a) Each Permittee shall amend codes and ordinances not later than August 1, 2002 to give legal effect to SUSMP changes contained in this Order. Changes to SUSMP requirements shall take effect not later than September 2, 2002.

b) Each Permittee shall require that a single-family hillside home:

(1) Conserve natural areas;

(2) Protect slopes and channels;

(3) Provide storm drain system stenciling and signage;

(4) Divert roof runoff to vegetated areas before discharge unless the diversion would result in slope instability; and

(5) Direct surface flow to vegetated areas before discharge unless the diversion would result in slope instability.

c) Each Permittee shall require that a SUSMP as approved by the Regional Board in Board Resolution No. R 00-02 be implemented for the following categories of developments:

(1) Ten or more unit homes (includes single family homes, multifamily homes, condominiums, and apartments);

(2) A 100,000 or more square feet of impervious surface area industrial/ commercial development;

(3) Automotive service facilities (SIC 5013, 5014, 5541, 7532-7534, and 7536-7539);

(4) Retail gasoline outlets;

(5) Restaurants (SIC 5812);

(6) Parking lots 5,000 square feet or more of surface area or with 25 or more parking spaces; and

(7) Redevelopment projects in subject categories that meet Redevelopment thresholds.

d) Each Permittee shall submit an ESA Delineation Map for its jurisdictional boundary, based on the Regional Board's ESA Definition, no later than June 3, 2002, for approval by the Regional Board Executive Officer in consultation with the California Department of Fish and Game, and the California Coastal Commission.

e) Each Permittee shall require the implementation of SUSMP provisions no later than September 2, 2002, for all projects located in or directly adjacent to or discharging directly to an ESA, where the development will:

(1) Discharge storm water and urban runoff that is likely to impact a sensitive biological species or habitat; and

(2) Create 2,500 square feet or more of impervious surface area.

3. Numerical Design Criteria

The Permittees shall require that post-construction Treatment Control BMPs incorporate, at a minimum, either a volumetric or flow based treatment control design standard, or both, as identified below to mitigate (infiltrate, filter or treat) storm water runoff:

a) Volumetric Treatment Control BMP

(1) The 85th percentile 24-hour runoff event determined as the maximized capture storm water volume for the area, from

the formula recommended in *Urban Runoff Quality Management, WEF Manual of Practice No. 23/ ASCE Manual of Practice No. 87, (1998)*; or

(2) The volume of annual runoff based on unit basin storage water quality volume, to achieve 80 percent or more volume treatment by the method recommended in *California Stormwater Best Management Practices Handbook – Industrial/ Commercial*, (1993); or

(3) The volume of runoff produced from a 0.75 inch storm event, prior to its discharge to a storm water conveyance system; or

(4) The volume of runoff produced from a historical-record based reference 24-hour rainfall criterion for "treatment" (0.75 inch average for the Los Angeles County area) that achieves approximately the same reduction in pollutant loads achieved by the 85th percentile 24-hour runoff event.

b) Flow Based Treatment Control BMP

(1) The flow of runoff produced from a rain event equal to at least 0.2 inches per hour intensity; or

(2) The flow of runoff produced from a rain event equal to at least two times the 85th percentile hourly rainfall intensity for Los Angeles County; or

(3) The flow of runoff produced from a rain event that will result in treatment of the same portion of runoff as treated using volumetric standards above.

4. Applicability of Numerical Design Criteria

The Permittees shall require the following categories of Planning Priority Projects to design and implement post-construction treatment controls to mitigate storm water pollution:

a) Single-family hillside residential developments of one acre or more of surface area;

b) Housing developments (includes single family homes, multifamily homes, condominiums, and apartments) of ten units or more;

c) A 100,000 square feet or more impervious surface area industrial/ commercial development;

d) Automotive service facilities (SIC 5013, 5014, 5541, 7532-7534 and 7536-7539) [5,000 square feet or more of surface area];

e) Retail gasoline outlets [5,000 square feet or more of impervious surface area and with projected Average Daily Traffic (ADT) of 100 or more vehicles]. Subsurface Treatment Control BMPs

which may endanger public safety (i.e., create an explosive environment) are considered not appropriate;

f) Restaurants (SIC 5812) [5,000 square feet or more of surface area];

g) Parking lots 5,000 square feet or more of surface area or with 25 or more parking spaces;

h) Projects located in, adjacent to or discharging directly to an ESA that meet threshold conditions identified above in 2.e; and

i) Redevelopment projects in subject categories that meet Redevelopment thresholds.

5. Not later than March 10, 2003, each Permittee shall require the implementation of SUSMP and post-construction control requirements for the industrial/commercial development category to projects that disturb one acre or more of surface area.

6. Site Specific Mitigation

Each Permittee shall, no later than September 2, 2002, require the implementation of a site-specific plan to mitigate post-development storm water for new development and redevelopment not requiring a SUSMP but which may potentially have adverse impacts on post-development storm water quality, where one or more of the following project characteristics exist:

a) Vehicle or equipment fueling areas;

b) Vehicle or equipment maintenance areas, including washing and repair;

c) Commercial or industrial waste handling or storage;

d) Outdoor handling or storage of hazardous materials;

e) Outdoor manufacturing areas;

f) Outdoor food handling or processing;

g) Outdoor animal care, confinement, or slaughter; or

h) Outdoor horticulture activities.

7. Redevelopment Projects

The Permittees shall apply the SUSMP, or site specific requirements including post-construction storm water mitigation to all Planning Priority Projects that undergo significant Redevelopment in their respective categories.

a) Significant Redevelopment means land-disturbing activity that results in the creation or addition or replacement of 5,000 square

feet or more of impervious surface area on an already developed site.

Where Redevelopment results in an alteration to more than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post development storm water quality control requirements, the entire project must be mitigated. Where Redevelopment results in an alteration to less than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post development storm water quality control requirements, only the alteration must be mitigated, and not the entire development.

b) Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety.

c) Existing single family structures are exempt from the Redevelopment requirements.

8. Maintenance Agreement and Transfer

Each Permittee shall require that all developments subject to SUSMP and site specific plan requirements provide verification of maintenance provisions for Structural and Treatment Control BMPs, including but not limited to legal agreements, covenants, CEQA mitigation requirements, and or conditional use permits. Verification at a minimum shall include:

a) The developer's signed statement accepting responsibility for maintenance until the responsibility is legally transferred; and either

b) A signed statement from the public entity assuming responsibility for Structural or Treatment Control BMP maintenance and that it meets all local agency design standards; or

c) Written conditions in the sales or lease agreement, which requires the recipient to assume responsibility for maintenance and conduct a maintenance inspection at least once a year; or

d) Written text in project conditions, covenants and restrictions (CCRs) for residential properties assigning maintenance responsibilities to the Home Owners Association for maintenance of the Structural and Treatment Control BMPs; or

e) Any other legally enforceable agreement that assigns responsibility for the maintenance of post-construction Structural or Treatment Control BMPs.

9. Regional Storm Water Mitigation Program

A Permittee or Permittee group may apply to the Regional Board for approval of a regional or sub-regional storm water mitigation program to substitute in part or wholly SUSMP requirements. Upon review and a determination by the Regional Board Executive Officer that the proposal is technically valid and appropriate, the Regional Board may consider for approval such a program if its implementation will:

a) Result in equivalent or improved storm water quality;

b) Protect stream habitat;

c) Promote cooperative problem solving by diverse interests;

d) Be fiscally sustainable and has secure funding; and

e) Be completed in five years including the construction and start-up of treatment facilities.

Nothing in this provision shall be construed as to delay the implementation of SUSMP requirements, as approved in this Order.

10. Mitigation Funding

The Permittees may propose a management framework, for endorsement by the Regional Board Executive Officer, to support regional or sub-regional solutions to storm water pollution, where any of the following situations occur:

a) A waiver for impracticability is granted;

b) Legislative funds become available;

c) Off-site mitigation is required because of loss of environmental habitat; or

d) An approved watershed management plan or a regional storm water mitigation plan exists that incorporates an equivalent or improved strategy for storm water mitigation.

11. California Environmental Quality Act (CEQA) Document Update

Each Permittee shall incorporate into its CEQA process, with immediate effect, procedures for considering potential storm water quality impacts and providing for appropriate mitigation when preparing and reviewing CEQA documents. The procedures shall require consideration of the following:

a) Potential impact of project construction on storm water runoff;

b) Potential impact of project post-construction activity on storm water runoff;

c) Potential for discharge of storm water from areas from material storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous

materials handling or storage, delivery areas or loading docks, or other outdoor work areas;

d) Potential for discharge of storm water to impair the beneficial uses of the receiving waters or areas that provide water quality benefit;

e) Potential for the discharge of storm water to cause significant harm on the biological integrity of the waterways and water bodies;

f) Potential for significant changes in the flow velocity or volume of storm water runoff that can cause environmental harm; and

g) Potential for significant increases in erosion of the project site or surrounding areas.

12. General Plan Update

a) Each Permittee shall amend, revise or update its General Plan to include watershed and storm water quality and quantity management considerations and policies when any of the following General Plan elements are updated or amended: (i) Land Use, (ii) Housing, (iii) Conservation, and (iv) Open Space.

b) Each Permittee shall provide the Regional Board with the draft amendment or revision when a listed General Plan element or the General Plan is noticed for comment in accordance with Cal. Govt. Code § 65350 *et seq.*

13. Targeted Employee Training

Each Permittee shall train its employees in targeted positions (whose jobs or activities are engaged in development planning) regarding the development planning requirements on an annual basis beginning no later than August 1, 2002, and more frequently if necessary. For Permittees with a population of 250,000 or more (2000 U.S. Census), training shall be completed no later than February 3, 2003.

14. Developer Technical Guidance and Information

a) Each Permittee shall develop and make available to the developer community SUSMP (development planning) guidelines immediately.

b) The Principal Permittee in partnership with Permittees shall issue no later than February 2, 2004, a technical manual for the siting and design of BMPs for the development community in Los Angeles County. The technical manual may be adapted from the revised California Storm Water Quality Task Force Best Management Practices Handbooks scheduled for publication in September 2002. The technical manual shall at a minimum include:

(1) Treatment Control BMPs based on flow-based and volumetric water quality design criteria for the purposes of countywide consistency;

(2) Peak Flow Control criteria to control peak discharge rates, velocities and duration;

(3) Expected pollutant removal performance ranges obtained from national databases, technical reports and the scientific literature;

(4) Maintenance considerations; and

(5) Cost considerations.

