by the alleged abuser, and any prior domestic violence responses to the same address. The County did not contest the Commission's outcome relating to this portion of the test claim, and therefore this issue is not before us on appeal.

FN5. In 1984, the Legislature created a statutory procedure for determining whether a statute imposes state-mandated costs on a local agency within the meaning of California Constitution article XII B, section 6. (See Gov.Code, § 17500 et seq.) The local agency files a test claim with the Commission, which holds a public hearing and determines whether the statute mandates a new program or increased level of service. (Gov.Code, §§ 17521, 17551, 17555.) If the Commission finds that a claim is reimbursable, it then determines the amount of reimbursement. (Gov.Code, § 17557.) The local agency then follows statutory procedures to obtain reimbursement. (See Gov.Code, § 17558 et seq.) Where the Commission finds no reimbursable mandate, the local agency can challenge this finding by administrative mandate proceedings under Code of Civil Procedure section 1094.5. (See Gov.Code, § 17552 [these provisions "provide the sole and exclusive procedure by which a local agency ... may claim reimbursement for costs mandated by the state as required by Section 6"].)

The test claim alleged that although POST bore the cost of producing two-hour telecourses on domestic violence, POST did not provide for any local law enforcement salary reimbursement for attendance at any type of POST-certified training, including the state-mandated costs for domestic violence training. Adherence to POST standards is voluntary by local law enforcement agencies, but POST requires a minimum of 24 hours of training every two years, to be chosen from a menu of available courses. POST does not dictate the courses that must be taken. POST courses include training in, among other things: interviewing techniques for detectives, defensive weapons, CPR, conflict resolution, bicycle patrol, ritual crime and hate group offenders, vehicle pullover and approach, confessions, courtroom demeanor, electronic vehicle recovery systems, vehicle theft investigation, and cultural awareness.

The POST program gives local law enforcement agencies flexibility in choosing training programs to meet their differing needs. In addition to domestic violence training, certain other programs are legislatively mandated: dealing with the developmentally disabled/mentally ill training (implemented July 1992); high speed vehicle pursuits (implemented November 1994); first aid/CPR (a 21-hour initial course, with a 12-hour refresher

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

course every three years); missing persons (implemented January 1989); racial and cultural diversity (implemented August 1983); sexual harassment (implemented November 1994); and sudden infant death syndrome (implemented July 1990). The time requirements for these other required courses vary. Some elective courses require 40 hours to complete.

However, the County alleged because there were no existing resources available for the domestic violence training, the annual training costs of the County were increased as a result of section 13519. The County Sheriff's Department incurred costs of $170,351.45 for domestic violence training for the fiscal year 1996-1997.

In support of its test claim, the County submitted legislative materials relating to section 13519. These included: A July 5, 1995 memorandum in which the Assembly Committee on Appropriations stated that Senate Bill No. 132, proposing the changes **425 to 13519, understood the "training requirement could have significant costs to local law enforcement in terms of expense and public safety, as most departments will be forced to backfill for offices while the officers are being trained or will have to forego the *1182 backfilling and have fewer offices on patrol. Any monetary costs incurred by local law enforcement for the officer backfilling would be state-reimbursable." The Committee noted that, "Although this bill states that the costs of the additional domestic violence training be absorbed by POST within existing resources, the reality is that this bill would create additional non-absorbable costs to POST since POST will be unable to exclude one type of training in favor of the domestic violence training, and instead will have to add this training to their current curriculum. The current curriculum of POST training is just as important to the maintaining of public safety as is the additional domestic violence training."

In addition, the Department of Finance recognized the fiscal impact of section 13519 on local law enforcement agencies, and opposed the adoption of Senate Bill No. 132. Diane M. Cummins, Deputy Director of the State Department of Finance, wrote to Senator Diane Watson on April 20, 1995, that, "This bill also specifies that training required pursuant to this measure 'shall be funded from existing resources', as specified. In so specifying, this bill would also require law enforcement agencies to modify existing training programs by increasing training requirements. Finance believes this bill contains a local mandate without providing necessary funding, thereby being in conflict with the California Constitution, which requires the state to fund local mandate costs. Although there is no specific information available regarding the level of additional costs which would be imposed on law enforcement agencies, the Department of Finance is opposed to legislation which would result in additional General Fund expenditures, given the State's ongoing fiscal constraints." The Department of Finance recognized that, "Adding mandatory domestic violence training requirement would result in an additional unknown cost for specified state and local law enforcement agencies...."

Furthermore, Gretchen Fretter, Chair of the California Academy Directors' Association (an organization of training center directors and police academy managers throughout the state) wrote Senator Watson on March 9, 1995, to express the association's concerns with Senate Bill No. 132. Fretter's analysis indicated that the mandate would incur a $300,000 price tag for each training cycle. The California State Sheriffs' Association also wrote to express concerns about Senate Bill No. 132, including that POST estimated the domestic violence training would add costs to local agencies of at least $750,000 per year. Glen Fine, the Deputy Executive Director of POST, on July 11, 1997, wrote to the Department of Finance to inform it that POST understood that the author of Senate Bill No. 132 was aware of POST's training requirements of 24 hours every two years, and it was "the author's intent ... that domestic violence update training become a statutorily required priority for inclusion

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

within this 24 hours of training every two years."

*1183 POST issued a bulletin in February 1996 advising local law enforcement agencies of the new domestic violence training requirement.

The Department of Finance contended that the Legislature intended the domestic violence continuing education and training to be funded from existing resources. The department also contended that POST, which was charged with developing training**426 standards for local law enforcement agencies, provided over $21 million in existing state funds for domestic violence training. POST pointed out that the drafter of the statute recognized the 24 hours of continuing education every two years, and intended the domestic violence training to be a priority to be included within this 24-hour requirement.

At the hearing before the Commission on the test claim, representatives of the County testified that POST refused to pay for the programs, putting the burdens on local governments, and POST itself had estimated the annual cost of the program at $750,000. A representative of the Sheriff's Department (Captain Dennis Wilson) testified that of the 24 hours required, any combination of courses could be used to meet the requirement. However, inclusion of the domestic violence training would take away two of those hours of training, resulting in only 22 hours. The Sheriff's Department would conduct domestic violence training even in the absence of the mandate; indeed; the Sheriff's Department actually conducted about 72 hours of training per officer per year. There was no funding for any of this training. The Sheriff's Department has 8,200 sworn officers, and two hours of training per officer adds up to 16,400 hours, which translates to 10 full-time officers for a year. Without funding for the domestic violence training, the Sheriff's Department therefore would lose the time equivalent of 10 officers for a year. Taking officers off the street impacts upon crime.

Martha Zavala testified on behalf of the County that the domestic violence training could not merely be subsumed within the 24 hours already required. With the training mandates already required by POST which exceed the 24-hour minimum, adding the domestic violence training only further exceeds the minimum 24 hours. There is no room to carve it out. Meeting POST requirements is not really an option. Thus, both the Sheriff's Department and the County agree they are seeking reimbursement of the costs of the training and the cost of replacing the officers on the street while in training.

A representative of POST testified that what POST provides in reimbursement to local law enforcement agencies is a small percentage of the real costs incurred. Where the training involved is through a telecourse, POST provides no reimbursement. There has been no increase in POST's budget since the amendment to section 13519. About 30 of the courses provided by POST are mandated training.

*1184 A representative of the Department of Finance testified that the Department believed section 13519 did not create state-mandated reimbursable program because the legislation indicated it was the Legislature's intent not increase the training costs of local government, and the training could be fit within the existing 24-hour requirements.

The Commission's staff prepared an analysis in advance of the hearing which found against the County. The "Staff Analysis" pointed out that section 13519 was originally added by chapter 1609, Statutes of 1984.[FN6] Originally, the statute required**427 that POST develop and implement a basic course of instruction for the training of law enforcement officers in the handling of domestic violence complaints, with local law enforcement agencies encouraged, but not required, to provide updates. These provisions of the 1984 version were the subject of a test claim filed by the City of Pasadena in 1990. That claim was denied because the original statute did not require local agencies to implement or pay for a domestic violence training program, did not increase the minimum basic training course hours or advanced officer training hours,

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

and did not require local agencies to provide domestic violence training pursuant to the POST skills and knowledge standards.

> FN6. The history of section 13519 is as follows: Added by Statutes 1984, chapter 1609, section 2, pages 5711-5713. Amended by Statutes 1985, chapter 281, section 1, pages 1305-1306, effective July 26, 1985; Statutes 1989, chapter 850, section 3; Statutes 1991, chapter 912 (Sen. Bill No. 421), section 1, pages 4086-4088; Statutes 1993, chapter 1098 (Assem. Bill No. 1268), section 8, pages 6162-6163; Statutes 1995, chapter 965 (Sen. Bill No. 132), section 1, pages 7377-7380; Statutes 1998, chapter 606 (Sen. Bill No.1880), section 13; Statutes 1998, chapter 701 (Assem. Bill No. 2172), section 1; Statutes 1999, chapter 659 (Sen. Bill No. 355), section 4. The 1995 amendment, at issue here, rewrote subdivision (e), which prior to amendment read: "(e) Forty thousand dollars ($40,000) is appropriated from the Peace Officers Training Fund [POST] in augmentation of Item 8120-001-268 of the Budget Act of 1984, to support the travel, per diem, and associated costs for convening the necessary experts." (Stats.1993, ch. 1098, § 8, p. 6188.)

Legally, the Staff Analysis pointed out that in order for a statute to impose a reimbursable state-mandated program, the statutory language must (1) direct or obligate an activity or task upon local government entities, and (2) the required activity or task must be new or it must create an increased or higher level of service over the former required level of service. (See, e.g., *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56, 233 Cal.Rptr. 38, 729 P.2d 202.) The Staff Analysis concluded that section 13519 did impose a new activity or program upon local law enforcement agencies. However, because the language of the statute requiring that the instruction be funded from existing resources, it was an open question whether the program imposed *mandated* costs. Because POST's minimum requirements remained at 24 hours before and after enactment of section 13519, there were no increased training hours and costs associated with the domestic violence training course. Instead, the course should be accommodated or absorbed by ***1185** local law enforcement agencies within their existing resources available for training. Thus, the Staff Analysis recommended denial of the test claim.

After the public hearings were held, the Commission adopted the findings of the Staff Analysis. The Commission issued its own statement of decision which substantially adopted the findings of the Staff Analysis.

Subsequently, the County filed a petition for writ of mandate with the trial court, seeking vacation of the Commission's decision. The County argued that the domestic violence training constituted a state-mandated reimbursable program because it (1) was mandatory, while the POST certification training was optional; and (2) the only way local agencies could avoid the costs of the new program would be to redirect their efforts from the training they were already providing as part of POST training, thereby losing flexibility to design programs to suit their own needs.

The Commission argued that the County's focus on "redirected" manpower costs was misplaced. Instead, the focus should be on whether the local law enforcement agencies actually experience increased expenditure of their tax revenues. (See, e.g., *County of Sonoma v. Commission on State Mandates* (2000) 84 Cal.App.4th 1264, 1283, 101 Cal.Rptr.2d 784.) In *County of Sonoma,* the court stated that California Constitution article XIII B, section 6 was designed to prevent the state from forcing programs on local governments, and such a forced program is one which results in "increased actual expenditures****428** of limited tax proceeds that are counted against the local government's spending limit. Section 6, located within a measure aimed at

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

limiting expenditures, is expressly concerned with 'costs' incurred by local governments as a result of state-mandated programs, particularly when the costs of compliance with a new program restrict local spending in other areas." (*County of Sonoma,* at p. 1284, 101 Cal.Rptr.2d 784.) Because section 13519 did not require the County to incur "actual increased costs" because the domestic violence training could be subsumed within the 24-hour POST training requirement, no state reimbursement was required.

The Commission also argued the state had not required the County to incur increased training costs for salaries of officers to receive the two-hour training. POST's requirements did not change as a result of section 13519, and indeed, shortly after the enactment of section 13519, POST forwarded a bulletin to local law enforcement agencies suggesting they include domestic violence training within the 24-hour continuing training requirement.

***1186** The trial court heard argument, after which the trial court adopted its tentative statement of decision in which it noted that, "Although it may be reasonable in some or even most cases for a deputy to eliminate an unrequired two-hour elective in favor of the required domestic violence instruction, what about cases where the County's needs and priorities would be affected detrimentally, if two hours of electives were taken away? At what point would additional mandated courses result in increased costs? [¶] The record also shows that, for some deputies, other state-required training already amounts to 24 hours or more per two-year period. For these deputies, the two hours of mandated domestic violence training cannot be accommodated by giving up other training but must be added on, for added cost. It appears that, if domestic violence instruction is to be funded from existing resources on a deputy-by-deputy basis, the County clearly does incur increased costs." The trial court granted the petition, and remanded the matter for consideration of the exact amount of increased costs.

DISCUSSION

I. STANDARD OF REVIEW.

[1][2][3] The determination whether the statute here at issue established a mandate under California Constitution article XIII B, section 6, is a question of law. (*County of San Diego v. State of California* (1997) 15 Cal.4th 68, 109, 61 Cal.Rptr.2d 134, 931 P.2d 312.) Under Government Code section 17559,FN7 administrative mandamus is the exclusive means to challenge a decision of the Commission on a subvention claim. (*Redevelopment Agency v. Commission on State Mandates* (1997) 55 Cal.App.4th 976, 980, 64 Cal.Rptr.2d 270.) "Government Code section 17559 governs the proceeding below and requires that the trial court review the decision of the Commission under the substantial evidence standard. Where the substantial evidence test is applied by the trial court, we are generally confined to inquiring whether substantial evidence supports the court's findings and judgment. [Citation.] However, we independently review the superior court's legal ****429** conclusions about the meaning and effect of constitutional and statutory provisions. [Citation.]" (*City of San Jose v. State of California* (1996) 45 Cal.App.4th 1802, 1810, 53 Cal.Rptr.2d 521.)

> FN7. Government Code section 17559, subd. (b), provides: "A claimant or the state may commence a proceeding in accordance with the provisions of Section 1094.5 of the Code of Civil Procedure to set aside a decision of the commission on the ground that the commission's decision is not supported by substantial evidence. The court may order the commission to hold another hearing regarding the claim and may direct the commission on what basis the claim is to receive a rehearing."

***1187** II. SECTION 13519'S IMPOSITION OF A DOMESTIC VIOLENCE TRAINING COURT IS NOT A STATE-MANDATED PRO-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

GRAM WITHIN THE MEANING OF CONSTITUTION ARTICLE XIII B, SECTION 6 BECAUSE IT DOES NOT CONSTITUTE AN "INCREASED LEVEL OF SERVICE."

[4] The Commission essentially makes two arguments. First, it contends that the County did not incur "increased costs." Reimbursement to the County under Constitution article XIII B, section 6 is not required unless there is a showing of actual increased costs mandated by the state. (See, e.g., *County of Los Angeles v. State of California, supra,* 43 Cal.3d at pp. 54-55, 233 Cal.Rptr. 38, 729 P.2d 202; *City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 66-67, 266 Cal.Rptr. 139, 785 P.2d 522.) In *City of Sacramento,* the court explained that the statutory concept of "costs mandated by the state" and the constitutional concept of article XIII B, section 6, are identical. (*City of Sacramento v. State of California, supra,* 50 Cal.3d at p. 67, fn. 11, 266 Cal.Rptr. 139, 785 P.2d 522.) Because of this limited, rather than broad definition, of "costs mandated by the state," article XIII B, section 6 does not provide reimbursement for every single increased cost. Thus, the trial court's finding that reimbursement was required where a statute results in a "redirection of local effort" or a "detrimental change in a local agency's needs and priorities" is not supported by the law. Rather, it constitutes an inappropriate injection of an equitable standard into the analysis.

Secondly, the Commission argues that no "mandate" exists. To the contrary, substantial evidence supports its finding that section 13519 does not result in *increased* costs because nothing in the statute requires the County, or any other local law enforcement agency, to incur actual increased costs. The total number of hours required (the 24 minimum hours of POST training) did not increase because of the domestic violence training; rather, POST still requires 24 hours and in fact after the passage of section 13519, POST forwarded a bulletin to law enforcement agencies recommending that they include domestic violence training within the 24-hour continuing professional training requirement. Because the POST standards are voluntary, if a local law enforcement agencies adds two hours of domestic violence training to either the POST requirement or its own requirements, it is doing so at its own discretion.

In response, the County points out that the Commission's conclusion is based upon the erroneous premise that local law enforcement agencies could escape increased costs simply by dropping two hours of their existing POST training and substituting the new domestic violence training. However, the evidence in the legislative history indicates that this was not the intent of the Legislature when it was considering section 13519, nor was it the position of ***1188** the Department of Finance. The County also contends that local law enforcement agencies incur costs when they sacrifice their existing training programs for the new domestic violence training. Although POST does not dictate those courses for which a local law enforcement agency must offer training and POST does pay for much of the training material, most of the cost of POST training is borne by the local law enforcement agencies in the form of personnel costs while deputies spend 24 hours of work time receiving ****430** training. Furthermore, if a mere legislative directive to fund a new program with existing resources would let the state off the hook for reimbursement, then the constitutional rule of mandate reimbursement would be a nullity: any new state mandate can be funded by canceling other services. Because California Constitution article XIII B, section 6 was designed to prevent the elimination of the fiscal freedom of local governmental agencies to expend their limited available resources without being straightjacketed by state-mandated programs, the Commission's "within existing resources" rule would circumvent the purposes of article XIII B, section 6.

A. The Purposes of California Constitution Article XIII B, Section 6 Guide Our Analysis.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

[5] In 1978, the voters approved Proposition 13, which added article XIII A to the California Constitution. Article XIII A"imposes a limit on the power of state and local governments to adopt and levy taxes. [Citation.]" (*County of Fresno v. State of California* (1991) 53 Cal.3d 482, 486, 280 Cal.Rptr. 92, 808 P.2d 235.) In 1979, Proposition 4 added article XIII B to the Constitution, which imposed a complementary limit on governmental spending. (*San Francisco Taxpayers Assn. v. Board of Supervisors* (1992) 2 Cal.4th 571, 574, 7 Cal.Rptr.2d 245, 828 P.2d 147.) These two constitutional provisions "work in tandem, together restricting California government's power both to levy and to spend for public purposes." (*City of Sacramento v. State of California, supra,* 50 Cal.3d at p. 59, fn. 1, 266 Cal.Rptr. 139, 785 P.2d 522.)Their goal is to protect citizens from excessive taxation and government spending. (*County of Los Angeles v. State of California, supra,* 43 Cal.3d at p. 61, 233 Cal.Rptr. 38, 729 P.2d 202.)

[6] California Constitution article XIII B, section 6, provides in relevant part: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service." Article XIII B, section 6, prevents the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are "ill equipped" to assume increased financial responsibilities because of the taxing and spending limitations of articles XIII A and XIII B. (*County of Fresno v. State of California, supra,* 53 Cal.3d at p. 487, 280 Cal.Rptr. 92, 808 P.2d 235.) Section 6 thus requires the state "to pay for any new ***1189** governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. [Citation.]" (*Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, 1577, 15 Cal.Rptr.2d 547.)

[7][8][9][10][11][12][13] State mandate jurisprudence has established that in general, local agencies are not entitled to reimbursement of all increased costs mandated by state law, but only those resulting from a "new" program or an "increased level of service" imposed upon them by the state. (*Lucia Mar Unified School District v. Honig* (1988) 44 Cal.3d 830, 835, 244 Cal.Rptr. 677, 750 P.2d 318.) A "program" is defined as a program which carries out the "governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state." (*County of Los Angeles v. State of California, supra,* 43 Cal.3d at p. 56, 233 Cal.Rptr. 38, 729 P.2d 202.) A program is "new" if the local governmental entity had not previously been required to ****431** institute it. (*City of San Jose v. State of California, supra,* 45 Cal.App.4th at p. 1812, 53 Cal.Rptr.2d 521.) State mandates are requirements imposed on local governments by legislation or executive orders. (*County of Los Angeles v. State of California, supra,* 43 Cal.3d at p. 50, 233 Cal.Rptr. 38, 729 P.2d 202.) Since the purpose of California Constitution article XIII B, section 6 is to avoid governmental programs from being forced on localities by the state, programs which are not unique to the government do not qualify; the programs must involve the provision of governmental services. (*City of Sacramento v. State of California, supra,* 50 Cal.3d at p. 68, 266 Cal.Rptr. 139, 785 P.2d 522.) Further, in order for a state mandate to be found, the local governmental entity must be required to expend the proceeds of its tax revenues. (*Redevelopment Agency of the City of San Marcos v. Commission on State Mandates, supra,* 55 Cal.App.4th at p. 986, 64 Cal.Rptr.2d 270.) Lastly, there must be compulsion to expend revenue. (*City of Merced v. State of California* (1984) 153 Cal.App.3d 777, 780, 783, 200 Cal.Rptr. 642 [revisions to Code of Civil Procedure required entities exercising the power of eminent domain to compensate businesses for lost goodwill did not create state mandate, because the power of eminent domain was discretionary, and need not be exercised at all]; *Department of Finance v. Com-*

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

mission on State Mandates (2003) 30 Cal.4th 727, 134 Cal.Rptr.2d 237, 68 P.3d 1203.) In *Lucia Mar*, the court explained article XIII B, section 6. "The intent of the section would plainly be violated if the state could, while retaining administrative control of programs it has supported with state tax money, simply shift the cost of the programs to local government on the theory that the shift does not violate section 6 of article XIIIB because the programs are not 'new.' " (*Lucia Mar Unified School District v. Honig, supra,* 44 Cal.3d at p. 836, 244 Cal.Rptr. 677, 750 P.2d 318.)

However, in spite of all of the above, "increased level of service" is not defined in California Constitution article XIII B, section 6 or in the ballot materials. ***1190**(*Long Beach Unified School District v. State of California* (1990) 225 Cal.App.3d 155, 173, 275 Cal.Rptr. 449.) Furthermore, "Although a law is addressed only to local governments and imposes new costs on them, it may still not be a reimbursable state mandate." (*City of Richmond v. Commission on State Mandates* (1998) 64 Cal.App.4th 1190, 1197, 75 Cal.Rptr.2d 754.)

In *City of San Jose v. State of California, supra,* 45 Cal.App.4th 1802, 53 Cal.Rptr.2d 521,Government Code section 29550 authorized counties to charge cities and other local entities for costs of booking into county jails persons who had been arrested by employees of the cities and other entities. (45 Cal.App.4th at p. 1806, 53 Cal.Rptr.2d 521.) The State argued the measure merely reallocated booking costs, no shifting from state to local entities, therefore not within article XIII B, section 6. (45 Cal.App.4th at p. 1806, 53 Cal.Rptr.2d 521.) The city contended counties function as agents of the state, charged with enforcement of state's criminal laws; detaining and booking integral part of this process. (*Id.* at p. 1808, 53 Cal.Rptr.2d 521.) The Commission found maintenance of jails and detention of prisoners, had always been a local matter, and cities and counties were both forms of local government; therefore, there was no shift in costs between *state* and local entities.

Furthermore, the terms of Government Code section 29550 were discretionary, not mandatory. (*City of San Jose v. State of California, supra,* 45 Cal.App.4th at pp. 1808-1809, 53 Cal.Rptr.2d 521.) *City of San Jose* found no cost had been improperly transferred to the local government ****432** entities because the cost of capture, detention and housing of persons charged with crimes had traditionally been borne by the counties. (*Id.* at p. 1813, 53 Cal.Rptr.2d 521.) *City of San Jose* rejected the cities' argument that the county was acting as agent of the state because it was "not supported by recent case authority, nor does it square with definitions particular to subvention analysis." (*Id.* at p. 1814, 53 Cal.Rptr.2d 521.) California Constitution article XIII B treated cities and counties alike; Government Code section 17514 defines "costs mandated by the state" to mean any increased costs that a "local agency" is required to incur. Because both cities and counties were to be treated alike for purposes of subvention analysis, nothing in article XIII B, section 6 prohibits the shifting of costs between local government entities. (*City of San Jose,* at p. 1815, 53 Cal.Rptr.2d 521.)

In *County of Los Angeles v. State of California, supra,* 43 Cal.3d 46, 233 Cal.Rptr. 38, 729 P.2d 202,Labor Code sections 4453, 4453.1 and 4460, increased the maximum weekly wage upon which temporary and permanent disability indemnity was computed from $231 to $262.50 per week. In addition, Labor Code section 4702 increased certain death benefits from $55,000 to $75,000. The trial court held that because the changes did not exceed costs of living changes, they did not create an "increased level of service." (43 Cal.3d at p. 52, 233 Cal.Rptr. 38, 729 P.2d 202.) The County argued the terms of California Constitution article XIII B, section 6, do not contain an exception for increased costs which do not exceed the inflation rate. (43 Cal.3d at p. 53, 233 Cal.Rptr. 38, 729 P.2d 202.) The County relied on certain repealed Revenue and ***1191** Taxation Code definitions which had equated any program which imposed "additional costs" as being within the constitutional provision

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

of "increased level of service." (*Id.* at p. 53, 233 Cal.Rptr. 38, 729 P.2d 202.) *County of Los Angeles* rejected this interpretation. "If the Legislature had intended to continue to equate 'increased level of service' with 'additional costs,' then the provision would be circular: 'costs mandated by the state' are defined as 'increased costs' due to an 'increased level of service,' which, in turn, would be defined as 'additional costs.' " (*Id.* at p. 55, 233 Cal.Rptr. 38, 729 P.2d 202.) An examination of the language of California Constitution article XIII B, section 6 shows that "by itself, the term 'higher level of service' is meaningless." *Id.* at p. 56, 233 Cal.Rptr. 38, 729 P.2d 202. Rather, it must be read in conjunction with the phrase " 'new program.' " *Ibid.* "Thus read, it is apparent that the subvention requirement for increased or higher level of service is directed to state mandated increases in the services provided by local agencies in existing 'programs.' " (*Ibid.*) By " 'program,' " the voters meant "programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, imposed unique requirements on local governments and do not apply generally to all residents and entities in the state." (*Ibid.*) 233 Cal.Rptr. 38, 729 P.2d 202.) The ballot materials provided that article XIII B, section 6 would "not allow the state government to *force programs* on local governments without the state paying for them." (43 Cal.3d at p. 56, 233 Cal.Rptr. 38, 729 P.2d 202.) "Laws of general application are not passed by the Legislature to 'force' programs on localities." (*Id.* at p. 57, 233 Cal.Rptr. 38, 729 P.2d 202.) In light of this, "[t]he language of section 6 is far too vague to support an inference that it was intended that each time the Legislature passes a law of general application it must discern the likely effect on local governments and provide an appropriation to pay **433 for any incidental increase in local costs.... If the electorate had intended such a far-reaching construction of section 6, the language would have explicitly indicated that the word 'program' was being used in such a unique fashion." (*Id.* at p. 57, 233 Cal.Rptr. 38, 729 P.2d 202.) Therefore, there was no need to pay for increase in worker's compensation, because it is not a program administered by local agencies to provide service to the general public. Local government entities are indistinguishable in this respect from private employers. (*Id.* at pp. 57-58, 233 Cal.Rptr. 38, 729 P.2d 202.)

In *City of Sacramento v. State of California, supra,* 50 Cal.3d 51, 266 Cal.Rptr. 139, 785 P.2d 522, chapter 2 of Statutes of 1978 extended mandatory coverage under the state's unemployment insurance laws to include state and local governments and nonprofit organizations. *City of Sacramento* held there was no obligation on the part of the state to provide funds because there was no "unique" obligation imposed upon local governments, nor was there any requirement of new or increased governmental services. (50 Cal.3d at p. 57, 266 Cal.Rptr. 139, 785 P.2d 522.) As the court stated, the measure was adopted to conform California's system to federal laws. (*Id.* at p. 58, 266 Cal.Rptr. 139, 785 P.2d 522.) Because the measure required local governments to provide unemployment benefits to their own employees, the state had not compelled provision of a new or increased level of service to the public at the local level. Rather, it had merely required local government to provide the same benefits as private **1192** employers. (*Id.* at p. 67, 266 Cal.Rptr. 139, 785 P.2d 522.) The purpose of California Constitution article XIII B, section 6 was to avoid governmental programs from being forced on localities by the state: Therefore, programs which are not unique to the government do not qualify. (50 Cal.3d at p. 67, 266 Cal.Rptr. 139, 785 P.2d 522.)The benefits at issue here have nothing to do with the provision of governmental services, and are therefore not within the scope of section 6. (50 Cal.3d at p. 68, 266 Cal.Rptr. 139, 785 P.2d 522.)

In *Lucia Mar Unified School District v. Honig, supra,* 44 Cal.3d 830, 244 Cal.Rptr. 677, 750 P.2d 318,Education Code section 59300 required school districts to contribute part of the cost of educating pupils from the district at state schools for the severely handicapped. *Lucia Mar* held section

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

59300 constituted a "new" program of higher level of service because cost of program had been shifted from the state to a local entity. "The intent of the section would plainly be violated if the state could, while retaining administrative control of programs it has supported with state tax money, simply shift the cost of the programs to local government on the theory that the shift does not violate section 6 of [California Constitution] article XIIIB because the programs are not 'new.' " (44 Cal.3d at p. 836, 244 Cal.Rptr. 677, 750 P.2d 318.)

On the other hand, in *County of San Diego v. State of California, supra,* 15 Cal.4th 68, 61 Cal.Rptr.2d 134, 931 P.2d 312, pursuant to 1982 legislation, the state withdrew from counties Medi-Cal funding for medically indigent persons (MIP's). (*Id.* at pp. 79-80, 61 Cal.Rptr.2d 134, 931 P.2d 312.) To offset this change in coverage, the state set up an account as a mechanism to transfer state funds to counties to pay for Medi-Cal expenses, and sufficient funds had been available in this account to enable the state to fully fund San Diego County's Medi-Cal costs. (*Id.* at p. 80, 61 Cal.Rptr.2d 134, 931 P.2d 312.) However, in fiscal year 1990-1991, insufficient funds were available. (*Ibid.*) The state argued that no mandate for reimbursement existed because the counties had always borne the responsibility of paying for indigent medical care pursuant to Welfare & Institutions Code section 17000. (*County of San Diego,* at pp. 91-92, 61 Cal.Rptr.2d 134, 931 P.2d 312.) In finding ****434** reimbursement was mandated, the Supreme Court found that at the time California Constitution article XIII B, section 6 was enacted, the state was fully funding Medi-Cal for MIP's and the County bore no responsibility for those costs. (*County of San Diego,* at p. 93, 61 Cal.Rptr.2d 134, 931 P.2d 312.) Thus, in enacting Medi-Cal, the Legislature had shifted the cost of indigent medical care from the counties to the state. (*Id.* at pp. 96-97, 61 Cal.Rptr.2d 134, 931 P.2d 312.) Given this background, the Legislature excluded MIP's from Medi-Cal, knowing full well that it would trigger the counties' obligation to pay for medical care as providers of last resort. (*Id.* at p. 98, 61 Cal.Rptr.2d 134, 931 P.2d 312.) Therefore, the 1982 legislation "mandated a ' "new program" ' on counties by 'compelling them to accept financial responsibility in whole or in part for a program,' i.e., medical care for adult MIP's, 'which was funded entirely by the state before the advent of article XIII B.' " (*County of San Diego v. State of California, supra,* 15 Cal.4th 68 at p. 98, 61 Cal.Rptr.2d 134, 931 P.2d 312, citing *Lucia Mar Unified School District v. Honig, supra,* 44 Cal.3d at p. 836, 244 Cal.Rptr. 677, 750 P.2d 318.) Otherwise, " 'County taxpayers would be forced to accept new taxes or see the county ***1193** forced to cut existing programs further....' " (*County of San Diego v. State of California, supra,* 15 Cal.4th 68 at p. 98, 61 Cal.Rptr.2d 134, 931 P.2d 312.)

The Commission relies heavily on *County of Sonoma v. Commission on State Mandates, supra,* 84 Cal.App.4th 1264, 101 Cal.Rptr.2d 784. In *County of Sonoma,* the challenged legislation added section 97.03 to the Revenue and Taxation Code, and reduced the amount of property tax revenue to be allocated to local government pursuant to a formula, allocating an equal portion to a "Educational Revenue Augmentation Fund (ERAF)" for distribution to school districts. (84 Cal.App.4th at pp. 1269-1270, 1275, 101 Cal.Rptr.2d 784.) The net effect of the legislation was to decrease counties' tax revenues, although school revenues remained stable, and satisfied the constitutional necessity of maintaining a minimum level of funding for schools pursuant to California Constitution article XIV, section 8. (84 Cal.App.4th at p. 1276, 101 Cal.Rptr.2d 784.) In *County of Sonoma,* the County argued that the reallocation of tax revenues constituted a state-mandated cost of a new program. (*Id.* at p. 1276, 101 Cal.Rptr.2d 784.) The court held that section 6 subvention was limited to "increases in actual costs." Because none of the County's tax revenues were expended, the legislation did not come within section 6. "Proposition 4 [the initiative enacting article XIII B] was aimed at controlling and capping government spending, not curbing changes in revenue allocations. Section 6 is an ob-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

vious [complement] to the goal of Proposition 4 in that it prevents the state from forcing extra programs on local governments in a manner that negates their careful budgeting of expenditures. A forced program that would negate such planning is one that results in increased actual expenditures of limited tax proceeds that are counted against the local government's spending limit. Section 6, located within a measure aimed at limiting expenditures, is expressly concerned when 'costs' incurred by local government as a result of state-mandated programs, particularly with the costs of compliance with a new program *restrict local spending in other areas.*" (84 Cal.App.4th at pp. 1283-1284, 101 Cal.Rptr.2d 784 (emphasis added).)

County of Sonoma discerned a further requirement of California Constitution article XIII B, section 6: that the costs incurred must involve programs previously funded exclusively by the state. In imposing this limitation, *County of Sonoma* relied on language in ****435***County of San Diego v. State of California, supra,* 15 Cal.4th 68, 61 Cal.Rptr.2d 134, 931 P.2d 312 that "section 6 prohibits the state from shifting to counties the costs of state programs for which the state assumed complete financial responsibility before adoption of section 6."(*County of San Diego v. State of California, supra,* 15 Cal.4th 68 at p. 99, fn. 20, 61 Cal.Rptr.2d 134, 931 P.2d 312.) *County of Sonoma* determined that because the statute at issue only involved a reallocation of funds between entities already jointly responsible for providing a service (education), no state-mandated reimbursable program existed. (*County of Sonoma v. Commission on State Mandates, supra,* 84 Cal.App.4th at p. 1289, 101 Cal.Rptr.2d 784.)

[14][15][16] ***1194** Based upon the principles discernable from the cases discussed, we find that in the instant case, the legislation does not mandate a "higher level of service." In the case of an existing program, an increase in existing costs does not result in a reimbursement requirement. Indeed, "costs" for purposes of California Constitution article XIII B, section 6, does not equal every increase in a locality's budget resulting from compliance with a new state directive. Rather, the state must be attempting to divest itself of its responsibility to provide fiscal support for a program, or forcing a new program on a locality for which it is ill-equipped to allocate funding.

We agree that POST certification is, for all practical purposes, not a "voluntary" program and therefore the County must, in order to comply with section 13519, add domestic violence training to its curriculum. POST training and certification is ongoing and extensive, and local law enforcement agencies may chose from a menu of course offerings to fulfill the 24-hour requirement. Adding domestic violence training obviously may displace other courses from the menu, or require the adding of courses. Officer downtime will be incurred. However, merely by adding a course requirement to POST's certification, the state has not shifted from itself to the County the burdens of state government. Rather, it has directed local law enforcement agencies to reallocate their training resources in a certain manner by mandating the inclusion of domestic violence training.

Furthermore, the state has not shifted from itself the cost of a program previously administered and funded by the state. Instead, the state is requiring certain courses to be placed within an already existing framework of training. This loss of "flexibility" does not, in and of itself, require the County to expend funds that previously had been expended on the POST program by the state. Instead, "[t]he purpose for which state subvention of funds was created, to protected local agencies from having the state transfer its cost of government from itself to the local level, is therefore not brought into play" by a directive that POST-certified studies include domestic violence training. (*Redevelopment Agency of the City of San Marcos v. Commission on State Mandates, supra,* 55 Cal.App.4th at p. 986, 64 Cal.Rptr.2d 270.) Any increased costs are merely "incidental" to the cost of administering the POST

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

certification.

[17][18] While we are mindful that legislative disclaimers, findings and budget control language are not determinative to a finding of a state-mandated reimbursable program (*Carmel Valley Fire Protection District v. State of California* (1987) 190 Cal.App.3d 521, 541, 234 Cal.Rptr. 795), our interpretation is supported by the hortatory statutory language that, "The instruction required pursuant to this subdivision shall be funded from existing resources available for the training required pursuant to this section. It is the intent of the Legislature not to increase ****436** the annual training costs of local ***1195** government entities." (§ 13519.) Thus, while the County may lose some flexibility in tailoring its training programs, such loss of flexibility does not rise to the level of a state-mandated reimbursable program because the loss of flexibility is incidental to the greater goal of providing domestic violence training. Every increase in cost that results from a new state directive does not automatically result in a valid subvention claim where, as here, the directive can be complied with by a minimal reallocation of resources within the entity seeking reimbursement. Thus, while there may be a mandate, there are no increased costs mandated by section 13519.

DISPOSITION

The judgment of the trial court is reversed. The trial court is directed to enter a new and different judgment denying the County's petition for writ of mandate and reinstating the findings of the Commission.

County of Los Angeles v. Commission on State Mandates (2007) 150 Cal.App.4th 898

C

County of Los Angeles v. Commission on State Mandates
Cal.App. 2 Dist.,2007.

Court of Appeal, Second District, Division 3, California.
COUNTY OF LOS ANGELES et al., Plaintiffs and Appellants,
v.
COMMISSION ON STATE MANDATES, Defendant and Appellant;
Regional Water Quality Control Board, Los Angeles Region, Real Party in Interest and Respondent.
City of Artesia, etc., et al., Plaintiffs and Appellants,
v.
Commission on State Mandates, Defendant and Appellant;
Regional Water Quality Control Board, Los Angeles Region, Real Party in Interest and Respondent.
No. B183981.

May 10, 2007.

Background: County and cites presented test claims to California Commission on State Mandates, seeking reimbursement, pursuant to constitutional requirement for subvention arising from a state mandate, for carrying out obligations under National Pollutant Discharge Elimination System (NPDES) Permit issued by Regional Water Quality Control Board. Commission would not adjudicate claims on the ground that subvention was precluded by statute. County and cities sued Commission, seeking an order requiring State to reimburse them for carrying out new obligations, along with other relief. Commission and county and cities filed cross-motions for judgment on the pleadings. The Superior Court, Los Angeles County, Nos. BS089769 and BS089785,Victoria G. Chaney, J., entered partial grant of cross-motions. Trial court also granted in part the petitions by county and cities for a writ of mandate directing Commission to consider the test claims and determine whether county and cities were entitled to reimbursement. Commission appealed and county and cities cross-appealed.

Holdings: The Court of Appeal, Aldrich, J., held that
(1) Commission forfeited its statute of limitations defense based on failure to raise it in trial court, and
(2) question of whether obligations constituted federal or state mandates presented factual issues that had to be addressed in the first instance by Commission.

Affirmed.

*903 INTRODUCTION

The California Commission on State Mandates (the Commission) appeals from the judgment entered following the partial grant of cross-motions for judgment on the pleadings. The County of Los Angeles, the Los Angeles County Flood Control District, and the Cities of Commerce, Carson, Downey, Hawaiian Gardens, Montebello, Santa Fe Springs, Signal Hill, Artesia, Beverly Hills, La Mirada, Monrovia, Norwalk, Rancho Palos Verdes, San Marino and Westlake Village (collectively, County/Cities) filed a cross-appeal from the judgment.

In 2001, the Regional Water Quality Control Board (Regional Water Board), Los Angeles Region, issued a National Pollutant Discharge Elimination System (NPDES) Permit for municipal stormwater and urban runoff discharges which obligated County/Cities to inspect industrial, commercial ***904** and construction water treatment facilities (which obligation County/Cities claim the State previously performed) and to install and maintain trash receptacles at transit stops.

County/Cities presented "test claims" [FN1] to the Executive Director of the Commission****765** seeking reimbursement for carrying out these obligations pursuant to the constitutional requirement for subvention arising from a state mandate (Cal. Const., art. XIII B, § 6). The Executive Director returned the claims unadjudicated, because they did not involve an executive order under section 17516 of the Government Code (Section 17516c). In denying the appeals of County/Cities, the Commission noted it was without authority to declare a statute unconstitutional and concluded that Section 17516c excludes from the subvention requirement any order, which includes a permit, issued by the Regional Water Boards of the State Water Resources Control Board (State Water Board).

> FN1. " 'Test claim' means the first claim filed with the commission alleging that a particular statute or executive order imposes costs mandated by the state." (Gov.Code, § 17521.)

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Section 6 of article XIII B of the California Constitution (article XIII B, section 6) provides in pertinent part: "Whenever the Legislature or *any state agency* mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service...." (Italics added.)

As we shall discuss, Section 17516c is unconstitutional to the extent it exempts Regional Water Boards from the constitutional state mandate subvention requirement. Its creation of an exception for Regional Water Boards, which are state agencies, contravenes the plain, unequivocal, and all-inclusive reference to "any state agency" in article XIII B, section 6. Moreover, a contrary conclusion is not compelled by virtue of the fact that Section 17516c essentially mirrors the language of section 2209, subdivision (c) (§ 2209(c)) of the Revenue and Taxation Code. A statute cannot trump the constitution.

We decline to consider the Commission's new claim that the constitutional challenge to Section 17516c by County/Cities is barred by the 90-day limitation period of section 341.5 of the Code of Civil Procedure. This statute of limitations defense, which should have been raised before the trial court, is not cognizable on this appeal.

***905** The Commission urges that should this court conclude Section 17516c is unconstitutional, the appropriate remedy is to afford the Commission the opportunity to pass on the merits of the subject test claims on the issues of whether: (1) the subject permit qualifies as a state mandated program under article XIII B, section 6; (2) the permit amounts to a new program or higher level of service; and (3) the permit imposes costs on local entities (Gov.Code, §§ 17514, 17556). We find its position persuasive.

The cross-appeal filed by County/Cities is premised on the theory that if subvention of funds from the Commission is foreclosed by Section 17516c, County/Cities are entitled to pursue an independent action against the Regional Water Board, Los Angeles Region (LA Regional Water Board). This cross-appeal, which is simply protective in nature, is moot.

In sum, we uphold the trial court's issuance of a writ of mandate directing the Commission to set aside its decisions affirming its Executive Director's rejections of the subject test claims and to consider fully these test claims and determine whether County/Cities are entitled to reimbursement without consideration of Section 17516c, and we affirm the judgment in its entirety.

BACKGROUND

1. *Article XIII B, section 6, Subvention of Funds for State Mandates*

"The electorate approved Proposition 4 in 1979, thus adding article XIII B to the ****766** state Constitution. While the earlier Proposition 13 limited the state and local governments' power to increase taxes (see Cal. Const., art. XIII A, added by initiative measure in Primary Elec. (June 6, 1978)), Proposition 4, the so-called 'Spirit of 13,' imposed a complementary limit on the rate of growth in governmental spending." (*San Francisco Taxpayers Assn. v. Board of Supervisors* (1992) 2 Cal.4th 571, 574, 7 Cal.Rptr.2d 245, 828 P.2d 147.) This measure also "provided [for] reimbursement to local governments for the costs of complying with certain requirements mandated by the state." (*Long Beach Unified Sch. Dist. v. State of California* (1990) 225 Cal.App.3d 155, 172, 275 Cal.Rptr. 449.)

"[V]oters were told that section 6 of Proposition 4 was intended to prevent state government attempts 'to force programs on local governments without the state paying for them.' (Ballot Pamp., Special Statewide Elec. [(Nov. 6, 1979)] p. 18.)" (*County of Sonoma v. Commission on State Mandates* (2000) 84 Cal.App.4th 1264, 1282, 101 Cal.Rptr.2d 784; see also, *County of Los Angeles v. State of*

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

California (1987) 43 Cal.3d 46, 56, 233 Cal.Rptr. 38, 729 P.2d 202 [intent was not all local costs arising from compliance with state law to be reimbursable; rather, intent was to prevent "the perceived ***906** attempt by the state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services which the state believed should be extended to the public"].)

"Section 6 was included in article XIII B in recognition that article XIII A of the Constitution severely restricted the taxing powers of local governments. [Citation.] The provision was intended to preclude the state from shifting financial responsibility for carrying out governmental functions onto local entities that were ill equipped to handle the task. [Citations.] Specifically, it was designed to protect the tax revenues of local governments from state mandates that would require expenditure of such revenues. Thus, although its language broadly declares that the 'state shall provide a subvention of funds to reimburse ... local government for the costs [of a state-mandated new] program or higher level of service,' read in its textual and historical context section 6 of article XIII B requires subvention only when the costs in question can be recovered *solely from tax revenues.*" (*County of Fresno v. State of California* (1991) 53 Cal.3d 482, 487, 280 Cal.Rptr. 92, 808 P.2d 235, italics original; see also, *Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 836, fn. 6, 244 Cal.Rptr. 677, 750 P.2d 318 [a reimbursement requirement was "enshrined in the Constitution ... to provide local entities with the assurance that state mandates would not place additional burdens on their increasingly limited revenue resources"].)

Article XIII B, section 6 provides: "(a) Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service, except that the Legislature may, but need not, provide such a subvention of funds for the following mandates. [¶] (1) Legislative mandates requested by the local agency affected. [¶] (2) Legislation defining a new crime or changing an existing definition of a crime. [¶] (3) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975."

[1] " 'Subvention' generally means a grant of financial aid or assistance, or a ****767** subsidy. [Citation.] As used in connection with state-mandated costs, the basic legal requirements of subvention can be easily stated; it is in the application of the rule that difficulties arise.

[2][3][4] "Essentially, the constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. [Citation.] This does not mean that the state is required to ***907** reimburse local agencies for any incidental cost that may result from the enactment of a state law; rather, the subvention requirement is restricted to governmental services which the local agency is required by state law to provide to its residents. [Citation.] The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agencies. [Citation.] Reimbursement is required when the state 'freely chooses to impose on local agencies *any* peculiarly "governmental" cost which they were not previously required to absorb.' [Citation, italics in original.]" (*Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, at 1577-1578, 15 Cal.Rptr.2d 547.)

The subvention requirement of article XIII B, section 6 is triggered if "the Legislature or any state agency" mandates a new program or higher level of service. (Art. XIII B, § 6.) Such requirement is inapplicable where the additional costs on local governments are imposed by a federal mandate, i.e., the federal government. Article XIII B, section 9, sub-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

division (b), defines federally mandated appropriations as those "required to comply with mandates of the courts or the federal government which, *without discretion,* require an expenditure for additional services or which *unavoidably make the provision of existing services more costly.*" FN2 (Italics added.)

> FN2. "In 1980, after the adoption of article XIII B, [the Legislature] amended the statutory definition of 'costs mandated by the federal government' to provide that these include 'costs resulting from enactment of a state law or regulation where failure to enact such law or regulation to meet specific federal program or service requirements would result in *substantial monetary penalties* or *loss of funds* to *public or private persons* in the state....' (Rev. & Tax.Code, § 2206, italics added; Stats.1980, ch. 1256, § 3, p. 4247.)" (*City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 75, 266 Cal.Rptr. 139, 785 P.2d 522.)

There is no precise formula or rule for determining whether the "costs" are the product of a federal mandate. Our Supreme Court explained: "Given the variety of cooperative federal-state-local programs, we here attempt no final test for 'mandatory' versus 'optional' compliance with federal law. A determination in each case must depend on such factors as the nature and purpose of the federal program; whether its design suggests an intent to coerce; when state and/or local participation began; the penalties, if any, assessed for withdrawal or refusal to participate or comply; and any other legal and practical consequences of nonparticipation, noncompliance, or withdrawal. Always, the courts and the Commission must respect the governing principle of article XIII B, section 9(b): neither state nor local agencies may escape their spending limits when their participation in federal programs is truly voluntary." (*City of Sacramento v. State of California, supra,* 50 Cal.3d at p. 76, 266 Cal.Rptr. 139, 785 P.2d 522.)

2. *Existence of State Mandate Matter for the Commission*

Whether a particular cost incurred by a local government arises from carrying out a state mandate for which subvention is required under article XIII B, section 6, is a matter for the Commission to determine in the first instance.

908** A local government initiates the process for subvention under article XIII B, section 6 by filing a claim with the Commission.*768** (gov.code, § 17521; cf. *county of san diego v. state of california* (1997) 15 Cal.4th 68, 89, 61 Cal.Rptr.2d 134, 931 P.2d 312 [futility exception to exhaustion of administrative remedies doctrine applicable to failure to file claim before Commission].) The initial claim is referred to as a "test claim." (Gov.Code, § 17521.)

"The Legislature enacted Government Code sections 17500 through 17630 to implement article XIII B, section 6. (Gov.Code, § 17500.)" (*County of Fresno v. State of California, supra,* 53 Cal.3d at p. 484, 280 Cal.Rptr. 92, 808 P.2d 235.) The provisions of Government Code sections 17500 et seq."provide the sole and exclusive procedure by which a local agency ... may claim reimbursement for costs mandated by the state as required by"article XIII B, section 6. (Gov.Code, § 17552.)

"It created a 'quasi-judicial body' (*ibid.*) called the Commission on State Mandates ... ([Gov.Code], § 17525) to 'hear and decide upon [any] claim' by a local government that the local government 'is entitled to be reimbursed by the state for costs' as required by article XIII B, section 6. (Gov.Code, § 17551, subd. (a).) It defined 'costs' as 'costs mandated by the state'-'any increased costs' that the local government 'is required to incur ... as a result of any statute ..., or any executive order implementing any statute ..., which mandates a new program or higher level of service of any existing program' within the meaning of article XIII B, section 6. (Gov.Code, § 17514.) Finally, in section 17556(d)

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

it declared that 'The commission shall not find costs mandated by the state ... if, after a hearing, the commission finds that' the local government 'has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.' "(*County of Fresno v. State of California, supra,* 53 Cal.3d at p. 484, 280 Cal.Rptr. 92, 808 P.2d 235.)

3. *Regional Water Board Order Not "Executive Order"*

Section 17516c defines, in pertinent part, an " '[e]xecutive order' [as] any order, plan, requirement, rule, or regulation issued by ... [a]ny agency ... of state government[,]' " except an " '[e]xecutive order' does not include any order, plan, requirement, rule, or regulation issued by the State Water ... Board or by any regional water ... board pursuant to Division 7 (commencing with Section 13000) of the Water Code." [FN3](Added by Stats.1984, ch. 1459, § 1.)

> FN3. Section 17516c further provides: "It is the intent of the Legislature that the State Water ... Board and regional water ... boards will not adopt enforcement orders against publicly owned dischargers which mandate major waste water treatment facility construction costs unless federal financial assistance and state financial assistance pursuant to the Clean Water Bond Act of 1970 and 1974, is simultaneously made available. 'Major' means either a new treatment facility or an addition to an existing facility, the cost of which is in excess of 20 percent of the cost of replacing the facility."

LA Regional Water Board argues the trial court's ruling sustaining its demurrer to the fourth cause of action for a writ of mandate directing it to delete the subject two obligations under the Permit as violative of section 17516 should be upheld, because section 17516"applies to construction of major waste treatment facilities, not trash receptacles or inspections." This analysis, however, is inconsistent with the plain language of section 17516 in its entirety.

*909 In light of the above definition, the subject permit issued by an order of the LA Regional Water Board cannot constitute an "executive order implementing any statute[,] ... which mandates a new program or higher level of service of an existing program within the meaning of" the **769 article XIII B, section 6 requirement of subvention of funds to local governments for carrying out a state mandate. (Gov.Code, § 17514.)

4. *Procedural Posture*

LA Regional Water Board issued Order No. 01-182, which adopted NPDES Permit No. CAS004001 (Permit). This Permit imposed two obligations on County/Cities for the purpose of regulating municipal stormwater and urban runoff discharges in Los Angeles County. The first required County/Cities to inspect industrial, commercial and construction sites to ensure compliance with the law, and the other required County/Cities to install and maintain trash receptacles at transit stops.

County/Cities filed four test claims, i.e., Test Claims 03-TC-04, 03-TC-19, 03-TC-20, and 03-TC-21, seeking reimbursement of costs for carrying out these obligations. The Executive Director rejected these test claims as excluded from subvention pursuant to Section 17516c.

In the administrative appeals, the Commission found it was bound by Section 17516c, upheld its executive director's decision, and denied the appeals.

In their amended and consolidated petitions and complaints, County/Cities sought, among other things: (1) an order requiring the State to reimburse them for the new programs or higher level of service under the permit or, alternatively, to allow them to offset payment of permit and other fees or moneys owed or to be transferred to the State

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

against their costs; (2) an order enjoining State from refusing to reimburse them in the future; or, alternatively, (3) a preemptory writ of mandate directing the Commission to accept their test claims and find they are entitled to reimbursement; (4) a declaration that section 17516 is unconstitutional; (5) a preemptory writ of mandate directing LA Regional Water Board either to delete or not ***910** enforce the subject obligations under the permit; and (6) a stay of the challenged portions of the permit.

The Commission and County/Cities filed cross-motions for judgment on the pleadings. The trial court granted the Commission's motion as to the second cause of action for declaratory relief. The court explained: "The only actual controversy between [County/Cities] and [Commission] is whether [County/Cities]' claims should be deemed reimbursable. The sole and exclusive procedure by which to adjudicate this controversy is a mandate action under Code of Civil Procedure section 1094.5. ([Government Code s]ections 17552, 17559.) The only pertinent relief under ...section 1094.5 is a finding that [the Commission] 'has not proceeded in the manner required by law.' Declaratory relief is not available."

After construing the motion addressed to the third cause of action as a motion to strike improper requested relief, the court granted the motion and struck that part of the third cause of action requesting an order directing the Commission to find their claims to be reimbursable on the ground "[t]he court has no power at this time to do so. [Citations.]"

Turning to County/Cities' motion for judgment on the pleadings, the trial court granted the motion as to the third cause of action for extraordinary writ relief, except as to the stricken request for improper relief.[FN4]

> FN4. In the third cause of action, County/Cities sought a writ of mandate (Code Civ. Proc., § 1094.5) compelling a court finding that section 17516 was unconstitutional on its face or as applied in this action and directing the Commission to accept their test claims for filing and approving them for reimbursement.

The court found that to the extent Section 17516c excepted the orders of Regional****770** Water Boards from the definition of "executive orders," Section 17516c was unconstitutional in that it expressly contravened article XIII B, section 6. The court ordered the Commission to set aside its order affirming its executive director's rejections of the four test claims and to consider these claims on the merits.

In granting in part County/Cities' petitions for a writ of mandate, the trial court found the Commission, "though it proceeded as required by statutory law, as it was constrained to do, has not proceeded as required by superior constitutional law. (Code Civ. Proc., [§]1094.5, subd. (a).) The question whether [County/Cities] state valid claims for reimbursement must be remanded to [C]ommission, which is ordered to consider [these] claims on their merits. [Citations.]"

***911** A peremptory writ of mandate was issued on May 24, 2005. Judgment was entered the same date. This appeal and cross-appeal followed.

STANDARD OF REVIEW

[5][6][7][8] "The standard for reviewing a judgment on the pleadings is settled: 'A motion for judgment on the pleadings is the equivalent of a general demurrer but is made after the time for demurrer has expired. The rules governing demurrers apply. [Citation.] The grounds for a motion for judgment on the pleadings must appear on the face of the challenged complaint or be based on facts which the court may judicially notice. [Citations.] On review we must determine if the complaint states a cause of action as a matter of law.' [Citation.] 'We review the complaint de novo to determine whether [it] alleges facts sufficient to state

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

a cause of action under any legal theory. [Citation.]' [Citation.]" (*McCormick v. Travelers Ins. Co.* (2001) 86 Cal.App.4th 404, 408, 103 Cal.Rptr.2d 258.)

[9] "In reviewing the trial court's ruling on a writ of mandate, the appellate court is ordinarily confined to an inquiry as to whether the findings and judgment of the trial court are supported by substantial evidence. (*Evans v. Unemployment Ins. Appeals Bd.* (1985) 39 Cal.3d 398, 407, 216 Cal.Rptr. 782, 703 P.2d 122.) However, where the facts are undisputed and the issues present questions of law, the appellate court is not bound by the trial court's decision but may make its own determination. (*Ibid.*)"(*Connell v. Superior Court* (1997) 59 Cal.App.4th 382, 394, 69 Cal.Rptr.2d 231.)

DISCUSSION

1. *Defense of Statute of Limitations Forfeited*

[10] On appeal for the first time, the Commission asserts the challenge of County/Cities to the constitutionality of Section 17156c is barred by the 90-day limitation period of section 341.5 of the Code of Civil Procedure, which governs the timeliness of actions challenging the constitutionality of state funding for municipalities, school districts, special districts, and local agencies.

Code of Civil Procedure section 341.5 provides: "Notwithstanding any other provision of law, any action or proceeding in which a county, city, city and county, school district, special district, or any other local agency is a plaintiff or petitioner, that is brought against the State of California challenging the constitutionality of any statute relating to state funding for counties, cities, cities and counties, school districts, special districts, or other local agencies, shall be commenced within 90 days of the effective date of the ***912** statute at issue in the action. For purposes of this section, 'State of California' means the State of California itself, or any of its agencies, departments, commissions, boards, or public officials." (Added by ****771** Stats.1994, ch. 155 (Assem. Bill No. 860), § 1, eff. July 11, 1994; amended by Stats.1994, ch. 156 (Sen. Bill No. 2127), § 1, eff. July 11, 1994.)

The Commission argues the constitutional challenge to Section 17516c is time-barred, because: "Government Code section 17500 et seq., including section 17516, relates to state funding for counties and cities relative to state-mandated local programs.... [S]ection 17516 was enacted in 1984 and became effective January 1, 1985. The petition in this case challenging section 17516 as unconstitutional was filed April 28, 2004[,]" which was more than 90 days after the effective date of section 17516.

[11][12] The time-bar of a statute of limitations may be raised by demurrer "[w]here the complaint discloses on its face that the statute of limitations has run on the causes of action stated in the complaint, [for the reason that] it fails to state facts sufficient to state a cause of action. [Citation.]" (*ABF Capital Corp. v. Berglass* (2005) 130 Cal.App.4th 825, 833, 30 Cal.Rptr.3d 588.) Forfeiture of a time-bar defense transpires by the failure to raise the applicable statute of limitations in the answer. (See e.g., *Minton v. Cavaney* (1961) 56 Cal.2d 576, 581, 15 Cal.Rptr. 641, 364 P.2d 473; *Davies v. Krasna* (1975) 14 Cal.3d 502, 508, 121 Cal.Rptr. 705, 535 P.2d 1161; *Mitchell v. County Sanitation District No. 1 of Los Angeles County* (1957) 150 Cal.App.2d 366, 371, 309 P.2d 930; see also, Code Civ. Proc., § 458.)

As the Commission concedes, it did not raise "[Code of Civil Procedure] section 341.5 as an affirmative defense in its pleadings in the trial court." This omission signifies that the Commission therefore has forfeited any right it may have had to assert section 341.5 to bar, as untimely, the claims of County/Cities to the constitutionality of Section 17516c.

For a contrary conclusion, the Commission argues "the statute of limitations to challenge an adminis-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

trative action is jurisdictional and should not be considered waived. (*United Farm Workers of America v. Agricultural Labor Relations Board* (1977) 74 Cal.App.3d 347, 350, 141 Cal.Rptr. 437; *Tielsch v. City of Anaheim* (1984) 160 Cal.App.3d 576, 578, 206 Cal.Rptr. 740; *Donnellan v. City of Novato* (2001) 86 Cal.App.4th 1097, 1103, 103 Cal.Rptr.2d 882.) If a time limit in a mandamus proceeding is held to be jurisdictional, estoppel or waiver cannot extend the time. (*Hollister Convalescent Hosp., Inc. v. Rico* (1975) 15 Cal.3d 660, 666, 674, 125 Cal.Rptr. 757, 542 P.2d 1349.)"

***913** The Commission's fall-back position is that this court should exercise its discretion to determine the applicability of the time-bar, because this " issue is a question of law rather than of fact" and "[t]his matter affects the public interest since [County/Cities] are seeking reimbursement from the state for costs incurred to comply with a permit" issued by the LA Regional Water Board. In other words, "taxpayers statewide could unjustly suffer the consequences of funding a local program if Code of Civil Procedure section 341.5 is not considered and ...section 17516 is held to be unconstitutional." As authority, the Commission relies primarily on *City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 64-65, 266 Cal.Rptr. 139, 785 P.2d 522 [where issue of law rather than fact raised, public-interest exception governs over collateral estoppel bar] and *Connell v. Superior Court, supra,* 59 Cal.App.4th 382, 387-388, 396-397, 69 Cal.Rptr.2d 231 [public-interest exception applicable to allow review of question of law as to whether recycled waste water regulation constituted reimbursable state mandate].)

Neither of the Commission's positions is successful. In the first instance, the time-****772** bar of section 341.5 of the Code of Civil Procedure applies to a challenge to the constitutionality of any statute relating to state funding for counties and other local governmental entities, *not* to a challenge to an action by an administrative agency. As for the second, neither *City of Sacramento* nor *Connell* stand for the proposition that the bar of the applicable statute of limitations may be raised for the first time on appeal.

Additionally, the Commission's characterization of the public interest to be served is a non sequitur. If section 17516 were in fact unconstitutional, it does not follow that "taxpayers statewide could *unjustly* suffer the consequences of funding a local program[.]" (Italics added.) How could such funding result in injustice when any requirement of reimbursement to local governments would be under the constitutional compulsion of article XIII B, section 6?

2. *Existence of Federal or State Mandate Issue for the Commission*

[13] It is undisputed that a federal mandate is not subject to the subvention requirement of article XIII B, section 6 for a state mandate. Accordingly, if the Permit, including the subject two obligations thereunder, constitutes a federal mandate, the constitutionality of Section 17516c is not implicated, and thus, no issue as to its constitutionality is before this court to address on the merits. (See *People ex rel. Lynch v. Superior Court* (1970) 1 Cal.3d 910, 912, 83 Cal.Rptr. 670, 464 P.2d 126 ["The rendering of advisory opinions falls within neither the functions nor the jurisdiction of this court."].)

***914** In its amicus curiae brief, LA Regional Water Board takes the position that, as a matter of law, Section 17516c is consistent with article XIII B, section 6 (and thus not unconstitutional) "to the extent Division 7, Chapter 5.5 (commencing with Water Code section 13370)" simply implements federal mandates under the Clean Water Act (33 U.S.C. § 1342(b)). The Water Boards, i.e., State Water Board and its Regional Water Boards, implement the federal permit program under Chapter 5.5, which the California Legislature enacted to by-pass administration of such program directly by the federal Environmental Protection Agency.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

LA Regional Water Board takes the further position that the federal mandate nature of its NPDES permits remains constant although it exercises discretion to control the discharge of pollutants through municipal stormwater programs not appearing in federal regulations. Specifically, LA Regional Water Board argues: "When a state [Regional Water Board] issues an NPDES permit requiring municipalities to inspect facilities as a means of controlling their discharge of pollutants, this is not shifting state responsibilities onto local agencies [, because f]ederal law imposes inspection requirements upon municipal permittees."

As for the trash receptacle obligation, LA Regional Water Board points out the Clean Water Act allows the use of programs to control discharge of pollutants in connection with a municipal stormwater permit and argues one such program under the Permit is the ability of "municipalities to employ 'Best Management Practices' (BMPs) to ... attain water quality standards." It identifies "[t]he Permit's trash receptacle requirement as one such [BMP]."

It further argues that the trash receptacle obligation cannot be deemed a state-mandated program, because it is not "an absolute requirement. Any permittee may petition the Regional Water Board to substitute another equally effective BMP for one included within the Permit.[ ] [For instance, i]f a permittee demonstrates that **773 a pre-existing program or level of service will be equally effective in controlling pollution, it may seek to substitute that program."

We are not convinced that the obligations imposed by a permit issued by a Regional Water Board necessarily constitute federal mandates under all circumstances. As explained ante, the existence of a federal, as contrasted with a state, mandate is not easily ascertainable.

By letter, we invited the parties and LA Regional Water Board to address whether an obligation under an NPDES permit by a Regional Water Board can qualify as a state mandate within the meaning of article XIII B, section 6, assuming an NPDES permit itself qualified as a federal mandate, and if so, *915 why each of the subject two obligations does or does not constitute a state mandate. We have received their responses.

a. *"NPDES" Permits Issued by Regional Water Boards*

"California cases have repeatedly explained the complicated web of federal and state laws and regulations concerning water pollution, especially storm sewer discharge into the public waterways. (*City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 619-621, 26 Cal.Rptr.3d 304, 108 P.3d 862(*Burbank*); *Building Industry Assn. of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, 872-875, 22 Cal.Rptr.3d 128; *Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1092-1094, 1 Cal.Rptr.3d 76; *WaterKeepers Northern California v. State Water Resources Control Bd.* (2002) 102 Cal.App.4th 1448, 1451-1453, 126 Cal.Rptr.2d 389.)

For purposes of this case, the important point is described by the California Supreme Court in *Burbank:* "Part of the federal Clean Water Act [33 U.S.C. § 1251 et seq.] is the National Pollutant Discharge Elimination System (NPDES), '[t]he primary means' for enforcing effluent limitations and standards under the Clean Water Act. (*Arkansas v. Oklahoma* [(1992) 503 U.S. 91, 101, 112 S.Ct. 1046, 117 L.Ed.2d 239].) The NPDES sets out the conditions under which the federal EPA or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater discharge requirements established by the regional [water] boards are the equivalent of the NPDES permits required by federal law. (§ 13374.)" (*Burbank, supra,* 35 Cal.4th at p. 621, 26 Cal.Rptr.3d 304, 108 P.3d 862.)

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

"California's Porter-Cologne Act (Wat.Code, § 13000 et seq.) establishes a statewide program for water quality control. Nine regional [water] boards, overseen by the State [Water] Board, administer the program in their respective regions. (Wat.Code, §§ 13140, 13200 et seq., 13240, and 13301.) Water Code sections 13374 and 13377 authorize the Regional [Water] Board to issue federal NPDES permits for five-year periods. (33 U.S.C. § 1342, subd. (b)(1)(B).)" [FN5] **774 *916(*City of Rancho Cucamonga v. Regional Water Quality Control Bd.* (2006) 135 Cal.App.4th 1377, 1380-1381, 38 Cal.Rptr.3d 450.) In a related case, Division Five of this District upheld the authority of LA Regional Water Board to issue the Permit here. (*County of Los Angeles v. State Water Resources Control Board* (2006) 143 Cal.App.4th 985, 999-1000, 50 Cal.Rptr.3d 619 [holding the nine Regional Water Boards authorized under state law to issue NPDES permits] review den.)

FN5. In pertinent part, article XIII B, section 6, provides: "[T]he Legislature may, but need not, provide a subvention of funds for the following mandates: ... [¶] ... [¶] Legislative mandates enacted prior to January 1, 1995, or executive orders ... initially implementing legislation enacted prior to January 1, 1975." (Art. XIII B, § 6, par. (a)(3).) LA Regional Water Board argues that subvention under article XIII B, section 6, is not required as to the Permit, because it is an executive order implementing the Porter-Cologne Act, which is legislation enacted in 1969. This argument fails for the reason that the executive order resulting in the 2001 Permit was not one "*initially* " implementing such pre-1975 legislation. Equally unsuccessful is LA Regional Water Board's apparent argument that Section 17516c should be deemed constitutional for the reason that "most of" the Porter-Cologne Act (Division 7) was enacted prior to 1975. The fatal fallacy of this position is that the exclusion of Section 17516c applies to all orders issued pursuant to Division 7 *regardless* of the date the statute in question was enacted.

b. *Potential Federal and State Components of NPDES Permit*

As expected, LA Regional Water Board contends that as in the case of NPDES "permits as a whole, the individual conditions of an NPDES permit are federally required to meet the mandates of the Clean Water Act."It argues: "The Permit is federally required. The conditions within it are federally required to implement the Clean Water Act's mandates. The two cannot be separated into a 'federal' permit with 'state' conditions.[Citation.]"

County/Cities respond, contrariwise, that "[a]n NPDES permit can contain both federal and non[-]federal requirements." As case authority, they rely primarily on *Burbank, supra,* 35 Cal.4th 613, 26 Cal.Rptr.3d 304, 108 P.3d 862.Our Supreme Court concluded that under the supremacy clause of the federal Constitution, a Regional Water Board must comply with the federal Clean Water Act in issuing an NPDES permit. (*Id.* at pp. 626-627, 26 Cal.Rptr.3d 304, 108 P.3d 862.) Nonetheless, "[u]nder the federal Clean Water Act, each state is free to enforce its own water quality laws so long as its effluent limitations are not 'less stringent' than those set out in the Clean Water Act [citation]." (*Id.* at p. 620, 26 Cal.Rptr.3d 304, 108 P.3d 862.) The Court thus acknowledged in *Burbank* that an NPDES permit may contain terms federally mandated and terms exceeding federal law. (See also, *Burbank, supra,* at pp. 618, 628, 26 Cal.Rptr.3d 304, 108 P.3d 862.) County/Cities also point out that the potential for non-federally mandated components of an NPDES permit is acknowledged under both federal law [FN6] and state law. [FN7]

FN6. In this regard, they rely on this federal statute: "Except as expressly provided in this Act [33 USCS §§ 1251 et seq.], nothing in this Act [33 USCS §§ 1251 et seq.] shall (1) preclude or deny the right of any

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> State or political subdivision thereof or interstate agency to adopt or enforce (A) any standard or limitation respecting discharges of pollutants, or (B) any requirement respecting control or abatement of pollution; except that if an effluent limitation, or other limitation ... is in effect under this Act [33 USCS §§ 1251 et seq.], such State [, etc.] ... may not adopt or enforce any effluent limitation or other limitation ... which is less stringent than the effluent limitation, or other limitation...." (33 U.S.C. § 1370.)
>
> FN7. On this point, they rely on this statutory provision: "Notwithstanding any other provision of this division, the state board or the regional boards shall, as required or authorized by the Federal Water Pollution Control Act, as amended, issue waste discharge requirements ... which apply and ensure compliance with all applicable provisions of the act and acts amendatory thereof or supplementary, thereto, together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance." (Wat.Code, § 13377.)

****775 *917** Additionally, County/Cities argue "that an obligation imposed on a municipality arises as a result of a federal law or program does not, in and of itself, render that obligation a federal mandate." Rather, they assert that to qualify as a federal mandate, "federal law itself must impose the obligation upon the municipality." They point out Government Code section 17556 provides that costs flowing from a federal mandate may be subject to subvention if such costs exceed such mandate.[FN8] They also cite two cases in support of their position.

> FN8. Government Code section 17556, subdivision (c), provides: "The commission shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds ... [¶] ... [¶][t]he statute or executive order imposes a requirement that is mandated by a federal law or regulation and results in costs mandated by the federal government, unless the statute or executive order mandates costs that exceed the mandate in that federal law or regulation."

In *San Diego Unified School Dist. v. Commission on State Mandates* (2004) 33 Cal.4th 859, 16 Cal.Rptr.3d 466, 94 P.3d 589, our Supreme Court concluded the costs incurred by school districts in holding mandatory expulsion hearings under Education Code section 48915 were state mandates subject to subvention under article XIII B, section 6. The court explained that expulsion was mandated under the Education Code, rather than federal law, and thus, the fact the costs were incurred to comport with federal due process, a federal mandate, was not controlling. (*San Diego Unified School Dist. v. Commission on State Mandates, supra,* at pp. 880-882, 16 Cal.Rptr.3d 466, 94 P.3d 589.)

In the other case, *Hayes v. Commission on State Mandates, supra,* 11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, the appellate court concluded that the finding a mandate was federal turned on whether "the state freely chose to impose the costs upon the local agency as a means of implementing a federal program" and that under these circumstances, "the costs are the result of a reimbursable state mandate regardless whether the costs were imposed upon the state by the federal government." (*Id.* at p. 1594, 15 Cal.Rptr.2d 547.)

c. *Existence of State Mandates Matter for the Commission*

A review of the pleadings and the matters that may be judicially noticed (Evid.Code, §§ 451, 452, 459) leads to the inescapable conclusion that whether the two obligations in question constitute federal or state mandates presents factual issues which must

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

be addressed in the first instance by the *918 Commission if Section 17516c were found to be unconstitutional. Resolution of the federal or state nature of these obligations therefore is premature and, thus, not properly before this court.

In its response, the Commission argues that if this court determines Section 17516c is unconstitutional, the subject test claims "should be remanded to ... Commission to 'decide in the first instance whether a local agency is entitled to reimbursement under [article XIII B,] section 6 [.]'(*Lucia Mar Unified School District v. Honig [, supra,]* 44 Cal.3d 830, 837 [244 Cal.Rptr. 677, 750 P.2d 318]; Gov.Code, § 17552.)"

The Commission stated that on such remand, it would apply the following cases in determining whether state mandates exist: *City of Sacramento v. State of California, supra,* 50 Cal.3d 51, 266 Cal.Rptr. 139, 785 P.2d 522, which sets forth various factors and criteria for determining whether the federal program imposes a mandate on the state; **776*Hayes v. Commission on State Mandates, supra,* 11 Cal.App.4th 1564, 15 Cal.Rptr.2d 547, which it contends "provides guidance on whether the state, in turn, has mandated a federal program on the local governments"; *Long Beach Unified Sch. Dist. v. State of California, supra,* 225 Cal.App.3d 155, 275 Cal.Rptr. 449, which analyzes whether the state-mandated activities exceed federal requirements; and *San Diego Unified School Dist. v. Commission on State Mandates, supra,* 33 Cal.4th 859, 16 Cal.Rptr.3d 466, 94 P.3d 589, which also provides guidance on this same issue.

3. *"Executive Order" under Revenue and Taxation Code Not Probative*

The Commission contends the exclusion of orders of the Regional Water Boards from the definition of "executive order" in Section 17516c does not contravene article XIII B, section 6, because section 17516 derives from the definition of "executive order" in Revenue and Taxation Code section 2209, FN9 of which the voters were presumed to have known to exist *919 when they adopted Proposition 4 (i.e., art. XIII B, § 6) in 1979, and thus, Proposition 4 intended to endorse and continue such exclusion from the definition of "executive order" which was later carried over to Section 17516c. We disagree.

> FN9. Section 2209(c) provides: " 'Executive order' means any order, plan, requirement, rule or regulation issued ... [¶] ... [¶][b]y any agency ... of state government; provided that the term 'executive order' shall not include any order ... issued by the State Water ... Board or by any regional water ... board pursuant to Division 7 (commencing with Section 13000) of the Water Code.
>
> "It is the intent of the Legislature that the State Water ... Board and regional water ... boards will not adopt enforcement orders against publicly owned discharges which mandate major waste water treatment facility construction costs unless federal financial assistance and state financial assistance pursuant to the Clean Water Bond Act of 1970 and 1974, is simultaneously made available.
>
> " 'Major' means either a new treatment facility or an addition to an existing facility, the cost of which is in excess of 20 percent of the cost of replacing the facility."(§ 2209(c); added by Stats.1974, ch. 457, p. 1079, § 2 and amended by Stats.1975, ch. 486, p. 998, § 2, eff. Sept. 2, 1975.)

We further disagree with the Commission's reliance on a presumption that when the voters adopted Proposition 1A in November 2004, they knew of, and thus, necessarily approved of Section 17516c's exclusion of orders of Regional Water Boards from the definition of "executive order."

Our focus, instead, must be on the import of article XIII B, section 6, not on the pre-constitutional scheme for subvention of funds to local agencies of which section 2209 of the Revenue and Taxation

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Code was part. As our Supreme Court instructs: "In construing the meaning of the constitutional provision (i.e., art. XIII B, § 6), our inquiry is not focused on what the Legislature intended in adopting the former statutory reimbursement scheme, but rather on what the voters meant when they adopted article XIII B in 1979. To determine this intent, we must look to the language of the provision itself. [Citation.]" (*County of Los Angeles v. California, supra,* 43 Cal.3d 46, at p. 56, 233 Cal.Rptr. 38, 729 P.2d 202.)

The subvention requirement of article XIII B, section 6 applies "[w]henever the Legislature or any state agency mandates a new program or higher level of service...." The all-encompassing "any state agency" language defeats any perceived presumption that the electorate intended to incorporate into article XIII B, section 6 the exclusion of a particular state agency, e.g., the Regional Water Board, from its subvention requirement.

**777 4. *Section 17516c Unconstitutional as to Regional Water Boards*

LA Regional Water Board argues in its amicus brief that Section 17516c is constitutional for the additional reason that its exemption from the subvention requirement of article XIII B, section 6, is "appropriate because the Water Boards regulate water pollution with an even hand. Whether the pollution originates from a local public agency or a private industrial source, the Water Boards must assure their permits protect water quality consistent with state and federal law."

This argument is not persuasive. Whether the permit in question issued by Regional Water Boards governs both public and private pollution dischargers to the same extent presents factual issues not yet resolved. In any event, the applicability of permits to public and private discharges does not inform us about whether a particular permit or an obligation thereunder imposed on local governments constitutes a state mandate necessitating subvention under article XIII B, section 6. (See ***920***Carmel Valley Fire Protection Dist. v. California* (1987) 190 Cal.App.3d 521, 530-531, 534, 537, 541, 234 Cal.Rptr. 795 [executive orders for protective fire clothing and equipment state mandated even if record, which was incomplete, revealed private sector firefighters also subject to the executive orders].)

In contrast, the constitutional infirmity of Section 17516c is readily apparent from its plain language that the definition of " '[e]xecutive order' does not include *any* order, plan, requirement, rule, or regulation *issued by the State Water ... Board or by any regional water ... board* pursuant to Division 7 (commencing with Section 13000) of the Water Code."(§ 17516c, italics added.) This exclusion of any order issued by any Regional Water Board contravenes the clear, unequivocal intent of article XIII B, section 6 that subvention of funds is required "[w]henever ...*any state agency* mandates a new program or higher level of service on any local government ...." [FN10] (§ 17516c, italics added.) We therefore conclude that Section 17516c is unconstitutional to the extent it excludes "any order ... issued by ... any regional water ... board pursuant to Division 7 (commencing with Section 13000) of the Water Code" from the definition of " 'executive order.' ".

> FN10. At oral argument, when asked to identify the public policy or other reason that would be served by exempting Regional Water Boards from the constitutional subvention requirement, counsel for LA Regional Water Board responded exemption is warranted, because water is an important concern. No one can quarrel with the fact water plays an important role in California. Nonetheless, this reason does not compel the conclusion that an exemption should be carved out for Regional Water Boards as contrasted with those state agencies which regulate other important state interests.

This conclusion leads to the further conclusion that

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

whether one or both of the subject two obligations constitutes a state mandate necessitating subvention of funds under article XIII B, section 6 is an issue that must in the first instance be resolved by the Commission. Accordingly, we uphold the trial court's issuance of a writ of mandate directing the Commission to vacate its decisions affirming its executive director's rejection of the four test claims and to consider these claims on the merits.

5. *Cross-Appeal Moot*

County/Cities filed a protective cross-appeal from the judgment to the extent the trial court dismissed the portions of their writ of mandate petitions against LA Regional Water Board.[FN11] The threshold **778 issue raised is whether County/Cities are entitled to proceed directly in superior court against LA *921 Regional Water Board for reimbursement relief if they are statutorily precluded from obtaining a hearing before the Commission.

> FN11. The trial court sustained the demurrer to the fourth cause of action for a writ of mandate directing LA Regional Water Board to delete or not enforce the inspection and trash receptacle obligations. The court granted its own motion for judgment on the pleadings without leave to amend as to LA Regional Water Board on the first cause of action for a writ of mandate directing reimbursement; the second cause of action for declaratory relief; and the fifth cause of action for a writ of mandate directing LA Regional Water Board to delete or not enforce the subject obligations.

County/Cities' position is they are entitled to a hearing on the merits of their claims before either the Commission or LA Regional Water Board. If this court determines the Commission's jurisdiction is exclusive, the Commission must afford them a hearing and determine the merits of their subvention claim under article XIII B, section 6. If not exclusive, County/Cities must be allowed to seek relief directly against Regional Water Board before the superior court.

LA Regional Water Board argues County/Cities have no right to seek subvention relief from a Regional Water Board, because reimbursement of costs mandated by state must be pursued through the statutory subvention scheme, which is "the sole and exclusive procedure by which a local agency ... may claim reimbursement for costs mandated by the state as required by Section 6 of Article XIII B...." (Gov.Code, § 17552.) Their claims thus must be addressed exclusively to the Commission in first instance.

The cross-appeal against LA Regional Water Board is moot in light of our above conclusion that the Commission is to hear and determine the merits of the County/Cities' test claims. We therefore do not reach the merits of the issues raised in the cross-appeal.

CONCLUSION

Section 17516c is unconstitutional to the extent it purports to exempt orders issued by Regional Water Boards from the definition of "executive orders" for which subvention of funds to local governments for carrying out state mandates is required pursuant to article XIII B, section 6. The trial court therefore properly issued a writ of mandate directing the Commission to resolve the four test claims on the merits without reference to Section 17516c. In light of this conclusion, we need not, and therefore do not, address the issues raised on the now moot cross-appeal.

*922 DISPOSITION

The judgment is affirmed. Each party shall bear its own costs on appeal and cross-appeal.

County of Los Angeles v. State of California (1987) 43 Cal.3d 46

Los Angeles County v. State
Cal.
COUNTY OF LOS ANGELES et al., Plaintiffs and Appellants,
v.
THE STATE OF CALIFORNIA et al., Defendants and Respondents.
CITY OF SONOMA et al., Plaintiffs and Appellants,
v.
THE STATE OF CALIFORNIA et al., Defendants and Respondents
L.A. No. 32106.

Supreme Court of California
Jan 2, 1987.

SUMMARY

The trial court denied a petition for writ of mandate to compel the State Board of Control to approve reimbursement claims of local government entities, for costs incurred in providing an increased level of service mandated by the state for workers' compensation benefits. The trial court found that Cal. Const., art. XIII B, § 6, requiring reimbursement when the state mandates a new program or a higher level of service, is subject to an implied exception for the rate of inflation. In another action, the trial court, on similar claims, granted partial relief and ordered the board to set aside its ruling denying the claims. The trial court, in this second action, found that reimbursement was not required if the increases in benefits were only cost of living increases not imposing a higher or increased level of service on an existing program. Thus, the second matter was remanded due to insubstantial evidence and legally inadequate findings. (Superior Court of Los Angeles County, Nos. C 424301 and C 464829, Leon Savitch and John L. Cole, Judges.) The Court of Appeal, Second Dist., Div. Five, Nos. B001713 and B003561 affirmed the first action; the second action was reversed and remanded to the State Board of Control for further and adequate findings.

The Supreme Court reversed the judgment of the Court of Appeal, holding that the petitions lacked merit and should have been denied by the trial court without the necessity of further proceedings before the board. The court held that when the voters adopted art. XIII B, § 6, their intent was not to require the state to provide subvention whenever a newly enacted statute results incidentally in some cost to local agencies, but only to require subvention for the expense or increased cost of programs administered locally, and for expenses occasioned by laws that impose unique requirements on local governments and do not apply generally to all state residents or entities. Thus, the court held, reimbursement was not required by art. XIII B, § 6. Finally, the court held that no pro tanto repeal of Cal. Const., art. XIV, § 4 (workers' compensation), was intended or made necessary by the adoption of art. XIII B, § 6. (Opinion by Grodin, J., with Bird, C. J., Broussard, Reynoso, Lucas and Panelli, JJ., concurring. Separate concurring opinion by Mosk, J.)

HEADNOTES

Classified to California Digest of Official Reports

(1) State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Governments--Costs to Be Reimbursed.
When the voters adopted Cal. Const., art. XIII B, § 6 (reimbursement to local agencies for new programs and services), their intent was not to require the state to provide subvention whenever a newly enacted statute resulted incidentally in some cost to local agencies. Rather, the drafters and the electorate had in mind subvention for the expense or increased cost of programs administered locally, and for expenses occasioned by laws that impose unique requirements on local governments and do not apply generally to all state residents or entities.

(2) Statutes § 18--Repeal--Effect--"Increased Level

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

of Service."
The statutory definition of the phrase "increased level of service," within the meaning of Rev. & Tax. Code, § 2207, subd. (a) (programs resulting in increased costs which local agency is required to incur), did not continue after it was specifically repealed, even though the Legislature, in enacting the statute, explained that the definition was declaratory of existing law. It is ordinarily presumed that the Legislature, by deleting an express provision of a statute, intended a substantial change in the law.
[See **Am.Jur.2d,** Statutes, § 384.]
(3) Constitutional Law § 13--Construction of Constitutions--Language of Enactment.
In construing the meaning of an initiative constitutional provision, a reviewing court's inquiry is focused on what the voters meant when they adopted the provision. To determine this intent, courts must look to the language of the provision itself.

(4) Constitutional Law § 13--Construction of Constitutions--Language of Enactment--"Program."
The word "program," as used in Cal. Const., art. XIII B, § 6 (reimbursement to local agencies for new programs and services), refers to programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state.

(5) State of California § 12--Fiscal Matters--Appropriations--Reimbursement to Local Governments--Increases in Workers' Compensation Benefits.
The provisions of Cal. Const., art. XIII B, § 6 (reimbursement to local agencies for new programs and services), have no application to, and the state need not provide subvention for, the costs incurred by local agencies in providing to their employees the same increase in workers' compensation benefits that employees of private individuals or organizations receive. Although the state requires that employers provide workers' compensation for nonexempt categories of employees, increases in the cost of providing this employee benefit are not subject to reimbursement as state- mandated programs or higher levels of service within the meaning of art. XIII B, § 6. Accordingly, the State Board of Control properly denied reimbursement to local governmental entities for costs incurred in providing state-mandated increases in workers' compensation benefits. (Disapproving *City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182 [203 Cal.Rptr. 258], to the extent it reached a different conclusion with respect to expenses incurred by local entities as the result of a newly enacted law requiring that all public employees be covered by unemployment insurance.)
[See **Cal.Jur.3d,** State of California, § 78.]
(6) Constitutional Law § 14--Construction of Constitutions--Reconcilable and Irreconcilable Conflicts.
Controlling principles of construction require that in the absence of irreconcilable conflict among their various parts, constitutional provisions must be harmonized and construed to give effect to all parts.

(7) Constitutional Law § 14--Construction of Constitutions--Reconcilable and Irreconcilable Conflicts--Pro Tanto Repeal of Constitutional Provision.
The goals of Cal. Const., art. XIII B, § 6 (reimbursement to local agencies for new programs and services), were to protect residents from excessive taxation and government spending, and to preclude a shift of financial responsibility for governmental functions from the state to local agencies. Since these goals can be achieved in the absence of state subvention for the expense of increases in workers' compensation benefit levels for local agency employees, the adoption of art. XIII B, § 6, did not effect a pro tanto repeal of Cal. Const., art. XIV, § 4, which gives the Legislature plenary power over workers' compensation.

GRODIN, J.

We are asked in this proceeding to determine whether legislation enacted in 1980 and 1982 increasing certain workers' compensation benefit payments is subject to the command of article XIII B of the California Constitution that local government costs mandated by the state must be funded by the state. The County of Los Angeles and the City of Sonoma sought review by this court of a decision of the Court of Appeal which held that state-mandated increases in workers' compensation benefits that do not exceed the rise in the cost of living are not costs which must be borne by the state under article XIII B, an initiative constitutional provision, and legislative implementing statutes.

Although we agree that the State Board of Control properly denied plaintiffs' claims, our conclusion rests on grounds other than those relied upon by the Court of Appeal, and requires that its judgment be reversed. (1) We conclude that when the voters adopted article XIII B, section 6, their intent was not to require the state to provide subvention whenever a newly enacted statute resulted incidentally in some cost to local agencies. Rather, the drafters and the electorate had in mind subvention for the expense or *50 increased cost of programs administered locally and for expenses occasioned by laws that impose unique requirements on local governments and do not apply generally to all state residents or entities. In using the word "programs" they had in mind the commonly understood meaning of the term, programs which carry out the governmental function of providing services to the public. Reimbursement for the cost or increased cost of providing workers' compensation benefits to employees of local agencies is not, therefore, required by section 6.

We recognize also the potential conflict between article XIII B and the grant of plenary power over workers' compensation bestowed upon the Legislature by section 4 of article XIV, but in accord with established rules of construction our construction of article XIII B, section 6, harmonizes these constitutional provisions.

I

On November 6, 1979, the voters approved an initiative measure which added article XIII B to the California Constitution. That article imposed spending limits on the state and local governments and provided in section 6 (hereafter section 6): "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [¶] (a) Legislative mandates requested by the local agency affected; [¶] (b) Legislation defining a new crime or changing an existing definition of a crime; or [¶] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975." No

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

definition of the phrase "higher level of service" was included in article XIII B, and the ballot materials did not explain its meaning. FN1

> FN1 The analysis by the Legislative Analyst advised that the state would be required to "reimburse local governments for the cost of complying with 'state mandates.' 'State mandates' are requirements imposed on local governments by legislation or executive orders." Elsewhere the analysis repeats: "[T]he initiative would establish a requirement that the state provide funds to reimburse local agencies for the cost of complying with state mandates. ...
> The one ballot argument which made reference to section 6, referred only to the "new program" provision, stating, "Additionally, this measure [¶] (1) will not allow the state government to force programs on local governments without the state paying for them."

The genesis of this action was the enactment in 1980 and 1982, after article XIII B had been adopted, of laws increasing the amounts which ***51** employers, including local governments, must pay in workers' compensation benefits to injured employees and families of deceased employees.

The first of these statutes, Assembly, Bill No. 2750 (Stats. 1980, ch. 1042, p. 3328), amended several sections of the Labor Code related to workers' compensation. The amendments of Labor Code sections 4453, 4453.1 and 4460 increased the maximum weekly wage upon which temporary and permanent disability indemnity is computed from $231 per week to $262.50 per week. The amendment of section 4702 of the Labor Code increased certain death benefits from $55,000 to $75,000. No appropriation for increased state-mandated costs was made in this legislation. FN2

> FN2 The bill was approved by the Governor and filed with the Secretary of State on September 22, 1980. Prior to this, the Assembly gave unanimous consent to a request by the bill's author that his letter to the Speaker stating the intent of the Legislation be printed in the Assembly Journal. The letter stated: (1) that the Assembly Ways and Means Committee had recommended approval without appropriation on grounds that the increases were a result of changes in the cost of living that were not reimbursable under either Revenue and Taxation Code section 2231, or article XIII B; (2) the Senate Finance Committee had rejected a motion to add an appropriation and had approved a motion to concur in amendments of the Conference Committee deleting any appropriation.
> Legislative history confirms only that the final version of Assembly Bill No. 2750, as amended in the Assembly on April 16, 1986, contained no appropriation. As introduced on March 4, 1980, with a higher minimum salary of $510 on which to base benefits, an unspecified appropriation was included.

Test claims seeking reimbursement for the increased expenditure mandated by these changes were filed with the State Board of Control in 1981 by the County of San Bernardino and the City of Los Angeles. The board rejected the claims, after hearing, stating that the increased maximum workers' compensation benefit levels did not change the terms or conditions under which benefits were to be awarded, and therefore did not, by increasing the dollar amount of the benefits, create an increased level of service. The first of these consolidated actions was then filed by the County of Los Angeles, the County of San Bernardino, and the City of San Diego, seeking a writ of mandate to compel the board to approve the reimbursement claims for costs incurred in providing an increased level of service mandated by the state pursuant to Revenue and Taxation Code section 2207. FN3 They also sought a declaration that because the State of Cali-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

fornia and the board were obliged by article XIII B to reimburse them, they were not obligated to pay the increased benefits until the state provided reimbursement.

> FN3 The superior court consolidated another action by the County of Butte, Novato Fire Protection District, and the Galt Unified School District with that action. Neither those plaintiffs nor the County of San Bernardino are parties to the appeal.

The superior court denied relief in that action. The court recognized that although increased benefits reflecting cost of living raises were not expressly ***52** excepted from the requirement of state reimbursement in section 6 the intent of article XIII B to limit governmental expenditures to the prior year's level allowed local governments to make adjustment for changes in the cost of living, by increasing their own appropriations. Because the Assembly Bill No. 2750 changes did not exceed cost of living changes, they did not, in the view of the trial court, create an "increased level of service " in the existing workers' compensation program.

The second piece of legislation (Assem. Bill No. 684), enacted in 1982 (Stats. 1982, ch. 922. p. 3363), again changed the benefit levels for workers' compensation by increasing the maximum weekly wage upon which benefits were to be computed, and made other changes among which were: The bill increased minimum weekly earnings for temporary and permanent total disability from $73.50 to $168, and the maximum from $262.50 to $336. For permanent partial disability the weekly wage was raised from a minimum of $45 to $105, and from a maximum of $105 to $210, in each case for injuries occurring on or after January 1, 1984. (Lab. Code, § 4453.)A $10,000 limit on additional compensation for injuries resulting from serious and willful employer misconduct was removed (Lab. Code, § 4553), and the maximum death benefit was raised from $75,000 to $85,000 for deaths in 1983, and to $95,000 for deaths on or after January 1, 1984. (Lab. Code, § 4702.)

Again the statute included no appropriation and this time the statute expressly acknowledged that the omission was made "[n]otwithstanding section 6 of Article XIIIB of the California Constitution and section 2231 ... of the Revenue and Taxation Code." (Stats. 1982, ch. 922, § 17, p. 3372.) FN4

> FN4 The same section "recognized," however, that a local agency "may pursue any remedies to obtain reimbursement available to it" under the statutes governing reimbursement for state-mandated costs in chapter 3 of the Revenue and Taxation Code, commencing with section 2201.

Once again test claims were presented to the State Board of Control, this time by the City of Sonoma, the County of Los Angeles, and the City of San Diego. Again the claims were denied on grounds that the statute made no change in the terms and conditions under which workers' compensation benefits were to be awarded, and the increased costs incurred as a result of higher benefit levels did not create an increased level of service as defined in Revenue and Taxation Code section 2207, subdivision (a).

The three claimants then filed the second action asking that the board be compelled by writ of mandate to approve the claims and the state to pay them, and that chapter 922 be declared unconstitutional because it was not adopted in conformity with requirements of the Revenue and Taxation Code or ***53** section 6. The trial court granted partial relief and ordered the board to set aside its ruling. The court held that the board's decision was not supported by substantial evidence and legally adequate findings on the presence of a state-mandated cost. The basis for this ruling was the failure of the board to make adequate findings on the possible impact of changes in the burden of proof in some workers' compensation proceedings (Lab. Code, § 3202.5); a limitation on an injured worker's right to

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

sue his employer under the "dual capacity" exception to the exclusive remedy doctrine (Lab. Code, §§ 3601-3602); and changes in death and disability benefits and in liability in serious and wilful misconduct cases. (Lab. Code, § 4551.)

The court also held: "[T]he changes made by chapter 922, Statutes of 1982 may be excluded from state-mandated costs if that change effects a cost of living increase which does not impose a higher or increased level of service on an existing program." The City of Sonoma, the County of Los Angeles, and the City of San Diego appeal from this latter portion of the judgment only.

II

The Court of Appeal consolidated the appeals. The court identified the dispositive issue as whether legislatively mandated increases in workers' compensation benefits constitute a "higher level of service" within the meaning of section 6, or are an "increased level of service" FN5 described in subdivision (a) of Revenue and Taxation Code section 2207. The parties did not question the proposition that higher benefit payments might constitute a higher level of "service." The dispute centered on whether higher benefit payments which do not exceed increases in the cost of living constitute a higher level of service. Appellants maintained that the reimbursement requirement of section 6 is absolute and permits no implied or judicially created exception for increased costs that do not exceed the inflation rate. The Court of Appeal addressed the problem as one of defining "increased level of service."

> FN5 The court concluded that there was no legal or semantic difference in the meaning of the terms and considered the intent or purpose of the two provisions to be identical.

The court rejected appellants' argument that a definition of "increased level of service" that once had been included in section 2231, subdivision (e) of the Revenue and Taxation Code should be applied. That definition brought any law that imposed "additional costs" within the scope of "increased level of service." The court concluded that the repeal of section 2231 in 1975 (Stats. 1975, ch. 486, § 7, pp. 999-1000) and the failure of the Legislature by statute or the electorate in article XIII B to readopt the *54 definition must be treated as reflecting an intent to change the law. (*Eu v. Chacon* (1976) 16 Cal.3d 465, 470 [128 Cal.Rptr. 1, 546 P.2d 289].) FN6 On that basis the court concluded that increased costs were no longer tantamount to an increased level of service.

> FN6 The Court of Appeal also considered the expression of legislative intent reflected in the letter by the author of Assembly Bill No. 2750 (see fn. 2, *ante*). While consideration of that expression of intent may have been proper in construing Assembly Bill No. 2750, we question its relevance to the proper construction of either section 6, adopted by the electorate in the prior year, or of Revenue and Taxation Code section 2207, subdivision (a) enacted in 1975. (Cf. *California Employment Stabilization Co.* v. *Payne* (1947) 31 Cal.2d 210, 213-214 [187 P.2d 702].) There is no assurance that the Assembly understood that its approval of printing a statement of intent as to the later bill was also to be read as a statement of intent regarding the earlier statute, and it was not relevant to the intent of the electorate in adopting section 6.
>
> The Court of Appeal also recognized that the history of Assembly Bill No. 2750 and Statutes 1982, chapter 922, which demonstrated the clear intent of the Legislature to omit any appropriation for reimbursement of local government expenditures to pay the higher benefits precluded reliance on reimbursement provisions included in benefit-increase bills passed in earlier years. (See e.g., Stats. 1973, chs. 1021 and 1023.)

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

The court nonetheless assumed that an increase in costs mandated by the Legislature did constitute an increased level of service if the increase exceeds that in the cost of living. The judgment in the second, or "Sonoma " case was affirmed. The judgment in the first, or "Los Angeles" case, however, was reversed and the matter "remanded" to the board for more adequate findings, with directions. FN7

FN7 We infer that the intent of the Court of Appeal was to reverse the order denying the petition for writ of mandate and to order the superior court to grant the petition and remand the matter to the board with directions to set aside its order and reconsider the claim after making the additional findings. (See Code Civ. Proc. § 1094.5, subd. (f).)

III

The Court of Appeal did not articulate the basis for its conclusion that costs in excess of the increased cost of living do constitute a reimbursable increased level of service within the meaning of section 6. Our task in ascertaining the meaning of the phrase is aided somewhat by one explanatory reference to this part of section 6 in the ballot materials.

A statutory requirement of state reimbursement was in effect when section 6 was adopted. That provision used the same "increased level of service " phraseology but it also failed to include a definition of "increased level of service," providing only: "Costs mandated by the state' means any increased costs which a local agency is required to incur as a result of the following: [¶] (a) Any law ... which mandates a new program or an increased level of service of an existing program." (Rev. & Tax. Code § 2207.)As noted, however, the definition of that term which had been *55 included in Revenue and Taxation Code section 2164.3 as part of the Property Tax Relief Act of 1972 (Stats. 1972, ch. 1406, § 14.7, p. 2961), had been repealed in 1975 when Revenue and Taxation Code section 2231, which had replaced section 2164.3 in 1973, was repealed and a new section 2231 enacted. (Stats. 1975. ch. 486, §§ 6 & 7, p. 999.) FN8 Prior to repeal, Revenue and Taxation Code section 2164.3, and later section 2231, after providing in subdivision (a) for state reimbursement, explained in subdivision (e) that " "Increased level of service' means any requirement mandated by state law or executive regulation ... which makes necessary expanded or additional costs to a county, city and county, city, or special district." (Stats. 1972, ch. 1406, § 14.7, p. 2963.)

FN8 Pursuant to the 1972 and successor 1973 property tax relief statutes the Legislature had included appropriations in measures which, in the opinion of the Legislature, mandated new programs or increased levels of service in existing programs (see, e.g., Stats. 1973, ch. 1021, § 4, p. 2026; ch. 1022, § 2, p. 2027; Stats. 1976, ch. 1017, § 9, p. 4597) and reimbursement claims filed with the State Board of Control pursuant to Revenue and Taxation Code sections 2218-2218.54 had been honored. When the Legislature fails to include such appropriations there is no judicially enforceable remedy for the statutory violation notwithstanding the command of Revenue and Taxation Code section 2231, subdivision (a) that "[t]he state shall reimburse each local agency for all 'costs mandated by the state,' as defined in Section 2207" and the additional command of subdivision (b) that any statute imposing such costs "provide an appropriation therefor." (*County of Orange v. Flournoy* (1974) 42 Cal.App.3d 908, 913 [117 Cal.Rptr. 224].)

(2) Appellants contend that despite its repeal, the definition is still valid, relying on the fact that the Legislature, in enacting section 2207, explained that the provision was "declaratory of existing law." (Stats. 1975, ch. 486, § 18.6, p. 1006.) We concur with the Court of Appeal in rejecting this ar-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

gument. "[I]t is ordinarily to be presumed that the Legislature by deleting an express provision of a statute intended a substantial change in the law." (*Lake Forest Community Assn. v. County of Orange* (1978) 86 Cal.App.3d 394, 402 [150 Cal.Rptr. 286]; see also *Eu* v. *Chacon, supra*, 16 Cal.3d 465, 470.) Here, the revision was not minor: a whole subdivision was deleted. As the Court of Appeal noted, "A change must have been intended; otherwise deletion of the preexisting definition makes no sense."

Acceptance of appellants' argument leads to an unreasonable interpretation of section 2207. If the Legislature had intended to continue to equate "increased level of service" with "additional costs," then the provision would be circular: "costs mandated by the state" are defined as "increased costs" due to an "increased level of service," which, in turn, would be defined as "additional costs." We decline to accept such an interpretation. Under the repealed provision, "additional costs" may have been deemed tantamount to an "increased level of service," but not under the post-1975 statutory scheme. Since that definition has been repealed, an act of which the drafters of section 6 and the electorate are presumed to have been ***56** aware, we may not conclude that an intent existed to incorporate the repealed definition into section 6.

(3) In construing the meaning of the constitutional provision, our inquiry is not focussed on what the Legislature intended in adopting the former statutory reimbursement scheme, but rather on what the voters meant when they adopted article XIII B in 1979. To determine this intent, we must look to the language of the provision itself. (*ITT World Communications, Inc. v. City and County of San Francisco* (1985) 37 Cal.3d 859, 866 [210 Cal.Rptr. 226, 693 P.2d 811].) In section 6, the electorate commands that the state reimburse local agencies for the cost of any "new program or higher level of service." Because workers' compensation is not a new program, the parties have focussed on whether providing higher benefit payments constitutes provision of a higher level of service. As we have observed, however, the former statutory definition of that term has been incorporated into neither section 6 nor the current statutory reimbursement scheme.

(4) Looking at the language of section 6 then, it seems clear that by itself the term "higher level of service" is meaningless. It must be read in conjunction with the predecessor phrase "new program" to give it meaning. Thus read, it is apparent that the subvention requirement for increased or higher level of service is directed to state mandated increases in the services provided by local agencies in existing "programs." But the term "program" itself is not defined in article XIII B. What programs then did the electorate have in mind when section 6 was adopted? We conclude that the drafters and the electorate had in mind the commonly understood meanings of the term - programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state.

The concern which prompted the inclusion of section 6 in article XIII B was the perceived attempt by the state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services which the state believed should be extended to the public. In their ballot arguments, the proponents of article XIII B explained section 6 to the voters: "Additionally, this measure: (1) Will not allow the state government to *force programs* on local governments without the state paying for them." (Ballot Pamp., Proposed Amend. to Cal. Const. with arguments to voters, Spec. Statewide Elec. (Nov. 6, 1979) p. 18. Italics added.) In this context the phrase "to force programs on local governments" confirms that the intent underlying section 6 was to require reimbursement to local agencies for the costs involved in carrying out functions peculiar to government, not ***57** for expenses incurred by local agencies as an incidental impact of laws that

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

apply generally to all state residents and entities. Laws of general application are not passed by the Legislature to "force" programs on localities.

The language of section 6 is far too vague to support an inference that it was intended that each time the Legislature passes a law of general application it must discern the likely effect on local governments and provide an appropriation to pay for any incidental increase in local costs. We believe that if the electorate had intended such a far-reaching construction of section 6, the language would have explicitly indicated that the word "program" was being used in such a unique fashion. (Cf. *Fuentes v. Workers' Comp. Appeals Bd.* (1976) 16 Cal.3d 1, 7 [128 Cal.Rptr. 673, 547 P.2d 449]; *Big Sur Properties v. Mott* (1976) 63 Cal.App.3d 99, 105 [132 Cal.Rptr. 835].) Nothing in the history of article XIII B that we have discovered, or that has been called to our attention by the parties, suggests that the electorate had in mind either this construction or the additional indirect, but substantial impact it would have on the legislative process.

Were section 6 construed to require state subvention for the incidental cost to local governments of general laws, the result would be far-reaching indeed. Although such laws may be passed by simple majority vote of each house of the Legislature (art. IV, § 8, subd. (b)), the revenue measures necessary to make them effective may not. A bill which will impose costs subject to subvention of local agencies must be accompanied by a revenue measure providing the subvention required by article XIII B. (Rev. & Tax. Code, §§ 2255, subd. (c).) Revenue bills must be passed by two-thirds vote of each house of the Legislature. (Art. IV, § 12, subd. (d).) Thus, were we to construe section 6 as applicable to general legislation whenever it might have an incidental effect on local agency costs, such legislation could become effective only if passed by a supermajority vote. [FN9] Certainly no such intent is reflected in the language or history of article XIII B or section 6.

FN9 Whether a constitutional provision which requires a supermajority vote to enact substantive legislation, as opposed to funding the program, may be validly enacted as a Constitutional amendment rather than through revision of the Constitution is an open question. (See *Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal.3d 208, 228 [149 Cal.Rptr. 239, 583 P.2d 1281].)

(5) We conclude therefore that section 6 has no application to, and the state need not provide subvention for, the costs incurred by local agencies in providing to their employees the same increase in workers' compensation ***58** benefits that employees of private individuals or organizations receive. FN10Workers' compensation is not a program administered by local agencies to provide service to the public. Although local agencies must provide benefits to their employees either through insurance or direct payment, they are indistinguishable in this respect from private employers. In no sense can employers, public or private, be considered to be administrators of a program of workers' compensation or to be providing services incidental to administration of the program. Workers' compensation is administered by the state through the Division of Industrial Accidents and the Workers' Compensation Appeals Board. (See Lab. Code, § 3201 et seq.) Therefore, although the state requires that employers provide workers' compensation for nonexempt categories of employees, increases in the cost of providing this employee benefit are not subject to reimbursement as state-mandated programs or higher levels of service within the meaning of section 6.

FN10 The Court of Appeal reached a different conclusion in *City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182 [203 Cal.Rptr. 258], with respect to a newly enacted law requiring that all public employees be covered by unemployment insurance. Approaching the question as to whether the expense was a "state mandated cost," rather than as whether the provision

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

of an employee benefit was a "program or service" within the meaning of the Constitution, the court concluded that reimbursement was required. To the extent that this decision is inconsistent with our conclusion here, it is disapproved.

IV

(6) Our construction of section 6 is further supported by the fact that it comports with controlling principles of construction which "require that in the absence of irreconcilable conflict among their various parts, [constitutional provisions] must be harmonized and construed to give effect to all parts. (*Clean Air Constituency* v. *California State Air Resources Bd.* (1974) 1 Cal.3d 801, 813-814 [114 Cal.Rptr. 577, 523 P.2d 617]; *Serrano v. Priest* (1971) 5 Cal.3d 584, 596 [96 Cal.Rptr. 601, 487 P.2d 1241, 41 A.L.R.3d 1187]; *Select Base Materials v. Board of Equal.* (1959) 51 Cal.2d 640, 645 [335 P.2d 672].)" (*Legislature* v. *Deukmejian* (1983) 34 Cal.3d 658, 676 [194 Cal.Rptr. 781, 669 P.2d 17].)

Our concern over potential conflict arises because article XIV, section 4, FN11 gives the Legislature "plenary power, unlimited by any provision of ***59** this Constitution" over workers' compensation. Although seemingly unrelated to workers' compensation, section 6, as we have shown, would have an indirect, but substantial impact on the ability of the Legislature to make future changes in the existing workers' compensation scheme. Any changes in the system which would increase benefit levels, provide new services, or extend current service might also increase local agencies' costs. Therefore, even though workers' compensation is a program which is intended to provide benefits to all injured or deceased employees and their families, because the change might have some incidental impact on local government costs, the change could be made only if it commanded a supermajority vote of two-thirds of the members of each house of the Legislature. The potential conflict between section 6 and the plenary power over workers' compensation granted to the Legislature by article XIV, section 4 is apparent.

FN11 Section 4: "The Legislature is hereby *expressly vested with plenary power, unlimited by any provision of this Constitution*, to create, and enforce a complete system of workers' compensation, by appropriate legislation, and in that behalf to create and enforce a liability on the part of any or all persons to compensate any or all of their workers for injury or disability, and their dependents for death incurred or sustained by the said workers in the course of their employment, irrespective of the fault of any party. A complete system of workers' compensation includes adequate provisions for the comfort, health and safety and general welfare of any and all workers and those dependent upon them for support to the extent of relieving from the consequences of any injury or death incurred or sustained by workers in the course of their employment, irrespective of the fault of any party; also full provision for securing safety in places of employment; full provision for such medical, surgical, hospital and other remedial treatment as is requisite to cure and relieve from the effects of such injury; full provision for adequate insurance coverage against liability to pay or furnish compensation; full provision for regulating such insurance coverage in all its aspects, including the establishment and management of a State compensation insurance fund; full provision for otherwise securing the payment of compensation and full provision for vesting power, authority and jurisdiction in an administrative body with all the requisite governmental functions to determine any dispute or matter arising under such legislation, to the end that the administration of such legislation shall accomplish substantial justice in all cases expedi-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> tiously, inexpensively, and without encumbrance of any character; all of which matters are expressly declared to be the social public policy of this State, binding upon all departments of the State government.
> "The Legislature is vested with plenary powers, to provide for the settlement of any disputes arising under such legislation by arbitration, or by an industrial accident commission, by the courts, or by either, any, or all of these agencies, either separately or in combination, and may fix and control the method and manner of trial of any such dispute, the rules of evidence and the manner of review of decisions rendered by the tribunal or tribunals designated by it; provided, that all decisions of any such tribunal shall be subject to review by the appellate courts of this State. The Legislature may combine in one statute all the provisions for a complete system of workers' compensation, as herein defined.
> "The Legislature shall have power to provide for the payment of an award to the state in the case of the death, arising out of and in the course of the employment, of an employee without dependents, and such awards may be used for the payment of extra compensation for subsequent injuries beyond the liability of a single employer for awards to employees of the employer.
> "Nothing contained herein shall be taken or construed to impair or render ineffectual in any measure the creation and existence of the industrial accident commission of this State or the State compensation insurance fund, the creation and existence of which, with all the functions vested in them, are hereby ratified and confirmed." (Italics added.)

The County of Los Angeles, while recognizing the impact of section 6 on the Legislature's power over workers' compensation, argues that the "plenary power" granted by article XIV, section 4, is power over the substance of workers' compensation legislation, and that this power would be unaffected by article XIII B if the latter is construed to compel reimbursement. The subvention requirement, it is argued, is analogous to other procedural *60 limitations on the Legislature, such as the "single subject rule" (art. IV, § 9), as to which article XIV, section 4, has no application. We do not agree. A constitutional requirement that legislation either exclude employees of local governmental agencies or be adopted by a supermajority vote would do more than simply establish a format or procedure by which legislation is to be enacted. It would place workers' compensation legislation in a special classification of substantive legislation and thereby curtail the power of a majority to enact substantive changes by any procedural means. If section 6 were applicable, therefore, article XIII B would restrict the power of the Legislature over workers' compensation.

The City of Sonoma concedes that so construed article XIII B *would* restrict the plenary power of the Legislature, and reasons that the provision therefore either effected a pro tanto repeal of article XIV, section 4, or must be accepted as a limitation on the power of the Legislature. We need not accept that conclusion, however, because our construction of section 6 permits the constitutional provisions to be reconciled.

Construing a recently enacted constitutional provision such as section 6 to avoid conflict with, and thus pro tanto repeal of, an earlier provision is also consistent with and reflects the principle applied by this court in *Hustedt v. Workers' Comp. Appeals Bd.* (1981) 30 Cal.3d 329 [178 Cal.Rptr. 801, 636 P.2d 1139]. There, by coincidence, article XIV, section 4, was the later provision. A statute, enacted pursuant to the plenary power of the Legislature over workers' compensation, gave the Workers' Compensation Appeals Board authority to discipline attorneys who appeared before it. If construed to include a transfer of the authority to discipline attorneys from the Supreme Court to the Legislature, or to delegate that power to the board, article

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

XIV, section 4, would have conflicted with the constitutional power of this court over attorney discipline and might have violated the separation of powers doctrine. (Art. III, § 3.) The court was thus called upon to determine whether the adoption of article XIV, section 4, granting the Legislature plenary power over workers' compensation effected a pro tanto repeal of the preexisting, exclusive jurisdiction of the Supreme Court over attorneys.

We concluded that there had been no pro tanto repeal because article XIV, section 4, did not give the Legislature the authority to enact the statute.Article XIV, section 4, did not expressly give the Legislature power over attorney discipline, and that power was not integral to or necessary to the establishment of a complete system of workers' compensation. In those circumstances the presumption against implied repeal controlled. "It is well established that the adoption of article XIV, section 4 'effected a repeal *pro tanto*' of any state constitutional provisions which conflicted with that ***61** amendment. (*Subsequent Etc. Fund. v. Ind. Acc. Com.* (1952) 39 Cal.2d 83, 88 [244 P.2d 889]; *Western Indemnity Co.* v. *Pillsbury* (1915) 170 Cal. 686, 695, [151 P. 398].) A *pro tanto* repeal of conflicting state constitutional provisions removes 'insofar as necessary' any restrictions which would prohibit the realization of the objectives of the new article. (*Methodist Hosp. of Sacramento* v. *Saylor* (1971) 5 Cal.3d 685, 691-692 [97 Cal.Rptr. 1, 488 P.2d 161]; cf. *City and County of San Francisco v. Workers' Comp. Appeals Bd.* (1978) 22 Cal.3d 103, 115-117 [148 Cal.Rptr. 626, 583 P.2d 151].) Thus the question becomes whether the board must have the power to discipline attorneys if the objectives of article XIV, section 4 are to be effectuated. In other words, does the achievement of those objectives compel the modification of a power - the disciplining of attorneys - that otherwise rests exclusively with this court?" (*Hustedt v. Workers' Comp. Appeals Bd., supra*, 30 Cal.3d 329, 343.) We concluded that the ability to discipline attorneys appearing before it was not necessary to the expeditious resolution of workers' claims or the efficient administration of the agency. Thus, the absence of disciplinary power over attorneys would not preclude the board from achieving the objectives of article XIV, section 4, and no pro tanto repeal need be found.

(7) A similar analysis leads to the conclusion here that no pro tanto repeal of article XIV, section 4, was intended or made necessary here by the adoption of section 6. The goals of article XIII B, of which section 6 is a part, were to protect residents from excessive taxation and government spending. (*Huntington Park Redevelopment Agency* v. *Martin* (1985) 38 Cal.3d 100, 109-110 [211 Cal.Rptr. 133, 695 P.2d 220].)Section 6 had the additional purpose of precluding a shift of financial responsibility for carrying out governmental functions from the state to local agencies which had had their taxing powers restricted by the enactment of article XIII A in the preceding year and were ill equipped to take responsibility for any new programs. Neither of these goals is frustrated by requiring local agencies to provide the same protections to their employees as do private employers. Bearing the costs of salaries, unemployment insurance, and workers' compensation coverage - costs which all employers must bear - neither threatens excessive taxation or governmental spending, nor shifts from the state to a local agency the expense of providing governmental services.

Therefore, since the objectives of article XIII B and section 6 can be achieved in the absence of state subvention for the expense of increases in workers' compensation benefit levels for local agency employees, section 6 did not effect a pro tanto repeal of the Legislature's otherwise plenary power over workers' compensation, a power that does not contemplate that the Legislature rather than the employer must fund the cost or increases in ***62** benefits paid to employees of local agencies, or that a statute affecting those benefits must garner a supermajority vote.

Because we conclude that section 6 has no application to legislation that is applicable to employees

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

generally, whether public or private, and affects local agencies only incidentally as employers, we need not reach the question that was the focus of the decision of the Court of Appeal - whether the state must reimburse localities for state-mandated cost increases which merely reflect adjustments for cost-of-living in existing programs.

V

It follows from our conclusions above, that in each of these cases the plaintiffs' reimbursement claims were properly denied by the State Board of Control. Their petitions for writs of mandate seeking to compel the board to approve the claims lacked merit and should have been denied by the superior court without the necessity of further proceedings before the board.

In B001713, the Los Angeles case, the Court of Appeal reversed the judgment of the superior court denying the petition. In the B003561, the Sonoma case, the superior court granted partial relief, ordering further proceedings before the board, and the Court of Appeal affirmed that judgment.

The judgment of the Court of Appeal is reversed. Each side shall bear its own costs.

Bird, C. J., Broussard, J., Reynoso, J., Lucas, J., and Panelli, J., concurred.

MOSK, J.

I concur in the result reached by the majority, but I prefer the rationale of the Court of Appeal, i.e., that neither article XIII B, section 6, of the Constitution nor Revenue and Taxation Code sections 2207 and 2231 require state subvention for increased workers' compensation benefits provided by chapter 1042, Statutes of 1980, and chapter 922, Statutes of 1982, but only if the increases do not exceed applicable cost-of-living adjustments because such payments do not result in an increased level of service.

Under the majority theory, the state can order unlimited financial burdens on local units of government without providing the funds to meet those burdens. This may have serious implications in the future, and does violence to the requirement of section 2231, subdivision (a), that the state reimburse local government for "all costs mandated by the state."

In this instance it is clear from legislative history that the Legislature did not intend to mandate additional burdens, but merely to provide a cost-of-living ***63** adjustment. I agree with the Court of Appeal that this was permissible.

Appellants' petition for a rehearing was denied February 26, 1987. ***64**

Court of Appeal, Second District, Division 5, California.
COUNTY OF **LOS ANGELES** et al., Plaintiffs and Appellants,
v.
CALIFORNIA STATE **WATER** RESOURCES CONTROL **BOARD** et al., Defendants and Respondents.
No. B184034.
Oct. 5, 2006.
Certified for Partial Publication.FN*

FN* Pursuant to California Rules of Court, rules 976(b) and 976.1, this opinion is certified for publication with the exception of part IV(G)-(L).

As Modified Nov. 6, 2006.

Background: Multiple cities, county, county flood control district, and other interested parties challenged order of the California Regional Water Quality Control Board adopting National Pollutant Discharge Elimination System permit. The Superior Court, Los Angeles County, No. BS080792, Victoria G. Chaney, J., entered judgment for regional board. Plaintiffs appealed.

Holdings: The Court of Appeal, Turner, P.J., held that:
(1) regional board had jurisdiction to issue permit;
(2) declaratory relief was not available to plaintiffs;
(3) regional board did not unlawfully interfere in local general plans and California Environmental Quality Act (CEQA) review; and
(4) CEQA review was not required.

Affirmed.

California Regional Water Quality Control Board had statewide jurisdiction within meaning of federal regulation, notwithstanding its organization into nine regional boards, and thus had jurisdiction to issue National Pollutant Discharge Elimination System permit. West's Ann.Cal.Water Code §§ 174, 13100, 13200, 13225; 40 C.F.R. § 123.1(f).

TURNER, P.J.

I. INTRODUCTION

Plaintiffs, 32 cities,[FN1] the County of Los Angeles (the county), the Los Angeles County Flood Control District (the flood control district), the Building Industry Legal Defense Fund, and the Construction Industry Coalition on Water Quality, appeal from a March 24, 2005 judgment in ***622** favor of defendants, California Regional Water Quality Control Board, Los Angeles Region (the regional board) and the State Water Resources Control Board (the state board) and intervenors, Natural Resources Defense Council, Inc., Santa Monica Baykeeper, and Heal the Bay. Plaintiffs challenge the legality of the regional board's issuance of Order No. 01-182 adopting the National Pollutant Discharge Elimination System Permit No. CAS004001 (the permit) which is entitled, "Municipal Storm Water And Urban Runoff Discharges Within The County Of Los Angeles, And The Incorporated Cities Therein, Except The City Of Long Beach." The December 13, 2001 permit was issued to the county, the flood control district, and 84 incorporated cities in Los Angeles County.

> FN1. The following cities have appealed Arcadia, Artesia, Bellflower, Beverly Hills, Carson, Cerritos, Claremont, Commerce, Covina, Diamond Bar, Downey, Gardena, Hawaiian Gardens, Industry, Irwindale, La Mirada, Lawndale, Monrovia, Norwalk, Paramount, Pico Rivera, Rancho Palos Verdes, Rosemead, Santa Clarita, Santa Fe Springs, Signal Hill, South Pasadena, Torrance, Vernon, Walnut, West Covina, Westlake Village, and Whittier.

We affirm the judgment in its entirety.

II. THE PERMIT

A. Overview

The permit was issued pursuant to the obligations imposed by the Clean Water Act which will be discussed in greater detail later in this opinion. The Clean Water Act was originally entitled the Federal Water Pollution Control Act. (62 Stat. 1115; 1948 U.S.Code Cong. & Admin. News at pp. 2215-2220.) For purposes of clarity and consistency, the federal applicable water pollution statutes will collectively be referred to as the Clean Water Act. The 72-page permit is divided into 6 parts. There is an overview and findings followed by: a statement of discharge prohibitions; a listing of receiving water limitations; the Storm Water Quality Management Program; an explanation of special provisions; a set of definitions; and a list of what are characterized as standard provisions. The county, the flood control district, and the 84 cities are designated in the permit as the permittees. The findings and permit are as follows.

B. Findings

The permit found that the county, the flood control district, and the 84 cities discharge and contribute to the release of pollutants from "municipal separate storm sewer systems" (storm drain systems). These discharges were the subject of permits issued by the regional board in 1990 and 1996. The 1996 order served as the National Pollutant Discharge Elimination System permit for the discharge of

municipal storm water.

The regional board found that storm drain systems in the county discharged cyanide, indicator bacteria, total dissolved solids, total suspended solids, turbidity, nutrients, total aluminum, dissolved cadmium, copper, lead, total mercury, nickel, zinc, bis(2-ethylhexyl)phthalate, polycyclic aromatic hydrocarbons, diazinon, and chlorpyrifos. According to the regional board, there were certain pollutants present in urban runoff which resulted from sources over which the permittees had no control. Among the runoff sources over which the permittees have no control are polycyclic aromatic hydrocarbons which are the products of internal combustion engines or copper from brake pad wear. Various reports prepared by the regional board, the Los Angeles County Grand Jury, and academic institutions indicated pollutants are threatening to or actually impairing the beneficial uses of water bodies in the Los Angeles region.

The regional board concluded that urbanization: increased the velocity, volume, and duration of water runoff; increased erosion; and adversely affected natural drainages. The regional board found: "The [county] has identified as the seven highest priority industrial and commercial critical source types, (i) wholesale trade (scrap recycling, auto dismantling); (ii) automotive*623 repair/parking; (iii) fabricated metal products; (iv) motor freight; (v) chemical and allied products; (vi) automotive dealers/gas stations; [and] (vii) primary metal products." Also, the regional board concluded "auto repair facilities" contribute "significant concentrations of heavy metals" to storm waters. Moreover, paved surfaces such as those outside fast food establishments or parking lots "are potential sources of pollutants" in storm water runoff. Further, storm water runoff from retail gas establishments "have concentrations" of heavy metals and hydrocarbons.

The regional board further made findings concerning the background of the permit and its coverage area. The essential components of a Storm Water Management Program are: adequate legal authority; fiscal resources; the actual Storm Water Quality Management Program itself; and a monitoring program. A Storm Water Quality Management Program consists of: a Public Information and Participation Program; an Industrial/Commercial Facilities Program: a Development Planning Program; a Development Construction Program; a Public Agency Activities Program; and an Illicit Connection and Illicit Discharges Elimination Program. The permittees filed a Report of Waste Discharge dated January 31, 2001, which contained a proposed Storm Water Quality Management Program.

C. Prohibited And Allowable Discharges

In the prohibited discharges portion of the permit, the county and the cities were required to "effectively prohibit non-storm water discharges" into their storm sewer systems. This prohibition contains the following exceptions: where the discharge is covered by a National Pollutant Discharge Elimination permit for non-storm water emission; natural springs and rising ground water; flows from riparian habitats or wetlands; stream diversions pursuant to a permit issued by the regional board; "uncontaminated ground water infiltrations" as defined by 40 Code of Federal Regulations, part 35.2005(b)(20) (1990); and waters from emergency fire fighting flows. Another category of permissible discharges were flows incidental to urban activities consisting of: reclaimed and potable landscape irrigation runoff; potable drinking water discharges which comply with the American Water Works Association guidelines for dechlorination and "suspended solids reduction practices"; drains for foundations, footings, and crawl spaces; air conditioning condensate; "dechlorinated/debrominated" swimming pool discharges; dewatering of lakes and decorative fountains; non-commercial car washing by residents or non-profit organizations; and sidewalk rinsing.

The regional board's executive officer was granted authority to add or remove categories of non-storm water discharges. If one of the foregoing categories was determined to be "a source of pollutants" by the regional board's executive officer, the discharge was to be no longer exempt. The executive officer retained the authority to impose conditions on the city or county to ensure that the discharge was "not a source of pollutants." Also, the executive director was given the authority to impose additional "prohibitions on non-storm water discharges" after considering either of two factors. The first factor the regional board's executive officer could consider is anti-degradation

policies. The second factor the regional board's executive officer could consider is the total maximum load an impaired water body can receive and still meet applicable water quality standards and protect beneficial uses. (33 U.S.C. § 1313(d)(1).)

*624 D. Receiving Water Limitations

Receiving waters are defined thusly, " 'Receiving waters' means all surface water bodies...." Discharges from storm sewer systems that "cause or contribute" to violations of "Water Quality Standards" objectives in receiving waters as specified in state and federal water quality plans were prohibited. Storm or non-storm water discharges from storm sewer systems which constitute a nuisance were also prohibited. The term nuisance is defined, " 'Nuisance' means anything that meets all of the following requirements: (1) is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property; (2) affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal; (3) occurs during, or as a result of, the treatment or disposal of wastes." In order to comply with the receiving water limitations, the permittees were required to implement control measures in accordance with the permit. If the Storm Water Quality Management Program did not assure compliance with the receiving water requirements, the permittee was required to: immediately notify the regional board; submit a Receiving Water Limitations Compliance Report that described the best management practices that were currently being used and proposed changes to them; submit an implementation schedule as part of the Receiving Water Limitations Compliance Report; and, after approval by the regional board, promptly implement the new best management practices. If the permittee makes the foregoing changes, even if there were further receiving water discharges beyond those addressed in the Water Limitations Compliance Report, additional changes to the best management practices need not be made unless directed to do so by the regional board.

E. Storm Water Quality Management Program

The permittees were to implement the Storm Water Quality Management Program which meet the standards of 40 Code of Federal Regulations, part 122.26(d)(2) (2000) and reduce the pollutants in storm waters to the maximum extent possible with the use of best management practices. Further, the permittees were required to revise the Storm Water Quality Management Program to comply with specified total daily maximum load allocations. If a permittee modified the countywide Storm Water Quality Management Program, it was required to implement a local management program. Each permittee was required by November 1, 2002, to adopt a storm water and urban runoff ordinance. By December 2, 2002, each permittee was required to certify that it had the requisite legal authority to comply with the permit through adoption of ordinances or municipal code modifications.

The county was designated as the "Principal Permittee" and was given coordination responsibilities of the Storm Water Quality Management Program. Among other things, the county was to convene Watershed Management Committees which were to meet at least four times per year. Each permittee was entitled to have a voting representative on the committees. The committees were to coordinate and monitor implementation of the Storm Water Quality Management Program. Each permittee was required to designate a technically knowledgeable representative to the appropriate Watershed Management Committees. Each permittee was required to prepare a budget summary of moneys spent on the Storm Water Quality Management Program.

*625 The permit granted each permittee the "necessary legal authority" to prohibit non-storm water discharges into the storm drain system. That authority extended to prohibiting discharges from: illicit connections of all kinds; wash waters from gas stations and automotive service facilities; runoff from mobile cleaning businesses; areas where oil, fluid, or antifreeze was dripping from machinery; storage areas containing hazardous substances; swimming pool waters; washing of toxic materials; and washing impervious surfaces in industrial and commercial areas. The authority also extended to the discharge of concrete and cement laden wash waters and prohibition of dumping of materials into storm drain systems. The legal authority extended to: requiring persons to comply with permittees'

ordinances; holding dischargers to storm drain systems accountable; controlling pollutants and their potential contributors; inspecting, watching, and monitoring procedures to insure compliance with the permit including prohibition of illicit discharges into storm drain systems; and requiring the use of best management practices to reduce pollutant discharge into the storm drain systems to the maximum extent possible.

F. Special Provisions

The regional board's executive officer had the power to alter a best management practice under specified circumstances. The county, as the principal permittee, was required to implement a public information and participation program. The program included: marking all storm drains with " 'no dumping' " signs; instituting a county-wide hotline to report illicit discharges and other environmental hazards; public education; every year, requiring 50 percent of all school children to be educated on storm water pollution; assessments of education; and other outreach programs.

Each permittee was required to maintain a database of entities that are "critical sources" of storm water pollution. Each permittee was required to inspect under specified circumstances critical facilities including: restaurants; automotive service businesses; retail gasoline outlets; and automotive dealerships. Further, each permittee was to evaluate best management practices and increase their severity if appropriate. Violations of the Storm Water Quality Management Program were to be investigated within specified time periods. By August 1, 2002, the permittees were to amend their ordinances or municipal codes to implement the standard urban storm water mitigation plans contained in the permit. Special requirements were imposed when discharges occur in environmentally sensitive areas.

Each permittee was required to consider storm water quality impacts as part of their California Environmental Quality Act assessments. Each permittee was required to update its general plan to include "considerations and policies" of watershed and storm water quality and quantity management. The permittees were required to educate employees involved in development planning regarding the permit's requirements.

G. Development Construction Program

The permittees were required to implement programs to "control" runoff from construction sites. Runoff from construction sites was prohibited. Non-storm water runoff from equipment washing on construction sites was to be contained on-site. Special requirements were imposed on construction sites of one acre or greater in area. Additional requirements were imposed on developments which were five acres or larger including securing a General Construction Activity Storm Water Permit. *626 The permit imposed "Numerical Design Criteria" which required that post construction best management practices incorporate "either a volumetric or flow based treatment control design standard, or both" under specified circumstances. If there is a violation of a General Construction Activity Storm Water Permit, the permittee may refer the violator to the state board.

H. Public Agency Activities Program

The permittees were required to minimize storm water pollution impacts. The requirements extended to: sewer systems; public construction; vehicle related facilities; landscape and recreational facilities; storm drain management; and street maintenance. The permittees were also required to participate in a study concerning possible dry weather discharges and the use of alternative treatment control best management practices.

I. Illicit Discharges And Connections

The permit states, "Permittees shall eliminate all illicit connections and ... discharges to the storm

drain system, and shall document, track, report all such cases...." The elimination and reporting of such discharges required: development of an implementation program; by February 3, 2003, the municipalities provide the county with a list of all approved connections in the storm drain system; the county to conduct an annual evaluation of illicit discharges; and training of personnel in the identification and investigation of such discharges. The permittees were to complete the screening of illicit connections as follows: open channels, no later than February 3, 2003; underground pipes by February 1, 2005; and underground pipes with a diameter of 36 inches or greater by December 12, 2006. By December 12, 2006, the permittees were to complete a review of all "permitted connections" to the storm drain system to insure eliminating illicit discharges. Upon receipt of a report an illicit connection, an investigation was to be initiated within 21 days to determine the source and the responsible party. Within 180 days, the permittees were required to "ensure termination of the connection" using appropriate enforcement authority. As to illicit discharges, a permittee was required within one business day to respond to a report and clean up a discharge. Illicit discharges were to be investigated as soon as possible and appropriate enforcement action was to be pursued.

III. NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM PERMITS, PROCEDURAL HISTORY, AND STANDARDS OF REVIEW

The present appeal arises from the issuance of the permit. The legal genesis of the National Pollutant Discharge Elimination System permits for the discharge of municipal storm water has previously been described in some detail in other decisions. (*City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 619-621, 26 Cal.Rptr.3d 304, 108 P.3d 862; *City of Rancho Cucamonga v. Regional Water Quality Control Board* (2006) 135 Cal.App.4th 1377, 1380-1381, 38 Cal.Rptr.3d 450.) In *City of Rancho Cucamonga,* our colleagues in the Division Two of the Fourth Appellate District summarized the complex federal and state relationship: " 'Part of the Federal Clean Water Act [33 U.S.C. § 1251 et seq.] is the National Pollutant Discharge Elimination System (NPDES), "[t]he primary means" for enforcing effluent limitations and standards under the Clean Water Act. (*Arkansas v. Oklahoma* (1992) 503 U.S. 91, 101, 112 S.Ct. 1046, 117 L.Ed.2d 239.) The NPDES sets out the conditions under ***627** which the federal [Environmental Protection Agency] or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law. (§ 13374.)' (*Burbank, supra,* 35 Cal.4th at p. 621, 26 Cal.Rptr.3d 304, 108 P.3d 862.)[¶] California's Porter-Cologne Act (Wat.Code, § 13000 et seq.) establishes a statewide program for water quality control. Nine regional boards, overseen by the State Board, administer the program in their respective regions. (Wat.Code, §§ 13140, 13200 et seq., 13240, and 13301.) Water Code sections 13374 and 13377 authorize the Regional Board to issue federal NPDES permits for five-year periods. (33 U.S.C. § 1342, subd. (b)(1)(B).)" (*City of Rancho Cucamonga v. Regional Water Quality Control Board, supra,* 135 Cal.App.4th at pp. 1380-1381, 38 Cal.Rptr.3d 450.)

After the board issued the aforementioned December 13, 2001 permit, on January 17, 2003, a series of legal challenges, consisting of the filing administrative mandate and mandate petitions and complaints, were instituted by plaintiffs. Judgments in favor of the regional and state boards were entered on March 24, 2005. After the judgments were entered, notices of appeal were filed on June 21 and 22, 2005. The parties stipulated to the maximum extensions of time to brief the matter as allowed by California Rules of Court, rule 15(b)(1). This court had no authority to deny the stipulated to extensions of time to file briefs. (Cal. Rules of Court, rule 15(b) ["The reviewing court may not shorten a stipulated extension"].) No extension of time request was ever granted by any member of this court. The final reply brief was filed on August 1, 2006. Oral argument was held on September 6, 2006.

[1] [2] [3] There are varying standards of review. Many of the challenges to the content of the permit involve review of the denial of Code of Civil Procedure section 1094.5 administrative mandate petitions filed pursuant to Water Code section 13330, subdivision (b). We review the trial court's factual findings for substantial evidence. (*Fukuda v. City of Angels* (1999) 20 Cal.4th 805,

824, 85 Cal.Rptr.2d 696, 977 P.2d 693; *Drummey v. State Bd. of Funeral Directors* (1939) 13 Cal.2d 75, 86, 87 P.2d 848.) Further, it is presumed the regional board considered the documents before it. (*City of Santa Cruz v. Local Agency Formation Com.* (1978) 76 Cal.App.3d 381, 393-394, 142 Cal.Rptr. 873.) All reasonable doubts are resolved in favor of upholding the regional board's decision. (*Laurel Heights Improvement Assn. v. Regents of the University of California* (1988) 47 Cal.3d 376, 393, 253 Cal.Rptr. 426, 764 P.2d 278; *San Franciscans Upholding the Downtown Plan v. City and County of San Francisco* (2002) 102 Cal.App.4th 656, 674, 125 Cal.Rptr.2d 745.) We (and trial courts) examine the regional board's interpretation of legal matters utilizing a de novo standard of review. But we defer to the regional board's expertise in construing language which is not clearly defined in statutes involving pollutant discharge into storm drain sewer systems. (*Yamaha Corp. of America v. State Board of Equalization* (1998) 19 Cal.4th 1, 7-8, 78 Cal.Rptr.2d 1, 960 P.2d 1031; *City of Rancho Cucamonga v. Regional Water Quality Control Board, supra,* 135 Cal.App.4th at p. 1384, 38 Cal.Rptr.3d 450.) Finally, the trial court's denials of plaintiffs' new trial and to enter a new judgment motions and declaratory relief requests are reviewed for an abuse of discretion. ***628** (*Ashcraft v. King* (1991) 228 Cal.App.3d 604, 616, 278 Cal.Rptr. 900 [new trial motion]; *Bess v. Park* (1955) 132 Cal.App.2d 49, 52, 281 P.2d 556 [declaratory relief].)

IV. DISCUSSION

A. The Jurisdiction of the Regional Board To Issue The Permit

[4] Plaintiffs contend the regional board did not have jurisdiction to issue the permit. Plaintiffs rely on language appearing in the Code of Federal Regulations. For example, the permittees cite to 40 Code of Federal Regulations part 123.1(g)(1) (1998) which states, "NPDES authority may be shared by two or more State agencies but each agency must have Statewide jurisdiction over a class of activities or discharges." [FN2] Further the permittees refer to the following language in 40 Code of Federal Regulations part 123.22(b) (1998), "If more than one agency is responsible for administration of a program, each agency must have statewide jurisdiction over a class of activities." [FN3] Moreover, 40 Code of Federal Regulations part 123.1(f) (1998) states, "Any State program approved by the Administrator shall at all times be conducted in accordance with the requirements of this part."

> FN2. 40 Code of Federal Regulations part 123.1(g)(1) (1998) states in its entirety: "(g) (1) Except as may be authorized pursuant to paragraph (g)(2) of this section or excluded by § 122.3, the State program must prohibit all point source discharges of pollutants, all discharges into aquaculture projects, and all disposal of sewage sludge which results in any pollutant from such sludge entering into any waters of the United States within the State's jurisdiction except as authorized by a permit in effect under the State program or under section 402 of [Clean Water Act]. [National Pollutant Discharge Elimination System] authority may be shared by two or more State agencies but each agency must have Statewide jurisdiction over a class of activities or discharges. When more than one agency is responsible for issuing permits, each agency must make a submission meeting the requirements of § 123.21 before [the Environmental Protection Agency] will begin formal review. [¶] (2) A State may seek approval of a partial or phased program in accordance with section 402(n) of the [Clean Water Act]."
>
> FN3. 40 Code of Federal Regulations part 123.22(b) (1998) states in its entirety: "A description (including organization charts) of the organization and structure of the State agency or agencies which will have responsibility for administering the program, including the information listed below. If more than one agency is responsible for administration of a program, each agency must have statewide jurisdiction over a class of activities. The responsibilities of each agency must be delineated, their procedures for coordination set forth, and an agency may be designated as a 'lead agency' to facilitate communications between [the Environmental Protection Agency] and the State agencies having program

> responsibility. If the State proposes to administer a program of greater scope of coverage than is required by Federal law, the information provided under this paragraph shall indicate the resources dedicated to administering the Federally required portion of the program. [¶] (1) A description of the State agency staff who will carry out the State program, including the number, occupations, and general duties of the employees. The State need not submit complete job descriptions for every employee carrying out the State program. [¶] (2) An itemization of the estimated costs of establishing and administering the program for the first two years after approval, including cost of the personnel listed in paragraph (b)(1) of this section, cost of administrative support, and cost of technical support. [¶] (3) An itemization of the sources and amounts of funding, including an estimate of Federal grant money, available to the State Director for the first two years after approval to meet the costs listed in paragraph (b)(2) of this section, identifying any restrictions or limitations upon this funding."

Plaintiffs reason that under state law, the regional board does not have statewide jurisdiction. Water Code section 13100 states that the state and regional boards are part of the California Environmental Protection Agency. Water Code section 13200 identifies the scope of jurisdiction of ***629** the nine regional boards. The regional board's limited jurisdiction is defined in Water Code section 13200, subdivision (d).[FN4] The powers of the regional boards are set forth in Water Code section 13225 with the caveat that the powers exist "with respect to its region."[FN5] Because the regional board is not a statewide agency, plaintiffs argue the permit is void.

> FN4. Water Code section 13200, subdivision (d) states: "The state is divided, for the purpose of this division, into nine regions: [¶] Los Angeles region, which comprises all basins draining into the Pacific Ocean between the southeasterly boundary, located in the westerly part of Ventura County, of the watershed of Rincon Creek and a line which coincides with the southeasterly boundary of Los Angeles County from the ocean to San Antonio Peak and follows thence the divide between San Gabriel River and Lytle Creek drainages to the divide between Sheep Creek and San Gabriel River drainages."

> FN5. Water Code section 13225 states in its entirety: "Each regional board, with respect to its region, shall: [¶] (a) Obtain coordinated action in water quality control, including the prevention and abatement of water pollution and nuisance. [¶] (b) Encourage and assist in self-policing waste disposal programs, and upon application of any person, advise the applicant of the condition to be maintained in any disposal area or receiving waters into which the waste is being discharged. [¶] (c) Require as necessary any state or local agency to investigate and report on any technical factors involved in water quality control or to obtain and submit analyses of water; provided that the burden, including costs, of such reports shall bear a reasonable relationship to the need for the report and the benefits to be obtained therefrom. [¶] (d) Request enforcement by appropriate federal, state and local agencies of their respective water quality control laws. [¶] (e) Recommend to the state board projects which the regional board considers eligible for any financial assistance which may be available through the state board. [¶] (f) Report to the state board and appropriate local health officer any case of suspected contamination in its region. [¶] (g) File with the state board, at its request, copies of the record of any official action. [¶] (h) Take into consideration the effect of its actions pursuant to this chapter on the California Water Plan adopted or revised pursuant to Division 6 (commencing with Section 10000) of this code and on any other general or coordinated governmental plan looking toward the development, utilization or conservation of the water resources of the state. [¶] (i) Encourage regional planning and action for water quality control."

This argument has no merit. Effective September 22, 1989, the authority to issue National Pollutant Discharge Elimination System permits was vested by the federal Environmental Protection Agency in the state board. (54 Fed.Reg. 40664, 40665 (Oct. 3, 1989); see *Building Industry Assn. of San Diego County v. State Water Resources Control Bd.* (2004) 124 Cal.App.4th 866, 875, 22 Cal.Rptr.3d 128.)

The state board is organized into nine regional boards which are part of the California Environmental Protection Agency. (Wat.Code, §§ 174 et seq. 13100; see *City of Arcadia v. State Water Resources Control Bd.* (2006) 135 Cal.App.4th 1392, 1405, 38 Cal.Rptr.3d 373.) The nine regional boards are authorized under this state's laws to issue National Pollutant Discharge Elimination System permits. (*Building Industry Assn. of San Diego County v. State Water Resources Control Bd., supra,* 124 Cal.App.4th at p. 875, 22 Cal.Rptr.3d 128; Wat.Code, § 13374.) The federal Environmental Protection Agency memorandum of agreement with the state board complies with the statewide jurisdiction requirements imposed by the federal regulations. The fact the state board is organized into nine regional boards is legally irrelevant. The state board has statewide jurisdiction.

[5] Further, we agree with the Attorney General that plaintiffs may not challenge the regional board's authority to issue a National Pollutant Elimination System permit in this proceeding. Such **630* an indirect challenge to the board's authority is barred by the de facto officer doctrine. The Supreme Court has described the de facto officer doctrine, which bars a challenge to an agency's action based on a purported lack of legal authority to act, thusly: "[W]e conclude that under the 'de facto officer' doctrine prior actions of the Commission cannot be set aside on the ground that the appointment of the commissioners who participated in the decision may be vulnerable to constitutional challenge. As this court explained in *In re Redevelopment Plan for Bunker Hill* (1964) 61 Cal.2d 21, 41-42 [37 Cal.Rptr. 74, 389 P.2d 538]: 'The de facto doctrine in sustaining official acts is well established. [Given the existence of] a de jure office, "[p]ersons claiming to be public officers while in possession of an office, ostensibly exercising their function lawfully and with the acquiescence of the public, are *de facto* officers.... The lawful acts of an officer *de facto,* so far as the rights of third persons are concerned, are, if done within the scope and by the apparent authority of office, as valid and binding as if he were the officer legally elected and qualified for the office and in full possession of it." [Citations.]' (See also *Pickens v. Johnson* (1954) 42 Cal.2d 399, 410 [267 P.2d 801] ['There is no question but that ... the status of a judge de facto attached to his action. The office to which he was assigned was a de jure office. By acting under regular assignment under a statute authorizing it he was acting under color of authority as provided by law. His conduct in trying the cases and rendering judgment therein cannot here be questioned.'].)" (*Marine Forests Soc. v. California Coastal Com.* (2005) 36 Cal.4th 1, 54, 30 Cal.Rptr.3d 30, 113 P.3d 1062; original italics.) Here, plaintiffs are challenging the permit by attacking the regional board's authority. Under these circumstances, this they may not do in what amounts to a licensing proceeding. (*Ibid.; In re Redevelopment Plan for Bunker Hill, supra,* 61 Cal.2d at pp. 41-42, 37 Cal.Rptr. 74, 389 P.2d 538.)

[6] Finally there is no merit to the contention that because the regional board is not an elected body, it cannot make the financial decisions of the scope entailed by the permit. The board's powers exist because of: the Clean Water Act which was adopted and amended by elected members of Congress and signed into law by elected presidents; provisions of the Water Code which were enacted by elected legislators and approved by elected governors; and the members, who must have special competence, are appointed by an elected governor and confirmed by the elected State Senate. (Wat.Code, § 13201, subds.(a)-(b).) The democratic processes of government control every aspect of the creation of the board, its legal authority, and the selection of its members. Further, the decisions of regulatory institutions such as the regional board, are entitled by law to a presumption of competence and propriety. (*City of Rancho Cucamonga v. Regional Water Quality Control Bd., supra,* 135 Cal.App.4th at p. 1384, 38 Cal.Rptr.3d 450; *Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1104, 1 Cal.Rptr.3d 76.)

B. The Motions To Strike

Plaintiffs argue that the trial court erroneously granted the regional board's motions to strike portions of the petition. Plaintiffs contend: the motions to strike were in fact disguised summary adjudication motions; the orders granting the motions to strike did not resolve entire causes of action; and hence, the orders violated **631* Code of Civil Procedure section 437c, subdivision (f)(1). This contention has no merit. Code of Civil Procedure section 436 allows a court to strike portions of a cause of action.

(*City of Rancho Cucamonga v. Regional Water Quality Control Bd., supra,* 135 Cal.App.4th at p. 1386, 38 Cal.Rptr.3d 450; *PH II, Inc. v. Superior Court* (1995) 33 Cal.App.4th 1680, 1682-1683, 40 Cal.Rptr.2d 169.)

C. The State Board's Demurrer

[7] Plaintiffs argue that the trial court erroneously sustained the state board's demurrer to the petitions. The state board contended it was not properly joined as a party to the litigation. A group of plaintiffs alleged the state board required the regional boards to adopt terms and conditions on National Pollutant Discharge Elimination System permits without complying with Government Code sections 11340.5, subdivision (a) [FN6] and 11352, subdivision (b) which are part of the Administrative Procedure Act. Plaintiffs had a duty to specifically allege every fact that would give rise to liability by the state board. (*Covenant Care, Inc. v. Superior Court* (2004) 32 Cal.4th 771, 790, 11 Cal.Rptr.3d 222, 86 P.3d 290; *Lopez v. Southern Cal. Rapid Transit Dist.* (1985) 40 Cal.3d 780, 795, 221 Cal.Rptr. 840, 710 P.2d 907.) The state board refused to assume jurisdiction over this case. There were thus no specific allegations as to the state board to hold it liable as it engaged in no independent activity. Hence, this contention has no merit and the demurrer was properly sustained. (*City of Rancho Cucamonga v. Regional Water Quality Control Bd., supra,* 135 Cal.App.4th at p. 1383, 38 Cal.Rptr.3d 450; *People ex rel Cal. Regional Wat. Quality Control Bd. v. Barry* (1987) 194 Cal.App.3d 158, 177, 239 Cal.Rptr. 349.)

> FN6: Government Code sections 11340.5, subdivision (a) states, "No state agency shall issue, utilize, enforce, or attempt to enforce any guideline, criterion, bulletin, manual, instruction, order, standard of general application, or other rule, which is a regulation as defined in Section 11342.600, unless the guideline, criterion, bulletin, manual, instruction, order, standard of general application, or other rule has been adopted as a regulation and filed with the Secretary of State pursuant to this chapter."

D. The Declaratory Relief Claims

[8] The trial court sustained the regional board's demurrers to the declaratory relief claims. Plaintiffs argue they were entitled to declaratory relief as to whether: the permittees were required to "go beyond the [maximum extent practicable]" standard to comply with part 2 of the permit which relates to receiving water limitations; part 2 contained a "safe harbor" if the permittees were acting in good faith in implementing best management practices to control excessive discharge of pollutants and nuisance conditions; the requirement in part 4 of the permit that each permittee's general plan and California Environmental Quality Act review take into account storm water runoff is lawful; the regional board was required to consider the economic impact of the proposed permit and its effect on housing; and the regional board was required to perform a "cost/benefit analysis" of the monitoring and reporting program.

[9] When a remedy has been designated by the Legislature to review an administrative action, declaratory relief is unavailable. (*State of California v. Superior Court* (1974) 12 Cal.3d 237, 249, 115 Cal.Rptr. 497, 524 P.2d 1281; *Scott v. City of Indian Wells* (1972) 6 Cal.3d 541, 546, 99 Cal.Rptr. 745, 492 P.2d 1137.) Water Code section 13330, subdivision (b) provides that a regional board order may be reviewed by a Code of Civil Procedure section 1094.5 administrative mandate petition*632 filed within 30 days after the state board denies review. Therefore, the demurrer was correctly sustained to the declaratory relief claims. (*Hill v. City of Manhattan Beach* (1971) 6 Cal.3d 279, 287, 98 Cal.Rptr. 785, 491 P.2d 369; *Hostetter v. Alderson* (1952) 38 Cal.2d 499, 500, 241 P.2d 230.)

E. The Regional Board Has Not Unlawfully Interfered In Local General Plans And California Environmental Quality Act Review

[10] The permit requires the permittees to update their general plans to include watershed and storm water runoff as considerations in the land use, housing, conservation, and open space planning. Further, the permittees were required to amend their California Environmental Quality Act process to insure review of the effect of commercial and residential development on storm water runoff. Plaintiffs argue these aspects of the permit violate the separation of powers doctrine. This contention has no merit. As noted, the regional boards are part of a joint state and federal process to enforce the Clean Water Act. (*City of Burbank v. State Water Resources Control Bd., supra,* 35 Cal.4th at pp. 619-620, 26 Cal.Rptr.3d 304, 108 P.3d 862; *City of Rancho Cucamonga v. Regional Water Quality Control Bd., supra,* 135 Cal.App.4th at pp. 1380-1381, 38 Cal.Rptr.3d 450.) The general plan powers and duties of cities and counties are limited by statewide law. (Cal. Const., art. XI, § 7; Gov.Code, § 65030.1; *Jackson v. City of Los Angeles* (2003) 111 Cal.App.4th 899, 907-908, 4 Cal.Rptr.3d 325; *Suter v. City of Lafayette* (1997) 57 Cal.App.4th 1109, 1118, 67 Cal.Rptr.2d 420.) Further, the Clean Water Act supersedes all conflicting state and local pollution laws. (*Arkansas v. Oklahoma* (1992) 503 U.S. 91, 101, 112 S.Ct. 1046, 117 L.Ed.2d 239; *City of Burbank v. State Water Resources Control Bd., supra,* 35 Cal.4th at p. 621, 26 Cal.Rptr.3d 304, 108 P.3d 862.) The state and regional boards are vested with the primary responsibility of controlling water quality. (Wat.Code, § 13001; see *Arkansas v. Oklahoma, supra,* 503 U.S. at p. 101, 112 S.Ct. 1046; *Hampson v. Superior Court* (1977) 67 Cal.App.3d 472, 484, 136 Cal.Rptr. 722.) Regional boards are explicitly granted the authority to issue orders for purposes of enforcing the federal Clean Water Act. (Wat.Code, § 13377.) Federal law requires that permits include controls to reduce pollutant discharge in areas of new development and significant redevelopment-the very area where regional board review occurs. (40 C.F.R. § 122.26(d)(2)(iv)(A)(2) (2006).) So long as the regional boards' decisions carry out federal and state water quality mandates resulting from express legislative action as the challenged orders in this case in fact do, no separation of powers issue is present. (*Kugler v. Yocum* (1968) 69 Cal.2d 371, 375-377, 71 Cal.Rptr. 687, 445 P.2d 303; *Salmon Trollers Marketing Assn. v. Fullerton* (1981) 124 Cal.App.3d 291, 300, 177 Cal.Rptr. 362.) Given the foregoing, we need not address the waiver, laches, and estoppel contentions of the regional and state boards and the intervenors.

F. Failure To Comply With the California Environmental Quality Act

[11] Plaintiffs argue that the permit issuance process violates provisions of the California Environmental Quality Act. Plaintiffs rely on Water Code section 13389 which provides that chapter 3 of the California Environmental Quality Act does not apply to National Pollutant Discharge Elimination Systems permit proceedings: "Neither the state board nor the regional boards shall be required to comply with ***633** the provisions of Chapter 3 (commencing with Section 21100) of Division 13 of the Public Resources Code prior to the adoption of any waste discharge requirement, except requirements for new sources as defined in the Federal Water Pollution Control Act or acts amendatory thereof or supplementary thereto." California Code of Regulations, title 23, section 3733 also states, "Environmental documents are not required for adoption of waste discharge requirements under Chapter 5.5, Division 7 of the Water Code, except requirements for new sources as defined in the Federal Water Pollution Control Act. This exemption is in accordance with Water Code Section 13389 which does not apply to the policy provisions of Chapter 1 of CEQA." Plaintiffs argue that the California Environmental Quality Act applies to: the receiving water limitations; the revision of the Storm Water Quality Management Program; and the Development Planning Program. (See *City of Arcadia v. State Water Resources Control Bd., supra,* 135 Cal.App.4th at pp. 1420-1426, 38 Cal.Rptr.3d 373; *Committee for Progressive Gilroy v. State Water Resources Control Bd.* (1987) 192 Cal.App.3d 847, 862, 237 Cal.Rptr. 723.)

Chapter 3 of the California Environmental Quality Act was originally adopted in 1970. (Stats.1970, ch. 1433, § 1, pp. 2781-2782.) The original chapter 3 of the California Environmental Quality Act required

all state agencies, boards, and commissions, that proposed a project which would have a significant effect on the environment to prepare a "detailed statement" setting forth the environmental effect of the contemplated undertaking.[FN7] (See *Russian Hill Improvement Assn. v. Board of Permit Appeals* (1974) 44 Cal.App.3d 158, 166, 118 Cal.Rptr. 490; *City of Orange v. Valenti* (1974) 37 Cal.App.3d 240, 246, 112 Cal.Rptr. 379.) Water Code section 13389 was adopted as urgency legislation to comply with certain provisions of the Clean Water Act provisions establishing the National Pollution Discharge Elimination System. (Stats.1972, ch. 1256, § 3, p. 2490.) Expressly for that purpose, the California Legislature enacted chapter 5.5, the "Water Quality" division, which includes Water Code section 13389. (Wat.Code, § 13370 [FN8]; ***634** *City of Brentwood v. Central Valley Regional Water Quality Control Bd.* (2004) 123 Cal.App.4th 714, 723, 20 Cal.Rptr.3d 322; *Sierra Club v. Union Oil Co. of California* (9th Cir.1987) 813 F.2d 1480, 1483.) When Water Code section 13389 became effective on December 19, 1972, chapter 2.6 of the California Environmental Quality Act had just been enacted, also as urgency legislation, and it consisted of Public Resources Code sections 21080 through 21090. The new chapter 2.6 of the California Environmental Quality Act became effective on December 5, 1972. (Stats.1972, ch. 1154, § 19, p. 2280.) Chapter 3 of the California Environmental Quality Act was also amended effective December 5, 1972, and it which applied to all environmental assessments by state agencies, boards, and commissions. Former Public Resource Code section 21100, the core provision of the 1972 version of the California Environmental Quality Act as it related to state agencies, boards, and commissions, stated: "All state agencies, boards, and commissions shall prepare, or cause to be prepared ... and certify the completion of an environmental impact report on any project they propose to carry out or approve which may have a significant effect on the environment." (Stats.1972, ch. 1154, § 2.5, p. 2274; see *Desert Environment Conservation Assn. v. Public Utilities Com.* (1973) 8 Cal.3d 739, 742, 106 Cal.Rptr. 31, 505 P.2d 223; *San Francisco Ecology Center v. City and County of San Francisco* (1975) 48 Cal.App.3d 584, 594, fn. 8, 122 Cal.Rptr. 100.) Beyond question, the Legislature intended that chapter 3 of the California Environmental Quality Act not apply to National Pollution Discharge Elimination System permits-in that respect Water Code section 13389 is entirely clear.

> FN7. Public Resources Code section 21100 as enacted in 1970 stated: "All state agencies, boards, and commissions shall include in any report on any project they propose to carry out which could have a significant effect on the environment of the state, a detailed statement by the responsible state official setting forth the following: [¶] (a) The environmental impact of the proposed action.[¶] (b) Any adverse environmental effects which cannot be avoided if the proposal is implemented. [¶] (c) Mitigation measures proposed to minimize the impact. [¶] (d) Alternatives to the proposed action. [¶] (e) The relationship between local short-term uses of man's environment and the maintenance and enhancement of long-term productivity. [¶] (f) Any irreversible environmental changes which would be involved in the proposed action should it be implemented." (Stats.1970, ch. 1433, § 1, pp. 2781-2782.)

> FN8. Water Code section 13370 states: "The Federal Water Pollution Control Act (33 U.S.C. Sec. 1251 et seq.), as amended, provides for permit systems to regulate the discharge of pollutants and dredged or fill material to the navigable waters of the United States and to regulate the use and disposal of sewage sludge. [¶] (b) The Federal Water Pollution Control Act, as amended, provides that permits may be issued by states which are authorized to implement the provisions of that act. [¶] (c) It is in the interest of the people of the state, in order to avoid direct regulation by the federal government of persons already subject to regulation under state law pursuant to this division, to enact this chapter in order to authorize the state to implement the provisions of the Federal Water Pollution Control Act and acts amendatory thereof or supplementary thereto, and federal regulations and guidelines issued pursuant thereto, provided, that the state board shall request federal funding under the Federal Water Pollution Control Act for the purpose of carrying out its responsibilities under this program."

But on December 19, 1972, when Water Code section 13389 was enacted, chapter 2.6 of the California Environmental Quality Act, which contains generalized requirements for the preparation of environmental impact reports for discretionary projects, had just been adopted effective December 5,

1972. Chapter 2.6 of the California Environmental Quality Act applies to discretionary projects proposed by public agencies. (Former Pub. Resources Code, § 21080.) Pursuant to new chapter 2.6 of the California Environmental Quality Act, all public agencies were required to adopt by ordinance, resolution, or the like procedures for preparation of environmental impact reports. (Former Pub. Resources Code, § 21082.) The Office of Planning and Research was directed to adopt proposed guidelines for the preparation of environmental impact reports including a listing of projects determined not to have a significant impact on the environment. (Former Pub. Resources Code, §§ 21083-21088.) Finally, chapter 2.6, as adopted in 1972, allowed a public agency to charge fees for the preparation an environmental impact report and defined public and private developments pursuant to a redevelopment plan as a single project. (Former Pub. Resources Code, §§ 21089-21090.)

It can be argued that even though chapter 3 with its environmental impact preparation requirement for state agencies, boards, and commissions was not to apply to National Pollution Discharge Elimination System permits, the discretionary projects requirements in chapter 2.6 of the California Environmental Quality Act mandated environmental review. Hence, the argument would be that the Legislature in enacting Water Code section 13389 did not intend to obviate the duty pursuant to ***635*** chapter 2.6 of the California Environmental Quality Act to prepare an environmental impact report. We are unpersuaded by this analysis. Former Public Resources Code section 20180, subdivision (a), the core provision relating to discretionary projects, stated: "(a) Except as otherwise provided in this division, this division shall apply to discretionary projects proposed to be carried out or approved by public agencies including, but not limited to, the enactment and amendment of zoning ordinances, the issuance of zoning variances, the issuance of conditional use permits and the approval of tentative subdivision maps (except where such a project is exempt from the preparation of an environmental impact report pursuant to Section 21166)." (Stats.1972, ch. 1154, § 2.3, p. 2272; see *People v. County of Kern* (1974) 39 Cal.App.3d 830, 839, 115 Cal.Rptr. 67; *Friends of Lake Arrowhead v. Board of Supervisors* (1974) 38 Cal.App.3d 497, 510, 113 Cal.Rptr. 539.) As can be noted, Public Resources Code section 21080, subdivision (a) established that a discretionary project was subject to the environmental impact requirement. But the requirement that a state agency, board, and commission prepare an environmental report was found in Public Resources Code section 21110 which was, and is now, located in chapter 3 of the California Environmental Quality Act. The obligation imposed on a state agency, board, and commission to prepare an environmental impact report existed in chapter 3 before the adoption of Water Code section 13389 and it remained there after the 1972 amendments to the California Environmental Quality Act. No doubt, since 1972 when the Legislature adopted Water Code section 13389 and the then new chapter 2.6, the California Environmental Quality Act has been repeatedly amended. But defendants cite no evidence the Legislature ever intended to: impose a duty on regional boards to prepare environmental impact reports; require regional boards to engage in any other form of environmental review specified in the California Environmental Quality Act; or to otherwise modify Water Code section 13389.

Defendants rely on the analysis of our colleague Presiding Justice Judith D. McConnell of Division One of the Fourth Appellate District in *City of Arcadia v. State Water Resources Control Bd., supra,* 135 Cal.App.4th at pages 1420-1430, 38 Cal.Rptr.3d 373 that regional board basin plans are subject to limited California Environmental Quality Act review. The *City of Arcadia* decision does not involve the issuance of a National Pollution Discharge Elimination System permit. Rather, it involves the development of a basin plan. (*Ibid.*) We agree with the Attorney General that a basin plan is subject to limited environmental review pursuant to Public Resources Code section 21080.5. Public Resources Code section 21080.5, subdivision (a) vests the Secretary of the Resources Agency with the authority to require limited environmental review: "(a) Except as provided in Section 21158.1, when the regulatory program of a state agency requires a plan or other written documentation containing environmental information and complying with paragraph (3) of subdivision (d) to be submitted in support of an activity listed in subdivision (b), the plan or other written documentation may be submitted in lieu of the environmental impact report required by this division if the Secretary of the Resources Agency has certified the regulatory program pursuant to this section." The secretary's authority extends to requiring limited environmental review when an agency adopts "standards, rules, regulations, or plans for use" in a regulatory program. (Pub. Resources Code, § 21080.5, subd. (b)(2).) The secretary has certified the regional boards' basin plan program as requiring limited environmental review. (***636*** *City of Arcadia v. State Water Resources Control Bd., supra,* 135

Cal.App.4th at p. 1422, 38 Cal.Rptr.3d 373; Cal.Code Regs. tit.14, § 15251, subd. (g). [FN9]) The resources secretary has never identified the National Pollution Discharge Elimination System permit system as a Public Resources Code section 21080.5 certified program. Thus, *City of Arcadia* does not require California Environmental Quality Act review prior to the issuance of a National Pollution Discharge Elimination System permit.

FN9. California Code of Regulations, title 14, section 15251, subdivision (g) states: "The following programs of state regulatory agencies have been certified by the Secretary for Resources as meeting the requirements of Section 21080.5:[¶] ... (g) The Water Quality Control (Basin)/208 Planning Program of the State Water Resources Control Board and the Regional Water Quality Control Boards."

G.-L.[FN**]

[The following material is not certified for publication under California Rules of Court, rules 976(b) and 976.1.]

G. Sufficiency Of The Evidence Contentions

1. Overview

Many of plaintiffs' contentions are overtly stated or deftly disguised sufficiency of the evidence arguments. We agree with the intervenors that plaintiffs in making these assertions have failed in every respect to set forth all of the relevant evidence. As such, all evidence sufficiency contentions have been waived. (*State Water Resources Control Bd. Cases* (2006) 136 Cal.App.4th 674, 749, 39 Cal.Rptr.3d 189; see *Foreman & Clark Corp. v. Fallon* (1971) 3 Cal.3d 875, 881, 92 Cal.Rptr. 162, 479 P.2d 362.)

2. The reasonableness of the permit requirements

Plaintiffs argue that the permit violates the statutory requirement it be reasonable. Plaintiffs contend that four parts of the permit exceed federal requirements which only require that a permit restrict pollutant discharges to the maximum extent possible. Plaintiffs identify three parts of the permit which exceed the federal maximum extent possible limit and reason as follows. Part 2.1 of the permit, which involves receiving water restrictions, prohibits all water discharges which violate water quality standards or objectives regardless of whether the best management practices are reasonable. Part 2.4, also part of the receiving water restrictions, permits the regional board to adopt best management practices without any reasonableness restriction. Part 3.C requires the permittees to revise their storm water quality management programs in order to implement the total maximum daily loads for impaired water bodies. As a result, according to plaintiffs, parts 3.G and 4 authorize the regional board to require strict requirements with numeric limits on pollutants which are incorporated into the total maximum daily load restrictions. Because these four parts of the permit exceed federal requirements, plaintiffs argue the permit violates a state law requirement derived from Water Code sections 13000, 13241, and 13263, subdivision (a) [FN10] that restrictions on storm water system discharges be reasonable.

FN10. Water Code section 13000 states: "The Legislature finds and declares that the people of the state have a primary interest in the conservation, control, and utilization of the water resources of the state, and that the quality of all the waters of the state shall

> be protected for use and enjoyment by the people of the state. [¶] The Legislature further finds and declares that activities and factors which may affect the quality of the waters of the state shall be regulated to attain the highest water quality which is reasonable, considering all demands being made and to be made on those waters and the total values involved, beneficial and detrimental, economic and social, tangible and intangible. [¶] The Legislature further finds and declares that the health, safety and welfare of the people of the state requires that there be a statewide program for the control of the quality of all the waters of the state; that the state must be prepared to exercise its full power and jurisdiction to protect the quality of waters in the state from degradation originating inside or outside the boundaries of the state; that the waters of the state are increasingly influenced by interbasin water development projects and other statewide considerations; that factors of precipitation, topography, population, recreation, agriculture, industry and economic development vary from region to region within the state; and that the statewide program for water quality control can be most effectively administered regionally, within a framework of statewide coordination and policy." The portions of Water Code section 13241 upon which plaintiff rely state: "Each regional board shall establish such water quality objectives in water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance; however, it is recognized that it may be possible for the quality of water to be changed to some degree without unreasonably affecting beneficial uses. Factors to be considered by a regional board in establishing water quality objectives shall include, but not necessarily be limited to, all of the following: [¶] ... (c) Water quality conditions that could reasonably be achieved through the coordinated control of all factors which affect water quality in the area. [¶] (d) Economic considerations. [¶] (e) The need for developing housing within the region. [¶] (f) The need to develop and use recycled water." Water Code section 13263, subdivision (a) states: "The regional board, after any necessary hearing, shall prescribe requirements as to the nature of any proposed discharge, existing discharge, or material change in an existing discharge, except discharges into a community sewer system, with relation to the conditions existing in the disposal area or receiving waters upon, or into which, the discharge is made or proposed. The requirements shall implement any relevant water quality control plans that have been adopted, and shall take into consideration the beneficial uses to be protected, the water quality objectives reasonably required for that purpose, other waste discharges, the need to prevent nuisance, and the provisions of Section 13241."

These contentions have no merit. To begin with, insofar as these contentions involve sufficiency of the evidence contentions, they are waived because of a failure to set forth all of the applicable evidence. (*Foreman & Clark Corp. v. Fallon, supra,* 3 Cal.3d at p. 881, 92 Cal.Rptr. 162, 479 P.2d 362; *State Water Resources Control Bd. Cases, supra,* 136 Cal.App.4th at p. 749, 39 Cal.Rptr.3d 189.) In any event, regardless of whether the permit imposed requirements beyond what plaintiffs contend is the maximum extent feasible, the regional board has the authority to impose additional restrictions. As the intervenors explain, title 33 United States Code section 1342(p)(3)(B) states in part: "Permits for discharges from municipal storm sewers-[¶] ... (ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and [¶] (iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the ... State determines appropriate for the control of such pollutants."

In fact, the regional board had the duty to place limits on the release of pollutants into certain waters. Our colleagues in Division One of the Fourth Appellate District have explained: the Clean Water Act requires that states identify a level of permissible pollution, the "total maximum daily load"; the total maximum daily load must be established at a level to achieve certain water standards; and the National Pollutant Elimination System permits must be consistent with the amount of pollutants described in the state specified total maximum daily load. (*City of Arcadia v. State Water Resources Control Bd., supra,* 135 Cal.App.4th at p. 1404, 38 Cal.Rptr.3d 373; 33 U.S.C. § 1313(d).) The federal Clean Water Act requires the following, "Except as in compliance with this section and sections ... [1312, 1316, 1317, 1328, 1342, and 1344] of this Act, the discharge of any pollutant by any person shall be unlawful." (33 U.S.C. § 1311(a).) In terms of the regional board's statutory duty

in setting a total maximum daily load, the Clean Water Act requires: "Each State shall establish for the waters identified in paragraph (1)(A) of this subsection, and in accordance with the priority ranking, the total maximum daily load, for those pollutants which the Administrator identifies under section [1314(a)(2)] as suitable for such calculation. Such load shall be established at a level necessary to implement the applicable water quality standards...." (33 U.S.C. § 1313(d)(1)(C).) As can be noted, the regional board may not to take into account the maximum extent practicable limitation in setting the total maximum daily load. (*City of Arcadia v. State Water Resources Control Bd., supra,* 135 Cal.App.4th at p. 1428, 38 Cal.Rptr.3d 373.) The regional board's total maximum daily load specification in this case was entirely consistent with federal water quality law. Nothing in the Water Code can circumvent the foregoing federally imposed requirements as to the calculation of the total maximum daily load. (See *City of Burbank v. State Water Resources Control Bd., supra,* 35 Cal.4th at pp. 618, 626-627, 26 Cal.Rptr.3d 304, 108 P.3d 862.) And the regional board's authority in setting the total maximum daily load extended to imposing requirements beyond the maximum extent practicable. (*City of Arcadia v. State Water Resources Control Bd., supra,* 135 Cal.App.4th at p. 1428, 38 Cal.Rptr.3d 373; *Building Industry Assn. of San Diego County v. State Water Resources Control Bd., supra,* 124 Cal.App.4th at pp. 885-886, 22 Cal.Rptr.3d 128.)

There is substantial evidence the permit imposes reasonable pollutant discharge requirements. The regional board had before it the study entitled "Fundamentals of Urban Runoff Management" which detailed the feasibility of the restrictions at issue. In footnote 6 of the trial court's March 24, 2005 statement of decision are 16 separate studies or analyses that evaluate the reasonableness of the restrictions at issue. Further, as described below, there was a vast array of reports and official papers that addressed the reasonableness issue in varying contexts ranging from economics to housing. Substantial evidence supports the trial court's finding that the permit's restrictions on pollutant discharge are reasonable. It is presumed the regional board examined these reports. (*City of Santa Cruz v. Local Agency Formation Com., supra,* 76 Cal.App.3d at pp. 393-394, 142 Cal.Rptr. 873; see *Laurel Heights Improvement Assn. v. Regents of the University of California, supra,* 47 Cal.3d at p. 393, 253 Cal.Rptr. 426, 764 P.2d 278.)