E. **Development Construction Program**

1. Each Permittee shall implement a program to control runoff from construction activity at all construction sites within its jurisdiction. The program shall ensure the following minimum requirements are effectively implemented at all construction sites:

   a) Sediments generated on the project site shall be retained using adequate Treatment Control or Structural BMPs;

   b) Construction-related materials, wastes, spills, or residues shall be retained at the project site to avoid discharge to streets, drainage facilities, receiving waters, or adjacent properties by wind or runoff;

   c) Non-storm water runoff from equipment and vehicle washing and any other activity shall be contained at the project site; and

   d) Erosion from slopes and channels shall be controlled by implementing an effective combination of BMPs (as approved in Regional Board Resolution No. 99-03), such as the limiting of grading scheduled during the wet season; inspecting graded areas during rain events; planting and maintenance of vegetation on slopes; and covering erosion susceptible slopes.

2. For construction sites one acre and greater, each Permittee shall comply with all conditions in section E.1, above and shall:

   a) Require the preparation and submittal of a Local Storm Water Pollution Prevention Plan (Local SWPPP), for approval prior to issuance of a grading permit for construction projects.

   The Local SWPPP shall include appropriate construction site BMPs and maintenance schedules. (A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs as the State SWPPP). The Local SWPPP must include the rationale used for selecting or rejecting BMPs. The project architect, or engineer of record, or authorized

qualified designee, must sign a statement on the Local SWPPP to the effect:

"As the architect/engineer of record, I have selected appropriate BMPs to effectively minimize the negative impacts of this project's construction activities on storm water quality. The project owner and contractor are aware that the selected BMPs must be installed, monitored, and maintained to ensure their effectiveness. The BMPs not selected for implementation are redundant or deemed not applicable to the proposed construction activity."

The landowner or the landowner's agent shall sign a statement to the effect:

"I certify that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete. I am aware that submitting false and/or inaccurate information, failing to update the Local SWPPP to reflect current conditions, or failing to properly and/or adequately implement the Local SWPPP may result in revocation of grading and/or other permits or other sanctions provided by law."

The Local SWPPP certification shall be signed by the landowner as follows, for a corporation: by a responsible corporate officer which means (a) a president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or (b) the manager of the construction activity if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures; for a partnership or sole proprietorship: by a general partner or the proprietor; or for a municipality or other public agency: by an elected official, a ranking management official (e.g., County Administrative Officer, City Manager, Director of Public Works, City Engineer, District Manager), or the manager of the construction activity if authority to sign Local SWPPPs has been assigned or delegated to the manager in accordance with established agency policy.

b) Inspect all construction sites for storm water quality requirements during routine inspections a minimum of once during the wet season. The Local SWPPP shall be reviewed for compliance with local codes, ordinances, and permits. For inspected sites that have not adequately implemented their Local SWPPP, a follow-up inspection to ensure compliance will take place within 2 weeks. If compliance has not been attained, the Permittee will take additional actions to achieve compliance (as specified in municipal

codes); if compliance has not been achieved, and the site is also covered under a statewide general construction storm water permit, each Permittee shall enforce their local ordinance requirements, and if non-compliance continues the Regional Board shall be notified for further joint enforcement actions.

c) Require, no later than March 10, 2003, prior to issuing a grading permit for all projects less than five acres requiring coverage under a statewide general construction storm water permit, proof of a Waste Discharger Identification (WDID) Number for filing a Notice of Intent (NOI) for permit coverage and a certification that a SWPPP has been prepared by the project developer. A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs as the State SWPPP.

3. For sites five acres and greater, each Permittee shall comply with all conditions in Sections E.1. and E.2. and shall:

a) Require, prior to issuing a grading permit for all projects requiring coverage under the state general permit, proof of a Waste Discharger Identification (WDID) Number for filing a Notice of Intent (NOI) for coverage under the GCASP and a certification that a SWPPP has been prepared by the project developer. A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs as the State SWPPP.

b) Require proof of an NOI and a copy of the SWPPP at any time a transfer of ownership takes place for the entire development or portions of the common plan of development where construction activities are still on-going.

c) Use an effective system to track grading permits issued by each Permittee. To satisfy this requirement, the use of a database or GIS system is encouraged, but not required.

4. GCASP Violation Referrals

a) Referral of Violations of the SQMP, Regional Board Resolution 98-08, and municipal storm water ordinances:
A Permittee may refer a violation(s) to the Regional Board provided that the Permittee has made a good faith effort of progressive enforcement. At a minimum, a Permittee's good faith effort must include documentation of:
- Two follow-up inspections within 3 months, and
- Two warning letters or notices of violation.

b) Referral of Violations of GCASP Filing Requirements:
For those projects subject to the GCASP, Permittees shall refer non-filers (i.e., those projects which cannot demonstrate that they have a WDID number) to the Regional Board, within 15 days of

making a determination. In making such referrals, Permittees shall include, at a minimum, the following documentation:

- Project location;
- Developer;
- Estimated project size; and
- Records of communication with the developer regarding filing requirements.

5. Each Permittee shall train employees in targeted positions (whose jobs or activities are engaged in construction activities including construction inspection staff) regarding the requirements of the storm water management program no later than August 1, 2002, and annually thereafter. For Permittees with a population of 250,000 or more (2000 U.S. Census), initial training shall be completed no later than February 3, 2003. Each Permittee shall maintain a list of trained employees.

F. Public Agency Activities Program

Each Permittee shall implement a Public Agency program to minimize storm water pollution impacts from public agency activities. Public Agency requirements consist of:

- Sewage Systems Maintenance, Overflow, and Spill Prevention
- Public Construction Activities Management
- Vehicle Maintenance/Material Storage Facilities/Corporation Yards Management
- Landscape and Recreational Facilities Management
- Storm Drain Operation and Management
- Streets and Roads Maintenance
- Parking Facilities Management
- Public Industrial Activities Management
- Emergency Procedures
- Treatment Feasibility Study

1. Sewage System Maintenance, Overflow, and Spill Prevention

a) Each Permittee shall implement a response plan for overflows of the sanitary sewer system within their respective jurisdiction, which shall consist at a minimum of the following:

(1) Investigation of any complaints received;

(2) Upon notification, immediate response to overflows for containment; and

(3) Notification to appropriate sewer and public health agencies when a sewer overflows to the MS4.

b) In addition to 1.a.1, 1.a.2, and 1.a.3 above, for those Permittees, which own and/or operate a sanitary sewer system, the Permittee shall also implement the following requirements:

COA 0074
001354

(1) Procedures to prevent sewage spills or leaks from sewage facilities from entering the MS4; and

(2) Identify, repair, and remediate sanitary sewer blockages, exfiltration, overflow, and wet weather overflows from sanitary sewers to the MS4.

2. Public Construction Activities Management

a) Each Permittee shall implement the Development Planning Program requirements (Permit Part 4.D) at public construction projects.

b) Each Permittee shall implement the Development Construction Program requirements (Permit Part 4.E) at Permittee owned construction sites.

c) Each Permittee shall obtain coverage under the GCASP for public construction sites 5 acres or greater (or part of a larger area of development) except that a municipality under 100,000 in population (1990 U.S. Census) need not obtain coverage under a separate permit until March 10, 2003.

d) Each Permittee, no later than March 10, 2003, shall obtain coverage under a statewide general construction storm water permit for public construction sites for projects between one and five acres.

3. Vehicle Maintenance/Material Storage Facilities/Corporation Yards Management

a) Each Permittee, consistent with the SQMP, shall implement SWPPPs for public vehicle maintenance facilities, material storage facilities, and corporation yards which have the potential to discharge pollutants into storm water.

b) Each Permittee shall implement BMPs to minimize pollutant discharges in storm water including but not be limited to:

(1) Good housekeeping practices;

(2) Material storage control;

(3) Vehicle leaks and spill control; and

(4) Illicit discharge control.

c) Each Permittee shall implement the following measures to prevent the discharge of pollutants to the MS4:

(1) For existing facilities, that are not already plumbed to the sanitary sewer, all vehicle and equipment wash areas (except for fire stations) shall either be:

(i) Self-contained;

(ii) Equipped with a clarifier;

(iii) Equipped with an alternative pre-treatment device; or

(iv) Plumbed to the sanitary sewer.

(2) For new facilities, or during redevelopment of existing facilities (including fire stations), all vehicle and equipment wash areas shall be plumbed to the sanitary sewer and be equipped with a pre-treatment device in accordance with requirements of the sewer agency.

4. Landscape and Recreational Facilities Management

Each Permittee shall implement the following requirements:

a) A standardized protocol for the routine and non-routine application of pesticides, herbicides (including pre-emergents), and fertilizers;

b) Consistency with State Board's guidelines and monitoring requirements for application of aquatic pesticides to surface waters (WQ Order No. 2001-12-DWQ);

c) Ensure no application of pesticides or fertilizers immediately before, during, or immediately after a rain event or when water is flowing off the area to be applied;

d) Ensure that no banned or unregistered pesticides are stored or applied;

e) Ensure that staff applying pesticides are certified by the California Department of Food and Agriculture, or are under the direct supervision of a certified pesticide applicator;

f) Implement procedures to encourage retention and planting of native vegetation and to reduce water, fertilizer, and pesticide needs;

g) Store fertilizers and pesticides indoors or under cover on paved surfaces or use secondary containment;

h) Reduce the use, storage, and handling of hazardous materials to reduce the potential for spills; and

i) Regularly inspect storage areas.

5. Storm Drain Operation and Management

a) Each Permittee shall designate catch basin inlets within its jurisdiction as one of the following:

Priority A: Catch basins that are designated as consistently generating the highest volumes of trash and/or debris.

Priority B: Catch basins that are designated as consistently generating moderate volumes of trash and/or debris.

Priority C: Catch basins that are designated as generating low volumes of trash and/or debris.

b) Permittees subject to a trash TMDL (Los Angeles River and Ballona Creek WMAs) shall continue to implement the requirements listed below until trash TMDL implementation measures are adopted. Thereafter, the subject Permittees shall implement programs in conformance with the TMDL implementation schedule, which shall include an effective combination of measures such as street sweeping, catch basin cleaning, installation of treatment devices and trash receptacles, or other BMPs. Default requirements include:

(1) Inspection and cleaning of catch basins between May 1 and September 30 of each year;

(2) Additional cleaning of any catch basin that is at least 40% full of trash and/or debris;

(3) Record keeping of catch basins cleaned; and

(4) Recording of the overall quantity of catch basin waste collected.

If the implementation phase for the Los Angeles River and Ballona Creek Trash TMDLs has not begun by October 2003, subject Permittees shall implement the requirements described below in subsection 5(c), until such time programs in conformance with the subject Trash TMDLs are being implemented.

c) Permittees not subject to a trash TMDL shall:

(1) Clean catch basins according to the following schedule:

Priority A: A minimum of three times during the wet season and once during the dry season every year.

Priority B: A minimum of once during the wet season and once during the dry season every year.

COA 0077

001357

Priority C: A minimum of once per year.

In addition to the schedule above, between February 1, 2002 and July 1, 2003, Permittees shall ensure that any catch basin that is at least 40% full of trash and/or debris shall be cleaned out. After July 1, 2003, Permittees shall ensure that any catch basin that is at least 25% full of trash and debris shall be cleaned out.

(2) For any special event that can be reasonably expected to generate substantial quantities of trash and litter, include provisions that require for the proper management of trash and litter generated, as a condition of the special use permit issued for that event. At a minimum, the municipality who issues the permit for the special event shall arrange for either temporary screens to be placed on catch basins or for catch basins in that area to be cleaned out subsequent to the event and prior to any rain event.

(3) Place trash receptacles at all transit stops within its jurisdiction that have shelters no later than August 1, 2002, and at all other transit stops within its jurisdiction no later than February 3, 2003. All trash receptacles shall be maintained as necessary.

d) Each Permittee shall inspect the legibility of the catch basin stencil or label nearest the inlet. Catch basins with illegible stencils shall be recorded and re-stenciled or re-labeled within 180 days of inspection.

e) Each Permittee shall implement BMPs for Storm Drain Maintenance that include:

(1) A program to visually monitor Permittee-owned open channels and other drainage structures for debris at least annually and identify and prioritize problem areas of illicit discharge for regular inspection;

(2) A review of current maintenance activities to assure that appropriate storm water BMPs are being utilized to protect water quality;

(3) Removal of trash and debris from open channel storm drains shall occur a minimum of once per year before the storm season;

(4) Minimize the discharge of contaminants during MS4 maintenance and clean outs; and

(5) Proper disposal of material removed.

6. Streets and Roads Maintenance

a) Each Permittee shall designate streets and/or street segments within its jurisdiction as one of the following:

Priority A: Streets and/or street segments that are designated as consistently generating the highest volumes of trash and/or debris.

Priority B: Streets and/or street segments that are designated as consistently generating moderate volumes of trash and/or debris.

Priority C: Streets and/or street segments that are designated as generating low volumes of trash and/or debris.

b) Each Permittee shall perform street sweeping of curbed streets according to the following schedule:

Priority A: These streets and/or street segments shall be swept at least two times per month.

Priority B: Each Permittee shall ensure that each street and/or street segments is swept at least once per month.

Priority C: These streets and/or street segments shall be swept as necessary but in no case less than once per year.

c) Each Permittee shall require that:

(1) Sawcutting wastes be recovered and disposed of properly and that in no case shall waste be left on a roadway or allowed to enter the storm drain;

(2) Concrete and other street and road maintenance materials and wastes shall be managed to prevent discharge to the MS4; and

(3) The washout of concrete trucks and chutes shall only occur in designated areas and never discharged to storm drains, open ditches, streets, or catch basins.

d) Each Permittee shall, no later than August 1, 2002, train their employees in targeted positions (whose interactions, jobs, and activities affect storm water quality) regarding the requirements of the storm water management program to:

(1) Promote a clear understanding of the potential for maintenance activities to pollute storm water; and

(2) Identify and select appropriate BMPs.

For Permittees with a population of 250,000 or more (2000 U.S. Census) training shall be completed no later than February 1, 2003.

7. Parking Facilities Management

Permittee-owned parking lots exposed to storm water shall be kept clear of debris and excessive oil buildup and cleaned no less than 2 times per month and/or inspected no less than 2 times per month to determine if cleaning is necessary. In no case shall a Permittee-owned parking lot be cleaned less than once a month.

8. Public Industrial Activities Management

Each Permittee shall, for any municipal activity considered a discharge of storm water associated with industrial activity, obtain separate coverage under the GIASP except that a municipality under 100,000 in population (1990 U.S. Census) need not file the Notice Of Intent to be covered by said permit until March 10, 2003 (with the exception of power plants, airports, and uncontrolled sanitary landfills).

9. Emergency Procedures

Each Permittee shall repair essential public services and infrastructure in a manner to minimize environmental damage in emergency situations such as: earthquakes; fires; floods; landslides; or windstorms. BMPs shall be implemented to the extent that measures do not compromise public health and safety. After initial emergency response or emergency repair activities have been completed, each Permittee shall implement BMPs and programs as required under this Order.

10. Treatment Feasibility Study

The Permittees in cooperation with the County Sanitation Districts of Los Angeles County shall conduct a study to investigate the possible diversion of dry weather discharges or the use of alternative Treatment Control BMPs to treat flows from their jurisdiction which may impact public health and safety and/or the environment. The Permittees shall collectively review their individual prioritized lists and create a watershed based priority list of drains for potential diversion or treatment and submit the priority listing to the Regional Board Executive Officer, no later than July 1, 2003.

G. Illicit Connections and Illicit Discharges Elimination Program

Permittees shall eliminate all illicit connections and illicit discharges to the storm drain system, and shall document, track, and report all such cases in accordance

with the elements and performance measures specified in the following subsections.

1. General

a) Implementation: Each Permittee must develop an Implementation Program which specifies how each Permittee is implementing revisions to the IC/ID Program of the SQMP. This Implementation Program must be documented, and available for review and approval by the Regional Board Executive Officer, upon request.

b) Tracking: All Permittees shall, no later than February 3, 2003, develop and maintain a listing of all permitted connections to their storm drain system. All Permittees shall map at a scale and in a format specified by the Principal Permittee all illicit connections and discharges on their baseline maps, and shall transmit this information to the Principal Permittee. No later than February 3, 2003, the Principal Permittee shall use this information as well as results of baseline and priority screening for illicit connections (as set forth in subsection 2 below) to start an annual evaluation of patterns and trends of illicit connections and illicit discharges, with the objectives of identifying priority areas for elimination of illicit connections and illicit discharges.

c) Training: All Permittees shall train all targeted employees who are responsible for identification, investigation, termination, cleanup, and reporting of illicit connections and discharges. For Permittees with a population of less than 250,000 (2000 U.S. Census), training shall be completed no later than August 1, 2002. For Permittees with a population of 250,000 or more (2000 U.S. Census), training shall be completed no later than February 3, 2003. Furthermore, all Permittees shall conduct refresher training on an annual basis thereafter.

2. Illicit Connections

a) Screening for Illicit Connections

(1) Field Screening: All Permittees shall field Screen the storm drain system for illicit connections in accordance with the following schedule:

(i) Open channels: No later than February 3, 2003;

(ii) Underground pipes in priority areas: No later than February 1, 2005; and

(iii) Underground pipes with a diameter of 36 inches or greater: No later than December 12, 2006.

Permittees shall report, to the Principal Permittee, on the location and length of open channels or underground pipes that have been Screened *vis a vis* the entire storm drain

network, and on the status of suspected, confirmed, and terminated illicit connections. Permittees shall maintain a list containing all permitted connections and the status of connections under investigation for possible illicit connection.

(2) Permit Screening: No later than December 12, 2006, Permittees shall complete a review of all permitted connections to the storm drain system, to confirm compliance with Part 1 (Discharge Prohibition).

b) Response to Illicit Connections

(1) Investigation: Upon discovery or upon receiving a report of a suspected illicit connection, Permittees shall initiate an investigation within 21 days, to determine the source of the connection, the nature and volume of discharge through the connection, and the responsible party for the connection.

(2) Termination: Upon confirmation of the illicit nature of a storm drain connection, Permittees shall ensure termination of the connection within 180 days, using enforcement authority as needed.

3. Illicit Discharges

a) Abatement and Cleanup: Permittees shall respond, within one business day of discovery or a report of a suspected illicit discharge, with activities to abate, contain, and clean up all illicit discharges, including hazardous substances.

b) Investigation: Permittees shall investigate illicit discharges as soon as practicable (during or immediately following containment and cleanup activities), and shall take enforcement action as appropriate.

Part 5. DEFINITIONS

The following are definitions for terms applicable to this Order:

"Adverse Impact" means a detrimental effect upon water quality or beneficial uses caused by a discharge or loading of a pollutant or pollutants.

"Anti-degradation policies" means the *Statement of Policy with Respect to Maintaining High Quality Water in California* (State Board Resolution No. 68-16) which protects surface and ground waters from degradation. In particular, this policy protects waterbodies where existing quality is higher than that necessary for the protection of beneficial uses including the protection of fish and wildlife propagation and recreation on and in the water.

"Applicable Standards and Limitations" means all State, interstate, and federal standards and limitations to which a "discharge" or a related activity is subject under the CWA, including

"effluent limitations," water quality standards, standards of performance, toxic effluent standards or prohibitions, "best management practices," and pretreatment standards under sections 301, 302, 303, 304, 306, 307, 308, 403 and 404 of CWA.

"**Areas of Special Biological Significance (ASBS)**" means all those areas of this state as ASBS, listed specifically within the California Ocean Plan or so designated by the State Board which, among other areas, includes the area from Mugu Lagoon to Latigo Point: Oceanwater within a line originating from Laguna Point at 34° 5' 40" north, 119° 6'30" west, thence southeasterly following the mean high tideline to a point at Latigo Point defined by the intersection of the meanhigh tide line and a line extending due south of Benchmark 24; thence due south to a distance of 1000 feet offshore or to the 100 foot isobath, whichever distance is greater; thence northwesterly following the 100 foot isobath or maintaining a 1,000-foot distance from shore, whichever maintains the greater distance from shore, to a point lying due south of Laguna Point, thence due north to Laguna Point.

"**Authorized Discharge**" means any discharge that is authorized pursuant to an NPDES permit or meets the conditions set forth in this Order.

"**Automotive Service Facilities**" means a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 5511, 7532-7534, or 7536-7539. For inspection purposes, Permittees need not inspect facilities with SIC codes 5013, 5014, 5541, 5511, provided that these facilities have no outside activities or materials that may be exposed to storm water.