There is likewise no merit to the factually unsupported theory of the county and the flood control district that they cannot comply with the permit. The county and the flood control district assert, without citation to any evidence in the record, they cannot comply with the permit thereby rendering it, as matter of law, unreasonable. We agree with the intervenors that there is insufficient facts to permit an evidentiary challenge of the type asserted by the county and the flood control district. (*Building Industry Assn. of San Diego County v. State Water Resources Control Bd., supra,* 124 Cal.App.4th at p. 888, 22 Cal.Rptr.3d 128; Cal. Rules of Court, rule 14(a)(1)(C).)

3. Failure to consider the economic effects of the permit and engage in a proper cost benefit analysis

Plaintiffs argue that the regional board failed to consider the economic impact of issuance of the permits. A regional board is authorized to issue a permit which imposes more protective restrictions on waste water discharge than required by the Clean Water Act. (Wat.Code, § 13377.[FN11]) As noted, Water Code section 13241, subdivision (d) requires that the regional board consider the economic effect including the cost of compliance of the issuance of the permit. (See fn. 6, *supra.*) Plaintiffs argue the permit imposes conditions more stringent than required by the federal Clean Water Act. Therefore, they reason that the regional board was required to consider the economic effect of the permit. (*City of Burbank v. State Water Resources Control Bd., supra,* 35 Cal.4th at p. 618, 26 Cal.Rptr.3d 304, 108 P.3d 862 ["When, however, a regional board is considering whether to make the pollutant restrictions in a wastewater discharge permit *more stringent* than federal law requires, California law allows the board to take into account economic factors, including the wastewater discharger's cost of compliance" (orig.italics)]; *City of Arcadia v. State Water Resources Control Bd., supra,* 135 Cal.App.4th at pp. 1415-1418, 38 Cal.Rptr.3d 373 [finding sufficient consideration of economic effect of total daily maximum loads for trash restriction imposed in 2001 permit].) Further, plaintiffs argue that the regional board failed to conduct a cost benefit analysis as required by Water Code sections 13165 [FN12], 13225, subdivision (c) [FN13], 13267, subdivision (b) [FN14] before imposing monitoring and reporting obligations as part of the permit.

FN11. Water Code section 13377 states, "Notwithstanding any other provision of this division, the state board or the regional boards shall, as required or authorized by the Federal Water Pollution Control Act, as amended, issue waste discharge requirements and dredged or fill material permits which apply and ensure compliance with all applicable provisions of the act and acts amendatory thereof or supplementary, thereto, together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance."

FN12. Water Code section 13165 states, "The state board may require any state or local agency to investigate and report on any technical factors involved in water quality control; provided that the burden, including costs, of such reports shall bear a reasonable relationship to the need for the reports and the benefits to be obtained therefrom."

FN13. Water Code section 13225, subdivision (c) states: "Each regional board, with respect to its region, shall: [¶] (c) Require as necessary any state or local agency to investigate and report on any technical factors involved in water quality control or to obtain and submit analyses of water; provided that the burden, including costs, of such reports shall bear a reasonable relationship to the need for the report and the benefits to be obtained therefrom."

FN14. Water Code section 13267, subdivision (b)(1) states: "In conducting an investigation specified in subdivision (a), the regional board may require that any person who has discharged, discharges, or is suspected of having discharged or discharging, or who proposes to discharge waste within its region, or any citizen or domiciliary, or political agency or entity of this state who has discharged, discharges, or is suspected of having discharged or discharging, or who proposes to discharge, waste outside of its region that could affect the quality of waters within its region shall furnish, under penalty of perjury, technical or monitoring program reports which the regional board requires. The burden, including costs, of these reports shall bear a reasonable relationship to the need for the report and the benefits to be obtained from the reports. In requiring those reports, the regional board shall provide the person with a written explanation with regard to the need for the reports, and shall identify the evidence that supports requiring that person to provide the reports."

These contentions have no merit. To begin with, insofar as plaintiffs argue that the there was no substantial evidence these issues were considered, they have waived their opportunity to do so because they failed to set forth all of the documents considered by the regional board. Plaintiffs have failed to detail an extensive array of reports and analysis appearing in the administrative record. (*Foreman & Clark Corp. v. Fallon, supra,* 3 Cal.3d at p. 881, 92 Cal.Rptr. 162, 479 P.2d 362; *State Water Resources Control Bd. Cases, supra,* 136 Cal.App.4th at p. 749, 39 Cal.Rptr.3d 189.)

Nonetheless this contention is without merit. The permit explicitly states it is intended to provide a cost-effective storm water pollution program to the maximum extent possible. The permit applies the same cost-effective analysis to efforts to reduce the flow of pollutants into receiving waters. Moreover, the regional board in its findings referred to a report specifying how the "maximum extent practicable" requirement includes considerations of costs and benefit. The regional board had before it: a study of costs prepared by the Maryland Department of Environment; a 58-page study prepared for Parsons Engineering Service on the costs and benefits of storm water best management practices; the extensive federal Environmental Protection Agency data summary of best management practices and their costs which include programs incorporated into the permit; a federal Environmental Protection Agency fact sheet showing the cost effectiveness of reductions in storm water run-off; a federal Environmental Protection Agency document detailing the economic benefits of run off controls; a 44-page federal Environmental Protection Agency document detailing cost analyses of various best management practices; a 99-page report entitled "Cost Analysis" on storm water programs in the state of Washington; a similar analysis prepared for the Commonwealth of Virginia; a federal Environmental Protection Agency analysis of the economic effects of clean water; a lengthy analysis

prepared by the federal Environmental Protection Agency on the effects of restrictions of runoff on housing values; and an 11-page study entitled, "The Economics of Watershed Protection." It is presumed the regional board examined these reports. (*City of Santa Cruz v. Local Agency Formation Com.*, *supra*, 76 Cal.App.3d at pp. 393-394, 142 Cal.Rptr. 873; see *Laurel Heights Improvement Assn. v. Regents of the University of California, supra*, 47 Cal.3d at p. 393, 253 Cal.Rptr. 426, 764 P.2d 278.) This constitutes substantial evidence the regional board considered the costs and benefits of implementation of the permit. Finally, for the foregoing reasons, the trial court did to abuse its discretion when it denied the posttrial motions which asserted the regional board did not consider the economic consequences of the permit.

4. Failure to consider the effect of the permit on housing

Plaintiffs argue that the regional board neglected to consider the effect of the permit on the need to develop housing as required by Water Code section 13241, subdivision (e). (See fn. 6, *supra.*) Plaintiffs argue that the Legislature has determined that all state agencies such as the regional board must "facilitate the improvement and development" of affordable housing. (Gov.Code, § 65580, subds.(c)-(d).) Plaintiffs argue: the permit is designed to impose new storm runoff limitations on future residential projects; the Standard Urban Water Mitigation Plan portion of the permit applies to both development and redevelopment projects; the permit requires that runoff mitigation occur on single family residences occupying one acre or more and 10-unit or more housing developments; among the mitigation requirements are retention of runoff and erosion from construction sites; transfers of property were subject to maintenance agreements; and the permit will require a significant amount of land to comply with treatment control best management practices.

Plaintiffs have failed to detail an extensive array of reports and analyses appearing in the administrative record. Thus, the issue of whether there is substantial evidence the regional board considered the effect of the permit on housing has been waived. (*Foreman & Clark Corp. v. Fallon*, *supra*, 3 Cal.3d at p. 881, 92 Cal.Rptr. 162, 479 P.2d 362; *State Water Resources Control Bd. Cases*, *supra*, 136 Cal.App.4th at p. 749, 39 Cal.Rptr.3d 189.) Nonetheless, there is substantial evidence the regional board considered housing issues prior to issuing the permit. The regional board had before it: the May 16, 2001 expression of concerns by the Building Industry Association; demographic analyses; a scholarly discussion of the effects of environmental regulation and housing availability; the federal Environmental Protection Agency analysis of the potential effects of restrictions of runoff on housing values; a technical analysis of runoff controls on housing design and planning; a National Association of Homebuilders guide for residential storm water runoff; an analysis of site design and watershed management in the context of residential subdivisions; the document entitled, "Storm Water Management in Washington" which discusses the technical requirements for small and large parcel developments; the regional board staff analysis; an analysis of the experiences in Virginia; and an article on additional housing costs resulting from storm water regulation. It is presumed the regional board examined these reports. (*City of Santa Cruz v. Local Agency Formation Com.*, *supra*, 76 Cal.App.3d at pp. 393-394, 142 Cal.Rptr. 873; see *Laurel Heights Improvement Assn. v. Regents of the University of California, supra*, 47 Cal.3d at p. 393, 253 Cal.Rptr. 426, 764 P.2d 278.) Thus, there is substantial evidence the regional board considered housing related issues before it issued the permit.

H. Improper Specifications Of Design Characteristics.

Plaintiffs argue that the regional board improperly specified the " 'design or the particular manner' " as to how there was to be compliance with waste discharge requirements. Plaintiffs rely on Water Code section 13360, subdivision (a) which states: "No waste discharge requirement or other order of a regional board ... issued under this division shall specify the design, location, type of construction, or particular manner in which compliance may be had with that requirement, order, or decree, and the person so ordered shall be permitted to comply with the order in any lawful manner." Plaintiffs contend two provisions of the permit violate Water Code section 13360, subdivision (a). First, plaintiffs argue that the permit improperly imposes a series of specific design criteria for " 'Volumetric Treatment Control' " and " 'Flow based Treatment Control' " best management practices. Second,

plaintiffs challenge the requirement that some of them place and maintain trash receptacles at transit stops.

These contentions have no merit. As held in *City of Rancho Cucamonga v. Regional Water Quality Control Bd., supra,* 135 Cal.App.4th at page 1389, 38 Cal.Rptr.3d 450, the federal Clean Water Act authorizes National Pollutant Discharge Elimination Systems permits to set forth specific practices which will restrict polluted storm water runoff. (33 U.S.C. § 1342(a)(1), (p)(3)(B)(iii).) In *City of Rancho Cucamonga*, Associate Justice Barton C. Gaut explained: "Rancho Cucamonga's reliance on Water Code section 13360 is misplaced because that code section involves enforcement and implementation of state water quality law, (Wat.Code, § 13300 et seq.) not compliance with the Clean Water Act (Wat.Code, § 13370 et seq.) The federal law preempts the state law. (*Burbank, supra,* 35 Cal.4th at p. 618, 26 Cal.Rptr.3d 304, 108 P.3d 862.) The Regional Board must comply with federal law requiring detailed conditions for NPDES permits." (*City of Rancho Cucamonga v. Regional Water Quality Control Bd., supra,* 135 Cal.App.4th at p. 1389, 38 Cal.Rptr.3d 450.) Thus, nothing in state law in general or Water Code section 13360 in particular is violated by the specific pollution control requirements imposed on the permittees. We need no address the parties' remaining contentions concerning trash receptacles.

I. Hearing Related And Due Process Arguments

1. Overview of arguments

Plaintiffs contend that the December 13, 2001 hearing failed to comply with due process requirements in the following particulars: the notice did not comply with the requirements for an adjudicative hearing specified in Government Code section 11425.10, subdivision (a)(2); no sworn testimony was presented nor any documentary evidence admitted into evidence; the permittees were not given the opportunity to present evidence, cross-examine witnesses, or present a rebuttal in accordance with Government Code section 11425.10, subdivision (a) and California Code of Regulations, title 23, sections 648.4 and 648.5; the permit was not based on evidence offered at the hearing in violation of Government Code section 11425.50, subdivision (c) and California Code of Regulations, title 23, sections 648.2 and 648.3; technical and scientific matter was relied upon without complying with California Code of Regulations, title 23, section 648.2; and substantive changes were made to the permit after the hearing was concluded without giving the permittees an opportunity to comment on the amendments; most of the administrative record was never set forth at the hearing and was not identified until four months after the December 13, 2001 hearing.

2. Adequacy of the hearing notice

Plaintiffs contend that they did not receive an adequate notice that an adjudicative hearing would be conducted. As to state law requirements, plaintiffs argue the notice never states an adjudicative hearing was going to be held. Plaintiffs argue: Government Code section 11440.20, subdivision (a) [FN15] requires that written notice be given of an adjudicatory hearing; the "Notice Of Public Hearing" did not comply with Government Code section 11425.10, subdivision (a)(2); [FN16] the written notice does not state that what evidence would be relied upon; the notice does not state that there would a waiver of the formal regulatory hearing and evidentiary requirements as permitted by California Code of Regulations, title 23, section 648, subdivision (d) [FN17]; and the written notice did not indicate an informal hearing would be held as permitted by Government Code section 11445.20 et seq. and California Code of Regulations, title 23, section 648.7.[FN18]

> FN15. Government Code section 11440.20, subdivision (a) states: "Service of a writing on, or giving of a notice to, a person in a procedure provided in this chapter is subject to the following provisions: [¶] (a) The writing or notice shall be delivered personally or sent by mail or other means to the person at the person's last known address or, if the person is a party with an attorney or other authorized representative of record in the proceeding,

to the party's attorney or other authorized representative. If a party is required by statute or regulation to maintain an address with an agency, the party's last known address is the address maintained with the agency."

FN16. Government Code section 11425.10, subdivision (a)(2) states: "(a) The governing procedure by which an agency conducts an adjudicative proceeding is subject to all of the following requirements: [¶] ... (2) The agency shall make available to the person to which the agency action is directed a copy of the governing procedure, including a statement whether Chapter 5 (commencing with Section 11500) is applicable to the proceeding."

FN17. California Code of Regulations title 23, section 648, subdivision (d) states: "(d) Waiver of Nonstatutory Requirements. The presiding officer may waive any requirements in these regulations pertaining to the conduct of adjudicative proceedings including but not limited to the introduction of evidence, the order of proceeding, the examination or cross-examination of witnesses, and the presentation of argument, so long as those requirements are not mandated by state or federal statute or by the state or federal constitutions."

FN18. California Code of Regulations, title 23, section 648.7 states: "Unless the hearing notice specifies otherwise, the presiding officer shall have the discretion to determine whether a matter will be heard pursuant to the informal hearing procedures set forth in article 10, commencing with section 11445.20, of chapter 4.5 of the Administrative Procedure Act. [¶] Among the factors that should be considered in making this determination are: [¶] The number of parties, [¶] The number and nature of the written comments received, [¶] The number of interested persons wishing to present oral comments at the hearing, [¶] The complexity and significance of the issues involved, and [¶] The need to create a record in the matter. [¶] An objection by a party, either in writing or at the time of the hearing, to the decision to hold an informal hearing shall be resolved by the presiding officer before going ahead under the informal procedure. Failure to make a timely objection to the use of informal hearing procedures before those procedures are used will constitute consent to an informal hearing. A matter shall not be heard pursuant to an informal hearing procedure over timely objection by the person to whom agency action is directed unless an informal hearing is authorized under subdivision (a), (b), or (d) of section 11445.20 of the Government Code."

We agree with the regional board that the December 13, 2001 hearing was an adjudicative, quasi-judicial, proceeding. (*City of Rancho Cucamonga v. Regional Water Quality Control Bd., supra,* 135 Cal.App.4th at p. 1385, 38 Cal.Rptr.3d 450; see *Sommerfield v. Helmick* (1997) 57 Cal.App.4th 315, 320, 67 Cal.Rptr.2d 51.) As an adjudicative proceeding, a National Pollutant Discharge Elimination Systems permit hearing is exempt from the rulemaking procedures of the Administrative Procedures Act. (Gov.Code, § 11352, subd. (b) [FN19]; *City of Rancho Cucamonga v. Regional Water Quality Control Bd., supra,* 135 Cal.App.4th at p. 1385, 38 Cal.Rptr.3d 450.) Thus, Government Code sections 11400 through 11475.70 and 11513 apply to regional board permit issuance proceedings. (Cal.Code Regs., tit. 23, § 648, subd. (b) [FN20]; *City of Rancho Cucamonga v. Regional Water Quality Bd., supra,* 135 Cal.App.4th at p. 1385, 38 Cal.Rptr.3d 450.)

FN19. Government Code section 11352, subdivision (b) states: "The following actions are not subject to this chapter: [¶] (b) The issuance ... of waste discharge requirements and permits pursuant to Sections 13263 and 13377 of the Water Code...."

FN20. California Code of Regulations, title 23, section 648, subdivision (b) states: "(b) Incorporation of Applicable Statutes. Except as otherwise provided, all adjudicative proceedings before the State Board, the Regional Boards, or hearing officers or panels appointed by any of those Boards shall be governed by these regulations, chapter 4.5 of the Administrative Procedure Act (commencing with section 11400 of the Government

Code), sections 801-805 of the Evidence Code, and section 11513 of the Government Code."

The permittees received a document entitled "Notice of Public Hearing" sent by the regional board on September 27, 2001. The notice stated: "The hearing will start at 9:00 a.m. Regional Board's staff will present an overview of the proposed permit. Interested persons are invited to attend and to testify in front of the Regional Board. For the accuracy of the record, comments should also be submitted in writing. The Regional Board may ask questions of staff and persons who testify prior to making a decision on the adoption of the proposed." On October 11, 2001, the regional board sent a "Announcement of a Public Hearing and Transmittal of the Tentative Draft-County of Los Angeles Municipal Storm Water NPDES Permit" scheduling the hearing on the permit for November 29, 2001. The October 11, 2001 announcement stated: "Following the consideration of written comments and oral testimony, the Board may take action to adopt tentative Order No. 01-XXX during a public meeting on November 29, 2001. At its discretion, however, the Board may direct further investigation." The October 11, 2001 announcement: indicated a agenda would be posted on the regional board's website by November 19, 2001; stated the permittees were operating under a permit which expired on July 30, 2001; contained a summary of the principal changes to be made to the permit that expired on July 30, 2001; referred to an attached staff report; and requested comments to the tentative draft of the proposed permit. Attached to the announcement was the notice of hearing which: identified when and where the hearing would be held; explained where documents pertinent to the hearing could be located; and indicated interested persons could testify and submit comments in writing.

The November 29, 2001 regional board meeting was continued to December 13, 2001 after an unsuccessful effort at achieving settlement through mediation. On November 30, 2001, the regional board gave notice on its website of the December 13, 2001 hearing. The regional board's meeting agenda posted on its website on December 13, 2001, listed as item No. 10 under the heading "STORM WATER-NPDES PERMIT RENEWAL" (original bold and underscore): "Consideration of a proposed renewal of the municipal storm water permit for the County of Los Angeles and incorporated cities therein, except the City of Long Beach. (After a public hearing, the Board will consider renewal of the existing municipal permit for the County and 83 cities.) [¶] [Xavier Swamikannu, 576-6654] ... Board [¶] Action" (Original italics.) Above the listing of the agenda items, the following appears, "All Board files pertaining to the items on this agenda are hereby made a part of the record submitted to the [regional board] by staff for its consideration prior to action on the related items." The regional board adopted the permit at the December 13, 2001 hearing. Plaintiffs through their counsel appeared at the December 13, 2001 hearing.

There is no merit to the state law inadequate notice contention. There was no requirement that the notice state an adjudicative hearing would be held. As a matter of law, an adjudicative hearing would be held in connection with any renewal or issuance of a National Pollutant Discharge Elimination Systems permit. (*City of Rancho Cucamonga v. Regional Water Quality Control Bd., supra,* 135 Cal.App.4th at p. 1385, 38 Cal.Rptr.3d 450.) Further, the notices complied with the requirements imposed by California Code of Regulations, title 23, section 647.2, subdivisions (a) through (c) and (e). FN21

FN21. California Code of Regulations, title 23, section 647.2, subdivisions (a) through (c) and (e) states: "(a) Purpose. Government Code Section 11125 requires state agencies to provide notice at least one week in advance of any meeting to any person who requests such notice in writing except that emergency meetings may be held with less than one week's notice when such meetings are necessary to discuss unforeseen emergency conditions as defined by published rule of the agency. The purpose of this section is to establish procedures for compliance with Government Code Section 11125 by the State Board and the Regional Boards. [¶] (b) Contents of Meeting Notice. The notice for all meetings of the State Board and Regional Boards shall specify the date, time and location of the meeting and include an agenda listing all items to be considered. The agenda shall include a description of each item, including any proposed action to be taken. [¶] (c) Time of Notice. Notice shall be given at least one week in advance of the meeting. When

> the notice is mailed, it shall be placed in the mail at least eight days in advance of the meeting. [¶] (e) Distribution. Notice shall be given to all persons directly affected by proceedings on the agenda and to all persons who request in writing such notice. Notice shall be given to any person known to be interested in proceedings on the agenda."

Plaintiffs contend that the foregoing notice was deficient because it violates federal and state laws. Plaintiffs argue that the notice fails to comply with federal law. Plaintiffs rely on the following provisions of 40 Code of Federal Regulations part 124.8 (2001) which states: "(a) A fact sheet shall be prepared for every draft permit.... The fact sheet shall briefly set forth the principal facts and the significant factual, legal, methodological and policy questions considered in preparing the draft permit. The Director shall send this fact sheet to the applicant and, on request, to any other person. [¶] (b) The fact sheet shall include, when applicable: [¶] ... (6) A description of the procedures for reaching a final decision on the draft permit including: [¶] ... (ii) Procedures for requesting a hearing and the nature of that hearing...." We agree with the Attorney General that these provisions doe not apply to a regional board National Pollutant Discharge Elimination Systems permit renewal and issuance proceedings.

Finally, in terms of the notice issues, plaintiffs argue the permittees' due process rights were violated. The state and federal due process provisions require that "some form of notice" be given. (*Sommerfield v. Helmick, supra,* 57 Cal.App.4th at p. 320, 67 Cal.Rptr.2d 51; *B.C. Cotton, Inc. v. Voss* (1995) 33 Cal.App.4th 929, 954, 39 Cal.Rptr.2d 484.) The notices that were provided complied with all due process requirements applicable to an adjudicative hearing..

3. Adequacy of the hearing

Plaintiffs contend the proceedings before the regional board were not conducted as a proper adjudicative hearing. Plaintiffs argue they were denied the opportunity to present or rebut evidence. Government Code section 11425.10, subdivision (a)(1) states in part: "(a) The governing procedure by which an agency conducts an adjudicative proceeding is subject to all of the following requirements: [¶] (1) The agency shall give the person to which the agency action is directed notice and an opportunity to be heard, including the opportunity to present and rebut evidence." The mode of presentation of evidence at adjudicatory hearing is spelled out in California Code of Regulations, title 23, sections 648.4, subdivision (a) and 648.5.[FN22] Because there was no evidence produced at the hearing, the permittees argue the findings were inadequate. (*English v. City of Long Beach* (1950) 35 Cal.2d 155, 158, 217 P.2d 22; *Southern Cal. Edison Co. v. State Water Resources Control Bd.* (1981) 116 Cal.App.3d 751, 760, 172 Cal.Rptr. 306.)

> FN22. California Code of Regulations, title 23, section 648.4, subdivision (a) provides: "(a) It is the policy of the State and Regional Boards to discourage the introduction of surprise testimony and exhibits. [¶] (b) The hearing notice may require that all parties intending to present evidence at a hearing shall submit the following information to the Board prior to the hearing: the name of each witness whom the party intends to call at the hearing, the subject of each witness' proposed testimony, the estimated time required by the witness to present direct testimony, and the qualifications of each expert witness. The required information shall be submitted in accordance with the procedure specified in the hearing notice. [¶] (c) The hearing notice may require that direct testimony be submitted in writing prior to the hearing. Copies of written testimony and exhibits shall be submitted to the Board and to other parties designated by the Board in accordance with provisions of the hearing notice or other written instructions provided by the Board. The hearing notice may require multiple copies of written testimony and other exhibits for use by the Board and Board staff. Copies of general vicinity maps or large, nontechnical photographs generally will not be required to be submitted prior to the hearing. [¶] (d) Any witness providing written testimony shall appear at the hearing and affirm that the written testimony is true and correct. Written testimony shall not be read into the record unless allowed by the presiding officer. [¶] (e) Where any of the provisions of this section have not been complied with, the presiding officer may refuse to

admit the proposed testimony or the proposed exhibit into evidence, and shall refuse to do so where there is a showing of prejudice to any party or the Board. This rule may be modified where a party demonstrates that compliance would create severe hardship. [¶] (f) Rebuttal testimony generally will not be required to be submitted in writing, nor will rebuttal testimony and exhibits be required to be submitted prior to the start of the hearing." California Code of Regulations, title 23, section 648.5 provides: "(a) Adjudicative proceedings shall be conducted in a manner as the Board deems most suitable to the particular case with a view toward securing relevant information expeditiously without unnecessary delay and expense to the parties and to the Board. Adjudicative proceedings generally will be conducted in the following order except that the chairperson or presiding officer may modify the order for good cause: [¶] (1) An opening statement by the chairperson, presiding member, or hearing officer, summarizing the subject matter and purpose of the hearing; [¶] (2) Identification of all persons wishing to participate in the hearing; [¶] (3) Administration of oath to persons who intend to testify; [¶] (4) Presentation of any exhibits by staff of the State or Regional Board who are assisting the Board or presiding officer; [¶] (5) Presentation of evidence by the parties; [¶] (6) Cross-examination of parties' witnesses by other parties and by Board staff assisting the Board or presiding officer with the hearing; [¶] (7) Any permitted redirect and recross-examination; [¶] (b) Questions from Board members or Board counsel to any party or witness, and procedural motions by any party shall be in order at any time. Redirect and recross-examination may be permitted. [¶] (c) If the Board or the presiding officer has determined that policy statements may be presented during a particular adjudicative proceeding, the presiding officer shall determine an appropriate time for presentation of policy statements. [¶] (d) After conclusion of the presentation of evidence, all parties appearing at the hearing may be allowed to present a closing statement."

We have read the transcript of the hearing. Those who wished to address the regional board were placed under oath. Presentations were made by the county, the City of Los Angeles, the Coalition for Practical Regulation, and a council representing the interests of various cities. Other individuals were permitted to present their views. The permittees' counsel made no request to call witnesses or objected to the manner in which the hearing proceeded as is argued on appeal. The permittees' counsel were given an opportunity to be heard. Further, extensive written comments were made by the permittees and their counsel. In light of the extensive notice given to them, if the permittees' counsel had any objections akin to those raised on appeal, they should have asserted them. No due process, statutory, or regulatory violation occurred. (*Mohilef v. Janovici* (1996) 51 Cal.App.4th 267, 285-287, 58 Cal.Rptr.2d 721; Cal.Code Regs., tit. 23, § 648, subd. (d).)

4. Belated findings

Plaintiffs contend that untimely findings were made by the regional board. The changes made without an opportunity and comment were: an amendment to the total daily maximum loads for trash; the insertion of a requirement that complaints referred by the regional board be investigated within one business day; and significant changes to the inspection program. We agree with the Attorney General that the modifications in the permit were not of such gravity that a due process or other violation occurred. The final permit was a logical outgrowth of the draft permit. Hence, there was no violation of any right to notice or a hearing. (See *Natural Resources Defense Council v. U.S. E.P.A.* (9th Cir.2002) 279 F.3d 1180, 1186 [applying federal notice and hearing provisions inn the administrative context]; *Center for Biological Diversity v. Bureau of Land Management* (N.D.Cal.2006) 422 F.Supp.2d 1115, 1155-1156 [same].)

J. Inspection Requirements

Plaintiffs argue the inspection requirements imposed in the permit are unlawful. The permit requires the permittees to inspect to insure there are no illicit discharges into the storm sewer system and critical sources of pollutants in runoff. We agree with the intervenors-no statute or regulation

prohibited the regional board from imposing the inspection requirements. Further, there is federal regulatory authority that required the regional board consider imposing the inspection requirements. (40 C.F.R. 122.26(d), (g) (2000).) This contention has no merit.

K. Propriety Of The Regional Board Considering The Administrative Record In The Long Beach Case

Plaintiffs contend that the regional board should not have considered the administrative record in proceedings involving the 1996 issuance of a National Pollutant Discharge Elimination System permit to the City of Long Beach. According to plaintiffs, the administrative record was prepared in connection with the challenge by the City of Long Beach to the National Pollutant Discharge Elimination System Permit issued in 1996. Plaintiffs assert most of the administrative record in the Long Beach case is unrelated to the present case. Plaintiffs argue that consideration of the Long Beach records: are surprise evidence received in violation of title 23, California Code of Regulations, section 648.4, subdivision (a); violated the requirement that the regional board's presentation of exhibits be followed by the parties' presentation of evidence as required by title 23, California Code of Regulations, section 648.5, subdivisions (a)(4) and (5); and the process for admitting public records by reference pursuant to California Code of Regulations, section 648.3 was violated.

We disagree. The regional board certified the administrative record as including documents relevant to a National Pollutant Discharge Elimination System permit issued for the City of Long Beach. It is presumed the regional board considered the documents pertinent to the Long Beach National Pollutant Discharge Elimination System permit. (*Mason v. Office of Admin. Hearings* (2001) 89 Cal.App.4th 1119, 1131, 108 Cal.Rptr.2d 102; see *Bar MK Ranches v. Yuetter* (10th Cir.1993) 994 F.2d 735, 740.) Admissibility of evidence is controlled by Government Code sections 11400 and 11513, subdivision (c). Government Code section 11513, subdivision (c) states: "The hearing need not be conducted according to technical rules relating to evidence and witnesses, except as hereinafter provided. Any relevant evidence shall be admitted if it is the sort of evidence on which responsible persons are accustomed to rely in the conduct of serious affairs, regardless of the existence of any common law or statutory rule which might make improper the admission of the evidence over objection in civil actions." What is unclear is the standard of judicial review of the regional board's decision to consider the Long Beach National Pollutant Discharge Elimination System permit. It would appear the standard of judicial review is that set forth in Code of Civil Procedure section 1094.5, subdivision (b) whether: the regional board's evidentiary ruling was in excess of jurisdiction; there was a fair trial; or there was any prejudicial abuse of discretion. Insofar as we are examining the trial court's ruling allowing the Long Beach evidence to be part of the record, as with any relevancy issue, we apply an abuse of discretion standard of review. (*People v. Panah* (2005) 35 Cal.4th 395, 474, 25 Cal.Rptr.3d 672, 107 P.3d 790; *People v. Kipp* (2001) 26 Cal.4th 1100, 1123, 113 Cal.Rptr.2d 27, 33 P.3d 450.) Under any standard of review, the Long Beach evidence is relevant. The actions taken in imposing runoff conditions on the second largest city in the county are pertinent to what conditions to impose on the remainder of the county. Finally, there is insufficient evidence to support plaintiffs' surprise contention. There is no evidence that any of the permittees' attorneys were prohibited from examining the entire administrative record prior to the December 13, 2001 hearing.

L. The Trial Court Did Not Abuse Its Discretion In Refusing To Augment The Record

Plaintiffs contend the trial court improperly refused to augment the record to include petitions they had filed with state board. This issue is in essence an issue of relevance which is reviewed for an abuse of discretion. (*Western States Petroleum Assn. v. Superior Court* (1995) 9 Cal.4th 559, 573, fn. 3, 38 Cal.Rptr.2d 139, 888 P.2d 1268; *People v. Panah, supra*, 35 Cal.4th at p. 474, 25 Cal.Rptr.3d 672, 107 P.3d 790; *People v. Kipp, supra*, 26 Cal.4th at p. 1123, 113 Cal.Rptr.2d 27, 33 P.3d 450.) The documents at issue were all prepared after the regional board issued the permit. Without abusing its discretion, the trial court could conclude that the post permit issuance papers were irrelevant. (*Cynthia D. v. Superior Court* (1993) 5 Cal.4th 242, 250, fn. 7, 19 Cal.Rptr.2d 698, 851 P.2d 1307; *People v. Rowland* (1992) 4 Cal.4th 238, 268, 14 Cal.Rptr.2d 377, 841 P.2d 897.)

V. DISPOSITION

The judgment is affirmed. Defendants, California Regional Water Quality Control Board, Los Angeles Region and the State Water Resources Board, are to recover their costs incurred on appeal jointly and severally from plaintiffs, the Cities of Arcadia, Artesia, Bellflower, Beverly Hills, Carson, Cerritos, Claremont, Commerce, Covina, Diamond Bar, Downey, Gardena, Hawaiian Gardens, Industry, Irwindale, La Mirada, Lawndale, Monrovia, Norwalk, Paramount, Pico Rivera, Rancho Palos Verdes, Rosemead, Santa Clarita, Santa Fe Springs, Signal Hill, South Pasadena, Torrance, Vernon, Walnut, West Covina, Westlake Village, and Whittier, and the County of Los Angeles, Los Angeles County Flood Control District, Building Industry Legal Defense Fund, and the Construction Industry Coalition on Water Quality.

No. C009519.

Court of Appeal, Third District, California.
Dec 30, 1992.

SUMMARY

Two school districts filed claims with the State Board of Control for state reimbursement of alleged state-mandated costs incurred in connection with special education programs. The board determined that the costs were state mandated and subject to reimbursement by the state. In a mandamus proceeding, the trial court entered a judgment by which it issued a writ of administrative mandate directing the Commission on State Mandates (the successor to the board) to set aside the board's administrative decision and to reconsider the matter in light of an intervening decision by the California Supreme Court, and by which it denied the petition of one of the school districts for a writ of mandate that would have directed the State Controller to issue a warrant in payment of the district's claim. (Superior Court of Sacramento County, No. 352795, Eugene T. Gualco, Judge.)

The Court of Appeal affirmed. It held that the 1975 amendments to the federal Education of the Handicapped Act (20 U.S.C. § 1401 et seq.) constituted a federal mandate with respect to the state. However, even though the state had no real choice in deciding whether to comply with the act, the act did not necessarily require the state to impose all of the costs of implementation upon local school districts. The court held that to the extent the state implemented the act by freely choosing to impose new programs or higher levels of service upon local school districts, the costs of such programs or higher levels of service are state-mandated and subject to subvention under Cal. Const., art. XIII B, § 6. Thus, on remand to the commission, the court held, the commission was required to focus on the costs incurred by local school districts and on whether those costs were imposed by federal mandate or by the state's voluntary choice in its implementation of the federal program. (Opinion by Sparks, Acting P. J., with Davis and Scotland, JJ., concurring.)

HEADNOTES

Classified to California Digest of Official Reports

(1) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--State-mandated Costs:Words, Phrases, and Maxims--Subvention.

"Subvention" generally means a grant of financial aid or assistance, or a subsidy. The constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. This does not mean that the state is required to reimburse local agencies for any incidental cost that may result from the enactment of a state law; rather, the subvention requirement is restricted to governmental services that the local agency is required by state law to provide to its residents. The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agencies. Reimbursement is required when the state freely chooses to impose on local agencies any peculiarly governmental cost which they were not previously required to absorb.

[See **Cal.Jur.3d,** State of California, § 78; 9 **Witkin,** Summary of Cal. Law (9th ed. 1989) Taxation, §§ 123, 124.]

(2) Schools § 4--School Districts--Relationship to State.

A school district's relationship to the state is different from that of local governmental entities such as cities, counties, and special districts. Education and the operation of the public school system are matters of statewide rather than local or municipal concern. Local school districts are agencies of the state and have been described as quasi-municipal corporations. They are not distinct and independent bodies politic. The Legislature's power over the public school system is exclusive, plenary, absolute, entire, and comprehensive, subject only to constitutional constraints. The Legislature has the power to create, abolish, divide, merge, or alter the boundaries of school districts. The state is the beneficial owner of all school properties, and local districts hold title as trustee for the state. School moneys belong to the state, and the apportionment of funds to a school district does not give the district a proprietary interest in the funds. While the Legislature has chosen to encourage local responsibility for control of public education through local school districts, that is a matter of legislative choice rather than constitutional compulsion, and the authority that the Legislature has given to local districts remains subject to the ultimate and nondelegable responsibility of the Legislature.

(3) Property Taxes § 7.8--Real Property Tax Limitation--Exemptions and Special Taxes--Federally Mandated Costs.

Pursuant to Rev. & Tax. Code, § 2271 (local agency may levy rate in addition to maximum property tax rate to pay costs mandated by federal government that are not funded by federal or state government), costs mandated by the federal government are exempt from an agency's taxing and spending limits.

(4) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--State-mandated Costs--Costs Incurred Before Effective Date of Constitutional Provision.

Since Cal. Const., art. XIII B, requiring subvention for state mandates enacted after Jan. 1, 1975, had an effective date of July 1, 1980, a local agency may seek subvention for costs imposed by legislation after Jan. 1, 1975, but reimbursement is limited to costs incurred after July 1, 1980. Reimbursement for costs incurred before July 1, 1980, must be obtained, if at all, under controlling statutory law.

(5) Schools § 53--Parents and Students--Right or Duty to Attend-- Handicapped Children--Federal Rehabilitation Act--Obligations Imposed on Districts.

Section 504 of the federal Rehabilitation Act of 1973 (29 U.S.C. § 794) does not only obligate local school districts to prevent handicapped children from being excluded from school. States typically purport to guarantee all of their children the opportunity for a basic education. In California, basic education is regarded as a fundamental right. All basic educational programs are essentially affirmative action activities in the sense that educational agencies are required to evaluate and accommodate the educational needs of the children in their districts. Section 504 does not permit local agencies to accommodate the educational needs of some children while ignoring the needs of others due to their handicapped condition. The statute imposes an obligation upon local school districts to take affirmative steps to accommodate the needs of handicapped children.

(6) Schools § 53--Parents and Students--Right or Duty to Attend-- Handicapped Children--Education of the Handicapped Act.

The federal Education of the Handicapped Act (20 U.S.C. § 1401 et seq.), which since its 1975 amendment has required recipient states to demonstrate a policy that assures all handicapped children the right to a free appropriate education, is not merely a funding statute; rather, it establishes an enforceable substantive right to a free appropriate public education in recipient states. Congress intended the act to

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

establish a basic floor of opportunity that would bring into compliance all school districts with the constitutional right to equal protection with respect to handicapped children. It is also apparent that Congress intended to achieve nationwide application.

(7) Civil Rights § 6--Education--Handicapped--Scope of Federal Statute.
Congress intended the Education of the Handicapped Act (20 U.S.C. § 1401 et seq.) to serve as a means by which state and local educational agencies could fulfill their obligations under the equal protection and due process provisions of the Constitution and under section 504 of the Rehabilitation Act of 1973 (29 U.S.C. § 794). Accordingly, where it is applicable, the act supersedes claims under the Civil Rights Act (42 U.S.C. § 1983) and section 504, and the administrative remedies provided by the act constitute the exclusive remedy of handicapped children and their parents or other representatives. As a result of the exclusive nature of the Education of the Handicapped Act, dissatisfied parties in recipient states must exhaust their administrative remedies under the act before resorting to judicial intervention.

(8a, 8b) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--State-mandated Costs--Special Education:Schools § 4--School Districts; Financing; Funds--Special Education Costs--Reimbursement by State.
The 1975 amendments to the federal Education of the Handicapped Act (20 U.S.C. § 1401 et seq.) constituted a federal mandate with respect to the state. However, even though the state had no real choice in deciding whether to comply with the act, the act did not necessarily require the state to impose all of the costs of implementation upon local school districts. To the extent the state implemented the act by freely choosing to impose new programs or higher levels of service upon local school districts, the costs of such programs or higher levels of service are state mandated and subject to subvention under Cal. Const., art. XIII B, § 6. Thus, on remand of a proceeding by school districts to the Commission on State Mandates for consideration of whether special education programs constituted new programs or higher levels of service mandated by the state entitling the districts to reimbursement, the commission was required to focus on the costs incurred by local school districts and whether those costs were imposed by federal mandate or by the state's voluntary choice in its implementation of the federal program.

(9) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--Federally Mandated Costs.
The constitutional subvention provision (Cal. Const., art. XIII B, § 6) and the statutory provisions which preceded it do not expressly say that the state is not required to provide a subvention for costs imposed by a federal mandate. Rather, that conclusion follows from the plain language of the subvention provisions themselves. The constitutional provision requires state subvention when "the Legislature or any State agency mandates a new program or higher level of service" on local agencies. Likewise, the earlier statutory provisions required subvention for new programs or higher levels of service mandated by legislative act or executive regulation. When the federal government imposes costs on local agencies, those costs are not mandated by the state and thus would not require a state subvention. Instead, such costs are exempt from local agencies' taxing and spending limitations. This should be true even though the state has adopted an implementing statute or regulation pursuant to the federal mandate, so long as the state had no "true choice" in the manner of implementation of the federal mandate.

(10) Statutes § 28--Construction--Language--Consistency of Meaning Throughout Statute.
As a general rule and unless the context clearly requires otherwise, it must be assumed that the meaning of a term or phrase is consistent throughout the entire act or constitutional article of which it is a

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

part.

(11) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--Federally Mandated Costs--Subvention.
Subvention principles are part of a more comprehensive political scheme. The basic purpose of the scheme as a whole was to limit the taxing and spending powers of government. The taxing and spending powers of local agencies were to be "frozen" at existing levels with adjustments only for inflation and population growth. Since local agencies are subject to having costs imposed upon them by other governmental entities, the scheme provides relief in that event. If the costs are imposed by the federal government or the courts, then the costs are not included in the local government's taxing and spending limitations. If the costs are imposed by the state, then the state must provide a subvention to reimburse the local agency. Nothing in the scheme suggests that the concept of a federal mandate should have different meanings depending upon whether one is considering subvention or taxing and spending limitations. Thus, the criteria set forth in a California Supreme Court case concerning whether costs mandated by the federal government are exempt from an agency's taxing and spending limits are applicable when subvention is the issue.

(12) State of California § 11--Fiscal Matters--Reimbursement to Local Governments--State-mandated Costs--Special Education--Applicable Criteria in Determining Whether Subvention Required.
In a proceeding for a writ of mandate to direct the Commission on State Mandates to set aside an administrative decision by the State Board of Control (the commission's predecessor), in which the board found that all local special education costs were state mandated and thus subject to state reimbursement, the trial court did not err in determining that the board failed to consider the issues under the appropriate criteria as set forth in a California Supreme Court case concerning whether costs mandated by the federal government are exempt from an agency's taxing and spending limits. The board relied upon the "cooperative federalism" nature of the Education of the Handicapped Act (20 U.S.C. § 1401 et seq.) without any consideration of whether the act left the state any actual choice in the matter. It also relied on litigation involving another state. However, under the criteria set forth in the Supreme Court's case, the litigation in the other state did not support the board's decision but in fact strongly supported a contrary result.

(13) Courts § 34--Decisions and Orders--Prospective and Retroactive Decisions--Opinion Elucidating Existing Law.
In a California Supreme Court case concerning whether costs mandated by the federal government are exempt from an agency's taxing and spending limits, the court elucidated and enforced existing law. Under such circumstances, the rule of retrospective operation controls. Thus, in a proceeding for a writ of mandate to direct the Commission on State Mandates to set aside an administrative decision by the State Board of Control (the commission's predecessor), in which the board found that all local special education costs were state mandated and thus subject to state reimbursement, the trial court correctly applied the Supreme Court decision to the litigation pending before it.

SPARKS, Acting P. J.

This appeal involves a decade-long battle over claims for subvention by two county superintendents of schools for reimbursement for mandated special education programs. Section 6 of article XIII B of the California Constitution directs, with exceptions not relevant here, that "[w]henever the Legislature or any State agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, ..." The issue on appeal is whether the special education programs in question constituted new programs or higher levels of service mandated by the state entitling the school districts to reimbursement under section 6 of article XIII B of the California Constitution and related statutes for the cost of implementing them or whether these programs were instead mandated by the federal government for which no reimbursement is due.

The Santa Barbara County Superintendent of Schools and the Riverside County Superintendent of Schools each filed claims with the Board of Control for state reimbursement for alleged state-mandated costs incurred in connection with special education programs. After a lengthy administrative process, the Board of Control rendered a decision finding that all local special education costs were state mandated and subject to state reimbursement. That decision was then successfully challenged in the Sacramento County Superior Court. The superior court entered a judgment by which it: (1) issued a writ of administrative mandate (Code Civ. Proc., § 1094.5), directing the Commission on State Mandates (the successor to the Board of ***1571** Control) to set aside the administrative decision and to reconsider the matter in light of the California Supreme Court's intervening decision in *City of Sacramento v. State of California* (1990) 50 Cal.3d 51 [266 Cal.Rptr. 139, 785 P.2d 522]; and (2) denied the Riverside County Superintendent of School's petition for a writ of mandate (Code Civ. Proc., § 1085), which would have directed the State Controller to issue a warrant in payment of the claim. The Riverside County Superintendent of Public Schools appeals. We shall clarify the criteria to be applied by the Commission on State Mandates on remand and affirm the judgment.

I. *The Parties*

This action was commenced in July 1987 by Jesse R. Huff, then the Director of the California Department of Finance. Huff petitioned for a writ of administrative mandate to set aside the administrative decision which found all the special education costs to be state mandated. On appeal Huff appears as a respondent urging that we affirm the judgment.

The Commission on State Mandates (the Commission) is the administrative agency which now has jurisdiction over local agency claims for reimbursement for state-mandated costs. (Gov. Code, § 17525.)In this respect the Commission is the successor to the Board of Control. The Board of Control rendered the administrative decision which is at issue here. Since an appropriation for payment of these claims was not included in a local government claims bill before January 1, 1985, administrative jurisdiction over the claims has been transferred from the Board of Control to the Commission. (Gov. Code, § 17630.)The Commission is the named defendant in the petition for a writ of administrative mandate. In the trial court and on appeal the Commission has appeared as the agency having administrative jurisdiction over the claims, but has not expressed a position on the merits of the litigation.

The Santa Barbara County Superintendent of Schools (hereafter Santa Barbara) is a claimant for state reimbursement of special education costs incurred in the 1979-1980 fiscal year. Santa Barbara is a real party in interest in the proceeding for administrative mandate. Santa Barbara has not appealed from the judgment of the superior court and,

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

although a nominal respondent on appeal, has not filed a brief in this court.

The Riverside County Superintendent of Schools (hereafter Riverside) represents a consortium of school districts which joined together to provide special education programs to handicapped students. Riverside seeks reimbursement for special education costs incurred in the 1980-1981 fiscal year. ***1572** Riverside is a real party in interest in the proceeding for writ of administrative mandate. It filed a cross-petition for a writ of mandate directing the Controller to pay its claim. Riverside is the appellant in this appeal.

The State of California and the State Treasurer are named cross- defendants in Riverside's cross-petition for a writ of mandate. They joined with Huff in this litigation. The State Controller is the officer charged with drawing warrants for the payment of moneys from the State Treasury upon a lawful appropriation. (Cal. Const., art. XVI, § 7.) The State Controller is a named defendant in Riverside's petition for a writ of mandate. In the trial court and on appeal the State Controller expresses no opinion on the merits of Riverside's reimbursement claim, but asserts that the courts lack authority to compel him to issue a warrant for payment of the claim in the absence of an appropriation for payment of the claim.

In addition to the briefing by the parties on appeal, we have permitted a joint amici curiae brief to be filed in support of Riverside by the Monterey County Office of Education, the Monterey County Office of Education Special Education Local Planning Area, and 21 local school districts.

II. *Factual and Procedural Background*

The Legislature has provided an administrative remedy for the resolution of local agency claims for reimbursement for state mandates. In *County of Contra Costa v. State of California* (1986) 177 Cal.App.3d 62 [222 Cal.Rptr. 750], at pages 71 and 72, we described these procedures as follows (with footnotes deleted): "Section 2250 [Revenue & Taxation Code] and those following it provide a hearing procedure for the determination of claims by local governments. The State Board of Control is required to hear and determine such claims. (§ 2250.)For purposes of such hearings the board consists of the members of the Board of Control provided for in part 4 (commencing with § 13900) of division 3 of title 2 of the Government Code, together with two local government officials appointed by the Governor. (§ 2251.) The board was required to adopt procedures for receiving and hearing such claims. (§ 2252.) The first claim filed with respect to a statute or regulation is considered a 'test claim' or a 'claim of first impression.' (§ 2218, subd. (a).) The procedure requires an evidentiary hearing where the claimant, the Department of Finance, and any affected department or agency can present evidence. (§ 2252.) If the board determines that costs are mandated, then it must adopt parameters and guidelines for the reimbursement of such claims. (§ 2253.2.) The claimant or the state is entitled to commence an action in administrative mandate pursuant to Code of Civil Procedure section 1094.5 to set aside a decision of the board on the grounds that the board's decision is not supported by substantial evidence. (§ 2253.5.) ***1573**

"At least twice each calendar year the board is required to report to the Legislature on the number of mandates it has found and the estimated statewide costs of these mandates. (§ 2255, subd. (a).) In addition to the estimate of the statewide costs for each mandate, the report must also contain the reasons for recommending reimbursement. (§ 2255, subd. (a).) Immediately upon receipt of the report a local government claims bill shall be introduced in the Legislature which, when introduced, must contain an appropriation sufficient to pay for the estimated costs of the mandates. (§ 2255, subd. (a).) In the event the Legislature deletes funding for a mandate from the local government claims bill, then it may take one of the following courses of action: (1) include a finding that the legislation or regulation

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

does not contain a mandate; (2) include a finding that the mandate is not reimbursable; (3) find that a regulation contains a mandate and direct that the Office of Administrative Law repeal the regulation; (4) include a finding that the legislation or regulation contains a reimbursable mandate and direct that the legislation or regulation not be enforced against local entities until funds become available; (5) include a finding that the Legislature cannot determine whether there is a mandate and direct that the legislation or regulation shall remain in effect and be enforceable unless a court determines that the legislation or regulation contains a reimbursable mandate in which case the effectiveness of the legislation or regulation shall be suspended and it shall not be enforced against a local entity until funding becomes available; or (6) include a finding that the Legislature cannot determine whether there is a reimbursable mandate and that the legislation or regulation shall be suspended and shall not be enforced against a local entity until a court determines whether there is a reimbursable mandate. (§ 2255, subd. (b).) If the Legislature deletes funding for a mandate from a local government claims bill but does not follow one of the above courses of action or if a local entity believes that the action is not consistent with article XIII B of the Constitution, then the local entity may commence a declaratory relief action in the Superior Court of the County of Sacramento to declare the mandate void and enjoin its enforcement. (§ 2255, subd. (c).)

"Effective January 1, 1985, the Legislature has established a new commission to consider and determine claims based upon state mandates. This is known as the Commission on State Mandates and it consists of the Controller, the Treasurer, the Director of Finance, the Director of the Office of Planning and Research, and a public member with experience in public finance, appointed by the Governor and approved by the Senate. (Gov. Code, § 17525.) 'Costs mandated by the state' are defined as 'any increased costs which a local agency or school district is required to incur after July 1, 1980, as a result of any statute enacted after January 1, 1975, or any executive order implementing any statute enacted on or after January 1, 1975, which *1574 mandates a new program or higher level of service of an existing program within the meaning of Section 6 of Article XIII B of the California Constitution.' (Gov. Code, § 17514.)The procedures before the Commission are similar to those which were followed before the Board of Control. (Gov. Code, § 17500 et seq.) Any claims which had not been included in a local government claims bill prior to January 1, 1985, were to be transferred to and considered by the commission. (Gov. Code, § 17630; [Rev. & Tax. Code,] § 2239.)"

On October 31, 1980, Santa Barbara filed a test claim with the Board of Control seeking reimbursement for costs incurred in the 1979-1980 fiscal year in connection with the provision of special education services as required by Statutes 1977, chapter 1247, and Statutes 1980, chapter 797. Santa Barbara asserted that these acts should be considered an ongoing requirement of increased levels of service.

Santa Barbara's initial claim was based upon the "mandate contained in the two bills specified above [which require] school districts and county offices to provide full and formal due process procedures and hearings to pupils and parents regarding the special education assessment, placement and the appropriate education of the child." Santa Barbara asserted that state requirements exceeded those of federal law as reflected in section 504 of the Rehabilitation Act of 1973 (29 U.S.C. § 794). [FN1] Santa Barbara's initial claim was for $10,500 in state-mandated costs for the 1979-1980 fiscal year.

> FN1 Section 794 of title 29 of the United States Code will of necessity play an important part in our discussion of the issues presented in this case. That provision was enacted as section 504 of the Rehabilitation Act of 1973. (Pub.L. No. 93-112, tit. V, § 504 (Sept. 26, 1973) 87 Stat. 394.) It has been amended several times. (Pub.L. No. 95-602, tit. I, §§ 119, 122(d)(2) (Nov.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

6, 1978) 92 Stat. 2982, 2987 [Rehabilitation, Comprehensive Services, and Developmental Disabilities Act of 1978]; Pub.L. No. 99- 506, tit. I, § 103(d)(2)(B), tit. X, § 1002(e)(4) (Oct. 21, 1986) 100 Stat. 1810, 1844; Pub.L. No. 100-259, § 4 (Mar. 22, 1988) 102 Stat. 29; Pub.L. No. 100-630, tit. II, § 206(d) (Nov. 7, 1988) 102 Stat. 3312.) The decisional authorities universally refer to the statute as "section 504." We will adhere to this nomenclature and subsequent references to section 504 will refer to title 29, United States Code, section 794.

During the administrative proceedings Santa Barbara amended its claim to reflect the following state-mandated activities alleged to be in excess of federal requirements: (1) the extension of eligibility to children younger and older than required by federal law; (2) the establishment of procedures to search for and identify children with special needs; (3) assessment and evaluation; (4) the preparation of "Individual Education Plans" (IEP's); (5) due process hearings in placement determinations; (6) substitute teachers; and (7) staff development programs. Santa Barbara was claiming reimbursement in excess of $520,000 for the cost of these services during the 1979- 1980 fiscal year. ***1575**

Also, during the administrative proceedings the focus of federally mandated requirements shifted from section 504 of the Rehabilitation Act to federal Public Law No. 94-142, which amended the Education of the Handicapped Act. (20 U.S.C. § 1401 et seq.) FN2

FN2 The Education of the Handicapped Act was enacted in 1970. (Pub.L. No. 91-230, tit. VI (Apr. 13, 1970) 84 Stat. 175.) It has been amended many times. The amendment of primary interest here was enacted as the Education for All Handicapped Children Act of 1975. (Pub.L. No. 94-142 (Nov. 29, 1975) 89 Stat. 774.) The 1975 legislation significantly amended the Education of the Handicapped Act, but did not change its short title. The Education of the Handicapped Act has now been renamed the Individuals with Disabilities Education Act. (Pub.L. No. 101-476, tit. IX, § 901(b)(21) (Oct. 30, 1990) 104 Stat. 1143; Pub.L. No. 101-476, tit. IX, § 901b; Pub.L. No. 102-119, § 25(b) (Oct. 7, 1991) 105 Stat. 607.) Since at all times relevant here the federal act was known as the Education of the Handicapped Act, we will adhere to that nomenclature.

The Board of Control adopted a decision denying Santa Barbara's claim. The board concluded that the Education of the Handicapped Act resulted in costs mandated by the federal government, that state special education requirements exceed those of federal law, but that "the resulting mandate is not reimbursable because the Legislature already provides funding for all Special Education Services through an appropriation in the annual Budget Act."

Santa Barbara sought judicial review by petition for a writ of administrative mandate. The superior court found the administrative record and the Board of Control's findings to be inadequate. Judgment was rendered requiring the Board of Control to set aside its decision and to rehear the matter to establish a proper record, including findings. That judgment was not appealed.

On October 30, 1981, Riverside filed a test claim for reimbursement of $474,477 in special education costs incurred in the 1980-1981 fiscal year. Riverside alleged that the costs were state mandated by chapter 797 of Statutes 1980. The basis of Riverside's claim was Education Code section 56760, a part of the state special education funding formula which, according to Riverside, "mandates a 10% cap on ratio of students served by special education and within that 10% mandates the ratio of students to be served by certain services." Riverside explained that chapter 797 of Statutes 1980 was enacted as urgency legislation effective July 28, 1980, and that at that time it was already "locked into"

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

providing special education services to more than 13 percent of its students in accordance with prior state law and funding formulae. FN3

FN3 The 1980 legislation required that a local agency adopt an annual budget plan for special education services. (Ed. Code, § 56200.)Education Code section 56760 provided that in the local budget plan the ratio of students to be served should not exceed 10 percent of total enrollment. However, those proportions could be waived for undue hardship by the Superintendent of Public Instruction. (Ed. Code, §§ 56760, 56761.)In addition, the 1980 legislation included provisions for a gradual transition to the new requirements. (Ed. Code, § 56195 et seq.) The transitional provisions included a guarantee of state funding for 1980-1981 at prior student levels with an inflationary adjustment of 9 percent. (Ed. Code, § 56195.8.)The record indicates that Riverside applied for a waiver of the requirements of Education Code section 56760, but that the waiver request was denied due to a shortage of state funding. It also appears that Riverside did not receive all of the 109 percent funding guarantee under Education Code section 56195.8. In light of the current posture of this appeal we need not and do not consider whether the failure of the state to appropriate sufficient funds to satisfy its obligations under the 1980 legislation can be addressed in a proceeding for the reimbursement of state-mandated costs or must be addressed in some other manner.

The Riverside claim, like Santa Barbara's, evolved over time with increases in the amount of reimbursement sought. Eventually the Board of ***1576** Control denied Riverside's claim for the same reasons the Santa Barbara claim was denied. Riverside sought review by petition for a writ of administrative mandate. In its decision the superior court accepted the board's conclusions that the Education of the Handicapped Act constitutes a federal mandate and that state requirements exceed those of the federal mandate. However, the court disagreed with the board that any appropriation in the state act necessarily satisfies the state's subvention obligation. The court concluded that the Board of Control had failed to consider whether the state had fully reimbursed local districts for the state-mandated costs which were in excess of the federal mandate, and the matter was remanded for consideration of that question. That judgment was not appealed.

On return to the Board of Control, the Santa Barbara claim and the Riverside claim were consolidated. The Board of Control adopted a decision holding that all special education costs under Statutes 1977, chapter 1247, and Statutes 1980, chapter 797, are state-mandated costs subject to subvention. The board reasoned that the federal Education of the Handicapped Act is a discretionary program and that section 504 of the Rehabilitation Act does not require school districts to implement any programs in response to federal law, and therefore special education programs are optional in the absence of a state mandate.

The claimants were directed to draft, and the Board of Control adopted, parameters and guidelines for reimbursement of special education costs. The board submitted a report to the Legislature estimating that the total statewide cost of reimbursement for the 1980-1981 through 1985-1986 fiscal years would be in excess of $2 billion. Riverside's claim for reimbursement for the 1980-1981 fiscal year was now in excess of $7 million. Proposed legislation which would have appropriated funds for reimbursement of special education costs during the 1980-1981 through 1985- 1986 fiscal years failed to pass in the Legislature. (Sen. Bill No. 1082 (1985-1986 Reg. Sess.).) A separate bill which would have appropriated funds to reimburse Riverside ***1577** for its 1980-1981 claim also failed to pass. (Sen. Bill No. 238 (1987-1988 Reg. Sess.).)

At this point Huff, as Director of the Department of

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Finance, brought an action in administrative mandate seeking to set aside the decision of the Board of Control. Riverside cross-petitioned for a writ of mandate directing the state, the Controller and the Treasurer to issue a warrant in payment of its claim for the 1980-1981 fiscal year.

The superior court concluded that the Board of Control did not apply the appropriate standard in determining whether any portion of local special education costs are incurred pursuant to a federal mandate. The court found that the definition of a federal mandate set forth by the *Supreme Court in City of Sacramento v. State of California, supra,* 50 Cal.3d 51, "marked a departure from the narrower 'no discretion' test" of this court's earlier decision in *City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182 [203 Cal.Rptr. 258]. It further found that the standard set forth in the high court's decision in *City of Sacramento* "is to be applied retroactively." Accordingly, the superior court issued a peremptory writ of mandate directing the Commission on State Mandates to set aside the decision of the Board of Control, to reconsider the claims in light of the decision in *City of Sacramento v. State of California, supra,* 50 Cal.3d 51, and "to ascertain whether certain costs arising from Chapter 797/80 and Chapter 1247/77 are federally mandated, and if so, the extent, if any, to which the state-mandated costs exceed the federal mandate." Riverside's cross-petition for a writ of mandate was denied. This appeal followed.

III. *Principles of Subvention*

(1) "Subvention" generally means a grant of financial aid or assistance, or a subsidy. (See Webster's Third New Internat. Dict. (1971) p. 2281.) As used in connection with state-mandated costs, the basic legal requirements of subvention can be easily stated; it is in the application of the rule that difficulties arise.

Essentially, the constitutional rule of state subvention provides that the state is required to pay for any new governmental programs, or for higher levels of service under existing programs, that it imposes upon local governmental agencies. (*County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56 [233 Cal.Rptr. 38, 729 P.2d 202].) This does not mean that the state is required to reimburse local agencies for any incidental cost that may result from the enactment of a state law; rather, the subvention requirement is restricted to governmental services which the local agency is required by ***1578** state law to provide to its residents. (*City of Sacramento v. State of California, supra,* 50 Cal.3d at p. 70.) The subvention requirement is intended to prevent the state from transferring the costs of government from itself to local agencies. (*Id.* at p. 68.)Reimbursement is required when the state "freely chooses to impose on local agencies *any* peculiarly 'governmental' cost which they were not previously required to absorb." (*Id.* at p. 70, italics in original.)

The requirement of subvention for state-mandated costs had its genesis in the "Property Tax Relief Act of 1972" which is also known as "SB 90" (Senate Bill No. 90). (*City of Sacramento v. State of California, supra,* 156 Cal.App.3d at p. 188.) That act established limitations upon the power of local governments to levy taxes and concomitantly prevented the state from imposing the cost of new programs or higher levels of service upon local governments.(*Ibid.*) The Legislature declared: "It is the intent in establishing the tax rate limits in this chapter to establish limits that will be flexible enough to allow local governments to continue to provide existing programs, that will be firm enough to insure that the property tax relief provided by the Legislature will be long lasting and that will afford the voters in each local government jurisdiction a more active role in the fiscal affairs of such jurisdictions." (Rev. & Tax. Code, former § 2162, Stats. 1972, ch. 1406, § 14.7, p. 2961.) [FN4] The act provided that the state would pay each county, city and county, city, and special district the sums which were sufficient to cover the total cost of new state-mandated costs. (See Rev. & Tax. Code,

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

former § 2164.3, Stats. 1972, ch. 1406, § 14.7, pp. 2962-2963.) New state-mandated costs would arise from legislative action or executive regulation after January 1, 1973, which mandated a new program or higher level of service under an existing mandated program. (*Ibid.*)

> FN4 In addition to requiring subventions for new state programs and higher levels of service, Senate Bill No. 90 required the state to reimburse local governments for revenues lost by the repeal or reduction of property taxes on certain classes of property. In this connection the Legislature said: "It is the purpose of this part to provide property tax relief to the citizens of this state, as undue reliance on the property tax to finance various functions of government has resulted in serious detriment to one segment of the taxpaying public. The subventions from the State General Fund required under this part will serve to partially equalize tax burdens among all citizens, and the state as a whole will benefit." (Gov. Code, § 16101, Stats. 1972, ch. 1406, § 5, p. 2953.)

(2)**(See fn. 5.)** Senate Bill No. 90 did not specifically include school districts in the group of agencies entitled to reimbursement for state-mandated costs. FN5(Rev. & Tax. Code, former § 2164.3, Stats. 1972, ch. 1406. § 14.7, pp. 2962-2963.) In fact, at that time methods of financing education in this state were ***1579** undergoing fundamental reformation as the result of the litigation in *Serrano v. Priest* (1971) 5 Cal.3d 584 [96 Cal.Rptr. 601, 487 P.2d 1241, 41 A.L.R.3d 1187]. At the time of the *Serrano* decision local property taxes were the primary source of school revenue. (*Id.* at p. 592.)In *Serrano,* the California Supreme Court held that education is a fundamental interest, that wealth is a suspect classification, and that an educational system which produces disparities of opportunity based upon district wealth would violate principles of equal protection. (*Id.* at pp. 614-615, 619.)A major portion of Senate Bill No. 90 constituted new formulae for state and local contributions to education in a legislative response to the decision in *Serrano.*(Stats. 1972, ch. 1406, §§ 1.5-2.74, pp. 2931-2953. See *Serrano v. Priest* (1976) 18 Cal.3d 728, 736- 737 [135 Cal.Rptr. 345, 557 P.2d 929].) FN6

> FN5 A school district's relationship to the state is different from that of local governmental entities such as cities, counties, and special districts. Education and the operation of the public school system are matters of statewide rather than local or municipal concern. (*California Teachers Assn. v. Huff* (1992) 5 Cal.App.4th 1513, 1524 [7 Cal.Rptr.2d 699].) Local school districts are agencies of the state and have been described as quasi-municipal corporations. (*Ibid.*) They are not distinct and independent bodies politic. (*Ibid.*) The Legislature's power over the public school system has been described as exclusive, plenary, absolute, entire, and comprehensive, subject only to constitutional constraints.(*Ibid.*) The Legislature has the power to create, abolish, divide, merge, or alter the boundaries of school districts. (*Id.* at p. 1525.)The state is the beneficial owner of all school properties and local districts hold title as trustee for the state. (*Ibid.*) School moneys belong to the state and the apportionment of funds to a school district does not give the district a proprietary interest in the funds. (*Ibid.*) While the Legislature has chosen to encourage local responsibility for control of public education through local school districts, that is a matter of legislative choice rather than constitutional compulsion and the authority that the Legislature has given to local districts remains subject to the ultimate and nondelegable responsibility of the Legislature. (*Id.* at pp. 1523-1524.)

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

FN6 After the first *Serrano* decision, the United States Supreme Court held that equal protection does not require dollar-for-dollar equality between school districts. (*San Antonio School District v. Rodriguez* (1973) 411 U.S. 1, 33-34 48-56, 61-62 [36 L.Ed.2d 16, 42-43, 51-56, 59-60, 93 S.Ct. 1278].) In the second *Serrano* decision, the California Supreme Court adhered to the first *Serrano* decision on independent state grounds. (*Serrano v. Priest, supra,* 18 Cal.3d at pp. 761-766.) The court concluded that Senate Bill No. 90 and Assembly Bill No. 1267, enacted the following year (Stats. 1973, ch. 208, p. 529 et seq.), did not satisfy equal protection principles. (*Serrano v. Priest, supra,* 18 Cal.3d at pp. 776-777.) Additional complications in educational financing arose as the result of the enactment of article XIII A of the California Constitution at the June 1978 Primary Election (Proposition 13), which limited the taxes which can be imposed on real property and forced the state to assume greater responsibility for financing education (see Ed. Code, § 41060), and the enactment of Propositions 98 and 111 in 1988 and 1990, respectively, which provide formulae for minimum state funding for education. (See generally *California Teachers Assn. v. Huff, supra,* 5 Cal.App.4th 1513.)

The provisions of Senate Bill No. 90 were amended and refined in legislation enacted the following year. (Stats. 1973, ch. 358.) Revenue and Taxation Code section 2231, subdivision (a), was enacted to require the state to reimburse local agencies, including school districts, for the full costs of new programs or increased levels of service mandated by the Legislature after January 1, 1973. Local agencies except school districts were also entitled to reimbursement for costs mandated by executive regulation after January 1, 1973. (Rev. & Tax. Code, § 2231, subd. (d), added by Stats. 1973, ch. 358, § 3, p. 783 ***1580** and repealed by Stats. 1986, ch. 879, § 23, p. 3045.) In subsequent years legislation was enacted to entitle school districts to subvention for state-mandated costs imposed by legislative acts after January 1, 1973, or by executive regulation after January 1, 1978. (Rev. & Tax. Code, former § 2207.5, added by Stats. 1977, ch. 1135, § 5, p. 3646 and amended by Stats. 1980, ch. 1256, § 5, pp. 4248-4249.)

In the 1973 legislation, Revenue and Taxation Code section 2271 was enacted to provide, among other things: "A local agency may levy, or have levied on its behalf, a rate in addition to the maximum property tax rate established pursuant to this chapter (commencing with Section 2201) to pay costs mandated by the federal government or costs mandated by the courts or costs mandated by initiative enactment, which are not funded by federal or state government." (3) In this respect costs mandated by the federal government are exempt from an agency's taxing and spending limits. (*City of Sacramento v. State of California, supra,* 50 Cal.3d at p. 71, fn. 17.)

At the November 6, 1979, General Election, the voters added article XIII B to the state Constitution by enacting Proposition 4. That article imposes spending limits on the state and all local governments. For purposes of article XIII B the term "local government" includes school districts. (Cal. Const., art. XIII B, § 8, subd. (d).) The measure accomplishes its purpose by limiting a governmental entity's annual appropriations to the prior year's appropriations limit adjusted for changes in the cost of living and population growth, except as otherwise provided in the article. (Cal. Const., art. XIII B, § 1.) FN7 The appropriations subject to limitation do not include, among other things: "Appropriations required to comply with mandates of the courts or the federal government which, without discretion, require an expenditure for additional services or which unavoidably make the provision of existing services more costly." (Cal. Const., art. XIII B, § 9, subd. (b).)

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

FN7 As it was originally enacted, article XIII B required that all governmental entities return revenues in excess of their appropriations limits to the taxpayers through tax rate or fee schedule revisions. In Proposition 98, adopted at the November 1988 General Election, article XIII B was amended to provide that half of state excess revenues would be transferred to the state school fund for the support of school districts and community college districts. (See Cal. Const., art. XVI, § 8.5; *California Teachers Assn. v. Huff, supra,* 5 Cal.App.4th 1513.)

Like its statutory predecessor, the constitutional initiative measure includes a provision designed "to preclude the state from shifting to local agencies the financial responsibility for providing public services in view of these restrictions on the taxing and spending power of the local entities." (*Lucia Mar Unified School Dist. v. Honig* (1988) 44 Cal.3d 830, 835-836 [244 Cal.Rptr. 677, 750 P.2d 318].)Section 6 of article XIII B of the state Constitution provides: "Whenever the Legislature or any State agency mandates a new program or higher level of service on any local government, the ***1581** State shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [¶] (a) Legislative mandates requested by the local agency affected; [¶] (b) Legislation defining a new crime or changing an existing definition of a crime; or [¶] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975."

Although article XIII B of the state Constitution requires subvention for state mandates enacted after January 1, 1975, the article had an effective date of July 1, 1980. (Cal. Const., art. XIII B, § 10.)(4) Accordingly, under the constitutional provision, a local agency may seek subvention for costs imposed by legislation after January 1, 1975, but reimbursement is limited to costs incurred after July 1, 1980. (*City of Sacramento v. State of California, supra,* 156 Cal.App.3d at pp. 190-193.) Reimbursement for costs incurred before July 1, 1980, must be obtained, if at all, under controlling statutory law. (See 68 Ops.Cal.Atty.Gen. 244 (1985).)

The constitutional subvention provision, like the statutory scheme before it, requires state reimbursement whenever "the Legislature or any State agency" mandates a new program or higher level of service. (Cal. Const., art. XIII B, § 6.) Accordingly, it has been held that state subvention is not required when the federal government imposes new costs on local governments. (*City of Sacramento v. State of California, supra,* 156 Cal.App.3d at p. 188; see also *Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521, 543 [234 Cal.Rptr. 795].) In our *City of Sacramento* decision this court held that a federal program in which the state participates is not a federal mandate, regardless of the incentives for participation, unless the program leaves state or local government with no discretion as to alternatives. (156 Cal.App.3d at p. 198.)

In its *City of Sacramento* opinion, FN8 the California Supreme Court rejected this court's earlier formulation. In doing so the high court noted that the vast bulk of cost-producing federal influence on state and local government is by inducement or incentive rather than direct compulsion. (50 Cal.3d at p. 73.) However, "certain regulatory standards imposed by the federal government ***1582** under 'cooperative federalism' schemes are coercive on the states and localities in every practical sense." (*Id.* at pp. 73-74.)The test for determining whether there is a federal mandate is whether compliance with federal standards "is a matter of true choice," that is, whether participation in the federal program "is truly voluntary." (*Id.* at p. 76.)The court went on to say: "Given the variety of cooperative federal-state-local programs, we here attempt no final test

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

for 'mandatory' versus 'optional' compliance with federal law. A determination in each case must depend on such factors as the nature and purpose of the federal program; whether its design suggests an intent to coerce; when state and/or local participation began; the penalties, if any, assessed for withdrawal or refusal to participate or comply; and any other legal and practical consequences of nonparticipation, noncompliance, or withdrawal." (*Ibid.*)

> FN8 The Supreme Court's decision in *City of Sacramento* was not a result of direct review of this court's decision. The Supreme Court denied a petition for review of this court's *City of Sacramento* decision. After the Board of Control had adopted parameters and guidelines for reimbursement under this court's decision, the Legislature failed to appropriate the funds necessary for such reimbursement. The litigation which resulted in the Supreme Court's *City of Sacramento* decision was commenced as an action to enforce the result on remand from this court's *City of Sacramento* decision. (See 50 Cal.3d at p. 60.)

IV. *Special Education*

The issues in this case cannot be resolved by consideration of a particular federal act in isolation. Rather, reference must be made to the historical and legal setting of which the particular act is a part. Our consideration begins in the early 1970's.

In considering the 1975 amendments to the Education of the Handicapped Act, Congress referred to a series of "landmark court cases" emanating from 36 jurisdictions which had established the right to an equal educational opportunity for handicapped children. (See *Smith v. Robinson* (1984) 468 U.S. 992, 1010 [82 L.Ed.2d 746, 763, 104 S.Ct. 3457].) Two federal district court cases, *Pennsylvania Ass'n, Ret'd Child. v. Commonwealth of Pa.* (E.D.Pa. 1972) 343 F.Supp. 279 (see also *Pennsylvania Ass'n, Retard. Child. v. Commonwealth of Pa.* (E.D.Pa. 1971) 334 F.Supp. 1257), and *Mills v. Board of Education of District of Columbia* (D.D.C. 1972) 348 F.Supp. 866, were the most prominent of these judicial decisions. (See *Hendrick Hudson Dist. Bd. of Ed. v. Rowley* (1982) 458 U.S. 176, 180, fn. 2 [73 L.Ed.2d 690, 695, 102 S.Ct. 3034].)

In the Pennsylvania case, an association and the parents of certain retarded children brought a class action against the commonwealth and local school districts in the commonwealth, challenging the exclusion of retarded children from programs of education and training in the public schools. (*Pennsylvania Ass'n, Ret'd. Child. v. Commonwealth of Pa., supra,* 343 F.Supp. at p. 282.)The matter was assigned to a three- judge panel which heard evidence on the plaintiffs' due process and equal protection claims. (*Id.* at p. 285.)The parties then agreed to resolve the litigation by means of a consent ***1583** judgment. (*Ibid.*) The consent agreement required the defendants to locate and evaluate all children in need of special education services, to reevaluate placement decisions periodically, and to accord due process hearings to parents who are dissatisfied with placement decisions. (*Id.* at pp. 303-306.)It required the defendants to provide "a free public program of education and training appropriate to the child's capacity." (*Id.* at p. 285, italics deleted.)

In view of the consent agreement the district court was not required to resolve the plaintiffs' equal protection and due process contentions. Rather, it was sufficient for the court to find that the suit was not collusive and that the plaintiffs' claims were colorable. The court found: "Far from an indication of collusion, however, the Commonwealth's willingness to settle this dispute reflects an intelligent response to overwhelming evidence against [its] position." (*Pennsylvania Ass'n, Ret'd. Child. v. Commonwealth of Pa., supra,* 343 F.Supp. at p. 291.)The court said that it was convinced the due process and equal protection claims were colorable. (*Id.* at pp. 295-296.)

In the *Mills* case, an action was brought on behalf of a number of school-age children with exception-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

al needs who were excluded from the Washington, D.C., public school system. (*Mills v. Board of Education of District of Columbia, supra,* 348 F.Supp. at p. 868.)The district court concluded that equal protection entitled the children to a public-supported education appropriate to their needs and that due process required a hearing with respect to classification decisions. (*Id.* at pp. 874-875.)The court said: "If sufficient funds are not available to finance all of the services and programs that are needed and desirable in the system then the available funds must be expended equitably in such manner that no child is entirely excluded from a publicly supported education consistent with his needs and ability to benefit therefrom. The inadequacies of the District of Columbia Public School System whether occasioned by insufficient funding or administrative inefficiency, certainly cannot be permitted to bear more heavily on the 'exceptional' or handicapped child than on the normal child." (*Id.* at p. 876.)

In the usual course of events, the development of principles of equal protection and due process as applied to special education, which had just commenced in the early 1970's with the authorities represented by the *Pennsylvania* and *Mills* cases, would have been fully expounded through appellate processes. However, the necessity of judicial development was truncated by congressional action. In the Rehabilitation Act of 1973, section 504, Congress provided: "No otherwise qualified handicapped individual in the United States, as defined in section 706(7) [now 706(8)] of this title, *1584 shall, solely by reason of his handicap, be excluded from the participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal financial assistance ...." (29 U.S.C. § 794, Pub.L. No. 93-112, tit. V, § 504 (Sept. 26, 1973) 87 Stat. 394.) FN9 Since federal assistance to education is pervasive (see, e.g., Ed. Code, §§ 12000-12405, 49540 et seq., 92140 et seq.), section 504 was applicable to virtually all public educational programs in this and other states.

FN9 In section 119 of the Rehabilitation, Comprehensive Services, and Developmental Disabilities Act of 1978, the application of section 504 was extended to federal executive agencies and the United States Postal Service. (Pub.L. No. 95-602, tit. I, § 119 (Nov. 6, 1978) 92 Stat. 2982.) The section is now subdivided and includes subdivision (b), which provides that the section applies to all of the operations of a state or local governmental agency, including local educational agencies, if the agency is extended federal funding for any part of its operations. (29 U.S.C. § 794.)This latter amendment was in response to judicial decisions which had limited the application of section 504 to the particular activity for which federal funding is received. (See *Consolidated Rail Corporation v. Darrone* (1984) 465 U.S. 624,635-636 [79 L.Ed.2d 568, 577-578, 104 S.Ct. 1248].)

The Department of Health, Education and Welfare (HEW) promulgated regulations to ensure compliance with section 504 by educational agencies. FN10The regulations required local educational agencies to locate and evaluate handicapped children in order to provide appropriate educational opportunities and to provide administrative hearing procedures in order to resolve disputes. The federal courts concluded that section 504 was essentially a codification of the equal protection rights of citizens with disabilities. (See *Halderman v. Pennhurst State School & Hospital* (E.D.Pa. 1978) 446 F.Supp. 1295, 1323.)Courts also held that section 504 embraced a private cause of action to enforce its requirements. (*Sherry v. New York State Ed. Dept.* (W.D.N.Y. 1979) 479 F.Supp. 1328, 1334; *Doe v. Marshall* (S.D.Tex. 1978) 459 F.Supp. 1190, 1192.)It was further held that section 504 imposed upon school districts and other public educational agencies "the duty of analyzing individually the needs of each handicapped student and devising a program which will enable each individual handi-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

capped student to receive an appropriate, free public education. The failure to perform this analysis and structure a program suited to the needs of each handicapped child, constitutes discrimination against that child and a failure to provide an appropriate, free ***1585** public education for the handicapped child." (*Doe v. Marshall, supra,* 459 F.Supp. at p. 1191.See also *David H. v. Spring Branch Independent School Dist.* (S.D.Tex. 1983) 569 F.Supp. 1324, 1334; *Halderman v. Pennhurst State School & Hospital, supra,* 446 F.Supp. at p. 1323.)

> FN10 HEW was later dissolved and its responsibilities are now shared by the federal Department of Education and the Department of Health and Human Services. The promulgation of regulations to enforce section 504 had a somewhat checkered history. Initially HEW determined that Congress did not intend to require it to promulgate regulations. The Senate Public Welfare Committee then declared that regulations were intended. By executive order and by judicial decree in *Cherry v. Mathews* (D.D.C. 1976) 419 F.Supp. 922, HEW was required to promulgate regulations. The ensuing regulations were embodied in title 45 Code of Federal Regulations part 84, and are now located in title 34 Code of Federal Regulations part 104. (See *Southeastern Community College v. Davis* (1979) 442 U.S. 397, 404, fn. 4 [60 L.Ed.2d 980, 987, 99 S.Ct. 2361]; *N. M. Ass'n for Retarded Citizens v. State of N. M.* (10th Cir. 1982) 678 F.2d 847, 852.)

(5) Throughout these proceedings Riverside, relying upon the decision in *Southeastern Community College v. Davis, supra,* 442 U.S. 397 [60 L.Ed.2d 980], has contended that section 504 cannot be considered a federal mandate because it does not obligate local school districts to take any action to accommodate the needs of handicapped children so long as they are not excluded from school. That assertion is not correct.

In the *Southeastern Community College* case a prospective student with a serious hearing disability sought to be admitted to a postsecondary educational program to be trained as a registered nurse. As a result of her disability the student could not have completed the academic requirements of the program and could not have attended patients without full-time personal supervision. She sought to require the school to waive the academic requirements, including an essential clinical program, which she could not complete and to otherwise provide full-time personal supervision. That demand, the Supreme Court held, was beyond the scope of section 504, which did not require the school to modify its program affirmatively and substantially. (442 U.S. at pp. 409-410 [60 L.Ed.2d at pp. 990- 991].)

The *Southeastern Community College* decision is inapposite. States typically do not guarantee their citizens that they will be admitted to, and allowed to complete, specialized postsecondary educational programs. State educational institutions often impose stringent admittance and completion requirements for such programs in higher education. In the *Southeastern Community College* case the Supreme Court simply held that an institution of higher education need not lower or effect substantial modifications of its standards in order to accommodate a handicapped person. (442 U.S. at p. 413 [60 L.Ed.2d at pp. 992-993].) The court did not hold that a primary or secondary educational agency need do nothing to accommodate the needs of handicapped children. (See *Alexander v. Choate* (1985) 469 U.S. 287, 301 [83 L.Ed.2d 661, 672,105 S.Ct. 712].)

States typically do purport to guarantee all of their children the opportunity for a basic education. In fact, in this state basic education is regarded as a fundamental right. (*Serrano v. Priest, supra,* 18 Cal.3d at pp. 765-766.) All basic educational programs are essentially affirmative action activities in the sense that educational agencies are required to

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

evaluate and accommodate *1586 the educational needs of the children in their districts. Section 504 would not appear to permit local agencies to accommodate the educational needs of some children while ignoring the needs of others due to their handicapped condition. (Compare *Lau v. Nichols* (1974) 414 U.S. 563 [39 L.Ed.2d 1, 94 S.Ct. 786], which required the San Francisco Unified School District to take affirmative steps to accommodate the needs of non-English speaking students under section 601 of the Civil Rights Act of 1964.)

Riverside's view of section 504 is inconsistent with congressional intent in enacting it. The congressional record makes it clear that section 504 was perceived to be necessary not to combat affirmative animus but to cure society's benign neglect of the handicapped. The record is replete with references to discrimination in the form of the denial of special educational assistance to handicapped children. In *Alexander v. Choate, supra,* 469 U.S. at pages 295 to 297 [83 L.Ed.2d at pages 668- 669], the Supreme Court took note of these comments in concluding that a violation of section 504 need not be proven by evidence of purposeful or intentional discrimination. With respect to the *Southeastern Community College v. Davis, supra,* 442 U.S. 397 case, the high court said: "The balance struck in *Davis* requires that an otherwise qualified handicapped individual must be provided with meaningful access to the benefit that the grantee offers. The benefit itself, of course, cannot be defined in a way that effectively denies otherwise qualified handicapped individuals the meaningful access to which they are entitled; to assure meaningful access, reasonable accommodations in the grantee's program or benefit may have to be made. ..." (*Alexander v. Choate, supra,* 469 U.S. at p. 301 [83 L.Ed.2d at p. 672], fn. omitted.)

Federal appellate courts have rejected the argument that the *Southeastern Community College* case means that pursuant to section 504 local educational agencies need do nothing affirmative to accommodate the needs of handicapped children. (*N. M. Ass'n for Retarded Citizens v. State of N. M., supra,* 678 F.2d at pp. 852-853; *Tatro v. State of Texas* (5th Cir. 1980) 625 F.2d 557, 564 [63 A.L.R. Fed. 844].) [FN11] We are satisfied that section 504 does impose an obligation upon local school districts to accommodate the needs of handicapped children. However, as was the case with constitutional principles, full judicial development of section 504 as it relates to special education in elementary and secondary school districts was truncated by congressional action. *1587

FN11 Following a remand and another decision by the Court of Appeals, the *Tatro* litigation, *supra,* eventually wound up in the Supreme Court. (*Irving Independent School Dist. v. Tatro* (1984) 468 U.S. 883 [82 L.Ed.2d 664, 104 S.Ct. 3371].) However, by that time the Education of the Handicapped Act had replaced section 504 as the means for vindicating the education rights of handicapped children and the litigation was resolved, favorably for the child, under that act.

In 1974 Congress became dissatisfied with the progress under earlier efforts to stimulate the states to accommodate the educational needs of handicapped children. (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley, supra,* 458 U.S. at p. 180 [73 L.Ed.2d at p. 695].) These earlier efforts had included a 1966 amendment to the Elementary and Secondary Education Act of 1965, and the 1970 version of the Education of the Handicapped Act. (*Ibid.*) The prior acts had been grant programs that did not contain specific guidelines for a state's use of grant funds. (*Ibid.*) In 1974 Congress greatly increased federal funding for education of the handicapped and simultaneously required recipient states to adopt a goal of providing full educational opportunities to all handicapped children. (*Ibid.* [73 L.Ed.2d at pp. 695-696].) The following year Congress amended the Education of the Handicapped Act by enacting the Education for All Handicapped Children Act of 1975. (*Ibid.* [73 L.Ed.2d at p. 696].)

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Since the 1975 amendment, the Education of the Handicapped Act has required recipient states to demonstrate a policy that assures all handicapped children the right to a free appropriate education. (20 U.S.C. § 1412(1).) (6) The act is not merely a funding statute; rather, it establishes an enforceable substantive right to a free appropriate public education in recipient states. (*Smith v. Robinson, supra,* 468 U.S. at p. 1010 [82 L.Ed.2d at p. 764].) To accomplish this purpose the act incorporates the major substantive and procedural requirements of the "right to education" cases which were so prominent in the congressional consideration of the measure. (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley, supra,* 458 U.S. at p. 194 [73 L.Ed.2d at p. 704].) The substantive requirements of the act have been interpreted in a manner which is "strikingly similar" to the requirements of section 504 of the Rehabilitation Act of 1973. (*Smith v. Robinson, supra,* 468 U.S. at pp. 1016-1017 [82 L.Ed.2d at p. 768].) The Supreme Court has noted that Congress intended the act to establish " 'a basic floor of opportunity that would bring into compliance all school districts with the constitutional right to equal protection with respect to handicapped children.' " (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley, supra,* 458 U.S. at p. 200 [73 L.Ed.2d at p. 708] citing the House of Representatives Report.) FN12

> FN12 Consistent with its "basic floor of opportunity" purpose, the act does not require local agencies to maximize the potential of each handicapped child commensurate with the opportunity provided nonhandicapped children. Rather, the act requires that handicapped children be accorded meaningful access to a free public education, which means access that is sufficient to confer some educational benefit. (*Ibid.*)

It is demonstrably manifest that in the view of Congress the substantive requirements of the 1975 amendment to the Education of the Handicapped Act were commensurate with the constitutional obligations of state and local ***1588** educational agencies. Congress found that "State and local educational agencies have a responsibility to provide education for all handicapped children, but present financial resources are inadequate to meet the special educational needs of handicapped children;" and "it is in the national interest that the Federal Government assist State and local efforts to provide programs to meet the educational needs of handicapped children in order to assure equal protection of the law." (20 U.S.C. former § 1400(b)(8) & (9).) FN13

> FN13 That Congress intended to enforce the Fourteenth Amendment to the United States Constitution in enacting the Education of the Handicapped Act has since been made clear. In *Dellmuth v. Muth* (1989) 491 U.S. 223 at pages 231 and 232 [105 L.Ed.2d 181, 189-191, 109 S.Ct. 2397], the court noted that Congress has the power under section 5 of the Fourteenth Amendment to abrogate a state's Eleventh Amendment immunity from suit in federal court, but concluded that the Education of the Handicapped Act did not clearly evince such a congressional intent. In 1990 Congress responded by expressly abrogating state sovereign immunity under the act. (20 U.S.C. § 1403.)

It is also apparent that Congress intended the act to achieve nationwide application: "It is the purpose of this chapter to assure that all handicapped children have available to them, within the time periods specified in section 1412(2)(B) of this title, a free appropriate public education which emphasizes special education and related services designed to meet their unique needs, to assure that the rights of handicapped children and their parents or guardians are protected, to assist States and localities to provide for the education of all handicapped children, and to assess and assure the effectiveness of efforts to educate handicapped children." (20 U.S.C. former § 1400(c).)

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

In order to gain state and local acceptance of its substantive provisions, the Education of the Handicapped Act employs a "cooperative federalism" scheme, which has also been referred to as the "carrot and stick" approach. (See *City of Sacramento v. State of California, supra,* 50 Cal.3d at pp. 73-74;*City of Sacramento v. State of California, supra,* 156 Cal.App.3d at p. 195.) As an incentive Congress made substantial federal financial assistance available to states and local educational agencies that would agree to adhere to the substantive and procedural terms of the act. (20 U.S.C. §§ 1411, 1412.)For example, the administrative record indicates that for fiscal year 1979-1980, the base year for Santa Barbara's claim, California received $71.2 million in federal assistance, and during fiscal year 1980-1981, the base year for Riverside's claim, California received $79.7 million. We cannot say that such assistance on an ongoing basis is trivial or insubstantial.

Contrary to Riverside's argument, federal financial assistance was not the only incentive for a state to comply with the Education of the Handicapped Act. (7) Congress intended the act to serve as a means by which state and ***1589** local educational agencies could fulfill their obligations under the equal protection and due process provisions of the Constitution and under section 504 of the Rehabilitation Act of 1973. Accordingly, where it is applicable the act supersedes claims under the Civil Rights Act (42 U.S.C. § 1983) and section 504 of the Rehabilitation Act of 1973, and the administrative remedies provided by the act constitute the exclusive remedy of handicapped children and their parents or other representatives. (*Smith v. Robinson, supra,* 468 U.S. at pp. 1009, 1013, 1019 [82 L.Ed.2d at pp. 763, 766, 769].) FN14

FN14 In *Smith v. Robinson, supra,* the court concluded that since the Education of the Handicapped Act did not include a provision for attorney fees, a successful complainant was not entitled to an award of such fees even though such fees would have been available in litigation under section 504 of the Rehabilitation Act of 1973 or section 1983 of the Civil Rights Act. Congress reacted by adding a provision for attorney fees to the Education of the Handicapped Act. (20 U.S.C. § 1415(e)(4)(B).)

As a result of the exclusive nature of the Education of the Handicapped Act, dissatisfied parties in recipient states must exhaust their administrative remedies under the act before resorting to judicial intervention. (*Smith v. Robinson, supra,* 468 U.S. at p. 1011 [82 L.Ed.2d at p. 764].) This gives local agencies the first opportunity and the primary authority to determine appropriate placement and to resolve disputes. (*Ibid.*) If a party is dissatisfied with the final result of the administrative process then he or she is entitled to seek judicial review in a state or federal court. (20 U.S.C. § 1415(e)(2).) In such a proceeding the court independently reviews the evidence but its role is restricted to that of review of the local decision and the court is not free to substitute its view of sound educational policy for that of the local authority. (*Hendrick Hudson Dist. Bd. of Ed. v. Rowley, supra,* 458 U.S. at pp. 206-207 [73 L.Ed.2d at p. 712].) And since the act provides the exclusive remedy for addressing a handicapped child's right to an appropriate education, where the act applies a party cannot pursue a cause of action for constitutional violations, either directly or under the Civil Rights Act (42 U.S.C. § 1983), nor can a party proceed under section 504 of the Rehabilitation Act of 1973. (*Smith v. Robinson, supra,* 468 U.S. at pp. 1013, 1020 [82 L.Ed.2d at pp. 766, 770].)

Congress's intention to give the Education of the Handicapped Act nationwide application was successful. By the time of the decision in *Hendrick Hudson Dist. Bd. of Ed. v. Rowley, supra,* all states except New Mexico had become recipients under the act. (458 U.S. at pp. 183-184 [73 L.Ed.2d at p. 698].) It is important at this point in our discussion to consider the experience of New Mexico, both because the Board of Control relied upon that state's

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

failure to adopt the Education of the Handicapped Act as proof that the act is not federally mandated, and because it illustrates the consequences of a failure to adopt the act. ***1590**

In *N. M. Ass'n for Retarded Citizens v. State of N. M.* (D.N.M. 1980) 495 F.Supp. 391, a class action was brought against New Mexico and its local school districts based upon the alleged failure to provide a free appropriate public education to handicapped children. The plaintiffs' causes of action asserting constitutional violations were severed and stayed pending resolution of the federal statutory causes of action. (*Id.* at p. 393.)The district court concluded that the plaintiffs could not proceed with claims under the Education of the Handicapped Act because the state had not adopted that act and, without more, that was a governmental decision within the state's power. (*Id.* at p. 394.) FN15 The court then considered the cause of action under section 504 and found that both the state and its local school districts were in violation of that section by failing to provide a free appropriate education to handicapped children within their territories. (495 F.Supp. at pp. 398-399.)

> FN15 The plaintiffs alleged that the failure of the state to apply for federal funds under the Education of the Handicapped Act was itself an act of discrimination. The district court did not express a view on that question, leaving it for resolution in connection with the constitutional causes of action. (*Ibid.*)

After the district court entered an injunctive order designed to compel compliance with section 504, the matter was appealed. (*N. M. Ass'n for Retarded Citizens v. State of N. M., supra,* 678 F.2d 847.)The court of appeals rejected the defendants' arguments that the plaintiffs were required to exhaust state administrative remedies before bringing their action and that the district court should have applied the doctrine of primary jurisdiction to defer ruling until the Office of Civil Rights could complete its investigation into the charges. (*Id.* at pp. 850-851.)The court also rejected the defendants' arguments that section 504 does not require them to take action to accommodate the needs of handicapped children and that proof of disparate treatment is essential to a violation of section 504. (678 F.2d at p. 854.)The court found sufficient evidence in the record to establish discrimination against handicapped children within the meaning of section 504. (678 F.2d at p. 854.)However, the reviewing court concluded that the district court had applied an erroneous standard in reaching its decision, and the matter was remanded for further proceedings. (*Id.* at p. 855.)

On July 19, 1984, during the proceedings before the Board of Control, a representative of the Department of Education testified that New Mexico has since implemented a program of special education under the Education of the Handicapped Act. We have no doubt that after the litigation we have just recounted New Mexico saw the handwriting on the wall and realized that it could either establish a program of special education with federal financial assistance under the Education of the Handicapped Act, or be compelled through litigation to accommodate the educational needs of handicapped ***1591** children without federal assistance and at the risk of losing other forms of federal financial aid. In any event, with the capitulation of New Mexico the Education of the Handicapped Act achieved the nationwide application intended by Congress. (20 U.S.C. § 1400(c).)

California's experience with special education in the time period leading up to the adoption of the Education of the Handicapped Act is examined as a case study in Kirp et al., *Legal Reform of Special Education: Empirical Studies and Procedural Proposals* (1974) 62 Cal.L.Rev. 40, at pages 96 through 115.As this study reflects, during this period the state and local school districts were struggling to create a program to accommodate adequately the educational needs of the handicapped. (*Id.* at pp. 97-110.)Individuals and organized groups, such as the California Association for the Retarded and the California Association for Neuro-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

logically Handicapped Children, were exerting pressure through political and other means at every level of the educational system.(*Ibid.*) Litigation was becoming so prevalent that the authors noted: "Fear of litigation over classification practices, prompted by the increasing number of lawsuits, is pervasive in California." (*Id.* at p. 106, fn. 295.) FN16

> FN16 Lawsuits primarily fell into three types: (1) Challenges to the adequacy or even lack of available programs and services to accommodate handicapped children. (*Id.* at p. 97, fns. 255, 257.) (2) Challenges to classification practices in general, such as an overtendency to classify minority or disadvantaged children as "retarded." (*Id.* at p. 98, fns. 259, 260.) (3) Challenges to individual classification decisions. (*Id.* at p. 106.)In the absence of administrative procedures for resolving classification disputes, dissatisfied parents were relegated to self-help remedies, such as pestering school authorities, or litigation. (*Ibid.*)

In the early 1970's the state Department of Education began working with local school officials and university experts to design a "California Master Plan for Special Education." (Kirp et al., *Legal Reform of Special Education: Empirical Studies and Procedural Proposals, supra,*62 Cal.L.Rev. at p. 111.)In 1974 the Legislature enacted legislation to give the Superintendent of Public Instruction the authority to implement and administer a pilot program pursuant to a master plan adopted by State Board of Education in order to determine whether services under such a plan would better meet the needs of children with exceptional needs. (Stats. 1974, ch. 1532, § 1, p. 3441, enacting Ed. Code, § 7001.) In 1977 the Legislature acted to further implement the master plan. (Stats. 1977, ch. 1247, especially § 10, pp. 4236-4237, enacting Ed. Code, § 56301.) In 1980 the Legislature enacted urgency legislation revising our special education laws with the express intent of complying with the 1975 amendments to the Education of the Handicapped Act. (Stats. 1980, ch. 797, especially § 9, pp. 2411-2412, enacting Ed. Code, § 56000.)

As this history demonstrates, in determining whether to adopt the requirements of the Education of the Handicapped Act as amended in 1975, our *1592 Legislature was faced with the following circumstances: (1) In the *Serrano* litigation, our Supreme Court had declared basic education to be a fundamental right and, without even considering special education in the equation, had found our educational system to be violative of equal protection principles. (2) Judicial decisions from other jurisdictions had established that handicapped children have an equal protection right to a free public education appropriate to their needs and due process rights with regard to placement decisions. (3) Congress had enacted section 504 of the Rehabilitation Act of 1973 to codify the equal protection rights of handicapped children in any school system that receives federal financial assistance and to threaten the state and local districts with the loss of all federal funds for failure to accommodate the needs of such children. (4) Parents and organized groups representing handicapped children were becoming increasingly litigious in their efforts to secure an appropriate education for handicapped children. (5) In enacting the 1975 amendments to the Education of the Handicapped Act, Congress did not intend to require state and local educational agencies to do anything more than the Constitution already required of them. The act was intended to provide a means by which educational agencies could fulfill their constitutional responsibilities and to provide substantial federal financial assistance for states that would agree to do so.

(8a) Under these circumstances we have no doubt that enactment of the 1975 amendments to the Education of the Handicapped Act constituted a federal mandate under the criteria set forth in *City of Sacramento v. State of California, supra,* 50 Cal.3d at page 76. The remaining question is whether the

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

state's participation in the federal program was a matter of "true choice" or was "truly voluntary." The alternatives were to participate in the federal program and obtain federal financial assistance and the procedural protections accorded by the act, or to decline to participate and face a barrage of litigation with no real defense and ultimately be compelled to accommodate the educational needs of handicapped children in any event. We conclude that so far as the state is concerned the Education of the Handicapped Act constitutes a federal mandate.

V. *Subvention for Special Education*

Our conclusion that the Education of the Handicapped Act is a federal mandate with respect to the state marks the starting point rather than the end of the consideration which will be required to resolve the Santa Barbara and Riverside test claims. In *City of Sacramento v. State of California, supra,* 50 Cal.3d at pages 66 through 70, the California Supreme Court concluded that the costs at issue in that case (unemployment insurance premiums) were not subject to state subvention because they were incidental to a law of general ***1593** application rather than a new governmental program or increased level of service under an existing program. The court addressed the federal mandate issue solely with respect to the question whether the costs were exempt from the local government's taxing and spending limitations. (*Id.* at pp. 70-71.)It observed that prior authorities had assumed that if a cost was federally mandated it could not be a state mandated cost subject to subvention, and said: "We here express no view on the question whether 'federal' and 'state' mandates are mutually exclusive for purposes of state subvention, but leave that issue for another day. ..." (*Id.* at p. 71, fn. 16.)The test claims of Santa Barbara and Riverside present that question which we address here for the guidance of the Commission on remand.

(9) The constitutional subvention provision and the statutory provisions which preceded it do not expressly say that the state is not required to provide a subvention for costs imposed by a federal mandate. Rather, that conclusion follows from the plain language of the subvention provisions themselves. The constitutional provision requires state subvention when "the Legislature or any State agency mandates a new program or higher level of service" on local agencies. (Cal. Const., art. XIII B, § 6.) Likewise, the earlier statutory provisions required subvention for new programs or higher levels of service mandated by legislative act or executive regulation. (See Rev. & Tax. Code, former §§ 2164.3 [Stats. 1972, ch. 1406, § 14.7, pp. 2962-2963], 2231 [Stats. 1973, ch. 358, § 3, pp. 783-784], 2207 [Stat. 1975, ch. 486, § 1.8, pp. 997-998], 2207.5 [Stats. 1977, ch. 1135, § 5, pp. 3646-3647].) When the federal government imposes costs on local agencies those costs are not mandated by the state and thus would not require a state subvention. Instead, such costs are exempt from local agencies' taxing and spending limitations. This should be true even though the state has adopted an implementing statute or regulation pursuant to the federal mandate so long as the state had no "true choice" in the manner of implementation of the federal mandate. (See *City of Sacramento v. State of California, supra,* 50 Cal.3d at p. 76.)

This reasoning would not hold true where the manner of implementation of the federal program was left to the true discretion of the state. A central purpose of the principle of state subvention is to prevent the state from shifting the cost of government from itself to local agencies. (*City of Sacramento v. State of California, supra,* 50 Cal.3d at p. 68.) Nothing in the statutory or constitutional subvention provisions would suggest that the state is free to shift state costs to local agencies without subvention merely because those costs were imposed upon the state by the federal government. In our view the determination whether certain costs were imposed upon a local agency by a federal mandate must focus upon the local agency which ***1594** is ultimately forced to bear the costs and how those costs came to be imposed upon that agency. If the state freely chose to impose the costs upon the local

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

agency as a means of implementing a federal program then the costs are the result of a reimbursable state mandate regardless whether the costs were imposed upon the state by the federal government.

The Education of the Handicapped Act is a comprehensive measure designed to provide all handicapped children with basic educational opportunities. While the act includes certain substantive and procedural requirements which must be included in a state's plan for implementation of the act, it leaves primary responsibility for implementation to the state. (20 U.S.C. §§ 1412, 1413.)(8b) In short, even though the state had no real choice in deciding whether to comply with the federal act, the act did not necessarily require the state to impose all of the costs of implementation upon local school districts. To the extent the state implemented the act by freely choosing to impose new programs or higher levels of service upon local school districts, the costs of such programs or higher levels of service are state mandated and subject to subvention.

We can illustrate this point with a hypothetical situation. Subvention principles are intended to prevent the state from shifting the cost of state governmental services to local agencies and thus subvention is required where the state imposes the cost of such services upon local agencies even if the state continues to perform the services. (*Lucia Mar Unified School Dist. v. Honig, supra,* 44 Cal.3d at pp. 835-836.) The Education of the Handicapped Act requires the state to provide an impartial, state-level review of the administrative decisions of local or intermediate educational agencies. (20 U.S.C. § 1415(c), (d).) Obviously, the state could not shift the actual performance of these new administrative reviews to local districts, but it could attempt to shift the costs to local districts by requiring local districts to pay the expenses of reviews in which they are involved. An attempt to do so would trigger subvention requirements. In such a hypothetical case, the state could not avoid its subvention responsibility by pleading "federal mandate" because the federal statute does not require the state to impose the costs of such hearings upon local agencies. Thus, as far as the local agency is concerned, the burden is imposed by a state rather than a federal mandate.

In the administrative proceedings the Board of Control did not address the "federal mandate" question under the appropriate standard and with proper focus on local school districts. In its initial determination the board concluded that the Education of the Handicapped Act constituted a federal mandate and that the state-imposed costs on local school districts in excess of the federally imposed costs. However, the board did not consider the ***1595** extent of the state-mandated costs because it concluded that any appropriation by the state satisfied its obligation. On Riverside's petition for a writ of administrative mandate the superior court remanded to the Board of Control to consider whether the state appropriation was sufficient to reimburse local school districts fully for the state-mandated costs. On remand the board clearly applied the now-discredited criteria set forth in this court's decision in *City of Sacramento v. State of California, supra,* 156 Cal.App.3d 182, and concluded that the Education of the Handicapped Act is not a federal mandate at any level of government. Under these circumstances we agree with the trial court that the matter must be remanded to the Commission for consideration in light of the criteria set forth in the Supreme Court's *City of Sacramento* decision. We add that on remand the Commission must focus upon the costs incurred by local school districts and whether those costs were imposed *on local districts* by federal mandate or by the state's voluntary choice in its implementation of the federal program.

VI. *Riverside's Objections*

In light of this discussion we may now consider Riverside's objections to the trial court's decision to remand the matter to the Commission for reconsideration.

Riverside asserts that the California Supreme Court

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

opinion in *City of Sacramento* is not on point because the court did not address the federal mandate question with respect to state subvention principles. Riverside implies that the definition of a federal mandate may be different with respect to state subvention than with respect to taxing and spending limitations. (10) As a general rule and unless the context clearly requires otherwise, we must assume that the meaning of a term or phrase is consistent throughout the entire act or constitutional article of which it is a part. (*Lungren v. Davis* (1991) 234 Cal.App.3d 806, 823 [285 Cal.Rptr. 777].) (11) Subvention principles are part of a more comprehensive political scheme. The basic purpose of the scheme as a whole was to limit the taxing and spending powers of government. The taxing and spending powers of local agencies were to be "frozen" at existing levels with adjustments only for inflation and population growth. Since local agencies are subject to having costs imposed upon them by other governmental entities, the scheme provides relief in that event. If the costs are imposed by the federal government or the courts, then the costs are not included in the local government's taxing and spending limitations. If the costs are imposed by the state then the state must provide a subvention to reimburse the local agency. Nothing in this scheme suggests that the concept of a federal mandate should have different meanings depending upon whether one is considering subvention or taxing and spending limitations. Accordingly, we reject the claim that the criteria set forth in ***1596** the Supreme Court's *City of Sacramento* decision do not apply when subvention is the issue.

(12) Riverside asserts that the trial court erred in concluding that the Board of Control did not consider the issues under the appropriate criteria and that the board did in fact consider the factors set forth in the Supreme Court's *City of Sacramento* decision. From our discussion above it is clear that we must reject these assertions. In its decision the board relied upon the "cooperative federalism" nature of the Education of the Handicapped Act without any consideration whether the act left the state any actual choice in the matter. In support of its conclusion the board relied upon the New Mexico litigation which we have also discussed. However, as we have pointed out, under the criteria set forth in the Supreme Court's *City of Sacramento* decision, the New Mexico litigation does not support the board's decision but in fact strongly supports a contrary result. We are satisfied that the trial court correctly concluded that the board did not apply the appropriate criteria in reaching its decision.

Riverside asserts that the Supreme Court's *City of Sacramento* decision elucidated and enforced prior law and thus no question of retroactivity arises. (See *Donaldson v. Superior Court* (1983) 35 Cal.3d 24, 37 [196 Cal.Rptr. 704, 672 P.2d 110].) (13) We agree that in *City of Sacramento* the Supreme Court elucidated and enforced existing law. Under such circumstances the rule of retrospective operation controls. (*Ibid.* See also *Wellenkamp v. Bank of America* (1978) 21 Cal.3d 943, 953- 954 [148 Cal.Rptr. 379, 582 P.2d 970]; *County of Los Angeles v. Faus* (1957) 48 Cal.2d 672, 680-681 [312 P.2d 680].) Pursuant to that rule the trial court correctly applied the *City of Sacramento* decision to the litigation pending before it. As we have seen, that decision supports the trial court's determination to remand the matter to the Commission for reconsideration.

Riverside asserts that if further consideration under the criteria of the Supreme Court's *City of Sacramento* decision is necessary then the trial court should have, and this court must, engage in such consideration to reach a final conclusion on the question. To a limited extent we agree. In our previous discussion we have concluded that under the criteria set forth in *City of Sacramento*, the Education of the Handicapped Act constitutes a federal mandate as far as the state is concerned. We are satisfied that is the only conclusion which may be drawn and we so hold as a matter of law. However, that conclusion does not resolve the question whether new special education costs were imposed upon local school districts by federal mandate or by

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

state choice in the implementation of the federal program. The issues were not addressed by the parties or the Board of Control in this light. The ***1597** Commission on State Mandates is the entity with the responsibility for considering the issues in the first instance and which has the expertise to do so. We agree with the trial court that it is appropriate to remand the matter to the Commission for reconsideration in light of the appropriate criteria which we have set forth in this appeal.

In view of the result we have reached we need not and do not consider whether it would be appropriate otherwise to fashion some judicial remedy to avoid the rule, based upon the separation of powers doctrine, that a court cannot compel the State Controller to make a disbursement in the absence of an appropriation. (See *Carmel Valley Fire Protection Dist. v. State of California, supra,* 190 Cal.App.3d at pp. 538- 541.)

Disposition

The judgment is affirmed.

Davis, J., and Scotland, J., concurred.
The petition of plaintiff and respondent for review by the Supreme Court was denied April 1, 1993. Lucas, C.J., Kennard, J., and Arabian, J., were of the opinion that the petition should be granted. ***1598**

Long Beach Unified School District v. State of California (1990) 225 Cal.App.3rd 155

Long Beach Unified School Dist. v. State
Cal.App.2.Dist.

LONG BEACH UNIFIED SCHOOL DISTRICT, Plaintiff and Appellant,
v.
THE STATE OF CALIFORNIA et al., Defendants and Appellants; MARK H. BLOODGOOD, as Auditor-Controller, etc., et al., Defendants and Respondents.

No. B033742.

Court of Appeal, Second District, Division 5, California.
Nov. 15, 1990.

SUMMARY

A school district filed a claim with the state Board of Control asserting that its expenditures related to its efforts to alleviate racial and ethnic segregation in its schools had been mandated by the state through an executive order (in the form of regulations issued by the state Department of Education) and were reimbursable pursuant to former Rev. & Tax. Code, § 2234, and Cal. Const., art. XIII B, § 6. The board approved the claim, but the Legislature deleted the requested funding from an appropriations bill and enacted a "finding" that the executive order did not impose a state-mandated local program. The district then filed a petition to compel reimbursement pursuant to Code Civ. Proc., § 1085, and a complaint for declaratory relief. The trial court ruled that the doctrines of administrative collateral estoppel and waiver prevented the state from challenging the board's decisions. The court's judgment in favor of the district identified certain funds previously appropriated by the Legislature as "reasonably available" for reimbursement of the claimed expenditures. (Superior Court of Los Angeles County, No. C606020, Robert I. Weil, Judge.)

The Court of Appeal modified the trial court's decision by striking as sources of reimbursement the Special Fund for Economic Uncertainties "or similarly designated accounts," and by including charging orders against certain funds appropriated through subsequent budget acts. The court affirmed the judgment as so modified and remanded to the trial court to determine whether at the time of its order, there were, in the funds from which reimbursement could properly be paid, unexpended, unencumbered funds sufficient to satisfy the judgment. The court held that since the doctrines of collateral estoppel and waiver were inapplicable to the facts of the case, the trial court should have allowed the state to challenge the board's decisions. However, the court also held that the executive order required local school boards to provide a higher level of service than is required constitutionally or by case law and that the order was a reimbursable state mandate pursuant to Cal. Const., art. XIII B, § 6. The court further held that former Rev. & Tax. Code, § 2234, did not provide reimbursement of the subject claim. (Opinion by Lucas, P. J., with Ashby and Boren, JJ., concurring.)

HEADNOTES

Classified to California Digest of Official Reports

(1a, 1b, 1c, 1d) Judgments § 88--Collateral Estoppel--Finality of Judgment--Administrative Order--Where Appeal Still Possible.

In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the doctrine of administrative collateral estoppel was inapplicable and did not prevent the state from litigating whether the state Board of Control properly considered the subject claim and whether the claim was reimbursable. The board had approved the claim but the Legislature had deleted the requested funding from an appropriations bill. The board's decisions were administratively final, for collateral estoppel purposes, since

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

no party requested reconsideration within the applicable 10-day period, and no statute or regulation provided for further consideration of the matter by the board. However, a decision will not be given collateral estoppel effect if an appeal has been taken or if the time for such appeal has not lapsed. The applicable statute of limitations for review of the board's decisions was three years, and the school district's action was filed before this period lapsed.

(2) Judgments § 88--Collateral Estoppel--Finality of Judgment.
Collateral estoppel precludes a party from relitigating in a subsequent action matters previously litigated and determined. The traditional elements of collateral estoppel include the requirement that the prior judgment be "final."

(3a, 3b) Administrative Law § 81--Judicial Review and Relief--Finality of Administrative Action--For Collateral Estoppel Purposes.
Finality for the purposes of administrative collateral estoppel may be understood as a two-step process: the decision must be final with respect to action by the administrative agency, and the decision must have conclusive effect. A decision attains the requisite administrative finality when the agency has exhausted its jurisdiction and possesses no further power to reconsider or rehear the claim. To have conclusive effect, the decision must be free from direct attack.

(4) Limitation of Actions § 30--Commencement of Period.
A statute of limitations commences to run at the point where a cause of action accrues and a suit may be maintained thereon.

(5a, 5b, 5c) Estoppel and Waiver § 23--Waiver--State's Right to Contest Board of Control's Findings as to State-mandated Costs.
In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the doctrine of waiver did not preclude the state from contesting the state Board of Control's previous findings that the subject claim was reimbursable (the Legislature subsequently deleted the requested funding from an appropriations bill). The statute of limitations applicable to an appeal by the state from the board's decisions had not run at the time the state raised its affirmative defenses in the district's action, and this assertion of defenses was inconsistent with an intent on the state's part to waive its right to contest the board's decisions.

(6) Estoppel and Waiver § 19--Waiver--Requisites.
A waiver occurs when there is an existing right, actual or constructive knowledge of its existence, and either an actual intention to relinquish it, or conduct so inconsistent with an intent to enforce the right as to induce a reasonable belief that it has been waived. Ordinarily the issue of waiver is a question of fact that is binding on the appellate court if the determination is supported by substantial evidence. However, the question is one of law when the evidence is not in conflict and is susceptible of only one reasonable inference.

(7) Estoppel and Waiver § 6--Equitable Estoppel--Challenge to State Board of Control's Findings as to State-mandated Costs--Absence of Confidential Relationship.
In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the state was not equitably estopped from challenging the state Board of Control's decisions finding that the subject claim was reimbursable as a state-mandated cost (the Legislature subsequently deleted the requested funding from an appropriations bill). In the absence of a confidential relationship, the doctrine of equitable estoppel is inapplicable where there is a mistake of law. There was no confidential relationship, and since the statute of limitations did not bar the state from litigating the mandate and reimbursability issues, the doctrine was inapplicable.

(8) Appellate Review § 145--Function of Appellate

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Court--Questions of Law.
On appeal by the state in an action by a school district to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the appellate court's conclusion that the trial court erred in failing to consider the merits of the state's challenge to the state Board of Control's decisions that the subject claims were reimbursable as state-mandated costs did not require that the matter be remanded to the trial court for a full hearing, since the question of whether a cost is state-mandated is one of law.

(9a, 9b, 9c) Schools § 4--School Districts; Financing; Funds-- Reimbursement of State-mandated Costs--Desegregation Expenditures.
A school district was entitled to reimbursement pursuant to Cal. Const., art. XIII B, § 6 (reimbursement of local governments for state-mandated costs or increased levels of service), for expenditures related to its efforts to alleviate racial and ethnic segregation in its schools, since an executive order (in the form of regulations issued by the state Department of Education) required a higher level of service and constituted a state mandate. The requirements of the order went beyond constitutional and case law requirements in that they required specific actions to alleviate segregation. Although under Cal. Const., art. XIII B, § 6, subd. (c), the state has discretion whether to reimburse pre-1975 mandates that are either statutes or executive orders implementing statutes, it cannot be inferred from this exception that reimbursability is otherwise dependent on the form of the mandate. Further, the district's claim was not defeated by Gov. Code, §§ 17561 and 17514, limiting reimbursement to certain costs incurred after July 1, 1980, the effective date of Cal. Const., art. XIII B, since the limitations contained in those sections are confined to the exception contained in Cal. Const., art. XIII B, § 6, subd. (c).

(10) State of California § 11--Fiscal Matters--Reimbursement to Local Governments for State-mandated Costs.
The subvention requirement of Cal. Const., art. XIII B, § 6 (reimbursement of local governments for state-mandated costs or increased levels of service), is directed to state-mandated increases in the services provided by local agencies in existing "programs." The drafters and electorate had in mind the commonly understood meaning of the term-programs that carry out the governmental function of providing services to the public, or laws that, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state.
[See **Cal.Jur.3d,** State of California, § 78; 9 **Witkin,** Summary of Cal. Law (9th ed. 1989) Taxation, § 123.]
(11) Constitutional Law § 13--Construction of Constitutions--Language of Enactments.
In construing a constitutional provision enacted by the voters, a court must determine the intent of the voters by first looking to the language itself, which should be construed in accordance with the natural and ordinary meaning of its words.

(12) State of California § 11--Fiscal Matters--Reimbursement to Local Governments for State-mandate Costs--Executive Order as Mandate.
In Cal. Const., art. XIII B, § 6 (reimbursement of local governments for state-mandated costs or increased levels of service), "mandates" means "orders" or "commands," concepts broad enough to include executive orders as well as statutes. The concern that prompted the inclusion of § 6 in art. XIII B was the perceived attempt by the state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services that the state believed should be extended to the public. It is clear that the primary concern of the voters was the increased financial burdens being shifted to local government, not the form in which those burdens appeared.

(13) Administrative Law § 88--Judicial Review and Relief--Exhaustion of Administrative Remedies-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

-Claim by School District for Reimbursement of State-mandated Costs.
A school district did not fail to exhaust its administrative remedies in seeking reimbursement for expenditures related to its efforts to alleviate racial and ethnic segregation, based on its claim that the expenditures were mandated by a state executive order, where the state Board of Control approved the district's reimbursement claim, even though the state Commission on State Mandates subsequently succeeded to the functions of the board and the district never made a claim to the commission. The board's decisions in favor of the district became administratively final before the commission was in place, and there was no evidence that the commission did not consider these decisions by the board to be final. Although the commission was given jurisdiction over all claims that had not been included in a local government claims bill enacted before January 1, 1985, the subject claim was included in such a bill (which was signed into law only after the recommended appropriation was deleted). Under the statutory scheme, the district pursued the only relief that a disappointed claimant at such a juncture could pursue-an action in declaratory relief to declare an executive order void or unenforceable and to enjoin its enforcement. There was no requirement to seek further administrative review.

(14) Courts § 20--Subject Matter Jurisdiction--When Issue May Be Raised.
Lack of subject matter jurisdiction may be raised at any time.

(15a, 15b) Schools § 4--School Districts; Financing; Funds-- Reimbursement of State-mandated Costs--Desegregation Expenditures-- Applicability of Statute Requiring Reimbursement of Subsequently Mandated Costs.
A school district was not entitled to reimbursement on the basis of former Rev. & Tax. Code, § 2234 (reimbursement of school district for costs it is incurring that are subsequently mandated by a state), for expenditures related to its efforts to alleviate racial and ethnic segregation in its schools, since the executive order (in the form of regulations issued by the state Department of Education) that required the district to take specific actions to alleviate segregation fell outside the purview of § 2234. The "subsequently mandated" provision of § 2234 originally was contained in sections that set forth specific date limitations, and the Legislature likewise intended to limit claims made pursuant to § 2234. The use of the language "subsequently mandated" merely describes an additional circumstance in which the state will reimburse costs. Since the executive order fell outside the January 1, 1978, limits set by Rev. & Tax. Code, § 2207.5, Rev. & Tax. Code, § 2234, did not provide reimbursement to the district.

(16) Statutes § 39--Construction--Giving Effect to Statute--Conformation of Parts.
A statute should be construed with reference to the whole system of law of which it is a part in order to ascertain the intent of the Legislature. The legislative history of the statute may be considered in ascertaining legislative design.

(17a, 17b, 17c) Constitutional Law § 40--Distribution of Governmental Powers--Judicial Power--Appropriation of Funds--Reimbursement of State-mandated Costs.
In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the trial court's award of reimbursement to the district, on the ground that the district's expenditures were mandated by an executive order, from appropriated funds and specified budgets and accounts did not constitute an invasion of the province of the Legislature or a judicial usurpation of the republican form of government guaranteed by U.S. Const., art. IV, § 4, except insofar as it designated the Special Fund for Economic Uncertainties as a source for reimbursement. The specified line item accounts for the Department of Education, the Commission on State Mandates, and the Reserve for Contingencies and Emergencies provided funds for a broad range of activities simil-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ar to those specified in the executive order and thus were reasonably available for reimbursement. However, remand to the trial court was necessary to determine whether these sources contained sufficient unexhausted funds to cover the award.

(18) Constitutional Law § 40--Distribution of Governmental Powers--Judicial Power--Appropriation of Funds.
A court cannot compel the Legislature either to appropriate funds or to pay funds not yet appropriated. However, no violation of the separation of powers doctrine occurs when a court orders appropriate expenditures from already existing funds. The test is whether such funds are reasonably available for the expenditures in question. Funds are "reasonably available" for reimbursement of local government expenditures when the purposes for which those funds were appropriated are generally related to the nature of costs incurred. There is no requirement that the appropriation specifically refer to the particular expenditure, nor must past administrative practice sanction coverage from a particular fund.

(19) Appellate Review § 162--Modification--To Add Charge Order.
An appellate court is empowered to add a directive that a trial court order be modified to include charging orders against funds appropriated by subsequent budgets acts.

(20) Schools § 4--School Districts; Financing; Funds--Reimbursement of State-mandated Costs--Desegregation Expenditures--Effect of Legislative Finding That Costs Not State-mandated.
A school district was entitled to reimbursement pursuant to Cal. Const., art. XIII B, § 6 (reimbursement of local governments for state-mandated costs or increased levels of service), for expenditures related to its efforts to alleviate racial and ethnic segregation in its schools, notwithstanding that after the state Board of Control approved the district's reimbursement claim, the Legislature enacted a "finding" that the executive order requiring the district to undertake desegregation activities did not impose a state-mandated local program. Unsupported legislative disclaimers are insufficient to defeat reimbursement. The district had a constitutional right to reimbursement, and the Legislature could not limit that right.

(21) Schools § 4--School Districts; Financing; Funds--Reimbursement of State-mandated Costs--Desegregation Expenditures--Department of Education Budget as Source.
In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the trial court, after finding that the executive order requiring the district to undertake desegregation activities was a reimbursable state mandate, did not err in ordering reimbursement to take place in part from the state Department of Education budget. Logic dictated that department funding be the initial and primary source for reimbursement: given the fact that the executive order was issued by the department, the evidence overwhelmingly supported the trial court's finding of a general relationship between the department budget items and the reimbursable expenditures.

(22) Interest § 8--Rate--Reimbursement of School District's State-mandated Costs.
In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the trial court, after finding that the executive order requiring the district to undertake desegregation activities was a reimbursable state mandate, did not err in awarding the district interest at the legal rate (Cal. Const., art. XV, § 1, par. (2)), rather than at the rate of 6 percent per annum pursuant to Gov. Code, § 926.10. Gov. Code, § 926.10, is part of the California Tort Claims Act (Gov. Code, § 900 et seq.), which provides a statutory scheme for the filing of claims against public entities for alleged injuries. It makes no provision for claims for reimbursement for state-mandated expenditures.

Funds--Reimbursement of State-mandated Costs--Desegregation Expenditures--County Fines and Forfeitures Funds as Source.

In an action by a school district against the state to compel the state to reimburse the district for expenditures related to its efforts to alleviate racial and ethnic segregation, the trial court, after finding that the executive order requiring the district to undertake desegregation activities was a reimbursable state mandate, did not err in determining that moneys in the Fines and Forfeiture Funds in the custody and possession of the county auditor-controller for transfer to the state treasury were not reasonably available for reimbursement purposes. There was no evidence in the record showing the use of those funds once they were transmitted to the state, nor was there any evidence indicating that those funds were then reasonably available to satisfy the district's claim. It could not be concluded as a matter of law that a general relationship existed between the funds and the nature of the costs incurred pursuant to the executive order. Further, there was no ground on which the funds could be made available to the district while in the possession of the auditor-controller.

Introduction

Long Beach Unified School District (LBUSD) filed a claim with the Board of Control of the State of California (Board), asserting that certain expenditures related to its efforts to alleviate racial and ethnic segregation in its schools had been mandated by the state through regulations (Executive Order) issued by the Department of Education (DOE) and were *164 reimbursable pursuant to former Revenue and Taxation Code section 2234 and article XIII B, section 6 of the California Constitution. The Board eventually approved the claim and reported to the Legislature its recommendation that funds be appropriated to cover the statewide estimated costs of compliance with the Executive Order. When the Legislature deleted the requested funding from an appropriations bill, LBUSD filed a petition to compel reimbursement (Code Civ. Proc., § 1085) and complaint for declaratory relief. The trial court held that the doctrines of administrative collateral estoppel and waiver prevented the state from challenging the decisions of the Board, and it gave judgment to LBUSD. It also ruled that certain funds previously appropriated by the Legislature were "reasonably available" for reimbursement of the claimed expenditures, subject to audit by the state Controller.

We conclude that the doctrines of collateral estoppel and waiver are inapplicable to the facts of this case. However, we determine as a question of law that the Executive Order requires local school boards to provide a higher level of service than is required either constitutionally or by case law and that the Executive Order is a reimbursable state mandate pursuant to article XIII B, section 6 of the California Constitution. We also decide that former Revenue and Taxation Code section 2234 does not provide for reimbursement of the claim.

Based on uncontradicted evidence, we modify the decision of the trial court regarding which budget line item account numbers provide "reasonably available" funds to reimburse LBUSD for appropriate expenditures under the claim. We further modify the decision to include charging orders against funds appropriated by subsequent budget acts. Finally, we remand the matter to the trial court to determine whether at the time of its order unexpended, unencumbered funds sufficient to satisfy the judgment remained in the approved budget line

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

item account numbers. The trial court must resolve this same issue with respect to the charging order.

Background and Procedural History

The California Property Tax Relief Act of 1972 (Stats. 1972, ch. 1406, § 1, p. 2931) limited the power of local governmental entities to levy property taxes. It also mandated that when the state requires such entities to provide a new program or higher level of service, the state must reimburse those costs. Over time, amendments to the California Constitution and numerous legislative changes impacted both the right and procedure for obtaining reimbursement. *165

Sometime prior to September 8, 1977, LBUSD, at its option, voluntarily began to incur substantial costs to alleviate the racial and ethnic segregation of students within its jurisdiction.

On or about the above date, DOE adopted certain regulations which added sections 90 through 101 to title 5 of the California Administrative Code, effective September 16, 1977. We refer to these regulations as the Executive Order.

The Executive Order and related guidelines for implementation required in part that school districts which identified one or more schools as either having or being in danger of having segregation of its minority students "shall, no later than January 1, 1979, and each four years thereafter, develop and adopt a reasonably feasible plan for the alleviation and prevention of racial and ethnic segregation of minority students in the district."

On or about June 4, 1982, LBUSD submitted a "test claim" (Claim) [FN1] to the Board for reimbursement of $9,050,714-the total costs which LBUSD claimed it had incurred during fiscal years 1977-1978 through 1981-1982 for activities required by the Executive Order and guidelines. LBUSD cited former Revenue and Taxation Code section 2234 as authority for the requested reimbursement, asserting that the costs had been "subsequently mandated" by the state. [FN2]

FN1 Former Revenue and Taxation Code section 2218 defines "test claim" as "the first claim filed with the State Board of Control alleging that a particular statute or executive order imposes a mandated cost on such local agency or school district." (Stats. 1980, ch. 1256, § 7, p. 4249.)

FN2 All statutory references are to the Revenue and Taxation Code unless otherwise stated.
Former section 2234 provided: "If a local agency or a school district, at its option, has been incurring costs which are subsequently mandated by the state, the state shall reimburse the local agency or school district for such costs incurred after the operative date of such mandate." (Stats. 1980, ch. 1256, § 11, pp. 4251-4252.)

The Board denied the Claim on the grounds that it had no jurisdiction to accept a claim filed under section 2234. LBUSD petitioned superior court for review of the Board decision. (Code Civ. Proc., § 1094.5.)That court concluded the Board had jurisdiction to accept a section 2234 claim and ordered it to hear the matter on its merits. The Board did not appeal this decision.

On February 16, 1984, the Board conducted a hearing to consider the Claim. LBUSD presented written and oral argument that the Claim was reimbursable pursuant to section 2234 and, in addition, under article XIII B, section 6 of the California Constitution. DOE and the State Department *166 of Finance (Finance) participated in the hearing. [FN3] The Board concluded that the Executive Order constituted a state mandate. On April 26, 1984, the Board adopted parameters and guidelines proposed by LBUSD for reimbursement of the expenditures. No state entity either sought reconsideration of the Board decisions, available pursuant to former section 633.6 of the California Administrative Code, FN4 or petitioned for judicial review. [FN5]

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

FN3 The DOE recommended that the Claim be denied on the grounds that the requirements of the Executive Order were constitutionally mandated and court ordered and because the Executive Order was effective prior to January 1, 1978 (issues discussed *post*). However, counsel for the DOE expressed dismay that school districts which had voluntarily instituted desegregation programs had been having problems receiving funding from the Legislature, while schools which had been forced to do so had been receiving "substantial amounts of money."
A spokesman from Finance recalled there had been some doubt whether the Board had jurisdiction to hear a 2234 claim. He stated that, assuming the Board did have jurisdiction, the Executive Order contained at least one state mandate, which possibly consisted of administrative kinds of tasks related to the identification of "problem areas and the like."

FN4 Former section 633.6 of the California Administrative Code (now renamed California Code of Regulations) provided in relevant part: "(b) Request for Reconsideration. [¶] (1) A request for reconsideration of a Board determination on a specific test claim ... shall be filed, in writing, with the Board of Control, no later than ten (10) days after any determination regarding the claim by the Board ...." (Title 2, Cal. Admin. Code)

FN5 Former section 2253.5 provided: "A claimant or the state may commence a proceeding in accordance with the provisions of Section 1094.5 of the Code of Civil Procedure to set aside a decision of the Board of Control on the grounds that the board's decision is not supported by substantial evidence. The court may order the board to hold another hearing regarding such claim and may direct the board on what basis the claim is to receive a rehearing." (Stats. 1978, ch. 794, § 8, p. 2551.)

In December 1984, pursuant to former section 2255, the Board reported to the Legislature the number of mandates it had found and the estimated statewide costs of each mandate. With respect to the Executive Order mandate, the Board adopted an estimate by Finance that reimbursement of school districts, including LBUSD, for costs expended in compliance with the Executive Order would total $95 million for fiscal years 1977-1978 through 1984-1985. The Board recommended that the Legislature appropriate that amount.

Effective January 1, 1985, the Commission on State Mandates (Commission) succeeded to the functions of the Board. (Gov. Code, §§ 17525, 17630.)

On March 4, 1985, Assembly Bill No. 1301 was introduced. It included an appropriation of $95 million to the state controller "for payment of claims of school districts seeking reimbursable state-mandated costs incurred pursuant to [the Executive Order] ...." On June 27, the Assembly amended the bill by deleting this $95 million appropriation and adding a ***167** "finding" that the Executive Order did not impose a state-mandated local program. FN6On September 28, 1985, the Governor approved the bill as amended.

FN6 Former Section 2255 provided in part: "(b) If the Legislature deletes from a local government claims bill funding for a mandate imposed either by legislation or by a regulation ..., it may take one of the following courses of action: (1) Include a finding that the legislation or regulation does not contain a mandate ...." (Stats. 1982, ch. 1638, § 7, p. 6662.)

On June 26, 1986, LBUSD petitioned for writ of mandate (Code Civ. Proc., § 1085) and filed a complaint for declaratory relief against defendants State of California; Commission; Finance; DOE; holders

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

of the offices of State Controller and State Treasurer and holder of the office of Auditor-Controller of the County of Los Angeles, and their successors in interest. LBUSD requested issuance of a writ of mandate commanding the respondents to comply with section 2234 (fn. 2, *ante*) [FN7] and, in an amended petition, its successor, Government Code section 17565, and with California Constitution, article XIII B, section 6. [FN8] It further requested respondents to reimburse LBUSD $24,164,593 for fiscal years 1977-1978 through 1982-1983, $3,850,276 for fiscal years 1983-1984 and 1984-1985, and accrued interest, for activities mandated by the Executive Order.

FN7 The language of Government Code section 17565 is nearly identical to that of section 2234 (fn. 2, *ante*), and provides: "If a local agency or a school district, at its option, has been incurring costs which are subsequently mandated by the state, the state shall reimburse the local agency or school district for those costs incurred after the operative date of the mandate." (Stats. 1986, ch. 879, § 10, p. 3043.)

FN8 Article XIII B, section 6 provides in pertinent part: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service ...."

The trial court let stand the conclusion of the Board that the Executive Order constituted a reimbursable state mandate and ruled in favor of LBUSD. No party requested a statement of decision.

The judgment stated that the Executive Order constituted a reimbursable state mandate which state entities could not challenge because of the doctrines of administrative collateral estoppel and waiver. It provided that certain previously appropriated funds were " 'reasonably available' " to reimburse LBUSD for its claimed expenditures, applicable interest, and court costs. The judgment also stated that funds denominated the "Fines and Forfeitures Funds," under the custody of the Auditor-Controller of the County of Los Angeles, were not reasonably available. The judgment further decreed that the State Controller retained the right to audit the claims and records of LBUSD to verify the amount of the reimbursement award sum. ***168**

State respondents (State) and DOE separately filed timely notices of appeal, and LBUSD cross-appealed. [FN9]

FN9 Although an "Amended Notice to Prepare Clerk's Transcript" filed by DOE on April 11, 1988, requests the clerk of the superior court to incorporate in the record its notice of appeal filed April 1, 1988, this latter document does not appear in the record before us, and the original apparently is lost within the court system. Respondent LBUSD received a copy of the notice on April 4, 1988.

Discussion

State asserts that neither the doctrine of collateral estoppel nor the doctrine of waiver is applicable to this case, the costs incurred by LBUSD are not reimbursable, and the remedy authorized by the trial court is inconsistent with California law and invades the province of the Legislature, a violation of article IV, section 4 of the United States Constitution.

The thrust of the DOE appeal is that its budget is not an appropriate source of funding for the reimbursement.

LBUSD has argued in its cross-appeal that an additional source of funding, the "Fines and Forfeiture Funds," should be made available for reimbursement of its costs and, in supplementary briefing, requests this court to order a modification of the judgment to include as "reasonably available fund-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ing" specific line item accounts from the 1988-1989 and 1989-1990 state budgets.

I. State Not Barred From Challenging Decisions of the Board

A. Administrative Collateral Estoppel

(1a) State first contends that the doctrine of administrative collateral estoppel is not applicable to the facts of this case and does not prevent State from litigating whether the Board properly considered the subject claim and whether the claim is reimbursable.

(2) Collateral estoppel precludes a party from relitigating in a subsequent action matters previously litigated and determined. (*Teitelbaum Furs, Inc. v. Dominion Ins. Co., Ltd.* (1962) 58 Cal.2d 601, 604 [25 Cal.Rptr. 559, 375 P.2d 439].) The traditional elements of collateral estoppel include the requirement that the prior judgment be "final." (*Ibid.*)

(3a) Finality for the purposes of administrative collateral estoppel may be understood as a two-step process: (1) the decision must be final with ***169** respect to action by the administrative agency (see Code Civ. Proc., § 1094.5, subd. (a)); and (2) the decision must have conclusive effect (*Sandoval v. Superior Court* (1983) 140 Cal.App.3d 932, 936-937 [190 Cal.Rptr. 29]).

A decision attains the requisite administrative finality when the agency has exhausted its jurisdiction and possesses "no further power to reconsider or rehear the claim. [Fn. omitted.]" (*Chas. L. Harney, Inc. v. State of California* (1963) 217 Cal.App.2d 77, 98 [31 Cal.Rptr. 524].) (1b) In the case at bar, former section 633.6 of the Administrative Code provided a 10-day period during which any party could request reconsideration of any Board determination (fn. 4, *ante*). The Board decided on February 16, 1984, that the Executive Order constituted a state mandate, and on April 26, 1984, it adopted parameters and guidelines for the reimbursement of the claimed expenditures. No party requested reconsideration, no statute or regulation provided for further consideration of the matter by the Board (see, e.g., *Olive Proration etc. Com. v. Agri. etc. Com.* (1941) 17 Cal.2d 204, 209 [109 P.2d 918]), and the decisions became administratively final on February 27, 1984, and May 7, 1984, respectively FN10 (*Ziganto v. Taylor* (1961) 198 Cal.App.2d 603, 607 [18 Cal.Rptr. 229]).

> FN10 We take judicial notice pursuant to Evidence Code section 452, subdivision (h), that February 26, 1984, and May 6, 1984, fall on Sundays.

(3b) Next, the decision must have conclusive effect. (*Sandoval v. Superior Court, supra,* 140 Cal.App.3d 932, 936-937.) In other words, the decision must be free from direct attack. (*People v. Sims* (1982) 32 Cal.3d 468, 486 [186 Cal.Rptr. 77, 651 P.2d 321].) A direct attack on an administrative decision may be made by appeal to the superior court for review by petition for administrative mandamus. (Code Civ. Proc., § 1094.5.)(1c) A decision will not be given collateral estoppel effect if such appeal has been taken or if the time for such appeal has not lapsed. (*Sandoval v. Superior Court, supra,* 140 Cal.App.3d at pp. 936-937;*Producers Dairy Delivery Co. v. Sentry Ins. Co.* (1986) 41 Cal.3d 903, 911 [226 Cal.Rptr. 558, 718 P.2d 920].) The applicable statute of limitations for such review in the case at bar is three years. (*Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521, 534 [234 Cal.Rptr. 795]; *Green v. Obledo* (1981) 29 Cal.3d 126, 141, fn. 10 [172 Cal.Rptr. 206, 624 P.2d 256].) (4) A statute of limitations commences to run at the point where a cause of action accrues and a suit may be maintained thereon. (*Dillon v. Board of Pension Comm'rs.*(1941) 18 Cal.2d 427, 430 [116 P.2d 37, 136 A.L.R. 800].)

(1d) In the instant case, State's causes of action accrued when the Board made the two decisions adverse to State on February 16 and April 26, 1984,

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

*170 as discussed. State did not request reconsideration, and the decisions became administratively final on February 27 and May 7, 1984. FN11 For purposes of discussion, we will assume the applicable three-year statute of limitations period for the two Board decisions commenced on February 28 and May 8, 1984, and ended on February 28 and May 8, 1987. FN12 LBUSD filed its petition for ordinary mandamus (Code Civ. Proc., § 1085) and complaint for declaratory relief on June 26, 1986. At that point, the limitations periods had not run against State and the Board decisions lacked the necessary finality to satisfy that requirement of the doctrine of administrative collateral estoppel. FN13

FN11 We do not address the contention of LBUSD that State failed to exhaust its administrative remedies (*Abelleira v. District Court of Appeal* (1941) 17 Cal.2d 280, 292 [109 P.2d 942, 132 A.L.R. 715]; *Morton v. Superior Court* (1970) 9 Cal.App.3d 977, 982 [88 Cal.Rptr. 533]) and therefore State cannot assert its affirmative defenses in response to the petition and complaint of the school district. Traditionally, the doctrine has been raised as a bar only with respect to the party seeking judicial relief, not against the responding party (*ibid.*); we have found no case holding otherwise.

FN12 If State had sought reconsideration and its request been denied, or if its request had been granted but the matter again decided in favor of LBUSD, the Board decision would have been final 10 days after the Board action, and at that point the statute would have commenced to run against State.

FN13 State argues that its statute of limitations did not commence until the legislation was enacted without the appropriation (Sept. 28, 1985), citing *Carmel Valley Fire Protection Dist. v. State of California, supra,* 190 Cal.App.3d at page 548. However, *Carmel Valley* held that the *claimant* does not exhaust its administrative remedies and cannot come under the court's jurisdiction until the legislative process is complete, which occurred in that case when the legislation was enacted without the subject appropriations. At that point, *Carmel Valley* reasoned, the state had breached its duty to reimburse, and the claimant's right of action in traditional mandamus accrued. (*Ibid.*) However, *Carmel Valley* decided, as do we in the case at bar, that the state's statute of limitations commenced on the date the Board made decisions adverse to its interests.(*Id.* at p. 534.)
In addition, we see no reason to permit State to rely on the fortuitous actions of the Legislature, an independent branch of government, to bail it out of obligations established in the distant past by state agents-especially given the lengthy three-year statute of limitations. (Compare, e.g., Gov. Code, § 11523 [mandatory time limit within which to petition for administrative mandamus can be 30 days after last day on which administrative reconsideration can be ordered]; Lab. Code, § 1160.8, and *Jackson & Perkins Co. v. Agricultural Labor Relations Board* (1978) 77 Cal.App.3d 830, 834 [144 Cal.Rptr. 166] [30 days from issuance of board order even if party has filed a motion to reconsider].)

B. Waiver

(5a) State also asserts that the doctrine of waiver is not applicable.

(6) A waiver occurs when there is "an existing right; actual or constructive knowledge of its existence; and either an actual intention to relinquish it, or conduct so inconsistent with an intent to enforce the right as to induce *171 a reasonable belief that it has been waived. [Citations.]" (*Carmel Valley Fire Protection Dist. v. State of California, supra,* 190 Cal.App.3d at p. 534.) Ordinarily, the issue of

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

waiver is a question of fact which is binding on the appellate court if the determination is supported by substantial evidence. (*Napa Association of Public Employees v. County of Napa* (1979) 98 Cal.App.3d 263, 268 [159 Cal.Rptr. 522].) However, the question is one of law when the evidence is not in conflict and is susceptible of only one reasonable inference. (*Glendale Fed. Sav. & Loan Assn. v. Marina View Heights Dev. Co.* (1977) 66 Cal.App.3d 101, 151-152 [135 Cal.Rptr. 802].)

(5b) In the instant case, the right to contest the findings of the Board is at issue, and there is no dispute that the state was aware of the existence of this right. As discussed, the statute of limitations had not run when State raised its affirmative defenses, and during this time State could have filed a separate petition for administrative mandamus. (7)(5c) State's assertion of its affirmative defenses during this period is inconsistent with an intent to waive its right to contest the Board decisions, and therefore the doctrine of waiver is not applicable. FN14

FN14 LBUSD contends that State should be equitably estopped from challenging the Board decisions. In the absence of a confidential relationship, the doctrine of equitable estoppel is inapplicable where there is a mistake of law. (*Gilbert v. City of Martinez* (1957) 152 Cal.App.2d 374, 378 [313 P.2d 139]; *People v. Stuyvesant Ins. Co.* (1968) 261 Cal.App.2d 773, 784 [68 Cal.Rptr. 389].) There is no confidential relationship herein, and since we conclude as a matter of law and contrary to the trial court that the statute of limitations does not bar State from litigating the mandate and reimbursability issues, the doctrine is inapplicable.

II. Issue of State Mandate

(8) Ordinarily, our conclusion that the trial court erred in failing to consider the merits of the State's challenge to the decisions of the Board would require that the matter be remanded to the trial court for a full hearing. However, because the question of whether a cost is state mandated is one of law in the instant case (cf. *Carmel Valley Fire Protection Dist. v. State of California, supra,* 190 Cal.App.3d at p. 536), we now decide that the expenditures are reimbursable pursuant to article XIII B, section 6 of the California Constitution and that no relief is available under section 2234. FN15 ***172**

FN15 We invited State, DOE, and LBUSD to submit additional briefing on the following issues: "1. Can it be determined as a question of law whether sections 90 through 101 of Title 5 of the California Administrative Code [Executive Order] constitute a state mandate within the meaning of article XIII B, section 6 of the California Constitution? 2. Do the above sections constitute such mandate?" State and LBUSD submitted additional argument; DOE declined the invitation.

A. Recovery Under Article XIII B, Section 6

(9a) On November 6, 1979, California voters passed initiative measure Proposition 4, which added article XIII B to the state Constitution. This measure, a corollary to the previously passed Proposition 13 (art. XIII A, which restricts governmental taxing authority), placed limits on the growth of state and local government appropriations. It also provided reimbursement to local governments for the costs of complying with certain requirements mandated by the state. LBUSD argues that section 6 of this provision is an additional ground for reimbursement.

1. The Executive Order Requires a Higher Level of Service

In relevant part article XIII B, section 6 (Section 6) provides: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to reimburse such

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

local government for the costs of such program or increased level of service ...." (10) The subvention requirement of Section 6 "is directed to state mandated increases in the services provided by local agencies in existing 'programs.' " (*County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56 [233 Cal.Rptr. 38, 729 P.2d 202].) "[T]he drafters and the electorate had in mind the commonly understood meanings of the term-programs that carry out the governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state." (*Ibid.*)

(9b) In the instant case, although numerous private schools exist, education in our society is considered to be a peculiarly governmental function. (Cf. *Carmel Valley Fire Protection Dist. v. State of California, supra,* 190 Cal.App.3d at p. 537.) Further, public education is administered by local agencies to provide service to the public. Thus public education constitutes a "program" within the meaning of Section 6.

State argues that the Executive Order does not mandate a higher level of service-or a new program-because school districts in California have a constitutional duty to make an effort to eliminate racial segregation in the public schools. In support of its argument, State cites *Brown v. Board of Education* (1952) 347 U.S. 483, 495 [98 L.Ed. 873, 881, 74 S.Ct. 686, 38 A.L.R.2d 1180]; *Jackson v. Pasadena City School District* (1963) 59 Cal.2d 876, 881 [31 Cal.Rptr. 606, 382 P.2d 878]; *Crawford v. Board of Education* (1976) 17 Cal.3d 280 [130 Cal.Rptr. 724, 551 P.2d 28] and cases cited therein; and **173National Assn. for Advancement of Colored People v. San Bernardino City Unified Sch. Dist.* (1976) 17 Cal.3d 311 [130 Cal.Rptr. 744, 551 P.2d 48]. These cases show that school districts do indeed have a constitutional obligation to alleviate racial segregation, and on this ground the Executive Order does not constitute a "new program." However, although school districts are required to "take steps, insofar as reasonably feasible, to alleviate racial imbalance in schools regardless of its cause [ ]' " (*Crawford, supra,* at p. 305, italics omitted, citing *Jackson*), the courts have been wary of requiring specific steps in advance of a demonstrated need for intervention (*Crawford*, at pp. 305-306;*Jackson, supra,* at pp. 881-882; *Swann v. Board of Education* (1971) 402 U.S. 1, 18-21 [28 L.Ed.2d 554, 567-570, 91 S.Ct. 1267]). On the other hand, courts have required specific factors be considered in determining whether a school is segregated (*Keyes v. School District No. 1, Denver, Colo.* (1973) 413 U.S. 189, 202-203 [37 L.Ed.2d 548, 559-560, 93 S.Ct. 2686]; *Jackson, supra,* at p. 882).

The phrase "higher level of service" is not defined in article XIII B or in the ballot materials. (*County of Los Angeles v. State of California, supra,* 43 Cal.3d 46, 50.) A mere increase in the cost of providing a service which is the result of a requirement mandated by the state is not tantamount to a higher level of service. (*Id.*, at pp. 54-56.)However, a review of the Executive Order and guidelines shows that a higher level of service is mandated because their requirements go beyond constitutional and case law requirements. Where courts have *suggested* that certain steps and approaches may be helpful, the Executive Order and guidelines *require* specific actions. For example, school districts are to conduct mandatory biennial racial and ethnic surveys, develop a "reasonably feasible" plan every four years to alleviate and prevent segregation, include certain specific elements in each plan, and take mandatory steps to involve the community, including public hearings which have been advertised in a specific manner. While all these steps fit within the "reasonably feasible" description of *Jackson* and *Crawford*, the point is that these steps are no longer merely being suggested as options which the local school district may wish to consider but are required acts. These requirements constitute a higher level of service. We are supported in our conclusion by the report of the Board to the Legislature regarding its decision that the Claim is reimburs-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

able: "[O]nly those costs that are above and beyond the regular level of service for like pupils in the district are reimbursable."

2. The Executive Order Constitutes a State Mandate

For the sake of clarity we quote Section 6 in full: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the state shall provide a subvention of funds to ***174** reimburse such local government for the costs of such program or increased level of service, except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [¶] (a) Legislative mandates requested by the local agency affected; [¶] (b) Legislation defining a new crime or changing an existing definition of a crime; or [¶] *(c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975."*(Italics added.) This amendment became effective July 1, 1980. (Art. XIII B, § 10.)Again, the Executive Order became effective September 16, 1977.

State argues there is no constitutional ground for reimbursement because (a) with reference to the language of exception (c) of Section 6, the Executive Order is neither a statute nor an executive order or regulation implementing a statute; (b) recent legislation limits reimbursement to certain costs incurred after July 1, 1980, the effective date of the constitutional amendment; and (c) LBUSD failed to exhaust administrative procedures for reimbursement of Section 6 claims (Gov. Code, § 17500 et seq.). We conclude that recovery is available under Section 6.

(a) *Form of Mandate*

State argues the Executive Order is not a state mandate because, with reference to exception (c) of Section 6, it is neither a statute nor an executive order implementing a statute.

(11) In construing the meaning of Section 6, we must determine the intent of the voters by first looking to the language itself (*County of Los Angeles v. State of California, supra,* 43 Cal.3d 46, 56), which " 'should be construed in accordance with the natural and ordinary meaning of its words.' [Citation.]" (*ITT World Communications, Inc. v. City and County of San Francisco* (1985) 37 Cal.3d 859, 865 [210 Cal.Rptr. 226, 693 P.2d 811].) The main provision of Section 6 states that whenever the Legislature or any state agency "mandates" a new program or higher level of service, the state must provide reimbursement. (12) We understand the use of "mandates" in the ordinary sense of "orders" or "commands," concepts broad enough to include executive orders as well as statutes. As has been noted, "[t]he concern which prompted the inclusion of section 6 in article XIII B was the perceived attempt by the state to enact legislation *or adopt administrative orders* creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services which the state believed should be extended to the public." (*County of Los Angeles v. State of California, supra,* 43 Cal.3d at p. 56.) It is clear that the primary concern of the voters was the increased financial ***175** burdens being shifted to local government, not the form in which those burdens appeared.

We derive support for our interpretation by reference to the ballot summary presented to the electorate. (Cf. *Amador Valley Joint Union High Sch. Dist. v. State Bd. of Equalization* (1978) 22 Cal.3d 208, 245-246 [149 Cal.Rptr. 239, 583 P.2d 1281].) The legislative analyst determined that the amendment would limit the rate of growth of governmental appropriations, require the return of taxes which exceeded amounts appropriated, and "[r]equire the state to reimburse local governments for the costs of complying with 'state mandates.' " The term "state mandates" was defined as "requirements imposed on local governments by legislation *or executive orders.*" (Italics added; Ballot Pamp., Proposed Amend. to Cal. Const. with arguments to

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

voters, Special Statewide Elec. (Nov. 6, 1979) p. 16.)

(9c) Although exception (c) of Section 6 gives the state discretion whether to reimburse pre-1975 mandates which are either statutes or executive orders implementing statutes, we do not infer from this exception that reimbursability is otherwise dependent on the form of the mandate. We conclude that since the voters provided for mandatory reimbursement except for the three narrowly drawn exceptions found in (a), (b), and (c), there was no intent to exclude recovery for state mandates in the form of executive orders. Further, as State sets forth in its brief, the adoption of the Executive Order was "arguably prompted" by the decision in *Crawford v. Board of Education, supra,* 17 Cal.3d 280, a case decided after the 1975 cutoff date of exception (c). Since case law and statutory law are of equal force, there appears to be no basis on which to exclude executive orders which implement case law or constitutional law while permitting reimbursement for executive orders implementing statutes. We see no relationship between the proposed distinction and the described purposes of the amendment (*County Los Angeles v. State of California, supra,* 43 Cal.3d at p. 56;*County of Los Angeles v. Department of Industrial Relations* (1989) 214 Cal.App.3d 1538, 1545 [263 Cal.Rptr. 351]).

(b) *Recent Legislative Limits*

State contends that LBUSD cannot claim reimbursement under Section 6 because Government Code sections 17561 (Stats. 1986, ch. 879, § 6, p. 3041) and 17514 (Stats. 1984, ch. 1459, § 1, p. 5114) limit such recovery to mandates created by statutes or executive orders implementing statutes, and only for costs incurred after July 1, 1980.

As discussed above, the voters did not intend to limit reimbursement of costs only to those incurred pursuant to statutes or executive orders implementing ***176** statutes except as set forth in exception (c) of Section 6. We presume that when the Legislature passed Government Code sections 17561 and 17514 it was aware of Section 6 as a related law and intended to maintain a consistent body of rules. (*Fuentes v. Workers' Comp. Appeals Bd.* (1976) 16 Cal.3d 1, 7 [128 Cal.Rptr. 673, 547 P.2d 449].) As discussed above, the limitations suggested by State are confined to exception (c).

Further, the state must reimburse costs incurred pursuant to mandates enacted after January 1, 1975, although actual payments for reimbursement were not required to be made prior to July 1, 1980, the effective date of Section 6. (*Carmel Valley Fire Protection Dist. v. State of California, supra,* 190 Cal.App.3d at pp. 547-548;*City of Sacramento v. State of California* (1984) 156 Cal.App.3d 182, 191-194 [203 Cal.Rptr. 258],disapproved on other grounds in *County of Los Angeles v. State of California, supra,* 43 Cal.3d at p. 58, fn. 10.)

(c) *Administrative Procedures*

The Legislature passed Government Code section 17500 et seq. (Stats. 1984, ch. 1459, § 1, p. 5113), effective January 1, 1985 (Stats. 1984, ch. 1459, § 1, p. 5123), to aid the implementation of Section 6 and to consolidate the procedures for reimbursement under statutes found in the Revenue and Taxation Code. This legislation created the Commission, which replaced the Board, and instituted a number of procedural changes. (Gov. Code, §§ 17525, 17527, subd. (g), 17550 et seq.) The Legislature intended the new system to provide "the sole and exclusive procedure by which a local agency or school district" could claim reimbursement. (Gov. Code, § 17552.)(13) State argues that since LBUSD never made its claim before the Commission, it failed to exhaust its administrative remedies and cannot now receive reimbursement under section 6.

As discussed, the Board decisions favorable to LBUSD became administratively final in 1984. The Commission was not in place until January 1, 1985. There is no evidence in the record that the Commission did not consider these decisions to be final.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

State argues the Commission was given jurisdiction over all claims which had not been included in a local government claims bill enacted before January 1, 1985. (Gov. Code, § 17630.)State is correct. However, the subject claim was included in such a bill, but the bill was signed into law after the recommended appropriation had been deleted. Under the statutory scheme, the only relief offered a disappointed claimant at such juncture is an action in declaratory relief to declare a subject executive order void ***177** (former Rev. & Tax Code, § 2255, subd. (c); Stats. 1982, ch. 1638, § 7, pp. 6662-6663) or unenforceable (Gov. Code, § 17612, subd. (b); Stats. 1984, ch. 1459, § 1, p. 5121) and to enjoin its enforcement. LBUSD pursued this remedy and in addition petitioned for writ of mandate (Code Civ. Proc., § 1085) to compel reimbursement. There is no requirement to seek further administrative review. Indeed, to do so after the Legislature has spoken would appear to be an exercise in futility.

We conclude that Section 6 provides reimbursement to LBUSD because the Executive Order required a higher level of service and because the Executive Order constitutes a state mandate.

B. Section 2234

As set forth in the procedural history of this case, the Board originally declined to consider the Claim as a claim made under section 2234 on the ground that it lacked jurisdiction to do so. LBUSD petitioned for judicial relief, and the trial court held that the Board had jurisdiction and must consider the claim on its merits. The Board did not appeal that decision. State raised the jurisdiction issue as an affirmative defense to the second petition for writ of mandate filed by LBUSD and presents it again for our consideration. (14) Of course, lack of subject matter jurisdiction may be raised at any time. (*Stuck v. Board of Medical Examiners* (1949) 94 Cal.App.2d 751, 755 [211 P.2d 389].)

Former section 2250 provided: "The State Board of Control, pursuant to the provisions of this article, shall hear and decide upon a claim by a local agency or school district that such local agency or school district has not been reimbursed for *all costs mandated by the state as required by Section 2231 or 2234*. [¶] Notwithstanding any other provision of law, this article shall provide the sole and exclusive procedure by which the Board of Control shall hear and decide upon a claim that a local agency or school district has not been reimbursed for *all costs mandated by the state as required by Section 2231 or 2234*." (Italics added; Stats. 1978, ch. 794, § 5, p. 2549.) Given the clear, unambiguous language of the statute, there is no need for construction. (*West Covina Hospital v. Superior Court* (1986) 41 Cal.3d 846, 850 [226 Cal.Rptr. 132, 718 P.2d 119, 60 A.L.R.4th 1257].) (15a) We conclude that the Board had jurisdiction to consider a claim filed under former section 2234. However, as discussed below, the 1977 Executive Order falls outside the purview of section 2234.

Former section 2231 provided: "(a) ... The state shall reimburse each school district only for those 'costs mandated by the state', as defined in ***178** Section 2207.5." (Stats. 1982, ch. 1586, § 3, p. 6264.) In part, former section 2207.5 defines "costs mandated by the state" as increased costs which a school district is required to incur as a result of certain new programs or certain increased program levels or services mandated by an executive order issued *after* January 1, 1978. (Stats. 1980, ch. 1256, § 5, pp. 4248-4249.) As previously stated, the Executive Order in the case at bar was issued September 8, 1977.

Former section 2234, pursuant to which LBUSD initially filed its claim, does not itself contain language indicating a time limitation: "If a local agency or a school district, at its option, has been incurring costs which are subsequently mandated by the state, the state shall reimburse the local agency or school district for such costs incurred after the operative date of such mandate." (Stats. 1980, ch. 1256, § 11, p. 4251.)

State asserts that the January 1, 1978, limitation of

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

sections 2231 and 2207.5 applies to section 2234, preventing reimbursement for costs expended pursuant to the September 8, 1977, Executive Order; LBUSD argues section 2234 is self-contained and without time limitation.

(16) It is a fundamental rule of statutory construction that a statute should be construed with reference to the whole system of law of which it is a part in order to ascertain the intent of the Legislature. (*Moore v. Panish* (1982) 32 Cal.3d 535, 541 [186 Cal.Rptr. 475, 652 P.2d 32]; *Pitman v. City of Oakland* (1988) 197 Cal.App.3d 1037, 1042 [243 Cal.Rptr. 306].) The legislative history of a statute may be considered in ascertaining legislative design. (*Walters v. Weed* (1988) 45 Cal.3d 1, 10 [246 Cal.Rptr. 5, 752 P.2d 443].)

The earliest version of section 2234 is found in former section 2164.3, subdivision (f), which provided reimbursement to a city, county, or special district for "a service or program [provided] at its option which is subsequently mandated by the state ...." Reimbursement was limited to costs mandated by statutes or executive orders enacted or issued after January 1, 1973. (Stats. 1972, ch. 1406, § 3, pp. 2962-2963.)

In 1973, section 2164.3 was amended to provide reimbursement to school districts for costs mandated by statutes enacted after January 1, 1973 (subd. (a)), *but it expressly excluded school districts from reimbursement for costs mandated by executive orders* (subd. (d)). (Stats. 1973, ch. 208, § 51, p. 565.) Later that same year, the Legislature repealed section 2164.3 (Stats. 1973, ch. 358, § 2, p. 779) and added section 2231, which took over the pertinent *179 reimbursement provisions of section 2164.3 virtually unchanged. (Stats. 1973, ch. 358, § 3, pp. 779, 783-784.)

In 1975, the Legislature removed the time limitation language from section 2231 and incorporated it into a new section, 2207. (Stats. 1975, ch. 486, § 1.8, pp. 997-998.) After this change, section 2231 then provided in pertinent part: "(a) The state shall reimburse each local agency for all 'costs mandated by the state', as defined in Section 2207. *The state shall reimburse each school district only for those 'costs mandated by the state' specified in subdivision (a) of Section 2207* ...." (Italics added; Stats. 1975, ch. 486, § 7, pp. 999-1000.) Subdivision (a) of section 2207 limited reimbursement solely to costs mandated by statutes enacted after January 1, 1973.

At this same juncture, the Legislature further amended section 2231 by deleting the provision for "subsequently mandated" services or programs and incorporating that provision into a new section, 2234 (Stats. 1975, ch. 486, § 9, p. 1000), the section under which LBUSD would eventually make its claim. The substance of section 2234 (see fn. 2, *ante*) remained unchanged until its repeal in 1986. (Stats. 1977, ch. 1135, § 8.6, p. 3648; Stats. 1980, ch. 1256, § 11, pp. 4251-4252; Stats. 1986, ch. 879, § 25, p. 3045.)

Next, section 2231 was amended to show that with regard to school districts, "costs mandated by the state" were now defined by a new section, 2207.5. (Stats. 1977, ch. 1135, § 7, pp. 3647-3648.) Section 2207.5 limited reimbursement to costs mandated by statutes enacted after January 1, 1973, and *executive orders issued after January 1, 1978*. (Stats. 1977, ch. 1135, § 5, pp. 3646-3647.) (No further pertinent amendments to section 2231 occurred; see Stats. 1978, ch. 794, § 1.1, p. 2546; Stats. 1980, ch. 1256, § 8, pp. 4249-4250; Stats. 1982, ch. 734, § 3, p. 2912.) The distinction between statutes and executive orders was preserved when section 2207.5 was amended in 1980 (Stats. 1980, ch. 1256, § 5, pp. 4248-4249) and was in effect at the time of the Board hearing.

(15b) This survey teaches us that with respect to the reimbursement process, the Legislature has treated school districts differently than it has treated other local government entities. The Legislature initially did not give school districts the right to recover costs mandated by executive orders; and when this option was made available, the effective date

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

differed from that applicable to other entities. The Legislature consistently limited reimbursement of costs by reference to the effective dates of statutes and executive orders and nothing indicates the state intended recovery of costs to be open-ended. ***180**

Because the "subsequently mandated" provision of section 2234 originally was contained in sections which set forth specific date limitations (former sections 2164.3 and 2231), we conclude the Legislature likewise intended to limit claims made pursuant to section 2234. The use of the language "subsequently mandated" merely describes an additional circumstance in which the state will reimburse costs, provided the claimant meets other requirements. Since the September 1977 Executive Order falls outside the January 1, 1978, limit set by section 2207.5, section 2234 does not provide for reimbursement to LBUSD.

III. The Award

The full text of the award as provided by the judgment is set forth in an appendix to this opinion. In part, the judgment states that there are appropriated funds in budgets for the DOE, the Commission, the Reserve for Contingencies or Emergencies, and the Special Fund for Economic Uncertainties, "or similarly designated accounts" which are " 'reasonably available' " to reimburse LBUSD for the state mandated costs it has incurred. (Appendix, pars. 3, 2.) The State Controller is commanded to pay the claims plus interest "at the legal rate" from the described appropriations for fiscal years 1984-1985 through 1987-1988 and "subsequently enacted State Budget Acts." (Appendix, par. 7.) The judgment declares that the deletion of funding for reimbursement of costs incurred in compliance with the Executive Order was invalid and unconstitutional. (Appendix, par. 12.) Finally, the Fines and Forfeiture Funds in the custody of the Auditor-Controller of Los Angeles County are held to be not reasonably available for reimbursement. (Appendix, par. 5.)

A. State Position

(17a) State contends the trial court's award is contrary to California law, asserting that it constitutes an invasion of the province of the Legislature and therefore a judicial usurpation of the republican form of government guaranteed by the United States Constitution, Article IV, section 4.

(18) A court cannot compel the Legislature either to appropriate funds or to pay funds not yet appropriated. (Cal. Const., art. III, § 3; art. XVI, § 7; *Mandel v. Myers* (1981) 29 Cal.3d 531, 540 [174 Cal.Rptr. 841, 629 P.2d 935]; *Carmel Valley Fire Protection Dist. v. State of California, supra,* 190 Cal.App.3d at p. 538.) However, no violation of the separation of powers doctrine occurs when a court orders appropriate expenditures from already existing funds. (*Mandel*, at p. 540;*Carmel Valley*, at pp. 539-540.)The test is whether such funds are "reasonably available for the ***181** expenditures in question ...." (*Mandel*, at p. 542;*Carmel Valley*, at pp. 540-541.)Funds are "reasonably available" for reimbursement when the purposes for which those funds were appropriated are "generally related to the nature of costs incurred ...." (*Carmel Valley*, at p. 541.)There is no requirement that the appropriation specifically refer to the particular expenditure (*Mandel* at pp. 543-544,*Carmel Valley* at pp. 540;*Committee to Defend Reproductive Rights v. Cory* (1982) 132 Cal.App.3d 852, 857-858 [183 Cal.Rptr. 475]), nor must past administrative practice sanction coverage from a particular fund (*Carmel Valley*, at p. 540).

(17b) As previously stated, the trial court found the subject funds were "reasonably available." No party requested a statement of decision, and therefore it is implied that the trial court found all facts necessary to support its judgment. (*Michael U. v. Jamie B.* (1985) 39 Cal.3d 787, 792-793 [218 Cal.Rptr. 39, 705 P.2d 362]; *Homestead Supplies, Inc. v. Executive Life Ins. Co.* (1978) 81 Cal.App.3d 978, 984 [147 Cal.Rptr. 22].) We now examine the record to ascertain whether substantial evidence supports the decision of the trial court.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

The Board having approved reimbursement under the Executive Order, reported to the Legislature that "[t]he categories of reimbursable costs include, but are not limited to: (1) voluntary pupil assignment or reassignment programs, (2) magnet schools or centers, (3) transportation of pupils to alternative schools or programs, (5) [*sic*, no item (4)] racially isolated minority schools, (6) costs of planning, recruiting, administration and/or evaluation, and (7) overhead costs." The guidelines set out comprehensive steps to be taken by school districts in order to be in compliance with the Executive Order.

The peremptory writ of mandate, issued the same date as the judgment, designated funds in specific account numbers and, in addition, a special fund as available for reimbursement. We take judicial notice of the relevant budget enactments and Government Code sections 16418 and 16419 (Evid. Code, §§ 459, subd. (a), 452) and address these designations seriatim.

The line item account numbers for the DOE for fiscal years 1984-1985 through 1987-1988 set forth in the writ are as follows: 6100-001-001, 6100-001-178, 6100-015-001, 6100-101-001, 6100-114-001, 6100-115-001, 6100-121-001, 6100-156-001, 6100-171-178, 6100-206-001, 6100-226-001.

An examination of the relevant budget acts Statutes 1985, chapter 111; Statutes 1986, chapter 186; Statutes 1987, chapter 135; and final budgetary changes as published by the Department of Finance for each year, shows ***182** that appropriations in the 11 DOE line item account numbers have supported a very broad range of activities including reimbursement of costs for both mandated and voluntary integration programs, assessment programs, child nutrition, meals for needy pupils, participation in educational commissions, administration costs of various programs, proposal review, teacher recruitment, analysis of cost data, school bus driver instructor training, shipping costs for instructional materials, local assistance for school district transportation aid, summer school programs, local assistance to districts with high concentrations of limited- and non-English-speaking children, adult education, driver training, Urban Impact Aid, and cost of living increases for specific programs. Further evidence regarding the uses of these funds is found in the deposition testimony of William C. Pieper, Deputy Superintendent for Administration with the State Department of Education, who stated that local school districts were being reimbursed for the costs of desegregation programs from line item account numbers 6100-114-001 and 6100-115-001 in the 1986 State Budget Act.

Comparing the requirements of the Executive Order and guidelines with the broad range of activities supported by the DOE budget, we conclude that the subject funds, although not specifically appropriated for the reimbursement in question, were generally related to the nature of the costs incurred.

With regard to the Commission, the writ sets out three line item account numbers: 8885-001-001; 8885-101-001; and 8885-101-214. A review of the relevant budget acts shows that the first line item provides funding for support of the Commission, and line item number 8885-101-001 provides funding specifically for local assistance "in accordance with the provisions of Section 6 of Article XIII B of the California Constitution ...." (Stats. 1986, ch. 186.) Line item number 8885-101-214 also provides funds for "local assistance." Since the Commission was created specifically to effect reimbursements for qualifying claims, we conclude there is a general relationship between the purpose of the appropriations and the requirements of the Executive Order.

Line item 9840-001-001 of the Reserve for Contingencies or Emergencies defines "contingencies" as "proposed expenditures arising from unexpected conditions or losses for which no appropriation, or insufficient appropriation, has been made by law and which, in the judgment of the Director of Finance, constitute cases of actual necessity." (All relevant budget acts.) In the instant case, previous to the issuance of the Executive Order, LBUSD could

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

not have anticipated the expenditures necessary to bring it into compliance. Further, the Legislature refused to appropriate the necessary funds *183 to directly reimburse the district for these expenditures. The necessity exists by virtue of the writ and judgment issued by the trial court. Therefore, this line item, and three others which also support the reserve (9840-001-494, 9840-001-988, 9840-011-001) are generally related to the costs. FN16

FN16 The costs do not come within past or current definitions of "emergency," which are, respectively, as follows. "[P]roposed expenditures arising from unexpected conditions or losses for which no appropriation, or insufficient appropriation, has been made by law and which in the judgment of the Director of Finance require immediate action to avert undesirable consequences or to preserve the public peace, health or safety." (Fiscal years 1984-1985, 1985-1986.) "[E]xpenditure incurred in response to conditions of disaster or extreme peril which threaten the health or safety of persons or property within the state." (Fiscal years 1986-1987 forward.)

Finally the writ lists as sources of reimbursement the Special Fund for Economic Uncertainties "or similarly designated accounts ...." An examination of Government Code sections 16418 and 16419 relating to the special fund shows only one use of this reserve: establishment of the Disaster Relief Fund "for purposes of funding disbursements made for response to and recovery from the earthquake, aftershocks, and any other related casualty." No evidence in the record indicates a general relationship between this purpose and the costs incurred by LBUSD. We conclude, therefore, that this source of funding cannot be used for reimbursement. This source is stricken from the judgment.

The description of further sources of funding as "similarly designated accounts" fails to sufficiently identify these sources and we therefore strike this part of the judgment.

In a supplemental brief, LBUSD requests this court to take judicial notice of the Budget Acts of 1988-1989 (Stats. 1988, ch. 313) and 1989-1990 (Stats. 1989, ch. 93) pursuant to the Evidence Code (Evid. Code, §§ 451, subd. (a), 452, subd. (a), 452, subd. (c), 459) and to order that the amounts set forth in the judgment and writ be satisfied from specific line item accounts in these later budgets and from the Special Fund for Economic Uncertainties. FN17

FN17 LBUSD identifies the line items accounts as follows: DOE-6110-001-001, 6110-001-178, 6110-015-001, 6110-101-001, 6110-114-001, 6110-115-001, 6110-121-001, 6110-156-001, 6110-171-178, 6110-226-001, 6110-230-001; Commission-8885-001-001, 8885-101-001, 8885-101-214; Reserve for Contingencies or Emergencies-9840-001-001, 9840-001-494, 9840-001-988, 9840-011-001.

(19) "An appellate court is empowered to add a directive that the trial court order be modified to include charging orders against funds appropriated by subsequent budget acts. [Citation.]" (*Carmel Valley, supra,* 190 Cal.App.3d at p. 557.) (17c) We have reviewed the designated budget acts and conclude that the specified line item accounts for DOE, the Commission, *184 and the Reserve for Contingencies and Emergencies provide funds for a broad range of activities similar to those set out above and therefore are generally related to the nature of the costs incurred. However, for the reasons previously discussed, we decline to designate the Special Fund for Economic Uncertainties as a source for reimbursement.

While we have concluded that certain line item accounts are generally related to the nature of the costs incurred, there must also be evidence that at the time of the order the enumerated budget items

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

contained sufficient funds to cover the award. (Gov. Code, § 12440; *Mandel v. Myers, supra,* 29 Cal.3d at p. 543;*Carmel Valley, supra,* 190 Cal.App.3d at p. 541; cf. *Baggett v. Dunn* (1886) 69 Cal. 75, 78 [10 P. 125]; *Marshall v. Dunn* (1886) 69 Cal. 223, 225 [10 P. 399].) The record before us contains evidence regarding balances at various points in time for some of the line item accounts, but that evidence is primarily in the form of uninterpreted statistical data. We have not found a clear statement which would satisfy this requirement. Furthermore, not every line item was in existence every fiscal year. In addition, those which entered the budgetary process did not always survive it unscathed. Therefore, we remand the matter to the trial court to determine with regard to the line item account numbers approved above whether funds sufficient to satisfy the award were available at the time of the order. (Cf. *County of Sacramento v. Loeb* (1984) 160 Cal.App.3d 446, 454-455 [206 Cal.Rptr. 626].) If the trial court determines that the unexhausted funds remaining in the specified appropriations are insufficient, the trial court order can be further amended to reach subsequent appropriated funds. (*County of Sacramento* at p. 457;*Serrano v. Priest* (1982) 131 Cal.App.3d 188, 198 [182 Cal.Rptr. 387].)