"**Basin Plan**" means the Water Quality Control Plan, Los Angeles Region, Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, adopted by the Regional Board on June 13, 1994 and subsequent amendments.

"**Beneficial Uses**" means the existing or potential uses of receiving waters in the permit area as designated by the Regional Board in the Basin Plan.

"**Best Management Practices (BMPs)**" means methods, measures, or practices designed and selected to reduce or eliminate the discharge of pollutants to surface waters from point and nonpoint source discharges including storm water. BMPs include structural and nonstructural controls, and operation and maintenance procedures, which can be applied before, during, and/or after pollution producing activities.

"**Commercial Development**" means any development on private land that is not heavy industrial or residential. The category includes, but is not limited to: hospitals, laboratories and other medical facilities, educational institutions, recreational facilities, plant nurseries, car wash facilities, mini-malls and other business complexes, shopping malls, hotels, office buildings, public warehouses and other light industrial complexes.

"**Construction**" means constructing, clearing, grading, or excavation that results in soil disturbance. Construction includes structure teardown. It does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of facility; emergency construction activities required to immediately protect public health and safety; interior remodeling with no outside exposure of construction material or construction waste to storm water; mechanical permit work; or sign permit work.

"Control" means to minimize, reduce, eliminate, or prohibit by technological, legal, contractual or other means, the discharge of pollutants from an activity or activities.

"Dechlorinated/Debrominated Swimming Pool Discharge" means swimming pool discharges which have no measurable chlorine or bromine and do not contain any detergents, wastes, or additional chemicals not typically found in swimming pool water. The term does not include swimming pool filter backwash.

"Development" means any construction, rehabilitation, redevelopment or reconstruction of any public or private residential project (whether single family, multi-unit or planned unit development), industrial, commercial, retail and other non-residential projects, including public agency projects; or mass grading for future construction. It does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of facility, nor does it include emergency construction activities required to immediately protect public health and safety.

"Directly Adjacent" means situated within 200 feet of the contiguous zone required for the continued maintenance, function, and structural stability of the environmentally sensitive area.

"Director" means the Director of a municipality and Person(s) designated by and under the Director's instruction and supervision.

"Discharge" means when used without qualification the "discharge of a pollutant."

"Discharging Directly" means outflow from a drainage conveyance system that is composed entirely or predominantly of flows from the subject property, development, subdivision, or industrial facility, and not commingled with the flows from adjacent lands.

"Discharge of a Pollutant" means: any addition of any "pollutant" or combination of pollutants to "waters of the United States" from any "point source" or; any addition of any pollutant or combination of pollutants to the waters of the "contiguous zone" or the ocean from any point source other than a vessel or other floating craft which is being used as a means of transportation. The term discharge includes additions of pollutants into waters of the United States from: surface runoff which is collected or channeled by man; discharges through pipes, sewers, or other conveyances owned by a State, municipality, or other person which do not lead to a treatment works; and discharges through pipes, sewers, or other conveyances, leading into privately owned treatment works.

"Disturbed Area" means an area that is altered as a result of clearing, grading, and/or excavation.

"Environmentally Sensitive Areas (ESAs)" means an area in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which would be easily disturbed or degraded by human activities and developments (California Public Resources Code § 30107.5). Areas subject to storm water mitigation requirements are: areas designated as Significant Ecological Areas by the County of Los Angeles (*Los Angeles County Significant Areas Study, Los Angeles County Department of Regional Planning (1976)* and amendments); an area designated as a Significant Natural Area by the California Department of Fish and Game's Significant Natural Areas Program, provided that area has been field verified by the Department of Fish and Game; an area listed in the

Basin Plan as supporting the "Rare, Threatened, or Endangered Species (RARE)" beneficial use; and an area identified by a Permittee as environmentally sensitive.

"General Construction Activities Storm Water Permit (GCASP)" means the general NPDES permit adopted by the State Board which authorizes the discharge of storm water from construction activities under certain conditions.

"General Industrial Activities Storm Water Permit (GIASP)" means the general NPDES permit adopted by the State Board which authorizes the discharge of storm water from certain industrial activities under certain conditions.

"Hillside" means property located in an area with known erosive soil conditions, where the development contemplates grading on any natural slope that is 25% or greater and where grading contemplates cut or fill slopes.

"Illicit Connection" means any man-made conveyance that is connected to the storm drain system without a permit, excluding roof drains and other similar type connections. Examples include channels, pipelines, conduits, inlets, or outlets that are connected directly to the storm drain system.

"Illicit Discharge" means any discharge to the storm drain system that is prohibited under local, state, or federal statutes, ordinances, codes, or regulations. The term illicit discharge includes all non storm-water discharges except discharges pursuant to an NPDES permit, discharges that are identified in Part 1, "Discharge Prohibitions" of this order, and discharges authorized by the Regional Board Executive Officer.

"Illicit Disposal" means any disposal, either intentionally or unintentionally, of material(s) or waste(s) that can pollute storm water.

"Industrial/Commercial Facility" means any facility involved and/or used in the production, manufacture, storage, transportation, distribution, exchange or sale of goods and/or commodities, and any facility involved and/or used in providing professional and non-professional services. This category of facilities includes, but is not limited to, any facility defined by the Standard Industrial Classifications (SIC). Facility ownership (federal, state, municipal, private) and profit motive of the facility are not factors in this definition.

"Infiltration" means the downward entry of water into the surface of the soil.

"Inspection" means entry and the conduct of an on-site review of a facility and its operations, at reasonable times, to determine compliance with specific municipal or other legal requirements. The steps involved in performing an inspection, include, but are not limited to:

1. Pre-inspection documentation research.;
2. Request for entry;
3. Interview of facility personnel;
4. Facility walk-through.
5. Visual observation of the condition of facility premises;
6. Examination and copying of records as required;
7. Sample collection (if necessary or required);

8. Exit conference (to discuss preliminary evaluation); and,
9. Report preparation, and if appropriate, recommendations for coming into compliance.

In the case of restaurants, a Permittee may conduct an inspection from the curbside, provided that such "curbside" inspection provides the Permittee with adequate information to determine an operator's compliance with BMPs that must be implemented per requirements of this Order, Regional Board Resolution 98-08, County and municipal ordinances, and the SQMP.

"Large Municipal Separate Storm Sewer System (MS4)" means all MS4s that serve a population greater than 250,000 (1990 Census) as defined in 40 CFR 122.26 (b)(4). The Regional Board designated Los Angeles County as a large MS4 in 1990, based on: (i) the U.S. Census Bureau 1990 population count of 8.9 million, and (ii) the interconnectivity of the MS4s in the incorporated and unincorporated areas within the County.

"Local SWPPP" means the Storm Water Pollution Prevention Plan required by the local agency for a project that disturbs one or more acres of land.

"Maximum Extent Practicable (MEP)" means the standard for implementation of storm water management programs to reduce pollutants in storm water. CWA § 402(p)(3)(B)(iii) requires that municipal permits "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants." See also State Board Order WQ 2000-11 at page 20.

"Method Detection Limit (MDL)" means the minimum concentration of a substance that can be measured and reported with 99 percent confidence that the analyte concentration is greater than zero, as defined in 40 CFR 136, Appendix B.

"Minimum Level (ML)" means the concentration at which the entire analytical system must give a recognizable signal and acceptable calibration point. The ML is the concentration in a sample that is equivalent to the concentration of the lowest calibration standard analyzed by a specific analytical procedure, assuming that all the method specified sample weights, volumes, and processing steps have been followed.

"Municipal Separate Storm Sewer System (MS4)" means a conveyance or system of conveyances (including roads with drainage systems, municipal streets, alleys, catch basins, curbs, gutters, ditches, manmade channels, or storm drains) owned by a State, city, county, town or other public body, that is designed or used for collecting or conveying storm water, which is not a combined sewer, and which is not part of a publicly owned treatment works, and which discharges to Waters of the United States.

"National Pollutant Discharge Elimination System (NPDES)" means the national program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under CWA §307, 402, 318, and 405. The term includes an "approved program."

"Natural Drainage Systems" means unlined or unimproved (not engineered) creeks, streams, rivers or similar waterways.

"New Development" means land disturbing activities; structural development, including construction or installation of a building or structure, creation of impervious surfaces; and land subdivision.

"Non-Storm Water Discharge" means any discharge to a storm drain that is not composed entirely of storm water.

"Nuisance" means anything that meets all of the following requirements: (1) is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property; (2) affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal; (3) occurs during, or as a result of, the treatment or disposal of wastes.

"Parking Lot" means land area or facility for the parking or storage of motor vehicles used for businesses, commerce, industry, or personal use, with a lot size of 5,000 square feet or more of surface area, or with 25 or more parking spaces.

"Permittee(s)" means Co-Permittees and any agency named in this Order as being responsible for permit conditions within its jurisdiction. Permittees to this Order include the Los Angeles County Flood Control District, Los Angeles County, and the cities of Agoura Hills, Alhambra, Arcadia, Artesia, Azusa, Baldwin Park, Bellflower, Bell Gardens, Beverly Hills, Bradbury, Burbank, Calabasas, Carson, Cerritos, Claremont, Commerce, Compton, Covina, Cudahy, Culver City, Diamond Bar, Downey, Duarte, El Monte, El Segundo, Gardena, Glendale, Glendora, Hawaiian Gardens, Hawthorne, Hermosa Beach, Hidden Hills, Huntington Park, Industry, Inglewood, Irwindale, La Canada Flintridge, La Habra Heights, Lakewood, La Mirada, La Puente, La Verne, Lawndale, Lomita, Los Angeles, Lynwood, Malibu, Manhattan Beach, Maywood, Monrovia, Montebello, Monterey Park, Norwalk, Palos Verdes Estates, Paramount, Pasadena, Pico Rivera, Pomona, Rancho Palos Verdes, Redondo Beach, Rolling Hills, Rolling Hills Estates, Rosemead, San Dimas, San Fernando, San Gabriel, San Marino, Santa Clarita, Santa Fe Springs, Santa Monica, Sierra Madre, Signal Hill, South El Monte, South Gate, South Pasadena, Temple City, Torrance, Vernon, Walnut, West Covina, West Hollywood, Westlake Village, and Whittier.

"Planning Priority Projects" means those projects that are required to incorporate appropriate storm water mitigation measures into the design plan for their respective project. These types of projects include:

1. Ten or more unit homes (includes single family homes, multifamily homes, condominiums, and apartments)
2. A 100,000 or more square feet of impervious surface area industrial/ commercial development (1 ac starting March 2003)
3. Automotive service facilities (SIC 5013, 5014, 5541, 7532-7534, and 7536-7539)
4. Retail gasoline outlets
5. Restaurants (SIC 5812)
6. Parking lots 5,000 square feet or more of surface area or with 25 or more parking spaces

7. Redevelopment projects in subject categories that meet Redevelopment thresholds
8. Projects located in or directly adjacent to or discharging directly to an ESA, which meet thresholds; and
9. Those projects that require the implementation of a site-specific plan to mitigate post-development storm water for new development not requiring a SUSMP but which may potentially have adverse impacts on post-development storm water quality, where the following project characteristics exist:
   a) Vehicle or equipment fueling areas;
   b) Vehicle or equipment maintenance areas, including washing and repair;
   c) Commercial or industrial waste handling or storage;
   d) Outdoor handling or storage of hazardous materials;
   e) Outdoor manufacturing areas;
   f) Outdoor food handling or processing;
   g) Outdoor animal care, confinement, or slaughter; or
   h) Outdoor horticulture activities.

"Pollutants" means those "pollutants" defined in CWA §502(6) (33.U.S.C.§1362(6)); and incorporated by reference into California Water Code §13373.

"Potable Water Distribution Systems Releases" means sources of flows from drinking water storage, supply and distribution systems including flows from system failures, pressure releases, system maintenance, distribution line testing, fire hydrant flow testing; and flushing and dewatering of pipes, reservoirs, vaults, and minor non-invasive well maintenance activities not involving chemical addition(s). It does not include wastewater discharges from activities that occur at wellheads, such as well construction, well development (i.e., aquifer pumping tests, well purging, etc.), or major well maintenance.

"Project" means all development, redevelopment, and land disturbing activities. The term is not limited to "Project" as defined under CEQA (Pub. Resources Code §21065).

"Rain Event" means any rain event greater than 0.1 inch in 24 hours except where specifically stated otherwise.

"Rare, Threatened, or Endangered Species (RARE)" means a beneficial use for waterbodies in the Los Angeles Region, as designated in the Basin Plan (Table 2-1), that supports habitats necessary, at least in part, for the survival and successful maintenance of plant or animal species established under state or federal law as rare, threatened, or endangered.

"Receiving Waters" means all surface water bodies in the Los Angeles Region that are identified in the Basin Plan.

"Redevelopment" means land-disturbing activity that results in the creation, addition, or replacement of 5,000 square feet or more of impervious surface area on an already developed site. Redevelopment includes, but is not limited to: the expansion of a building footprint;

addition or replacement of a structure; replacement of impervious surface area that is not part of a routine maintenance activity; and land disturbing activities related to structural or impervious surfaces. It does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of facility, nor does it include emergency construction activities required to immediately protect public health and safety.

"Regional Administrator" means the Regional Administrator of the Regional Office of the USEPA or the authorized representative of the Regional Administrator.

"Restaurant" means a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC Code 5812).

"Retail Gasoline Outlet" means any facility engaged in selling gasoline and lubricating oils.

"Runoff" means any runoff including storm water and dry weather flows from a drainage area that reaches a receiving water body or subsurface. During dry weather it is typically comprised of base flow either contaminated with pollutants or uncontaminated, and nuisance flows.

"Screening" means using proactive methods to identify illicit connections through a continuously narrowing process. The methods may include: performing baseline monitoring of open channels, conducting special investigations using a prioritization approach, analyzing maintenance records for catch basin and storm drain cleaning and operation, and verifying all permitted connections into the storm drains. Special investigation techniques may include: dye testing, visual inspection, smoke testing, flow monitoring, infrared, aerial and thermal photography, and remote control camera operation.

"Sidewalk Rinsing" means pressure washing of paved pedestrian walkways with average water usage of 0.006 gallons per square foot, with no cleaning agents, and properly disposing of all debris collected, as authorized under Regional Board Resolution No. 98-08.

"Significant Ecological Area (SEA)" means an area that is determined to possess an example of biotic resources that cumulatively represent biological diversity, for the purposes of protecting biotic diversity, as part of the Los Angeles County General Plan.[1] Areas are designated as SEAs, if they possess one or more of the following criteria:

1. The habitat of rare, endangered, and threatened plant and animal species.
2. Biotic communities, vegetative associations, and habitat of plant and animal species that are either one of a kind, or are restricted in distribution on a regional basis.
3. Biotic communities, vegetative associations, and habitat of plant and animal species that are either one of a kind or are restricted in distribution in Los Angeles County.

[1] The 61 existing SEAs represent the findings of a study that was completed in 1976 by England and Nelson, Environmental Consultants, as amended through the adoption of a revised Los Angeles County General Plan in 1980. The results of an update study to evaluate existing SEAs within unincorporated Los Angeles County is currently being proposed to the Los Angeles County Planning Commission (*Los Angeles County Significant Ecological Area Update Study 2000, Background Report*, PCR Services Corporation). The *Update Study 2000*, which contains existing and proposed SEA boundaries, can be downloaded from the Los Angeles County Department of Planning website at http://planning.co.la.ca.us/drp_revw.htm#SEA

4. Habitat that at some point in the life cycle of a species or group of species, serves as a concentrated breeding, feeding, resting, migrating grounds and is limited in availability either regionally or within Los Angeles County.
5. Biotic resources that are of scientific interest because they are either an extreme in physical/geographical limitations, or represent an unusual variation in a population or community.
6. Areas important as game species habitat or as fisheries.
7. Areas that would provide for the preservation of relatively undisturbed examples of natural biotic communities in Los Angeles County.
8. Special areas.[2]

"Significant Natural Area (SNA)" means an area defined by the California Department of Fish and Game (DFG), Significant Natural Areas Program, as an area that contains an important example of California's biological diversity. The most current SNA maps, reports, and descriptions can be downloaded from the DFG website at ftp://maphost.dfg.ca.gov/outgoing/whdab/sna/. These areas are identified using the following biological criteria only, irrespective of any administrative or jurisdictional considerations:

1. Areas supporting extremely rare species or habitats.
2. Areas supporting associations or concentrations of rare species or habitats.
3. Areas exhibiting the best examples of rare species and habitats in the state.

"Site" means the land or water area where any "facility or activity" is physically located or conducted, including adjacent land used in connection with the facility or activity.

"Source Control BMP" means any schedules of activities, prohibitions of practices, maintenance procedures, managerial practices or operational practices that aim to prevent storm water pollution by reducing the potential for contamination at the source of pollution.

"SQMP" means the Los Angeles Countywide Stormwater Quality Management Program.

"State Storm Water Pollution Prevention Plan (State SWPPP)" means a plan, as required by a State General Permit, identifying potential pollutant sources and describing the design, placement and implementation of BMPs, to effectively prevent non-stormwater Discharges and reduce Pollutants in Stormwater Discharges during activities covered by the General Permit.

"Storm Water" means storm water runoff, snow melt runoff, and surface runoff and drainage.

"Storm Water Discharge Associated with Industrial Activity" means industrial discharge as defined in 40 CFR 122.26(b)(14)

"Stormwater Quality Management Program" means the Los Angeles Countywide Stormwater Quality Management Program, which includes descriptions of programs, collectively developed by the Permittees in accordance with provisions of the NPDES Permit, to comply with applicable federal and state law, as the same is amended from time to time.

[2] These criteria from the 1976 study have been modified in the *Update Study 2000*.

"Structural BMP" means any structural facility designed and constructed to mitigate the adverse impacts of storm water and urban runoff pollution (e.g. canopy, structural enclosure). The category may include both Treatment Control BMPs and Source Control BMPs.

"SUSMP" means the Los Angeles Countywide Standard Urban Stormwater Mitigation Plan. The SUSMP shall address conditions and requirements of new development.

"Total Maximum Daily Load (TMDL)" means the sum of the individual waste load allocations for point sources and load allocations for nonpoint sources and natural background.

"Toxicity Identification Evaluation (TIE)" means a set of procedures to identify the specific chemical(s) responsible for toxicity. These procedures are performed in three phases (characterization, identification, and confirmation) using aquatic organism toxicity tests.

"Toxicity Reduction Evaluation (TRE)" means a study conducted in a step-wise process to identify the causative agents of effluent or ambient toxicity, isolate the sources of toxicity, evaluate the effectiveness of toxicity control options, and then confirm the reduction in toxicity.

"Treatment" means the application of engineered systems that use physical, chemical, or biological processes to remove pollutants. Such processes include, but are not limited to, filtration, gravity settling, media absorption, biodegradation, biological uptake, chemical oxidation and UV radiation.

"Treatment Control BMP" means any engineered system designed to remove pollutants by simple gravity settling of particulate pollutants, filtration, biological uptake, media absorption or any other physical, biological, or chemical process.

"USEPA Phase I Facilities" means facilities in specified industrial categories that are required to obtain an NPDES permit for storm water discharges, as required by 40 CFR 122.26(c). These categories include:

i. facilities subject to storm water effluent limitation guidelines, new source performance standards, or toxic pollutant effluent standards (40 CFR N)
ii. manufacturing facilities
iii. oil and gas/mining facilities
iv. hazardous waste treatment, storage, or disposal facilities
v. landfills, land application sites, and open dumps
vi. recycling facilities
vii. steam electric power generating facilities
viii. transportation facilities
ix. sewage or wastewater treatment works
x. light manufacturing facilities

"Vehicle Maintenance/Material Storage Facilities/Corporation Yards" means any Permittee owned or operated facility or portion thereof that:

i. Conducts industrial activity, operates equipment, handles materials, and provides services similar to Federal Phase I facilities;
ii. Performs fleet vehicle service/maintenance on ten or more vehicles per day including repair, maintenance, washing, and fueling;

iii. Performs maintenance and/or repair of heavy industrial machinery/equipment ; and
iv. Stores chemicals, raw materials, or waste materials in quantities that require a hazardous materials business plan or a Spill Prevention, Control , and Counter-measures (SPCC) plan.

"Water Quality Standards and Water Quality Objectives" means water quality criteria contained in the Basin Plan, the California Ocean Plan, the National Toxics Rule, the California Toxics Rule, and other state or federally approved surface water quality plans. Such plans are used by the Regional Board to regulate all discharges, including storm water discharges.