(20) Having concluded that certain appropriations are generally available to reimburse LBUSD, we turn to an additional issue raised by State: that the "finding" by the Legislature that the Executive Order does not impose a "state-mandated local program" prevents reimbursement.

Unsupported legislative disclaimers are insufficient to defeat reimbursement. (*Carmel Valley, supra,* 190 Cal.App.3d at pp. 541-544.) As discussed, LBUSD, pursuant to Section 6, has a constitutional right to reimbursement of its costs in providing an increased service mandated by the state. The Legislature cannot limit a constitutional right. (*Hale v. Bohannon* (1952) 38 Cal.2d 458, 471 [241 P.2d 4].)

B. DOE Contentions

DOE is sympathetic to LBUSD's position. On appeal, it takes no stand on the issue whether the Executive Order constitutes a state mandate within ***185** the meaning of Section 6. (21) The thrust of its appeal is that, if there is a mandate, the DOE budget is an inappropriate source of funding in comparison with other budget line item accounts included in the order.

We conclude to the contrary because logic dictates that DOE funding be the initial and primary source for reimbursement. As discussed, the test set forth in *Mandel* and *Carmel Valley* is whether there is a general relationship between budget items and reimbursable expenditures. Since the Executive Order was issued by DOE, it is not surprising that the evidence overwhelmingly supports the finding of the trial court that this general relationship exists with regard to the DOE budget.

While we also have concluded that certain line item accounts for entities other than DOE are also appropriate sources of funding, the record does not provide the statistical data necessary to determine how far the order will reach with regard to these additional sources of support.

DOE also contends that reimbursement for expenditures in fiscal years 1977-1978, 1978-1979, and 1979-1980 cannot be awarded under Section 6 because the amendment was not effective until July 1, 1980. As discussed, this argument has been previously rejected. (*Carmel Valley Fire Protection Dist. v. State of California, supra,* 190 Cal.App.3d at pp. 547-548;*City of Sacramento v. State of California, supra,* 156 Cal.App.3d 182, 191-194,disapproved on other grounds in *County of Los Angeles v. State of California, supra,* 43 Cal.3d 46, 58, fn. 10.)

(22) Finally, DOE contends that interest should have been awarded at the rate of 6 percent per annum pursuant to Government Code section 926.10 rather than at the legal rate provided under article XV, section 1, paragraph (2) of the California Constitution.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Government Code section 926.10 is part of the California Tort Claims Act (Gov. Code, § 900 et seq.) which provides a statutory scheme for the filing of claims against public entities for alleged injuries; it makes no provision for claims for reimbursement for state mandated expenditures. In *Carmel Valley* a judgment awarding interest at the legal rate was affirmed. (*Carmel Valley Fire Protection Dist. v. State of California, supra,* 190 Cal.App.3d at p. 553.) We decline the invitation of DOE to apply another rule.

C. Cross Appeal of LBUSD

(23) LBUSD seeks reversal of that part of the judgment holding that monies in the Fines and Forfeitures Funds in the custody and possession of ***186** cross-respondent Auditor-Controller of the County of Los Angeles (County Controller) for transfer to the state treasury are not reasonably available for reimbursement of its state mandated expenditures. FN18

> FN18 In its first amended petition, LBUSD listed the following code sections as appropriate sources of reimbursement: "Penal Code Sections 1463.02, 1463.03, 1403.5A and 1464; Government Code Sections 13967, 26822.3 and 72056; Health and Safety Code Section 11502; and Vehicle Code Sections 1660.7, 42003, and 41103.5."

As previously stated, funds are "reasonably available" when the purposes for which those funds were appropriated are generally related to the nature of the costs incurred. (*Carmel Valley, supra,* 190 Cal.App.3d at pp. 540-541.) LBUSD does not cite, nor have we found, any evidence in the record showing the use of those funds once they are transmitted to the state and that those funds are then "reasonably available" to satisfy the Claim. We cannot conclude as a matter of law that a general relationship exists between those funds and the nature of the costs incurred pursuant to the Executive Order. LBUSD has failed to carry its burden of proof and the trial court correctly decided these funds were not "reasonably available" for reimbursement.

Nor have we concluded that there is any ground on which the funds could be made available to LBUSD while in the possession of the county Auditor-Controller. The instant case differs from *Carmel Valley* wherein we affirmed an order which authorized a county to satisfy its claims against the state by offsetting fines and forfeitures it held which were due the state. The *Carmel Valley, supra,* 190 Cal.App.3d 521, holding was based on the right of offset as "a long-established principle of equity." (*Id.* at p. 550.)That is a different standard than the standard of "generally related to the nature of costs incurred." In the case at bar there is no set-off relationship between county and LBUSD.

Disposition

We conclude that because the doctrines of collateral estoppel and waiver are inapplicable to the facts of this case, the trial court should have allowed State to challenge the decisions of the Board. However, we also determine, as a question of law, that the Executive Order requires local school boards to provide a higher level of service than is required constitutionally or by case law and that the Executive Order is a reimbursable state mandate pursuant to article XIII B, section 6 of the California Constitution. Former Revenue and Tax Code section 2234 does not provide reimbursement of the subject claim. ***187**

Based on uncontradicted evidence, we modify the decision of the trial court by striking as sources of reimbursement the Special Fund for Economic Uncertainties "or similarly designated accounts." We also modify the judgment to include charging orders against certain funds appropriated through subsequent budget acts.

We affirm the decision of the trial court that the

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Fines and Forfeitures Funds are not "reasonably available" to satisfy the Claim.

Finally, we remand the matter to the trial court to determine whether at the time of its order, unexpended, unencumbered funds sufficient to satisfy the judgment remained in the approved budget line item account numbers. The trial court is also directed to determine this same issue with respect to the charging order.

The judgment is affirmed as modified. Each party is to bear its own costs on appeal.

Ashby, J., and Boren, J., concurred.
Appellants' petitions for review by the Supreme Court were denied February 28, 1991. Lucas, C. J., did not participate therein. ***188**

Appendix

The superior court judgment provides in pertinent part: "It Is Ordered, Adjudged and Decreed That: "1. The requirements contained in Title 5, California Administrative Code, Sections 90-101 constitute a reimbursable State-mandate which cannot be challenged by State Respondents or Respondent DOE because of the doctrines of administrative collateral estoppel and waiver.

"2. There are appropriated funds from specified line items in the 1984, 1985, 1986 and 1987 budgets which are 'reasonably available' to reimburse Petitioner for State-mandated costs it has occurred [*sic*] as a result of its compliance with the requirements of Title 5, California Administrative Code, Sections 90-101.

"3. The funds appropriated by the Legislature for:

"(a) the support of the Department of Education, including, but not limited, to the Department's General Fund;

"(b) the Commission on State Mandates, including, but not limited to the State Mandates Claim Fund; and

"(c) the 'Reserve for Contingencies or Emergencies', 'Special Fund for Economic Uncertainties' or similarly designated accounts, are 'reasonably available' and may properly be and should be encumbered and expended for the reimbursement of State-mandated costs in the amount of $28,014,869.00, plus applicable interest, as incurred by Petitioner and as computed by Petitioner in compliance with Parameters and Guidelines adopted by the State Board of Control.

"4. The law in effect at the time that Petitioner's claim was processed provided for the computation of a specific claim amount for specific fiscal years based on Parameters and Guidelines, or claiming instructions, adopted in April 1984 and a Statewide Cost Estimate adopted on August 23, 1984, both of which are administrative actions of the State Board of Control which have not been challenged by State Respondents. The computations made pursuant to the Parameters and Guidelines and Statewide Cost Estimate are specific and ascertainable and subject to audit by the State Controller under Government Code section 17558.

"5. The Court decrees that State funds entitled the 'Fines and Forfeitures Funds' under the custody and control of Respondent Bloodgood, are not reasonably available for satisfaction of Petitioner's claim for reimbursement of State-mandated costs.

"6. A peremptory writ of mandamus shall issue under the seal of this Court, commanding State Respondents and Respondent Doe to comply with Article XIIIB, Section 6 of the California Constitution and Government Code Section 17565 and reimburse petitioner for:

"(a) State-mandated costs in the amount of $24,164,593.00, incurred as a result of its compliance with the requirements of Title 5, California Administrative Code, Sections 90-101 during fiscal

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

years 1977-78 through 1982-1983, plus interest at the legal rate from September 28, 1985; and

"(b) State-mandated costs in the amount of $3,850,276.00, incurred as a result of Petitioner's compliance with the requirements of Title 5, California Administrative Code, Sections 90-101 during fiscal years 1983-84 and 1984-85, plus interest at the legal rate from September 28, 1985.

"7. Said peremptory writ shall command Respondent Gray Davis, State Controller, or his successor-in-interest, to pay the claims of Petitioner, plus interest at the legal rate from ***189** September 28, 1985 from the appropriations in the State Budget Acts for the 1984-85, 1985-86, 1986-87 and 1987-88 fiscal years, and the subsequently enacted State Budget Acts, which include, or will include appropriations for:

"(a) the support of the Department of Education, including, but not limited to the Department's General Fund;

"(b) the Commission on State Mandates, including, but not limited to the State Mandates Claim Fund; and

"(c) the 'Reserve for Contingencies or Emergencies', Special Fund for Economic Uncertainties' or similarly designated accounts, which are 'reasonably available' to be encumbered and expended for the reimbursement of State-mandated costs incurred by Petitioner and further shall compel Elizabeth Whitney, Acting State Treasurer, or her successor-in-interest, to make payments on the warrants drawn by Respondent Gray Davis, State Controller upon their presentation for payment by Petitioner without offset or attempt to offset against other monies due and owing Petitioner until Petitioner is reimbursed for all such costs.

"8. Said Peremptory Writ of Mandate also shall command Respondent Jesse R. Huff, Director of the State Department of Finance, to perform such actions as may be necessary to effect reimbursement required by other portions of this Judgment, including but not limited to, those actions specified in Chapter 135, Statutes of 1987, Section 2.00, pp. 549-553, or with respect to the Special Fund for Economic Uncertainties.

"9. Pending the final disposition of this proceeding, State Respondents and Respondent DOE, and each of them, their successors in office, agents, servants and employees and all persons acting in concert or participation with them, are hereby enjoined or restrained from directly or indirectly expending from the appropriations described in Paragraph No. 7 hereinabove any sums greater than that which would leave in said appropriations at the conclusion of the respective fiscal years an amount less than the reimbursement amounts claimed by Petitioner together with interest at the legal rate through payment of said reimbursement amount. Said amounts are hereinafter referred to collectively as the 'reimbursement award sum'.

"10. Pending the final disposition of this proceeding State Respondents and Respondent DOE, and each of them, their successors in office, agents, servants and employees, and all persons acting in concert or participation with them, are hereby enjoined and restrained from directly or indirectly causing to revert the reimbursement award sum from the appropriations described in Paragraph No. 7 hereinabove to the general funds of the State of California and from otherwise dissipating the reimbursement award sum in a manner that would make it unavailable to satisfy this Court's judgment.

"11. The State Respondents and Respondent Doe have a continuing obligation to reimburse Petitioner for costs incurred in compliance with the requirements contained in Title 5, California Administrative Code, Section 90-101 in the fiscal years subsequent to it's [*sic*] claims for expenditures in fiscal years 1977-78 through 1984-85 as set forth in the First Amended Petition, as amended, and the accompanying Motion For the Issuance Of A Writ Of Mandate.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

"12. The deletion of funding for reimbursement of State-mandated costs incurred in compliance with Title 5, California Administrative Code, Sections 90-101 from Chapter 1175, Statutes of 1985 was invalid and unconstitutional.

"13. Respondent Gray Davis, State Controller, shall retain the right to audit the claims and records of the Petitioner pursuant to Government Code Section 17561(d) to verify the actual dollar amount of the reimbursement award sum.

"14. The Court reserves and retains jurisdiction to effect any appropriate remedy at law or equity which may be necessary to enforce its judgment or order. ***190**

"15. Petitioner shall recover from State Respondents and Respondent DOE costs in this proceeding in the amount of 1,863.54.

ATTACHMENT NO. 29

Redevelopment Agency v. Commission on State Mandates (1997) 55 Cal.App.4th 976

Redevelopment Agency of City of San Marcos v. California Com'n on State Mandates
Cal.App.4.Dist.
REDEVELOPMENT AGENCY OF THE CITY OF SAN MARCOS, Plaintiff and Appellant,
v.
CALIFORNIA COMMISSION ON STATE MANDATES, Defendant and Respondent; CALIFORNIA DEPARTMENT OF FINANCE, Intervener and Respondent.
No. D026195.

Court of Appeal, Fourth District, Division 1, California.
May 30, 1997.

SUMMARY

The trial court denied a petition for a writ of administrative mandate brought by a city's redevelopment agency that challenged the California Commission on State Mandates' denial of the agency's test claim under Gov. Code, § 17550 et seq. (reimbursement of costs mandated by the state). In its claim, the agency sought a determination that the State of California should reimburse the agency for moneys transferred into its lowand moderate-income housing fund pursuant to Health & Saf. Code, §§ 33334.2 and 33334.3, of the Community Redevelopment Law. Those statutes require a 20 percent deposit of the particular form of financing received by the agency (tax increment financing generated from its project areas) for purposes of improving the supply of affordable housing. The agency claimed that this tax increment financing should not be subject to state control of the allocations made to various funds and that such control constituted a state-mandated new program or higher level of service for which reimbursement or subvention was required under Cal. Const., art. XIII B, § 6. The trial court found that the source of funds used by the agency was exempt, under Health & Saf. Code, § 33678, from the scope of Cal. Const., art. XIII B, § 6. (Superior Court of San Diego County, No. 686818, Sheridan E. Reed and Herbert B. Hoffman, Judges.)

The Court of Appeal affirmed. It held that under Health & Saf. Code, § 33678, which provides that tax increment financing is not deemed to be the "proceeds of taxes," the source of funds used by the agency was exempt from the scope of Cal. Const., art. XIII B, § 6. Although Cal. Const., art. XIII B, § 6, does not expressly discuss the source of funds used by an agency to fund a program, the historical and contextual context of this provision demonstrates that it applies only to costs recovered solely from tax revenues. Because of the nature of the financing they receive (i.e., tax increment financing), redevelopment agencies are not subject to appropriations limitations or spending caps, they do not expend any proceeds of taxes, and they do not raise general revenues for the local entity. Also, the state is not transferring any program for which it was formerly responsible. Therefore, the purposes of state subvention laws are not furthered by requiring reimbursement when redevelopment agencies are required to allocate their tax increment financing in a particular manner, as in the operation of Health & Saf. Code, §§ 33334.2 and 33334.3. (Opinion by Huffman, J., with Work, Acting P. J., and McIntyre, J., concurring.)

HEADNOTES

Classified to California Digest of Official Reports

(1) State of California § 11--Fiscal Matters--Subvention:Words, Phrases, and Maxims--Subvention.
"Subvention" generally means a grant of financial aid or assistance, or a subsidy.

(2) State of California § 11--Fiscal Matters--Subvention--Judicial Rules.
Under Gov. Code, § 17559, review by administrative mandamus is the exclusive method of challen-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ging a decision of the California Commission on State Mandates to deny a subvention claim. The determination whether the statutes at issue established a mandate under Cal. Const., art. XIII B, § 6, is a question of law. On appellate review, the following standards apply: Gov. Code, § 17559, governs the proceeding below and requires that the trial court review the decision of the commission under the substantial evidence standard. Where the substantial evidence test is applied by the trial court, the appellate court is generally confined to inquiring whether substantial evidence supports the trial court's findings and judgment. However, the appellate court independently reviews the trial court's legal conclusions about the meaning and effect of constitutional and statutory provisions.

(3a, 3b) State of California § 11--Fiscal Matters--Subvention--State-mandated Costs--Statutory Set-aside Requirement for Local Redevelopment Agency's Tax Increment Financing.
The California Commission on State Mandates properly denied a test claim brought by a city's redevelopment agency seeking a determination that the state should reimburse the agency for moneys transferred into its lowand moderate-income housing fund pursuant to Health & Saf. Code, §§ 33334.2 and 33334.3, which require a 20 percent deposit of the particular form of financing received by the agency, i.e., tax increment financing generated from its project areas. Under Health & Saf. Code, § 33678, which provides that tax increment financing is not deemed to be the "proceeds of taxes," the source of funds used by the agency was exempt from the scope of Cal. Const., art. XIII B, § 6 (subvention). Although Cal. Const., art. XIII B, § 6, does not expressly discuss the source of funds used by an agency to fund a program, the historical and contextual context of this provision demonstrates that it applies only to costs recovered solely from tax revenues. Because of the nature of the financing they receive (i.e., tax increment financing), redevelopment agencies are not subject to appropriations limitations or spending caps, they do not expend any proceeds of taxes, and they do not raise general revenues for the local entity. Also, the state is not transferring any program for which it was formerly responsible. Therefore, the purposes of state subvention laws are not furthered by requiring reimbursement when redevelopment agencies are required to allocate their tax increment financing in a particular manner, as in the operation of Health & Saf. Code, §§ 33334.2 and 33334.3.
[See 9 Witkin, Summary of Cal. Law (9th ed. 1989) Taxation, § 123.]
(4) Constitutional Law § 10--Construction of Constitutional Provisions-- Limitations on Legislative Powers.
The rules of constitutional interpretation require a strict construction of a constitutional provision that contains limitations and restrictions on legislative powers, because such limitations and restrictions are not to be extended to include matters not covered by the language used.

(5) State of California § 11--Fiscal Matters--Subvention--Purpose of Constitutional Provisions.
The goal of Cal. Const., arts. XIII A and XIII B, is to protect California residents from excessive taxation and government spending. A central purpose of Cal. Const., art. XIII B, § 6 (reimbursement to local government of state-mandated costs), is to prevent the state's transfer of the cost of government from itself to the local level.

HUFFMAN, J.
The California Commission on State Mandates (the Commission) denied a test claim by the Redevelopment Agency of the City of San Marcos (the Agency) (Gov. Code, § 17550 et seq.), which sought a determination that the State of California should reimburse the Agency for moneys trans-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ferred into its Low and Moderate Income Housing Fund (the Housing Fund) pursuant to Health and Safety Code [FN1] sections 33334.2 and 33334.3. Those sections require a 20 percent deposit of the particular form of financing received by the Agency, tax increment financing generated from its project areas, for purposes of improving the supply of affordable housing. (1)(**See fn. 2**)The Agency claimed that this tax increment financing should not be subject to state control of the allocations made to various funds and that such control constituted a state-mandated new program or higher level of service for which reimbursement or subvention was required under article XIII B of the California Constitution, section 6 (hereafter section 6; all further references to articles are to the California Constitution). [FN2] (Cal. Const., art. XVI, § 16; § 33670.)

FN1 All further statutory references are to the Health and Safety Code unless otherwise noted.

FN2 " 'Subvention' generally means a grant of financial aid or assistance, or a subsidy. [Citation.]" (*Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, 1577 [15 Cal.Rptr.2d 547].)

The Agency brought a petition for writ of administrative mandamus to challenge the decision of the Commission. (Code Civ. Proc., § 1094.5; Gov. Code, § 17559.) The superior court denied the petition, ruling that the source of funds used by the Agency for redevelopment, tax increment financing, was exempt pursuant to section 33678 from the scope of section 6, as not constituting "proceeds of taxes" which are governed by that section. The superior court did not rule upon the alternative grounds of decision stated by the Commission, i.e., the 20 percent set-aside requirement for lowand moderate-income housing did not impose a new program or higher level of service in an existing program within the meaning of section 6, and, further, there were no costs subject to reimbursement related to the Housing Fund because there was no net increase in the aggregate program responsibilities of the Agency.

The Agency appeals the judgment denying its petition for writ of mandate. For the reasons set forth below, we affirm. ***980**

I. Procedural Context

This test claim was litigated before the Commission pursuant to statutory procedures for determining whether a statute imposes state-mandated costs upon a local agency which must be reimbursed, through a subvention of funds, under section 6. (Gov. Code, § 17500 et seq.) [FN3] The Commission hearing consisted of oral argument on the points and authorities presented.

FN3 In our prior opinion issued in this case, we determined the trial court erred when it denied the California Department of Finance (DOF) leave to intervene as an indispensable party and a real party in interest in the mandamus proceeding. (*Redevelopment Agency v. Commission on State Mandates* (1996) 43 Cal.App.4th 1188, 1194-1199 [51 Cal.Rptr.2d 100].) Thus, DOF is now a respondent on this appeal, as is the Commission (sometimes collectively referred to as respondents). However, our decision in that case was a collateral matter and does not assist us on the merits of this proceeding.

(2) Under Government Code section 17559, review by administrative mandamus is the exclusive method of challenging a Commission decision denying a subvention claim. "The determination whether the statutes here at issue established a mandate under section 6 is a question of law. [Citation.]" (*County of San Diego v. State of California* (1997) 15 Cal.4th 68, 109 [61 Cal.Rptr.2d 134, 931 P.2d 312].) On appellate review, we apply these standards: "Government Code section 17559 governs the proceeding below and requires that the trial court review the decision of the Commission under the

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

substantial evidence standard. Where the substantial evidence test is applied by the trial court, we are generally confined to inquiring whether substantial evidence supports the court's findings and judgment. [Citation.] However, we independently review the superior court's legal conclusions about the meaning and effect of constitutional and statutory provisions. [Citation.]" (*City of San Jose v. State of California* (1996) 45 Cal.App.4th 1802, 1810 [53 Cal.Rptr.2d 521].)

II. Statutory Schemes

Before we outline the statutory provisions setting up tax increment financing for redevelopment agencies, we first set forth the Supreme Court's recent summary of the history and substance of the law applicable to state mandates, such as the Agency claims exist here: "Through adoption of Proposition 13 in 1978, the voters added article XIII A to the California Constitution, which 'imposes a limit on the power of state and local governments to ***981** adopt and levy taxes. [Citation.]' [Citation.] The next year, the voters added article XIII B to the Constitution, which 'impose[s] a complementary limit on the rate of growth in governmental spending.' [Citation.] These two constitutional articles 'work in tandem, together restricting California governments' power both to levy and to spend for public purposes.' [Citation.] Their goals are 'to protect residents from excessive taxation and government spending. [Citation.]' [Citation.]" (*County of San Diego v. State of California, supra*, 15 Cal.4th at pp. 80-81.)

Section 6, part of article XIII B and the provision here at issue, requires that whenever the Legislature or any state agency mandates a "new program or higher level of service" on any local government, " 'the state shall provide a subvention of funds to reimburse such local government for *the costs of such program* or increased level of service ....' " (*County of San Diego v. State of California, supra*, 15 Cal.4th at p. 81, italics added.) Certain exceptions are then stated, none of which is relevant here. FN4

FN4 Section 6 lists the following exclusions to the requirement for subvention of funds: "(a) Legislative mandates requested by the local agency affected; [¶] (b) Legislation defining a new crime or changing an existing definition of a crime; or [¶] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975." In *City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 69 [266 Cal.Rptr. 139, 785 P.2d 522], the Supreme Court identified these items as exclusions of otherwise reimbursable programs from the scope of section 6. (See also Gov. Code, § 17514, definition of "costs mandated by the state," using the same "new program or higher level of service" language of section 6.)

In *County of San Diego v. State of California, supra*, 15 Cal.4th at page 81, the Supreme Court explained that section 6 represents a recognition that together articles XIII A and XIII B severely restrict the taxing and spending powers of local agencies. The purpose of the section is to preclude the state from shifting financial responsibility for governmental functions to local agencies, which are ill equipped to undertake increased financial responsibilities because they are subject to taxing and spending limitations under articles XIII A and XIII B. (*County of San Diego v. State of California, supra*, at p. 81.)

To evaluate the Agency's argument that the provisions of sections 33334.2 and 33334.3, requiring a deposit into the housing fund of 20 percent of the tax increment financing received by the Agency, impose this type of reimbursable governmental program or a higher level of service under an existing program, we first review the provisions establishing financing for redevelopment agencies. Such agencies have no independent powers of taxation (***982***Huntington Park Redevelopment Agency v. Martin* (1985) 38 Cal.3d 100, 106 [211 Cal.Rptr.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

133, 695 P.2d 220]), but receive a portion of tax revenues collected by other local agencies from property within a redevelopment project area, which may result from the following scheme: "Redevelopment agencies finance real property improvements in blighted areas. Pursuant to article XVI, section 16 of the Constitution, these agencies are authorized to use tax increment revenues for redevelopment projects. The constitutional mandate has been implemented through the Community Redevelopment Law (Health & Saf. Code, § 33000 et seq.). [¶] The Community Redevelopment Law authorizes several methods of financing; one is the issuance of tax allocation bonds. Tax increment revenue, the increase in annual property taxes attributable to redevelopment improvements, provides the security for tax allocation bonds. Tax increment revenues are computed as follows: The real property within a redevelopment project area is assessed in the year the redevelopment plan is adopted. Typically, after redevelopment, property values in the project area increase. The taxing agencies (e.g., city, county, school or special district) keep the tax revenues attributable to the original assessed value and pass the portion of the assessed property value which exceeds the original assessment on to the redevelopment agency. (Health & Saf. Code, §§ 33640, 33641, 33670, 33675). In short, tax increment financing permits a redevelopment agency to take advantage of increased property tax revenues in the project areas without an increase in the tax rate. This scheme for redevelopment financing has been a part of the California Constitution since 1952. (Cal. Const., art. XVI, § 16.)" (*Brown v. Community Redevelopment Agency* (1985) 168 Cal.App.3d 1014, 1016-1017 [214 Cal.Rptr. 626].) FN5

FN5 Section 33071 in the Community Redevelopment Law provides that a fundamental purpose of redevelopment is to expand the supply of lowand moderate-income housing, as well as expanding employment opportunities and improving the social environment.

In *Brown v. Community Redevelopment Agency*, *supra*, 168 Cal.App.3d at pages 1016-1018, the court determined that by enacting section 33678, the Legislature interpreted article XIII B of the Constitution as not broad enough in reach to cover the raising or spending of tax increment revenues by redevelopment agencies. Specifically, the court decided the funds a redevelopment agency receives from tax increment financing do not constitute "proceeds of taxes" subject to article XIII B appropriations limits.(*Brown v. Community Redevelopment Agency*,*supra*, at p. 1019). FN6 This ruling was based on section 33678, providing in pertinent part: "This section implements and fulfills the intent ... of Article XIII B and ***983**Section 16 of Article XVI of the California Constitution. *The allocation and payment to an agency of the portion of taxes specified in subdivision (b) of Section 33670 for the purpose of paying principal of, or interest on ... indebtedness incurred for redevelopment activity ... shall not be deemed the receipt by an agency of proceeds of taxes levied by or on behalf of the agency within the meaning of or for the purposes of Article XIII B ... nor shall such portion of taxes be deemed receipt of proceeds of taxes by, or an appropriation subject to limitation of, any other public body within the meaning or for purposes of Article XIII B* ... or any statutory provision enacted in implementation of Article XIII B. *The allocation and payment to an agency of this portion of taxes shall not be deemed the appropriation by a redevelopment agency of proceeds of taxes levied by or on behalf of a redevelopment agency within the meaning or for purposes of Article XIII B of the California Constitution.*" (Italics added.)

FN6 The term of art, "proceeds of taxes," is defined in article XIII B, section 8, as follows: (c) " *'Proceeds of taxes' shall include, but not be restricted to, all tax revenues* and the proceeds to an entity of government, from (1) regulatory licenses, user charges, and user fees to the extent that those proceeds exceed the costs reasonably borne by that entity in providing the regu-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> lation, product, or service, and (2) the investment of tax revenues. With respect to any local government, 'proceeds of taxes' shall include subventions received from the state, other than pursuant to Section 6, and, with respect to the state, proceeds of taxes shall exclude such subventions." (Italics added.)

In *County of Placer v. Corin* (1980) 113 Cal.App.3d 443, 451 [170 Cal.Rptr. 232], the court defined "proceeds of taxes" in this way: "Under article XIII B, with the exception of state subventions, the items that make up the scope of ' "proceeds of taxes" ' concern charges levied to raise *general revenues* for the local entity. ' "Proceeds of taxes," ' in addition to 'all tax revenues' includes 'proceeds ... from ... regulatory licenses, user charges, and user fees [*only*] *to the extent that such proceeds exceed the costs reasonably borne by such entity in providing the regulation, product or service....*' (§ 8, subd. (c).) (Italics added.) Such 'excess' regulatory or user fees are but *taxes* for the raising of general revenue for the entity. [Citations.] Moreover, to the extent that an assessment results in revenue above the cost of the improvement or is of general public benefit, it is no longer a special assessment but a tax. [Citation.] *We conclude 'proceeds of taxes' generally contemplates only those impositions which raise general tax revenues for the entity.*" (Italics added.) FN7

> FN7 The issues before the court in *County of Placer v. Corin, supra*, 113 Cal.App.3d 443 were whether special assessments and federal grants should be considered proceeds of taxes; the court held they should not.Section 6 is not discussed; the court's analysis of other concepts found in article XIII B is nevertheless instructive.

(3a) In light of these interrelated sections and concepts, our task is to determine whether the 20 percent Housing Fund set-aside requirement of a redevelopment agency's tax increment financing qualifies under section 6 as a "cost" of a program. As will be explained, we agree with the trial court that the resolution of this issue is sufficient to dispose of the entire matter, and ***984** accordingly we need not discuss the alternate grounds of decision stated by the Commission. FN8

> FN8 The alternate grounds of the Commission's decision were that there were no costs subject to reimbursement related to the Housing Fund because there was no net increase in the aggregate program responsibilities of the Agency, and that the set-aside requirement did not constitute a mandated "new program or higher level of service" under this section.

III. Housing Fund Allocations: Reimbursable Costs?

1. *Arguments*

The Agency takes the position that the language of section 33678 is simply inapplicable to its claim for subvention of funds required to be deposited into the Housing Fund. It points out that section 6 expressly lists three exceptions to the requirement for subvention of funds to cover the costs of state-mandated programs: (a) Legislative mandates requested by the local agency affected; (b) legislation defining or changing a definition of a crime; or (c) pre-1975 legislative mandates or implementing regulations or orders. (See fn. 4, *ante*.)None of these exceptions refers to the source of the funding originally used by the agency to pay the costs incurred for which reimbursement is now being sought. Thus, the agency argues it is immaterial that under section 33678, *for purposes of appropriations limitations*, tax increment financing is not deemed to be the "proceeds of taxes." (*Brown v. Community Redevelopment Agency, supra*, 168 Cal.App.3d at pp. 1017-1020.) The Agency would apply a "plain meaning" rule to section 6 (see, e.g., *Davis v. City of* Berkeley (1990) 51 Cal.3d 227, 234 [272 Cal.Rptr. 139, 794 P.2d 897]) and conclude that the

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

source of the funds used to pay the program costs up front, before any subvention, is not stated in the section and thus is not relevant.

As an illustration of its argument that the source of its funds is irrelevant under section 6, the Agency cites to Government Code section 17556. That section is a legislative interpretation of section 6, creating several classes of state-mandated programs for which no state reimbursement of local agencies for costs incurred is required. In *County of Fresno v. State of California* (1991) 53 Cal.3d 482, 487 [280 Cal.Rptr. 92, 808 P.2d 235], the Supreme Court upheld the facial constitutionality of Government Code section 17556, subdivision (d), which disallows state subvention of funds where the local government is authorized to collect service charges or fees in connection with a mandated program. The court explained that section 6 "was designed to protect the tax revenues of local governments from state mandates that ***985** would require expenditure of such revenues." (*County of Fresno v. State of California,supra*, at p. 487.) Based on the language and history of the measure, the court stated, "Article XIII B of the Constitution, however, was not intended to reach beyond taxation." (*Ibid.*) The court therefore concluded that in view of its textual and historical context, section 6 "requires subvention only when the costs in question can be recovered *solely from tax revenues*." (*Ibid.*, original italics.) Interpreting section 6, the court stated: "Considered within its context, the section effectively construes the term 'costs' in the constitutional provision as excluding expenses that are recoverable from sources other than taxes." (*Ibid.*) No subvention was required where the local authority could recover its expenses through fees or assessments, not taxes.

2. *Interpretation of Section 6*

Here, the Agency contends the authority of *County of Fresno v. State of California, supra,53* Cal.3d 482, should be narrowly read to cover only self-financing programs, and the Supreme Court's broad statements defining "costs" in this context read as mere dicta. It also continues to argue for a "plain meaning" reading of section 6, which it reiterates does not expressly discuss the source of funds used by an agency to pay the costs of a program before any reimbursement is sought. We disagree with both of these arguments. The correct approach is to read section 6 in light of its historical and textual context. (4) The rules of constitutional interpretation require a strict construction of section 6, because constitutional limitations and restrictions on legislative powers are not to be extended to include matters not covered by the language used. (*City of San Jose v. State of California, supra,* 45 Cal.App.4th at pp. 1816-1817.)

(5) The goals of articles XIII A and XIII B are to protect California residents from excessive taxation and government spending. (*County of Los Angeles v. State of California, supra,* 15 Cal.4th at p. 81.) A central purpose of section 6 is to prevent the state's transfer of the cost of government from itself to the local level. (*City of Sacramento v. State of California, supra,* 50 Cal.3d at p. 68.) (3b) The related goals of these enactments require us to read the term "costs" in section 6 in light of the enactment as a whole. The "costs" for which the Agency is seeking reimbursement are its deposits of tax increment financing proceeds into the Housing Fund. Those tax increment financing proceeds are normally received pursuant to the Community Redevelopment Law (§ 33000 et seq.) when, after redevelopment, the taxing agencies collect and keep the tax revenues attributable to the original assessed value and pass on to the redevelopment agency the portion of the ***986** assessed property value which exceeds the original assessment. (*Brown v. Community Redevelopment Agency, supra,* 168 Cal.App.3d at pp. 1016-1017.) Is this the type of expenditure of tax revenues of local governments, upon state mandates which require use of such revenues, against which section 6 was designed to protect? (*County of Fresno v. State of California, supra,* 53 Cal.3d at p. 487.)

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

3. *Relationship of Appropriations Limitations and Subvention*

We may find assistance in answering this question by looking to the type of appropriations limitations imposed by article XIII B. In *County of Placer v. Corin*, *supra*, 113 Cal.App.3d at page 447, the court described the discipline imposed by article XIII B in this way: "[A]rticle XIIIB does not limit the ability to expend government funds collected from all sources. Rather, the appropriations limit is based on 'appropriations subject to limitation,' which consists primarily of the authorization to expend during a fiscal year the 'proceeds of taxes.' (§ 8, subd. (a).) As to local governments, limits are placed only on the authorization to expend the proceeds of taxes levied by that entity, in addition to proceeds of state subventions (§ 8, subd. (c)); no limitation is placed on the expenditure of those revenues that do not constitute 'proceeds of taxes.' " FN9

FN9 The term of art, "appropriations subject to limitation," is defined in article XIII B, section 8, as follows: [¶] (b) " 'Appropriations subject to limitation' of an entity of local government means any authorization to expend during a fiscal year *the proceeds of taxes levied by or for that entity* and the proceeds of state subventions to that entity (other than subventions made pursuant to Section 6) exclusive of refunds of taxes." (Italics added.)

Because of the nature of the financing they receive, tax increment financing, redevelopment agencies are not subject to this type of appropriations limitations or spending caps; they do not expend any "proceeds of taxes." Nor do they raise, through tax increment financing, "*general revenues* for the local entity." (*County of Placer v. Corin*, *supra*, 113 Cal.App.3d at p. 451, original italics.) The purpose for which state subvention of funds was created, to protect local agencies from having the state transfer its cost of government from itself to the local level, is therefore not brought into play when redevelopment agencies are required to allocate their tax increment financing in a particular manner, as in the operation of sections 33334.2 and 33334.3. (See *City of Sacramento v. State of California*, *supra*, 50 Cal.3d at p. 68.) The state is not transferring to the Agency the operation and administration of a program for which it was formerly legally and financially *987 responsible. (*County of Los Angeles v. Commission on State Mandates* (1995) 32 Cal.App.4th 805, 817 [38 Cal.Rptr.2d 304].) FN10

FN10 We disagree with respondents that the legislative history of sections 33334.2 and 33334.3 is of assistance here, specifically, that section 23 of the bill creating these sections provided that no appropriations were made by the act, nor was any obligation for reimbursements of local agencies created for any costs incurred in carrying out the programs created by the act. (Stats. 1976, ch. 1337, § 23, pp. 6070-6071.) As stated in *City of San Jose v. State of California*, *supra*, 45 Cal.App.4th at pages 1817-1818, legislative findings regarding mandate are irrelevant to the issue to be decided by the Commission, whether a state mandate exists.

For all these reasons, we conclude the same policies which support exempting tax increment revenues from article XIII B appropriations limits also support denying reimbursement under section 6 for this particular allocation of those revenues to the Housing Fund. Tax increment financing is not within the scope of article XIII B. (*Brown v. Community Redevelopment Agency*, *supra*, 168 Cal.App.3d at pp. 1016-1020.) Section 6 "requires subvention only when the costs in question can be recovered *solely from tax revenues*." (*County of Fresno v. State of California*, *supra*, 53 Cal.3d at p. 487, original italics.) No state duty of subvention is triggered where the local agency is not required to expend its proceeds of taxes. Here, these costs of depositing tax increment revenues in the Housing Fund are attributable not directly to tax revenues, but to the benefit received by the Agency from the tax increment

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

financing scheme, which is one step removed from other local agencies' collection of tax revenues. (§ 33000 et seq.) Therefore, in light of the above authorities, this use of tax increment financing is not a reimbursable "cost" under section 6. We therefore need not interpret any remaining portions of section 6.

Disposition

The judgment is affirmed.

Work, Acting P. J., and McIntyre, J., concurred.
Appellant's petition for review by the Supreme Court was denied September 3, 1997.

ATTACHMENT NO. 30

San Diego Unified School District v. Commission on State Mandates (2004) 33 Cal.4th 859

H

San Diego Unified School Dist. v. Commission On State Mandates
Cal.,2004.

Supreme Court of California
SAN DIEGO UNIFIED SCHOOL DISTRICT,
Plaintiff and Respondent,
v.
COMMISSION ON STATE MANDATES, Defendant and Appellant;
California Department of Finance, Real Party in Interest and Appellant.
No. S109125.

Aug. 2, 2004.

Background: School district petitioned for writ of administrative mandate to require the Commission on State Mandates to approve test claim for costs of mandatory and discretionary expulsion of students. The Superior Court, San Diego County, No. GIC737638,Linda B. Quinn, J., granted the petition. Commission and Department of Finance appealed. The Court of Appeal affirmed. Review was granted, superseding opinion of Court of Appeal.

Holdings: The Supreme Court, George, C.J., held that:
(1) all hearing costs incurred by district as result of mandatory actions related to expulsions for student's possession of firearm, at time relevant to this proceeding, constituted "higher level of service" within meaning of state constitutional provision, and thus were fully reimbursable, and
(2) hearing costs incurred by district as result of actions related to discretionary expulsions did not constitute "new program or higher level of service," and, in any event, did not trigger right to reimbursement, as costs of procedures exceeding federal due process requirements were de minimis.

Affirmed in part and reversed in part.

Opinion, 122 Cal.Rptr.2d 614, superseded.

All hearing costs incurred by school district as result of mandatory actions related to expulsions of students for possession of firearm, at time relevant to mandamus proceeding initiated by district, constituted state-mandated "higher level of service" within meaning of state constitutional provision providing for reimbursement of local government for costs of "new program or higher level of service" imposed on local government by statute or state regulation, and thus were fully reimbursable; providing public schooling clearly constituted governmental function, enhancing safety of those who attended such schools constituted service to public, and mandatory expulsion provision did not implement federal law or regulation then extant. 345k19(1) k. In General. Most Cited Cases
Hearing costs incurred by school district as result of actions related to discretionary expulsions did not constitute "new program or higher level of service," triggering right to reimbursement under state constitutional provision mandating reimbursement of local government for costs of "new program or higher level of service" imposed on local government by statute or state regulation, and, in any event, procedures related to discretionary expulsions were adopted to implement federal due process mandate, and thus were nonreimbursable, and costs exceeding federal requirements were de minimis, and so also nonreimbursable. 591 GEORGE, C.J.
Article XIII B, section 6, of the California Constitution provides: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse such local government for the costs of such program or increased level of service...." [FN1] (Hereafter article XIII B, section 6.)

> FN1. The provision continues: "except that the Legislature may, but need not, provide such subvention of funds for the following mandates: [¶] (a) Legislative mandates requested by the local agency affected; [¶] (b) Legislation defining a new crime or changing an existing definition of a crime; or [¶] (c) Legislative mandates enacted prior to January 1, 1975, or executive orders or regulations initially implementing legislation enacted prior to January 1, 1975." (Cal. Const., art. XIII B, § 6.)

Plaintiff San Diego Unified School District (District), like all other public school districts in the state, is, and was at the time relevant in this proceeding, governed by statutes that regulate the expulsion of students. (Ed.Code, § 48900 et seq.) Whenever an expulsion recommendation is made (and before a student may be expelled), the District is required by Education Code section 48918 to afford the student a hearing with various procedural protections-including notice of the hearing and the right to representation by ***468** counsel, preparation of findings of fact, notices related to any expulsion and the right of appeal, and preparation of a hearing record. Providing these procedural protections requires the District to expend funds, for which the District asserts a right to reimbursement from the state pursuant to article XIII B, section 6, and implementing legislation, Government Code section 17500 et seq.

We granted review to consider two questions: (1) Are the hearing costs incurred as a result of the *mandatory* actions related to expulsions that are compelled by Education Code section 48915 fully reimbursable-or are those hearing costs reimbursable only to the extent such costs are attributable to hearing procedures that exceed the procedures re-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

quired by federal law? (2) Are any hearing costs incurred in carrying out expulsions that are *discretionary* under Education Code section 48915 reimbursable? After we granted review and filed our decision in *Department of Finance v. Commission on State Mandates* (*Kern High School Dist.*) (2003) 30 Cal.4th 727, 134 Cal.Rptr.2d 237, 68 P.3d 1203(*Kern High School Dist.*), we added the following preliminary question to be addressed: Do the Education Code ***867** statutes cited above establish a "new program" or "higher level of service" under article XIII B, section 6? Finally, we also asked the parties to brief the effect of the decision in *Kern High School Dist., supra,* 30 Cal.4th 727, 134 Cal.Rptr.2d 237, 68 P.3d 1203, on the present case.

We conclude that Education Code section 48915, insofar as it compels suspension and mandates a recommendation of expulsion for certain offenses, constitutes a "higher level of service" under article XIII B, section 6, and imposes a reimbursable state mandate for *all* resulting hearing costs-even those costs attributable to procedures required by federal law. In this respect, we shall affirm the judgment of the Court of Appeal.

We also conclude that *no* hearing costs incurred in carrying out those expulsions that are *discretionary* under Education Code section 48915-including costs related to hearing procedures claimed to exceed the requirements of federal law-are reimbursable. As we shall explain, to the extent that statute makes expulsions discretionary, it does not reflect a new program or a higher level of service related to an existing program. Moreover, even if the hearing *procedures* set forth in Education Code section *48918* constitute a new program or higher level of service, we conclude that *this* statute does not trigger any right to reimbursement, because the hearing provisions that assertedly exceed federal requirements are merely incidental to fundamental federal due process requirements and the added costs of such procedures are de minimis. For these reasons, we conclude such hearing provisions should be treated, for purposes of ruling upon a request for reimbursement, as part of the nonreimbursable underlying *federal* mandate and not as a state mandate. Accordingly, we shall reverse the judgment of the Court of Appeal insofar as it compels reimbursement****592** of any costs incurred pursuant to discretionary expulsions.

I

A. *Education Code sections 48918 and 48915*

We first describe the relevant provisions of two statutes-Education Code sections 48918 and 48915-pertaining to the expulsion of students from public schools.

Education Code section 48918 specifies the right of a student to an expulsion hearing and sets forth procedures that a school district must ***868** follow when conducting*****469** such a hearing. (Stats.1990, ch. 1231, § 2, pp. 5136-5139.) FN2

FN2. For purposes of our present inquiry, section 48918, at the time relevant here (mid-1993 through mid-1994) read essentially as it had for the prior decade, and as it has in the ensuing decade. That provision first was enacted in 1975 (see Stats.1975, ch. 1253, § 4, pp. 3277-3278) as Education Code, former section 10608. (This enactment apparently was a response to the United States Supreme Court's decision in *Goss v. Lopez* (1975) 419 U.S. 565, 581, 95 S.Ct. 729, 42 L.Ed.2d 725(*Goss*) [recognizing due process requirements applicable to public school students who are suspended for more than 10 days].) The statute was renumbered as Education Code, former section 48914 in 1976 (Stats.1976, ch. 1010, § 2, pp. 3589-3590) and was substantially augmented in 1977 (Stats.1977, ch. 965, § 24, pp. 2924-2926). After relatively minor amend-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ments in 1978 and 1982, the section in 1983 was substantially restated, further augmented, and renumbered as Education Code section 48918 (Stats.1983, ch. 498, § 91, p. 2118). Amendments adopted in 1984 and 1988 made relatively minor changes, and further similar modifications were made in 1990, reflecting the version of the statute here at issue. Subsequent amendments in 1995, 1996, 1998, and 1999 made further changes that are irrelevant to the issue presented in the case now before us.

In identifying the right to a hearing, subdivision (a) of this statute declares that a student is "entitled" to an expulsion hearing within 30 days after the school principal determines that the student has committed an act warranting expulsion.[FN3] *In practical effect, this means that whenever a school principal makes such a determination and recommends to the school board that a student be expelled, an expulsion hearing is mandated.*[FN4]

FN3. The provision reads: "The pupil shall be entitled to a hearing to determine whether the pupil should be expelled. An expulsion hearing shall be held within 30 schooldays after the date the principal or the superintendent of schools determines that the pupil has committed any of the acts enumerated in Section 48900...." (Ed.Code, § 48918, subd. (a). (Subdivision (b) of § 48900 presently includes-as it did at the time relevant here-the offense of possession of a firearm.)

FN4. Of course, if a student does not invoke his or her entitlement to such a hearing, and instead waives the right to such a hearing, the hearing need not be held.

In specifying the substantive and procedural requirements for such an expulsion hearing, Education Code section 48918 sets forth rules and procedures, some of which, the parties agree, codify requirements of federal due process and some of which may exceed those requirements.[FN5] These rules and procedures govern, among other things, notice of a hearing and the right to representation by counsel, preparation of findings of fact, notices related to the expulsion and the right of appeal, and preparation of a hearing record. (See § 48918, subds. (a) through former subd. (j) (currently subd. (k).)

FN5. See *Goss, supra,* 419 U.S. 565, 581, 95 S.Ct. 729, 42 L.Ed.2d 725; *Gonzales v. McEuen* (C.D.Cal.1977) 435 F.Supp. 460, 466-467 (concluding that former Education Code section 10608 [current § 48918] met federal due process requirements pertaining to expulsions from public schools); 7 Witkin, Summary of California Law (9th ed.1988), Constitutional Law, § 549, p. 754 (noting that Education Code section 48918 and related legislation were enacted in response to the decision in *Goss*).

***869** The second statute at issue in this matter is Education Code section 48915. Discrete subdivisions of this statute address circumstances in which a principal *must* recommend to the school board that a student be expelled, and circumstances in which a principal *may* recommend that a student be expelled.

First, there is what the parties characterize as the "mandatory expulsion provision," Education Code section 48915, former subdivision (b). As it read during the time relevant in this proceeding (mid-1993 *****470** through mid-1994), this subdivision (1) compelled a school principal to *immediately suspend* any ****593** student found to be in possession of a firearm at school or at a school activity off school grounds, and (2) mandated a *recommendation* to the school district governing board that the student be *expelled.* The provision further required the governing board, upon confirmation of the student's knowing possession of a firearm, either to expel the student or "refer" him or her to an alternative education program housed at a separate school site.[FN6] (Compare this former provision

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

with *current*Ed.Code, § 48915, subds. (c) and (d).) FN7

> FN6. An earlier and similar, albeit broader, version of the provision-extending not only to possession of firearms but also to possession of explosives and certain knives-existed briefly and was effective for approximately two and one-half months in late 1993. That initial statute, former section 48915, subdivision (b) (as amended Stats.1993, ch. 1255, § 2, pp. 7284-7285), which was effective only from October 11, 1993 through December 31, 1993, provided: "The principal or the superintendent of schools shall immediately suspend pursuant to Section 48911, and shall recommend to the governing board the expulsion of, any pupil found to be in possession of a firearm, knife of no reasonable use to the pupil, or explosive at school or at a school activity off school grounds. The governing board shall expel that pupil or, as an alternative, refer that pupil to an alternative education program, whenever the principal or the superintendent of schools and the governing board confirm that: [¶] (1) The pupil was in knowing possession of the firearm, knife, or explosive. [¶] (2) Possession of the firearm, knife of no reasonable use to the pupil, or explosive was verified by an employee of the school district. [¶] (3) There was no reasonable cause for the pupil to be in possession of the firearm, knife, or explosive."

As subsequently amended by Statutes 1993, chapter 1256, section 2, pages 7286-7287, effective January 1, 1994, Education Code section 48915, former subdivision (b), read: "The principal or the superintendent of schools shall immediately suspend, pursuant to Section 48911, any pupil found to be in possession of a firearm at school or at a school activity off school grounds and shall recommend expulsion of that pupil to the governing board. The governing board shall expel that pupil or refer that pupil to a program of study that is appropriately prepared to accommodate students who exhibit discipline problems and is not provided at a comprehensive middle, junior, or senior high school or housed at the schoolsite attended by the pupil at the time the expulsion was recommended to the school board, whenever the principal or superintendent of schools and the governing board confirm the following: [¶] (1) The pupil was in knowing possession of the firearm. [¶] (2) An employee of the school district verifies the pupil's possession of the firearm."

> FN7. The current subdivisions of Education Code section 48915 set forth a list of mandatory expulsion conduct broader than that set forth in former subdivision (b), and require a school board both to *expel and refer* to other institutions all students found to have committed such conduct. The present subdivisions read: "(c) The principal or superintendent of schools shall immediately suspend, pursuant to Section 48911, and shall recommend expulsion of a pupil that he or she determines has committed any of the following acts at school or at a school activity off school grounds: [¶] (1) Possessing, selling, or otherwise furnishing a firearm. This subdivision does not apply to an act of possessing a firearm if the pupil had obtained prior written permission to possess the firearm from a certificated school employee, which is concurred in by the principal or the designee of the principal. This subdivision applies to an act of possessing a firearm only if the possession is verified by an employee of a school district. [¶] (2) Brandishing a knife at another person. [¶] (3) Unlawfully selling a controlled substance listed in Chapter 2 (commencing with Section 11053) of Division 10 of the Health and Safety Code. [¶] (4) Committing or attempting to commit a sexual assault as defined in subdivision (n) of Section 48900

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> or committing a sexual battery as defined in subdivision (n) of Section 48900.[¶] (5) Possession of an explosive. [¶] (d) The governing board shall order a pupil expelled upon finding that the pupil committed an act listed in subdivision (c), and shall refer that pupil to a program of study that meets all of the following conditions: [¶] (1) Is appropriately prepared to accommodate pupils who exhibit discipline problems. [¶] (2) Is not provided at a comprehensive middle, junior, or senior high school, or at any elementary school. [¶] (3) Is not housed at the schoolsite attended by the pupil at the time of suspension." (Stats.2001, ch. 116, § 1.)

***471 *870** This provision, as it read at the time relevant here, did not mandate expulsion per se FN8-but it *did* require immediate suspension followed by a mandatory expulsion recommendation (and it provided that a student found by the governing board to have possessed**594** a firearm would be removed from the school site by limiting disposition to either expulsion or "referral" to an alternative school). Moreover, as noted above, whenever expulsion is recommended a student has a right to an expulsion hearing. Accordingly, it is appropriate to characterize the former provision as *mandating* immediate suspension, a recommendation of expulsion, *and hence, an expulsion hearing.* For convenience, we accept the parties' description of this aspect of Education Code section 48915 as constituting a "mandatory expulsion provision."

> FN8. As the Department of Finance observed in an August 22, 1994, communication to the Commission in this matter, "nothing in [Education Code section 48915]... requires a district governing board or a county board of education to expel a pupil," and even "unauthorized and knowing possession of a firearm, does not result in mandated expulsion. Section 48915 subdivision (b) provides for the choice of the governing board to either expel the pupil in possession of a firearm, or refer the pupil to an alternative program of study...."

The second aspect of Education Code section 48915 relevant here consists of what we shall call the "discretionary expulsion provision." (*Id.*, former subd. (c), subsequently subd. (d), currently subd. (e).) During the period relevant in this proceeding (as well as currently), this subdivision of Education Code section 48915 recognized that a principal possesses *discretion* to recommend that a student be expelled for specified conduct other than firearm possession (conduct such as damaging or stealing school property or private property, using or selling illicit drugs, receiving stolen property, possessing tobacco or drug paraphernalia, or engaging in disruptive behavior). The former provision (like the current provision) further specified that the school district governing board "may" order a student expelled upon finding that the ***871** student, while at school or at a school activity off school grounds, engaged in such conduct.[FN9]

> FN9. Education Code, section 48915, former subdivision (c) (as amended Stats.1992, ch. 909, § 3, p. 4226; amended and redesignated as former subd. (d) by Stats.1993, ch. 1255, § 2, pp. 7284-7285; further amended Stats.1993, ch. 1256, § 2, p. 7287, and Stats.1994, ch. 1198, § 7, p. 7271) provided, at the time relevant here: "Upon recommendation by the principal, superintendent of schools, or by a hearing officer or administrative panel appointed pursuant to subdivision (d) of Section 48918, the governing board *may* order a pupil expelled upon finding that the pupil violated subdivision (f), (g), (h), (i), (j), (k), or (*l*) of Section 48900, or Section 48900.2 or 48900.3, and either of the following: [¶] (1) That other means of correction are not feasible or have repeatedly failed to bring about proper conduct. [¶]

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> (2) That due to the nature of the violation, the presence of the pupil causes a continuing danger to the physical safety of the pupil or others." (Italics added.)

At the time relevant here, subdivisions (f) through (*l*) of section 48900 (as amended Stats.1992, ch. 909, § 1, pp. 4224-4225; Stats.1994, ch. 1198, § 5, pp. 7269-5270) provided: "A pupil shall *not* be suspended from school or recommended for expulsion *unless* the superintendent or the principal of the school in which the pupil is enrolled determines that the pupil has: [¶] ... [¶] (f) Caused or attempted to cause damage to school property or private property. [¶] (g) Stolen or attempted to steal school property or private property. [¶] (h) Possessed or used tobacco, or any products containing tobacco or nicotine products.... However, this section does not prohibit use or possession by a pupil of his or her own prescription products. [¶] (i) Committed an obscene act or engaged in habitual profanity or vulgarity. [¶] (j) Had unlawful possession of, or unlawfully offered, arranged, or negotiated to sell any drug paraphernalia, as defined in Section 11014.5 of the Health and Safety Code. [¶] (k) Disrupted school activities or otherwise willfully defied the valid authority of supervisors, teachers, administrators, school officials, or other school personnel engaged in the performance of their duties. [¶] (*l*) Knowingly received stolen school property or private property." (Italics added.)

At the time relevant here, section 48900.2 (Stats.1992, ch. 909, § 2, p. 4225) provided: "In addition to the reasons specified in Section 48900, a pupil may be suspended from school or recommended for expulsion if the superintendent or the principal of the school in which the pupil is enrolled determines that the pupil has committed sexual harassment as defined in Section 212.5.[¶] For the purposes of this chapter, the conduct described in Section 212.5 must be considered by a reasonable person of the same gender as the victim to be sufficiently severe or pervasive to have a negative impact upon the individual's academic performance or to create an intimidating, hostile, or offensive educational environment. This section shall not apply to pupils enrolled in kindergarten and grades 1 to 3, inclusive."

Section 48900.3 (Stats.1994, ch. 1198, § 6, p. 7270), at the time relevant here, provided: "In addition to the reasons specified in Sections 48900 and 48900.2, a pupil in any of grades 4 to 12, inclusive, may be suspended from school or recommended for expulsion if the superintendent or the principal of the school in which the pupil is enrolled determines that the pupil has caused, attempted to cause, threatened to cause, or participated in an act of, hate violence, as defined in subdivision (e) of [former] Section 33032.5 [current section 233]."

In addition, section 48900.4 (Stats.1994, ch. 1017, § 1, p. 6196) provided, at the time relevant here: "In addition to the grounds specified in Sections 48900 and 48900.2, a pupil enrolled in any of grades 4 to 12, inclusive, may be suspended from school or recommended for expulsion if the superintendent or the principal of the school in which the pupil is enrolled determines that the pupil has intentionally engaged in harassment, threats, or intimidation, directed against a pupil or group of pupils, that is sufficiently severe or pervasive to have the actual and reasonably expected effect of materially disrupting classwork, creating substantial disorder, and invading the rights of that pupil or group of pupils by creating an intimidating or hostile educational environment."

(All of these current provisions-sections 48915, subdivision (e), 48900, 48900.2, 48900.3, and 48900.4-read today substantially the same as they did at the time relevant in the present case.)

***472 *872 **595 B. *Proceedings under Government Code section 17500 et seq.*

Procedures governing the constitutional requirement of reimbursement under article XIII B, section 6, are set forth in Government Code section 17500 et seq. The Commission on State Mandates (Commission) (Gov.Code, § 17525) is charged with the responsibility of hearing and deciding, subject to judicial review by an administrative writ of mandate, claims for reimbursement made by local gov-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ernments or school districts. (Gov.Code, § 17551.) Government Code section 17561, subdivision (a), provides that the "state shall reimburse each ... school district for all 'costs mandated by the state,' as defined in section 17514." Government Code section 17514, in turn, defines "costs mandated by the state" to mean, in relevant part, "any increased costs which a ... school district is required to incur ... as a result of any statute ... which mandates a new program or higher level of service of an existing program within the meaning of Section 6 of Article XIII B of the California Constitution." Finally, Government Code section 17556 sets forth circumstances in which there shall be no reimbursement, including, under subdivision (c), circumstances in which "[t]he statute or executive order implemented a federal law or regulation and resulted in costs mandated by the federal government, unless the statute or ***473** executive order mandates costs which exceed the mandate in that federal law or regulation."

In March 1994, the District filed a "test claim" with the Commission, asserting entitlement to reimbursement for the costs of hearings provided with respect to both categories of cases described above-that is, those hearings triggered by mandatory expulsion recommendations, and those hearings resulting from discretionary expulsion recommendations. (See Gov.Code, § 17521; *Kinlaw v. State of California* (1991) 54 Cal.3d 326, 331-333, 285 Cal.Rptr. 66, 814 P.2d 1308.) [FN10] The District sought reimbursement for costs incurred between July 1, 1993, and June 30, 1994, under statutes effective through the latter date.

> FN10. As observed by amicus curiae California School Boards Association, a "test claim is like a class action-the Commission's decision applies to all school districts in the state. If the district is successful, the Commission goes to the Legislature to fund the statewide costs of the mandate for that year and annually thereafter as long as the statute is in effect."

In August 1998, after holding hearings on the District's claim (as amended in April 1995, to reflect legislation that became effective in 1994), the Commission issued a "Corrected Statement of Decision" in which it determined that Education Code section 48915's requirement of suspension and a ***873** mandatory recommendation of expulsion for firearm possession constituted a "new program or higher level of service," and found that because costs related to some of the resulting hearing provisions set forth in Education Code section 48918 (primarily various notice, right of inspection, and recording provisions) exceeded the requirements of federal due process, those additional hearing costs constituted reimbursable state-mandated costs.[FN11] As to the vast majority of the remaining**596** hearing procedures triggered by Education Code section 48915's requirement of suspension and a mandatory recommendation of expulsion for firearm possession-for example, procedures governing such matters as the hearing itself and the board's decision; a statement of facts and charges; notice of the right to representation by counsel; written findings; recording of the hearing; and the making of a record of the expulsion-the Commission found that those procedures were enacted to comply with federal due process requirements, and hence fell within the exception set forth in Government Code section 17556, subdivision (c), and ***474** did not impose a reimbursable state mandate. The Commission further found that with respect to Education Code section 48915's *discretionary* expulsions, there was no right to reimbursement for costs incurred in holding expulsion hearings, because such expulsions do not constitute a new program or higher level of service, and in any event such expulsions are not *mandated* by the state, but instead represent a choice by the principal and the school board.

> FN11. The Commission concluded that the costs incurred in providing the following state-mandated procedures under Education Code section 48918 exceeded federal due process requirements, and were reimbursable: (i) adoption of rules and regula-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

tions pertaining to pupil expulsions (§ 48918, first par. & *passim*); (ii) inclusion in the notice of hearing of (a) a copy of the disciplinary rules of the District, (b) a notice of the parents' obligation to notify a new school district, upon enrollment, of the pupil's expulsion, and (c) a notice of the opportunity to inspect and obtain copies of all documents to be used at the hearing (§ 48918, subd. (b)); (iii) allowing, upon request, the pupil or parent to inspect and obtain copies of the documents to be used at the hearing (§ 48918, subd. (b)); (iv) sending of written notice concerning (a) any decision to expel or suspend the enforcement of an expulsion order during a period of probation, (b) the right to appeal the expulsion to the county board of education, and (c) the obligation of the parent to notify a new school district, upon enrollment, of the pupil's expulsion (§ 48918, former subd. (i), currently subd. (j); (v) maintenance of a record of each expulsion, including the cause thereof (§ 48918, former subd. (j), currently subd. (k); and (vi) the recording of expulsion orders and the causes thereof in the pupil's mandatory interim record (and, upon request, the forwarding of this record to any school in which the pupil subsequently enrolls) (§ 48918, former subd. (j), currently subd. (k)).

In October 1999, the District brought this proceeding for an administrative writ of mandate challenging the Commission's decision. The trial court issued a writ commanding the Commission to render a new decision finding (i) all costs associated with hearings triggered by compulsory suspensions and mandatory expulsion recommendations are reimbursable, and (ii) hearing costs associated with discretionary expulsions are reimbursable to the limited ***874** extent that required hearing procedures exceed federal due process mandates. The Commission (defendant) and the Department of Finance (real party in interest, hereafter Department) appealed, and the Court of Appeal affirmed the judgment rendered by the trial court.

II

A. *Costs associated with hearings triggered by compulsory suspensions and mandatory expulsion recommendations*

1. *"New program or higher level of service"?*

We address first the issue that we asked the parties to brief: Does Education Code section 48915, former subdivision (b) (current subds. (c) & (d)), which mandated suspension and an expulsion recommendation for those students who possess a firearm at school or at a school activity off school grounds, and which also required a school board, if it found the charge proved, either to expel or to "refer" such a student to an alternative educational program housed at a separate school site, constitute a "new program or higher level of service" under article XIII B, section 6 of the state Constitution, and under Government Code section 17514?

We addressed the meaning of the Constitution's phrase "new program or higher level of service" in *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 233 Cal.Rptr. 38, 729 P.2d 202(*County of Los Angeles*). That case concerned whether local governments are entitled to reimbursement for costs incurred in complying with legislation that required local agencies to provide the same increased level of workers' compensation benefits for their employees as private individuals or organizations were required to provide for their employees. We stated:

"Looking at the language of [article XIII B, section 6] then, it seems clear that by itself the term 'higher level of service' is meaningless. It must be read in conjunction with the predecessor phrase 'new pro-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

gram' to give it meaning. Thus read, it is apparent that the subvention requirement for increased or higher level of service is directed to state mandated increases in the services provided by local agencies in existing 'programs.' But the term 'program' itself is not defined in article XIII B. What programs **597 then did the electorate have in mind when section 6 was adopted? We conclude that the drafters and the electorate had in mind the commonly understood meanings of the term-[(1)] programs that carry out the governmental function of providing services to the public, or [(2)] laws which, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents ***475 and entities in the state." (*County of Los Angeles, supra,* 43 Cal.3d 46, 56, 233 Cal.Rptr. 38, 729 P.2d 202.)

*875 We continued in *County of Los Angeles:* "The concern which prompted the inclusion of section 6 in article XIII B was the perceived attempt by the state to enact legislation or adopt administrative orders creating programs to be administered by local agencies, thereby transferring to those agencies the fiscal responsibility for providing services which the state believed should be extended to the public. In their ballot arguments, the proponents of article XIII B explained section 6 to the voters: 'Additionally, this measure: (1) Will not allow the state government to *force programs* on local governments without the state paying for them.' (Ballot Pamp., Proposed Amend. to Cal. Const. with arguments to voters, Spec. Statewide Elec. (Nov. 6, 1979) p. 18. Italics added.) In this context the phrase 'to force programs on local governments' confirms that *the intent underlying section 6 was to require reimbursement to local agencies for the costs involved in carrying out functions peculiar to government, not for expenses incurred by local agencies as an incidental impact of laws that apply generally to all state residents and entities.*" (*County of Los Angeles, supra,* 43 Cal.3d 46, 56-57, 233 Cal.Rptr. 38, 729 P.2d 202, italics added.)

It was clear in *County of Los Angeles, supra,* 43 Cal.3d 46, 233 Cal.Rptr. 38, 729 P.2d 202, that the law at issue did not meet the second test for a "program or higher level of service"-it did not implement a state policy by imposing unique requirements upon local governments, but instead applied workers' compensation contribution rules generally to all employers in the state. Nor, we held, did the law requiring local agencies to shoulder a general increase in workers' compensation benefits amount to a reimbursable "program or higher level of service" under the first test described above. (*Id.,* at pp. 57-58, 233 Cal.Rptr. 38, 729 P.2d 202.) The law increased the cost of employing public servants, but it did not in any tangible manner increase the level of service provided by those employees to the public.

We reaffirmed and applied the test set out in *County of Los Angeles, supra,* 43 Cal.3d 46, 233 Cal.Rptr. 38, 729 P.2d 202, in *Lucia Mar Unified School District v. Honig* (1988) 44 Cal.3d 830, 244 Cal.Rptr. 677, 750 P.2d 318(*Lucia Mar*). The state law at issue in *Lucia Mar* required local school districts to pay a portion of the cost of educating pupils in *state* schools for the severely handicapped-costs that the state previously had paid in full.

We determined that the contributions called for under the law were used to fund a "program" within both definitions of that term set forth in *County of Los Angeles.* (*Lucia Mar, supra,* 44 Cal.3d 830, 835, 244 Cal.Rptr. 677, 750 P.2d 318.) We stated: "[T]he education of handicapped children is clearly a governmental function providing a service to the public, and the [state law] imposes requirements on school districts not imposed on all the states residents. Nor can there be any doubt that although the schools for the handicapped have been operated by the state for many years, the program was new insofar as plaintiffs are *876 concerned, since at the time [the state law] became effective they were not required to contribute to the education of students from their districts at such schools. [ ] ... To hold, under the circumstances of this case, that a shift in funding of an existing program from the state to a

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

local entity is not a new program as to the local agency would, we think, violate the intent underlying section 6 of article XIII B....Section 6 was intended to preclude the state from shifting to local ***476** agencies the financial responsibility for providing public services in view of ... restrictions on the taxing and spending power of the local entities." (*Lucia Mar, supra,* 44 Cal.3d 830, 835-836, 244 Cal.Rptr. 677, 750 P.2d 318; see also ****598***County of San Diego v. State of California* (1997) 15 Cal.4th 68, 98, 61 Cal.Rptr.2d 134, 931 P.2d 312 [legislation excluding indigents from Medi-Cal coverage transferred obligation for such costs from state to counties, and constituted a reimbursable "new program or higher level of service"].)

We again applied the alternative tests set forth in *County of Los Angeles, supra,* 43 Cal.3d 46, 233 Cal.Rptr. 38, 729 P.2d 202, in *City of Sacramento v. State of California* (1990) 50 Cal.3d 51, 266 Cal.Rptr. 139, 785 P.2d 522(*City of Sacramento*). In that case we considered whether a state law implementing federal "incentives" that encouraged states to extend unemployment insurance coverage to all public employees constituted a program or higher level of service under article XIII B, section 6. We concluded that it did not because, as in *County of Los Angeles,* (1) providing unemployment compensation protection to a city's own employees was not a service to the public; and (2) the statute did not apply uniquely to local governments-indeed, the same requirements previously had been applied to most employers, and extension of the requirement (by eliminating a prior exemption for local governments) merely placed local government employers on the same footing as most private employers. (*City of Sacramento, supra,* 50 Cal.3d at pp. 67-68, 266 Cal.Rptr. 139, 785 P.2d 522.)

Subsequently, the Court of Appeal in *City of Richmond v. Commission on State Mandates* (1998) 64 Cal.App.4th 1190, 75 Cal.Rptr.2d 754(*City of Richmond*), following *County of Los Angeles, supra,* 43 Cal.3d 46, 233 Cal.Rptr. 38, 729 P.2d 202, and *City of Sacramento, supra,* 50 Cal.3d 51, 266 Cal.Rptr. 139, 785 P.2d 522, concluded that requiring local governments to provide death benefits to local safety officers, under both the Public Employees Retirement System and the workers' compensation system, did not constitute a higher level of service to the public. The Court of Appeal arrived at that determination even though-as might also have been argued in *County of Los Angeles* and *City of Sacramento*-such benefits may "generate a higher quality of local safety officers" and thereby, in a general and indirect sense, provide the public with a "higher level of service" by its employees. (*City of Richmond, supra,* 64 Cal.App.4th 1190, 1195, 75 Cal.Rptr.2d 754.)

Viewed together, these cases (*County of Los Angeles, supra,* 43 Cal.3d 46, 233 Cal.Rptr. 38, 729 P.2d 202,*City of Sacramento, supra,* 50 Cal.3d 51, 266 Cal.Rptr. 139, 785 P.2d 522, and ***877***City of Richmond, supra,* 64 Cal.App.4th 1190, 75 Cal.Rptr.2d 754) illustrate the circumstance that simply because a state law or order may *increase the costs* borne by local government *in providing services,* this does not necessarily establish that the law or order constitutes an *increased or higher level* of the resulting "service to the public" under article XIII B, section 6, and Government Code section 17514.[FN12]

FN12. Indeed, as the court in *City of Richmond, supra,* 64 Cal.App.4th 1190, 75 Cal.Rptr.2d 754, observed: "Increasing the cost of providing services cannot be equated with requiring an increased level of service under [article XIII B,] section 6.... A higher cost to the local government for compensating its employees is not the same as a higher cost of providing [an increased level of] services to the public." (*Id.,* at p. 1196, 75 Cal.Rptr.2d 754; accord, *City of Anaheim v. State of California* (1987) 189 Cal.App.3d 1478, 1484, 235 Cal.Rptr. 101 [temporary increase in PERS benefit to retired employees, result-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ing in higher contribution rate by local government, does not constitute a higher level of service to the public].)

***477 By contrast, Courts of Appeal have found a reimbursable "higher level of service" concerning an existing "program" when a state law or executive order mandates not merely some change that increases the cost of providing services, but an increase in the actual level or quality of governmental services provided. In *Carmel Valley Fire Protection Dist. v. State of California* (1987) 190 Cal.App.3d 521, 537-538, 234 Cal.Rptr. 795(*Carmel Valley*), for example, an executive order required that county firefighters be provided with protective clothing and safety equipment. Because this increased safety equipment apparently was designed to result in more effective fire protection, the mandate evidently was intended to produce a higher level of service to the public, thereby satisfying the first alternative test set out in *County of Los Angeles, supra,* 43 Cal.3d 46, 56, 233 Cal.Rptr. 38, 729 P.2d 202. Similarly, in **599*Long Beach Unified School District v. State of California* (1990) 225 Cal.App.3d 155, 173, 275 Cal.Rptr. 449(*Long Beach*), an executive order required school districts to take specific steps to measure and address racial segregation in local public schools. The appellate court held that this constituted a "higher level of service" to the extent the order's requirements exceeded federal constitutional and case law requirements by mandating school districts to undertake defined remedial actions and measures that were merely advisory under prior governing law.

[1] The District and the Commission assert that the "mandatory" aspect of Education Code section 48915, insofar as it compels suspension and mandates an expulsion recommendation for firearm possession (and thereafter restricts the board's options to expulsion or referral to an off-site alternative school), carries out a governmental function of providing services to the public and hence constitutes an increased or higher level of service concerning an existing program under the first alternative test of *County of Los Angeles, supra,* 43 Cal.3d 46, 56, 233 Cal.Rptr. 38, 729 P.2d 202. They argue, in essence, that the present matter is more analogous to the latter cases *878(*Carmel Valley, supra,* 190 Cal.App.3d 521, 234 Cal.Rptr. 795, and *Long Beach, supra,* 225 Cal.App.3d 155, 275 Cal.Rptr. 449)-both of which involved measures designed to increase the level of governmental service provided to the public-than to the former cases (*County of Los Angeles, supra,* 43 Cal.3d 46, 233 Cal.Rptr. 38, 729 P.2d 202,*City of Sacramento, supra,* 50 Cal.3d 51, 266 Cal.Rptr. 139, 785 P.2d 522, and *City of Richmond, supra,* 64 Cal.App.4th 1190, 75 Cal.Rptr.2d 754)-in which the cost of employment was increased but the resulting governmental services themselves were not directly enhanced or increased. As we shall explain, we agree with the District and the Commission.

The statutory requirements here at issue-immediate suspension and mandatory recommendation of expulsion for students who possess a firearm, and the limitation upon the ensuing options of the school board (expulsion or referral)-reasonably are viewed as providing a "higher level of service" to the public under the commonly understood sense of that term: (i) the requirements are new in comparison with the preexisting scheme in view of the circumstance that they did not exist prior to the enactment of Statutes of 1993, chapters 1255 (Assem. Bill No. 342 (1993-1994 Reg. Sess.) (Assembly Bill No. 342)) and 1256 (Senate Bill ***478 No. 1198 (1993-1994 Reg. Sess.) (Senate Bill No. 1198)); and (ii) the requirements were intended to provide an enhanced service to the public-*safer schools for the vast majority of students* (that is, those who are not expelled or referred to other school sites). In other words, the legislation was premised upon the idea that by removing potentially violent students from the general school population, the safety of those students who remain thereby is increased. (See, e.g., Stats.1993, ch. 1255, § 4, pp. 7285-7286 ["In order to ensure public safety on school campuses ... it is necessary that this act take effect immediately"]; Sen. Com. on Ed. (Apr. 28, 1993),

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Analysis of Assem. Bill No. 342, p. 2 [noting legislative purpose to enhance public safety]; see also Assem. Com. on Ed. (July 14, 1993), Analysis of Sen. Bill No. 1198, p. 1 [noting legislative purpose to remove those who possess firearms from the general school population by increasing the frequency of expulsion for such conduct].)

In challenging this conclusion, the Department relies upon *County of Los Angeles v. Department of Industrial Relations* (1989) 214 Cal.App.3d 1538, 263 Cal.Rptr. 351(*Department of Industrial Relations*). In that case, the state enacted enhanced statewide safety regulations that governed all public and private elevators, and thereafter the County of Los Angeles sought reimbursement for the costs of complying with the new regulations. The Court of Appeal found that the regulations constituted neither a new program nor a higher level of service concerning an existing program under either of the two alternative tests set out in *County of Los Angeles, supra,* 43 Cal.3d 46, 56, 233 Cal.Rptr. 38, 729 P.2d 202. The court concluded that the elevator regulations did not meet the first alternative test, because the regulations did not carry out a governmental function of providing services to the public; the court found instead that ***879** "[p]roviding elevators equipped with fire and earthquake ****600** safety features simply is not a 'government function of providing services to the public.' " (*Department of Industrial Relations, supra,* 214 Cal.App.3d at p. 1546, 263 Cal.Rptr. 351.) Moreover, the court found, the second ("uniqueness") test was not met-the regulation applied to all elevators, not only those owned or operated by local governments.

The Department asserts that *Department of Industrial Relations, supra,* 214 Cal.App.3d 1538, 263 Cal.Rptr. 351, is analogous, and argues that the "service" afforded by mandatory suspensions followed by a required expulsion recommendation, etc., is "not qualitatively different from the safety regulations at issue in [*Department of Industrial Relations*]. School districts carrying out such expulsions are not providing a service to the public...." We disagree. Providing public schooling clearly constitutes a governmental function, and enhancing the safety of those who attend such schools constitutes a service to the public. Moreover, here, unlike the situation in *Department of Industrial Relations,* the law implementing this state policy applies uniquely to local public schools. We conclude that *Department of Industrial Relations* does not conflict with the conclusion that the mandatory suspension and expulsion recommendation requirements, together with restrictions placed upon a district's resolution of such a case, constitute an increased or higher level of service to the public under the constitutional provision and the implementing statutes.

Of course, even if, as we have concluded above, a statute effectuates an increased or higher level of governmental service to the public concerning an existing program, this "does not necessarily lead to the conclusion that the program is a *state* mandate*****479** under California Constitution, article XIII B, section 6."(*County of Los Angeles v. Commission on State Mandates* (1995) 32 Cal.App.4th 805, 818, 38 Cal.Rptr.2d 304, italics added (*County of Los Angeles II*).) We turn to the question whether the hearing costs at issue, flowing from compulsory suspensions and mandatory expulsion recommendations, are mandated by the state.

2. *Are the hearing costs state mandated?*

As noted above, a compulsory suspension and a mandatory recommendation of expulsion under Education Code section 48915 in turn trigger a mandatory expulsion hearing. All parties agree that any such resulting expulsion hearing must comply with basic federal due process requirements, such as notice of charges, a right to representation by counsel, an explanation of the evidence supporting the charges, and an opportunity to call and cross-examine witnesses and to present evidence. (See *ante,* fn. 5.) But as also noted above, article XIII B, section 6, and the implementing statutes ***880**

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Gov.Code, § 17500 et seq.), by their terms, provide for reimbursement only of *state*-mandated costs, not *federally* mandated costs. The Commission and the Department assert that this circumstance raises the question: Do all or some of a district's costs in complying with the mandatory expulsion provision of Education Code section 48915 constitute a non-reimbursable *federal* mandate?

In the absence of the operation of Education Code section 48915's mandatory provision (specifically, compulsory immediate suspension and a mandatory expulsion recommendation), a school district would not automatically incur the due process hearing costs that are mandated by federal law pursuant to *Goss, supra,* 419 U.S. 565, 95 S.Ct. 729, 42 L.Ed.2d 725, and related cases, and codified in Education Code section 48918. Instead, a district would incur such hearing costs only if a school principal first were to exercise discretion to recommend expulsion. Accordingly, in its mandatory aspect, Education Code section 48915 appears to constitute a state mandate, in that it establishes conditions under which the state, rather than local officials, has made the decision requiring a school district to incur the costs of an expulsion hearing.

The Department and the Commission agree to a point, but argue that a district's costs incurred in complying with this state mandate are reimbursable only if, and to the extent that, hearing procedures set forth in Education Code section 48918 exceed the requirements of federal due process. In support, they rely upon Government Code **601section 17556, which in setting forth circumstances in which the Commission shall *not* find costs to be mandated by the state provides that "[t]he commission shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds that: ... (c) The statute or executive order implemented a federal law or regulation and resulted in costs mandated by the federal government, unless the statute or executive order mandates costs which exceed the mandate in that federal law or regulation." FN13

FN13. Government Code section 17556 reads in full: "The commission shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds that: [¶] (a) The claim is submitted by a local agency or school district which requested legislative authority for that local agency or school district to implement the program specified in the statute, and that statute imposes costs upon that local agency or school district requesting the legislative authority. A resolution from the governing body or a letter from a delegated representative of the governing body of a local agency or school district which requests authorization for that local agency or school district to implement a given program shall constitute a request within the meaning of this paragraph. [¶] (b) The statute or executive order affirmed for the state that which had been declared existing law or regulation by action of the courts. [¶] (c) The statute or executive order implemented a federal law or regulation and resulted in costs mandated by the federal government, unless the statute or executive order mandates costs which exceed the mandate in that federal law or regulation. [¶] (d) The local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service. [¶] (e) The statute or executive order provides for offsetting savings to local agencies or school districts which result in no net costs to the local agencies or school districts, or includes additional revenue that was specifically intended to fund the costs of the state mandate in an amount sufficient to fund the cost of the state mandate. [¶] (f) The statute or executive order

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> imposed duties which were expressly included in a ballot measure approved by the voters in a statewide election. [¶] (g) The statute created a new crime or infraction, eliminated a crime or infraction, or changed the penalty for a crime or infraction, but only for that portion of the statute relating directly to the enforcement of the crime or infraction."

***480 *881** We agree with the District and the Court of Appeal below that, as applied to the present case, it cannot be said that Education Code section 48915's mandatory expulsion provision "*implemented a federal law or regulation.*" (Italics added.) Education Code section 48915, at the time relevant here, did not implement any federal law; as explained below, federal law did not *then* mandate an expulsion recommendation-or expulsion-for firearm possession.[FN14] Moreover, although the Department argues that in this context Government Code section 17556, subdivision (c)'s phrase "the statute" should be viewed as referring not to Education Code section 48915's mandatory expulsion recommendation requirement, but instead to the mandatory due process hearing under Education Code section 48918 that is triggered by such an expulsion recommendation, it still cannot be said that section 48918 itself required the District to incur any costs. As noted above, Education Code section 48918 sets out requirements for expulsion hearings that must be held when a district seeks to expel a student-but neither section 48918 nor federal law requires that any such expulsion recommendation be made in the first place, and hence section 48918 does not implement any federal mandate that school districts hold such hearings and incur such costs whenever a student is found in possession of a firearm. Accordingly, we conclude that the so-called exception to reimbursement described in Government Code section 17556, subdivision (c), is inapplicable in this context.

> FN14. Subsequent amendments to federal law may alter this conclusion with regard to future test claims concerning Education Code section 48915's mandatory expulsion provision-see *post,* 16 Cal.Rptr.3d pages 481-482, 94 P.3d pages 602-603.

Because it is state law (Education Code section 48915's mandatory expulsion provision), and not federal due process law, that requires the District to take steps that in turn require it to incur hearing costs, it follows, contrary to the view of the Commission and the Department, that we cannot characterize *any* of the hearing costs incurred by the District, triggered by the mandatory provision of Education Code section 48915, as constituting a federal mandate (and hence being nonreimbursable). We conclude **602 that under the statutes existing at the time of the test claim in this case (state legislation in effect through ***481** mid-1994), *all* such hearing costs-those designed to satisfy the minimum requirements of federal due process, and those that may exceed **882** those requirements-are, with respect to the mandatory expulsion provision of section 48915, state mandated costs, fully reimbursable by the state.[FN15]

> FN15. In Exhibit No. 1 to its claim, the District presented the declaration of a San Diego Unified School District official, estimating that in order to process "350 proposed expulsions" during the period spanning July 1, 1993, to June 30, 1994, the District would incur approximately $94,200 "in staffing and other costs"-yielding an average estimated cost of approximately $270 per hearing during the relevant period. It is unclear from the record how many of these 350 hearings would be triggered by Education Code section 48915's mandatory expulsion provision (and constitute state-mandated costs subject to reimbursement under article XIII B, section 6), and how many of these 350 hearings would be triggered by Education Code section 48915's discretionary provision (and, as explained *post,* in part II.B,

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

constitute a nonreimbursable *federal* mandate).

We note that in the proceedings below, the Commission did not confine reimbursement only to those matters as to which the district on its own initiative would not have sought expulsion in the absence of the statutory requirement that it seek expulsion-and the Department has not raised that point in the trial court or on appeal.

Against this conclusion, the Department, in its supplemental briefing, offers a wholly new theory, not advanced in any of the proceedings below, in support of its belated claim that *all* hearing costs triggered by Education Code section 48915's mandatory expulsion provision are in fact nonreimbursable *federal* mandates, and not, as we have concluded above, reimbursable state mandates. As we shall explain, we reject the Department's contention, as applied to the test case here at issue (involving state statutes in effect through mid-1994).

The Department cites 20 United States Code section 7151, part of the federal No Child Left Behind Act of 2001, which provides, as relevant here: "Each State receiving Federal funds under any subchapter of this chapter shall have in effect a State law requiring local educational agencies to expel from school for a period of not less than 1 year a student who is determined to have brought a firearm to a school, or to have possessed a firearm at a school, under the jurisdiction of local educational agencies in that State, except that such State law shall allow the chief administering officer of a local educational agency to modify such expulsion requirement for a student on a case-by-case basis if such modification is in writing." FN16

FN16. "Firearm," as defined in 18 United States Code section 921, includes guns and explosives.

The Department further asserts that more than $2.8 billion in federal funds under the No Child Left Behind Act are included "for local use" in the 2003-04 state budget. (Cal. State Budget, 2003-04, Budget Highlights, p. 4.) The Department argues that in light of the requirements set forth in 20 United States Code section 7151, and the amount of federal program funds at issue under the No Child Left Behind Act, the financial consequences to the state and to the school districts of failing to comply with 20 United States Code section 7151 are such that as a practical matter, *883Education Code section 48915's mandatory expulsion provision in reality constitutes an implementation of federal law, and hence resulting costs are nonreimbursable except to the extent they exceed the requirements of federal law. (See Govt.Code, § 17556, subd. (c); see also *Kern High School Dist., supra,* 30 Cal.4th 727, 749-751, 134 Cal.Rptr.2d 237, 68 P.3d 1203; *City of Sacramento, supra,* 50 Cal.3d 51, 70-76, 266 Cal.Rptr. 139, 785 P.2d 522.) Moreover, the Department asserts, to the extent school districts are ***482** compelled by federal law, through Education Code section 48915's mandatory expulsion provision, to hold hearings pursuant to section 48918 in cases of firearm possession on school grounds, under 20 United States Code section 7164 (defining prohibited uses of program funds), *all* costs of such hearings properly may be paid out of federal program funds, and hence we should "view the ... provision of program funding as satisfying, in advance, any reimbursement requirement." (*Kern High School Dist., supra,* 30 Cal.4th 727, 747, 134 Cal.Rptr.2d 237, 68 P.3d 1203.)

**603 Although the Department asserts that this federal law and program existed at the time relevant in this matter (that is, through mid-1994), our review of the statutes and relevant history suggests otherwise. Title 20 of the United States Code, section 7151, and the remainder of the No Child Left Behind Act, became effective on January 8, 2002. The predecessor legislation cited by the Department-the Gun-Free Schools Act of 1994 (former 20 U.S.C. § 8921(a)), although containing a substantially identical mandatory expulsion provision (*id.*, § 8921(b)(1)) FN17 -was not effective until July 1, 1995 (108 Stat. 3518, § 3). In turn, the predecessor

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

legislation to *that* Act cited by the Department, the Elementary and Secondary Education Act of 1965 (former 20 U.S.C. § 6301 et seq.)-as it existed at the time relevant here (July 1, 1993, through June 30, 1994)-contained no such mandatory expulsion provision. Accordingly, it appears that despite the Department's late discovery of 20 United States Code section 7151, at the time relevant here (regarding legislation in effect through mid-1994), neither 20 United States Code section 7151, nor either of its predecessors, compelled states to enact a law such as Education Code section 48915's mandatory expulsion provision. Therefore, we reject the Department's assertion that, during the time period at issue in this case, Education Code section 48915's mandatory expulsion provision constituted an implementation of a federal, rather than a state, mandate.

> FN17. The prior law stated: "Except as provided in paragraph (3), each State receiving Federal funds under this chapter shall have in effect a State law requiring local educational agencies to expel from school for a period of not less than one year a student who is determined to have brought a weapon to a school under the jurisdiction of local educational agencies in that State, except that such State law shall allow the chief administering officer of such local educational agency to modify such expulsion requirement for a student on a case-by-case basis." (Pub.L. No. 103-382, § 14601(b)(1) (Oct. 20, 1994) 108 Stat. 3518.)

Although we conclude that all hearing costs triggered by Education Code section 48915's mandatory expulsion provision constitute reimbursable state-mandated expenses under the statutes as they existed during the period ***884** covered by the District's present test claim, we do not foreclose the possibility that 20 United States Code section 7151 or its predecessor, 20 United States Code section 8921, may lead to a different conclusion when applied to versions of Education Code section 48915 effective in years 1995 and thereafter. Indeed, we note that at least one subsequent test claim that has been filed with the Commission may raise the federal statutory issue advanced by the Department.FN18

> FN18. See Pupil Expulsions II (4th Amendment), CSM No. 01-TC-18 (filed June 3, 2002). This claim, filed by the San Juan Unified School District, asserts reimbursable state mandates with respect to, among numerous other statutes, Education Code section 48915, as amended effective in 2002.

B. *Costs associated with hearings triggered by discretionary expulsion recommendations*

[2] We next consider whether reimbursement is required for the costs associated*****483** with hearings triggered under discretionary expulsion provisions. Again, we address first the issue that we asked the parties to brief: Does the discretionary expulsion provision of Education Code section 48915 (former subd. (c), thereafter subd. (d), currently subd. (e)), which, as noted above, recognized that a principal possesses *discretion* to recommend that a student be expelled for specified conduct other than firearm possession (conduct such as damaging or stealing property, using or selling illicit drugs, possessing tobacco or drug paraphernalia, etc.), and further specified that the school district governing board "may" order a student expelled upon finding that the student, while at school or at a school activity off school grounds, engaged in such conduct, constitute a "new program or higher level of service" under article XIII B, section 6 of the state Constitution, and under Government Code section 17514?

We answer this question in the negative. The discretionary expulsion provision of Education Code section 48915 does not constitute a "new" program or higher level of service, because provisions recognizing discretion to suspend or expel were set forth in statutes predating 1975. (See Educ.Code,

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

former **604 § 10601, Stats.1959, ch. 2, § 3, p. 860 [providing that a student may be suspended for good cause]; *id.*, former § 10602 (Stats.1970, ch. 102, § 102, p. 159 (defining "good cause"); *id.*, former section 10601.6 (Stats.1972, ch. 164, § 2, p. 384 (further defining "good cause").))) FN19 Accordingly, the discretionary expulsion provision of Education Code section 48915 is not a "new" program under article XIII B, section 6, and the implementing statutes, *885 nor does it reflect a higher level of service related to an existing program. (*County of Los Angeles, supra,* 43 Cal.3d 46, 56, 233 Cal.Rptr. 38, 729 P.2d 202.)

> FN19. As the Commission observed in its Corrected Statement of Decision in this matter: "The authorization for governing boards to expel pupils from school for inappropriate behaviors has been in existence since before 1975. The behaviors defined as inappropriate under current law, subdivisions (a) though (*l*) of section 48900, 48900.2, and 48900.3, meet prior laws' definitions of 'good cause' and 'misconduct' as reasons for expulsion." (Italics deleted.)

The District maintains, nevertheless, that once it elects to pursue expulsion, it is obligated to abide by the procedural hearing requirements of Education Code section 48918 and accordingly is mandated by that section to incur costs associated with such compliance. The District asserts that in this respect, *section 48918* constitutes a "new program or higher level of service" related to an existing program under article XIII B, section 6 and under Government Code section 17514. We shall assume for analysis that this is so.FN20

> FN20. The requirements of Education Code section 48918 would appear to be "new" for purposes of the reimbursement provisions, in that they did not exist prior to 1975 and were enacted in that year and subsequently. (See *ante,* fn. 2.) The requirements also would appear to meet both alternative tests set forth in *County of Los Angeles, supra,* 43 Cal.3d 46, 56, 233 Cal.Rptr. 38, 729 P.2d 202-that is, by implementing procedures that direct and guide the process of expulsion from public school, the statute appears to carry out a governmental function of providing services to public school students who face expulsion; or, it would seem, section 48918 constitutes a law that, to implement state policy, imposes unique requirements on local governments.

The District recognizes, of course, that under Government Code, section 17556, subdivision (c), it is not entitled to reimbursement to the extent Education Code section 48918 merely implements federal due process law, but the District argues that it has a right to reimbursement for its costs of complying with section 48918*to* ***484 *the extent* those costs are attributable to hearing procedures that *exceed* federal due process requirements. (See Govt.Code, § 17556, subd. (c).) The District asserts that its costs in complying with various notice, right of inspection, and recording requirements (see *ante,* fn. 11) fall into this category and are reimbursable.

The Department and the Commission argue in response that any right to reimbursement for hearing costs triggered by discretionary expulsions-even costs limited to those procedures that assertedly exceed federal due process hearing requirements-is foreclosed by virtue of the circumstance that when a school pursues a discretionary expulsion, it is not acting under compulsion of any law but instead is exercising a choice. In support, the Department and the Commission rely upon *Kern High School Dist., supra,* 30 Cal.4th 727, 134 Cal.Rptr.2d 237, 68 P.3d 1203, and *City of Merced v. State of California* (1984) 153 Cal.App.3d 777, 200 Cal.Rptr. 642(*City of Merced*).

In *Kern High School Dist., supra,* 30 Cal.4th 727, 134 Cal.Rptr.2d 237, 68 P.3d 1203, school districts asserted that costs incurred in complying with statutory notice and agenda requirements for commit-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

tee meetings concerning various state and federally funded educational programs constituted a reimbursable state mandate, because once ***886** school districts *elected* to participate in the underlying state and federal programs, the districts had no option but to hold program-related committee meetings and abide by the challenged notice and agenda requirements. (*Id.*, at p. 742, 134 Cal.Rptr.2d 237, 68 P.3d 1203.) We rejected the school districts' position, reasoning in part that because the districts' participation in the underlying programs was voluntary, the notice and agenda costs incurred as a result of that voluntary participation were not the product of legal compulsion and did not constitute a reimbursable state mandate on that basis. ****605**(*Id.*, at p. 745, 134 Cal.Rptr.2d 237, 68 P.3d 1203.) FN21

> FN21. We also proceeded to hold that in any event, because the school districts were free to use program funds to pay for the challenged increased costs, the districts had, in practical effect, already been given funds by the Legislature to cover the challenged costs. (*Kern High School Dist., supra,* 30 Cal.4th at pp. 748-754, 134 Cal.Rptr.2d 237, 68 P.3d 1203.)

In reaching that conclusion in *Kern High School Dist., supra,* 30 Cal.4th 727, 134 Cal.Rptr.2d 237, 68 P.3d 1203, we discussed *City of Merced, supra,* 153 Cal.App.3d 777, 200 Cal.Rptr. 642. In that case, the city wished either to purchase or to condemn, pursuant to its eminent domain authority, certain privately owned real property. The city elected to proceed by eminent domain, under which it was required by then recent legislation (Code Civ. Proc., § 1263.510) to compensate the property owner for loss of "business goodwill." The city so compensated the property owner and then sought reimbursement from the state, arguing that the new statutory requirement that it compensate for business goodwill amounted to a reimbursable state mandate. (*City of Merced, supra,* 153 Cal.App.3d at p. 780, 200 Cal.Rptr. 642.) The Court of Appeal concluded that the city's increased costs flowing from its election to condemn the property did not constitute a reimbursable state mandate. (*Id.*, at pp. 781-783, 200 Cal.Rptr. 642.) The court reasoned: "[W]hether a city or county decides to exercise eminent domain is, essentially, an option of the city or county, rather than a mandate of the state. *The fundamental concept is that the city or county is not required to exercise eminent domain. If, however, the power of eminent domain is ***485 exercised, then the city will be required to pay for loss of goodwill. Thus, payment for loss of goodwill is not a state-mandated cost.*" (*Id.*, at p. 783, 200 Cal.Rptr. 642, italics added.)

Summarizing this aspect of *City of Merced, supra,* 153 Cal.App.3d 777, 200 Cal.Rptr. 642, in *Kern High School Dist., supra,* 30 Cal.4th 727, 134 Cal.Rptr.2d 237, 68 P.3d 1203, we stated: "[T]he core point articulated by the court in *City of Merced* is that *activities undertaken at the option or discretion of a local government entity* (that is, actions undertaken without any legal compulsion or threat of penalty for nonparticipation) *do not trigger a state mandate and hence do not require reimbursement of funds-even if the local entity is obliged to incur costs as a result of its discretionary decision to participate in a particular program or practice.*" (*Kern High School Dist.*, at p. 742, 134 Cal.Rptr.2d 237, 68 P.3d 1203, italics added.)

The Department and the Commission argue that in the present case the District, like the claimants in *Kern High School Dist.*, errs by focusing upon ***887** the final result-a school district's legal obligation to comply with statutory hearing procedures-rather than focusing upon whether the school district has been *compelled* to put itself in the position in which such a hearing (with resulting costs) is required.

The District and amici curiae on its behalf (consistently with the opinion of the Court of Appeal below) argue that the holding of *City of Merced, supra,* 153 Cal.App.3d 777, 200 Cal.Rptr. 642, should not be extended to apply to situations beyond the context presented in that case and in *Kern High School Dist., supra,* 30 Cal.4th 727, 134

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Cal.Rptr.2d 237, 68 P.3d 1203. The District and amici curiae note that although any particular expulsion recommendation may be discretionary, as a practical matter it is inevitable that some school expulsions will occur in the administration of any public school program.[FN22]

> FN22. Indeed, the Court of Appeal below suggested that the present case is distinguishable from *City of Merced, supra,* 153 Cal.App.3d 777, 200 Cal.Rptr. 642, in light of article I, section 28, subdivision (c), of the state Constitution. That constitutional subdivision, part of Proposition 8 (known as the Victims' Bill of Rights initiative, adopted by the voters at the Primary Election in June 1982), states: "All students and staff of public primary, elementary, junior high and senior high schools have the inalienable right to attend campuses which are safe, secure and peaceful." The Court of Appeal below concluded: "In light of a school district's constitutional obligation to provide a safe educational environment ..., the incurring of [hearing] costs [under Education Code section 48918] cannot properly be viewed as a nonreimbursable 'downstream' consequence of a decision to [seek to] expel a student under [Education Code section 48915's discretionary provision] for damaging or stealing school or private property, using or selling illicit drugs, receiving stolen property, engaging in sexual harassment or hate violence, or committing other specified acts of misconduct ... that warrant such expulsion."

Building upon this theme, amicus curiae on behalf of the District, California School Boards Association, argues that based upon article I, section 28, subdivision (c), of the state Constitution, together with Education Code section 48200 et seq. and article IX, section 5 of the state Constitution (establishing and implementing a right of public education), *no* expulsion recommendation is "truly discretionary." Indeed, amicus curiae argues, school districts may not, "either as a matter of law or policy, realistically choose to [forgo] expelling [a] student [who commits one of the acts, other than firearm possession, referenced in Education Code section 48915's discretionary provision], because doing so would fail to meet that school district's legal obligations to provide a safe, secure and peaceful learning environment for the other students."

****606** Upon reflection, we agree with the District and amici curiae that there is reason to question an extension of the holding of *City of Merced* so as to preclude reimbursement*****486** under ***888**article XIII B, section 6 of the state Constitution and Government Code section 17514, whenever an entity makes an initial discretionary decision that in turn triggers mandated costs. Indeed, it would appear that under a strict application of the language in *City of Merced,* public entities would be denied reimbursement for state-mandated costs in apparent contravention of the intent underlying article XIII B, section 6 of the state Constitution and Government Code section 17514[FN23] and contrary to past decisions in which it has been established that reimbursement was in fact proper. For example, as explained above, in *Carmel Valley, supra,* 190 Cal.App.3d 521, 234 Cal.Rptr. 795, an executive order requiring that county firefighters be provided with protective clothing and safety equipment was found to create a reimbursable state mandate for the added costs of such clothing and equipment. (*Id.,* at pp. 537-538, 234 Cal.Rptr. 795.) The court in *Carmel Valley* apparently did not contemplate that reimbursement would be foreclosed in that setting merely because a local agency possessed discretion concerning how many firefighters it would employ-and hence, in that sense, could control or perhaps even avoid the extra costs to which it would be subjected. Yet, under a strict application of the rule gleaned from *City of Merced, supra,* 153 Cal.App.3d 777, 200 Cal.Rptr. 642, such costs would not be reimbursable for the simple reason that the local agency's decision to employ firefighters involves an exercise of discretion concerning,

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

for example, how many firefighters are needed to be employed, etc. We find it doubtful that the voters who enacted article XIII B, section 6, or the Legislature that adopted Government Code section 17514, intended that result, and hence we are reluctant to endorse, in this case, an application of the rule of *City of Merced* that might lead to such a result.

> FN23. As we observed in *Kern High School Dist., supra,* 30 Cal.4th 727, 751-752, 134 Cal.Rptr.2d 237, 68 P.3d 1203, "article XIII B, section 6's 'purpose is to preclude the state from shifting financial responsibility for carrying out governmental functions to local agencies, which are "ill equipped" to assume increased financial responsibilities.' "

In any event, we have determined that we need not address in this case the problems posed by such an application of the rule articulated in *City of Merced,* because this aspect of the present case can be resolved on an alternative basis. As we shall explain, we conclude, regarding the reimbursement claim that we face presently, that *all* hearing procedures set forth in Education Code section 48918 properly should be considered to have been adopted to implement a federal due process mandate, and hence that all such hearing costs are nonreimbursable under article XIII B, section 6, and Government Code section 17557, subdivision (c).

In this regard, we find the decision in *County of Los Angeles II, supra,* 32 Cal.App.4th 805, 38 Cal.Rptr.2d 304, to be instructive. That case concerned Penal Code section 987.9, which requires counties to provide indigent criminal defendants with defense funds for ancillary investigation services related to capital trials and certain other trials, and further provides related procedural protections-namely, the confidentiality of a request for funds, the right to have the request ruled upon by a judge other than the trial judge, and the right to an in camera hearing on the request. The county in that case asserted that funds expended under the statute constituted reimbursable ****607** state mandates. The Court of Appeal disagreed, finding instead that the Penal Code section merely implements the requirements of federal constitutional law, and that "even in the ***889** absence of [*****487**Penal Code] section 987.9, ... counties would be responsible for providing ancillary services under the constitutional guarantees of due process ... and under the Sixth Amendment...." (32 Cal.App.4th at p. 815, 38 Cal.Rptr.2d 304.) Moreover, the Court of Appeal concluded, the procedural protections that the Legislature had built into the statute-requirements of confidentiality of a request for funds, the right to have the request ruled upon by a judge other than the trial judge, and the right to an in camera hearing on the request-were merely incidental to the federal rights codified by the statute, and their "financial impact" was de minimis. (*Id.,* at p. 817, fn. 7, 38 Cal.Rptr.2d 304.)Accordingly, the Court of Appeal concluded, the Penal Code section, in its entirety-that is, *even those incidental aspects of the statute that articulated specific procedures, not expressly set forth in federal law, for the filing and resolution of requests for funds*-constituted an implementation of federal law, and hence those costs were nonreimbursable under article XIII B, section 6.

We conclude that the same reasoning applies in the present setting, concerning the District's request for reimbursement for procedural hearing costs triggered by its discretionary decision to seek expulsion. As in *County of Los Angeles II, supra,* 32 Cal.App.4th 805, 38 Cal.Rptr.2d 304, the initial discretionary decision (in the former case, to file charges and prosecute a crime; in the present case, to seek expulsion) in turn triggers a federal constitutional mandate (in the former case, to provide ancillary defense services; in the present case, to provide an expulsion hearing). In both circumstances, the Legislature, in adopting specific statutory procedures to comply with the general federal mandate, reasonably articulated various incidental procedural protections. These protections are designed to make the underlying federal right enforceable and to set forth procedural details that were not

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

expressly articulated in the case law establishing the respective rights; viewed singly or cumulatively, they did not significantly increase the cost of compliance with the federal mandate. The Court of Appeal in *County of Los Angeles II* concluded that, for purposes of ruling upon a claim for reimbursement, such incidental procedural requirements, producing at most de minimis added cost, should be viewed as part and parcel of the underlying federal mandate, and hence nonreimbursable under Government Code, section 17556, subdivision (c). We reach the same conclusion here.

Indeed, to proceed otherwise in the context of a reimbursement claim would produce impractical and detrimental consequences. The present case demonstrates the point. The record reveals that in the extended proceedings before the Commission, the parties spent numerous hours producing voluminous pages of analysis directed toward determining whether various provisions of Education Code section 48918 exceeded federal due process requirements. That task below was complicated by the circumstance that this area of federal due process law is not well developed. The Commission, which is not a judicial body, did as best it could and concluded that in certain ***890** respects the various provisions (as observed *ante,* footnote 11, predominantly concerning notice, right of inspection, and recording requirements) "exceeded" the requirements of federal due process.

Even for an appellate court, it would be difficult and problematic in this setting to categorize the various notice, right of inspection, and recording requirements here at issue as falling either within or without the general federal due process mandate. The difficulty results not only from the circumstance that, as noted, the case law *****488** in the area of due process procedures concerning expulsion matters is relatively undeveloped, but also from the circumstance that when such an issue is raised in an action for reimbursement, as opposed to its being raised in litigation challenging an actual expulsion on the ground of allegedly inadequate hearing procedures, the issue inevitably is presented in the abstract, without any factual context that might help frame the legal issue. In such circumstances, courts are-and should be-****608** wary of venturing pronouncements (especially concerning matters of constitutional law).

In light of these considerations, we agree with the conclusion reached by the Court of Appeal in *County of Los Angeles II, supra,* 32 Cal.App.4th 805, 38 Cal.Rptr.2d 304: for purposes of ruling upon a request for reimbursement, challenged state rules or procedures that are intended to implement an applicable federal law-and whose costs are, in context, de minimis-should be treated as part and parcel of the underlying federal mandate.

Applying that approach to the case now before us, we conclude there can be no doubt that the assertedly "excessive due process" aspects of Education Code section 48918 for which the District seeks reimbursement in connection with hearings triggered by discretionary expulsions (see *ante,* footnote 11-primarily, as noted, various notice, right of inspection, and recording rules) fall within the category of matters that are merely incidental to the underlying federal mandate, and that produce at most a de minimis cost. Accordingly, for purposes of the District's reimbursement claim, all hearing costs incurred under Education Code section 48918, triggered by the District's exercise of discretion to seek expulsion, should be treated as having been incurred pursuant to a mandate of federal law, and hence all such costs are nonreimbursable under Government Code section 17556, subdivision (c).FN24

> FN24. We do not foreclose the possibility that a local government might, under appropriate facts, demonstrate that a state law, though codifying federal requirements in part, also imposes more than "incidental" or "de minimis" expenses in excess of those demanded by federal law, and thus gives rise to a reimbursable state mandate to that extent.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

***891 III**

The judgment of the Court of Appeal is affirmed insofar as it provides for full reimbursement of all costs related to hearings triggered by the mandatory expulsion provision of Education Code section 48915. The judgment of the Court of Appeal is reversed insofar as it provides for reimbursement of any costs related to hearings triggered by the discretionary provision of section 48915. All parties shall bear their own costs on appeal.

City of Los Angeles Ordinance No. 178132, fn. 68

1954

ORDINANCE NO. 178132

An ordinance amending Chapter IX Article I Section 91.106.4.1 and Chapter VI Article 4.4 Section 64.72 and adding Section 64.72.05 of the Los Angeles Municipal Code to collect fees to recover the Bureau of Sanitation's cost of providing Best Management Practices plan check to comply with the Standard Urban Stormwater Mitigation Plan or Site Specific Mitigation Plan; and amending Chapter IX Article I Section 91.106.4.1 of the Los Angeles Municipal Code by increasing the parcels over which the Department of Building and Safety may withhold grading permits from those with disturbed areas.

THE PEOPLE OF THE CITY OF LOS ANGELES DO ORDAIN AS FOLLOWS:

Section 1. Exception 13 of Section 91.106.4.1 of Chapter IX of Article I of the Los Angeles Municipal Code is amended to read:

13. The Department of Building and Safety shall have the authority to withhold grading permits for developments with disturbed areas of one acre or more unless the applicant is able to show that a Notice of Intent to comply with the State Construction Activity Storm Water Permit has been filed with the State Water Resources Control Board and a Storm Water Pollution Prevention Plan has been prepared. For the purpose of this section, "**disturbed area**" shall mean an area altered as a result of cleaning, grading and/or excavation of earth.

Sec 2. Exception 15 B of Section 91.106.4.1 of Chapter IX of Article I of the Los Angeles Municipal Code is amended to read:

B. The City receives a Covenant and Agreement, signed by the owner and recorded with the Los Angeles County Recorder, declaring that the best management practices necessary to control stormwater pollution shall be installed and/or constructed and maintained in proper working condition at all times; and

Sec 3. A new Paragraph C is added to Exception 15 of Section 91.106.4.1 of Chapter IX of Article I of the Los Angeles Municipal Code to read:

C. The applicant pays a Best Management Practices plan check fee to comply with the Standard Urban Stormwater Mitigation Plan or Site Specific Mitigation Plan as authorized by Section 64.72.05 of this Code.

Sec 4. Subsection (B) of Section 64.72 of Chapter VI of Article 4.4 of the Los Angeles Municipal Code is amended to read:

(B) **Scope.** This section provides for the requirements of stormwater pollution control measures in accordance with the "**Development Best**

Management Practices Handbook" adopted by the Board of Public Works. This section applies to development and redevelopment projects and authorizes the Board of Public Works to define and adopt stormwater pollution control measures, collect Best Management Practices compliance plan check fees, grant waivers from the requirements of the Standard Urban Stormwater Mitigation Plan, collect funds from projects that are granted waivers, conduct inspections, cite violators for infractions, and impose fines. Except as otherwise provided here, the Board of Public Works shall administer, implement and enforce the provisions of this section.

Sec. 5. A new Section 64.72.05 of Chapter VI of Article 4.4 of the Los Angeles Municipal Code is added to read:

SEC. 64.72.05. BEST MANAGEMENT PRACTICES PLAN CHECK FEES

A. Before formally accepting a set of plans and specifications for checking, the Bureau of Sanitation shall collect a Best Management Practices plan check fee.

B. The fee schedule for providing Best Management Practices plan check services for Standard Urban Stormwater Mitigation Plan (SUSMP) or Site Specific Mitigation Plan (SSMP) is as follows:

	Development Category	Fees
1	Single-family hillside residential developments less than 1 acre	$ 200 / Project
2	Other Types of developments	$ 600 / Project

C. At the discretion of the Bureau of Sanitation, a large scale project may be categorized as a Special Project and billed on actual cost incurred by the City.

D. Off-hour Plan Check Fee. Upon request by an applicant, the Bureau of Sanitation may, at its discretion, provide plan check at other than normal working hours upon application therefore by an applicant. In addition to the plan check fees listed in (B) of this Section, an additional 50 percent premium will be collected at the time of request.

E. All entities, including City Departments and other public agencies, are required to pay the Best Management Practices plan check fees.

F. All monies collected pursuant to Section 64.72.05 of this Code shall be placed and deposited into the Stormwater Pollution Abatement Fund established by Section 64.51.11 of the Los Angeles Municipal Code.

Sec. 6. The City Clerk shall certify to the passage of this ordinance and have it published in accordance with Council policy, either in a daily newspaper circulated in the City of Los Angeles or by posting for ten days in three public places in the City of Los Angeles: one copy on the bulletin board located at the Main Street entrance to the Los Angeles City Hall; one copy on the bulletin board located at the Main Street entrance to the Los Angeles City Hall East; and one copy on the bulletin board located at the Temple Street entrance to the Los Angeles County Hall of Records.

I hereby certify that the foregoing ordinance was passed by the Council of the City of Los Angeles, at its meeting of NOV 2 9 2006.

MUNICIPAL STORM WATER PERMIT FOR LOS ANGELES COUNTY - REVIEW OF SECOND YEAR COMPLIANCE (NPDES No. CA0061654, CI File No. 6948)

The County of Los Angeles, as principal permittee for the above NPDES permit, has submitted information required in the permit for second year compliance. On January 11, 1993, in the interest of timely implementation, we transmitted our letter approving the proposed Storm Water Monitoring Program and Early Action Best Management Practice Plans and our recommendations. A Regional Board workshop was conducted on January 25, 1993, to solicit comments from permittees and the public on these recommendations to the program. Comments were received from the Los Angeles County Department of Public Works and other co-permittees, three environmental groups, and the U.S. Environmental Protection Agency. Staff has reviewed all comments and made revisions to the recommendations. Enclosed as Attachment 1 are comments on the second year compliance submittals. Attachment 2 contains review comments on the Storm Water Monitoring Program.

We request that you respond to comments contained in the Attachments by July 1, 1993. We will present the results of this Review of Second Year Compliance at the July 19 Board meeting, to be held at Glendale City Hall, 613 E. Broadway, Glendale, at 9:30 a.m. Responses to comments from the County of Los Angeles may be presented at this time.

Staff of the Los Angeles County Department of Public Works has improved co-permittee participation and communication between permittees and the Regional Board in the past year by conducting monthly action meetings for the different phases. I encourage the continuation of this communication, and believe that this level of effort at coordination must be sustained to ensure the success of the storm water program.

If you have any questions regarding the second year comments or requirements, please call me at (213) 266-7510, or have your staff call Mark Pumford at (213) 266-7596.

ATTACHMENT 1
MUNICIPAL STORM WATER PERMIT FOR LOS ANGELES COUNTY
REVIEW OF SECOND YEAR COMPLIANCE
(July 1, 1991 - June 30, 1992)

I. BACKGROUND

On June 18, 1990, this Regional Board adopted Order No. 90-079 (NPDES No. CA0061654) regulating storm water and urban runoff discharges from separate storm water sewers throughout Los Angeles County.

The area-wide municipal storm water permit was issued specifically recognizing that the storm drainage system in Los Angeles County is interconnected across numerous municipal jurisdictions. A workable and cost-effective storm water management program may be achieved only if Best Management Practices (BMPs) are used effectively to address, minimize, and/or prevent the pollution of storm water runoff on an area wide basis. Consequently, adoption and implementation of widely applicable pollution prevention practices as the initial step would be the most practical and efficient approach to ensure program effectiveness.

The Regional Board requires that permittees within their jurisdictions implement storm water management practices that are an integral part of a comprehensive area-wide storm water program. This may be achieved by incorporating a set of the same BMPs in all municipalities and a supplemental series of BMPs specific to the characteristics of a geographic location or hydrologic area. Other factors for consideration in effective BMP program development include:

1. Cross-Jurisdictional Agreements - A program for detecting and eliminating illegal connections, discharges, and disposals is essential for the overall success of the storm water program. The closures of Los Angeles County beaches due to high bacteria counts coming from the storm drainage system exemplify the fact that contaminants, litter, or other materials found in one municipality may originate from another area or municipality leading to cross-jurisdictional impacts. In order to effectively respond to such occurrences, a formal agreement should be developed by permittees similar to one being developed by the Ballona Creek Task Force chaired by the Los Angeles County Department of Public Works.

2. Construction Sites - The control of pollutants in surface runoff from construction sites is essential in preventing the flow of sediments and other waste materials and/or contaminants to the drainage system.

Municipal permittees are encouraged to adopt ordinances like those of the cities of Santa Monica and Malibu and develop enforcement strategies. These may include inspections at construction sites to insure that all practices are done in a proper and legal manner, and that problems are rectified immediately.

The State Water Resources Control Board (State Board) adopted a General Construction Storm Water Permit on August 20, 1992, which requires that a Storm Water Pollution Prevention Plan (SWPPP) be retained on site and will be made available to Regional Board or local authority

representatives when requested. The SWPPP establishes procedures adopted by the site operator to prevent the pollution of storm water leaving the site, and is an important document to verify proper practices.

3. Industrial Sites - Municipal permittees are to develop a storm water enforcement program which at a minimum shall include the inspection of industrial and commercial sites for compliance with municipal storm water pollution prevention programs. Such a program may utilize the Storm Water Pollution Prevention Plan (SWPPP) to verify compliance at facilities subject to the State of California General Industrial Storm Water Permit, and for notification of Regional Board staff for follow-up action.

4. Model Proposals - The City of Los Angeles and the City of Torrance have proposed and implemented noteworthy storm water programs and policies which may be effective in the prevention of runoff pollution. Regional Board staff suggests that all permittees consider such programs for potential implementation.

At the January 27, 1992, and January 25, 1993, Board meetings, staff presented reviews of compliance with first and second year requirements of the municipal storm water permit, respectively. At that time, not all requirements for Year 1 had been completed and some were carried over to Year 2.

During the first year of the Permit (July 1, 1990 - June 30, 1991), the cities and entities within the Santa Monica Bay Drainage Basin were phased into the Storm Water Program - 19 cities, the County of Los Angeles, Caltrans, and unincorporated areas of Ventura County.

The City of Thousand Oaks, which has a portion draining to the Santa Monica Bay Drainage Basin, submitted Part 1 and Part 2 application for a separate Municipal Storm Water Discharge Permit for that portion on March 25, 1992 and March 25, 1993, respectively. The City of Thousand Oaks is cooperating with the County of Los Angeles to ensure that all necessary information, data compilation, BMP compilation, and other relevant information is completed in a timely manner.

On July 1, 1992, 36 entities from the Upper Los Angeles River and the Upper San Gabriel River Drainage Basins became permittees under Phase II of the storm water permit. These cities in the Upper Los Angeles River Basin are: Burbank, Glendale, Hidden Hills, and San Fernando. Cities in the Upper San Gabriel River Drainage Basin are: Alhambra, Arcadia, Azusa, Baldwin Park, Bradbury, Claremont, Covina, Diamond Bar, Duarte, El Monte, Glendora, Industry, Irwindale, La Cañada Flintridge, La Habra Heights, La Puente, La Verne, Monrovia, Montebello, Monterey Park, Pasadena, San Dimas, San Gabriel, San Marino, Sierra Madre, South El Monte, South Pasadena, Temple City, Walnut, and West Covina.

On July 1, 1993, 30 entities from the Lower Los Angeles River and the Lower San Gabriel River Drainage Basins will become permittees under Phase III of the storm water permit. These entities include: Artesia, Bell, Bellflower, Bell Gardens, Carson, Cerritos, Commerce, Compton, Cudahy, Downey, Gardena, Hawaiian Gardens, Hawthorne, Huntington Park, Lakewood, La Mirada, Lawndale, Lomita, Long Beach, Lynwood, Maywood, Norwalk, Paramount, Pico Rivera, Santa Clarita, Santa Fe Springs, Signal Hill, South Gate, Vernon, and Whittier.

For the purposes of this Attachment, tasks that are requirements of the Municipal Permit will be underlined. Required actions necesarry to fullfill the requirements are shown in bold.

II. COMPLIANCE WITH REMAINING FIRST YEAR PERMIT REQUIREMENTS - SANTA MONICA BAY DRAINAGE BASIN

Task 2.1.8 Submit Early Action BMPs (EABMPs) during the first year of the permit for approval by the Executive Officer.

An EABMP is defined as an existing storm water/urban runoff management practice that is optimized to the maximum extent practicable in efficiency for the control or prevention of storm water runoff pollution.

Fifteen plans for this activity were submitted to the Board on January 23, 1992; however, the cities of El Segundo, Malibu, Inglewood, Calabasas, County of Ventura, and the City of Beverly Hills submitted their EABMPs between June 17 and November 18, 1992.

EABMP plans and schedules for implementation submitted represent a wide range of BMPs. All EABMPs proposed by individual cities may help prevent or control storm water pollution in their respective areas but may not be the most effective method of minimizing storm water pollution if not implemented on an area wide basis.

III. SECOND YEAR COMPLIANCE WITH PERMIT REQUIREMENTS

Year 2 requirements were submitted by all Permittees, on July 2, 1992, except Ventura County, which to date has not submitted the required information.

The required tasks, and Regional Board review of the submittals, follows:

Task 3.1 For each Drainage Basin, prepare and submit to the Regional Boards for approval by the Executive Officer, a monitoring program designed to:

a. detect accurately the constituents and parameters of concern in discharges indicated in the workplan, and to identify possible sources

b. identify illegal dischargers and/or locations of illicit disposal practices

Permittees submitted a monitoring program workplan on March 26, 1992, which was deficient in several respects. A detailed staff review of the workplan and required amendments are provided in Attachment 2. Regional Board staff and Los Angeles County Department of Public Works staff have had several discussions on deficiencies in the plans and are near agreement on a final monitoring program.

Task 3.1.2 Submit to the Regional Board for approval a plan with schedule of implementation of Additional BMPs (ABMPs), judged appropriate for each city or drainage basin to control pollutants from residential, commercial, and industrial sites to the maximum extent practicable.

Board staff has determined that the following BMPs shall constitute the minimum required for area-wide implementation. These BMPs will be used to evaluate compliance with BMP requirements of the permit. These BMPs will not entirely satisfy the EABMP nor the ABMP requirements but serve as a minimum. This list is not an additional requirement, but incorporates BMPs already proposed by some permittees.

It establishes an area-wide minimum BMP implementation standard for storm water management in the Santa Monica Bay watershed.

1. Establish or improve an area-wide catch basin stenciling program with a universal stencil to discourage dumping, discarding, and/or discharge of pollutants, carriers, and/or debris into storm drainage systems county wide.

2. Develop programs to promote, publicize and facilitate public reporting of illegal discharges and/or dumping (Permit Task 3.1.3).

3. Adopt a runoff control ordinance requiring the use of BMPs during and after construction and at selected commercial and industrial establishments (Permit Tasks 3.1.2, and 3.1.4.)

4. Augment public education and outreach programs with regard to catch basins and storm drainage systems and their intended purpose.

5. Provide additional catch basin and storm water channel cleaning when and where needed.

6. Increase cleaning frequency of and number of roadside trash receptacles in areas where needed.

7. Increase street sweeping in areas where needed.

8. Create or augment a program to eliminate the improper disposal of litter, lawn/garden clippings, and pet feces into the street or areas where runoff may carry these pollutants to the storm drainage system.

9. Implement facility inspections of auto repair shops, auto body shops, auto parts and accessory shops, gasoline stations, and restaurants (Permit Task 3.1.2).

10. Encourage owners and occupants of homes or businesses to remove dirt, rubbish, and debris from their sidewalks and alleys which may contribute pollutants to urban runoff.

11. Encourage recycling of oil, antifreeze, glass, plastic, and other materials to prevent their improper disposal into the storm drainage system.

12. Encourage the proper disposal of Household Hazardous Wastes to prevent the improper disposal of such materials to the storm drainage system.

13. Encourage the proper use and conservation of water to minimize runoff from landscaped areas, lawns, golf courses, etc.

A detailed plan, with schedule of implementation of above mentioned baseline BMPs, must be submitted to this Regional Board no later than July 1, 1993.

The Additional BMP plans submitted are inadequate for control of pollutants from residential, commercial, and industrial sites. Greater detail must be provided and a revised schedule for implementation must be submitted. ABMPs selected for implementation must supplement EABMPs and must control pollutants to the maximum extent practicable on an area-wide basis.

A plan, with schedule of implementation, for additional BMPs judged appropriate for each city or drainage basin must be developed. These ABMPs, implemented to control pollutants from residential, commercial, and industrial sites to the maximum extent practicable, must be submitted to this Regional Board no later than July 1, 1993.

Task 3.1.3 Submit for approval a plan with schedule of implementation of procedures to detect and eliminate illegal discharges and illicit disposal practice.

The plans submitted to comply with this requirement are inadequate. Some permittees have proposed only the standardization of hazardous material spill containment capabilities and response procedures to improve containment and clean-up. The standardization of containment procedures is not in itself sufficient and as such does not satisfy permit requirements. Other permittees omitted information altogether.

A plan, with schedule of implementation of procedures to detect and eliminate illegal discharges and illicit disposal practices, must be submitted to this Regional Board no later than July 1, 1993.

Task 3.1.4 Submit for approval a plan with schedule of implementation of measures to control pollutants in surface runoff from construction sites.

Board staff's review of plans submitted for this requirement determined that the ABMPs for control of pollutants from construction sites are inadequate. More detail must be provided and a revised schedule for implementation must be submitted. ABMPs selected for implementation must supplement EABMPs.

One permittee responded that because all undeveloped lots in its jurisdiction are less than one tenth of an acre in size, no plan to control pollutants or sediments is necessary other than simply sand bagging. This may be true for sediment or erosion control but does not necessarily control waste materials generated during construction. A plan for the control of pollutants for construction sites is required regardless of size under the municipal compliance program. Construction activity may include any disturbance of soil including excavation, grading, and demolishing.

Another permittee has proposed to make construction contractors aware of permit regulations and the problems associated with contaminated runoff. Such measures may be adequate for certain municipalities but are most effective if practiced across municipal jurisdictions. In addition, other BMPs must be considered.

A plan, with schedule of implementation of measures to control pollutants in surface runoff from construction sites, must be submitted to this Regional Board no later than July 1, 1993.

Task 3.2 Evidence of satisfactory progress of implementation of plan and schedule for early action BMPs

The Cities of Torrance and Los Angeles have implemented EABMPs in advance of the Executive Officer's approval. These cities are the only permittees in compliance with this requirement. Progress

made by these municipalities is very positive. Permittees should consider the implementation of similar programs and/or practices. Staff commends the initiative taken by these cities. Other cities have indicated that they have implemented EABMPs as well, but no documentation has been submitted to the Regional Board.

Evidence of satisfactory progress of implementation of plan and schedule for early action BMPs and additional BMPs must be submitted to this Regional Board no later than July 1, 1993.

Task 3.3 Evidence of all requisite legal authority to regulate illegal discharges and illicit disposal practices to drainage facilities, and to prosecute violators

The Permit Implementation Agreement submitted to the Board to satisfy Task 3.3 is an agreement between permittees which establishes responsibilities with respect to compliance with the Storm Water Permit. The agreement, however, does not demonstrate that the permittees possess adequate legal authority to regulate illegal discharges and illicit disposal practices to storm water drainage facilities, and to prosecute violators. While general nuisance codes and rules may exist, it is important to adopt specific legal regulations specific to storm water and urban runoff, both to educate the public at large and to consolidate the authority to enforce violations.

The City of Santa Monica and the City of Malibu have developed model ordinances which provide legal authority to enforce storm water program requirements. Similar model ordinances should to be considered by all permittees in the drainage basin. These cities' ordinances are a forward step in satisfying the legal authority requirements.

The City of Santa Monica Urban Runoff Pollution Ordinance requires the use of pollutant and runoff control measures; contains pollution control mandates for all construction sites within the city; and requires reduction in urban runoff flows from all new development.

The City of Malibu Ordinance No. 51U establishes storm water management standards, and amends the excavation and grading standards of the municipal code to comply with the Federal Clean Water Act.

A summary of all requisite legal authority to regulate illegal discharges and illicit disposal practices to drainage facilities and to prosecute violators must be submitted to this Regional Board no later than July 1, 1993. The actual sections of municipal ordinances must be submitted to this Board no later than September 17, 1993.

IV. CONCLUSION AND RECOMMENDATIONS

Permittee and co-permittee compliance with storm water permit requirements is improving. The variety of approaches taken by the majority of permittees to meet permit requirements was not conducive of an area-wide program. With an increased level of compliance, a workable comprehensive storm water/urban runoff management program for Los Angeles County may be achieved.

Board staff suggests that permittees share information and discuss submittals to insure an effective area-wide comprehensive program.

Staff believes that specific EABMPs submitted which are regionally applicable should be implemented in all areas. ABMPs selected for implementation should supplement EABMPs.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION
JUNE 14, 1993

ATTACHMENT 2
REVIEW OF SECOND YEAR COMPLIANCE
MONITORING WORK PLAN FOR THE SANTA MONICA BAY WATERSHED

I. SUMMARY

Board staff, in evaluating the Santa Monica Bay (SMB) Watershed monitoring work-plan, considered (1) existing storm water monitoring programs in other urban areas of the State, (2) the United States Environmental Protection Agency guidance for municipal storm water permitting, (3) recent reports by the Santa Monica Bay Restoration Project on non-point-source pollution, and (4) comments received by Los Angeles County during public review of the plans.

Although the monitoring plan submitted by the County and co-permittees addresses the specific objectives required by the permit (Board Order No. 90-079, Section 3.1.1), it overlooked the objective of the Storm Water Program which is to achieve a reduction of pollutants discharged through storm water and urban runoff to receiving waters. Additionally, the submittal lacks the essential elements of a comprehensive monitoring program. The proposed plan was insufficient in the following areas:

1. rationale/procedures for the selection of monitoring sites and relationship to specific objectives;
2. quality assurance/quality control procedures for field sampling, data analysis, and data management; and,
3. projected time schedules to meet the various objectives.

The list of monitoring parameters submitted are acceptable, with the addition of the biological indicator Enterococcus. We recommend that bacterial indicator monitoring be coordinated with existing programs of the Los Angeles County Department of Health and the City of Los Angeles for cost effectiveness. The proposed monitoring frequency is satisfactory.

For the purposes of this attachment, recommendations are in *italics*, required actions are in bold.

Board staff proposes the following revisions to the monitoring plan:

1. *Include enterococcus as a monitoring parameter;*

2. Add the following tasks and schedule for completion;

	TASKS	COMPLETION DATE	REPORT OF COMPLIANCE TO REGIONAL BOARD
a.	Develop methodology to make refined estimates of pollutants discharged to Santa Monica Bay	July 1, 1993	July 15, 1993
b.	Make a first estimate of pollutant loads to Santa Monica Bay on the basis of monitoring	July 1, 1994	July 15, 1994
c.	Complete a basic QA/QC plan for the Storm Water Monitoring Program	July 1, 1993	July 15, 1993
d.	Develop and implement a pilot project to establish monitoring of long-term trends in storm water quality	July 1, 1993	Jan 15, 1994
e.	Develop monitoring for identification of sources of pollutants	July 1, 1993	Jan 15, 1994
f.	Develop and implement a monitoring program to evaluate effectiveness of BMPs	Jan 1, 1994	Jan 15, 1994
g.	Develop and implement a monitoring program to identify locations of illegal practices and elimination sources of pollutants	Jan 1, 1994	Jan 15, 1994
h.	Develop and implement a program to evaluate storm water impacts on selected receiving waters	July 1, 1994	July 15, 1994

II. EVALUATION OF THE PROPOSED MONITORING PLAN

1. Objectives of the Monitoring Plan

The objectives of a comprehensive Storm Water/Urban Runoff Monitoring Program must include the following:

(a) develop a methodology to refine annual estimates of pollutant loads to Santa Monica Bay;

(b) determine long-term trends in the quality of storm water/urban runoff;

(c) improve the understanding of sources of storm water pollution;

(d) establish effectiveness of controls (BMPs) for specific land uses, with implication for broader implementation;

(e) identify illegal discharges or locations of illegal disposal practices; and,

(f) monitor effects of storm water/urban runoff on receiving water quality and watet quality objectives.

The proposed monitoring plan submitted by Los Angeles County includes objectives (b) through (e), but does not address (a) and (f). *Staff proposes that (a) and (f) be included.*

2. Annual Estimates of Pollutant Loads

The proposed work-plan does not discuss this objective. The permittees in their monitoring plan proposed a pilot program of nine monitoring stations in the Santa Monica watershed to evaluate storm water quality. The permittees must modify the choice of sampling stations to include the major drainage basins in the watershed and use this pilot project to make the first estimate of pollutant loads to Santa Monica Bay. It must be recognized that the number of monitoring stations need to be increased in coming years to meet the criterion of two stations per land use category.

Annual pollutant loads and event mean concentrations (EMCs) are important parameters to assess the impact of municipal storm water discharges on receiving waters. Sampling stations to estimate pollutant loads and EMCs must include drainage basins with the largest input relative to volume and predominant land-uses. A good evaluation of the relative importance of drainage basins within the Santa Monica Bay watershed is provided in a report produced for the Santa Monica Bay Restoration Project by UCLA[2]. Permittees are expected to select an appropriate mathematical model (e.g. QUALUDAS, SWMM, etc.) to refine and estimate pollutant loads, and for decision-making projections. While detailed dynamic modelling for the entire Basin may be too resource intensive, a simple model for the whole Basin could be augmented with a dynamic model for large sub-basins (such as the Malibu Creek and the Ballona Creek watersheds), and single land-use sub-basins (such as the Palos Verdes Peninsula watershed). A discussion of storm water models may be found in "Modelling of Nonpoint Source Water Quality in Urban and Non-urban Areas, Donigan and Heber"[16].

Development of methodology to refine estimates of pollutant loads must be accomplished and documented no later than July 15, 1993.

3. Long-Term Trends in Storm Water/Urban Runoff Quality

Permittees have proposed nine test sites for the pilot study to select fixed stations but have not justified the usefulness of these sites in terms of either pollutant loads or predominant land uses. Almost half the number of sites are within a single basin (Ballona Creek basin), and none are located within the large Malibu Creek watershed.

The objective of any long-term monitoring is to monitor potential pollutant trends in storm water/urban runoff quality and loads. Fixed stations for such purposes must be representative of the twenty-seven basins in the SMB watershed, in terms of land-use breakdowns, rainfall patterns, and land area. The pilot study may be used to choose fixed stations to evaluate long term trends in water quality and pollutant loads. The choice of permanent stations must be properly justified and approved. Also required is a description of the statistical methodology that will be used to evaluate data, and the accounting of factor variability. It is expected that this program will be expanded eventually to include two stations per significant land use, including road transportation corridors.

The pilot study to develop a monitoring program to establish long term trends in storm water quality must be initiated immediately and the objective must be accomplished no later than January 15, 1994.

4. Sources of Storm Water Pollutants

The permittees have discussed this objective in general but without focus or detail. No pilot or model program to develop this objective has been presented.

Identification of sources of pollutants that generate high concentrations and present the greatest risk is important to the targeting of storm water quality management programs. An effective monitoring program should evaluate sources that include, (a) priority industrial sources, (b) priority commercial/retail sources, (c) land-use categories, and (d) urban transportation corridors. Source identification should consider both water and sediment as media for pollutant transport. This task is not mutually exclusive and could be successfully integrated with other elements of the monitoring program.

This component of the Monitoring Program is part of compliance activity under permit requirement 3.1.3. (page 11) of NPDES Permit No. CA0061654.

A detailed description of a pilot or model program to meet this objective must be submitted by July 15, 1993 and the program implemented no later than January 1, 1994.

5. Effectiveness of BMPs

The permittees discussed this objective only briefly. No specific plan is proposed to evaluate effectiveness of BMPs through monitoring.

Monitoring to evaluate the effectiveness of BMPs, and characterize the efficiency of specific controls is

important in focussing available resources to achieve the most pollutant reduction. Structural controls may be evaluated in specific locations by discrete sampling and then considered for area-wide application. The effectiveness of non-structural BMPs may be evaluated locally before basin-wide implementation. Further, monitoring regional structural-BMPs routinely will forewarn the onset of operation and maintenance problems.

A detailed description of a plan to meet this objective, outlining pilot projects for immediate implementation is due January 15, 1994.

6. Illegal Discharges and Illegal Disposal Practices

The permittees mentioned this objective but did not discuss a plan to monitor illegal discharges or locations of illicit disposal practices.

Monitoring to identify sources and locations of illegal practices is essential in identifying violations that may adversely affect a storm water quality management program. A monitoring program that includes selected screening indicator parameters and flexible locations will facilitate the identification of contaminated sites or pollutant sources for additional evaluations.

A detailed description of a plan to address this objective and the area for immediate implementation must be submitted no later than January 15, 1994.

7. Receiving Water Quality

The permittees did not discuss this objective in the proposed workplan. Receiving water monitoring is an integral requirement of all major NPDES permits.

Investigating impacts of storm water on receiving water quality is essential to protecting beneficial uses and is best approached as an integrated effort. Initial programs should focus on screening for in-stream toxicity of storm water and evaluation of stream sediment toxicity using biological approaches such as the triad method (i.e., bulk sediment chemistry, sediment toxicity information, and benthic community survey) in selected receiving waters (e.g., Ballona Creek at Marina del Rey, Malibu Lagoon, etc.)[10,11]. Such programs may be coordinated with other agencies, including the Santa Monica Bay Restoration Project, for maximum benefit.

A detailed description of a plan to achieve this objective must be submitted no later than July 15, 1994.

8. Quality Assurance/Quality Control

The work-plan does not discuss Program Quality Assurance/Quality Control and Data Management procedures.

A QA/QC Plan should address as appropriate, (a) Standard operating procedures including, field procedures, pre-sampling mobilization, sample collection procedures, chain-of-custody and post sampling procedures, (b) Laboratory QA/QC, including lab compositing, detection limits and holding times and, (c) Data reduction, validation, and data reporting. Also essential are monitoring plan management, plan

schedule, field crew training, and health and safety plan. Data management, including reporting and analyses, should discuss statistical methods for analysis and reporting of data (including censored data).

A basic QA\QC Plan for the storm water monitoring program must be submitted by July 15, 1993. *Specific modifications to the basic QA\QC Plan for single projects may be addressed in supplementary submittals.*

9. General Comments

In addition, we have the following minor comments regarding the monitoring program:

i. Sampling

- *semi-volatiles should be collected as grab-samples*
- *metals should be done as both soluble and total*
- *Cyanide should be done as a grab sample*
- *Grab samples must be collected during the first part of the storm*
- *Flow weighting method is faulty; volume must be set by storm based on predicted runoff coefficients; bottles may have to be changed if storm is larger than expected*
- *Minimum flow volume for dry weather analysis must be reported*
- *Dry weather sampling should be done as a 24-hr composite (except for bacteriological indicators, pH, cyanide, oil and grease, semi-volatile organic compounds).*

ii. Equipment

- *Samplers must be continuously maintained and pre-storm checked*
- *Provide details on sampling and flow equipment, and data storage required.*
- *Number of bottles in sampler and volume available not described.*
- *Equipment housing procedures must be presented.*

10. References

The following section lists references used by Board staff in its review of the monitoring plan and are sources that permittees may find useful in addressing our comments.

1. Introduction and Background

1.1 Overview

Purpose of the Guidance

The National Pollutant Discharge Elimination System (NPDES) Municipal Separate Storm Sewer System (MS4) Program Evaluation Guidance (Guidance) is intended to assist State and NPDES permitting authority staff to:

- Assess the compliance and effectiveness of Phase I and Phase II MS4 programs;
- Develop Phase II MS4 stormwater management programs (SWMPs);
- Assess pollutants of concern;
- Provide technical assistance.

TIP:

The questions and issues addressed in this MS4 Evaluation Guidance are intended to be used as a reference during an MS4 program evaluation, not as a script or checklist during the review.

Each evaluation should be customized to the issues and requirements specific to that MS4.

Unlike NPDES industrial wastewater permits which typically contain specific end-of-pipe effluent limits based on water quality standards or available treatment technology, MS4 permits usually include programmatic requirements involving the implementation of **best management practices** (BMPs) in order to reduce pollutants discharged to the "maximum extent practicable" (MEP). In addition, the permittees often are allowed flexibility in the types of BMPs and activities implemented to meet permit requirements. This flexibility, as well as the multifaceted nature of the requirements, makes it difficult to evaluate the effectiveness of MS4 stormwater programs. The purpose of this Guidance is to provide NPDES permitting authority staff the information and questions necessary to conduct a comprehensive MS4 program evaluation and determine if the permittee is implementing the program in order to reduce pollutants discharged to the MEP. This Guidance is not intended to be used as a checklist, rather as a reference to prepare for and conduct an MS4 evaluation. The evaluator must ultimately rely on personal experience and **best professional judgment** (BPJ) to conduct a comprehensive MS4 program evaluation.

An MS4 program evaluation is ultimately based on the requirements in the MS4 permit and commitments made in the stormwater management program (SWMP). These should serve as the primary references for a specific MS4 program evaluation, with this Guidance used as a tool to help assess compliance with the SWMP Plan and the permit. The evaluator may also recommend additional activities that should be conducted by the permittee to improve the SWMP. The term evaluation can refer to an audit, inspection or screening process depending on the level of detail utilized. These terms are defined under "Common Terms" below.

It is important to keep in mind that this Guidance is not an enforcement "how to" document, but can be used to *assist* in the enforcement process by describing a process for consistently and accurately assessing and documenting the compliance status of permittees based on permit or SWMP requirements. Notes, checklists, and reports developed as a result of an evaluation will be helpful when justifying and generating enforcement actions.

TIP:

Permittees may find this Guidance useful in conducting a self-audit to identify and proactively address issues.

Intended Audience

This Guidance is written for State and EPA staff responsible for NPDES MS4 permit issuance, compliance and inspections.

Permittees may also find the information in this Guidance useful in conducting a self-audit to improve the effectiveness of their SWMP.

Resources:

Information regarding permitting authorities or other NPDES information can be found at www.epa.gov/npdes/stormwater

Objective Evaluation

This Guidance is intended to provide information to evaluators to help them objectively evaluate if the permittee is implementing the SWMP to the MEP. This is going to vary from state to state and by permittee. For example, some states have requirements that go beyond the federal regulations, or have state programs or policies that affect the way in which certain requirements are articulated in a permit. In addition, individual NPDES MS4 permits may provide some details on the type of program elements the permittee must implement, but not describe in detail all activities necessary to implement each element. Typically these permits require that the permittee's SMWP Plan include this detail, however, and be submitted for approval. Or permits may specify goals or performance standards that the permittee must meet and then require them to develop the necessary program components to reach those goals or standards and describe them in their SWMP.

Each permittee may have a different approach to complying with a specific permit requirement based on MS4-specific traits or issues. For example, EPA regulations require permittees to develop "procedures for site inspection and enforcement" for addressing construction activities. MS4 permits will likely elaborate on this requirement in more detail, such as by specifying a minimum frequency for inspection. However, few MS4 permits will specify how the permittee should inventory their active construction projects or track enforcement activities. A permittee with only a few construction projects a year may be able to use a paper system to inventory and track construction projects. A permittee with hundreds or thousands of construction projects would likely need a database or similar electronic tracking system to ensure it was implementing the program to the MEP.

Some MS4 permits will not include any specific requirements at all and will only generally dictate that the required MS4 SMWP components are developed and implemented. These MS4 programs are often the hardest to objectively evaluate because there is no prescribed benchmarks to measure against. In these cases, the evaluator will need to subjectively assess the MS4's SWMP program against the intent of the associated regulations to reduce pollutants to the MEP. Evaluation techniques and tools (i.e. checklists) may need to be altered in these cases to best ascertain and assess the effectiveness and compliance status of such a program.

Common Terms

For purposes of this guidance, it is important to note that the term "evaluation" is generally used to define any assessment of an MS4 program. Evaluations are further defined as either "inspections", "audits", or "screenings" depending upon the level of review performed. These and other common terms used throughout this Guidance are defined as follows:

- Audit—comprehensive evaluation of all components of an MS4 program to assess overall implementation and identify problems
- MS4—the municipal separate storm sewer system (full text definition included in Appendix A); can refer to the conveyance system in addition to the jurisdiction(s) which own/operate the system.
- Permittee—the permitted owner/operator(s) of the MS4; the entity being evaluated
- Evaluation—any screening, audit or inspection of an MS4 program
- Evaluator—the NPDES permitting authority staff person who is conducting the evaluation of the MS4 program

- Inspection—focused evaluation of specific components of an MS4 program to verify compliance with permit requirements
- Municipal permittee—a general reference to a municipality that is the owner/operator of an MS4 and is covered by an NPDES MS4 permit
- Permit Area—Geographic area covered by the MS4 permit
- Permitting Authority—the State or EPA Region authorized to issue NPDES permits
- Screening—evaluation method used to get a basic impression of a program or uncover "red flags;" may be used as a precursor to a program evaluation
- Stormwater Management Program, or SWMP—the stormwater management program implemented by the permittee; also referred to as the "program"
- SWMP Plan—the document often used by permittees to document SWMP elements implemented or planned

How to Use this Guidance

The first part of this Guidance includes background information useful for review. Subsequent sections lead the evaluator through a series of steps to conduct an evaluation, which can be categorized into three parts: Advance Preparation, Conducting the Evaluation, and Post-Evaluation Activities.

The section titled "Conducting the Evaluation" is divided into subsections that describe in depth how to evaluate overall program management as well as each of the major SWMP components:

- MS4 public education and participation
- MS4 maintenance activities
- Construction activities
- Post-construction controls
- Industrial/commercial facilities
- Illicit discharge detection and elimination

For each subsection, the following information is provided:

- A description of regulatory requirements
- Resources for more information
- Common activities related to the SWMP component
- Materials to review prior to the evaluation
- Elements to address and questions to ask during the evaluation
- A description of any recommended in-field evaluation activities
- Common issues identified during evaluations

In addition, a glossary as well as multiple worksheets and checklists have been included in appendices as tools for the evaluator to prepare for and conduct an MS4 SWMP evaluation.

Appendix A—Glossary & Acronym List
Appendix B—Evaluation Worksheets

Appendix C—Field Visit Worksheets
Appendix D—Annual Report Review and Evaluation Worksheet

Note that this Guidance is best used as a preparatory tool and except for the worksheets in Appendices B and C does not lend itself well as a reference to be used *during* an evaluation.

1.2 Regulatory Overview

For More Information:
For information on stormwater programs and regulations visit www.epa.gov/npdes/stormwater

Background

A brief summary of EPA's stormwater regulations are presented below. Sections of relevant regulatory text are included in the Chapter 4 of this Guidance, however, MS4 stormwater program evaluators are referred to the NPDES Phase I and Phase II regulations, preamble, and other EPA guidance for detailed information on the stormwater regulations. State programs that wish to adopt this Guidance may want to add state-specific elements.

In 1987, Congress amended the **Clean Water Act** (CWA) to require implementation, in two phases, of a comprehensive national program for addressing stormwater discharges.

Stormwater Phase I

The first phase of the program, commonly referred to as "Phase I," was promulgated on November 16, 1990 (55 *Federal Regulations* (FR) 47990) and addresses MS4, active construction and industrial facilities.

Phase I requires NPDES permits for stormwater discharges from a large number of priority sources including medium and large MS4s generally serving populations of 100,000 or more, and several categories of industrial activity, including construction activity that disturbs five or more acres of land.

The Phase I permits mostly covered larger cities, and required them to develop a SWMP, conduct some monitoring, and submit periodic reports.

According to 40 CFR 122.26(b)(8), **municipal separate storm sewer system** means a "conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains): (i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law)...including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the Clean Water Act that discharges into waters of the United States. (ii) Designed or used for collecting or conveying stormwater; (iii) Which is not a combined sewer; and (iv) Which is not part of a **Publicly Owned Treatment Works** (POTW) as defined at 40 CFR 122.2."

TIP:
MS4 systems can be linear or more complex, open, piped, manmade, natural, or a combination of all of these things. Some carry groundwater or piped streams, are tidally influenced, or have some other constant source of non-stormwater discharge.

What constitutes an MS4 is often misinterpreted and misunderstood. An MS4 is not always just a system of underground pipes—it can include roads with drainage systems, gutters, and ditches. Although most entities with MS4s are local municipal governments (e.g., cities and counties), there are other governmental entities that manage storm drain systems at their facility, including state departments of transportation, universities, local sewer districts, hospitals, military installations, and prisons. As

previously stated in the "Common Terms" section, the term "MS4" can refer to the system itself or the entities which own and operate the system.

The operators of construction activities disturbing greater than 5 acres have been required to obtain NPDES permit coverage since 1992. General permits for large construction activity require construction operators to develop and implement a stormwater pollution prevention plan to control erosion, sediment and other wastes on the site.

The Phase I industrial stormwater program regulates eleven industrial categories, which EPA has further broken out into 30 sectors. Similar to construction activities, these industrial facilities have been required to obtain NPDES permit coverage since 1992. General permits require regulated industries to develop and implement a stormwater pollution prevention plan, including monitoring for some industries.

Stormwater Phase II

The second phase of the stormwater program, promulgated on December 8, 1999 (64 FR 68722) and amends existing Phase I regulations dealing with MS4s, active construction and industrial facilities.

Phase II Stormwater Minimum Measures
- ✓ Public education and outreach
- ✓ Public involvement/ participation
- ✓ Illicit discharge detection and elimination
- ✓ Construction site runoff control
- ✓ Post-construction stormwater management
- ✓ Pollution prevention/ good housekeeping for municipal operations

The Phase II regulations require NPDES permits for stormwater discharges from certain small municipal separate storm sewer systems and construction activity generally disturbing between 1 and 5 acres. The construction requirements essentially extended the Phase I threshold for construction activities from 5 acres down to 1 acre.

Under the Phase II MS4 stormwater program, operators of regulated small MS4s are required to

- Apply for NPDES permit coverage
- Develop a SWMP that addresses six minimum control measures
  - Public Education and Outreach on Stormwater Impacts
  - Public Involvement/Participation
  - Illicit Discharge Detection and Elimination
  - Construction Site Runoff Control
  - Post-Construction Stormwater Management in New Development and Redevelopment
  - Pollution Prevention/Good Housekeeping for Municipal Operations
- Implement the SWMP using appropriate stormwater management controls, or BMPs
- Develop measurable goals for the SWMP
- Evaluate the effectiveness of the SWMP
- Provide reports on program status

The Phase II regulations also required certain regulated industrial facilities, with no industrial activities exposed to stormwater runoff, to submit a certification of "no exposure" if the facility fell into one of the regulated eleven industrial categories but did not have an NPDES permit.

MS4 Permits

Phase I MS4 permittees were subject to the permit application requirements found at 40 *Code of Federal Regulations* (CFR) 122.26(d). The permit application consisted of two parts that provided the NPDES permitting authority comprehensive information to use in developing permit requirements. Information required in the application included a physical description of the MS4, legal authority of the MS4 operator, a characterization of the surrounding sources and the pollutants found in the stormwater discharge, and a description of fiscal resources. The most significant portion of the application was the development of a proposed SWMP that would meet the standard of "reducing pollutants to the MEP." Using the information submitted in the permit application, the NPDES permitting authority would then develop appropriate permit requirements. Phase I MS4 permittees were covered under individual permits issued to either single permittees or groups of co-permittees.

Although there are some exceptions, phase II MS4 permittees are primarily covered by general permits that require implementation of the six minimum control measures.

The specific requirements in MS4 permits vary greatly around the country. Some MS4 permits contain broad requirements that outline the basic SWMP components the permittee is required to implement, giving the permittee the flexibility to develop a program to meet these broad requirements. Other MS4 permits are more prescriptive and specify in detail the minimum activities and BMPs for each program element.

1.3 Types of Permittees

Traditional MS4 Programs

Many MS4 operators permitted under the NPDES program are either city or county governments. To evaluate this type of an MS4 program, an evaluator must have a basic understanding of the structure, operation and function of local governments. The structure and authority of local governments can vary by state (for example, the use of towns, townships, villages or parishes), therefore a general description of a common city/county local government structure is provided below.

TIP:
City and county stormwater management programs can be administered by various programs including: public works, building, and environmental program, or wastewater management staff, usually pretreatment.

Cities provide a variety of functions including fire and police protection, construction and maintenance of streets, stormwater and wastewater services, and providing for health, recreation, and social needs. Counties provide many of these same services in unincorporated areas. Cities are governed by a city council that establishes municipal policy and enacts local ordinances. Many cities are run by the council-manager system, where the elected council appoints a full-time professional manager to direct city departments and implement policy. Some cities are run by the mayor-council system, where a mayor (either elected or appointed by the council) works with the council to direct city departments and implement policy.

City boundaries can change through the annexation process. Unincorporated county land that is adjacent to the city can be annexed through a formal process.

Stormwater management responsibilities vary depending on the city or county. Some permittees assign stormwater program oversight and implementation to the public works department, while others assign stormwater to an environmental services department. Still others combine stormwater program implementation with wastewater treatment agencies, flood control authorities, or other regional entities. Also, some counties perform stormwater activities within incorporated cities (such as inspections). Each

permittee should clearly describe in the SWMP Plan the roles and responsibilities of each department involved in stormwater management.

Nontraditional MS4 Programs

As stated previously, the term MS4 does not solely refer to municipally owned storm sewer systems. Examples include, but are not limited to non-traditional entities such as state departments of transportation (DOTs), airports, universities, local sewer districts, hospitals, military installations, post offices, prisons, or irrigation districts.

For More Information:

The California Department of Transportation is a non-traditional MS4. To review the permit, programs, reporting, etc. visit: http://www.dot.ca.gov/hq/construc/stormwater/stormwater1.htm

Because of the unique structure and features of many non-traditional MS4s, some of the traditional SWMP elements may need to be modified or may not be entirely applicable. For example, a public education program for a state DOT or military base would be very different from a public education program for a traditional city.

TIP:

When evaluating non-traditional MS4 SWMPs, be sure to adjust interview topics and questions, field inspections, and documents evaluated to accommodate any unique characteristics of the MS4.

In other instances, some non-traditional MS4s may lack the legal authority or employ a different type of enforcement mechanism than a city/county government to implement a SWMP component. For example, a state DOT may not have the legal authority to enforce controls on illicit discharges into its system. In these situations the DOT is encouraged to work with the neighboring regulated permittees to develop and implement a shared SWMP in which each permittee is responsible for activities that are within their individual legal authorities and abilities. The DOT could work closely with the permittees that surround the DOT MS4 (i.e. country or city) and use their enforcement authority to eliminate illicit discharges. In other words, a municipal permittee can utilize regulations which prohibit polluted runoff from leaving an individual property and entering the DOT MS4 if the property is covered under an appropriate municipal code (e.g. building, health, etc.) An evaluation of a non-traditional MS4 program must be very specific to the particular circumstances, permittee relationships, and permit requirements applicable.

1987

2. *Pre-Evaluation Preparation*

2.1 Evaluation Goals and Benefits

Evaluation Goals

A permitting authority can have one or more overall goals when conducting an MS4 program evaluation. Identifying the overall goals of the evaluation will help in developing an appropriate schedule and focus. The primary goals in conducting an MS4 SWMP evaluation can include

TIP:

An MS4 evaluation should not be confrontational. The evaluation process works smoothly if both parties use the evaluation as a mechanism to improve the program and increase coordination.

- **Determination of compliance status.** Assessing the compliance status of a permittee with its MS4 permit and SWMP Plan is often a principal goal of an evaluation.
- **Assistance with permit issuance or renewal process.** An on-site program evaluation might be very helpful after the issuance or during renewal of a permit. The evaluation process can be used to identify and answer questions about implementation of program components within the first year of permit issuance. Towards the end of the permit term, the permitting authority can use the evaluation to assist the permittee with the permit application or SWMP Plan revision and/or the evaluation may provide valuable information to the MS4 permit writer to assist in the permit renewal process (including the drafting of a new Phase II General Permit).
- **Phase II SWMP development.** Because most Phase II permittees are just beginning to implement SWMPs, a full compliance evaluation might not be necessary. Nevertheless, an evaluation can also be a compliance assistance tool that can help to correct deficiencies early in the program. Permitting authorities could conduct evaluations geared toward compliance assistance early in the Phase II program development process.
- **Assessing pollutants of concern.** If a water body is impaired or there is a concern regarding pollutants common in urban stormwater, it may be helpful to assess the implementation effectiveness of MS4 programs in the watershed to reduce those pollutants. If a **total maximum daily load** (TMDL) has been developed for a waterway receiving a discharge from a permittee, a program evaluation may assist the permitting authority in assigning an applicable **wasteload allocation**, and/or assist the permittee in implementing the steps necessary to comply with the wasteload allocation.
- **Technical assistance.** Providing technical assistance is an important goal of an MS4 SWMP evaluation. Often it is the only time that the permitting authority staff and the permittees meet face-to-face and can be a valuable opportunity to share technical expertise, advice, reference materials, and examples of successful SWMPs implemented elsewhere.

Benefits of an Evaluation

There are a number of benefits from conducting an MS4 SWMP evaluation of a permittee, including:

- Determination of compliance and assistance with execution of appropriate enforcement actions
- Stronger coordination and working relationship between the permitting authority and the permittee
- Better understanding by the permittee of the expectations and permit requirements of the permitting authority
- An opportunity to clarify any misunderstandings in the MS4 permit requirements or SWMP Plan

- Improved permitting authority knowledge of the permittee's operations, priorities, constraints and challenges faced when implementing a municipal stormwater program
- A more effective SWMP resulting in better water quality

2.2 Advance Preparation

Evaluation Options

Which permittee(s) should be evaluated?
The first question to be answered is which permittee should be evaluated. If the permitting authority has jurisdiction over numerous MS4 permits, ideally all MS4s would be evaluated on an annual basis. If staff resources are limited and only a select number of evaluations can be conducted in a given year, a permitting authority may want to evaluate those MS4s with suspected compliance issues, those located in watersheds of concern, or those with pending permit renewals most frequently. However, permitting authorities should visit each permittee on a regular basis, even if they are not considered "bad actors" however, as evaluations provide many valuable benefits beyond compliance determination or assistance with permit renewal.

If a selected permit covers more than one co-permittee, the evaluator then must determine which co-permittee or co-permittees should be evaluated during a single evaluation. Some permits may cover 20-30 or more co-permittees and it may be impossible to evaluate them all in a single evaluation or year. Evaluations conducted early in the permit cycle may focus on the larger MS4s or those that coordinate activities for smaller permittees. Subsequent evaluations may focus on the smaller co-permittees that have compliance issues or located in watersheds of concern.

After the evaluator has determined which permittees are to be evaluated, the evaluator must consider several questions when determining the level of detail for the evaluation and how best to facilitate and coordinate the process.

What Level of Detail is Possible or Necessary?
If limited time is available, a screening-level evaluation may be an efficient and effective method for developing a basic impression of the program's compliance status or as a way to determine if a more in-depth evaluation is necessary (see Chapter 3). A screening is a way to uncover "red flags" or obvious instances of noncompliance with the MS4 permit. A screening-level evaluation is comprised of a basic interview with the MS4 coordinator or main contact of the program along with a review of the most recent annual report and the SWMP Plan. Documents can be obtained during the screening and reviewed by the evaluator at a later date. The screening-level evaluation should take a minimal amount of time but should be thorough enough to answer general questions about permit compliance. This type of screening may be the precursor to a detailed evaluation (see Chapter 4) at a later date.

A detailed on-site evaluation involves a more intensive review of files and detailed interviews with all or most applicable office and field staff. This type of review is more time-consuming but will provide a more comprehensive picture of SWMP development, coordination, and implementation.

Type of Evaluation	Typical Allotted Time[1]
Screening-level	2-6 hours per permittee
Detailed on-site evaluation	2-3 days per permittee

[1] Assumes one evaluator

Which Program Component(s) will be Evaluated?

A program component-specific evaluation focuses on a specific stormwater program area, such as construction activities or new and significant redevelopment. This type of evaluation may allow the evaluator to get more details through a more extensive file review or more numerous field inspections. For example, during an evaluation focused strictly on the construction component the evaluator may be able to interview all plan reviewers on staff, do an in-depth review of multiple erosion and sediment control plans, review those site's compliance histories, and perform inspections of each. This type of a review is especially helpful if the permitting authority has specific concerns about implementation of a particular component. Such an in-depth evaluation will typically take 1 to 2 days, depending on the complexity of the program and the amount of information to be covered.

Primary Phase I Stormwater Components

- ✓Program management
- ✓Maintenance activities
- ✓Construction
- ✓Post-construction
- ✓Illicit discharge detection and elimination
- ✓Public education/Participation
- ✓Industrial/Commercial

A detailed on-site evaluation addresses all of the generally accepted primary stormwater program components (i.e., program management, MS4 maintenance activities, construction, post-construction, illicit discharge detection and elimination, public education/participation and industrial/commercial for Phase I MS4 permittees). The intent of a detailed on-site evaluation is to assess the permittee's entire SWMP and possibly identify specific areas or issues that might require a component-specific review in the future.

The level of detail that can be achieved during either type of evaluation is often dictated by the amount of time devoted to each program area. Both the screening-level and detailed on-site evaluation can vary in terms of level of detail.

Will the Evaluation be Conducted in the Office, the Field, or Both?

To get an accurate picture of "on the ground" implementation of the construction and industrial/commercial components of a typical SWMP, the evaluator will need to accompany inspection staff into the field. In addition, many permittees manage municipal facilities such as maintenance yards, material storage facilities, or other municipal facilities that would be helpful to visit during the evaluation to ascertain the permittee's municipal housekeeping practices. If time allows and the evaluator has questions about implementation of these aspects of the SWMP, field time should be built into the evaluation schedule.

As previously stated, this level of detail may not be necessary for a compliance screening or component-specific inspection. In addition, if the program areas being evaluated do not have a field element (i.e., public education), then field activities will not be necessary.

Evaluation Logistics

The MS4 program coordinator or primary contact should be notified well in advance to allow for proper coordination and scheduling amongst parties responsible for program implementation. The contact should be in charge of determining who the appropriate people are to include in the evaluation. Some examples of pertinent staff includes:

TIP:

It is helpful to exchange cell phone numbers to facilitate schedule changes, alternative meeting places, inspection schedules, etc.

- Program managers
- Inspectors

- Administrative staff
- Outreach specialists
- Legal staff

One or more conference calls prior to the evaluation may be necessary to establish the schedule, determine appropriate participants, and answer any questions. Establishing email contact with all of the players well in advance is key to providing necessary information, resources, as well. A final call is helpful the week before the evaluation to answer any last-minute questions, exchange contact information (especially cell phone numbers), confirm the schedule and meeting locations, and make necessary changes. A final evaluation schedule should be developed and distributed to all contacts well in advance to ensure everyone is prepared and expecting the evaluator(s) on the correct dates.

When conducting a component-specific inspection, depending on the complexity of the program, roughly 2 – 4 hours should be assumed for an adequate in-depth office review of each program component. Evaluation of inspection activities in the field can be time consuming due to travel times between sites and facilities, so it is important to allow adequate time in the field as well. Normally, four hours per component (e.g., construction, industrial/commercial) is adequate to evaluate inspection staff. Evaluation of municipal maintenance activities should include adequate field time to inspect the municipal public works yard or similar facility, but normally this should not take more than 1 – 2 hours. All of these time estimates should be confirmed with the permittee when establishing the draft schedule.

Depending upon the size of the area covered under the MS4 permit, the scope of the SWMP, and the type of evaluation to be conducted, a single evaluator could require three days for a comprehensive, in-depth office and in-field program audit.

More than one evaluator can be used to conduct a comprehensive audit as well. This allows one person to interview office staff and another to perform field activities thereby minimizing the number of days to complete the audit.

In addition, multiple evaluators can be used to assess multiple permittees covered under one permit simultaneously. This can be accomplished either by assigning evaluators or "teams" to a particular permittee or to a specific component for all permittees. For example, Team 1 would assess all construction programs for three separate permittees covered under the same permit during a three day period. This approach allows for a consistent review of the all three permittees' construction programs and helps to ensure an equitable assessment between them. Or, Team 1 could review all program components for the City of Pleasantville, while another evaluator reviews the Town of Bliss. This allows the evaluators to become intimately familiar with all facets of their respective MS4 permittees, SMWP, implementation challenges, etc.

It is helpful to try and minimize travel between office locations whenever possible and establish a central meeting place, such as a conference room in a city hall, to save time.

Often it is helpful for the evaluator to coordinate a "kickoff" meeting at the start of the evaluation to review the schedule, answer any last minute questions and finalize logistics. An outbrief session is helpful to coordinate at the conclusion the audit to give a tentative summary of findings from the evaluation. Care must be taken to caveat all

TIP:

Outbrief sessions should be limited to the findings the evaluator feels comfortable revealing prior to a more thorough review of documents, interview responses, and inspection results. In addition, it should be stated that the outbrief findings are subject to change. Rebuttals and questions by the MS4 staff should be limited to clarification of incorrect findings or misunderstandings.

findings as preliminary at that time subject to change based on further review of evaluation materials, the permit, or the SWMP Plan.

Below is an example of a comprehensive, 3-day MS4 program evaluation schedule that addresses the major SWMP components for typical Phase I and Phase II permittees.

Example Schedule for a Phase I Permittee

Monday	
8:30 – 9:00	Evaluation Kickoff
9:00 – 12:00	Illicit Discharge Detection and Elimination & Industrial and Commercial Facilities (office)
1:30 – 5:00	Industrial and Commercial Facilities (field)
Tuesday	
8:30 – 12:00	MS4 Maintenance Activities (office and field)
1:00 – 5:00	New Development/Redevelopment & Construction Activities (office)
Wednesday	
8:30 – 12:00	Construction Inspections (field)
1:30 – 3:00	Outbrief Session

Example Schedule for a Phase II Permittee

Monday	
8:30 – 9:00	Kick-off Meeting
9:00 – 10:30	Program Management, Effectiveness and Assessment
10:30 – 12:00	Public Education and Outreach Public Involvement/Participation
1:00 – 5:00	Post-Construction Stormwater Management Construction Activities (office)
Tuesday	
8:30 – 12:00	Pollution Prevention/Good Housekeeping for Municipal Operations (office and field)
1:00 – 4:00	Construction Site Runoff Control (field)
Wednesday	
8:30 – 10-30	Illicit Discharge Detection and Elimination
10:30 – 12:00	Outbrief Session

2.3 Materials to Review Before the Evaluation

The information provided below should be reviewed before an on-site evaluation. The level of review varies depending on the evaluator's experience with the particular permittee program being evaluated and the type of evaluation being conducted.

- **MS4 NPDES permit.** Because the evaluation is ultimately an assessment of the permittee's compliance with its NPDES permit, the evaluator must be very familiar with the permit and its requirements.
- **SWMP Plan.** The evaluator must review the permittee's latest SWMP planning document(s) and note the commitments and schedules for specific activities.
- **Latest annual report.** The most recent annual report must be reviewed to establish the current status of implementation. Previous annual reports could be reviewed if time permits and if the evaluator wants to assess trends before the on-site evaluation. See Chapter 2.4 below for guidance on Annual Report review.
- **Permitting authority correspondence with the permittee.** Review any relevant correspondence with the permittee regarding its stormwater program. This material might include permitting authority comments on the permittee's SWMP Plan, comments on annual reports, notices of violation (NOVs), or other notices.
- **Permitting authority inspections within the MS4.** Ideally, the evaluator should be aware if an NPDES permitting authority industrial or construction inspector has found violations within the permittee's jurisdiction. If this review is not completed before an evaluation is conducted, it should occur after the on-site evaluation and before the final evaluation report is developed. Any findings should be incorporated into the final report.
- **Permittee Web sites.** Often, permittees have developed stormwater Web sites that can provide copies of reports, guidance documents, and other more current information on the stormwater program.
- **Legal authority.** Review the permittee's legal authority, especially with respect to any exemptions or exclusions from the applicable ordinance.
- **Special water quality concerns.** Be aware of any impaired waters, TMDLs, high quality or protected status, or other water quality-related designations for water bodies to which the MS4 discharges.
- **Other water programs affecting the permittee.** A significant source of frustration to permittees is trying to meet requirements for multiple programs arising from a single agency (i.e. EPA or state environmental protection agency) when program staff within that agency do not understand the trade-offs (sometimes even contradictions) in funding and implementing the requirements of various regulations and programs. For example, an MS4 SWMP evaluator should at least be aware if the municipality being evaluated has a drinking water program, a state revolving fund loan, wastewater permit(s), **combined sewer overflow** (CSO) long-term control plan, or other requirement for which it must also account to the permitting authority. If there is time, it is helpful to find out a little bit about the program requirements applicable to the municipality. There may even be ways to streamline, modify or combine certain requirements to meet multiple program goals.

For More Information:

Chittendon County, Vermont, has developed a Web site to educate the general public about stormwater and the regional management program. Visit http://www.smartwaterways.org.

2.4 Annual Report Reviews

Applicable federal regulations for the NPDES stormwater Phase I regulations and Phase II Rule require that annual reports be submitted. Many permitting authorities include more specific requirements for reporting in their MS4 permits. These reporting requirements can include specific information required for each program component, or it can specify the format for the annual report. For permits with multiple co-permittees, often a central organization or lead co-permittee will coordinate the annual report and submit one to cover all co-permittees.

In general, an annual report should document implementation of the SWMP during the previous year; evaluate program results and describe planned changes towards continuous improvement. Generally written for the permitting authority, an annual report can also be written for the citizens of the community as a way to report progress in meeting water quality goals. To this end, an annual report should clearly illustrate three key items for each SWMP area:

- **Permit and SWMP Requirements.** These requirements either will be specifically prescribed in the permit itself, or described in the permittee's SWMP. The SWMP normally is considered a binding document and part of the permit once it is submitted and approved by the permitting authority. A description of applicable goals or performance standards for each SWMP component should be stated in this summary as well.

- **Summary of Year's Activities.** The summary should describe and quantify program activities for each SWMP component. Responsible persons, agency, department or copermittee should be included. Each activity should be described in relation to achievement of established goals or performance standards.

- **Planned Activities and Changes.** The annual report should describe activities planned for the next year highlighting any changes made to improve BMP or program effectiveness.

An annual report should describe not only the activities during the previous year, but should highlight the SMWP's effectiveness as well. It should be assumed that the ultimate goal of the SWMP is the protection or improvement of water quality; however, there may be multiple, smaller program goals. Identification of direct measures of success for a stormwater program is very difficult, therefore, what is considered 'effective' and how the permittee chooses to assess this effectiveness will vary. Ideally the permittee and permitting authority will establish performance standards or goals in an attempt to define and quantify what is "effective" when the permit is issued. If the performance standards or goals include definitive milestones or schedules, the annual report should highlight these as well.

In addition to the items described above, the annual report should include appropriate program budget information, and a summary of any required monitoring data.

It is important to remember that annual reporting and program assessment are valuable exercises for the permittee as well as the permitting authority. Reporting should not be seen as merely a 'bean counting' effort. The permittee benefits greatly as an annual program assessment guides program focus, helps to budget and target resources, helps justify program support, and facilitates participation among the affected departments and permittees.

Step 1: Related Document Review and Preparation

Prior to beginning the annual report review, an evaluator should review or obtain the following information:

- **NPDES permit provisions.** The NPDES permit requirements will serve as the primary basis for the annual report review. The permit should describe basic program requirements, discharge prohibitions and reporting requirements.

- **SWMP provisions.** The permittee's SWMP document will describe the overall management structure of the program, planned activities, milestones, schedules and any established performance standards or goals. The SWMP should describe if there is a blanket organization which coordinates the co-permittees and if the organization is coordinated by co-permittee staff or a consultant.

- **Previous annual report review comments.** If the previous year's annual report was received and reviewed by the permitting authority, any comments or response should be reviewed to determine if requested changes to report were made, requested information was provided, etc.

- **Previous annual reports.** It is helpful to have access to previous years' reports as certain documents may have been submitted which may be helpful to have on hand (i.e., an ordinance which established legal authority).

Step 2: Background Information

It is helpful to first document basic information about the permittee and permit. Each permittee has different land use, socioeconomic, and water quality issues which will shape the SWMP. All of this information may not be included in the annual report, but can be obtained through a cursory internet search.

- What is the population served by the permittee?
- What is the primary industry within the permittee's boundary?
- What are the primary land uses within the permittee's boundary?
- What are the priority pollutants within the watersheds of the permittee's boundary?
- Are there impaired waterways impacted by the permittee?
- Have TMDLs been established?
- Are there other sensitive areas of concern within the permittee's boundary?

Step 3: Legal Authority

While most important during the first permit year annual report review, it is helpful to confirm a permittee's legal authority to implement all components of the SWMP on an annual basis. Note any described changes to the SMWP and confirm that existing legal authority will support the implementation of those changes (i.e., requiring existing gas stations to install catch basin insert treatment BMPs). Any changes to applicable ordinances should be included in the annual report as well. If the actual codes or ordinances are not included in the annual report or previous annual reports, they should be obtained during an on-site evaluation.

Step 4: Fiscal Analysis

Phase I regulations require that annual expenditures and budget for the year following be included in each annual report. No such requirement exists for Phase II. If included, this information should be reviewed to determine if budget changes are being made. If funding changes are planned, an explanation should be provided (i.e., an additional inspector is being added or additional expenditures are not expected for the development of new outreach materials as they were developed during year one of the permit).

Step 5: SWMP Component Review

TIP:

When reviewing an annual report with the Worksheet provided, pay special attention to questions in the Worksheet answered "unknown." Program components for which little information was provided may be good candidates for an on-site evaluation.