"Waters of the State" means any surface water or groundwater, including saline waters, within boundaries of the state.

"Waters of the United States" or "Waters of the U.S." means:

a. All waters that are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;
b. All interstate waters, including interstate "wetlands";
c. All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, "wetlands," sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds the use, degradation, or destruction of which would affect or could affect interstate or foreign commerce including any such waters:
    1. Which are or could be used by interstate or foreign travelers for recreational or other purposes;
    2. From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or
    3. Which are used or could be used for industrial purposes by industries in interstate commerce;
d. All impoundments of waters otherwise defined as waters of the United States under this definition;
e. Tributaries of waters identified in paragraphs (a) through (d) of this definition;
f. The territorial sea; and
g. "Wetlands" adjacent to waters (other than waters that are themselves wetlands) identified in paragraph (a) through (f) of this definition.

Waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of CWA (other than cooling ponds as defined in 40 CFR 423.22(m), which also meet the criteria of this definition) are not waters of the United States. This exclusion applies only to man-made bodies of water which neither were originally created in waters of the United States (such as disposal area in wetlands) nor resulted from the impoundment of waters of the United States. Waters of the United States do not include prior converted cropland. Notwithstanding the determination of an area's status as prior converted cropland by any other federal agency, for the purposes of the CWA, the final authority regarding CWA jurisdiction remains with USEPA.

"Wet Season" means the calendar period beginning October 1 through April 15.

Part 6. STANDARD PROVISIONS

A. Standard Requirements

1. Each Permittee shall comply with all provisions and requirements of this permit.
2. Should a Permittee discover a failure to submit any relevant facts or that it submitted incorrect information in a report, it shall promptly submit the missing or correct information.
3. Each Permittee shall report all instances of non-compliance not otherwise reported at the time monitoring reports are submitted.
4. This Order includes the attached Monitoring and Reporting Program, and SUSMP(Regional Board Resolution No. R00-02), which are a part of the permit and must be complied with in the same manner as with the rest of the requirements in the permit.

B. Regional Board Review

Any formal determination or approval made by the Regional Board Executive Officer pursuant to the provisions of this Order may be reviewed by the Regional Board. A Permittee(s) or a member of the public may request such review upon petition within 30 days of the effective date of the notification of such decision to the Permittee(s) and interested parties on file at the Regional Board.

C. Public Review

1. All documents submitted to the Regional Board in compliance with the terms and conditions of this Order shall be made available to members of the public pursuant to the Freedom of Information Act (5 U.S.C. § 552 (as amended) and the Public Records Act (Cal. Government Code § 6250 *et seq.*).
2. All documents submitted to the Regional Board Executive Officer for approval shall be made available to the public for a 30-day period to allow for public comment.

D. Duty to Comply

1. Each Permittee must comply with all of the terms, requirements, and conditions of this Order. Any violation of this order constitutes a violation of the Clean Water Act, its regulations and the California Water Code, and is grounds for enforcement action, Order termination, Order revocation and reissuance, denial of an application for reissuance; or a combination thereof [40 CFR 122.41(a), CWC § 13261, 13263, 13265, 13268, 13300, 13301, 13304, 13340, 13350].
2. A copy of these waste discharge specifications shall be maintained by each Permittee so as to be available during normal business hours to Permittee employees and members of the public.

3. Any discharge of wastes at any point(s) other than specifically described in this Order is prohibited, and constitutes a violation of the Order.

E. **Duty to Mitigate [40 CFR 122.41 (d)]**

Each Permittee shall take all reasonable steps to minimize or prevent any discharge that has a reasonable likelihood of adversely affecting human health or the environment.

F. **Inspection and Entry [40 CFR 122.41(i), CWC § 13267]**

The Regional Board, USEPA, and other authorized representatives shall be allowed:

1. Entry upon premises where a regulated facility is located or conducted, or where records are kept under conditions of this Order;

2. Access to copy any records, at reasonable times, that are kept under the conditions of this Order;

3. To inspect at reasonable times any facility, equipment (including monitoring and control equipment), practices, or operations regulated or required under this Order; and

4. To photograph, sample, and monitor at reasonable times for the purpose of assuring compliance with this Order, or as otherwise authorized by the CWA and the CWC.

G. **Proper Operation and Maintenance [40 CFR 122.41 (e), CWC § 13263(f)]**

The Permittees shall at all times properly operate and maintain all facilities and systems of treatment (and related appurtenances) that are installed or used by the Permittees to achieve compliance with this Order. Proper operation and maintenance includes adequate laboratory controls and appropriate quality assurance procedures. This provision requires the operation of backup or auxiliary facilities or similar system that are installed by a Permittee only when necessary to achieve compliance with the conditions of this Order.

H. **Signatory Requirements [40 CFR 122.41(k) & 122.22]**

Except as otherwise provided in this Order, all applications, reports, or information submitted to the Regional Board shall be signed by the Director of Public Works, City Engineer, or authorized designee and certified as set forth in 40 CFR 122.22.

I. **Reopener and Modification [40 CFR 122.41(f) & 122.62]**

1. This Order may only be modified, revoked, or reissued, prior to the expiration date, by the Regional Board, in accordance with the procedural requirements of the CWC and CCR Title 23 for the issuance of waste

discharge requirements, 40 CFR 122.62, and upon prior notice and hearing, to:

a) Address changed conditions identified in the required reports or other sources deemed significant by the Regional Board;

b) Incorporate applicable requirements or statewide water quality control plans adopted by the State Board or amendments to the Basin Plan;

c) Comply with any applicable requirements, guidelines, and/or regulations issued or approved pursuant to CWA Section 402(p); and/or,

d) Consider any other federal, or state laws or regulations that became effective after adoption of this Order.

2. After notice and opportunity for a hearing, this Order may be terminated or modified for cause, including, but not limited to:

a) Violation of any term or condition contained in this Order;

b) Obtaining this Order by misrepresentation, or failure to disclose all relevant facts; or,

c) A change in any condition that requires either a temporary or permanent reduction or elimination of the authorized discharge.

3. The filing of a request by the Principal Permittee or Permittees for a modification, revocation and re-issuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any condition of this Order.

4. This Order may be modified to make corrections or allowances for changes in the permitted activity listed in this section, following the procedures at 40 CFR 122.63, if processed as a minor modification. Minor modifications may only:

a) Correct typographical errors, or

b) Require more frequent monitoring or reporting by the Permittee.

J. Severability

The provisions of this permit are severable; and if any provision of this permit or the application of any provision of this permit to any circumstance is held invalid, the application of such provision to other circumstances and the remainder of this permit shall not be affected.

K. Duty to Provide Information [40 CFR 122.41(h)]

The Permittees shall furnish, within a reasonable time, any information the Regional Board or USEPA may request to determine whether cause exists for

COA 0095
001375

modifying, revoking and reissuing, or terminating this Order. The Permittees shall also furnish to the Regional Board, upon request, copies of records required to be kept by this Order.

L. Twenty-four Hour Reporting [40 CFR 122.41(l)(6)][3]

1. The Permittees shall report to the Regional Board any noncompliance that may endanger health or the environment. Any information shall be provided orally within 24 hours from the time any Permittee becomes aware of the circumstances. A written submission shall also be provided within five days of the time the Permittee becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times and, if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance.
2. The Regional Board may waive the required written report on a case-by-case basis.

M. Bypass [40 CFR 122.41(m)][4]

Bypass (the intentional diversion of waste streams from any portion of a treatment facility) is prohibited. The Regional Board may take enforcement action against Permittees for bypass unless:

1. Bypass was unavoidable to prevent loss of life, personal injury or severe property damage. (Severe property damage means substantial physical damage to property, damage to the treatment facilities that causes them to become inoperable, or substantial and permanent loss of natural resources that can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.);
2. There were no feasible alternatives to bypass, such as the use of auxiliary treatment facilities, retention of untreated waste, or maintenance during normal periods of equipment down time. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass that could occur during normal periods of equipment downtime or preventive maintenance;
3. The Permittee submitted a notice at least ten days in advance of the need for a bypass to the Regional Board; or,
4. Permittees may allow a bypass to occur that does not cause effluent limitations to be exceeded, but only if it is for essential maintenance to

[3] This provision applies to incidents where effluent limitations (numerical or narrative) as provided in this Order or in the Los Angeles County SQMP are exceeded, and which endanger public health or the environment.

[4] This provision applies to the operation and maintenance of storm water controls and BMPs as provided in this Order or in the SQMP.

assure efficient operation. In such a case, the above bypass conditions are not applicable. The Permittee shall submit notice of an unanticipated bypass as required.

N. Upset [40 CFR 122.41(n)][5]

Upset means an exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond the reasonable control of the permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.

1. A Permittee that wishes to establish the affirmative defense of an upset in an action brought for non compliance shall demonstrate, through properly signed, contemporaneous operating logs, or other relevant evidence that:

   a) An upset occurred and that the Permittee can identify the cause(s) of the upset;

   b) The permitted facility was being properly operated by the time of the upset;

   c) The Permittee submitted notice of the upset as required; and,

   d) The Permittee complied with any remedial measures required.

2. No determination made before an action for noncompliance, such as during administrative review of claims that non-compliance was caused by an upset, is final administrative action subject to judicial review.

3. In any enforcement proceeding, the Permittee seeking to establish the occurrence of an upset has the burden of proof.

O. Property Rights [40 CFR 122.41(g)]

This Order does not convey any property rights of any sort, or any exclusive privilege.

P. Enforcement

1. Violation of any of the provisions of the NPDES permit or any of the provisions of this Order may subject the violator to any of the penalties described herein, or any combination thereof, at the discretion of the prosecuting authority; except that only one kind of penalties may be applied for each kind of violation. The CWA provides the following:

   a) Criminal Penalties for:

[5] *Supra*. See footnote number 3.

(1) Negligent Violations:
The CWA provides that any person who negligently violates permit conditions implementing § 301, 302, 306, 307, 308, 318, or 405 is subject to a fine of not less than $2,500 nor more than $25,000 per day for each violation, or by imprisonment for not more than 1 year, or both.

(2) Knowing Violations:
The CWA provides that any person who knowingly violates permit conditions implementing § 301, 302, 306, 307, 308, 318, or 405 is subject to a fine of not less than $5,000 nor more than $50,000 per day of violation, or by imprisonment for not more than 3 years, or both.