While each MS4 SWMP will differ based on various factors (i.e., permit requirements, priority pollutants), the Worksheet lists some basic information that should be provided for each program component. In addition, each target established in the permit or SWMP should be documented and verified on the Worksheet as well. It is helpful to document all quantifiable data during the review to highlight what vital information may be missing and what, if any "red flags" need to be addressed with the permittee. For example, if the permittee provides the total number of construction inspections conducted, but does not provide the prioritized list of active construction sites, the reviewer cannot determine the frequency of inspections or whether high-priority sites were adequately monitored and assessed. Further if the permittee had established a goal of inspecting all active sites within 48 hours of every rain event, the reviewer would be unable to ascertain whether this goal had been met.

For each program component, the annual report should describe applicable training of staff which occurred during the previous year. It is helpful if agendas or presentation materials are included.

As described in the Conducting an Evaluation section of this Guidance, information regarding the implementation of the following SWMP components should be provided in a Phase I MS4 annual report (additional components may be required by the MS4 permitting authority):

- Program to detect and eliminate illicit discharges to the system
- Program to prevent, contain, and respond to spills
- Program to educate and allow citizens to report illicit discharges or other potential impacts to water quality
- Educational program to encourage the proper disposal of used oil and other toxic materials
- Program to reduce infiltration of sewage into the storm sewer system
- Program to reduce pollutants from active construction sites
- Programs to reduce pollutants in runoff from industrial, commercial, and residential areas

Phase II permittees are required to develop SWMPs which include similar minimum measures, each of which should be addressed in an annual report:

- Public education and outreach program
- Public involvement/participation program
- Illicit discharge detection and elimination program
- Construction site stormwater runoff control program
- Post-construction SWMP for new development and redevelopment (for development greater than or equal to one acre)
- Pollution prevention/good housekeeping program for municipal operations

For purposes of this Guidance and annual report review Worksheet, the above SWMP requirements have been combined and categorized into the following components for both Phase I and Phase II MS4s:

- Program Management
- Public Education and Public Participation
- Municipal Maintenance/Good Housekeeping
- Construction Activities
- New Development and Significant Redevelopment
- Industrial/Commercial Facilities
- Illicit Discharge Detection and Elimination

Step 6: Follow-Up Activities

The information obtained during the annual report review can be used in various ways.

1. To provide feedback to the permittee regarding program development or implementation. Often, permittees have limited contact with permitting authority staff and the submittal of an annual report is the primary means of communication during the year. It is important that the permitting authority review annual reports in a timely manner and respond with any comments, suggestions or criticisms.

2. To determine the need for an on-site evaluation. If the annual report elicited numerous questions about SWMP implementation, an on-site evaluation may be very helpful in determining compliance or effectiveness of the MS4 program.

3. To prepare for an on-site program evaluation. If a permittee has been selected for an on-site evaluation, the most recent and historic annual reports should be reviewed prior.

4. To determine the compliance status of the permittee and progress towards achieving permit requirements, milestones or measurable goals. The permitting authority may choose to use the annual report to determine compliance and issue necessary enforcement actions.

5. To note exceptional approaches, programs, or BMPs used by the permittee that might be helpful to other permittees. Often it is beneficial for permittees to share information, program ideas, educational tools or implementation approaches and annual reports are a good way to facilitate the distribution of ideas.

3. Conducting a Screening-Level Evaluation

3.1 Screening-Level Procedures

TIP:

Conduct a screening-level evaluation when you have limited time and want a "quick" assessment of the MS4.

The majority of this Guidance (Chapter 4 and the worksheets in Appendix B) describes how to conduct a detailed on-site evaluation of an MS4 program. However, if an evaluator does not have enough time to conduct a detailed on-site evaluation, a more limited screening-level evaluation could be conducted. The intent of the screening-level evaluation is to quickly identify the program areas that are deficient or noncompliance and should be targeted for a more in-depth evaluation. The screening-level evaluation is not intended to be an assessment of compliance with all permit conditions.

TIP:

Benefits of a screening-level evaluation:

- A quick "snapshot" of MS4 compliance
- Identify major strengths and weaknesses of a program
- Can be conducted in a relatively short amount of time

The screening-level evaluation ideally should be conducted on-site at the permittee's offices after a review of the permittee's annual report (see chapter 2.4). The screening-level evaluation could cover all program components or focus on specific program components that are of particular interest due to pollutants of concern, past compliance issues, or other factors. Depending on the level of detail, the complexity of the program and the number of program components to be reviewed, the screening-level evaluation could last from 2 hours to a full day.

To conduct a screening-level evaluation, the evaluator should be familiar with the permittee's NPDES permit and most recent annual report. The screening-level evaluation will need to be customized to the unique permit requirements and issues of each MS4, however, some of the more common questions and information to review during a screening-level evaluation are listed below. An evaluator should use this list as a guide to help them quickly assess whether a more comprehensive evaluation is necessary for a certain program component or to review the entire SWMP.

3.2 Common Screening-Level Questions

Program Management

Key questions to ask:

- ✓ Does your written stormwater management plan include specific milestones and quantities for each program/BMP?
- ✓ Describe how your SWMP is coordinated across departments.
- ✓ Describe the impaired waters, pollutants of concern and TMDLs for the waterbodies you discharge to. Does your SWMP include programs or BMPs specifically addressing these impairments?
- ✓ Describe how you evaluate the success of your stormwater management program.

Potential information to review:

- ✓ Stormwater management plan document
- ✓ Most recent annual report
- ✓ Organizational chart showing departments with stormwater responsibilities

Public Education and Participation

Key questions to ask:

- ✓ Describe your overall approach to educating the public on stormwater issues.
- ✓ What are the primary pollutants or behaviors you target with your public education program?
- ✓ Describe your top three target audiences and the messages you plan to deliver. How do they relate to the primary pollutants or behaviors?
- ✓ How do you evaluate the effectiveness of your outreach activities? Have you conducted any public awareness surveys?

Potential information to review:

- ✓ Public outreach strategy
- ✓ Results of any public awareness surveys
- ✓ Information tracking the distribution of outreach materials

MS4 Maintenance Activities

Key questions to ask:

- ✓ Describe your current MS4 mapping resources (e.g., has the permittee mapped storm drains, outfalls, inlets, municipal facilities, etc.),
- ✓ Describe your procedures for catch basin cleaning, street sweeping and MS4 maintenance.
- ✓ Do your municipal facilities have SWPPPs? If not, why?
- ✓ How are maintenance staff trained with respect to stormwater activities and BMPs?

Potential information to review:

- ✓ Catch basin cleaning records for the month of _____
- ✓ Stormwater plan or SWPPP for main municipal maintenance facility (including any self-inspection records)
- ✓ Standard Operating Procedures (SOPs) for stormwater-related maintenance activities

Construction Activities

Key questions to ask:

- ✓ Describe your legal authority to require erosion and sediment control BMPs and enforce stormwater requirements.
- ✓ Describe your system for tracking construction plans, active construction projects, inspections, and enforcement actions (including the number of projects disturbing greater than one acre last year).
- ✓ How do you coordinate implementation of your local erosion and sediment control requirements with the States (or EPA's) NPDES construction general permit requirements?
- ✓ Describe your process for reviewing plans to ensure stormwater BMPs are addressed. What BMPs does a plan reviewer look for on a plan?

1999

- ✓ Interview an inspector to assess how stormwater inspections are conducted at construction sites. Ask about the frequency of inspections and the number of inspectors.
- ✓ Describe the most recent training attended by inspectors and plan review staff

Potential information to review:

- ✓ List of active construction projects disturbing greater than one acre for the month of _____
- ✓ Erosion and sediment control plan reviewed and approved by permittee (selected from list)
- ✓ Inspection reports for a selected project (including any enforcement actions for noncompliance)

Post-Construction Controls

Key questions to ask:

- ✓ Describe your post-construction design standards and legal authority.
- ✓ Describe your process for reviewing plans to ensure post-construction BMPs are addressed. Do plan reviewers use checklists to ensure consistent plan review?
- ✓ Describe your post-construction operation and maintenance (O&M) program (including your inventory of post-construction BMPs and your inspection and maintenance schedule).

Potential information to review:

- ✓ Post-construction plan reviewed and approved by MS4
- ✓ Records for post-construction BMP inspection and maintenance; both private and public if applicable
- ✓ An O&M plan for post-construction BMPs from a recently approved project

Industrial/Commercial Facilities

Key questions to ask:

- ✓ Describe your industrial/commercial facility program, including the types and numbers of facilities covered. How were these facilities selected?
- ✓ Describe the types of BMPs or stormwater requirements these facilities must meet.
- ✓ Describe your industrial/commercial inspection program (including the frequency of inspections and the number of inspectors)
- ✓ Interview an inspector to assess how industrial/commercial stormwater inspections are conducted. Ask about the frequency of inspections and the number of inspectors.

Potential information to review:

- ✓ List of industrial/commercial facilities subject to stormwater requirements
- ✓ Inspection report(s) for selected facilities
- ✓ Enforcement records for a facility out of compliance

Illicit Discharge Detection and Elimination

Key questions to ask:

- ✓ Describe your legal authority to prohibit illicit discharges and illegal dumping to the MS4 (including an exemptions).

- ✓ Describe any field screening activities. If an illicit discharge is discovered during screening, what is the process for determining the source and eliminating the discharge.
- ✓ Describe your illicit discharge investigation and spill response programs, including staff and equipment available.
- ✓ How are the locations of illicit discharges tracked and used to steer other SWMP components (i.e. industrial inspections, public education, etc).

Potential information to review:

- ✓ List of illicit discharge events investigated over the past _____
- ✓ Records on investigation, follow-up and enforcement relating to one or more event(s)

3.3 Screening-Level Evaluation Follow-Up

After a screening-level evaluation, an evaluator has several options:

- Submit a report to the permittee summarizing the findings and asking for deficiencies to be corrected
- Conduct a detailed on-site evaluation of those program components found deficient
- Conduct a detailed on-site evaluation of all program components

If an evaluator conducted a screening-level assessment of multiple permittees, common deficiencies can be used to target either more detailed evaluations or additional compliance assistance on those program components. Additional information on post-evaluation activities, including preparing a written report and follow-up activities, are described in Chapter 5.

4. Conducting a Detailed On-Site Evaluation

The following chapter describes the process and content of a detailed on-site evaluation. The following program areas are covered:

- Program Management
- Public Education and Participation
- MS4 Maintenance Activities
- Construction Activities
- Post-Construction Controls
- Industrial/Commercial Facilities
- Illicit Discharge Detection and Elimination

Each program area section includes a list of regulatory requirements that apply to that program area and describes activities that typically are performed by permittees to meet permit requirements. The sections also include a description of documents to be reviewed before the evaluation and a series of questions to be asked during the interviews. Also included is a list of common problems identified during evaluations.

Approach and Demeanor

An evaluator's approach and demeanor can have a significant impact on the success of the interviews by putting the interviewees at ease. Evaluations can be a stressful process for the permittee, which could result in stilted discussions and overly brief answers to questions. It is best to use a friendly approach and start by asking open-ended, broad questions that allow the interviewees to talk freely about their programs. Since MS4 stormwater programs are not "one size fits all," it is sometimes best to have the interviewees describe their approach to each program area up front rather than ask questions from a list that may not be organized in a way that makes sense in the context of their program's activities. To ensure that all topics are covered in sufficient depth, the evaluator should ask for clarification throughout and take a break at the end of the session to review the list of topics and ask follow-up questions if needed. Maintaining a conversational style will allow the interviewees to explain their answers and feel as though they can provide input into the interview process.

Kick-off Meeting

The first day of an evaluation should begin with a kickoff meeting to allow for introductions and an overview of the process and goals of the evaluation. The meeting usually includes all staff who will be interviewed, and it is a good time for higher-level managers and officials to be introduced to the process and understand what will be happening over the next few days.

The following is a sample agenda for the kickoff meeting. The evaluator should tailor the agenda to suit his or her own objectives:

- **Introductions.** The evaluator should introduce him- or herself and can provide a brief overview of his or her background in stormwater program evaluations. Then each person in the room can introduce him- or herself in turn. It is helpful to distribute a sign-in sheet at this time to collect the names, positions, and contact information for the people being interviewed throughout the week in case follow up is needed.

- **Goals and benefits.** Describe the goals and outline some of the benefits of the evaluation process. These are described in depth in Section 2.1 of this guidance.
- **Schedule.** Review the schedule for the week's interviews and discuss which topics will be discussed during each session. It is also helpful to clarify what type or level of staff should participate in each session and what documentation should be available for review.
- **Products and timeline.** The evaluator should describe the general content and organization of the report and provide a timeline for when a final report will be produced.
- **Questions.** Limit questions to the evaluation process, procedures, and report. Questions about a specific program topic can be addressed during that session.

4.1 Program Management

Regulatory Requirements
Applicable federal regulations for the Phase I and Phase II NPDES regulations are listed at right. NPDES MS4 permits must address these requirements and often more specific state requirements as well.

Federal NPDES Regulations
- ✓ Phase I MS4 Regulations
  40 CFR 122.26(d)(2)(iv)
  40 CFR 122.42(c)
- ✓ Phase II MS4 Regulations
  40 CFR 122.34(a)
  40 CFR 122.34(d)
  40 CFR 122.34(g)(1)
  40 CFR 122.34(g)(3)
  40 CFR 122.35(a)

Common Activities

Comprehensive Stormwater Management Planning
Phase I and Phase II permittees are required to develop SWMPs designed to reduce the discharge of pollutants from the MS4 to the MEP. Ideally, a SWMP is developed with input from internal and external stakeholders including, but not limited to, departments, agencies, and co-permittees within the permitted area, the general public, nonprofit organizations, state agencies, and watershed groups. This program should be described in a planning document (SWMP Plan) that details organizational structure and coordination scheme and a detailed description of the proposed controls or program components (i.e., public education and outreach) that includes performance standards or goals, standards, or timelines and a prioritization of existing resources.

Multiple co-permittees or different agencies may be involved in the development and implementation of the MS4 SWMP programs and Plan. To ensure that the program is implemented consistently by all, it is important that the SWMP describe the communication mechanisms between the co-permittees, and between the co-permittees and other agencies. Within a permittee's stormwater management structure there might be different departments that are to develop, implement, and enforce various components of the program. The SWMP should describe how the various departments communicate and coordinate activities.

Performance standards and goals are important tools for permittees to use to gauge the success of their programs in achieving measurable benefits and improving water quality. The development of performance standards or goals may not be required for many Phase I permittees, however, you should discuss the establishment of water quality-or performance-based goals for SWMP components and refer Phase I permittee's to available measurable goals guidance developed in response to the Phase II regulations (see Resources text box).

Assessment and Evaluation
SWMP evaluations not only demonstrate progress, but also allow the permittee to adjust programming, funding, or staffing levels for the upcoming year to best use existing resources to maximize water quality benefit. Evaluations should examine both direct measures, such as water quality indicators, and indirect measures of program

Measurable Goals

According to the Stormwater Phase II Regulations, small MS4 operators must reduce pollutants in stormwater to the MEP to protect water quality. The regulations specify that compliance with the MEP requirement can be attained by developing a SWMP that addresses the six minimum control measures previously described in this Guidance. One component required in the Phase II MS4 SWMP is the selection of measurable goals to evaluate the effectiveness of the individual control measures and the SWMP as a whole. Phase I MS4 regulations do not specify the creation of measurable goals per se, but require the assessment of water quality improvements or degradation and propose changes to the SWMP necessary to improve effectiveness. Requiring measurable goals of Phase I permittees allow permitting authorities to track the permittee's progress in implementing BMPs and the overall SWMP. The process for developing measurable goals and the benefits of incorporating them into the evaluation of a MS4 program are the same for Phase I or Phase II permittees.

To determine the effectiveness and success of a stormwater management program, managers must first determine the ultimate outcomes they wish to achieve. Then, programmatic, social, physical, and hydrological, or environmental indicators can be used to assess the achievement of the desired goals, or outcomes.

TIP:

Often, permittees do not develop measurable goals that truly quantify and track progress towards desired outcomes in the SWMP. Many times "performance standards" primarily consist of a list of BMPs. Performance standards should include quantifiable activities that can be tracked or criteria against which progress towards desired outcomes can be measured.

The California Stormwater Quality Association[1] (CASQA) asserts that there are six levels of stormwater management program outcomes. Each successive level represents increasingly difficult outcomes to not only achieve, but to assess.

The levels are:

1. Compliance with activity-based permit requirements
2. Changes in attitudes, knowledge and awareness
3. Behavioral change and BMP implementation
4. Pollutant load reductions
5. Changes in urban runoff and discharge quality
6. Changes in receiving water quality

Stormwater program managers may strive to achieve some or all of these outcomes; however, in general the "implementation outcomes" (1, 2, and 3 above) typically are easier to measure than the more complex goals of reducing loading and achieving changes in discharge and receiving water quality. In addition, these outcome levels are not independent of one another; the hope is that movement towards one will result in progress towards achieving another.

[1] CASQA. 2005. *An Introduction to Stormwater Program Effectiveness Assessment.* August 2005. http://www.casqa.org/resources/product.php

It is important that some measure of assessment be determined in conjunction with the establishment of each goal. A goal can be expressed qualitatively or quantitatively, and the associated index should be measurable, relevant, reliable, available, scientifically valid, replicable, and focused on measuring the outcome.

EPA has developed sets of "measurable parameters" for stormwater program managers to use as a guide when developing quantifiable goals. For example, the following implementation parameters could be used to quantify and track the effectiveness of an illicit discharge detection and elimination program component:

- Inventory conducted and sites prioritized for inspection
- Number of field tests conducted in high-risk areas
- Whether or not an ordinance was developed to allow entrance into private buildings for the purpose of conducting tests
- Number of illicit connections reported by business employees
- Number of survey responses indicating a possible illicit connection
- Number of illicit connections found
- Number of illicit connections repaired/replaced
- Whether or not an ordinance was developed for mandatory inspections of new buildings
- Number of new buildings inspected

CASQA asserts that depending on the outcome, various methods of obtaining necessary measurement data are available, including the following:

Method	Definition	Example
Confirmation	Documenting whether a task has been completed.	Development of an construction operator BMP outreach brochure
Tabulation	Tracking an absolute number or value of something	Number of brochures distributed to construction operators
Surveying	Determining knowledge, awareness, etc. of a group of people	Phone survey of 100 construction operators, 50 of whom had received the BMP brochure, to gauge any differences in stormwater awareness
Quantification	Estimating pollutant loading	Modeling to determine sediment load reductions prior to initiating construction operator outreach program – assumption made about BMP use before and after program
Inspections or site visits	Observing activities or BMPs	Inspections of construction projects before and after initiating construction operator outreach program
Reporting	Utilizing reports generated by third parties	Audit of construction component of the SWMP indicated that BMPs observed and the level of understanding demonstrated by operators had improved during the last year

Method	Definition	Example
Monitoring	Sampling or observation in the field to determine environmental or water quality conditions	Water quality monitoring above and below three comparable active construction sites (Site 1 – trained on construction BMPs, Site 2 – no training, Site 3 – random control, unknown level of BMP understanding) to determine any differences in per/acre disturbed loading of sediment

Permittees need to perform sampling and conduct scientific field assessments to assess specific water quality-related SWMP goals (i.e., pollutant load reductions, changes in urban runoff and discharge quality, and changes in receiving water quality). Some MS4 permits require water quality monitoring to establish baseline water quality conditions, determine the quality of discharges from different land uses or subwatersheds, measure the effectiveness of structural BMPs, or to participate in regional watershed monitoring efforts to track water quality trends.

Evaluating Program Management

Effective program management is essential to help guide SWMP development, implementation, administration, and continued assessment. Each program should have a management process that facilitates stormwater activity coordination between departments within each permittee, between co-permittees, and between the permittee and other organizations and agencies interested in stormwater quality. Some permits that regulate multiple co-permittees may allow for a separate "umbrella" management structure to perform certain functions, one of which may be management of certain components (e.g. public education) of the program and coordination among copermittees. These umbrella structures can be managed by the lead permittee or by consultants hired collectively by all co-permittees.

For More Information:

For an example of a program that uses an "umbrella" management structure, the Contra Costa Clean Water Program manages the stormwater program for nineteen co-permittees in Contra Costa County, California. Visit http://www.cccleanwater.org.

Another important aspect of program management is the development of goals or standards to measure effectiveness of the program from a water quality perspective. This is normally required by the permitting authority in addition to being helpful to MS4 SWMP coordinators for use in budgeting, staff allocation, and long-term planning. When evaluating a SWMP, you should question permittee staff regarding the desired outcomes for the program as a whole and for each individual program component. You should determine what, if any, assessment measures have been established for each goal and question the MS4 staff regarding progress.

The findings of the MS4 evaluation should not be based solely on the level of achievement of measurable goals. It is important, however, that the permittee's SWMP includes the use of measures to assess progress towards meeting goals that benefit water quality and not rely on "bean-counting." You should be confident that the SWMP is being regularly assessed and modified as necessary to improve effectiveness.

Typically, each MS4 SWMP would have a coordinator or other principal contact. This person would be the best to interview regarding program management procedures.

TIP:

Normally, it is not within the scope of a typical MS4 program evaluation to review or evaluate water quality monitoring data. Because of the amount of data, monitoring methods, and monitoring plans, this is an exercise best undertaken by NPDES staff that specializes in ambient water quality monitoring protocols and analysis.

Before the Program Evaluation

To prepare for the program management evaluation, an evaluator should review or obtain the following information prior to the evaluation:

Pre-Evaluation Checklist
- ✓ MS4 permit provisions
- ✓ SWMP provisions
- ✓ Most recent annual report
- ✓ Memorandums of understanding

- **MS4 NPDES permit provisions.** Review the permit requirements for program management to identify any specific requirements (such as annual reporting details). The NPDES permit will serve as the primary basis for the program evaluation.
- **SWMP provisions.** The permittee's SWMP planning document(s) should describe the overall management structure of the program.
- **Latest annual report.** The annual report should be reviewed to help you become familiar with the management structure of the program.
- **Memorandums of Understanding (MOUs)** or other written agreements between or among co-permittees or other agencies stipulating arrangements and responsibilities for meeting permit requirements.

Records Review

The following records might help in evaluating the permittee's program management structure. Ask for copies of relevant information where it will help in writing the report or documenting a permit violation.

Documentation	What to Look For
▪ Stormwater program staff lists ▪ Organizational charts ▪ Contact names and responsibilities	▪ Are specific departments and/or individual positions identified as responsible for each part of the SWMP? ▪ Are lines of authority and responsibility clear?
▪ Performance standards ▪ Program goals/measurable goals ▪ Implementation schedule	▪ Has the permittee documented a schedule and goals for guiding the SWMP in subsequent years? ▪ Are these goals specific enough for the SWMP to be evaluated?
MOUs or other agreements	▪ Does the permittee document partnerships with other agencies, nonprofit organizations, or other cooperating entities? ▪ Are the roles and responsibilities of each entity clearly identified?
▪ Tracking systems ▪ Reporting and assessment procedures	▪ Has the permittee established procedures or deadlines for reporting or program assessment, both within the permittee's structure and between agencies or co-permittees?
Coordination meeting schedules, task force rosters	▪ Do permittee staff responsible for implementing the SWMP meet periodically? ▪ Do municipal agency representatives meet to discuss SWMP implementation? ▪ Does the permittee meet with cooperating entities to discuss SWMP implementation?

Elements to Address During the Program Evaluation

A successful management structure will generally be composed of the following elements:

- Comprehensive stormwater management planning
  - Public participation
  - Intergovernmental, agency, and department coordination
  - Staff inventory and organization
  - Performance standards or goals
  - Prioritization of resources
- Data collection and reporting
- Assessment and evaluation
- Program adjustments based on ongoing assessments

The common program elements are the key issues to consider during the review. For each of the elements listed above, this Guidance presents common program activities and questions to consider during the program evaluation. The questions are suggested for you to address each program component. Of course, a comprehensive SWMP evaluation must be tailored to the specific issues associated with each permittee and should include more specific questions regarding the permittee's permit structure and management challenges.

COMPREHENSIVE STORMWATER MANAGEMENT PLANNING

SWMP Planning Documents

- ✓ Has a SWMP Plan been developed? If so, when? Last revised?
- ✓ If a SWMP plan has not been developed, what guidance does the permittee use to implement components of the SWMP?
- ✓ Is there a schedule for revision of the SWMP plan?
- ✓ If multiple co-permittees are included in the program, does each permittee have their own SWMP planning document?
- ✓ Is there an additional MS4-wide document, plan, or program? Who developed it?
- ✓ How were internal and external stakeholders included in the development or revision of the SWMP plan?

Intergovernmental, Agency, and Department Coordination

- ✓ If the permit covers more than one permittee, does the program contain a description of the roles and responsibilities of each permittee and procedures to ensure effective coordination?
- ✓ Is there an "umbrella" group that facilitates administration and coordination among the co-permittees?
  - What functions does this group perform?
  - Are there task forces or committees who are used to coordinate program-wide components and to address specific issues related to different program topics (e.g., Public Education and Outreach Committee)?

- Who are members of these committees?
- Are there regular meetings to coordinate amongst the co-permittees?

✓ Is there a formal agreement (e.g., an MOU) between the co-permittees?

✓ Discuss with the permittee the institutional arrangements between city departments that have been developed to ensure coordination and collaboration on stormwater management activities.

✓ Is there a stormwater committee (or equivalent) within the municipal permittee to help ensure coordination among city departments?

✓ How often does the committee meet? Who are the members, and are all the relevant city departments involved?

✓ Is the stormwater program coordinated with nonpoint source, **brownfield** redevelopment, transportation planning, underground injection control, coastal zone, household hazardous waste, recycling, and other relevant programs?

✓ Does the stormwater program use nonprofit organizations, watershed groups or other community organizations to administer required elements of their permit or minimum measures?

Staff Inventory and Organization

✓ Does the permittee have a person designated to lead and coordinate the stormwater program and activities?

✓ Does the SWMP planning document include an organization chart listing responsible parties for each SWMP component?

Performance Standards or Goals

✓ Has the permittee established measurable goals or performance standards for program components?

✓ If performance standards have been established, are they measurable or are they essentially BMP recommendations with level of service (i.e., number of miles swept) requirements?

✓ Does the permittee attempt to quantify or assess a program or a BMP's water quality impact or effectiveness as opposed to merely tracking level of service? For example, the percentage of violation recidivism for industrial facilities reinspected during a permit term may provide better information about the effectiveness of the industrial inspection program than the total number of facilities inspected in a year.

Prioritization of Resources

✓ Has the permittee identified specific pollutants of concern for its local water bodies?

✓ Are these pollutants of concern consistent with priorities identified in the **303(d)-listed** impairments for local water bodies?

✓ Are these pollutants of concern consistent with any water quality monitoring data or studies conducted by the permittee or another agency?

✓ Has the permittee developed strategies to specifically address those pollutants?

✓ How does the permittee decide on program priorities? Are these reassessed periodically?

✓ Does the SWMP include a schedule of activities?

✓ Does the MS4 discharge to a water body on the state's list of impaired waters?

- What pollutants are identified on the list?

- Has stormwater been identified as a source?
- Does the SWMP specifically address this pollutant?
- Does the SWMP identify BMPs specifically for sources or discharges to the listed water body?

✓ Has a TMDL been developed for a water body to which the MS4 discharges and for which stormwater has been identified as a pollutant source?

- What pollutants are addressed in the TMDL?
- Does the TMDL specifically address (or include wasteload allocations for) stormwater?
- Has the corrective action plan or other planning to address TMDLs been reviewed for integration with the SWMP?
- Does the permittee's stormwater program address the pollutants of concern identified in the TMDL?

✓ Is the permittee participating in any watershed planning efforts?

✓ Have any goals been developed based on watershed issues, strategies, or challenges?

✓ Has the permittee established a set of indicators or parameters to assess progress toward meeting the goal(s) of the watershed plan?

✓ Is the permittee's stormwater program implemented on a watershed basis?

ASSESSMENT AND EVALUATION

Programs

✓ Does the permittee regularly measure progress against the established performance standards and goals?

✓ Are the goals quantifiable?

✓ Is the permittee analyzing data in the annual report to identify program activities that may need to change to address problem areas?

✓ Has the SWMP been altered based on this evaluation?

BMPs

✓ Is the permittee able to track both structural BMPs and non-structural BMPs and activities?

✓ Has the permittee set measurable goals or performance standards to evaluate individual BMPs and activities or suites of BMPs that address a particular pollutant source?

✓ Is there a process to evaluate or revise individual BMPs and suites of BMPs when receiving water outcomes or endpoints are not being met?

✓ Do assessments evaluate impacts of BMPs on ground water?

✓ Is the permittee analyzing data in the annual report to identify individual BMPs or suites of BMPs that may need to change to address problem areas?

Water Quality

- ✓ Has the permittee documented environmental, water quality, stream corridor, habitat, or other types of improvements?
- ✓ Has the permittee estimated reductions in pollutant loadings from the MS4 or other quantifiable water quality benefits expected as the result of the municipal stormwater program?

MONITORING

Note: It is important to tailor these questions to each permittee's monitoring requirements as specified in their permit.

Wet Weather Outfall Screening and Monitoring

- ✓ Does the permittee conduct wet weather screening at outfalls to characterize stormwater flows from the MS4?
- ✓ Does the permittee have written screening procedures?
- ✓ What is the permittee's schedule for screening the sites?
- ✓ Are parts of the permit area prioritized for screening based on incidents of illicit discharges, land use, dumping reports, etc.?
- ✓ What parameters are being tested?
- ✓ How does the permittee prioritize sites for follow-up (e.g., magnitude and nature of suspected discharge)?
- ✓ Who conducts the sampling? What kind of training have sampling personnel received?
- ✓ What type of records are kept?
    - o Analytical results
    - o Date and duration (in hours) of the storm events sampled (rainfall data)
    - o Rainfall measurements or estimates (in inches) of the storm event which generated the sampled runoff (rainfall data)
    - o Duration (in hours) of the storm event sampled and the end of the previous measurable (greater than 0.1 inch rainfall) storm event (rainfall data)
    - o Estimate of the total flow of the discharge sampled (stage and velocity)
- ✓ What analytical methods are used (i.e., 40 CFR Part 136)?
- ✓ What are the results of the initial sampling and analysis?
- ✓ Has the permittee made any changes to the monitoring program based on past results and experience?
- ✓ How have monitoring results been used to assess program components?
- ✓ Are monitoring data used to estimate pollutant loads for a TMDL?

Dry Weather Outfall Screening and Monitoring

- ✓ Does the permittee conduct dry weather screening at outfalls to identify non-stormwater discharges?
- ✓ Does the permittee have written screening procedures?
- ✓ What is the permittee's schedule for screening the sites?
- ✓ Are parts of the permit area prioritized for screening based on incidents of illicit discharges, land use, dumping reports, etc.?
- ✓ What parameters are being tested?
- ✓ How does the permittee prioritize sites for follow-up (e.g., magnitude and nature of suspected discharge)?
- ✓ Who conducts the sampling? What kind of training have sampling personnel received?
- ✓ What type of records are kept?
    - o Analytical results
    - o Date and duration (in hours) of the storm events sampled (rainfall data)
    - o Rainfall measurements or estimates (in inches) of the storm event which generated the sampled runoff (rainfall data)
    - o Duration (in hours) of the storm event sampled and the end of the previous measurable (greater than 0.1 inch rainfall) storm event (rainfall data)
    - o Estimate of the total flow of the discharge sampled (stage and velocity)
- ✓ What analytical methods are used (i.e., 40 CFR Part 136)?
- ✓ What are the results of the initial sampling and analysis?
- ✓ Has the permittee made any changes to the monitoring program based on past results and experience?
- ✓ How have monitoring results been used to assess program components?
- ✓ Are monitoring data used to estimate pollutant loads for a TMDL?

Biological Monitoring

- ✓ Does the permittee perform biological sampling?
- ✓ Has a plan been developed to conduct biological sampling? If so, does the plan include the following:
    - o Identification of sampling stations and rationale for selection
    - o Location of known major MS4 outfalls discharging to water bodies in which sampling stations were chosen
    - o Land use activities near sampling stations
    - o Frequency of monitoring
- ✓ Who conducts biological sampling and what training have they received?

- ✓ Has the permittee made any changes to the monitoring program based on past results and experience?
- ✓ How have monitoring results been used to assess program components?

Ambient Monitoring

- ✓ Does the permittee conduct ambient monitoring to characterize water quality conditions in receiving waters?
- ✓ How were the sampling sites selected?
- ✓ Is sampling conducted both during dry weather and wet weather?
- ✓ What is the frequency of sampling?
- ✓ What parameters are analyzed? What sampling and analytical methods have been used?
- ✓ Does the permittee have a written protocol or procedures for this sampling program?
- ✓ Who conducts the sampling and what training have they received?
- ✓ Has the permittee made any changes to the monitoring program based on past results and experience?
- ✓ How have monitoring results been used to assess program components?
- ✓ Are monitoring data used to estimate pollutant loads for a TMDL?

DATA COLLECTION AND REPORTING

- ✓ What reporting requirements are included in the MS4 NPDES permit?
- ✓ If multiple permittees are covered, are there different requirements for the co-permittees and the "umbrella" group?
- ✓ For co-permittees or Phase II permittees that rely on other entities to implement required elements of the program, how are data provided or reported?
- ✓ How are the required data collected, tracked, and reported?
    - o Is there a database?
    - o Are there reporting forms?
- ✓ Are there internal reporting deadlines within the municipal program structure?
- ✓ Are the appropriate data being collected by the permittee to be able to measure effectiveness and determine if performance standards are being met?
- ✓ How are data disseminated to those who use them, if at all?

<u>In-Field Program Evaluation Activities</u>
In-field activities are not necessary to evaluate program management.

Common Issues Identified During Program Evaluations

- ✓ The permittee lacks necessary intradepartmental coordination on stormwater issues.
- ✓ The permittee does not describe a formal, coordinated program framework.
- ✓ The SWMP does not identify pollutants of concern or program priorities.

- ✓ The program does not have measurable goals to track and quantify progress towards desired outcomes.
- ✓ The "umbrella" group for multiple co-permittees has a program or plan, but nothing has been developed for each specific co-permittee to detail actual implementation or goals specific to each co-permittee's program.
- ✓ No SWMP planning document(s) exist to guide the implementation of SWMP components.
- ✓ The SWMP has not been revised and updated based on evaluations of effectiveness.

4.2 Public Education and Participation

Regulatory Requirements
EPA's federal NPDES regulations for the stormwater Phase I and Phase II are listed at right. NPDES MS4 permits must address these requirements and often include more specific provisions.

Public education is not addressed as a separate program area in the Phase I regulations. Two general public education requirements are contained in the illicit discharge detection and elimination program requirements, as well requirements for education of pesticide, herbicide, and fertilizer applicators and construction site operators. The latter two programs are discussed in greater detail in the MS4 Maintenance and Construction Activities sections of Conducting an Evaluation.

The NPDES Phase II regulation's minimum control measures include requirements for Public Education and Public Participation.

Common Activities
Public education efforts aim to project information to the audience, while the goal of a public participation and involvement program is to encourage volunteerism, public comment and input on policy, and activism in the community. Many activities can and often do achieve both goals, therefore many permittees combine the two into one public outreach program component and develop joint materials. For example, a brochure about stormwater impacts could also invite residents to participate in a stream cleanup. In addition, it is common for several co-permittees to combine funds and produce one set of public outreach materials to distribute regionally or simply use another permittee's materials.

Goals and Objectives
Although not specified in NPDES regulations, ideally a stormwater outreach program should have a strategy to address public education and participation. The outreach strategy should be outlined in a document that may only be a few pages but should establish who is responsible for specific tasks, how much is budgeted, and the dates of implementation (especially if the permittee has to apply for funding support) and completion.

A permittee's outreach program should include goals based on specific stormwater quality issues in the community or pollutants of concern as well as specific target audiences. The goals can be quantitative (i.e., numbers of classroom presentations per year) or qualitative (i.e., increased stormwater awareness among Spanish-speaking residents regarding illegal dumping demonstrated by awareness surveys). Goals can be short-term or long-term but should be designed to be reassessed on a regular basis. Goals should also be progressive; for example, a goal for the first two years may be based on increasing public awareness of certain issues, whereas a goal for

Federal NPDES Regulations
NPDES MS4 permits must address these requirements and often include more specific state requirements:

✓Phase I MS4 Regulations
Public Education
40 CFR 122.26(d)(2)(iv)(B)
40 CFR 122.26(d)(2)(iv)(D)(4)
40 CFR 122.26(d)(2)(iv)(A)(6)

Public Participation
40 CFR 122.26(d)(2)(iv)(D)

✓Phase II MS4 Regulations
Public Education
40 CFR 122.34(b)(1)

Public Participation
40 CFR 122.34(b)(2)

✓CTIC Know Your Watershed
http://www.ctic.purdue.edu/KYW/

subsequent years would be based on measurable changes in behavior as a result of increased awareness.

Though each permittee may select its own unique set of goals, the ultimate outcome of all programs should be to elicit specific changes in behavior that benefit water quality. Brochures and presentations are means to this end, but they do not necessarily indicate a meaningful and successful public education program.

Message Development

The permittee's stormwater outreach messages should be clear, specific, and tied directly to elements that each specific audience values, in addition to goals established in the SWMP. Multiple messages may be necessary to address various audiences or behaviors.

Target Audiences

An outreach strategy should identify target audiences a permittee wants to reach with appropriate messages. Target audiences can be segmented by geographic location, demographics, occupation, or behavior patterns. Selection of a target audience can be based on stormwater quality issues and behaviors to be altered. The permittee should determine what information the target audience needs, gather information on the profile of the target audience, and collect information on the barriers to reaching this target audience. As stormwater awareness is evaluated and the program evolves, the target audience may change as well.

Message Packaging

Permittees use various packages to deliver messages to different target audiences. The packages should be appropriate to the audience (i.e., demographic, employment, geographic location, etc.). Packages for messages can include brochures, TV and radio spots, videos, presentations, events, and other formats.

Distribution Mechanisms

There are many ways to distribute outreach messages and materials. Distribution methods should be specific to the message and audience. Often, co-permittees or other partners (i.e., nonprofit organizations, watershed groups, other government agencies) share the distribution costs to best use available resources. Often goals or permit requirements are tied to distribution; therefore, permittees should track distribution of materials, program-related presentations, and other delivery methods.

Evaluation Methods

Permittees can evaluate the effectiveness of an outreach strategy in a number of ways, but any method should be linked to established measurable goals. Some use public surveys to gauge changes in awareness or behavior of the target audiences. The surveys can be conducted in person at events, on the phone, or using Web-based survey tools. Others track quantifiable data such as brochures distributed, people trained, participation in events, volunteer hours, etc. Ultimately, permittees should track metrics showing the adoption of desirable behavior changes.

Public Participation Activities

Ideally, permittees give the public the opportunity to participate in the development, implementation, evaluation, and improvement of the stormwater program. At the very least, permittees need to notify the public about the availability of the SWMP and notice of intent and solicit comments. Some permittees have stakeholder workgroups that are involved in developing policy and programs. Many permittees encourage and facilitate involvement by coordinating or promoting community events and promoting volunteerism in the community through activities such as storm drain stenciling, stream cleanups, riparian tree plantings, and other programs.

Evaluating Public Education and Participation Programs

The public education and participation component of a SWMP may be implemented by one person or department (e.g., a communications office) or be a combination of efforts by many people, departments, or agencies. An evaluator should question the SWMP coordinator about key staff to talk with prior to the evaluation. It may be possible for the coordinator to relay all necessary information without having to track down numerous staff. It is also a good idea for you to request that copies of pertinent outreach materials be compiled to review during the evaluation or taken to review after.

Some permittees will want to present all stormwater public education activities as an independent program area, while other permittees describe education activities in each relevant SWMP component (for example, education of construction operators is addressed in the construction component or public education on illicit discharges is addressed in the illicit discharge component). An evaluator should take note of how the permittee organizes its education activities and adjust the evaluation process accordingly.

Before the Program Evaluation

An evaluator should review or obtain the following information prior to the evaluation:

Pre-Evaluation Checklist
- ✓ MS4 permit provisions
- ✓ SWMP provisions
- ✓ Most recent annual report

- **MS4 NPDES permit provisions.** Review the permit requirements for public education and public participation to identify any specific requirements (such as the type of activities the program must include or the pollutants the program must address). The NPDES permit will serve as the primary basis for the program evaluation.
- **SWMP provisions.** The permittee's SWMP should describe the overall outreach structure of the program and any measurable goals.
- **Latest annual report.** The annual report should be reviewed to help you become familiar with the activities that have been conducted in the past and the progress made towards achieving measurable goals of the program component.

Records Review

The following records might help in evaluating the compliance and performance of the permittee's public education and participation program. Ask for copies of relevant information where it will help in writing a report or documenting a permit violation.

Documentation	What to Look For
Public outreach or communication strategy	Target audiences, specific stormwater messages, tracking methods, measurable goals, a plan to review and modify the strategy over time.
Stormwater Web site	Pamphlets, calendars of events, hotlines, contact information, access to stormwater permit requirements and SWMP documentation, general stormwater information, volunteer opportunities
Public awareness survey	Public awareness surveys may be available to assess either baseline awareness or movement towards measurable goals.

Elements to Address During the Program Evaluation

This Guidance presents common program activities and questions to consider during the program evaluation. Of course, a comprehensive program evaluation must be tailored to the specific issues associated with each permittee and should include more specific questions regarding the permittee's permit structure and management challenges.

GOALS AND OBJECTIVES

- ✓ Does the permittee have a strategy document for education and participation?
- ✓ Does the document include specific goals?
- ✓ On what are the goals based?
- ✓ Are the goals measurable? How?

MESSAGE DEVELOPMENT

- ✓ Have specific messages been developed for stormwater outreach?
- ✓ On what are the messages based? Pollutants of concern? General awareness? Problem target audience? All of the above?
- ✓ Are different messages used for different target audiences (i.e., children, homeowners, industry, etc.) or is one central message used for all?
- ✓ Do the messages encourage participation in stormwater-related activities?
- ✓ Do the messages educate about behavior changes that the audience can make to contribute to a solution?
- ✓ Have messages been developed specific to reducing illicit discharges with information about how to report them to the appropriate authorities?
- ✓ Have messages been developed to educate pesticide, fertilizer, and herbicide applicators (including homeowners) about ways to reduce stormwater pollution?

TARGET AUDIENCES

- ✓ Has the permittee identified target audiences for outreach efforts? How are these target audiences selected? What are the target audiences?
- ✓ What land use groups (i.e. industry, commercial businesses) has the permittee targeted?
- ✓ Have certain ethnic groups or nationalities been identified as audiences to be targeted based on an evaluation of local demographics?
- ✓ Have the target groups been reevaluated based on evaluation of the strategy and progress that has been made?
- ✓ Has the Phase I permittee targeted pesticide, herbicide, and fertilizer applicators (including homeowners) and construction site operators for outreach?
- ✓ Has the Phase II permittee targeted industries or commercial businesses of concern for outreach?

MESSAGE PACKAGING

- ✓ Does the permittee have a variety of written educational materials?
- ✓ Does the permittee have a variety of other packages (i.e., Web site, presentations, displays) for educational materials?
- ✓ Did the permittee produce the education and outreach materials in the different languages that are spoken in the community?
- ✓ Do the permittee's materials explain stormwater issues in easy-to-understand terms?

DISTRIBUTION MECHANISMS

- ✓ Does the permittee track distribution of materials to measure effectiveness?
- ✓ Is the permittee focused solely on distribution or is an effort made to evaluate the impact of the messages?
- ✓ Does the permittee use a variety of distribution mechanisms to target various audiences?

EVALUATION METHODS

- ✓ How does the permittee evaluate the effectiveness of the outreach strategy?
- ✓ Has the permittee conducted a public awareness survey?
- ✓ Which outreach materials have been the most effective in soliciting public involvement and participation? Changing audience behaviors? Increasing general stormwater awareness?
- ✓ Have any changes been made to the outreach strategy or materials based on an evaluation of effectiveness?

PUBLIC PARTICIPATION ACTIVITIES

- ✓ What opportunities does the permittee give to the public to review and comment on any changes to the SWMP, such as public comment via a Web site, a public meeting, or a stormwater advisory group?
- ✓ What volunteer opportunities (i.e., stream cleanups, storm drain stenciling) does the permittee coordinate or publicize to encourage the public to participate in stormwater-related activities?
- ✓ Does the permittee sponsor or promote any of the following activities?
    - o Beach/stream/lake cleanups
    - o Volunteer stream monitoring
    - o Stream clean-ups or equivalent activities
    - o Stormwater citizen panel

In-Field Program Evaluation Activities

The evaluation for this program area will be primarily conducted with the permittee in the office or by reviewing materials before or after the evaluation. However, evaluators can take note during other field activities to observe the stormwater educational materials available and distributed. For example, when visiting the permittee's permit counter, assess the types of stormwater outreach materials available to applicants for new construction projects. When driving around the permit area, observe if posters,

billboards, or other signs display stormwater messages. These types of field observations about the permittee's public education activities can help assess the effectiveness of the program.

Common Issues Identified During Program Evaluations

The following should be closely considered during evaluations of permittees:

- ✓ Permittees set inappropriate or immeasurable goals for activities.
- ✓ Permittees are not including key target audiences.
- ✓ Permittees are not customizing the materials for the target audience.
- ✓ Permittees are not developing materials for commonly spoken languages.
- ✓ Permittees are not distributing the materials adequately using appropriate methods for the target audience.
- ✓ Permittees are not facilitating involvement in program development, implementation, and improvement during the course of the permit term.
- ✓ Permittees are not coordinating or promoting events or activities that would improve water quality or change behaviors of concern.

4.3 MS4 Maintenance Activities

Regulatory Requirements
Applicable Phase I and Phase II federal NPDES regulations are listed at right.

General Permits
Although MS4 maintenance activities are addressed in MS4 NPDES permits, it is important to note that some permittees will also have coverage under industrial stormwater general permits or have individual permits for maintenance facilities that fall under one of the covered industrial categories, such as landfills, waste transfer stations, or transportation facilities.

Federal NPDES Regulations
NPDES MS4 permits must address these requirements and often include more specific state requirements:

- ✓ Phase I MS4 Regulations 40 CFR 122.26(d)(2)(iv)(A)
- ✓ Phase II MS4 Regulations 40 CFR 122.34(b)(6)(i)

Common Activities

Infrastructure Mapping and Characterization
Debris, **floatables**, sediment, metals, and other pollutants are caught in the MS4 and a regular program to inspect, clean, and repair components of this infrastructure will reduce the pollutants leaving the system and entering surface waters. A map of the MS4 is important for the permittee to plan for and track proper maintenance of inlets, catch basins, outlets, conduits, and management structures such as detention basins.

Public Streets Operation and Maintenance
The SWMP should address and include various practices for operating and maintaining public streets, roads, and highways that reduce the impact on receiving waters of discharges from municipal storm sewer systems. These practices should include regular street sweeping and proper use of BMPs during street maintenance activities. In addition, where applicable, permittees should consider deicing agent application methods that minimize the discharge of pollutants into the MS4, as well as salt and sand storage, fleet maintenance, fueling, and washing.

Flood Management
Permittees should assure that the impacts on the water quality of receiving water bodies are assessed in municipal or regional flood management projects and that existing structural flood control devices have been evaluated to determine if retrofitting the device to provide additional pollutant removal from stormwater is feasible.

Public Facilities Operation and Maintenance
The SWMP should include a mechanism to inventory and assess the impact of stormwater runoff from municipal facilities. The inventory should include all facilities that treat, store, or transport municipal waste as well as industrial/commercial facilities (facilities covered by a general permit as well as those defined by the Industrial/Commercial Facilities program component). Facilities

Resources

- ✓ North Texas Council of Governments - Stormwater Pollution Prevention Training Module Series http://www.nctcog.org/envir/SEEclean/stormwater/program-areas/pollution_prevention/CD/Version_1/P2_Training_Materials.asp

MS4 Facilities

- ✓ Municipal maintenance yard
- ✓ Fleet maintenance facility
- ✓ Chemical storage facility
- ✓ Household hazardous waste facility
- ✓ Solid waste transfer station
- ✓ Animal control facility
- ✓ Salt storage facility

with activities characterized as a potential threat should be inspected and BMPs should be implemented to reduce water quality impact.

Pesticide, Herbicide and Fertilizer Application and Management
The SWMP should include a component to reduce pollutants associated with the application of pesticides, herbicides, and fertilizer. This program should include, as appropriate, educational activities, permits, certifications and other measures for commercial applicators and distributors, and controls for application in public right-of-ways and at permittee owned or operated facilities, such as playing fields and other recreational facilities.

Training and Education
To ensure that maintenance staff is knowledgeable and proficient in the newest and most effective approaches to minimizing stormwater pollution from facilities and activities, many permittees require annual BMP training for field staff. This training may be presented in-house or staff may attend trainings provided by the permitting authority or industry. It is important to cross-train or educate any contracted staff used for field work as well. Many permittees also provide general stormwater awareness training to all employees.

TIP:

MS4 permittees are not required to enforce the NPDES (state or federal) industrial stormwater general permit, but they are required to comply with this permit at their own facilities. This includes the submittal of a notice of intent, development of a stormwater pollution prevention plan (SWPPP) or equivalent, inspections, and other requirements specified in the applicable industrial stormwater general permit.

Evaluating MS4 Maintenance Programs

MS4 maintenance encompasses a large variety of facilities and activities necessary to operate and maintain a permittee's infrastructure, which include streets, facilities, and the storm drain system. MS4 maintenance activities typically are designed to maintain a certain level of service to maintain the aesthetics of public areas, provide public safety, maintain public infrastructure, and provide flood management, rather than for stormwater quality protection. When reviewing MS4 maintenance programs, however, an evaluator should focus on activities that might impact stormwater quality. The following should be evaluated:

1. How the permittee has inventoried all its infrastructure and facility maintenance activities
2. How the permittee has reviewed maintenance activities to assess potential impacts on stormwater quality
3. Whether the permittee has revised activities or implemented new measures to protect stormwater quality

MS4 maintenance staff should be trained on stormwater BMPs and principles, and have clear guidance on appropriate stormwater BMPs to use during typical maintenance operations and facilities management.

Various departments may be involved in the MS4 maintenance component of a SWMP. Within a municipality, the majority of functions normally are performed by public works staff. However, be sure to discuss the areas to be evaluated with the SWMP coordinator to ensure that the appropriate staff are available to interview during the evaluation. Departments or agencies that might need to be interviewed include streets and highways, facilities management, water authority, fire department, wastewater treatment plant, flood control district, solid waste, and parks and recreation. As previously stated, it is important to interview managers as well as field staff whenever possible.

Before the Program Evaluation

To prepare for the MS4 maintenance program evaluation, an evaluator should review or obtain the following information prior to the evaluation:

Pre-Evaluation Checklist
- ✓ MS4 permit provisions
- ✓ SWMP provisions
- ✓ Most recent annual report
- ✓ NPDES-permitted municipal facilities
- ✓ Municipal facility inspection reports

- **MS4 NPDES permit provisions.** Review the permit requirements for the MS4 maintenance program to identify any specific requirements (such as a minimum street sweeping frequency). The NPDES permit will serve as the primary basis for the program evaluation.
- **SWMP provisions.** The permittee's SWMP planning document(s) should describe the activities and BMPs that the permittee has committed to implement and may include measurable goals that provide deadlines for program implementation.
- **Latest annual report.** The annual report should be reviewed to identify past activities and help you become familiar with the permittee's SWMP.
- **List of permittee-owned or -operated facilities with NPDES permits.** Try to obtain a list of industrial facilities owned or operated by the permittee that are covered by an NPDES industrial stormwater permit issued by the permitting authority (i.e., household hazardous waste collection facility). This list can be used during the program evaluation to determine whether the permittee is including the facilities that are covered by an industrial stormwater general permit in the inspection program and to understand the types of facilities present in the permit area. The list can also help identify potential sites for the field inspections.
- **MS4 maintenance facility inspection reports.** Review reports from inspections performed by the permitting authority within the permit area and talk to state inspectors to determine if there have been past stormwater violations at facilities owned or operated by the permittee.

Records Review

The following records might help in evaluating the compliance and performance of the permittee's MS4 maintenance activities. Ask for copies of relevant information where it will help in writing the report or documenting a permit violation.

Documentation	What to Look For

Tracking systems
✓ Catch basin cleaning
✓ Street sweeping
✓ Pump station maintenance
✓ Structural BMP maintenance
	▪ What type of water quality-related information is tracked (i.e., tons of material swept)
	▪ Does the permittee set priorities and goals for MS4 maintenance activities each year?
	▪ How are these priorities and goals established?
	  ▪ Pollutants of concern
	  ▪ Watersheds of concern
	▪ Review how these activities are summarized for the annual report

In-field inspection sheets	▪ What guidance is provided to inspectors or maintenance crews to ensure they're properly inspecting and maintaining stormwater infrastructure?

Documentation	What to Look For
Maintenance SOPs	▪ Review standard operating procedures or any employee manuals or fact sheets used by permittee staff to conduct their day-to-day activities to determine if stormwater BMPs are described
List of municipal facilities	▪ Have the facilities been prioritized based on potential water quality impacts? ▪ Are the facilities inspected? How often? Who inspects?
MS4 maintenance facility SWPPPs	▪ Are SWPPPs (or equivalent) for permittee-owned or -operated maintenance yards, wastewater treatment plants, public transit facilities that perform maintenance, or other facilities adequately addressing stormwater? ▪ When were the SWPPPs last updated?
Training schedule	▪ Review training records to determine how often training is provided, who is required to attend
Pesticides, herbicides, and fertilizers ✓Application records and protocols ✓Applicator certifications and training	▪ Has the permittee tracked the types and amounts of chemicals applied in the permit area? ▪ Does the permittee have state-certified pesticide applicators? ▪ Are the applicators' certifications up to date?
Flood management program	▪ Review the permittee's capital improvement project list for flood drainage or flood management projects. ▪ Review the permittee's watershed master plans or flood drainage master plans for flood management projects. ▪ What types of evaluation criteria have been used to prioritize the projects on the (CIP) list or in the watershed master plan (e.g., water quality impacts)? ▪ Determine whether permittee has a documented evaluation showing why it is not feasible to retrofit existing flood management projects.

Elements to Address During the Program Evaluation

Although the specific nature of a successful municipal program is not specified in NPDES regulations, it will generally be composed of the following components:

- Stormwater infrastructure management and maintenance
- Public streets operation and maintenance
- Flood management
- Public facilities operations and maintenance
- Pesticide, herbicide and fertilizer application and management, as well as erosion control, landscaping, and turf grass care

- Standards, BMPs, and outreach for municipal staff
- Training and education

For each of the elements listed above, this Guidance presents questions to consider during the program evaluation. Of course, a comprehensive program evaluation must be tailored to the specific issues associated with each permittee and should include more specific questions regarding the permittee's permit structure and management challenges.

STORMWATER INFRASTRUCTURE OPERATION AND MAINTENANCE

Infrastructure Mapping and Characterization

- ✓ Does the permittee have a map showing all inlets, outfalls, storm drain conduits, stormwater management facilities, and receiving water bodies?
  - o Does this map include catch basins and structural stormwater controls?
  - o Is the map readily available and used by maintenance field staff when performing maintenance activities?
  - o Is the map in hard copy format only or is it also in a geographic information system (GIS)?
- ✓ Are infrastructure assets or components named or numbered to better track necessary maintenance and repairs?

TIP:

A map is also required for the illegal connection and illicit discharge detection and elimination programs described in this Guidance. The maps developed for MS4 maintenance and illegal connection and illicit discharge programs can be the same to best use resources.

- ✓ Is information regarding stormwater infrastructure maintained in a database or mapping system? What types of data are maintained?
  - o Type of structure or asset
  - o Location (address, latitude/longitude)
  - o Photo
  - o Date built
  - o Date last inspected
  - o Date last cleaned/maintained

Catch Basin Cleaning

- ✓ Does the permittee have a schedule for routine maintenance or cleaning of catch basins?
  - o How many are cleaned and how often?
  - o Has the permittee targeted certain areas for more frequent maintenance? Does this targeting help minimize stormwater pollution?
  - o Does the permittee set goals for how many basins are inspected and cleaned each year?
  - o How does the permittee track and record cleaning and maintenance needs?
  - o What information is documented? Does the permittee track which catch basins are cleaned, how much material is removed, and so forth?
  - o How does the permittee use the data collected to further its program or evaluate program effectiveness? Are the data used to help prioritize cleaning frequency? Are they used to identify areas for targeted outreach?
- ✓ What are the permittee's procedures for disposing of waste removed from catch basins or storm drains?
  - o Does the permittee flush material that could potentially discharge to surface water?

- If the material is removed using a wet vacuum, how is the material dewatered? How is the decanted water disposed?

✓ Does the permittee have a schedule for routine maintenance or inspection of storm drain pipes?

✓ What are the permittee's maintenance procedures for cleaning clogged storm drain pipes?

Stormwater Management Structures

✓ Are catch basins and other inlet structures marked so that the public knows they drain to surface waters?

✓ Has the permittee inventoried the type and location of public stormwater management structures in its jurisdiction? How are the data collected and stored?

- Pump stations
- Drainage structures (debris basins, detention basins, regional ponds, etc.)
- Structural treatment controls
- Open channels

✓ How is vegetation maintained in grassed swales, rain gardens, pond perimeters, and other vegetated stormwater controls?

✓ Has the permittee mapped private stormwater management structures?

✓ How often are these facilities inspected?

✓ Are the stormwater management structures regularly maintained by the permittee?

- Are records kept of material and debris removed during maintenance?
- How is maintenance conducted? Are chemicals used to maintain vegetation and pests?

✓ How does the permittee use the data collected to further its program or evaluate program effectiveness? Are the data used to help prioritize cleaning frequency? Are they used to identify areas for targeted outreach based on type and volume of materials removed?

TIP:

Governmental Accounting Standards Board (GASB) Statement No. 34, Basic Financial Statements and Management's Discussion and Analysis for State and Local Governments (Statement 34) establishes new requirements for the annual financial reports of state and local governments. The Statement was developed to make annual reports easier to understand and more useful to the people who use governmental financial information to make decisions. Statement 34 requires governments to document and report existing infrastructure and depreciate their capital assets.

Permittees can utilize the information obtained through this required reporting to inventory assets such as maintenance facilities, stormwater management structures and MS4 infrastructure (i.e. outfalls, storm sewer pipes, catch basin).

http://www.gasb.org/

PUBLIC STREETS OPERATION AND MAINTENANCE

Street Sweeping

✓ Does the permittee regularly sweep streets? Public parking lots?

✓ What is the schedule for street sweeping?

✓ Are areas scheduled for sweeping based on aesthetics only or is consideration given for reducing impacts on the stormwater management infrastructure and surface water?

✓ What types of sweepers are used? Wet or dry?

TIP:

It is a good idea to question both managers and field staff regarding BMPs used. It is helpful to ascertain the level of understanding at the field level as well what types of BMPs are deemed appropriate and feasible for the specific MS4.

- ✓ How is street-sweeping debris disposed? If the debris is dewatered, how is this done? How is the decanted water disposed?
- ✓ Are records kept of the amount of debris collected?
- ✓ How does the permittee use the data collected to further its program or evaluate program effectiveness? Are the data used to help prioritize cleaning frequency?

Yard Debris Reduction and Disposal

- ✓ Does the permittee offer guidance or services to encourage mulching and/or composting of grass clippings and other yard debris?
- ✓ Does the permittee offer seasonal recycling or disposal services to collect leaf litter, Christmas trees, yard debris, or other seasonal organic materials?

Public Streets, Roads, and Highways Maintenance

- ✓ What types of public streets, roads, and highways operation and maintenance practices and procedures are performed by the permittee?
- ✓ Are BMPs used by field crews to minimize stormwater impacts during road maintenance or repair activities?
- ✓ What types of BMPs are used? Discuss BMPs used for such activities as:
  - o Ditch cleaning
  - o Sidewalk repair
  - o Asphalt patching
  - o Curb and gutter repair
  - o Street striping
  - o Sign painting
  - o Maintaining dirt and gravel roads (preventing erosion, dust control)

Deicing Activities

- ✓ What types of deicing agents does the permittee use? If salt is used, has the permittee investigated alternatives?
- ✓ How are deicing agents, sand, or other materials stored? Is the material covered and/or bermed to prevent runoff?
- ✓ Does the permittee track the locations and volumes of deicing agents, sand, or other materials applied?
- ✓ Is the material picked up after the snow/ice event is concluded? Is there a schedule for picking it up after an event?

FLOOD MANAGEMENT

- ✓ Does the permittee have an inventory of structural flood management structures?
- ✓ Have these structures been assessed to determine whether retrofitting could provide additional water quality benefits?
- ✓ How often are flood management projects inspected and/or maintained?
- ✓ Are new flood management projects being designed or planned to include water quality considerations?

PUBLIC FACILITIES OPERATION AND MAINTENANCE

Facility Inventory

- ✓ Does the permittee have an inventory of public facilities? At a minimum, this list should include the following:
  - o Public works yards
  - o Public transit facilities
  - o Wastewater and domestic water treatment plants
  - o Sanitary sewer system overflow locations
  - o Public parks/open areas
  - o Public parking lots
  - o Public buildings
  - o Landfills and hazardous waste disposal sites, transfer locations, or storage facilities
- ✓ Have the facilities been inspected and assessed for water quality impacts?
- ✓ Are any facilities required to apply for coverage under a general industrial permit? Do these facilities have SWPPPs?

Maintenance Yard Management

- ✓ If the permittee is a municipality, does the municipal public works yard have a SWPPP?
- ✓ Who is responsible for implementing and maintaining the SWPPP?
- ✓ Who is responsible for periodically inspecting the yard for stormwater compliance?

Parks Operation and Maintenance

- ✓ Are there adequate trash enclosures available at park facilities? Are they emptied regularly?
- ✓ Does the permittee provide any stormwater education or signage at parks and other areas?
- ✓ How are public restrooms cleaned and maintained? What chemicals are used? How is cleanup water disposed of?
- ✓ How are public pools maintained? How is the chlorinated water disposed of?
- ✓ Does the permittee include pet waste disposal stations with signage and baggies in public parks?
- ✓ What BMPs are used to address:
  - o Stormwater impacts from turf grass maintenance?
  - o The transport of pesticides, herbicides, and fertilizers by stormwater?
  - o Erosion?
- ✓ What types of vegetated BMPs are implemented at parks (e.g., alternative landscaping to minimize high-maintenance turf grass, streamside buffers, reduced mowing frequency, etc.)
- ✓ Does the permittee implement water conservation measures at its park facilities?

Building Operation and Maintenance

- ✓ Are the permittee's parking lots regularly swept?
- ✓ How are enclosed parking structures and other public buildings cleaned? If power washing is used, are BMPs implemented to protect storm drain inlets?

Sanitary Sewer System Maintenance, Overflow, and Spill Prevention

- ✓ Does the permittee have a program to mitigate or prevent **sanitary sewer overflows (SSO)** from entering the MS4?
- ✓ Have flow pathways from SSO locations to catch basins or other points of entry to the MS4 been identified?
- ✓ Have spill prevention and cleanup plans been prepared?
- ✓ Does the permittee have a written procedure to ensure that the MS4 is protected from a sewage overflow or spill? Do the procedures include protection of the storm drain system during and after the cleanup of a spill or overflow?
- ✓ Does the permittee implement a reporting protocol to ensure that all spills and overflows are reported to the appropriate authorities or the department designated to collect and report the permittee's annual report?
- ✓ If the jurisdiction includes residential homes with septic tanks, how does the permittee educate homeowners about proper maintenance of the systems?

Water Supply Operation and Maintenance

- ✓ Have procedures been developed to ensure that field staff integrate stormwater management BMPs into their operation and maintenance activities?
- ✓ Are BMPs implemented to address the testing and flushing of new or existing water lines?
- ✓ Are BMPs implemented to address hydrant testing?
- ✓ Are BMPs implemented to address maintenance activities required to maintain underground water lines (e.g., trenching, excavation)?
- ✓ Does the permittee coordinate source water protection efforts with the stormwater program?

Chemical and Hazardous Material Use and Disposal

- ✓ What types of chemicals or hazardous materials are used by the permittee?
- ✓ Where are these materials stored?
- ✓ Has the permittee implemented an alternative materials program to reduce the use of hazardous materials?
- ✓ Has the permittee implemented an inventory reduction program to reduce the quantity of chemicals and hazardous materials stored and used?
- ✓ Does the permittee have a household hazardous waste collection center for the public?
    - o Are records of the quantity of materials collected maintained by type of material?
    - o How does the permittee notify the public of these sites?
    - o Does the permittee have special household hazardous waste collection days?
- ✓ How does the permittee use the data collected to further its program or evaluate program effectiveness? Are the data used to help prioritize maintenance frequency? Are they used to identify areas of targeted outreach?

PESTICIDE, HERBICIDE AND FERTILIZER APPLICATION AND MANAGEMENT

- ✓ What kind of program has been established to address pollutants associated with the application of pesticides, herbicides, and fertilizer at public facilities?
- ✓ Are the permittee's fertilizer/pesticide applicators certified? Are permits or other certifications required?
- ✓ Where are the chemicals stored? Are appropriate procedures and secondary containment followed?
- ✓ Is there a pesticide/fertilizer application plan?
- ✓ Does the permittee practice integrated pest management (IPM) or use alternatives to pesticides?
- ✓ How does the permittee implement alternative landscaping to minimize the use of fertilizers and pesticides?
- ✓ What types of educational activities does the permittee conduct for applicators?
- ✓ What types of BMPs are used during application of pesticides in public rights-of-way?
- ✓ What types of BMPs are used during application of pesticides at municipal facilities such as parks?

STANDARDS, BMPS, AND OUTREACH

Municipal Staff

- ✓ Have standard operating procedures or their equivalent been developed to ensure that municipal field staff integrate stormwater quality BMPs into their daily activities?
- ✓ Have BMPs or standards been officially adopted by the permittee for use by municipal field staff?
- ✓ What reference materials or guidance documents are provided to field staff regarding BMP specifications and details?
- ✓ How does the permittee ensure that staff are fulfilling their responsibilities as outlined in standard operating procedures? Do managers provide oversight on a regular basis?

Contracted Services Staff

- ✓ Does the permittee require contractors to incorporate stormwater quality BMPs into their activities?
- ✓ How are BMPs required? Are the requirements outlined in requests for proposals? Are they included in contracts?
- ✓ Have BMPs or standards been officially adopted by the permittee for use by contractual staff?
- ✓ What reference materials or guidance documents are provided to contractual staff regarding BMP specifications and details?
- ✓ How does the permittee ensure that contractors are fulfilling their responsibilities as outlined in their contracts? Are inspections performed? Are periodic reports submitted?

TIP:

Educational programs for pesticide, herbicide, and fertilizer applicators used by the permittee may be addressed during the public education and participation portion of the evaluation.

General Public

- ✓ Does the permittee provide any information to the public regarding:

- Cleaning up after pets
- Household hazardous waste disposal
- Oil recycling
- Litter reduction

TRAINING AND EDUCATION

- ✓ What type of general stormwater training is provided to staff that are not involved in field activities? How often?
- ✓ How are new employees trained?
- ✓ What types of activity-specific training is provided to field staff? Is information on specific BMPs provided?
- ✓ Is any training provided to contract staff?

In-Field Program Evaluation Activities

The primary in-field evaluation activity is an inspection of the permittee's public works yard(s) or other type of permittee owned or operated facility (i.e. fleet maintenance). The intent of this inspection is to verify that activities are performed as described in the SWMP. The facility should be inspected as if it were a typical industrial facility. During the inspection, look for the following:

TIP:

Other MS4 facilities, such as parks, marinas, and household hazardous waste collection facilities, should be visited if there is adequate time.

- ✓ Are chemicals, bulk materials, or other potential pollutants stored outside? Is there secondary containment? Are the materials covered?
- ✓ Where are the permittee's vehicles washed? Are wash racks and dewatering areas plumbed to sanitary sewers, if allowed? If not allowed, are wastewaters from wash racks and dewatering areas prohibited from entering the MS4?
- ✓ Where are the permittee's vehicles maintained? If outside, what BMPs are used to prevent polluted runoff?
- ✓ Does the facility have structural stormwater BMPs (e.g., stormwater detention ponds, stormwater filter devices) installed?
  - If so, how are they maintained?
  - What is the frequency of maintenance?
- ✓ Are inoperable vehicles stored and maintained in a way to prevent polluted runoff and leaching of contaminants to groundwater?
- ✓ Are storm drain inlets at the yard free of debris and regularly cleaned?
- ✓ Is the yard swept regularly? Are there oil stains and spills at the yard?

An additional in-field evaluation activity could include visiting maintenance staff as they conduct maintenance. For example, you could visit staff as they clean catch basins, perform street repairs, or conduct other similar activities to ascertain whether stormwater BMPs are being implemented and identify whether staff are knowledgeable about BMPs.

Document all findings in the field in as much detail as possible. An MS4 Facilities Inspection Worksheet has been included as Appendix C to assist in this documentation.

Common Issues Identified During Program Evaluations

The following are some typical problem areas associated with MS4 maintenance programs. These areas should be closely considered during evaluations:

- ✓ The permittee's MS4 maintenance staff lack training on and awareness of stormwater management BMPs.
- ✓ Permittee staff lack adequate guidance (e.g., MS4 maintenance BMP manual, SOPs, fact sheets) on proper stormwater management BMPs.
- ✓ Stormwater BMPs and procedures are not incorporated during routine MS4 maintenance activities.
- ✓ Maintenance yards lack SWPPPs and adequate controls to prevent stormwater contamination.
- ✓ Contractual staff performing operation and maintenance activities for the permittee are not required to consider stormwater quality and implement appropriate BMPs.

4.4 Construction Activities

Regulatory Requirements

EPA's federal regulations for the stormwater NPDES Phase I and Phase II regulations are listed at right. NPDES MS4 permits must address these requirements and often include more specific state requirements.

General Permits

As described above, stormwater Phase I and Phase II MS4 permittees must implement a SWMP that includes erosion and sediment controls on construction sites disturbing at least one acre. In addition to the regulation of construction site stormwater at the local level, EPA regulations also require construction sites disturbing greater than one acre to obtain an NPDES permit. This permit can be issued by the state permitting authority or EPA, depending on whether the state has been delegated the NPDES authority. This dual regulation of construction sites at both the local and state or federal level can be confusing to permittees and construction operators.

Although there are many similarities between the NPDES construction general permit and the MS4 construction program requirements, Municipalities are not required to ensure that local construction projects comply with NPDES construction general permits. Federal NPDES MS4 regulations describe broad requirements for a stormwater program to control construction site runoff to the MS4 and give the permittees flexibility in designing a local program to meet their needs. However, to avoid duplication and confusion between the two programs, some permittees choose to require the same BMPs and plan submittals (i.e., SWPPPs) as required by NPDES regulations.

Federal NPDES Regulations

NPDES MS4 permits must address these requirements and often include more specific state requirements:

- ✓ Phase I MS4 Regulations 40 CFR 122.26(d)(2)(iv)(D)
- ✓ Phase II MS4 Regulations 40 CFR 122.34(b)(4)

TIP:

MS4 permittees are not required to enforce the NPDES (state or federal) construction general permit, but they are required to comply with this permit for their own public construction projects (e.g., capital improvement projects, road construction). This includes the submittal of a notice of intent, development of a SWPPP or equivalent, inspections, and other requirements specified in the state's construction general permit.

Common Activities

Ordinance/Legal Authority

Many municipal permittees address legal authority for construction site stormwater runoff control in a grading or stormwater ordinance. The ordinance(s) should specify which sites are required to implement controls (i.e., MS4 regulations require all sites greater than one acre, but many permittees use a smaller area or volume threshold, such as 50 cubic feet of earth moved or proximity to water bodies). The ordinance should require erosion and sediment control BMPs to be implemented and maintained, a performance standard, and penalties for noncompliance.

Construction Site Inventory

The permittee should have an inventory of active and completed construction projects that includes information about the site and inspections that the permittee has conducted, including inspection findings and follow-up (letters, enforcement actions, additional inspections). Permittees should consider prioritizing the inventory to

better target inspections based on project size, location, threat to water quality, or other factors. The permittee should also develop procedures for the receipt and consideration of complaints submitted by the public. Ideally, this information would be managed in a database and linked to a GIS for optimum tracking.

Resources (continued)

Construction Requirements and BMPs

While the legal authority described above should require BMPs at construction sites, a permittee should also have additional specifications or guidance on what types of BMPs are expected at sites. These requirements and standards and specifications for BMPs should be readily available to project applicants.

Plan Review Procedures

The review of erosion and sediment control plans (or SWPPPs if required under an NPDES construction permit) should be based on formal review specifications, a checklist, or similar criteria. Plan review staff should document the BMPs considered, whether they were addressed on the plans, and any identified deficiencies.

TIP:

You should have a clear understanding of the plan review and approval process and how stormwater and erosion and sediment control requirements are included in this process.

Some municipal permittees require that projects submit a copy of the **notice of intent (NOI)** that has been submitted to the State or EPA before approving a project. In some states, the state requires that the permittee receive local erosion and sediment control approval prior to submitting a NOI. At a minimum, permittees should make sure that project applicants are aware of the requirement to apply for NPDES permit coverage for projects disturbing greater than one acre.

Some municipal permittees use contract staff to review some or all plans. Be sure to review plans completed by contractual as well as municipal employees.

Construction Site Inspections

A key element of the construction component is the frequency at which sites are inspected. Some permittees identify a minimum frequency of inspections (such as weekly and/or following a rain event) for all projects. Other permittees will rely on building inspectors to conduct erosion and sediment control inspections at the same time as other types of required inspections (e.g., electrical). This approach, however, can result in sites not being inspected for long periods of time if the building inspector is not called out for an inspection. Also, building inspectors are not necessarily trained to recognize erosion and sediment control problems or have other priorities besides stormwater.

TIP:

Some municipal permittees have different inspectors for their public and private projects, be sure to evaluate each in the field.

Inspections are often targeted to specific types of sites or during specific periods (especially immediately following a rain event). For permittees with numerous active construction projects, it is recommended that a prioritization process be developed to ensure that the sites with the greatest threat to water quality are considered high priority and inspected more frequently. Inspection results should be documented using paper forms or electronic databases.

Program Support and Resources

Permittees should have an established source of funding for their construction program, including adequate resources for frequent inspections and plan review. Funds often come from fees paid by the construction operators. If general funds are used to support the program, permittees should ensure that construction inspections are a line-item appropriation not subject to reduction or elimination based on board politics or budget constraints.

Enforcement

Permittees should have an established, escalating enforcement policy that clearly describes the action to be taken for common violations. Enforcement authority typically includes verbal and written warnings, fines, and "stop work" orders. Verbal warnings should be documented in addition to all written violation notices. The enforcement policy should also address how repeat or serious violations will be addressed, including referral of the case to the NPDES permitting authority in the most egregious cases.

TIP:

Review enforcement cases to assess whether the permittee is adequately ensuring compliance. Lack of fines, "stop work" orders, or other enforcement actions do not necessarily indicate that the permittee's enforcement program is inadequate. A lack of enforcement cases could be the result of an effective inspection program, or it could indicate problems with the inspection records, inspector training, inspection procedures, or even the lack of commitment from the permittee to escalate enforcement.

Training and Education

A SWMP should include training to plan review and inspection staff. This training should include classroom presentations, in-field training, and follow-up evaluations to determine whether the training was effective. Although some permittees also provide training to construction operators, most simply provide educational materials such as fact sheets or brochures that describe local requirements and recommended BMPs.

Public Construction Projects

Public construction projects must comply with both the local program and the applicable NPDES construction general permit (state or federal). This requires the permittee to take on dual roles as both local regulator and permittee. Permittees must apply the same local requirements to public construction projects as are required of private projects. Some permittees develop and design public construction projects in-house without direct involvement from the department that reviews most private construction projects; therefore, it is important that the public project designers are trained and proficient in stormwater BMPs as well. If a permittee hires outside designers for public projects, it is important that stormwater guidelines be provided to them to ensure compliance with local and NPDES permit requirements.

After the project is designed, many permittees will hire contractors to build the project. Interested applicants submit proposals to bid on the project. To ensure that successful applicants will abide by all stormwater requirements, it is recommended that the request for proposals (RFP) include specific language regarding installation and maintenance of all BMPs. Many permittees also include additional language in subsequent contracts (if there is a document separate from the proposal) obligating contractors to appropriate stormwater measures and outlining potential enforcement penalties (i.e. delayed or reduced payment). An evaluation of public construction projects should include a review of RFP or contract language relating to stormwater controls.

Evaluating Construction Programs

The evaluation of a permittee's construction program should focus on the regulatory mechanism to require and enforce the program, plan review procedures, and erosion and sediment control inspection procedures. The evaluation should begin with a thorough review of the permittee's ordinances, standards,

approved plans, and other relevant written materials. Ask staff to walk through the planning and approval process from initial plan receipt to final approval.

You should determine how erosion and sediment control BMPs are required in construction site plans and how they are implemented and enforced in the field. Inspectors from multiple departments might also inspect different portions of a development project. For example, building department inspectors may be charged with site inspections during the construction of the buildings, whereas public works inspectors may be responsible for the inspection of construction activities within the right-of-way, such as streets, sewer, and water. Various departments may inspect a site during different stages of the project. You must be sure to interview all applicable staff and departments, which could include building, planning, engineering, or public works. Questioning planners and engineers in addition to questioning inspectors is helpful in determining how well various staff work together to achieve "on the ground" BMP implementation.

Some municipal permittees manage public construction projects (including capital improvement projects or CIPs) differently than private construction projects, for example, in some communities private projects are reviewed and approved by the planning or building department, whereas public projects may be entirely planned, reviewed, approved, and developed by the public works department. Make sure you distinguish between these two types of projects during the evaluation, and if necessary, repeat the same questions for both private and public projects.

Before the Program Evaluation

To prepare for the construction program evaluation, an evaluator should review or obtain the following information:

Pre-Evaluation Checklist
- ✓ MS4 permit provisions
- ✓ SWMP provisions
- ✓ Most recent annual report
- ✓ State or EPA Construction General Permit
- ✓ List of NPDES construction projects
- ✓ NPDES Construction inspection reports

- **MS4 NPDES permit provisions.** Review the permit requirements for the construction program to identify any specific requirements (such as a minimum inspection frequency). The NPDES permit will serve as the primary basis for the program evaluation.
- **SWMP provisions.** The permittee's SWMP planning document(s) will describe the activities and BMPs it is committed to implement and include measurable goals that provide deadlines for program implementation.
- **Latest annual report.** The most recent annual report should be reviewed to identify past activities and help the inspector become familiar with the permittee's program.
- **State or EPA NPDES Construction General Permit.** You should be very familiar with the requirements of the state or EPA's construction general permit, whichever applies, to ensure that conflicts between the SWMP and the state or EPA permit can be identified and violations of the state or EPA permit can be found.
- **List of NPDES construction projects.** Obtain a recent list of construction projects within the permit area that have been issued coverage under an NPDES general permit by the permitting authority (one acre or greater disturbed area). This list can be used during the program evaluation to determine whether the permittee has any public construction projects. The list can also help identify potential construction sites for field inspections. The list can also be crosschecked with a similar list requested and obtained from the permittee. Obtain information such as the operator name, name of the construction site, address, size, and other relevant information.
- **NPDES construction inspection reports.** Review inspection reports from construction inspections in the permittee's jurisdiction conducted by the permitting authority and/or EPA. Talk

to state or federal construction inspectors to determine if there have been past stormwater violations at construction sites in the permitted area and any role the permittee played in resolving the violations.

Records Review

The following records might help in evaluating the compliance and performance of the permittee's construction program. Ask for copies of relevant information where it will help in writing a report or documenting a permit violation.

Documentation	What to Look For
Local ordinances	One or more of the following ordinances may be used by a municipal permittee to regulate erosion and sediment control. ▪ Grading ordinance ▪ Erosion control ordinance ▪ Stormwater ordinance ▪ Landscaping ordinance ▪ Health and safety codes
Design standards, BMP manuals, and fact sheets.	These can be state or local standards or be taken from a non-regulatory source
Construction plans reviewed and approved by the permittee	Where possible, try to review the plans for projects that you will also visit during the field portion of the evaluation
Construction project inventory or database	▪ Does one exist? ▪ How often is it updated? ▪ What is the source for the inventory?
Enforcement escalation response plan or procedure	▪ Is the enforcement process documented and codified? ▪ Are roles of individuals or departments clearly defined?

Elements to Address During the Program Evaluation

Although not specified in detail in NPDES regulations, a successful construction program will generally be composed of the following elements:

- Ordinance/legal authority
- Construction project inventory
- Construction requirements and BMPs
- Plan review procedures
- Construction site inspections

- Program support and resources
- Enforcement/referrals
- Training and education

The common program elements are the key issues to consider during the review.

ORDINANCE/LEGAL AUTHORITY

- ✓ What legal authority does the permittee have to require erosion and sediment control BMPs on construction sites and to ensure compliance?
- ✓ Does the permittee's legal authority address stormwater quality for all projects disturbing at least one acre?
- ✓ What exemptions does the ordinance or other legal authority allow?
- ✓ Does the legal authority authorize the permittee to require erosion and sediment control plans?

CONSTRUCTION SITE INVENTORY

- ✓ How does the permittee track construction projects?
- ✓ What information is collected?
  - o The number and status (active/inactive/completed) of construction sites
  - o The number, frequency, results, and follow-up actions resulting from inspections
  - o The actions taken to resolve the issues and dates when compliance was achieved.
  - o The number and type of enforcement actions taken at sites in violation
  - o Complaints submitted by the public
- ✓ Does the inventory include construction sites disturbing less than 1 acre?
- ✓ What is the threshold for tracking projects?
- ✓ Does the inventory track which sites have submitted an NOI for coverage under a state/EPA construction general permit?
- ✓ How is the inventory updated? How often?
- ✓ Does the permittee prioritize projects for more frequent or targeted inspections?
  - o If yes, based on what criteria?

CONSTRUCTION REQUIREMENTS AND BMPS

- ✓ What technical guidance (e.g., BMP manual or fact sheets) does the permittee use as the standard for design and selection of nonstructural and structural construction BMPs?
  - o Are project applicants required to follow these technical manuals?
  - o Does the guidance set minimum operation and maintenance requirements for BMPs?

TIP:

You should ask the permittee for a copy of the information packet that they provide to new project applicants. What type of stormwater information is included? Does it describe the types of BMPs and stormwater requirements that could apply to their project?

- Does the guidance include installation requirements for the BMPs?
- Does the guidance provide proper siting and use criteria for BMPs to ensure that adequate BMPs are being selected and implemented?

✓ Does the permittee provide guidance as to recommended BMPs to be used?

✓ Does the permittee have different requirements or standards for different times of the year (i.e., during the rainy season vs. the dry season)?

PLAN REVIEW PROCEDURES

✓ Does the permittee hold pre-application meetings on any construction projects? Are stormwater and erosion and sediment control requirements addressed at these meetings?

✓ Is there any plan review coordination with other city departments such as smart growth, redevelopment, traffic engineering, etc.?

✓ What is the permittee's threshold for plan review? (For example, does the permittee review plans for all projects disturbing greater than 1 acre, or do they use another threshold?)

✓ Does the permittee apply standard conditions that incorporate erosion and sediment control requirements into its plan review process?

- Get a copy of the standard conditions to determine if they specifically address erosion and sediment control

TIP:

You should select at least 2 to 3 approved projects with erosion and sediment control plans to review with the permittee. Try to choose different project types (residential, commercial) and sizes. Also review at least one public project plan to see if the permittee is applying adequate standards to municipal construction.

✓ Do the plan reviewers verify whether the project applicant has submitted an NOI to the state or EPA? Is evidence of NOI submission required before a plan can be approved or a local permit issued?

✓ Do plan reviewers use specific criteria or a checklist when reviewing plans?

✓ Does the permittee consider during the review process whether the construction project discharges to a TMDL/impaired water?

✓ When reviewing plans approved by the permittee, you should:

- Look for whether adequate BMPs are included on plans, details, and drawings for the installation of certain BMPs when applicable, what types of standard conditions or notes are included, and whether maintenance requirements are specified.
- Are inadequate or incomplete plans automatically returned to the applicant? Are these returns accompanied by an explanation of what is needed for approval?
- Are BMPs addressing other construction activities, such as materials storage and waste disposal, incorporated into the construction plans?
- Do the plans include notes addressing the prohibition of non-stormwater discharges?
- Were comments provided by the permittee to the project proponent reasonable and appropriate?

CONSTRUCTION SITE INSPECTIONS

- ✓ Does the permittee adequately inspect all phases of construction?
  - o Clearing and grubbing and site preparation
  - o Mass grading and public infrastructure/utility construction
  - o Building construction and final grading
  - o Final stabilization
- ✓ What departments are charged with erosion and sediment control inspections? Is the department responsible based on the location of the site (i.e. right-of-way vs. building site) or phase of development (i.e., grading vs. building)?
- ✓ Do the inspectors use a checklist or inspection form during each inspection?
- ✓ How many inspectors does the permittee use to verify erosion and sediment control compliance at construction sites?
- ✓ Does this number appear adequate to assess active construction occurring in the permitted area? Compare this to the total number of construction sites that need to be inspected at any one time (number of inspections per construction site per year). Consider project durations and phasing, local conditions (e.g., dry vs. wet seasons), and additional duties assigned to inspectors.
- ✓ Does the permittee have an established prioritization process for establishing inspection frequency? If so, on what factors is the prioritization based (i.e., size, proximity to water body, sensitive areas)?
- ✓ How often are sites inspected?
- ✓ Does the permittee target inspections during and immediately after wet weather events? If so:
  - o What size rain event triggers an inspection?
  - o How soon after a rain event?
- ✓ Is there an established rainy season for the area? Are sites inspected prior to the start of the rainy season to determine preparedness?

TIP:

Review inspection records to determine how the permittee corrects identified problems. If an inspection report identifies missing BMPs or a non-stormwater discharge, verify that there is an inspection record showing that the site was reinspected within a reasonable timeframe. Was the problem corrected?

PROGRAM SUPPORT AND RESOURCES

- ✓ Does the program have a dedicated source of funding to support plan review staff and inspectors?

ENFORCEMENT

- ✓ What types of enforcement actions are provided for in applicable ordinances (e.g., notices of violation, "stop work" orders, fines)?
- ✓ Is use of these actions outlined in an established, escalating enforcement policy?
- ✓ Review with the permittee statistics on enforcement of construction site erosion and sediment controls.
  - o How many enforcement actions are taken per year?
  - o Are follow-up inspections conducted to verify compliance?

- ✓ Are there limitations on the permittee's enforcement authority (e.g., limits on the dollar amount of fines, inability to issue civil penalties)?
- ✓ Do staff feel that their enforcement authority is adequate to achieve compliance on construction projects?
- ✓ What is the relationship with the City Attorney or other relevant prosecuting authority?

TRAINING AND EDUCATION

Staff training

- ✓ What type of training do construction inspectors receive? Are plan reviewers trained on erosion and sediment control BMPs and requirements?
- ✓ How often is training conducted? How many staff have been trained?
- ✓ What type of follow-up is conducted by the permittee to verify that the training is effective?

TIP:

Permittees must train their primary inspectors, but they should also provide at least basic stormwater training to other field inspectors not directly involved in the stormwater program, such as building inspectors and code compliance staff. At a minimum, this will encourage these staff to refer stormwater problems to the permittee's designated stormwater inspector.

Construction operator education

- ✓ What types of educational materials have been developed and distributed to construction operators?
- ✓ How are they distributed? At the permit desk? During inspections?
- ✓ What type of training does the permittee provide or advertise to local construction operators?
- ✓ How often is this training conducted? How many construction site operators have been trained?
- ✓ Are contractors and developers required to attend?
- ✓ Does the training cover any of the following?
  - o Local and state erosion and sediment control requirements and permits
  - o Proper erosion and sediment control BMP design and installation
  - o Maintenance requirements for BMPs
  - o General construction stormwater permit requirements (state or federal)
- ✓ Are training sessions held in cooperation with other local permittees or regional authorities?

PUBLIC CONSTRUCTION PROJECTS

- ✓ Do RFPs or contracts include language specifying stormwater requirements?
- ✓ Are inspection and maintenance requirements specified in the contract?
- ✓ What oversight does the permittee implement to ensure the contractor is implementing all requirements appropriately and adequately?
- ✓ What penalties are in place to require compliance from the permittee's contractors?

In-Field Program Evaluation Activities

In-field activities to evaluate the construction inspection program typically consist of accompanying one or more construction inspectors in the field as they conduct inspections. The construction inspector is to conduct the inspection; you are to strictly observe. Discourage construction inspectors from merely describing the inspection process. It is best to accompany more than one construction inspector, if possible, to see whether the permittee is providing adequate training to all inspectors.

TIP:

Let the inspector lead the inspection—just observe. Don't let the inspector "explain" how they would conduct the inspection—tell them to show you.

The main purpose of the field evaluation is to assess the permittee's construction inspection program—how knowledgeable the inspectors are about stormwater requirements and BMPs, how thorough of an inspection they conduct, and how they handle problems identified at construction sites. This assessment can sometimes be made after only one or two construction site inspections, while for other permittees it may take multiple inspections and visits with several inspectors to assess their inspection program. Try to limit the number of people that join each inspection—too many staff can overwhelm a construction site, making it harder for the construction inspector to conduct an actual inspection.

Schedule at least a half-day for construction inspections. Travel time between sites may be significant, so plan accordingly. For a large permit area with a lot of active construction, schedule a full day if possible to visit both private and public projects. Stress the need to visit as many construction projects as possible while still following the inspector's standard procedures. Try to observe a large variety of sites, such as small residential projects, larger housing developments, commercial projects, and public construction projects, projects in mass grading, projects close to completion, and projects adjacent to waterways.

As the inspector conducts the construction inspection, observe the following:

- ✓ Is the inspector knowledgeable about stormwater BMPs, requirements, and ordinances?
- ✓ Is the inspector familiar with the applicable construction stormwater general permit?
- ✓ Does the inspector check the approved plans at the construction site? (Note that some inspectors visit sites frequently and this is not always practical. Also, plans at small construction sites might not be kept on-site.)
    - o Ask the inspector if he or she has visited this particular site before. If the answer is no, the inspector should ask to see the plans, have reviewed them ahead of time, or brought a copy so he or she knows what BMPs have been approved for that site.
- ✓ Does the inspector use a checklist or otherwise document inspection findings in the field?
- ✓ What kind of written feedback is provided to the operator and within what timeframe do violations need to be addressed?
- ✓ What kind of report is generated as a result of the inspection? Does it detail all problems found at the site or does it document only that the inspection occurred?
- ✓ Are findings from inspections tracked in a central location or database?

TIP:

Be aware that permittees will often match you up with their "best" inspectors and want to take you to the most compliant sites. Visiting sites that are "bad actors" or typically non-compliant can also be very helpful in characterizing the inspector's knowledge and abilities. "Dirty" projects do not necessarily indicate inadequate inspections or inept inspection staff. It is sometimes helpful to the inspectors to have another set of eyes at a problem site to assess the issues and provide insight for solutions.

- ✓ How does the inspector track required follow-up inspections or enforcement actions?
- ✓ Is the inspector thorough? Does the inspector walk the entire site and identify all potential problems?
- ✓ Does the inspector note flow pathways and check for discharges from the site at outfalls or to storm drain inlets?
- ✓ What type of stormwater training has the inspector received?

The in-field activity is a good opportunity for you to ask the inspectors some of the same questions asked during the office portion of the program evaluation to see if the answers differ. Often, inspectors are more open to discussing "problems" with the program than are the program managers. Try to spend some time with the construction inspector talking informally about the program. (The drive between inspections is a good time for this talk.)

Document all findings in the field in as much detail as possible. A Construction Inspection Worksheet has been included in Appendix C to assist in this documentation.

Common Issues Identified During Program Evaluations

The following are some common problems with construction programs. These areas should be closely considered during evaluations:

- ✓ When erosion and sediment control inspections are included as part of building inspections, erosion and sediment control is seen as a less important aspect of the inspection compared to other aspects, such as electrical or plumbing.
- ✓ The inspectors may lack the training and time necessary to conduct thorough erosion and sediment control inspections.
- ✓ Construction inspectors sometimes lack the authority to enforce the local ordinance.
- ✓ The inspectors may not follow a formal, written, escalating enforcement policy, or such a policy does not exist.
- ✓ Construction inspectors do not document inspection results using a checklist or other document.
- ✓ Inspectors do not conduct thorough inspections (i.e., drive-by inspections are common).
- ✓ Construction inspectors do not verify that BMPs approved on plans are actually installed at the project.
- ✓ Construction inspectors do not inspect to determine if BMPs are adequately maintained.
- ✓ The permittee is not adequately tracking inspections and inspection results.
- ✓ The permittee is not verifying general permit coverage before approving plans for construction disturbing one acre or more.
- ✓ Plan review staff lack adequate guidance and criteria for reviewing erosion and sediment control plans.
- ✓ Inspectors of public projects (in-house or contractual staff) are not knowledgeable about the applicable construction general permit (this is a significant liability because the inspector is usually responsible for ensuring compliance with this permit).

4.5 Post-Construction Controls

Regulatory Requirements
EPA's federal regulations for the stormwater Phase I and Phase II NPDES MS4 regulations are listed at right. NPDES MS4 permits must address these requirements and often include more specific requirements.

Federal NPDES Regulations
NPDES MS4 permits must address these requirements and often include more specific state requirements:

- ✓ Phase I MS4 Regulations
  40 CFR 122.26(d)(2)(iv)(D)
- ✓ Phase II MS4 Regulations
  40 CFR 122.23(b)(5)
  40 CFR 122.23(b)(5)

General Permits
As described above, stormwater Phase I and Phase II permittees must implement a SWMP that includes a post-construction component that addresses stormwater runoff at the completion of construction of new or redevelopment sites that disturb at least one acre.

Common Activities

Ordinance/Legal Authority
The ordinance should have language requiring that all new development and significant redevelopment projects incorporate stormwater management BMPs and submit a plan that complies with design standards, zoning codes and comprehensive or master plans. Some permittees review required construction general permit SWPPPs, while others require the development and submittal of a separate post-construction plan to address local stormwater requirements. In addition, some permittees require that projects smaller than one acre implement post-construction stormwater controls. These requirements should be detailed in an ordinance to establish legal authority. Ideally, the ordinance will outline the contents of an approvable plan and responsibilities for operation and maintenance of approved BMPs. The operation and maintenance section should also describe who is responsible for inspections and maintenance (e.g., the homeowner, homeowners' association, permittee, etc.).

- ✓ EPA Low Impact Development Resource Center www.epa.gov/owow/nps/lid/
- ✓ Low Impact Development Center www.lowimpactdevelopment.org

Comprehensive or Master Planning
Often, when the MS4 is a municipality, the permittees address stormwater management using the established local comprehensive or master planning process. Comprehensive or master planning typically is required by state law and is to be used as guide in decision-making about the built and natural environment by the governing body of the permittee (i.e., city council, planning commission, county board). A comprehensive plan contains long-term planning recommendations for the community and often addresses water quality issues either directly with specific water quality goals or indirectly through the encouragement of land use practices that minimize impervious surface (i.e., high density "villages") or encourage open space.

The inclusion of water quality-related goals in the comprehensive plan could assist local planners and policymakers to institutionalize the stormwater principles necessary to implement an effective SWMP.

However, the comprehensive plan is not a substitute for a SWMP Plan because it cannot be changed or updated readily and does not include necessary implementation details of the stormwater program.

Post-Construction BMP Standards

While the legal authority described above should require the installation of BMPs at sites, a permittee should also have additional specifications or guidance on what types of BMPs are expected or required. Ideally, the ordinance will include language that refers to a guidance manual for BMP design and implementation. The recommended manual should contain sizing criteria, performance criteria, and guidance on selection and location of BMPs. The manual and preferred BMPs should be available to project applicants early in the planning phase of a project. The standards should include guidance for proper district or subarea design (e.g., a redevelopment district), proper site design (e.g., sending gutter water into landscaping), source control (e.g., covering trash cans), and stormwater treatment BMPs (e.g., sand filters).

Plan Review and Approval Procedures

The review of post-construction plans should be based on formal review specifications, a checklist, or similar criteria. Plan review staff should document the BMPs considered, whether they were addressed on the plans, and any identified deficiencies. Some permittees use contract staff to review some or all plans. Be sure to review plans completed by contractual as well as permittee staff.

TIP:

Review several types of recent development projects that have gone through the review process. Include small residential and large commercial development projects as well as both new development and redevelopment projects, if applicable.

Post-Construction BMP Inventory

The permittee should maintain inventory detailing the types and locations of planned and installed post-construction BMPs projects. There may be two types of inventories: (1) a traditional database for site-level structural BMPs, and (2) a tracking system for planning or development practices BMPs. Ideally, both types of information would be managed in a database and linked to a GIS for optimum tracking. Structural post-construction BMPs must be inspected and maintained to remain effective. Tracking the locations, conditions, ages of the structural BMPs as well as the inspection findings is critical to ensuring the proper maintenance occurs for the life of the BMP. For planning-related BMPs, tracking systems may be linked to code revisions or development permits. Note that some revisions may occur with State or regional codes or standards, which might require a separate tracking system.

BMP Inspection and Maintenance

Proper BMP installation, operation, and maintenance are critical to optimizing the effectiveness of post-construction BMPs. If BMPs are not maintained, they can become concentrated sources of pollutants themselves. Comprehensive "as built" inspections are necessary at the conclusion of a project to ensure the BMP has been built properly and regular inspections are critical to ensure the BMP is being maintained as needed. Permittees may inspect private BMPs or require that the owners/operators of the facility inspect them through maintenance agreements or other mechanisms. Often, permittees require that facility owner/operators submit documentation detailing inspection dates and maintenance performed.

Enforcement

Legal authority is needed to require owner/operators to maintain BMPs. This can be outlined in a maintenance agreement or other binding contract, but it must be included in municipal code or regulation as well. The permittee should have available enforcement actions to require the owner/operator to perform necessary inspections and maintenance. Some permittees have authority to abate problem facilities (i.e., maintain the facility and charge the owner/operator) if necessary.

Public Construction Projects

Municipal permittees must apply the same local requirements to public construction projects as is required of private projects. Some municipal permittees develop and design public construction projects in-house without direct involvement from the department that reviews most private construction projects; therefore, it is important that the public project designers are trained and proficient in stormwater BMPs as well. If the permittee hires outside designers for public projects, stormwater guidelines should be provided to them to ensure compliance with local and general permit requirements. Permittees should have an inventory of publicly owned stormwater management and treatment facilities and should have an inspection and maintenance program established.

Training and Education

Permittees should provide training to plan review and BMP inspection staff (if applicable). This training should include classroom presentations and in-field training as well as follow-up evaluations to demonstrate that the training was effective.

TIP:

A review of existing codes and land development regulations can be extensive. The following are previous efforts to evaluate development codes that may be helpful in this process:

Center for Watershed Protection Codes and Ordinances worksheet http://www.cwp.org/COW_worksheet.htm

EPA list of smart growth scorecards www.epa.gov/smartgrowth/scorecards/project.htm

King County Washington "Built Green" Checklists http://www.builtgreen.net/checklists.html

Evaluating Post-Construction Programs

Development can significantly alter landscapes by increasing imperviousness (e.g., roofs, driveways, parking lots) and changing drainage patterns, thereby increasing the volume and velocity of runoff from the site. Increased volume leads to degradation of receiving waters and increased flood frequency. Stormwater from newly developed impervious areas can also contain a variety of pollutants that are detrimental to water quality, such as sediment, nutrients, road salts, heavy metals, pathogenic bacteria, and petroleum hydrocarbons. Two groups of BMPs can minimize the impacts of stormwater from new development and redevelopment projects: nonstructural site design or source control measures, which prevent or reduce the generation of pollutants, and structural treatment BMPs that detain and treat stormwater to control the volume of runoff and reduce pollutant loading to receiving waters.

Postconstruction stormwater impacts are not likely to be controlled entirely with site-level BMPs. Thus regional, district and subarea planning is increasingly recognized as a means to control overall imperviousness. Postconstruction BMP standards are likely to include many interlinking requirements that affect common land development practices, such as street design, community layout, and land use mix. The aim of such standards is to revise building practices that drive impervious surface generation within a watershed to reduce the effects of the built environment at a meaningful scale. Note that this approach to stormwater management is new, so an evaluation of this area may address future planning activities in addition to current activities.

There are several approaches permittees may use to implement planning-level BMPs, each of which is are appropriate in different development settings and offers a unique set of benefits. Four of these approaches or frameworks—redevelopment, infill, compact design, and conservation development—are described below and may be found in a comprehensive plan or SWMP:

- *Redevelopment*: Under this framework, a permittee is looking to redevelop already impervious districts and lots. Programs to support redevelopment include downtown redevelopment plans, vacant property reforms, brownfields redevelopment, and corridor redevelopment plans. These programs are typically more successful when supported by financial programs (e.g., tax incentives and grants), policy support (e.g., priority infrastructure), and technical assistance and staffing support.

- *Infill*: Infill development, like redevelopment, takes place in areas supported by existing road, water, and sewer infrastructure. Infill development tends to have a smaller footprint than conventional new development projects. Infill sites, whether individual lots or larger parcels, are generally undeveloped and may be able to manage stormwater flows onsite. The policies described above for redevelopment would apply to infill development, as well as any policies to mitigate flows from infill.

- *Compact Design*: Compact designs seek to meet development needs on a smaller footprint to achieve both development and conservation goals. These designs can be used in redevelopment (e.g., transit-oriented development) or new development (e.g., cluster housing or rural or urban villages) situations and are suitable in urban, urbanizing, and rural settings. The key to successful designs lies in coordinating interlinking aspects of transportation, land use, and open spaces. This framework is particularly amenable to design guidelines for a district, including stormwater management.

- *Conservation Development*: This framework, typically used in rural areas or along the urbanizing fringe, is targeted for the lowest impact development. Successful programs will be tied to specific conservation objectives (e.g., habitat preservation, groundwater recharge) and will link the rural development scheme with rural economic development objectives.

TIP:
When permittees review development codes to identify areas where stormwater benefits can be incorporated, the following are typically examined:

- ✓ Review of parking demand or indications of overly high parking ratios
- ✓ Overlarge setbacks from the street or other lot lines
- ✓ Minimum lot size requirements in urbanizing areas
- ✓ Highly separated uses embedded in codes
- ✓ Subdivision and street requirements
- ✓ A review of barriers to low impact development, redevelopment or other land efficient forms, including State or institutional barriers and standards

When evaluating the post-construction, new and redevelopment component of a SWMP, it is helpful to discuss the process chronologically in the order that a project would occur. Ask the permittee's planning staff to walk you through the process as if you were a developer proposing a project. Discuss what post-construction stormwater BMPs are required for new and redevelopment projects, how and when developers are informed of the stormwater requirements in the initial planning stages, how plans are reviewed for stormwater standards, on what legal authority requirements and standards are based, what is required for plan approval, how the BMPs are inspected during and after construction, and how the permittee ensures that BMPs are adequately operated and maintained.

Typically, an on-site evaluation for post-construction BMPs will involve interviewing planning and engineering staff. Planners usually work with developers to determine what is required for plan submittal, but engineering staff may actually review the plans and verify design calculations.

Before the Program Evaluation

To prepare for the post-construction program evaluation, you should review or obtain the following information:

- **NPDES MS4 permit provisions.** Review the permit requirements for the post-construction program to identify any specific requirements (such as a design standard for post-construction controls). The NPDES permit will serve as the primary basis for the program evaluation.

Pre-Evaluation Checklist
- ✓ MS4 permit provisions
- ✓ SWMP provisions
- ✓ Most recent annual report
- ✓ Comprehensive plans
- ✓ Economic development plans

- **SWMP provisions.** The permittee's SWMP planning document(s) will describe the activities and BMPs the permittee has committed to implement and include measurable goals that provide deadlines for program implementation.
- **Latest annual report.** The annual report should be reviewed to identify past activities and help the inspector become familiar with the permittee's program.

Records Review

The following records might help in evaluating the compliance and performance of the permittee's post-construction program. Ask for copies of relevant information where it will help in writing a report or documenting a permit violation.

Documentation	What to Look For
Local ordinances	One or more of the following ordinances may be used by a permittee to regulate post-construction BMPs ▪ Grading ordinance ▪ Stormwater ordinance ▪ Landscaping ordinance ▪ Other portions of the code used by code enforcement staff to enforce aesthetic concerns ▪ Zoning codes or land development regulations (where the permittee chooses to amend existing codes to implement post-construction improvements) ▪ Economic development and capital improvement plans that support the district or comprehensive planning goals ▪ Design guidelines for larger development areas (e.g. subdivisions, mixed use districts, downtown redevelopment programs) ▪ Local and district open space and park plans that serve to support the post-construction program
Comprehensive or General Plans	Review for language that requires consideration of water quality concerns when evaluating development projects
Design standards, BMP manuals, or fact sheets	These can be state or local standards or be taken from a non-regulatory source
Post-construction plans reviewed and approved by the permittee	Where possible, try to review the plans for projects that you will also visit during the field portion of the evaluation
Post-construction BMP tracking system	Database or other system used to track the location of post-construction BMPs that have been installed and the maintenance performed or required for each BMP

Elements to Address During the Program Evaluation

Although not specified in detail in NPDES regulations, a successful post-construction program will generally be composed of the following elements:

- Ordinance/legal authority
- Comprehensive or master planning
- Post-construction BMP standards

- Plan Review and approval procedures
- Post-construction BMP inventory
- BMP inspections
- Enforcement
- Public construction projects
- Training and education

The common program elements are the key issues to consider during the review. For each of the elements listed above, this Guidance presents common program activities and questions to consider during the program evaluation. The questions are suggested for you to address each program component. Of course, a comprehensive program evaluation must be tailored to the specific issues associated with each permittee and should include more specific questions regarding the permittee's permit structure and management challenges.

ORDINANCE/LEGAL AUTHORITY

- ✓ What legal authority does the permittee have to require post-construction BMPs on development sites and to ensure maintenance?
- ✓ Does the permittee's legal authority address post-construction requirements for all projects disturbing one acre or more?
- ✓ Does the legal authority require site design, source control, and stormwater treatment BMPs?
- ✓ What exemptions does the ordinance or other legal authority allow?
- ✓ What procedures for alternative compliance (i.e., planning-level BMPs and other non-structural controls) are allowed?
- ✓ Does the legal authority authorize the permittee to require stormwater management plans to address post-construction impacts?

COMPREHENSIVE OR MASTER PLANNING

- ✓ Does the comprehensive or master plan include elements encouraging the control of water quality or quantity (e.g., flooding) from existing or new developments?
- ✓ Does the plan include elements to encourage protection of natural features (such as wetlands, buffer strips, etc.)?
- ✓ Does the comprehensive or master plan include elements to encourage minimization of impervious surfaces?
- ✓ Does the comprehensive plan include elements to encourage open space?

POST-CONSTRUCTION BMP STANDARDS

- ✓ What technical guidance (e.g., BMP manual) does the permittee use as the standard for design and selection of post-construction BMPs? It is not necessary to do a thorough review of the manual or standards used by the permittee. Question the planners regarding the following key items:
    - o Are project proponents required to follow the technical manual?

- Does the guidance provide siting and use criteria for the BMPs to ensure proper and adequate BMPs are being selected and implemented?
- Does the guidance provide siting and use criteria for BMP selection based on the development context (i.e., BMP selection appropriate for ultra urban-areas versus those more appropriate for more rural settings with larger parcels)?
- Are pollutants of concern that are typically generated by the proposed development type considered when selecting or approving BMPs?
- Does the technical manual provide guidance on sizing, performance, and location of BMPs?
- When was the BMP manual last updated?

✓ Does the permittee have different requirements or standards for different types of developments (e.g., specific post-construction requirements for gas stations or automobile repair facilities)?

✓ Does the permittee have design manuals related to land-efficient site designs (e.g. better site design, better models for large retailers)?

✓ Does the permittee promote source control and site design standards to reduce the generation of pollutants in addition to treatment BMPs?

✓ Does the permittee include in standards and manuals specifications for innovative site design practices, such as low-impact development and other techniques that manage runoff on-site?

✓ Are project applicants encouraged or required to use vegetative BMPs that promote infiltration, such as swales, biofiltration practices, etc., where possible?

✓ Does the permittee offer financial incentives to support post-construction stormwater goals (e.g., programs to support redevelopment, such as enterprise zones, or stormwater utility credits)?

TIP:

Select 2 to 3 approved projects with post-construction BMPs to review with the permittee. Try to choose different project types (residential, commercial) and sizes. Also review at least one public project plan to see if the permittee is applying adequate standards to municipal developments.

PLAN REVIEW AND APPROVAL PROCEDURES

✓ What is the project size threshold for the permittee to require post-construction BMPs?

✓ Does the permittee apply standard conditions that incorporate post-construction installation and maintenance requirements into its plan review process?

- Obtain a copy of the standard conditions. Do they specifically address post-construction stormwater management?

✓ Do plan reviewers use specific criteria or a checklist when reviewing plans?

✓ Does the permittee consider pollutants of concern or whether the project discharges to a 303(d) listed impaired water when determining which BMPs are required?

✓ Does the permittee consider such regional concerns as smart growth initiatives, watershed master plans, and other larger-scale planning efforts to ensure that each new development and redevelopment plan is consistent with the goals of these initiatives?

✓ When reviewing plans approved by the permittee:

- Look for whether adequate BMPs are included on plans, details, and drawings, what types of standard conditions or notes are included, whether maintenance requirements are specified, and whether the location of BMPs would hinder maintenance.
- Look for BMPs that may not be easily characterized, in particular the comprehensive planning and land-efficient planning BMPs.
- For commercial/industrial projects, review whether adequate source control BMPs are required on plans.
- Were comments provided by the permittee to the project proponent reasonable and appropriate?

✓ What types of projects must be reviewed by the permittee for post-construction stormwater controls? Does the permittee have a process to identify priority projects identified in the MS4 NPDES permit?

✓ What types of standards or technical guidance do the permittee's reviewers use to review projects?

✓ Does the permittee condition improvements to existing developments with requirements for post-construction stormwater controls? How are these redevelopment requirements triggered?

POST-CONSTRUCTION BMP INVENTORY

✓ How does the permittee track the installation and maintenance of post-construction BMPs?

✓ What information is collected?

- Location
- Owner/operator
- Recommended maintenance schedule
- Inspection findings

BMP INSPECTION AND MAINTENANCE

✓ Does the permittee require maintenance agreements for all projects with post-construction BMPs?

✓ Are "as-built" inspections required at the conclusion of a development project?

- Do staff conduct these inspections or are they self-certified?

✓ Does the permittee inspect private facilities or require inspections by owner/operators?

✓ If the permittee performs the inspections, how often are they performed?

✓ If owner/operators are required to inspect and maintain their BMPs, how is this authorized? Through a MOU? Through conditions of approval? Through another type of agreement?

✓ How does the permittee ensure inspections are occurring?

- Does the permittee send reminder notices?
- Does the permittee require the owner/operator to submit inspection reports?

ENFORCEMENT

- ✓ How does the permittee require proper maintenance and repair after the inspection?
- ✓ What types of enforcement actions are provided by ordinance (e.g., notices of violation, abatement)?
- ✓ Is the permittee's enforcement authority limited (e.g., limits on the dollar amount of fines, inability to issue civil penalties)?

PUBLIC CONSTRUCTION PROJECTS

- ✓ Does the permittee use post-construction BMPs for public projects?
- ✓ Has the permittee instituted a pilot program to test and showcase innovative BMPs on public property or in public buildings?
- ✓ Are they tracking the location, inspection history, and condition of the BMPs?
- ✓ Who inspects them? How often?

TRAINING AND EDUCATION

Training for staff

- ✓ Are plan reviewers trained on post-construction BMPs and requirements?
- ✓ What type of training do staff performing "as built" and post-construction inspections receive?
- ✓ How often are the trainings conducted?
- ✓ How many staff have been trained?
- ✓ What type of training or education does the permittee provide to city-contracted developers and engineers on post-construction requirements?

Developer and plan designer education

- ✓ What types of educational materials have been developed and distributed to developers and designers regarding post-construction BMPs and application requirements?
- ✓ How are the materials distributed? At the permit desk? During inspections?
- ✓ What type of training does the permittee provide or advertise to local developers and designers?
    - o How often is this training conducted?
    - o How many developers and designers have been trained?
- ✓ Are they required to attend?

In-Field Program Evaluation Activities

In-field evaluation activities primarily focus on verifying that structural and source control BMPs approved by the permittee were installed and are being maintained properly in the field. Select several completed projects that were subject to post-construction requirements. Take along the approved plans so that the locations and types of BMPs can be verified.

Note whether BMPs are installed as designed or if BMPs have been modified or removed after the project has been completed. For example, trash storage areas could have been modified after installation, slopes might have become destabilized, or storm drain stenciling could have been removed or become illegible.

In addition, in-field evaluation activities should include inspections of publicly owned stormwater BMPs, such as detention basins, to verify that they are being adequately maintained.

Common Issues Identified During Program Evaluations

The following are some areas where past on-site evaluations have found problems in post-construction programs. These areas should be closely considered during evaluations:

- ✓ The plan review staff lack training on design requirements for development standards and conditioning of new development projects.
- ✓ The permittee lacks review criteria, checklists, or a formal plan review process to assist plan review staff in reviewing development projects.
- ✓ The permittee does not assess BMPs for effectiveness at more than one scale (e.g., at both the site and watershed scales).
- ✓ The permittee institutes blanket BMP requirements (i.e., those that apply to all projects) that do not take into account the development setting.
- ✓ The permittee institutes BMP requirements that act as unintended barriers to better models for development and redevelopment.
- ✓ The permittee developed its program from a "Menu of BMPs" that has resulted in BMPs that are easy to administer but are not the most effective or do not address target stressors.
- ✓ The permittee does not consistently condition plans with post-construction stormwater controls.
- ✓ The permittee does not require inspection and maintenance of post-construction controls.
- ✓ The permittee lacks a system to track approved structural and source control BMPs for inspections and ongoing maintenance.
- ✓ The permittee's BMP tracking system is based on conventional, structural measures that are more readily quantified than non-structural techniques that work on a watershed basis, such as comprehensive planning or improved street designs.
- ✓ The permittee has not updated approved BMP lists to reflect advances in low impact development or comprehensive planning-related BMPs.

4.6 Industrial/Commercial Facilities

Regulatory Requirements

Applicable federal regulations for the NPDES stormwater Phase I and Phase II MS4 regulations are listed at right. NPDES MS4 permits must address these requirements and often include more specific state requirements. This program area is mainly applicable to Phase I MS4 permittees; Phase II MS4 permittees address stormwater discharges from industrial facilities and commercial businesses as part of their education programs.

Federal Regulations

NPDES MS4 permits must address these requirements and often include more specific state requirements:

- ✓ Phase I MS4 Regulations
  - 40 CFR 122.26(d)(2)(iv)(C)
  - 40 CFR 122.26(d)(2)(i)(A)
  - 40 CFR 122.26(d)(2)(ii)
- ✓ Phase II MS4 Regulations
  - 40 CFR 122.34(b)(ii)

General Permits

To minimize the impact of stormwater discharges from industrial facilities, the NPDES program includes an industrial stormwater permitting component. Operators of industrial facilities included in one of the 11 categories of stormwater discharges associated with industrial activity that discharge or have the potential to discharge stormwater to an MS4 or directly to waters of the United States require authorization under an NPDES industrial stormwater permit. Construction activity is one of these 11 categories, but because of the nature of construction stormwater controls, the category is discussed separately from the other 10 categories. Most states are authorized to implement the NPDES stormwater permitting program. EPA remains the permitting authority in several states and territories, on Indian Country lands, and at some federal facilities.

Resources

- ✓ EPA Menu of BMPs www.epa.gov/npdes/stormwater/menuobmps
- ✓ Stormwater Management for Industrial Activities: Developing Pollution Prevention Plans and Best Management Practices www.epa.gov/npdes/pubs/contents_indguide.pdf
- ✓ Sacramento County Industrial Stormwater Compliance Program www.sactostormwater.org/industrial/compliance.asp
- ✓ Multi-Sector General Permit www.epa.gov/npdes/msgp

For those areas where EPA is the permitting authority, the **Multi-Sector General Permit (MSGP)** provides facility-specific requirements for many types of industrial facilities with a single permit. The permit outlines steps that facility operators must take prior to being eligible for permit coverage, including development and implementation of a SWPPP.

It is important to note that some permittees will also have coverage under industrial stormwater general permits or have individual permits for maintenance facilities that fall under one of the covered industrial categories, such as landfills, waste transfer stations, or transportation facilities. Please refer to the "MS4 Maintenance Activities" section of Conducting an Evaluation for information regarding municipal facilities that may also require industrial stormwater permit coverage.

Common Activities

The industrial and commercial facilities program component can be implemented by various departments and staff. Many municipal permittees use existing pretreatment and restaurant inspectors to fulfill the stormwater requirements. Some permittees choose to hire outside consultants to perform inspections and maintain the inventory of facilities.

Legal Authority

Many municipal permittees have adopted stormwater ordinances that outline general or specific discharge prohibitions that apply to industrial and commercial properties. These ordinances should list discharge exemptions, inspection requirements, and penalties for non-compliance. Some permittees, however, must

rely on multiple existing codes (i.e., health, building, hazardous materials) designed to protect health and human safety. In these cases, the program coordinator and inspection staff should be able to articulate the combination of codes that provide the authority to inspect, prohibit, or stop illegal discharges, require BMPs, and enforce instances of noncompliance.

Facility Inventory

The types of industrial and commercial facilities that a permittee needs to inspect can vary significantly from permittee to permittee. Some localities may have large industrial areas with few commercial businesses, while others may have a large number of restaurants and retail businesses but no industrial facilities at all. Still other permittees may have a mix of many different types of industrial and commercial facilities. Permittees should characterize the facilities and prioritize them based on their potential impact on stormwater quality, and the inspection program should be based on this prioritization approach.

Many permittees have developed a database to inventory industrial/commercial facilities and manage the inspection program. The inventory can be created using multiple resources, such as the permitting authority's list of facilities that are covered under the state industrial general permit, business licenses, list of pretreatment significant industrial users, and phone books or other professional directories. As per the federal regulations, the inventory should be organized by watershed with a description (such as standard industrial classification (SIC) codes) that "best reflects the principal products or services provided by each facility which may discharge, to the municipal separate storm sewer, stormwater associated with industrial activity." The database inventory should include facility type, past inspection or enforcement results, proximity to receiving waters, potential pollutant sources on-site, and other pertinent information to assist in inspection prioritization and management. Many permittees use the same database to manage the construction inspection program as well.

Standards, BMPs, and Outreach

Many municipal permittees have stormwater ordinances that include specific BMPs or standards for industrial and commercial facilities to protect water quality and minimize stormwater pollution. Others have adopted pollution prevention standards for new or redevelopment of industrial/commercial facilities that are required through conditions of approval, improvement permits, etc. Phase I MS4 permittees have developed brochures, fact sheets, and posters to hand out to operators during inspections to educate them about appropriate BMPs. Many permittees have developed these materials in multiple languages to use in a variety of communities. Some permittees have Web sites with links to relevant outside resources for more information. Many permittees also acknowledge that educating facility operators is essential to implementing BMPs and minimizing stormwater pollution and should be done, not only during inspections, but also through workshops, conferences, and professional meetings.

Staff Training

To ensure that inspectors are knowledgeable and proficient in the newest and most effective approaches to minimizing stormwater pollution from industrial/commercial facilities, many permittees require annual BMP training for inspection staff. This training may be presented in-house or staff may attend trainings provided by the permitting authority or industry. It is important to cross-train any other staff (e.g., pretreatment, health department) used for stormwater inspections as well.

Inspections

Most effective industrial/commercial inspection programs maintain a complete facility inventory and group them according to priorities established by the permittee. An inspection frequency is determined based on priority, and a database is used to manage such information as inspection findings, enforcement actions, and required follow-up activities. Many permittees use and cross-train existing staff to perform industrial/commercial inspections, but some permittees may need to maintain an exclusive stormwater inspector due to a potentially large number of high-priority facilities. There should be an inspection

standard operating procedure that has been formalized and documented. It should include a checklist to be used during the inspection and possibly a report format. Inspectors should be aware of federal, state, and local stormwater regulations that may apply to industrial/commercial facilities. Inspectors should be familiar with various types of BMPs commonly used at the types of facilities typically found in the permit area and should be able to educate facility operators about such BMPs. In addition, inspectors should understand and use the permittee's established enforcement escalation response plan to gain compliance as necessary. The inspection staff should be proficient in the enforcement escalation procedure and should properly document all enforcement actions accordingly. Inspections should be used not only to identify non-compliance issues, but as an opportunity to educate facility operators about proper stormwater BMPs.

Program Support and Resources

Permittees should have an established source of funding for their industrial/commercial facilities program, including adequate resources for frequent inspections. Funds can come from fees paid by the business owners. If general funds are used to support the program, permittees should ensure that industrial and commercial inspections are line-item appropriations not subject to reduction or elimination based on board politics or budget constraints.

Enforcement

The ordinance establishing legal authority for the industrial/commercial inspection component of the SMWP should define all stormwater discharge prohibitions, describe any exemptions or waivers, detail the enforcement escalation procedure, and outline any fines or other penalties for noncompliance. Inspectors should have the ability to levy a penalty such as a compliance directive, notice of violation (NOV), or administrative fine to the facility during an inspection if non-compliance is noted. Significant fines or penalties should be included in the ordinance for egregious violations or recidivism.

Evaluating Industrial/Commercial Inspection Programs

The evaluation of an industrial/commercial inspection program focuses on the permittee's legal authority to require and enforce their program, prioritization of facilities, and in-field inspection procedures. The evaluation should begin with a thorough review of the permittee's ordinances, standards, guidance, and other relevant written materials.

Before the Program Evaluation

To prepare for the industrial/commercial inspection program evaluation, you should review or obtain the following information prior to the evaluation:

Pre-Evaluation Checklist
- ✓ MS4 permit provisions
- ✓ SWMP provisions
- ✓ Most recent annual report
- ✓ List of NPDES facilities
- ✓ Inspection reports

- **MS4 NPDES permit provisions.** Review the permit requirements for the industrial/commercial inspection program to identify any specific requirements (such as a minimum inspection frequency). The NPDES permit will serve as the primary basis for the program evaluation.
- **SWMP provisions.** The permittee's SWMP planning document(s) will describe the activities and BMPs the permittee has committed to implement and may include measurable goals that provide deadlines for program implementation.
- **Latest annual report.** The most recent annual report should be reviewed to identify past activities and help you become familiar with the permittee's program.
- **List of NPDES industrial facilities.** Try to obtain a list of industrial facilities in the permit area that are covered under an industrial stormwater general permit issued by the permitting authority or are included in the pretreatment program of local or regional POTWs. This list can be used during the program evaluation to determine whether the permittee is including these facilities in

the inspection program and to understand the types of facilities that are found in the permit area. The list can also help identify potential sites for field inspections. The list can also be crosschecked with a similar list requested and obtained from the permittee.

- **Industrial inspection reports.** Review reports from inspections performed by the permitting authority and talk to state or EPA inspectors to determine if there have been past industrial stormwater violations at facilities located in the permit area.

Records Review

During the evaluation, you should ask for copies of relevant information to assist in writing the report or documenting a permit violation. The following records might help in evaluating the compliance and performance of the permittee's industrial/commercial inspection program.

Documentation	What to Look For
Local ordinances, regulations, or policies that might apply to industrial/commercial facilities	▪ Stormwater ordinance ▪ Health codes ▪ Municipal code sections dealing with aesthetics; vehicles; dumpsters, trash, solid waste; and litter, trash, sweeping ▪ Building codes
Enforcement escalation procedure or response plan	Flow chart or procedure that specifies a process by which fines can be levied and legal action taken against facility operators or business owners who violate stormwater rules and ordinances
Tracking system	Database or other system used to track the following information: ▪ The number and type of industrial facilities in the permit area ▪ Prioritization scheme or other method that determines inspection schedule and frequency ▪ The number, frequency, and results, along with follow-up actions resulting from inspections ▪ The number and type of enforcement actions at facilities
Examples of inspection reports	▪ Hand-written field notes and formal write-ups if both are used
Examples of enforcement files or cases	▪ Records should document enforcement and follow-up activities ▪ Review both a completed file and one that is in progress if possible
Training	▪ Review any records documenting how often training has been provided to municipal inspectors, who prepared and delivered the training, who attended, and how long the training lasted, as well as any examples of the training materials used ▪ Educational information, brochures, or other BMP guidance used by staff or distributed to facility operators

Elements to Address During a Phase I MS4 Program Evaluation

Although not specified in detail in the NPDES Phase I MS4 regulations, a successful industrial/commercial inspection program will generally be composed of the following elements:

- Legal authority
- Facility inventory/prioritization
- Standards, BMPs, and outreach
- Staff training
- Facility inspections
- Program support and resources
- Enforcement/referrals

The common program elements are the key issues to consider during the review.

LEGAL AUTHORITY

- ✓ Does the Phase I permittee have the authority to require industrial and commercial facilities to implement stormwater BMPs? Does the Phase I permittee have the authority to conduct inspections and enforce requirements?
    - o What ordinance(s), code, or policy provides this legal authority?
- ✓ What types of facilities are covered under this legal authority?
- ✓ Who (e.g., specific staff, department, etc.) has the authority to enforce the ordinances and/or inspect the facilities?
- ✓ What exemptions does the ordinance or other legal authority allow?

FACILITY INVENTORY

- ✓ Has the permittee completed an inventory of industrial/commercial facilities discharging to the stormwater system?
- ✓ What types of facilities are included on the inventory?
- ✓ What sources were used to create the inventory?
    - o Facilities that filed NOIs for EPA MSGP or state industrial general permit coverage?
    - o Significant industrial users within the pretreatment program?
    - o Business licenses?
    - o Phone book?
    - o "Windshield" survey?
- ✓ Does the inventory include all the industrial/commercial facilities subject to the industrial general permit?
    - o Does the permittee periodically check to see if new facilities that must be covered by an industrial stormwater general permit have filed an NOI?
    - o What is the process for notifying the permitting authority of non-filers?
- ✓ If applicable, does the inventory include all the facilities specified as required in the MS4 NPDES permit?
- ✓ How is the inventory updated? How often?

- ✓ What information is maintained about the facilities?
- ✓ How is the inventory maintained and stored?
- ✓ Does the permittee prioritize the facilities?
- ✓ Is the prioritization based on facility type, past inspection or enforcement results, proximity to receiving waters, potential pollutant sources on-site, and so forth?
- ✓ Is the prioritization used to determine frequency of inspections?
- ✓ Has the permittee mapped the locations of prioritized facilities to cross-reference reports of dumping, illicit discharges, or other water quality issues?

STANDARDS, BMPS, AND OUTREACH

- ✓ Has the permittee adopted standards or BMPs that industrial/commercial facilities are required to implement (e.g., all car dealerships must install a wash rack plumbed to the sanitary sewer)?
- ✓ Are the requirements for new developments only or are they triggered by improvements of existing facilities? Are there schedules for implementing retrofits?
- ✓ Are these standards applicable to existing facilities, new facilities, or both?
- ✓ Does the permittee refer facility operators to specific stormwater BMP or standards guidance documents?
- ✓ What type of educational program has been developed for industrial and commercial facility operators?
- ✓ What type of brochures, handouts, or guidance on BMPs is provided to these facilities by the permittee?
- ✓ When is this information provided? During inspections? During training events? During professional organization presentations?

STAFF TRAINING

- ✓ What type of training do the industrial and commercial inspectors receive?
- ✓ How often?
- ✓ If additional inspectors are used (e.g., food safety inspectors for restaurant inspections, pretreatment inspectors), are they trained specifically on stormwater BMPs and requirements? By whom?

INSPECTIONS

- ✓ Who performs inspections and for what types of facilities (e.g., health inspectors for restaurants, pretreatment inspectors for industrial facilities with a pretreatment permit)
- ✓ How often are industrial and commercial facilities inspected?
  - o How is the frequency determined?
- ✓ Does the permittee's industrial/commercial inspector(s) use a standard checklist during inspections?

TIP:
It is a good idea to ride with the inspector during the in-field portion of the evaluation. This is a good time to talk informally about the any program, staffing, and noncompliance issues.

- ✓ Is a report written after the inspection? How is the inspection documented in the file?
- ✓ Does the permittee verify NPDES permit coverage for facilities?
- ✓ For industrial facilities, does the inspector review the SWPPP and monitoring data during the inspection?
- ✓ Does the permittee refer non-filers to the permitting authority?
- ✓ Do inspectors provide educational materials during inspections? What types?
- ✓ If multiple departments or agencies perform inspections, how is information transferred or cataloged?

PROGRAM SUPPORT AND RESOURCES

- ✓ Does the program have a dedicated source of funding to support inspectors?

ENFORCEMENT

- ✓ In instances of noncompliance, do the inspection staff use a formalized, approved enforcement escalation procedure?
- ✓ How was the enforcement escalation procedure developed? Is it used? Is it effective?
- ✓ Who is authorized to apply various enforcement procedures (e.g., NOVs, fines)?
- ✓ What types of penalties are readily available to the inspection staff?
- ✓ What is the most common method of gaining compliance (e.g., NOVs, fines, abatement)?
- ✓ Have the permittee describe a recent non-compliance issue at an industrial/commercial facility to assess how compliance was achieved.
- ✓ At what point are non-compliance cases referred to the NPDES permitting authority? How many have been referred in the last 12 months?

In-Field Phase I Program Evaluation Activities

To determine whether the permittee is adequately inspecting for compliance at industrial/commercial facilities, it is necessary to observe the inspectors "in action." Discourage inspectors from merely describing the inspection process; you need to observe an actual inspection in process.

Schedule at least a half-day for this in-field activity being sure to allow enough time for travel between facilities. If the permittee is conducting both commercial and industrial inspections, try to observe inspections at each type of facility. If the permittee has more than one inspector, accompany a different inspector at each type of facility. In general, small, less complex facilities are better to visit than large industrial facilities. Work with the permittee to select typical facilities. For example, if the vast majority of facilities are vehicle maintenance facilities, visit several of those. It should be made clear that the inspectors are to conduct the inspections; you are only to observe.

Try to limit the number of people that attend each inspection. Too many staff can overwhelm a small facility, making it harder for the inspector to conduct a representative inspection. Discuss which facilities are to be inspected early in the evaluation process. This will allow enough time to schedule inspection staff and arrange transportation logistics.

Many times, inspectors do not participate in the office evaluation, so the in-field activity is a good opportunity to ask the same questions to see if the answers are consistent. Also, many inspectors are more open to discussing "problems" with the program than are stormwater program managers. Try to spend some time with the municipal inspector talking informally about the program.

First and foremost, during a site visit the municipal inspector should be able to determine whether illegal discharges are occurring or could be imminent from industrial/commercial facilities. Visiting a site during a rain event is optimal to observe potential issues. In the event that the inspector does feel immediate action is necessary, it is important that the inspector either have the legal authority to cease discharges and require immediate BMPs, or be aware of who does have this ability and under what legal authority. The inspector should be aware of all applicable ordinances, as well as administrative, civil, and criminal recourse in the event of non-compliance. The inspector should be aware of the enforcement escalation procedure or plan as well.

As the inspector conducts the industrial or commercial inspection, observe the following:

- ✓ Is the inspector knowledgeable about stormwater BMPs, requirements, and ordinances?
- ✓ Is the inspector familiar with the applicable industrial stormwater general permit (state or federal)?
- ✓ When inspecting an industrial facility, does the inspector check whether the facility has a waste discharge identification number, and does the inspector review the facility's SWPPP?
- ✓ Does the inspector use a checklist or otherwise document inspection findings in the field?
- ✓ What kind of written feedback is provided to the operator and within what timeframe do violations need to be addressed?
- ✓ What kind of report is generated as a result of the inspection? Does it detail all problems found at the facility or does it document only that the inspection occurred?
- ✓ Are findings from inspections tracked in a central location or database?
- ✓ How does the inspector track follow-up inspections or enforcement actions?
- ✓ Is the inspector thorough? Does the inspector walk the entire site and identify all potential pollutant sources?
- ✓ Does the inspector note flow pathways and check for discharges from the facility at outfalls or to storm drain inlets?
- ✓ Is the inspector able to educate the facility manager on proper BMPs or requirements? What educational material is provided?

TIP:

It is a good practice to visit at least one facility with historic or existing compliance issues. This can be an excellent way to demonstrate how effective the inspection and enforcement program is, and often the inspector will welcome outside assistance and advice.

Document all findings in the field in as much detail as possible. An Industrial/Commercial Inspection Worksheet has been included as Appendix C to assist in this documentation.

Elements to Address During a Phase II MS4 Program Evaluation

- ✓ Has the permittee identified specific business sectors that might be a significant source of stormwater pollutants to the MS4?
- ✓ What type of educational program has been developed to address stormwater discharges from industrial facilities and commercial businesses?
- ✓ What type of brochures, handouts, or guidance on BMPs is provided to these businesses by the permittee?
- ✓ How is this information provided? As a result of complaints or illicit discharge incidents? During training events? During professional organization presentations?
- ✓ How does the permittee evaluate the effectiveness of education and outreach efforts in terms of measuring changes in stormwater management and pollution prevention practices at industrial facilities and commercial businesses?

Common Issues Identified During Program Evaluations

The following are some typical problem areas associated with the industrial/commercial SWMP component. These areas should be closely considered during evaluations:

- ✓ The permittee has yet to fully implement an inspection program for industrial and/or commercial facilities.
- ✓ The inventory of industrial/commercial facilities is not complete and is not regularly updated.
- ✓ Facilities have not been prioritized according to water quality threat.
- ✓ The permittee has not conducted outreach to facilities on the types of stormwater BMPs that should be implemented.
- ✓ Industrial/commercial inspectors have not been trained on stormwater BMPs and requirements.
- ✓ The permittee does not have a process to identify non-filers to the permitting authority.
- ✓ The permittee lacks written procedures and standards for conducting industrial/commercial inspections and for enforcement.
- ✓ The permittee cross-trains existing inspectors (e.g., pretreatment, food safety) to perform stormwater inspections but does not provide adequate time and resources to perform them.

CHAPTER 4.7: ILLICIT DISCHARGE DETECTION AND ELIMINATION

4.7 Illicit Discharge Detection and Elimination

Regulatory Requirements

EPA's federal regulations for the stormwater Phase I and Phase II MS4 regulations are listed at right. NPDES MS4 permits must address these requirements and often include more specific requirements.

Federal Regulations

- ✓ Phase I MS4 Regulations 122.26(d)(2)(iv)(B)
- ✓ Phase II MS4 Regulations 40 CFR 122.34(b)(3)

Common Activities

Legal Authority

Permittees must develop and implement an effective program to prohibit illicit discharges from entering the MS4. The prohibition of illicit discharges should be linked to legal authority to ensure proper enforcement. This legal authority can be included in public health and safety regulations, specific stormwater regulations, sewer use bylaws, local ordinance, or a combination of several parts of the code.

Resources

- ✓ Menu of BMPs www.epa.gov/npdes/stormwater/menuofbmps
- ✓ Illicit Discharge Detection and Elimination: A Guidance Manual for Program Development and Technical Assessments www.cwp.org/
- ✓ Illicit Discharge Detection and Elimination Manual www.neiwpcc.org/PDF_Docs/iddmanual.pdf

Mapping

Phase I MS4 permittees should have developed a map of known municipal outfalls discharging to waters of the United States as part of their source identification conducted for Part I of their NPDES application. Phase II permittees are required to develop a map of outfalls and the names of locations of all waters of the United States that receive discharges from those outfalls. To be useful, these maps should also include the storm drain pipe network and catch basin locations, along with other relevant information such as the location of stormwater treatment facilities, watershed boundaries for each outfall, critical land uses and pollutant sources, and municipal facilities. Outfalls and drainage areas should be prioritized in order of their potential to be a source of illicit discharges. Ideally, this information would be managed in a database linked to a GIS.

Field Screening

Field screening of outfalls during dry weather can help to identify illicit discharges in priority areas. Of particular concern are areas of older development, areas with a high concentration of automobile-related industries, and areas with high concentrations of industrial facilities among others. Documentation of the illicit discharge detection and elimination (IDDE) program component in the SWMP Plan should include a detailed summary of the departmental responsibility for field activities, frequency of inspections, inspection procedures, inspection equipment, and documentation procedures for field activities.

Investigation of Potential Illicit Discharges

Municipalities should have a written procedure for how they will locate, eliminate, and prevent illicit discharges to the MS4. The procedure should address both spills and illegal connections to the MS4 and should be available to all staff responsible for responding to illicit discharges. The procedure should also specify how spills and illicit discharge incidents are tracked.

Spill Response and Prevention

The purpose of spill response programs is to reduce the risk of spills and improve response and cleanup when they occur. These programs usually require coordination among fire, police, health, and public works departments. The departments responsible for implementing the program should be identified and the SMWP should address employee training, reporting procedures, spill containment, storage and

disposal activities, documentation, and follow-up procedures. For each of these elements, particular attention should be given to good housekeeping and materials management practices. Procedures can be implemented through modification of ordinances and enforcement or through coordination with existing spill prevention or spill containment programs. Most permittees address this element through the development of a spill response plan.

Public Awareness and Reporting Program

Permittees should promote, publicize, and facilitate public reporting of illicit discharges or water quality impacts associated with discharges to the MS4 or receiving waters. Typical public awareness and reporting programs may include developing a hotline number, educating school students, using inserts in utility bills, and developing media announcements. Permittees should have a system in place to quickly route all public calls to appropriate staff, track the calls, and document response and enforcement, if used, for reporting purposes.

TIP:

IDDE public awareness efforts are often discussed during the evaluation of the public education and involvement program.

Proper Management of Used Oil and Toxics

Permittees should provide information on where the public can safely recycle or dispose of used oil and toxic materials to minimize illegal dumping.

Preventing Sanitary Sewer Discharges

Although not a specific requirement of Phase II programs, Phase I MS4 permittees are required to limit infiltration to the MS4 of seepage from municipal sanitary sewers. Many permittees have developed a sanitary sewer overflow program to address discharges from their sanitary sewers. Others have developed programs to promote proper maintenance of septic tanks.

Education and Training

Training for staff should include spill response procedures and procedures on how to locate, eliminate, and prevent illicit discharges. Permittees should also educate the public on the hazards of illegal dumping and illicit discharges to the MS4.

TIP:

Maintenance field crews are usually the best "eyes and ears" available to the permittee to detect illicit discharges and illegal dumping activities. It is important that the information observed in the field is communicated the appropriate staff for follow up and outreach.

Evaluating Illicit Discharge Detection and Elimination Programs

Common sources of illegal, non-stormwater discharges include sanitary wastewater, automobile maintenance waste products such as motor oil or antifreeze, laundry wastewater, household toxic substances, spills from car accidents, runoff from excess irrigation, and industrial sources of cooling waters, rinse water, and other process wastewater. Although these illicit discharges can enter the storm sewer system in various ways, they generally result from either direct connections (e.g., wastewater piping either mistakenly or deliberately connected to the storm drains) or indirect connections (e.g., infiltration into the storm drain system or spills). Illicit discharges can be further divided into those discharging continuously and those discharging intermittently.

Phase I NPDES MS4 regulations require that a program be developed to detect and remove illicit discharges into the storm sewer by prohibiting these discharges, field screening outfalls, investigating potential illicit discharges, controlling the infiltration of sanitary sewage into the storm sewer, and developing programs for spill response and prevention, public awareness and reporting, and used oil and toxics disposal.

Typically, staff charged with implementing the IDDE SWMP component are from multiple departments and agencies, although this varies from permittee to permittee. The primary responsibility for detecting and investigating illicit discharges normally falls to the public works department. Public works field crews are in the field every day and are the best source of information about what is happening in the permit area. Also, public works departments often have access to the maps and equipment necessary to track discharges to their source. Normally, public works field staff are not authorized to use enforcement against dischargers, so code enforcement staff may be necessary to investigate cases. Many permittees use the fire department for cleanup of spills, and sometimes police departments are charged with manning a "hotline" for complaints called in by citizens and for ultimately investigating dumping or other illegal activities.

Before the Program Evaluation

To prepare for the IDDE program evaluation, an evaluator should review or obtain the following information prior to the evaluation:

Pre-Evaluation Checklist
- ✓ MS4 permit provisions
- ✓ SWMP provisions
- ✓ Most recent annual report

- **MS4 NPDES permit provisions.** Review the permit requirements for the IDDE program to identify any specific requirements, such as a proactive outfall screening. The NPDES permit will serve as the primary basis for the program evaluation.
- **SWMP provisions.** The permittee's SWMP planning document(s) will describe the activities and BMPs they have committed to implement and may include measurable goals that provide deadlines for program implementation.
- **Latest annual report.** The annual report should be reviewed to identify past activities and help you become familiar with the IDDE program.

Records Review

Consider reviewing the following records during the on-site evaluation to determine the permittee's capabilities and extent of implementation.

Documentation	What to Look For
Ordinance and policies	▪ Code which allows the permittee to prohibit illicit discharges from commercial, industrial, or residential sources ▪ Should include or reference an enforcement escalation policy
Enforcement escalation policy	▪ Should describe the process for eliminating the source of an illicit discharge and for obtaining recourse or abatement if necessary ▪ Should describe which staff are authorized to enforce the applicable ordinances and which enforcement mechanisms are available
Illicit discharge tracking records and databases	Database or other system used to track the following information: ▪ The number and type of illicit discharges located in the permit area ▪ Follow-up actions once discharges are located ▪ Locations of discharge incidents (e.g., on a map or in a GIS)

Documentation	What to Look For
Dry-weather monitoring or screening records	▪ Describes the location and description of dry weather flows ▪ Monitoring data associated with a discharge ▪ Information about the source of a discharge and actions take to identify sources
Spill Response Plan and records	▪ These records may be maintained by a different agency such as the fire department, but the permittee should have access to the information and be provided a regular report of spills that impact the MS4
Recycled oil and household hazardous waste educational materials	▪ These materials may be presented during the public outreach part of the evaluation
Web site or other educational materials for reporting illicit discharges and dumping	▪ Review educational materials to determine if the general public has adequate information to identify and report illicit discharges ▪ Materials should have a reporting number that is viable 24 hours a day
Training records	▪ Training records should be available to document that the permittee's employees are regularly trained on recognize an illicit discharge

Elements to Address During the Program Evaluation

The NPDES regulations specifically require the following elements in an IDDE program for both Phase I and Phase II programs:

- Legal authority
- Mapping
- Field screening
- Investigation of potential illicit discharges
- Spill response and prevention
- Public awareness and reporting program
- Proper management of used oil and toxics
- Preventing sanitary sewer discharges
- Education and training

The common program elements are the key issues to consider during the review. For each of the elements listed above, this Guidance presents common program activities and questions to consider during the program evaluation. The questions are suggested for you to address each program component. Of course, a comprehensive program evaluation must be tailored to the specific issues associated with each permittee and should include more specific questions regarding the permittee's permit structure and management challenges.

CHAPTER 4.7: ILLICIT DISCHARGE DETECTION AND ELIMINATION

LEGAL AUTHORITY

- ✓ Does the permittee have an ordinance to prohibit illicit discharges and dumping to the MS4?
- ✓ What exclusions are included in this ordinance?
- ✓ What enforcement mechanisms are authorized in the event of an illicit discharge being detected?
- ✓ Has an enforcement escalation plan been developed?

MAPPING

- ✓ Does the permittee have a map showing storm drain pipes, outfalls, and storm drain inlets?
- ✓ Is the map readily available to the personnel who would respond to an illicit discharge incident?
- ✓ Does the permittee have a map of the storm drain system showing the locations of outfalls and municipally maintained structural stormwater controls?

TIP:

The IDDE mapping and field screening discussion may need to be coordinated with the discussion of MS4 maintenance activities. Ideally, the maps developed for public agency activities and for IDDE would be the same because often public works field maintenance crews are involved with inspections of outfalls.

FIELD SCREENING

- ✓ How are field screening areas identified?
- ✓ Are areas of the MS4 prioritized based on incidents of illicit discharges, land use, dumping reports, etc.?
- ✓ How often are field screening areas evaluated?
- ✓ Are outfalls inspected during dry weather to identify any potential dry-weather discharges? What does the inspection include?
- ✓ If dry-weather flows are present, are they being sampled to determine potential sources of pollutants? For what parameters?
- ✓ Does the permittee have a database (or other method) to track locations of illicit discharges, spills, and illegal dumping?
- ✓ Does the database track dry-weather monitoring or screening data?

INVESTIGATION OF POTENTIAL ILLICIT DISCHARGES

- ✓ Does the permittee have a procedure for tracing the source of an active illicit discharge?
- ✓ Who performs the investigations?
- ✓ Are these procedures written in a document or plan?
- ✓ What equipment does the permittee use to find illicit discharges?
- ✓ Does the permittee have equipment to videotape storm drains, or can it quickly contract out this work?
- ✓ How are investigations tracked?
- ✓ Has an enforcement response plan been adopted for use when an illicit discharge source has been located?

- ✓ Review complete paperwork trails for several illicit discharge events (including a spill and an unknown illicit discharge in the storm drain system).
  - o Was the full investigation process documented?
  - o Are adequate enforcement actions taken when required?
- ✓ Does the permittee have the ability to collect cleanup and abatement costs from the responsible party?

SPILL RESPONSE AND PREVENTION

- ✓ Does the permittee have a clear set of procedures in place that details who is responsible for responding to spills and emergency situations?
- ✓ Do field staff have spill containment supplies in their vehicles, and are they trained to contain minor spills?
- ✓ Is a contractor or other entity available for larger spills?
- ✓ Does the permittee have the ability to collect cleanup and abatement costs from the responsible party?
- ✓ How are spills and spill response tracked to ensure adequate reporting?

PUBLIC AWARENESS AND REPORTING PROGRAM

- ✓ Does the permittee prioritize subwatersheds or neighborhoods and assign resources for educational efforts based on frequency and types of illicit discharge incidents?
- ✓ Is there a general phone number or "hotline" in the phone book or Web site that people can call to report a spill or dumping?
- ✓ What types of public outreach materials are available to publicize public reporting?
- ✓ Does the permittee track the number of public calls or complaints reporting illicit discharges?

PROPER MANAGEMENT OF USED OIL AND TOXICS

- ✓ Assess education activities, public information activities, and other appropriate activities to facilitate the proper management and disposal of used oil and toxic materials such as household hazardous waste.
- ✓ Does the permittee have recycling or collection facilities to which the public can take used oil and other toxics?
- ✓ What type of toxics does the permittee manage recycling and disposal?

PREVENTING SANITARY SEWER DISCHARGES

- ✓ Has the permittee conducted any studies or evaluations to determine whether sanitary sewers are contributing pollutants to the MS4?
- ✓ What is the extent of infiltration and inflow into the sanitary sewer system? How is this impacting discharge from the MS4?
- ✓ If the permittee also operates a sanitary sewer system, do they have procedures to prevent sewage spills and SSOs to the MS4?

EDUCATION AND TRAINING

- ✓ What type of training do field staff (e.g., storm sewer maintenance crews, street sweepers) receive on spill response and IDDE?
- ✓ Are staff generally educated about what illicit discharges are and how to report them?

In-Field Program Evaluation Activities

IDDE activities can be difficult to evaluate in the field. If, during an on-site evaluation, the permittee receives a report of a potential illicit discharge, you could accompany the response staff (if allowed) to view their response procedures. Other in-field activities include viewing the equipment available for responding to illicit discharge events (e.g., response trucks, spill containment equipment, video equipment for investigating storm drains) and talking to field staff about their knowledge of and training in illicit discharge identification, reporting, and response.

Another field activity is observing the dry-weather screening program. Staff can take you to screening/sampling points to demonstrate the permittee's dry-weather sampling procedures. An Outfall Visual Inspection Worksheet has been included in Appendix C to assist in this field inspection.

Although field activities are somewhat subjective, during all field activities you should get a sense of whether the staff are aware of illicit discharges and proactive in identifying and addressing them. For example, if the industrial inspector observes obvious illicit discharges while driving to an inspection, does the inspector ignore these incidents or stop and report them?

Common Issues Identified During Program Evaluations

The following are some areas in which past on-site program evaluations have found problems with IDDE program components. Consider these activities as you conduct evaluations:

- ✓ IDDE programs are largely reactionary spill response programs and do not contain a proactive element to detect or prevent discharges.
- ✓ The permittee lacks adequate documented procedures for how to conduct illicit connection and illegal discharge investigations (e.g., the permittee does not have written procedures for tracking and identifying the source of a discharge).
- ✓ The permittee fails to conduct any dry-weather screening to identify illicit discharges.
- ✓ If a discharge is found, the permittee does not have specific criteria, which could include numeric criteria, to determine whether the discharge is illicit. In most cases, unless the discharge is obviously illicit (e.g., presence of discoloration, oil sheen), the permittee assumes the discharge is either irrigation runoff or groundwater and does not conduct further investigation of the quality or source of the discharge.
- ✓ Staff are not adequately trained on illicit discharge identification, reporting, and response.
- ✓ The permittee does not track illicit discharge events and does not target areas of the MS4 for additional inspection based on areas with past incidents.

5. Post-Evaluation Activities

5.1 Preparing the Written Report

After the MS4 SWMP evaluation, it is important that a written description of findings is provided to the permittees. Using only an oral outbrief is not a sufficient way to convey any recommendations or requirements for program improvement. Keep in mind that an NPDES permit is a contract between the permittee and the permitting authority and all correspondence regarding that contract should be in writing. Also, remember that a SWMP evaluation is typically taken very seriously by MS4 staff and management. The written findings often are distributed amongst upper management or to the governing body of the MS4 (i.e., city council). And finally, the permittee has undoubtedly invested numerous staff hours preparing for the evaluation and providing you with necessary information during the on-site evaluation itself. Therefore, it is incumbent upon you to take the necessary time to develop a concise, thorough, and fair written assessment of the findings obtained.

As soon as possible after the evaluation, it is recommended that you review all notes and supporting information obtained prior to and during the on-site evaluation and document the findings and conclusions. As a general guideline, the final report should be provided to the permittee within 6 to 8 weeks after the evaluation. Less time may be needed to prepare a report for an abbreviated program evaluation or for a screening level evaluation. On the other hand, more time may be needed if contractors perform the evaluation because the draft report would need to be reviewed by permitting authority staff to approve all findings, conclusions, and recommendations.

Conclusions drawn should be defensible and based on permit requirements and conditions, the SWMP, measurable goals, or a best professional judgment interpretation of the NPDES regulations and Clean Water Act. In addition, it is critical that conclusions drawn are consistently applied to all permittees evaluated. If a permitting authority uses more than one staff person to conduct an evaluation, an effort should be made to calibrate assessment techniques to ensure equitable evaluations. This can be accomplished by daily discussions amongst the evaluators to compare findings during the evaluation as well as quality assurance reviews of the resulting evaluation report.

The report should state which permittee(s) were evaluated, for what SWMP components, the date, a basic description of how the evaluation was conducted, relevant findings, and any recommendations for future evaluations or follow-up activities.

Depending upon the goals of the evaluation, there are many different ways to document the findings:

- **Determination of compliance status.** If assessing the compliance status of a permittee with its MS4 permit and SWMP is the only goal of an evaluation, then the report can very simply, describe each permit requirement the MS4 is not complying with and the associated requirement. The report can also indicate the areas of compliance as well, or state up front that if the permit requirement is not discussed in the report, no recommendations or requirements apply to that item.
- **Assistance with permit issuance or renewal process.** If the evaluation is conducted after the issuance of a new permit or during renewal of an existing permit (Phase I or Phase II MS4s), the report might discuss recommendations for effective implementation of the new SMWP or discuss recommended changes to the existing SWMP determined during the audit.

- **Assessing pollutants of concern.** If the permitting authority conducted the evaluation to assign an applicable waste load allocation, or to assist the permittee in implementing the waste load allocation for a particular pollutant of concern, the report may focus on only those components which minimize that pollutant. Or the report may make recommendations about how the SWMP could be changed to better address an existing waste load allocation.

As previously stated, the most common goal of an evaluation is to determine compliance with an existing permit. In this instance, in addition to providing recommendations for improvement or required actions to gain compliance, the permitting authority may find it helpful to provide positive feedback as well. Typically, it is not advisable to describe SWMP components that are not associated with a particular evaluation finding as this type of descriptive detail is found in the annual reports.

Findings can be divided into three categories:

1. **Permit violations.** Permit violations are areas where the evaluation found the permittee not in compliance with a specific permit requirement or SWMP commitment. Use of the qualifier "potential" can be used depending on the severity of the violation.
2. **Program deficiencies or recommendations for improvement.** Program deficiencies are areas of concern impeding effective program implementation. They are typically areas where the permit or SWMP does not describe specifically how the permittee should conduct an activity, yet the permitting authority evaluator believes the permittee should alter how they conduct the activity to meet water quality goals. Deficiencies can also be areas where future permit violations could result if the permittee continues on its present path.
3. **Positive or commendable program elements.** Positive program elements indicate activities that are "above and beyond" the requirements of the permit and SWMP. It is always a good idea to commend innovative approaches and techniques utilized by permittees. Not only does this encourage the permittee to continue implementing the program, it allows other permittees to learn about the approach if they read the evaluation document.

EXAMPLE FINDING:

The Parks and Recreation Department has developed a pollutant-based BMP manual.

The manual is innovative in that a diverse work group first identified the pollutants of concern and then developed suites of BMPs to minimize their occurrence or impacts on receiving waters. The resulting manual provides about 30 individual BMPs grouped into four categories: organic, chemical, maintenance, and administrative.

Each BMP description provides procedures; maps; monitoring frequency; additional references; the names of city and non-city employees who perform the task; site-specific equipment needs; possible locations of use; possible surfaces affected; procedures for spilled, dumped, or mishandled products or activities; evaluation criteria; and the staff responsible for BMP development.

People from multiple department sections collaborated on the BMPs to ensure that they are appropriate and can be implemented. The manual could be a guide for other city departments or Phase I and II programs throughout the country because it describes the entire BMP development process from conception through field-testing.

The following are format suggestions to use when drafting findings from the MS4 program evaluation:

- Organize findings by program component (e.g., all findings related to the industrial/commercial facilities component)
- Group similar findings for that component together (i.e., all positive attributes)

- Provide a heading for each individual finding that is a complete sentence and that clearly summarizes the significant point. For example, if there is a permit violation, the heading should state what the permittee is doing that is a violation: "The City does not currently inspect all industrial facilities annually as required by the permit."
- Describe each finding in detail. The narrative description should clearly define the finding and then describe the supporting information obtained or observed during the evaluation that led to this conclusion. The finding narrative should describe what the permittee was required to do (which is particularly important for a permit violation), briefly restate (paraphrase) the finding, and then provide the information obtained during the evaluation that supports this finding in as much detail as possible. When describing a positive attribute the finding should clearly state how the activity being described is innovative and not merely compliant.
- Insert applicable permit citations and language in potential permit violations. If a program deficiency relates to a particular part of the permit or SWMP, be sure to cite the appropriate language as well.

EXAMPLE FINDING:

The City has failed to notify industries and commercial facilities of the stormwater requirements and appropriate BMPs for implementation.

Part F.3.b(4) of the permit requires the permittee to implement, or require the implementation of, designated minimum BMPs (based on the site's threat to water quality rating) at each industrial site within its jurisdiction. BMP implementation was to occur by no later than 365 days after the permit was adopted. At the time of the evaluation, the City had yet to implement, or inform applicable industrial sites of their responsibility to implement, appropriate BMPs. The City needs to inform all applicable industrial sites of their responsibility and also needs to provide them with the minimum BMPs outlined in the SWMP.

In some cases, it might not be possible to determine compliance with a program component because of the limitations of the MS4 program evaluation process (i.e., not reviewing each industrial inspection report), because of time constraints, or because the requirement itself is not definable. The written report should then state that this is the case and provide as much supporting information as possible, such as "Compliance with public education and participation permit requirements could not be determined because..." If there were no findings of note for a particular SWMP component, it is important to state this fact so it is clear that the component was reviewed: "No recommendations or requirements were identified for this program component."

After an MS4 program evaluation report is developed, the permitting authority typically distributes the report to the permittee(s) evaluated with a cover letter summarizing the findings of the evaluation and any enforcement action being taken or corrections required. It is important that the report be distributed in a timely manner to ensure that requirements and recommendations can be instituted by the permittee(s).

The cover letter should request a written response within a specific time period (e.g., 30 to 60 days) addressing any permit violations or deficiencies noted. Normally, permittees are given an opportunity to refute findings or appeal violations noted. A meeting also can be scheduled with the permittee(s) to discuss proposed modifications to its SWMP to address the permit violations and deficiencies described in the report. In either case, the permitting authority should request a formal response describing the compliance process and schedule including appropriate milestones. The permitting authority should review the response and continue to work with the permittee(s) to improve the SWMP per the evaluations findings.

Photo Logs

Photo logs are used to visually illustrate items noted during field inspections. A photo log can be an important part of an MS4 program evaluation report and can assist a permitting authority in assessing potential permit violations. It is important to keep in mind that you are not inspecting the actual construction sites and industrial facilities visited for compliance with general permit or SWPPP conditions, but documenting the condition of these facilities with photos can help to assess compliance with MS4 permit conditions.

TIP:

Photos do not need to be used in the MS4 program evaluation report. An evaluator can take photos to help remember issues identified during field visits. The photos can also help you build a photo library of stormwater BMPs and problems.

To address potential legal concerns related to digital photographs, EPA published a guidance document on the use of digital photographs—*Digital Camera Guidance for EPA Civil Inspections and Investigations*. This document identifies requirements necessary to ensure the integrity of digital pictures. It addresses image capturing, storage, and handling and provides an overview of digital camera technology, peripheral equipment, and recommended steps. If digital images are to be used in court, their credibility usually depends on reliability, reproducibility, and security. As stated in the guidance, it is acceptable to make changes to digital images such as cropping, enlarging, or making them lighter/darker to improve the sharpness, provided the evaluator does all the following:

- Records how, when, and where the picture was taken,
- Logs the steps used in processing the image when they include techniques other than those used in a traditional photographic darkroom,
- Complies with a written SOP that includes the recommended steps set forth in this document, and
- Ensures the preservation of the original digital image.

To view EPA's *Digital Camera Guidance for EPA Civil Inspections and Investigations*, visit http://www.epa.gov/compliance/resources/publications/monitoring/cwa/inspections/npdesinspect/npdesinspectapph.pdf.

In general, it is important to keep careful notes of the photographs taken, including location and why the photograph was taken. It is helpful for the first photo taken to be of the facility sign or building. This helps to orient the photo log layout when photos are viewed after the evaluation.

For an MS4 program evaluation, it is not necessary to photo document all aspects of the facilities inspected, however, photos should be used to highlight issues on site that may lend credence to an issue described in the MS4 program evaluation report. For example, stormwater problems at a municipal maintenance yard should be documented with photos to provide additional documentation of problems. During inspections of construction sites or industrial facilities, photos can help document the issues the permittee's inspector addressed. At a minimum, even if the photos are not used in a formal report, the photos can help recall conditions at the sites visited.

Taking Photos

A digital camera should be used to take pictures where possible. Also, it is usually not necessary to set the resolution of the camera to its highest settings—most photo logs do not need high-resolution photos. Additional tips on taking good photos during an MS4 program evaluation include:

- **Take lots of pictures.** With digital cameras, deleting extra photos is easy. For something particularly important, take at least 4-5 pictures.
- **Use photos to identify sites.** When inspecting multiple sites, use the first picture to photograph the sign, SWPPP cover, or file name to be able to identify the facility later.
- **Consider perspective.** Have someone stand in the photo or place something of recognizable size, like a hard hat or clip board, to gain perspective.

Creating Photo Logs

Photo logs are often created using word processing software or presentation (e.g., PowerPoint) software. The following steps for creating a photo log are based on Microsoft Word:

- It is recommended that photo logs be created in Microsoft Word and the photos saved in a standard format such as jpeg or gif. Consider the resolution of the photos: many reports are made available electronically, and high-resolution photos can cause file size to exceed many users' download capabilities.
- Size the photos to be 3.5" tall with the width set by Microsoft Word for landscape view and 3.5" width with the height set by Microsoft Word for portrait view.
- Center the photos and captions on the page. (Note: Microsoft Word requires that the picture layout not be "in line with text" in order for the photo to be centered on the page.) Generally a page will have two landscape oriented photos or one portrait.
- Each photo should be numbered.
- Document the date and/or time to help identify photos.
- Photo captions should briefly describe what is observed in the picture and the location (both the facility or site name and the location within the facility or site).
- A photo log can contain a separate narrative to describe the findings, or individual photos can be referred to within the body of the MS4 program evaluation report.

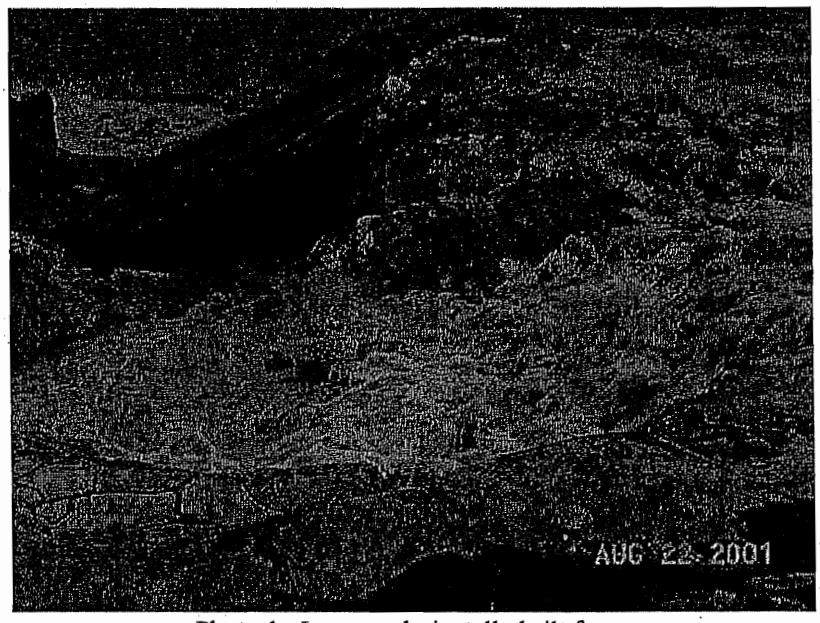

Photo 1: Improperly installed silt fence

5.2 Follow-Up Activities

An MS4 program evaluation can result in several different follow-up activities, from enforcement to technical assistance to permit reissuance. Several of these activities are described below.

Technical Assistance

Many MS4 program evaluation findings will result in a deficiency that requires the permittee to modify or improve a program area to achieve compliance. The permitting authority can help ensure compliance by providing technical assistance to the permittee on issues related to these deficiencies. As a reference and useful tool for permittees, EPA has developed case studies of selected stormwater programs available at http://cfpub.epa.gov/npdes/stormwater/casestudies.cfm

Where necessary, the permitting authority may wish to provide additional technical assistance or training to address specific deficiencies identified during the evaluation.

Follow-Up MS4 Program Evaluations

Follow-up MS4 program evaluations should be conducted where major deficiencies have been identified and the permittee needs additional time to correct them. The permittee should be given time to correct any deficiencies, but a follow-up evaluation should be scheduled for deficiencies that cannot be documented via annual reports or written correspondence.

Targeted Evaluations

If an MS4 program evaluation identifies a program area that appears to be a common problem amongst several permittees, then the permitting authority may want to conduct targeted evaluations of that program area at additional permittees. For example, if stormwater compliance problems are identified at most of the public works yards visited, the permitting authority might want to target additional inspections for those yards.

Permit Issuance or Renewal

A thorough review of submitted annual reports along with an on-site evaluation is very helpful when issuing MS4 permits. Specific permit requirements could be drafted to address any deficiencies identified during the evaluation. Also, the evaluation may reveal current permit requirements that are no longer applicable or need to be revised to meet current conditions. An MS4 program evaluation is also an excellent time to collect additional data for permit reissuance, or verify data or clarify information submitted with the permit reapplication.

MS4 Enforcement

Taking enforcement on a violation identified during an evaluation will obviously depend on a variety of factors including the severity of the violation, any discharge to a water of the U.S., history of past violations, and other factors. To make a case for an enforcement action, it is important to collect information that documents the violation, including copies of records, photographs, or other documentation. An enforcement action is the last course of action to ensure compliance, but even the possible threat of an enforcement action will usually help bring about compliance.

Appendix A – Glossary & Acronyms

Authorized Program Or Authorized State – A state, Territorial, Tribal, or interstate NPDES program which has been approved or authorized by EPA under 40 CFR Part 123.

Best Management Practice (BMP) – Policies or practices that prevent, reduce, or mitigate the impacts of stormwater runoff. These methods can be structural (e.g., devices, ponds) or non-structural (e.g., policies to reduce imperviousness). BMPs classified as "non-structural" are those that rely predominantly on behavioral changes rather than construction in order to be effective. "Structural" BMPs are engineered or constructed to prevent or manage stormwater. BMPs are often further classified into (1) source control BMPs to prevent pollution, (2) water quality BMPs to reduce or prevent pollutants in runoff, (3) flow control BMPs to reduce the volume of stormwater and (4) infiltration BMPs to increase infiltration.

Best Professional Judgment (BPJ) – Using all reasonably available and relevant data to make a decision.

CIP – Capital Improvement Project

Clean Water Act – Clean Water Act or the Federal Water Pollution Control Act, 33 U.S.C. section 1251 et seq.

Construction General Permit (CGP) – Where EPA is the permitting authority, the Construction General Permit (CGP) outlines a set of provisions construction operators must follow to comply with the requirements of the NPDES stormwater regulations. The CGP covers any site one acre and above, including smaller sites that are part of a larger common plan of development or sale, and replaces and updates previous EPA permits.

Co-permittee – A permittee to a NPDES permit that is only responsible for permit conditions relating to the discharge for which it is operator.

Combined Sewer Overflow (CSO) – A discharge of untreated wastewater from a combined sewer system at a point prior to the headworks of a publicly owned treatment works. CSOs generally occur during wet weather (rainfall or snowmelt). During periods of wet weather, these systems become overloaded, bypass treatment works, and discharge directly to receiving waters.

Comprehensive Plan – A general plan that identifies a community's long-range growth and development goals. Comprehensive plans and watershed plans often overlap in areas of natural resources, analysis of current conditions, and growth trends. Comprehensive and/or watershed plans often include smaller subarea plans, with additional details on infrastructure, open space, parks, neighborhood design, drainage, and circulation.

DOT – Department of Transportation

EPA – United States Environmental Protection Agency

Floatables – Plastics and other floating debris (e.g., oil, grease, toilet paper).

General permit – An NPDES permit issued under 40 CFR 122.28 that authorizes a category of discharges under the CWA within a geographical area. A general permit is not specifically tailored for an individual discharger.

Geographic Information System (GIS) – A computer application used to store, view, and analyze geographical information, especially maps (*taken from the American Heritage Dictionary*).

IDDE – Illicit Discharge Elimination and Detection

Illicit Discharge – Any discharge to a municipal separate storm sewer that is not composed entirely of stormwater, except discharges pursuant to a NPDES permit and discharges resulting from fire fighting activities.

Impervious Surface – A hard surface area that either prevents or retards the entry of water into the soil mantle as occurs under natural conditions (prior to development), and from which water runs off at an increased rate of flow or in increased volumes. Common impervious surfaces include, but are not limited to, rooftops, walkways, patios, driveways, parking lots, compacted soil, and roadways. "Effective impervious surface" is commonly used to describe impervious surfaces connected to receiving water directly or with a conveyance device (e.g., curbs, pipes, gutters).

Integrated Pest Management (IPM) – Planned program that coordinates economically and environmentally acceptable methods of pest control with the judicious and minimal use of toxic pesticides. IPM programs are based on a careful assessment of local conditions, including such factors as climate, crop characteristics, the biology of the pest species, agricultural practices, soil quality, and government regulations. The tactics employed range from changes in agricultural methods, such as better tillage to prevent soil erosion and interplanting of different crop varieties; natural biological weapons, such as the introduction of beneficial insects that eat the harmful species; and mechanical tools, such as vacuums that pull the insects off of the crops. Toxic pesticides are used only when all other methods have failed (*taken from the Columbia Press Encyclopedia*).

MOU – Memorandum of Understanding

MEP – Maximum extent practicable

Multi-Sector General Permit (MSGP) – Authorizes the discharge of stormwater from industrial facilities, consistent with the terms of the permit, in areas of the United States where EPA manages the NPDES permit program.

Municipal Separate Storm Sewer System (MS4) – A conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains): (i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law)...including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the Clean Water Act that discharges into waters of the United States. (ii) Designed or used for collecting or conveying stormwater; (iii) Which is not a combined sewer; and (iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2.

National Pollutant Discharge Elimination System (NPDES) – A national program under Section 402 of the Clean Water Act for regulation of discharges of pollutants from point sources to waters of the United States. Discharges are illegal unless authorized by an NPDES permit.

Notice of Intent (NOI) – Submission of a completed NOI constitutes notice that the entity intends to be authorized to discharge pollutants to waters of the United States, from the facility or site identified in the

form, under a State or EPA general permit such as the Phase II MS4 General Permit, the Multi-Sector General Permit (MSGP) for industrial stormwater, or the Construction General Permit (CGP).

Notice of Violation (NOV) – Enforcement mechanism used to inform regulated entities of noncompliance

Outfall – A point source as defined by 40 CFR 122.2 at the point where a municipal separate storm sewer discharges to waters of the United States and does not include open conveyances connecting two municipal separate storm sewers, or pipes, tunnels or other conveyances which connect segments of the same stream or other waters of the United States and are used to convey waters of the United States.

Permitting Authority – The United States Environmental Protection Agency, EPA, a Regional Administrator of the Environmental Protection Agency or an authorized representative.

Pollutant of concern (POC) – Any pollutant that has been identified as a cause of impairment in any water body to which the MS4 discharges.

Publicly Owned Treatment Works (POTW) – A treatment works, as defined by Section 212 of the CWA, that is owned by the state or municipality. This definition includes any devices and systems used in the storage, treatment, recycling, and reclamation of municipal sewage or industrial wastes of a liquid nature. It also includes sewers, pipes, and other conveyances only if they convey wastewater to a POTW treatment plant [40 CFR 403.3]. Privately-owned treatment works, Federally-owned treatment works, and other treatment plants not owned by municipalities are not considered POTWs.

Sanitary sewer overflow (SSO) – Occasional unintentional discharges of raw sewage from municipal sanitary sewers. SSOs have a variety of causes, including but not limited to severe weather, improper system operation and maintenance, and vandalism. EPA **estimates that there are at least 40,000 SSOs each year.**

Stormwater – Stormwater runoff, snow melt runoff, and surface runoff and drainage.

Stormwater Pollution Prevention Plan (SWPPP) – Plan developed to minimize the discharge of pollutants from an industrial site (including construction activities) to the maximum extent practicable using BMPs.

Total Maximum Daily Load (TMDL) – A water quality assessment that determines the source or sources of pollutants of concern for a particular waterbody, considers the maximum amount of pollutants the waterbody can assimilate, and then allocates to each source a set level of pollutants that it is allowed to discharge (i.e., a wasteload allocation).

Waters of the United States – 1. All waters which are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide; 2. All interstate waters, including interstate wetlands"; 3. All other waters such as interstate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds the use, degradation, or destruction of which would affect or could affect interstate or foreign commerce including any such waters: a. Which are or could be used by interstate or foreign travelers for recreational or other purposes; b. From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or c. Which are used or could be used for industrial purposes by industries in interstate commerce; 4. All impoundments of waters otherwise defined as waters of the United States under this definition; 5. Tributaries of waters identified

in paragraphs (1) through (4) of this definition; 6. The territorial sea; and 7. Wetlands adjacent to waters (other than waters that are themselves wetlands) identified in paragraphs 1. through 6. of this definition.