(3) Knowing Endangerment:
The CWA provides that any person who knowingly violates permit conditions implementing § 301, 302, 307, 308, 318, or 405 and who knows at that time that he is placing another person in imminent danger of death or serious bodily injury is subject to a fine of not more than $250,000, or by imprisonment for not more than 15 years, or both.

(4) False Statement:
The CWA provides that any person who knowingly makes any false material statement, representation, or certification in any application, record, report, plan, or other document filed or required to be maintained under the Act or who knowingly falsifies, tampers with, or renders inaccurate, any monitoring device or method required to be maintained under the Act, shall upon conviction, be punished by a fine of not more than $10,000 or by imprisonment for not more than two years, or by both. If a conviction is for a violation committed after a first conviction of such person under this paragraph, punishment shall be by a fine of not more than $20,000 per day of violation, or by imprisonment of not more than four years, or by both. (See CWA § 309(c)(4))

b) Civil Penalties

The CWA provides that any person who violates a permit condition implementing § 301, 302, 306, 307, 308, 318, or 405 is subject to a civil penalty not to exceed $27,500 per day for each violation.

2. The CWC provides that any person who violates a waste discharge requirement provision of the CWC is subject to civil penalties of up to $5,000 per day, $10,000 per day, or $25,000 per day of violation; or when the violation involves the discharge of pollutants, is subject to civil penalties of up to $10 per gallon per day or $25 per gallon per day of violation; or some combination thereof, depending on the violation or combination of violations.

Q. **Need to Halt or Reduce Activity not a Defense [40 CFR 122.41(c)]**

It shall not be a defense for a Permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this Order.

R. **Rescission**

Regional Board Order No. 96-054 is hereby rescinded.

S. **Expiration**

This Order expires on December 12, 2006. The Permittees must submit a Report of Waste Discharges and a proposed Storm Water Quality Management Program in accordance with CCR Title 23 as application for reissuance of waste discharge requirements no later than June 12, 2006.

I, Dennis A. Dickerson, Regional Board Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of an order adopted by the California Regional Water Quality Control Board, Los Angeles Region, on December 13, 2001.

_____

Dennis A. Dickerson
Executive Officer

State Water Resources Control Board

Water Quality Order No. 97-03-DWQ

STATE WATER RESOURCES CONTROL BOARD (STATE WATER BOARD)
WATER QUALITY ORDER NO. 97-03-DWQ
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES)
GENERAL PERMIT NO. CAS000001 (GENERAL PERMIT)

WASTE DISCHARGE REQUIREMENTS (WDRS)
FOR
DISCHARGES OF STORM WATER ASSOCIATED WITH INDUSTRIAL ACTIVITIES
EXCLUDING CONSTRUCTION ACTIVITIES

The State Water Board finds that:

1. Federal regulations for storm water discharges were issued by the U.S. Environmental Protection Agency (U.S. EPA) on November 16, 1990 (40 Code of Federal Regulations [CFR] Parts 122, 123, and 124). The regulations require operators of specific categories of facilities where discharges of storm water associated with industrial activity (storm water) occur to obtain an NPDES permit and to implement Best Available Technology Economically Achievable (BAT) and Best Conventional Pollutant Control Technology (BCT) to reduce or prevent pollutants associated with industrial activity in storm water discharges and authorized non-storm discharges.

2. This General Permit shall regulate storm water discharges and authorized non-storm water discharges from specific categories of industrial facilities identified in Attachment 1, storm water discharges and authorized non-storm water discharges from facilities as designated by the Regional Water Quality Control Boards (Regional Water Boards), and storm water discharges and authorized non-storm water discharges from other facilities seeking General Permit coverage. This General Permit may also regulate storm water discharges and authorized non-storm water discharges from facilities as required by U.S. EPA regulations. This General Permit shall regulate storm water discharges and authorized non-storm water discharges previously regulated by San Francisco Bay Regional Water Board Order, No.92-11 (as amended by Order No. 92-116). This General Permit excludes storm water discharges and non-storm water discharges that are regulated by other individual or general NPDES permits, storm water discharges and non-storm water discharges from construction activities, and storm water discharges and non-storm water discharges excluded by the Regional Water Boards for coverage by this General Permit. Attachment 2 contains the addresses and telephone numbers of each Regional Water Board office.

3. To obtain coverage for storm water discharges and authorized non-storm water discharges pursuant to this General Permit, operators of facilities (facility operators) must submit a Notice of Intent (NOI), in accordance with the Attachment 3

instructions, and appropriate annual fee to the State Water Board. This includes facility operators that have participated in U.S. EPA's group application process.

4. This General Permit does not preempt or supersede the authority of local agencies to prohibit, restrict, or control storm water discharges and authorized non-storm water discharges to storm drain systems or other water-courses within their jurisdictions as allowed by State and Federal law.

5. If an individual NPDES permit is issued to a facility operator otherwise subject to this General Permit or an alternative NPDES general permit is subsequently adopted which covers storm water discharges and/or authorized non-storm water discharges regulated by this General Permit, the applicability of this General Permit to such discharges is automatically terminated on the effective date of the individual NPDES permit or the date of approval for coverage under the subsequent NPDES general permit.

6. Effluent limitations and toxic and effluent standards established in Sections 208(b), 301, 302, 303(d), 304, 306, 307, and 403 of the Federal Clean Water Act (CWA), as amended, are applicable to storm water discharges and authorized non-storm water discharges regulated by this General Permit.

7. This action to adopt an NPDES general permit is exempt from the provisions of the California Environmental Quality Act (Public Resources Code Section 21100, et seq.) in accordance with Section 13389 of the California Water Code.

8. Federal regulations (40 CFR Subchapter N) establish effluent limitations guidelines for storm water discharges from some facilities in ten industrial categories.

9. For facilities which do not have established effluent limitation guidelines for storm water discharges in 40 CFR Subchapter N, it is not feasible at this time to establish numeric effluent limitations. This is due to the large number of discharges and the complex nature of storm water discharges. This is also consistent with the U.S. EPA's August 1, 1996 "Interim Permitting Approach for Water Quality Based Effluent Limitations in Storm Water Permits."

10. Facility operators are required to comply with the terms and conditions of this General Permit. Compliance with the terms and conditions of this General Permit constitutes compliance with BAT/BCT requirements and with requirements to achieve water quality standards. This includes the development and implementation of an effective Storm Water Pollution Prevention Plan (SWPPP) to reduce or prevent pollutants associated with industrial activity in storm water discharges and authorized non-storm water discharges.

11. Best Management Practices (BMPs) to reduce or prevent pollutants associated with industrial activity in storm water discharges and authorized non-storm water discharges are appropriate where numeric effluent limitations are infeasible, and the implementation of BMPs is adequate to achieve compliance with BAT/BCT and with water quality standards.

12. The State Water Board has adopted a Watershed Management Initiative that encourages watershed management throughout the State. This General Permit recognizes the Watershed Management Initiative by supporting the development of watershed monitoring programs authorized by the Regional Water Boards.

13. Following adoption of this General Permit, the Regional Water Boards shall enforce its provisions.

14. Following public notice in accordance with State and Federal laws and regulations, the State Water Board held a public hearing on November 12, 1996 and heard and considered all comments pertaining to this General Permit. A response to all significant comments has been prepared and is available for public review.

15. This Order is an NPDES General Permit in compliance with Section 402 of the CWA and shall take effect upon adoption by the State Water Board.

16. All terms that are defined in the CWA, U.S. EPA storm water regulations and the Porter-Cologne Water Quality Control Act will have the same definition in this General Permit unless otherwise stated.

IT IS HEREBY ORDERED that all facility operators required to be regulated by this General Permit shall comply with the following:

A. DISCHARGE PROHIBITIONS:

1. Except as allowed in Special Conditions (D.1.) of this General Permit, materials other than storm water (non-storm water discharges) that discharge either directly or indirectly to waters of the United States are prohibited. Prohibited non-storm water discharges must be either eliminated or permitted by a separate NPDES permit.

2. Storm water discharges and authorized non-storm water discharges shall not cause or threaten to cause pollution, contamination, or nuisance.

B. EFFLUENT LIMITATIONS:

1. Storm water discharges from facilities subject to storm water effluent limitation guidelines in Federal regulations (40 CFR

Subchapter N) shall not exceed the specified effluent limitations.

2. Storm water discharges and authorized non-storm water discharges regulated by this General Permit shall not contain a hazardous substance equal to or in excess of a reportable quantity listed in 40 CFR Part 117 and/or 40 CFR Part 302.

3. Facility operators covered by this General Permit must reduce or prevent pollutants associated with industrial activity in storm water discharges and authorized non-storm water discharges through implementation of BAT for toxic and non-conventional pollutants and BCT for conventional pollutants. Development and implementation of an SWPPP that complies with the requirements in Section A of the General Permit and that includes BMPs that achieve BAT/BCT constitutes compliance with this requirement.

C. RECEIVING WATER LIMITATIONS:

1. Storm water discharges and authorized non-storm water discharges to any surface or ground water shall not adversely impact human health or the environment.

2. Storm water discharges and authorized non-storm water discharges shall not cause or contribute to an exceedance of any applicable water quality standards contained in a Statewide Water Quality Control Plan or the applicable Regional Water Board's Basin Plan.

3. A facility operator will not be in violation of Receiving Water Limitation C.2. as long as the facility operator has implemented BMPs that achieve BAT/BCT and the following procedure is followed:

   a. The facility operator shall submit a report to the appropriate Regional Water Board that describes the BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report shall include an implementation schedule. The Regional Water Board may require modifications to the report.

   b. Following approval of the report described above by the Regional Water Board, the facility operator shall revise its SWPPP and monitoring program to incorporate the additional BMPs that have been and will be implemented, the implementation schedule, and any additional monitoring required.

4. A facility operator shall be in violation of this General Permit if he/she fails to do any of the following:

a. Submit the report described above within 60 days after either the facility operator or the Regional Water Board determines that discharges are causing or contributing to an exceedance of an applicable water quality standard;

b. Submit a report that is approved by the Regional Water Board; or

c. Revise its SWPPP and monitoring program as required by the approved report.