Alhambra, CA 91803-1331

And

Directors of Public Works/City Engineers
Los Angeles County Municipal Co-Permittees

TRANSMITTAL OF THE LOS ANGELES COUNTY MUNICIPAL STORM WATER NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) PERMIT AS AMENDED BY REGIONAL BOARD ORDER R4-2007-0042 ON AUGUST 9, 2007 (BOARD ORDER 01-182; NPDES PERMIT NO. CAS004001)

Dear Mr. Wolfe, Directors of Public Works, and City Engineers:

We are pleased to transmit to you a copy of the municipal storm water permit for the County of Los Angeles (LA Storm Water Permit) that was amended by the Los Angeles Regional Water Quality Control Board (LA Water Board) at its meeting on August 9, 2007 pursuant to Division 7 of the California Water Code. Board Order 01-182 (as amended by Board Orders R4-2006-0074 and R4-2007-0042) serves as the permit under the National Pollutant Discharge Elimination System (NPDES) for storm water discharges and urban runoff within the County of Los Angeles.

The LA Water Board reopened the LA Storm Water Permit to incorporate the Marina del Rey Harbor Mothers' Beach and Back Basins Bacteria (MDR Bacteria) Total Maximum Daily Load (TMDL) Waste Load Allocations (WLAs) for summer dry weather discharges from the MS4 to Marina del Rey Harbor (MDRH). The LA Water Board adopted the MDR Bacteria TMDL in 2003 (Resolution No. 2003-012). This TMDL was subsequently approved by the State Water Resources Control Board (Resolution No. 2003-0072), Office of Administrative Law, and the United States Environmental Protection Agency and became effective on March 18, 2004. This TMDL required compliance with the summer dry weather WLAs and winter dry weather WLAs by March 18, 2007.

The MDR Bacteria summer dry weather WLAs were incorporated as Receiving Water Limitations along with a supporting prohibition on discharges from the MS4 to MDRH that are inconsistent with the limits. The LA Storm Water Permit already prohibits discharges that cause or contribute to the exceedance of water quality standards. The proposed changes make more

specific the permit provisions as they relate to discharges of bacteria that could impact Mothers' Beach and the back basins (Basins D, E, and F) of Marina del Rey Harbor during summer dry weather. The changes affect the County of Los Angeles and the Los Angeles County Flood Control District and the Cities of Los Angeles and Culver City.

For your use and public dissemination, an electronic copy of the current LA Storm Water Permit may be downloaded from our website at:

http://www.waterboards.ca.gov/losangeles/html/programs/stormwater/lams4.html

We would greatly appreciate your staff directing others to the website for further information on storm water management updates as necessary.

We thank you and your staff for the assistance with developing language that recognizes the ongoing work of the County and the Cities toward improving water quality in Marina del Rey, while also strengthening public health protection for the hundreds of thousands of people who live in and visit Marina del Rey. In particular, I would like to acknowledge the efforts of Mr. Pestrella who proactively sought to work with me on this issue, as well as the broader issue of our partnership in addressing water quality issues.

Should you have any comments or questions please do not hesitate to call me directly at (213) 576-6609. Alternatively, your staff may contact Carlos Urrunaga at (213) 620-2083.

Sincerely,

Deborah J. Smith
Interim Executive Officer

ORDER NO. 01-182
NPDES PERMIT NO. CAS004001
WASTE DISCHARGE REQUIREMENTS
FOR
MUNICIPAL STORM WATER AND URBAN RUNOFF DISCHARGES WITHIN THE COUNTY OF LOS ANGELES, AND THE INCORPORATED CITIES THEREIN, EXCEPT THE CITY OF LONG BEACH

The California Regional Water Quality Control Board, Los Angeles Region (hereinafter referred to as the Regional Board) finds:

A. Existing Permit

The Los Angeles County Flood Control District, the County of Los Angeles, and 84 incorporated cities within the Los Angeles County Flood Control District (see Attachment A, List of Permittees), hereinafter referred to separately as Permittees and jointly as the Discharger, discharge or contribute to discharges of storm water and urban runoff from municipal separate storm sewer systems (MS4s), also called storm drain systems. The discharges flow to water courses within the Los Angeles County Flood Control District and into receiving waters of the Los Angeles Region. These discharges are covered under countywide waste discharge requirements contained in Order No. 96-054 adopted by this Regional Board on July 15, 1996, which replaced Order No. 90-079 adopted by this Regional Board on June 18, 1990. Order No. 96-054 also serves as a National Pollutant Discharge Elimination System (NPDES) permit for the discharge of municipal storm water.

B. Nature of Discharges and Sources of Pollutant

1. Storm water discharges consist of surface runoff generated from various land uses in all the hydrologic drainage basins that discharge into water bodies of the State. The quality of these discharges varies considerably and is affected by the hydrology, geology, land use, season, and sequence and duration of hydrologic events. The primary constituents of concern currently identified by the Los Angeles County Flood Control District Integrated Receiving Water Impacts Report (1994-2000) are cyanide, indicator bacteria, total dissolved solids, turbidity, total suspended solids, nutrients, total aluminum, dissolved cadmium, copper, lead, total mercury, nickel, zinc, bis(2-ethylhexyl)phthalate, polycyclic aromatic hydrocarbons (PAHs), diazinon, and chlorpyrifos.

2. Certain pollutants present in storm water and/or urban runoff may be derived from extraneous sources that Permittees have no or limited jurisdiction over. Examples of such pollutants and their respective

sources are: PAHs which are products of internal combustion engine operation, nitrates, bis (2-ethylhexyl) phthalate and mercury from atmospheric deposition, lead from fuels, copper from brake pad wear, zinc from tire wear, dioxins as products of combustion, and natural-occurring minerals from local geology. However, the implementation of the measures set forth in this Order is intended to reduce the entry of these pollutants into storm water and their discharge to receiving waters.

3. Water quality assessments conducted by the Regional Board identified impairment, or threatened impairment, of beneficial uses of water bodies in the Los Angeles Region. The causes of impairments include pollutants of concern identified in municipal storm water discharges by the County of Los Angeles in the Integrated Receiving Water Impacts Report (1994-2000). Pollutants in storm water can have damaging effects on both human health and aquatic ecosystems.

4. The Los Angeles County Grand Jury, September 2000, completed an investigation into the health risks of swimming near beaches in Los Angeles County and made several recommendations to reduce public health risks (Final Report, Grand Jury, Los Angeles County, 1999-2000). The Grand Jury recommended that the Regional Board consider among other actions, (i) a focus on setting contaminant limits rather than programmatic evaluations, (ii) audit of MS4 Permittee programs; and (iii) clarifying enforcement responsibilities between the State and local governments.

5. Studies and research conducted by other Regional agencies, academic institutions, and universities have also identified storm water and urban runoff as significant sources of pollutants to surface waters in Southern California. See, e.g., [*Surface Runoff to the Southern California Bight*, Southern California Coastal Water Research Project, (1992); *Impacts of Urban Runoff on Santa Monica Bay and Surrounding Ocean Waters* (Gersberg, R.M., 1995); *State of the Bay 1998*, Santa Monica Bay Restoration Project; *Storm Water Impact*, In, Southern California Environmental Report Card 1999, Institute of the Environment, University of California, Los Angeles (Stenstrom, M.S., 1999); *Distribution of Anthropogenic and Natural Debris on the Mainland Shelf of Southern California Bight,* Shelly L. Moore and M. James Allen (1999); *The Health Effects of Swimming in Ocean Water Contaminated by Storm Drain Runoff*, Haile, R.W. et al. (1999); *Huntington Beach Closure Investigation: Technical Review* (University of Southern California, 2000); *A Regional Survey of the Microbiological Water Quality Along the Shoreline of the Southern California Bight,* Rachel T. Noble *et al.* (2001*); Integrated Receiving Water Impacts Report (1994-2000)*, County of Los Angeles (2001)].

6. Development and urbanization increase pollutant load, volume, and discharge velocity. First, natural vegetated pervious ground cover is converted to impervious surfaces such as paved highways, streets, rooftops and parking lots. Natural vegetated soil can both absorb rainwater and remove pollutants providing an effective natural purification process. In contrast, pavement and concrete can neither absorb water

nor remove pollutants, and thus the natural purification characteristics are lost. Second, urban development creates new pollution sources as the increased density of human population brings proportionately higher levels of vehicle emissions, vehicle maintenance wastes, municipal sewage waste, pesticides, household hazardous wastes, pet wastes, trash, and other anthropogenic pollutants. Development and urbanization especially threaten environmentally sensitive areas. Such areas have a much lower capacity to withstand pollutant shocks than might be acceptable in the general circumstance. In essence, development that is ordinarily insignificant in its impact on the environment may in a particular sensitive environment become significant. These environmentally sensitive areas designated by the State and/or the County of Los Angeles include Areas of Special Biological Significance (ASBS), water bodies designated as supporting a RARE beneficial use, Significant Natural Areas (SNAs), and Significant Ecological Areas (SEAs).

7. The increased volume, increased velocity, and discharge duration of storm water runoff from developed areas has the potential to greatly accelerate downstream erosion and impair stream habitat in natural drainages. Studies have demonstrated a direct correlation between the degree of imperviousness of an area and the degradation of its receiving waters. Significant declines in the biological integrity and physical habitat of streams and other receiving waters have been found to occur with as little as 10 percent conversion from natural to impervious surfaces. Percentage impervious cover is a reliable indicator and predictor of potential water quality degradation expected from new development. (*Impervious Cover as An Urban Stream Indicator and a Watershed Management Tool*, Schueler, T. and R. Claytor, In, Effects of Water Development and Management on Aquatic Ecosystems (1995), ASCE, New York; Leopold, L. B., (1973), *River Channel Change with Time: An Example*, Geological Society of America Bulletin, v. 84, p. 1845-1860; Hammer, T. R., (1972), *Stream Channel Enlargement Due to Urbanization: Water Resources Research*, v. 8, p. 1530-1540; Booth, D. B., (1991), *Urbanization and the Natural Drainage System--Impacts, Solutions and Prognoses*: The Northwest Environmental Journal, v. 7, p. 93-118; Klein, R. D., (1979), *Urbanization and Stream Quality Impairment*: Water Resources Bulletin, v. 15, p. 948-963; May, C. W., Horner, R. R., Karr, J. R., Mar, B. W., and Welch, E. B., (1997), *Effects of Urbanization on Small Streams in the Puget Sound Lowland Ecoregion*: Watershed Protection Techniques, v. 2, p. 483-494; Morisawa, M. and LaFlure, E. *Hydraulic Geometry, Stream Equilibrium and Urbanization* In Rhodes, D. P. and Williams, G. P. *Adjustments to the Fluvial System* p.333-350. (1979); Dubuque, Iowa, Kendall/Hunt. Tenth Annual Geomorphology Symposia Series; and *The Importance of Imperviousness*: Watershed Protection Techniques, 1(3), Schueler, T. (1994).)

8. The County of Los Angeles has identified as the seven highest priority industrial and commercial critical source types, (i) wholesale trade (scrap recycling, auto dismantling); (ii) automotive repair/parking; (iii) fabricated metal products; (iv) motor freight; (v) chemical and allied products; (vi)

automotive dealers/gas stations; (vii) primary metal products (*Critical Source Selection and Monitoring Report*, Los Angeles County Department of Public Works -Sept 1996). Monitoring conducted by Los Angeles County and the Regional Board demonstrates that the priority industrial sectors and auto repair facilities (one of the commercial sectors) on the list, contribute significant concentrations of heavy metals to storm water (*Los Angeles County 1999-2000 Storm Water Monitoring Report*, Los Angeles County Department of Public Works -July 2000; *Compliance Assessment of the Auto Dismantling Industry; Evaluation of the California General Industrial Storm Water Permit*, H. Chang, (2001), 70 pp., California Regional Water Quality Control Board, Los Angeles Region).

9. The discharge of washwaters and contaminated storm water from industries and businesses specified in this Order for inspection by Permittees is an environmental threat and can also adversely impact public health and safety. For example, a review of industrial waste/ pretreatment records performed in 1995 in the County of Los Angeles on illicit discharges indicates that automotive service facilities and food service facilities sometimes discharge polluted washwaters to the MS4. The pollutants of concern in such washwaters include food waste, oil and grease, and toxic chemicals. Other storm water/industrial waste programs in California have reported similar observations. Illicit discharges from automotive service facilities and food service facilities have been identified elsewhere as a major cause of widespread contamination and water quality problems (Washtenaw County Statutory Drainage Board - 1987 Huron River Pollution Abatement Program).

10. Studies indicate that facilities with paved surfaces subject to frequent motor vehicular traffic (such as parking lots and fast food restaurants), or facilities that perform vehicle repair, maintenance, or fueling (automotive service facilities) are potential sources of pollutants of concern in storm water. [References: Pitt *et al.*, *Urban Storm Water Toxic Pollutants: Assessment, Sources, and Treatability*, Water Environment Res., 67, 260 (1995); *Results of Retail Gas Outlet and Commercial Parking Lot Storm Water Runoff Study*, Western States Petroleum Association and American Petroleum Institute, (1994); *Action Plan Demonstration Project, Demonstration of Gasoline Fueling Station Best Management Practices*, Final Report, County of Sacramento (1993); *Source Characterization*, R. Pitt, In Innovative Urban Wet-Weather Flow Management Systems (2000) Technomic Press, Field, R *et al.* editors; *Characteristics of Parking Lot Runoff Produced by Simulated Rainfall*, , L.L. Tiefenthaler *et al.* Technical Report 343, Southern California Coastal Water Research Project (2001).]

11. Retail Gasoline Outlets (RGOs) are points of convergence for vehicular traffic and are similar to parking lots and urban roads. Studies indicate that storm water discharges from RGOs have high concentrations of hydrocarbons and heavy metals. [*The Quality of Trapped Sediments and Poor Water within Oil Grit Separators in Suburban MD,* Schueler T. and Shepp D. (1992), and *Concentrations of Selected Constituents in Runoff*

from Impervious Surfaces in Four Urban Catchments of Different Landuse, Ranabal, F.I., and T.J. Gizzard (1995), In Proceedings of the Fourth Biennial Stormwater Research Conference, Florida, pp-42-52]. Pilot studies indicate that treatment control best management practices installed at retail gasoline stations are effective in removing pollutants, reasonable in capital cost, easy to operate, and do not present safety risks [*Rouge River National Wet Weather Demonstration Project, Task Product Memorandum – Evaluation of On-line Media Filters RPO-NPS-TPM59.00*, Wayne County, MI, March 1999]. The Regional Board and the San Diego Regional Board have jointly prepared a Technical Report on the applicability of new development BMP design criteria for retail gasoline outlets, (*Retail Gasoline Outlets: New Development Design Standards for Mitigation of Storm Water Impacts*, (June 2001)). Retail Gasoline Outlets in Western U.S. States (such as Washington and Oregon) are already subject to numerical BMP design criteria, as well in other U.S. States.

C. Permit Background

1. The essential components of the Storm Water Management Program, as established by federal regulations [40 CFR 122.26(d)] are: (i) Adequate Legal Authority, (ii) Fiscal Resources, (iii) Storm Water Quality Management Program (SQMP) - (Public Information and Participation Program, Industrial/Commercial Facilities Program, Development Planning Program, Development Construction Program, Public Agency Activities Program, Illicit Connection and Illicit Discharges Elimination Program), and (iv) Monitoring and Reporting Program.

2. The Permittees have filed a Report of Waste Discharge (ROWD), dated February 1, 2001, and applied for renewal of their waste discharge requirements that serves as an NPDES permit to discharge wastes to surface waters. The ROWD includes a proposed SQMP and a Monitoring Program. The proposed SQMP contains programs previously approved under Board Order No. 96-054 in the following areas:

   Public Information and Participation
   Development Planning
   Development Construction
   Public Agency Activities
   Illicit Connection/Illicit Discharge Elimination Program

   These programs are revised pursuant to the provisions of this Order after adoption.

3. The County of Los Angeles has previously conducted source identification and pollutant characterization consistent with 40 CFR 122.26(d)(1)(ii) and (iii) under its storm water Monitoring Program. The Monitoring Program submitted with the ROWD proposes to advance the assessment of receiving water impacts, identification of sources of pollution, evaluation of Best Management Practices (BMPs), and measurement of long term trends in mass emissions.

4. The Regional Board has reviewed the ROWD and has determined it to be complete under the reapplication policy of MS4s issued by the U.S. Environmental Protection Agency (USEPA) (61 *Fed. Reg.* 41697). The Regional Board finds that the Permittees' proposed SQMP, incorporating the additional and/or revised provisions contained in this Order would meet the minimum requirements of federal regulations.

5. The City of Los Angeles has conducted shoreline and nearshore water quality monitoring off the Santa Monica Bay since the 1950s under the monitoring program for the Hyperion Waste Water Treatment Plant (NPDES No. CA0109991). The monitoring results indicate that effluent from Hyperion's 5-Mile Outfall does not impinge the shoreline, and that elevated bacterial counts are associated with runoff from storm drains and discharges from piers. In 1994, the Regional Board approved the relocation of Hyperion's shoreline stations to implement a bay-wide, regional shoreline-monitoring program associated with storm drain outfalls in the Santa Monica Bay. The City of Los Angeles requested that the shoreline-monitoring requirement be incorporated in this Order. The shoreline pathogen monitoring requirements are outlined in the Monitoring Program for this Order.

D. Permit Coverage

1. The requirements in this Order cover all areas within the boundaries of the Permittee municipalities (see Attachment A) over which they have regulatory jurisdiction as well as unincorporated areas in Los Angeles County within the jurisdiction of the Regional Board. The Permittees serve a population of about 9.5 million [Reference: *2000 Census of Population and Housing,* Bureau of the Census, U.S. Department of Commerce (2001)] in an area of approximately 3,100 square miles.

2. Federal, state, regional or local entities within the Permittees' boundaries or in jurisdictions outside the Los Angeles County Flood Control District, and not currently named in this Order, may operate storm drain facilities and/or discharge storm water to storm drains and watercourses covered by this Order. The Permittees may lack legal jurisdiction over these entities under state and federal constitutions. The Regional Board will coordinate with these entities to implement programs that are consistent with the requirements of this Order. The Regional Board will consider such facilities for coverage in 2003 under its NPDES permitting scheme pursuant to USEPA Phase II storm water regulations.

3. Sources of discharges into receiving waters in the County of Los Angeles but in jurisdictions outside its boundary include the following:

   About 34 square miles of unincorporated area in Ventura County, which drain into Malibu Creek and then to Santa Monica Bay,

   About 9 square miles of the City of Thousand Oaks, which also drain into Malibu Creek and then to Santa Monica Bay, and

About 86 square miles of area in Orange County, which drain into Coyote Creek and then into the San Gabriel River.

The Regional Board will ensure that storm water management programs for the areas in Ventura County and the City of Thousand Oaks that drain into Santa Monica Bay are consistent with the requirements of this Order. The Regional Board will coordinate with the Santa Ana Regional Board so that storm water management programs for the areas in Orange County that drain into Coyote Creek are consistent with the requirements of this Order.

4. This permit is intended to develop, achieve, and implement a timely, comprehensive, cost-effective storm water pollution control program to reduce the discharge of pollutants in storm water to the Maximum Extent Practicable (MEP) from the permitted areas in the County of Los Angeles to the waters of the U.S. subject to the Permittees' jurisdiction.

5. Permittees have expressed their intention to work cooperatively to control the contribution of pollutants from one portion of the MS4 to another portion of the system. Permittees may control the contribution of pollutants to the MS4 from non-permittee dischargers such as Caltrans, the U.S. Department of Defense, and other state and federal facilities, through interagency agreements.

E. Federal, State, and Regional Regulations

1. The Water Quality Act of 1987 added Section 402(p) to the federal Clean Water Act (CWA) (33 U.S.C. § 1251-1387). This section requires the USEPA to establish regulations setting forth NPDES requirements for storm water discharges in two phases.

   - The USEPA Phase I storm water regulations were directed at MS4s serving a population of 100,000 or more, including interconnected systems and storm water discharges associated with industrial activities, including construction activities. The Phase I Final Rule was published on November 16, 1990 (55 *Fed. Reg.* 47990).

   - The USEPA Phase II storm water regulations are directed at storm water discharges not covered in Phase I, including small MS4s (serving a population of less than 100,000), small construction projects (one to five acres), municipal facilities with delayed coverage under the Intermodal Surface Transportation Efficiency Act of 1991, and other discharges for which the USEPA Administrator or the State determines that the storm water discharge contributes to a violation of a water quality standard, or is a significant contributor of pollutants to waters of the United States. The Phase II Final Rule was published on December 8, 1999 (64 *Fed. Reg.* 68722).

2. The USEPA published an 'Interim Permitting Approach for Water Quality-Based Effluent Limitations in Storm Water Permits' on August 26, 1996 (61 *Fed. Reg.* 43761). This policy discusses the appropriate kinds of

water quality-based effluent limitations to be included in NPDES storm water permits to provide for the attainment of water quality standards.

3. The USEPA published an 'Interpretative Policy Memorandum on Reapplication Requirements' for MS4 permits on August 9, 1996 (61 *Fed. Reg.* 41697). This policy requires that MS4 reapplication for reissuance for a subsequent five-year permit term contain certain basic information and information for proposed changes and improvements to the storm water management program and monitoring program.

4. The USEPA has entered into a Memorandum of Agreement (MOA) with the U.S. Fish and Wildlife Service and the National Marine Fisheries Service for enhancing coordination regarding the protection of endangered and threatened species under Section 7 of the Endangered Species Act and the CWA's Water Quality Standards and NPDES programs. Among other actions, the MOA establishes a framework for coordination of actions by the USEPA, the Services, and CWA delegated States on CWA permit issuance under Section 402 of the CWA [66 *Fed. Reg.* 11202 – 11217].

5. USEPA regulations at 40 CFR 122.26(d)(2)(iv)(A) and 40 CFR 122.26(d)(2)(iv)(C) require that MS4 permittees implement a program to monitor and control pollutants in discharges to the municipal system from industrial and commercial facilities that contribute a substantial pollutant load to the MS4. The regulations require that permittees establish priorities and procedures for inspection of industrial facilities and priority commercial establishments. This permit, consistent with the USEPA policy, incorporates a cooperative partnership, including the specifications of minimum expectations, between the Regional Board and the Permittees for the inspection of industrial facilities and priority commercial establishments to control pollutants in storm water discharges (58 *Fed. Reg.* 61157).

6. Section 402 (p) of the CWA (33 U.S.C. § 1342(p) provides that MS4 permits must "require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design engineering method and such other provisions as the [EPA] Administrator or the State determines appropriate for the control of such pollutants." The State Water Resources Control Board's (State Board) Office of Chief Counsel (OCC) has issued a memorandum interpreting the meaning of MEP to include technical feasibility, cost, and benefit derived with the burden being on the municipality to demonstrate compliance with MEP by showing that a BMP is not technically feasible in the locality or that BMPs costs would exceed any benefit to be derived (dated February 11, 1993).

7. The CWA authorizes the USEPA to permit a state to serve as the NPDES permitting authority in lieu of the USEPA. The State of California has in-lieu authority for an NPDES program. The Porter-Cologne Water Quality Control Act authorizes the State Board, through the Regional Boards, to regulate and control the discharge of pollutants into waters of the State. The State Board entered into a MOA with the USEPA, on

September 22, 1989, to administer the NPDES Program governing discharges to waters of the U.S.

8. Section 303(d) of the CWA requires that the State identify a list of impaired water-bodies and develop and implement Total Maximum Daily Loads (TMDLs) for these waterbodies (33 U.S.C. §1313(d)(1)). A TMDL specifies the maximum amount of a pollutant that a water-body can receive, still meet applicable water quality standards and protect beneficial uses. The USEPA entered into a consent decree with the Natural Resources Defense Council (NRDC), Heal the Bay, and the Santa Monica BayKeeper on March 22, 1999, under which the Regional Board must adopt all TMDLs for the Los Angeles Region within 13 years from that date. This permit incorporates a provision to implement and enforce approved load allocations for municipal storm water discharges and requires amending the SQMP after pollutants loads have been allocated and approved.

9. Section 6217(g) of the Coastal Zone Act Reauthorization Amendments of 1990 (CZARA) requires coastal states with approved coastal zone management programs to address non-point pollution impacting or threatening coastal water quality. CZARA (16 U.S.C. § 1451-1465) amends the Coastal Zone Management Act of 1972, to address five sources of non-point pollution: agriculture, silviculture, urban, marinas, and hydromodification. This NPDES permit addresses the management measures required for the urban category, with the exception of septic systems. The Regional Board addresses septic systems through the administration of other programs.

10. On May 18, 2000, the USEPA established numeric criteria for priority toxic pollutants for the State of California (California Toxics Rule (CTR)) 65 *Fed. Reg.* 31682 (40 CFR 131.38), for the protection of human health and aquatic life. These apply as ambient water quality criteria for inland surface waters, enclosed bays, and estuaries. The State Board adopted the *Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California (SIP) – 2000,* on March 2, 2000, for implementation of the CTR (State Board Resolution No. 2000-15 as amended by Board Resolution No. 2000-030). This policy requires that discharges comply with TMDL-derived load allocations as soon as possible but no later than 20 years from the effective date of the policy.

11. The State Board adopted a revised Water Quality Control Plan for Ocean Waters of California (Ocean Plan) on July 23, 1997. The Ocean Plan contains water quality objectives which apply to all discharges to the coastal waters of California.

12. The State Board in *In Re*: California Department of Transportation (State Board Order WQ 2001-08), determined that the discharge of storm water to ASBS is subject to the prohibition in the Ocean Plan against the discharge of wastes to an ASBS.

13. The Regional Board adopted an updated Water Quality Control Plan (Basin Plan) for the Los Angeles Region on June 13, 1994, *'Water Quality Control Plan, Los Angeles Region: Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties*, (1994).' The Basin Plan designates beneficial uses of receiving waters and specifies both narrative and numerical water quality objectives for the receiving waters in Los Angeles County.

14. The Regional Board on September 19, 2001, adopted amendments to the Basin Plan, to incorporate TMDLs for trash in the Los Angeles River (Resolution No. 01-013) and Ballona Creek (Resolution No. 01-014). After approval by the State Board, the Office of Administrative Law, and the USEPA, the TMDLs for trash will be effective and enforceable.

15. The Regional Board on April 13, 1998, approved BMPs for sidewalk rinsing to minimize the discharge of wash waters to the storm drain system (Resolution No. 98-08). By the same resolution, the Regional Board prohibited the discharge of municipal street wash waters to the storm drain system.

16. The Regional Board on April 13, 1998, approved recommended BMPs for industrial/commercial facilities (Resolution No. 98-08).

17. The Regional Board on April 22, 1999, approved a list of BMPs for use in development planning and development construction (Resolution No. 99-03)

18. The Regional Board adopted and approved requirements for new development and significant redevelopment projects in Los Angeles County to control the discharge of storm water pollutants in post-construction storm water, on January 26, 2000, in Board Resolution No. R-00-02. The Regional Board Executive Officer issued the approved Standard Urban Storm Water Mitigation Plans (SUSMPs) on March 8, 2000. The State Board in large part affirmed the Regional Board action and SUSMPs in State Board Order No. WQ 2000-11 issued on October 5, 2000.

    - The State Board's Chief Counsel has issued a statewide policy memorandum (dated December 26, 2000), which interprets the Order to provide broad discretion to Regional Boards and identifies potential future areas for inclusion in SUSMPs and the types of evidence and findings necessary. Such areas include ministerial projects, projects in environmentally sensitive areas, and water quality design criteria for RGOs.

    - The State Board's Chief Counsel interprets the Order to encourage regional solutions and endorses a mitigation fund or "bank" that may be funded by developers who obtain waivers from the numerical design standards for new development and significant redevelopment.

19. 40 CFR 131.10(a) prohibits states from designating waste transport or waste assimilation as a use for any water of the U.S. Authorizing the

construction of a storm water/ urban runoff treatment facility in a jurisdictional water body would be tantamount to accepting waste assimilation as an appropriate use for that water body. Furthermore, the construction and operation of a pollution control facility in a water body can impact the physical, chemical, and biological integrity as well as the beneficial uses of the water body. Therefore, storm water treatment and/or mitigation in accordance with SUSMPs and any other requirements of this Order must occur prior to the discharge of storm water into a water of the U.S.

20. The Regional Board supports a Watershed Management Approach to address water quality protection in the region. The objective of the Watershed Management Approach should be to provide a comprehensive and integrated strategy towards water resource protection, enhancement, and restoration while balancing economic and environmental impacts within a hydrologically defined drainage basin or watershed. It emphasizes cooperative relationships between regulatory agencies, the regulated community, environmental groups, and other stakeholders in the watershed to achieve the greatest environmental improvements with available resources.

21. To promote a watershed management approach, the County of Los Angeles is divided into six Watershed Management Areas (WMAs) as follows:

Malibu Creek and Rural Santa Monica Bay WMA
Ballona Creek and Urban Santa Monica Bay WMA
Los Angeles River WMA
San Gabriel River WMA
Dominguez Channel/Los Angeles Harbor WMA, and
Santa Clara River WMA

Attachment A shows the list of Permittees under each WMA and some Permittees have expressed an intent to form sub-watershed groups within the WMA to promote regional solutions for the mitigation of storm water discharge pollution.

22. To facilitate compliance with federal regulations, the State Board has issued two statewide general NPDES permits for storm water discharges: one for storm water from industrial sites [NPDES No. CAS000001, General Industrial Activity Storm Water Permit (GIASP)] and the other for storm water from construction sites [NPDES No. CAS000002, General Construction Activity Storm Water Permit (GCASP)]. The GCASP was reissued on August 19, 1999. The GIASP was reissued on April 17, 1997. Facilities discharging storm water associated with industrial activities and construction projects with a disturbed area of five acres or more are required to obtain individual NPDES permits for storm water discharges, or to be covered by a statewide general permit by completing and filing a Notice of Intent (NOI) with the State Board. The USEPA guidance anticipates coordination of the state-administered programs for

industrial and construction activities with the local agency program to reduce pollutants in storm water discharges to the MS4.

The Regional Board is the enforcement authority in the Los Angeles Region for the two statewide general permits regulating discharges from industrial facilities and construction sites, and all NPDES storm water and non-storm water permits issued by the Regional Board. These industrial and construction sites and discharges are also regulated under local laws and regulations.

23. The State Board, on October 28, 1968, adopted Resolution No. 68-16, which established an anti-degradation policy for the State and Regional Boards. This policy restricts the degradation of surface waters and protects waterbodies where existing water quality is higher than is necessary for the protection of beneficial uses.

24. The State Board, on June 17, 1999, adopted Order No. WQ 99-05, which, in a precedential decision, identifies acceptable receiving water limitations language to be included in municipal storm water permits issued by the State and Regional Boards. The receiving water limitations included herein are consistent with the State Board Order, USEPA Policy, and the U.S. Appellate court decision in, *Defenders of Wildlife v. Browner* (9th. Cir, 1999). The State Board OCC has determined that the federal court decision did not conflict with State Board Order No. WQ 99-05 (memorandum dated October 14, 1999)

25. California Water Code (CWC) § 13263(a) requires that waste discharge requirements issued by the Regional Board shall implement any relevant water quality control plans that have been adopted; shall take into consideration the beneficial uses to be protected and the water quality objectives reasonably required for that purpose; other waste discharges; the need to prevent nuisance; and provisions of CWC § 13241. The Regional Board has considered the requirements of § 13263 and § 13241, and applicable plans, policies, rules, and regulations in developing these waste discharge requirements.

26. CWC § 13370 *et seq.* requires that waste discharge requirements issued by the Regional Boards be consistent with provisions of the federal CWA and its amendments.

27. On March 12, 2001, the U.S. Court of Appeals ruled that it is necessary to obtain a NPDES permit for application of aquatic pesticides to waterways. (*Headwaters, Inc. vs. Talent Irrigation District,* 243 F.3d. 526 (9th Cir., 2001)) This decision is controlling in California for nonagricultural applications of pesticides to waterways. The State Board adopted a general NPDES permit (Order No. 2001-12-DWQ) on July 19, 2001, for public entities that discharge pollutants to waters of the U.S. associated with the application of aquatic pesticides for resource or pest management. Public entities that conduct such activities must seek coverage under the general permit.

Findings Related To The Incorporation Of The Santa Monica Bay Beaches Dry Weather Bacteria TMDL And The Marina Del Rey Harbor Mothers' Beach And Back Basins Bacteria TMDL

28. The Regional Board adopted the Santa Monica Bay Beaches Dry Weather TMDL for Bacteria (hereinafter "Dry Weather Bacteria TMDL") on January 24, 2002. The TMDL was subsequently approved by the State Board, the Office of Administrative Law (OAL), and the USEPA and became effective on July 15, 2003.

29. The Regional Board adopted the Marina del Rey Harbor Mothers' Beach and Back Basins Bacteria TMDL (hereinafter "MDR Bacteria TMDL") on August 7, 2003. The TMDL was subsequently approved by the SWRCB, the OAL, and the USEPA and became effective on March 18, 2004.

30. The Waste Load Allocations (WLAs) in the Dry Weather Bacteria TMDL and the MDR Bacteria TMDL are expressed as the number of allowable days that the Santa Monica Bay beaches, Mothers' Beach and Basins D, E, and F in Marina del Rey Harbor may exceed the Basin Plan water quality objectives for protection of Water Contact Recreation (REC-1) in marine waters, specifically the water quality objectives for bacteria. Appropriate modifications to this order are therefore included in Parts 1 (Discharge Prohibitions) and 2 (Receiving Water Limitations), pursuant to 40 CFR 122.41(f) and 122.62, and Part 6.I.1 of this Order. Additionally, 40 CFR 122.44(d)(1)(vii)(B) requires that NPDES permits be consistent with the assumptions and requirements of any available waste load allocation. Tables 7-4.1, 7-4.2a, and 7-4.3 of the Basin Plan set forth the pertinent provisions of the Dry Weather Bacteria TMDL. Tables 7-5.1, 7-5.2, and 7-5.3 of the Basin Plan set forth the pertinent provisions of the MDR Bacteria TMDL. They require that during Summer Dry Weather there shall be no exceedances in the Wave Wash of the single sample or the geometric mean bacteria objectives set to protect the Water Contact Recreation (REC-1) beneficial use in marine waters. Accordingly, a prohibition is included in this Order barring discharges from a MS4 to Santa Monica Bay or Marina del Rey Harbor that result in exceedance of these objectives. Since the TMDL and the WLAs contained therein are expressed as receiving water conditions, Receiving Water Limitations have been included in this Order that are consistent with and implement the zero exceedance day WLAs.

31. Pursuant to federal regulations at 40 CFR 124.8, and 125.56, Fact Sheets were prepared to provide the bases for incorporating the Dry Weather Bacteria TMDL and the MDR Bacteria TMDL into this Order. These Fact Sheets are hereby incorporated by reference into these findings.

32. The iterative approach to regulating municipal storm water is not an appropriate means of implementing the Santa Monica Bay beaches or the MDR Summer Dry Weather WLAs for any and all of the following reasons: (a) The WLAs do not regulate the discharge of storm water; (b) The harm to the public from violating the WLAs is dramatic both in terms

of health impacts to exposed beachgoers, and the economic cost to the region associated with related illnesses; (c) Under the iterative approach over three permit cycles, required elements of the MS4 permit (e.g., elimination of illicit connections/illicit discharges (IC/ID) into their MS4s, revisions to their SQMP, etc.) have not resulted in the elimination of exceedances of water quality standards at the beaches or in Basins D, E, and F of Marina del Rey Harbor.

33. On March 14, 2007, Marina del Rey watershed responsible agencies submitted to the Regional Board the results of a non-point source study conducted over a one year period between July 2005 and July 2006, which was required under the terms of the MDR TMDL. The study was designed to determine the relative bacterial loading to the harbor from sources including but not limited to storm drains, boats, birds, and other non-point sources. The study has not yet been peer reviewed, and is currently under review by Regional Board staff.

34. On January 8, 2007, as required by the MDR Bacterial TMDL, Marina del Rey watershed responsible agencies submitted to the Regional Board an implementation plan describing the strategy by which they intend to comply with the MDR Bacterial TMDL. This implementation plan was developed through a process that included both Regional Board staff and representatives from Heal the Bay and Santa Monica Baykeeper.

35. The Regional Board acknowledges the County's timely submittals of reports required by the TMDL and implementation measures initiated thus far towards meeting water quality standards for bacteria in Marina del Rey. As a result of the adoption of the MDR Bacterial TMDL in 2003, the County has funded or received grants to initiate the following activities:

- Marina Beach Water Quality Improvement Project, Phase I and Phase II through a CBI grant;
- Mothers' Beach and Back Basins Bacterial TMDL Non-point Source Study;
- Marina del Rey Harbor Mothers' Beach and Back Basins Report of Small Drain Identification;
- Marina del Rey Vessel Discharge Report;
- Marina del Rey Harbor Mothers' Beach and Back Basins Bacterial TMDL Coordinated Monitoring Plan; and
- Three low-flow diversion projects, which were partially funded by a grant, two of which have been completed.

In addition to participation in the above studies, the County and other Marina del Rey watershed responsible agencies continue to implement BMPs proposed in the January 8, 2007, Implementation Plan.

36. The Receiving Water Limitations have been revised to implement the Summer Dry Weather WLAs set forth in Basin Plan Tables 7-4.1 and 7-5.1. These Receiving Water Limitations apply at the compliance

monitoring sites identified in the *Santa Monica Bay Beaches Bacterial TMDLs Coordinated Shoreline Monitoring Plan* dated April 7, 2004[1] and the *Marina del Rey Harbor Mothers' Beach and Back Basins Bacterial TMDL Coordinated Monitoring Plan* dated April 13, 2007. Compliance with the Receiving Water Limitations shall be determined using monitoring data obtained in conformance with the *Santa Monica Bay Beaches Bacterial TMDLs Coordinated Shoreline Monitoring Plan* dated April 7, 2004; the *Marina del Rey Harbor Mothers' Beach and Back Basins Bacterial TMDL Coordinated Monitoring Plan* dated April 13, 2007; and the Monitoring and Reporting Program CI 6948.

37. If the Receiving Water Limitations are exceeded at a compliance monitoring site, the Regional Board will generally issue an appropriate investigative order pursuant to Cal. Water Code § 13267 or § 13225 to the Permittees and other responsible agencies or jurisdictions within the relevant subwatershed to determine the source of the exceedance. Following these actions, Regional Board staff will generally evaluate the need for further enforcement as follows:

a) If the Regional Board determines that the exceedance did not result from discharges from the MS4, then the MS4 Permittees would not be responsible for violations of these provisions.

b) If the Regional Board determines that Permittees in the relevant subwatershed have demonstrated that their MS4 does not discharge dry weather flow into Santa Monica Bay or Basins D, E, or F in Marina del Rey Harbor, those Permittees would not be responsible for violations of these provisions even if the Receiving Water Limitations are exceeded at an associated compliance monitoring site.

c) If the Regional Board determines that Permittees in the relevant subwatershed have demonstrated that their MS4 summer dry weather discharge into Santa Monica Bay or Basins D, E, or F in Marina del Rey Harbor is treated to a level that does not exceed either the single sample or the geometric mean bacteria objectives, those Permittees shall not be responsible for violations of these provisions even if the Receiving Water Limitations are exceeded at an associated compliance monitoring site.

d) If the Regional Board determines that one or more Permittees have caused or contributed to violations of these Receiving Water Limitations, the Regional Board will consider appropriate enforcement action, including a cease and desist order with or without a time schedule for compliance, or other appropriate

[1] If the Regional Board determines that publicly owned storm drains that flow during dry weather are situated at additional shoreline locations, the *Santa Monica Bay Beaches Bacterial TMDLs Coordinated Shoreline Monitoring Plan* may be revised by the Regional Board Executive Officer approval, after providing the opportunity for public comment, to include these locations as compliance monitoring sites.

enforcement action depending upon the circumstances and the extent to which the Permittee(s) has endeavored to comply with these provisions.

38. A Permittee would not be responsible for violations of these provisions if the Regional Board Executive Officer determines that the Permittee has adequately documented through a source investigation of the subwatershed, pursuant to protocols established under Cal. Water Code 13178, that bacterial sources originating within the jurisdiction of the Permittee have not caused or contributed to the exceedance of the Receiving Water Limitations.

39. Water Code section 13389 exempts the Regional Board from compliance with Chapter 3 (commencing with Section 21100) of Division 13 of the Public Resources Code prior to the adoption of waste discharge requirements. Therefore the Regional Board is not required to prepare environmental documents to evaluate this permit modification. Nevertheless, the Regional Board has considered the policies and requirements set forth in Chapters 1 through 2.6 of CEQA, and further, has considered the final substitute environmental documents for the Santa Monica Bay Beaches Bacteria TMDL and the MDR Bacteria TMDL.

F. Implementation

1. The California Environmental Quality Act (CEQA) (Cal. Pub. Resources Code § 21000 *et seq.*) requires that public agencies consider the environmental impacts of the projects they approve for development. CEQA applies to projects that are considered discretionary and does not apply to ministerial projects, which involve the use of established standards or objective measurements. A ministerial project may be made discretionary by adopting local ordinance provisions or imposing conditions to create decision-making discretion in approving the project. In the alternative, Permittees may establish standards and objective criteria administratively for storm water mitigation for ministerial projects. For water quality purposes, the Regional Board considers that all new development and significant redevelopment activity in specified categories, that receive approval or permits from a municipality, are subject to storm water mitigation requirements.

2. The objective of this Order is to protect the beneficial uses of receiving waters in Los Angeles County. To meet this objective, this Order requires that the SQMP specify BMPs that will be implemented to reduce the discharge of pollutants in storm water to the maximum extent practicable. Further, Permittees are to assure that storm water discharges from the MS4 shall neither cause nor contribute to the exceedance of water quality standards and objectives nor create conditions of nuisance in the receiving waters, and that the discharge of non-storm water to the MS4 has been effectively prohibited.

3. The SQMP required in this Order builds upon the programs established in Order Nos. 90-079, and 96-054, consists of the components recommended in the USEPA guidance manual; and was developed with

the cooperation of representatives from the regulated community and environmental groups. The SQMP includes provisions that promote customized initiatives, both on a countywide and watershed basis, in developing and implementing cost-effective measures to minimize discharge of pollutants to the receiving water. The various components of the SQMP, taken as a whole rather than individually, are expected to reduce pollutants in storm water and urban runoff to the maximum extent practicable. Provisions of the SQMP are fully enforceable under provisions of this Order.

4. The emphasis of the SQMP is pollution prevention through education, public outreach, planning, and implementation as source control BMPs first and then Structural and Treatment Control BMPs next. Successful implementation of the provisions of the SQMP will require cooperation and coordination of all public agencies in each Permittee's organization, among Permittees, and with the regulated community.

5. The implementation of a Public Information and Participation Program is a critical component of a storm water management program. An informed and knowledgeable community is critical to the success of a storm water management program since it helps insure the following: (i) greater support for the program as the public gains a greater understanding of the reasons why it is necessary and important, and (ii) greater compliance with the program as the public becomes aware of the personal responsibilities expected of them and others in the community, including the individual actions they can take to protect or improve the quality of area waters.

6. This Order includes a Monitoring Program that incorporates Minimum Levels (MLs) established under the SIP. The SIP's MLs represent the lowest quantifiable concentration for priority toxic pollutants that is measurable with the use of proper method-based analytical procedures and factoring out matrix interference. The SIP's MLs therefore represent the best available science for determining MLs and are appropriate for a storm water monitoring program. The use of MLs allows the detection of toxic priority pollutants at concentrations of concern using recent advances in chemical analytical methods.

7. This Order provides flexibility for Permittees to petition the Regional Board Executive Officer to substitute a BMP under the SQMP with an alternative BMP, if they can provide information and documentation on the effectiveness of the alternative, equal to or greater than the prescribed BMP in meeting the objectives of this Order.

8. This Order contemplates that the Permittees are responsible for considering potential storm water impacts when making planning decisions in order to fulfill the Permittees' CWA requirement to reduce the discharge of pollutants in municipal storm water to the MEP from new development and redevelopment activities. However, the Permittees retain authority to make the final land-use decisions and retain full statutory authority for deciding what land uses are appropriate at specific locations within each Permittee's jurisdiction. This Order and its

requirements are not intended to restrict or control local land use decision-making authority.

9. This Order is not intended to prohibit the inspection for or abatement of vectors by the State Department of Health Services or local vector agencies in accordance with Cal. Health and Safety Code § 2270 *et seq.* and §116110 *et seq.* Certain Treatment Control BMPs if not properly designed, operated or maintained may create habitats for vectors (e.g. mosquito and rodents). This Order contemplates that the Permittees will closely cooperate and collaborate with local vector control agencies and the State Department of Health Services for the implementation, operation, and maintenance of Treatment Control BMPs in order to minimize the risk to public health from vector borne diseases.

G. Public Process

1. The Regional Board has notified the Permittees and interested agencies and persons of its intent to issue waste discharge requirements for this discharge, and has provided them with an opportunity to submit their written view and recommendations.

2. The Regional Board, in a public hearing, heard and considered all comments pertaining to the discharge and to the tentative requirements.

3. The Regional Board has conducted public workshops to discuss drafts of the permit. On April 24, 2001, Regional Board staff conducted a workshop outlining the reasoning behind the changes proposed for the new permit and received input from the Permittees and the public regarding those proposed changes. On July 26, 2001, a second public workshop was held at a special Regional Board meeting. The Permittees and the public had another opportunity to express their opinions regarding the proposed changes to the permit in front of the Regional Board members. A significant number of working meetings with the Permittees and other interested parties have occurred throughout the period from the submittal of the ROWD and completion of the tentative draft, in an attempt to incorporate and address all the comments presented.

4. The Los Angeles County Flood Control District, the County of Los Angeles and the other municipalities are co-permittees as defined in 40 CFR 122.26 (b)(1). Los Angeles County Flood Control District will coordinate with the other municipalities and facilitate program implementation. Each Permittee is responsible only for a discharge for which it is the operator.

5. This Order shall serve as a NPDES Permit, pursuant to CWA § 402, or amendments thereto, and shall take effect 50 days from Order adoption provided the Regional Administrator of the USEPA has no objections.

6. The action to adopt an NPDES permit is exempt from the provisions of Chapter 3 of CEQA (Cal. Pub. Resources Code § 21100 *et seq.*), in accordance with CWC § 13389.

7. Pursuant to CWC §13320, any aggrieved party may seek review of this Order by filing a petition with the State Board. A petition must be sent to: State Water Resources Control Board, P.O. Box 100, Sacramento, California, 95812, within 30 days of adoption of the Order by the Regional Board.

8. This Order may be modified or alternatively revoked or reissued prior to its expiration date, in accordance with the procedural requirements of the NPDES program, and the CWC for the issuance of waste discharge requirements.

IT IS HEREBY ORDERED that the Los Angeles County Flood Control District, Los Angeles County, and the Cities of Agoura Hills, Alhambra, Arcadia, Artesia, Azusa, Baldwin Park, Bell, Bellflower, Bell Gardens, Beverly Hills, Bradbury, Burbank, Calabasas, Carson, Cerritos, Claremont, Commerce, Compton, Covina, Cudahy, Culver City, Diamond Bar, Downey, Duarte, El Monte, El Segundo, Gardena, Glendale, Glendora, Hawaiian Gardens, Hawthorne, Hermosa Beach, Hidden Hills, Huntington Park, Industry, Inglewood, Irwindale, La Cañada Flintridge, La Habra Heights, Lakewood, La Mirada, La Puente, La Verne, Lawndale, Lomita, Los Angeles, Lynwood, Malibu, Manhattan Beach, Maywood, Monrovia, Montebello, Monterey Park, Norwalk, Palos Verdes Estates, Paramount, Pasadena, Pico Rivera, Pomona, Rancho Palos Verdes, Redondo Beach, Rolling Hills, Rolling Hills Estates, Rosemead, San Dimas, San Fernando, San Gabriel, San Marino, Santa Clarita, Santa Fe Springs, Santa Monica, Sierra Madre, Signal Hill, South El Monte, South Gate, South Pasadena, Temple City, Torrance, Vernon, Walnut, West Covina, West Hollywood, Westlake Village, and Whittier, in order to meet the provisions contained in Division 7 of the CWC and regulations adopted thereunder, and the provisions of the CWA, as amended, and regulations and guidelines adopted thereunder, shall comply with the following:

Part 1. DISCHARGE PROHIBITIONS

Part 1. A. The Permittees shall effectively prohibit non-storm water discharges into the MS4 and watercourses, except where such discharges:

1. Are covered by a separate individual or general NPDES permit for non-storm water discharges; or

2. Fall within one of the categories below, and meet all conditions when specified by the Regional Board Executive Officer:

   a) Category A - Natural flow:

      (1) Natural springs and rising ground water;

      (2) Flows from riparian habitats or wetlands;

      (3) Stream diversions, permitted by the State Board; and

      (4) Uncontaminated ground water infiltration [as defined by 40 CFR 35.2005(20)].

   b) Category B - Flows from emergency fire fighting activity.

c) Category C - Flows incidental to urban activities:

(1) Reclaimed and potable landscape irrigation runoff;

(2) Potable drinking water supply and distribution system releases (consistent with American Water Works Association guidelines for dechlorination and suspended solids reduction practices);

(3) Drains for foundations, footings, and crawl spaces;

(4) Air conditioning condensate;

(5) Dechlorinated/debrominated swimming pool discharges;

(6) Dewatering of lakes and decorative fountains;

(7) Non-commercial car washing by residents or by non-profit organizations; and

(8) Sidewalk rinsing.

The Regional Board Executive Officer may add or remove categories of non-storm water discharges above. Furthermore, in the event that any of the above categories of non-storm water discharges are determined to be a source of pollutants by the Regional Board Executive Officer, the discharge will no longer be exempt from this prohibition unless the Permittee implements conditions approved by the Regional Board Executive Officer to ensure that the discharge is not a source of pollutants. Notwithstanding the above, the Regional Board Executive Officer may impose additional prohibitions of non-storm water discharges in consideration of antidegradation policies and TMDLs.

Part 1. B. Discharges of Summer Dry Weather flows from MS4s into Santa Monica Bay[2] or into Marina del Rey Harbor Basins D, E, or F, including Mothers' Beach, that cause or contribute to exceedances of the bacteria Receiving Water Limitations in Part 2.5 and 2.6 below, are prohibited.[3]

[2] Santa Monica Bay encompasses the coastal waters from Point Dume to Point Fermin and seaward to the 500-meter depth contour. It includes all beaches from the Los Angeles/Ventura County line south to the Outer Cabrillo Beach located just south of the Palos Verdes Peninsula.

[3] Responsibility for such prohibited discharges is determined as indicated in Footnote 3 part (2) of Table 7-4.1 and Footnote 2 part (1) of Table 7-5.1 of the Basin Plan. All Permittees within a subwatershed of the Santa Monica Bay Watershed Management Area are jointly responsible for compliance with the limitations imposed in Tables 7-4.1 and 7-5.1 of the Basin Plan.

Part 2. RECEIVING WATER LIMITATIONS

1. Except as provided in Part 2.5 and 2.6 below, discharges from the MS4 that cause or contribute to the violation of Water Quality Standards or water quality objectives are prohibited.

2. Discharges from the MS4 of storm water, or non-storm water, for which a Permittee is responsible for, shall not cause or contribute to a condition of nuisance.

3. The Permittees shall comply with Part 2.1. and 2.2. through timely implementation of control measures and other actions to reduce pollutants in the discharges in accordance with the SQMP and its components and other requirements of this Order including any modifications. The SQMP and its components shall be designed to achieve compliance with receiving water limitations. If exceedances of Water Quality Objectives or Water Quality Standards (collectively, Water Quality Standards) persist, notwithstanding implementation of the SQMP and its components and other requirements of this permit, the Permittee shall assure compliance with discharge prohibitions and receiving water limitations by complying with the following procedure:

   a) Upon a determination by either the Permittee or the Regional Board that discharges are causing or contributing to an exceedance of an applicable Water Quality Standard, the Permittee shall promptly notify and thereafter submit a Receiving Water Limitations (RWL) Compliance Report (as described in the Program Reporting Requirements, Section I of the Monitoring and Reporting Program) to the Regional Board that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedances of Water Quality Standards. This RWL Compliance Report may be incorporated in the annual Storm Water Report and Assessment unless the Regional Board directs an earlier submittal. The RWL Compliance Report shall include an implementation schedule. The Regional Board may require modifications to the RWL Compliance Report.

   b) Submit any modifications to the RWL Compliance Report required by the Regional Board within 30 days of notification.

   c) Within 30 days following the approval of the RWL Compliance Report, the Permittee shall revise the SQMP and its components and monitoring program to incorporate the approved modified BMPs that have been and will be implemented, an implementation schedule, and any additional monitoring required.

   d) Implement the revised SQMP and its components and monitoring program according to the approved schedule.

4. So long as the Permittee has complied with the procedures set forth above and is implementing the revised SQMP and its components, the Permittee does not

have to repeat the same procedure for continuing or recurring exceedances of the same receiving water limitations unless directed by the Regional Board to develop additional BMPs.

5. During Summer Dry Weather there shall be no discharges of bacteria from MS4s into the Santa Monica Bay that cause or contribute to exceedances in the Wave Wash, of the applicable bacteria objectives. The applicable bacteria objectives include both the single sample and geometric mean bacteria objectives set to protect the Water Contact Recreation (REC-1) beneficial use, as set forth in the Basin Plan.[4]

6. During Summer Dry Weather there shall be no discharges of bacteria from MS4s into Marina del Rey Harbor Basins D, E, or F, including Mothers' Beach that cause or contribute to exceedances of the applicable bacteria objectives. The applicable bacteria objectives include both the single sample and geometric mean bacteria objectives set to protect the Water Contact Recreation (REC-1) beneficial use, as set forth in the Basin Plan.[5]

Part 3. STORM WATER QUALITY MANAGEMENT PROGRAM (SQMP) IMPLEMENTATION

A. General Requirements

1. Each Permittee shall, at a minimum, implement the SQMP. The SQMP is an enforceable element of this Order. The SQMP shall be implemented no later than February 1, 2002, unless a later date has been specified for a particular provision in this Order.

2. The SQMP shall, at a minimum, comply with the applicable storm water program requirements of 40 CFR 122.26(d)(2). The SQMP and its components shall be implemented so as to reduce the discharges of pollutants in storm water to the MEP.

3. Each Permittee shall implement additional controls, where necessary, to reduce the discharges of pollutants in storm water to the MEP.

4. Permittees that modify the countywide SQMP (i.e., implement additional controls, implement different controls than described in the countywide SQMP, or determine that certain BMPs in the countywide SQMP are not applicable in the area under its jurisdiction), shall develop a local SQMP, no later than August 1, 2002. The local SQMP shall be customized to reflect the conditions in the area under the Permittee's jurisdiction and

[4] Samples collected for determining compliance with the receiving water limitations of Part 2.5 shall be processed in accordance with the sampling procedures and analytical methodology set forth in the *Santa Monica Bay Beaches Bacterial TMDLs Coordinated Shoreline Monitoring Plan* dated April 7, 2004 and the Monitoring and Reporting Program CI 6948.

[5] Samples collected for determining compliance with the receiving water limitations of Part 2.6 shall be processed in accordance with the sampling procedures and analytical methodology set forth in the *Marina del Rey Harbor Mothers' Beach and Back Basins Bacterial TMDL Coordinated Shoreline Monitoring Plan* dated April 13, 2007 and the Monitoring and Reporting Program CI 6948.

shall specify activities being implemented under the appropriate elements described in the countywide SQMP.

B. Best Management Practice Implementation

The Permittees shall implement or require the implementation of the most effective combination of BMPs for storm water/urban runoff pollution control. When implemented, BMPs are intended to result in the reduction of pollutants in storm water to the MEP.

C. Revision of the Storm Water Quality Management Program

The Permittees shall revise the SQMP, at the direction of the Regional Board Executive Officer, to incorporate program implementation amendments so as to comply with regional, watershed specific requirements, and/or waste load allocations developed and approved pursuant to the process for the designation and implementation of Total Maximum Daily Loads (TMDLs) for impaired water bodies.

D. Designation and Responsibilities of the Principal Permittee

The Los Angeles County Flood Control District is hereby designated as the Principal Permittee. As such, the Principal Permittee shall:

1. Coordinate and facilitate activities necessary to comply with the requirements of this Order, but is not responsible for ensuring compliance of any individual Permittee;
2. Coordinate permit activities among Permittees and act as liaison between Permittees and the Regional Board on permitting issues;
3. Provide personnel and fiscal resources for the necessary updates of the SQMP and its components;
4. Provide technical and administrative support for committees that will be organized to implement the SQMP and its components;
5. Convene the Watershed Management Committees (WMCs) constituted pursuant to Part F, below, upon designation of representatives;
6. Implement the Countywide Monitoring Program required under this Order and evaluate, assess and synthesize the results of the monitoring program;
7. Provide personnel and fiscal resources for the collection, processing and submittal to the Regional Board of annual reports and summaries of other reports required under the SQMP; and
8. Comply with the "Responsibilities of the Permittees" in Part 3.E., below.

E. Responsibilities of the Permittees

Each Permittee is required to comply with the requirements of this Order applicable to discharges within its boundaries (see Findings D.1, D.2. and D.3.) and not for the implementation of the provisions applicable to the Principal Permittee or other Permittees. Each Permittee shall, within its geographic jurisdiction:

1. Comply with the requirements of the SQMP and any modifications thereto;

2. Coordinate among its internal departments and agencies, as appropriate, to facilitate the implementation of the requirements of the SQMP applicable to such Permittee in an efficient and cost-effective manner;

3. Designate a technically knowledgeable representative to the appropriate WMC;

4. Participate in intra-agency coordination (e.g. Fire Department, Building and Safety, Code Enforcement, Public Health, etc.) necessary to successfully implement the provisions of this Order and the SQMP.

5. Prepare an annual Budget Summary of expenditures applied to the storm water management program. This summary shall identify the storm water budget for the following year, using estimated percentages and written explanations where necessary, for the specific categories noted below:

   a) Program management
      - Administrative costs

   b) Program Implementation

      Where information is available, provide an estimated percent breakdown of expenditures for the categories below:
      - Illicit connection/illicit discharge
      - Development planning
      - Development construction
      - Construction inspection activities
      - Industrial/Commercial inspection activities
      - Public Agency Activities
        - Maintenance of Structural BMPs and Treatment Control BMPs
        - Municipal Street Sweeping
        - Catch basin clean-up
        - Trash collection
        - Capital costs

   c) Public Information and Participation

   d) Monitoring Program

   e) Miscellaneous Expenditures

6. Each Permittee, in addition to the Budget Summary, shall report any supplemental dedicated budgets for the same categories.

F. Watershed Management Committees (WMCs)

1. Each WMC shall be comprised of a voting representative from each Permittee in the WMA.

2. The WMC's chair and secretary shall be chosen by the WMC upon Order adoption and on an annual basis, thereafter. In the absence of volunteer Permittee(s) for the positions, the Principal Permittee shall assume those roles until the WMC chooses members of the committee for the positions.

3. Each WMC shall:

   a) Facilitate cooperation and exchange of information among Permittees;

   b) Establish additional goals and objectives and associated deadlines for the WMA, as the program implementation progresses;

   c) Prioritize pollution control efforts based on beneficial use impairment(s), watershed characteristics and analysis of results from studies and the monitoring program;

   d) Develop and/or update and monitor the adequate implementation, on an annual basis, of the tasks identified for the WMA;

   e) Assess the effectiveness of, prepare revisions for, and recommend appropriate changes to the SQMP and its components;

   f) Continue to prioritize the Industrial/Commercial critical sources for investigation, outreach and follow-up; and

   g) Meet four times per year and, as necessary.

G. Legal Authority

1. Permittees shall possess the necessary legal authority to prohibit non-storm water discharges to the storm drain system, including, but not limited to:

   a) Illicit discharges and illicit connections and require removal of illicit connections;

   b) The discharge of wash waters to the MS4 from the cleaning of gas stations, auto repair garages, or other types of automotive service facilities;

   c) The discharge of runoff to the MS4 from mobile auto washing, steam cleaning, mobile carpet cleaning, and other such mobile commercial and industrial operations;

d) The discharge of runoff to the MS4 from areas where repair of machinery and equipment which are visibly leaking oil, fluid or antifreeze, is undertaken;

e) The discharge of runoff to the MS4 from storage areas of materials containing grease, oil, or other hazardous substances, and uncovered receptacles containing hazardous materials;

f) The discharge of chlorinated/ brominated swimming pool water and filter backwash to the MS4;

g) The discharge of runoff from the washing of toxic materials from paved or unpaved areas to the MS4;

h) Washing impervious surfaces in industrial/commercial areas that results in a discharge of runoff to the MS4;

i) The discharge of concrete or cement laden wash water from concrete trucks, pumps, tools, and equipment to the MS4; and

j) Dumping or disposal of materials into the MS4 other than storm water, such as:

(1) Litter, landscape debris and construction debris;

(2) Any state or federally banned or unregistered pesticides;

(3) Food and food processing wastes; and

(4) Fuel and chemical wastes, animal wastes, garbage, batteries, and other materials that have potential adverse impacts on water quality.

2. The Permittees shall possess adequate legal authority to:

a) Require persons within their jurisdiction to comply with conditions in Permittees' ordinances, permits, contracts, model programs, or orders (i.e. hold dischargers to its MS4 accountable for their contributions of pollutants and flows);

b) Utilize enforcement mechanisms to require compliance with Permittees ordinances, permits, contracts, or orders;

c) Control pollutants, including potential contribution, in discharges of storm water runoff associated with industrial activities (including construction activities) to its MS4 and control the quality of storm water runoff from industrial sites (including construction sites). This requirement applies to Source Control, and Treatment Control BMPs;

d) Carry out all inspection, surveillance and monitoring procedures necessary to determine compliance and non-compliance with permit conditions, including the prohibition of illicit discharges to the MS4. Permittees must possess authority to enter, sample, inspect, review and copy records, and require regular reports from

industrial facilities (including construction sites) discharging polluted or with the potential to discharge polluted storm water runoff into its MS4;

e) Require the use of BMPs to prevent or reduce the discharge of pollutants to MS4s to MEP; and

f) Require that Treatment Control BMPs be properly operated and maintained to prevent the breeding of vectors.

3. Each Permittee shall, no later than November 1, 2002, amend and adopt (if necessary), a Permittee-specific storm water and urban runoff ordinance to enforce all requirements of this permit.

4. Each Permittee shall submit no later than December 2, 2002, a new or updated statement by its legal counsel that the Permittee has obtained all necessary legal authority to comply with this Order through adoption of ordinances and/or municipal code modifications.

Part 4. SPECIAL PROVISIONS

Maximum Extent Practicable Standard

This permit, and the provisions herein, are intended to develop, achieve, and implement a timely, comprehensive, cost-effective storm water pollution control program to reduce the discharge of pollutants in storm water to the MEP from the permitted areas in the County of Los Angeles to the waters of the State.

A. General Requirements

1. Best Management Practice Substitution

The Regional Board Executive Officer may approve any site-specific BMP substitution upon petition by a Permittee(s), if the Permittee can document that:

a) The proposed alternative BMP or program will meet or exceed the objective of the original BMP or program in the reduction of storm water pollutants; or

b) The fiscal burden of the original BMP or program is substantially greater than the proposed alternative and does not achieve a substantially greater improvement in storm water quality; and,

c) The proposed alternative BMP or program will be implemented within a similar period of time.

B. Public Information and Participation Program (PIPP)

The Principal Permittee shall implement a Public Information and Participation Program (PIPP) that includes, but is not limited to, the requirements listed in this section. The Principal Permittee shall be responsible for developing and

implementing the Public Education Program, as described in the SQMP, and shall coordinate with Permittees to implement specific requirements.

The objectives of the PIPP are as follows:

- To measurably increase the knowledge of the target audiences regarding the MS4, the impacts of storm water pollution on receiving waters, and potential solutions to mitigate the problems caused;
- To measurably change the waste disposal and runoff pollution generation behavior of target audiences by encouraging implementation of appropriate solutions; and
- To involve and engage socio-economic groups and ethnic communities in Los Angeles County to participate in mitigating the impacts of storm water pollution.

The Principal Permittee shall convene an advisory committee to provide input and assistance in meeting the goals and objectives of the public education campaign. The advisory committee shall be consulted during the process of developing the PIPP campaign, and shall provide comments and advice during the process of preparing a Request For Proposals for a storm water public education contractor. The committee may participate as a part of a working group that evaluates contractor proposals and other tasks as appropriate. The committee shall be comprised of representatives of the environmental community, Permittee cities, Regional Board staff, and experts in the fields of public education and marketing. The Principal Permittee shall ensure that the committee meets at least once a year.

1. Residential Program

   a) "No Dumping" Message

   Each Permittee shall mark all storm drain inlets that they own with a legible "no dumping" message. In addition, signs with prohibitive language discouraging illegal dumping must be posted at designated public access points to creeks, other relevant water bodies, and channels no later than February 2, 2004. Signage and storm drain messages shall be legible and maintained as necessary during the term of the permit.

   b) Countywide Hotline

   The 888-CLEAN-LA hotline will serve as the general public reporting contact for reporting clogged catch basin inlets and illicit discharges/dumping, faded or lack of catch basin stencils, and general storm water management information. Each Permittee may establish its own hotline if preferred. Permittees shall include this information, updated when necessary, in public information, and the government pages of the telephone book, as they are developed or published. The Principal Permittee shall compile a list of the general public reporting contacts from all Permittees and make this information available on the web site (888CleanLA.com) and upon request. Permittees shall provide the Principal Permittee with their reporting contacts no later than

March 1, 2002. Permittees are responsible for providing current, updated information to the Principal Permittee.

c) Outreach and Education

(1) The Principal Permittee shall continue to implement the following activities that were components of the first five-year PIPP:

(i) Advertising;

(ii) Media relations;

(iii) Public service announcements;

(iv) "How To" instructional material distributed in a targeted and activity-related manner;

(v) Corporate, community association, environmental organization and entertainment industry tie-ins; and

(vi) Events targeted to specific activities and population subgroups.

(2) The Principal Permittee shall develop a strategy to educate ethnic communities and businesses through culturally effective methods. Details of this strategy should be incorporated into the Public Education Program, and implemented, no later than February 3, 2003.

(3) The Principal Permittee shall enhance the existing outreach efforts to residents and businesses related to the proper disposal of cigarette butts.

(4) Each Permittee shall conduct educational activities within its jurisdiction and participate in countywide events.

(5) The Principal Permittee shall organize Public Outreach Strategy meetings for Permittees on a quarterly basis, beginning no later than May 1, 2002. The Principal Permittee shall provide guidance for Permittees to augment the countywide outreach and education program. Permittees shall coordinate regional and local outreach and education to reduce duplication of efforts. Permittees are encouraged to include other interested parties in the outreach strategy to strengthen and coordinate educational efforts.

(6) The Principal Permittee shall ensure that a minimum of 35 million impressions per year are made on the general public about storm water quality via print, local TV access, local radio, or other appropriate media.

(7) The Principal Permittee, in cooperation with the Permittees, shall provide schools within each School

District in the County with materials, including, but not limited to, videos, live presentations, and other information necessary to educate a minimum of 50 percent of all school children (K-12) every 2 years on storm water pollution.

(8) Permittees shall provide the contact information for their appropriate staff responsible for storm water public education activities to the Principal Permittee no later than April 1, 2002, and changes to contact information no later than 30 days after a change occurs.

(9) The Principal Permittee shall develop a strategy to measure the effectiveness of in-school educational programs. The protocol shall include assessment of students' knowledge of storm water pollution problems and solutions before and after educational efforts are conducted. The protocol shall be developed and submitted to the Regional Board Executive Officer for approval no later than May 1, 2002. It shall be implemented upon approval.

(10) In order to ensure that the PIPP is demonstrably effective in changing the behavior of the public, the Principal Permittee shall develop a behavioral change assessment strategy no later than May 1, 2002. The strategy shall be developed based on sociological data and studies (such as the County Segmentation Study). The Principal Permittee shall submit the assessment strategy to the Regional Board Executive Office for approval. It shall be implemented on approval.

d) Pollutant-Specific Outreach

The Principal Permittee, in cooperation with Permittees, shall coordinate to develop outreach programs that focus on the watershed-specific pollutants listed in Table 1 no later than February 3, 2003. Metals may be appropriately addressed through the Industrial/Commercial Facilities Program (e.g. distribute education materials on appropriate BMPs for metal waste management to facilities that have been identified as a potential source, such as metal fabricating facilities). Region-wide pollutants may be included in the Principal Permittee's mass media outreach efforts.

Table 1.	
Watershed	***Target Pollutants for Outreach***
Ballona Creek	Trash, Indicator Bacteria, Metals, PAHs
Malibu Creek	Trash, Nutrients (Nitrogen), Indicator Bacteria, Sediments
Los Angeles River	Trash, Nutrients (Nitrogen), Indicator

	Bacteria, Metals, Pesticides, PAHs
San Gabriel River	Trash, Nutrients (Nitrogen), Indicator Bacteria, Metals
Santa Clara River	Nutrients (Nitrogen), Coliform
Dominguez Channel	Trash, Indicator Bacteria, PAHs

Each Permittee shall make outreach materials available to the general public and target audiences, such as schools, community groups, contractors and developers, and at appropriate public counters and events. Outreach material shall include information on pollutants, sources of concern, and source abatement measures.

2. Businesses Program

a) Corporate Outreach

The Principal Permittee shall develop and implement a Corporate Outreach program to educate and inform corporate managers about storm water regulations. The program shall target RGOs and restaurant chains. At a minimum, this program shall include:

(1) Conferring with corporate management to explain storm water regulations;

(2) Distribution and discussion of educational material regarding storm water pollution and BMPs, and provide managers with suggestions to facilitate employee compliance with storm water regulations.

Corporate Outreach for all RGOs and restaurant chain corporations shall be conducted not less than twice during the permit term, with the first outreach contact to begin no later than February 3, 2003.

b) Business Assistance Program

The Principal Permittee and Permittees may implement a Business Assistance Program to provide technical resource assistance to small businesses to advise them on BMPs implementation to reduce the discharge of pollutants in storm water runoff. Programs may include:

(1) On-site technical assistance or consultation via telephone to identify and implement storm water pollution prevention methods and best management practices; and

(2) Making available, distributing, and discussing of applicable BMP and educational materials.

C. Industrial/Commercial Facilities Control Program

Each Permittee shall require implementation of pollutant reduction and control measures at industrial and commercial facilities, with the objective of reducing pollutants in storm water runoff. Except as specified in other sections of this Order, pollutant reduction and control measures can be used alone or in combination, and can include Structural and Source Control BMPs, and operation and maintenance procedures, which can be applied before, during, and/or after pollution generating activities. At a minimum, the Industrial/Commercial Facilities Control Program shall include requirements to: (1) track, (2) inspect, and (3) ensure compliance at industrial and commercial facilities that are critical sources of pollutants in storm water.

1. Track Critical Sources

a) Each Permittee shall maintain a watershed-based inventory or database of all facilities within its jurisdiction that are critical sources of storm water pollution. Critical sources to be tracked are summarized below, and also specified in Attachment B:

(1) Commercial Facilities
- restaurants;
- automotive service facilities; and
- RGOs and automotive dealerships.

(2) USEPA Phase I Facilities (Tier 1 and 2)

(3) Other Federally-mandated Facilities [as specified in 40 CFR 122.26(d)(2)(iv)(C)]
- municipal landfills;
- hazardous waste treatment, disposal, and recovery facilities; and
- facilities subject to SARA Title III (also known as EPCRA).

b) Each Permittee shall include the following minimum fields of information for each industrial and commercial facility:
- name of facility and name of owner/operator;
- address;
- coverage under the GIASP or other individual or general NPDES permits; and
- a narrative description including SIC codes that best reflects the industrial activities at and principal products of each facility.

The Regional Board encourages Permittees to add other fields of information, such as material usage and/or industrial output, and discrepancies between SIC Code designations (as reported by facility operators) and the actual type of industrial activity has the potential to pollute storm water. In addition, the Regional Board recommends use of an automated database system, such as a Geographical Information System (GIS) or Internet-based system; however, this is not required.

c) Each Permittee shall update its inventory of critical sources at least annually. The update may be accomplished through collection of new information obtained through field activities or through other readily available intra-agency informational databases (e.g. business licenses, pretreatment permits, sanitary sewer hook-up permits).

2. Inspect Critical Sources

Each Permittee shall inspect all facilities in the categories and at a level and frequency as specified in the following subsections.

a) Commercial Facilities

(1) Restaurants

Frequency of Inspections: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of inspections: Each Permittee, in cooperation with its appropriate department (such as health or public works), shall inspect all restaurants within its jurisdiction to confirm that storm water BMPs are being effectively implemented in compliance with State law, County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP. At each restaurant, inspectors shall verify that the restaurant operator:

- has received educational materials on storm water pollution prevention practices;
- does not pour oil and grease or oil and grease residue onto a parking lot, street or adjacent catch basin;
- keeps the trash bin area clean and trash bin lids closed, and does not fill trash bins with washout water or any other liquid;
- does not allow illicit discharges, such as discharge of washwater from floormats, floors, porches, parking lots, alleys, sidewalks and street areas (in the immediate vicinity of the establishment), filters or garbage/trash containers;
- removes food waste, rubbish or other materials from parking lot areas in a sanitary manner that does not create a nuisance or discharge to the storm drain.

(2) Automotive Service Facilities

Frequency of Inspections: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of inspections: Each Permittee shall inspect all automotive service facilities within its jurisdiction to confirm that storm water BMPs are effectively implemented in compliance with County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP. At each automotive service facility, inspectors shall verify that each operator:

- maintains the facility area so that it is clean and dry and without evidence of excessive staining;
- implements housekeeping BMPs to prevent spills and leaks;
- properly discharges wastewaters to a sanitary sewer and/or contains wastewaters for transfer to a legal point of disposal;
- is aware of the prohibition on discharge of non-storm water to the storm drain;
- properly manages raw and waste materials including proper disposal of hazardous waste;
- protects outdoor work and storage areas to prevent contact of pollutants with rainfall and runoff;
- labels, inspects, and routinely cleans storm drain inlets that are located on the facility's property; and
- trains employees to implement storm water pollution prevention practices.

(3) Retail Gasoline Outlets and Automotive Dealerships

Frequency of Inspection: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of Inspection: Each Permittee shall confirm that BMPs are being effectively implemented at each RGO and automotive dealership within its jurisdiction, in compliance with the SQMP, Regional Board Resolution 98-08, and the Stormwater Quality Task Force Best Management Practice Guide for RGOs. At each RGO and automotive dealership, inspectors shall verify that each operator:

- routinely sweeps fuel-dispensing areas for removal of litter and debris, and keeps rags and absorbents ready for use in case of leaks and spills;
- is aware that washdown of facility area to the storm drain is prohibited;
- is aware of design flaws (such as grading that doesn't prevent run-on, or inadequate roof covers and berms), and that equivalent BMPs are implemented;
- inspects and cleans storm drain inlets and catch basins within each facility's boundaries no later than October 1st of each year;
- posts signs close to fuel dispensers, which warn vehicle owners/operators against "topping off" of vehicle fuel tanks and installation of automatic shutoff fuel dispensing nozzles;
- routinely checks outdoor waste receptacle and air/water supply areas, cleans leaks and drips, and ensures that only watertight waste receptacles are used and that lids are closed; and
- trains employees to properly manage hazardous materials and wastes as well as to implement other storm water pollution prevention practices.

b) Phase I Facilities

Permittees need not inspect facilities that have been inspected by the Regional Board within the past 24 months. For the remaining Phase I facilities that the Regional Board has not inspected, each Permittee shall conduct compliance inspections as specified below.

Frequency of Inspection

Facilities in Tier 1 Categories: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Facilities in Tier 2 Categories: Twice during the 5-year term of the permit, provided that the first inspection occurs no later than August 1, 2004. Permittees need not perform additional inspections at those facilities determined to have no risk of exposure of industrial activity to storm water. For those facilities that do have exposure of industrial activities to storm water, a Permittee may reduce the frequency of additional compliance inspections to once every 5 years, provided that the Permittee inspects at least 20% of the facilities in Tier 2 each year.

Level of Inspection: Each Permittee shall confirm that each operator:

- has a current Waste Discharge Identification (WDID) number for facilities discharging storm water associated with industrial activity, and that a Storm Water Pollution Prevention Plan is available on-site, and
- is effectively implementing BMPs in compliance with County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP.

c) Other Federally-mandated Facilities

Frequency of Inspection: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of Inspection: Each Permittee shall confirm that each operator:

- has a current Waste Discharge Identification (WDID) number for facilities discharging storm water associated with industrial activity, and that a Storm Water Pollution Prevention Plan is available on-site, and
- is effectively implementing BMPs in compliance with County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP.

3. Ensure Compliance of Critical Sources

a) **BMP Implementation:** In the event that a Permittee determines that a BMP specified by the SQMP or Regional Board Resolution 98-08 is infeasible at any site, that Permittee shall require implementation of other BMPs that will achieve the equivalent reduction of pollutants in the storm water discharges. Likewise, for those BMPs that are not adequate to achieve water quality objectives, Permittees may require additional site-specific controls, such as Treatment Control BMPs.

b) **Environmentally Sensitive Areas and Impaired Waters:** For critical sources that are in ESAs or that are tributary to CWA § 303(d) impaired water bodies, Permittees shall consider requiring operators to implement additional controls to reduce pollutants in storm water runoff that are causing or contributing to the exceedences of Water Quality Objectives.

c) **Progressive Enforcement:** Each Permittee shall implement a progressive enforcement policy to ensure that facilities are brought into compliance with all storm water requirements within a reasonable time period as specified below.

(1) In the event that a Permittee determines, based on an inspection conducted above, that an operator has failed to adequately implement all necessary BMPs, that Permittee shall take progressive enforcement action which, at a minimum, shall include a follow-up inspection within 4 weeks from the date of the initial inspection.

(2) In the event that a Permittee determines that an operator has failed to adequately implement BMPs after a follow-up inspection, that Permittee shall take further enforcement action as established through authority in its municipal code and ordinances or through the judicial system.

(3) Each Permittee shall maintain records, including inspection reports, warning letters, notices of violations, and other enforcement records, demonstrating a good faith effort to bring facilities into compliance.

d) Interagency Coordination

(1) **Referral of Violations of the SQMP, Regional Board Resolution 98-08, and Municipal Storm Water Ordinances:** A Permittee may refer a violation(s) to the Regional Board provided that that Permittee has made a good faith effort of progressive enforcement. At a minimum, a Permittee's good faith effort must include documentation of:

- Two follow-up inspections; and
- Two warning letters or notices of violation.

(2) **Referral of Violations of the GIASP, including Requirements to File a Notice of Intent:** For those facilities in violation of the GIASP, Permittees may escalate referral of such violations to the Regional Board after one inspection and one written notice to the operator regarding the violation. In making such referrals, Permittees shall include, at a minimum, the following documentation:

- Name of the facility;
- Operator of the facility;
- Owner of the facility;
- Industrial activity being conducted at the facility that is subject to the GIASP; and
- Records of communication with the facility operator regarding the violation, which shall include at least an inspection report and one written notice of the violation.

Permittees shall, at a minimum, make such referrals on a quarterly basis.

(3) **Investigation of Complaints Regarding Facilities – Transmitted by the Regional Board Staff:** Each Permittee shall initiate, within one business day, investigation of complaints (other than non-storm water discharges) regarding facilities within its jurisdiction. The initial investigation shall include, at a minimum, a limited inspection of the facility to confirm the complaint to determine if the facility is effectively complying with the SQMP and municipal storm water/urban runoff ordinances, and to oversee corrective action.

(4) **Support of Regional Board Enforcement Actions:** As directed by the Regional Board Executive Officer, Permittees shall support Regional Board enforcement actions by: assisting in identification of current owners, operators, and lessees of facilities; providing staff, when available, for joint inspections with Regional Board inspectors; appearing as witnesses in Regional Board enforcement hearings; and providing copies of inspection reports and other progressive enforcement documentation.

(5) **Participation in a Task Force:** The Permittees, Regional Board, and other stakeholders may form a Storm Water Task Force, the purpose of which is to communicate concerns regarding special cases of storm water violations by industrial and commercial facilities and to develop a coordinated approach to enforcement action.

D. Development Planning Program

The Permittees shall implement a development-planning program that will require all Planning Priority development and Redevelopment projects to:

- Minimize impacts from storm water and urban runoff on the biological integrity of Natural Drainage Systems and water bodies in accordance with requirements under CEQA (Cal. Pub. Resources Code § 21100), CWC §

13369, CWA § 319, CWA § 402(p), CWA § 404, CZARA § 6217(g), ESA § 7, and local government ordinances ;

- Maximize the percentage of pervious surfaces to allow percolation of storm water into the ground;
- Minimize the quantity of storm water directed to impervious surfaces and the MS4;
- Minimize pollution emanating from parking lots through the use of appropriate Treatment Control BMPs and good housekeeping practices;
- Properly design and maintain Treatment Control BMPs in a manner that does not promote the breeding of vectors; and
- Provide for appropriate permanent measures to reduce storm water pollutant loads in storm water from the development site.

1. Peak Flow Control

The Permittees shall control post-development peak storm water runoff discharge rates, velocities, and duration (peak flow control) in Natural Drainage Systems (i.e., mimic pre-development hydrology) to prevent accelerated stream erosion and to protect stream habitat. Natural Drainage Systems are located in the following areas:

a) Malibu Creek;

b) Topanga Canyon Creek;

c) Upper Los Angeles River;

d) Upper San Gabriel River;

e) Santa Clara River; and

f) Los Angeles County Coastal streams (see Basin Plan Table 2-1).

The Principal Permittee in consultation with Permittees shall develop numerical criteria for peak flow control, based on the results of the Peak Discharge Impact Study (see Monitoring Program Section II.I).

Each Permittee shall, no later than February 1, 2005, implement numerical criteria for peak flow control.

A Permittee or group of Permittees may substitute for the countywide peak flow control criteria with a Hydromodification Control Plan (HCP), on approval by the Regional Board, in the following circumstances:

(1) Stream or watershed-specific conditions indicate the need for a different peak flow control criteria, and the alternative numerical criteria is developed through the application of hydrologic modeling and supporting field observations; or

(2) A watershed-wide plan has been developed for implementation of control measures to reduce erosion and stabilize drainage systems on a watershed basis.

2. Standard Urban Storm Water Mitigation Plans (SUSMPs)

a) Each Permittee shall amend codes and ordinances not later than August 1, 2002 to give legal effect to SUSMP changes contained in this Order. Changes to SUSMP requirements shall take effect not later than September 2, 2002.

b) Each Permittee shall require that a single-family hillside home:

(1) Conserve natural areas;

(2) Protect slopes and channels;

(3) Provide storm drain system stenciling and signage;

(4) Divert roof runoff to vegetated areas before discharge unless the diversion would result in slope instability; and

(5) Direct surface flow to vegetated areas before discharge unless the diversion would result in slope instability.

c) Each Permittee shall require that a SUSMP as approved by the Regional Board in Board Resolution No. R 00-02 be implemented for the following categories of developments:

(1) Ten or more unit homes (includes single family homes, multifamily homes, condominiums, and apartments);

(2) A 100,000 or more square feet of impervious surface area industrial/ commercial development;

(3) Automotive service facilities (SIC 5013, 5014, 5541, 7532-7534, and 7536-7539);

(4) Retail gasoline outlets;

(5) Restaurants (SIC 5812);

(6) Parking lots 5,000 square feet or more of surface area or with 25 or more parking spaces; and

(7) Redevelopment projects in subject categories that meet Redevelopment thresholds.

d) Each Permittee shall submit an ESA Delineation Map for its jurisdictional boundary, based on the Regional Board's ESA Definition, no later than June 3, 2002, for approval by the Regional Board Executive Officer in consultation with the California Department of Fish and Game, and the California Coastal Commission.

e) Each Permittee shall require the implementation of SUSMP provisions no later than September 2, 2002, for all projects located in or directly adjacent to or discharging directly to an ESA, where the development will:

(1) Discharge storm water and urban runoff that is likely to impact a sensitive biological species or habitat; and

(2) Create 2,500 square feet or more of impervious surface area.

3. Numerical Design Criteria

The Permittees shall require that post-construction Treatment Control BMPs incorporate, at a minimum, either a volumetric or flow based treatment control design standard, or both, as identified below to mitigate (infiltrate, filter or treat) storm water runoff:

a) Volumetric Treatment Control BMP

(1) The 85th percentile 24-hour runoff event determined as the maximized capture storm water volume for the area, from the formula recommended in *Urban Runoff Quality Management, WEF Manual of Practice No. 23/ ASCE Manual of Practice No. 87, (1998)*; or

(2) The volume of annual runoff based on unit basin storage water quality volume, to achieve 80 percent or more volume treatment by the method recommended in *California Stormwater Best Management Practices Handbook – Industrial/ Commercial,* (1993); or

(3) The volume of runoff produced from a 0.75 inch storm event, prior to its discharge to a storm water conveyance system; or

(4) The volume of runoff produced from a historical-record based reference 24-hour rainfall criterion for "treatment" (0.75 inch average for the Los Angeles County area) that achieves approximately the same reduction in pollutant loads achieved by the 85th percentile 24-hour runoff event.

b) Flow Based Treatment Control BMP

(1) The flow of runoff produced from a rain event equal to at least 0.2 inches per hour intensity; or

(2) The flow of runoff produced from a rain event equal to at least two times the 85th percentile hourly rainfall intensity for Los Angeles County; or

(3) The flow of runoff produced from a rain event that will result in treatment of the same portion of runoff as treated using volumetric standards above.

4. Applicability of Numerical Design Criteria

The Permittees shall require the following categories of Planning Priority Projects to design and implement post-construction treatment controls to mitigate storm water pollution:

a) Single-family hillside residential developments of one acre or more of surface area;

b) Housing developments (includes single family homes, multifamily homes, condominiums, and apartments) of ten units or more;

c) A 100,000 square feet or more impervious surface area industrial/ commercial development;

d) Automotive service facilities (SIC 5013, 5014, 5541, 7532-7534 and 7536-7539) [5,000 square feet or more of surface area];

e) Retail gasoline outlets [5,000 square feet or more of impervious surface area and with projected Average Daily Traffic (ADT) of 100 or more vehicles]. Subsurface Treatment Control BMPs which may endanger public safety (i.e., create an explosive environment) are considered not appropriate;

f) Restaurants (SIC 5812) [5,000 square feet or more of surface area];

g) Parking lots 5,000 square feet or more of surface area or with 25 or more parking spaces;

h) Projects located in, adjacent to or discharging directly to an ESA that meet threshold conditions identified above in 2.e; and

i) Redevelopment projects in subject categories that meet Redevelopment thresholds.

5. Not later than March 10, 2003, each Permittee shall require the implementation of SUSMP and post-construction control requirements for the industrial/commercial development category to projects that disturb one acre or more of surface area.

6. Site Specific Mitigation

Each Permittee shall, no later than September 2, 2002, require the implementation of a site-specific plan to mitigate post-development storm water for new development and redevelopment not requiring a SUSMP

but which may potentially have adverse impacts on post-development storm water quality, where one or more of the following project characteristics exist:

a) Vehicle or equipment fueling areas;

b) Vehicle or equipment maintenance areas, including washing and repair;

c) Commercial or industrial waste handling or storage;

d) Outdoor handling or storage of hazardous materials;

e) Outdoor manufacturing areas;

f) Outdoor food handling or processing;

g) Outdoor animal care, confinement, or slaughter; or

h) Outdoor horticulture activities.

7. Redevelopment Projects

The Permittees shall apply the SUSMP, or site specific requirements including post-construction storm water mitigation to all Planning Priority Projects that undergo significant Redevelopment in their respective categories.

a) Significant Redevelopment means land-disturbing activity that results in the creation or addition or replacement of 5,000 square feet or more of impervious surface area on an already developed site.

Where Redevelopment results in an alteration to more than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post development storm water quality control requirements, the entire project must be mitigated. Where Redevelopment results in an alteration to less than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post development storm water quality control requirements, only the alteration must be mitigated, and not the entire development.

b) Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety.

c) Existing single family structures are exempt from the Redevelopment requirements.

8. Maintenance Agreement and Transfer

Each Permittee shall require that all developments subject to SUSMP and site specific plan requirements provide verification of maintenance provisions for Structural and Treatment Control BMPs, including but not limited to legal agreements, covenants, CEQA mitigation requirements, and or conditional use permits. Verification at a minimum shall include:

a) The developer's signed statement accepting responsibility for maintenance until the responsibility is legally transferred; and either

b) A signed statement from the public entity assuming responsibility for Structural or Treatment Control BMP maintenance and that it meets all local agency design standards; or

c) Written conditions in the sales or lease agreement, which requires the recipient to assume responsibility for maintenance and conduct a maintenance inspection at least once a year; or

d) Written text in project conditions, covenants and restrictions (CCRs) for residential properties assigning maintenance responsibilities to the Home Owners Association for maintenance of the Structural and Treatment Control BMPs; or

e) Any other legally enforceable agreement that assigns responsibility for the maintenance of post-construction Structural or Treatment Control BMPs.

9. Regional Storm Water Mitigation Program

A Permittee or Permittee group may apply to the Regional Board for approval of a regional or sub-regional storm water mitigation program to substitute in part or wholly SUSMP requirements. Upon review and a determination by the Regional Board Executive Officer that the proposal is technically valid and appropriate, the Regional Board may consider for approval such a program if its implementation will:

a) Result in equivalent or improved storm water quality;

b) Protect stream habitat;

c) Promote cooperative problem solving by diverse interests;

d) Be fiscally sustainable and has secure funding; and

e) Be completed in five years including the construction and start-up of treatment facilities.

Nothing in this provision shall be construed as to delay the implementation of SUSMP requirements, as approved in this Order.

10. Mitigation Funding

The Permittees may propose a management framework, for endorsement by the Regional Board Executive Officer, to support regional or sub-

regional solutions to storm water pollution, where any of the following situations occur:

a) A waiver for impracticability is granted;

b) Legislative funds become available;

c) Off-site mitigation is required because of loss of environmental habitat; or

d) An approved watershed management plan or a regional storm water mitigation plan exists that incorporates an equivalent or improved strategy for storm water mitigation.

11. California Environmental Quality Act (CEQA) Document Update

Each Permittee shall incorporate into its CEQA process, with immediate effect, procedures for considering potential storm water quality impacts and providing for appropriate mitigation when preparing and reviewing CEQA documents. The procedures shall require consideration of the following:

a) Potential impact of project construction on storm water runoff;

b) Potential impact of project post-construction activity on storm water runoff;

c) Potential for discharge of storm water from areas from material storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous materials handling or storage, delivery areas or loading docks, or other outdoor work areas;

d) Potential for discharge of storm water to impair the beneficial uses of the receiving waters or areas that provide water quality benefit;

e) Potential for the discharge of storm water to cause significant harm on the biological integrity of the waterways and water bodies;

f) Potential for significant changes in the flow velocity or volume of storm water runoff that can cause environmental harm; and

g) Potential for significant increases in erosion of the project site or surrounding areas.

12. General Plan Update

a) Each Permittee shall amend, revise or update its General Plan to include watershed and storm water quality and quantity management considerations and policies when any of the following General Plan elements are updated or amended: (i) Land Use, (ii) Housing, (iii) Conservation, and (iv) Open Space.

b) Each Permittee shall provide the Regional Board with the draft amendment or revision when a listed General Plan element or the

General Plan is noticed for comment in accordance with Cal. Govt. Code § 65350 *et seq.*

13. Targeted Employee Training

Each Permittee shall train its employees in targeted positions (whose jobs or activities are engaged in development planning) regarding the development planning requirements on an annual basis beginning no later than August 1, 2002, and more frequently if necessary. For Permittees with a population of 250,000 or more (2000 U.S. Census), training shall be completed no later than February 3, 2003.

14. Developer Technical Guidance and Information

a) Each Permittee shall develop and make available to the developer community SUSMP (development planning) guidelines immediately.

b) The Principal Permittee in partnership with Permittees shall issue no later than February 2, 2004, a technical manual for the siting and design of BMPs for the development community in Los Angeles County. The technical manual may be adapted from the revised California Storm Water Quality Task Force Best Management Practices Handbooks scheduled for publication in September 2002. The technical manual shall at a minimum include:

(1) Treatment Control BMPs based on flow-based and volumetric water quality design criteria for the purposes of countywide consistency;

(2) Peak Flow Control criteria to control peak discharge rates, velocities and duration;

(3) Expected pollutant removal performance ranges obtained from national databases, technical reports and the scientific literature;

(4) Maintenance considerations; and

(5) Cost considerations.

E. Development Construction Program

1. Each Permittee shall implement a program to control runoff from construction activity at all construction sites within its jurisdiction. The program shall ensure the following minimum requirements are effectively implemented at all construction sites:

a) Sediments generated on the project site shall be retained using adequate Treatment Control or Structural BMPs;

b) Construction-related materials, wastes, spills, or residues shall be retained at the project site to avoid discharge to streets, drainage

facilities, receiving waters, or adjacent properties by wind or runoff;

c) Non-storm water runoff from equipment and vehicle washing and any other activity shall be contained at the project site; and

d) Erosion from slopes and channels shall be controlled by implementing an effective combination of BMPs (as approved in Regional Board Resolution No. 99-03), such as the limiting of grading scheduled during the wet season; inspecting graded areas during rain events; planting and maintenance of vegetation on slopes; and covering erosion susceptible slopes.

2. For construction sites one acre and greater, each Permittee shall comply with all conditions in section E.1. above and shall:

a) Require the preparation and submittal of a Local Storm Water Pollution Prevention Plan (Local SWPPP), for approval prior to issuance of a grading permit for construction projects.

The Local SWPPP shall include appropriate construction site BMPs and maintenance schedules. (A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs as the State SWPPP). The Local SWPPP must include the rationale used for selecting or rejecting BMPs. The project architect, or engineer of record, or authorized qualified designee, must sign a statement on the Local SWPPP to the effect:

"As the architect/engineer of record, I have selected appropriate BMPs to effectively minimize the negative impacts of this project's construction activities on storm water quality. The project owner and contractor are aware that the selected BMPs must be installed, monitored, and maintained to ensure their effectiveness. The BMPs not selected for implementation are redundant or deemed not applicable to the proposed construction activity."

The landowner or the landowner's agent shall sign a statement to the effect:

"I certify that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete. I am aware that submitting false and/or inaccurate information, failing to update the Local SWPPP to reflect current conditions, or failing to properly and/or adequately implement the Local SWPPP may result in revocation of grading and/or other permits or other sanctions provided by law."

The Local SWPPP certification shall be signed by the landowner as follows, for a corporation: by a responsible corporate officer which means (a) a president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or (b) the manager of the construction activity if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures; for a partnership or sole proprietorship: by a general partner or the proprietor; or for a municipality or other public agency: by an elected official, a ranking management official (e.g., County Administrative Officer, City Manager, Director of Public Works, City Engineer, District Manager), or the manager of the construction activity if authority to sign Local SWPPPs has been assigned or delegated to the manager in accordance with established agency policy.

b) Inspect all construction sites for storm water quality requirements during routine inspections a minimum of once during the wet season. The Local SWPPP shall be reviewed for compliance with local codes, ordinances, and permits. For inspected sites that have not adequately implemented their Local SWPPP, a follow-up inspection to ensure compliance will take place within 2 weeks. If compliance has not been attained, the Permittee will take additional actions to achieve compliance (as specified in municipal codes). If compliance has not been achieved, and the site is also covered under a statewide general construction storm water permit, each Permittee shall enforce their local ordinance requirements, and if non-compliance continues the Regional Board shall be notified for further joint enforcement actions.

c) Require, no later than March 10, 2003, prior to issuing a grading permit for all projects less than five acres requiring coverage under a statewide general construction storm water permit, proof of a Waste Discharger Identification (WDID) Number for filing a Notice of Intent (NOI) for permit coverage and a certification that a SWPPP has been prepared by the project developer. A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs as the State SWPPP.

3. For sites five acres and greater, each Permittee shall comply with all conditions in Sections E.1. and E.2. and shall:

a) Require, prior to issuing a grading permit for all projects requiring coverage under the state general permit, proof of a Waste Discharger Identification (WDID) Number for filing a Notice of Intent (NOI) for coverage under the GCASP and a certification that a SWPPP has been prepared by the project developer. A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs as the State SWPPP.

b) Require proof of an NOI and a copy of the SWPPP at any time a transfer of ownership takes place for the entire development or portions of the common plan of development where construction activities are still on-going.

c) Use an effective system to track grading permits issued by each Permittee. To satisfy this requirement, the use of a database or GIS system is encouraged, but not required.

4. GCASP Violation Referrals

a) Referral of Violations of the SQMP, Regional Board Resolution 98-08, and municipal storm water ordinances:

A Permittee may refer a violation(s) to the Regional Board provided that the Permittee has made a good faith effort of progressive enforcement. At a minimum, a Permittee's good faith effort must include documentation of:

- Two follow-up inspections within 3 months, and
- Two warning letters or notices of violation.

b) Referral of Violations of GCASP Filing Requirements:

For those projects subject to the GCASP, Permittees shall refer non-filers (i.e., those projects which cannot demonstrate that they have a WDID number) to the Regional Board, within 15 days of making a determination. In making such referrals, Permittees shall include, at a minimum, the following documentation:

- Project location;
- Developer;
- Estimated project size; and
- Records of communication with the developer regarding filing requirements.

5. Each Permittee shall train employees in targeted positions (whose jobs or activities are engaged in construction activities including construction inspection staff) regarding the requirements of the storm water management program no later than August 1, 2002, and annually thereafter. For Permittees with a population of 250,000 or more (2000 U.S. Census), initial training shall be completed no later than February 3, 2003. Each Permittee shall maintain a list of trained employees.

F. Public Agency Activities Program

Each Permittee shall implement a Public Agency program to minimize storm water pollution impacts from public agency activities. Public Agency requirements consist of:

- Sewage Systems Maintenance, Overflow, and Spill Prevention
- Public Construction Activities Management
- Vehicle Maintenance/Material Storage Facilities/Corporation Yards Management
- Landscape and Recreational Facilities Management

- Storm Drain Operation and Management
- Streets and Roads Maintenance
- Parking Facilities Management
- Public Industrial Activities Management
- Emergency Procedures
- Treatment Feasibility Study

1. Sewage System Maintenance, Overflow, and Spill Prevention

   a) Each Permittee shall implement a response plan for overflows of the sanitary sewer system within their respective jurisdiction, which shall consist at a minimum of the following:

      (1) Investigation of any complaints received;

      (2) Upon notification, immediate response to overflows for containment; and

      (3) Notification to appropriate sewer and public health agencies when a sewer overflows to the MS4.

   b) In addition to 1.a.1, 1.a.2, and 1.a.3 above, for those Permittees, which own and/or operate a sanitary sewer system, the Permittee shall also implement the following requirements:

      (1) Procedures to prevent sewage spills or leaks from sewage facilities from entering the MS4; and

      (2) Identify, repair, and remediate sanitary sewer blockages, exfiltration, overflow, and wet weather overflows from sanitary sewers to the MS4.

2. Public Construction Activities Management

   a) Each Permittee shall implement the Development Planning Program requirements (Permit Part 4.D) at public construction projects.

   b) Each Permittee shall implement the Development Construction Program requirements (Permit Part 4.E) at Permittee owned construction sites.

   c) Each Permittee shall obtain coverage under the GCASP for public construction sites 5 acres or greater (or part of a larger area of development) except that a municipality under 100,000 in population (1990 U.S. Census) need not obtain coverage under a separate permit until March 10, 2003.

   d) Each Permittee, no later than March 10, 2003, shall obtain coverage under a statewide general construction storm water permit for public construction sites for projects between one and five acres.

3. Vehicle Maintenance/Material Storage Facilities/Corporation Yards Management

a) Each Permittee, consistent with the SQMP, shall implement SWPPPs for public vehicle maintenance facilities, material storage facilities, and corporation yards which have the potential to discharge pollutants into storm water.

b) Each Permittee shall implement BMPs to minimize pollutant discharges in storm water including but not be limited to:

(1) Good housekeeping practices;

(2) Material storage control;

(3) Vehicle leaks and spill control; and

(4) Illicit discharge control.

c) Each Permittee shall implement the following measures to prevent the discharge of pollutants to the MS4:

(1) For existing facilities, that are not already plumbed to the sanitary sewer, all vehicle and equipment wash areas (except for fire stations) shall either be:

(i) Self-contained;

(ii) Equipped with a clarifier;

(iii) Equipped with an alternative pre-treatment device; or

(iv) Plumbed to the sanitary sewer.

(2) For new facilities, or during redevelopment of existing facilities (including fire stations), all vehicle and equipment wash areas shall be plumbed to the sanitary sewer and be equipped with a pre-treatment device in accordance with requirements of the sewer agency.

4. Landscape and Recreational Facilities Management

Each Permittee shall implement the following requirements:

a) A standardized protocol for the routine and non-routine application of pesticides, herbicides (including pre-emergents), and fertilizers;

b) Consistency with State Board's guidelines and monitoring requirements for application of aquatic pesticides to surface waters (WQ Order No. 2001-12 DWQ);

c) Ensure no application of pesticides or fertilizers immediately before, during, or immediately after a rain event or when water is flowing off the area to be applied;

d) Ensure that no banned or unregistered pesticides are stored or applied;

e) Ensure that staff applying pesticides are certified by the California Department of Food and Agriculture, or are under the direct supervision of a certified pesticide applicator;

f) Implement procedures to encourage retention and planting of native vegetation and to reduce water, fertilizer, and pesticide needs;

g) Store fertilizers and pesticides indoors or under cover on paved surfaces or use secondary containment;

h) Reduce the use, storage, and handling of hazardous materials to reduce the potential for spills; and

i) Regularly inspect storage areas.

5. Storm Drain Operation and Management

a) Each Permittee shall designate catch basin inlets within its jurisdiction as one of the following:

Priority A:	Catch basins that are designated as consistently generating the highest volumes of trash and/or debris.
Priority B:	Catch basins that are designated as consistently generating moderate volumes of trash and/or debris.
Priority C:	Catch basins that are designated as generating low volumes of trash and/or debris.

b) Permittees subject to a trash TMDL (Los Angeles River and Ballona Creek WMAs) shall continue to implement the requirements listed below until trash TMDL implementation measures are adopted. Thereafter, the subject Permittees shall implement programs in conformance with the TMDL implementation schedule, which shall include an effective combination of measures such as street sweeping, catch basin cleaning, installation of treatment devices and trash receptacles, or other BMPs. Default requirements include:

(1) Inspection and cleaning of catch basins between May 1 and September 30 of each year;

(2) Additional cleaning of any catch basin that is at least 40% full of trash and/or debris;

(3) Record keeping of catch basins cleaned; and

(4) Recording of the overall quantity of catch basin waste collected.

If the implementation phase for the Los Angeles River and Ballona Creek Trash TMDLs has not begun by October 2003, subject Permittees shall implement the requirements described below in subsection 5(c), until such time programs in conformance with the subject Trash TMDLs are being implemented.

c) Permittees not subject to a trash TMDL shall:

(1) Clean catch basins according to the following schedule:

Priority A: A minimum of three times during the wet season and once during the dry season every year.

Priority B: A minimum of once during the wet season and once during the dry season every year.

Priority C: A minimum of once per year.

In addition to the schedule above, between February 1, 2002 and July 1, 2003, Permittees shall ensure that any catch basin that is at least 40% full of trash and/or debris shall be cleaned out. After July 1, 2003, Permittees shall ensure that any catch basin that is at least 25% full of trash and debris shall be cleaned out.

(2) For any special event that can be reasonably expected to generate substantial quantities of trash and litter, include provisions that require for the proper management of trash and litter generated, as a condition of the special use permit issued for that event. At a minimum, the municipality who issues the permit for the special event shall arrange for either temporary screens to be placed on catch basins or for catch basins in that area to be cleaned out subsequent to the event and prior to any rain event.

(3) Place trash receptacles at all transit stops within its jurisdiction that have shelters no later than August 1, 2002, and at all other transit stops within its jurisdiction no later than February 3, 2003. All trash receptacles shall be maintained as necessary.

d) Each Permittee shall inspect the legibility of the catch basin stencil or label nearest the inlet. Catch basins with illegible stencils shall be recorded and re-stenciled or re-labeled within 180 days of inspection.

e) Each Permittee shall implement BMPs for Storm Drain Maintenance that include:

(1) A program to visually monitor Permittee-owned open channels and other drainage structures for debris at least annually and identify and prioritize problem areas of illicit discharge for regular inspection;

(2) A review of current maintenance activities to assure that appropriate storm water BMPs are being utilized to protect water quality;

(3) Removal of trash and debris from open channel storm drains shall occur a minimum of once per year before the storm season;

(4) Minimize the discharge of contaminants during MS4 maintenance and clean outs; and

(5) Proper disposal of material removed.

6. Streets and Roads Maintenance

a) Each Permittee shall designate streets and/or street segments within its jurisdiction as one of the following:

Priority A: Streets and/or street segments that are designated as consistently generating the highest volumes of trash and/or debris.

Priority B: Streets and/or street segments that are designated as consistently generating moderate volumes of trash and/or debris.

Priority C: Streets and/or street segments that are designated as generating low volumes of trash and/or debris.

b) Each Permittee shall perform street sweeping of curbed streets according to the following schedule:

Priority A: These streets and/or street segments shall be swept at least two times per month.

Priority B: Each Permittee shall ensure that each street and/or street segments is swept at least once per month.

Priority C: These streets and/or street segments shall be swept as necessary but in no case less than once per year.

c) Each Permittee shall require that:

(1) Sawcutting wastes be recovered and disposed of properly and that in no case shall waste be left on a roadway or allowed to enter the storm drain;

(2) Concrete and other street and road maintenance materials and wastes shall be managed to prevent discharge to the MS4; and

(3) The washout of concrete trucks and chutes shall only occur in designated areas and never discharged to storm drains, open ditches, streets, or catch basins.

d) Each Permittee shall, no later than August 1, 2002, train their employees in targeted positions (whose interactions, jobs, and activities affect storm water quality) regarding the requirements of the storm water management program to:

(1) Promote a clear understanding of the potential for maintenance activities to pollute storm water; and

(2) Identify and select appropriate BMPs.

For Permittees with a population of 250,000 or more (2000 U.S. Census) training shall be completed no later than February 1, 2003.

7. Parking Facilities Management

Permittee-owned parking lots exposed to storm water shall be kept clear of debris and excessive oil buildup and cleaned no less than 2 times per month and/or inspected no less than 2 times per month to determine if cleaning is necessary. In no case shall a Permittee-owned parking lot be cleaned less than once a month.

8. Public Industrial Activities Management

Each Permittee shall, for any municipal activity considered a discharge of storm water associated with industrial activity, obtain separate coverage under the GIASP except that a municipality under 100,000 in population (1990 U.S. Census) need not file the Notice Of Intent to be covered by said permit until March 10, 2003 (with the exception of power plants, airports, and uncontrolled sanitary landfills).

9. Emergency Procedures

Each Permittee shall repair essential public services and infrastructure in a manner to minimize environmental damage in emergency situations such as: earthquakes; fires; floods; landslides; or windstorms. BMPs shall be implemented to the extent that measures do not compromise public health and safety. After initial emergency response or emergency repair activities have been completed, each Permittee shall implement BMPs and programs as required under this Order.

10. Treatment Feasibility Study

The Permittees in cooperation with the County Sanitation Districts of Los Angeles County shall conduct a study to investigate the possible diversion of dry weather discharges or the use of alternative Treatment Control BMPs to treat flows from their jurisdiction which may impact public health and safety and/or the environment. The Permittees shall collectively review their individual prioritized lists and create a watershed based priority list of drains for potential diversion or treatment and submit the priority listing to the Regional Board Executive Officer, no later than July 1, 2003.

G. Illicit Connections and Illicit Discharges Elimination Program

Permittees shall eliminate all illicit connections and illicit discharges to the storm drain system, and shall document, track, and report all such cases in accordance with the elements and performance measures specified in the following subsections.

1. General

a) Implementation: Each Permittee must develop an Implementation Program which specifies how each Permittee is implementing revisions to the IC/ID Program of the SQMP. This Implementation Program must be documented, and available for review and approval by the Regional Board Executive Officer, upon request.

b) Tracking: All Permittees shall, no later than February 3, 2003, develop and maintain a listing of all permitted connections to their storm drain system. All Permittees shall map at a scale and in a format specified by the Principal Permittee all illicit connections and discharges on their baseline maps, and shall transmit this information to the Principal Permittee. No later than February 3, 2003, the Principal Permittee shall use this information as well as results of baseline and priority screening for illicit connections (as set forth in subsection 2 below) to start an annual evaluation of patterns and trends of illicit connections and illicit discharges, with the objectives of identifying priority areas for elimination of illicit connections and illicit discharges.

c) Training: All Permittees shall train all targeted employees who are responsible for identification, investigation, termination, cleanup, and reporting of illicit connections and discharges. For Permittees with a population of less than 250,000 (2000 U.S. Census), training shall be completed no later than August 1, 2002. For Permittees with a population of 250,000 or more (2000 U.S. Census), training shall be completed no later than February 3, 2003. Furthermore, all Permittees shall conduct refresher training on an annual basis thereafter.

2. Illicit Connections

a) Screening for Illicit Connections

(1) Field Screening: All Permittees shall field Screen the storm drain system for illicit connections in accordance with the following schedule:

(i) Open channels: No later than February 3, 2003;

(ii) Underground pipes in priority areas: No later than February 1, 2005; and

(iii) Underground pipes with a diameter of 36 inches or greater: No later than December 12, 2006.

Permittees shall report, to the Principal Permittee, on the location and length of open channels or underground pipes that have been Screened *vis a vis* the entire storm drain network, and on the status of suspected, confirmed, and terminated illicit connections. Permittees shall maintain a list containing all permitted connections and the status of connections under investigation for possible illicit connection.

(2) Permit Screening: No later than December 12, 2006, Permittees shall complete a review of all permitted connections to the storm drain system, to confirm compliance with Part 1 (Discharge Prohibition).

b) Response to Illicit Connections

(1) Investigation: Upon discovery or upon receiving a report of a suspected illicit connection, Permittees shall initiate an investigation within 21 days, to determine the source of the connection, the nature and volume of discharge through the connection, and the responsible party for the connection.

(2) Termination: Upon confirmation of the illicit nature of a storm drain connection, Permittees shall ensure termination of the connection within 180 days, using enforcement authority as needed.

3. Illicit Discharges

a) Abatement and Cleanup: Permittees shall respond, within one business day of discovery or a report of a suspected illicit discharge, with activities to abate, contain, and clean up all illicit discharges, including hazardous substances.

b) Investigation: Permittees shall investigate illicit discharges as soon as practicable (during or immediately following containment and cleanup activities), and shall take enforcement action as appropriate.

Part 5. DEFINITIONS

The following are definitions for terms applicable to this Order:

"Adverse Impact" means a detrimental effect upon water quality or beneficial uses caused by a discharge or loading of a pollutant or pollutants.

"Anti-degradation policies" means the *Statement of Policy with Respect to Maintaining High Quality Water in California* (State Board Resolution No. 68-16) which protects surface and ground waters from degradation. In particular, this policy protects waterbodies where existing quality is higher than that necessary for the protection of beneficial uses including the protection of fish and wildlife propagation and recreation on and in the water.

"Applicable Standards and Limitations" means all State, interstate, and federal standards and limitations to which a "discharge" or a related activity is subject under the CWA, including "effluent limitations, "water quality standards, standards of performance, toxic effluent standards or prohibitions, "best management practices," and pretreatment standards under sections 301, 302, 303, 304, 306, 307, 308, 403 and 404 of CWA.

"**Areas of Special Biological Significance (ASBS)**" means all those areas of this state as ASBS, listed specifically within the California Ocean Plan or so designated by the State Board which, among other areas, includes the area from Mugu Lagoon to Latigo Point: Oceanwater within a line originating from Laguna Point at 34° 5' 40" north, 119° 6'30" west, thence southeasterly following the mean high tideline to a point at Latigo Point defined by the intersection of the meanhigh tide line and a line extending due south of Benchmark 24; thence due south to a distance of 1000 feet offshore or to the 100 foot isobath, whichever distance is greater; thence northwesterly following the 100 foot isobath or maintaining a 1,000-foot distance from shore, whichever maintains the greater distance from shore, to a point lying due south of Laguna Point, thence due north to Laguna Point.

"Authorized Discharge" means any discharge that is authorized pursuant to an NPDES permit or meets the conditions set forth in this Order.

"Automotive Service Facilities" means a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 5511, 7532-7534, or 7536-7539. For inspection purposes, Permittees need not inspect facilities with SIC codes 5013, 5014, 5541, 5511, provided that these facilities have no outside activities or materials that may be exposed to storm water.

"Basin Plan" means the Water Quality Control Plan, Los Angeles Region, Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, adopted by the Regional Board on June 13, 1994 and subsequent amendments.

"Beneficial Uses" means the existing or potential uses of receiving waters in the permit area as designated by the Regional Board in the Basin Plan.

"Best Management Practices (BMPs)" means methods, measures, or practices designed and selected to reduce or eliminate the discharge of pollutants to surface waters from point and nonpoint source discharges including storm water. BMPs include structural and nonstructural controls, and operation and maintenance procedures, which can be applied before, during, and/or after pollution producing activities.

"Commercial Development" means any development on private land that is not heavy industrial or residential. The category includes, but is not limited to: hospitals, laboratories and other medical facilities, educational institutions, recreational facilities, plant nurseries, car wash facilities, mini-malls and other business complexes, shopping malls, hotels, office buildings, public warehouses and other light industrial complexes.

"Construction" means constructing, clearing, grading, or excavation that results in soil disturbance. Construction includes structure teardown. It does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of facility; emergency construction activities required to immediately protect public health and safety; interior remodeling with no outside exposure of construction material or construction waste to storm water; mechanical permit work; or sign permit work.

"Control" means to minimize, reduce, eliminate, or prohibit by technological, legal, contractual or other means, the discharge of pollutants from an activity or activities.

"Dechlorinated/Debrominated Swimming Pool Discharge" means swimming pool discharges which have no measurable chlorine or bromine and do not contain any detergents, wastes, or additional chemicals not typically found in swimming pool water. The term does not include swimming pool filter backwash.

"Development" means any construction, rehabilitation, redevelopment or reconstruction of any public or private residential project (whether single-family, multi-unit or planned unit development); industrial, commercial, retail and other non-residential projects, including public agency projects; or mass grading for future construction. It does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of facility, nor does it include emergency construction activities required to immediately protect public health and safety.

"Directly Adjacent" means situated within 200 feet of the contiguous zone required for the continued maintenance, function, and structural stability of the environmentally sensitive area.

"Director" means the Director of a municipality and Person(s) designated by and under the Director's instruction and supervision.

"Discharge" means when used without qualification the "discharge of a pollutant."

"Discharging Directly" means outflow from a drainage conveyance system that is composed entirely or predominantly of flows from the subject, property, development, subdivision, or industrial facility, and not commingled with the flows from adjacent lands.

"Discharge of a Pollutant" means: any addition of any "pollutant" or combination of pollutants to "waters of the United States" from any "point source" or, any addition of any pollutant or combination of pollutants to the waters of the "contiguous zone" or the ocean from any point source other than a vessel or other floating craft which is being used as a means of transportation. The term discharge includes additions of pollutants into waters of the United States from: surface runoff which is collected or channeled by man; discharges through pipes, sewers, or other conveyances owned by a State, municipality, or other person which do not lead to a treatment works; and discharges through pipes, sewers, or other conveyances, leading into privately owned treatment works.

"Disturbed Area" means an area that is altered as a result of clearing, grading, and/or excavation.

"Dry Weather" means those days with less than 0.1 inch of rainfall, and occurring more than three days after a Rain Day.

"Environmentally Sensitive Areas (ESAs)" means an area in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which would be easily disturbed or degraded by human activities and developments (California Public Resources Code § 30107.5). Areas subject to storm water mitigation requirements are: areas designated as Significant Ecological Areas by the County of Los Angeles (*Los Angeles County Significant Areas Study, Los Angeles County Department of Regional Planning (1976)* and amendments); an area designated as a Significant Natural Area by the California Department of Fish and Game's Significant Natural Areas Program, provided that area has been field verified by the Department of Fish and Game; an area listed in the Basin Plan as supporting the "Rare, Threatened, or Endangered Species (RARE)" beneficial use; and an area identified by a Permittee as environmentally sensitive.

"General Construction Activities Storm Water Permit (GCASP)" means the general NPDES permit adopted by the State Board which authorizes the discharge of storm water from construction activities under certain conditions.

"General Industrial Activities Storm Water Permit (GIASP)" means the general NPDES permit adopted by the State Board which authorizes the discharge of storm water from certain industrial activities under certain conditions.

"Hillside" means property located in an area with known erosive soil conditions, where the development contemplates grading on any natural slope that is 25% or greater and where grading contemplates cut or fill slopes.

"Illicit Connection" means any man-made conveyance that is connected to the storm drain system without a permit, excluding roof drains and other similar type connections. Examples include channels, pipelines, conduits, inlets, or outlets that are connected directly to the storm drain system.

"Illicit Discharge" means any discharge to the storm drain system that is prohibited under local, state, or federal statutes, ordinances, codes, or regulations. The term illicit discharge includes all non storm-water discharges except discharges pursuant to an NPDES permit, discharges that are identified in Part 1, "Discharge Prohibitions" of this order, and discharges authorized by the Regional Board Executive Officer.

"Illicit Disposal" means any disposal, either intentionally or unintentionally, of material(s) or waste(s) that can pollute storm water.

"Industrial/Commercial Facility" means any facility involved and/or used in the production, manufacture, storage, transportation, distribution, exchange or sale of goods and/or commodities, and any facility involved and/or used in providing professional and non-professional services. This category of facilities includes, but is not limited to, any facility defined by the Standard Industrial Classifications (SIC). Facility ownership (federal, state, municipal, private) and profit motive of the facility are not factors in this definition.

"Infiltration" means the downward entry of water into the surface of the soil.

"Inspection" means entry and the conduct of an on-site review of a facility and its operations, at reasonable times, to determine compliance with specific municipal or other legal requirements. The steps involved in performing an inspection, include, but are not limited to:

1. Pre-inspection documentation research.;
2. Request for entry;
3. Interview of facility personnel;
4. Facility walk-through.
5. Visual observation of the condition of facility premises;
6. Examination and copying of records as required;
7. Sample collection (if necessary or required);
8. Exit conference (to discuss preliminary evaluation); and,
9. Report preparation, and if appropriate, recommendations for coming into compliance.

In the case of restaurants, a Permittee may conduct an inspection from the curbside, provided that such "curbside" inspection provides the Permittee with adequate information to determine an operator's compliance with BMPs that must be implemented per requirements of this Order, Regional Board Resolution 98-08, County and municipal ordinances, and the SQMP.

"Large Municipal Separate Storm Sewer System (MS4)" means all MS4s that serve a population greater than 250,000 (1990 Census) as defined in 40 CFR 122.26 (b)(4). The Regional Board designated Los Angeles County as a large MS4 in 1990, based on: (i) the U.S. Census Bureau 1990 population count of 8.9 million, and (ii) the interconnectivity of the MS4s in the incorporated and unincorporated areas within the County.

"Local SWPPP" means the Storm Water Pollution Prevention Plan required by the local agency for a project that disturbs one or more acres of land.

"Maximum Extent Practicable (MEP)" means the standard for implementation of storm water management programs to reduce pollutants in storm water. CWA § 402(p)(3)(B)(iii) requires

that municipal permits "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants. See also State Board Order WQ 2000-11 at page 20.

"Method Detection Limit (MDL)" means the minimum concentration of a substance that can be measured and reported with 99 percent confidence that the analyte concentration is greater than zero, as defined in 40 CFR 136, Appendix B.

"Minimum Level (ML)" means the concentration at which the entire analytical system must give a recognizable signal and acceptable calibration point. The ML is the concentration in a sample that is equivalent to the concentration of the lowest calibration standard analyzed by a specific analytical procedure, assuming that all the method specified sample weights, volumes, and processing steps have been followed.

"Municipal Separate Storm Sewer System (MS4)" means a conveyance or system of conveyances (including roads with drainage systems, municipal streets, alleys, catch basins, curbs, gutters, ditches, manmade channels, or storm drains) owned by a State, city, county, town or other public body, that is designed or used for collecting or conveying storm water, which is not a combined sewer, and which is not part of a publicly owned treatment works, and which discharges to Waters of the United States.

"National Pollutant Discharge Elimination System (NPDES)" means the national program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under CWA §307, 402, 318, and 405. The term includes an "approved program.".

"Natural Drainage Systems" means unlined or unimproved (not engineered) creeks, streams, rivers or similar waterways.

"New Development" means land disturbing activities; structural development, including construction or installation of a building or structure, creation of impervious surfaces; and land subdivision.

"Non-Storm Water Discharge" means any discharge to a storm drain that is not composed entirely of storm water.

"Nuisance" means anything that meets all of the following requirements: (1) is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property; (2) affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal.; (3) occurs during, or as a result of, the treatment or disposal of wastes.

"Parking Lot" means land area or facility for the parking or storage of motor vehicles used for businesses, commerce, industry, or personal use, with a lot size of 5,000 square feet or more of surface area, or with 25 or more parking spaces.

"Permittee(s)" means Co-Permittees and any agency named in this Order as being responsible for permit conditions within its jurisdiction. Permittees to this Order include the Los Angeles County Flood Control District, Los Angeles County, and the cities of Agoura Hills, Alhambra, Arcadia, Artesia, Azusa, Baldwin Park, Bellflower, Bell Gardens, Beverly Hills, Bradbury, Burbank, Calabasas, Carson, Cerritos, Claremont, Commerce, Compton, Covina, Cudahy, Culver City, Diamond Bar, Downey, Duarte, El Monte, El Segundo, Gardena, Glendale, Glendora, Hawaiian Gardens, Hawthorne, Hermosa Beach, Hidden Hills, Huntington Park, Industry, Inglewood, Irwindale, La Canada Flintridge, La Habra Heights, Lakewood, La Mirada, La Puente, La Verne, Lawndale, Lomita, Los Angeles, Lynwood, Malibu, Manhattan Beach, Maywood, Monrovia, Montebello, Monterey Park, Norwalk, Palos Verdes Estates, Paramount, Pasadena, Pico Rivera, Pomona, Rancho Palos Verdes, Redondo Beach, Rolling Hills, Rolling Hills Estates, Rosemead, San Dimas, San Fernando, San Gabriel, San Marino, Santa Clarita, Santa Fe Springs, Santa Monica, Sierra Madre, Signal Hill, South El Monte, South Gate, South Pasadena, Temple City, Torrance, Vernon, Walnut, West Covina, West Hollywood, Westlake Village, and Whittier.

"Planning Priority Projects" means those projects that are required to incorporate appropriate storm water mitigation measures into the design plan for their respective project. These types of projects include:

1. Ten or more unit homes (includes single family homes, multifamily homes, condominiums, and apartments)
2. A 100,000 or more square feet of impervious surface area industrial/ commercial development (1 ac starting March 2003)
3. Automotive service facilities (SIC 5013, 5014, 5541, 7532-7534, and 7536-7539)
4. Retail gasoline outlets
5. Restaurants (SIC 5812)
6. Parking lots 5,000 square feet or more of surface area or with 25 or more parking spaces
7. Redevelopment projects in subject categories that meet Redevelopment thresholds
8. Projects located in or directly adjacent to or discharging directly to an ESA, which meet thresholds; and
9. Those projects that require the implementation of a site-specific plan to mitigate post-development storm water for new development not requiring a SUSMP but which may potentially have adverse impacts on post-development storm water quality, where the following project characteristics exist:

a) Vehicle or equipment fueling areas;
b) Vehicle or equipment maintenance areas, including washing and repair;
c) Commercial or industrial waste handling or storage;
d) Outdoor handling or storage of hazardous materials;
e) Outdoor manufacturing areas;
f) Outdoor food handling or processing;
g) Outdoor animal care, confinement, or slaughter; or
h) Outdoor horticulture activities.

"Pollutants" means those "pollutants" defined in CWA §502(6) (33.U.S.C.§1362(6)), and incorporated by reference into California Water Code §13373.

"Potable Water Distribution Systems Releases" means sources of flows from drinking water storage, supply and distribution systems including flows from system failures, pressure releases, system maintenance, distribution line testing, fire hydrant flow testing; and flushing and dewatering of pipes, reservoirs, vaults, and minor non-invasive well maintenance activities not involving chemical addition(s). It does not include wastewater discharges from activities that occur at wellheads, such as well construction, well development (i.e., aquifer pumping tests, well purging, etc.), or major well maintenance.

"Project" means all development, redevelopment, and land disturbing activities. The term is not limited to "Project" as defined under CEQA (Pub. Resources Code §21065).

"Rain Days" are those days with greater than or equal to 0.1 inch of rainfall.

"Rain Event" means any rain event greater than 0.1 inch in 24 hours except where specifically stated otherwise.

"Rare, Threatened, or Endangered Species (RARE)" means a beneficial use for waterbodies in the Los Angeles Region, as designated in the Basin Plan (Table 2-1), that supports habitats necessary, at least in part, for the survival and successful maintenance of plant or animal species established under state or federal law as rare, threatened, or endangered.

"Receiving Waters" means all surface water bodies in the Los Angeles Region that are identified in the Basin Plan.

"Redevelopment" means land-disturbing activity that results in the creation, addition, or replacement of 5,000 square feet or more of impervious surface area on an already developed site. Redevelopment includes, but is not limited to: the expansion of a building footprint; addition or replacement of a structure; replacement of impervious surface area that is not part of a routine maintenance activity; and land disturbing activities related to structural or impervious surfaces. It does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of facility, nor does it include emergency construction activities required to immediately protect public health and safety.

"Regional Administrator" means the Regional Administrator of the Regional Office of the USEPA or the authorized representative of the Regional Administrator.

"Restaurant" means a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC Code 5812).

"Retail Gasoline Outlet" means any facility engaged in selling gasoline and lubricating oils.

"Runoff" means any runoff including storm water and dry weather flows from a drainage area that reaches a receiving water body or subsurface. During dry weather it is typically comprised of base flow either contaminated with pollutants or uncontaminated, and nuisance flows.

"Screening" means using proactive methods to identify illicit connections through a continuously narrowing process. The methods may include: performing baseline monitoring of open channels, conducting special investigations using a prioritization approach, analyzing maintenance records for catch basin and storm drain cleaning and operation, and verifying all permitted connections into the storm drains. Special investigation techniques may include: dye testing, visual inspection, smoke testing, flow monitoring, infrared, aerial and thermal photography, and remote control camera operation.

"Sidewalk Rinsing" means pressure washing of paved pedestrian walkways with average water usage of 0.006 gallons per square foot, with no cleaning agents, and properly disposing of all debris collected, as authorized under Regional Board Resolution No. 98-08.

"Significant Ecological Area (SEA)" means an area that is determined to possess an example of biotic resources that cumulatively represent biological diversity, for the purposes of protecting biotic diversity, as part of the Los Angeles County General Plan.[6]
Areas are designated as SEAs, if they possess one or more of the following criteria:

1. The habitat of rare, endangered, and threatened plant and animal species.
2. Biotic communities, vegetative associations, and habitat of plant and animal species that are either one of a kind, or are restricted in distribution on a regional basis.
3. Biotic communities, vegetative associations, and habitat of plant and animal species that are either one of a kind or are restricted in distribution in Los Angeles County.
4. Habitat that at some point in the life cycle of a species or group of species, serves as a concentrated breeding, feeding, resting, migrating grounds and is limited in availability either regionally or within Los Angeles County.
5. Biotic resources that are of scientific interest because they are either an extreme in physical/geographical limitations, or represent an unusual variation in a population or community.
6. Areas important as game species habitat or as fisheries.

[6] The 61 existing SEAs represent the findings of a study that was completed in 1976 by England and Nelson, Environmental Consultants, as amended through the adoption of a revised Los Angeles County General Plan in 1980. The results of an update study to evaluate existing SEAs within unincorporated Los Angeles County is currently being proposed to the Los Angeles County Planning Commission (*Los Angeles County Significant Ecological Area Update Study 2000, Background Report*, PCR Services Corporation). The *Update Study 2000*, which contains existing and proposed SEA boundaries, can be downloaded from the Los Angeles County Department of Planning website at http://planning.co.la.ca.us/drp_revw.html#SEA

7. Areas that would provide for the preservation of relatively undisturbed examples of natural biotic communities in Los Angeles County.
8. Special areas.[7]

"Significant Natural Area (SNA)" means an area defined by the California Department of Fish and Game (DFG), Significant Natural Areas Program, as an area that contains an important example of California's biological diversity. The most current SNA maps, reports, and descriptions can be downloaded from the DFG website at ftp://maphost.dfg.ca.gov/outgoing/whdab/sna/. These areas are identified using the following biological criteria only, irrespective of any administrative or jurisdictional considerations:

1. Areas supporting extremely rare species or habitats.
2. Areas supporting associations or concentrations of rare species or habitats.
3. Areas exhibiting the best examples of rare species and habitats in the state.

"Site" means the land or water area where any "facility or activity" is physically located or conducted, including adjacent land used in connection with the facility or activity.

"Source Control BMP" means any schedules of activities, prohibitions of practices, maintenance procedures, managerial practices or operational practices that aim to prevent storm water pollution by reducing the potential for contamination at the source of pollution.

"SQMP" means the Los Angeles Countywide Stormwater Quality Management Program.

"State Storm Water Pollution Prevention Plan (State SWPPP)" means a plan, as required by a State General Permit, identifying potential pollutant sources and describing the design, placement and implementation of BMPs, to effectively prevent non-stormwater Discharges and reduce Pollutants in Stormwater Discharges during activities covered by the General Permit.

"Storm Water" means storm water runoff, snow melt runoff, and surface runoff and drainage.

"Storm Water Discharge Associated with Industrial Activity" means industrial discharge as defined in 40 CFR 122.26(b)(14)

"Stormwater Quality Management Program" means the Los Angeles Countywide Stormwater Quality Management Program, which includes descriptions of programs, collectively developed by the Permittees in accordance with provisions of the NPDES Permit, to comply with applicable federal and state law, as the same is amended from time to time.

"Structural BMP" means any structural facility designed and constructed to mitigate the adverse impacts of storm water and urban runoff pollution (e.g. canopy, structural enclosure). The category may include both Treatment Control BMPs and Source Control BMPs.

"Summer Dry Weather" means Dry Weather days occurring from April 1 through October 31 of each year.

[7] These criteria from the 1976 study have been modified in the *Update Study 2000*.

"SUSMP" means the Los Angeles Countywide Standard Urban Stormwater Mitigation Plan. The SUSMP shall address conditions and requirements of new development.

"Total Maximum Daily Load (TMDL)" means the sum of the individual waste load allocations for point sources and load allocations for nonpoint sources and natural background.

"Toxicity Identification Evaluation (TIE)" means a set of procedures to identify the specific chemical(s) responsible for toxicity. These procedures are performed in three phases (characterization, identification, and confirmation) using aquatic organism toxicity tests.

"Toxicity Reduction Evaluation (TRE)" means a study conducted in a step-wise process to identify the causative agents of effluent or ambient toxicity, isolate the sources of toxicity, evaluate the effectiveness of toxicity control options, and then confirm the reduction in toxicity.

"Treatment" means the application of engineered systems that use physical, chemical, or biological processes to remove pollutants. Such processes include, but are not limited to, filtration, gravity settling, media absorption, biodegradation, biological uptake, chemical oxidation and UV radiation.

"Treatment Control BMP" means any engineered system designed to remove pollutants by simple gravity settling of particulate pollutants, filtration, biological uptake, media absorption or any other physical, biological, or chemical process.

"USEPA Phase I Facilities" means facilities in specified industrial categories that are required to obtain an NPDES permit for storm water discharges, as required by 40 CFR 122.26(c). These categories include:

i. facilities subject to storm water effluent limitation guidelines, new source performance standards, or toxic pollutant effluent standards (40 CFR N)
ii. manufacturing facilities
iii. oil and gas/mining facilities
iv. hazardous waste treatment, storage, or disposal facilities
v. landfills, land application sites, and open dumps
vi. recycling facilities
vii. steam electric power generating facilities
viii. transportation facilities
ix. sewage of wastewater treatment works
x. light manufacturing facilities

"Vehicle Maintenance/Material Storage Facilities/Corporation Yards" means any Permittee owned or operated facility or portion thereof that:

i. Conducts industrial activity, operates equipment, handles materials, and provides services similar to Federal Phase I facilities;
ii. Performs fleet vehicle service/maintenance on ten or more vehicles per day including repair, maintenance, washing, and fueling;
iii. Performs maintenance and/or repair of heavy industrial machinery/equipment ; and
iv. Stores chemicals, raw materials, or waste materials in quantities that require a hazardous materials business plan or a Spill Prevention, Control , and Counter-measures (SPCC) plan.

December 13, 2001 (As amended on September 14, 2006 by Order R4-2006-0074 and on August 9, 2007 by Order R4-2007-0042)

"Water Quality Standards and Water Quality Objectives" means water quality criteria contained in the Basin Plan, the California Ocean Plan, the National Toxics Rule, the California Toxics Rule, and other state or federally approved surface water quality plans. Such plans are used by the Regional Board to regulate all discharges, including storm water discharges.

"Waters of the State" means any surface water or groundwater, including saline waters, within boundaries of the state.

"Waters of the United States" or "Waters of the U.S." means:

a. All waters that are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;
b. All interstate waters, including interstate "wetlands";
c. All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, "wetlands," sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds the use, degradation, or destruction of which would affect or could affect interstate or foreign commerce including any such waters:

    1. Which are or could be used by interstate or foreign travelers for recreational or other purposes;
    2. From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or
    3. Which are used or could be used for industrial purposes by industries in interstate commerce;

d. All impoundments of waters otherwise defined as waters of the United States under this definition;
e. Tributaries of waters identified in paragraphs (a) through (d) of this definition;
f. The territorial sea; and
g. "Wetlands" adjacent to waters (other than waters that are themselves wetlands) identified in paragraph (a) through (f) of this definition.

Waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of CWA (other than cooling ponds as defined in 40 CFR 423.22(m), which also meet the criteria of this definition) are not waters of the United States. This exclusion applies only to man-made bodies of water, which neither were originally created in waters of the United States (such as disposal area in wetlands) nor resulted from the impoundment of waters of the United States. Waters of the United States do not include prior converted cropland. Notwithstanding the determination of an area's status as prior converted cropland by any other federal agency, for the purposes of the CWA, the final authority regarding CWA jurisdiction remains with USEPA.

"Wave Wash" means the point at which a storm drain or creek empties and the effluent from the storm drain initially mixes with the receiving ocean water.

"Wet Season" means the calendar period beginning October 1 through April 15.

Part 6. STANDARD PROVISIONS

A. Standard Requirements

1. Each Permittee shall comply with all provisions and requirements of this permit.

2. Should a Permittee discover a failure to submit any relevant facts or that it submitted incorrect information in a report, it shall promptly submit the missing or correct information.

3. Each Permittee shall report all instances of non-compliance not otherwise reported at the time monitoring reports are submitted.

4. This Order includes the attached Monitoring and Reporting Program, and SUSMP(Regional Board Resolution No. R00-02), which are a part of the permit and must be complied with in the same manner as with the rest of the requirements in the permit.

B. Regional Board Review

Any formal determination or approval made by the Regional Board Executive Officer pursuant to the provisions of this Order may be reviewed by the Regional Board. A Permittee(s) or a member of the public may request such review upon petition within 30 days of the effective date of the notification of such decision to the Permittee(s) and interested parties on file at the Regional Board.

C. Public Review

1. All documents submitted to the Regional Board in compliance with the terms and conditions of this Order shall be made available to members of the public pursuant to the Freedom of Information Act (5 U.S.C. § 552 (as amended) and the Public Records Act (Cal. Government Code § 6250 *et seq.*).

2. All documents submitted to the Regional Board Executive Officer for approval shall be made available to the public for a 30-day period to allow for public comment.

D. Duty to Comply

1. Each Permittee must comply with all of the terms, requirements, and conditions of this Order. Any violation of this order constitutes a violation of the Clean Water Act, its regulations and the California Water Code, and is grounds for enforcement action, Order termination, Order revocation and reissuance, denial of an application for reissuance; or a combination thereof [40 CFR 122.41(a), CWC § 13261, 13263, 13265, 13268, 13300, 13301, 13304, 13340, 13350].

2. A copy of these waste discharge specifications shall be maintained by each Permittee so as to be available during normal business hours to Permittee employees and members of the public.

3. Any discharge of wastes at any point(s) other than specifically described in this Order is prohibited, and constitutes a violation of the Order.

E. Duty to Mitigate [40 CFR 122.41 (d)]

Each Permittee shall take all reasonable steps to minimize or prevent any discharge that has a reasonable likelihood of adversely affecting human health or the environment.

F. Inspection and Entry [40 CFR 122.41(i), CWC § 13267]

The Regional Board, USEPA, and other authorized representatives shall be allowed:

1. Entry upon premises where a regulated facility is located or conducted, or where records are kept under conditions of this Order;
2. Access to copy any records, at reasonable times, that are kept under the conditions of this Order;
3. To inspect at reasonable times any facility, equipment (including monitoring and control equipment), practices, or operations regulated or required under this Order; and,
4. To photograph, sample, and monitor at reasonable times for the purpose of assuring compliance with this Order, or as otherwise authorized by the CWA and the CWC.

G. Proper Operation and Maintenance [40 CFR 122.41 (e), CWC § 13263(f)]

The Permittees shall at all times properly operate and maintain all facilities and systems of treatment (and related appurtenances) that are installed or used by the Permittees to achieve compliance with this Order. Proper operation and maintenance includes adequate laboratory controls and appropriate quality assurance procedures. This provision requires the operation of backup or auxiliary facilities or similar system that are installed by a Permittee only when necessary to achieve compliance with the conditions of this Order.

H. Signatory Requirements [40 CFR 122.41(k) & 122.22]

Except as otherwise provided in this Order, all applications, reports, or information submitted to the Regional Board shall be signed by the Director of Public Works, City Engineer, or authorized designee and certified as set forth in 40 CFR 122.22.

I. Reopener and Modification [40 CFR 122.41(f) & 122.62]

1. This Order may only be modified, revoked, or reissued, prior to the expiration date, by the Regional Board, in accordance with the procedural requirements of the CWC and CCR Title 23 for the issuance of waste

discharge requirements, 40 CFR 122.62, and upon prior notice and hearing, to:

a) Address changed conditions identified in the required reports or other sources deemed significant by the Regional Board;

b) Incorporate applicable requirements or statewide water quality control plans adopted by the State Board or amendments to the Basin Plan;

c) Comply with any applicable requirements, guidelines, and/or regulations issued or approved pursuant to CWA Section 402(p); and/or,

d) Consider any other federal, or state laws or regulations that became effective after adoption of this Order.

2. After notice and opportunity for a hearing, this Order may be terminated or modified for cause, including, but not limited to:

a) Violation of any term or condition contained in this Order;

b) Obtaining this Order by misrepresentation, or failure to disclose all relevant facts; or,

c) A change in any condition that requires either a temporary or permanent reduction or elimination of the authorized discharge.

3. The filing of a request by the Principal Permittee or Permittees for a modification, revocation and re-issuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any condition of this Order.

4. This Order may be modified to make corrections or allowances for changes in the permitted activity listed in this section, following the procedures at 40 CFR 122.63, if processed as a minor modification. Minor modifications may only:

a) Correct typographical errors, or

b) Require more frequent monitoring or reporting by the Permittee.

J. Severability

The provisions of this permit are severable; and if any provision of this permit or the application of any provision of this permit to any circumstance is held invalid, the application of such provision to other circumstances and the remainder of this permit shall not be affected.

K. Duty to Provide Information [40 CFR 122.41(h)]

The Permittees shall furnish, within a reasonable time, any information the Regional Board or USEPA may request to determine whether cause exists for

modifying, revoking and reissuing, or terminating this Order. The Permittees shall also furnish to the Regional Board, upon request, copies of records required to be kept by this Order.

L. Twenty-four Hour Reporting [40 CFR 122.41(l)(6)][8]

1. The Permittees shall report to the Regional Board any noncompliance that may endanger health or the environment. Any information shall be provided orally within 24 hours from the time any Permittee becomes aware of the circumstances. A written submission shall also be provided within five days of the time the Permittee becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times and, if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance.

2. The Regional Board may waive the required written report on a case-by-case basis.

M. Bypass [40 CFR 122.41(m)][9]

Bypass (the intentional diversion of waste streams from any portion of a treatment facility) is prohibited. The Regional Board may take enforcement action against Permittees for bypass unless:

1. Bypass was unavoidable to prevent loss of life, personal injury or severe property damage. (Severe property damage means substantial physical damage to property, damage to the treatment facilities that causes them to become inoperable, or substantial and permanent loss of natural resources that can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.);

2. There were no feasible alternatives to bypass, such as the use of auxiliary treatment facilities, retention of untreated waste, or maintenance during normal periods of equipment down time. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass that could occur during normal periods of equipment downtime or preventive maintenance;

3. The Permittee submitted a notice at least ten days in advance of the need for a bypass to the Regional Board; or,

[8] This provision applies to incidents where effluent limitations (numerical or narrative) as provided in this Order or in the Los Angeles County SQMP are exceeded, and which endanger public health or the environment.

[9] This provision applies to the operation and maintenance of storm water controls and BMPs as provided in this Order or in the SQMP.

4. Permittees may allow a bypass to occur that does not cause effluent limitations to be exceeded, but only if it is for essential maintenance to assure efficient operation. In such a case, the above bypass conditions are not applicable. The Permittee shall submit notice of an unanticipated bypass as required.

N. Upset [40 CFR 122.41(n)][10]

Upset means an exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond the reasonable control of the permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.

1. A Permittee that wishes to establish the affirmative defense of an upset in an action brought for non compliance shall demonstrate, through properly signed, contemporaneous operating logs, or other relevant evidence that:

   a) An upset occurred and that the Permittee can identify the cause(s) of the upset;

   b) The permitted facility was being properly operated by the time of the upset;

   c) The Permittee submitted notice of the upset as required; and,

   d) The Permittee complied with any remedial measures required.

2. No determination made before an action for noncompliance, such as during administrative review of claims that non-compliance was caused by an upset, is final administrative action subject to judicial review.

3. In any enforcement proceeding, the Permittee seeking to establish the occurrence of an upset has the burden of proof.

O. Property Rights [40 CFR 122.41(g)]

This Order does not convey any property rights of any sort, or any exclusive privilege.

P. Enforcement

1. Violation of any of the provisions of the NPDES permit or any of the provisions of this Order may subject the violator to any of the penalties described herein, or any combination thereof, at the discretion of the

[10] *Supra.* See footnote number 3.

prosecuting authority; except that only one kind of penalties may be applied for each kind of violation. The CWA provides the following:

a) Criminal Penalties for:

(1) Negligent Violations:

The CWA provides that any person who negligently violates permit conditions implementing § 301, 302, 306, 307, 308, 318, or 405 is subject to a fine of not less than $2,500 nor more than $25,000 per day for each violation, or by imprisonment for not more than 1 year, or both.

(2) Knowing Violations:

The CWA provides that any person who knowingly violates permit conditions implementing § 301, 302, 306, 307, 308, 318, or 405 is subject to a fine of not less than $5,000 nor more than $50,000 per day of violation, or by imprisonment for not more than 3 years, or both.

(3) Knowing Endangerment:

The CWA provides that any person who knowingly violates permit conditions implementing § 301, 302, 307, 308, 318, or 405 and who knows at that time that he is placing another person in imminent danger of death or serious bodily injury is subject to a fine of not more than $250,000, or by imprisonment for not more than 15 years, or both.

(4) False Statement:

The CWA provides that any person who knowingly makes any false material statement, representation, or certification in any application, record, report, plan, or other document filed or required to be maintained under the Act or who knowingly falsifies, tampers with, or renders inaccurate, any monitoring device or method required to be maintained under the Act, shall upon conviction, be punished by a fine of not more than $10,000 or by imprisonment for not more than two years, or by both. If a conviction is for a violation committed after a first conviction of such person under this paragraph, punishment shall be by a fine of not more than $20,000 per day of violation, or by imprisonment of not more than four years, or by both. (See CWA § 309(c)(4))

b) Civil Penalties

The CWA provides that any person who violates a permit condition implementing § 301, 302, 306, 307, 308, 318, or 405 is subject to a civil penalty not to exceed $27,500 per day for each violation.

2. The CWC provides that any person who violates a waste discharge requirement provision of the CWC is subject to civil penalties of up to $5,000 per day, $10,000 per day, or $25,000 per day of violation; or when the violation involves the discharge of pollutants, is subject to civil penalties of up to $10 per gallon per day or $25 per gallon per day of

violation; or some combination thereof, depending on the violation or combination of violations.

Q. Need to Halt or Reduce Activity not a Defense [40 CFR 122.41(c)]

It shall not be a defense for a Permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this Order.

R. Rescission

Regional Board Order No. 96-054 is hereby rescinded.

S. Expiration

This Order expires on December 12, 2006. The Permittees must submit a Report of Waste Discharges and a proposed Storm Water Quality Management Program in accordance with CCR Title 23 as application for reissuance of waste discharge requirements no later than June 12, 2006.

I, Dennis A. Dickerson, Regional Board Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of an order adopted by the California Regional Water Quality Control Board, Los Angeles Region, on December 13, 2001.

_____

Dennis A. Dickerson
Executive Officer

Linda S. Adams
Secretary for
Environmental Protection

Arnold Schwarzenegger
Governor

To: STORM WATER DISCHARGER

SUBJECT: CHECKLIST FOR SUBMITTING A NOTICE OF INTENT

In order for the State Water Resources Control Board to expeditiously process your Notice of Intent (NOI), the following items must be submitted to either of the addresses indicated below:

1._____ NOI (please keep a copy for your files) with all applicable sections completed and original signature of the facility operator;

2._____ Check made out to the "State Water Resources Control Board" with the appropriate fee. The regular fee is **$830.00** ($700 plus 18.5% surcharge).

3. _____ Site Map of the facility (see NOI instructions). DO NOT SEND BLUEPRINTS

U.S. Postal Service Address

State Water Resources Control Board
Division of Water Quality
Attn: Storm Water Section
P.O. Box 1977
Sacramento, CA 95812-1977

Overnight Mailing Address

State Water Resources Control Board
Division Of Water Quality
Attn: Storm Water, 15th Floor
1001 I Street
Sacramento, CA 95814

NOIs are processed in the order they are received. A NOI receipt letter will be mailed to the facility operator within approximately two weeks. Incomplete NOI submittals will be returned to the facility operator within the same timeframe and will specify the reason(s) for return. If you need a receipt letter by a specific date (for example, to provide to a local agency), we advise that you submit your NOI thirty (30) days prior to the date the receipt letter is needed.

Please do not call us to verify your NOI status. A copy of your NOI receipt letter will be available on our web page within twenty-four (24) hours of processing. Go to: http://www.waterboards.ca.gov/stormwtr/databases.html to retrieve an electronic copy of your NOI receipt letter. If you have any questions regarding this matter, please contact us at (916) 341-5538.

BACKGROUND

In 1972, the Federal Water Pollution Control Act (also referred to as the Clean Water Act [CWA]) was amended to provide that the discharge of pollutants to waters of the United States from any point source is effectively prohibited unless the discharge is in compliance with an NPDES permit. The 1987 amendments to the CWA added Section 402(p) that establishes a framework for regulating municipal and industrial storm water discharges under the NPDES Program. On November 16, 1990, the U.S. Environmental Protection Agency (U.S. EPA) published final regulations that establish application requirements for storm water permits. The regulations require that storm water associated with industrial activity (storm water) that discharges either directly to surface waters or indirectly through municipal separate storm sewers must be regulated by an NPDES permit.

U.S. EPA developed a four-tier permit issuance strategy for storm water discharges associated with industrial activity as follows:

Tier I, Baseline Permitting--One or more general permits will be developed to initially cover the majority of storm water discharges associated with industrial activity.

Tier II, Watershed Permitting--Facilities within watersheds shown to be adversely impacted by storm water discharges associated with industrial activity will be targeted for individual or watershed-specific general permits.

Tier III, Industry-Specific Permitting--Specific industry categories will be targeted for individual or Industry-specific general permits.

Tier IV, Facility-Specific Permitting--A variety of factors will be used to target specific facilities for individual permits.

The regulations allow authorized states to issue general permits or individual permits to regulate storm water discharges.

Consistent with Tier I, Baseline Permitting, of the U.S. EPA permitting strategy, the State Water Board issued a statewide General Permit on November 19, 1991 that applied to all storm water discharges requiring a permit except construction activity. The monitoring requirements of this General Permit were amended September 17, 1992. A separate statewide general permit has been issued for construction activity.

To obtain authorization for continued and future storm water discharge under this General Permit, each facility operator must submit a Notice of Intent (NOI). This approach is consistent with the four-tier permitting strategy described in Federal regulations, i.e., Tier 1, Baseline Permitting. Tier 1, Baseline Permitting, enables the State to begin reducing pollutants in industrial storm water in the most efficient manner possible.

This General Permit generally requires facility operators to:

1. Eliminate unauthorized non-storm water discharges;
2. Develop and implement a storm water pollution prevention plan (SWPPP); and
3. Perform monitoring of storm water discharges and authorized non-storm water discharges.

TYPES OF STORM WATER DISCHARGES COVERED BY THIS GENERAL PERMIT

This General Permit is intended to cover all new or existing storm water discharges and authorized non-storm water discharges from facilities required by Federal regulations to obtain a permit including those (1) facilities previously covered by the San Francisco Bay Regional Water Quality Control Board Order No. 92-011 (as amended by Order No. 92-116), (2) facilities designated by the Regional Water Quality Control Boards (Regional Water Boards), (3) facilities whose operators seek coverage under this General Permit, (4) and facilities required by future U.S. EPA storm water regulations.

The General Permit is intended to cover all facilities described in Attachment 1, whether the facility is primary or is auxiliary to the facility operator's function. For example, although a school district's primary function is education, a facility that it operates for vehicle maintenance of school buses is a transportation facility that is covered by this General Permit.

The definition of "storm water associated with industrial activity" is provided in Attachment 4, Definition 9, of this General Permit. Facilities that discharge storm water associated with industrial activity requiring a General Permit are listed by category in 40 Code of Federal Regulations (CFR) Section 122.26(b)(14) (Federal Register, Volume 55 on

Pages 48065-66) and in Attachment 1 of this General Permit. The facilities can be publicly or privately owned. General descriptions of these categories are:

1. Facilities subject to storm water effluent limitations guidelines, new source performance standards, or toxic pollutant effluent standards (40 CFR Subchapter N);

2. Manufacturing facilities;

3. Mining/oil and gas facilities;

4. Hazardous waste treatment, storage, or disposal facilities;

5. Landfills, land application sites, and open dumps that receive industrial waste;

6. Recycling facilities such as metal scrap yards, battery reclaimers, salvage yards, automobile yards;

7. Steam electric generating facilities;

8. Transportation facilities that conduct any type of vehicle maintenance such as fueling, cleaning, repairing, etc.;

9. Sewage treatment plants;

10. Construction activity (covered by a separate general permit); and

11. Certain facilities (often referred to as "light industry") where industrial materials, equipment, or activities are exposed to storm water.

For the most part, these facilities are identified in the Federal regulations by a Standard Industrial Classification (SIC).

Category 1 Dischargers

The following categories of facilities currently have storm water effluent limitation guidelines for at least one of their subcategories. They are cement manufacturing (40 CFR Part 411); feedlots (40 CFR Part 412); fertilizer manufacturing (40 CFR Part 418); petroleum refining (40 CFR Part 419); phosphate manufacturing (40 CFR Part 422); steam electric power generation (40 CFR Part 423); coal mining (40 CFR Part 434); mineral mining and processing (40 CFR Part 436); ore mining and dressing (40 CFR Part 440); and asphalt emulsion (40 CFR Part 443). A facility operator whose facility falls into one of these general categories should examine the effluent guidelines to determine if the facility is categorized in one of the subcategories that have storm water effluent guidelines. If

a facility is classified as one of those subcategories, that facility is subject to the standards listed in the CFR for that category and is subject to this General Permit. This General Permit contains additional requirements (see Section B.6.) for facilities with storm water effluent limitations guidelines.

Category 5 Dischargers

Inactive or closed landfills, land application sites, and open dumps that have received industrial wastes (Category 5) may be subject to this General Permit unless the storm water discharges from the sites are already regulated by an NPDES permit issued by the appropriate Regional Water Board. Facility operators of closed landfills that are regulated by waste discharge requirements (WDRs) may be required to comply with this General Permit. In some cases, it may be appropriate for closed landfills to be covered by the State Water Board's General Permit during closure activities. The Construction Activities General Permit should cover new landfill construction. Facility operators should contact their Regional Water Board to determine the appropriate permit coverage.

Category 10 Dischargers

Facility operators of Category 10 (light industry) facilities are not subject to this General Permit if they can certify that the following minimum conditions at their facilities are met:

1. All prohibited non-storm water discharges have been eliminated or otherwise permitted.

2. All areas of past exposure have been inspected and cleaned, as appropriate.

3. All materials related to industrial activity (including waste materials) are not exposed to storm water or authorized non-storm water discharges.

4. All industrial activities and industrial equipment are not exposed to storm water or authorized non-storm water discharges.

5. There is no exposure of materials associated with industrial activity through other direct or indirect pathways such as particulates from stacks and exhaust systems.

6. There is periodic re-evaluation of the facility to ensure Conditions 1, 3, 4, and 5 are continuously met.

Currently, facility operators that can certify that the above conditions are met are not required to notify the State Water

Board or Regional Water Board. These facility operators are advised to retain such certification documentation on site.

The Ninth Circuit Court of Appeals invalidated the exemption granted by U.S. EPA for storm water discharges from facilities in Category 11 that do not have exposure and remanded the regulation to U.S. EPA for further action. The State Water Board, at this time, is not requiring storm water discharges from facilities in Category 11 that do not have exposure to be covered by this General Permit. Instead, the State Water Board will await future U.S. EPA or court action clarifying the types of storm water discharges that must be permitted. If necessary, the State Water Board will reopen the General Permit to accommodate such a clarification.

Section 1068 of the Intermodal Surface Transportation Act of 1991 exempts municipal agencies serving populations of less than 100,000 from Phase I permit requirements for most facilities they operate (uncontrolled sanitary landfills, power plants, and airports are still required to be permitted in Phase I). Phase II of the Permit Program scheduled to begin August 7, 2001 will cover the facilities that are exempt from Phase I permit requirements.

TYPES OF DISCHARGES NOT COVERED BY THIS GENERAL PERMIT

1. CONSTRUCTION ACTIVITY: Discharges from construction activity of five acres or more, including clearing, grading, and excavation. A separate general permit was adopted on August 20, 1992 for this industrial category.

2. FACILITIES WHICH HAVE NPDES PERMITS CONTAINING STORM WATER PROVISIONS: Some storm water discharges may be regulated by other individual or general NPDES permits issued by the State Water Board or the Regional Water Boards. This General Permit shall not regulate these discharges. When the individual or general NPDES permits for such discharges expire, the State Water Board or Regional Water Board may authorize coverage under this General Permit or another general NPDES permit, or may issue a new individual NPDES permit consistent with the Federal and State storm water regulations. Interested parties may petition the State Water Board or appropriate Regional Water Board to issue individual or General NPDES Permits. General Permits may be issued for a particular industrial group or watershed area.

3. FACILITIES DETERMINED INELIGIBLE BY REGIONAL WATER BOARDS: Regional Water Boards may determine that discharges from a facility or groups of facilities, otherwise eligible for coverage under this General Permit, have potential water quality impacts that may not be appropriately addressed by

this General Permit. In such cases, a Regional Water Board may require such discharges to be covered by an individual or general NPDES permit. Interested persons may petition the appropriate Regional Water Board to issue individual NPDES permits. The applicability of this General Permit to such discharges will be terminated upon adoption of an individual NPDES permit or a different general NPDES permit.

4. FACILITIES WHICH DO NOT DISCHARGE STORM WATER TO WATERS OF THE UNITED STATES: The discharges from the following facilities are not required to be permitted:

   a. FACILITIES THAT DISCHARGE STORM WATER TO MUNICIPAL SANITARY SEWER SYSTEMS: Facilities that discharge storm water to municipal sanitary sewer systems or combined sewer systems are not required by Federal regulations to be covered by an NPDES storm water permit or to submit an NOI to comply with this General Permit. (It should be noted that many municipalities have sewer use ordinances that prohibit storm drain connections to their sanitary sewers.)

   b. FACILITIES THAT DO NOT DISCHARGE STORM WATER TO SURFACE WATERS OR SEPARATE STORM SEWERS: Storm water that is captured and treated and/or disposed of with the facility's NPDES permitted process wastewater and storm water that is disposed of to evaporation ponds, percolation ponds, or combined sewer systems are not required to obtain a storm water permit. To avoid liability, the facility operator should be certain that no discharge of storm water to surface waters would occur under any circumstances.

5. MOST SILVICULTURAL ACTIVITIES: Storm water discharges from most silvicultural activities such as thinning, harvesting operations, surface drainage, or road construction and maintenance are exempt from this permit. Log sorting or log storage facilities that fall within SIC 2411 are required to be permitted.

6. MINING AND OIL AND GAS FACILITIES: Oil and gas facilities that have not released storm water resulting in a discharge of a reportable quantity (RQ) for which notification is or was required pursuant to 40 CFR Parts 110, 117, and 302 at any time after November 19, 1987 are not required to be permitted unless the industrial storm water discharge contributed to a violation of a water quality standard. Mining facilities that discharge storm water that does not come into contact with any overburden, raw materials, intermediate product, finished product, by-product, or waste product located at the facility are not required to be permitted. These facilities must be permitted if they have a new release of storm water resulting in a discharge of an RQ.

7. FACILITIES ON INDIAN LANDS: the U.S. EPA will regulate Discharges from facilities on Indian lands.

NOTIFICATION REQUIREMENTS

Storm water discharges from facilities described in the section titled "Types of Storm Water Discharges Covered by This General Permit" must be covered by an NPDES permit. An NOI must be submitted by the facility operator for each individual facility to obtain coverage. Certification of the NOI signifies that the facility operator intends to comply with the provisions of the General Permit. Facility operators who have filed NOIs for the State Water Board Order No. 91-013-DWQ (as amended by Order No. 92-12-DWQ) or San Francisco Bay Regional Water Board Order No. 92-011 (as amended by Order No. 92-116) will be sent an abbreviated NOI soon after adopting this General Permit that must be completed and returned within 45 days of receipt. Where operations have discontinued and significant materials remain on site (such as at closed landfills), the landowner may be responsible for filing an NOI and complying with this General Permit. A landowner may also file an NOI for a facility if the landowner, rather than the facility operator(s), is responsible for compliance with this General Permit.

A facility operator that does not submit an NOI for a facility must submit an application for an individual NPDES permit. U.S. EPA's regulations [40 CFR 122.21 (a)] exclude facility operators covered by a general permit from requirements to submit an individual permit application unless required by the Regional Water Board. The NOI requirements of this General Permit are intended to establish a mechanism which can be used to establish a clear accounting of the number of facility operators complying with the General Permit, their identities, the nature of operations at the facilities, and location.

All facility operators filing an NOI after the adoption of this General Permit must comply with this General Permit. Existing facility operators who have filed NOIs prior to the adoption of this General Permit shall continue to complete the requirements of the previous General Permit through June 30, 1997 including submitting annual reports to the Regional Water Boards by July 1, 1997. Group Leaders are required to submit a 1996-97 Group Evaluation Report by August 1, 1997.

DESCRIPTION OF GENERAL PERMIT CONDITIONS

Prohibitions

This General Permit authorizes storm water and authorized non-storm water discharges from facilities that are required to be covered by a storm water permit. This General Permit prohibits discharges of material other than storm water (non-storm water discharges) that are not authorized by the General Permit and discharges containing hazardous substances in storm water in excess of reportable quantities established at 40 CFR 117.3 and 40 CFR 302.4. Authorized non-storm water discharges are addressed in the Special Conditions of the General Permit.

Effluent Limitations

NPDES Permits for storm water discharges must meet all applicable provisions of Sections 301 and 402 of the CWA. These provisions require control of pollutant discharges using best available technology economically achievable (BAT) and best conventional pollutant control technology (BCT) to prevent and reduce pollutants and any more stringent controls necessary to meet water quality standards.

U.S. EPA regulations (40 CFR Subchapter N) establish effluent limitation guidelines for storm water discharges from facilities in ten industrial categories. For these facilities, compliance with the effluent limitation guidelines constitutes compliance with BAT and BCT for the specified pollutants and must be met to comply with this General Permit.

For storm water discharges from facilities not among the ten industrial categories listed in 40 CFR Subchapter N, it is not feasible at this time to establish numeric effluent limitations. The reasons why establishment of numeric effluent limitations is not feasible are discussed in detail in State Water Board Orders No. WQ 91-03 and WQ 91-04. Therefore, this General Permit allows the facility operator to implement best management practices (BMPs) to comply with the requirements of this General Permit. This approach is consistent with the U.S. EPA's August 1, 1996 "Interim Permitting Approach for Water Quality Based Effluent Limitations in Storm Water Permits".

Receiving Water Limitations

Storm water discharges shall not cause or contribute to a violation of an applicable water quality standard. The General Permit requires facility operators to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges through the development and implementation of BMPs which constitutes compliance with BAT and BCT and, in most cases, compliance with water quality standards. If receiving water quality standards are exceeded, facility operators are required to submit a written report providing additional BMPs that will be implemented to achieve water quality standards.

Storm Water Pollution Prevention Plans (SWPPPs)

All facility operators must prepare, retain on site, and implement an SWPPP. The SWPPP has two major objectives: (1) to help identify the sources of pollution that affect the quality of industrial storm water discharges and authorized non-storm water discharges, and (2) to describe and ensure the implementation of BMPs to reduce or prevent pollutants in industrial storm water discharges and authorized non-storm water discharges.

This General Permit requires development and implementation of an SWPPP emphasizing BMPs. This approach provides the flexibility necessary to establish appropriate BMPs for different types of industrial activities and pollutant sources. As this General Permit covers vastly different types of facilities, the State Water Board recognizes that there is no single best way of developing or organizing an SWPPP. The SWPPP requirements contain the essential elements that all facility operators must consider and address in the SWPPP. This General Permit's SWPPP requirements are more detailed than the previous general permit's SWPPP requirements, and the suggested order of the SWPPP elements have been rearranged (1) to correspond more closely with other storm water permits in effect throughout the country, and (2) to generally follow a more logical path. Facility operators that have already developed and implemented SWPPPs under previous general permits are required to review the SWPPP's requirements contained in this General Permit and then review their existing SWPPP for adequacy. If the existing SWPPP adequately identifies and assesses all potential sources of pollutants and describes the appropriate BMPs necessary to reduce or prevent pollutants, the facility operator is not required to revise the existing SWPPP.

One of the major elements of the SWPPP is the elimination of unauthorized non-storm water discharges to the facility's storm drain system. Unauthorized non-storm water discharges can be generated from a wide variety of potential pollutant sources. They include waters from the rinsing or washing of vehicles, equipment, buildings, or pavement; materials that have been improperly disposed of or dumped; and spilled; or leaked materials. Unauthorized non-storm water discharges can contribute a significant pollutant load to receiving waters. Measures to control spills, leakage, and dumping can often be addressed through BMPs. Unauthorized non-storm water discharges may enter the storm drain system via conveyances such as floor drains. All conveyances should be evaluated to determine whether they convey unauthorized non-storm water discharges to the storm drain system. Unauthorized non-storm water discharges (even when commingled with storm water) shall be eliminated or covered by a separate NPDES Permit.

There are many non-storm water discharges that, under certain conditions, should not contain pollutants associated with

industrial activity (i.e., air conditioning condensate, potable water line testing, landscaping overflow, etc.). Item D, Special Conditions, provides the conditions where certain listed non-storm water discharges are authorized by this General Permit.

Monitoring Program

The General Permit requires development and implementation of a monitoring program. The objectives of the monitoring program are to (1) demonstrate compliance with the General Permit, (2) aid in the implementation of the SWPPP, and (3) measure the effectiveness of the BMPs in reducing or preventing pollutants in storm water discharges and authorized non-storm water discharges.

All facility operators (with the exception of inactive mining operations) are required to:

1. Perform visual observations of storm water discharges and authorized storm water discharges.

2. Collect and analyze samples of storm water discharges. Analysis must include pH, total suspended solids (TSS), total organic carbon (TOC), specific conductance, toxic chemicals, and other pollutants which are likely to be present in storm water discharges in significant quantities, and those parameters listed in Table D of this General Permit. The Table D parameters are those listed in the U.S. EPA Multi-Sector General Permit. Facility operators subject to Federal storm water effluent limitation guidelines in 40 CFR Subchapter N must also sample and analyze for any pollutant specified in the appropriate category of 40 CFR Subchapter N.

Facility operators are not required to collect samples or perform visual observations during adverse climatic conditions. Sample collection and visual observations are required only during scheduled facility operating hours. Visual observations are required only during daylight hours. Facility operators that are unable to collect any of the required samples or visual observations because of the above circumstances must provide documentation to the Regional Water Board in their annual report.

Facility operators may be exempt from performing sampling and analysis if they: (1) do not have areas of industrial activity exposed to storm water, (2) receive an exemption from a local agency which has jurisdiction over the storm sewer system, or (3) receive an exemption from the appropriate Regional Water Board. Facility operators must always perform sampling and analysis for any pollutant specified in storm water effluent limitation guidelines.

This General Permit contains a new procedure where facility operators, if they meet certain minimum conditions, may certify compliance with the General Permit and reduce the number of

sampling events required to be sampled for the remaining term of the General Permit. Each Regional Water Board may develop instructions, guidance, and checklists to assist facility operators to complete sampling reduction requests.

Local agencies that wish to provide sampling and analysis exemptions or reductions to facility operators within their jurisdiction shall develop a certification program that clearly indicates the certification procedures and criteria used by the local agency. At a minimum, these programs should include site inspections, a review of the facility operator's SWPPP, and a review of other records such as monitoring data, receiving water data, etc. The certification program shall be approved by the local Regional Water Board before implementation.

Alternative Monitoring

Facility operators are required to develop a facility-specific monitoring program that satisfies both the minimum monitoring program requirements and the objectives of the monitoring program. Some facility operators have indicated that cost-effective alternative monitoring programs can be developed that provide equivalent or more accurate indicators of pollutants and/or BMP performance than a monitoring program based upon the minimum monitoring program requirements. An example of such an alternative monitoring program would be one that identifies sample locations at or near pollutant sources rather than sampling an entire drainage area where the storm water discharge has been diluted with storm water from areas with little or no industrial activity.

The State Water Board does not want to preclude facility operators from developing better, and perhaps more cost-effective, monitoring programs. This General Permit allows facility operators to submit alternative monitoring programs for approval by the Regional Water Board. For individual facilities, these proposals must be facility specific and demonstrate how the alternative monitoring program will result in an equivalent or more accurate indicator of pollutants and/or BMP effectiveness. Facility operators with similar industrial activities may also propose alternative monitoring programs for approval by the Regional Water Boards. These proposals must demonstrate how the alternative monitoring program will result in an equivalent or more accurate indicator of pollutants and/or BMP effectiveness for all of the participating facilities.

Facility operators shall continue to comply with the existing monitoring program requirements until receiving approval by the Regional Water Board.

Group Monitoring

Each facility operator may either perform sampling and analysis individually or participate in a group monitoring program. A group monitoring program may be developed either by a group leader representing a group of similar facilities or by a local agency which holds a storm water permit for a municipal separate storm sewer system for industrial facilities within its jurisdiction. The group leader or local agency responsible for the group monitoring program must schedule all participating facilities to sample two storm events over the life of this General Permit. Facility operators subject to Federal effluent limitations guidelines in 40 CFR Subchapter N must individually sample and analyze for pollutants listed in the appropriate Federal regulations.

Participants within a group may be located within the jurisdiction of more than one Regional Water Board. Multi-Regional Water Board groups must receive the approval of the State Water Board Executive Director (with the concurrence of the appropriate Regional Water Boards).

Each group leader or local agency responsible for group sampling must: (1) provide guidance or training so that the monitoring is done correctly, (2) recommend appropriate BMPs to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges from group participants, (3) evaluate and report the monitoring data to the State Water Board and/or the appropriate Regional Water Board(s), and (4) conduct two on-site inspections at each facility over the five year term of this General Permit to evaluate facility compliance and recommend BMPs to achieve compliance with this General Permit. The group leader or local agency may designate, hire, or train inspectors to conduct these inspections that are or are not directly affiliated with the group leader or local agency. It is the group leader's or local agency's responsibility to select inspectors that are capable of evaluating each facility's compliance with the General Permit and can recommend appropriate BMPs. All group monitoring plans are subject to State Water Board and/or Regional Water Board(s) review. Consistent with the four-tier permitting strategy described in the Federal regulations, the Regional Water Board(s) may evaluate the data and results from group monitoring to establish future permitting decisions. As appropriate, the State Water Board and/or the Regional Water Board(s) may terminate or require substantial amendment to the group monitoring plans. The State Water Board and/or the Regional Water Board(s) may terminate a facility's participation in group monitoring or require additional monitoring activities.

Retention of Records

The facility operator is required to retain records of all monitoring information, copies of all reports required by this General Permit, and records of all data used to complete the NOI for a period of five years from the date of measurement, report, or monitoring activity. This period may be extended by the State and/or Regional Water Boards. All records are public documents and must be provided to the Regional Water Boards on request.

Watershed Management

The State and Regional Water Boards are undertaking a focussed effort in watershed management throughout the State. In reissuing this General Permit, the State Water Board recognizes both the evolving nature of watershed management and the long-term desirability of structuring monitoring programs to support the Watershed Management Initiative. Therefore, the amended monitoring and reporting provisions provide flexibility for individual facility operators or groups of facility operators to propose and participate in, subject to Regional Water Board approval, watershed monitoring programs in lieu of some or all of the monitoring requirements contained in this General Permit.

Facility Operator Compliance Responsibilities

This General Permit has been written to encourage individual facility operators to develop their own SWPPP and monitoring programs. Many facility operators, however, choose to obtain compliance assistance either by hiring a consultant on an individual basis or by participating in a group monitoring plan. Regardless of how a facility operator chooses to pursue compliance, it is the facility operator that is responsible for compliance with this General Permit.

The State Water Board recognizes that industrial activities and operating conditions at many facilities change over time. In addition, new and more effective BMPs are being developed by various facility operators and by industrial groups. The SWPPP and monitoring program requirements include various inspections, reviews, and observations all of which recognize, encourage, and mandate an iterative self-evaluation process that is necessary to consistently comply with this General Permit. In general, facility operators that develop and implement SWPPPs that comply with this General Permit should not be penalized when discovering minor violations through this iterative self-evaluation process. The General Permit provides facility operators up to 90 days to revise and implement the SWPPP to correct such violations.

STATE WATER RESOURCES CONTROL BOARD (STATE WATER BOARD)
WATER QUALITY ORDER NO. 97-03-DWQ
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES)
GENERAL PERMIT NO. CAS000001 (GENERAL PERMIT)

WASTE DISCHARGE REQUIREMENTS (WDRS)
FOR
DISCHARGES OF STORM WATER ASSOCIATED WITH INDUSTRIAL ACTIVITIES
EXCLUDING CONSTRUCTION ACTIVITIES

The State Water Board finds that:

1. Federal regulations for storm water discharges were issued by the U.S. Environmental Protection Agency (U.S. EPA) on November 16, 1990 (40 Code of Federal Regulations [CFR] Parts 122, 123, and 124). The regulations require operators of specific categories of facilities where discharges of storm water associated with industrial activity (storm water) occur to obtain an NPDES permit and to implement Best Available Technology Economically Achievable (BAT) and Best Conventional Pollutant Control Technology (BCT) to reduce or prevent pollutants associated with industrial activity in storm water discharges and authorized non-storm discharges.

2. This General Permit shall regulate storm water discharges and authorized non-storm water discharges from specific categories of industrial facilities identified in Attachment 1, storm water discharges and authorized non-storm water discharges from facilities as designated by the Regional Water Quality Control Boards (Regional Water Boards), and storm water discharges and authorized non-storm water discharges from other facilities seeking General Permit coverage. This General Permit may also regulate storm water discharges and authorized non-storm water discharges from facilities as required by U.S. EPA regulations. This General Permit shall regulate storm water discharges and authorized non-storm water discharges previously regulated by San Francisco Bay Regional Water Board Order, No.92-11 (as amended by Order No. 92-116). This General Permit excludes storm water discharges and non-storm water discharges that are regulated by other individual or general NPDES permits, storm water discharges and non-storm water discharges from construction activities, and storm water discharges and non-storm water discharges excluded by the Regional Water Boards for coverage by this General Permit. Attachment 2 contains the addresses and telephone numbers of each Regional Water Board office.

3. To obtain coverage for storm water discharges and authorized non-storm water discharges pursuant to this General Permit, operators of facilities (facility operators) must submit a Notice of Intent (NOI), in accordance with the Attachment 3

instructions, and appropriate annual fee to the State Water Board. This includes facility operators that have participated in U.S. EPA's group application process.

4. This General Permit does not preempt or supersede the authority of local agencies to prohibit, restrict, or control storm water discharges and authorized non-storm water discharges to storm drain systems or other water-courses within their jurisdictions as allowed by State and Federal law.

5. If an individual NPDES permit is issued to a facility operator otherwise subject to this General Permit or an alternative NPDES general permit is subsequently adopted which covers storm water discharges and/or authorized non-storm water discharges regulated by this General Permit, the applicability of this General Permit to such discharges is automatically terminated on the effective date of the individual NPDES permit or the date of approval for coverage under the subsequent NPDES general permit.

6. Effluent limitations and toxic and effluent standards established in Sections 208(b), 301, 302, 303(d), 304, 306, 307, and 403 of the Federal Clean Water Act (CWA), as amended, are applicable to storm water discharges and authorized non-storm water discharges regulated by this General Permit.

7. This action to adopt an NPDES general permit is exempt from the provisions of the California Environmental Quality Act (Public Resources Code Section 21100, et seq.) in accordance with Section 13389 of the California Water Code.

8. Federal regulations (40 CFR Subchapter N) establish effluent limitations guidelines for storm water discharges from some facilities in ten industrial categories.

9. For facilities which do not have established effluent limitation guidelines for storm water discharges in 40 CFR Subchapter N, it is not feasible at this time to establish numeric effluent limitations. This is due to the large number of discharges and the complex nature of storm water discharges. This is also consistent with the U.S. EPA's August 1, 1996 "Interim Permitting Approach for Water Quality Based Effluent Limitations in Storm Water Permits."

10. Facility operators are required to comply with the terms and conditions of this General Permit. Compliance with the terms and conditions of this General Permit constitutes compliance with BAT/BCT requirements and with requirements to achieve water quality standards. This includes the development and implementation of an effective Storm Water Pollution Prevention Plan (SWPPP) to reduce or prevent pollutants associated with industrial activity in storm water discharges and authorized non-storm water discharges.

11. Best Management Practices (BMPs) to reduce or prevent pollutants associated with industrial activity in storm water discharges and authorized non-storm water discharges are appropriate where numeric effluent limitations are infeasible, and the implementation of BMPs is adequate to achieve compliance with BAT/BCT and with water quality standards.

12. The State Water Board has adopted a Watershed Management Initiative that encourages watershed management throughout the State. This General Permit recognizes the Watershed Management Initiative by supporting the development of watershed monitoring programs authorized by the Regional Water Boards.

13. Following adoption of this General Permit, the Regional Water Boards shall enforce its provisions.

14. Following public notice in accordance with State and Federal laws and regulations, the State Water Board held a public hearing on November 12, 1996 and heard and considered all comments pertaining to this General Permit. A response to all significant comments has been prepared and is available for public review.

15. This Order is an NPDES General Permit in compliance with Section 402 of the CWA and shall take effect upon adoption by the State Water Board.

16. All terms that are defined in the CWA, U.S. EPA storm water regulations and the Porter-Cologne Water Quality Control Act will have the same definition in this General Permit unless otherwise stated.

IT IS HEREBY ORDERED that all facility operators required to be regulated by this General Permit shall comply with the following:

A. DISCHARGE PROHIBITIONS:

1. Except as allowed in Special Conditions (D.1.) of this General Permit, materials other than storm water (non-storm water discharges) that discharge either directly or indirectly to waters of the United States are prohibited. Prohibited non-storm water discharges must be either eliminated or permitted by a separate NPDES permit.

2. Storm water discharges and authorized non-storm water discharges shall not cause or threaten to cause pollution, contamination, or nuisance.

B. EFFLUENT LIMITATIONS:

1. Storm water discharges from facilities subject to storm water effluent limitation guidelines in Federal regulations (40 CFR

Subchapter N) shall not exceed the specified effluent limitations.

2. Storm water discharges and authorized non-storm water discharges regulated by this General Permit shall not contain a hazardous substance equal to or in excess of a reportable quantity listed in 40 CFR Part 117 and/or 40 CFR Part 302.

3. Facility operators covered by this General Permit must reduce or prevent pollutants associated with industrial activity in storm water discharges and authorized non-storm water discharges through implementation of BAT for toxic and non-conventional pollutants and BCT for conventional pollutants. Development and implementation of an SWPPP that complies with the requirements in Section A of the General Permit and that includes BMPs that achieve BAT/BCT constitutes compliance with this requirement.

C. RECEIVING WATER LIMITATIONS:

1. Storm water discharges and authorized non-storm water discharges to any surface or ground water shall not adversely impact human health or the environment.

2. Storm water discharges and authorized non-storm water discharges shall not cause or contribute to an exceedance of any applicable water quality standards contained in a Statewide Water Quality Control Plan or the applicable Regional Water Board's Basin Plan.

3. A facility operator will not be in violation of Receiving Water Limitation C.2. as long as the facility operator has implemented BMPs that achieve BAT/BCT and the following procedure is followed:

a. The facility operator shall submit a report to the appropriate Regional Water Board that describes the BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report shall include an implementation schedule. The Regional Water Board may require modifications to the report.

b. Following approval of the report described above by the Regional Water Board, the facility operator shall revise its SWPPP and monitoring program to incorporate the additional BMPs that have been and will be implemented, the implementation schedule, and any additional monitoring required.

4. A facility operator shall be in violation of this General Permit if he/she fails to do any of the following:

a. Submit the report described above within 60 days after either the facility operator or the Regional Water Board determines that discharges are causing or contributing to an exceedance of an applicable water quality standard;

b. Submit a report that is approved by the Regional Water Board; or

c. Revise its SWPPP and monitoring program as required by the approved report.

D. SPECIAL CONDITIONS

1. Non-Storm Water Discharges

a. The following non-storm water discharges are authorized by this General Permit provided that they satisfy the conditions specified in Paragraph b. below: fire hydrant flushing; potable water sources, including potable water related to the operation, maintenance, or testing of potable water systems; drinking fountain water; atmospheric condensates including refrigeration, air conditioning, and compressor condensate; irrigation drainage; landscape watering; springs; ground water; foundation or footing drainage; and sea water infiltration where the sea waters are discharged back into the sea water source.

b. The non-storm water discharges as provided in Paragraph a. above are authorized by this General Permit if all the following conditions are met:

i. The non-storm water discharges are in compliance with Regional Water Board requirements.

ii. The non-storm water discharges are in compliance with local agency ordinances and/or requirements.

iii. BMPs are specifically included in the SWPPP to (1) prevent or reduce the contact of non-storm water discharges with significant materials or equipment and (2) minimize, to the extent practicable, the flow or volume of non-storm water discharges.

iv. The non-storm water discharges do not contain significant quantities of pollutants.

v. The monitoring program includes quarterly visual observations of each non-storm water discharge and its sources to ensure that BMPs are being implemented and are effective.

vi. The non-storm water discharges are reported and described annually as part of the annual report.

c. The Regional Water Board or its designee may establish additional monitoring programs and reporting requirements for any non-storm water discharge authorized by this General Permit.

d. Discharges from firefighting activities are authorized by this General Permit and are not subject to the conditions of Paragraph b. above.

E. PROVISIONS

1. All facility operators seeking coverage by this General Permit must submit an NOI for each of the facilities they operate. Facility operators filing an NOI after the adoption of this General Permit shall use the NOI form and instructions (Attachment 3) attached to this General Permit. Existing facility operators who have filed an NOI pursuant to State Water Board Order No. 91-013-DWQ (as amended by Order No. 92-12-DWQ) or San Francisco Bay Regional Water Board Order No. 92-11 (as amended by Order No. 92-116) shall submit an abbreviated NOI form provided by the State Water Board. The abbreviated NOI form shall be submitted within 45 days of receipt.

2. Facility operators who have filed an NOI, pursuant to State Water Board Order No. 91-013-DWQ (as amended by Order No. 92-12-DWQ) or San Francisco Bay Regional Water Board Order No. 92-11 (as amended by Order No. 92-116), shall continue to implement their existing SWPPP and shall implement any necessary revisions to their SWPPP in accordance with Section A of this General Permit in a timely manner, but in no case later than August 1, 1997. Facility operators beginning industrial activities after adoption of this General Permit must develop and implement an SWPPP in accordance with Section A of this General Permit when the industrial activities begin.

3. Facility operators who have filed an NOI, pursuant to State Water Board Order No. 91-013-DWQ (as amended by Order No. 92-12-DWQ) or San Francisco Bay Regional Water Board Order No. 92-11 (as amended by Order No. 92-116), shall continue to implement their existing Monitoring Program and shall implement any necessary revisions to their Monitoring Program in accordance with Section B of the General Permit in a timely manner, but in no case later than August 1, 1997. Facility operators beginning industrial activities after adoption of this General Permit must develop and implement a Monitoring Program in

accordance with Section B of this General Permit when industrial activities begin.

4. Facility operators of feedlots as defined in 40 CFR Part 412 that are in full compliance with Section 2560 to Section 2565, Title 23, California Code of Regulations (Chapter 15) will be in compliance with all effluent limitations and prohibitions contained in this General Permit. Facility operators of feedlots that comply with Chapter 15, however, must perform monitoring in compliance with the requirements of Section B.4.d. and B.14. of this General Permit. Facility operators of feedlots must also comply with any Regional Water Board WDRs or NPDES general permit regulating their storm water discharges.

5. All facility operators must comply with lawful requirements of municipalities, counties, drainage districts, and other local agencies regarding storm water discharges and non-storm water discharges entering storm drain systems or other watercourses under their jurisdiction, including applicable requirements in municipal storm water management programs developed to comply with NPDES permits issued by the Regional Water Boards to local agencies.

6. All facility operators must comply with the standard provisions and reporting requirements for each facility covered by this General Permit contained in Section C, Standard Provisions.

7. Facility operators that operate facilities with co-located industrial activities (facilities that have industrial activities that meet more than one of the descriptions in Attachment 1) that are contiguous to one another are authorized to file a single NOI to comply with the General Permit. Storm water discharges and authorized non-storm water discharges from the co-located industrial activities are authorized if the SWPPP and Monitoring Program addresses each co-located industrial activity.

8. Upon reissuance of a successor NPDES general permit by the State Water Board, the facility operators subject to this reissued General Permit may be required to file an NOI.

9. Facility operators may request to terminate their coverage under this General Permit by filing a Notice of Termination (NOT) with the Regional Water Board. The NOT shall provide all documentation requested by the Regional Water Board. The facility operator will be notified when the NOT has been approved. Should the NOT be denied, facility operators are responsible for continued compliance with the requirements of this General Permit.

10. Facility operators who have filed an NOI, pursuant to State Water Board Order No. 91-013-DWQ (as amended by Order No. 92-12) or San Francisco Bay Regional Water Board Order No. 92-11 (as amended by Order No. 92-116) shall:

    a. Complete the 1996-97 activities required by those general permits. These include, but are not limited to, conducting any remaining visual observations, sample collection, annual site inspection, annual report submittal, and (for group monitoring leaders) Group Evaluation Reports; and

    b. Comply with the requirements of this General Permit no later than August 1, 1997.

11. If the Regional Water Board determines that a discharge may be causing or contributing to an exceedance of any applicable water quality standards contained in a Statewide Water Quality Control Plan or the applicable Regional Water Board's Basin Plan, the Regional Water Board may order the facility operator to comply with the requirements described in Receiving Water Limitation C.3. The facility operator shall comply with the requirements within the time schedule established by the Regional Water Board.

12. If the facility operator determines that its storm water discharges or authorized non-storm water discharges are causing or contributing to an exceedance of any applicable water quality standards, the facility operator shall comply with the requirements described in Receiving Water Limitation C.3.

13. State Water Board Order No. 91-013-DWQ (as amended by Order No. 92-12-DWQ) and San Francisco Bay Regional Water Board Order No. 91-011 (as amended by Order No. 92-116) are hereby rescinded.

F. REGIONAL WATER BOARD AUTHORITIES

1. Following adoption of this General Permit, Regional Water Boards shall:

    a. Implement the provisions of this General Permit, including, but not limited to, reviewing SWPPPs, reviewing annual reports, conducting compliance inspections, and taking enforcement actions.

    b. Issue other NPDES general permits or individual NPDES storm water permits as they deem appropriate to individual facility operators, facility operators of specific categories of industrial activities, or facility operators in a watershed or geographic area. Upon issuance of such NPDES permits by a Regional Water Board, the affected facility operator shall no longer

be regulated by this General Permit. Any new NPDES permit issued by the Regional Water Board may contain different requirements than the requirements of this General Permit.

2. Regional Water Boards may provide guidance to facility operators on the SWPPP and the Monitoring Program and reporting implementation.

3. Regional Water Boards may require facility operators to conduct additional SWPPP and Monitoring Program and reporting activities necessary to achieve compliance with this General Permit.

4. Regional Water Boards may approve requests from facility operators whose facilities include co-located industrial activities that are not contiguous within the facilities (e.g., some military bases) to comply with this General Permit under a single NOI. Storm water discharges and authorized non-storm water discharges from the co-located industrial activities and from other sources within the facility that may generate significant quantities of pollutants are authorized provided the SWPPP and Monitoring Program addresses each co-located industrial activity and other sources that may generate significant quantities of pollutants.

CERTIFICATION

The undersigned, Administrative Assistant to the State Water Board, does hereby certify that the foregoing is a full, true, and correct copy of an order duly and regularly adopted at a meeting of the State Water Resources Control Board held on April 17, 1997.

AYE: John P. Caffrey

Administrative Assistant to the Board

SECTION A: STORM WATER POLLUTION PREVENTION PLAN REQUIREMENTS

1. *Implementation Schedule*

A storm water pollution prevention plan (SWPPP) shall be developed and implemented for each facility covered by this General Permit in accordance with the following schedule.

a. Facility operators beginning industrial activities before October 1, 1992 shall develop and implement the SWPPP no later than October 1, 1992. Facility operators beginning industrial activities after October 1, 1992 shall develop and implement the SWPPP when industrial activities begin.

b. Existing facility operators that submitted a Notice of Intent (NOI), pursuant to State Water Resources Control Board (State Water Board) Order No. 91-013-DWQ (as amended by Order No. 92-12) or San Francisco Bay Regional Water Quality Control Board (Regional Water Board) Order No. 92-11 (as amended by Order No. 92-116), shall continue to implement their existing SWPPP and shall implement any necessary revisions to their SWPPP in a timely manner, but in no case later than August 1, 1997.

2. *Objectives*

The SWPPP has two major objectives: (a) to identify and evaluate sources of pollutants associated with industrial activities that may affect the quality of storm water discharges and authorized non-storm water discharges from the facility; and (b) to identify and implement site-specific best management practices (BMPs) to reduce or prevent pollutants associated with industrial activities in storm water discharges and authorized non-storm water discharges. BMPs may include a variety of pollution prevention measures or other low-cost and pollution control measures. They are generally categorized as non-structural BMPs (activity schedules, prohibitions of practices, maintenance procedures, and other low-cost measures) and as structural BMPs (treatment measures, run-off controls, over-head coverage.) To achieve these objectives, facility operators should consider the five phase process for SWPPP development and implementation as shown in Table A.

The SWPPP requirements are designed to be sufficiently flexible to meet the needs of various facilities. SWPPP requirements that are not applicable to a facility should not be included in the SWPPP.

A facility's SWPPP is a written document that shall contain a compliance activity schedule, a description of industrial activities and pollutant sources, descriptions of BMPs, drawings, maps, and relevant copies or references of parts of other plans. The SWPPP shall be revised whenever appropriate and shall be readily available for review by facility employees or Regional Water Board inspectors.

3. *Planning and Organization*

a. *Pollution Prevention Team*

The SWPPP shall identify a specific individual or individuals and their positions within the facility organization as members of a storm water pollution prevention team responsible for developing the SWPPP, assisting the facility manager in SWPPP implementation and revision, and conducting all monitoring program activities required in Section B of this General Permit. The SWPPP shall clearly identify the General Permit related responsibilities, duties, and activities of each team member. For small facilities, storm water pollution prevention teams may consist of one individual where appropriate.

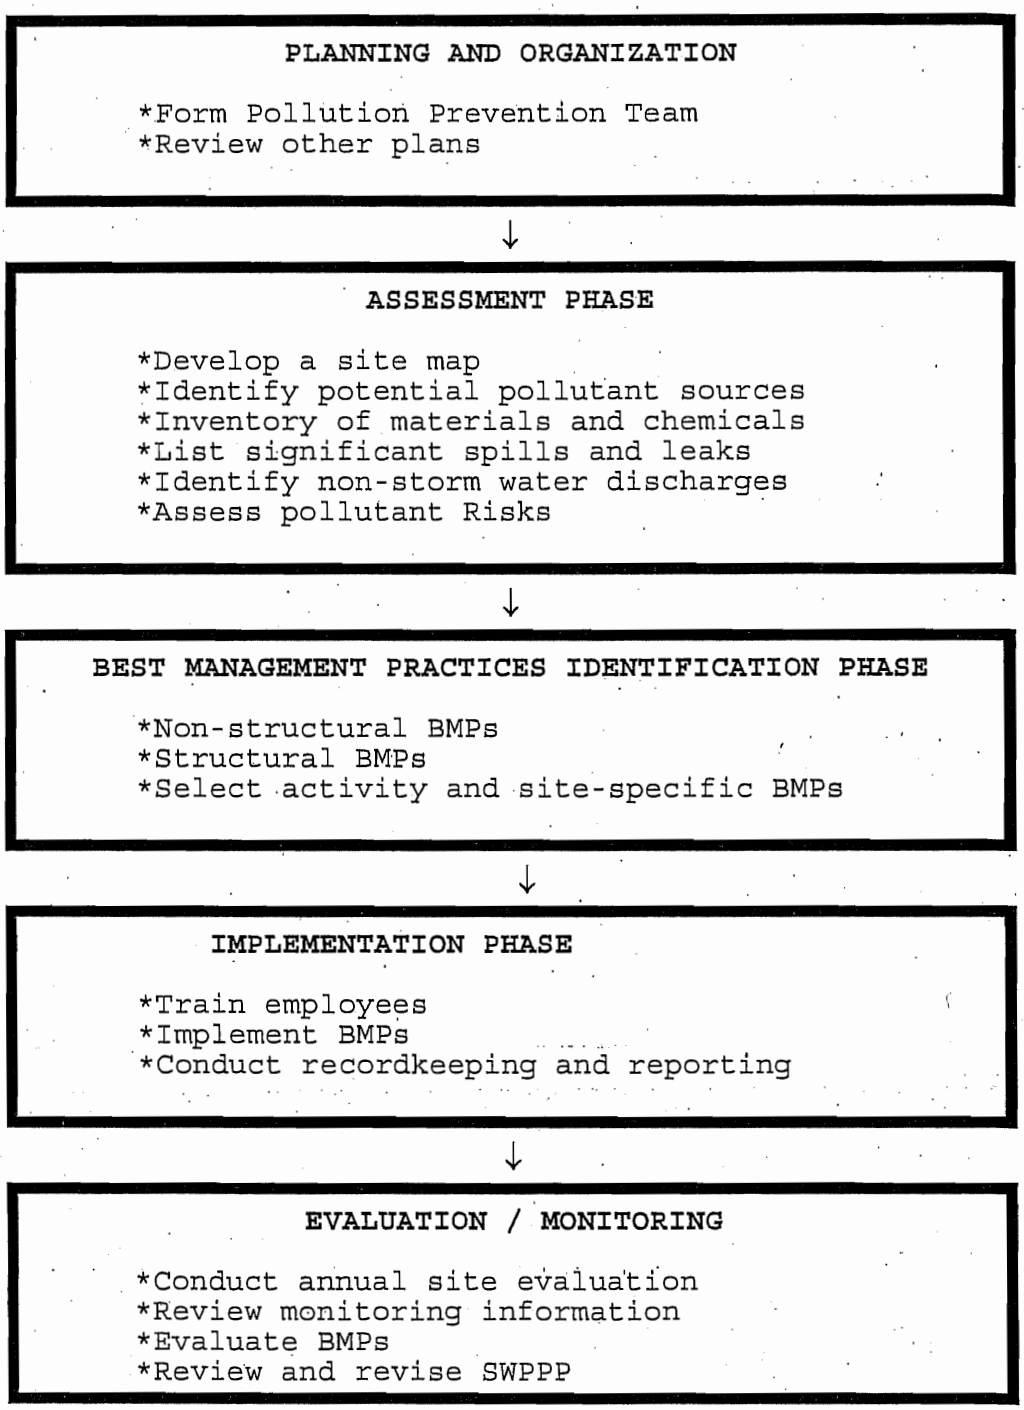
b. *Review Other Requirements and Existing Facility Plans*

The SWPPP may incorporate or reference the appropriate elements of other regulatory requirements. Facility operators should review all local, State, and Federal requirements that impact, complement, or are consistent with the requirements of this General Permit. Facility operators should identify any existing facility plans that contain storm water pollutant control measures or relate to the requirements of this General Permit. As examples, facility operators whose facilities are subject to Federal Spill Prevention Control and Countermeasures' requirements should already have instituted a plan to control spills of certain hazardous materials. Similarly, facility operators whose facilities are subject to air quality related permits and regulations may already have evaluated industrial activities that generate dust or particulates.

4. *Site Map*

The SWPPP shall include a site map. The site map shall be provided on an 8-½ x 11 inch or larger sheet and include notes, legends, and other data as appropriate to ensure that the site map is clear and understandable. If necessary, facility operators may provide the required information on multiple site maps.

TABLE A
FIVE PHASES FOR DEVELOPING AND IMPLEMENTING INDUSTRIAL STORM WATER POLLUTION PREVENTION PLANS



The following information shall be included on the site map:

a. The facility boundaries; the outline of all storm water drainage areas within the facility boundaries; portions of the drainage area impacted by run-on from surrounding areas; and direction of flow of each drainage area, on-site surface water bodies, and areas of soil erosion. The map shall also identify nearby water bodies (such as rivers, lakes, and ponds) and municipal storm drain inlets

where the facility's storm water discharges and authorized non-storm water discharges may be received.

b. The location of the storm water collection and conveyance system, associated points of discharge, and direction of flow. Include any structural control measures that affect storm water discharges, authorized non-storm water discharges, and run-on. Examples of structural control measures are catch basins, berms, detention ponds, secondary containment, oil/water separators, diversion barriers, etc.

c. An outline of all impervious areas of the facility, including paved areas, buildings, covered storage areas, or other roofed structures.

d. Locations where materials are directly exposed to precipitation and the locations where significant spills or leaks identified in Section A.6.a.iv. below have occurred.

e. Areas of industrial activity. This shall include the locations of all storage areas and storage tanks, shipping and receiving areas, fueling areas, vehicle and equipment storage/maintenance areas, material handling and processing areas, waste treatment and disposal areas, dust or particulate generating areas, cleaning and rinsing areas, and other areas of industrial activity which are potential pollutant sources.

5. *List of Significant Materials*

The SWPPP shall include a list of significant materials handled and stored at the site. For each material on the list, describe the locations where the material is being stored, received, shipped, and handled, as well as the typical quantities and frequency. Materials shall include raw materials, intermediate products, final or finished products, recycled materials, and waste or disposed materials.

6. *Description of Potential Pollutant Sources*

a. The SWPPP shall include a narrative description of the facility's industrial activities, as identified in Section A.4.e above, associated potential pollutant sources, and potential pollutants that could be discharged in storm water discharges or authorized non-storm water discharges. At a minimum, the following items related to a facility's industrial activities shall be considered:

i. Industrial Processes

Describe each industrial process, the type, characteristics, and quantity of significant materials used in or resulting from the process, and a description of the manufacturing, cleaning, rinsing, recycling, disposal, or other activities related to the process. Where applicable, areas protected by containment structures and the corresponding containment capacity shall be described.

ii. Material Handling and Storage Areas

Describe each handling and storage area, type, characteristics, and quantity of significant materials handled or stored, description of the shipping, receiving, and loading procedures, and the spill or leak prevention and response procedures. Where applicable, areas protected by containment structures and the corresponding containment capacity shall be described.

iii. Dust and Particulate Generating Activities

Describe all industrial activities that generate dust or particulates that may be deposited within the facility's boundaries and identify their discharge locations; the characteristics of dust and particulate pollutants; the approximate quantity of dust and particulate pollutants that may be deposited within the facility boundaries; and a description of the primary areas of the facility where dust and particulate pollutants would settle.

iv. Significant Spills and Leaks

Describe materials that have spilled or leaked in significant quantities in storm water discharges or non-storm water discharges since April 17, 1994. Include toxic chemicals (listed in 40 CFR, Part 302) that have been discharged to storm water as reported on U.S. Environmental Protection Agency (U.S. EPA) Form R, and oil and hazardous substances in excess of reportable quantities (see 40 Code of Federal Regulations [CFR], Parts 110, 117, and 302).

The description shall include the type, characteristics, and approximate quantity of the material spilled or leaked, the cleanup or remedial actions that have occurred or are planned, the approximate remaining quantity of materials that may be exposed to storm water or non-storm water

discharges, and the preventative measures taken to ensure spill or leaks do not reoccur. Such list shall be updated as appropriate during the term of this General Permit.

v. Non-Storm Water Discharges

Facility operators shall investigate the facility to identify all non-storm water discharges and their sources. As part of this investigation, all drains (inlets and outlets) shall be evaluated to identify whether they connect to the storm drain system.

All non-storm water discharges shall be described. This shall include the source, quantity, frequency, and characteristics of the non-storm water discharges and associated drainage area.

Non-storm water discharges that contain significant quantities of pollutants or that do not meet the conditions provided in Special Conditions D. are prohibited by this General Permit (Examples of prohibited non-storm water discharges are contact and non-contact cooling water, boiler blowdown, rinse water, wash water, etc.). Non-storm water discharges that meet the conditions provided in Special Condition D. are authorized by this General Permit. The SWPPP must include BMPs to prevent or reduce contact of non-storm water discharges with significant materials or equipment.

vi. Soil Erosion

Describe the facility locations where soil erosion may occur as a result of industrial activity, storm water discharges associated with industrial activity, or authorized non-storm water discharges.

b. The SWPPP shall include a summary of all areas of industrial activities, potential pollutant sources, and potential pollutants. This information should be summarized similar to Table B. The last column of Table B, "Control Practices", should be completed in accordance with Section A.8. below.

7. *Assessment of Potential Pollutant Sources*

a. The SWPPP shall include a narrative assessment of all industrial activities and potential pollutant sources as described in A.6. above to determine:

i. Which areas of the facility are likely sources of

pollutants in storm water discharges and authorized non-storm water discharges, and

ii. Which pollutants are likely to be present in storm water discharges and authorized non-storm water discharges. Facility operators shall consider and evaluate various factors when performing this assessment such as current storm water BMPs; quantities of significant materials handled, produced, stored, or disposed of; likelihood of exposure to storm water or authorized non-storm water discharges; history of spill or leaks; and run-on from outside sources.

b. Facility operators shall summarize the areas of the facility that are likely sources of pollutants and the corresponding pollutants that are likely to be present in storm water discharges and authorized non-storm water discharges.

Facility operators are required to develop and implement additional BMPs as appropriate and necessary to prevent or reduce pollutants associated with each pollutant source. The BMPs will be narratively described in Section 8 below.

8. *Storm Water Best Management Practices*

The SWPPP shall include a narrative description of the storm water BMPs to be implemented at the facility for each potential pollutant and its source identified in the site assessment phase (Sections A.6. and 7. above). The BMPs shall be developed and implemented to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges. Each pollutant and its source may require one or more BMPs. Some BMPs may be implemented for multiple pollutants and their sources, while other BMPs will be implemented for a very specific pollutant and its source.

TABLE B
EXAMPLE
ASSESSMENT OF POTENTIAL POLLUTION SOURCES AND CORRESPONDING BEST MANAGEMENT PRACTICES
SUMMARY

Area	Activity	Pollutant Source	Pollutant	Best Management Practices
Vehicle & Equipment Fueling	Fueling	Spills and leaks during delivery	fuel oil	- Use spill and overflow protection - Minimize run-on of storm water into the fueling area - Cover fueling area - Use dry cleanup methods rather than hosing down area - Implement proper spill prevention control program - Implement adequate preventative maintenance program to preventive tank and line leaks - Inspect fueling areas regularly to detect problems before they occur - Train employees on proper fueling, cleanup, and spill response techniques.
		Spills caused by topping off fuel tanks	fuel oil	
		Hosing or washing down fuel area	fuel oil	
		Leaking storage tanks	fuel oil	
		Rainfall running off fueling area, and rainfall running onto and off fueling area	fuel oil	

The description of the BMPs shall identify the BMPs as (1) existing BMPs, (2) existing BMPs to be revised and implemented, or (3) new BMPs to be implemented. The description shall also include a discussion on the effectiveness of each BMP to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges. The SWPPP shall provide a summary of all BMPs implemented for each pollutant source. This information should be summarized similar to Table B.

Facility operators shall consider the following BMPs for implementation at the facility:

a. Non-Structural BMPs

Non-structural BMPs generally consist of processes, prohibitions, procedures, schedule of activities, etc., that prevent pollutants associated with industrial activity from contacting with storm water discharges and authorized non-storm water discharges. They are considered low technology, cost-effective measures. Facility operators should consider all possible non-structural BMPs options before considering additional structural BMPs (see Section A.8.b. below). Below is a list of non-structural BMPs that should be considered:

i. Good Housekeeping

Good housekeeping generally consist of practical procedures to maintain a clean and orderly facility.

ii. Preventive Maintenance

Preventive maintenance includes the regular inspection and maintenance of structural storm water controls (catch basins, oil/water separators, etc.) as well as other facility equipment and systems.

iii. Spill Response

This includes spill clean-up procedures and necessary clean-up equipment based upon the quantities and locations of significant materials that may spill or leak.

iv. Material Handling and Storage

This includes all procedures to minimize the potential for spills and leaks and to minimize exposure of significant materials to storm water and authorized non-storm water discharges.

v. Employee Training

This includes training of personnel who are responsible for (1) implementing activities identified in the SWPPP, (2) conducting inspections, sampling, and visual observations, and (3) managing storm water. Training should address topics such as spill response, good housekeeping, and material handling procedures, and actions necessary to implement all BMPs identified in the SWPPP. The SWPPP shall identify periodic dates for such training. Records shall be maintained of all training sessions held.

vi. Waste Handling/Recycling

This includes the procedures or processes to handle, store, or dispose of waste materials or recyclable materials.

vii. Recordkeeping and Internal Reporting

This includes the procedures to ensure that all records of inspections, spills, maintenance activities, corrective actions, visual observations, etc., are developed, retained, and provided, as necessary, to the appropriate facility personnel.

viii. Erosion Control and Site Stabilization

This includes a description of all sediment and erosion control activities. This may include the planting and maintenance of vegetation, diversion of run-on and runoff, placement of sandbags, silt screens, or other sediment control devices, etc.

ix. Inspections

This includes, in addition to the preventative maintenance inspections identified above, an inspection schedule of all potential pollutant sources. Tracking and follow-up procedures shall be described to ensure adequate corrective actions are taken and SWPPPs are made.

x. Quality Assurance

This includes the procedures to ensure that all elements of the SWPPP and Monitoring Program are adequately conducted.

b. Structural BMPs

Where non-structural BMPs as identified in Section A.8.a. above are not effective, structural BMPs shall be considered. Structural BMPs generally consist of structural devices that reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges. Below is a list of structural BMPs that should be considered:

i. Overhead Coverage

This includes structures that provide horizontal coverage of materials, chemicals, and pollutant sources from contact with storm water and authorized non-storm water discharges.

ii. Retention Ponds

This includes basins, ponds, surface impoundments, bermed areas, etc. that do not allow storm water to discharge from the facility.

iii. Control Devices

This includes berms or other devices that channel or route run-on and runoff away from pollutant sources.

iv. Secondary Containment Structures

This generally includes containment structures around storage tanks and other areas for the purpose of collecting any leaks or spills.

v. Treatment

This includes inlet controls, infiltration devices, oil/water separators, detention ponds, vegetative swales, etc. that reduce the pollutants in storm water discharges and authorized non-storm water discharges.

9. Annual Comprehensive Site Compliance Evaluation

The facility operator shall conduct one comprehensive site compliance evaluation (evaluation) in each reporting period (July 1-June 30). Evaluations shall be conducted within 8-16 months of each other. The SWPPP shall be revised, as appropriate, and the revisions implemented within 90 days of the evaluation. Evaluations shall include the following:

a. A review of all visual observation records, inspection records, and sampling and analysis results.

b. A visual inspection of all potential pollutant sources for evidence of, or the potential for, pollutants entering the drainage system.

c. A review and evaluation of all BMPs (both structural and non-structural) to determine whether the BMPs are adequate, properly implemented and maintained, or whether additional BMPs are needed. A visual inspection of equipment needed to implement the SWPPP, such as spill response equipment, shall be included.

d. An evaluation report that includes, (i) identification of personnel performing the evaluation, (ii) the date(s) of the evaluation, (iii) necessary SWPPP revisions, (iv) schedule, as required in Section A.10.e, for implementing SWPPP revisions, (v) any incidents of non-compliance and the corrective actions taken, and (vi) a certification that the facility operator is in compliance with this General Permit. If the above certification cannot be provided, explain in the evaluation report why the facility operator is not in compliance with this General Permit. The evaluation report shall be submitted as part of the annual report, retained for at least five years, and signed and certified in accordance with Standard Provisions 9. and 10. of Section C. of this General Permit.

10. *SWPPP General Requirements*

a. The SWPPP shall be retained on site and made available upon request of a representative of the Regional Water Board and/or local storm water management agency (local agency) which receives the storm water discharges.

b. The Regional Water Board and/or local agency may notify the facility operator when the SWPPP does not meet one or more of the minimum requirements of this Section. As requested by the Regional Water Board and/or local agency, the facility operator shall submit an SWPPP revision and implementation schedule that meets the minimum requirements of this section to the Regional Water Board and/or local agency that requested the SWPPP revisions. Within 14 days after implementing the required SWPPP revisions, the facility operator shall provide written certification to the Regional Water Board and/or local agency that the revisions have been implemented.

c. The SWPPP shall be revised, as appropriate, and implemented prior to changes in industrial activities which (i) may significantly increase the quantities of pollutants in storm water discharge, (ii) cause a new area of industrial activity at the facility to be exposed to storm water, or (iii) begin an industrial activity which would introduce a new pollutant source at the facility.

d. Other than as provided in Provisions B.11, B.12, and E.2 of the General Permit, the SWPPP shall be revised and implemented in a timely manner, but in no case more than 90 days after a facility operator determines that the SWPPP is in violation of any requirement(s) of this General Permit.

e. When any part of the SWPPP is infeasible to implement by the deadlines specified in Provision E.2 or Sections A.1, A.9, A.10.c, and A.10.d of this General Permit due to proposed significant structural changes, the facility operator shall submit a report to the Regional Water Board prior to the applicable deadline that (i) describes the portion of the SWPPP that is infeasible to implement by the deadline, (ii) provides justification for a time extension, (iii) provides a schedule for completing and implementing that portion of the SWPPP, and (iv) describes the BMPs that will be implemented in the interim period to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges. Such reports are subject to Regional Water Board approval and/or modifications. Facility operators shall provide written notification to the Regional Water Board within 14 days after the SWPPP revisions are implemented.

f. The SWPPP shall be provided, upon request, to the Regional Water Board. The SWPPP is considered a report that shall be available to the public by the Regional Water Board under Section 308(b) of the Clean Water Act.

SECTION B. MONITORING PROGRAM AND REPORTING REQUIREMENTS

1. *Implementation Schedule*

Each facility operator shall develop a written monitoring program for each facility covered by this General Permit in accordance with the following schedule:

a. Facility operators beginning industrial activities before October 1, 1992 shall develop and implement a monitoring program no later than October 1, 1992. Facility operators beginning operations after October 1, 1992 shall develop and implement a monitoring program when the industrial activities begin.

b. Facility operators that submitted a Notice Of Intent (NOI) pursuant to State Water Resources Control Board (State Water Board) Order No. 91-013-DWQ (as amended by Order No. 92-12) or San Francisco Bay Regional Water Quality Control Board (Regional Water Board) Order No. 92-11 (as amended by Order No. 92-116), shall continue to implement their existing monitoring program and implement any necessary revisions to their monitoring program in a timely manner, but in no case later than August 1, 1997. These facility operators may use the monitoring results conducted in accordance with those expired general permits to satisfy the pollutant/parameter reduction requirements in Section B.5.c., Sampling and Analysis Exemptions and Reduction certifications in Section B.12., and Group Monitoring Sampling credits in B.15.k. For facilities beginning industrial activities after the adoption of this General Permit, the monitoring program shall be developed and implemented when the facility begins the industrial activities.

2. *Objectives*

The objectives of the monitoring program are to:

a. Ensure that storm water discharges are in compliance with the Discharge Prohibitions, Effluent Limitations, and Receiving Water Limitations specified in this General Permit.

b. Ensure practices at the facility to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges are evaluated and revised to meet changing conditions.

c. Aid in the implementation and revision of the SWPPP required by Section A of this General Permit.

d. Measure the effectiveness of best management practices (BMPs) to prevent or reduce pollutants in storm water

discharges and authorized non-storm water discharges. Much of the information necessary to develop the monitoring program, such as discharge locations, drainage areas, pollutant sources, etc., should be found in the Storm Water Pollution Prevention Plan (SWPPP). The facility's monitoring program shall be a written, site-specific document that shall be revised whenever appropriate and be readily available for review by employees or Regional Water Board inspectors.

3. *Non-storm Water Discharge Visual Observations*

a. Facility operators shall visually observe all drainage areas within their facilities for the presence of unauthorized non-storm water discharges;

b. Facility operators shall visually observe the facility's authorized non-storm water discharges and their sources;

c. The visual observations required above shall occur quarterly, during daylight hours, on days with no storm water discharges, and during scheduled facility operating hours[1]. Quarterly visual observations shall be conducted in each of the following periods: January-March, April-June, July-September, and October-December. Facility operators shall conduct quarterly visual observations within 6-18 weeks of each other.

d. Visual observations shall document the presence of any discolorations, stains, odors, floating materials, etc., as well as the source of any discharge. Records shall be maintained of the visual observation dates, locations observed, observations, and response taken to eliminate unauthorized non-storm water discharges and to reduce or prevent pollutants from contacting non-storm water discharges. The SWPPP shall be revised, as necessary, and implemented in accordance with Section A of this General Permit.

4. *Storm Water Discharge Visual Observations*

a. With the exception of those facilities described in Section B.4.d. below, facility operators shall visually

---

[1] "Scheduled facility operating hours" are the time periods when the facility is staffed to conduct any function related to industrial activity, but excluding time periods where only routine maintenance, emergency response, security, and/or janitorial services are performed.

observe storm water discharges from one storm event per month during the wet season (October 1-May 30). These visual observations shall occur during the first hour of discharge and at all discharge locations. Visual observations of stored or contained storm water shall occur at the time of release.

b. Visual observations are only required of storm water discharges that occur during daylight hours that are preceded by at least three (3) working days[2] without storm water discharges and that occur during scheduled facility operating hours.

c. Visual observations shall document the presence of any floating and suspended material, oil and grease, discolorations, turbidity, odor, and source of any pollutants. Records shall be maintained of observation dates, locations observed, observations, and response taken to reduce or prevent pollutants in storm water discharges. The SWPPP shall be revised, as necessary, and implemented in accordance with Section A of this General Permit.

d. Feedlots (subject to Federal effluent limitations guidelines in 40 Code of Federal Regulations [CFR] Part 412) that are in compliance with Sections 2560 to 2565, Article 6, Chapter 15, Title 23, California Code of Regulations, and facility operators with storm water containment facilities shall conduct monthly inspections of their containment areas to detect leaks and ensure maintenance of adequate freeboard. Records shall be maintained of the inspection dates, observations, and any response taken to eliminate leaks and to maintain adequate freeboard.

5. *Sampling and Analysis*

a. Facility operators shall collect storm water samples during the first hour of discharge from (1) the first storm event of the wet season, and (2) at least one other storm event in the wet season. All storm water discharge locations shall be sampled. Sampling of stored or contained storm water shall occur at the time the stored or contained storm water is released. Facility operators that do not collect samples from the first storm event of the wet season are still required to collect samples from two other storm events of the wet season and shall explain in the Annual Report why the first storm event was not sampled.

---

[2] Three (3) working days may be separated by non-working days such as weekends and holidays provided that no storm water discharges occur during the three (3) working days and the non-working days.

b. Sample collection is only required of storm water discharges that occur during scheduled facility operating hours and that are preceded by at least (3) three working days without storm water discharge.

c. The samples shall be analyzed for:

i. Total suspended solids (TSS) pH, specific conductance, and total organic carbon (TOC). Oil and grease (O&G) may be substituted for TOC; and

ii. Toxic chemicals and other pollutants that are likely to be present in storm water discharges in significant quantities. If these pollutants are not detected in significant quantities after two consecutive sampling events, the facility operator may eliminate the pollutant from future sample analysis until the pollutant is likely to be present again; and

iii. Other analytical parameters as listed in Table D (located at the end of this Section). These parameters are dependent on the facility's standard industrial classification (SIC) code. Facility operators are not required to analyze a parameter listed in Table D when the parameter is not already required to be analyzed pursuant to Section B.5.c.i. and ii. or B.6 of this General Permit, and either of the two following conditions are met: (1) the parameter has not been detected in significant quantities from the last two consecutive sampling events, or (2) the parameter is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation of the facilities industrial activities, potential pollutant sources, and SWPPP. Facility operators that do not analyze for the applicable Table D parameters shall certify in the Annual Report that the above conditions have been satisfied.

iv. Other parameters as required by the Regional Water Board.

6. *Facilities Subject to Federal Storm Water Effluent Limitation Guidelines*

Facility operators with facilities subject to Federal storm water effluent limitation guidelines, in addition to the requirements in Section B.5. above, must complete the following:

a. Collect and analyze two samples for any pollutant specified in the appropriate category of 40 CFR Subchapter N. The sampling and analysis exemptions and reductions described in Section B.12. of this General Permit do not apply to these pollutants.

b. Estimate or calculate the volume of storm water discharges from each drainage area;

c. Estimate or calculate the mass of each regulated pollutant as defined in the appropriate category of 40 CFR Subchapter N; and

d. Identify the individual(s) performing the estimates or calculations in accordance with Subsections b. and c. above.

7. *Sample Storm Water Discharge Locations*

a. Facility operators shall visually observe and collect samples of storm water discharges from all drainage areas that represent the quality and quantity of the facility's storm water discharges from the storm event.

b. If the facility's storm water discharges are commingled with run-on from surrounding areas, the facility operator should identify other visual observation and sample collection locations that have not been commingled by run-on and that represent the quality and quantity of the facility's storm water discharges from the storm event.

c. If visual observation and sample collection locations are difficult to observe or sample (e.g., sheet flow, submerged outfalls), facility operators shall identify and collect samples from other locations that represent the quality and quantity of the facility's storm water discharges from the storm event.

d. Facility operators that determine that the industrial activities and BMPs within two or more drainage areas are substantially identical may either (i) collect samples from a reduced number of substantially identical drainage areas, or (ii) collect samples from each substantially identical drainage area and analyze a combined sample from each substantially identical drainage area. Facility operators must document such a determination in the annual report.

8. *Visual Observation and Sample Collection Exceptions*

Facility operators are required to be prepared to collect samples and conduct visual observations at the beginning of the wet season (October 1) and throughout the wet season

until the minimum requirements of Sections B.4. and B.5. are completed with the following exceptions:

a. A facility operator is not required to collect a sample and conduct visual observations in accordance with Section B.4 and Section B.5 due to dangerous weather conditions, such as flooding, electrical storm, etc., when storm water discharges begin after scheduled facility operating hours or when storm water discharges are not preceded by three working days without discharge. Visual observations are only required during daylight hours. Facility operators that do not collect the required samples or visual observations during a wet season due to these exceptions shall include an explanation in the Annual Report why the sampling or visual observations could not be conducted.

b. A facility operator may conduct visual observations and sample collection more than one hour after discharge begins if the facility operator determines that the objectives of this Section will be better satisfied. The facility operator shall include an explanation in the Annual Report why the visual observations and sample collection should be conducted after the first hour of discharge.

9. *Alternative Monitoring Procedures*

Facility operators may propose an alternative monitoring program that meets Section B.2 monitoring program objectives for approval by the Regional Water Board. Facility operators shall continue to comply with the monitoring requirements of this Section and may not implement an alternative monitoring plan until the alternative monitoring plan is approved by the Regional Water Board. Alternative monitoring plans are subject to modification by the Regional Water Boards.

10. *Monitoring Methods*

a. Facility operators shall explain how the facility's monitoring program will satisfy the monitoring program objectives of Section B.2. This shall include:

i. Rationale and description of the visual observation methods, location, and frequency.

ii. Rationale and description of the sampling methods, location, and frequency; and

iii. Identification of the analytical methods and corresponding method detection limits used to detect pollutants in storm water discharges. This shall include justification that the method detection limits are adequate to satisfy the objectives of the monitoring program.

b. All sampling and sample preservation shall be in accordance with the current edition of "Standard Methods for the Examination of Water and Wastewater" (American Public Health Association). All monitoring instruments and equipment (including a facility operator's own field instruments for measuring pH and Electro Conductivity) shall be calibrated and maintained in accordance with manufacturers' specifications to ensure accurate measurements. All laboratory analyses must be conducted according to test procedures under 40 CFR Part 136, unless other test procedures have been specified in this General Permit or by the Regional Water Board. All metals shall be reported as total metals. With the exception of analysis conducted by facility operators, all laboratory analyses shall be conducted at a laboratory certified for such analyses by the State Department of Health Services. Facility operators may conduct their own sample analyses if the facility operator has sufficient capability (qualified employees, laboratory equipment, etc.) to adequately perform the test procedures.

11. *Inactive Mining Operations*
Inactive mining operations are defined in Attachment 1 of this General Permit. Where comprehensive site compliance evaluations, non-storm water discharge visual observations, storm water discharge visual observations, and storm water sampling are impracticable, facility operators of inactive mining operations may instead obtain certification once every three years by a Registered Professional Engineer that an SWPPP has been prepared for the facility and is being implemented in accordance with the requirements of this General Permit. By means of these certifications, the Registered Professional Engineer having examined the facility and being familiar with the provisions of this General Permit shall attest that the SWPPP has been prepared in accordance with good engineering practices. Facility operators of mining operations who cannot obtain a certification because of noncompliance must notify the appropriate Regional Water Board and, upon request, the local agency which receives the storm water discharge.

12. *Sampling and Analysis* Exemptions and Reductions

A facility operator who qualifies for sampling and analysis exemptions, as described below in Section B.12.a.i., or who qualifies for reduced sampling and analysis, as described below in Section B.12.b., must submit the appropriate certifications and required documentation to the Regional Water Boards prior to the wet season (October 1) and recertify as part of the Annual Report submittal. A facility operator that qualifies for either the Regional Water Board or local agency certification programs, as described below in Section B.12.a.ii. and iii., shall submit certification and documentation in accordance with the requirements of those programs. Facility operators who provide certifications in accordance with this Section are still required to comply with all other monitoring program and reporting requirements. Facility operators shall prepare and submit their certifications using forms and instructions provided by the State Water Board, Regional Water Board, or local agency or shall submit their information on a form that contains equivalent information. Facility operators whose facility no longer meets the certification conditions must notify the Regional Water Boards (and local agency) within 30 days and immediately comply with the Section B.5. sampling and analysis requirements. Should a Regional Water Board (or local agency) determine that a certification does not meet the conditions set forth below, facility operators must immediately comply with the Section B.5. sampling and analysis requirements.

a. Sampling and Analysis Exemptions

A facility operator is not required to collect and analyze samples in accordance with Section B.5. if the facility operator meets all of the conditions of one of the following certification programs:

i. No Exposure Certification (NEC)

This exemption is designed primarily for those facilities where all industrial activities are conducted inside buildings and where all materials stored and handled are not exposed to storm water. To qualify for this exemption, facility operators must certify that their facilities meet all of the following conditions:

(1) All prohibited non-storm water discharges have been eliminated or otherwise permitted.

(2) All authorized non-storm water discharges have been identified and addressed in the SWPPP.

(3) All areas of past exposure have been inspected and cleaned, as appropriate.

(4) All significant materials related to industrial activity (including waste materials) are not exposed to storm water or authorized non-storm water discharges.

(5) All industrial activities and industrial equipment are not exposed to storm water or authorized non-storm water discharges.

(6) There is no exposure of storm water to significant materials associated with industrial activity through other direct or indirect pathways such as from industrial activities that generate dust and particulates.

(7) There is periodic re-evaluation of the facility to ensure conditions (1), (2), (4), (5), and (6) above are continuously met. At a minimum, re-evaluation shall be conducted once a year.

ii. Regional Water Board Certification Programs

The Regional Water Board may grant an exemption to the Section B.5. Sampling and Analysis Requirements if it determines a facility operator has met the conditions set forth in a Regional Water Board certification program. Regional Water Board certification programs may include conditions to (1) exempt facility operators whose facilities infrequently discharge storm water to waters of the United States, and (2) exempt facility operators

that demonstrate compliance with the terms and conditions of this General Permit.

iii. Local Agency Certifications

A local agency may develop a local agency certification program. Such programs must be approved by the Regional Water Board. An approved local agency program may either grant an exemption

from the Section B.5. Sampling and Analysis Requirements or reduce the frequency of sampling if it determines that a facility operator has demonstrated compliance with the terms and conditions of this General Permit.

b. Sampling and Analysis Reduction

i. A facility operator may reduce the number of sampling events required to be sampled for the remaining term of this General Permit if the facility operator provides certification that the following conditions have been met:

(1) The facility operator has collected and analyzed samples from a minimum of six storm events from all required drainage areas;

(2) All prohibited non-storm water discharges have been eliminated or otherwise permitted;

(3) The facility operator demonstrates compliance with the terms and conditions of the General Permit for the previous two years (i.e., completed Annual Reports, performed visual observations, implemented appropriate BMPs, etc.);

(4) The facility operator demonstrates that the facility's storm water discharges and authorized non-storm water discharges do not contain significant quantities of pollutants; and

(5) Conditions (2), (3), and (4) above are expected to remain in effect for a minimum of one year after filing the certification.

ii. Unless otherwise instructed by the Regional Water Board, facility operators shall collect and analyze samples from two additional storm events (or one additional storm event when certification filed for the wet season beginning October 1, 2001) during the remaining term of this General Permit in accordance with Table C below. Facility operators shall collect samples of the first

storm event of the wet season. Facility operators that do not collect samples from the first storm event of the wet season shall collect samples from another storm event during the same wet season. Facility operators that do not collect a sample in a required wet season shall collect the sample from another storm event in the next wet season. Facility operators shall explain in the Annual Report why the first storm event of a wet season was not sampled or a sample was not taken from any storm event in accordance with the Table C schedule.

Table C
REDUCED MONITORING SAMPLING SCHEDULE

Facility Operator Filing Sampling Reduction Certification By	Samples Shall be Collected and Analyzed in These Wet Seasons	
	Sample 1	Sample 2
Oct. 1, 1997	Oct. 1, 1997-May 31, 1998	Oct. 1, 1999-May 31, 2000
Oct. 1, 1998	Oct. 1, 1998-May 31, 1999	Oct. 1, 2000-May 31, 2001
Oct. 1, 1999	Oct. 1, 1999-May 31, 2000	Oct. 1, 2001-May 31, 2002
Oct. 1, 2000	Oct. 1, 2000-May 31, 2001	Oct. 1, 2001-May 31, 2002
Oct. 1, 2001	Oct. 1, 2001-May 31, 2002	-

13. *Records*

Records of all storm water monitoring information and copies of all reports (including the Annual Reports) required by this General Permit shall be retained for a period of at least five years. These records shall include:

a. The date, place, and time of site inspections, sampling, visual observations, and/or measurements;

b. The individual(s) who performed the site inspections, sampling, visual observations, and or measurements;

c. Flow measurements or estimates (if required by Section B.6);

d. The date and approximate time of analyses;

e. The individual(s) who performed the analyses;

f. Analytical results, method detection limits, and the analytical techniques or methods used;

g. Quality assurance/quality control records and results;

h. Non-storm water discharge inspections and visual observations and storm water discharge visual observation records (see Sections B.3. and 4.);

i. Visual observation and sample collection exception records (see Section B.5.a, 7.d, 8, and 12.b.ii.);

j. All calibration and maintenance records of on-site instruments used;

k. All Sampling and Analysis Exemption and Reduction certifications and supporting documentation (see Section B.12);

l. The records of any corrective actions and follow-up activities that resulted from the visual observations.

14. *Annual Report*

All facility operators shall submit an Annual Report by July 1 of each year to the Executive Officer of the Regional Water Board responsible for the area in which the facility is located and to the local agency (if requested).

The report shall include a summary of visual observations and sampling results, an evaluation of the visual observation and sampling and analysis results, laboratory reports, the Annual Comprehensive Site Compliance Evaluation Report required in Section A.9., an explanation of why a facility did not implement any activities required by the General Permit (if not already included in the Evaluation Report), and records specified in Section B.13.i. The method detection limit of each analytical parameter shall be included. Analytical results that are less than the method detection limit shall be reported as "less than the method detection limit." The Annual Report shall be signed and certified in accordance with Standard Provisions 9. and 10. of Section C of this General Permit. Facility operators shall prepare and submit their Annual Reports using the annual report forms provided by the State Water Board or Regional Water Board or shall submit their information on a form that contains equivalent information.

15. *Group Monitoring*

Facility operators may participate in group monitoring as described below. A facility operator that participates in group monitoring shall develop and implement a written site-specific SWPPP and monitoring program in accordance with the General Permit and must satisfy any group monitoring requirements. Group monitoring shall be subject to the following requirements:

a. A group monitoring plan (GMP) shall be developed and implemented by a group leader representing a group of

similar facility operators regulated by this General Permit or by a local agency which holds an NPDES permit (local agency permittee) for a municipal separate storm sewer system. GMPs with participants that discharge storm water within the boundaries of a single Regional Water Board shall be approved by that Regional Water Board. GMPs with participants that discharge storm water within the boundaries of multiple Regional Water Boards shall be approved by the State Water Board. The State Water Board and/or Regional Water Board(s) may disapprove a facility's participation in a GMP or require a GMP participant to conduct additional monitoring activities.

b. Each GMP participant shall collect and analyze samples from at least two storm events in accordance with Section B.5. over the five-year period of this General Permit. The two storm event minimum applies to new and existing members. The group leader or local agency permittee shall schedule sampling to meet the following conditions: (i) to evenly distribute the sample collection over the five-year term of this General Permit, and (ii) to collect samples from the two storm events at each participant's facility in different and non-consecutive wet seasons. New participants who join in Years 4 and 5 of this General Permit are not subject to Condition (ii) above. Group leaders shall explain in the annual Group Evaluation Report why any scheduled samples were not collected and reschedule the sampling so that all required samples are collected during the term of this General Permit.

c. The group leader or local agency permittee must have the appropriate resources to develop and implement the GMP. The group leader or local agency permittee must also have the authority to terminate any participant who is not complying with this General Permit and the GMP.

d. The group leader or local agency permittee is responsible for:

   i. Developing, implementing, and revising the GMP;

   ii. Developing and submitting an annual Group Evaluation Report to the State Water Board and/or Regional Water Board by August 1 of each year that includes:

      (1) An evaluation and summary of all group monitoring data,

      (2) An evaluation of the overall performance of the GMP participants in complying with this General Permit and the GMP,

(3) Recommended baseline and site-specific BMPs that should be considered by each participant based upon Items (1) and (2) above, and

(4) A copy of each evaluation report and recommended BMPs as required in Section B.15.d.v. below.

iii. Recommending appropriate BMPs to reduce or prevent pollutants associated with industrial activities in storm water discharges and authorized non-storm water discharges;

iv. Assisting each participant in completing their Annual Comprehensive Site Compliance Evaluation and Annual Report;

v. Conducting a minimum of two on-site inspections of each participant's facility (it is recommended that these inspections be scheduled during the Annual Comprehensive Site Compliance Evaluation) during the term of this General Permit to evaluate the participant's compliance with this General Permit and the GMP, and to recommend any additional BMPs necessary to achieve compliance with this General Permit. Participants that join in Years 4 and 5 shall be scheduled for one evaluation. A copy of the evaluation and recommended BMPs shall be provided to the participants;

vi. Submitting a GMP (or revisions, as necessary), to the appropriate Regional Water Board(s) and State Water Board no later than September 1, 1997 (or August 1 in subsequent years). Once approved, a group leader or local agency permittee shall submit a letter of intent by August 1 of each year to continue the approved GMP. The letter of intent must include a roster of participants, participant's Waste Discharge Identification number (WDID#), updated sampling schedules, and any other revisions to the GMP;

vii. Revising the GMP as instructed by the Regional Water Board or the State Water Board; and

viii. Providing the State Water Board and/or Regional Water Board with quarterly updates of any new or deleted participants and corresponding changes in the sampling and inspection schedule.

e. The GMP shall:

i. Identify the participants of the GMP by name, location, and WDID number;

ii. Include a narrative description summarizing the industrial activities of participants of the GMP and explain why the participants, as a whole, have sufficiently similar industrial activities and BMPs to be covered by a group monitoring plan;

iii. Include a list of typical potential pollutant sources associated with the group participant's facilities and recommended baseline BMPs to prevent or reduce pollutants associated with industrial activity in the storm water discharges and authorized non-storm water discharges;

iv. Provide a five-year sampling and inspection schedule in accordance with Subsections b. and d.v. above.

v. Identify the pollutants associated with industrial activity that shall be analyzed at each participant's facility in accordance with Section B.5. The selection of these pollutants shall be based upon an assessment of each facility's potential pollutant sources and likelihood that pollutants associated with industrial activity will be present in storm water discharges and authorized non-storm water discharges in significant quantities.

f. Sampling and analysis shall be conducted in accordance with the applicable requirements of this Section.

g. Unless otherwise instructed by the Regional Water Board or the State Water Board Executive Director, the GMPs shall be implemented at the beginning of the wet season (October 1).

h. All participants in an approved GMP that have not been selected to sample in a particular wet season are required to comply with all other monitoring program and reporting requirements of this Section including the submittal of an Annual Report by July 1 of each year to the appropriate Regional Water Board.

i. GMP participants subject to Federal storm water effluent limitation guidelines must perform the monitoring described in Section B.6. and submit the results of the monitoring to the appropriate Regional Water Board within the facility operator's Annual Report.

j. GMPs and Group Evaluation Reports should be prepared in accordance with State Water Board (or Regional Water Board) guidance.

k. GMP participants may receive Sampling and Analysis Reduction sampling credit in accordance with the following conditions:

i. Current or prior participants (group participants) of approved GMPs, who have not collected and analyzed samples from six storm events as required in Section B.7.b.i.(1), may substitute credit earned through participation in a GMP for up to four of the six required storm events. Credits for GMP participation shall be calculated as follows:

(1) Credit may only be earned in years of participation where the GMP participant was not scheduled to sample and the GMP was approved.

(2) One credit will be earned for each year of valid GMP participation.

(3) One additional credit may be earned for each year the overall GMP sample collection performance is greater than 75 percent.

ii. GMP participants substituting credit as calculated above shall provide proof of GMP participation and certification that all the conditions in Section B.12.b.i. have been met. GMP participants substituting credit in accordance with Section B.15.k.i.(3) shall also provide GMP sample collection performance documentation.

iii. GMP participants that qualify for Sampling and Analysis Reduction and have already sampled a storm event after October 1, 1997 shall only be required to sample one additional storm event during the remainder of this General Permit in accordance with the "Sample 2" schedule (or "Sample 1" schedule when certification filed for the wet season beginning October 1, 2001) in Table C of this Section.

n. Group leaders shall furnish, within 60 days of receiving a request from the State Water Board or Regional Water Board, any GMP information and documentation necessary to verify the Section B.15.k. sampling credits. Group leaders may also provide this information and documentation to the group participants.

16. *Watershed Monitoring Option*

Regional Water Boards may approve proposals to substitute watershed monitoring for some or all of the requirements of this Section if the Regional Water Board finds that the watershed monitoring will provide substantially similar monitoring information in evaluating facility operator compliance with the requirements of this General Permit.

Section C: STANDARD PROVISIONS

1. Duty to Comply

The facility operator must comply with all of the conditions of this General Permit. Any General Permit noncompliance constitutes a violation of the Clean Water Act (CWA) and the Porter-Cologne Water Quality Control Act and is grounds for (a) enforcement action for (b) General Permit termination, revocation and reissuance, or modification or (c) denial of a General Permit renewal application.

The facility operator shall comply with effluent standards or prohibitions established under Section 307(a) of the CWA for toxic pollutants within the time provided in the regulations that establish these standards or prohibitions, even if this General Permit has not yet been modified to incorporate the requirement.

2. General Permit Actions

This General Permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by the facility operator for a General Permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any General Permit condition.

If any toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is promulgated under Section 307(a) of the CWA for a toxic pollutant which is present in the discharge and that standard or prohibition is more stringent than any limitation on the pollutant in this General Permit, this General Permit shall be modified or revoked and reissued to conform to the toxic effluent standard or prohibition, and the facility operator so notified.

3. Need to Halt or Reduce Activity not a Defense

It shall not be a defense for a facility operator in an enforcement action that it would have been necessary to halt or reduce the general permitted activity in order to maintain compliance with the conditions of this General Permit.

4. Duty to Mitigate

The facility operator shall take all responsible steps to minimize or prevent any discharge in violation of this General Permit which has a reasonable likelihood of adversely affecting human health or the environment.

5. Proper Operation and Maintenance

The facility operator at all times shall properly operate and maintain any facilities and systems of treatment and control (and related appurtenances) which are installed or used by the facility operator to achieve compliance with the conditions of this General Permit and with the requirements of storm water pollution prevention plans (SWPPPs). Proper operation and maintenance also include adequate laboratory controls and appropriate quality assurance procedures. Proper operation and maintenance may require the operation of backup or auxiliary facilities or similar systems installed by a facility operator when necessary to achieve compliance with the conditions of this General Permit.

6. Property Rights

This General Permit does not convey any property rights of any sort, or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor any infringement of Federal, State, or local laws or regulations.

7. Duty to Provide Information

The facility operator shall furnish the Regional Water Quality Control Board (Regional Water Board), State Water Resources Control Board (State Water Board), U.S. Environmental Protection Agency (U.S. EPA), or local storm water management agency, within a reasonable time specified by the agencies, any requested information to determine compliance with this General Permit. The facility operator shall also furnish, upon request, copies of records required to be kept by this General Permit.

8. Inspection and Entry

The facility operator shall allow the Regional Water Board, State Water Board, U.S. EPA, and local storm water management agency, upon the presentation of credentials and other documents as may be required by law, to:

a. Enter upon the facility operator's premises where a regulated facility or activity is located or conducted or where records must be kept under the conditions of this General Permit;

b. Have access to and copy at reasonable times any records that must be kept under the conditions of this General Permit;

c. Inspect at reasonable times any facilities or equipment (including monitoring and control equipment) that are related to or may impact storm water discharge or authorized non-storm water discharge; and

d. Conduct monitoring activities at reasonable times for the purpose of ensuring General Permit compliance.

9. Signatory Requirements

a. All Notices of Intent (NOIs) submitted to the State Water Board shall be signed as follows:

(1) For a corporation: by a responsible corporate officer. For the purpose of this section, a responsible corporate officer means: (a) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation; or (b) the manager of the facility if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;

(2) For a partnership or sole proprietorship: by a general partner or the proprietor, respectively; or

(3) For a municipality, State, Federal, or other public agency: by either a principal executive officer or ranking elected official. The principal executive officer of a Federal agency includes the chief executive officer of the agency or the senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrators of U.S. EPA).

b. All reports, certifications, or other information required by the General Permit or requested by the Regional Water Board, State Water Board, U.S. EPA, or local storm water management agency shall be signed by a person described above or by a duly authorized representative. A person is a duly authorized representative only if:

(1) The authorization is made in writing by a person described above and retained as part of the SWPPP.

(2) The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of manager, operator, superintendent, or position of equivalent responsibility or an individual or position having overall responsibility for named position.)

(3) If an authorization is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization must be attached to the SWPPP prior to submittal of any reports, certifications, or information signed by the authorized representative.

10. Certification

Any person signing documents under Provision 9. above shall make the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

11. Reporting Requirements

a. Planned changes: The facility operator shall give advance notice to the Regional Water Board and local storm water management agency of any planned physical alteration or additions to the general permitted facility. Notice is required under this provision only when the alteration or addition could significantly change the nature or increase the quantity of pollutants discharged.

b. Anticipated noncompliance: The facility operator will give advance notice to the Regional Water Board and local storm water management agency of any planned changes at the permitted facility which may result in noncompliance with General Permit requirements.

c. Compliance schedules: Reports of compliance or noncompliance with or any progress reports on interim and final requirements contained in any compliance schedule of this General Permit shall be submitted no later than 14 days following each scheduled date.

d. Noncompliance reporting: The facility operator shall report any noncompliance at the time monitoring reports are submitted. The written submission shall contain (1) a description of the noncompliance and its cause; (2) the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and (3) steps taken or planned to reduce and prevent recurrence of the noncompliance.

12. Oil and Hazardous Substance Liability

Nothing in this General Permit shall be construed to preclude the institution of any legal action or relieve the facility operator from any responsibilities, liabilities, or penalties to which the facility operator is or may be subject under Section 311 of the CWA.

13. Severability

The provisions of this General Permit are severable; and if any provision of this General Permit or the application of any provision of this General Permit to any circumstance is held invalid, the application of such provision to other circumstances and the remainder of this General Permit shall not be affected thereby.

14. Reopener Clause

This General Permit may be modified, revoked, and reissued, or terminated for cause due to promulgation of amended regulations, receipt of U.S. EPA guidance concerning regulated activities, judicial decision, or in accordance with 40 CFR 122.62, 122.63, 122.64, and 124.5. This General Permit may be reopened to modify the provisions regarding authorized non-storm water discharges specified in Section D. Special Conditions.

15. Penalties for Violations of General Permit Conditions.

a. Section 309 of the CWA provides significant penalties for any person who violates a General Permit condition

implementing Sections 301, 302, 306, 307 308, 318, or 405 of the CWA, or any General Permit condition or limitation implementing any such section in a General Permit issued under Section 402. Any person who violates any General Permit condition of this General Permit is subject to a civil penalty not to exceed $25,000 per day of such violation, as well as any other appropriate sanction provided by Section 309 of the CWA.

b. The Porter-Cologne Water Quality Control Act also provides for civil and criminal penalties in some cases greater than those under the CWA.

16. Availability

A copy of this General Permit shall be maintained at the facility and be available at all times to the appropriate facility personnel and to Regional Water Board and local agency inspectors.

17. Transfers

This General Permit is not transferable from one facility operator to another facility operator nor may it be transferred from one location to another location. A new facility operator of an existing facility must submit an NOI in accordance with the requirements of this General Permit to be authorized to discharge under this General Permit.

18. Continuation of Expired General Permit

This General Permit continues in force and effect until a new general permit is issued or the State Water Board rescinds the General Permit. Facility operators authorized to discharge under the expiring general permit are required to file an NOI to be covered by the reissued General Permit.

19. Penalties for Falsification of Reports

Section 309(c)(4) of the CWA provides that any person who knowingly makes any false material statement, representation, or certification in any record or other document submitted or required to be maintained under this General Permit, including reports of compliance or noncompliance shall, upon conviction, be punished by a fine of not more than $10,000 or by imprisonment for not more than two years, or by both.

Attachment 1

FACILITIES COVERED BY THIS GENERAL PERMIT

Industrial facilities include Federal, State, municipally owned, and private facilities from the following categories:

1. FACILITIES SUBJECT TO STORM WATER EFFLUENT LIMITATIONS GUIDELINES, NEW SOURCE PERFORMANCE STANDARDS, OR TOXIC POLLUTANT EFFLUENT STANDARDS (40 Code of Federal Regulations (CFR) SUBCHAPTER N). Currently, categories of facilities subject to storm water effluent limitations guidelines are Cement Manufacturing (40 CFR Part 411), Feedlots (40 CFR Part 412), Fertilizer Manufacturing (40 CFR Part 418), Petroleum Refining (40 CFR Part 419), Phosphate Manufacturing (40 CFR Part 422), Steam Electric (40 CFR Part 423), Coal Mining (40 CFR Part 434), Mineral Mining and Processing (40 CFR Part 436), Ore Mining and Dressing (40 CFR Part 440), and Asphalt Emulsion (40 CFR Part 443).

2. MANUFACTURING FACILITIES: Standard Industrial Classifications (SICs) 24 (except 2434), 26 (except 265 and 267), 28 (except 283 and 285) 29, 311, 32 (except 323), 33, 3441, and 373.

3. OIL AND GAS/MINING FACILITIES: SICs 10 through 14 including active or inactive mining operations (except for areas of coal mining operations meeting the definition of a reclamation area under 40 CFR 434.11(l) because of performance bond issued to the facility by the appropriate Surface Mining Control and Reclamation Act (SMCRA) authority has been released, or except for area of non-coal mining operations which have been released from applicable State or Federal reclamation requirements after December 17, 1990); oil and gas exploration, production, processing, or treatment operations; or transmission facilities that discharge storm water contaminated by contact with or that has come into contact with any overburden, raw material, intermediate products, finished products, by-products, or waste products located on the site of such operations. Inactive mining operations are mined sites that are not being actively mined but which have an identifiable facility operator. Inactive mining sites do not include sites where mining claims are being maintained prior to disturbances associated with the extraction, beneficiation, or processing of mined material; or sites where minimal activities are undertaken for the sole purpose of maintaining a mining claim.

4. HAZARDOUS WASTE TREATMENT, STORAGE, OR DISPOSAL FACILITIES: Includes those operating under interim status or a general permit under Subtitle C of the Federal Resource, Conservation, and Recovery Act (RCRA).

5. LANDFILLS, LAND APPLICATION SITES, AND OPEN DUMPS: Sites that receive or have received industrial waste from any of

the facilities covered by this General Permit, sites subject to regulation under Subtitle D of RCRA, and sites that have accepted wastes from construction activities (construction activities include any clearing, grading, or excavation that results in disturbance of five acres or more).

6. RECYCLING FACILITIES: SICs 5015 and 5093. These codes include metal scrapyards, battery reclaimers, salvage yards, motor vehicle dismantlers and wreckers, and recycling facilities that are engaged in assembling, breaking up, sorting, and wholesale distribution of scrap and waste material such as bottles, wastepaper, textile wastes, oil waste, etc.

7. STEAM ELECTRIC POWER GENERATING FACILITIES: Includes any facility that generates steam for electric power through the combustion of coal, oil, wood, etc.

8. TRANSPORTATION FACILITIES: SICs 40, 41, 42 (except 4221-25), 43, 44, 45, and 5171 which have vehicle maintenance shops, equipment cleaning operations, or airport deicing operations. Only those portions of the facility involved in vehicle maintenance (including vehicle rehabilitation, mechanical repairs, painting, fueling, and lubrication) or other operations identified herein that are associated with industrial activity.

9. SEWAGE OR WASTEWATER TREATMENT WORKS: Facilities used in the storage, treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated to the disposal of sewage sludge that are located within the confines of the facility with a design flow of one million gallons per day or more or required to have an approved pretreatment program under 40 CFR Part 403. Not included are farm lands, domestic gardens, or lands used for sludge management where sludge is beneficially reused and which are not physically located in the confines of the facility, or areas that are in compliance with Section 405 of the Clean Water Act.

10. MANUFACTURING FACILITIES WHERE INDUSTRIAL MATERIALS, EQUIPMENT, OR ACTIVITIES ARE <u>EXPOSED</u> TO STORM WATER: SICs 20, 21, 22, 23, 2434, 25, 265, 267, 27, 283, 285, 30, 31 (except 311), 323, 34 (except 3441), 35, 36, 37 (except 373), 38, 39, and 4221-4225.

Attachment 2

STORM WATER CONTACTS FOR THE STATE AND REGIONAL WATER BOARDS

See Storm Water Contacts at:
http://www.waterboards.ca.gov/stormwtr/contact.html

NOTICE OF INTENT (NOI) INSTRUCTIONS

TO COMPLY WITH STATE WATER RESOURCES CONTROL BOARD WATER QUALITY ORDER NO. 97-03-DWQ NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) GENERAL PERMIT NO. CAS000001

Who Must Submit

The facility operator must submit an NOI for each industrial facility that is required by U.S. Environmental Protection Agency (U.S.EPA) regulations to obtain a storm water permit. The required industrial facilities are listed in Attachment 1 of the General Permit and are also listed in 40 Code of Federal Regulations Section 122.26(b)(14).

The facility operator is typically the owner of the business or operation where the industrial activities requiring a storm water permit occur. The facility operator is responsible for all permit related activities at the facility.

Where operations have discontinued and significant materials remain on site (such as at closed landfills), the landowner may be responsible for filing an NOI and complying with this General Permit. Landowners may also file an NOI for a facility if the landowner, rather than the facility operator, is responsible for compliance with this General Permit.

How and Where to Apply

The completed NOI form, a site map, and appropriate fee must be mailed to the State Water Resources Control Board (State Water Board) at the following address:

State Water Resources Control Board
Division of Water Quality
P.O. Box 1977
Sacramento, CA 95812-1977
Attn: Storm Water Permitting Unit

Please Note: Do not send the original or copies of the NOI submittal to the Regional Water Quality Control Board (Regional Water Board). The original NOI will be forwarded to the Regional Water Board after processing.

Do not send a copy of your Storm Water Pollution Prevention Plan (SWPPP) with your NOI submittal. Your SWPPP is to be kept on site and made available for review upon request.

When to Apply

Facility operators of existing facilities must file an NOI in accordance with these instructions by March 30, 1992. Facility

operators of new facilities (those beginning operations after March 30, 1992) must file an NOI in accordance with these instructions at least 14 days prior to the beginning of operations.

Once the completed NOI, site map, and appropriate fee have been submitted to the State Water Board, your NOI will be processed and you will be issued a receipt letter with a Waste Discharge Identification (WDID) Number. Please refer to this number when you contact either the State or Regional Water Boards.

Fees

The total annual fee is $830. Checks should be made payable to: SWRCB

Change of Information

If the information provided on the NOI or site map changes, you should report the changes to the State Water Board using an NOI form. Section I of the line-by-line instructions includes information regarding changes to the NOI.

Questions

If you have any questions completing the NOI, please call the appropriate Regional Water Board (Attachment 2) or the State Water Board at (916) 341-5538.

NOI LINE-BY-LINE INSTRUCTIONS

Please type or print your responses on the NOI. Please complete the NOI form in its entirety and sign the certification.

Section I--NOI STATUS

Check box "A" if this is a new NOI registration.

Check box "B" if you are reporting changes to the NOI (e.g., new contact person, phone number, mailing address). Include the facility WDID #. Highlight all the information that has been changed.

Please note that a change of information **does not** apply to a change of facility operator or a change in the location of the facility. These changes require a Notice of Termination (NOT) and submittal of a new NOI and annual fee. Contact the State Water Board or Regional Water Boards for more information on the NOT Form and instructions.

Regardless of whether you are submitting a new or revised NOI, you must complete the NOI in its entirety and the NOI must be signed.

Section II--Facility Operator Information

Part A: The facility operator is the legal entity that is responsible for all permit related compliance activities at the facility. In most cases, the facility operator is the owner of the business or operation where the industrial activity occurs. Give the legal name and the address of the person, firm, public organization, or any other entity that is responsible for complying with the General Permit.

Part B: Check the box that indicates the type of operation.

Section III--Facility Site Information

Part A: Enter the facility's official or legal name and provide the address. Facilities that do not have a street address must provide cross-streets or parcel numbers. Do not include a P.O. Box address in Part A.

Part B: Enter the mailing address of the facility if different than Part A. This address may be a P.O. Box.

The contact person should be the plant or site manager who is familiar with the facility and responsible for overseeing compliance of the General Permit requirements.

Part C: Enter the total size of the facility in either acres or square feet. Also include the percentage of the site that is impervious (areas that water cannot soak into the ground, such as concrete, asphalt, and rooftops).

Part D: Determine the Standard Industrial Classification (SIC) code which best identifies the industrial activity that is taking place at the facility. This information can be obtained by referring to the Standard Industrial Classification Manual prepared by the Federal Office of Management and Budget which is available at public libraries. The code you determine should identify the industrial activity that requires you to submit the NOI. (For example, if the business is high school education and the activity is school bus maintenance, the code you choose would be bus maintenance, not education.) Most facilities have only one code; however, additional spaces are provided for those facilities that have more than one activity.

Part E: Identify the title of the industrial activity that requires you to submit the NOI (e.g., the title of SIC Code 2421 is Sawmills and Planing Mills, General). If you cannot identify the title, provide a description of the regulated activity(s).

Section IV--Address for Correspondence

Correspondence relative to the permit will be mailed occasionally. Check the box which indicates where you would like such correspondence delivered. If you want correspondence sent to another contact person or address different than indicated in Section II or Section III then include the information on an extra sheet of paper.

Section V--Billing Address Information

To continue coverage under the General Permit, the annual fee must be paid. Use this section to indicate where the annual fee invoices should be mailed. Enter the billing address if different than the address given in Sections II or III.

Section VI--Receiving Water Information

Provide the name of the receiving water where storm water discharge flows from your facility. A description of each option is included below.

1. Directly to waters of the United States: Storm water discharges directly from the facility to a river, creek, lake, ocean, etc. Enter the name of the receiving water (e.g., Boulder Creek).

2. Indirectly to waters of the United States: Storm water discharges over adjacent properties or right-of-ways prior to discharging to waters of the United States. Enter the name of the closest receiving water (e.g., Clear Creek).

Section VII--Implementation of Permit Requirements

Parts A and B: Check the boxes that best describe the status of the Storm Water Pollution Prevention Plan (SWPPP) and the Monitoring Program.

Part C: Check yes or no to questions 1 through 4. If you answer no to any question, you need to assign a person to these tasks immediately.

As a permit holder you are required to have an SWPPP and Monitoring Program in place prior to the beginning of facility operations. Failure to do so is in direct violation of the General Permit. Do not send a copy of your SWPPP with your NOI submittal.

Please refer to Sections A and B of the General Permit for additional information regarding the SWPPP and Monitoring Program.

Section VIII--Site Map

Provide a "to scale" drawing of the facility and its immediate surroundings. Include as much detail about the site as possible. At a minimum, indicate buildings, material handling and storage areas, roads, names of adjacent streets, storm water discharge points, sample collection points, and a north arrow. Whenever

possible limit the map to a standard size sheet of paper (8.5" x 11" or 11" x 17"). **Do not send blueprints** unless you are sending one page and it meets the size limits as defined above.

A location map may also be included, especially in cases where the facility is difficult to find, but are not to be submitted as a substitute for the site map. The location map can be created from local street maps and U.S. Geological Survey (USGS) quadrangle maps, etc.

A revised site map must be submitted whenever there is a significant change in the facility layout (e.g., new building, change in storage locations, boundary change, etc.).

Section IX--Certification

This section should be read by the facility operator. The certification provides assurances that the NOI and site map were completed by the facility operator in an accurate and complete fashion and with the knowledge that penalties exist for providing false information. It also requires the Responsible Party to certify that the provisions in the General Permit will be complied with.

The NOI must be signed by:

For a Corporation: a responsible corporate officer (or authorized individual).

For a Partnership or Sole Proprietorship: a general partner or the proprietor, respectively.

For a Municipality, State, or other non-Federal Public Agency: either a principal executive officer or ranking elected official.

For a Federal Agency: either the chief or senior executive officer of the agency.

DEFINITIONS

1. "Best Management Practices" ("BMPs") means schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of waters of the United States. BMPs also include treatment measures, operating procedures, and practices to control facility site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage. BMPs may include any type of pollution prevention and pollution control measure necessary to achieve compliance with this General Permit.

2. Clean Water Act (CWA) means the Federal Water Pollution Control Act enacted by Public Law 92-500 as amended by Public Laws 95-217, 95-576, 96-483, and 97-117; 33 USC. 1251 et seq.

3. "Facility" is a collection of industrial processes discharging storm water associated with industrial activity within the property boundary or operational unit.

4. "Non-Storm Water Discharge" means any discharge to storm sewer systems that is not composed entirely of storm water.

5. "Significant Materials" includes, but is not limited to: raw materials; fuels; materials such as solvents, detergents, and plastic pellets; finished materials such as metallic products; raw materials used in food processing or production; hazardous substances designated under Section 101(14) of Comprehensive Environmental Response, Compensation, and Liability Act (CERLCA); any chemical the facility is required to report pursuant to Section 313 of Title III of Superfund Amendments and Reauthorization Act (SARA); fertilizers; pesticides; and waste products such as ashes, slag, and sludge that have the potential to be released with storm water discharges.

6. "Significant Quantities" is the volume, concentrations, or mass of a pollutant that can cause or threaten to cause pollution, contamination, or nuisance; adversely impact human health or the environment; and/or cause or contribute to a violation of any applicable water quality standards for the receiving water.

7. "Significant Spills" includes, but is not limited to: releases of oil or hazardous substances in excess of reportable quantities under Section 311 of the CWA (see 40 CFR 110.10 and 117.21) or Section 102 of CERCLA (see 40 CFR 302.4).

8. "Storm water" means storm water runoff, snow melt runoff, and storm water surface runoff and drainage. It excludes infiltration and runoff from agricultural land.

9. "Storm Water Associated with Industrial Activity" means the discharge from any conveyance which is used for collecting and conveying storm water and which is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant. The term does not include discharges from facilities or activities excluded from the NPDES program. For the facilities identified in Categories 1 through 9 of Attachment 1 of this General Permit, the term includes, but is not limited to, storm water discharges from industrial plant yards; immediate access roads and rail lines used or traveled by carriers of raw materials; manufactured products, waste material, or by-products used or created by the facility; material handling sites; refuse sites; sites used for the application or disposal of process wastewaters (as defined at 40 CFR Part 401); sites used for the storage and maintenance of material handling equipment; sites used for residual treatment, storage, or disposal; shipping and receiving areas; manufacturing buildings; storage areas (including tank farms) for raw materials, and intermediate and finished products; and areas where industrial activity has taken place in the past and significant materials remain and are exposed to storm water.

   For the facilities identified in Category 10 of Attachment 1 of this General Permit, the term only includes storm water discharges from all areas listed in the previous sentence where material handling equipment or activities, raw materials, intermediate products, final products, waste materials, by-products, or industrial machinery <u>are exposed to storm water</u>.

   Material handling activities include the: storage, loading and unloading, transportation, or conveyance of any raw material, intermediate product, finished product, by-product, or waste product. The term excludes areas located on plant lands separate from the plant's industrial activities, such as office buildings and accompanying parking lots as long as the drainage from the excluded areas is not mixed with storm water drained from the above described areas. Industrial facilities (including industrial facilities that are federally, State, or municipally owned or operated that meet the description of the facilities listed in this paragraph) include those facilities designated under 40 CFR 122.26(a)(1)(v).

REFER TO FILE. WM-9

January 31, 2001

Mr. Dennis A. Dickerson, Executive Officer
California Regional Water Quality
Control Board - Los Angeles Region
320 West Fourth Street, Suite 200
Los Angeles, CA 90013-1105

RECEIVED
2001 JAN 31 A 10:36
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD

Dear Mr. Dickerson:

REPORT OF WASTE DISCHARGE FOR MUNICIPAL STORMWATER AND URBAN RUNOFF DISCHARGES IN THE COUNTY OF LOS ANGELES (ORDER NO. 96-054, NPDES NO. CAS614001)

Enclosed is the Report of Waste Discharge for the Los Angeles River, San Gabriel River, Dominguez Channel, Ballona Creek, and Malibu Creek Watersheds in Los Angeles County.

The Report consists of the following components:

- Permit Application
- Performance Standards
- Watershed Management Area Plans

We look forward to working with your staff to expedite the approval process of the Report. I have directed my staff to work with the Regional Water Quality Control Board in making any necessary modifications.

If you have any additional questions, please contact Mr. Mustafa Ariki at (626) 458-5948, Monday through Thursday, 7:30 a.m. to 6 p.m.

Very truly yours,

HARRY W. STONE
Director of Public Works

BRIAN T. SASAKI
Deputy Director

R0000008

Permittee shall submit reports to the Executive Officer on the progress made under the SPCA. The frequency of the progress report submittal shall be quarterly unless otherwise prescribed by the Executive Officer. Failure to comply with the terms and conditions of the SPCA shall constitute a violation of this Order and shall be a cause for enforcement action by the Regional Board; and,

d. The Executive Officer shall not take enforcement action against a Permittee until the Executive Officer has notified the Permittee in writing that the Administrative Review Process has been exhausted and that the Executive Officer has determined that a violation exists and it warrants enforcement.

H. Legal Authority

1. Permittees shall possess the necessary legal authority to prohibit non-stormwater discharges, to the maximum extent practicable, to the storm drain system, including, but not limited to:

a. A prohibition on illicit discharges and illicit connections and a requirement for removal of illicit connections;

i. Prohibit the discharge of wash waters to the MS4 from the cleaning of gas stations, auto repair garages, or other types of automotive service facilities;

ii. Prohibit the discharge of runoff to the MS4 from mobile auto washing, steam cleaning, mobile carpet cleaning, and other such mobile commercial and industrial operations;

iii. Prohibit the discharge of runoff to the MS4 from areas where repair of machinery and equipment which are visibly leaking oil, fluid or antifreeze, is undertaken;

iv. Prohibit the discharge of runoff to the MS4 from storage areas of materials containing grease, oil, or other hazardous substances, and uncovered receptacles containing hazardous materials, unless such containers are new and unopened with a visibly clean exterior;

v. Prohibit the discharge of chlorinated swimming pool water and filter backwash to the MS4;

vi. Prohibit the discharge of runoff from the washing of toxic

materials to the MS4;

vii. Prohibit washing impervious surfaces in industrial/commercial areas that results in a discharge of runoff to the MS4; and

viii. Prohibit the discharge from washing out concrete trucks, pumps, tools, and equipment to the MS4.

b. Control spills, dumping, or disposal of materials into the MS4, such as;

i. Litter, landscape debris and construction debris;

ii. Any state or federally banned pesticide, fungicide or herbicide;

iii. Food wastes; and

iv. Fuel and chemical wastes, animal wastes, garbage, batteries, and other materials that have potential adverse impacts on water quality.

c. A requirement for compliance with conditions in ordinances, permits, contracts, or orders; and,

d. The ability to carry out all inspection, surveillance and monitoring procedures, within the Permitttee's legal jurisdiction, necessary to determine compliance and non-compliance with permit conditions, including the prohibition of illicit discharges to the MS4.

I. Annual Stormwater Program Report, Assessment, and Budget Summary

1. The Discharger shall submit, by October 15 of each year beginning the Year 2002, an Annual Stormwater Program Report, Assessment, and Budget Summary documenting the status of the general program and individual tasks contained in the WMAPs, in accordance with the requirements identified in the Monitoring and Reporting Program Part I.A of this order. The Annual Stormwater Program Report, Assessment, and Budget Summary shall cover the previous fiscal year from July 1 through June 30, and shall include the information necessary to assess the Discharger's compliance status relative to this Order, and the effectiveness of implementation of permit requirements on stormwater quality. The Annual Stormwater Program Report, Assessment, and Budget Summary shall include any proposed changes to the WMAPs.

PART 4. SPECIAL PROVISIONS

Requirements of the permit shall take effect 60 days from permit adoption provided the US EPA Regional Administrator has no objections unless new permit requirements require additional resources and budgeting, wherein effective date will be 90 days after the next budget cycle.

Implementation Plans for any future watershed based requirement modifications, will be formulated and added to the SQMP at that time.

All requirements listed in the SQMP are to be applied. The following special provisions were either extracted from the SQMP or are additional requirements and are only presented hereafter for emphasis because of their importance.

A. Public Information and Participation

1. Programs for the General Public

a. The 888-CLEAN-LA hotline will serve as the general public reporting contact for reporting clogged catch basin inlets and illicit discharges/dumping, and general stormwater management information. Each Permittee may establish its own hotline if preferred. Permittees shall include this information, updated when necessary, in public information, and the government pages of the telephone book as they are developed/published.

b. Permittees shall mark storm drain inlets with a legible "no dumping" message. In addition, signs with language prohibiting illegal dumping must be posted at designated public access points to creeks, other relevant water bodies, and channels under Permittee's jurisdiction.

c. Each Permittee shall conduct educational activities within its jurisdiction and participate in countywide events to the extent possible.

d. Each Permittee shall distribute outreach materials to the general public and school children at appropriate public counters and events. Outreach material shall include information such as proper disposal of litter, green waste, and pet waste, proper vehicle maintenance techniques, proper lawn care, and water conservation practices.

2 Programs for Industrial/Commercial Businesses

a. Permittees shall implement an industrial/commercial educational site

visit program.

b. Permittees shall visit automotive service and food service facilities as outlined in the SQMP in its jurisdiction once every two years. During site visits, Permittees shall:

i. Consult with a representative of the facility to explain applicable stormwater regulations;

ii. Distribute and discuss applicable BMP and educational materials; and,

iii. Conduct a site walk-through to verify for, at a minimum, evidence of BMP implementation.

c. Permittees shall revisit automotive and food service facilities where evidence of illicit discharge is found within six months of the date of the initial visit. If necessary, Permittees will begin enforcement action to remove sources of illicit discharges.

d. Based on Pollutants of Concern source identification, additional target businesses may be identified to be included in the site visit program. Each Permittee shall visit a maximum of 125 such businesses twice during the term of this permit. Permittees shall report on the types and proposed actions to be taken in regard to the additional target businesses in annual reports.

e. Permittees shall provide an annual update of the visited automotive service, food service, and other targeted facilities to the Regional Board in the annual report. The database shall include at a minimum; facility name, site address, applicable SIC code(s), and NPDES stormwater permit coverage.

f. Permittees shall train their employees in targeted positions (whose jobs or activities directly affect stormwater quality, or those who respond to questions from the public), including inspection staff, on the requirements of the SQMP within one year from the date of the permit adoption, and annually thereafter, as necessary.

B. Programs for Development Planning

1. The Discharger shall implement the approved Standard Urban Stormwater Mitigation Plan (SUSMP) (See SQMP, Development Planning). The SUSMP addresses conditions and requirements for discretionary development and

redevelopment projects. Appropriate elements of the SUSMP will be included as project requirements.

2. Permittees shall make appropriate modifications to their internal planning procedures for preparing/reviewing CEQA documents, and for linking stormwater quality mitigation conditions to legal discretionary project approvals.

3. Permittees shall train their employees in targeted positions (whose jobs or activities are engaged in development planning) on the requirements of the SUSMP within one year from the date of the permit adoption, and annually thereafter, as necessary.

4. The Permittee shall include watershed and stormwater management considerations in the appropriate elements of the Permittee's General Plan whenever these elements are significantly rewritten. Appropriate elements include, but are not limited to, water quality protection, development goals and policies, open space goals and policies, preservation of and integration with natural features, and water conservation policies.

C. Programs for Development Construction

1. Permittees shall require the preparation, submittal, and implementation of a Local Stormwater Pollution Prevention Plan (Local SWPPP) prior to issuance of a grading permit for priority construction projects unless the project falls under the requirements of the State's General Construction Activities Permit.

2. Permittees shall prepare and implement a Local SWPPP on Permittee's construction projects, as required in Part 4.C.1.

3. The Local SWPPP shall include appropriate construction site BMPs selected from documents such as the California Stormwater BMP Handbook, the Caltrans Stormwater Quality Handbook, EPA database and American Society of Civil Engineers (ASCE) database. In addition, Permittees shall ensure the following minimum requirements are met, to the maximum extent practicable, at construction sites regardless of size:

   a. Sediments generated on the project site shall be retained using structural drainage controls;

   b. Construction-related materials, wastes, spills, or residues shall be retained on project sites;

   c. Non-stormwater runoff from equipment and vehicle washing and any

other activity shall be contained at project sites;

d. Erosion from slopes and channels will be minimized, by implementing BMPs, including, but not limited to, limiting grading scheduled during the wet season, inspecting graded areas during rain events, planting and maintaining of vegetation on slopes, and covering slopes susceptible to erosion.

4. Local SWPPPs must include the rationale used for selecting or rejecting BMPs. The project architect, engineer of record, or authorized qualified designee, must sign a statement on the submitted Local SWPPP to the effect:

"As the architect/engineer of record, I have selected appropriate BMPs to effectively minimize the negative impacts of this project's construction activities on stormwater quality. The project owner and contractor are aware that the selected BMPs must be installed, monitored, and maintained to ensure their effectiveness. The BMPs not selected for implementation are redundant or deemed not applicable to the proposed construction activities."

The landowner shall sign a statement to the effect:

"I certify that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete. I am aware that submitting false and/or inaccurate information, failing to update the Local SWPPP to reflect correct conditions, or failing to properly and/or adequately implement the Local SWPPP may result in revocation of grading and/or other permits or other sanctions provided by law."

The Local SWPPP certification shall be signed by the landowner as follows:

i. For a corporation: by a responsible corporate officer which means (a) a president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or (b) the manager of the construction activity if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;

ii. For a partnership or sole proprietorship: by a general partner or the proprietor; or

iii. For a municipality or other public agency: by an elected official, a ranking management official (e.g., County Administrative Officer, City Manager, Director of Public Works, District Engineer, City Engineer, District Manager), or the manager of the construction activity if authority to sign stormwater quality plans has been assigned or delegated to the manager in accordance with established agency policy.

5. Permittees shall require proof of filing a Notice of Intent for coverage under the State General Construction Activity Stormwater Permit and a State SWPPP prior to issuing a grading permit for all projects requiring coverage under the state general permit.

6. Permittees shall inspect sites with Local SWPPP and Wet Weather Erosion Control Plan (WWECP) for stormwater quality requirements during routine inspection a minimum of once during the wet season. For inspected sites that have not adequately implemented their local SWPPP, a follow-up inspection to ensure compliance will take place within 2 weeks.

7. Permittees shall discuss stormwater controls and provide stormwater control educational materials targeted to the construction community when requested by the public and/or inspectors.

8. Permittees shall train employees in targeted positions (whose jobs or activities are engaged in construction activities including construction inspection staff) on the requirements of the SQMP within one year from the date of adoption of the permit, and annually thereafter, as necessary.

D. Public Agency Activities

Corporation Yards

1. Permittees shall prohibit the discharge of untreated stormwater runoff to the storm drain system from toxic or hazardous material storage areas no later than one year from the adoption of the permit, where practicable.

2. Permittees shall prohibit the discharge of untreated stormwater runoff to the storm drain system from new fueling areas and new repair/maintenance areas for vehicle maintenance and repair facilities no later than one year from the adoption of the permit.

8. There shall be no application of pesticides or fertilizers during a rain event that results in runoff.

   Permittees shall ensure that staff applying pesticides are either certified by the California Department of Food and Agriculture, or are under the direct supervision of a certified pesticide applicator.

9. Permittees shall train their employees in targeted positions (whose jobs and activities affect stormwater quality) regarding the requirements of the SQMP within one year from the adoption of the permit, and annually thereafter, as necessary.

10. Permittees shall conduct trash collection along, or in improved open channels within their jurisdiction.

11. The Discharger shall encourage the establishment of voluntary programs for the collection of trash in natural stream channels.

E. Programs for Illicit Connections and Illicit Discharges

1. Refer to Part 1.A.2. for conditions of illicit discharges.

2. Permittees shall investigate the cause, determine the nature and estimated amount of reported illicit discharge/dumping incidents, and refer documented non-stormwater discharges/connections or dumping to an appropriate agency for investigation, containment and cleanup. If the source of the illicit discharge has been identified, appropriate action including issuance of an enforcement order that will result in cessation of the illicit discharge, and/or elimination of the illicit connection, shall take place after the Permittee gains knowledge of the discharge/connection.

3. Each Permitee shall train its employees in targeted positions, as defined by the SQMP, on how to identify and report illicit discharges within one year from the date of the permit adoption, and annually thereafter, as necessary.

4. Automotive, food facility, construction and Permittee facility site visits shall include distribution of educational material that describes illicit discharges and provides a contact number for reporting illicit discharges.

5. New information developed for Phase I industrial facility educational material shall include information describing illicit discharges. The information shall include: types of discharges prohibited. how to prevent illicit discharges. what to do in the event of an illicit discharge, and the array of enforcement action the facility may be subjected to, including penalties that can be assessed.

FEBRUARY 2001

R0000248

The objectives of this program component are to:

- Select and incorporate appropriate construction control measures for stormwater quality management from construction sites.
- Conduct and inspection program, including enforcement procedures as necessary, to verify that the construction control measures are implemented and performed effectively throughout the construction period.

Vehicle Maintenance / Material Storage Facilities Management

This program component is applicable to all Permittees who own and operate vehicle maintenance or materials storage facilities. Activities at these facilities may generate waste, spills and leaks that could potentially reach the storm drain system and receiving waters. The goal of this program is to make stormwater quality a consideration when conducting activities at municipal facilities.

The objectives of this program component are to:

- Identify and evaluate sources of pollutants from public vehicle maintenance/material storage facilities that may affect the quality of stormwater discharge from the facility.
- Identify and implement site-specific best management practices to reduce or prevent pollutants in stormwater discharges.

Landscape and Recreational Facilities Management

This program component is applicable to all Permittees who own and operate recreational facilities. Maintenance practices at parks and recreation facilities generally include fertilizer and pesticide applications, vegetation maintenance and disposal, swimming pool chemical maintenance and draining, and trash and debris management. All of these activities have the potential to contribute pollutants to the storm drain system. If improperly managed, potential pollutants can be transported in runoff (stormwater and non-stormwater discharges) to the storm drain system and subsequently to receiving waters. The goal of the program for landscape and recreational facilities management is to make the stormwater quality a consideration when conducting operation and maintenance activities.

The objectives of this program component are to:

- Minimize the discharge of pesticides, herbicides and fertilizers to the storm drain system and receiving waters.
- Prevent the disposal of landscape waste into the storm drain system.
- Minimize the trash, debris and other pollutants from entering Permitee-owned recreational water bodies.
- Discharge municipal swimming pool water in a manner that will not contribute pollutants to receiving waters.

R0000256

Storm Drain Operation and Management

The storm drain system functions primarily to collect and convey surface runoff to receiving waters during storms in order to prevent flooding. A common municipal activity includes the maintenance of the storm drain system to maintain hydraulic function as intended during storms. The goal of this program is to reduce the impact of storm drain operation and maintenance activities on stormwater quality.

The objectives of this program component are to:

- Inspect and clean catch basins annually and keep appropriate records.
- Remove trash and debris annually from open channels and properly dispose of these materials to prevent them from being washed to receiving waters.
- Report prohibited non-stormwater discharges observed during the course of normal daily activities so they can be investigated, contained and cleaned up, or eliminated.
- Review maintenance activities to verify that they minimize the amount of pollutants discharged to receiving waters.

Streets and Roads Maintenance

Streets and roads may collect litter and debris from nearby activities, as well as from vehicular traffic. During the course of routine maintenance waste materials are often generated. The goal of this component is to reduce the impact of Permittee street and road operations and maintenance on stormwater quality.

The objectives of this program component are to:

- Sweep curbed streets to reduce the discharge of pollutants associated with activities occurring in street and road rights-of-way.
- Minimize the discharge of pollutants associated with the maintenance of streets and roads.

Parking Facilities Management

Permittees who own parking lots with more than 25 parking spaces located in areas with potential exposure to stormwater must have a parking facilities management plan. The goal of this component is to reduce the impact of these parking facilities on the quality of stormwater discharges and receiving waters. The object of this program component is to remove debris from parking facilities to reduce the amount of material that comes into contact with stormwater.

Public Industrial Activities

Industrial activities, whether private or public, have the potential to discharge pollutants to the storm drain system. Many industrial facilities are subject to the California General Industrial Activities Storm Water Permit (General Industrial Permit) for control of stormwater pollution. The goal of the General Industrial Permit is to reduce the impact of industrial facilities on stormwater quality. This provision of the Permit may procedurally simplify and reduce the cost of Permittees' compliance for their industrial facilities (Phase 1) by providing the option to obtain coverage under the Permit in lieu of the General Industrial Permit.

Appendix B

BMP Lists For Industrial/Commercial Site Visits

Appendix B
BMP Lists For Industrial/Commercial Site Visits

The Permit requires the Principal Permittee, in consultation with the Permittees, to develop BMP lists for each group of facilities that requires educational site visits. These groups of facilities include:

- All industrial groups regulated under Phase 1 of the Federal stormwater program (Phase 1 Facilities)
- Motor vehicle repair shops, motor vehicle body shops, motor vehicle parts and accessories facilities, gas stations, and restaurants (Other Specific Facilities).

The BMPs must:

- Address multiple pollutants.
- Initially focus on pollutant source minimization, education, good housekeeping, and site design alternatives.
- Target source areas and activities with the highest potential to generate substantial pollutant loads.

The BMP lists are included as Appendix B1 (Phase 1 Facilities) and Appendix B2 (Other Specific Facilities). These BMP lists must be incorporated into outreach measures conducted during the educational site visits. This may include using them as fact sheets to hand out to appropriate facilities, incorporating their information into educational materials, or using them to increase the knowledge of staff who will be conducting the site visits.

There is no expectation on the part of the Regional Board, nor does the Permit require, that such lists be completed by a Permittee during the course of conducting an educational site visit at a facility. In addition, there is no expectation on the part of the Regional Board that these lists be utilized by Permittees at their own municipal facilities. BMPs appropriate for municipal facilities are described in the Model Public Agency Activities Program. Permittees must comply with the requirements of that model program at their own municipal facilities.

The BMP lists are *not* required to be implemented by all facilities but are only *suggested* BMPs. They are provided as guidance to help facility owners develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Some facilities may be subject to other state or federal environmental protection programs such as the Resource Conservation and Recovery Act (RCRA) and the Underground Storage Tank (UST) program. Implementing the BMPs suggested in this document does not replace a facility's requirement to comply with these other programs.

Generally, source controls will be easier and less costly for facilities to implement in the near term. These types of controls include good housekeeping activities, employee training, and methods to reduce the source of pollutants by substituting products, reducing their use, and using/storing them inside. Structural controls may need to be carefully considered to ensure they are appropriate and cost-effective. For some activities, however, such as land disturbing activities, structural controls may be the primary solution.

B.1 PHASE 1 FACILITIES

In California, the *General Industrial Storm Water Permit* (General Industrial Permit) is the stormwater regulatory document for industrial facilities. On September 29, 1995, USEPA issued the *NPDES Storm*

Water Multi-Sector General Permit for Industrial Activities (Multi-Sector Permit) to serve as a general permit for industrial facilities in most other areas of the United States. The Multi-Sector Permit provides lists of typical activities, pollutant sources, pollutants, and suggested BMPs for industrial facilities, breaking them out into 29 "sectors" of industrial activity. The lists of BMPs in the Multi-Sector Permit were developed following an extensive survey of facilities, a review of existing Stormwater Pollution Prevention Plans, and additional discussion and review. With this in mind, the list of BMPs in Appendix B1 was taken directly from the Multi-Sector Permit. The BMPs were edited slightly to put them in a common format. Care was taken to avoid interpreting the BMP, adding to or deleting from its intent. For additional guidance on pollutant sources, special considerations and references, please see the original Multi-Sector Permit.

B.2 OTHER SPECIFIC FACILITIES

The BMP lists for these facilities are arranged into three sections: Vehicle Service Facilities, Gasoline Stations, and Restaurants. The BMP lists represent a compilation of activities developed by other stormwater management programs and wastewater agencies. The basis for the vehicle service facility BMPs is the document *Your Shop Can Make a Difference! What vehicle service shops can do to protect water quality in the Bay and Delta* (Bay Area Stormwater Management Agencies Association and Bay Area Dischargers Association, 1995). The Gasoline Station BMPs are based on the document *Retail Gasoline Outlet BMPs* (California Storm Water Quality Task Force, March 1997). These BMPs are very detailed due to extensive refinement over several years by state task forces and committees that included industry representatives. The bases for the restaurant BMPs are a wide range of documents created throughout Los Angeles County.

B.3 BMP LIST INDEX

Table B-1 is an index to all BMP lists, their categories and SIC codes.

Table B-1
Index of BMP Lists for Industrial/Commercial Facilities

EPA Sectors	SIC Codes (exceptions in parentheses)	Industry Types/Sector Title
A	24 (2434)	Timber Products Facilities
B	26	Paper and Allied Products Mfg Facilities

5812		Restaurants

Appendix B1

BMPs for Phase 1 Facilities

R00000277

Timber Products Facilities

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Log, Lumber, and Other Wood Product Storage Areas

- ❑ Divert storm water around storage areas with ditches, swales and/or berms.
- ❑ Locate storage areas on stable, well-drained soils with slopes of 2-5 percent.
- ❑ Line storage areas with crushed rock or gravel or porous pavement to promote infiltration, minimize discharge and provide sediment and erosion control.
- ❑ Stack materials to minimize surface areas of materials exposed to precipitation.
- ❑ Practice good housekeeping measures such as frequent removal of debris.
- ❑ Provide collection and treatment of runoff with containment basins, sedimentation ponds and infiltration basins.
- ❑ Use ponds for collection, containment and recycle for log spraying operations.
- ❑ Use silt fence and rip rap check dams in drainage ways.

Residue Storage Areas

- ❑ Locate stored residues away from drainage pathways and surface waters.
- ❑ Avoid contamination of residues with oil, solvents, chemically treated wood, trash, etc.
- ❑ Limit storage time of residues to prevent degradation and generation of leachates.
- ❑ Divert storm water around residue storage areas with ditches, swales and/or berms.
- ❑ Assemble piles to minimize surface areas exposed to precipitation.
- ❑ Spray surfaces to reduce windblown dust and residue particles.
- ❑ Place materials on raised pads of compacted earth, clay, shale, or stone to collect and drain runoff.
- ❑ Cover and/or enclose stored residues to prevent contact with precipitation using silos, van trailers, shed, roofs, buildings or tarps.
- ❑ Limit slopes of storage areas to minimize velocities of runoff which may transport residues.
- ❑ Provide collection and treatment of runoff with containment basins, sedimentation ponds and infiltration basins.
- ❑ Use silt fence and rip rap check dams in drainage ways.

Loading and Unloading and Material Handling Areas

- ❑ Provide diversion berms and dikes to limit run on.
- ❑ Cover loading and unloading areas.
- ❑ Enclose material handling systems for wood wastes.
- ❑ Cover materials entering and leaving areas.
- ❑ Provide good housekeeping measures to limit debris and to provide dust control.
- ❑ Provide paved areas to enable easy collection of spilled materials.

Chemical Storage Areas

- ❑ Provide secondary containment around chemical storage areas.
- ❑ Inventory of fluids to identify leakage.
- ❑ Locate storage areas away from high traffic areas and surface waters.
- ❑ Develop spill prevention, containment and countermeasure (SPCC) plans and implement.
- ❑ Cover and/or enclose chemical storage areas.
- ❑ Provide drip pads to allow for recycling of spills and leaks.

Wood Surface Protection and Preserving Activities

- ❑ Extend drip time in process areas before moving to storage areas.
- ❑ Pave and berm areas used by equipment that has come in contact with treatment chemicals.
- ❑ Dedicate equipment that is used for treatment activities to that specific purpose only to prevent the tracking of treatment chemicals to other areas on the site.
- ❑ Locate treatment chemical loading and unloading areas away from high traffic areas where tracking of the chemical may occur.
- ❑ Provide drip pads under conveyance equipment from treatment process areas.
- ❑ Provide frequent visual inspections of treatment chemical loading and unloading areas during and after activities occur to identify any spills or leaks needing clean-up.
- ❑ Cover and/or enclose treatment areas.
- ❑ Provide containment in treated wood storage areas.
- ❑ Cover storage areas to prevent contact of treated wood products with precipitation.
- ❑ Elevate stored, treated wood products to prevent contact with run on/runoff.

Paper and Allied Products Manufacturing Facilities

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Outdoor Loading and Unloading

- ❑ Confine loading/unloading activities to a designated response and control area.
- ❑ Avoid loading/unloading materials in the rain.
- ❑ Cover loading/unloading area/or conduct these activities indoors.
- ❑ Develop and implement spill plans.
- ❑ Use berms or dikes around area page 50850.
- ❑ Inspect containers for leaks or damage prior to loading.
- ❑ Use catch buckets, drop cloths, and other spill prevention measures where liquid materials are loaded/unloaded.
- ❑ Provide paved areas to enable easy collection of spilled materials.

Raw and/or Waste Material Storage Areas

- ❑ Confine storage to a designated area.
- ❑ Store materials inside.
- ❑ Cover storage areas with a roof or tarp.
- ❑ Use dikes or berms for storage tanks and drum storage.
- ❑ Cover dumpsters used for waste paper and other materials.
- ❑ Store materials on concrete pads to allow for recycling and spills of leaks.
- ❑ Expedite recycling process for exposed scrap paper.
- ❑ Develop and implement spill plans.
- ❑ Provide paved areas to enable easy collection of spilled materials.
- ❑ Provide good housekeeping (i.e., dust and debris collection) where cyclones are utilized.

Log, Lumber and Other Wood Product Storage Areas

- ❑ Divert storm water around storage areas with ditches, swales, and/or berms.
- ❑ Practice good housekeeping measures such as frequent removal of debris.
- ❑ Line storage areas with crushed rock or gravel or porous pavement to promote infiltration, minimize discharge and provide sediment and erosion control.
- ❑ Use ponds for collection, containment and recycle for log spraying operations.

Chemical and Allied Products Manufacturing Facilities

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Good Housekeeping

- ❑ Schedule regular pickup and disposal of garbage and waste materials or other measures to dispose of waste. Individuals responsible for waste management and disposal should be informed of the procedures established under the plan.
- ❑ Routinely inspect for leaks and conditions of drums, tanks and containers. Ensure that spill cleanup procedures are understood by employees.
- ❑ Keep an up to date inventory of all materials present at the facility. While preparing the inventory, all containers should be clearly labeled. Hazardous containers that require special handling, storage, use and disposal considerations should be clearly marked and readily recognizable.
- ❑ Maintain clean ground surfaces by using brooms, shovels, vacuum cleaners or cleaning machines. Employee training should address procedures for equipment and containers cleaning and washing. The training should emphasize the human hazards and the potential environmental impacts from the discharges of washwaters.
- ❑ Facilities should consider evaluating existing security systems such as fencing, lighting, vehicular traffic control, and securing of equipment and to prevent accidental or intentional entry which could cause a discharge of pollutants to waters of the United States.

Material Handling and Storage Areas

- ❑ For areas where liquid or powdered materials are stored, facilities should consider providing either diking, curbing, or berms.
- ❑ For all other outside storage areas including storage of used containers, machinery, scrap and construction materials, and pallets, facilities should consider preventing or minimizing storm water runon to the storage area by using curbing, culverting, gutters, sewers or other forms of drainage control.
- ❑ For all storage areas, roofs, covers or other forms of appropriate protection should be considered to prevent exposure to weather. In areas where liquid or powdered materials are transferred in bulk from truck or rail cars, permittees should consider appropriate measures to minimize contact of material with precipitation.
- ❑ Permittees should consider providing for hose connection points at storage containers to be inside containment areas and drip pans to be used in areas which are not in a containment area, where spillage may occur (e.g., hose reels, connection points with rail cars or trucks) or equivalent measures.
- ❑ In areas of transfer of contained or packaged materials and loading/unloading areas, permittees should consider providing appropriate protection such as overhangs or door skirts to enclose trailer ends at truck loading/unloading docks or an equivalent.
- ❑ In order to prevent facilities from discharging contaminated storm water from areas where precipitation is contained, contained areas should be restrained by valves or other positive means to prevent the discharge of a spill or leak. Containment units may be emptied by pumps or ejectors; however, these should be manually activated. Flapper type drain valves should not be used to drain containment areas. Valves used for the drainage of containment areas should, as far as is practical, be of manual, open or closed design. If facility drainage is not engineered as above, the final discharge point of all in-facility sewers should be equipped to prevent the discharge in the event of an uncontrolled spill of materials.
- ❑ Use storm water management practices to divert, infiltrate, reuse, or otherwise manage storm water runoff in a manner that reduces pollutants in storm water discharges from the site.
- ❑ For areas with a potential for significant soil erosion, use permanent stabilization practices to stabilize disturbed areas. The measures will minimize the amount of sediment materials in the discharge.

Asphalt Paving and Roofing Materials Manufacturers and Lubricant Manufacturers

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Material Storage, Handling, and Processing

- ❑ Cover material storage and handling areas with an awning tarp or roof.
- ❑ Practice good stockpiling practices such as: storing materials on concrete or asphalt pads; surrounding stockpiles with diversion dikes or curbs; and revegetating areas used for stockpiling in order to slow runoff.
- ❑ Use curbing, diking or channelization around material storage, handling and processing areas to divert run on around areas where it can come into contact with material stored or spilled on the ground.
- ❑ Utilize secondary containment measures such as dikes or berms around asphalt storage tanks and fuel oil tanks.
- ❑ Use dust collection systems (i.e., baghouses) to collect airborne particles generated as a result of material handling operations or aggregate drying.
- ❑ Properly dispose of waste materials from dust collection systems and other operations.
- ❑ Remove spilled material and dust from paved portions of the facility by shoveling and sweeping on a regular basis.
- ❑ Utilize catch basins to collect potentially contaminated storm water.
- ❑ Implement spill plans to prevent contact of runoff with spills of significant materials.
- ❑ Clean material handling equipment and vehicles to remove accumulated dust and residue.
- ❑ Use a detention pond or sedimentation basin to reduce suspended solids.
- ❑ Use an oil/water separator to reduce the discharge of oil/ grease.

Glass, Clay, Cement, Concrete, and Gypsum Product Facilities

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Storing Dry Bulk Materials

- ❑ Store materials in an enclosed silo or building. Materials may include sand, gravel, clay, cement, fly ash, kiln dust, and gypsum.
- ❑ Cover material storage piles with a tarp or awning.
- ❑ Divert run on around storage areas using curbs, dikes, diversion swales or positive drainage away from the storage piles.
- ❑ Install sediment basins, silt fence, vegetated filter strips, or other sediment removal measures downstream/downslope.
- ❑ Only store washed sand and gravel outdoors.

Handling Bulk Materials

- ❑ Use dust collection systems (e.g., bag houses) to collect airborne particles generated as a result of handling operations.
- ❑ Remove spilled material and settled dust from paved portions of the facility by shoveling and sweeping on a regular basis.
- ❑ Periodically clean material handling equipment and vehicles to remove accumulated dust and residue.
- ❑ Install sediment basins, silt fence, vegetated filter strips, or other sediment removal measures downstream/downslope.

Mixing Operations

- ❑ Use dust collection systems (e.g., bag houses) to collect airborne particles generated as a result of mixing operations.
- ❑ Remove spilled material and settled dust from the mixing area by shoveling and sweeping on a regular basis.
- ❑ Clean exposed mixing equipment after mixing operations are complete.
- ❑ Install sediment basins, silt fence, vegetated filter strips, or other sediment removal measures downstream/downslope.

Vehicle and Equipment Washing

- ❑ Designate vehicle and equipment wash areas that drain to recycle ponds or process wastewater treatment systems.
- ❑ Train employees on proper procedure for washing vehicles and equipment including a discussion of the appropriate location for vehicle washing.
- ❑ Conduct vehicle washing operation indoors or in a covered area.
- ❑ Clean wash water residue from portions of the site that drain to storm water discharges.

Dust Collection

- ❑ Maintain dust collection system and baghouse. Properly remove and recycle or dispose of collected dust to minimize exposure of collected dust to.

Pouring and Curing Pre-cast Concrete Products

- ❑ Pour and cure precast products in a covered area.
- ❑ Clean forms before storing outdoors.

Primary Metals Facilities

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Metal Product Stored Outside Such as Returns, Scrap Metal, Turnings, Fines, Ingots, Bars, Pigs, Wire

- ❑ Store all wastes indoors or in sealed drums, covered dumpsters, etc.
- ❑ Minimize raw material storage through effective inventory control.
- ❑ Minimize run on from adjacent properties and stabilized areas to areas with exposed soil with diversion dikes, berms, curbing, concrete pads, etc.

Outdoor Storage or Handling of Fluxes

- ❑ Store fluxes in covered hoppers, silos, or indoors and protect from wind-blown losses.
- ❑ Stabilize areas surrounding storage and material handling areas and establish schedule for sweeping.

Storage Piles, Bins, or Material Handling of Coke or Coal

- ❑ Where possible store coke and coal under cover or indoors and protect from wind-blown losses.
- ❑ Prevent or divert run on from adjacent areas with swales, dikes, or curbs.
- ❑ Minimize quantities of coke or coal stored onsite through implementation of effective inventory control.
- ❑ Trap particulates originating in coke or coal storage or handling areas with filter fabric fences, gravel outlet protection, sediment traps, vegetated swales, buffer strips of vegetation, catch-basin filters, retention/detention basins or equivalent.

Storage or Handling of Casting Sand

- ❑ Store raw sand in silos, covered hoppers, or indoor whenever possible.
- ❑ Prevent or divert run on from adjacent areas with swales, dikes, or curbs.
- ❑ Minimize quantities of sand stored onsite through implementation of effective inventory control.
- ❑ Tarp or otherwise cover piles.
- ❑ Trap particulates originating in coke or coal storage or handling areas with filter fabric fences, gravel outlet protection, sediment traps, vegetated swales, buffer of vegetation, catch-basin filters, retention/detention basins or equivalent.

Vehicle Fueling and Maintenance

- ❑ See the fact sheet AVehicle and Equipment Maintenance Areas at Land Transportation Facilities.

Outdoor Storage Tanks or Drums of Gas, Diesel, Kerosene, Lubricants, Solvents

- ❑ Store tanks and drums inside when possible.
- ❑ Establish regular inspection of all tanks and drums for leaks, spills, corrosion, damage, etc.
- ❑ Utilize effective inventory control to reduce the volume of chemicals stored onsite.
- ❑ Prevent run on to and runoff from tank and drum storage areas, provide adequate containment to hold spills and leaks.
- ❑ Prepare and train employees in dealing with spills and leaks properly, use dry clean-up methods when possible.

Slag or Dross Stored or Disposed of Outside in Piles or Drums

- ❑ Collect waste waters used for granulation of slag.
- ❑ Store slag and dross indoors, under cover, or in sealed containers.
- ❑ Establish regular disposal of slag or dross to minimize quantities stored and handled onsite.
- ❑ Minimize run on to slag storage areas with diversion dikes, berms, curbing, vegetated swales.
- ❑ Trap particulates originating in slag storage areas with filter fabric fences, gravel outlet protection, sediment traps, vegetated swales, buffer strips of vegetation, catch-basin filters, retention/detention basins or equivalent.

Fly Ash, Particulate Emissions, Dust Collector Sludges and Solids, Baghouse Dust

- ❑ Store all dusts and sludges indoors to prevent contact with storm water or losses due to wind.
- ❑ Establish regular disposal schedule to minimize quantities of pollutants stored and handled onsite.

Storage and Disposal of Waste Sand or Refractory Rubble in Piles Outside

- ❑ Move piles under cover or tarps whenever possible.
- ❑ Establish regular disposal schedule to minimize quantities stored onsite.
- ❑ Stabilize areas of waste product storage and perform regular sweeping of area.

Scrap Processing Activities (Shredding Etc.)

- ❑ See the fact sheet AScrap and Waste Recycling Facilities.

Machining Waste Stored Outside or Exposed to Storm Water-fines, Turnings, Oil, Borings, Gates, Sprues, Scale

- ❑ Store all wastes indoors or in sealed drums, covered dumpsters, etc.
- ❑ Stabilize areas of waste product storage and perform regular sweeping and cleaning of any residues.
- ❑ Consider using booms, oil/water separators, sand filters, etc. for outfalls draining areas where oil is potentially present.
- ❑ Minimize run on from adjacent properties and stabilized areas to areas with exposed soil with diversion dikes, berms, curbing, concrete pads, etc.

Obsolete Equipment Stored Outside

- ❑ Where possible, dispose of unused equipment properly, or move indoors.
- ❑ Cover obsolete equipment with a tarp or roof.
- ❑ Consider using booms, oil/water separators, sand filters, etc. for outfalls draining areas where oil is potentially present.
- ❑ Minimize runoff coming into contact with old equipment through berms, curbs, or placement on a concrete pad.

Material Losses from Handling Equipment Such as Conveyors, Trucks, Pallets, Hoppers, Etc.

- ❑ Schedule frequent inspections of equipment for spills or leakage of fluids, oil, or fuel.
- ❑ Inspect for collection of particulate matter on and around equipment and clean. Where possible cover these areas to prevent losses to wind and precipitation.
- ❑ Store pallets, hoppers, etc. which have residual materials on them under cover, with tarps, or inside.

Losses During Charging of Coke Ovens or Sintering Plants

- ❑ Cover any exposed areas related to furnace charging/material handling activities.
- ❑ Stabilize areas around all material handling areas and establish regular sweeping.
- ❑ Route runoff from particulate generating operations to sediment traps, vegetated swales, buffer strips of vegetation, catch-basin filters, retention/detention basins or equivalent.

Particulate Emissions from Blast Furnaces, Electric Arc Furnaces, Induction Furnaces and Fugitive Emissions from Poorly Maintained or Malfunctioning Baghouses, Scrubbers, Electrostatic Precipitators, Cyclones

- ❑ Establish schedule for inspection and maintenance of all pollution control equipment-check for any particulate deposition from leaks, spills, or improper operation of equipment and remedy.
- ❑ Route runoff from particulate generating operations to sediment traps, vegetated swales, buffer strips of vegetation, catch-basin filters, retention/detention basins or equivalent.

Storage of Products Outside after Painting, Pickling, or Cleaning Operations

- ❑ Store all materials inside or under cover whenever possible.
- ❑ Prevent run on to product storage areas through curbs, berms, dikes, etc.
- ❑ Consider using booms, oil/water separators, sand filters, etc. for outfalls draining areas where oil is potentially present.
- ❑ Remove residual chemicals from intermediate or finished products before storage or transport outside.

Casting Cooling or Shakeout Operations Exposed to Precipitation or Wind

- ❑ Perform all pouring, cooling, and shakeout operations indoors in areas with roof vents to trap fugitive particulate emissions.
- ❑ Recycle into process as much casting sand as possible.

Landfilling or Open Pit Disposal of Wastes Onsite

- ❑ See the fact sheet ALandfills and Land Application Sites.≡

Losses of Particulate Matter from Machining Operations (Grinding, Drilling, Boring, Cutting). Through Deposition or Storage of Products Outside.

- ❑ Store all intermediate and finished products inside or under cover.
- ❑ Consider using booms, oil/water separators, sand filters, etc. for outfalls draining areas where oil is potentially present.
- ❑ Clean products of residual materials before storage outside.
- ❑ Stabilize storage areas and establish sweeping schedule.

Areas of the Facility with Unstabilized Soils Subject to Erosion.

- ❑ Minimize run on from adjacent properties and stabilized areas to areas with exposed soil with diversion dikes, berms, vegetated swales, etc.
- ❑ Stabilize all high traffic areas including all vehicle entrances, exits, loading, unloading, and vehicle storage areas.
- ❑ Conduct periodic sweeping of all traffic areas.
- ❑ Trap sediment originating in unstabilized areas. Filter fabric fences, gravel outlet protection, sediment traps, vegetated swales, buffer strips of vegetation, catch-basin filters, retention/detention basins or equivalent.
- ❑ Inspect and maintain all BMPs on a regular basis.
- ❑ Provide employee training on proper installation and maintenance of sediment and erosion controls.

Improper Connection of Floor, Sink, or Process Wastewater Drains.

- ❑ Inspect and test all floor, sink, and process wastewater drains for proper connection to sanitary sewer and remove any improper connections to storm sewer or waters of the United States.

Metal Mining Facilities; Coal Mines and Coal Mining-Related Facilities; Mineral Mining and Processing Facilities

Land Disturbance Activities

Land-disturbed Area	*Discharge Diversions*	*Conveyance Systems*	*Runoff Dispersion*	*Sediment Control and Collection*	*Vegetation*	*Containment*	*Treatment*
Haul Roads and Access Roads	Dikes, curbs, berms	Channels, gutters, culverts, rolling dips, road sloping, roadway water deflectors	Check dams, rock outlet protection, level spreaders, stream alteration, drop structures	Gabions, riprap, native rock retaining walls, straw bale barriers, sediment traps/catch basins, vegetated buffer strips	Seeding, willow cutting establishment		
Pits, Quarries, or Underground Mines.	Dikes, curbs, berms	Channels, gutters	Serrated slopes, benched slopes, contouring, stream alteration	Sediment settling ponds, straw bale barrier, siltation berms	Seeding	Plugging and grouting	Chemical/ physical treatment
Overburden, Waste Rock and Raw Material Piles	Dikes, curbs, berms	Channels, gutters	Serrated slopes, benched slopes, contouring, stream alteration	Plastic matting, plastic netting, erosion control blankets, mulch-straw, compaction, sediment/settling ponds, silt fences, siltation berms	Topsoiling, seedbed preparation, seeding	Capping	Chemical/ physical treatment, artificial wetlands
Reclamation	Dikes, curbs, berms	Channels, gutters	Check dams, rock outlet protection, level spreaders, serrated slopes, benched slopes, contouring, drain fields, stream alteration, drop structures	Gabions, riprap, native rock retaining walls, biotechnical stabilization, straw bale barriers, sediment traps/catch basins, vegetated buffer strips, silt fences, siltation berms, brush sediment barriers	Topsoiling, seedbed preparation, seeding, willow cutting establishment	Capping, plugging and grouting	Chemical/ physical treatment, wetlands

Oil and Gas Extraction Facilities

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

General Activities

- ❑ Utilize diking and other forms of containment and diversion around storage tanks, drums of oil, acid, production chemicals, and liquids, reserve pits, and impoundments.
- ❑ Use diking and other forms of containment and diversion around material handling and processing areas.
- ❑ Use porous pads under drum and tank storage areas.
- ❑ Use covers and/or lining for waste reserve and sludge pits to avoid overflows and leaks.
- ❑ Use drip pans, catch basins, or liners during handling of materials such as tank bottoms.
- ❑ Reinject or treat produced water instead of discharging it.
- ❑ Limit the amount of land disturbed during construction of access roads and facilities.
- ❑ Employ spill plans for pipelines, tanks, drums, etc.
- ❑ Recycle oily wastes, drilling fluids and other materials onsite, or dispose of properly.
- ❑ Take wastes offsite to be disposed of instead of burying them.
- ❑ Use oil water separators.

Hazardous Waste Treatment, Storage, or Disposal Facilities

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Outdoor Unloading and Loading

- ❑ Confine loading/unloading activities to a designated area.
- ❑ Consider performing loading/unloading activities indoors or in a covered area.
- ❑ Consider covering loading/unloading area with permanent cover (e.g., roofs) or temporary cover (e.g., tarps).
- ❑ Close storm drains during loading/unloading activities in surrounding areas.
- ❑ Avoid loading/unloading materials in the rain.
- ❑ Inspect the unloading/loading areas to detect problems before they occur.
- ❑ Inspect all containers prior to loading/unloading of any raw or spent materials.
- ❑ Consider berming, curbing, or diking loading/ unloading areas.
- ❑ Use dry clean-up methods instead of washing the areas down.
- ❑ Train employees on proper loading/unloading techniques.

Landfills and Land Application Sites

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Land Disturbance Activities

- ❑ Stabilize soils with temporary seeding, mulching, and geotextiles; leave vegetative filter strips along streams.
- ❑ Implement structural controls such as dikes, swales, silt fences, filter berms, sediment traps and ponds, outlet protection, pipe slope drains, check dams, and terraces to convey runoff, to divert storm water flows away from areas susceptible to erosion, and to prevent sediments from entering water bodies.
- ❑ Frequently inspect all stabilization and structural erosion control measures and perform all necessary maintenance and repairs.
- ❑ Stabilize haul roads and entrances to landfill with gravel or stone.
- ❑ Construct vegetated swales along road.
- ❑ Clean wheels and body of trucks or other equipment as necessary to minimize sediment tracking (but contain any wash waters [process wastewaters]).
- ❑ Frequently inspect all stabilization and structural erosion control measures and perform all necessary maintenance and repairs.

Application of Fertilizers, Pesticides, and Herbicides

- ❑ Observe all applicable Federal, State, and local regulations when using these products.
- ❑ Strictly follow recommended application rates and methods (i.e., do not apply in excess of vegetative requirements).
- ❑ Have materials such as absorbent pads easily accessible to clean up spills.

Exposure of Chemical Material Storage Areas to Precipitation

- ❑ Provide barriers such as dikes to contain spills.
- ❑ Provide cover for outside storage areas.
- ❑ Have materials such as absorbent pads easily accessible to clean up spills.

Exposure of Waste at Open Face

- ❑ Minimize the area of exposed open face as much as is practicable.
- ❑ Divert flows around open face using structural measures such as dikes, berms, swales, and pipe slope drains.
- ❑ Frequently inspect erosion and sedimentation controls.

Waste Tracking Onsite

- ❑ Clean wheels and exterior of trucks or other equipment as necessary to minimize waste tracking (but contain any wash waters [process wastewaters]).

Uncontrolled Leachate

- ❑ Frequently inspect leachate collection system and landfill for leachate leaks.
- ❑ Maintain landfill cover and vegetation.
- ❑ Maintain leachate collection system

Automobile Salvage Yards

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Dismantling and Vehicle Maintenance

- ❑ Drain all fluids from vehicles upon arrival at the site.
- ❑ Segregate the fluids and properly store or dispose of them.
- ❑ Maintain an organized inventory of materials used in the maintenance shop.
- ❑ Keep waste streams separate (e.g., waste oil and mineral spirits). Nonhazardous substances that are contaminated with a hazardous substance is considered a hazardous substance.
- ❑ Recycle anti-freeze, gasoline, used oil, mineral spirits, and solvents.
- ❑ Dispose of greasy rags, oil filters, air filters, batteries, spent coolant, and degreasers properly.
- ❑ Label and track the recycling of waste material (e.g., used oil, spent solvents, batteries).
- ❑ Drain oil filters before disposal or recycling.
- ❑ Store cracked batteries in a non-leaking secondary container.
- ❑ Promptly transfer used fluids to the proper container. Do not leave full drip pans or other open containers around the shop. Empty and clean drip pans and containers.
- ❑ Do not pour liquid waste down floor drains, sinks, or outdoor storm drain inlets.
- ❑ Plug floor drains that are connected to the storm or sanitary sewer. If necessary, install a sump that is pumped regularly.
- ❑ Inspect the maintenance area regularly for proper implementation of control measures.
- ❑ Filtering storm water discharges with devices such as oil-water separators.
- ❑ Train employees on proper waste control and disposal procedures.

Outdoor Vehicle, Equipment, and Parts Storage

- ❑ Use drip pans under all vehicles and equipment waiting for maintenance and during maintenance.
- ❑ Store batteries on impervious surfaces. Curb, dike or berm this area.
- ❑ Confine storage of parts, equipment and vehicles to designated areas.
- ❑ Cover all storage areas with a permanent cover (e.g., roofs) or temporary cover (e.g., canvas tarps).

Vehicle, Equipment and Parts Washing Areas

- ❑ Avoid washing parts or equipment outside.
- ❑ Use phosphate-free biodegradable detergents.
- ❑ Consider using detergent-based or water-based cleaning systems in place of organic solvent degreasers.
- ❑ Designate an area for cleaning activities.
- ❑ Contain steam cleaning washwaters or discharge under an applicable NPDES permit.
- ❑ Ensure that washwaters drain well.
- ❑ Inspect cleaning area regularly.
- ❑ Install curbing, berms or dikes around cleaning areas.
- ❑ Train employees on proper washing procedures.

Liquid Storage in Above Ground Containers

- ❑ Maintain good integrity of all storage containers.
- ❑ Install safeguards (such as diking or berming) against accidental releases at the storage area.
- ❑ Inspect storage tanks to detect potential leaks and perform preventive maintenance.
- ❑ Inspect piping systems (pipes, pumps, flanges, couplings, hoses, and valves) for failures or leaks.
- ❑ Train employees on proper filling and transfer procedures.

Improper Connection with Storm Drains

- ❑ Plug all floor drains if it is unknown whether the connection is to storm drain or sanitary sewer systems.
- ❑ Alternatively, install a sump that is pumped regularly.
- ❑ Perform dye testing to determine if interconnections exist between sanitary water system and storm drain system.
- ❑ Update facility schematics to accurately reflect all plumbing connections.
- ❑ Install a safeguard against vehicle washwaters and parts cleaning waters entering the storm drain unless permitted.
- ❑ Maintain and inspect the integrity of all underground storage tanks; replace when necessary.
- ❑ Train employees on proper disposal practices for all material.

Scrap and Waste Recycling Facilities

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Inbound Recyclable and Waste Material Control

- ❑ Provide public education brochures on acceptable recyclable materials.
- ❑ Educate curbside pick-up drivers on acceptable materials. Reject unacceptable materials at the source.
- ❑ Employee training.
- ❑ Provide totally-enclosed drop-off containers for public.
- ❑ Establish program to encourage suppliers of scrap, waste and other salvageable materials to drain residual fluids prior to arrival at the facility.
- ❑ Establish acceptance program for handling, storage and disposal of lead-acid batteries.
- ❑ Establish procedures for rejecting or handling, storing and disposal of hazardous wastes and other nonhazardous residual fluids.
- ❑ Establish procedures to properly handle industrial turnings and cuttings and prohibiting cutting oils and metallic fines from coming in contact with runoff.
- ❑ Identify inspector training requirements.

Outside Scrap Material Storage: Liquids

- ❑ Conduct inspections for fluids, e.g., oils, transmission fluids, antifreeze, brake fluid, and fuels. Establish handling/ storage/disposal procedures for these materials.
- ❑ Drain and collect liquids in a designated area.
- ❑ Provide covered storage or impervious areas with curbing/berms or other appropriate containment.
- ❑ Store liquid materials in covered areas or impervious areas with curbing/berms or other appropriate measure.
- ❑ Establish spill prevention procedures.
- ❑ Provide adequate supply of materials for dry clean up of spills or leaks.
- ❑ Prevent runoff into liquid storage areas. Store liquid wastes in materially compatible containers.
- ❑ Minimize/eliminate the accumulation of liquid wastes.
- ❑ Establish procedures if hazardous wastes are discovered after material accepted.
- ❑ Conduct periodic inspections of storage areas.
- ❑ Conduct preventative maintenance of BMPs as necessary.

Outside Scrap Material Storage: Bulk Solid Materials

- ❑ Store only processed materials, i.e., baled plastic and aluminum and glass cullet.
- ❑ Provide containment pits with sumps pumps that discharge to sanitary sewer system. Prevent discharge of residual fluids to storm sewer.
- ❑ Provide dikes and curbs around bales of waste paper.
- ❑ Use tarpaulins or covers over bales of wastepaper.
- ❑ Conduct regularly scheduled sweeping of storage areas to minimize particulate buildup.
- ❑ Minimize runoff from coming into areas where significant materials are stored, e.g., diversion structures such as curbing, berms, containment trenches, surface grading, and elevated concrete pads or other equivalent measure.
- ❑ Use adsorbents to collect leaking or spills of oil, fuel, transmission and brake fluids, e.g., dry absorbent, drip pans.
- ❑ Install media filters such as catch basin filters and sand filters.
- ❑ Install oil/water separator in storage areas with vehicle transmissions and engines. Locate spill plans under stored vehicles.
- ❑ Provide non-recyclable waste storage bins and containers.
- ❑ Conduct periodic inspections.
- ❑ Conduct preventative maintenance as necessary.
- ❑ Provide equipment operator training to minimize damage to controls, e.g., curbing and berms.

Storage Other: Lightweight Materials

- ❑ Store equivalent of the average daily volume of recyclable materials indoors.
- ❑ Provide good housekeeping.
- ❑ Disconnect all floor drains from storm sewer system.
- ❑ Prohibit illicit discharges and illegal dumping to floor drains that are connected to the storm sewer.
- ❑ Direct tipping floor washwaters to sanitary sewer system if permitted by local sanitary authority.
- ❑ Identify/provide supplier training or information bulletins on requirements for acceptance of lightweight materials.
- ❑ Encourage supplier participation in program to minimize/eliminate, as practicable, volume of semisolid and liquid residues in recyclable materials, e.g., residual fluids in aluminum and plastic containers.
- ❑ Provide covered storage, container bins or equivalent for lighter-weight materials such as glass, plastics, aluminum cans, paper, cardboard.
- ❑ Minimize/eliminate residue from bottles, containers, etc. from coming in contact with runoff. Establish dry clean up methods.
- ❑ Establish procedures and employee training for the handling, storage and disposal of residual fluids from small containers.
- ❑ Prohibit washdown of tipping floor areas.
- ❑ Provide good housekeeping to eliminate particulate and residual materials buildup. Establish cleaning schedule for high traffic areas.
- ❑ Provide covered disposal containers or equivalent for residual waste materials.
- ❑ Eliminate floor drains discharging to storm sewer.

Residual Non-recyclable Materials

- ❑ Store residual non-recyclable materials in covered containers for transport to a proper disposal facility.
- ❑ Bale residual non-recyclable materials and cover with tarpaulin or equivalent.

Recyclable Material Processing

- ❑ Conduct processing operations indoors. Clean up residual fluids.
- ❑ Conduct routine preventive maintenance on all processing equipment.
- ❑ Schedule frequent good housekeeping to minimize particulate and residual materials buildup.

Scrap Processing Operations

- ❑ Provide training to equipment operators on how to minimize exposure of runoff to scrap processing areas.
- ❑ Schedule frequent cleaning of accumulated fluids and particulate residue around all scrap processing equipment.
- ❑ Schedule frequent inspections of equipment for spills or leakage of fluids, oil, fuel, hydraulic fluids.
- ❑ Conduct routine preventive maintenance of equipment per original manufacturer's equipment (OME) recommendations. Replace worn or malfunctioning parts.
- ❑ Site process equipment on elevated concrete pads or provide runoff diversion structures around process equipment, berms, containment trenches or surface grading or other equivalent measure. Discharge runoff from within bermed areas to a sump, oil/ water separator, media filter or discharge to sanitary sewer.
- ❑ Conduct periodic maintenance and clean out of all sumps, oil/water separators, media filters.
- ❑ Dispose of residual waste materials properly (e.g., according to RCRA).
- ❑ Provide curbing, dikes, and berms around scrap processing equipment to prevent contact with runoff.
- ❑ Where practicable, locate process equipment (e.g., balers, briquetters, small compactors) under an appropriate cover.
- ❑ Provide cover over hydraulic equipment and combustion engines. Provide dry clean up materials, e.g., dry-adsorbents, drip pans, absorbent booms, etc. to prevent contact of hydraulic fluids, oils, fuels, etc., with storm water runoff.
- ❑ Provide alarm, pump shutoff, or sufficient containment for hydraulic reservoirs in the event of a line break.
- ❑ Stabilize high traffic areas (e.g., concrete pads, gravel, pavement) around processing equipment, where practicable.
- ❑ Provide site gages or overfill protection devices for all liquid and fuel storage reservoirs and tanks.
- ❑ Establish spill prevention and response procedures, including employee training.
- ❑ Provide containment bins or equivalent for shredded material, especially lightweight materials such as fluff (preferably at the discharge of these materials from the air classification system).

Supplies for Process Equipment

- ❑ Locate storage drums containing liquids, including oils and lubricants indoors. Alternatively, site palletized drums and containers on an impervious surface and provide sufficient containment around the materials. Provide sumps, oil/water separators, if necessary.
- ❑ Conduct periodic inspections of containment areas and containers/drums for corrosion.
- ❑ Perform preventive maintenance of BMPs, as necessary.
- ❑ Instruct employees on proper material handling and storage procedures.

Scrap Lead Acid Battery Program

- ❑ Establish inspection and acceptance procedures for scrap lead-acid batteries.
- ❑ Provide supplier training on acceptance practices for scrap batteries.
- ❑ Provide employee training on the safe handling, storage and disposition of scrap batteries.
- ❑ Separate all scrap batteries from other scrap materials.
- ❑ Store scrap batteries under cover or equivalent.
- ❑ Establish procedures for the storage, handling, disposition of cracked or broken batteries in accordance with applicable Federal regulations, e.g., RCRA.
- ❑ Establish procedures to collect and dispose of leaking battery acid according to Federal regulations, e.g., RCRA.
- ❑ Provide covered storage or equivalent to prevent exposure to either precipitation or runoff.

Vehicle and Equipment Maintenance

- ❑ Avoid washing equipment and vehicles outdoors.
- ❑ Eliminate outdoor maintenance areas.
- ❑ Establish an inventory of materials used in the maintenance shop that could become a potential pollutant source with storm water runoff, e.g., fuels, solvents, oils, lubricants.
- ❑ Store and dispose of oily rags, filters (oil and air), batteries, engine coolant, transmission fluid, use oil, brake fluid, and solvents in a manner that minimizes potential contact with runoff and in compliance with State and Federal regulations.
- ❑ Label and track recycling of waste materials, e.g., batteries, solvent, used oil.
- ❑ Drain oil filters before disposal or recycling.
- ❑ Drain all fluids from all parts or components that will become scrap material or secondhand parts.
- ❑ Store liquid waste materials in compatible containers.
- ❑ Store and dispose used batteries in accordance with scrap lead acid battery program.
- ❑ Disconnect all floor drains connected to storm sewer system.
- ❑ Prohibit non-storm water discharges, e.g., dumping of used liquids down floor drains and washdown of maintenance areas.
- ❑ Provide employee training on appropriate storage and disposal of waste materials.
- ❑ Provide good housekeeping measures.
- ❑ Conduct inspections of work areas for compliance with BMPs.

Fueling

- ❑ Establish spill prevention and clean-up procedures.
- ❑ Provide dry-absorbent materials or equivalent.
- ❑ Provide employee training, i.e., avoid topping off fuel tanks.
- ❑ Divert runoff from fueling areas.
- ❑ Use spill and overflow protection devices.
- ❑ Provide high level alarm on fuel storage tanks.
- ❑ Minimize/eliminate runoff onto fueling areas.
- ❑ Reduce exposure of fueling areas to precipitation by covering the fueling area.
- ❑ Provide dry adsorbents to clean up fuel spills.
- ❑ Conduct periodic inspections of fueling areas.
- ❑ Provide curbing or posts around fuel pumps to prevent collisions during vehicle ingress and egress.

Vehicle and Equipment Washing

- ❑ Avoid washing vehicles and equipment outdoors.
- ❑ Use biodegradable, phosphate free detergents.
- ❑ Recycle wash water.
- ❑ Provide vehicle wash rack with dedicated trap.
- ❑ Use autoshut-off valves on washing equipment.

Outdoor Vehicle Parking and Storage

- ❑ Use drip pans under all equipment and vehicles waiting maintenance.
- ❑ Cover vehicle and equipment storage areas.
- ❑ Conduct inspections of storage and parking areas for leaks and filled drip pans.
- ❑ Provide employee training.

Vehicle and Equipment Painting (where applicable)

- ❑ Keep paint and solvents away from traffic areas.
- ❑ Conduct sanding and painting in nonexposed areas, e.g., under cover, in accordance with OSHA standards.
- ❑ Cleanup accumulated particulate matter.
- ❑ Minimize overspraying parts.
- ❑ Dispose or recycle paint, solvents and thinner properly.
- ❑ Provide training to employees.
- ❑ Conduct periodic inspections of paint spraying areas.

Erosion and Sediment Control

- ❑ Minimize runon from adjacent properties, e.g., diversion dikes, berms, or equivalent.
- ❑ Trap sediment at downgradient locations and outlets serving unstabilized areas. This may include filter fabric fences, gravel outlet protection, sediment traps, vegetated or riprap swales, vegetated strips, diversion structures, catch- basin filters, retention/detention basins or equivalent.
- ❑ Runoff containing oil and grease may include the use of absorbent booms or sand filters in front of outlet structures or other equivalent measures.
- ❑ Stabilize all high traffic areas, including all vehicle entrances and exit points.
- ❑ Conduct periodic sweeping of all traffic areas.
- ❑ Conduct inspections of BMPs.
- ❑ Perform preventative maintenance as needed on BMPs.
- ❑ Provide employee training on the proper installation and maintenance of erosion and sediment controls.

Activities Specific to Liquid Waste Recycling Facilities

Individual Drum/Container Storage

- ❑ Ensure container/drums are in good condition. Store waste materials in materially compatible drums.
- ❑ Use containers that meet National Fire Protection Association (NFPA) guidelines.
- ❑ Put individual containers on pallets. Limit stack height of individual containers/drums. Provide straps, plastic wrap, or equivalent around stacked containers to provided stability.
- ❑ Label/mark drums. Segregate hazardous and flammable wastes. Comply with NFPA guidelines for segregation of flammable wastes.
- ❑ Provide adequate clearance to allow material movement and access by material handling equipment.
- ❑ Provide semipermanent or permanent cover over wastes.
- ❑ Provide adequate clearance between stored materials to allow movement and handling.
- ❑ Establish clean up procedures, including the use of dry adsorbents, in the event of spills or leaks.
- ❑ Prohibit washing down of material storage areas.
- ❑ Disconnect or seal all floor drains from storm sewer system.
- ❑ Develop spill prevention, countermeasures and control (SPCC) procedures for all liquid container storage areas. Ensure employees are familiar with SPCC procedures. Schedule/conduct periodic employee training.
- ❑ Provide secondary containment, dikes, berms, containment trench, sumps, or other equivalent measure, in all storage areas.

Bulk Liquid Storage

- ❑ Use welded pipe connections versus flange connections. Inspect all flange gaskets for deterioration.
- ❑ Apply corrosion inhibitors to exposed metal surfaces.
- ❑ Provide high level alarms for storage tanks.
- ❑ Provide redundant piping, valves, pumps, motors, as necessary, at all pumping stations.
- ❑ Provide manually activated shutoff valves in the event of spill. Install visible and/or audible alarms in the event of a spill.
- ❑ Install manually activated drainage values, or equivalent, versus flapper-type drain values.
- ❑ Provide adequate security against vandalism and tampering.
- ❑ Provide secondary containment around all bulk storage tanks, including berms, dikes, surface impoundments or equivalent. Ensure surfaces of secondary containment areas are adequately sealed to prevent leaks.
- ❑ Provide stationary boxes around all return and fill stations to eliminate/minimize hose drainage and minor waste transfer spills.

Waste Transfer Areas

- ❑ Provide secondary containment or equivalent measures around all liquid waste transfer facilities.
- ❑ Provide cover over liquid waste transfer areas.
- ❑ Establish clean up procedures for minor spills including the use of dry adsorbents.

Inspections

- ❑ Conduct inspections of all material storage, handling and transfer areas.
- ❑ Document signs of corrosion, worn parts or components on pumps and motors, leaking seals and gaskets.
- ❑ Conduct periodic nondestructive testing (NDT) of all bulk storage tanks for signs of deteriorating structural integrity.

Preventive Maintenance

- ❑ Conduct periodic preventive maintenance of all structural controls, replace worn parts on components on valves, pumps, motors per manufacturer's recommendations.

Vehicle Maintenance (if applicable)

- ❑ Establish an inventory of materials used in the maintenance shop that could become a potential pollutant source with storm water runoff, e.g., fuels, solvents, oils, lubricants.
- ❑ Store and dispose of oily rags, filters (oil and air), batteries, engine coolant, transmission fluid, use oil, brake fluid, and solvents in a manner that minimizes potential contact with runoff and in compliance with State and Federal regulations.
- ❑ Label and track recycling of waste materials, e.g., batteries, solvent, used oil.
- ❑ Drain oil filters before disposal or recycling.
- ❑ Drain all fluids from all parts or components that will become scrap material or secondhand parts.
- ❑ Store liquid waste materials in compatible containers.
- ❑ Store and dispose used batteries in accordance with scrap lead acid battery program.
- ❑ Disconnect all floor drains connected to storm sewer system.
- ❑ Prohibit non-storm water discharges, e.g., dumping of used liquids down floor drains and washdown of maintenance areas.
- ❑ Provide employee training on appropriate storage and disposal of waste materials.
- ❑ Provide good housekeeping measures.
- ❑ Conduct inspections of work areas for compliance with BMPs.

Vehicle Cleaning (if applicable)

- ❑ Avoid washing vehicles and equipment outdoors.
- ❑ Use biodegradable, phosphate free detergents.
- ❑ Recycle wash water.
- ❑ Provide vehicle wash rack with dedicated sediment trap.
- ❑ Use autoshut-off valves on washing equipment.

Training

- ❑ Provide employee training on proper material handling and storage procedures. Require familiarization with applicable SPCC measures.

Steam Electric Power Generating Facilities

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Fugitive Dust Emissions

- ❑ Consider establishing procedures to minimize offsite tracking of coal dust. To prevent offsite tracking the facility may consider specially designed tires, or washing vehicles in a designated area before they leave the site, and controlling the wash water.

Delivery Vehicles

- ❑ Develop procedures for the inspection of delivery vehicles arriving on the plant site, and ensure overall integrity of the body or container.
- ❑ Develop procedures to control leakage or spillage from vehicles or containers, and ensure that proper protective measures are available for personnel and environment.

Fuel Oil Unloading Areas

- ❑ Use containment curbs in unloading areas.
- ❑ During deliveries station personnel familiar with spill prevention and response procedures may be present to ensure that any leaks or spills are immediately contained and cleaned up.
- ❑ Use spill and overflow protection (drip pans, drip diapers, and/or other containment devices should be placed beneath fuel oil connectors to contain any spillage that may occur during deliveries or due to leaks at such connectors).

Chemical Loading/Unloading Areas

- ❑ Use containment curbs at chemical loading/unloading areas to contain spills.
- ❑ During deliveries station personnel familiar with spill prevention and response procedures may be present to ensure that any leaks or spills are immediately contained and cleaned up.
- ❑ Where practicable chemical loading/unloading areas should be covered, and chemicals should be stored indoors.

Miscellaneous Loading/Unloading Areas

- ❑ Consider covering the loading area.
- ❑ Minimize storm water runon to the loading area by grading, berming, or curbing the area around the loading area to direct storm water away from the area.
- ❑ Locate the loading/unloading equipment and vehicles so that leaks can be controlled in existing containment and flow diversion systems.

Liquid Storage Tanks

- ❑ Use protective guards around tanks.
- ❑ Use containment curbs.
- ❑ Use spill and overflow protection (drip pans, drip diapers, and/or other containment devices should be placed beneath chemical connectors to contain any spillage that may occur during deliveries or due to leaks at such connectors).
- ❑ Use dry cleanup methods.

Large Bulk Fuel Storage Tanks

- ❑ Comply with applicable State and Federal laws, including Spill Prevention Control and Countermeasures (SPCC).
- ❑ Use containment berms.

Oil/Chemical Storage

- ❑ The structural integrity of all above ground tanks, pipelines, pumps and other related equipment should be visually inspected on a weekly basis.
- ❑ All repairs deemed necessary based on the findings of the inspections should be completed immediately to reduce the incidence of spills and leaks occurring from such faulty equipment.

Oil Bearing Equipment in Switchyards

- ❑ Consider level grades and gravel surfaces to retard flows and limit the spread of spills.
- ❑ Collect storm water runoff in perimeter ditches.

Residue Hauling Vehicles

- ❑ Inspect all residue hauling vehicles for proper covering over the load, adequate gate sealing and overall integrity of the body or container.
- ❑ Vehicles without load covers or adequate gate sealing, or with poor body or container conditions may be repaired as soon as practicable.

Ash Loading Areas

- ❑ Reduce and/or control the tracking of ash or residue from ash loading areas. Where practicable, clear the ash building floor and immediately adjacent roadways of spillage, debris and excess water before each loaded vehicle departs.

Areas Adjacent to Disposal Ponds or Landfills

- ❑ Develop procedures to reduce ash residue which may be tracked on to access roads traveled by residue trucks or residue handling vehicles.
- ❑ Reduce ash residue on exit roads leading into and out of residue handling areas.

Landfills, Scrapyards, and General Refuse Sites

- ❑ See the fact sheet AScrap and Waste Recycling Facilities.

Vehicle Maintenance Activities

- ❑ See the fact sheet AVehicle and Equipment Maintenance Areas at Land Transportation Facilities.

Material Storage Areas

- ❑ Consider flat yard grades, runoff collection in graded swales or ditches, erosion protection measures at steep outfall sites (e.g., concrete chutes, riprap, stilling basins), covering lay down areas, storing the materials indoors, covering the material with a temporary covering made of polyethylene, polyurethane, polypropylene, or hypalon.
- ❑ Storm water runon may be minimized by constructing an enclosure or building a berm around the area.

Vehicle and Equipment Maintenance Areas at Land Transportation Facilities

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Fueling

- ❑ Use spill and overflow protection.
- ❑ Minimize runon of storm water into the fueling area by grading the area such that storm water only runs off.
- ❑ Reduce exposure of the fuel area to storm water by covering the area.
- ❑ Use dry cleanup methods for fuel area rather than hosing the fuel area down.
- ❑ Use proper petroleum spill control.
- ❑ Perform preventive maintenance on storage tanks to detect potential leaks before they occur.
- ❑ Inspect the fueling area to detect problems before they occur.
- ❑ Train employees on proper fueling techniques.

Vehicle and Equipment Maintenance

- ❑ Maintain an organized inventory of materials used in the maintenance shop.
- ❑ Dispose of greasy rags, oil filters, air filters, batteries, spent coolant, and degreasers properly.
- ❑ Label and track the recycling of waste material (e.g., used oil, spent solvents, batteries).
- ❑ Drain oil filters before disposal or recycling.
- ❑ Drain and contain all fluids from wrecked vehicles and Aparts≡ cars.
- ❑ Store cracked batteries in a nonleaking secondary container.
- ❑ Promptly transfer used fluids to the proper container; do not leave full drip pans or other open containers around the shop. Empty and clean drip pans and containers.
- ❑ Do not pour liquid waste down floor drains, sinks, or outdoor storm drain inlets.
- ❑ Plug floor drains that are connected to the storm or sanitary sewer. Alternatively, install a sump that is pumped regularly.
- ❑ Inspect the maintenance area regularly for proper implementation of control measures.
- ❑ Train employees on proper waste control and disposal procedures.

Outdoor Vehicle and Equipment Storage and Parking

- ❑ Use drip pans under all vehicles and equipment waiting for maintenance.
- ❑ Cover the storage area with a roof.
- ❑ Inspect the storage yard for filling drip pans and other problems regularly.
- ❑ Train employees on procedures for storage and inspection items.

Locomotive Sanding Areas

- ❑ Cover sand storage piles.
- ❑ Install sediment traps.
- ❑ Install curbs or dikes around storage piles to minimize storm water runon.

Painting Areas

- ❑ Keep paint and paint thinner away from traffic areas to avoid spills.
- ❑ Spray paint in an Occupational Safety and Health Act (OSHA) approved hood.
- ❑ Use effective spray equipment that delivers more paint to the target and less over-spray.
- ❑ Avoid sanding in windy weather and collect and dispose of waste properly.
- ❑ Recycle paint, paint thinner, and solvents.
- ❑ Inspect painting procedures to ensure that they are conducted properly.
- ❑ Train employees on proper sanding, painting, and spraying techniques.

Vehicle or Equipment Washing Areas

- ❑ Avoid washing parts or equipment outside.
- ❑ Use phosphate-free biodegradable detergents.
- ❑ Designate an area for cleaning activities.
- ❑ Contain and recycle washwaters.
- ❑ Ensure that washwaters drain well.
- ❑ Inspect cleaning area regularly.
- ❑ Train employees on proper washing procedures.

Liquid Storage in Above Ground Storage

- ❑ Maintain good integrity of all storage containers.
- ❑ Install safeguards (such as diking or berming) against accidental releases at the storage area.
- ❑ Inspect storage tanks to detect potential leaks and perform preventive maintenance.
- ❑ Inspect piping systems (pipes, pumps, flanges, couplings, hoses, and valves) for failures or leaks.
- ❑ Train employees on proper filling and transfer procedures.

Cold Weather Activities

- ❑ Minimize salt application.
- ❑ Use uncontaminated dirt or ash, if use is necessary.
- ❑ Train employees on proper salt, dirt, sand, or ash application.

Improper Connections to Storm Drain

- ❑ Plug all floor drains connected to storm drain or if connection is unknown. Alternatively, install a sump that is pumped regularly.
- ❑ Perform smoke or dye testing to determine if interconnections exist between sanitary water system and storm drain system.
- ❑ Update facility schematics to accurately reflect all plumbing connections.
- ❑ Install a safeguard against vehicle washwaters entering the storm sewer unless permitted.
- ❑ Maintain and inspect the integrity of all underground storage tanks; replace when necessary.
- ❑ Train employees on proper disposal practices for all materials.

Vehicle and Equipment Maintenance Areas at Water Transportation Facilities

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Pressure Washing

- ❑ Collect discharge water and remove all visible solids before discharging to a sewer system, or where permitted, to a drainage system, or receiving water.
- ❑ Perform pressure washing only in designated areas where wash water containment can be effectively achieved.
- ❑ Use no detergents or additives in the pressure wash water.
- ❑ Direct deck drainage to a collection system sump for settling and/or additional treatment.
- ❑ Implement diagonal trenches or berms and sumps to contain and collect wash water at marine railways.
- ❑ Use solid decking, gutters, and sumps at lift platforms to contain and collect wash water for possible reuse.

Surface Preparation, Sanding, and Paint Removal.

- ❑ Enclose, cover, or contain blasting and sanding activities to the extent practical to prevent abrasives, dust, and paint chips from reaching storm sewers or receiving water.
- ❑ Where feasible, cover drains, trenches, and drainage channels to prevent entry of blasting debris to the system.
- ❑ Prohibit uncontained blasting or sanding activities performed over open water.
- ❑ Prohibit blasting or sanding activities performed during windy conditions which render containment ineffective.
- ❑ Inspect and clean sediment traps to ensure the interception and retention of solids prior to entering the drainage system.
- ❑ Sweep accessible areas of the drydock to remove debris and spent sandblasting material prior to flooding.
- ❑ Collect spent abrasives routinely and store under a cover to await proper disposal.

Painting

- ❑ Enclose, cover, or contain painting activities to the maximum extent practical to prevent overspray from reaching the receiving water.
- ❑ Prohibit uncontained spray painting activities over open water.
- ❑ Prohibit spray painting activities during windy conditions which render containment ineffective.
- ❑ Mix paints and solvents in designated areas away from drains, ditches, piers, and surface waters, preferably indoors or under cover.
- ❑ Have absorbent and other cleanup items readily available for immediate cleanup of spills.
- ❑ Allow empty paint cans to dry before disposal.
- ❑ Keep paint and paint thinner away from traffic areas to avoid spills.
- ❑ Recycle paint, paint thinner, and solvents.
- ❑ Train employees on proper painting and spraying techniques, and use effective spray equipment that delivers more paint to the target and less overspray.

Drydock Maintenance

- ❑ Clean and maintain drydock on a regular basis to minimize the potential for pollutants in the storm water runoff.
- ❑ Sweep accessible areas of the drydock to remove debris and spent sandblasting material prior to flooding.
- ❑ If hosing may be used as a removal method, collect wash water to remove solids and potential metals.
- ❑ Clean the remaining areas of the dock after a vessel has been removed and the dock raised.
- ❑ Remove and properly dispose of floatable and other low-density waste (wood, plastic, insulations, etc.).

Drydocking

- ❑ Use plastic barriers beneath the hull, between the hull and drydock walls for containment.
- ❑ Use plastic barriers hung from the flying bridge of the drydock, from the bow or stern of the vessel, or from temporary structures for containment.
- ❑ Weight the bottom edge of the containment tarpaulins or plastic sheeting during a light breeze.
- ❑ Use plywood and/or plastic sheeting to cover open areas between decks when sandblasting (scuppers, railings, freeing ports, ladders, and doorways).
- ❑ Install tie rings or cleats, cable suspension systems, or scaffolding to make implementation containment easier.

Nondrydock Containment

- ❑ Hang tarpaulin from the boat, fixed, or floating platforms to reduce pollutants transported by wind.
- ❑ Pave or tarp surfaces under marine railways.
- ❑ Clean railways before the incoming tide.
- ❑ Haul vessels beyond the high tide zone before work commences or halt work during high tide.
- ❑ Place plastic sheeting or tarpaulin underneath boats to contain and collect waste and spent materials and clean and sweep regularly to remove debris.
- ❑ Use fixed or floating platforms with appropriate plastic or tarpaulin barriers as work surfaces and for containment when work is performed on a vessel in the water to prevent blast material or paint overspray from contacting storm water or the receiving water.
- ❑ Sweep, rather than hose, debris present on the dock.

Engine Maintenance and Repairs

- ❑ Maintain an organized inventory of materials used in the maintenance shop.
- ❑ Dispose of greasy rag, oil filters, air filters, batteries, spent coolant, and degreasers properly.
- ❑ Label and track the recycling of waste material (i.e., used oil, spent solvents, batteries).
- ❑ Drain oil filters before disposal or recycling.
- ❑ Store cracked batteries in a non-leaking secondary container.
- ❑ Promptly transfer used fluids to the proper container; do not leave full drip pans or other open containers around the shop. Empty and clean drip pans and containers.
- ❑ Do not pour liquid waste down floor drains, sinks, or outdoor storm drain inlets.
- ❑ Plug floor drains that are connected to the storm or sanitary sewer; if necessary, install a sump that is pumped regularly.
- ❑ Inspect the maintenance area regularly for proper implementation of control measures.
- ❑ Train employees on proper waste control and disposal procedures.

Material Handling: Bulk Liquid Storage and Containment.

- ❑ Store permanent tanks in a paved area surrounded by a dike system that provides sufficient containment for the larger of either 10 percent of the volume of all containers or 110 percent of the volume of the largest tank.
- ❑ Maintain good integrity of all storage tanks.
- ❑ Inspect storage tanks to detect potential leaks and perform preventive maintenance.
- ❑ Inspect piping systems (pipes, pumps, flanges, couplings, hoses, valves) for failures or leaks.
- ❑ Train employees on proper filling and transfer procedures.

Material Handling: Containerized Material Storage

- ❑ Store containerized materials (fuels, paints, solvents, etc. in a protected, secure location and away from drains.
- ❑ Store reactive, ignitable, or flammable liquids in compliance with the local fire code.
- ❑ Identify potentially hazardous materials, their characteristics, and use.
- ❑ Control excessive purchasing, storage, and handling of potentially hazardous materials.
- ❑ Keep records to identify quantity, receipt date, service life, users, and disposal routes.
- ❑ Secure and carefully monitor hazardous materials to prevent theft, vandalism, and misuse of materials.
- ❑ Educate personnel for proper storage, use, cleanup, and disposal of materials.
- ❑ Provide sufficient containment for outdoor storage areas the larger of either 10 percent of the volume of all containers or 110 percent of the volume of the largest tank.
- ❑ Use temporary containment where required by portable drip pans.
- ❑ Use spill troughs for drums with taps.

Material Handling Designated Material Mixing Areas

- ❑ Mix paints and solvents in designated areas away from drains, ditches, piers, and surface waters. Locate designated areas preferably indoors or under a shed.
- ❑ If spills occur,
  - stop the source of the spill immediately
  - contain the liquid until cleanup is complete
  - deploy oil containment booms if the spill may reach the water
  - cover the spill with absorbent material
  - keep the area well ventilated
  - dispose of cleanup materials properly
  - do not use emulsifier or dispersant

Shipboard Process Water Handling

- ❑ Keep process and cooling water used aboard ships separate from sanitary wastes to minimize disposal costs for the sanitary wastes.
- ❑ Keep process and cooling water from contact with spent abrasives and paint to avoid discharging these pollutants.
- ❑ Inspect connecting hoses for leaks.

Shipboard Sanitary Waste Disposal

- ❑ Discharge sanitary wastes from the ship being repaired to the yard's sanitary system or dispose of by a commercial waste disposal company.
- ❑ Use appropriate material transfer procedures, including spill prevention and containment activities.

Bilge and Ballast Water

- ❑ Collect and dispose of bilge and ballast waters that contain oils, solvents, detergents, or other additives to a licensed waste disposal company.

Ship and Boat Building or Repairing Yards

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Pressure Washing

- ❑ Collect discharge water and remove all visible solids before discharging to a sewer system, or where permitted, to a drainage system, or receiving water.
- ❑ Perform pressure washing only in designated areas where wash water containment can be effectively achieved.
- ❑ Use no detergents or additives in the pressure wash water.
- ❑ Direct deck drainage to a collection system sump for settling and/or additional treatment.
- ❑ Implement diagonal trenches or berms and sumps to contain and collect wash water at marine railways.
- ❑ Use solid decking, gutters, and sumps at lift platforms to contain and collect wash water for possible reuse.

Surface Preparation, Sanding, and Paint Removal

- ❑ Enclose, cover, or contain blasting and sanding activities to the extent practical to prevent abrasives, dust, and paint chips from reaching storm sewers or receiving water.
- ❑ Where feasible, cover drains, trenches, and drainage channels to prevent entry of blasting debris to the system.
- ❑ Prohibit uncontained blasting or sanding activities performed over open water.
- ❑ Prohibit blasting or sanding activities performed during windy conditions that render containment ineffective.
- ❑ Inspect and clean sediment traps to ensure the interception and retention of solids prior to entering the drainage system.
- ❑ Sweep accessible areas of the drydock to remove debris and spent sandblasting material prior to flooding.
- ❑ Collect spent abrasives routinely and store under a cover to await proper disposal.

Painting

- ❑ Enclose, cover, or contain painting activities to the maximum extent practical to prevent overspray from reaching the receiving water.
- ❑ Prohibit uncontained spray painting activities over open water.
- ❑ Prohibit spray painting activities during windy conditions which render containment ineffective.
- ❑ Mix paints and solvents in designated areas away from drains, ditches, piers, and surface waters, preferably indoors or under cover.
- ❑ Have absorbent and other cleanup items readily available for immediate cleanup of spills.
- ❑ Allow empty paint cans to dry before disposal.
- ❑ Keep paint and paint thinner away from traffic areas to avoid spills.
- ❑ Recycle paint, paint thinner, and solvents.
- ❑ Train employees on proper painting and spraying techniques, and use effective spray equipment that delivers more paint to the target and less overspray.

Drydock Maintenance

- ❑ Clean and maintain drydock on a regular basis to minimize the potential for pollutants in the storm water runoff.
- ❑ Sweep accessible areas of the drydock to remove debris and spent sandblasting material prior to flooding.
- ❑ If hosing may be used as a removal method, collect wash water to remove solids and potential metals.
- ❑ Clean the remaining areas of the dock after a vessel has been removed and the dock raised.
- ❑ Remove and properly dispose of floatable and other low-density waste (wood, plastic, insulations, etc.).

Drydocking

- ❑ Use plastic barriers beneath the hull, between the hull and drydock walls for containment.
- ❑ Use plastic barriers hung from the flying bridge of the drydock, from the bow or stern of the vessel, or from temporary structures for containment.
- ❑ Weight the bottom edge of the containment tarpaulins or plastic sheeting during a light breeze.
- ❑ Use plywood and/or plastic sheeting to cover open areas between decks when sandblasting (scuppers, railings, freeing ports, ladders, and doorways).
- ❑ Install tie rings or cleats, cable suspension systems, or scaffolding to make implementation containment easier.

Nondrydock Containment

- ❑ Hang tarpaulin from the boat, fixed, or floating platforms to reduce pollutants transported by wind.
- ❑ Pave or tarp surfaces under marine railways.
- ❑ Clean railways before the incoming tide.
- ❑ Haul vessels beyond the high tide zone before work commences or halt work during high tide.
- ❑ Place plastic sheeting or tarpaulin underneath boats to contain and collect waste and spent materials and clean and sweep regularly to remove debris.
- ❑ Use fixed or floating platforms with appropriate plastic or tarpaulin barriers as work surfaces and for containment when work is performed on a vessel in the water to prevent blast material or paint overspray from contacting storm water or the receiving water.
- ❑ Sweep, rather than hose, debris present on the dock.

Engine Maintenance and Repairs

- ❑ Maintain an organized inventory of materials used in the maintenance shop.
- ❑ Dispose of greasy rag, oil filters, air filters, batteries, spent coolant, and degreasers properly.
- ❑ Label and track the recycling of waste material (i.e., used oil, spent solvents, batteries).
- ❑ Drain oil filters before disposal or recycling.
- ❑ Store cracked batteries in a non-leaking secondary container.
- ❑ Promptly transfer used fluids to the proper container; do not leave full drip pans or other open containers around the shop. Empty and clean drip pans and containers.
- ❑ Do not pour liquid waste down floor drains, sinks, or outdoor storm drain inlets.
- ❑ Plug floor drains that are connected to the storm or sanitary sewer; if necessary, install a sump that is pumped regularly.
- ❑ Inspect the maintenance area regularly for proper implementation of control measures.
- ❑ Train employees on proper waste control and disposal procedures.

Material Handling: Bulk Liquid Storage and Containment

- ❑ Store permanent tanks in a paved area surrounded by a dike system which provides sufficient containment for the larger of either 10 percent of the volume of all containers or 110 percent of the volume of the largest tank.
- ❑ Maintain good integrity of all storage tanks.
- ❑ Inspect storage tanks to detect potential leaks and perform preventive maintenance.
- ❑ Inspect piping systems (pipes, pumps, flanges, couplings, hoses, valves) for failures or leaks.
- ❑ Train employees on proper filling and transfer procedures.

Material Handling: Containerized Material Storage

- ❑ Store containerized materials (fuels, paints, solvents, etc. in a protected, secure location and away from drains.
- ❑ Store reactive, ignitable, or flammable liquids in compliance with the local fire code.
- ❑ Identify potentially hazardous materials, their characteristics, and use.
- ❑ Control excessive purchasing, storage, and handling of potentially hazardous materials.
- ❑ Keep records to identify quantity, receipt date, service life, users, and disposal routes.
- ❑ Secure and carefully monitor hazardous materials to prevent theft, vandalism, and misuse of materials.
- ❑ Educate personnel for proper storage, use, cleanup, and disposal of materials.
- ❑ Provide sufficient containment for outdoor storage areas the larger of either 10 percent of the volume of all containers or 110 percent of the volume of the largest tank.
- ❑ Use temporary containment where required by portable drip pans.
- ❑ Use spill troughs for drums with taps.

Material Handling Designated Material Mixing Areas

- ❑ Mix paints and solvents in designated areas away from drains, ditches, piers, and surface waters. Locate designated areas preferably indoors or under a shed.
- ❑ If spills occur,
  - stop the source of the spill immediately
  - contain the liquid until cleanup is complete
  - deploy oil containment booms if the spill may reach the water
  - cover the spill with absorbent material
  - keep the area well ventilated
  - dispose of cleanup materials properly
  - do not use emulsifier or dispersant

Shipboard Process Water Handling

- ❑ Keep process and cooling water used aboard ships separate from sanitary wastes to minimize disposal costs for the sanitary wastes.
- ❑ Keep process and cooling water from contact with spent abrasives and paint to avoid discharging these pollutants.
- ❑ Inspect connecting hoses for leaks.

Shipboard Sanitary Waste Disposal

- ❑ Discharge sanitary wastes from the ship being repaired to the yard's sanitary system or dispose of by a commercial waste disposal company.
- ❑ Use appropriate material transfer procedures, including spill prevention and containment activities.

Bilge and Ballast Water

- ❑ Collect and dispose of bilge and ballast waters that contain oils, solvents, detergents, or other additives to a licensed waste disposal company.

Vehicle and Equipment Maintenance and Deicing Areas at Air Transportation Facilities

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Aircraft, Ground Vehicle and Equipment Maintenance Areas

- ❑ Perform all maintenance activities indoors.
- ❑ Maintain an organized inventory of materials used.
- ❑ Drain all parts of fluids prior to disposal.
- ❑ Prohibit the practice of hosing down the apron or hangar floor.
- ❑ Use dry cleanup methods in the event of spills.
- ❑ Collect the storm water runoff from maintenance and/or service areas and provide treatment or recycling.

Aircraft, Ground Vehicle, and Equipment Cleaning Areas

- ❑ Perform all cleaning operations indoors.
- ❑ Collect the storm water runoff from the area and provide treatment or recycling.

Aircraft, Ground Vehicle, and Equipment Storage Areas

- ❑ The storage of aircraft, ground vehicles, and equipment awaiting maintenance may be confined to designated areas.
- ❑ Store aircraft and ground vehicles indoors.
- ❑ Use drip pans for the collection of fluid leaks.
- ❑ Consider perimeter drains, dikes or berms surrounding storage areas.

Material Storage Areas

- ❑ Storage units of all materials (e.g., used oils, hydraulic fluids, spent solvents and waste aircraft fuel) may be maintained in good condition, so as to prevent contamination of storm water, and plainly labeled (e.g., "used oil", "contaminated Jet A", etc.).
- ❑ Store materials indoors.
- ❑ Maintain a centralized storage areas for waste materials.
- ❑ Install berms and dikes around storage areas.

Airport Fuel System and Fueling Areas

- ❑ Where above ground storage timers are present, pollution prevention plan requirements should be consistent with requirements established in 40 CFR 112.7 guidelines for the preparation and implementation of a Spill Prevention Control and Countermeasure (SPCC) plan.

Deicing Operations

- ❑ Evaluate present chemical application rates to ensure against excessive over application. Devices which meter the amount of chemical being applied to runways help to prevent over application.
- ❑ Emphasize anti-icing operations which would preclude the need to deice; less chemical is required to prevent the formation of ice on a runway than is required to remove ice from a runway.
- ❑ Consider installing runway ice detection systems (RID) otherwise known as Apavement sensors≡ which monitor runway temperatures. Pavement sensors provide an indication of when runway temperatures are approaching freezing conditions, thus alerting operators of the need to conduct anti-icing operations.
- ❑ Deicing/anti-icing chemicals applied during extremely cold, dry conditions, are often ineffective since they do not adhere to the ice surface and may be scattered as a result of windy conditions or aircraft movement. In an effort to improve the efficiency of the application, operators should consider prewetting the deicing chemical to improve the adhesion to the iced surface.
- ❑ Consider using chemicals which have less of an environmental impact on receiving waters. Potassium acetate, has a lower oxygen demand than glycol, is nontoxic to aquatic habitat or humans, and was approved by the FAA for runway deicing operations in November, 1991 (AC No. 150/520030A CHG 1).
- ❑ Consider pretreating aircraft with hot water or forced air prior to the application of chemical deicer to reduce the amount of chemical deicer used during the operation.
- ❑ When deicing/anti-icing operations are conducted on aircraft during periods of dry weather, operators should ensure that storm water inlets are blocked to prevent the discharge of deicing/anti-icing chemicals to the storm sewer system. Mechanical vacuum systems or other similar devices can then be used to collect the spent deicing chemical from the apron surface for proper disposal to prevent those materials from later becoming a source of storm water contamination.
- ❑ Establishing a centralized deicing station would provide better control over aircraft deicing/anti-icing operations in that it enables operators to readily collect spent deicing/anti-icing chemicals.
- ❑ Once spent deicer/anti-icer chemicals are collected, operators can select from various methods of disposal such as disposal to sanitary sewer facility, retention and detention ponds, or recycling.

Treatment Works

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Preparation of Biological and Physical Treatment Process

- ❑ Use drip pans under drums and equipment where feasible.
- ❑ Store process chemicals inside buildings.
- ❑ Inspect the storage yard for filling drip pans and other problems regularly.
- ❑ Train employees on procedures for storing and inspecting chemicals.

Soil Amending and Grass Fertilizing

- ❑ Use the appropriate amount of fertilizer.
- ❑ Do not overfertilize.
- ❑ Train employee on proper fertilizing techniques.

Liquid Storage in Above Ground Storage Containers

- ❑ Maintain good integrity of all storage containers.
- ❑ Install safeguards (such as diking or berming) against accidental releases at the storage area.
- ❑ Inspect storage tanks to detect potential leaks and perform preventive maintenance.
- ❑ Inspect piping systems (pipes, pumps, flanges, couplings, hoses, and valves) for failures or leaks.
- ❑ Train employees on proper filling and transfer procedures.

Pest Control

- ❑ Minimize pesticide application.
- ❑ Only apply pesticide if needed.
- ❑ Train employees on proper pesticide application.

Sludge Drying Beds

- ❑ Ensure drying bed is draining properly (e.g., check for clogging); avoid overfilling drying bed; grade the land to divert flow around drying bed; berm, dike, or curb drying bed areas; cover drying beds.

Sludge Storage Piles

- ❑ Confine storage of sludge to a designated area as far from any receiving water body as possible; store sludge on an impervious surface (e.g., concrete pad); grade the land to divert flow around storage piles; berm, dike, or curb sludge storage piles; cover sludge storage piles.

Sludge Transfer

- ❑ Promptly remove any sludge spilled during transfer; conduct transfer operations over an impervious surface; avoid transferring sludge during rain events; grade the land to divert flow around transfer areas; berm, curb, or dike transfer areas; avoid locating transfer operations near receiving water bodies.

Incineration-Ash Impoundments/ Piles

- ❑ Line ash impoundments with clay (or other type of impervious material); ensure ash impoundments will hold maximum volume of ash and a 10-year, 24-hour rain event; curb, berm, or dike ash storage areas; avoid locating ash storage areas near receiving water bodies.

Miscellaneous

- ❑ Properly dispose of grit/scum; properly dispose of screens on a daily basis; maximize vegetative cover to stabilize soil and reduce erosion.

Food and Kindred Products Facilities

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Raw Material Unloading/Product Loading

- ❑ Ensure that a facility representative is present during unloading/loading activities.
- ❑ Inspect the unloading/loading areas to detect problems before they occur.
- ❑ Close storm drains during loading/unloading activities in surrounding area.
- ❑ Inspect all containers prior to unloading/loading of any raw or spent materials.
- ❑ Install backflow prevention devices on liquid transfer equipment.
- ❑ Inspect all connection equipment (e.g., hoses and couplings), and replace when necessary, before performing unloading/loading activities.
- ❑ Perform all unloading/loading activities in a covered and/or enclosed areas.
- ❑ Use drip pans when loading/unloading liquid product.
- ❑ Situate loading/unloading areas indoors or in a covered area.
- ❑ Use rubber seals in truck loading dock areas to contain spills indoors.
- ❑ Drain hoses back into truck, railcar, etc. after loading/unloading materials.
- ❑ Install high level alarm on tanks to prevent overfilling.
- ❑ Ensure that berms and dikes are built around the unloading/loading areas, if applicable.
- ❑ If outside or in covered areas, minimize run on of storm water into the unloading/loading areas by grading the areas to ensure that storm water runs off.
- ❑ Use dry cleanup methods for unloading/loading areas rather than washing the areas down.
- ❑ Train employees on proper unloading/loading techniques.
- ❑ Initiate an inventory control for all raw and spent materials.

Storage Containers: Liquid Storage

- ❑ Inspect the external condition (corrosion, leaks) of the containers.
- ❑ Inspect the general area around the containers.
- ❑ Ensure that beams and dikes are built around the containers.
- ❑ Cover and/or enclose.
- ❑ Bulkhead liquid storage tanks indoors (i.e., tank outlets located inside buildings).
- ❑ Ensure that all containers are closed (e.g., valves shut, lids and manways sealed, caps closed).
- ❑ Wash containers indoors before storing empty containers outdoors.
- ❑ If outside or in a covered area, minimize run on of storm water into a storage area by grading area to ensure that storm water runs Aoff≅ and not Aon≅.
- ❑ Train employees on proper storage techniques (e.g., filling and transferring contents).
- ❑ Maintain employee training on proper handling and transportation of materials.
- ❑ Maintain an inventory control of all raw and spent materials.
- ❑ Employ measures to protect against spillage from the overflows (e.g., high level sensors, alarms).

Storage Containers: Solid Storage

- ❑ Consider vacuum emission control systems for airborne dust and particulate matter.

Waste Management: Wastewater

- ❑ Perform treatment processes in-house, if possible.
- ❑ Inspect the outside pipe connections (couplings, valve seals and gaskets, flanges, etc.) of the treatment system for leaks, corrosion, and poor maintenance upkeep.

Waste Management: Solid Waste

- ❑ Inspect the general area around the solid waste (e.g., look for signs of leaching).
- ❑ Store waste so that it is physically contained (dumpsters, drums, bags).
- ❑ Store waste in an enclosed/covered area.
- ❑ If outside or in a covered area, minimize exposure to storm water by grading the area to ensure that storm water runs Aoff≅ and not Aon≅.
- ❑ Ensure hazardous waste disposal practices are performed in accordance with Federal, State, and local requirements.
- ❑ Route trash compactor leakage to treatment system or sanitary sewer.

Waste Management: Air Emissions

- ❑ Clean around vents and stacks to atmosphere from process and storage areas.
- ❑ Place tubs around vents and stacks for easy collection of settling particles.
- ❑ Inspect air emission control systems (e.g., baghouses) regularly and repair and replace as necessary.
- ❑ Route overflows/condensates from process vents to onsite treatment system or to the sanitary sewer.

Pest Control

- ❑ Follow manufacturers directions for application of pest control materials to site.
- ❑ Time application for dry weather conditions.
- ❑ Store partially full containers indoors or undercover.
- ❑ Apply insecticides during breeding months.
- ❑ Protect rat bait houses from storm water.

Improper Connections to the Storm Drain

- ❑ Perform smoke or dye testing to determine if interconnections exist between the sanitary sewer and storm drain.
- ❑ Plug all floor drains leading to storm drains.
- ❑ Update facility schematics to accurately reflect all plumbing connections.

General

- ❑ Offer employee incentives so that employees will develop cost effective, worker efficient BMPs.
- ❑ Request outside firm to conduct a storm water inspection/audit.
- ❑ Inspect material transfer lines/connections for leaks or signs of wear and repair or replace as necessary.

Activities for Specific Facilities:

Meat Products

- ❑ Inspect area around animal holding pens.
- ❑ Enclose/cover fowl hanging area.
- ❑ Enclose/cover the animal holding pens.
- ❑ Grade the areas around the animal holding pens to ensure storm water runs Aoff≡ and not Aon≡ to the holding pen.
- ❑ Train employees on proper material (i.e., hide, hair, feathers, animal parts) clean-up procedures around and within the animal holding pens.
- ❑ Store animal manure and other materials from clean-up activities in appropriate containers in an enclosed/covered area.
- ❑ Area for trailers holding empty bird cages should have storm water run on/runoff controls in place.
- ❑ Use mechanical sweepers around site to clean up fugitive feathers, dust, and manure.

Dairy Products

- ❑ Inspect area around aged/spoiled dairy products.
- ❑ Store aged/spoiled dairy products in enclosed area.
- ❑ Train employees on proper disposal methods for all aged/spoiled dairy products.
- ❑ Ensure that all aged/spoiled product (e.g., bottles, cartons, plastic containers) are disposed of in a proper manner (bagged, covered).

Canned Frozen and Preserved Fruits, Vegetables, and Frozen Specialties

- ❑ Inspect all fruit and vegetable storage areas.
- ❑ Store all fruits and vegetables in appropriate containers (e.g., bins, bushels, baskets, buckets) and in enclosed/covered areas.
- ❑ Store empty fruit and vegetable containers in an enclosed/covered area.
- ❑ Train employees on proper handling/disposal methods for fresh/rotten fruits and vegetables.
- ❑ Consider air emission control systems for all cooking processes to reduce particulate matter.
- ❑ Minimize fruit and vegetable storage time outdoors.

Grain Mills

- ❑ Inspect the general area around the grain storage.
- ❑ Store all grain in appropriate containers (e.g., silos, hoppers) in an enclosed/covered area.
- ❑ Train employees on grain handling procedures.
- ❑ Consider a vacuum control system in all grain mixing areas.

Bakery Products

- ❑ Inspect ingredient storage areas.
- ❑ Store all ingredients (e.g., corn sweeteners, flour, shortening, syrup, vegetable oils) in appropriate containers (e.g., tanks, drums, bags) in an enclosed/covered area.
- ❑ Remove flour/oil dust accumulation around ventilation exhaust systems.
- ❑ Install an air emission control system for all baking processes to reduce particulate matter.

Sugar and Confectionery

- ❑ Consider a vacuum control system in all granular and powdered processing areas.

Fats & Oils

- ❑ Inspect all fats and oils storage areas.
- ❑ Store all fats and oils, (e.g., butcher shop materials, hair, hide, tallow, bone meal, and offal) in enclosed/covered areas.
- ❑ Ensure all fats and oils are physically contained.

Beverages

- ❑ Ensure grain is stored in enclosed/covered area.
- ❑ Consider an air emission control system for all grain handling and brewing processes.
- ❑ Protect reusable beverage containers that are stored outdoors from storm water contact.

Textile Mills, Apparel, and Other Fabric Product Manufacturing Facilities

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Preparation (e.g., Desizing and Scouring).

- ❑ Waste stream reuse for typical bleach unit processing; recycle J-box or kier drain wastes to saturator.
- ❑ Make use of countercurrent washing.
- ❑ Use washer waste from scour operation for batch scouring.

Dyeing

- ❑ Perform analysis of spent dye baths for residual materials.
- ❑ Where feasible, obtain background information and data necessary before making product substitutions. This includes OSHA form 20 data and technical data.
- ❑ Be aware of potential problem chemicals, such as aryl phenol ethoxylates, chlorinated aromatics, chlorinated aromatics, and metals.
- ❑ Employ pad batch dyeing to eliminate the need for salts and chemical specialties from the dyebath, with associated reduction in cost and pollution source reduction.

Finishing

- ❑ Reuse residual portions of finish mixes as much as possible by adding back to them the required components to make up the next mix.
- ❑ Return noncontact cooling water and stream condensates to either a hot water holding tank or a clear well. If neither is available, segregate waste streams from sources which do not generally require treatment from other waste streams that do require treatment.

General Water Conservation Techniques

- ❑ Use "low liquor ratio" dyeing machines where practicable.
- ❑ Use of foam processing (mercerizing, bleaching, dyeing, finishing) where practicable as a water conservation process.

Chemical Screening and Inventory Control

- ❑ Employ prescreening practices to evaluate and consider chemicals on a wide range of environmental and health impact criteria.
- ❑ Develop and perform a routine raw material quality control program.
- ❑ Review and develop procedures for source reduction of metals.
- ❑ Promptly transfer used fluids to the proper container; do not leave full drip pans or other open containers around the shop. Empty and clean drip pans and containers.
- ❑ Do not pour liquid waste down floor drains, sinks, or outdoor storm drain inlets.
- ❑ Plug floor drains that are connected to the storm or sanitary sewer; if necessary, install a sump that is pumped regularly.
- ❑ Inspect the maintenance area regularly for proper implementation of control measures.
- ❑ Train employees on proper waste control and disposal procedures.

Material Handling: Bulk Liquid Storage and Containment

- ❑ Store permanent tanks in a paved area surrounded by a dike system which provides sufficient containment for the larger of either 10 percent of the volume of all containers or 110 percent of the volume of the largest tank.
- ❑ Maintain good integrity of all storage tanks.
- ❑ Inspect storage tanks to detect potential leaks and perform preventive maintenance.
- ❑ Inspect piping systems (pipes, pumps, flanges, couplings, hoses, valves) for failures or leaks.
- ❑ Train employees on proper filling and transfer procedures.

Material Handling: Containerized Material Storage

- ❑ Store containerized materials (fuels, paints, solvents, etc.) in a protected, secure location and away from drains.
- ❑ Store reactive, ignitable, or flammable liquids in compliance with the local fire code.
- ❑ Label all materials clearly.
- ❑ Identify potentially hazardous materials, their characteristics, and use.
- ❑ Control excessive purchasing, storage, and handling of potentially hazardous materials.
- ❑ Keep records to identify quantity, receipt date, service life, users, and disposal routes.
- ❑ Secure and carefully monitor hazardous materials to prevent theft, vandalism, and misuse of materials.
- ❑ Educate personnel for proper storage, use, cleanup, and disposal of materials.
- ❑ Provide sufficient containment for outdoor storage areas for the larger of either 10 percent of the volume of all containers or 110 percent of the volume of the largest tank.
- ❑ Use temporary containment where required by portable drip pans.
- ❑ Use spill troughs for drums with taps.

Material Handling: Designated Material Mixing Areas

- ❑ Mix solvents in designated areas away from drains, ditches, and surface waters.
- ❑ If spills occur,
  - stop the source of the spill immediately
  - contain the liquid until cleanup is complete
  - deploy oil containment booms if the spill may reach the water
  - cover the spill with absorbent material
  - keep the area well ventilated
  - dispose of cleanup materials properly
  - do not use emulsifier or dispersant

Wood and Metal Furniture and Fixture Manufacturing Facilities

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Outdoor Unloading and Loading

- ❑ Confine loading/unloading activities to a designated area.
- ❑ Perform all loading/unloading activities in a covered or enclosed area.
- ❑ Close storm drains during loading/unloading activities in surrounding areas.
- ❑ Avoid loading/unloading materials in the rain.
- ❑ Inspect all containers prior to loading/unloading of any raw or spent materials.
- ❑ Berm, curb, or dike loading/unloading areas.
- ❑ Use dry clean-up methods instead of washing the areas down.
- ❑ Train employees on proper loading/unloading techniques.

Outdoor Material Storage

- ❑ Confine storage of raw materials, parts, and equipment to designated areas.
- ❑ Train employees on proper waste control and disposal.
- ❑ Berm, curb, or dike any areas around tanks.
- ❑ Ensure that all containers are properly sealed and valves closed.
- ❑ Inventory all raw and spent materials.
- ❑ Inspect air emission control systems regularly, and repair or replace when necessary.
- ❑ Store wastes in covered, leak proof containers (e.g., dumpsters, drums).
- ❑ Store wastes in enclosed and/or covered areas.
- ❑ Ensure hazardous and solid waste disposal practices are performed in accordance with applicable Federal, State, and local requirements.
- ❑ Ship all wastes to offsite landfills or treatment facilities.

Printing and Publishing Facilities

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Plate Preparation

- ❑ Use aqueous-developed lithographic plates or wipe-on plates.

Printing

- ❑ Use press wipes as long as possible before discarding or laundering; dirty ones for the first pass, clean ones for the second pass.
- ❑ Squeeze or centrifuge solvent out of dirty rags.
- ❑ Set up an in-house dirty rag cleaning operation if warranted or send to approved industrial laundries, if available.
- ❑ Dedicate press for inks with hazardous pigments/solvents.
- ❑ Segregate used oil from solvents or other materials.
- ❑ Use water-based inks in gravure and flexographic printing process.

Clean Up

- ❑ Label sinks as to proper disposal of liquids.
- ❑ Keep equipment in good condition.
- ❑ Use doctor blades and squeegees to remove as much ink as possible prior to cleaning with solvent and rags.
- ❑ Control solvent use during equipment cleaning, use only what you need.
- ❑ Designate special areas for draining or replacing fluids.
- ❑ Substitute nontoxic or less toxic cleaning solvents.
- ❑ Recover waste solvents onsite with batch distillation if warranted or utilize professional solvent recyclers.
- ❑ Centralize liquid solvent cleaning in one location. Have refresher courses in operating and safety procedures.

Stencil Preparation for Screen Printing

- ❑ Recapture excess ink from silkscreen process before washing the screen to decrease amount of ink used and cleaning emulsion used.

Material Handling and Storage Areas

- ❑ Store containerized materials (fuels, paints, inks, solvents, etc.) in a protected, secure location and away from drains.
- ❑ Store reactive, ignitable, or flammable liquids in compliance with the local fire code.
- ❑ Identify potentially hazardous materials, their characteristics, and use.
- ❑ Eliminate/reduce exposure to storm water.
- ❑ Control excessive purchasing, storage, and handling of potentially hazardous materials.
- ❑ Keep records to identify quantity, receipt date, service life, users, and disposal routes secure and carefully monitor hazardous materials to prevent theft, vandalism, and misuse of materials.
- ❑ Educate personnel for proper storage, use, cleanup, and disposal of materials.
- ❑ Maintain good integrity of all storage tanks inspect storage tanks to detect potential leaks and perform preventive maintenance.
- ❑ Provide sufficient containment for outdoor storage areas for the larger of either 10 percent of the volume of all containers or 110 percent of the volume of the largest tank.
- ❑ Use temporary containment where required by portable drip pans.
- ❑ Use spill troughs for drums with taps.
- ❑ Train employees on proper filling and transfer procedures.
- ❑ Inspect piping systems (pipes, pumps, flanges, couplings, hoses, valves) for failures or leaks.
- ❑ Handle solvents in designated areas away from drains, ditches, and surface waters. Locate designated areas preferably indoors or under a shed.
- ❑ If spills occur,
    - stop the source of the spill immediately
    - contain the liquid until cleanup is complete
    - deploy oil containment booms if the spill may reach the water
    - cover the spill with absorbent material
    - keep the area well ventilated
    - dispose of cleanup materials properly
    - do not use emulsifier or dispersant

Rubber, Miscellaneous Plastic Products, and Miscellaneous Manufacturing Industries

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Outdoor Unloading and Loading

- ❑ Confine loading/unloading activities to a designated area.
- ❑ Consider performing loading/unloading activities indoors or in a covered area.
- ❑ Consider covering loading/unloading area with permanent cover (e.g., roofs) or temporary cover (e.g., tarps).
- ❑ Close storm drains during loading/unloading activities in surrounding areas.
- ❑ Avoid loading/unloading materials in the rain.
- ❑ Inspect the unloading/loading areas to detect problems before they occur.
- ❑ Inspect all containers prior to loading/unloading of any raw or spent materials.
- ❑ Consider berming, curbing, or diking loading/unloading areas.
- ❑ Dead-end sump where spilled materials could be directed.
- ❑ Drip pans under hoses.
- ❑ Use dry clean-up methods instead of washing the areas down.
- ❑ Train employees on proper loading/unloading techniques and spill prevention and response.

Outdoor Material Storage

- ❑ Confine storage of materials, parts, and equipment to designated areas.
- ❑ Consider secondary containment using curbing, berming, or diking all liquid storage areas.
- ❑ Train employees on proper waste control and disposal.
- ❑ Train employees in spill prevention and response.
- ❑ Consider covering tanks.
- ❑ Ensure that all containers are closed (e.g., valves shut, lids sealed, caps closed).
- ❑ Wash and rinse containers indoors before storing them outdoors.
- ❑ If outside or in covered areas, minimize run on by grading the land to divert flow away from containers.
- ❑ Leak detection and container integrity testing.
- ❑ Direct runoff to onsite retention pond.
- ❑ Inventory all raw and spent materials.
- ❑ Clean around vents and stacks.
- ❑ Place tubs around vents and stacks to collect particulate.
- ❑ Inspect air emission control systems (e.g., baghouses) regularly, and repair or replace when necessary.
- ❑ Store wastes in covered, leak proof containers (e.g., dumpsters, drums).
- ❑ Consider shipping all wastes to offsite landfills or treatment facilities.
- ❑ Ensure hazardous waste disposal practices are performed in accordance with Federal, State, and local requirements.

Zinc Handling

- ❑ Train employee train regarding the handling and emptying of zinc bags.
- ❑ Indoor storage of zinc bags.
- ❑ Thoroughly cleanup zinc spills without washing the zinc into a storm drain.
- ❑ Consider the use of 2,500 pound sacks (from which spills are less likely) rather than 50 to 100 pound sacks.
- ❑ Provide a cover for the dumpster or move the dumpster inside.
- ❑ Provide a lining for the dumpster.
- ❑ Review dust collectors and baghouses as possible sources of zinc. Improperly operating dust collectors or baghouses may be replaced or repaired as appropriate; the plan may also provide for regular maintenance of these facilities.
- ❑ Review dust generation from rubber grinding operations and as appropriate, install a dust collection system.
- ❑ Prevent and/or clean up drips or spills of zinc stearate slurry that may be released to a storm drain. Alternate compounds to zinc stearate may also be considered.

Leather Tanning and Finishing Facilities

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Temporary Outdoor Storage of Fresh or Brine Cured Hides

- ❑ Store hides indoors if possible.
- ❑ Cover the hides with a roof or temporary covering (e.g.,polyethylene, tarpaulin etc.).
- ❑ Minimize storm water run on by enclosing the area or building a berm around the area.
- ❑ Inspect area regularly for proper implementation of good housekeeping and control measures.

Beamhouse Operations

- ❑ Store chemical drums & bags and empty lime & depilatory chemical containers indoors if possible, preventive maintenance.
- ❑ Cover chemical drums & bags, empty lime & depilatory chemical containers and leather scraps with roof or temporary covering (e.g., tarpaulins, polyethylene) and store on elevated impermeable surface.
- ❑ Curbing, containment dikes around chemical storage, empty lime & depilatory chemical containers and leather scrap storage area.
- ❑ Inspect area regularly for leaking drums, broken bags, proper implementation of good housekeeping and control measures, (broken cracked dikes), material inventory, material storage and operation & maintenance.
- ❑ Clean up leaks & spills quickly & completely, use drip pans for leaking equipment.
- ❑ Good Housekeeping-all paved areas should be swept regularly, eliminate unnecessary flushing with water and label chemical drums and containers.
- ❑ Employee training on good housekeeping, proper handling of chemicals.

Tanyards

- ❑ BMPs for Tanyards (empty chemical containers and hides, leather dust, shavings) are the same as those listed above for Beamhouse Activities.

Retan and Wet Finish

- ❑ Dust reduction through frequent inspection of vacuum, collector (bag & cyclone), and filter systems.
- ❑ Dust reduction through enclosure and covering.
- ❑ Preventive maintenance/inspection of dust collection systems.
- ❑ Good Housekeeping-regular sweeping of paved areas, eliminate unnecessary flushing with water and label chemical drums and containers.
- ❑ Employee training on good housekeeping, proper handling of chemicals.

Dry Finish

- ❑ Preventive maintenance, inspection of spray booths.
- ❑ Employee training on proper disposal of spent solvents.

Receiving and Shipping

- ❑ Cover shipping & receiving area.
- ❑ Cover trucks.
- ❑ Vehicle positioning-locating trucks while transferring materials to prevent spills onto the ground surface.
- ❑ Grade berm or curb area to prevent storm water run on contamination, divert rain gutters away from loading area.
- ❑ Clean spills immediately.
- ❑ Inspect trucks for leaks.
- ❑ Employee training in spill prevention.

Liquid Storage in Above Ground Tanks

- ❑ Clearly tag valves to avoid human error.
- ❑ Install overflow protection devices on tank systems to warn operator or to automatically shut down transfer pumps when tanks reach full capacity.
- ❑ Secondary containment around tanks.
- ❑ Employee training.
- ❑ Inspection of tank foundations, connections, coatings, valves and piping systems.
- ❑ Comply with existing spill prevention, cleanup and countermeasure plans (SPCC plan) and State and Federal laws.
- ❑ Integrity testing by qualified professional.

Improper Connections to Storm Drains

- ❑ Plug all floor drains connected to storm drain.
- ❑ Perform smoke or dye testing to determine if interconnections exist between sanitary water system and storm drain system.
- ❑ Update facility schematics to accurately reflect all plumbing connections.
- ❑ Install a safeguard against washwaters from processing areas entering the storm sewer unless permitted.
- ❑ Train employees on proper disposal practices for all materials.

Waste Management

- ❑ Conduct waste reduction assessment-develop guidelines for the elimination of waste generation emissions.
- ❑ Institute industrial waste source reduction and recycling BMPs.
- ❑ Move waste management activities indoors (after safety concerns are addressed) and cover waste piles, dumpsters, hoppers, place on impermeable elevated surfaces.
- ❑ Prevent storm water run on by curbing, building berms.
- ❑ Cover trucks & inspect for leaking wastes.
- ❑ Inspection of waste management areas for leaking containers, spills, damaged containers, uncovered waste piles, dumpsters, hoppers.
- ❑ Inspection of roof areas & outside equipment.
- ❑ Develop and maintain proper erosion control or site stabilization measures.
- ❑ Train employees on proper disposal practices for all materials.

Fabricated Metal Products Industry

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Metal Fabricating Areas

- ❑ Sweep fabrication areas. Absorb dust through a vacuum system to avoid accumulation on roof tops and onto the ground.
- ❑ Sweep on a regular basis all accessible paved areas.
- ❑ Maintain floors in a clean and dry condition.
- ❑ Remove waste and dispose of regularly.
- ❑ Remove obsolete equipment expeditiously.
- ❑ Train employees on good housekeeping measures.

Storage Areas for Raw Metal

- ❑ The storage of raw materials should be under a covered area whenever possible and protected from contact with the ground.
- ❑ The amount of material stored should be minimized to avoid corrosive activity from longterm exposed materials.
- ❑ Diking or berming the area to prevent or minimize runon may be considered.
- ❑ Check raw metals for corrosion.
- ❑ Keep area neat and orderly, stack neatly on pallets or off the ground; and cover exposed materials.

Receiving, Unloading, and Loading Areas

- ❑ These areas should be enclosed where feasible using either curbing, berming, diking or other accepted containment systems in case of spills during delivery of chemicals such as lubricants, coolants, rust preventatives, solvents, oil, sodium hydroxide, hydrochloric acid, calcium chloride, polymers, sulfuric acid, and other chemicals used in the metal fabricating processes.
- ❑ Directing roof down spouts away from loading sites and equipment and onto grassy or vegetated areas should help prevent storm water contamination by pollutants that have accumulated in these areas.
- ❑ Clean up spills immediately.
- ❑ Check for leaks and remedy problems regularly.
- ❑ Unload under covered areas when possible.

Storage of Heavy Equipment

- ❑ Vehicles should be stored indoors when possible.
- ❑ If stored outdoors, the use of gravel, concrete or other porous surfaces should be considered to minimize or prevent heavy equipment from creating ditches or other conveyances that would cause sedimentation runoff and increase TSS loadings.
- ❑ Clean equipment prior to storage.
- ❑ Divert drainage to the grass swales, filter strips, retention ponds, or holding tanks.

Metal Working Fluid Areas

- ❑ Store used metal working fluid with fine metal dust indoors.
- ❑ Use tight sealing lids on all fluid containers.
- ❑ Use straw, clay absorbents, sawdust, or synthetic absorbents to confine or contain any spills, or other absorbent material and establish recycling programs for used fluids when possible.

Unprotected Liquid Storage Tanks

- ❑ Cover all tanks whenever possible.
- ❑ Berm tanks whenever possible.
- ❑ Dike area or install grass filters to contain spills.
- ❑ Keep area clean.
- ❑ Check piping, valves and other related equipment on a regular basis.

Chemical Cleaners and Rinse Water

- ❑ Use drip pans and other spill devices to collect spills or solvents and other liquid cleaners.
- ❑ Recycle wastewater.
- ❑ Store recyclable waste indoors or in covered containers.
- ❑ Substitute nontoxic cleaning agents when possible.

Raw Steel Collection Areas

- ❑ Materials should be kept in a covered storage bin or kept inside until pickup.
- ❑ The use of pitched structures should be considered.
- ❑ Collect scrap metals, fines, iron dust and store under cover and recycle.

Paints and Painting Equipment

- ❑ Paint and sand indoors when possible.
- ❑ Avoid painting and sandblasting operations outdoors in windy weather conditions.
- ❑ If done outside, enclose sanding and painting areas with tarps or plastic sheeting.
- ❑ Use waterbased paints when possible.
- ❑ Use tarps, drip pans, or other spill collection devices to contain and collect spills of paints, solvents or other liquid material.

Vehicle and Equipment Maintenance Areas

- ❑ Changing fluids or parts should be done indoors when possible.
- ❑ If maintenance is performed outdoors, fluids used in maintaining these vehicles should be contained in the area by using drip pans, large plastic sheets, canvas or other similar controls under the vehicles, or berming the area.
- ❑ Hydraulic fluids should be properly stored to prevent leakage and storm water contamination.
- ❑ Discard fluids properly or recycle if possible.

Hazardous Waste Storage Areas

- ❑ All hazardous waste may be stored in sealed drums.
- ❑ Establish centralized drum storage satellite areas throughout the complex to store these materials.
- ❑ Store indoors or under cover where possible.
- ❑ Do not stack containers in such a way as to cause leaks or damage to the containers.
- ❑ Use pallets to store containers when possible.
- ❑ Store materials with adequate space for traffic without disturbing drums.
- ❑ Maintain low inventory level of chemicals based on need.
- ❑ Dike or use grass swales, ditches or other containment to prevent runon or runoff in case of spills.
- ❑ Label materials clearly.
- ❑ Check for corrosion and leakage of storage containers.
- ❑ Properly dispose of outdated materials.
- ❑ Post notices prohibiting dumping of materials into storm drains.
- ❑ All other applicable Federal, State, and local regulations may be followed.

Transporting Chemicals to Storage Areas

- ❑ Forklift operators should be trained to avoid puncturing drums.
- ❑ Store drums as close to operational building as possible.
- ❑ Label all drums with proper warning and handling instructions.

Finished Products (Galvanized) Storage

- ❑ Materials should be stored in such a way to minimize contact with precipitation and runoff.
- ❑ Consider storing finished products indoors, on a wooden pallets concrete pad, gravel surface, or other impervious surface.

Wooden Pallets and Empty Drums

- ❑ Clean contaminated wooden pallets.
- ❑ Cover empty drums.
- ❑ Cover contaminated wooden pallets.
- ❑ Store drums and pallets indoors.
- ❑ Clean empty drums.
- ❑ Store pallets and drums on concrete pads.

Retention Ponds (Lagoon)

- ❑ Provide routine maintenance.
- ❑ Remove excess sludge periodically.
- ❑ Aerate periodically to maintain pond's aerobic character and ecological balance.

Facilities that Manufacture Transportation Equipment, Industrial, or Commercial Machinery

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Outdoor Unloading and Loading

- ❑ Confine loading/unloading activities to a designated area.
- ❑ Consider performing loading/unloading activities indoors or in a covered area.
- ❑ Consider covering loading/unloading area with permanent cover (e.g., roofs) or temporary cover (e.g., tarps).
- ❑ Close storm drains during loading/unloading activities in surrounding areas.
- ❑ Avoid loading/unloading materials in the rain.
- ❑ Inspect the unloading/loading areas to detect problems before they occur.
- ❑ Inspect all containers prior to loading/unloading of any raw or spent materials.
- ❑ Consider berming, curbing, or diking loading/unloading areas.
- ❑ Use dry cleanup methods instead of washing the areas down.
- ❑ Train employees on proper loading/unloading techniques.

Outdoor Material Storage

- ❑ Confine storage of materials, parts, and equipment to designated areas.
- ❑ Consider curbing, berming, or diking all liquid storage areas.
- ❑ Train employees on proper waste control and disposal.
- ❑ Consider covering tanks.
- ❑ Ensure that all containers are closed (e.g., valves shut, lids sealed, caps closed).
- ❑ Wash and rinse containers indoors before storing them outdoors.
- ❑ If outside or in covered areas, minimize runon of storm water by grading the land to divert flow away from containers.
- ❑ Inventory all raw and spent materials.
- ❑ Clean around vents and stacks.
- ❑ Place tubs around vents and stacks to collect particulate.
- ❑ Inspect air emission control systems (e.g., baghouses) regularly, and repair or replace when necessary.
- ❑ Store wastes in covered, leak proof containers (e.g., dumpsters, drums).
- ❑ Consider shipping all wastes to offsite landfills or treatment facilities.
- ❑ Ensure hazardous waste disposal practices are performed in accordance with Federal, State, and local requirements.

Manufacturers of Electronic and Electrical Equipment

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Outdoor Unloading and Loading

- ❑ Confine loading/unloading activities to a designated area.
- ❑ Consider performing loading/unloading activities indoors or in a covered area.
- ❑ Consider covering loading/unloading area with permanent cover (e.g., roofs) or temporary cover (e.g., tarps).
- ❑ Close storm drains during loading/unloading activities in surrounding areas.
- ❑ Avoid loading/unloading materials in the rain.
- ❑ Inspect the unloading/loading areas to detect problems before they occur.
- ❑ Inspect all containers prior to loading/unloading of any raw or spent materials.
- ❑ Consider berming, curbing, or diking loading/unloading areas.
- ❑ Dead-end sump where spilled materials could be directed.
- ❑ Drip pans under hoses.
- ❑ Use dry clean-up methods instead of washing the areas down.
- ❑ Train employees on proper loading/unloading techniques and spill prevention and response.

Outdoor Material Storage

- ❑ Confine storage of materials, parts, and equipment to designated areas.
- ❑ Consider secondary containment using curbing, berming, or diking all liquid storage areas.
- ❑ Train employees in spill prevention and response techniques.
- ❑ Train employees on proper waste control and disposal.
- ❑ Consider covering tanks.
- ❑ Ensure that all containers are closed (e.g., valves shut, lids sealed, caps closed).
- ❑ Wash and rinse containers indoors before storing them outdoors.
- ❑ If outside or in covered areas, minimize run on of storm water by grading the land to divert flow away from containers.
- ❑ Leak detection and container integrity testing.
- ❑ Direct runoff to onsite retention pond.
- ❑ Inventory all raw and spent materials.
- ❑ Clean around vents and stacks.
- ❑ Place tubs around vents and stacks to collect particulate.
- ❑ Inspect air emission control systems (e.g., baghouses) regularly, and repair or replace when necessary.
- ❑ Store wastes in covered, leak proof containers (e.g., dumpsters, drums).
- ❑ Consider shipping all wastes to offsite landfills or treatment facilities.
- ❑ Ensure hazardous waste disposal practices are performed in accordance with Federal, State, and local requirements.

Appendix B2

BMPs for Other Specifications

Vehicle Service Facilities

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Changing Oil and Other Fluids

- ❑ Whenever possible, change vehicle fluids indoors and only on floors constructed of non-porous materials. Avoid working over asphalt and dirt floors – surfaces that absorb vehicle fluids.
- ❑ If vehicle fluids must be removed outdoors, always use a drip pan. Prevent spills from reaching the street or storm drain by working over an absorbent mat and covering nearby storm drains, or working in a bermed area. If necessary, use absorbent socks to create a bermed area.
- ❑ When draining fluids into a drain pan, place a larger drip pan (e.g., 3' x 4') under the primary drain pan to catch any spilled fluids.
- ❑ Divert storm water around storage areas with ditches, swales and/or berms. Transfer fluids drained from vehicles to a designated waste storage area as soon as possible. Drain pans and other open containers of fluids should not be left unattended unless they are covered and within secondary containment.
- ❑ Store waste containers of antifreeze and oil within secondary containment. Antifreeze and waste oil should be stored separately and recycled, or disposed of as hazardous waste.
- ❑ Never pour vehicle fluids or other hazardous wastes into sinks, toilets, floor drains, outside storm drains, or in the garbage. These substances should be kept in designated storage areas until recycled or safe disposal.
- ❑ Drain fluids from leaking or wrecked vehicles as soon a possible, to avoid leaks and spills.
- ❑ Consider using a quarter barrel, vacuum pump, or drain pan with built-in pump to transfer fluids.

Cleaning Engines and Parts, and Flushing Radiators

- ❑ Eliminate discharges from these operations to the sanitary sewer and storm drains. Use a licensed service to haul and recycle or dispose of wastes.
- ❑ Designate specific areas or service bays for engine, parts, or radiator cleaning. Do not wash or rinse parts outdoors.
- ❑ Use self-contained sinks and tanks when working with solvents. Keep sinks and tanks covered when not in use.
- ❑ Inspect degreasing solvent sinks regularly for leaks, and make necessary repairs immediately.
- ❑ Avoid soldering over drip tanks. Sweep up drippings and recycle or dispose as hazardous waste.
- ❑ Rinse and drain parts over the solvent sink or tank, so that solvents will not drip or spill onto the floor. Use drip boards or pans to catch excess solutions and divert them back to a sink or tank.
- ❑ Allow parts to dry over the hot tank. If rinsing is required, rinse over the tank as well.
- ❑ Collect and reuse parts cleaning solvents and water used in flushing and testing radiators. When reuse is no longer possible, these solutions may be hazardous wastes, and must be disposed of properly.
- ❑ Never discharge cleaning solutions used for engines or parts into the sewer system without adequate treatment. Most facilities have these solutions hauled off-site as hazardous waste because of the permits necessary for on-site treatment.
- ❑ Rinse water may only be discharged to the sanitary sewer with adequate treatment and approval of the sewage treatment plant.
- ❑ Never discharge wastewater from steam cleaning, or engine/parts cleaning to a street, gutter, or storm drain.
- ❑ Sweep or use a vacuum to clean up dust and debris from scraping or bead blasting radiators.
- ❑ Use static tanks for rinsing to reduce the volume of discharged rinse water.
- ❑ Use counter-current rinsing to reduce water usage and rinse water discharges.

Washing Cars and Other Vehicles

Regular Activity

- ❑ If car washing is a central business activity, the most desirable option is to treat and recycle the wash water.
- ❑ Designate a vehicle washing area and wash cars and trucks only in that area. This "wash pad" should be bermed or protected from storm drains and should drain to an oil/water separator before discharging to the sewer.
- ❑ Cover an outside wash pad or minimize the area of an uncovered pad to reduce the amount of rainwater reaching the sewer. Consult the local sewage treatment plant for guidance.
- ❑ Minimize the use of acid-based wheel cleaners. These products may require additional treatment (beyond oil/water separation) before discharge to the sewer.

Occasional Activity

- ❑ Even biodegradable soap is toxic to fish and wildlife. Whenever possible, take vehicles to a commercial car wash.
- ❑ If soap is used in washing, the wash water must be collected and discharged, preferably with treatment, to the sanitary sewer. This water cannot be discharged to a storm drain.
- ❑ Never rinse off spray-on acid-based wheel cleaners where rinse water may flow to a street, gutter, or storm drain.

New Vehicles

- ❑ If cleaning the exterior of new vehicles with only water, the discharged water may go directly to the storm drain.
- ❑ Always protect the storm drains from solvents used to remove protective coatings from new cars. Discharges of these solvents to the sanitary sewer must receive adequate treatment and approval of the sewage treatment plant.

Body Repair and Painting

- ❑ Whenever possible, conduct all body repair and painting work indoors or under cover.
- ❑ When receiving damaged vehicles, inspect for leaks. Use drip pans if necessary.
- ❑ When cleaning auto body parts before painting, minimize use of hose-off degreasers. Brush off loose debris and use rags to wipe down parts.
- ❑ Use dry cleanup methods such as vacuuming or sweeping to clean up dust from sanding metal or body filler. Debris from wet sanding can be allowed to dry overnight on the shop floor, then swept and vacuumed. Liquid from wet sanding should not be discharged to the storm drain.
- ❑ Minimize waste paint and thinner by carefully calculating paint needs based on surface area and using the proper sprayer cup size.
- ❑ Do not use water to control overspray or dust in the paint booth unless this wastewater is collected. This water should be treated before discharge into the sewer system.
- ❑ Clean spray guns in a self-contained cleaner. Recycle the cleaning solution when it becomes too dirty to use. Never discharge cleaning waste to the sewer or storm drain.
- ❑ Use sanding tools equipped with a vacuum to pick up debris and dust.
- ❑ Reduce waste by using low-volume paint mixing equipment and high-efficiency painting tools.

Keeping a Clean Shop

- ❑ Use drip pans under leaking vehicles to capture fluids.
- ❑ Sweep or vacuum the shop floor frequently. Use mopping as an alternative to hosing down work areas.
- ❑ If mopping is used to clean shop floors:
  - Spot clean any spilled oil or fluids using absorbents or rags.
  - Use dry cleanup methods: Sweep the floor using absorbents.
  - After steps 1 and 2 above (if mopping is still needed), mop and discharge mop water to the sanitary sewer.
- ❑ Do not pour mop water into the parking lot, street, gutter, or storm drain.
- ❑ Remove unnecessary hoses to discourage washing down floors and outside paved areas.
- ❑ Regularly sweep parking lots and areas around facility instead of washing them down with water.
- ❑ Clean fuel dispensing areas with absorbent instead of water.
- ❑ Collect all metal filings, dust, and paint chips from grinding, shaving, and sanding, and dispose of the waste properly. Never discharge these wastes to the storm drain or sanitary sewer.
- ❑ Collect all dust from brake pads separately and dispose of the waste properly. Never discharge these wastes to the storm drain or sanitary sewer.
- ❑ Send rags to an industrial laundry.
- ❑ Consider using an oleophilic mop (picks up oil and not water) to reduce the volume of waste liquids collected and to reduce disposal cost.

Storage

- ❑ Store hazardous materials and wastes where they are protected from rain and in a way that prevents spills from reaching the sanitary sewer or storm drain.
- ❑ Keep lids on waste barrels and containers, and store them indoors or under cover to reduce exposure to rain.
- ❑ All hazardous wastes must be labeled according to hazardous waste regulations. Consult the Fire Department or a local hazardous waste agency for details.
- ❑ Keep wastes separated to increase waste recycling/disposal options and to reduce costs.
- ❑ Never mix waste oil with fuel, antifreeze, or chlorinated solvents. Consult a hazardous waste hauler for details.
- ❑ Double-contain all bulk fluids to prevent accidental discharges to the sewer and storm drain. Consult the Fire Department for details.
- ❑ Keep storage areas clean and dry. Conduct regular inspections so that leaks and spills are detected as soon as possible.
- ❑ Carefully transfer fluids from drip pans or collection devices to designated waste storage areas, as soon as possible.
- ❑ When receiving vehicles to be parted or scavenged, park them on a paved surface and immediately drain and collect gasoline and other fluids properly.
- ❑ Drain all fluids from components, such as engine blocks, that may be stored for reuse or reclamation. Keep these components under cover and on a drip pan or sealed floor.
- ❑ Store new batteries securely to avoid breakage and acid spills during earthquakes. Shelving should be secured to the wall. Store used batteries indoors and in plastic trays to contain potential leaks. Recycle old batteries.

Spill Control

- ❑ The best spill control is prevention.
- ❑ Maintain and keep current, as required by other regulations, a spill response plan and ensure that employees are trained on the elements of the plan.
- ❑ Minimize the distance between waste collection points and storage areas.
- ❑ Contain and cover all solid and liquid wastes □ especially during transfer.
- ❑ Purchase and maintain the proper absorbent materials for containment and cleanup of different spills, and make sure they are easily accessible anywhere in the shop. Saturated absorbents generally must be disposed of as hazardous waste.
- ❑ Clean up spills immediately and completely. Spills are not considered cleaned up until the absorbent is picked up.
- ❑ Cover nearby downstream storm drains when transferring fuel from tank truck to fuel tank.
- ❑ Seal or remove floor drains to prevent accidental discharge to the sewer system.

Recycling / Treatment

- ❑ Recycle solvents, paints, oil filters, antifreeze, motor oil, batteries, and lubricants.
- ❑ Set up a system (separate, well-labeled containers in a convenient location) to make it easy for employees to separate wastes and to recycle.
- ❑ Choose treatment systems that are easy to maintain and repair.
- ❑ Properly maintain and service all pretreatment equipment, including sumps, separators, and grease traps to ensure proper functioning. Follow manufacturer's maintenance instructions and consider using a licensed service to conduct maintenance on a regular basis.
- ❑ Frequently inspect equipment for malfunctioning parts, leaks, and the accumulation of pollutants such as oil and grease. Since pretreatment equipment is supposed to remove pollutants, a lack of accumulation may be a sign of a malfunction.
- ❑ Retain only a licensed service to haul away and dispose of wastes.
- ❑ Install self-contained, zero-discharge treatment systems that recycle wastewater.

Purchasing

- ❑ Ask a local supplier for information on less toxic chemical cleaners and other products. There are alternatives to chlorinated solvents; chlorofluorocarbons; and 1,1,1, trichloroethane (TCA).
- ❑ Ask a local supplier for information on the composition of brake pads. Recent studies have shown that brake dust washed off streets by rain may be the single biggest contributor of copper, a major pollutant, to waterways. Awareness and understanding of this problem and the available alternatives will help create future solutions.
- ❑ Minimize inventory by purchasing only as much product as needed in the foreseeable future. This will reduce storage space needs, inventory tracking costs, and liability for storing hazardous materials and waste.

Education and Training

- ❑ Train all employees upon hiring, and annually thereafter, on personal safety, chemical management, and proper methods for handling and disposing of waste. Make sure that all employees understand stormwater discharge prohibitions, wastewater discharge requirements, and these best management practices. Use a training log or similar method to document training.
- ❑ Post instructional/informational signs around the shop for customers and employees. Put signs above all sinks prohibiting discharges of vehicle fluids and wastes. Put signs on faucets (hose bibbs) reminding employees and customers to conserve water and not to use water to clean up spills.
- ❑ Label drains within the facility boundary, by paint/stencil (or equivalent), to indicate whether they flow to an oil/water separator, directly to the sewer, or to a storm drain. Labels are not necessary for plumbing fixtures directly connected to the sanitary sewer.

Gasoline Stations

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Existing Facilities:

Fuel Dispensing Areas

- ❑ Maintain fuel dispensing areas using dry cleanup methods such as sweeping for removal of litter and debris, or use of rags and absorbents for leaks and spills. Fueling areas should never be washed down unless the wash water is collected and disposed of properly.
- ❑ Fit underground storage tanks with spill containment and overfill prevention systems meeting the requirements of Section 2635(b) of Title 23 of the California Code of Regulations.
- ❑ Fit fuel dispensing nozzles with "hold-open latches" (automatic shutoffs) except where prohibited by local fire departments.
- ❑ Post signs at the fuel dispenser or fuel island warning vehicle owners/operators against "topping off" of vehicle fuel tanks.

Facility - General

- ❑ "Spot clean" leaks and drips routinely. Leaks are not cleaned up until the absorbent is picked up and disposed of properly.
- ❑ Maintain and keep current, as required by other regulations, a spill response plan and ensure that employees are trained on the elements of the plan.
- ❑ Manage materials and waste to reduce adverse impacts on storm water quality.
- ❑ Train all employees upon hiring and annually thereafter on proper methods for handling and disposing of waste. Make sure that all employees understand storm water discharge prohibitions, wastewater discharge requirements, and these best management practices. Use a training log or similar method to document training.
- ❑ Label drains within the facility boundary, by paint/stencil (or equivalent), to indicate whether they flow to an oil/water separator, directly to the sewer, or to a storm drain. Labels are not necessary for plumbing fixtures directly connected to the sanitary sewer.
- ❑ Inspect and clean if necessary, storm drain inlets and catch basins within the facility boundary before October 1 each year.

Outdoor Waste Receptacle Area

- ❑ Spot clean leaks and drips routinely to prevent runoff of spillage.
- ❑ Minimize the possibility of storm water pollution from outside waste receptacles by doing at least one of the following:
  - use only watertight waste receptacle(s) and keep the lid(s) closed, or
    grade and pave the waste receptacle area to prevent run-on of storm water, or
  - install a roof over the waste receptacle area, or
  - install a low containment berm around the waste receptacle area, or
  - use and maintain drip pans under waste receptacles.

Air/Water Supply Area

- ❑ Minimize the possibility of storm water pollution from air/water supply areas by doing at least one of the following:
- ❑ Spot clean leaks and drips routinely to prevent runoff of spillage, or
  - grade and pave the air/water supply area to prevent run-on of storm water, or
  - install a roof over the air/water supply area, or
  - install a low containment berm around the air/water supply area.

New or Substantially Remodeled Facilities:

Note: Substantially Remodeled Facilities - One of the following criteria must be met before a facility is deemed to be substantially remodeled and the design elements described above are required to be included in the new design and construction:

- the canopy cover over the fuel dispensing area is new or is being substantially replaced (not including cosmetic/facial appearance changes only) and the footing is structurally sufficient to support a cover of the minimum dimensions described above, or
- one or more fuel dispensers are relocated or added in such a way that the Portland cement concrete (or, equivalent) paving and grade break or the canopy cover over the fuel dispensing area do not meet the minimum dimensions as defined above. Replacement of existing dispensers or underground storage tanks do not, by themselves, constitute a substantial remodel.

Fuel Dispensing Areas

- ❑ Fuel dispensing areas must be paved with Portland cement concrete (or, equivalent smooth impervious surface), with a 2% to 4% slope to prevent ponding, and must be separated from the rest of the site by a grade break that prevents run-on of storm water to the extent practicable. The fuel dispensing area is defined as extending 6.5 feet from the corner of each fuel dispenser or the length at which the hose and nozzle assembly may be operated plus 1 foot, whichever is less. The paving around the fuel dispensing area may exceed the minimum dimensions of the "fuel dispensing area" stated above.
- ❑ The fuel dispensing area must be covered, and the cover's minimum dimensions must be equal to or greater than the area within the grade break or the fuel dispensing area, as defined above. The cover must not drain onto the fuel dispensing area.

Note: Special note on the paving BMP. This best management practice is not specifically intended to apply to facilities that install a new canopy where no canopy existed.

Note: Special note on the canopy BMP. This best management practice is not specifically intended to apply to facilities that:

- are located in geographic areas not subject to federal or state storm water regulations
- do not discharge storm water either directly to surface waters or indirectly, through municipal separate storm drain systems
- do not add fuel dispensers
- replace, relocate, or add fuel dispensers within the parameters described in the BMP
- increase their throughput of fuel dispensed without modifying their equipment
- make only cosmetic or facial appearance changes to their existing canopy

Outdoor Waste Receptacle Area

- ❑ Grade and pave the outdoor waste receptacle area to prevent run-on of storm water to the extent practicable.

Air/Water Supply Area

- ❑ Grade and pave the air/water supply area to prevent run-on of storm water to the extent practicable.

Note: For the purposes of the waste receptacle area and air/water supply area BMPs only, the facility is considered substantially remodeled if the area around the waste receptacle area or air/water supply area is being regraded or repaved.

Restaurants

The following comprehensive list of Best Management Practices (BMPs) are not required to be implemented by all facilities but are only *suggested BMPs* that may be appropriate for this industry type or sector. The BMPs are provided as guidance to help facility owners conduct a site-specific assessment and develop their own programs to reduce potential pollutants to the storm drain system and receiving waters. Facility owners may develop and use additional BMPs if desired.

Housekeeping

- ❑ Clean floor mats, filters, and garbage cans in a mop sink, floor drain, or proper outside area connected to the sanitary sewer with an oil/water separator. Don't wash them in a parking lot, alley, sidewalk, or street.
- ❑ Pour washwater into a janitorial or mop sink. Don't pour onto a parking lot, alley, sidewalk, or street.
- ❑ Use dry methods for spill cleanup (sweeping, cat litter, etc.). Don't hose down spills.
- ❑ Keep dumpster area clean and lid closed. Don't fill it with liquid waste or hose it out.
- ❑ Cover, repair or replace leaky dumpsters and compactors, and/or drain the pavement beneath them to the sanitary sewer.

Recycling and Disposal

- ❑ Separate wastes. Keep recyclable wastes in separate containers according to the type of material. They are easier to recycle if separated.
- ❑ Recycle grease and oil. Don't pour it into sinks, floor drains, or onto a parking lot or street. Look in the yellow pages for "Renderers" or call the County of Los Angeles' Recycling & Household Hazardous Waste Hotline (888) CLEANLA.
- ❑ Recycle the following materials:
  - food waste (non-greasy, non-animal food waste can be composted)
  - paper and cardboard
  - container glass, aluminum, and tin
  - pallets and drums
- ❑ Dispose of toxic waste properly. Toxic waste includes used cleaners, and rags (soaked with solvents, floor cleaners, and detergents). For disposal information call: (888) CLEANLA.

Purchasing

- ❑ Look for and purchase "recycled" and "recyclable" containers. In doing so, a use for the recyclable materials that people collect and recycle is ensured.

Education and Training

- ❑ By including urban runoff training in employee orientations and reviews, employees can help prevent pollution. Promote these BMPs:
  - Storage containers should be regularly inspected and kept in good condition.
  - Place materials inside rigid, durable, water-tight and rodent-proof containers with tight fitting covers.
  - Store materials inside a building or build a covered area that is paved and designed to prevent runoff from entering storm drains.
  - Place temporary plastic sheeting over materials or containers and secure the cover with ties and weighted objects. (Not appropriate for storing liquids.)
  - Post BMPs where employees and customers can see them. Showing customers ocean protection is good public relations.
  - Explain BMPs to other food businesses through business associations or chambers of commerce.
  - Stencil catch basins near the workplace with Stormwater Program stencils that say "No Dumping: This drains to ocean."

FEBRUARY 2001

R0000421

Each Permittee will seek to achieve compliance by developers with minimum water quality protection requirements (Table 2-1) and applicable BMPs through site inspections, review of self-audits by developers/contractors, enforcement procedures, and other means as described in this section.

3.1 PERMITTEE SITE INSPECTION RESPONSIBILITIES

Each Permittee will adopt site inspection procedures, as necessary, to assess whether the minimum requirements for Development Construction Projects are being achieved and applicable BMPs are being implemented. Site inspections will also determine if Local SWPPPs/WWECPs are being implemented at projects where they apply. Each Permittee will also develop and implement enforcement procedures to require that corrective actions be undertaken when the requirements are not met. The program will include the following elements:

- Permittee Inspections;
- Developer/Contractor Self-Inspections; and
- Enforcement Procedures

3.2 INSPECTION PROCEDURES

Development Construction Projects are routinely checked by municipal inspectors to verify that the construction work is being performed in accordance with the project plans, building and grading permits, and applicable municipal codes. When a project is in violation of these permits or codes, inspectors have the authority to enforce respective permit conditions by issuing verbal warnings, written notices, or stop work orders. Additional administrative actions may be taken, including revoking the building or grading permit or issuing fines. Inspections may be conducted for various reasons, and at various times and include Permittee site inspections currently performed in ongoing programs, as well as routine owner/contractor self-inspections. At their sole discretion, and when warranted, the Permittee may implement SWPPP/WWECPs and take other measures deemed necessary to protect public health, safety, and welfare with their own resources or by contract.

3.2.1 Permittee Inspections

Permittees or their designated agents must conduct at least one inspection of all Construction Priority Projects and all projects subject to the state General Construction Permit active during the rainy season. If the inspected site is not meeting minimum water quality protection requirements, Permittee inspectors must follow-up within a reasonable time frame to assure that

the minimum requirements are implemented. When conducting an inspection, the Permittee's inspector shall observe the site for compliance with the minimum water quality protection requirements. Permittee inspections shall include observations of storm water management practices.

The primary mechanism Permittee inspectors will use to determine if minimum water quality protection requirements and BMPs for development construction are being met will be to assess the site against the narrative requirements in Table 2-1. These narrative requirements are intended to be easy to interpret field observations that allow an assessment of site conditions during both dry and wet conditions. Inspection training will focus on how to recognize whether minimum water quality protection requirements are being achieved at any time during the year.

Each Permittee must be able to demonstrate the existence of a site inspection and enforcement program to achieve compliance with minimum BMP requirements. Appendix H provides a model checklist that is particularly suited for more detailed inspections if it is determined that minimum water quality protection requirements are not being achieved and corrective actions need to be documented.

Additional inspections should be conducted at the discretion of the Permittee to verify compliance with storm water pollution prevention measures, particularly when grading activities are being conducted during the rainy season. The need for such inspections may vary depending upon several factors including:

- Site conditions;
- Previous violations;
- History of developer or contractor performance; and
- Weather patterns.

3.2.2 Developer/Contractor Self-Inspection Requirements

Construction is a dynamic operation where changes are expected. BMPs for construction sites are usually temporary measures that require frequent maintenance to maintain their effectiveness and may require relocation and re-installation, particularly as project grading progresses. Therefore, developer/construction self-inspections are required, particularly during the rainy season.

There are two primary purposes of the self-inspections conducted by developers and contractors:

- To ensure that BMPs are properly implemented and functioning effectively, and
- To identify maintenance (e.g., sediment removal) and repair needs.

An example form is provided in Appendix C that may be provided to developers and contractors by the Permittee for use in recording self-inspection results. When requested, self-inspection forms are to be made available to Permittee inspectors for their review.

Developers and/or contractors of projects subject to the General Construction Permit are required to perform self-inspections. In addition, self-inspections are required for Construction Priority Projects. At a minimum, a developer self-inspection checklist, noting date, time, conditions and inspection date, must be kept on-site and made available for inspection, if requested. Self-inspections must be performed according to the following schedule:

- Before every rainfall event that is predicted to produce observable runoff and after every rainfall event that produces observable runoff, and
- At 24-hour intervals during extended rainfall events (except weekends or holidays when there is no ongoing site activity on those days).

More frequent inspections to ensure that developers are maintaining BMPs in good condition would be of benefit and Permittees may elect to require additional inspections by developers. For example, weekly self-inspections could be conducted during the wet season.

3.3 INSPECTION CRITERIA

3.3.1 Criteria for All Development Construction Projects

When conducting permittee inspections, the most important element of the inspection is to ensure that appropriate controls are in place that reduce pollutants from entering the storm drainage system. One element of which is to determine that the minimum requirements for Development Construction Projects are being achieved. If the inspector cannot affirmatively find that the minimum requirements are being achieved, the inspector shall require the developer to conform with those requirements.

The inspector may utilize the following framework when conducting an inspection:

1) Determine what BMPs are necessary to meet the minimum requirements;

2) Determine if BMPs are being used;

3) Determine whether BMPs are being implemented properly; and

4) Review developer's self-inspection checklist to determine whether minimum self-inspections have been performed.

An example checklist for documenting deficiencies and identifying corrective actions when conducting Permittee inspections is provided in Appendix H. If BMPs are either lacking or being implemented improperly, Section 3.4 provides a discussion of appropriate enforcement actions.

3.3.2 Criteria for Construction Priority Projects

Permittees must conduct at least one inspection of all active Construction Priority Projects during the rainy season. If the inspected site is not meeting minimum water quality protection requirements, Permittee inspectors must immediately direct compliance with these requirements and conduct a follow-up inspection to confirm that compliance is attained.

When conducting the initial Permittee inspection of Construction Priority Projects, the inspector will use the inspection checklist (or an equivalent) to evaluate conformance with minimum requirements and required BMPs and to document deficiencies and corrective actions. If BMPs are either lacking or improperly implemented, refer to Section 3.4 for a discussion of appropriate enforcement actions. Appendix H provides an example checklist for site inspections.

3.3.3 Criteria for Development Construction Projects Subject to General Construction Permit

The Regional Board is responsible for verifying and enforcing requirements of the General Construction Permit. When Permittee inspections are conducted at sites covered by the General Construction Permit, the inspector will document observations of potential violations using a checklist similar to the example provided in Appendix H. If violations are observed during the inspection, the Permittee must notify the Regional Board of the possible violation and the location of the construction site via facsimile or telephone within the next 2 business days.

3.4 PROCEDURES FOR CORRECTIVE AND ENFORCEMENT ACTIONS

Enforcement of storm water pollution prevention requirements for Development Construction Projects will be conducted by the Permittee's inspectors and/or other Permittee staff with enforcement authority. Violations observed will be documented by the inspectors in accordance with the Permittee's existing procedures for recording violations. Depending on the severity of the violation, enforcement can range from a verbal warning, to a written notice, stop work order, having the work performed by the Permittee's own staff or by a contractor secured by the

Permittee, or prosecution. Violations of the minimum requirements listed in Section 2.1 are to be treated with the same seriousness as violations of code provisions of similar importance.

Permittee inspectors will conduct a follow-up inspection to determine if corrective actions have been taken in accordance with minimum requirements. Escalating enforcement steps, leading up to the issuance of stop work orders and providing flexibility for the inspector to establish appropriate compliance time frames on a case-by-case basis, are to be used as needed to ensure compliance. Existing inspection/enforcement procedures should be used to achieve this result. *If a significant and/or immediate threat to water quality is observed by a Permittee's inspector, action should be taken to require the developer/contractor to immediately cease the discharge.* The threat to water quality shall be assessed by the inspector considering if runoff from a construction site will not be reasonably controlled by the protective measures in place or if a failure of BMPs is resulting in the release of sediments or other pollutants to a degree that may be substantially degrading water quality. The typical progressive enforcement steps that each Permittee should apply to the inspection enforcement program are:

1) Verbal warnings;
2) Written warnings; and
3) Stop work orders.

A discussion of these measures is provided below. While the provisions are not binding, the elements of these provisions should be incorporated in the Permittee's enforcement approach to the maximum extent practicable. Each Permittee's program should be consistent with existing enforcement mechanisms while generally conforming to the elements described in Sections 3.4.1 through 3.4.4.

3.4.1 Verbal Warnings

A common initial method of requesting corrective action and enforcing compliance is a verbal warning from the Permittee's inspector to the private contractor. Verbal warnings are often sufficient to achieve correction of the violation, often while the inspector is present at the construction site. The inspector will notify the developer/contractor's project supervisor of the violation, and document the violation and the notification to the project supervisor in the inspection file. A specific time frame for correcting the problem and a follow-up inspection date should be documented by the inspector. In judging the degree of severity, the Permittee inspector may also take into account any history of similar or repeated violations by the same developer or contractor at this or other sites.

3.4.2 Written Warnings

If the deficiency noted in the verbal warning is not corrected by the next inspection, a written notice of violation shall be issued describing the infraction that is to be corrected and the time frame for correction and for a follow-up inspection. A copy of the notice is to be given to the contractor's project supervisor and placed in the active inspection file. If the violation has been corrected to the satisfaction of the inspector, the inspector will document compliance in the inspection file. An example of a notice of violation form and a notice of correction form are provided in Appendix I. [Note that use of the specific forms provided as examples in Appendix I is not required.]

3.4.3 Stop Work Orders

If a notice of violation has not been addressed by the next inspection, or if the developer has not complied with their permit requirements, *or if a significant threat to water quality is observed* (such as a failure of BMPs resulting in a significant release of sediment or other pollutants off site), a stop work order may be issued by the appropriate municipal official. Stop work orders prohibit further construction activity until the problem is resolved and provide a time frame for correcting the problem. The stop work order will describe the infraction and specify what corrective action must be taken. A copy of the stop work order will be given to the private contractor's project supervisor and placed in the active inspection file. To restart work once a stop work order has been issued, the private contractor's project supervisor must request the inspector to re-inspect the project and verify that the deficiencies have been satisfactorily corrected. If the inspector is satisfied with the corrections, the inspector may sign off on that phase of the project, and work may proceed. A copy of a sample stop work order form is provided in Appendix I. In severe cases, the building or grading permit may be revoked.

3.4.4 Fines

A fine may also be issued if the Permittee has the authority to do so.

3.5 SITE INSPECTION AND ENFORCEMENT EMPLOYEE TRAINING

Each Permittee will implement a training program for staff involved with development construction activities. The minimum requirements are:

- Training must promote a clear understanding of the potential for construction activities to pollute storm water; and
- Training must cover the identification of violations of minimum water quality protection requirements for developer construction and implementation of corrective BMPs.

All existing construction inspection staff and other staff directly involved in development construction activities should receive formal training at least once after implementation of the Permittee's development construction program, and new staff should receive formal training after assignment to Permittee's development construction staff. Refresher training will be conducted periodically as necessary.

Training should cover the following areas:

- Minimum BMP requirements for Development Construction Projects;
- Description and contents of Local SWPPPs and WWECPs;
- Appropriate BMP applications and implementation;
- Inspection and enforcement procedures; and
- Use of inspection checklists.

Additional guidance for training employees involved in development construction activities is contained in Appendix J.

Relevant materials should be distributed to staff as appropriate. These may include checklists, guidance documents, materials included as appendices to this document, or other documentation that may be used later as reference information. The training program for construction inspection staff developed by Los Angeles County has been distributed to all Permittees and may be utilized to conduct formal training.

Informal training will be conducted periodically in conjunction with routine staff meetings, site inspections, or other opportunities as appropriate. Informal training is encouraged to include discussion of "lessons learned" in the field, introduction of new information, and periodic review of normal storm water inspection procedures.

The appendices of this Model Program (excluding Appendix A) are advisory only unless specifically identified in this Model Program as a requirement.

1-2 Exempt and Conditionally Exempt Discharges
2-1 Permit Requirements - Illicit Discharge Elimination
3-1 Permit Requirements - Illicit Connection Elimination
4-1 Permit Requirements - Public Reporting
5-1 Permit Requirements - Reporting Hazardous Substances

List of Figures

3-1 Illicit Discharge/Illicit Connection Elimination Strategy

- Determine drainage areas where disposal incidents have the greatest potential negative effect on stormwater quality.
- Determine drainage areas that have recurring incidents of illicit disposal.

Guidance is included in Appendix C.

A prioritization process for investigation and elimination of illicit connections and associated suspected illicit discharges is discussed in Section 3.2.2.

2.2.5 Education Program for Inspectors, Maintenance and Field Staff

Permittee staff will be required to implement the baseline objectives of observing, reporting, investigating and eliminating illicit discharges to the storm drain system.

Standardized procedures will be implemented to educate inspectors, maintenance workers, and other field staff to notice illicit discharges during the course of their daily activities and report them. The standard procedures include:

- Compile and/or prepare training materials, such as handouts and posters. Topics will include:
  - Stormwater quality requirements
  - Types of illicit discharges/disposal
  - Reporting forms
- Identify staff who conduct field activities and others who may benefit from training.
- Present information on illicit discharges during regular safety and tailgate meetings.
- Discuss how to report illicit discharges:
  - Call in report to request investigation and cleanup.
  - Fill out illicit discharge reporting forms.

Guidance for conducting the staff educational program for noticing and reporting illicit discharges is included in Appendix D.

The education program will also help appropriate Permittee staff to determine the appropriate follow-up activity when evidence of illicit discharges is observed. This includes:

- If the nature and source of the discharge is known or readily apparent, enforcement procedures will be initiated as discussed in Section 2.2.6.
- If the nature and source of the discharge is not known, additional investigation techniques will be used to determine the nature of the material and investigate the source. Guidance is included in Appendix E.

Appendix D

Education Program Guidance for Inspectors, Maintenance and Field Staff

Appendix D
Education Program Guidance For Inspectors, Maintenance And Field Staff

General training will be conducted as part of the Five-Year Storm Water Public Education Strategy described in Section 2.V.C.1.b.iv of the Permit. Specific training on illicit discharges should be conducted for inspectors, maintenance and field staff who may encounter illicit discharges during their regular activities. The following are some of the issues that should be considered when conducting a training program.

- **Who should be trained?** Training for noticing and reporting suspected discharge or disposal may target a broad range of Permittee staff including all field workers and supervisors involved in storm drain system operation and maintenance as well as field inspectors. Training for investigation and follow-up may be targeted at selected Permittee staff with designated inspection, investigation and enforcement responsibility.
- **Who should train?** Trainers selected to conduct employee training should be familiar with both the work performed by the staff and stormwater pollution control principles. A trainer would typically be a superintendent, foreman, or lead worker who oversees the work of small to large crews or inspection staff.
- **What?** The training should cover two major areas: observation/noticing and reporting suspected illicit discharges or disposal; and follow-up to identify the nature and source of the discharge and take appropriate enforcement action to eliminate the discharge.
- **When?** Training can be conducted during regular safety or tailgate meetings or can be scheduled separately. All targeted employees should receive training at least once per year.

The scope of the training should include:

All staff:

- Overview of Clean Water Act and NPDES program
- Potential sources of stormwater pollution
- Potential impact of illicit non-stormwater discharges on receiving waters
- Field observation of illicit discharges/disposal/connections
- Reporting procedures and forms

Staff responsible for investigation and enforcement:

- Identification of nature and source of illicit discharges/disposal
- Municipal code requirements for stormwater pollution prevention on private property

In March 1997, a comprehensive training curriculum reference document, the *Municipal Activities, Public Employee Trainer Manual*, was distributed to all Permittees for their use. It was developed in response to Permit requirements that Permittees have "training materials for

educating appropriate Permittee employees regarding compliance with applicable stormwater permits." It contains suggestions on how to conduct an effective training program, such as:

- How to determine the appropriate audience
- Steps to organize, prepare and conduct a training session
- How to select appropriate presentation materials for specific categories of employees
- Who to contact regarding questions on the training program

The manual also contains all of the materials necessary to conduct the training sessions, including the presentation narrative, slides, video, and handouts.

Appendix C5 of the manual contains specific information for training staff in illicit discharge control, and suggests best management practices that should be used. Copies of the first two pages of Appendix C5 are attached.

APPENDIX C5
ACTIVITY CATEGORY: ILLICIT DISCHARGE CONTROL

This activity involves routine inspection for illegal connections to the storm drain system and evidence of illegal dumping activities. Many municipal employees; such as road maintenance crews, storm drain maintenance personnel, inspectors, sanitation workers, etc., can routinely look for and report incidents of illicit discharges to the storm drain system.

[*Word Slide MA-C5-1 Illicit Discharge Control Activities*]

Illicit Discharge Control Activities

- Illicit connection prevention, detection and removal
- Illegal dumping control

Word Slide MA-C5-1

Illicit discharge control is different from the other categories. Most of these BMPs are preventative measures taken by employees to control pollutant sources from the public's activities. Preventative measures include:

- **Illicit connection prevention, detection and removal**
- **Illegal dumping control**

Activity: Illicit Connection Prevention, Detection and Removal

[*Word Slide MA-C5-2 Activity: Illicit Connection Prevention, Detection and Removal*]

SUGGESTED BMPs
Activity: Illicit Connection Prevention, Detection and Removal

- Prohibit non-stormwater physical connections to the storm drain system
- Conduct visual inspections during construction
- Conduct field screenings
- If needed, use methods to verify physical connections
- Keep accurate records

Word Slide MA-C5-2

- **Prohibit non-stormwater physical connections to the storm drain system** - Ensure that existing building and plumbing codes prohibit non-stormwater physical connections to the storm drain system.
- **Conduct visual inspections during construction** - During the construction phase of new developments, conduct visual inspections to determine if any illegal connections are present.
- **Conduct field screenings** - Conduct field screenings to identify outfalls with characteristics of illegal connections.
- **If needed, use methods to verify physical connections** - Use smoke and dye testing or television camera inspections to verify physical connections.
- **Keep accurate records** - Keep records to track inspections and catalog the storm drain system.

APPENDIX C5
ACTIVITY CATEGORY: ILLICIT DISCHARGE CONTROL

Activity: Illegal Dumping Control

[*Word Slide MA-C5-3 Activity: Illegal Dumping Control*]

SUGGESTED BMPs
Activity: Illegal Dumping Control

- Train employees to recognize and report illegal dumping
- Call 1-888-CLEANLA or City specific number

Word Slide MA-C5-3

- **Train all employees to recognize and report illegal dumping** - Visual observations of catch basins and outfalls can be used to identify areas of suspected illegal dumpings. The following observations at a site could be indications of illegal dumping.
  - Odors
  - Deposits and stains
  - Liquid present during dry weather, especially if it is colored or is associated with an odor.

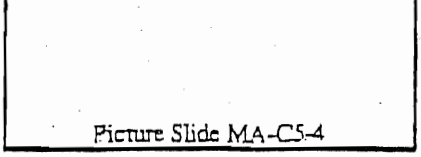
  Field analysis of the deposits and liquids present also helps to identify dumpings. pH, dissolved oxygen levels, water temperature, chlorine levels, copper levels, detergents and phenols are all useful analysis to help identify areas of illegal dumping.

- **Call 1-888-CLEANLA or City specific number** - Use this hotline to report illegal dumping and to ask questions about suspected dumping. Several other offices are available for questions and reporting:
  - Stormwater program offices - Your city may have an office devoted to the stormwater program. They should have information about illegal dumping available.
  - Call 911 or the police or fire department to report illegal dumping of hazardous material.

[*Note to Trainer: Determine if your city has a specific number for reporting illegal dumping. If there is such a number, provide it in this section.*]

[*Picture Slide MA-C5-4 Illegal Dumping*]

Illegal Dumping



Picture Slide MA-C5-4

- Example of illegal dumping. Any substance being dumped down a storm drain is an example of illegal dumping.
- Call 1-888-CLEANLA to report the incident.

Question and Answer Session

[*Note to Trainer: Provide some time now for questions on the last section of material.*]

ATTACHMENT NO. 37

U.S. EPA document on Evaluating the Effectiveness of Municipal Storm Water Programs

EPA
United States Environmental Protection Agency and the EPA Region III states of Pennsylvania, Maryland, Delaware, District of Columbia, Virginia and West Virginia

Evaluating the Effectiveness of Municipal Stormwater Programs

EPA 833-F-07-010

January 2008

Introduction

NPDES Stormwater Management Programs

EPA stormwater regulations require National Pollutant Discharge Elimination Program (NPDES) permits for stormwater discharges from many municipal separate storm sewer systems (MS4s). Phase I of the stormwater permit program generally addresses municipalities with greater than 100,000 in population, while Phase II addresses smaller jurisdictions within urban areas. Additional information on EPA's stormwater program is available at www.epa.gov/npdes/stormwater.

Stormwater Phase II programs address the following program components:

- Public education and outreach
- Public involvement
- Illicit discharge detection and elimination
- Construction Site Runoff Control
- Post-Construction Runoff Control
- Pollution Prevention/Good Housekeeping for Municipal Operations

In addition to the programs above, Stormwater Phase I programs also must address stormwater runoff from industrial facilities.

Operators of regulated MS4s are required to develop a stormwater management plan (SWMP) that includes measurable goals and to implement needed stormwater management controls (BMPs). The process of developing a plan, implementing the plan, and evaluating the plan is a dynamic, iterative process that helps move communities toward achievement of their goals (Figure 1).

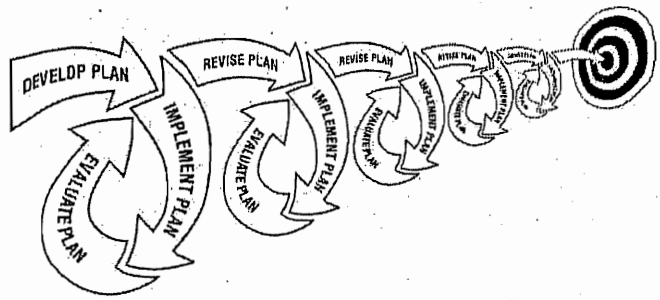


Figure 1. The iterative process of stormwater management (Develop, implement, evaluate, repeat).

40 CFR 122.26(d)(2)(v) and 122.34(g) requires MS4s to assess controls and the effectiveness of their stormwater programs. Municipal stormwater programs are also required to reduce the discharge of pollutants to the "maximum extent practicable" and satisfy the water quality requirements of the Clean Water Act. In addition, a number of government and scientific reports have found that better water quality data is needed if MS4s are to evaluate the effectiveness of their program in meeting water quality goals (NRC, 2004; Schwarzenback, et. al, 2006; Vaux, 2005).

This document discusses three approaches to evaluation of municipal SWMP effectiveness:

- Assessing program operations;
- Evaluating social indicators; and
- Monitoring water quality.

Other guidance is available to assist managers in evaluating overall implementation of the SWMP to the maximum extent practicable, e.g., EPA's MS4 *Program Evaluation Guidance* (www.epa.gov/npdes/pubs/ms4guide_withappendixa.pdf).

Purposes of Program Evaluation

- **Meet regulatory requirements.** EPA stormwater regulations require that the effectiveness of the SWMP be evaluated, including assessment of SWMP implementation, evaluation of BMP effectiveness, and the extent to which improvements in stormwater outfall discharge quality have occurred.
- **Document progress toward water quality goals.** Evaluation of SWMP effectiveness is essential to measure progress toward meeting benchmark conditions, complying with water quality standards, or restoring beneficial uses.
- **Justify commitment of resources.** Knowledge of program effectiveness can help justify SWMP expenditures to decision-makers and to the public, and help improve cost-effective implementation and management of the SWMP.
- **Provide feedback to the management program.** Stormwater management is an iterative process and knowledge of program effectiveness is essential for the permit renewal process and for mid-course corrections to improve the program.
- **Assess reductions in pollutants of concern.** If a waterbody is impaired, it may be helpful to assess the effectiveness of the SWMP in reducing the pollutants of concern.

Stormwater Management Goals

Setting Goals for SWMPs

Stormwater management plans must be guided by specific measurable water quality-based goals, but also typically include, programmatic, BMP-implementation, and social goals. NPDES permit conditions often serve as minimum goals for a SWMP, but an MS4 may have other goals for restoration or protection of water quality that go beyond minimum permit conditions and reflect local understanding of the storm drain system and receiving water conditions. Guidance on setting measurable goals for SWMPs can be found in EPA's *Measurable Goals Guidance for Phase II Small MS4s* (**www.epa.gov/npdes/pubs/measurablegoals.pdf**).

Programmatic goals might address education and outreach to a range of audiences, establishment of partnerships with business owners, or adoption of ordinances. BMP implementation goals may call for some number of practices to be installed in key locations according to a certain schedule. Goals for public involvement could include targets for number of participants in clean-up or tree-planting activities, number and quality of responses to attitude surveys, or changes in the use of lawn fertilizer.

The ultimate goal of any NPDES stormwater management program is to reduce pollutant discharges to the maximum extent practical, prohibit illicit discharges to the MS4, and protect water quality. Water quality goals may pertain to pollution prevention (reduction of potential pollutants at the source), improvements in stormwater outfall discharge quality, reduction of pollutant loads to receiving waters (e.g., a TMDL), restoration of aquatic resources (e.g., stream channel stabilization, fishery restoration), compliance with water quality standards, or restoration of beneficial uses. Intermediate benchmarks that indicate progress toward meeting water quality standards are important elements of successful long-term SWMPs.

Matching Evaluation to Management Goals

Evaluation of the effectiveness of a SWMP must relate directly to its goals. Two central questions are: *Are we meeting the municipal SWMP goals?* and *Are we meeting NPDES stormwater regulatory requirements?* If a goal is to keep a swimming beach open, it is often necessary to determine the extent to which water quality criteria for bacteria are being met. If a goal is to reduce nutrient loads by 40% from a watershed, it is then necessary to measure nutrient loads and compare measured loads against the goal. Meeting your water quality goals is the ultimate sign of program success, however, meeting programmatic or social goals can also be indicators of a successful program. Information on how these goals are met will serve as critical feedback in the iterative process of stormwater management.

Evaluating Stormwater Management Program Effectiveness

Stormwater program evaluation must be more than an exercise in collecting and tabulating data; evaluation data must be analyzed, interpreted, and reported so that results can be applied to such purposes as documenting effectiveness of BMPs, reporting information to government or the public, and planning future management activities.

Stormwater programs address multiple objectives and program evaluation can focus on a variety of desired outcomes that parallel these objectives. Approaches to the evaluation of stormwater program effectiveness may therefore fall on a continuum from basic verification of compliance with regulatory requirements to assessing changes in knowledge and behavior to detecting changes in receiving water quality (Figure 2). The NPDES stormwater evaluation program in Baltimore County, Maryland (**www.baltimorecountymd.gov/Agencies/environment/watersheds/epnpdesmain.html**) is a good example of effective evaluation of an MS4 program.

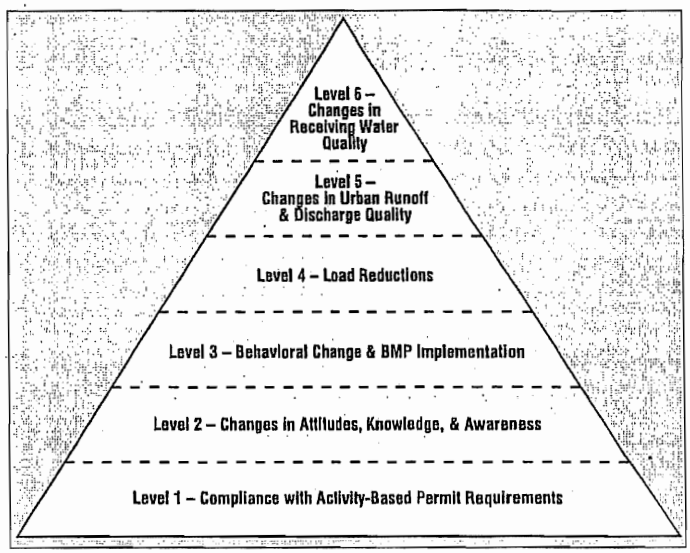

Figure 2. Approaches to evaluation of stormwater program effectiveness. (Source: CASQA, 2007)

In this document, we consider the range of evaluation approaches in three groups: program operations, social indicators, and water quality. Every evaluation approach must contain appropriate water quality measures to be meaningful.

Assess program operations

Assessment of stormwater program operations and activities verifies basic compliance with permit requirements and, more importantly, documents that tangible efforts have been made to reduce the impacts of urban stormwater. This approach to program evaluation can be applied to all of the components of a SWMP.

Track structural BMP implementation. Tracking the type and number of structural BMPs installed provides managers with direct feedback on how implementation is progressing and whether goals set forth in the permit are being achieved. Data on BMP specifications, location, date of completion, compliance with permit conditions, and ongoing operation and maintenance may be important to record. See USEPA Techniques for Tracking, Evaluating, and Reporting the Implementation of Nonpoint Source Control Measures: Urban (www.epa.gov/owow/nps/urban.pdf) for more information on the topic of tracking BMPs implemented in your jurisdiction.

Document management activities. Documenting management activities and pollutant source reduction efforts can be as important as tracking structural BMPs. How much material has been collected through street-sweeping and parking lot maintenance? How many site inspections were conducted and what were the results? How many and what type of illicit discharges were identified and eliminated? How many trainings and outreach activities were conducted, and how many people were reached? Baltimore City, Maryland, focuses limited stormwater management resources in a small highly urbanized watershed to demonstrate how making communities more livable can improve water quality. An important part of this effort is to document management activities so that both managers and residents can easily follow progress.

Evaluate social indicators

Social indicators—changes in knowledge, attitudes, and behavior of people—are important for two reasons. First, some SWMPs may have goals for increasing knowledge and awareness and changing attitudes among groups such as residents, business owners, and municipal employees. Second, social indicators—especially behavior changes—are important intermediate benchmarks in a successful SWMP when many years are needed to measure a water quality response. For more information, see *Developing a Social Component for the NPS Evaluation Framework* (www.uwex.edu/ces/regionalwaterquality/Flagships/Indicators.htm). This approach to program evaluation is typically applied to the public education and public participation components of a SWMP.

Gauge the effects of public education efforts. Changes in awareness, knowledge, and attitudes can be measured effectively using statistically valid surveys or questionnaires; for example see *Stormwater Knowledge, Attitude and Behaviors: A 2005 Survey of North Carolina Residents* (www.ncstormwater.org/pdfs/stormwater_survey_12506.pdf). Other approaches include monitoring attendance at public meetings, tracking requests for information, and counting hits on web sites. Keep in mind that simply reporting the number of meetings held or the number of brochures printed is not an effective method to document changes in stormwater knowledge.

Assess behavior changes. Measurement of change in pollution-generating behavior in a watershed can be an important indicator of progress toward achieving SWMP goals. Examples include: changes in lawn fertilizer sales in response to a publicity campaign, pounds of hazardous waste turned in at collection events, participation in streambank clean-up events, and sign-ups for environmental action pledges.

Monitor water quality

Water quality monitoring is the most direct—and usually the best—approach to evaluating the effectiveness of a SWMP. Program evaluation through water quality monitoring can apply to several of the SWMP components, including illicit discharge detection, construction site runoff control and post-construction runoff control. The collection of water quality data (along with BMP performance data) would be especially useful for discharges to an impaired water body with an approved TMDL. (For more information about the TMDL program, visit www.epa.gov/owow/tmdl). Detailed guidance on design and operation of monitoring is available elsewhere, e.g., *USDA-NRCS National Handbook of Water Quality Monitoring* (ftp://ftp.wcc.nrcs.usda.gov/downloads/wqam/wqm1.pdf) and *EPA Monitoring Guidance for Determining the Effectiveness of Nonpoint Source Controls* (Sept. 1997, EPA 841-B-96-004).

Water quality monitoring approaches range from qualitative observations to highly quantitative measurements, covering areas as small as individual BMPs to large receiving waters such as lakes or estuaries. A good monitoring program for evaluation of SWMP effectiveness will probably contain several elements at various levels of detail and scale. Before embarking on new monitoring, however, it is important to collect and evaluate historic and current data from existing monitoring activities. Data from state 305(b) assessments, 303(d) lists, and published TMDLs, ongoing state and federal agency monitoring programs, water supply intake testing, and watershed volunteer groups, for example, can be useful both in designing a monitoring program and in supplementing program results.

Monitoring can focus on **biological** (e.g., *E. coli*, fish), **physical** (e.g., flow, suspended sediment, streambank stability), or **chemical** (e.g., phosphorus, trace metals) dimensions of the water resource. Measured water quality variables should be directly linked to both the pollutant sources and the BMPs being implemented. In general, a monitoring program should focus on selecting a few good water quality variables to measure well, rather than trying to track a long list of indicators. For example, for a swimming beach impaired by bacteria, it would be appropriate to monitor the swimming area, nearby storm drain outfalls, and tributary flows for *E. coli*. If stream channel blow-outs are an issue and BMPs addressing excessive flows are implemented, monitoring of streamflow and channel cross-section conditions would be a good choice. For algal blooms, monitoring of nutrient concentrations and loads to the receiving water might be appropriate.

Water quality monitoring must take hydrologic variation into account. Most stormwater pollution processes are driven by rainfall that varies from year to year. If several dry years follow

implementation of a SWMP, the program may appear to be highly effective in reducing pollutant loads simply because runoff is unusually low. Conversely, several years of wet weather could result in higher pollutant loads simply because of increased runoff volume despite BMP implementation. Consequently, it is important to monitor precipitation and streamflow to help interpret results from all but a few highly qualitative monitoring approaches.

MS4s can take a variety of monitoring approaches to evaluate their SWMP effectiveness. Several common approaches that can be implemented for physical, chemical, and biological dimensions of water quality are listed at the end of this document.

Feedback: The Iterative Approach to Stormwater Management

Management of stormwater programs is an iterative process, beginning with planning, progressing through implementation and program evaluation, and then returning to the beginning of the cycle with feedback to further program planning. Effectiveness evaluation assesses how well implementation is working and estimates benefits derived from the program for the primary purpose of assessing progress toward program goals and compliance with regulatory requirements. Results can also be used to make practical changes in management strategies. Effective program feedback will enable local governments to guide decisions on shifting priorities to achieve goals more cost-effectively, including modification of activities that need improvement, expansion of effective activities, and cessation of efforts that are no longer productive. Results of SWMP evaluation should be presented to decision-makers in a clear manner that addresses the questions formulated when the evaluation plan was designed.

Reporting

Annual reports are a good place to summarize evaluation results and to take stock of what is working and what is not. Data gathered throughout the year should be used to answer critical questions such as:

- What is the current status in meeting stormwater goals and NPDES regulatory requirements?
- What are the estimated load reductions and other benefits of BMP implementation?
- What are the costs associated with program implementation?
- How do the costs of program implementation relate to water quality changes?
- What stormwater program changes are necessary to meet the stated goals?

The Baltimore City, Maryland MS4 2005 NPDES permit, for example, requires the permittee to provide an annual narrative summary describing the results and analyses of program data, including monitoring data accumulated throughout the reporting year. Identification of water quality improvements or degradation is a key part of this requirement.

Fourth-year reports are a good opportunity to use data gathered under the entire permit period to guide future management direction. Continuation of a NPDES permit typically requires the permittee to submit with its permit renewal application a summary of its SWMP describing how water quality goals are being achieved. Information in the application would include measured pollutant load reductions resulting from SWMP implementation and achievement of other benchmarks or water quality standards. Analysis of evaluation data is also used to justify or support changes in the permit and SWMP.

Feedback to the stormwater management program

NPDES regulations require assessment and revision of the stormwater management program in order to continue, to the maximum extent practicable, to not cause or contribute to water quality standards exceedances. As part of the iterative management process, stormwater program activities should be adjusted based on the results of an effectiveness evaluation. If a management goal has been achieved, effort in this area might be reduced to a maintenance level and resources reallocated to another pollutant or goal. If a goal has not been achieved, or satisfactory progress has not been made, additional resources can be applied and new strategies implemented. Such adjustments provide the direction for a municipality's permit renewal and will ensure progress toward program goals.

Effectiveness evaluation can also apply to ongoing stormwater programs through the process of adaptive management. Through this, evaluation results on program operations, social or water quality can provide rapid feedback to guide management activities. For example, an MS4 might establish dry weather action levels—or targets—for water quality constituents such as turbidity, phosphorus, and trace metals in tributaries draining to receiving water. Exceedance of an action level in samples taken from a tributary during dry weather would trigger an immediate investigation upstream to find and eliminate illicit connections and illegal discharges. Dry weather action levels would be reviewed and updated annually based on monitoring data and progress toward meeting SWMP goals.

In another example (Figure 3), coastal beaches and storm drains discharging near them are monitored for fecal bacteria. When compared against storm drain action levels for bacteria (sampled at the storm drain) and bacteria water quality criteria for body contact recreation (sampled in the open coastal receiving water), results of the paired samples guide management decisions on actions needed to protect the beach and follow up on sources of high bacteria counts.

Multi-faceted stormwater management programs can be evaluated as well. Baltimore City's NPDES stormwater permit requires it to restore a watershed or combination of watersheds containing 10% of the City's total impervious area during each five-year permit. The City conducts comprehensive watershed assessments and goals for restoration are developed based on

		Beach	
		Meets bacteria criteria	Fails to meet bacteria criteria
Storm drain discharge	Below bacteria action level	No action required	Storm drain discharge not causing beach impairment; continue to monitor and investigate other sources
	Above bacteria action level	Storm drain discharge not causing beach impairment; investigate storm drain sources	Storm drain discharge causing beach impairment; investigate storm drain sources ASAP

Figure 3. Decision table for storm drain and beach bacteria levels.

severity of water quality problems, input form local watershed associations, the possibility for inter-jurisdictional cooperation, and the availability of restoration opportunities. One restoration priority is Watershed 263 (www.cwp.org/RR_Photos/Baltimore_City_profile_sheet.pdf) where Baltimore City plans to restore a degraded stream system and simultaneously address other social and economic problems associated with older urban environments. The goals in this watershed include; replacing school yard asphalt with green infrastructure to filter stormwater; replacement of sidewalk sections with trees to remove nutrients and reduce the "heat island" effect; conversion of vacant abandoned lots into gardens for local residents to use; reduce the buildup of trash and litter through increased municipal street sweeping; and installing innovative ultra-urban BMPs wherever possible. A catch basin downstream of all of these activities will be monitored for water quality and compared to a similar watershed in the City with no controls. Since the installation of BMPs will be progressive, monitoring data will show the effectiveness of differing management strategies. Information will be fed back into future management plans for this watershed and others across the City to ensure that stormwater is being controlled to the maximum extent practicable.

In summary, a municipal stormwater management program needs to set clear goals and identify appropriate monitoring methods to evaluate those goals in order to assess the effectiveness of the stormwater program in protecting water quality.

Useful Water Quality Monitoring Approaches for Evaluation of SWMPs

Visual observations. Some water quality conditions can be assessed by visual (qualitative) observations of controls, outfalls or receiving waters. Searching for and correcting illicit discharges through observation of oil and grease sheens, floatables, or odors at outfalls is one example. Progress in streambank stabilization and channel restoration might be monitored by regular photography of critical locations. In general, qualitative observations should be supplemented by quantitative measurements where possible, such as with dry weather sampling at outfalls or regular surveys of representative stream cross-sections. The City of Albuquerque MS4 Floatable & Gross Pollutant Study (www.cabq.gov/flood/pdf/FINALREPORT-OCTOBER2005.pdf) is an example of a systematic approach to qualitative observations of water quality conditions. Examples of survey techniques for streambank assessment can be found in the Maryland Stream Corridor Assessment Survey (www.dnr.maryland.gov/streams/pubs/surveyprotocols2.pdf) and the USACE/USEPA Review of protocols for stream assessment (www.mitigationactionplan.gov/Physical%20Stream%20Assessment%20Sept%2004%20Final.pdf).

BMP performance monitoring. Monitoring of individual BMP performance provides a direct measure of pollutant reduction efficiency of these key components of a SWMP. Conceptually, BMP input/output monitoring is simple—measure pollutant concentrations or loads entering and leaving a wet pond for example, and compute the difference. In practice, BMP monitoring is more complex, requiring careful collection of data concerning storm and runoff characteristics and information on BMP attributes, as well as water quality information. There are several sources of information on BMP performance and on protocols for collecting, storing, analyzing, and reporting BMP monitoring data, including the National Stormwater BMP Database (www.bmpdatabase.org) and the USEPA and ASCE *Urban Stormwater BMP Performance Monitoring Manual*. Some examples of individual BMP monitoring studies can be found at the Villanova Urban Stormwater Partnership (www3.villanova.edu/VUSP/index.html).

Probability monitoring. Monitoring sites can be selected across a broad geographic area according to some statistical design to broadly characterize water quality conditions in a watershed or to identify possible contamination hotspots. Site selection could be random to achieve wide spatial coverage or stratified to focus monitoring on particular environment types or represent specific target populations. Data from a statistical sample of stream riffle sites across a watershed could be used to assess the overall condition of watershed macroinvertebrate communities. A monitoring program addressing sediment toxicity in a bay might geographically direct sampling to ensure that sediments in different depositional environments or with different physical characteristics are sampled, or that samples are collected within the areas affected by discharges from major tributaries. Results of probability monitoring can be used to guide SWMP implementation efforts and to assess long-term trends in response to SWMP implementation. An example of a probability design applied to evaluating sediment toxicity is found in the NOAA report Magnitude and Extent of Contaminated Sediment and Toxicity in Chesapeake Bay (ccma.nos.noaa.gov/publications/NCCOSTM47.pdf).

Short-term extensive network monitoring. Short-term grab-sampling at the outlets of numerous small watersheds or other drainages within a large MS4 can identify impaired waters and rank areas for implementation priority. Data collected simultaneously across the MS4 can help characterize the geographical distribution of pollutant sources. The City of Los Angeles monitors a network of shoreline stations in Santa Monica Bay for bacteria to identify stormwater impacts on recreational uses of the bay. This approach can apply not only to streams draining small watersheds but also to storm drains during both wet-weather and dry-weather conditions. If continued over several years, this kind of monitoring can be a good opportunity for volunteer groups to participate in the SWMP evaluation process. Data collected by volunteers could be reported separately or incorporated within "official" data sets used for regulatory purposes depending upon the methods used and level of training provided to volunteers.

Site-specific monitoring. High-value resources such as popular swimming beaches, important shellfish beds, or high-priority habitats could require specific monitoring to regularly assess the status of use support. Similarly, known high-priority pollutant sources or hotspots of impairment like contaminated aquatic sediments, an eroding stream channel threatening property, or a stream reach with a degraded fish population could be monitored to assess progress in restoration. Depending on the situation, such monitoring can be done in the critical area itself to assess its condition or upstream and downstream of the area to evaluate changes in pollutant stressors. Fairfax County's MS4 program conducts an Industrial and High-Risk Runoff monitoring program to identify and investigate industrial and other high-risk sites to determine if they are contributing substantial pollutant loadings to the MS4. The San Diego Bay MS4 permittees operate a Toxic Hot Spots Monitoring Program to locate and track areas of aquatic sediment contamination related to discharges from MS4s around the Bay.

Long-term fixed stations. Permanent monitoring stations at major discharges from an MS4 or on a receiving water above and below an MS4 can be used to measure changes in pollutant loads discharged from the MS4. Such stations are usually located where it is easy to measure flow and collect representative samples. Accurate load measurement requires consideration of many factors including patterns of hydrologic variation, seasonal patterns of pollutant concentrations, and desired statistical power; it is advisable to consult a monitoring expert before setting up a sample program to monitor pollutant loads. Flow, concentration, and load data from long-term fixed stations can be used for many purposes, including assessing compliance with water quality standards, collection of representative data from drainage areas that are undergoing similar activities and where the discharges are expected to be of similar quality as required in some MS4s under Phase I rules, documenting water quality trends, and marking progress toward meeting pollutant load goals, e.g., for a TMDL. The Los Angeles County stormwater monitoring program operates a system of mass emissions stations (www.ladpw.com/WMD/npdes/Int_report/Section_1.pdf) to update estimated pollutant loads to the ocean and to document long-term trends in pollutant concentrations. The San Diego region urban runoff monitoring program maintains similar long-term mass loading stations (www.projectcleanwater.org/pdf/science_mon/2003-2004_monitoring_summary.pdf) that regular assessment of the biological communities as well as chemical pollutant loads in major drainages.

Receiving water monitoring. Protection of a water body receiving discharges from an MS4 is often the ultimate goal of stormwater management. However, an MS4 may not be the only stormwater discharge into a water body, and achievement of the MS4's discharge quality goals may not eliminate the impairment in the receiving water. It may nevertheless be important to monitor water quality in the river, lake, estuary, or bay that receives its discharge, especially if localized impacts can be identified. Evaluation of the effectiveness of a SWMP on maintaining recreational benefits, for example, might involve monitoring both storm drains and swimming beaches for *E. coli*. If a goal of a SWMP is to reduce the impacts of toxic materials delivered in stormwater, a program monitoring a combination of water and sediment chemistry, sediment toxicity, and benthic communities in the receiving water might be appropriate.

ATTACHMENT NO. 38

U.S. EPA letter dated April 10, 2008

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION IX
75 Hawthorne Street
San Francisco, CA 94105-3901

APR 10 2008

Ms. Tam M. Doduc, Chair
Ms. Dorothy R. Rice, Executive Director
State Water Resources Control Board
1001 I Street
Sacramento, CA 95814

Dear Ms. Doduc and Ms. Rice:

I understand that certain specific provisions of the 2001 Municipal Separate Storm Sewer System ("MS4") permit for the County of Los Angeles have been called into question as going beyond what is required under section 402(p) of the CWA. (Commission on State Mandates, File Nos. 03-TC-04, 03-TC-19, 03-TC-20, and 03-TC-21.) The permit conditions at issue are: 1) the requirements for conducting inspections at industrial and commercial facilities including, restaurants and automobile servicing, [Parts 4.C.2.a. and b.] and, 2) the requirement for permittees not subject to the Trash TMDL to locate and maintain trash receptacles at transit stops [Part 4.F.5.c.3.]. California RWQCB, Los Angeles Region, Order No. 01-182, NPDES No. CAS004001 (Dec. 13, 2001). This letter discusses these permit conditions in the context of EPA's expectations for MS4 permits.

Section 402(p) of the Clean Water Act, 33 U.S.C. 1342(p), requires EPA (or authorized states) to issue National Pollutant Discharge Elimination System ("NPDES") permits to regulate the discharge of stormwater from MS4s. Typically, these MS4s are owned and operated by cities and counties. Pursuant to the Clean Water Act, these permits must require the MS4 to: 1) "effectively prohibit" non-stormwater discharges, and 2)"reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants." 33 U.S.C. 1342(p)(3)(B)(ii) and (iii).

The NPDES regulations require medium and large MS4s to develop stormwater management programs that the permitting authority will consider when developing permit conditions to reduce pollutants in discharges to the maximum extent practicable. Stormwater permitting has generally relied on the use of best management practices ("BMPs"), including both structural and non-structural controls, for achieving compliance with these requirements. The EPA also expects stormwater permits to follow an iterative process whereby each successive permit becomes more refined, detailed, and expanded as needed, based on experience under the previous permit. See, 55 Fed. Reg. 47990, 48052 ("EPA anticipates that storm water management programs will evolve and mature over time."); 64 Fed. Reg. 68722, 68754 (Dec. 8, 1999) ("EPA envisions application of the MEP standard as an iterative process."); Interim Permitting Approach for Water Quality-Based Effluent Limitations in Stormwater Permits (Sept. 1, 1996) ("The interim permitting approach uses BMPs in first-round storm water permits, and

Printed on Recycled Paper

expanded or better-tailored BMPs in subsequent permits, where necessary, to provide for the attainment of water quality standards"). See also, "Evaluating the Effectiveness of Municipal Stormwater Programs" (January 2008) (http://www.epa.gov/npdes/pubs/region3_factsheet_swmp.pdf). While the standard of "maximum extent practicable" (MEP) allows for flexibility, that flexibility is not boundless and requires some level of vigor. EPA has created a national menu of stormwater BMPs to provide additional guidance concerning appropriate BMPs for stormwater management plans. Other factors to consider in ensuring appropriate controls include "technical feasibility, cost, public acceptance, regulatory compliance, and effectiveness." Building Indus. Ass'n v. State Water Res. Control Bd., 124 Cal. App. 4th 866, 889 (2004). See also "In re Cities of Bellflower, et al.", SWRCB 2000-11.

At the outset, I note the Los Angeles MS4 permit is a third generation Phase I MS4 permit that should be building upon the experiences from previous permits. Both of the provisions at issue here seem well within a reasonable expectation of controls that reduce pollutants to the "maximum extent practicable." EPA regulations at 40 C.F.R. §122.26(d)(2)(iv) set forth the basic elements to be included in a Phase I MS4's stormwater management program. Subparagraph (A) requires a description of "source control measures to reduce pollutants from runoff from commercial and residential areas that are discharged from the [MS4] that are to be implemented during the life of the permit." Subparagraph (B) requires a program for detection and removal of illicit discharges and improper disposal into the storm sewer, including a program for inspections and enforcement. A program for commercial and industrial facility inspection and enforcement that includes restaurants and automobile facilities, would appear to be both practicable and effective. Such an inspection program ensures that stormwater discharges from such facilities are reducing their contribution of pollutants and that there are no non-stormwater discharges or illicit connections. Thus these programs are founded in both 402(p)(3)(B)(ii) and (iii) and are well within the scope of 40 C.F.R. §122.26(d)(2)(iv)(A) and (B).[1]

Similarly, maintaining trash receptacles at all public transit stops is well within the scope of these regulations. Among the minimum controls required to reduce pollutants from runoff from commercial and residential areas are practices for "operating and maintaining public streets, roads, and highways . . . ." §122.26(d)(2)(iv)(A)(3). I believe these requirements are also practical and effective.[2] Moreover, this permit provision is consistent with EPA's national menu

---

[1]EPA's "MS4 Program Evaluation Guidance" (January 2007) envisions that an MS4 permit would include a requirement for an inspection program for common industrial/commercial businesses, such as restaurants and gas stations, within the jurisdiction of the MS4. Id. at 76 - 77, 81. The inspection requirements of the LA MS4 permit are consistent with the recommended activities in the Guide.

[2]The provision applicable to the TMDL permittees is also clearly consistent with EPA's 2002 guidance on TMDLs and storm water permitting. "Establishing Total Maximum Daily Load (TMDL) Wasteload Allocations (WLAs) for Storm Water Sources and NPDES Permit

of BMPs for stormwater management programs, which recommends a number of BMPs to reduce trash discharges. See http://cfpub.epa.gov/npdes/stormwater/menuofbmps/index.cfm?action=browse&Rbutton=detail&bmp=5. Among the recommendations is "improved infrastructure" for trash management when necessary, which includes the placement of trash receptacles at appropriate locations based on expected need. The requirements of the Los Angeles County MS4 permit are consistent with this recommendation. See also, "MS4 Program Evaluation Guidance" (January 2007) at pp. 50, 79. EPA's expectations of the programs to reduce pollutants to the maximum extent practicable specifically refer to control of litter and trash, regardless of whether the particular receiving water is already impaired for trash.

I hope that this explanation helps clarify EPA's expectations for MS4 permit requirements under the Clean Water Act. I look forward to continuing to work with the State on our shared goal of ensuring consistency and effectiveness in storm water permitting as a vital tool in protecting the quality of our waters. Should you have further questions about these issues, please have your staff contact Douglas Eberhardt of my staff at (415) 972-3420 or have your counsel's office contact Laurie Kermish of the Office of Regional Counsel at (415) 972-3917.

Sincerely,

Alexis Strauss 10 April 2008

Dear Ms. Higashi:

Los Angeles County's Review of State Agency Comments
Public Transit Trash Receptacles and State Permit Inspections
Storm Water Pollution Control Test Claims [03-TC-04, -19, -20, -21]

The enclosed review considers comments filed by the State Water Resources Control Board on April 18, 2008 and the State Department of Finance on March 27, 2008 regarding the referenced test claims filed by the County of Los Angeles and twenty cities.

Leonard Kaye of my staff is available at (213) 974-8564 to answer questions you may have concerning this submission.

Very truly yours,

Wendy L. Watanabe
Acting Auditor-Controller

WLW:CY:LK
Enclosures

"To Enrich Lives Through Effective and Caring Service"

Los Angeles County's Review of State Agency Comments
Public Transit Trash Receptacles and State Permit Inspections
Storm Water Pollution Control Test Claims [03-TC-04, -19, -20, -21]

The enclosed review considers comments filed by the State Water Resources Control Board [State Water Board] on April 18, 2008 and the State Department of Finance [Finance] on March 27, 2008 regarding the referenced test claims filed by the County of Los Angeles [County] and twenty cities [cities].

The County contends that reimbursement is required under article XIII B, section 6 of the California Constitution and Government Code section 17514 for providing State-permitted industrial and commercial facility and construction site inspections and public transit trash receptacle services as specified in the California Regional Water Quality Control Board, Los Angeles Region's, [Regional Water Board] Executive Order Number 01-182 [Order], Permit Number CAS004001, issued December 13, 2001, [Permit].

The State Water Board and Finance contend otherwise.

Inspection Mandates

Finance's position on the inspection requirements is summarized on page 3 of its analysis as follows:

> "Although these inspections and other permit requirements may result in additional costs to local agencies, those costs are not reimbursable because the conditions implement federal NPDES permit requirements and do not shift responsibilities from the state to local agencies."

However, as discussed in Sections 1-3 below, Finance fails to note that the inspection duties here are for State-permitted industrial and commercial facilities and construction sites.

The County contends that under prior law the State had sole and exclusive responsibility for conducting the subject inspections. After the instant Permit was issued, the County was required to perform these inspections. Clearly, a shift of responsibilities from the state to local agencies occurred.

Further, there is no evidence in the record that the County requested the duties claimed herein. For example, the State Water Board's Exhibit 36 which

includes the County's Permit Application to the Regional Water Board, dated January 31, 2001, does not include a request to conduct State-permitted industrial and commercial facility and construction site inspections. To the contrary, this application indicates, on page 22, that "Permittees shall implement an industrial/commercial educational site visit program. (emphasis added)", not an inspection program.

Moreover, according to the declaration of Adam Ariki, Assistant Deputy Director of the Water Works Division of the Los Angeles County Department of Public Works [LADPW], attached hereto as Exhibit 1, Mr. Ariki indicates on page 1 that:

> ".. it was their [Regional Water Board] idea to have LADPW perform these inspections in lieu of Regional Board staff performing these inspections themselves"

The substitution of the County for the State in conducting the instant inspections is further corroborated by a letter attached to Mr Ariki's declaration from the Regional Water Board to LADPW dated December 17, 2001, around the time the instant Permit was issued, indicating that the Regional Water board was trying to contract with the County to perform the subject inspections but that the Regional Water Board was "unable to proceed in further developing the proposal". The result was that this 'proposal' was subsequently mandated in the instant Permit, without County payment.

To make matters worse, the County incurred substantial costs in implementing the State mandated inspection services and found itself without sufficient fee authority to recover its costs. As noted in Section 5, the State still charges and keeps the fees for these inspections --- even though the County conducts them.

In addition, the State Water Board notes on page 17 of their April 18, 2008 letter that this "approach may result in two different entities inspecting the same businesses to review storm water practices". Of course, it is unfortunate when businesses undergo duplicate inspections. But it is unconscionable to charge them twice for doing so.

And it is undisputed that the County is now mandated to perform extensive duties in inspecting State-permitted facilities and construction sites pursuant to the Regional Water Board's Executive Order Number 01-182, which details pages of new requirements under:

> Part 4.c.2.a [Inspection of certain commercial facilities to prevent those facilities from discharging waste into waters of the state and to assure compliance with state law], pages 28-31;
>
> Part 4.c.2.b [Inspection of industrial facilities to determine compliance with the State's program that regulates discharge of stormwater from industrial facilities, including compliance with State Water Resources Control ("State Water Board") permits], page 31;
>
> Part 4.E. [Inspection of construction sites to determine those sites' compliance with the State's program that regulates discharge of stormwater from those sites, including compliance with State Water permits], pages 42-45;

As will be seen, in Sections 1-3 below, federal law did not mandate that the County conduct the new inspections specified in the instant Permit. The State did.

Trash Receptacle Mandates

Regarding public transit trash receptacle services, Finance argues that this service is not reimbursable. Finance explains, on pages 3-4 of its analysis, that:

> "... the claimants had discretion over what activities and conditions to include in the permit application . ... As a result, the permit requirements are a downstream result of the local agencies' decision to include the particular activities in the permit. Such requirements are not reimbursable mandates."

However, the County did not decide to put public transit trash receptacle services in the Permit. The State did. Indeed, the State Water Board's Exhibit 36 which includes the County's Permit Application to the Regional Water Board, dated January 31, 2001, does not include a request for a public transit trash receptacle services or even a similar program.

Further, the State Water Board erroneously suggests on page 19 of their April 18, 2008 letter, that because "most cities routinely place trash receptacles at bus stops", the State did not subsequently mandate a new duty. However, where such duties are voluntarily performed under prior law, the costs of performing the same duties become subject to reimbursement when mandated

in accordance with article XIII B, section 6 of the California Constitution and its implementing statutory provision in Government Code Section 17565:

> "If a local agency or a school district, at its option, has been incurring costs which are subsequently mandated by the state, the state shall reimburse the local agency or school district for those costs incurred after the operative date of the mandate." [Emphasis added.]

Therefore, under Government Code Section 17565, reimbursement is now required for the costs claimed herein as the public transit trash receptacle services are no longer discretionary.

The State Water Board contends that the claimed activities are not 'a new program or higher level of service' and consequently not reimbursable. In the State Water Board's April 18, 2008 letter to Paula Higashi, Executive Director of the Commission on State Mandates [Commission], Elizabeth Miller Jennings, Office of Chief Counsel, State Water [1], states on page 2, that:

> "In order to obtain reimbursement, the claimants must show that the requirements constitute a new program or higher level of service. They must prove either: (1) the program must carry out a governmental function of providing services to the public, or (2) the requirements, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the State."

Here, the claimed State-permitted industrial and commercial facility and construction site inspections [discussed in Sections 1-3] as well as the public transit trash receptacle services [discussed in Section 4] impose new and unique requirements on local governments.

1a. Inspection of Commercial Facilities

[1] Ms. Jennings also attached a letter opining on the nature of pertinent federal Clean Water Act [CWA] requirements from Ms. Alexis Strauss, Director, Water Division, United States Environmental Protection Agency [USEPA], Region IX.

Part 4.C.2.a of the Order requires the County to inspect restaurants, automotive service facilities, retail gasoline outlets and automotive dealerships. The purpose of the inspection is to assure that these facilities are implementing programs, known as Best Management Practices ("BMPs"), to prevent the discharge of waste into locations where it will be picked up by stormwater and carried into the rivers and other waters of the state.

Since at least 1969, State agencies have had the responsibility to prevent or regulate the discharge of waste that could be carried into the rivers and other waters of the state. In that year the Legislature adopted the Porter-Cologne Water Quality Act, Water Code §§ 13000 et seq. Under the Porter-Cologne Act, the Legislature imposed on the State Water and the regional water quality control boards ("regional boards") responsibility for the coordination and control of water quality. Water Code § 13001.

This responsibility includes the regulation of discharges from any entity that could affect the quality of the water of the state, including inspection of those facilities. Under the Act, any person who discharges "waste" or proposes to discharge "waste" that could affect the quality of the "waters of the state," other than into a community sewer system, must file a report of the discharge with the regional that has the authority over that discharge. Water Code §§ 13260 and 13263. "Waste" and "waters of the state" are defined broadly. "Waste" includes all waste substances associated with human habitation, or of human or animal origin, or from any producing, manufacturing or processing operation. Water Code § 13050(d). "Waters of the state" means any surface water or groundwater, including saline waters, within the boundaries of the state. Water Code § 13050(e). Upon receipt of the report of discharge, the regional board, after a hearing, issues a permit, known as waste discharge requirements, authorizing or conditioning (including disallowing) the discharge. Water Code § 13263. The regional is given the authority to require any person to furnish technical and monitoring reports describing any discharge or proposed discharge of waste, and can inspect the facility of any such person to ascertain whether the purpose of the Act are being met. Water Code § 13267(b) and (c). The State Water is given this same authority if it will not duplicate the efforts of the Regional Board. *Id.*, subd. (f).

The Porter-Cologne Act contains no exceptions for discharges from restaurants, automotive service facilities, retail gas station, or automobile dealerships. Accordingly, the State, through the State Water and the regional water quality control boards, has had the responsibility since 1969 for

regulating the discharge or proposed discharge of any waste from these facilities.

As set forth above, the purpose of the inspections of restaurants, automotive service facilities, retail gasoline outlets and automotive dealerships is to assure that these facilities are implementing BMPs that will prevent the discharge of waste into locations where it could be carried into rivers and other waters of the state. The restaurant inspections are to assure that oil, grease, trash or waste are not entering areas exposed to stormwater, all to prevent these materials from being picked up by stormwater and then being discharged into waters of the state. The automotive service facility inspections are to assure that materials at these facilities do not come into contact with stormwater or other runoff that would carry these materials into waters of the state. The retail gas outlet and automotive dealership inspections likewise are to assure that fuel, debris and waste does not enter storm drain and catch basins and then enter waters of the state.

These inspections are all tasks for which the State has been responsible since at least 1969. These are all obligations of the State and regional boards under the Porter-Cologne Act since 1969.

1b. The Order requires the County to conduct these inspections to assure compliance with State law

The Order explicitly requires the County to conduct these inspections to assure compliance with State law, including a resolution issued by a state agency, i.e., the Regional Water Board. The Order specifically provides that inspections of restaurants are to be performed in order to assure that BMPs "are being effectively implemented in compliance with state law, County and municipal ordinances, Regional Resolution No. 98-08, and the SQMP." Order, Part 4.C.2.a(1) (emphasis added). The inspection of automotive service facilities, retail gasoline outlets and automobile dealerships similarly are to confirm that BMPs are being "effectively implemented . . . in compliance with Regional Resolution No. 98-08. Order, Parts 4.C.2.a(2) and (3) (emphasis added). (A copy of Resolution No. 98-08 was included in Section 7 of the test claim filed by the cities of Artesia et al. [03-TC-20] on November 28, 2007.)

1c. These inspection obligations are new programs or higher levels of service

The obligation to inspect restaurants, automotive service facilities, retail gas outlets and automotive dealerships is a new program or a higher level of service. A "program" within the meaning of Article XIII B, section 6, of the California Constitution is a program that carries out a governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments. *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56. These inspection obligations are such a program; inspections for the purpose of policing compliance with state law are a uniquely governmental function and are uniquely imposed on the municipalities that are permittees under the Order.[2]

These inspection obligations are also new. A program is "new" if the local governmental entity had not previously been required to institute it. *County of Los Angeles v. Comm'n on State Mandates* (2003) 110 Cal.App.4th 1176, 1189. Here, the Order constitutes both waste discharge requirements issued by the Regional Water Board and a NPDES municipal stormwater permit issued under the federal Clean Water Act. This is the third such order issued to the County. The Regional Water Board previously issued orders to the County in 1991 and 1996. Neither the 1991 nor the 1996 order imposed these inspection obligations. The inspection obligations were imposed by the Regional Water Board for the first time in the Order issued in 2001.

1d. The inspections are not required by the federal Clean Water Act

The federal Clean Water Act imposes certain obligations on the County. Under the Clean Water Act, the County are required to (i) prohibit non-stormwater discharges into the storm sewers, and (2) reduce the discharge of pollutants in stormwater to the maximum extent practicable. 33 U.S.C. §1342(p). As noted above, the Order itself constitutes both waste discharge requirements and NPDES permit issued under the federal Clean Water Act.

---

[2] While these services are completely new and clearly constitute a 'new program', these inspections even if viewed as a higher level of service also qualify for reimbursement as claimed herein. A "higher level of service" refers to state mandated increases in the services provided by local agencies. *County of Los Angeles*, 43 Cal.3d at 56. A higher level of service exists where the mandate results in an increase in the actual level or quality of governmental services provided. *See San Diego Unified School District v. Comm'n on State Mandates* (2004) 33 Cal.4th 859, 877.

The federal Clean Water Act does not require the County to inspect restaurants, automotive service facilities, retail gas outlets or automotive dealerships. The federal Clean Water Act regulations set forth those facilities required to be inspected pursuant to the Act. Those facilities are solely municipal landfills, hazardous waste treatment, disposal and recovery facilities, industrial facilities that are subject to section 313 of Title III of the Superfund Amendment and Reauthorization Act of 1986, and industrial facilities that a municipality has determined to be contributing a substantial pollutant loading to the municipal storm sewer system. 40 C.F.R. § 122.26(d)(2)(iv)(C). The federal regulations do not require inspections of restaurants, automotive service facilities, retail gas stations, or automotive dealerships.

Indeed, the 1991 and 1996 orders issued by the Regional Water Board to the County did not contain these inspection obligations. If the federal Clean Water Act had required the County to inspect restaurants, automotive service facilities, retail gas outlets or automotive dealerships, the Regional Water Board could not have issued the prior orders without including these inspections. The Regional Water Board, however, did issue the prior orders without requiring these inspections.[3]

The State's argument that, because the Order also constituted a federal NPDES permit, the inspections are federally mandated, lacks merit. An NPDES permit can contain both federal and non-federal requirements. *See City of Burbank v. State Water Resources Control* (2005) 35 Cal.4th 613, 618, 628. Where state-mandated activities exceed federal requirements, those mandates constitute a reimbursable state mandate. *See Long Beach Unified School District v State of California* (1990) 225 Cal.App.3d 155, 172-173.

Moreover, a "new program or higher level of service" imposed by the State upon a municipality as a result of a federal law or federal program is not necessarily a "federal mandate." In order to be a federal mandate, the obligation must be imposed upon the municipality by federal law itself. The test for determining whether the "new program or higher level of service" is a state mandate is whether the state has a "true choice" in the matter of implementation, *i.e.*, whether the state freely chose to impose that program on

[3] Because the current federal regulations were not in effect at the time of the issuance of 1991 order, it could be argued that the 1991 order was issued under a prior set of regulations. The current regulations however, were in existence at the time the 1996 order was issued.

local municipalities as opposed to performing the obligation itself. *See Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, 1593-94.

Here, the inspections are not required by federal statute or regulations; they exceed the requirements of the federal Clean Water Act. Here, the State has had the obligation to regulate restaurants, automotive service facilities, retail gas stations and automotive dealerships since 1969. This included the right to inspect such facilities to prevent activities that would result in the discharge of waste that could affect the quality of the waters of the state. Water Code § 13267(c). In 2001, the Regional Water Board freely chose to shift those inspection obligations to the County. Nothing under the federal Clean Water Act required the Regional Water Board to do so; nothing prevented the Regional Water Board from continuing to perform these inspections itself.

2a. Inspection of Industrial Facilities

The inspections of industrial facilities that hold State Water stormwater permits for compliance with those permits are new programs or higher level of service mandated by the State. The Order imposes new inspection obligations that were required to be performed by the State

Part 4.c.2.b requires the County to inspect industrial facilities to determine those facilities' compliance with the State's program for preventing waste from being discharged from those facilities, including permits issued by the State Water Board. As with the inspection of restaurants, gas stations and the other facilities, the requirement to inspect industrial is also a new program, one formerly performed by the State itself.

The Clean Water Act requires certain industrial facilities to have permits for stormwater discharges associated with their industrial activity. 33 U.S.C. § 1342(p)(3); 40 C.F.R. § 122.26(c). These industrial stormwater permits are issued either by the State Water Boards or the Regional Water Boards. In California, the State Water issues a general permit to which industrial facilities can subscribe. Alternatively, an industrial discharger can obtain its own permit from a Regional Water Board. The Order refers to these industrial facilities as "Phase I Facilities." Order, pp. 31, 62.

Under the Porter-Cologne Water Quality Act, the State Water and the regional boards have both the authority and the obligation to issue these permits to "Phase I Facilities." Water Code § 13377. The State Water has issued these industrial stormwater permits since 1991. (See State Water Order No. 91-013-

DWQ.) The most current general permit was issued in 1997. (See State Water Resources Control Order No. 97-03-WQ, a copy of which was included in Section 7 of the test claim filed by the cities of Artesia et al. [03-TC-20] on November 28, 2007.)

Significantly, the Legislature has authorized the State Water and regional boards to charge these industrial dischargers a fee which is deposited in the State's Waste Discharge Permit Fund and separately accounted for. Water Code § 13260(d)(2)provides in pertinent part:

> (A) Subject to subparagraph (B), any fees collected pursuant to this section shall be deposited in the Waste Discharge Permit Fund, which is hereby created.
>
> (B) Notwithstanding subparagraph (A) the fees collected pursuant to this section from stormwater dischargers that are subject to a general industrial or construction stormwater permit under the National Pollutant Discharge Elimination System (NPDES) shall be separately accounted for in the Waste Discharge Permit Fund.

The Legislature has then directed that a portion of this fee should be spent specifically on inspection of these industrial facilities. "Not less than 50 percent in the Waste Discharge Permit Fund that is separately accounted for . . . is available, upon appropriation by the Legislature, for expenditure by the regional with jurisdiction over the permitted industry or construction site that generated the fee to carry out the stormwater programs in the region." Water Code § 13260(d)(2)(B)(ii). "Each regional . . . shall spend not less than 50 percent of that money solely on stormwater inspection and regulatory compliance issues associated with industrial and construction stormwater programs." *Id.*, subd.(d)(2)(B)(iii) (emphasis added).

Like the inspections of restaurants, automotive service facilities, retail gas stations and automotive dealerships, the State Water and regional boards have had the authority under the Porter-Cologne Act to regulate these discharges from "Phase I" facilities since 1969, including the authority to inspect these facilities. Water Code §§ 13260, 13263, 13267. The obligation to inspect these "Phase I" industrial facilities that hold the State issued stormwater permits has rested with the Regional Water Boards since 1991. The State Water Board, in adopting the general industrial permit it issues to these Phase I facilities, stated that "following adoption of this General Permit, the Regional

Water Boards shall enforce its provisions." Order No. 97-03-DWQ, Finding 13 (emphasis added).

In 2001, the Regional Water Board imposed this obligation on the County. There is no question that the Regional Water Board imposed this inspection requirement to assure Phase I facilities' compliance with state law. The inspection required to be performed by the County is a "compliance inspection." Order, Part 4.2.b. The inspection shall include a determination as to whether the industrial discharger has a waste discharge identification number and a stormwater pollution prevention plan. The waste discharge identification number is a number assigned by the State in conjunction with its permit program. The stormwater pollution prevention plan is a requirement of the state-issued general permit. The inspection is also for the purpose of determining whether the industrial facility is implementing BMPs in compliance with Regional Resolution No. 98-08, a resolution of the Regional Water Board itself.

Accordingly, the inspections of Phase I facilities is a new program or higher level of service imposed on the County:

> (1) The State Water and the regional boards have had authority to regulate and inspect these facilities since 1969. Water Code §§ 13260, 13263, 13267.
>
> (2) The inspection is to determine compliance with the general industrial stormwater permit issued by the State Water Board. The State has specifically provided that the regional shall enforce the provisions of this permit. State Water Order No. 97-03-DWQ, Finding 13.
>
> (3) The State and the regional charge these industrial facilities a fee for this program. Water Code § 13260(d)(2).
>
> (4) The State Water and the regional boards do not share any of these fees with the County.
>
> (5) The inspections are compliance inspections to determine compliance with the State Water permit, and Regional Resolution No. 98-08.

(6) The inspection obligation is new. The Regional Water Board imposed this obligation on the County in 2001. Prior orders did not impose this obligation on the County.

2b. The obligation to inspect industrial facilities with State-issued stormwater permits is not contained in the federal Clean Water Act

As discussed above, the federal Clean Water Act regulations set forth those facilities required to be inspected pursuant to the Act. Those facilities are municipal landfills, hazardous waste treatment, disposal and recovery facilities, industrial facilities that are subject to section 313 of Title III of the Superfund Amendment and Reauthorization Act of 1986, and industrial facilities that a municipality has determined to be contributing a substantial pollutant loading to the municipal storm sewer system. 40 C.F.R. § 122.26(d)(2)(iv)(C). These regulations do not require inspections of industrial facilities with state-issued stormwater permits.

3a. Inspection of Construction Sites

The inspection of State-permitted construction sites is a new State-mandated program.

Under the Clean Water Act, the definition of industrial activities includes construction. See 40 C.F.R. § 122.26(b)(14)(x). In 2001, construction sites where activity resulted in the disturbance of greater than five acres of total land area were required to obtain stormwater permits. In 2003 this requirement was expanded to sites where the activities resulted in the disturbance of greater than one acre. See 40 CFR Section 122.26(b)(14)(x) and (15).

As with the industrial facilities, the State Water and regional boards are charged with issuing these permits. Water Code § 13377. The State Water has issued a general construction stormwater permit since 1992. See State Water Resources Control Order No. 92-08-DWQ. The most current general construction stormwater permit was issued in 1999. See State Water Resources Control Order No. 99-08-DWQ. Like industrial facilities, the State charges a fee for these permits. Like industrial facilities, a portion of that fee is to go to Regional Water Boards to be spent "solely on stormwater inspection and regulatory compliance issues associated with industrial and construction stormwater programs." Water Code § 13260(d)(2)(B)(iii).

Like general industrial stormwater permit, the general construction stormwater permit issued by the State Water imposes the inspection obligation on the Regional Water Boards. State Order No. 99-08-DWQ specifically provides that "[f]ollowing adoption of this General Permit, the Regional Water Board's shall enforce the provisions herein . . . ." State Order No. 99-08-DWQ, Finding 11. Part D.1 of that Order further specifically provided that "RWQCBs [Regional Water Boards] shall . . . implement the provision of this General Permit. Implementation of this General Permit may include, but is not limited to requesting the submittal of SWPPPs, reviewing SWPPPs, reviewing monitoring reports, conducting compliance inspections, and taking enforcement actions." Thus, the specific responsibility for inspection of construction sites was allocated by the State Water to the regional boards, including the Regional Water Board.

The same analysis that applies the obligation to inspect industrial facilities applies to the obligation to inspect construction sites. Like inspection of the Phase I facilities in 2001, the Regional Water Board simply shifted this obligation from itself to the County. The obligation to inspect these construction sites for compliance with the State Water Board's permit is a new program or higher level of service mandated on the County:

> (1) The State Water and the regional boards have had the authority and obligation to regulate these discharges since 1969. Water Code §§ 13260, 13263 and 13267.
>
> (2) The State Water Resources has issued permits to these facilities since 1992. See State Order No. 92-08-DWQ.
>
> (3) The State orders adopting the general permit imposed the obligation to inspect construction sites on the Regional Water Boards. See State Order No. 99-08-DWQ, part D.1.
>
> (4) The State and the regional boards charge a fee to the owners or developers of these construction sites. Water Code § 13260(d)(2). The State Water Boards and the regional boards do not share any of these fees with the County.

(5) The inspections are compliance inspections to determine compliance with the State Water program and permit.

(6) The obligation is new. The Regional Water Board imposed the obligation on the County in 2001. Prior to 2001, the County did not have this obligation.

4. Public Transit Trash Receptacles

The installation and maintenance of trash receptacles at public transit stops are new programs or higher levels of service mandated upon the County.

Part 4.F.5.c.3. of the Order [regarding installation and maintenance of trash receptacles at transit stops, pages 48-49] requires the County to place trash receptacles at all transit stops within their jurisdiction no later than February 3, 2003. All trash receptacles shall be maintained as necessary. This requirement also constitutes a new program or higher level of service mandated upon the County.

As set forth above, a "program" within the meaning of Article XIII B, section 6, of the California Constitution is a program that carries out a governmental function of providing services to the public. *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56. A program is "new" if the local government entity had not previously been required to institute it. *County of Los Angeles v. Comm'n on State Mandates* (2003) 110 Cal.App.4th 1176, 1189. A "higher level of service" refers to state mandated increases in the services provided by local agencies. *County of Los Angeles v. State of California*, 43 Cal.3d at 56. A higher level of service exists where the mandate results in increase in the actual level or quality of governmental services. *See San Diego Unified School District v. Comm'n on State Mandates* (2004) 33 Cal.4th 859, 877.

The obligation to install trash receptacles at all transit stops is a new program or higher level of service. The collection of trash is a program that carries out a governmental function of providing services to the public. The Order directed the County how and where to collect trash. It resulted in a new program or higher level of service along with a concomitant increase in costs.

Nothing in the federal Clean Water Act requires the County to install trash receptacles at transit stops. Nothing in the federal regulations or the Clean

Water Act itself imposes this obligation. Indeed, this obligation is not found in other stormwater permits issued to the County throughout the state. The fact that it does not exist in other stormwater permits demonstrates that it is not a federal requirement.

The State Water Board's April 18, 2008 filing with the Commission included a letter from Mr. Alexis Strauss, Director, Water Division, United States Environmental Protection Agency [USEPA], Region IX. who indicated that the pertinent federal standard in this matter is whether or not there was a "reasonable expectation of controls that reduce pollutants to the "maximum extent practicable". Ms. Strauss explains her position, on page 2 of her letter, as follows:

> "... the Los Angeles MS4 permit is a third generation Phase 1 MS4 permit that should be building upon the experiences from previous permits. Both of the provisions at issue here seem well within a reasonable expectation of controls that reduce pollutants to the "maximum extent practicable." ... A program for commercial and industrial facility inspection and enforcement that includes restaurants and automobile facilities, would appear to be both practical and effective. Such an inspection program ensures that stormwater discharges from such facilities are reducing their contribution of pollutants that there are no non-stormwater discharges or illicit connections. ...
>
> Similarly, maintaining trash receptacles at all public transit stops is well within the scope of these regulations. ... Moreover, this permit provision is consistent with EPA's national menu of BMPs for stormwater management programs, which recommends a number of BMPs to reduce trash discharges. See http://cfpub.epa.gov/npdes/stormwater/menuofbmps/index.cfm?action=&Rbutton=detail&bmp=5."

However, no federal mandates to comply with the requirements claimed herein are to be found. Granted, such requirements may be permitted under federal law ... and even encouraged as 'reasonable expectations'. But such requirements are not mandated on the County by federal law. Rather, as previously discussed, such requirements are mandated on the County under State law.

Previously, the Commission considered a case where federal law permitted and even encouraged a State mandated program to implement "Two-Way Traffic Signal Communication". Even so -- the Commission found a reimbursable state mandated program. The Commissioners explain, on the first page of their decision, that:

> " The Commission recognized federal regulations and a federal manual providing for uniform traffic control devices and traffic coordination among jurisdictions. However, the Commission found that these authorities do not obligate the state or local agencies to install software capable of two-way communication in traffic signal controllers." [www.csm.ca.gov/tcdocs/4504sod.pdf

In this present case also, there is an abundance of federal guidance and encouragement to have the County install and maintain trash receptacles at all public transit stops. But these are merely federal suggestions, not mandates.

Here, as in the San Diego Tentative Order 2001-01, State mandates were included in the federal MS4 Permits. As noted by Professor John H. Minan, former chairman of the San Diego Regional Water Board, in a San Diego Law Review article, attached in pertinent part in Exhibit Two, on page 2:

> "In the early 1990s, regional boards began issuing MS4 permits based on the provisions in the CWA. Some MS4 permits, for example those issued by the San Diego Regional Water Quality Control Board to San Diego and Orange County, "exceed" the requirements of federal law. [FN30] As discussed in the Part below dealing with the California Environmental Quality Act, [FN31] this feature of going beyond the federal requirements is legally significant."

Hence these State practices, similar to the ones test-claimed herein, are not isolated instances.

Here, the new mandates requiring the County to install and maintain trash receptacles at all public transit stops are not compelled by federal law but by State law. Accordingly, such State requirements impose a new program of higher level or service upon the County --- impose a reimbursable program upon the County as none of the State funding disclaimers, discussed below apply.

5. The State Funding Disclaimers Under Government Code § 17556 Do Not Apply

The seven disclaimers specified in Government Code § 17556 do not apply to the instant test claim, as shown below.

Government Code § 17556(a): "The claim is submitted by a local agency . . . which requested legislative authority for that local agency . . . to implement the Program specified in the statute, and that statute imposes costs upon that local agency . . . requesting the legislative authority." This disclaimer is not applicable because the County did not request legislative authority for the Order.

Government Code § 17556(b): "The statute or executive order affirmed for the state that which had been declared existing law or regulation by action of the courts." This disclaimer is not applicable because the Order did not affirm what had been declared existing law or regulation by action of the courts.

Government Code § 17556(c): The statute or executive order implemented a federal law or regulation and resulted in costs mandated by the federal government, unless the statute or executive order mandates costs which exceed the mandate in that federal law or regulation." This disclaimer is not applicable because no federal law or regulation is implemented in the Order, and the Order exceeds that mandated by federal law, as discussed above.

Government Code § 17556(d): "The local agency . . . has the authority to levy service charges, fees or assessments sufficient to pay for the mandated program or increased level of service." This disclaimer is not applicable because the County does not have the authority to levy service charges, fees or assessments sufficient to pay for the mandated program or increased level of service.

It should further be noted that the State collects fees for inspections but does not share these funds with the County. The State Water and the Regional Water Board have in fact received funds from permit fees associated with the General Industrial Permit and the General Construction Permit, fees that were specifically assessed to pay for the costs of implementing the stormwater permit program. Water Code § 13260(d). The State receives an annual fee of $700 from every

industrial facility, plus applicable surcharges (but subject to certain reductions) that is required to have a General Industrial Permit. 23 Cal. Code Reg. § 2200(b)(2)(A). For construction sites required to have a General Construction Permit, the annual fee is $200 plus $20 per acre, up to a maximum of $2,200. 23 Cal. Code Reg. § 2200(b)(3). The State shares none of these fees with the County.

In addition, the State Water Board erroneously contends, on page 19 of their April 18, 2008 letter, that "Any additional costs associated with trash removal at these transit stops ... could be borne by transit users through higher transit fees'. Here the County has no fee authority, or insufficient fee authority, to impose fees on transit users. Moreover, it is unclear how such fees would be of benefit only to such users. Certainly they would get no better a ride. Further, the Commission has found insufficient fee authority in prior test claims – even where purportedly set forth in the test claimed statutes.

For example, in the Sudden Infant Death Syndrome Training program, the Commission's Parameters and Guidelines, indicate on page 2 that:

> "The [test-claimed] Statute .. authorizes local agencies that provide instruction and training to assess a fee sufficient to pay for the cost for training...
>
> [However] ... The Commission found that the authority to impose fees upon firefighters cannot be realistically exercised by local agencies and special districts. Thus the Commission finds that the fee authority exception to reimbursement under Government Code Section 17556, Subdivision (d), does not apply and that that the test claim statute imposes "costs mandated by the State" on local agencies and special districts". [www.csm.ca.gov/tdocs/4412pg.pdf]

Further, it should be noted that the County's costs in providing the mandated services claimed herein are not *de minimis*, and far exceed the minimum reimbursement amount of $1,000 per annum. [Government Code Section 17564(a)]

The cost schedules attached as Exhibit 1 to the County's test claim on "Inspection of Industrial/Commercial Facilities" and attached as Exhibit 2 to the County's test claim on "Transit Trash Receptacles" are reproduced below, on pages 20-23, to clearly illustrate the scope of work and substantial costs imposed

upon the County under the instant Permit. Certainly, such costs are not *de minimis*.

6. Conclusion

Accordingly, for all of the above reasons, reimbursement for providing State-permitted industrial and commercial facility and construction site inspections and public transit trash removal services pursuant to the Regional Water Board's Executive Order Number 01-182, Permit Number CAS004001, issued December 13, 2001, is required.

Los Angeles County's Review of State Agency Comments
Public Transit Trash Receptacles and State Permit Inspections
Storm Water Pollution Control Test Claims [03-TC-04, -19, -20, -21]

Declaration of Leonard Kaye

Leonard Kaye makes the following declaration and statement under oath:

I, Leonard Kaye, SB 90 Coordinator, in and for the County of Los Angeles, am responsible for filing test claims, reviews of State agency comments, Commission staff analysis, and for proposing parameters and guidelines (P's& G's) and amendments thereto, and, when necessary requesting postponements of hearings, all for the complete and timely recovery of costs mandated by the State. Specifically, I have prepared the subject review.

Specifically, I declare that I have examined the County's State mandated duties and resulting costs, in implementing the subject law, and find that such costs as set forth in the subject test claims, are, in my opinion, reimbursable "costs mandated by the State", as defined in Government Code section 17514:

> " ' Costs mandated by the State' means any increased costs which a local agency or school district is required to incur after July 1, 1980, as a result of any statute enacted on or after January 1, 1975, or any executive order implementing any statute enacted on or after January 1, 1975, which mandates a new program or higher level of service of an existing program within the meaning of Section 6 of Article XIII B of the California Constitution."

I am personally conversant with the foregoing facts and if so required, I could and would testify to the statements made herein.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct of my own knowledge, except as to the matters which are therein stated as information or belief, and as to those matters I believe them to be true.

6/23/08; Los Angeles, CA

DECLARATION OF ADAM ARIKI, P.E.

I, Adam Ariki, P.E. hereby declare:

1. I am currently the Assistant Deputy Director of the Water Works Division of the Los Angeles County Department of Public Works (LADPW).

2. In 2001, I held the position of Senior Civil Engineer, and supervised the section of LADPW's Watershed Management Division that was responsible for compliance with the Los Angeles County Municipal Storm Water Permit (Permit) issued by the Los Angeles Regional Water Quality Control Board (Regional Board).

3. I have personal knowledge of the matters set forth herein and, if called to testify, could and would testify competently thereto.

4. In conjunction with my duties in 2001, I participated in meetings with staff of the Los Angeles Regional Board in which the parties discussed a request by the Los Angeles Regional Board to enter into a contract pursuant to which the LADPW would perform, for the benefit of the Regional Board, inspections of sites that held general industrial stormwater permits. The Regional Board would pay the County of Los Angeles for the performance of these inspections.

5. To my knowledge, these negotiations were initiated by Regional Board staff, and it was their idea to have LADPW perform these inspections in lieu of Regional Board staff performing these inspections themselves.

6. By letter dated December 17, 2001, the Executive Officer of the Regional Board advised LADPW that the Regional Board was terminating these discussions. Attached hereto is a copy of the letter from Dennis Dickerson, Executive Officer, to Donald Wolfe, Assistant Director, advising that the Regional Board staff was terminating these discussions.

I declare under the penalty of perjury under the laws of the State of California that the foregoing is true and correct.

Executed this 18 day of June, 2008 at Alhambra, California.

Governor

December 17, 2001

Mr. Donald L. Wolfe, Assistant Director
County of Los Angeles Department of Public Works
900 South Freemont Avenue
Alhambra, CA 91803-1331

Dear Mr. Wolfe:

INSPECTION OF FACILITIES COVERED UNDER THE CALIFORNIA GENERAL INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (GENERAL PERMIT)

During the last several months, staff from the County of Los Angeles and the Regional Board met a number of times and worked together in an effort to develop a contract proposal with the County to inspect facilities covered under the General Permit. These efforts were an attempt to further the partnership between the Regional Board and local agencies in the arena of storm water management in the region. They were also an attempt to tap into the County's staff expertise in an efficient way in order to thoroughly and expeditiously address the challenging task of overseeing a large number of industrial sites covered under the General Permit and identifying the significant number of facilities that have not yet obtained coverage.

Your staff worked diligently and was very helpful and cooperative during the whole process.

Unfortunately, we are unable to proceed in further developing this proposal at this time. I hope that in the future the opportunity to renew our discussion will present itself.

Should you have any questions regarding this matter, please do not hesitate to contact me at (213) 576-6605, or Dan Radulescu at (213) 576-6668.

Sincerely,

Dennis A. Dickerson
Executive Officer

cc: Mr. Carl Sjoberg, County of Los Angeles Department of Public Works
Mr. John Youngerman, Stormwater Section, State Water Resources Control Board

***246** I. Introduction

This Article deals with the regulation of discharges of waste in storm water from municipal separate storm sewer systems (MS4s). [FN1] In the last few years, significant regulatory action has occurred in this area, especially in California. The permitting of MS4s has generated political controversy in the regulated community, which has bubbled over into legal challenges. [FN2]

Although some legal questions have been settled by the courts, the ***247** situation is dynamic. At the federal level there have been two notable storm water decisions, Defenders of Wildlife v. Browner and Environmental Defense Center v. U.S. Environmental Protection Agency. [FN3] There have been two administrative decisions issued by the State Water Resources Control Board. [FN4] Petitions to the State Water Resources Control Board challenging the Los Angeles, Orange County, and Santa Ana storm water permits have been filed and are pending resolution. [FN5] In late 2001, a lawsuit was filed by the Building Industry Association challenging the San Diego MS4 permit [FN6] and requesting a writ of mandate to set it aside. In mid-2002, the California Court of Appeal for the Sixth District decided Howard Jarvis Taxpayers Ass'n v. City of Salinas, [FN7] in which the city's storm drainage fee was held invalid for failing to comply with the voter approval requirements of proposition 218. Additional administrative and judicial legal challenges to these and other storm water permits are likely in the future.

***248** Predictably, public policy decisionmakers and attorneys practicing environmental and land use law will be swept up in the controversy surrounding the subject of municipal storm water regulation. The stakes are high. The goal of this Article is to provide a framework for understanding some of the emerging legal issues.

II. The Federal-State Structure

The Federal Water Pollution Control Act, more commonly referred to as the Clean Water Act (CWA), is based on Congress's authority under the Commerce Clause "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters." [FN8] It is premised on the realization that the protection of aquatic resources necessitated broad authority to control water pollution and that the discharge of pollutants be controlled at the source. [FN9]

The CWA generally uses two different regulatory approaches or philosophies to control water pollution. The predominant regulatory strategy is based on controlling the discharge of pollutants through the use of effluent limits, which are set in uniform, technology-based terms. [FN10] Dischargers are legally authorized to release pollutants [FN11] to waters of the United States pursuant to the effluent limits contained in their permit. The other approach focuses on regulating dischargers based on their impact to the receiving water quality. Discharge limits are set in terms of the amount of pollution allowed in a defined water body or water body segment with consideration given to local conditions, such as the beneficial uses of the receiving water and its assimilative pollutant capacity. [FN12]

The starting point to understanding the storm water regulation is the CWA. It is the principal federal statute dealing with water pollution, including MS4 storm water permitting. [FN13] The CWA consists of a number of general programs, including the National Pollutant Discharge ***249** Elimination System (NPDES) point source program, [FN14] the pretreatment program applicable to indirect dischargers, [FN15] the nonpoint source (NPS) program, [FN16] the dredge and fill program, [FN17] and the oil spill program. [FN18]

Municipal storm water regulation is part of the NPDES permit program, although it also seeks to deal with some of the problems common to NPS pollution. In 1987, Congress added section 402(p) to the CWA. [FN19] Congress directed that storm water discharges be regulated as "point sources" [FN20] and then established a framework for issuing permits. [FN21]

Section 402(p)(3)(B) is the controlling federal statutory provision for municipal storm water discharges. The statute establishes the following federal permit requirements for municipal storm water discharges:

> Permits for discharges from municipal storm sewers –
> (i) may be issued on a system- or jurisdiction-wide basis;

© 2008 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

40 SANDLR 245
40 San Diego L. Rev. 245
(Cite as: 40 San Diego L. Rev. 245)

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and
(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable [MEP], including management practices, *250 control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants. [FN22]

Since 1987, the U.S. Environmental Protection Agency (EPA) has promulgated regulations governing storm water discharges. They are contained primarily in 40 C.F.R. § 122.26, [FN23] with additional references in Parts 122, 123, and 124. As would be expected, these regulations add considerable implementing detail to the statutory mandate found in section 402(p).

Although MS4 permits are NPDES permits, they differ considerably from the technology-based treatment standards and numeric effluent criteria associated with "end-of-pipe" discharges. [FN24] The rationale for treating storm water discharges differently from traditional end-of-pipe discharges is based on the variability of storm water discharge. Storm water is highly variable, both as to flow and as to pollutant type and concentration. The MEP standard was created by Congress to allow permits to be tailored to the specific nature of MS4 discharges. Included in this grant of flexibility was the idea that the permit requirements could be directed at sources of pollution on a system-wide basis.

Issuing permits on a system-wide basis allows municipal entities and other political subdivisions responsible for different parts of a single MS4 system to be co-permittees on a single permit. [FN25] This approach is advantageous because it facilitates coordination and consolidation of MS4 activities and spreads the burden for monitoring, analysis, and development and implementation amongst those parties to the permit.

The next important structural consideration to understand is the role of the states in administering the CWA's provisions. The EPA is authorized by the CWA to delegate NPDES permit issuing responsibilities to a state provided that the state has a permit program that is substantially equivalent to the federal program. [FN26] California has enacted equivalency legislation authorizing it to implement and administer the CWA. [FN27] The authority to issue MS4 permits is exercised *251 by the nine California Regional Water Quality Control Boards within the state. [FN28] The State Regional Water Quality Control Board has administrative review authority over the regionally issued storm water permits. [FN29]

In the early 1990s, regional boards began issuing MS4 permits based on the provisions in the CWA. Some MS4 permits, for example those issued by the San Diego Regional Water Quality Control Board to San Diego and Orange County, "exceed" the requirements of federal law. [FN30] As discussed in the Part below dealing with the California Environmental Quality Act, [FN31] this feature of going beyond the federal requirements is legally significant.

The topic of storm water regulation has recently attracted the attention of the California Legislature. In 1998, it added the Storm Water Enforcement Act [FN32] to the Water Code. In 2001, it added section 13383.5 to the Water Code requiring the State Water Resources Control Board to develop, by January 1, 2003, minimum storm water monitoring and *252 sampling requirements for specified municipalities and industries. [FN33] As the politics of storm water regulation heat up, which they undoubtedly will, one can confidently predict more involvement by the legislature.

The federal-state structural relationship is fundamental to understanding storm water regulation in California. Decisionmakers and attorneys practicing in this area must understand both the CWA and the **Porter-Cologne Water Quality Control Act**, [FN34] which is the water quality control law through which California implements the CWA.

III. The Storm Water Pollution Problem

The significance of the storm water problem can be easily stated: it has been found to be the leading cause of water quality impairment in California, [FN35] as well as nationally. In November 2001, the State Water Resources Control Board and Regional Water Quality Control Boards adopted a strategic plan for the next five years. One of the identified challenges contained in the plan is reducing storm water pollution. The strategic plan captures the essence of the storm water problem:

The recent repeated closures of beaches in Southern California due to excessive bacteria levels in coastal waters has

© 2008 Thomson Reuters/West. No Claim to Orig. US Gov. Works.

accordance with the Clean Water Act.") (citation omitted).

[FN28]. Cal. Water Code §§ 13200-13228 (West 1992 & Supp. 2003); see also id. § 13160 (West 1992) (dealing with the state board's authority to exercise any powers delegated to California by the CWA).

[FN29]. Cal. Water Code § 13320 (West 1992).

[FN30]. See San Diego Regional Water Quality Control Board, Comparison Between the Requirements of Tentative Order 2001-01, the Federal NPDES Storm Water Regulations, the Existing San Diego Municipal Storm Water Permit (Order 90-42), and Previous Drafts of the San Diego Municipal Storm Water Permit, agenda item 5, attach. 4, at 2-3 (Dec. 13, 2000) (on file with author). The comparison states:

> Approximately 60% of the requirements in Tentative Order 2001-01 are based solely on the 1990 federal NPDES Storm Water Regulations. The remaining 40% of the requirements in the Tentative Order "exceed the federal regulations." Requirements that "exceed the federal regulations" are either more numerous, more specific/detailed, or more stringent than the requirements in the regulations.

Id. at 2. The comparison goes on to discuss the provisions that exceed the federal regulations. "The 40% of the requirements in Tentative Order 2001-01 which 'exceed the federal regulations' are based almost exclusively on (1) guidance documents developed by the USEPA; and (2) the SWRCB's orders describing statewide precedent setting decisions on MS4 permits." Id. at 2-3.

[FN31]. See discussion infra Part V.A.

[FN32]. 1998 Cal. Stat. 998 (1998) (codified at Cal. Water Code §§ 13399.25-.43 (West Supp. 2003)).

[FN33]. 2001 Cal. Stat. 492 (codified at Cal. Water Code § 13383.5(b) (West Supp. 2003)) ("This section only applies to regulated municipalities that were subject to a storm water permit on or before December 31, 2001, and to regulated industries that are subject to the General Permit for Storm Water Discharges Associated with Industrial Activities Excluding Construction Activities.").

[FN34]. Cal. Water Code §§ 13200-13270 (West 1992 & Supp. 2003)). For a useful introduction to the Porter-Cologne Act, see William R. Attwater & James Markle, Overview of California Water Rights and Water Quality Law, 19 Pac. L.J. 957, 994-1012 (1988). The reader is cautioned, however, that changes to federal and state law have occurred since this article was published in 1988.

[FN35]. Storm Water Enforcement Act § 1, 1998 Cal. Stat. 998 ("The Legislature hereby finds and declares all of the following: (a) Unregulated storm water runoff is a leading cause of contamination of the state's surface water and groundwater.").

[FN36]. State Water Resources Control Board & Regional Water Quality Control Boards, Strategic Plan 8 (2001), available at http:// www.swrcb.ca.gov/strategicplan/01strategic_plan.pdf. The state and regional boards completed a strategic plan in 1995 and revised it in 1997. Id. at 4. The current strategic plan was promulgated on November 15, 2001. Its purpose is to highlight priorities that need to be addressed during the next five years. Id.

[FN37]. As used in this Article, the term "storm sewer system" is broadly inclusive. It includes roads with drainage systems, municipal streets, curbs, gutters, ditches, natural drainage features or channels, and man-made channels or storm drains. When natural drainage features or channels, such as an urban stream, are used as part of the storm sewer system, they are both part of the municipal conveyance system and the receiving water.

[FN38]. As used in this Article, the term "receiving waters" also is broadly inclusive. It includes, for example, creeks, streams, rivers, lakes, reservoirs, estuaries, bays, and the ocean.

–Professor John H. Minan's Website

John "Jack" H. Minan has been a Professor of Law at USD since 1979. Currently, he teaches Property, Land Use Planning and Water Law. Prior to joining USD, Professor Minan taught at the University of Toledo College of Law and at the United States Naval Academy, Annapolis, Maryland. He also taught at the National Judicial College as the lead faculty member of an exchange program designed to introduce Russian judges to the American legal system. At USD, Professor Minan has taught a variety of law courses, including Torts, Community Property, Trusts and Estates, Estate Planning, Federal Estate and Gift Tax, and Comparative Law.

Jack has a B.S. from the University of Louisville, an M.B.A. from the University of Kentucky, and a J.D. from the University of Oregon. He has completed Ph.D. course work in Operations Analysis at American University. Following law school, Jack was selected for the U.S. Department of Justice Honors Program. In the early 1970's, he practiced admiralty law as a trial attorney with the Civil Division in Washington, D.C.

Jack has been the educational leader for a number of continuing legal education programs and has been the leader of programs in Brazil, the People's Republic of China, Austria, Switzerland, France, Australia, New Zealand, Hong Kong, Thailand, Indonesia, Morocco, Egypt and in several republics of the former Soviet Union.

Professor Minan is an active scholar. He has authored or co-authored six books, four contributions to books, more than thirty-five scholarly articles, and a number of published reports and proceedings. At the outset of his career, his scholarship focused on the legal problems associated with the development of solar energy. His work established him as one of the few national experts in this area. His scholarship also includes a number of publications on socialist legal systems. More recently, his interest has shifted to commercial law and water law. He has a treatise on leasing law under Article 2A of the Uniform Commercial Code and has published articles on water quality.

Professor Minan has served on numerous Law School and University committees at USD. He has been Associate Dean for Academic Affairs, Acting Dean of Summer Programs, and the Director of USD's International and Comparative Law Programs at Trinity College, Dublin, at Magdalen College, Oxford, and in Florence, Italy. He also served on the USD search committee for the Vice President for Finance and Administration.

Professor Minan has an active record of public service. He served two terms on the California Regional Water Quality Control Board (1999-2006), and was elected its chairman six consecutive years (2001-2006). Jack was on the Governing Board of the Southern California Wetlands Recovery Project, an organization consisting of seventeen state and federal agencies (2001-2006). He served on San Diego River Conservancy, a state agency dedicated to acquiring and managing public lands adjacent to the San Diego River (2003-2006), and was its vice chairman (2005-2006).

TH

Jack is active with the American Bar Association (ABA). Professor Minan is chairman of Environmental Law Committee of the State and Local Government Section (2005-2007), and is an active member of the Section of Environment, Energy and Resources. For several years, he was a *pro bono* hearing officer for the San Diego Housing Commission. He coauthored the citizen's Clean Air Initiative amending San Diego's General Plan. In 1991, he prepared the environmental assessment for San Diego's proposed Jackson Drive extension through Mission Trails Regional Park. He has qualified as an expert witness on matters involving Land Use Planning and Real Property.

COMMISSION ON STATE MANDATES

TEST CLAIM NO. 03-TC-21

CLAIMANTS' REBUTTAL TO AND COMMENTS ON RESPONSES SUBMITTED BY THE DEPARTMENT OF FINANCE, STATE WATER RESOURCES CONTROL BOARD AND LOS ANGELES REGIONAL WATER QUALITY CONTROL BOARD

INCORPORATION BY REFERENCE OF WRITTEN NARATIVE SUBMITTED IN SUPPORT OF TEST CLAIM NO. 03-TC-20

In support of their rebuttal to the responses submitted by the Department of Finance, the State Water Resources Control Board and the Regional Board, the claimants hereby incorporate by reference the written narrative submitted by the claimants in Test Claim No. 03-TC-20 in support of their test claim. A copy of that written narrative is attached.

FURTHER REBUTTAL TO AND COMMENTS ON RESPONSES SUBMITTED BY THE DEPARTMENT OF FINANCE, STATE WATER RESOURCES CONTROL BOARD AND LOS ANGELES REGIONAL WATER QUALITY CONTROL BOARD

The claimants submit the further rebuttal to and comments on the responses submitted by the Department of Finance, State Water Resources Control Board, and Regional Water Quality Control Board.[1]

I. THE NEW MANDATES

Claimants the Cities and the County of Los Angeles seek a subvention of funds for the following state mandates contained in Los Angeles Regional Water Quality Control Board ("Regional Board") Order No. 01-182 ("Order"):

a. Part 4.c.2.a [Inspection of certain commercial facilities to prevent those facilities from discharging waste into waters of the state and to assure compliance with state law], pages 28-31;

b. Part 4.c.2.b [Inspection of industrial facilities to determine compliance with the State's program that regulates discharge of stormwater from industrial facilities, including compliance with State Water Resources Control Board ("State Water Board") permits], page 31;

c. Part 4.E. [Inspection of construction sites to determine those sites' compliance with the State's program that regulates discharge of stormwater from those sites, including compliance with State Water Board permits], pages 42-45;

[1] The comments that follow are identical to the comments and rebuttal that the claimants filed in Test Claim No. 03-TC-20.

d. Part 4.F.5.c.3 [Installation and maintenance of trash receptacles at transit stops], pages 48-49.

As set forth in the written narrative in support of the Cities' Test Claim No. 03-TC-20:

> (1) The State Board and the Regional Board (collectively, the "Water Boards") have had responsibility for preventing restaurants, automotive service facilities, retail gas stations and automotive dealerships from discharging waste into waters of the state since 1969. *See* Water Code §§ 13260 and 13263.
>
> (2) The State Board and the Regional Board have had responsibility for preventing industrial facilities and construction sites from discharging waste and other pollutants into waters of the state since 1969. *Id.*
>
> (3) The purpose of the inspection and trash receptacle obligations imposed by the Order is to prevent facilities and individuals from discharging waste and pollutants into waters of the state.
>
> (4) The Order requires the Cities and the County to conduct inspections to assure compliance with state law, including Regional Board orders. *See e.g.* Order, Part 4.C.2.a (1) (inspections are to be performed to assure that best management practices ("BMPs") "are being effectively implemented *in compliance with state law*, county and municipal ordinances, *Regional Board Resolution No. 98-08*, and SQMP"); Order, Parts 4.C.2.a (2) and (3) (inspections are to confirm that BMPs are being "effectively implemented . . . in compliance with *Regional Board Resolution No. 98-08*"); Order, Part 4.C.2.(b) (inspection shall determine whether industrial facility is "effectively implementing BMPs in compliance with county and municipal ordinances, *Regional Board Resolution No. 98-08*, and SQMP"); Order, Part 4.E (inspection of construction sites for compliance with state issued general construction stormwater permit requirements).
>
> (5) The inspection and trash receptacle requirements are new obligations imposed by the Order.

Neither the Department of Finance nor the Water Boards dispute these points.

Instead, the Department of Finance and the Water Boards contend that these inspection and trash receptacle requirements are federal mandates. The Water Boards also contend that the obligations are not unique governmental functions and that the County and the Cities can assess service charges or fees for the costs incurred.

II. A LOCAL AGENCY OR SCHOOL DISTRICT IS ENTITLED TO REIMBURSEMENT WHERE (1) THE MANDATE EXCEEDS FEDERAL REQUIREMENTS OR (2) THE STATE FREELY CHOSES TO IMPOSE THE MANDATE

Article XIIIB, Section 6 of the California Constitution provides:

> Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the cost of the program or increased level of service . . . .

In making a determination as to whether the claimants are entitled to a subvention of funds under Article XIIIB, Section 6, the Commission on State Mandates shall not find the cost to be mandated by the state if, after hearing, the commission finds that "the statute or executive order implemented a federal law or regulation and resulted in costs mandated by the federal government, unless the statute or executive order mandates costs which exceed the mandate in that federal law or regulation." Government Code § 17556(c). Thus, in order to constitute a federal mandate, the statute or executive order must both (1) implement a federal law or regulation and (2) result in costs mandated by the federal government. On the other hand, Government Code § 17556(c) specifically recognizes that a mandate is not immunized from reimbursement merely because a federal program is involved, and that a local agency or school district is entitled to reimbursement to the extent the order mandates costs "which exceed the mandate in that federal law or regulation."

Thus, the courts have recognized that a local agency or school district is entitled to reimbursement, even where a federal program is involved, where (1) the state-mandated activities exceed federal requirements, *see Long Beach Unified School District v. State of California* (1990) 225 Cal.App.3d 155, 172-173, or (2) the federal government imposes the mandate upon the state and the state then freely chooses to impose that program on the local agency or school district, as opposed to performing the obligation itself, *Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, 1593-94. *See also San Diego Unified School District v. Commission on State Mandates* (2004) 33 Cal.4th 859, 881-82 (procedural activities that are mandated by federal law, but triggered by state mandates, are also entitled to reimbursement).[2]

III. THE INSPECTION OBLIGATIONS ARE STATE MANDATES

There are three categories of inspections that are mandated by the Order and are at issue here: (1) inspections of restaurants, automotive service facilities, retail gasoline

[2] Copies of the statutes and cases cited herein were previously submitted in support of Test Claim No. 03-TC-20.

outlets and automotive dealerships; (2) inspections of industrial facilities that hold a state-issued General Industrial Storm Water Permit, referred to in the Order as "Phase I facilities"; and (3) inspections of construction sites that hold a state-issued General Construction Storm Water Permit. The Cities submit that each one of these inspection obligations is a state mandate because the Regional Board imposed the inspection obligation even though it was not required to do so by federal law, or because the Regional Board freely chose to shift its own obligation onto the Cities and County, or both.

There are eight pieces of evidence that are relevant to one or more of the inspection categories and demonstrate that these inspections were not required by federal law or that the Regional Board freely chose to impose these inspection obligations on the Cities and the County:

1. *These inspection obligations were not contained in two prior permits issued to the Cities and the County.* As the Water Boards themselves state (Water Board Letter, dated April 18, 2008 (hereafter "Water Boards Ltr.") at 7-8), and as discussed in the Cities' written narrative in support of it Test Claim No 03-TC-20 (written narrative at 9), the Order is the third NPDES storm water permit issued to the Cities and the County. The inspection requirements at issue here were not contained in either the first or the second permit, both of which EPA had the opportunity to review for compliance with federal law. *See* 40 C.F.R. 123.44(a)(1).

2. *No federal statute or regulation requires the Cities or the County to inspect restaurants, automotive service facilities, retail gas outlets, automotive dealerships or facilities that hold general industrial or general construction stormwater permits.* The Federal Clean Water Act regulations identify only the following facilities as facilities that are required to be inspected: municipal landfills; hazardous waste treatment, disposal and recovery facilities; industrial facilities that are subject to §313 of Title III of the Superfund Amendment and the Authorization Act of 1986; and industrial facilities that a municipality has determined to be contributing a substantial pollutant loading to the municipal storm sewer system. 40 C.F.R. § 122.26(d)(2)(iv)(C). No mention is made of restaurants, automotive service facilities, retail gas stations, automotive dealerships, or facilities that hold general industrial or general construction stormwater permits.

3. *Likewise, storm water NPDES permits issued by the EPA itself do not contain the requirement to inspect restaurants, auto service facilities, retail gas outlets and automotive dealerships, or require the extensive inspection of facilities that hold general industrial stormwater permits as contained in the Order here.* Submitted herewith is the Declaration of Julie Quinn, MESM, of URS Corporation. Ms. Quinn has performed a survey of Phase I Municipal Separate Storm Water System permits issued by EPA to municipalities similar to the Cities and the County. As set forth by Ms. Quinn:

None of the Phase I NPDES MS4 permits issued by EPA required the inspection of commercial facilities or industrial facilities that are not required to be covered under a NPDES Permit (Quinn Declaration, ¶ 5);

None of the Phase I NPDES MS4 permits issued by EPA included the extensive requirements for inspection of industrial facilities covered by NPDES general industrial permits that are included in the Phase I NPDES MS4 permit issued to the Los Angeles County permittees by the California Regional Water Quality Control Board, Los Angeles Region, Order No. 01-182 (Quinn Dec., ¶ 6).

If these inspection requirements were federally mandated, then EPA would have placed them in the permits that EPA issued. The fact that EPA-issued permits themselves do not include these inspection requirements proves that they are not federal requirements.

4. *The Administrator of EPA, as well as the head of the water division for EPA Region IX, have specifically stated that a municipality has an obligation under a storm water permit like the Order here only to assure compliance with local ordinances; the state retains responsibility to inspect for compliance with the state law, including state-issued permits:*

a. Letter, dated July 12, 2001 from EPA Administrator Christine Todd Whitman to The Hon. David Dreier, p. 1: "The Clean Water Act regulations concerning permits for discharges for municipal storm sewers provide that the State permit authority and the local government holding the permit share responsibility for inspections of facilities discharging to these storm sewers. *The State is responsible for enforcing its general Clean Water Act storm water permits*, while a local government permit holder needs to enforce local storm water ordinances (which may be similar, but not identical to, the State general permits). (Emphasis added.)

b. Letter dated April 30, 2001 from Alexis Strauss, Director, Water Division, Region IX, to the Hon. Steven Horn, p. 2: "[W]e believe that neither the MS4 permittees nor the State should be saddled with the entire inspection burden for industrial and commercial facilities. *The State is also responsible for enforcing its general NPDES storm water permits*, while the MS4 permittees need to enforce local storm water ordinances (which are often similar to the State general permits)." (Emphasis added.)

c. Letter dated May 16, 2001 from Alexis Strauss, Director, Water Division, Region IX, to James DeStefano, Interim City Manager, City of Diamond Bar, p. 1: "[W]e believe that neither the MS4 permittees nor the State should be saddled with the entire inspection burden for industrial and commercial facilities. *The State is also responsible for enforcing its general NPDES storm water permits*, while the MS4 permittees need to

enforce local storm water ordinances (which are often similar to the State general permits)." (Emphasis added.)[3]

5. *The California Legislature has empowered the State Board to assess fees on general industrial and general construction stormwater permittees, which fees shall be shared with Regional Boards and used for inspections and regulatory compliance.* Water Code § 13260(d)(2). Every holder of a general industrial or general construction stormwater permit must submit an annual fee to the State Board for its permit. Water Code § 13260(d)(1)(A). The Legislature has directed that a portion of this fee should be spent specifically on inspection of industrial and construction facilities. "Not less than fifty percent in the Waste Discharge Permit Fund that is separately accounted for . . . is available, on appropriation by the Legislature, for expenditure by the regional board with jurisdiction over the permitted industry or construction site that generated the fee to carry out the stormwater programs in the region. Water Code § 13260(d)(2)(B)(ii). "Each regional board . . . shall spend not less than fifty percent of that money solely on stormwater inspection and regulatory compliance issues associated with industrial and construction stormwater programs." *Id.*, subd.(d)(2)(B)(iii).

6. *The State Board, in issuing the general industrial stormwater permit for facilities identified in the Order as "Phase I facilities", imposed the inspection obligation on the Regional Board.* In adopting the general industrial stormwater permit, the State Board did not impose any obligation on the cities or any local agency. Instead, in adopting the general industrial permit, the State Board provided that "following adoption of this general permit, *the regional water boards shall enforce its provisions*." See State Board Order No. 97-03-DWQ, Finding 13 (emphasis added).

7. *The State Board, in issuing the general construction stormwater permit, imposed the inspection obligation on the Regional Board.* State Board Order No. 99-08-DWQ specifically provides that "[f]ollowing adoption of this General Permit, the RWQCBs shall enforce the provisions herein . . . ." State Board Order No. 99-08-DWQ, Finding 11. Part D.1 of that order specifically provides that "RWQCBs shall . . . implement the provisions of this General Permit. Implementation of this General Permit may include, but is not limited to . . . conducting compliance inspections, and taking enforcement actions."

8. *In 2001, the Regional Board initiated negotiation of a contract with the County whereby the Regional Board would pay the County to perform inspections of facilities that held general industrial stormwater permits (the "Phase I facilities") on the Regional Board's behalf. Immediately after issuance of the Order, the Regional Board terminated those negotiations.* Submitted in support of the County's test claim, Test Claim No. 03-TC-19, is the Declaration of Adam Ariki describing those negotiations. A copy of that declaration is also submitted herewith. Mr. Ariki describes how the

[3] Copies of these letters are submitted herewith, attached to the declaration of Howard Gest.

Regional Board's staff initiated negotiations over a contract with the County whereby the Regional Board would pay the County to perform inspections of facilities that held general industrial storm water permits (the "Phase I facilities" under the Order) on the Regional Board's behalf. If the obligation to inspect these Phase I Facilities was an obligation imposed by federal law on the County or other municipalities, the Regional Board would not have initiated the negotiation of a contract for the County to perform these inspections on the Regional Board's behalf.

Inspections of Restaurants, Automotive Service Facilities, Retail Gasoline Outlets and Automotive Dealerships

The evidence cited above demonstrates that the inspections of restaurants, automotive service facilities, retail gasoline outlets and automotive dealerships was not a federal requirement. First, to the extent the Department of Finance or the Water Boards argue that the fact that these inspections are in a NPDES permit is sufficient in itself to establish that they are federal requirements, this argument has been specifically rejected by the California Supreme Court. The Supreme Court has held that a NPDES permit issued by the Regional Board can contain both federal and non-federal requirements. *City of Burbank v. State Water Resources Control Board* (2005) 35 Cal.4th 613, 618, 628.

Second, if inspection of these commercial facilities was federally mandated, it would have been included in the first two permits. The fact that these inspection obligations were omitted from the first two permits demonstrates that they were not federally required. EPA had an opportunity to review these permits for compliance with federal law.

Third, no federal statute or regulation requires a municipal stormwater permit to include an obligation to inspect restaurants, automotive service facilities, retail gas outlets or automotive dealerships.

Fourth, and most significantly, if federal law required municipal stormwater permittees to inspect restaurants, automotive service facilities, retail gasoline outlets and automotive dealerships, then that obligation would be present in the municipal stormwater permits issued by EPA itself. EPA can be presumed to follow its own, federal requirements. The fact that EPA-issued permits do not include an obligation to inspect restaurants, automotive service facilities, retail gasoline outlets and automotive dealerships demonstrates that this inspection obligation is not a federal requirement.

In addition to this inspection obligation exceeding federal law, the Regional Board freely chose to impose this inspection obligation on the Cities and the County. *See Hayes v. Commission on State Mandates*, supra, 11 Cal.App.4th at 1593-94. Since 1969, the Regional Board has had the obligation to prevent the discharge of pollutants into waters of the state from all dischargers, including restaurants, automotive service facilities, retail gasoline outlets and automotive dealerships. Water Code §§ 13260 and 13263. The Regional Board could have retained that obligation. Instead, it shifted the cost of that obligation onto the Cities and the County.

Nevertheless, the Water Boards argue that they were required to impose these inspection obligations under the general statutory language of the Clean Water Act. The Water Boards appear to argue that, because the Water Boards are to identify Best Management Practices (BMPs) in the permits, and a municipal stormwater permit should reduce the discharge of pollutants from municipal separate storm sewers to the maximum extent practicable, *see* 42 U.S.C. §1342(p)(3)(B), any requirement that the Regional Board places in a permit is federally mandated. *See* Water Board Ltr. at 6-7, 15.

This argument is rebutted by the EPA-issued permits themselves. In issuing its permits, EPA was also required to have the municipalities subject to its permits reduce pollutants to the maximum extent practicable. No obligation to inspect restaurants, automotive service facilities, retail gasoline outlets, or automotive dealerships, however, was included.

Moreover, under 33 U.S.C. § 1342(p)(3), the municipal stormwater permit shall require controls to reduce the discharge of pollutants to the maximum extent practicable "*from* municipal storm sewers." Here, the inspection requirements are not meant to prevent the discharge of pollutants from the municipal storm sewer, but instead are meant to prevent restaurants, automotive service facilities, retail gasoline outlets, and automotive dealerships themselves from discharging pollutants that might enter waters of the state, including into the municipal storm sewer system. As noted above, the obligation to regulate discharges from these facilities is an obligation of the Water Boards themselves under the California Water Code. Because these inspections go to reducing the discharge of pollutants from these facilities, and not to the discharge of pollutants from municipal storm sewers, they are not federally mandated by the Clean Water Act.

Finally, the scope of the required inspections shows that the inspections were not solely federal requirements. The inspections required the Cities and the County to inspect for compliance with state law, including Regional Board orders. Under the Order, the Cities and the County were required to inspect restaurants to ensure that BMPs were being effectively implemented "in compliance with state law" and "Regional Board Resolution No. 98-08." Order, Part 4.c.2.a(1). Similarly, inspections of the automotive service facilities, retail gasoline outlets, and automotive dealerships, were also to confirm that BMPs were being effectively implemented "in compliance with . . . Regional Board Resolution 98-08." Order, Part 4.c.2.a(2) and (3).

In this regard, the Water Boards miscite the court's decision in *County of Los Angeles v. State Water Resources Control Board* (2006) 143 Cal.App.4th 985. The court in that case did not hold that the inspection requirements were federally mandated. The court only held that no statute or regulation prohibited the Regional Board from imposing these obligations. *See* Slip Opinion, Part 4.J (Inspection Requirements).[4] As noted, a Regional Board can include an NPDES permit both federal and non-federal requirements.

[4] The court's discussion of the inspection requirements is included in the unpublished portion of this opinion.

City of Burbank v. State Water Resources Control Board, supra, 35 Cal.4th at 618, 628. That inclusion incurred here.

Inspections of General Industrial Stormwater Permittees

Like inspections of restaurants, automotive service facilities, retail gasoline outlets, and automotive dealerships, the inspection of facilities that hold state-issued general industrial stormwater permits is not a federal requirement. Additionally, there is no question that this inspection obligation, for which the State and Regional Board obtain a fee, was an obligation that the Regional Board freely chose to impose on the Cities and the County in lieu to performing the inspections itself. *See Hayes v. Commission on State Mandates*, supra, 11 Cal.App.4th at 1593-94.

First, like the inspections of restaurants, automotive service facilities, retail gasoline outlets and automotive dealerships, the inspection of facilities that hold state-issued general industrial stormwater permits is not required by federal law. As with the other inspections, the obligation to inspect these facilities was not included in the first or second stormwater permits issued to the Cities and the County. Like the other inspections, no mention of these inspections is contained in the federal regulation addressing inspections. *See* 40 C.F.R. § 122.26(d)(2)(iv)(C). Like the other inspections, the MS4 permits issued by EPA itself do not include the extensive requirements for inspection of industrial facilities that are included in the order. *See* Quinn Decl., ¶ 6, and permits attached thereto.

Any doubt as to whether the obligation to inspect facilities that hold state-issued general industrial stormwater permits for compliance with the terms of those permits is not a state mandate is removed by the statements of the EPA Administrator and the head of the Water Division of EPA Region IX. In a letter issued to Congressman David Dreier, coincident with the Regional Board's preparation of and circulation of drafts of the Order, EPA Administrator Whitman stated that "the State is responsible for enforcing its general Clean Water Act stormwater permits, while a local government permit holder needs to enforce local stormwater ordinances . . . ." EPA Region IX Water Division Director Strauss, at approximately the same time, similarly stated in letters to Congressman Stephen Horn and to the City Manager of the City of Diamond Bar that "the State is also responsible for enforcing its general NPDES stormwater permits, while the MS4 permittees needs to enforce local stormwater ordinances . . . ."

If federal law required the Cities and the County to inspect facilities that hold state-issued general industrial stormwater permits, then Administrator Whitman and the Director Strauss would not have told the Congressmen and the City Manager for the City of Diamond Bar that this was a state obligation. There is no question that the EPA Administrator and the Regional IX Director of the Water Division have explicitly stated that enforcement of state-issued permits is a state, not a city or County, obligation.[5]

[5] In their written response, the Water Boards have submitted a letter dated April 10, 2008 from the Director Strauss. Significantly, the Director does not retract or address the

Second, the Regional Board freely chose to shift the obligation to inspect these facilities from itself to the Cities and the County. Under the Clean Water Act, the obligation to issue general industrial stormwater permits, and the enforcement of those permits, is held by the state. In addition, the Regional Board has had the obligation to regulate these facilities under the California Water Code since 1969 and has had the specific obligation to enforce that the state-issued general industrial stormwater permits since 1991. *See* e.g., State Water Board Order No. 97-03-DWQ, Finding 13 (with respect to the general permit issued in 1997).

The State Board and the Regional Board obtain annual fees from the general industrial stormwater permittees. These fees are to be used, in part, for inspections and regulatory compliance. Water Code § 13260(d)(2)(B). None of fees collected by the State or Regional Board are shared with the Cities or the County.

The Regional Board could have continued to meet its obligations to enforce the state-issued general industrial stormwater permit, including inspections for compliance therewith. Nothing required the Regional Board to impose that obligation on the Cities or the County. This is evidenced by the fact that, up to the time of the issuance of the Order itself, the Regional Board was negotiating a contract with the County whereby the Regional Board would pay the County to undertake these inspections on the Regional Board's behalf. The Regional Board would not have been negotiating such a contract if this inspection obligation was not its own. Rather than to continue to expend its own funds, however, the Regional Board simply chose to shift the cost of the program from itself to the Cities and the County. This shifting of cost is precisely the conduct that Article XIII B, Section 6 was adopted to prevent.

In support of their argument, the Water Boards cite the case of *City of Rancho Cucamonga v. Regional Water Quality Control Board* (2006) 135 Cal.App.4th 1377. The Water Boards contend that the court in *Rancho Cucamonga* held that federal law required inspections such as the inspections at issue here (Water Board Ltr. at 10-11). To the contrary, the court's decision in *City of Rancho Cucamonga* is consistent with the Cities and the County's position that federal law does not require the Cities or the County to inspect for compliance with state law. The court in *City of Rancho Cucamonga* said:

> Rancho Cucamonga and the other permittees are responsible for inspecting construction and industrial sites and commercial facilities within their jurisdiction for compliance with and enforcement of local municipal ordinances and permits. *But the Regional Board continues to be responsible under the 2002 NPDES permit for inspections under the general permits.*

---

position she articulated in 2001. Indeed, if the Director had articulated a different position, such position would not be entitled to any deference in that the Director's earlier position was different. *See Riegel v. Medtronic, Inc.* (Feb. 20, 2008) 552 U.S. ___, Slip. Opp. at 13.

135 Cal.App.4th at 1377 (emphasis added).

Finally, the Water Boards argue (Water Boards Ltr. at 20) and the Department of Finance appears to argue (March 27, 2008 letter at 3-4) that the Cities and the County proposed these inspection obligations. This argument is incorrect. Excerpts of the Report of Waste Discharge, which acts as an application in part for renewal of the stormwater permit, is enclosed in the material submitted by the Water Boards. That report proposed that the permittees would implement an industrial/commercial "educational site visit program." They would visit automotive service and food service facilities once every two years, consult with a representative about stormwater regulations, distribute materials discussing BMPs, and conduct a site walk through. *See* Report of Waste Discharge at 22-23 (R000030-31).

This proposal is significantly different from the inspection obligation imposed by Regional Board under the Order. Whereas the report of waste discharge proposed educational visits, the Order required *compliance inspections* of restaurants, automotive service facilities, retail gasoline outlets, and automotive dealerships. Compliance inspections are quite different in both intent and resource commitment from educational visits. Furthermore, nowhere in the Report of Waste Discharge do the applicants propose compliance inspections of facilities that hold general industrial and general construction stormwater permits for compliance with those permits. This obligation was unilaterally imposed by the Regional Board, and done so over the written and oral objections of the Cities and the County.[6] The Water Boards' argument that the Cities or the County proposed these inspection requirements is simply incorrect.

Inspections of General Construction Stormwater Permittees

The analysis applicable to the obligation to inspect general industrial stormwater permittees is equally applicable to the obligation to inspect general construction stormwater permittees. First, the State Board and the Regional Board have had the authority and obligation to regulate these discharges from these sites since 1969. Water Code §§ 13260 and 13263. Second, the State Board has issued general construction stormwater permits to these facilities since 1992. These orders imposed the obligation to inspect these construction sites on the Regional Board. *See* State Board Order No. 99-08-DWQ, Part D.1. Third, the State Board and the Regional Board collect a fee from these permittees to be used, in part, for these inspections and regulatory compliance. Water Code § 13260(d)(2). The Water Boards do not share any of these fees with the Cities or the County. Fourth, EPA clearly stated that the state has the obligation to enforce its own state-issued permits. *See* letters from EPA Administrator Whitman and the Director

[6] The Cities and the County submitted to the Regional Board written objections to the inspections being proposed by the Regional Board. The Cities and County also expressed oral objections at the hearing on the permit. The Cities' and the County's written and oral objections are contained in the administrative record for the adoption of the order.

Strauss. Nevertheless, in 2001, the Regional Board shifted the cost and obligation to inspect construction facilities for compliance with the state-issued general construction permit from itself to the Cities and the County.[7]

IV. THE INSTALLATION AND MAINTENANCE OF TRASH RECEPTACLES ARE STATE MANDATES

Part 4.F.5.c.3 of the Order requires the Cities and the County to place trash receptacles at all transit stops within their jurisdiction no later than February 3, 2003, and to maintain those receptacles as necessary. The Department of Finance and the Water Boards do not dispute that this is a new obligation imposed by the Order. Instead, they again argue that this is a federal mandate.

Nothing, however, in the Clean Water Act requires Cities to install trash receptacles at transit stops. Nothing in the federal regulations or the Clean Water Act itself imposes this obligation. It was not required in either of the two prior permits, and it is not found in the federal regulations.

Significantly, like the inspection requirements, no EPA-issued stormwater permit contains an obligation to install trash receptacles. As set forth in the Declaration of Julie Quinn, who performed a survey of EPA issued permits:

> None of the Phase I NPDES MS4 permits issued by EPA required the installation of trash receptacles at transit stops.

Quinn Decl., ¶ 6 (sic). If installation of trash receptacles was a federal requirement, it would be present in the EPA-issued permits. This requirement is not present in those permits, demonstrating that it is not a federal requirement.

Nevertheless, the Water Boards argue that the Regional Board had discretion to include this requirement in the Order (Water Boards Ltr. at 15). Discretion, however, implies that it is not a requirement. A Regional Board must issue a permit that complies with the Clean Water Act. Its discretionary authority, however, gives it the authority to include matters that exceed federal requirements. *See City of Burbank v. State Water Resources Control Board*, supra, 35 Cal.4th at 618, 628. If it is assumed that the Regional Board had the discretion to require the installation of trash receptacles, as argued by the Water Boards, then the Regional Board also had the discretion to not require their

---

[7] The Water Boards imply that the Cities and the County had themselves proposed inspection of construction sites for compliance with the state-issued general construction stormwater permit. *See* Water Boards Ltr. at 8. To the contrary, the provisions of the Report of Waste Discharge cited by the Water Boards do not require inspections of construction facilities for compliance with the state general construction stormwater permit. Instead, those sections only require inspections for compliance with local ordinances and preparation of a "local" stormwater pollution prevention plan. *See* Report of Waste Discharge at 26 (R000034).

installation. The discretion not to require the installation of trash receptacles demonstrates that this requirement was not federally required.

Here, the requirement to install trash receptacles exceeded the requirements of federal law, and thus constituted a state mandate. The trash receptacle requirement is not found in any other permit issued by regional boards throughout the state. It is no found in any EPA-issued permit.

Like with inspections, the Water Boards appear to argue that the Cities or the County proposed this requirement that trash receptacles be installed at all transit stops (Water Boards Ltr. at 8). To the contrary, no such proposal was made. The pages in the stormwater quality management plan cited by the Water Boards speak of minimizing trash and debris from entering recreational water bodies and removing trash and debris from open channels (SQMP, ES-6 & 7). There is no proposal to install trash receptacles at every transit stop, which is a different activity, addressing a different source.[8]

V. THE INSPECTIONS AND INSTALLATION AND MAINTENANCE OF TRASH RECEPTACLES ARE NEW PROGRAMS OR HIGHER LEVELS OF SERVICE MANDATED UPON THE CITIES AND THE COUNTY

The inspections and the installation and maintenance of trash receptacles at transit stops at issue in these test claims are new programs or higher levels of service within the meaning of Article XIII B, Section 6. A "program" within the meaning of Article XIII B, Section 6, is a program that carries out a governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments. *County of Los Angeles v. State of California* (1987) 43 Cal.3d, 46, 56.

These inspection and trash receptacle obligations are such programs. The inspections are for the purpose of policing compliance with state law, a uniquely governmental function. This obligation is imposed on municipalities under the Order. No private NPDES permittee is required to inspect another NPDES permittee to verify that other permittee's compliance with an NPDES permit; enforcement is a uniquely governmental function. Likewise, the collection of trash is also a program that carries out a governmental function of providing services to the public.

---

[8] The Water Boards note that the Cities and the County do not claim subvention for trash receptacle requirements for Cities and portions of the County subject to the "Trash TMDL." (Water Boards Ltr. at 4 n.4.) Contrary to the Water Boards' statement, however, the test claimants do not concede that the Trash TMDL might not also impose state mandates. The test claims do not here seek subvention for activities that go to implementing the Trash TMDL because the installation of trash receptacles applies only to permittees or portions of the County not subject to the Trash TMDL. The obligations imposed by the Trash TMDL are different and become effective at a different time. *See* Order, page 48.

Nevertheless, the Water Boards argue that NPDES permits are not peculiar to local government. The Water Boards argue that other dischargers are required to obtain an NPDES permit, and therefore these permits are not unique to local governments (Water Boards Ltr. at 20-21).

The Water Boards argument is inapposite. The test is not whether the general program applies to both governmental and non-governmental entities. The test is whether the specific executive orders at issue apply to both governmental and non-governmental entities. *See Carmel Valley Fire Protection District v. State of California* (1987) 190 Cal.App.3d 521, 537. Thus, in determining that local agencies were entitled to reimbursement for firefighter's protective clothing whose purchase was required by executive orders promulgated under Cal/OSHA, an act that applies to both private and public entities, 190 Cal.App.3d at 530-31, 541, the court said "[t]he question is whether the *executive orders* constitute the type of 'program' that is subject to the constitution imperative of subvention under Article XIII B, Section 6." *Id.* at 537 (emphasis added).

The Water Boards do not argue, and there is no dispute, that no private NPDES permittee is required to inspect restaurants, automotive facilities, retail gasoline outlets and automotive dealerships. No private NPDES permittee is required to inspect facilities that hold state-issued general industrial or general construction stormwater permits (other than its own facility or site). No private permittee is required to install trash receptacles at transit stops. The inspection of commercial and industrial facilities for compliance with state-issued permits and the installation and collection of trash are a governmental functions, not ones engaged in by private parties.

VI. THE CITIES AND THE COUNTY DO NOT HAVE AUTHORITY TO LEVY SERVICE CHARGES, FEES OR ASSESSMENTS TO PAY FOR THE STATE MANDATE PROGRAMS

Finally, the Water Boards argue that the Cities and the County can adopt fees or levy service charges to pay for the inspections and the installation of trash receptacles ordered by the Regional Board. They further argue that the cost of installing these trash receptacle requirements can be born by transit users through higher transit fees. Water Boards Ltr. at 19. To the contrary, the Cities and the County cannot levy service charges or assess fees to pay for the inspections or the installation of the trash receptacles.

First, with respect to facilities that hold state-issued general industrial or general construction stormwater permits, the state has already occupied the field. As discussed above, the state already imposes an annual fee on general industrial and general construction stormwater permittees. That fee is explicitly designated, in part, to cover inspections of these facilities and regulatory compliance. Water Code § 13260(d)(2)(B).

This state fee thus preempts any fee that the Cities or County could charge for inspection of these facilities. In order for a fee to be considered a "fee" as opposed to a "special tax," the fee cannot exceed the reasonable cost of providing the services necessary for which the fee is charged. *See Mills v. County of Trinity* (1980) 108

Cal.App.3d 656, 659-660. Any fee assessed by the Cities or the County for inspection of these facilities would be a double assessment, and thus run afoul of this rule.

Likewise, it would be difficult for the Cities or the County to assess a fee for the inspection of restaurants, automotive service facilities, retail gasoline outlets and automotive dealerships. Although the cities could enact a general business license on all businesses, the cities could not charge other businesses for the cost of inspecting this subgroup without again running the risk of charging fees on the other businesses for services not related to regulation of them.

The Water Boards assert that the City of Los Angeles adopted a fee ordinance based on property assessments for implementation of its program (Water Boards Ltr. at 19). The Water Boards, however, mischaracterize the Los Angeles ordinance. Although the Water Boards do not identify that ordinance, they are presumably referring to Ordinance No. 178132, which the Water Boards submitted as documentation in support of their response.

City of Los Angeles Ordinance No. 178132 does not adopt fees for inspections of commercial facilities or facilities that hold general industrial or general construction storm water permits. The fee is not assessed on any of these businesses. Instead the fee is a plan check fee assessed on developers for approval of plans on those developments that are required to have post-construction controls.[9] This plan check fee is no different than any other plan check fee assessed to assure compliance with building codes. It is not related to regulating commercial or industrial facilities. Indeed, as a one time fee, it is not intended to and could not fund ongoing expenditures such as an ongoing inspection program.

The suggestion that the Cities or County could charge transit riders also lacks merit. The Cities and the County do not operate the public transit system. The public transit systems are operated either by certain individual cities or by a regional agency. Accordingly, any money paid by those transit users would not go to the cities who are obligated to install these trash receptacles.

The Water Boards also suggest that any additional cost arising from these mandates is de minimis. To the contrary, the Cities have all alleged that their costs exceed $1,000. The County has set forth in its test claim that it incurred $543,155.95 for inspection costs through September 15, 2003 and $440,903.39 in installation and $375,570.00 for maintenance for trash receptacles. The Cities and the County have shown that they've incurred substantial, additional costs.

---

[9] The Order orders the Cities and County to require developments of homes on hillsides, developments of ten or more residential units, and developments with 100,000 or more square feet of impervious surface area, to have post construction controls that will infiltrate or treat stormwater runoff above a certain amount coming from the new development (Order at 35-38).

VII. CONCLUSION

In 2001, the Regional Board did not want to spend money from its budget to perform its obligations. The Regional Board did not want to spend its funds to inspect restaurants, automotive service facilities, retail gasoline outlets and automotive dealerships to prevent those facilities from discharging pollutants to waters of the state. The Regional Board did not want to spend money from its budget to inspect facilities for compliance with the state-issued general industrial permit, and did not want to spend money from its budget to inspect construction sites for compliance with the state-issued general construction stormwater permit. The Regional Board did not want to spend its funds on controlling the discharge of trash into waters of the state. The Regional Board sought to eliminate its expenditures on these tasks by shifting the obligation to the Cities and the County. Shifting of costs from the state to local government, however, is the precise conduct that Article XIII, Section 6 is meant to prevent.

For the foregoing reasons, the Cities and the County are entitled to reimbursement for the obligations imposed by the Order to inspect restaurants, automotive service facilities, retail gasoline outlets, automotive dealerships, and general industrial and general construction stormwater permittees, and to install and maintain trash receptacles at transit stops. The test claims of the Cities and the County should be approved.

Section 5: WRITTEN NARRATIVE IN SUPPORT OF TEST CLAIM OF THE CITIES OF ARTESIA, AZUSA, BEVERLY HILLS, CARSON, COMMERCE, NORWALK, RANCHO PALOS VERDES, VERNON AND WESTLAKE VILLAGE REGARDING MANDATES IMPOSED UNDER AN EXECUTIVE ORDER OF THE CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION, ORDER NUMBER 01-182

This written narrative is submitted on behalf of the Cities of Artesia, Azusa, Beverly Hills, Carson, Commerce, Norwalk, Rancho Palos Verdes, Vernon and Westlake Village (hereinafter, "Cities") regarding the following mandates contained in California Regional Water Quality Control Board, Los Angeles Region (hereinafter, "RWQCB") Order Number 01-182 ("Order"):

5(A) DESCRIPTION OF NEW ACTIVITIES AND COSTS

1. The New Mandates

The Cities seek a subvention of funds for the following state mandates contained in the Order:

a. Part 4.c.2.a [Inspection of certain commercial facilities to prevent those facilities from discharging waste into waters of the state and to assure compliance with state law], pages 28-31;

b. Part 4.c.2.b [Inspection of industrial facilities to determine compliance with the State's program that regulates discharge of stormwater from industrial facilities, including compliance with State Water Resources Control Board ("State Water Board") permits], page 31;

c. Part 4.E. [Inspection of construction sites to determine those sites' compliance with the State's program that regulates discharge of stormwater from those sites, including compliance with State Water Board permits], pages 42-45;

d. Part 4.F.5.c.3 [Installation and maintenance of trash receptacles at transit stops], pages 48-49.

2. Description of Mandates

a. Part 4.c.2.a [Inspection of certain commercial facilities to prevent those facilities from discharging waste into waters of the state and to assure compliance with state law], Order, pages 28-31

Part 4.C.2.a of the Order provides, in relevant part, as follows:

> Each Permittee shall inspect all facilities in the categories and at a level and frequency as specified in the following subsections.
>
> (a) Commercial Facilities
>
> (1) Restaurants
>
> Frequency of Inspections: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.
>
> Level of inspections: Each Permittee, in cooperation with its appropriate department (such as health or public works), shall inspect all restaurants within its jurisdiction to confirm that storm water BMPs are being effectively implemented *in compliance with State law*, County and municipal ordinances, *Regional Board Resolution 98-08*, and the SQMP. At each restaurant, inspectors shall verify that the restaurant operator:
>
> - has received educational materials on storm water pollution prevention practices;
> - does not pour oil and grease or oil and grease residue onto a parking lot, street or adjacent catch basin;
> - keeps the trash bin area clean and trash bin lids closed, and does not fill trash bins with washout water or any other liquid;
> - does not allow illicit discharges, such as discharge of washwater from floormats, floors, porches, parking lots, alleys, sidewalks and street areas (in the immediate vicinity of the establishment), filters or garbage/trash containers;
> - removes food waste, rubbish or other materials from parking lot areas in a sanitary manner that does not create a nuisance or discharge to the storm drain.

(2) Automotive Service Facilities

Frequency of Inspections: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of inspections: Each Permittee shall inspect all automotive service facilities within its jurisdiction to confirm that storm water BMPs are effectively implemented in compliance with County and municipal ordinances, *Regional Board Resolution 98-08*, and the SQMP. At each automotive service facility, inspectors shall verify that each operator:

- maintains the facility area so that it is clean and dry and without evidence of excessive staining;
- implements housekeeping BMPs to prevent spills and leaks;
- properly discharges wastewaters to a sanitary sewer and/or contains wastewaters for transfer to a legal point of disposal
- is aware of the prohibition on discharge of non-storm water to the storm drain;
- properly manages raw and waste materials including proper disposal of hazardous waste;
- protects outdoor work and storage areas to prevent contact of pollutants with rainfall and runoff;
- labels, inspects, and routinely cleans storm drain inlets that are located on the facility's property; and
- trains employees to implement storm water pollution prevention practices.

(3) Retail Gasoline Outlets and Automotive Dealerships

Frequency of Inspection: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of Inspection: Each Permittee shall confirm that BMPs are being effectively implemented at each RGO and automotive dealership within its jurisdiction, in compliance with the SQMP,

Regional Board Resolution 98-08, and the Stormwater Quality Task Force Best Management Practice Guide for RGOs. At each RGO and automotive dealership, inspectors shall verify that each operator:

- routinely sweeps fuel-dispensing areas for removal of litter and debris, and keeps rags and absorbents ready for use in case of leaks and spills;
- is aware that washdown of facility area to the storm drain is prohibited;
- is aware of design flaws (such as grading that doesn't prevent run-on, or inadequate roof covers and berms), and that equivalent BMPs are implemented;
- inspects and cleans storm drain inlets and catch basins within each facility's boundaries no later than October 1st of each year;
- posts signs close to fuel dispensers, which warn vehicle owners/operators against "topping off" of vehicle fuel tanks and installation of automotive shutoff fuel dispensing nozzles;
- routinely checks outdoor waste receptacle and air/water supply areas, cleans leaks and drips, and ensure that only watertight waste receptacles are used and that lids are closed; and
- trains employees to properly manage hazardous materials and wastes as well as to implement other storm water pollution prevention practices.

(Emphasis added.)

b. Part 4.c.2.b [Inspection of industrial facilities to determine compliance with the State's program that regulates discharge of stormwater from industrial facilities, including compliance with State Water Board permits], Order, page 31

Part 4.C.2.b of the Order provides, in relevant part, as follows:

Each Permittee shall inspect all facilities in the categories and at a level and frequency as specified in the following subsections.

. . .

(b) Phase I Facilities

> Permittees need not inspect facilities that have been inspected by the Regional Board within the past 24 months. For the remaining Phase I facilities that the Regional Board has not inspected each Permittee shall conduct compliance inspections as specified below.
>
> Frequency of Inspection
>
> Facilities in Tier 1 Categories: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.
>
> Facilities in Tier 2 Categories: Twice during the 5-year term of the permit, provided that the first inspection occurs no later than August 1, 2004. Permittees need not perform additional inspections at those facilities determined to have no risk of exposure of industrial activity to storm water. For those facilities that do have exposure of industrial activities to storm water, a Permittee may reduce the frequency of additional compliance inspections to once every 5 years, provide that the Permittee inspects at least 20% of the facilities in Tier 2 each year.
>
> Level of Inspection: Each Permittee shall confirm that each operator:
>
> - *has a current Waste Discharge Identification (WDID) number* for facilities discharging storm water associated with industrial activity; and that *a Storm Water Pollution Prevention Plan is available on-site*; and
> - is effectively implementing BMPs in compliance with County and municipal ordinances, *Regional Board Resolution 98-08*, and the SQMP.

(Emphasis added.)

c. Part 4.E. [Inspection of construction sites to determine those sites' compliance with the State's program that regulates discharge of stormwater from those sites, including compliance with State Water Board permits], Order, pages 42-45

Part 4.E.2.b of the Order provides, in relevant part, as follows:

> 2. For construction sites one acre or greater, each Permittee shall comply with all conditions in section E.1 above and shall:
>
> . . .
>
> (b) Inspect all construction sites for storm water quality requirements during routine inspections a minimum of once during the wet seasons. The Local SWPPP shall be reviewed for compliance with local codes, ordinances, and permits. For inspected sites that have not adequately implemented their Local SWPPP, a follow-up inspection to ensure compliance will take place within 2 weeks. If compliance has not been attained, the Permittee will take additional actions to achieve compliance (as specified in municipal codes). If compliance has not been achieved, and the site is also covered under a statewide general construction storm water permit, each Permittee shall enforce their local ordinance requirements, and if non-compliance continues the Regional Board shall be notified for further joint enforcement actions.

Part 4.E.3. of the Order provides, in relevant part, as follows:

> 3. For sites five acres and greater, each Permittee shall comply with all conditions in Sections E.1 and E.2. and shall:
>
> a) Require, prior to issuing a grading permit for all projects requiring coverage under the state general permit, *proof of a Waste Discharger Identification (WDID) Number for filing a Notice of Intent (NOI) for coverage under the GCASP and a certification that a SWPPP has been prepared by the project developer.* A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs as the State SWPPP.
>
> b) Require *proof of an NOI and a copy of the SWPPP at any time a transfer of ownership* takes place for the entire development or portions of the common plan of development where construction activities are still on-going.
>
> c) Use an effective system to track grading permits issued by each Permittee. To satisfy this requirement, the use of a database or GIS system is encouraged, but not required.

(Emphasis added.)

d. Part 4.F.5.c.3 [Installation and maintenance of trash receptacles at transit stops], Order, pages 48-49.

Part 4.F.5.c.3 of the Order provides, in relevant part, as follows:

> 5. Storm Drain Operation and Management
>
> . . .
>
> (c) Permittees not subject to a trash TMDL shall:
>
> . . .
>
> (3) Place trash receptacles at all transit stops within its jurisdiction that have shelters no later than August 1, 2002, and at all other transit stops within its jurisdiction no later than February 3, 2003. All trash receptacles shall be maintained as necessary.

3. The inspections of restaurants, automotive service facilities, retail gas stations and automotive dealerships are new programs or higher levels of service mandated by the State

a. The State has had responsibility for regulation of discharges from restaurants, automotive service facilities, retail gas stations and automotive dealerships since 1969

Part 4.C.2.a of the Order requires the Cities to inspect restaurants, automotive service facilities, retail gasoline outlets and automotive dealerships. The purpose of the inspection is to assure that these facilities are implementing programs, known as Best Management Practices ("BMPs"), to prevent the discharge of waste into locations where it will be picked up by stormwater and carried into the rivers and other waters of the state.

Since at least 1969, State agencies have had the responsibility to prevent or regulate the discharge of waste that could be carried into the rivers and other waters of the state. In that year the Legislature adopted the Porter-Cologne Water Quality Act, Water Code §§ 13000 et seq. Under the Porter-Cologne Act, the Legislature imposed on the State Water Board and the regional water quality control boards ("regional boards") responsibility for the coordination and control of water quality. Water Code § 13001.

This responsibility includes the regulation of discharges from any entity that could affect the quality of the water of the state, including inspection of those facilities. Under the Act, any person who discharges "waste" or proposes to discharge "waste" that could affect the quality of the "waters of the state," other than into a community sewer system, must file a report of the discharge with the regional board that has the authority over that discharge. Water Code §§ 13260 and 13263. "Waste" and "waters of the state" are defined broadly. "Waste" includes all waste substances associated with human habitation, or of human or animal origin, or from any producing, manufacturing or

processing operation. Water Code § 13050(d). "Waters of the state" means any surface water or groundwater, including saline waters, within the boundaries of the state. Water Code § 13050(e). Upon receipt of the report of discharge, the regional board, after a hearing, issues a permit, known as waste discharge requirements, authorizing or conditioning (including disallowing) the discharge. Water Code § 13263. The regional board is given the authority to require any person to furnish technical and monitoring reports describing any discharge or proposed discharge of waste, and can inspect the facility of any such person to ascertain whether the purpose of the Act are being met. Water Code § 13267(b) and (c). The State Water Board is given this same authority if it will not duplicate the efforts of the Regional Board. *Id.*, subd. (f).

The Porter-Cologne Act contains no exceptions for discharges from restaurants, automotive service facilities, retail gas station, or automobile dealerships. Accordingly, the State, through the State Water Board and the regional water quality control boards, has had the responsibility since 1969 for regulating the discharge or proposed discharge of any waste from these facilities.

b. The purpose of the inspection obligations imposed by the Order is to prevent or minimize the discharge of waste into waters of the state

As set forth above, the purpose of the inspections of restaurants, automotive service facilities, retail gasoline outlets and automotive dealerships is to assure that these facilities are implementing BMPs that will prevent the discharge of waste into locations where it could be carried into rivers and other waters of the state. The restaurant inspections are to assure that oil, grease, trash or waste are not entering areas exposed to stormwater, all to prevent these materials from being picked up by stormwater and then being discharged into waters of the state. The automotive service facility inspections are to assure that materials at these facilities do not come into contact with stormwater or other runoff that would carry these materials into waters of the state. The retail gas outlet and automotive dealership inspections likewise are to assure that fuel, debris and waste does not enter storm drain and catch basins and then enter waters of the state.

These inspections are all tasks for which the State has been responsible since at least 1969. These are all obligations of the State and regional boards under the Porter-Cologne Act since 1969.

c. The Order requires the Cities to conduct these inspections to assure compliance with State law

The Order explicitly requires the Cities to conduct these inspections to assure compliance with State law, including a resolution issued by a state agency, i.e., the RWQCB. The Order specifically provides that inspections of restaurants are to be performed in order to assure that BMPs "are being effectively implemented *in compliance with state law,* County and municipal ordinances, *Regional Board Resolution*

No. 98-08, and the SQMP." Order, Part 4.C.2.a(1) (emphasis added). The inspection of automotive service facilities, retail gasoline outlets and automobile dealerships similarly are to confirm that BMPs are being "effectively implemented . . . in compliance with *Regional Board Resolution No. 98-08*. Order, Parts 4.C.2.a(2) and (3) (emphasis added). (A copy of Resolution No. 98-08 is included in Section 7.)

d. These inspection obligations are new programs or higher levels of service.

The obligation to inspect restaurants, automotive service facilities, retail gas outlets and automotive dealerships is a new program or a higher level of service. A "program" within the meaning of Article XIII B, section 6, of the California Constitution is a program that carries out a governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments. *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56. These inspection obligations are such a program; inspections for the purpose of policing compliance with state law are a uniquely governmental function and are uniquely imposed on the municipalities that are permittees under the Order.[1]

These inspection obligations are also new. A program is "new" if the local governmental entity had not previously been required to institute it. *County of Los Angeles v. Comm'n on State Mandates* (2003) 110 Cal.App.4th 1176, 1189. Here, the Order constitutes both waste discharge requirements issued by the RWQCB and a NPDES municipal stormwater permit issued under the federal Clean Water Act. This is the third such order issued to the Cities. The RWQCB previously issued orders to the Cities in 1991 and 1996. Neither the 1991 nor the 1996 order imposed these inspection obligations. The inspection obligations were imposed by the RWQCB for the first time in the Order issued in 2001.

e. The inspections are not required by the federal Clean Water Act

The federal Clean Water Act imposes certain obligations on the Cities. Under the Clean Water Act, the Cities are required to (i) prohibit non-stormwater discharges into the storm sewers, and (2) reduce the discharge of pollutants in stormwater to the maximum extent practicable. 33 U.S.C. §1342(p). As noted above, the Order itself

[1] The inspections could also be considered a higher level of service. A "higher level of service" refers to state mandated increases in the services provided by local agencies. *County of Los Angeles*, 43 Cal.3d at 56. A higher level of service exists where the mandate results in an increase in the actual level or quality of governmental services provided. *See San Diego Unified School District v. Comm'n on State Mandates* (2004) 33 Cal.4th 859, 877.

constitutes both waste discharge requirements and NPDES permit issued under the federal Clean Water Act.

The federal Clean Water Act does not require Cities to inspect restaurants, automotive service facilities, retail gas outlets or automotive dealerships. The federal Clean Water Act regulations set forth those facilities required to be inspected pursuant to the Act. Those facilities are solely municipal landfills, hazardous waste treatment, disposal and recovery facilities, industrial facilities that are subject to section 313 of Title III of the Superfund Amendment and Reauthorization Act of 1986, and industrial facilities that a municipality has determined to be contributing a substantial pollutant loading to the municipal storm sewer system. 40 C.F.R. § 122.26(d)(2)(iv)(C). The federal regulations do not require inspections of restaurants, automotive service facilities, retail gas stations, or automotive dealerships.

Indeed, the 1991 and 1996 orders issued by the RWQCB to these Cities did not contain these inspection obligations. If the federal Clean Water Act had required Cities to inspect restaurants, automotive service facilities, retail gas outlets or automotive dealerships, the RWQCB could not have issued the prior orders without including these inspections. The RWQCB, however, did issue the prior orders without requiring these inspections.[2]

It is possible that the State Water Board or the RWQCB may argue that, because the Order also constituted a federal NPDES permit, the inspections are federally mandated. This argument would lack merit. An NPDES permit can contain both federal and non-federal requirements. *See City of Burbank v. State Water Resources Control Board* (2005) 35 Cal.4th 613, 618, 628. Where state-mandated activities exceed federal requirements, those mandates constitute a reimbursable state mandate. *See Long Beach Unified School District v State of California* (1990) 225 Cal.App.3d 155, 172-173.

Moreover, a "new program or higher level of service" imposed by the State upon a municipality as a result of a federal law or federal program is not necessarily a "federal mandate." In order to be a federal mandate, the obligation must be imposed upon the municipality by federal law itself. The test for determining whether the "new program or higher level of service" is a state mandate is whether the state has a "true choice" in the matter of implementation, *i.e.*, whether the state freely chose to impose that program on local municipalities as opposed to performing the obligation itself. *See Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, 1593-94.

---

[2] Because the current federal regulations were not in effect at the time of the issuance of 1991 order, it could be argued that the 1991 order was issued under a prior set of regulations. The current regulations however, were in existence at the time the 1996 order was issued.

Here, the inspections are not required by federal statute or regulations; they exceed the requirements of the federal Clean Water Act. Here, the State has had the obligation to regulate restaurants, automotive service facilities, retail gas stations and automotive dealerships since 1969. This included the right to inspect such facilities to prevent activities that would result in the discharge of waste that could affect the quality of the waters of the state. Water Code § 13267(c). In 2001, the RWQCB freely chose to shift those inspection obligations to the Cities. Nothing under the federal Clean Water Act required the RWQCB to do so; nothing prevented the RWQCB from continuing to perform these inspections itself.

4. The inspections of industrial facilities that hold State Water Board stormwater permits for compliance with those permits are new programs or higher level of service mandated by the State

a. The Order imposes new inspection obligations that were required to be performed by the State

Part 4.c.2.b requires the cities to inspect industrial facilities to determine those facilities' compliance with the State's program for preventing waste from being discharged from those facilities, including permits issued by the State Water Board. As with the inspection of restaurants, gas stations and the other facilities, the requirement to inspect industrial is also a new program, one formerly performed by the State itself.

The Clean Water Act requires certain industrial facilities to have permits for stormwater discharges associated with their industrial activity. 33 U.S.C. § 1342(p)(3); 40 C.F.R. § 122.26(c). These industrial stormwater permits are issued either by the State Water Board or the regional boards. In California, the State Water Board issues a general permit to which industrial facilities can subscribe. Alternatively, an industrial discharger can obtain its own permit from a regional water quality control board. The Order refers to these industrial facilities as "Phase I Facilities." Order, pp. 31, 62.

Under the Porter-Cologne Water Quality Act, the State Water Board and the regional boards have both the authority and the obligation to issue these permits to "Phase I Facilities." Water Code § 13377. The State Water Board has issued these industrial stormwater permits since 1991. (See State Water Board Order No. 91-013-DWQ.) The most current general permit was issued in 1997. See State Water Resources Control Board Order No. 97-03-WQ, a copy of which is included in Section 7.

Significantly, the Legislature has authorized the State Water Board and regional boards to charge these industrial dischargers a fee which is deposited in the State's Waste Discharge Permit Fund and separately accounted for. Water Code § 13260(d)(2)provides in pertinent part:

(A) Subject to subparagraph (B), any fees collected pursuant to this section shall be deposited in the Waste Discharge Permit Fund, which is hereby created.

(B) Notwithstanding subparagraph (A) the fees collected pursuant to this section from stormwater dischargers that are subject to a general industrial or construction stormwater permit under the National Pollutant Discharge Elimination System (NPDES) shall be separately accounted for in the Waste Discharge Permit Fund.

The Legislature has then directed that a portion of this fee should be spent specifically on inspection of these industrial facilities. "Not less than 50 percent in the Waste Discharge Permit Fund that is separately accounted for . . . is available, upon appropriation by the Legislature, for expenditure by the regional board with jurisdiction over the permitted industry or construction site that generated the fee to carry out the stormwater programs in the region." Water Code § 13260(d)(2)(B)(ii). "Each regional board . . . shall spend not less than 50 percent of that money *solely on stormwater inspection and regulatory compliance issues* associated with industrial and construction stormwater programs." *Id.*, subd.(d)(2)(B)(iii) (emphasis added).

Like the inspections of restaurants, automotive service facilities, retail gas stations and automotive dealerships, the State Water Board and regional boards have had the authority under the Porter-Cologne Act to regulate these discharges from "Phase I" facilities since 1969, including the authority to inspect these facilities. Water Code §§ 13260, 13263, 13267. The obligation to inspect these "Phase I" industrial facilities that hold the State Board issued stormwater permits has rested with the regional boards since 1991. The State Water Board, in adopting the general industrial permit it issues to these Phase I facilities, stated that "following adoption of this General Permit, *the Regional Water Boards shall enforce its provisions.*" Order No. 97-03-DWQ, Finding 13 (emphasis added).

In 2001, the RWQCB imposed this obligation on the Cities. There is no question that the RWQCB imposed this inspection requirement to assure Phase I facilities' compliance with state law. The inspection required to be performed by the cities is a "compliance inspection." Order, Part 4.2.b. The inspection shall include a determination as to whether the industrial discharger has a waste discharge identification number and a stormwater pollution prevention plan. The waste discharge identification number is a number assigned by the State in conjunction with its permit program. The stormwater pollution prevention plan is a requirement of the state-issued general permit. The inspection is also for the purpose of determining whether the industrial facility is implementing BMPs in compliance with Regional Board Resolution No. 98-08, a resolution of the RWQCB itself.

Accordingly, the inspections of Phase I facilities is a new program or higher level of service imposed on the cities:

> (1) The State Board and the regional boards have had authority to regulate and inspect these facilities since 1969. Water Code §§ 13260, 13263, 13267.
>
> (2) The inspection is to determine compliance with the general industrial stormwater permit issued by the State Board. The State Board has specifically provided that the regional board shall enforce the provisions of this permit. State Water Board Order No. 97-03-DWQ, Finding 13.
>
> (3) The State Board and the regional board charge these industrial facilities a fee for this program. Water Code § 13260(d)(2).
>
> (4) The Water Board and the regional boards do not share any of these fees with the cities.
>
> (5) The inspections are compliance inspections to determine compliance with the State Water Board permit, and Regional Board Resolution No. 98-08.
>
> (6) The inspection obligation is new. The RWQCB imposed this obligation on the Cities in 2001. Prior orders did not impose this obligation on the Cities.

b. The obligation to inspect industrial facilities with State-issued stormwater permits is not contained in the federal Clean Water Act

As discussed above, the federal Clean Water Act regulations set forth those facilities required to be inspected pursuant to the Act. Those facilities are municipal landfills, hazardous waste treatment, disposal and recovery facilities, industrial facilities that are subject to section 313 of Title III of the Superfund Amendment and Reauthorization Act of 1986, and industrial facilities that a municipality has determined to be contributing a substantial pollutant loading to the municipal storm sewer system. 40 C.F.R. § 122.26(d)(2)(iv)(C). These regulations do not require inspections of industrial facilities with state-issued stormwater permits.

5. The inspection of construction sites that hold State Board permits for compliance with those permits is a new program mandated by the state

Under the Clean Water Act, the definition of industrial activities includes construction. See 40 C.F.R. § 122.26(b)(14)(x). In 2001, construction sites where activity resulted in the disturbance of greater than five acres of total land area were required to obtain stormwater permits. In 2003 this requirement was expanded to sites where the activities resulted in the disturbance of greater than one acre.

As with the industrial facilities, the State Water Board and the regional boards are charged with issuing these permits. Water Code § 13377. The State Water Board has issued a general construction stormwater permit since 1992. See State Water Resources Control Board Order No. 92-08-DWQ. The most current general construction stormwater permit was issued in 1999. See State Water Resources Control Board Order No. 99-08-DWQ. Like industrial facilities, the State charges a fee for these permits. Like industrial facilities, a portion of that fee is to go to regional boards to be spent "solely on stormwater inspection and regulatory compliance issues associated with industrial and construction stormwater programs." Water Code § 13260(d)(2)(B)(iii).

Like general industrial stormwater permit, the general construction stormwater permit issued by the State Water Board imposes the inspection obligation on the regional boards. State Board Order No. 99-08-DWQ specifically provides that "[f]ollowing adoption of this General Permit, the RWQCBs shall enforce the provisions herein . . . ." State Board Order No. 99-08-DWQ, Finding 11. Part D.1 of that Order further specifically provided that "RWQCBs shall . . . implement the provision of this General Permit. Implementation of this General Permit may include, but is not limited to requesting the submittal of SWPPPs, reviewing SWPPPs, reviewing monitoring reports, conducting *compliance inspections*, and taking enforcement actions." Thus, the specific responsibility for inspection of construction sites was allocated by the State Water Board to the regional boards, including the RWQCB.

The same analysis that applies the obligation to inspect industrial facilities applies to the obligation to inspect construction sites. Like inspection of the Phase I facilities in 2001, the RWQCB simply shifted this obligation from itself to the cities. The obligation to inspect these construction sites for compliance with the State Water Board's permit is a new program or higher level of service mandated on the Cities:

> (1) The State Water Board and the regional boards have had the authority and obligation to regulate these discharges since 1969. Water Code §§ 13260, 13263 and 13267.
>
> (2) The State Water Resources Board has issued permits to these facilities since 1992. See State Board Order No. 92-08-DWQ.

(3) The State Board orders adopting the general permit imposed the obligation to inspect construction sites on the regional boards. See State Board Order No. 99-08-DWQ, part D.1.

(4) The State Board and the regional boards charge a fee to the owners or developers of these construction sites. Water Code § 13260(d)(2). The Water Boards and the regional boards do not share any of these fees with the Cities.

(5) The inspections are compliance inspections to determine compliance with the State Water Board program and permit.

(6) The obligation is new. The RWQCB imposed the obligation on the Cities in 2001. Prior to 2001, the Cities did not have this obligation.

6. The installation and maintenance of trash receptacles at transit stops are new programs or higher levels of service mandated upon the Cities

Part 4.F.5.c.3. of the Order requires the cities to place trash receptacles at all transit stops within their jurisdiction no later than February 3, 2003. All trash receptacles shall be maintained as necessary. This requirement also constitutes a new program or higher level of service mandated upon the Cities.

As set forth above, a "program" within the meaning of Article XIII B, section 6, of the California Constitution is a program that carries out a governmental function of providing services to the public. *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56. A program is "new" if the local government entity had not previously been required to institute it. *County of Los Angeles v. Comm'n on State Mandates* (2003) 110 Cal.App.4th 1176, 1189. A "higher level of service" refers to state mandated increases in the services provided by local agencies. *County of Los Angeles v. State of California*, 43 Cal.3d at 56. A higher level of service exists where the mandate results in increase in the actual level or quality of governmental services. *See San Diego Unified School District v. Comm'n on State Mandates* (2004) 33 Cal.4th 859, 877.

The obligation to install trash receptacles at all transit stops is a new program or higher level of service. The collection of trash is a program that carries out a governmental function of providing services to the public. The Order directed the cities how and where to collect trash. It resulted in a new program or higher level of service along with a concomitant increase in costs.

Nothing in the federal Clean Water Act requires cities to install trash receptacles at transit stops. Nothing in the federal regulations or the Clean Water Act itself imposes this obligation. Indeed, this obligation is not found in other stormwater permits issued to

the cities throughout the state. The fact that it does not exist in other stormwater permits demonstrates that it is not a federal requirement.

The Order mandated that the Cities install and maintain trash receptacles at all transit stops. This is a new program or higher level or service mandated upon the Cities.

7. The State Funding Disclaimers Under Government Code § 17556 Do Not Apply

The seven disclaimers specified in Government Code § 17556 do not apply to the instant test claim, as shown below.

Government Code § 17556(a): "The claim is submitted by a local agency . . . which requested legislative authority for that local agency . . . to implement the Program specified in the statute, and that statute imposes costs upon that local agency . . . requesting the legislative authority." This disclaimer is not applicable because the Cities did not request legislative authority for the Order.

Government Code § 17556(b): "The statute or executive order affirmed for the state that which had been declared existing law or regulation by action of the courts." This disclaimer is not applicable because the Order did not affirm what had been declared existing law or regulation by action of the courts.

Government Code § 17556(c): The statute or executive order implemented a federal law or regulation and resulted in costs mandated by the federal government, unless the statute or executive order mandates costs which exceed the mandate in that federal law or regulation." This disclaimer is not applicable because no federal law or regulation is implemented in the Order, and the Order exceeds that mandated by federal law, as discussed above.

Government Code § 17556(d): "The local agency . . . has the authority to levy service charges, fees or assessments sufficient to pay for the mandated program or increased level of service." This disclaimer is not applicable because the Cities do not have the authority to levy service charges, fees or assessments sufficient to pay for the mandated program or increased level of service.

Government Code § 17556(e): "The statute or executive order provides for offsetting savings to local agencies . . . which result in no net costs to the local agencies . . . , or includes additional revenue that was specifically intended to fund the costs of the State mandate in an amount sufficient to fund the cost of the State mandate." This disclaimer is not applicable as no offsetting savings are provided in the Order and no revenue to fund the implementation of the Order was provided.

Government Code § 17556(f): "The statute or executive order imposed duties which were expressly included in a ballot measure approved by the voters in a Statewide election." This disclaimer is not applicable as the Order does not impose duties imposed by a statewide ballot measure.

Government Code § 17556(g): "The statute created a new crime or infraction, eliminated a crime or infraction, or changed the penalty for a crime or infraction, but only for that portion of the statute relating directly to the enforcement of the crime or infraction." This disclaimer is not applicable as the Order did not create or eliminate a crime or infraction or change the penalty for a crime or infraction.

B. DESCRIPTION OF EXISTING ACTIVITIES AND COSTS THAT ARE MODIFED BY THE MANDATE

Not Applicable. The only possible exception is if the installation and maintenance of trash receptacles is viewed as a modification of the Cities' existing trash collection activities. See the discussion in Section 5(A) above.

C. INCREASED COSTS INCURRED BY THE CLAIMANT DURING THE FISCAL YEAR FOR WHICH THE CLAIM WAS FILED TO IMPLEMENT THE ALLEGED MANDATE:

The actual increased costs incurred by the Cities during the current fiscal year exceeds $1,000.

D: ESTIMATED ANNUAL COSTS THAT WILL BE INCURRED BY THE CLAIMANT TO IMPLEMENT THE ALLEGED MANDATE DURING THE FISCAL YEAR IMMEDIATELY FOLLOWING THE FISCAL YEAR FOR WHICH THE CLAIM WAS FILED:

The actual or estimated increased costs that will be incurred by the Cities during the next fiscal year will exceed $1,000.

E. STATEWIDE ESTIMATE OF INCREASED COSTS THAT ALL LOCAL AGENCIES OR SCHOOL DISTRICTS WILL INCUR TO IMPLEMENT THE ALLEGED MANDATE DURING THE FISCAL YEAR IMMEDIATELY FOLLOWING THE FISCAL YEAR FOR WHICH THE CLAIM WAS FILED:

The mandates in the Order, including those at issue in this test claim, apply to the County of Los Angeles, the Los Angeles Flood Control District, and 84 cities in the County of Los Angeles (except for the trash receptacle obligation, which does not apply to cities subject to a "Trash TMDL".) The increased costs that all the municipalities will incur to implement the mandates during the next fiscal year are not currently known, but

will exceed $1,000. It is also not known the number of municipalities outside the County of Los Angeles that are subject to similar mandates.

F. IDENTIFICATION OF FUNDING SOURCES AVAILABLE FOR THIS PROGRAM:

(i) Dedicated state funds

There are no known dedicated state funds available to fund the inspection programs or placement of trash receptacles mandated by the Order.

(ii) Dedicated federal funds

There are no known dedicated federal funds available to fund the inspection programs or of trash receptacles mandated by the Order.

(iii) Other nonlocal agency funds

There are no known nonlocal agency funds available to fund the inspection programs or of trash receptacles mandated by the Order.

(iv) The local agency's general purpose funds

There are no general purpose funds available to fund the inspection programs or installation and maintenance of trash receptacles mandated by the Order without taking those funds from other programs.

(v) Fee authority to offset costs

The State collects fees for inspections but does not share those funds with the Cities. The State Water Board and the RWQCB have in fact received funds from permit fees associated with the General Industrial Permit and the General Construction Permit, fees that were specifically assessed to pay for the costs of implementing the stormwater permit program. Water Code § 13260(d). The State receives an annual fee of $700 from every industrial facility, plus applicable surcharges (but subject to certain reductions) that is required to have a General Industrial Permit. 23 Cal. Code Reg. § 2200(b)(2)(A). For construction sites required to have a General Construction Permit, the annual fee is $200 plus $20 per acre, up to a maximum of $2,200. 23 Cal. Code Reg. § 2200(b)(3). The State shares none of these fees with the Cities.

G. IDENTIFICATION OF PRIOR MANDATE DETERMINATIONS MADE BY THE BOARD OF CONTROL OR THE COMMISSION ON STATE MANDATES THAT MAY BE RELATED TO THE ALLEGED MANDATE.

The Cities are not aware of any prior mandate determinations made by the Board of Control or the Commission on State Mandates that may be related to these mandates.

DECLARATION OF HOWARD GEST

I, HOWARD GEST, hereby declare and state as follows:

1. I am a member of Burhenn & Gest LLP and, as such, am one of the attorneys responsible for representing the claimants in Test Claim Nos. 03-TC-20 and 03-TC-21.

2. I have personal knowledge of the matters set forth herein and, if called to testify, could and would testify competently thereto.

3. I represented the County of Los Angeles and the Los Angeles County Flood Control District with respect to appeals from the adoption of the Los Angeles County Municipal Stormater Permit.

4. Attached hereto are copies of (a) a letter dated July 12, 2001 from EPA Administrator Christine Todd Whitman to the Hon. David Dreier; (b) a letter dated April 30, 2001 from Alexis Strauss, Director, Water Division, EPA Region IX to the Hon. Steve Horn; and (c) a letter dated May 16, 2001 from Alexis Strauss, Director, Water Division, EPA Region IX to James DeStefano, Interim City Manager, City of Diamond Bar.

5. Each letter is a part of the administrative record for the Los Angeles County Municipal Stormwater Permit.

I declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct.

Executed this 24 day of June, 2008 at Los Angeles, California.

Howard Gest

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
WASHINGTON, D.C. 20460

JUL 12 2001

THE ADMINISTRATOR

The Honorable David Dreier
U.S. House of Representatives
Washington, DC 20515

Dear Congressman Dreier:

Thank you for your letter of April 24, 2001 concerning Clean Water Act permits for discharges from storm sewers owned by local governments. Your letter explains that several local governments are concerned that enforcement of pollution controls at individual industrial and commercial sites that discharge to the local storm sewer systems should be the responsibility of the State permit authority and that local governments should not be required to participate in this effort.

I understand that throughout the State, communities are facing a considerable challenge in the need to address storm water issues. While the State has already begun to substantially increase its staffing resources devoted to the storm water program, EPA recognizes that funding for the State storm water program needs to increase. We are continuing to discuss ways to further increase the State's investment, including discussions of EPA funding.

Urban runoff is the leading cause of water quality impairment throughout the country and in the Santa Monica Bay and the Los Angeles area. Effective programs for reducing pollution from municipal storm sewers are essential to protecting and restoring the Nation's water resources.

The Clean Water Act regulations concerning permits for discharges from municipal storm sewers provide that the State permit authority and the local government holding the permit share responsibility for inspections of facilities discharging to these storm sewers. The State is responsible for enforcing its general Clean Water Act storm water permits, while a local government permit holder needs to enforce local storm water ordinances (which may be similar, but not identical to, the State general permits). The specific responsibilities of the permit holder to monitor and control storm water pollutants from industrial and commercial facilities are normally determined through a cooperative process when a permit is prepared.

It is important to note that the storm water regulations require the local government permit holder to perform activities such as control, inspect, monitor, and require compliance of industrial and commercial facilities and that the permit holder must have the legal authority to ensure compliance. Such programs are already required in many storm water permits, such as the permits for Orange, Riverside and San Diego Counties, and they play a significant role in ensuring the overall effectiveness of the storm water program.

EPA has been intensively involved with all nine California Regional Boards and the State Water Resources Control Board to effectively implement the storm water program. From the initial issuance of the storm water permits to the current round of reissuing those permits, EPA has been working closely with the State to encourage stakeholder participation and cooperation in storm water programs. In addition, EPA and the State have worked together to respond to a petition filed by the Natural Resources Defense Council (NRDC) to withdraw the NPDES storm water program administered by the Los Angeles Regional Board. In response to the NRDC petition, Region 9 met with NRDC and the State to discuss steps to respond to the concerns in the petition.

If you have any additional questions or concerns please contact me, or your staff may call Shawna Roesch in the Office of Congressional and Intergovernmental Relations at (202) 564-3641.

Sincerely yours,

Christine Todd Whitman

April 30, 2001

The Honorable Stephen Horn
U.S. House of Representatives
2331 Rayburn House Office Building
Washington, DC 20515

Dear Congressman Horn:

Thank you for your letter of April 12, 2001, to Christine Todd Whitman, Administrator, U.S. Environmental Protection Agency (EPA), and the accompanying correspondence from your constituent, Larry Forester, representing the Steering Committee for the Coalition for Practical Regulation. I have been asked to respond to your constituent's concerns regarding EPA, Region 9's letter of December 19, 2000 to the Los Angeles Regional Board concerning requirements for inspections of industrial and commercial facilities by municipal separate storm sewer system (MS4) permittees.

As you may be aware, urban runoff is the leading cause of water quality impairment in Santa Monica Bay and the Los Angeles area. This problem, and the State's inability to apply adequate resources to its storm water program, were key factors cited in a petition filed by the Natural Resources Defense Council (NRDC) to withdraw the NPDES storm water program administered by the Los Angeles Regional Board. Current storm water fees received by the State do not provide enough funds to meet all storm water program needs. The State currently collects about $3 million in fees annually from storm water dischargers, and these fees are used entirely to fund storm water program activities, including inspections, enforcement, permitting and other activities. However, the storm water fees cover only about 30% of the cost of the current program, with the rest of the funding coming from other sources. As such, the fees are not adequate to fully fund the State's program and its various activities including inspections.

In response to the NRDC petition, the October 5, 2000 meeting referenced in your constituent's letter was our first meeting with the State to discuss what steps the State could take to respond to the concerns in the petition. The State had already begun to substantially increase its staffing resources devoted to the storm water program and we are continuing to discuss ways to further increase the State's investment through grant money from EPA. Also discussed were the NPDES regulatory requirements for MS4 permits, specifically the existing Federal regulatory requirement that MS4 permittees implement inspection and pollution control programs for certain industrial and commercial facilities. Such programs are already required in many MS4 permits, such as the permits for Orange, Riverside and San Diego Counties, and they play a significant role in ensuring the overall effectiveness of the storm water program through the combined efforts of the State and MS4 permittees.

The storm water program is intentionally a flexible program that allows for different approaches to best address unique local challenges such as those presented by arid environments. The scope of an MS4 inspection program is normally negotiated with the State when a permit is reissued. We agree that a cooperative effort between the State and MS4 permittees on inspections is needed, and we believe that neither the MS4 permittees nor the State should be saddled with the entire inspection burden for industrial and commercial facilities. The State is also responsible for enforcing its general NPDES storm water permits, while the MS4 permittees need to enforce local storm water ordinances (often similar to the State general permits).

EPA has been intensively involved with all nine California Regional Boards and the State Water Resources Control Board to effectively implement the storm water program. From the initial issuance of the MS4 permits to the current round of reissuing those permits, we have been working closely with the State to encourage stakeholder participation and cooperation in the MS4 storm water programs. EPA staff have been participating in the monthly meetings between the State and the MS4 permittees to discuss the pending reissuance of the Los Angeles County MS4 permit, and we are committed to maintaining a cooperative and constructive dialogue among the stakeholders. As mentioned above, the October 5, 2000 meeting was an initial meeting with the State on how to resolve the NRDC petition, and the existing monthly meetings with the Los Angeles County MS4 permittees have been a key forum for cities to provide input on the permit and engage in an ongoing dialogue with the State and EPA. We welcome and encourage active participation by all permittees in these monthly meetings.

We trust this information will be helpful in responding to your constituent's concerns. If we can be of further assistance, please call our Congressional Liaison Officer, Sunny Nelson at (415) 744-1562.

Sincerely,

Alexis Strauss
Director
Water Division

James DeStefano
Interim City Manager
City of Diamond Bar
21825 E. Copley Drive
Diamond Bar, CA 91765-4178

Dear Mr. DeStefano:

Thank you for your letter of April 30, 2001, regarding EPA, Region 9's letter of December 19, 2000 to the Los Angeles Regional Board concerning requirements for inspections of industrial and commercial facilities by municipal separate storm sewer system (MS4) permittees. Your letter requested clarification of a number of issues in the December 19, 2000 letter.

As you may be aware, urban runoff is the leading cause of water quality impairment in Santa Monica Bay and the Los Angeles area. This problem, and the State's inability to apply adequate resources to its storm water program, were key factors cited in a petition filed by the Natural Resources Defense Council (NRDC) to withdraw the NPDES storm water program administered by the Los Angeles Regional Board. Current storm water fees to the State do not provide enough funds to meet all storm water program needs. In response to the NRDC petition, we met with NRDC and the State on October 5, 2000 to discuss what steps the State could take to respond to the concerns in the petition. The State had already begun to substantially increase its staffing resources devoted to the storm water program and we are continuing to discuss ways to further increase the State's investment through grant money from EPA. Also discussed were the NPDES regulatory requirements for MS4 permits, specifically the existing Federal regulatory requirement that MS4 permittees implement inspection and pollution control programs for certain industrial and commercial facilities. Such programs are already required in many MS4 permits, such as the permits for Orange, Riverside and San Diego Counties, and they play a significant role in ensuring the overall effectiveness of the storm water program through the combined efforts of the State and MS4 permittees.

The scope of an MS4 inspection program is normally negotiated with the State when a permit is reissued. We agree that a cooperative effort between the State and MS4 permittees on inspections is needed, and we believe that neither the MS4 permittees nor the State should be saddled with the entire inspection burden for industrial and commercial facilities. The State is also responsible for enforcing its general NPDES storm water permits, while the MS4 permittees need to enforce local storm water ordinances (which are often similar to the State general permits).

R0002033

With regards to the intent of the "educational visits" in the existing MS4 permit, we contacted Los Angeles Regional Board staff to obtain additional information on this matter since the permit was issued by the Los Angeles Regional Board. According to Board staff, the intent of the "educational visits" in the 1996 permit was to provide a period of time during which MS4 permittees could engage in outreach activities to industrial and commercial facilities concerning storm water pollution control and best management practices which could be implemented by the facilities to reduce pollutant discharges. Since storm water pollution control was new to some facilities, the Board thought that such outreach was appropriate prior to actual enforcement of the pollution control measures. The Board also intended, however, that future permits, such as the permit under development at the present time, would require enforcement of local storm water pollution control ordinances. We believe that this is generally consistent with the characterization in our letter.

EPA has been intensively involved with all nine California Regional Boards and the State Water Resources Control Board to effectively implement the storm water program. From the initial issuance of the MS4 permits to the current round of reissuing those permits, we have been working closely with the State to encourage stakeholder participation and cooperation in the MS4 storm water programs. EPA staff have been participating in the monthly meetings between the State and the MS4 permittees to discuss the pending reissuance of the Los Angeles County MS4 permit, and we are committed to maintaining a cooperative and constructive dialogue among the stakeholders. We welcome and encourage active participation by all permittees in these monthly meetings.

Should you have any questions, please call me at (415) 744-1860, or refer your staff to Eugene Bromley of the CWA Standards and Permits Office at (415) 744-1906.

Sincerely,

Alexis Strauss 15 May 2001

Alexis Strauss
Director, Water Division

R0002034

DECLARATION OF ADAM ARIKI, P.E.

I, Adam Ariki, P.E. hereby declare:

1. I am currently the Assistant Deputy Director of the Water Works Division of the Los Angeles County Department of Public Works (LADPW).

2. In 2001, I held the position of Senior Civil Engineer, and supervised the section of LADPW's Watershed Management Division that was responsible for compliance with the Los Angeles County Municipal Storm Water Permit (Permit) issued by the Los Angeles Regional Water Quality Control Board (Regional Board).

3. I have personal knowledge of the matters set forth herein and, if called to testify, could and would testify competently thereto.

4. In conjunction with my duties in 2001, I participated in meetings with staff of the Los Angeles Regional Board in which the parties discussed a request by the Los Angeles Regional Board to enter into a contract pursuant to which the LADPW would perform, for the benefit of the Regional Board, inspections of sites that held general industrial stormwater permits. The Regional Board would pay the County of Los Angeles for the performance of these inspections.

5. To my knowledge, these negotiations were initiated by Regional Board staff, and it was their idea to have LADPW perform these inspections in lieu of Regional Board staff performing these inspections themselves.

6. By letter dated December 17, 2001, the Executive Officer of the Regional Board advised LADPW that the Regional Board was terminating these discussions. Attached hereto is a copy of the letter from Dennis Dickerson, Executive Officer, to Donald Wolfe, Assistant Director, advising that the Regional Board staff was terminating these discussions.

I declare under the penalty of perjury under the laws of the State of California that the foregoing is true and correct.

Executed this 18 day of June, 2008 at Alhambra, California.

Mr. Donald L. Wolfe, Assistant Director
County of Los Angeles Department of Public Works
900 South Freemont Avenue
Alhambra, CA 91803-1331

Dear Mr. Wolfe:

INSPECTION OF FACILITIES COVERED UNDER THE CALIFORNIA GENERAL INDUSTRIAL ACTIVITIES STORM WATER GENERAL PERMIT (GENERAL PERMIT)

During the last several months, staff from the County of Los Angeles and the Regional Board met a number of times and worked together in an effort to develop a contract proposal with the County to inspect facilities covered under the General Permit. These efforts were an attempt to further the partnership between the Regional Board and local agencies in the arena of storm water management in the region. They were also an attempt to tap into the County's staff expertise in an efficient way in order to thoroughly and expeditiously address the challenging task of overseeing a large number of industrial sites covered under the General Permit and identifying the significant number of facilities that have not yet obtained coverage.

Your staff worked diligently and was very helpful and cooperative during the whole process.

Unfortunately, we are unable to proceed in further developing this proposal at this time. I hope that in the future the opportunity to renew our discussion will present itself.

Should you have any questions regarding this matter, please do not hesitate to contact me at (213) 576-6605, or Dan Radulescu at (213) 576-6668.

Sincerely,

Dennis A. Dickerson
Executive Officer

PROOF OF SERVICE

I am employed in Los Angeles County. I am over the age of 18 and not a party to this action. My business address is 624 S. Grand Avenue, 22nd Floor, Los Angeles, California 90017.

On June 24, 2008 I served the foregoing document, described as

TEST CLAIM NO. 03-TC-21; CLAIMANTS' REBUTTAL TO AND COMMENTS ON RESPONSES SUBMITTED BY THE DEPARTMENT OF FINANCE, STATE WATER RESOURCES CONTROL BOARD AND LOS ANGELES REGIONAL WATER QUALITY CONTROL BOARD

☐ the original of the document
☒ true copies of the document

in separate sealed envelopes addressed as follows:

See Attached Service List

☒ **BY U.S. MAIL**: I sealed and placed such envelope for collection and mailing to be deposited on the same day at Los Angeles, California. The envelopes were mailed with postage thereon fully prepaid. I am readily familiar with Burhenn & Gest LLP's practice of collection and processing corresponding for mailing. Under this practice, documents are deposited with the U.S. Postal Service on the same day that is stated in the proof of service, with postage fully prepaid at Los Angeles, California in the ordinary course of business.

☐ **BY FEDERAL EXPRESS**: I am familiar with the firm's practice of collecting and processing correspondence for delivery via Federal Express. Under that practice, it would be picked up by Federal Express on that same day at Los Angeles, California and delivered to the parties as listed on this Proof of Service the following business morning.

☐ **BY FACSIMILE**: I caused the above referenced document to be transmitted via facsimile to the parties as listed on this Proof of Service.

☐ **BY PERSONAL SERVICE**: I personally delivered such envelope by hand to the office of the addressee(s).

☐ **STATE**: I declare under penalty of perjury under the laws of the state of California that the above is true and correct.

☒ **FEDERAL**: I declare that I am employed in the office of a member of the bar of this court at whose direction the service was made.

Executed on June 24, 2008 at Los Angeles, California.

DECLARATION OF JULIE QUINN, MESM

I, Julie Quinn, hereby declare:

1. I am a water quality and water resources professional with URS Corporation. I have a Bachelor of Science degree from University of California, Riverside, with a major in Environmental Science, and a Master of Environmental Science and Management from University of California, Santa Barbara.

2. I have personal knowledge of the matters set forth herein and, if called to testify, could and would testify competently thereto.

3. I was requested to perform a survey of Phase I National Pollutant Discharge Elimination System (NPDES) municipal separate storm sewer systems (MS4) permits issued by the United States Environmental Protection Agency (EPA). I was further asked to review those permits to determine whether they included any of the following: (1) a requirement to inspect industrial facilities that are covered under a NPDES general industrial stormwater permit; (2) a requirement to inspect restaurants, automotive service facilities, or retail gasoline outlets and automotive dealerships; and (3) a requirement to install trash receptacles at all transit stops within the MS4 permittee's jurisdiction.

4. Attached as Exhibit 1 is a letter report summarizing the results of this survey. This letter report sets forth the Phase I NPDES MS4 permits that I reviewed and the conclusions of the survey.

5. None of the Phase I NPDES MS4 permits issued by EPA required the inspection of commercial facilities or industrial facilities that are not required to be covered under a NPDES permit.

6. None of the Phase I NPDES MS4 permits issued by EPA included the extensive requirements for inspection of industrial facilities covered by NPDES general industrial permits that are included in the Phase I NPDES MS4 permit issued to the Los Angeles County permittees by the California Regional Water Quality Control Board, Los Angeles Region, Order No. 01-182.

6. None of the Phase I NPDES MS4 permits issued by EPA required the installation of trash receptacles at transit stops.

I declare under the penalty of perjury under the laws of the State of California that the foregoing is true and correct.

Executed this 17th day of June, 2008 at Santa Ana, California.

Subject: ***Phase I Municipal Separate Storm Sewer Systems (MS4) Permit Survey***

Dear Mr. Gest,

URS Corporation is pleased to submit this letter report describing the results of the National Pollution Discharge Elimination System (NPDES) municipal separate storm sewer system (MS4) permit survey. The survey involved obtaining copies of Phase I NPDES MS4 permits issued directly by the United States Environmental Protection Agency (USEPA). These Phase I NPDES MS4 Permits were obtained and reviewed to determine if they contained provisions similar to the two specific requirements of the Phase I NPDES MS4 permit issued to Los Angeles County on December 13, 2001 (NPDES Permit No. CAS004001) and as amended on September 14, 2006 and August 9, 2007 (hereafter referred to as the NPDES MS4 Permit issued to the Los Angeles County permittees).

Los Angeles County MS4 Permit Requirements

The two specific requirements of the NPDES MS4 Permit issued to the Los Angeles County permittees in question are:

- Installation of trash receptacles as specified in Part 4.F.5.c.3. This provision requires the installation and maintenance of trash receptacles at all transit stops within the permittees jurisdiction.
- Required commercial/industrial inspection programs as specified in Part 4.C. The Industrial/Commercial Facilities Control Program described in Part 4.C. requires permittees to establish ongoing programs to track, inspect, and ensure compliance at industrial and commercial facilities that are critical sources of storm water pollutants. Inspections include commercial facilities such as restaurants, automotive service stations, retail gasoline outlets, automotive dealerships, and Phase I Tier 1 and 2 facilities that have not been inspected by the Regional Water Quality Control Board.

The specific Los Angles County MS4 Permit requirements summarized above are provided in Attachment A.

Phase I NPDES MS4 Permits Regulated by USEPA

There are several states that are not designated to administer the Phase I NPDES MS4 Permit Program. Therefore, dischargers in those states are issued NPDES MS4 permits and regulated directly by the USEPA. In some instances the USEPA will review NPDES MS4 permits issued by delegated states and make findings regarding if the NPDES MS4 permits comply with the Clean Water Act and other federal regulations.

URS Corporation
2020 East First Street, Suite 400
Santa Ana, CA 92705
Tel: 714.835.6886
Fax: 714.667.7147

The following states and United States lands are non-designated states:

United States

- Massachusetts
- New Hampshire
- Idaho
- Alaska
- New Mexico

United States Lands

- Puerto Rico
- District of Columbia
- Pacific Islands
- Guam
- Indian Lands

Provisions of USEPA Issued Phase I NPDES MS4 Permits

The following table summarizes the results of a review of the Phase I NPDES MS4 permits issued by the USEPA to municipal entities in non-designated states as well as the Phase I NPDES MS4 permit issued to the District of Columbia. None of the Phase I NPDES MS4 permits issued in non-designated states had provisions similar to the Industrial/Commercial Facilities Control Program required by the NPDES MS4 Permit issued to the Los Angeles County permittees. These requirements are unique in requiring inspections for commercial facilities such as restaurants, automotive service facilities, retail gasoline outlets and automotive dealerships. Additionally, the level of inspection requires the MS4 permittees to confirm that operators of Phase I industrial facilities have a current Waste Discharge Identification (WDID) number, Storm Water Pollution Prevention Plan (SWPPP), effective BMP implementation, and participation in enforcement actions for those commercial/industrial facilities not in compliance. Although the Phase I NPDES MS4 permits issued to the municipalities in the non-designated states did require permittees to develop inspection procedures, prioritize, monitor, and in some cases inspect those facilities specifically identified in the federal regulations, 40 CFR 122.26(d)(2)(iv)(C), sometimes referred to in the permits as "high risk", these requirements were distinctly different from the requirement to implement comprehensive inspections of all industrial and commercial facilities as specified in the NPDES MS4 Permit issued to the Los Angeles County permittees. Table 1 summarizes the sections of each Phase I NPDES MS4 permit where program elements addressing commercial/industrial activities are described.

Phase I NPDES MS4 Permits for the other lands of the U.S. (e.g. Guam, Indian Lands, Puerto Rico, & Pacific Islands) were not obtained in time to include in this survey. New Hampshire is a non-designated state but currently has no municipalities that have been issued a Phase I NPDES MS4 permit.

Permit Status

NPDES permits are issued for a period of five years. An application for renewal of the NPDES permits must be submitted prior to the expiration date. The status of the Phase I NPDES MS4 program in each non-designated state is described herein. Copies of the large and medium Phase I NPDES MS4 permits that were reviewed as part of this survey are provided in Attachment B.

Alaska

The state of Alaska has formally applied to the USEPA for authority to administer their NPDES program. Since they are applying to administer their own program, their two Phase I NPDES MS4 permits have not been renewed or re-issued. The Municipality of Anchorage Phase I NPDES MS4 permit that covers the Alaska Department of Transportation, City of Anchorage, Port of Anchorage, and University of Alaska at Anchorage expired in 2003 and has not been renewed.

Idaho

The Phase I NPDES MS4 permit covering the six co-permittees within Idaho (Ada County Highway District, City of Boise, Boise State University, Garden City, Idaho Department of Transportation, and Drainage District Number 3) expired in 2005. An application for renewal of the permit was submitted in 2004, but a revised permit has not been issued.

Massachusetts

There are two large Phase I municipalities within Massachusetts, Boston and Worcester. The City of Boston's Phase I NPDES MS4 permit was issued in 1999 and expired in 2004 and a draft revised permit is expected to be issued in late 2008. Worcester is the other large Phase I municipality within Massachusetts and a draft revised Phase I NPDES MS4 permit is expected in late June 2008.

New Hampshire

There have been no large or medium Phase I NPDES MS4 permits issued in New Hampshire.

New Mexico

The City of Albuquerque, Albuquerque Flood Control Authority, New Mexico Department of Transportation, and University of New Mexico at Albuquerque are co-permittees and are covered under a Phase I NPDES MS4 permit that expires on November 30, 2008. New Mexico has been pursuing primacy to administer a state regulated NPDES program but has not yet been designated to do so.

District of Columbia

Washington DC was issued a Phase I NPDES MS4 permit in 2000 that expired in 2005. In 2004 the USEPA issued a new Phase I NPDES MS4 permit that expires on August 18, 2009.

Non-Designated State	USEPA Re	equirements to inspect urants, automotive service ties, retail gasoline outlets, automotive dealerships?	Requirements to install trash receptacles?
Alaska	Alaska Department of Transport	No	No
	City of Anchorage		
	University of Alaska, Anchorage		
	Port of Anchorage	No	No
Idaho	Ada County Highway District	No	No
	City of Boise		
	Boise State University		
	Garden City

	Albuquerque Flood Control Auth		
	New Mexico Department of Tran		
	University of New Mexico at Albu		
District of Columbia	Washington D.C.	No	No
New Hampshire	No MS4 permit(s) currently issue	N/A	N/A

Table Notes:

EPCRA = Emergency Planning and Community Right-to-Know Act

MS4 = Municipal Separate Storm Sewer System

Survey Conclusions

Upon reviewing the Phase I NPDES MS4 permits issued by USEPA, there were no provisions that called for the specific trash receptacles and commercial / industrial inspection programs as described in the NPDES MS4 Permit issued to the Los Angeles County permittees. The provisions in the permits describing monitoring and inspections required for "Industrial and High Risk" dischargers did not call for the detailed inspection program of commercial/industrial facilities as described in the Los Angeles NPDES MS4 Permit. Moreover, all of the Phase I NPDES MS4 permits issued by USEPA described "high risk" dischargers as facilities that treated, recovered, stored, or disposed of hazardous waste, facilities subject to EPCRA Title III, as well as landfills. The majority of the Phase I NPDES MS4 permits issued by USEPA called for prioritization and monitoring of these high risk facilities with inspection and monitoring results to be reported in the Annual Report.

The Phase I NPDES MS4 permits issued by EPA in the non-designated states contained requirements that were distinctly different from the inspection requirements for industrial facilities contained in the NPDES MS4 Permit issued to the Los Angeles County permittees. None of the EPA issued permits required inspection of restaurants, automotive service facilities, retail gasoline outlets, or automotive dealerships. With the exception of the District of Columbia permit, none of the permits require inspection of all facilities that were issued general industrial stormwater permits.

Instead, all the EPA issued Phase I NPDES MS4 permits, except for the District of Columbia permit, require only a program to monitor and control pollutants from stormwater discharged from the facilities specifically identified in 40 C.F.R. 122.26(d)(2)(iv)(C). Those facilities are municipal landfills; hazardous waste treatment, disposal and recovery facilities subject to § 313 of the Emergency Planning and Community Right to Know Act; and industrial or commercial facilities that are determined to be contributing substantial pollutant loading to the MS4. Inspections are required only of these facilities. The District of Columbia Phase I NPDES MS4 permit does provide that the city's program to monitor and control pollutants from industrial facilities should include a program with respect to industrial facilities with NPDES Permits. However, that permit does not require compliance inspection of those sites to determine whether the facility is complying with the terms of its NPDES general industrial storm water permit, which is the case under the Phase I NPDES MS4 Permit issued to the Los Angeles permittees.

In contrast, the NPDES MS4 Permit issued to the Los Angeles County permittees requires a comprehensive Industrial/Commercial Facilities Control Program that includes the following unique requirements:

- Inspection of all commercial/industrial facilities regardless of whether they are contributing a substantial pollutant loading to the MS4;
- Inspection of commercial facilities such as restaurants, automotive service facilities, retail gasoline and automotive dealerships;
- Inspections to confirm that Phase I facilities have current WDID numbers, SWPPPs, and effective BMP implementation; and
- Participation in enforcement actions for commercial/industrial facilities not in compliance.

In summary, there were no provisions for installation of trash receptacles in any of the non-designated USEPA regulated states. Inspection of high risk commercial/industrial dischargers was present in the Phase I NPDES MS4 permits, but none required the establishment of an ongoing program to comprehensively inspect and enforce storm water compliance at all commercial and industrial facilities as specified in the NPDES MS4 Permit issued to the Los Angeles County permittees.

If you have any questions or comments regarding the results of this survey please do not hesitate to contact me at 714.648.2725.

Sincerely,
URS Corporation

Julie Quinn

Water Quality & Water Resources Professional

Attachment A

Los Angeles County Phase I NDPES MS4 Permit Provisions:

Trash Receptacles - Part 4.F.5.c.3.

&

Industrial/Commercial Facilities Control Program - Part 4.C.

STATE OF CALIFORNIA

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION

ORDER NO. 01-182
NPDES PERMIT NO. CAS004001
WASTE DISCHARGE REQUIREMENTS
FOR
MUNICIPAL STORM WATER AND URBAN RUNOFF DISCHARGES WITHIN THE COUNTY OF LOS ANGELES, AND THE INCORPORATED CITIES THEREIN, EXCEPT THE CITY OF LONG BEACH

December 13, 2001
(Amended on September 14, 2006 by Order R4-2006-0074
and
on August 9, 2007 by Order R4-2007-0042)

(4) Recording of the overall quantity of catch basin waste collected.

If the implementation phase for the Los Angeles River and Ballona Creek Trash TMDLs has not begun by October 2003, subject Permittees shall implement the requirements described below in subsection 5(c), until such time programs in conformance with the subject Trash TMDLs are being implemented.

c) Permittees not subject to a trash TMDL shall:

(1) Clean catch basins according to the following schedule:

Priority A: A minimum of three times during the wet season and once during the dry season every year.

Priority B: A minimum of once during the wet season and once during the dry season every year.

Priority C: A minimum of once per year.

In addition to the schedule above, between February 1, 2002 and July 1, 2003, Permittees shall ensure that any catch basin that is at least 40% full of trash and/or debris shall be cleaned out. After July 1, 2003, Permittees shall ensure that any catch basin that is at least 25% full of trash and debris shall be cleaned out.

(2) For any special event that can be reasonably expected to generate substantial quantities of trash and litter, include provisions that require for the proper management of trash and litter generated, as a condition of the special use permit issued for that event. At a minimum, the municipality who issues the permit for the special event shall arrange for either temporary screens to be placed on catch basins or for catch basins in that area to be cleaned out subsequent to the event and prior to any rain event.

(3) Place trash receptacles at all transit stops within its jurisdiction that have shelters no later than August 1, 2002, and at all other transit stops within its jurisdiction no later than February 3, 2003. All trash receptacles shall be maintained as necessary.

d) Each Permittee shall inspect the legibility of the catch basin stencil or label nearest the inlet. Catch basins with illegible stencils shall be recorded and re-stenciled or re-labeled within 180 days of inspection.

e) Each Permittee shall implement BMPs for Storm Drain Maintenance that include:

	Bacteria, Metals, Pesticides, PAHs
San Gabriel River	Trash, Nutrients (Nitrogen), Indicator Bacteria, Metals
Santa Clara River	Nutrients (Nitrogen), Coliform
Dominguez Channel	Trash, Indicator Bacteria, PAHs

Each Permittee shall make outreach materials available to the general public and target audiences, such as schools, community groups, contractors and developers, and at appropriate public counters and events. Outreach material shall include information on pollutants, sources of concern, and source abatement measures.

2. Businesses Program

a) Corporate Outreach

The Principal Permittee shall develop and implement a Corporate Outreach program to educate and inform corporate managers about storm water regulations. The program shall target RGOs and restaurant chains. At a minimum, this program shall include:

(1) Conferring with corporate management to explain storm water regulations;

(2) Distribution and discussion of educational material regarding storm water pollution and BMPs, and provide managers with suggestions to facilitate employee compliance with storm water regulations.

Corporate Outreach for all RGOs and restaurant chain corporations shall be conducted not less than twice during the permit term, with the first outreach contact to begin no later than February 3, 2003.

b) Business Assistance Program

The Principal Permittee and Permittees may implement a Business Assistance Program to provide technical resource assistance to small businesses to advise them on BMPs implementation to reduce the discharge of pollutants in storm water runoff. Programs may include:

(1) On-site technical assistance or consultation via telephone to identify and implement storm water pollution prevention methods and best management practices; and

(2) Making available, distributing, and discussing of applicable BMP and educational materials.

C. Industrial/Commercial Facilities Control Program

Each Permittee shall require implementation of pollutant reduction and control measures at industrial and commercial facilities, with the objective of reducing pollutants in storm water runoff. Except as specified in other sections of this Order, pollutant reduction and control measures can be used alone or in combination, and can include Structural and Source Control BMPs, and operation and maintenance procedures, which can be applied before, during, and/or after pollution generating activities. At a minimum, the Industrial/Commercial Facilities Control Program shall include requirements to: (1) track, (2) inspect, and (3) ensure compliance at industrial and commercial facilities that are critical sources of pollutants in storm water.

1. Track Critical Sources

a) Each Permittee shall maintain a watershed-based inventory or database of all facilities within its jurisdiction that are critical sources of storm water pollution. Critical sources to be tracked are summarized below, and also specified in Attachment B:

(1) Commercial Facilities
- restaurants;
- automotive service facilities; and
- RGOs and automotive dealerships.

(2) USEPA Phase I Facilities (Tier 1 and 2)

(3) Other Federally-mandated Facilities [as specified in 40 CFR 122.26(d)(2)(iv)(C)]
- municipal landfills;
- hazardous waste treatment, disposal, and recovery facilities; and
- facilities subject to SARA Title III (also known as EPCRA).

b) Each Permittee shall include the following minimum fields of information for each industrial and commercial facility:
- name of facility and name of owner/operator;
- address;
- coverage under the GIASP or other individual or general NPDES permits; and
- a narrative description including SIC codes that best reflects the industrial activities at and principal products of each facility.

The Regional Board encourages Permittees to add other fields of information, such as material usage and/or industrial output, and discrepancies between SIC Code designations (as reported by facility operators) and the actual type of industrial activity has the potential to pollute storm water. In addition, the Regional Board recommends use of an automated database system, such as a Geographical Information System (GIS) or Internet-based system; however, this is not required.

c) Each Permittee shall update its inventory of critical sources at least annually. The update may be accomplished through collection of new information obtained through field activities or through other readily available intra-agency informational databases (e.g. business licenses, pretreatment permits, sanitary sewer hook-up permits).

2. Inspect Critical Sources

Each Permittee shall inspect all facilities in the categories and at a level and frequency as specified in the following subsections.

a) Commercial Facilities

(1) Restaurants

Frequency of Inspections: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of inspections: Each Permittee, in cooperation with its appropriate department (such as health or public works), shall inspect all restaurants within its jurisdiction to confirm that storm water BMPs are being effectively implemented in compliance with State law, County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP. At each restaurant, inspectors shall verify that the restaurant operator:

- has received educational materials on storm water pollution prevention practices;
- does not pour oil and grease or oil and grease residue onto a parking lot, street or adjacent catch basin;
- keeps the trash bin area clean and trash bin lids closed, and does not fill trash bins with washout water or any other liquid;
- does not allow illicit discharges, such as discharge of washwater from floormats, floors, porches, parking lots, alleys, sidewalks and street areas (in the immediate vicinity of the establishment), filters or garbage/trash containers;
- removes food waste, rubbish or other materials from parking lot areas in a sanitary manner that does not create a nuisance or discharge to the storm drain.

(2) Automotive Service Facilities

Frequency of Inspections: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of inspections: Each Permittee shall inspect all automotive service facilities within its jurisdiction to confirm that storm water BMPs are effectively implemented in compliance with County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP. At each automotive service facility, inspectors shall verify that each operator:

- maintains the facility area so that it is clean and dry and without evidence of excessive staining;
- implements housekeeping BMPs to prevent spills and leaks;
- properly discharges wastewaters to a sanitary sewer and/or contains wastewaters for transfer to a legal point of disposal;
- is aware of the prohibition on discharge of non-storm water to the storm drain;
- properly manages raw and waste materials including proper disposal of hazardous waste;
- protects outdoor work and storage areas to prevent contact of pollutants with rainfall and runoff;
- labels, inspects, and routinely cleans storm drain inlets that are located on the facility's property; and
- trains employees to implement storm water pollution prevention practices.

(3) Retail Gasoline Outlets and Automotive Dealerships

Frequency of Inspection: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of Inspection: Each Permittee shall confirm that BMPs are being effectively implemented at each RGO and automotive dealership within its jurisdiction, in compliance with the SQMP, Regional Board Resolution 98-08, and the Stormwater Quality Task Force Best Management Practice Guide for RGOs. At each RGO and automotive dealership, inspectors shall verify that each operator:

- routinely sweeps fuel-dispensing areas for removal of litter and debris, and keeps rags and absorbents ready for use in case of leaks and spills;
- is aware that washdown of facility area to the storm drain is prohibited;
- is aware of design flaws (such as grading that doesn't prevent run-on, or inadequate roof covers and berms), and that equivalent BMPs are implemented;
- inspects and cleans storm drain inlets and catch basins within each facility's boundaries no later than October 1st of each year;
- posts signs close to fuel dispensers, which warn vehicle owners/operators against "topping off" of vehicle fuel tanks and installation of automatic shutoff fuel dispensing nozzles;
- routinely checks outdoor waste receptacle and air/water supply areas, cleans leaks and drips, and ensures that only watertight waste receptacles are used and that lids are closed; and
- trains employees to properly manage hazardous materials and wastes as well as to implement other storm water pollution prevention practices.

b) Phase I Facilities

Permittees need not inspect facilities that have been inspected by the Regional Board within the past 24 months. For the remaining Phase I facilities that the Regional Board has not inspected, each Permittee shall conduct compliance inspections as specified below.

Frequency of Inspection

Facilities in Tier 1 Categories: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Facilities in Tier 2 Categories: Twice during the 5-year term of the permit, provided that the first inspection occurs no later than August 1, 2004. Permittees need not perform additional inspections at those facilities determined to have no risk of exposure of industrial activity to storm water. For those facilities that do have exposure of industrial activities to storm water, a Permittee may reduce the frequency of additional compliance inspections to once every 5 years, provided that the Permittee inspects at least 20% of the facilities in Tier 2 each year.

Level of Inspection: Each Permittee shall confirm that each operator:

- has a current Waste Discharge Identification (WDID) number for facilities discharging storm water associated with industrial activity, and that a Storm Water Pollution Prevention Plan is available on-site, and
- is effectively implementing BMPs in compliance with County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP.

c) Other Federally-mandated Facilities

Frequency of Inspection: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of Inspection: Each Permittee shall confirm that each operator:

- has a current Waste Discharge Identification (WDID) number for facilities discharging storm water associated with industrial activity, and that a Storm Water Pollution Prevention Plan is available on-site, and
- is effectively implementing BMPs in compliance with County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP.

3. Ensure Compliance of Critical Sources

a) **BMP Implementation:** In the event that a Permittee determines that a BMP specified by the SQMP or Regional Board Resolution 98-08 is infeasible at any site, that Permittee shall require implementation of other BMPs that will achieve the equivalent reduction of pollutants in the storm water discharges. Likewise, for those BMPs that are not adequate to achieve water quality objectives, Permittees may require additional site-specific controls, such as Treatment Control BMPs.

b) **Environmentally Sensitive Areas and Impaired Waters:** For critical sources that are in ESAs or that are tributary to CWA § 303(d) impaired water bodies, Permittees shall consider requiring operators to implement additional controls to reduce pollutants in storm water runoff that are causing or contributing to the exceedences of Water Quality Objectives.

c) **Progressive Enforcement:** Each Permittee shall implement a progressive enforcement policy to ensure that facilities are brought into compliance with all storm water requirements within a reasonable time period as specified below.

(1) In the event that a Permittee determines, based on an inspection conducted above, that an operator has failed to adequately implement all necessary BMPs, that Permittee shall take progressive enforcement action which, at a minimum, shall include a follow-up inspection within 4 weeks from the date of the initial inspection.

(2) In the event that a Permittee determines that an operator has failed to adequately implement BMPs after a follow-up inspection, that Permittee shall take further enforcement action as established through authority in its municipal code and ordinances or through the judicial system.

(3) Each Permittee shall maintain records, including inspection reports, warning letters, notices of violations, and other enforcement records, demonstrating a good faith effort to bring facilities into compliance.

d) Interagency Coordination

(1) **Referral of Violations of the SQMP, Regional Board Resolution 98-08, and Municipal Storm Water Ordinances:** A Permittee may refer a violation(s) to the Regional Board provided that that Permittee has made a good faith effort of progressive enforcement. At a minimum, a Permittee's good faith effort must include documentation of:

- Two follow-up inspections, and
- Two warning letters or notices of violation.

(2) **Referral of Violations of the GIASP, including Requirements to File a Notice of Intent:** For those facilities in violation of the GIASP, Permittees may escalate referral of such violations to the Regional Board after one inspection and one written notice to the operator regarding the violation. In making such referrals, Permittees shall include, at a minimum, the following documentation:

- Name of the facility;
- Operator of the facility;
- Owner of the facility;
- Industrial activity being conducted at the facility that is subject to the GIASP; and
- Records of communication with the facility operator regarding the violation, which shall include at least an inspection report and one written notice of the violation.

Permittees shall, at a minimum, make such referrals on a quarterly basis.

(3) **Investigation of Complaints Regarding Facilities – Transmitted by the Regional Board Staff:** Each Permittee shall initiate, within one business day, investigation of complaints (other than non-storm water discharges) regarding facilities within its jurisdiction. The initial investigation shall include, at a minimum, a limited inspection of the facility to confirm the complaint to determine if the facility is effectively complying with the SQMP and municipal storm water/urban runoff ordinances, and to oversee corrective action.

(4) **Support of Regional Board Enforcement Actions:** As directed by the Regional Board Executive Officer, Permittees shall support Regional Board enforcement actions by: assisting in identification of current owners, operators, and lessees of facilities; providing staff, when available, for joint inspections with Regional Board inspectors; appearing as witnesses in Regional Board enforcement hearings; and providing copies of inspection reports and other progressive enforcement documentation.

(5) **Participation in a Task Force:** The Permittees, Regional Board, and other stakeholders may form a Storm Water Task Force, the purpose of which is to communicate concerns regarding special cases of storm water violations by industrial and commercial facilities and to develop a coordinated approach to enforcement action.

D. Development Planning Program

The Permittees shall implement a development-planning program that will require all Planning Priority development and Redevelopment projects to:

- Minimize impacts from storm water and urban runoff on the biological integrity of Natural Drainage Systems and water bodies in accordance with requirements under CEQA (Cal. Pub. Resources Code § 21100), CWC §

Attachment B

Phase I NDPES MS4 Permits

Alaska

United States Environmental Protection Agency
Region 10
1200 Sixth Avenue
Seattle, Washington 98101

AUTHORIZATION TO DISCHARGE UNDER THE

NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM

In compliance with the provisions of the Clean Water Act, 33 U.S.C. § 1251 et seq., as amended by the Water Quality Act of 1987, P.L. 100-4 (the "Act"),

THE MUNICIPALITY OF ANCHORAGE and
THE ALASKA DEPARTMENT OF TRANSPORTATION AND PUBLIC FACILITIES
(hereinafter "Permittees")

are authorized to discharge from all municipal separate storm sewer system outfalls existing as of the effective date of this Permit, to receiving waters which include the Eklutna River, Edmonds Creek, Mirror Creek, Peters Creek, Fire Creek, Eagle River, Meadow Creek, South Fork Eagle River, Ship Creek, Chester Creek, North Fork Chester Creek, Middle Fork Chester Creek, South Fork Chester Creek, Fish Creek, Campbell Creek, North Fork Campbell Creek, South Fork Campbell Creek, Little Campbell Creek, Craig Creek, Furrow Creek, Hood Creek, Little Survival Creek, Rabbit Creek, Little Rabbit Creek, Potter Creek, Bird Creek, Mink Creek, Indian Creek, and Glacier Creek, their tributaries, associated lake systems, and wetlands located within the corporate limits of the Municipality of Anchorage in accordance with the conditions set forth herein.

This permit shall become effective

This permit and the authorazation to discharge shall expire at midnight,

Signed this day of

Director, Office of Water,Region 10
U.S.EnvironmentalProtectionAgency

PART V -- DEFINITIONS 42

PART I -- APPLICABILITY

A. PERMIT AREA

This Permit covers all areas within the corporate boundary of the Municipality of Anchorage served by the municipal separate storm sewer system ("MS4") owned or operated by the Permittees.

B. DISCHARGES AUTHORIZED UNDER THIS PERMIT

This Permit authorizes the discharge of storm water to waters of the United States from: (1) all portions of the MS4 owned or operated by the Municipality of Anchorage; and (2) portions of the MS4 within State of Alaska highway rights-of-way located within the corporate boundaries of the Municipality of Anchorage that are owned or operated by the Alaska Department of Transportation and Public Facilities. This Permit also authorizes the discharge of storm water commingled with flows contributed by process wastewater, non-process wastewater, and storm water associated with industrial activity, provided that the commingled flows fall within at least one of the categories of covered non-storm water discharges set forth in Part I.D. of this Permit.

C. PERMITTEES' RESPONSIBILITIES

1. Each Permittee is individually responsible
2. or permit compliance:

    a. related to portions of the MS4 owned or operated solely by that Permittee; and

    b. where this Permit directs action or inaction by that named Permittee.

3. Each Permittee is jointly responsible for permit compliance:

    a. related to portions of the MS4 where operational or storm water management program implementation authority has been transferred from one Permittee to another in accordance with an interagency or inter-jurisdictional agreement;

    b. related to portions of the MS4 where Permittees jointly own or operate a portion of the MS4; and andassessments required
    c. related to the submission of plans, reports, strategies by Part II of this Permit.

D. LIMITATIONS ON PERMIT COVERAGE

1. Non-Storm Water. Discharges of non-storm water are not authorized by this Permit except where such discharges satisfy one of the following three conditions:

a. The non-storm water discharges are in compliance with a separate NPDES permit;

b. The non-storm water discharges result from a spill and:

(1) are the result of an Act of God where reasonable and prudent measures have been taken to minimize the impact of such discharge; or

(2) consist of emergency discharges required to prevent imminent threat to human health or severe property damage, provided that reasonable and prudent measures have been taken to minimize the impact of such discharges; or

c. The non-storm water discharges satisfy each of the following two conditions:

(1) The discharges consist of water line flushing, landscape irrigation, diverted stream flows, rising ground waters, uncontaminated ground water infiltration (as defined at 40 CFR § 35.2005(20)), uncontaminated pumped ground water, discharges from potable water sources, foundation drains, air conditioning condensation, irrigation water, springs, water from crawl space pumps, footing drains, lawn watering, individual residential car washing, flows from riparian habitats and wetlands, dechlorinated swimming pool discharges, street wash water, or flows from emergency fire fighting activities; and

(2) The discharges are not sources of pollution to waters of the United States. A discharge will be considered a source of pollution to waters of the United States if it:

(a) causes excessive foam in the receiving waters or contains floating and/or settleable solids;

(b) contains oil or other substances in amounts sufficient to create a visible film or sheen on the receiving waters;

(c) contains substances that are in amounts sufficient to be unsightly or deleterious or which produce color, odor, or other conditions to such a degree as to create a nuisance;

(d) contains any substance, or combination of substances, in amounts sufficient to be acutely toxic to, or to otherwise severely injure or kill aquatic life, other animals, plants or humans;

(e) contains any substances or combination of substances in amounts that will cause or contribute to the growth of aquatic plants or algae to such degree as to create a nuisance, be unsightly or otherwise impair the designated use;

(f) results in the discharge of sufficient quantities of pollutants that would cause a violation of water quality standards; or

(g) results in the degradation or loss of State-designated beneficial uses of receiving waters (unless authorized by the State in accordance with the State's Antidegradation policy).

2. Discharges Threatening Water Quality. This permit does not authorize storm water discharges that the Regional Administrator determines will cause, or have the reasonable potential to cause, violations of water quality standards.

PART II -- STORM WATER MANAGEMENT PROGRAM

Permittees shall develop and implement a Storm Water Management Program which shall include all controls necessary to reduce the discharge of pollutants from the MS4 to the maximum extent practicable ("MEP"). The Storm Water Management Program should employ best management practices ("BMPs"), control techniques, system design and engineering methods, and other appropriate provisions.

The Storm Water Management Program shall cover the term of this Permit and shall be updated as necessary, or as required by the Regional Administrator, to ensure compliance with Section 402(p)(3)(B) of the Clean Water Act, 33 U.S.C. § 1342(p)(3)(B). Modifications to the Storm Water Management Program shall be made in accordance with Part IV.H. of this Permit. The Storm Water Management Program and all approved updates made in accordance with Part IV.J. of this Permit, are hereby incorporated by reference. All components, conditions and requirements of the Storm Water Management Program are enforceable as conditions of this Permit.

All plans requiring submittal for review and approval shall be submitted to the U.S. Environmental Protection Agency ("EPA") and the Alaska Department of Environmental Conservation ("ADEC") in accordance with the requirements identified in Part II.A. and the procedures identified in Part IV.K. of this Permit. EPA, in consultation with ADEC, shall have the right to disapprove, or require modifications for approval to plans, within sixty (60) days of receipt. If EPA does not disapprove such plans within sixty (60) days, they shall be deemed approved.

A. STORM WATER MANAGEMENT PROGRAM REQUIREMENTS

1. Structural and Source Control Measures. The MS4 and any storm water structural and source controls shall be operated in a manner to reduce the discharge of pollutants to the MEP.

    a. Maintenance Activities and Maintenance Schedule. Permittees shall operate the existing structural control maintenance programs as detailed in Sections 3 and 5A of Part 1 of the Permit Application, which shall include the following:

        (1) Inspection and Maintenance Schedules. Permittees shall revise Sections 5.8.1.1 and 5.8.1.2 of Part 2 of the Permit Application to include definitive inspection and maintenance schedules for all Permittee-owned structural controls. Inspection schedules shall include the frequency of routine inspections for all categories of structural controls, including wetlands used as storm water

treatment, as well as a description of the inspection criteria and procedures. Maintenance programs shall establish guidelines and criteria for maintenance activities that are to be implemented for Permittee-owned structural controls, as well as a description of the maintenance activities required, such as "disposal of sediment or removal of debris." Permittees shall identify and submit the locations of all permittee-owned structural controls to the Regional Administrator with the first annual report due twelve (12) months from the effective date of this permit. The inspection and maintenance schedule shall be submitted to the Regional Administrator with the second annual report due twenty-four (24) months from the effective date of this Permit.

(2) Inspection and Maintenance Record-keeping. Each Permittee shall maintain an internal record-keeping system to track inspections and maintenance for those portions of the MS4 operated by that Permittee. Inspection and maintenance activities shall be recorded on standardized reporting forms and shall be submitted annually in conjunction with the annual reports beginning with the second annual report due twenty-four (24) months from the effective date of this permit.

(3) Inspection and Maintenance Evaluations. Permittees shall conduct annual evaluations to assess the appropriateness of the inspection and maintenance schedule to: (1) ensure that controls are operating in a manner that reduces pollutants to the MEP; and (2) assist in setting priorities for program development. Modifications to the inspection and maintenance schedule shall be submitted as part of the annual report required by Part IV.G. of this Permit.

(4) Structural and Source Controls Effectiveness Assessments and Analyses. Permittees shall continue to implement and refine the existing program to evaluate the effectiveness of structural and source controls. Information gathered and evaluated through this program shall be used in: estimating the effectiveness of controls; selecting, designing, and maintaining controls; and providing valuable information to management in land use planning and decision-making.

(a) During the five year term of this Permit, Permittees shall complete (at a minimum) the following structural and source control assessment projects which are further described in Appendix "A":

i) Oil and Grit Separator BMP Assessment

ii) Sedimentation Basin Assessment

iii) Storm Water Treatment in Wetlands Assessment

iv) Assessment of Non-Structural Source Controls to include increased use of Greenbelts and Pervious Surfaces

v) Fecal Coliform Bacteriological Impacts Assessment

vi) Stream Sediment - Characterization

(b) Schedule and Scope of Assessments. Permittees shall provide a proposed schedule and detailed overview of the scope of all assessments required in Part II.A.1.a.(4) for approval to the Regional Administrator within 90 days after the effective date of this Permit. This schedule shall be a topic for discussion during the first annual meeting as set forth in Part II.A.7. Assessments will be initiated according to the approved schedule and scope, with incorporation of modifications as set forth in writing by the Regional Administrator.

(c) Reporting Requirements. Permittees shall submit completed assessment reports to the Regional Administrator in accordance with the approved schedule required in Part II.A.1.a.(4)(b).

b. Areas of New Development and Significant Redevelopment. The Municipality of Anchorage shall limit to the MEP the discharge of pollutants in storm water resulting from new development and from redeveloped areas after construction is completed. The primary emphasis shall be on prevention, through planned development, and secondarily through storm water treatment via required implementation of BMPs. In accordance with this program area:

(1) As part of its revisions to the Anchorage Bowl Comprehensive Development Plan the Municipality of Anchorage shall evaluate new land use policies to reduce urban runoff pollution to the MEP. Policies to be evaluated shall include, but are not limited to:

(a) Establishment of incentive plans to encourage preservation of at least 25% (or a lesser percentage based on site limitations) of native vegetation on developing acreage to aid in on-site treatment of runoff water.

(b) Establishment of minimum nondisturbance and structural setback requirements from lakes for developing acreage together with incentive programs for existing property owners who voluntarily elect to dedicate nondisturbance easements adjacent to lakes.

(c) Establishment of an incentive plan to encourage dedicated setbacks from waterbodies of at least 50 feet in new subdivisions within the Municipality, unless otherwise specified as greater in the Anchorage Wetlands Management Plan. The Municipality of Anchorage shall also evaluate the establishment of an incentive plan to encourage existing property owners to dedicate setbacks from waterbodies or otherwise reduce adverse impacts of storm water to waterbodies.

(d) Requiring permitting and review of land-clearing activities to retain as much pervious surface area as possible.

(2) The Municipality of Anchorage shall establish an Open Space Plan for the purpose of guiding future growth and development in the Municipality while taking into consideration storm water impacts. The Open Space Plan shall be adopted and submitted to the Regional Administrator within twenty-four (24) months after the effective date of this Permit.

(3) The Municipality of Anchorage shall submit a general schedule and list of actions describing the procedures under which the elements set forth in Part II.A.1.b.(1) of this Permit will be considered during the Anchorage Bowl Comprehensive Development Plan revision process to the Regional Administrator no later than 90 days after the effective date of this Permit.

(4) The Municipality of Anchorage shall adopt a minimum of two of the elements set forth in Part II.A.1.b.(1), or equivalent incentive programs and shall report results to the Regional Administrator with the annual report in the year coinciding with completion of the Anchorage Bowl Comprehensive Plan revision. Extensions or modifications to this requirement can be requested in writing to the Regional Administrator in conjunction with the annual reports.

(5) The policies, development regulations and permitting requirements adopted and implemented by the Municipality of Anchorage shall be no less stringent than policies and management strategies of the Anchorage Wetlands Management Plan.

(6) The Municipality of Anchorage shall ensure that its local ordinances and design criteria are consistent with applicable State and Federal regulations, as well as with findings resulting from the assessments required in Part II.A.1.a.(4)(a).

(7) New Develoment and Significant Redevelopment Program Requirements. To satisfy the requirements of this program, the Municipality of Anchorage shall comply with the following elements for all new development and significant redevelopment within the Municipal boundaries defined by this permit.

(a) The MOA shall develop and submit project review and approval procedures, for new development and significant redevelopment, as part of the first annual report required by Part IV.G. of this Permit. The Municipality of Anchorage shall begin implementation of these project review and approval procedures for new development and significant redevelopment within twelve (12) months of the effective date of this Permit. Project review and approval procedures shall include:

i) procedures for incorporating and addressing post-construction storm water quality concerns as part of the permitting process for new development and significant redevelopment,

ii) a description of review standards (Permittees may review ADEC standards and modify in cooperation with ADEC, as appropriate) and a description of the site development review process, and

iii) minimum design criteria for all BMPs.

(b) The Municipality of Anchorage shall develop an inspection and enforcement strategy for new development and significant redevelopment (private and public) to ensure that all specified BMPs are implemented in accordance with the approved plan. The Municipality of Anchorage shall submit, for review and approval, an inspection and enforcement strategy and procedures as part of the first annual report due twelve (12) months after the effective date of this Permit. Implementation shall begin within sixty (60) days after approval. An annual summary of activities shall be submitted as part of the annual report beginning with the second annual report due twenty-four (24) months after the effective date of this permit.

(c) The MOA shall develop and provide staff training for personnel responsible for plan review and inspection of development sites. DOT&PF shall also develop and provide staff training for personnel responsible for plan review and inspection of DOT&PF development. Training shall include information on BMPs, their applications, and effectiveness. Training shall begin within two (2) years from the effective date of this permit. Summaries of the training (materials, dates, and attendees) shall be submitted as part of the annual reports beginning with the second annual report due twenty-four (24) months of the effective date of this permit.

(d) The MOA shall provide public education to developers, landowners, and other potentially affected parties. Public education shall also target existing property owners to increase awareness on basic land use regulations within the Municipality of Anchorage. Summaries of the training (materials, dates, and attendees) shall be submitted as part of the annual reports beginning with the second annual report due twenty-four (24) months of the effective date of this permit.

c. Roadways. Permittees shall operate and maintain public streets, roads, highways, and parking areas in a manner to reduce to the MEP the impact on receiving waters of discharges from the MS4. Permittees shall minimize to the MEP the discharge of pollutants, including those pollutants related to street sweeping, snow removal, deicing or sanding activities. Permittees shall continue their current practices of road, street, and highway maintenance, with improvements and modifications as required to reduce the pollutant load to the MEP. In addition, a program relating to the application of substances used in deicing operations, and the management of snow disposal areas shall be implemented. In accordance with this program area:

(1) Permittees shall examine, assess, and implement procedures of deicing to ensure that there are no adverse impacts on water quality. Permittees shall submit existing studies of alternative deicing agents to EPA and ADEC no later than 90 days from the effective date of this Permit. Permittees shall complete and submit to EPA and ADEC studies of deicing agents under consideration, as further described in Appendix "A," within twelve (12) months of the effective date of this Permit. Investigative results and a management and monitoring plan that addresses deicer application areas, application and dilution rates of sand and chemical deicers,

disposition of snow associated with removal efforts, recommended BMPs designed to reduce discharges to receiving waters to the MEP, and monitoring to determine BMP effectiveness shall be submitted to EPA for review and approval a minimum of thirty (30) days prior to further use of chemical deicers. This management and monitoring plan shall be adhered to by both MOA and DOT&PF and updated as information becomes available in subsequent monitoring efforts. Updates to the deicing management and monitoring plan shall be submitted to EPA with the annual reports as required in Part IV.G. of this Permit.

(2) Permittees shall examine, assess, and implement sanding procedures to ensure runoff is reduced to the MEP. Permittees shall establish a sand storage, application, and monitoring program to include volume balance and particulate analysis of material added to municipality streets. Permittees shall submit plans for street sanding and sweeping practices that reflect results of recent studies. Existing street sediment analysis shall be submitted to the Regional Administrator no later than 90 days from the effective date of this Permit. Permittees shall complete and submit to EPA and ADEC additional studies of street sediment impacts, further described in Appendix "A," within four (4) years of the effective date of this Permit. Program updates and enhancements shall be submitted with the annual reports as required in Part IV.G. of this Permit;

(3) By the end of the first year of the permit term, Permittees shall develop (or update) and implement a snow disposal policy that establishes requirements for all publicly-owned snow disposal sites. This snow disposal policy shall require the use of BMPs and an inspection and maintenance schedule and shall be part of Permittees' Storm Water Management Program.

(4) Permittees shall not establish any new snow disposal site prior to providing an opportunity for public review and submittal of plan for review and approval from ADEC. Any new snow disposal site plan shall include controls to address the migration of meltwater to reduce the discharge of pollutants to the MEP to surface waters for the purpose of this permit.

d. Floodplain Management. The Municipality of Anchorage shall ensure that construction activities and development located in floodplain areas, and flood control devices be designed to prevent violations of Alaska State Water Quality Standards to the MEP. To satisfy this program area, the MOA shall comply with the following elements:

(1) All development proposed within floodplains shall be assessed by the Municipality of Anchorage during the Flood Hazard Review process to ensure potential impacts on the water quality of receiving water bodies has been properly addressed. If a use, structure, or activity is proposed in a floodway or floodway fringe area, the MOA shall prohibit that proposal as stipulated in AMC Section 21.60.060.

(2) Information regarding impervious surface area located in the floodplain corridors should be used (in conjunction with other environmental indicators) as a planning tool. The Municipality of Anchorage shall collect data on the percentage of impervious surface area located in floodplain boundaries for all development proposed after the effective date of this Permit. The Municipality shall collect similar data for existing development in floodplain areas, in accordance with the mapping program and other activities designed to improve water quality, as detailed in Appendix "A."

(3) Critical unmapped areas shall be prioritized by the Municipality of Anchorage with an emphasis on developed and developing acreage and shall be submitted to the Federal Emergency Management Agency ("FEMA") for designation of flood hazard boundaries. Results shall be submitted to EPA with the second annual report required by Part IV.G. of this Permit.

(4) The Municipality of Anchorage shall determine the status of compliance with the mandatory (five years or less) review of existing flood hazard maps as required by Chapter 21.60.020(B) of the Anchorage Municipal Code.

e. Pesticide, Herbicide, and Fertilizer Application. Permittees shall implement the following program to control the discharge of pesticides, fertilizers, and herbicides to the MS4:

(1) Permittees shall develop a pesticide screening program which, at a minimum, shall incorporate the following elements:

(a) Permittees shall evaluate the use of pesticides, herbicides, and fertilizers in Anchorage by compiling readily available information from sources including, but not limited to, the Cooperative Extension Service, ADEC's pesticide program, primary retail and wholesale outlet sources, and commercial applicators. The end result of this effort shall be to determine the types of products recommended and used in the Anchorage area. The information gathered through this effort shall be provided to the Regional

Administrator and ADEC as part of the first annual report required by Part IV.G. of this Permit.

(b) Based on the above evaluation, Permittees shall develop and implement a field screening assessment design for pesticides detection and evaluation as per Appendix "A" of this Permit. Collected information shall be included in the annual reports required by Part IV.G. of this Permit.

(2) Based on the information collected in year one (1) of this Permit, Permittees shall begin implementation of an ongoing education program in year two (2) of this Permit for promoting the proper use of pesticides, herbicides, and fertilizers with the overall goal of reducing, to the MEP, the discharges of such to the MS4. Such a program may incorporate existing materials such as those developed by the University of Alaska Cooperative Extension Service and ADEC. Permittees shall submit copies of all materials distributed as part of the public education program with the second annual report required by Part IV.G. of this Permit. Additional materials distributed thereafter shall be included in the annual reports.

(3) Based on the results of the field screening assessment and the available local information, Permittees shall develop and implement a plan for the on-going control of pesticide, herbicide, and fertilizer use within one year of completion of the field screening assessment. The plan shall include re-evaluation of the public education program with appropriate revisions. Permittees shall identify areas for which additional testing may be warranted and shall take all steps necessary for timely testing and appropriate implementation. The plan shall include the measures to be used for assessing program results. Actions taken under this condition shall be submitted as part of the annual report required by Part IV.G. of this Permit.

2. Illicit Discharges. Permittees shall implement a program to detect and eliminate illicit discharges into the MS4. Details of the program are to be incorporated into the annual report required under Part IV.G. of this Permit. The program shall include the following program areas:

a. Prevention. Permittees shall implement an ongoing program to detect and remove (or require the discharger to the MS4 to obtain a separate NPDES permit for) illicit discharges into the MS4.

(1) Permittees shall effectively prohibit non-storm water discharges (except those identified in the following subsection), to the MS4,

including all used motor vehicle fluids and household chemical wastes, by enforcement of Municipal ordinances.

(2) Unless identified by either Permittees or the Regional Administrator as sources of pollutants to waters of the United States, the following non-storm water discharges need not be addressed by Permittees' Illicit Discharge and Illegal Disposal Program: water line flushing, landscape irrigation, diverted stream flows, rising ground waters, uncontaminated ground water infiltration (as defined at 40 CFR § 35.2005(20)), uncontaminated pumped ground water, discharges from potable water sources, foundation drains, air conditioning condensation, irrigation water, springs, water from crawl space pumps, footing drains, lawn watering, individual residential car washing, flows from riparian habitats and wetlands, dechlorinated swimming pool discharges, and street wash water.

(3) Discharges and flows from emergency fire fighting activities shall not be addressed by Permittees' Illicit Discharge Program unless identified by either Permittees or the Regional Administrator as sources of pollutants to waters of the United States.

b. Ongoing field screening. Permittees shall maintain an ongoing program to screen the MS4 for illicit discharges, to include, at a minimum, the following program elements:

(1) Permittees shall conduct a visual inspection of all major outfalls during dry weather periods in years two (2) and five (5) of this Permit term. Permittees shall submit an inspection plan, listing the outfalls and inspections criteria, to the Regional Administrator for review and approval within 90 days of the effective date of this Permit. Permittees shall submit documentation regarding protocols and parameters of the field screening as part of the first annual report required by Part IV.G. of this Permit.

(2) Permittees shall conduct chemical analysis of the dry weather flow for those outfalls identified as likely to contribute pollutants to the storm drain system in accordance with the monitoring plan outlined in Appendix "A.". Chemical analysis shall be prioritized based on information obtained through visual inspections, citizen complaints, bioassessment monitoring, and/or previous monitoring results. Permittees shall submit results of this monitoring to the Regional Administrator and ADEC with the annual reports required in Part IV.G. of this Permit.

c. Investigation of suspected illicit discharges. Permittees shall implement

this program area to locate and eliminate suspected sources of illicit discharges to the MS4.

(1) Permittees shall use the results of existing and on-going dry-weather screening and citizen reports as the primary basis for locating illicit discharges.

(2) The Municipality of Anchorage shall evaluate and properly address all citizen and agency reports of illicit discharges , as well as other information made available to the Municipality.

(3) Permittees shall perform field testing to identify and isolate sources of suspected illicit dischargesin a timely manner.

(4) Permitttees shall issue a notice of violation, when appropriate, to any party found responsible for the illicit discharge, connection or disposal.

(5) Permittees shall require an expeditious compliance schedule for the elimination of any illicit discharge by any party responsible for the illicit discharge.

(6) Permittees shall submit a copy of their procedures for the investigation of suspected illicit discharges with the first annual report required by Part IV.G. of this Permit.

(7) Permittees shall investigate the 45 outfalls identified in Table 5-4 of Section 5.9.3.1 of Part II of the Permit Application by the end of the second year of the Permit term. Conclusions and follow-up action resulting from these investigations shall be submitted to the Regional Administrator with the annual report due at the end of year two of the Permit term.

d. Procedures to Prevent, Contain and Respond to Spills. Permittees shall finalize the Emergency Response Program identified in Section 5B of Part 1 of the Permit Application in order to formalize the spill response roles of state and municipal departments and to provide a coordinated response to spills that may discharge into the MS4. Final program plans shall be completed within twenty-four (24) months of the effective date of this Permit and shall be submitted with the second annual report required by Part IV.G. of this Permit.

e. Public Reporting of Illicit Discharges. Permittees shall promote and facilitate public reporting of the presence of illicit discharges to the MS4.

(1) Permittees shall establish and operate a central phone number (i.e.,

a hotline number) for public reporting of illicit dischargesas stated in Section 5.9.1.2 of Part 2 of the Permit Application. Permittees shall establish procedures that govern the appropriate follow-up response to calls received through the hotline. The establishment and operation of a central phone number (i.e., a hotline number) shall be completed within twelve (12) months from the effective date of this Permit. Permittees shall submit procedures governing the appropriate follow-up response to calls received through the hotline to the Regional Administrator with the first annual report required by Part IV.G. of this Permit.

(2) Permittees shall establish and maintain a log that contains of a list of all reports, date of report, follow-up action taken, and results. Reports shall include all suspected illicit discharges, public and otherwise, requiring investigation by Part II.A.2.(c). A copy of this log shall be submitted with the annual reports required by Part IV.G. of this Permit.

(3) Permittees shall promote public reporting of illicit discharges through brochures and other means. Permittees shall submit program plans for the promotion of public reporting of illicit discharges with the first annual report required by Part IV.G. of this Permit.

f. Educational and Public Information Activities. Permittees shall continue to implement and develop additional program elements where necessary to inform and educate the public on proper management and disposal of used oil, other automotive fluids, and household chemicals. Programs such as Free Dump Day are encouraged. Permittees shall develop a coordinated business and industry education program for implementation in the second year of this permit term, and continuing thereafter, to control illicit discharges as stated in Section 5.9.1.2 of Part 2 of the Permit Application.

3. Industrial and High Risk Runoff Program. Permittees shall implement a program to identify, monitor and control pollutants in storm water discharges to the MS4 from: municipal landfills (open and closed); hazardous waste recovery, treatment, storage, and disposal facilities; privately-owned snow disposal sites; facilities subject to Section 313 of the Emergency Planning and Community Right-to-Know Act, 42 U.S.C. § 11023; and any other industrial facility that either the Permittees or the Regional Administrator determines is contributing a substantial pollutant loading to the MS4. The program shall include the following program procedures:

a. Facility Identification: Permittees shall complete an identification of industrial and high risk runoff facilities and develop procedures to map and record details of the facilities. Procedures to identify, map, and record

the high risk facilities shall be completed, and implementation commenced, within three (3) years of the effective date of this Permit. Mapping of all identified facilities shall be completed by the end of this permit term.

b. Outreach. Permittees shall develop (or incorporate existing) educational and outreach materials concerning storm water runoff management at targeted industrial categories including, but not limited to: automotive repair shops, gas stations, snow disposal sites, nurseries and greenhouses, and floatplane and other transportation facilities. The development of educational materials (if necessary), and the distribution of such materials to the targeted industries shall be achieved within two years of the effective date of this Permit. All information developed and/or distributed shall be included in the annual report required by Part IV.G. of this Permit.

c. Investigation of Wrongful Discharge. Permittees shall develop procedures to govern the investigation of the identified facilities suspected of contributing pollutants to the MS4, including a review, if applicable, of monitoring data collected by the facility pursuant to its NPDES permit. Procedures governing the investigation of identified facilities shall be submitted as part of the first and second annual reports required by Part IV.G. of this Permit.

Permittees shall work with such facilities to gain voluntary compliance in reducing pollutants to the MEP. Facilities that fail to cooperate and continue to contribute to the pollutant load or operate in violation of NPDES discharge permits shall be reported to the permitting agency for further action. Permittees shall make a good faith effort to track referrals to ensure appropriate measures are taken. Any activity arising from this program element shall be reported in the annual report required by Part IV.G. of this Permit for the year in which the activity took place.

4. Construction Site Runoff Program. Permittees shall implement a construction site runoff program to reduce, to the MEP, the discharge of pollutants from public and private construction sites. The program shall incorporate the following elements:

a. Storm Water Quality Pollution Prevention Plans. The Municipality of Anchorage shall require property owners and developers to prepare and submit for approval Storm Water Pollution Prevention Plans for construction within the boundaries of the Municipality of Anchorage as of the effective date of this permit. Permittees shall implement procedures for site plan review that incorporate consideration of potential water quality impacts from construction sites within the Municipality of Anchorage.

(1) Approved Storm Water Pollution Prevention Plans shall require appropriate BMPs to reduce runoff impacts to waterbodies to the MEP and shall contain provisions addressing erosion and sediment control, material containment, spill prevention, and other areas as applicable.

(2) Storm Water Pollution Prevention Plans for construction sites shall be subject to review and approval by the Municipality of Anchorage.

(3) The Municipality of Anchorage shall develop Storm Water Pollution Prevention Plan review and approval procedures and shall submit such procedures to the Regional Administrator as part of the first annual report required by Part IV.G. of this Permit. This submittal shall include:

(a) a description of the Storm Water Quality Pollution Prevention Plan review and approval process;

(b) written criteria and standards for plan approval; and

(c) a description of periodic staff training on control technologies and on the review and approval process.

b. Structural and Non-structural BMPs. Permittees shall maintain and update existing requirements for the selection, implementation, installation, and maintenance of construction BMPs in years four (4) and five (5) of this permit term. The criteria for BMP selection and design shall consider such factors as project type, size, duration, soil type, and proximity to waters of the United States. BMP requirements, and subsequent modifications, shall be submitted as part of the annual reports required in Part IV.G. of this Permit.

c. Procedures for Site Inspection and Enforcement. Permittees shall implement procedures for inspection and enforcement of control measures at construction sites.

(1) Permittees shall submit a description of the procedures and strategies for conducting site inspections and enforcement for review and approvalwith the first annual report required by Part IV.G. of this Permit. These procedures and strategies shall include:

(a) inspections to ensure BMPs are being installed and maintained according to the approved plan and that all pollution sources have been addressed;

(b) inspection strategy detailing frequency, prioritization, and follow-up;

(c) plans for training of inspection and enforcement staff; and
(d) enforcement provisions to insure compliance with requirements for operation and maintenance of BMPs.

(2) Permittees shall commence implementation of the site inspections and enforcement procedures within twenty-four (24) months of the effective date of this Permit.

d. Training and Education for Construction Site Operators. Permittees shall develop a training program for construction site operators and developers. Permittees shall submit a description of this training program with the first annual report required by Part IV.G. of this Permit. Implementation of the training program shall begin within twenty-four (24) months of the effective date of this Permit. Permittees shall ensure that:

(1) Such training is provided at a minimum of once per year; and

(2) Attendance at such training is encouraged through incentive programs or mandatory attendance requirements.

e. Permittees shall notify construction site owners operating sites greater than 5 acres in area of their additional responsibilities under the NPDES permitting program for construction site runoff.

5. Public Education Programs: Permittees shall employ educational and outreach opportunities to reduce, to the MEP, impacts to the MS4 from non-point source inputs caused by human activity.

a. Permittees shall maintain public education activities with regard to storm water pollution prevention as required by Parts II.A.1.b., II.A.1.e., II.A.2., II.A.3., and II.A.4. of this Permit.

b. All public education and outreach materials distributed pursuant to this permit shall contain easily understood graphics and narratives converted from technical information on Anchorage area water quality.

c. Permittees shall establish an ongoing, broad-based technical advisory board to assist with providing information to public forums on issues related to storm water pollution and the monitoring program. The technical advisory board shall be comprised of members representing local, state, and federal agencies, non-profit interests, local citizens, and

private experts and shall be established and submitted to the Regional Administrator within twelve (12) months of the effective date of this permit.

6. Monitoring Programs. Permittees shall establish a comprehensive monitoring program to: (1) assess and characterize aquatic resources, water quality problems and sources, (2) assist in problem prioritization and resource targeting, and (3) assist in evaluating the effectiveness of specific controls as well as the overall Storm Water Management Program. Permittees shall establish a set of environmental indicators that will require tracking and monitoring to address storm water impacts to the MS4 that are further described, with corresponding schedules, in Appendix "A" of this permit. Appendix "A" shall be submitted annually for review and approval and shall be included for discussion during the annual coordination meetings required in Part II.A.7 of this Permit. Appendix "A"shall, at a minimum, consist of the following:

   a. Structural and Source Control Assessments. Assessments to be completed during this Permit term are identified in Part II.A.1.a.(4)(a) of this Permit and Appendix "A."

   b. Watershed Mapping. Permittees shall map the Campbell, Chester, Rabbit, and Ship Creek watersheds during this Permit term. Details of the mapping program are contained in Appendix "A."

   c. Sand and Deicer Impacts. Permittees shall continue to investigate the impacts of street sanding by performing a mass balance of street sediment, analysis of the street sediment adsorbed pollutants, and an analysis of commercial lot impacts from sediment buildup and runoff as identified in Part II.A.1.c.(2) of this Permit and Appendix "A." Permittees shall perform an analysis of the potential impacts of deicing agents in accordance with Part II.A.1.c.(1) of this Permit and Appendix "A."

   d. Pesticides, Herbicides, and Fertilizers. Field screening and appropriate follow-up investigation shall take place as identified in Part II.A.1.e.(1) - (3) of this Permit and Appendix "A."

   e. Illicit Discharges. Permittees shall perform dry weather field screening and appropriate investigative monitoring of outfalls as required in Part II.A.2.b. and Part II.A.2.c. of this Permit and Appendix "A."

   f. Receiving Water Monitoring. Permittees shall conduct receiving water monitoring to obtain flow and event mean concentrations of fecal coliform, copper, lead, zinc, hardness, total suspended solids, turbidity, temperature, and pH in the Campbell, Chester, Rabbit, and Ship Creek watersheds. Permittees shall conduct a macroinvertebrate assessment in the Campbell, Chester, Rabbit, and Ship watersheds, and in at least three

(3) additional Anchorage streams for which significant future development is anticipated. Details of these monitoring plans are included in Appendix "A."

g. Dry Weather and Wet Weather Periods. Permittees shall review the nationally recognized definitions for dry and wet weather periods and submit geographically appropriate modifications to the Regional Administrator for review and approval within six (6) months after the effective date of this permit.

7. Programmatic Coordination. Permittees shall conduct an annual meeting to coordinate their implementation of the Storm Water Management Program within their respective agencies as well as with other municipal, state, and federal agencies and groups who undertake activities that may impact, contribute to, or in some way overlap Permittees' storm water management efforts. The agenda for these annual meetings shall be comprised of topics of interest to the Permittees and the Anchorage Office of the EPA. Meetings shall be held approximately two months following submission of each annual report. The first meeting shall serve as an orientation and planning effort and shall take place no later than 90 days after the effective date of this Permit. The logistics for this first meeting will be handled by EPA (Permittees shall be active participants); all subsequent meetings will be organized by the Permittees. Such elements that Permittees shall consider for coordination efforts include public education relating to storm water management, monitoring activities and results, the application of BMPs, data management using such techniques as GIS applications, staff and targeted training, enforcement, capital project support, and watershed planning. Permittees shall include a summary of the previous year's efforts and annual meeting in the annual report required by Part IV.G of this Permit. Information which Permittees shall consider for inclusion in the report of the annual meeting are the names and affiliations of those in attendance, the dates and times of meetings held to coordinate consistent approaches, and a comprehensive summary of the meetings.

B. DEADLINES FOR PROGRAM COMPLIANCE

Permittees shall implement the Storm Water Management Program in accordance with the compliance schedule detailed in Part III of this Permit.

C. LEGAL AUTHORITY

Each Permittee shall ensure that it retains legal authority to control discharges to and from those portions of the MS4 over which it has jurisdiction. This legal authority may be established by statute, ordinance, permit, contract, or order (or any combination thereof), and shall enable each Permittee to:

1. Control the contribution of pollutants to the MS4 by storm water discharges associated with industrial activity and the quality of storm water discharged from sites of industrial activity and the quality of storm water discharged from sites of industrial activity;

2. prohibit illicit discharges to the MS4;

3. control the discharge to the MS4 of spills, dumping or disposal of materials other than storm water;

4. control through an interagency agreement between Permittees the contribution of pollutants from one portion of the MS4 to other portions of the MS4;

5. require compliance with conditions in ordinances, permits, contracts, or orders; and

6. carry out all inspection, surveillance, and monitoring procedures necessary to determine compliance and non-compliance with permit conditions, including the prohibition on illicit discharges to the MS4.

D. STORM WATER MANAGEMENT PROGRAM RESOURCES

Permittees shall provide adequate finances, staff, equipment, and support capabilities to implement their activities under the Storm Water Management Program.

E. TRANSFER OF OWNERSHIP, OPERATIONAL AUTHORITY, OR RESPONSIBILITY FOR STORM WATER MANAGEMENT PROGRAM IMPLEMENTATION

Permittees shall implement the Storm Water Management Program on all new areas added to the MS4 as expeditiously as practicable, but not later than three years from addition of the new areas. Implementation may be accomplished in a phased manner to allow additional time for controls that cannot be implemented immediately. Prior to land annexation, Permittees shall include a schedule for extending the Storm Water Management Program to the annexed areas in the Storm Water Management Program. At least 30 days prior to transfer of operational authority or responsibility for Storm Water Management Program implementation, Permittees shall prepare a schedule for transfer of responsibility for Storm Water Management Program implementation on the effected portions of the MS4.

F. RETENTION OF STORM WATER MANAGEMENT PROGRAM RECORDS

Permittees shall retain the Storm Water Management Program developed in accordance with Parts II and III of this Permit for at least 3 years after coverage under this Permit terminates.

PART III -- SCHEDULES FOR IMPLEMENTATION AND COMPLIANCE

Reports of compliance or noncompliance with interim and final requirements contained in any compliance schedule of this Permit shall be submitted no later than 14 days following each schedule date. Any reports of noncompliance shall include the cause of noncompliance, any remedial actions taken, and the probability of meeting the next scheduled requirement
Table III.A. Schedules for Implementation and Compliance

Storm Water Management Program Component Activity	Compliance Date
1. Structural and Source Control	
a. Maintenance Activities and Maintenance Schedule	
- Identify locations of structural controls	-12 months after effective permit date
- Revision of Application Sections 5.8.1.1. & 5.8.1.2, and program development	-24 months after effective permit date
- Submit Inspection and Maintenance records	-with annual reports
- Effectiveness Assessments of Structural and Source Controls	-per schedule in Appendix "A"
b. Areas of New Development and Significant Redevelopment	
- Comprehensive Master Planning Process	-90 days after effective permit date
- Resulting actions	-Concurrent with Final Comprehensive Plan
- Open Space Plan	-24 months after effective permit date
- Project Review and Approval Procedures	-12 months after effective permit date
- Implementation of Approved Procedures Post-Construction Inspection & Enforcememt Strategy	-12 months after effective permit date
- Submit Strategy for Review & Approval	-60 days after approval
- Implement Strategy	
- Submit Summaries of inspections &	
- enforcement	-annually
c. Roadways De-icing	
- Complete/Submit existing studies/management plan	-90 days after effective permit date -12 months after effective permit date (plan prior to chemical deicing)

- Submit New Assessments Street Sanding -90 days after effective permit date
- Complete/Submit existing studies -24 months after effective permit date
- Submit New Assessments Snow Disposal Policy -12 months after effective permit date

d. Flood Management
- Collect data on impervious surface area -begin after effective permit date according to schedule in Appendix "A"
- Identify critical unmapped areas/submit to FEMA & results to EPA -24 months after effective permit date

e. Pesticide, Herbicide, and Fertilizer Application
- Study of Use & Application -12 months after effective permit date
- Field Screening -contingent on Use Study per schedule in Appendix "A"
- Development and Implementation of Public Education Program -begin in year 2 of the permit term & continue throughout permit term
- Submit Long-term plan for on-going control of Pesticides -12 months after completion of field screening

2. Illicit Discharge Program

a. Prevention of illicit connections and discharges and improper disposal -Ongoing throughout the permit term

b. Ongoing field screening
- Protocols of Screening Process -90 days after effective permit date
- Visual Screening -in years 2 and 5 of permit term

c. Investigation of Suspected Illicit Discharges
- Procedures Submitted -12 months after effective permit date
- Investigate 45 outfalls identified in Permit Application -24 months after effective permit date

d. Procedures to Prevent, Contain and Respond to Spills
- Procedures Submitted -24 months after effective permit date

e. Public Reporting of Illicit Discharges, Illicit Connections, and Improper Disposal
- Establish Hotline & submit procedures for Follow-up -12 months after effective permit date
- Maintain & submit Log of Activity & Follow- up -submit with annual reports -beginning in year 2 & continuing thereafter

f. Develop/Implement Educational Program
- Ongoing throughout the permit term

3. Industrial and High Risk Runoff

a. Program Development
- Identify & Map Facilities — -Years 3, 4, & 5 of the permit term

b. Educational Material
-Develop Materials & Make Available — -24 months after effective permit date

c. Investigation of Suspected Discharge
- Develop & Submit Procedures — -Years 1 & 2 of permit term with annual reports

- Summarize Investigative Activities & Referral Follow-up — -Submit with annual reports throughout permit term

4. Construction Site Runoff

a. Program Development
- Project Review & Approval Procedures — -12 months after effective permit date (continue existing procedures - effective immediately)

b. BMP Selection Requirements
- Update BMP requirements — -Years 4 & 5 of permit term

c. Site Inspection and Enforcement Procedures
- Submittal of Strategy — -12 months after effective permit date
- Site Inspection Procedure Implementation — -24 months after effective permit date

d. Training and Education for Site Operators
- Procedures Submitted — -12 months after effective permit date
- Implementation — -24 months after effective permit date

5. Public Participation and Education

Continued Public Education Efforts — -thoughout permit term

c. Technical Advisory Board — -12 months after effective permit date

- 12 months after effective permit date

6. Monitoring

a. Structural & Source Control Assessments — -All monitoring shall take place in accordiance

	with schedules included in Appendix "A" which is to be submitted annually for review and approval
b. Watershed Mapping	
c. Roadway Sand & Deicer Analyses	
d. Pesticides, Herbicides, & Fertilizers	
e. Illicit Discharges	
f. Receiving Water Monitoring - Chemical monitoring in four priority watersheds to obtain event mean concentrations - Macroinvertebrate monitoring in four priority watersheds plus 3 watersheds incurring development pressure	
g. - Dry & Wet Weather Definitions	-six (6) months after effective date of permit
7. Programmatic Coordination Conduct annual meetings	-annually, beginning 90 days after effective permit date

PART IV -- ADDITIONAL PERMIT CONDITIONS

A. STANDARD PERMIT CONDITIONS

1. Duty to comply. Permittees must comply with all conditions of this Permit. Any Permit noncompliance constitutes a violation of the Clean Water Act and is grounds for enforcement action; for Permit termination, revocation and reissuance, or modification; or denial of a Permit renewal application.

    a. Permittees shall comply with effluent standards or prohibitions established under section 307(a) of the Clean Water Act for toxic pollutants and with standards for sewage sludge use or disposal established under section 405(d) of the Clean Water Act within the time provided in the regulations that establish these standards or prohibitions or standards for sewage sludge use or disposal, even if the Permit has not yet been modified to incorporate the requirement.

    b. The Clean Water Act provides that any person who violates section 301, 302, 306, 307, 308, 318 or 405 of the Act, or any permit condition or limitation implementing any such sections in a permit issued under section 402, or any requirement imposed in a pretreatment program approved under sections 402(a)(3) or 402(b)(8) of the Act, is subject to a civil penalty not to exceed $27,500 per day for each violation. The Clean Water Act provides that any person who negligently violates sections 301, 302, 306, 307, 308, 318, or 405 of the Act, or any condition or limitation implementing any of such sections in a permit issued under section 402 of the Act, or any requirement imposed in a pretreatment program approved under section 402(a)(3) or 402(b)(8) of the Act, is subject to criminal penalties of $2,500 to $25,000 per day of violation, or imprisonment of not more than 1 year, or both. In the case of a second or subsequent conviction for a negligent violation, a person shall be subject to criminal penalties of not more than $50,000 per day of violation, or by imprisonment of not more than 2 years, or both. Any person who knowingly violates such sections, or such conditions or limitations is subject to criminal penalties of $5,000 to $50,000 per day of violation, or imprisonment for not more than 3 years, or both. In the case of a second or subsequent conviction for a knowing violation, a person shall be subject to criminal penalties of not more than $100,000 per day of violation, or imprisonment of not more than 6 years, or both. Any person who knowingly violates section 301, 302, 303, 306, 307, 308, 318 or 405 of the Act, or any permit condition or limitation implementing any of such sections in a permit issued under section 402 of the Act, and who knows at that time that he thereby places another person in imminent danger of death or serious bodily injury, shall, upon conviction, be subject to a fine of not more than $250,000 or

imprisonment of not more than 15 years, or both. In the case of a second or subsequent conviction for a knowing endangerment violation, a person shall be subject to a fine of not more than $500,000 or by imprisonment of not more than 30 years, or both. An organization, as defined in section 309(c)(3)(B)(iii) of the Clean Water Act, shall, upon conviction of violating the imminent danger provision, be subject to a fine of not more than $1,000,000 and can be fined up to $2,000,000 for second or subsequent convictions.

c. Any person may be assessed an administrative penalty by the Administrator for violating section 301, 302, 306, 307, 308, 318 or 405 of the Clean Water Act, or any permit condition or limitation implementing any of such sections in a permit issued under section 402 of this Act. Administrative penalties for Class I violations are not to exceed $11,000 per violation, with the maximum amount of any Class I penalty assessed not to exceed $27,500. Penalties for Class II violations are not to exceed $11,000 per day for each day during which the violation continues, with the maximum amount of any Class II penalty not to exceed $137,500.

2. Duty to reapply. If Permittees wish to continue an activity regulated by this Permit after the expiration date of this Permit, Permittees must apply for and obtain a new permit.

3. Need to halt or reduce activity not a defense. It shall not be a defense for a Permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this Permit.

4. Duty to mitigate. Permittees shall take all reasonable steps to minimize or prevent any discharge or sludge use or disposal in violation of this Permit which has a reasonable likelihood of adversely affecting human health or the environment.

5. Proper operation and maintenance. Permittees shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by Permittees to achieve compliance with the conditions of this Permit. Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures. This provision requires the operation of back-up or auxiliary facilities or similar systems which are installed by Permittees only when the operation is necessary to achieve compliance with the conditions of the Permit.

6. Permit actions. This Permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by Permittees for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any permit condition.

7. Property rights. This Permit does not convey any property rights of any sort, or any exclusive privilege.

8. Duty to provide information. Permittees shall furnish to the Regional Administrator, within a reasonable time, any information which the Regional Administrator may request to determine whether cause exists for modifying, revoking and reissuing, or terminating this Permit or to determine compliance with this Permit. Permittees shall also furnish to the Regional Administrator upon request, copies of records required to be kept by this Permit.

9. Inspection and entry. Permittees shall allow the Regional Administrator, or an authorized representative (including an authorized contractor acting as a representative of the Administrator), upon presentation of credentials and other documents as may be required by law, to:

    a. Enter upon Permittees' premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of this Permit;

    b. Have access to and copy, at reasonable times, any records that must be kept under the conditions of this Permit;

    c. Inspect at reasonable times any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under this Permit; and

    d. Sample or monitor at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized by the Clean Water Act, any substances or parameters at any location.

10. Monitoring and records.

    a. Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity.

    b. Except for records of monitoring information required by this Permit related to Permittees' sewage sludge use and disposal activities, which shall be retained for a period of at least five years (or longer as required by 40 CFR Part 503), Permittees shall retain records of all monitoring information, including all calibration and maintenance records and all original strip chart recordings for continuous monitoring instrumentation, copies of all reports required by this Permit, and records of all data used to complete the application for this Permit, for a period of at least 3 years from the date of the sample, measurement, report or application. This period may be extended by request of the Regional Administrator at any time.

c. Records of monitoring information shall include:

(1) The date, exact place, and time of sampling or measurements;

(2) The individual(s) who performed the sampling or measurements;

(3) The date(s) analyses were performed;

(4) The individual(s) who performed the analyses;

(5) The analytical techniques or methods used; and

(6) The results of such analyses.

d. Monitoring results must be conducted according to test procedures approved under 40 CFR Part 136 or, in the case of sludge use or disposal, approved under 40 CFR Part 136 unless otherwise specified in 40 CFR Part 503, unless other test procedures have been specified in the Permit.

e. The Clean Water Act provides that any person who falsifies, tampers with, or knowingly renders inaccurate any monitoring device or method required to be maintained under this Permit shall, upon conviction, be punished by a fine of not more than $10,000, or by imprisonment for not more than 2 years, or both. If a conviction of a person is for a violation committed after a first conviction of such person under this paragraph, punishment is a fine of not more than $20,000 per day of violation, or by imprisonment of not more than 4 years, or both.

11. Signatory requirement.

a. All applications, reports, or information submitted to the Regional Administrator shall be signed and certified. (See 40 CFR § 122.22)

b. The Clean Water Act provides that any person who knowingly makes any false statement, representation, or certification in any record or other document submitted or required to be maintained under this Permit, including monitoring reports or reports of compliance or non-compliance shall, upon conviction, be punished by a fine of not more than $10,000 per violation, or by imprisonment for not more than 6 months per violation, or by both.

12. Reporting requirements.

a. Planned changes. Permittees shall give notice to the Regional Administrator as soon as possible of any planned physical alterations or

additions to the permitted facility. Notice is required only when:

(1) The alteration or addition to a permitted facility may meet one of the criteria for determining whether a facility is a new source in 40 CFR § 122.29(b); or

(2) The alteration or addition could significantly change the nature or increase the quantity of pollutants discharged. This notification applies to pollutants which are subject neither to effluent limitations in the Permit, nor to notification requirements under 40 CFR § 122.42(a)(1).

(3) The alteration or addition results in a significant change in Permittees' sludge use or disposal practices, and such alteration, addition, or change may justify the application of permit conditions that are different from or absent in the existing permit, including notification of additional use or disposal sites not reported during the permit application process or not reported pursuant to an approved land application plan;

b. Anticipated noncompliance. Permittees shall give advance notice to the Regional Administrator of any planned changes in the permitted facility or activity which may result in noncompliance with permit requirements.

c. Transfers. This Permit is not transferable to any person except after notice to the Regional Administrator. The Regional Administrator may require modification or revocation and reissuance of the Permit to change the name of Permittees and incorporate such other requirements as may be necessary under the Clean Water Act. (See 40 CFR § 122.61; in some cases, modification or revocation and reissuance is mandatory.)

d. Monitoring reports. Monitoring results shall be reported at the intervals specified elsewhere in this Permit.

(1) Monitoring results must be reported on a Discharge Monitoring Report ("DMR") or forms provided or specified by the Regional Administrator for reporting results of monitoring of sludge use or disposal practices.

(2) If Permittees monitors any pollutant more frequently than required by the Permit using test procedures approved under 40 CFR Part 136 or, in the case of sludge use or disposal, approved under 40 CFR Part 136 unless otherwise specified in 40 CFR Part 503, or as specified in the Permit, the results of this monitoring shall be included in the calculation and reporting of the data submitted in the DMR or sludge reporting form specified by the Regional

Administrator.

(3) Calculations for all limitations which require averaging of measurements shall utilize an arithmetic mean unless otherwise specified by the Regional Administrator in the Permit.

e. Compliance schedules. Reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule of this Permit shall be submitted no later than 14 days following each schedule date.

f. Twenty-four hour reporting.

(1) Permittees shall report any noncompliance which may endanger health or the environment. Any information shall be provided orally within 24 hours from the time Permittees become aware of the circumstances. A written submission shall also be provided within 5 days of the time Permittees become aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance.

(2) The following shall be included as information which must be reported within 24 hours under this paragraph.

(a) Any unanticipated bypass which exceeds any effluent limitation in the Permit.

(b) Any upset which exceeds any effluent limitation in the Permit.

(c) Violation of a maximum daily discharge limitation for any of the pollutants listed by the Regional Administrator in the Permit to be reported within 24 hours. (See 40 CFR § 122.44(g)).

(3) The Regional Administrator may waive the written report on a case-by-case basis for reports under paragraph (IV)(A)(12)(f)(2) of this Permit if the oral report has been received within 24 hours.

g. Other noncompliance. Permittees shall report all instances of noncompliance not reported under paragraphs (IV)(A)(12)(d-f) of this Permit, at the time monitoring reports are submitted. The reports shall

contain the information listed in paragraph (IV)(A)(12)(f) of this Permit.

h. Other information. Where Permittees become aware that Permittees failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application or in any report to the Regional Administrator, Permittees shall promptly submit such facts or information.

13. Bypass--

a. Definitions.

(1) Bypass means the intentional diversion of waste streams from any portion of a treatment facility.

(2) Severe property damage means substantial physical damage to property, damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.

b. Bypass not exceeding limitations. Permittees may allow any bypass to occur which does not cause effluent limitations to be exceeded, but only if it also is for essential maintenance to assure efficient operation. These bypasses are not subject to the provisions of paragraphs (IV)(A)(13)(c) & (d) of this Permit.

c. Notice--

(1) Anticipated bypass. If Permittees know in advance of the need for a bypass, Permittees shall submit prior notice, if possible at least ten days before the date of the bypass.

(2) Unanticipated bypass. Permittees shall submit notice of an unanticipated bypass as required in paragraph (IV)(A)(12)(f) of this Permit (24-hour notice).

d. Prohibition of bypass.

(1) Bypass is prohibited, and the Regional Administrator may take enforcement action against a Permittee for bypass, unless:

(a) Bypass was unavoidable to prevent loss of life, personal injury, or severe property damage;

(b) There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and

(c) Permittees submitted notices as required under paragraph (IV)(A)(13)(c) of this Permit.

(2) The Regional Administrator may approve an anticipated bypass, after considering its adverse effects, if the Regional Administrator determines that it will meet the three conditions listed above in paragraph (IV)(A)(13)(d)(1) of this Permit.

14. Upset--

a. Definition. Upset means an exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond the reasonable control of Permittees. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.

b. Effect of an upset. An upset constitutes an affirmative defense to an action brought for noncompliance with such technology based permit effluent limitations if the requirements of paragraph (IV)(A)(14)(c) of this Permit are met. No determination made during administrative review of claims that noncompliance was caused by upset, and before an action for noncompliance, is final administrative action subject to judicial review.

c. Conditions necessary for a demonstration of upset. A permittee who wishes to establish the affirmative defense of upset shall demonstrate, through properly signed, contemporaneous operating logs, or other relevant evidence that:

(1) An upset occurred and that Permittees can identify the cause(s) of the upset;

(2) The permitted facility was at the time being properly operated;

(3) Permittees submitted notice of the upset as required in paragraph (IV)(A)(12)(f) of this Permit (24 hour notice); and

(4) Permittees complied with any remedial measures required under paragraph (IV)(A)(4) of this Permit.

d. Burden of proof. In any enforcement proceeding Permittees seeking to establish the occurrence of an upset has the burden of proof.

B. SEVERABILITY

The provisions of this Permit are severable, and if any provision of this Permit, or the application of any provision of this Permit to any circumstance, is held invalid, the application of such provision to other circumstances, and the remainder of this Permit shall not be affected thereby.

C. STATE/ENVIRONMENTAL LAWS

1. Nothing in this Permit shall be construed to preclude the institution of any legal action or relieve Permittees from any responsibilities, liabilities, or penalties established pursuant to any applicable State law or regulation under authority preserved by Section 510 of the Clean Water Act, 33 U.S.C. § 1370.

2. Nothing in this Permit shall be construed to relieve Permittees of their obligation to comply in full with all state and federal environmental statutes and regulations.

D. ADDRESSES:

Submittals required by this Permit shall be made to the following addresses:

EPA REGIONAL OFFICE:	United States Environmental Protection Agency 222 W. 7th Ave., Box 19 Anchorage, Alaska 99513-7588 Attn: Jacqueline H. Poston
ADEC OFFICE:	Alaska Department of Environmental Conservation Watershed Management Section 555 Cordova St. Anchorage, AK 99501

E. ADDITIONAL MONITORING BY PERMITTEES

If Permittees monitor more frequently than required by this Permit, using test procedures approved under 40 CFR Part 136, or equivalent, or as specified in this Permit, the results of this monitoring shall be included with the data submitted as part of the annual report required by Part IV.G. of this Permit.

F. ARCHEOLOGICAL AND HISTORICAL SITES

1. Where municipal excavation and/or construction projects implementing requirements of this Permit will result in the disturbance of previously undisturbed land, Permittees shall, thirty (30) days prior to commencing land disturbance, submit the following to the State Historic Preservation Officer ("SHPO") for evaluation of possible effects on properties listed or eligible for listing on the National Register of Historic Places:

    a. a description of the construction or land disturbing activity and the potential impact that this activity may have upon the ground, and

b. a copy of a USGS topographic map outlining the location of the project and other ancillary impact areas. The address of the SHPO is:

Ms. Judith E. Bittner
Chief, History and Archeology
Department of Natural Resources
Division of Parks and Outdoor Recreation
3601 "C" Street, Suite 1278
Anchorage, Alaska 99503-5921
(907) 269-8721

2. If Permittees receive requests for an archeological survey or notice of adverse effects from the SHPO, Permittees shall delay such activity until:

   a. a determination of no adverse effect has been made, or

   b. measures to minimize harm to historic properties have been agreed upon.

3. If Permittees do not receive notification of adverse effects or a request for an archeological survey from the SHPO within thirty (30) days, Permittees may proceed with the activity.

G. ANNUAL REPORTS

1. Within one (1) year of the effective date of this Permit, and annually thereafter, Permittees shall prepare and submit to EPA and ADEC an Annual Report. In addition, copies of all annual reports shall be available to the public through the municipal library system. The Annual Report shall be mailed to the addresses found at Part IV.D. of this Permit and shall include, at a minimum:

   a. A report on the status of implementing the components of the Storm Water Management Program that are established as Permit conditions;

   b. Proposed changes to the Storm Water Management Program required by this Permit. Such proposed changes shall be consistent with 40 CFR § 122.26(d)(2);

   c. Revisions, if necessary, to the assessments of controls and the fiscal analysis reported in the Part 2 of the Permit Application;

   d. A summary of the data, including monitoring data, that Permittees accumulated throughout the reporting year;

   e. Annual expenditures and budget for the year following each annual report;

f. A summary describing the number and nature of enforcement actions, inspections, and public education programs, including copies of all educational materials distributed in conjunction with efforts to reduce pollutant discharges to the MS4;

g. Identification of water quality improvements or degradation; and

h. All other information required by this Permit to be submitted with the Annual Report.

H. MODIFICATION OF THE PERMIT

All modifications to this Permit shall be made in accordance with 40 CFR §§ 122.62, 122.63, and 124.5. The Permit may be modified during the life of the Permit to address:

1. changes in the State's Water Quality Management Plan, including Water Quality Standards;

2. changes in State or Federal statutes or regulations;

3. adding a new Permittee who is the owner or operator of a portion of the MS4;

4. changes in portions of the Storm Water Management Program that are considered Permit conditions; or

5. other modifications deemed necessary by the Regional Administrator to meet the requirements of the Act.

I. TERMINATION OF COVERAGE FOR A SINGLE PERMITTEE

Permit coverage may be terminated, in accordance with the provisions of 40 CFR §§ 122.64 and 124.5, for a single Permittee without terminating coverage for other Permittees.

J. MODIFICATION OF STORM WATER MANAGEMENT PROGRAM

Only those portions of the Storm Water Management Program specifically required as permit conditions shall be subject to the modification requirements of 40 CFR §§ 122.62, 122.63 and 124.5. Addition of the following components, controls, or requirements by Permittees shall be considered minor changes to the Storm Water Management Program and not modifications to the Permit: replacement of an ineffective or infeasible BMP; implementing a requirement of the Storm Water Management Program with an alternate BMP expected to achieve the goals of the original BMP; and changes required as a result of schedules contained in Part III of this Permit.

K. APPROVAL OF SUBMITTALS

1. The following approval procedures shall apply to:

   a. Schedule & Scope of Assessments (Part II.A.1.a.(4)(b));

   b. Roadway Deicing Management and Monitoring Plan (Part II.A.1.c.(1))

   c. Inspection and Enforcement Strategy for New Development and Significant Redevelopment (Part II.A.b.(6)(b));

   d. Site Inspection and Enforcement Strategy at Construction Sites (Part II.A.4.c.(1)); and

   e. Monitoring program (Part II.A.6. and Appendix "A");

   f. Definitions of Dry and Wet Weather (Part II.A.6.)

   This Part will refer to each of the foregoing six (6) reports as "submittals."

2. After reviewing any submittal or other item which is required to be submitted for review and approval pursuant to this Permit, EPA may:

   a. approve the submittal ("approval");

   b. approve the submittal with modifications ("modified approval");

   c. disapprove the submittal and direct Permittee(s) to revise the submittal in accordance with EPA's comments ("revision request"); or

   d. disapprove the submittal ("disapproval").

   Should EPA fail to issue its determination on a submittal timely submitted by Permittee(s), within 60 days of EPA's receipt that submittal shall be deemed to have received approval.

3. In the event of approval or modified approval by EPA, Permittees shall proceed to comply with any conditions imposed by the approved submittal, as approved or modified by EPA.

4. In the event of a revision request, Permittees shall, within five (5) days or such longer time as specified by EPA in its notice of request for revisions, correct the deficiencies and resubmit the plan, report, or other item for approval. Notwithstanding any revision request, Permittees shall proceed, at the direction of EPA, to take any action required by any non-deficient portion of the submittal.

5. If any submittal or resubmittal does not ultimately receive approval or modified approval by EPA, Permittees shall have failed to comply with the conditions and requirements of this Permit.

PART V -- DEFINITIONS

The following definitions apply to this Permit. Except as otherwise specifically provided, terms used in this Permit but not defined by this Part shall have the meaning ascribed to them by Section 502 of the Clean Water Act (33 U.S.C. § 1362), 40 CFR § 122.2, and 40 CFR § 122.26(b). These statutory and regulatory definitional sections are incorporated herein by reference.

1. "Discharge" refers to a discharge of storm water from the Municipal Separate Storm Sewer System (MS4).

2. "Landfill" means an area of land or an excavation in which wastes are placed for permanent disposal, and which is not a land application unit, surface impoundment, injection well, or waste pile.

3. "MEP" is an acronym for "Maximum Extent Practicable," the technology-based discharge standard for Municipal Separate Storm Sewer Systems established by Section 402(p) of the Clean Water Act, 33 U.S.C. § 1342(p).

4. "MS4" is an acronym for "Municipal Separate Storm Sewer System" and is used in this Permit to refer to those portions of the Medium Municipal Separate Storm Sewer System within the corporate limits of the Municipality of Anchorage that are owned and operated by the Municipality of Anchorage or the Alaska Department of Transportation and Public Facilities.

5. "Permit Application" refers to the submissions required as part of the NPDES permit application process and includes Part One (May 1992), Part One Appendices (May 1992), Maps (May 1992), Part Two (May 1993), Part Two (May 1993), and the Response to Comments (December 1994).

6. "Permittee" refers to any "person," as defined at 40 CFR § 122.2, authorized by this NPDES Permit to discharge to Waters of the United States.

7. "Regional Administrator" means the Regional Administrator of Region 10 of the United States Environmental Protection Agency or an authorized representative of the Regional Administrator. The Regional Administrator may be contacted at the address set forth at Part IV.D. of this Permit.

8. "Storm Water Management Program" refers to the comprehensive program described in this permit to manage the quality of storm water discharged from the MS4. For the purposes of this Permit, the Storm Water Management Program is considered a single document, but may actually consist of separate programs (e.g., "chapters") for each Permittee.

COVER PAGE Permit No.: AKS052426

United States Environmental Protection Agency
Region 10
1200 Sixth Avenue
Seattle, Washington 98101

AUTHORIZATION TO DISCHARGE UNDER THE

NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM

In compliance with the provisions of the Clean Water Act, 33 U.S.C. §1251 et seq., as amended by the Water Quality Act of 1987, P.L. 100-4, the "Act",

Port of Anchorage

is authorized to discharge from a **Municipal Separate Storm Sewer System** located **at Port of Anchorage, 2000 Anchorage Port Road, Anchorage, Alaska,**

to receiving waters named **Cook Inlet,**

in accordance with discharge point(s), an approved storm water management plan, monitoring requirements, and other conditions set forth herein.

This permit shall become effective March 3, 1995.

This permit and the authorization to discharge shall expire at midnight, March 3, 2000.

Signed this 1st day of February, 1995.

Director, Water Division, Region 10
U.S. Environmental Protection Agency

NPDES PERMIT
MUNICIPAL SEPARATE STORM SEWER SYSTEM
TABLE OF CONTENTS

Part I. COVERAGE UNDER THIS PERMIT
- A. Permit Area
- B. Authorized Discharges
- C. Limitations on Coverage

Part II. STORM WATER POLLUTION PREVENTION & MANAGEMENT PROGRAMS
- A. Pollution Prevention Requirements
- B. SWMP System-wide Requirements
- C. SWMP Area-specific Requirements
- D. Deadlines for Program Compliance
- E. Roles and Responsibilities of Co-permittees
- F. Legal Authority
- G. SWMP Resources
- H. SWMP Review and Modification
- I. System-wide Report

Part III. SCHEDULES FOR COMPLIANCE
- A. PPM Implementation
- B. SWMP Implementation

Part IV. SPECIAL REQUIREMENTS
- A. Monitoring
- B. Miscellaneous

Part V. MONITORING AND REPORTING REQUIREMENTS
- A. Storm Event Monitoring
- B. Dry Weather Monitoring
- C. Certification and Signature of Reports
- D. Reporting: Where to Submit.
- E. Additional Notification
- F. Retention of Records.

Part VI. STANDARD PERMIT CONDITIONS
- A. Duty to Comply.
- B. Penalties for Violations of Permit Conditions.
- C. Duty to Reapply.
- D. Need to halt or reduce activity not a defense.
- E. Duty to Mitigate.
- F. Duty to Provide Information.
- G. Other Information.
- H. Signatory Requirements.
- I. Certification.
- J. Penalties for Falsification of Reports
- K. Penalties for Falsification of Monitoring Systems.
- L. Oil and Hazardous Substance Liability.
- M. Property Rights.
- N. Severability.
- O. Requiring an individual permit.
- P. State/Environmental Laws.
- Q. Proper Operation and Maintenance.
- R. Monitoring and Records.
- S. Monitoring Methods.
- T. Inspection and Entry.
- U. Permit Actions.

Part VII. PERMIT MODIFICATION
- A. Modification of the permit.
- B. Termination of Co-permittee coverage.
- C. Modification of SWMPs.
- D. Changes in Monitored Outfalls.

Part VIII. DEFINITIONS

PART I. DISCHARGES AUTHORIZED UNDER THIS PERMIT

A. Permit Area

This permit covers all areas within the jurisdictional boundary of **the Port of Anchorage within the Municipality of Anchorage, Alaska,** served by, or otherwise contributing to discharges from, municipal separate storm sewers (MS4s) owned or operated by the permittee listed in Part I.C.

B. Authorized Discharges

This permit authorizes all existing or new storm water point source discharges to waters of the United States from the MS4. This permit also authorizes the discharge of storm water commingled with flows contributed by process wastewater, non-process wastewater, or storm water associated with industrial activity provided such discharges are authorized under separate NPDES permits. This permit will consider any and all activities conducted by lessees of the Port of Anchorage while within the jurisdictional boundaries of the Port, and which activity leads to a discharge either to or from the MS4s for which this permit is written, to be the activity of the Port and subject to the conditions of this permit.

C. Limitations on Coverage

The following discharges are not authorized by this permit:

1. *Non-storm Water:* storm water discharges that are mixed with non-storm water or storm water associated with industrial activity except where such discharges are:

   a. in compliance with a separate NPDES permit; or

   b. identified by and in compliance with Part II.B.7 of this permit.

2. *Endangered Species Protection:* storm water discharges whose direct, indirect, interrelated, interconnected, or interdependent impacts would jeopardize a listed endangered or threatened species or adversely modify designated critical habitat.

3. *Historic Preservation:* storm water discharges, or the permittee construction activities or implementation of storm water management controls, which adversely effect properties listed or eligible for listing in the National Register of Historic Places, unless the permittee is in compliance with requirements of the National Historic Preservation Act and has coordinated any necessary activities to avoid or minimize impacts with the appropriate State Historic Preservation Officer; and

4. *Coastal Zone Management:* storm water discharges not in compliance with any applicable requirements of a State's Coastal Zone Management Plan.

PART II. STORM WATER POLLUTION PREVENTION & MANAGEMENT PROGRAMS

The permittee is required to develop and implement a storm water pollution prevention and management program designed to limit, to the maximum extent practicable, the discharge of pollutants from the MS4. Either collectively, or separately, the permittee's storm water pollution prevention and management program shall satisfy the requirements of paragraphs A through I, below for all portions of the MS4 authorized to discharge under this permit.

A. **POLLUTION PREVENTION REQUIREMENTS**

The permittee shall develop and implement the following pollution prevention measures:

1. The permittee shall include requirements to consider water quality impacts of new and significant re-development in its comprehensive master planning process. The goal of such requirements shall be limiting, to the maximum extent practicable, the discharge of pollutants to pre-development levels.

2. The permittee shall ensure the establishment or availability of a program to collect used motor vehicle fluids (including oil and antifreeze) and batteries for recycle or reuse. Such program shall be readily available to all lessees. This program shall be publicized and promoted on a regular basis, but at least anually.

3. The permittee shall ensure the establishment or availability of a program to collect commonly-used hazardous materials (including paint, pesticides, herbicides, cleaners, solvents, and similar hazardous materials) for recycle, reuse, or safe disposal. The program shall be readily available to all lessees and include information on locations accepting such materials on a continuous basis. This program shall be publicized and promoted on a regular basis, but at least anually.

4. The permittee shall ensure the establishment of a program, including structural controls where necessary, to reduce the discharge of floatables (including solid wastes) to the maximum extent practicable.

B. **SWMP SYSTEM-WIDE REQUIREMENTS**

The permittee shall operate a Storm Water Management Program (SWMP) in accordance with Section 402(p)(3)(B) of the Clean Water Act, the storm water regulations (40 CFR Part 122.26) and the approved SWMP plan to be submitted to EPA by the permittee. SWMP controls and activities identified in the SWMP plan shall clearly identify areas of applicability on a system-wide basis, jurisdiction-wide basis, or specific-area basis. The SWMP, and all approved updates, are hereby incorporated into this permit by reference and shall be implemented in a manner consistent with the following requirements:

1. *Statutory Requirements:* SWMPs shall include controls necessary to reduce the discharge of pollutants from the MS4 to the Maximum Extent Practicable (MEP). Controls may consist of a combination of best management practices, control techniques, system design and engineering methods, and such other provisions as the permittee, Administrator or the State determines appropriate. The various components of the SWMP, taken as a whole (rather than individually), shall be sufficient to meet the statutory MEP standard. The SWMP shall be updated as necessary to ensure conformance with the statutory requirements of Clean Water Act §402(p)(3)(B)(ii) and (iii).

2. *Structural Controls:* The permittee shall operate and maintain any storm water structural controls over which it has jurisdiction, in a manner so as to reduce the discharge of pollutants (including floatables) to the MEP.

3. *Areas of New Development:* The Port of Anchorage shall utilize a comprehensive master planning process to develop, implement, and enforce controls to reduce, to the MEP, the discharge of pollutants from areas of new development and significant redevelopment after construction is completed.

4. *Roadways:* The permittee shall operate and maintain public streets, roads, highways, parking areas, and cargo storage/staging areas under its jurisdiction in a manner so as to reduce, to the MEP, discharge of pollutants (including those related to deicing or sanding activities).

5. *Flood Control Projects:* The permittee shall ensure any flood control project it undertakes assesses and minimize to the MEP the impacts on water quality of the receiving waters. The permittee shall also evaluate the feasibility of retro-fitting existing structural flood control devices to provide additional pollutant removal from storm water. If retro-fitting is found to be feasible, the permittee shall implement the retro-fitting of existing structural devices within 3 years of such determination of feasibility.

6. *Pesticide, Herbicide, and Fertilizer Application:* The permittee shall implement controls to reduce, to the MEP, the discharge of pollutants related to application of pesticides, herbicides, and fertilizers applied by Port employees, contractors, or lessees to public right of ways, parks, and all port lands and facilities.

7. *Illicit Discharges and Improper Disposal:* The permittee shall implement an ongoing program to detect and eliminate illicit discharges and improper disposal into the storm sewer. The permittee may chose to require the discharger to the MS4 to eliminate the illicit discharges or obtain a separate NPDES permit for such discharges.

a. The permittee shall effectively prohibit non-storm water discharges to the MS4.

b. Unless identified by either the permittee, the Administrator, or the State as significant sources of pollutants to waters of the United States, the following non-storm water discharges need not be prohibited from entering the MS4, provided the necessity of such discharge(s) and appropriate control measures (if needed) to minimize the impacts of such sources, are developed under the SWMP:

(1) water line flushing;
(2) landscape irrigation;
(3) diverted stream flows;
(4) rising ground waters;
(5) uncontaminated ground water infiltration (as defined at 40 CFR 35.2005(20)) to separate storm sewers;
(6) uncontaminated pumped ground water;
(7) discharges from potable water sources;
(8) uncontaminated foundation drains;
(9) air conditioning condensate;
(10) irrigation water;
(11) springs;
(12) uncontaminated water from crawl space pumps;
(13) uncontaminated footing drains;
(14) lawn watering;
(15) individual residential car washing;
(16) flows from riparian habitats and wetlands;
(17) dechlorinated swimming pool discharges;
(18) street wash waters;
(19) NPDES permitted non-contact cooling waters and remediated ground waters, provided appropriate management practices are implemented and the discharges are in accordance with the Municipality's storm water management program; and,
(20) discharges or flows from emergency fire fighting activities.

c. The permittee shall prevent discharges of dry and wet weather overflows from sanitary sewers into the MS4. The permittee shall limit, to the maximum extent practicable, the infiltration of seepage from sanitary sewers into the MS4.

d. The permittee shall prohibit the discharge or disposal of all motor vehicle fluids and chemical wastes into separate storm sewers.

e. The permittee shall require the elimination of illicit connections as expeditiously as possible and the immediate cessation of improper disposal practices upon identification of responsible parties. Where elimination of an illicit connection within seven (7) days is not possible, the Port of Anchorage shall require an expeditious

schedule for elimination of the discharge. In the interim, the Port of Anchorage shall require the operator of the illicit connection to take all reasonable and prudent measures to minimize the discharge of pollutants to the MS4. Elimination schedules should not exceed ninety (90) days, except for capital intensive projects which shall not exceed 455 days (one year ninety days).

8. *Spill Prevention and Response:* The permittee shall implement a program to prevent, contain, and respond to spills that may discharge into the MS4. The spill response program may include a combination of spill response actions by the permittee and its lessees.

9. *Industrial & High Risk Runoff:* The permittee shall implement a program to identify, monitor, and control pollutants in storm water discharges to the MS4 from: hazardous waste treatment, storage and disposal facilities that are subject to EPCRA Title III, Section 313; bulk storage facilities; and, any other industrial or commercial discharges the permittee determines are contributing a substantial pollutant loading to the MS4. The program shall include:

   a. priorities and procedures for inspections and establishing and implementing control measures for such discharges;

   b. a monitoring (or self-monitoring) program for facilities identified under this section, including the collection of quantitative data on the following constituents:

      (1) any pollutants limited in an existing NPDES permit for an identified facility;
      (2) oil and grease;
      (3) chemical oxygen demand (COD);
      (4) pH;
      (5) biochemical oxygen demand, five-day (BOD_5);
      (6) total suspended solids (TSS);
      (7) total phosphorous;
      (8) total Kjeldahl nitrogen (TKN);
      (9) nitrate plus nitrite nitrogen; and