D. SPECIAL CONDITIONS

1. Non-Storm Water Discharges

a. The following non-storm water discharges are authorized by this General Permit provided that they satisfy the conditions specified in Paragraph b. below: fire hydrant flushing; potable water sources, including potable water related to the operation, maintenance, or testing of potable water systems; drinking fountain water; atmospheric condensates including refrigeration, air conditioning, and compressor condensate; irrigation drainage; landscape watering; springs; ground water; foundation or footing drainage; and sea water infiltration where the sea waters are discharged back into the sea water source.

b. The non-storm water discharges as provided in Paragraph a. above are authorized by this General Permit if all the following conditions are met:

i. The non-storm water discharges are in compliance with Regional Water Board requirements.

ii. The non-storm water discharges are in compliance with local agency ordinances and/or requirements.

iii. BMPs are specifically included in the SWPPP to (1) prevent or reduce the contact of non-storm water discharges with significant materials or equipment and (2) minimize, to the extent practicable, the flow or volume of non-storm water discharges.

iv. The non-storm water discharges do not contain significant quantities of pollutants.

v. The monitoring program includes quarterly visual observations of each non-storm water discharge and its sources to ensure that BMPs are being implemented and are effective.

vi. The non-storm water discharges are reported and described annually as part of the annual report.

c. The Regional Water Board or its designee may establish additional monitoring programs and reporting requirements for any non-storm water discharge authorized by this General Permit.

d. Discharges from firefighting activities are authorized by this General Permit and are not subject to the conditions of Paragraph b. above.

E. PROVISIONS

1. All facility operators seeking coverage by this General Permit must submit an NOI for each of the facilities they operate. Facility operators filing an NOI after the adoption of this General Permit shall use the NOI form and instructions (Attachment 3) attached to this General Permit. Existing facility operators who have filed an NOI pursuant to State Water Board Order No. 91-013-DWQ (as amended by Order No. 92-12-DWQ) or San Francisco Bay Regional Water Board Order No. 92-11 (as amended by Order No. 92-116) shall submit an abbreviated NOI form provided by the State Water Board. The abbreviated NOI form shall be submitted within 45 days of receipt.

2. Facility operators who have filed an NOI, pursuant to State Water Board Order No. 91-013-DWQ (as amended by Order No. 92-12-DWQ) or San Francisco Bay Regional Water Board Order No. 92-11 (as amended by Order No. 92-116), shall continue to implement their existing SWPPP and shall implement any necessary revisions to their SWPPP in accordance with Section A of this General Permit in a timely manner, but in no case later than August 1, 1997. Facility operators beginning industrial activities after adoption of this General Permit must develop and implement an SWPPP in accordance with Section A of this General Permit when the industrial activities begin.

3. Facility operators who have filed an NOI, pursuant to State Water Board Order No. 91-013-DWQ (as amended by Order No. 92-12-DWQ) or San Francisco Bay Regional Water Board Order No. 92-11 (as amended by Order No. 92-116), shall continue to implement their existing Monitoring Program and shall implement any necessary revisions to their Monitoring Program in accordance with Section B of the General Permit in a timely manner, but in no case later than August 1, 1997. Facility operators beginning industrial activities after adoption of this General Permit must develop and implement a Monitoring Program in

accordance with Section B of this General Permit when industrial activities begin.

4. Facility operators of feedlots as defined in 40 CFR Part 412 that are in full compliance with Section 2560 to Section 2565, Title 23, California Code of Regulations (Chapter 15) will be in compliance with all effluent limitations and prohibitions contained in this General Permit. Facility operators of feedlots that comply with Chapter 15, however, must perform monitoring in compliance with the requirements of Section B.4.d. and B.14. of this General Permit. Facility operators of feedlots must also comply with any Regional Water Board WDRs or NPDES general permit regulating their storm water discharges.

5. All facility operators must comply with lawful requirements of municipalities, counties, drainage districts, and other local agencies regarding storm water discharges and non-storm water discharges entering storm drain systems or other watercourses under their jurisdiction, including applicable requirements in municipal storm water management programs developed to comply with NPDES permits issued by the Regional Water Boards to local agencies.

6. All facility operators must comply with the standard provisions and reporting requirements for each facility covered by this General Permit contained in Section C, Standard Provisions.

7. Facility operators that operate facilities with co-located industrial activities (facilities that have industrial activities that meet more than one of the descriptions in Attachment 1) that are contiguous to one another are authorized to file a single NOI to comply with the General Permit. Storm water discharges and authorized non-storm water discharges from the co-located industrial activities are authorized if the SWPPP and Monitoring Program addresses each co-located industrial activity.

8. Upon reissuance of a successor NPDES general permit by the State Water Board, the facility operators subject to this reissued General Permit may be required to file an NOI.

9. Facility operators may request to terminate their coverage under this General Permit by filing a Notice of Termination (NOT) with the Regional Water Board. The NOT shall provide all documentation requested by the Regional Water Board. The facility operator will be notified when the NOT has been approved. Should the NOT be denied, facility operators are responsible for continued compliance with the requirements of this General Permit.

10. Facility operators who have filed an NOI, pursuant to State Water Board Order No. 91-013-DWQ (as amended by Order No. 92-12) or San Francisco Bay Regional Water Board Order No. 92-11 (as amended by Order No. 92-116) shall:

    a. Complete the 1996-97 activities required by those general permits. These include, but are not limited to, conducting any remaining visual observations, sample collection, annual site inspection, annual report submittal, and (for group monitoring leaders) Group Evaluation Reports; and

    b. Comply with the requirements of this General Permit no later than August 1, 1997.

11. If the Regional Water Board determines that a discharge may be causing or contributing to an exceedance of any applicable water quality standards contained in a Statewide Water Quality Control Plan or the applicable Regional Water Board's Basin Plan, the Regional Water Board may order the facility operator to comply with the requirements described in Receiving Water Limitation C.3. The facility operator shall comply with the requirements within the time schedule established by the Regional Water Board.

12. If the facility operator determines that its storm water discharges or authorized non-storm water discharges are causing or contributing to an exceedance of any applicable water quality standards, the facility operator shall comply with the requirements described in Receiving Water Limitation C.3.

13. State Water Board Order No. 91-013-DWQ (as amended by Order No. 92-12-DWQ) and San Francisco Bay Regional Water Board Order No. 91-011 (as amended by Order No. 92-116) are hereby rescinded.

F. REGIONAL WATER BOARD AUTHORITIES

1. Following adoption of this General Permit, Regional Water Boards shall:

    a. Implement the provisions of this General Permit, including, but not limited to, reviewing SWPPPs, reviewing annual reports, conducting compliance inspections, and taking enforcement actions.

    b. Issue other NPDES general permits or individual NPDES storm water permits as they deem appropriate to individual facility operators, facility operators of specific categories of industrial activities, or facility operators in a watershed or geographic area. Upon issuance of such NPDES permits by a Regional Water Board, the affected facility operator shall no longer

be regulated by this General Permit. Any new NPDES permit issued by the Regional Water Board may contain different requirements than the requirements of this General Permit.

2. Regional Water Boards may provide guidance to facility operators on the SWPPP and the Monitoring Program and reporting implementation.

3. Regional Water Boards may require facility operators to conduct additional SWPPP and Monitoring Program and reporting activities necessary to achieve compliance with this General Permit.

4. Regional Water Boards may approve requests from facility operators whose facilities include co-located industrial activities that are not contiguous within the facilities (e.g., some military bases) to comply with this General Permit under a single NOI. Storm water discharges and authorized non-storm water discharges from the co-located industrial activities and from other sources within the facility that may generate significant quantities of pollutants are authorized provided the SWPPP and Monitoring Program addresses each co-located industrial activity and other sources that may generate significant quantities of pollutants.

CERTIFICATION

The undersigned, Administrative Assistant to the State Water Board, does hereby certify that the foregoing is a full, true, and correct copy of an order duly and regularly adopted at a meeting of the State Water Resources Control Board held on April 17, 1997.

Maureen Marché

Administrative Assistant to the Board

SECTION A: STORM WATER POLLUTION PREVENTION PLAN REQUIREMENTS

1. *Implementation Schedule*

A storm water pollution prevention plan (SWPPP) shall be developed and implemented for each facility covered by this General Permit in accordance with the following schedule.

a. Facility operators beginning industrial activities before October 1, 1992 shall develop and implement the SWPPP no later than October 1, 1992. Facility operators beginning industrial activities after October 1, 1992 shall develop and implement the SWPPP when industrial activities begin.

b. Existing facility operators that submitted a Notice of Intent (NOI), pursuant to State Water Resources Control Board (State Water Board) Order No. 91-013-DWQ (as amended by Order No. 92-12) or San Francisco Bay Regional Water Quality Control Board (Regional Water Board) Order No. 92-11 (as amended by Order No. 92-116), shall continue to implement their existing SWPPP and shall implement any necessary revisions to their SWPPP in a timely manner, but in no case later than August 1, 1997.

2. *Objectives*

The SWPPP has two major objectives: (a) to identify and evaluate sources of pollutants associated with industrial activities that may affect the quality of storm water discharges and authorized non-storm water discharges from the facility; and (b) to identify and implement site-specific best management practices (BMPs) to reduce or prevent pollutants associated with industrial activities in storm water discharges and authorized non-storm water discharges. BMPs may include a variety of pollution prevention measures or other low-cost and pollution control measures. They are generally categorized as non-structural BMPs (activity schedules, prohibitions of practices, maintenance procedures, and other low-cost measures) and as structural BMPs (treatment measures, run-off controls, over-head coverage.) To achieve these objectives, facility operators should consider the five phase process for SWPPP development and implementation as shown in Table A.

The SWPPP requirements are designed to be sufficiently flexible to meet the needs of various facilities. SWPPP requirements that are not applicable to a facility should not be included in the SWPPP.

A facility's SWPPP is a written document that shall contain a compliance activity schedule, a description of industrial activities and pollutant sources, descriptions of BMPs, drawings, maps, and relevant copies or references of parts of other plans. The SWPPP shall be revised whenever appropriate and shall be readily available for review by facility employees or Regional Water Board inspectors.

3. *Planning and Organization*

a. *Pollution Prevention Team*

The SWPPP shall identify a specific individual or individuals and their positions within the facility organization as members of a storm water pollution prevention team responsible for developing the SWPPP, assisting the facility manager in SWPPP implementation and revision, and conducting all monitoring program activities required in Section B of this General Permit. The SWPPP shall clearly identify the General Permit related responsibilities, duties, and activities of each team member. For small facilities, storm water pollution prevention teams may consist of one individual where appropriate.

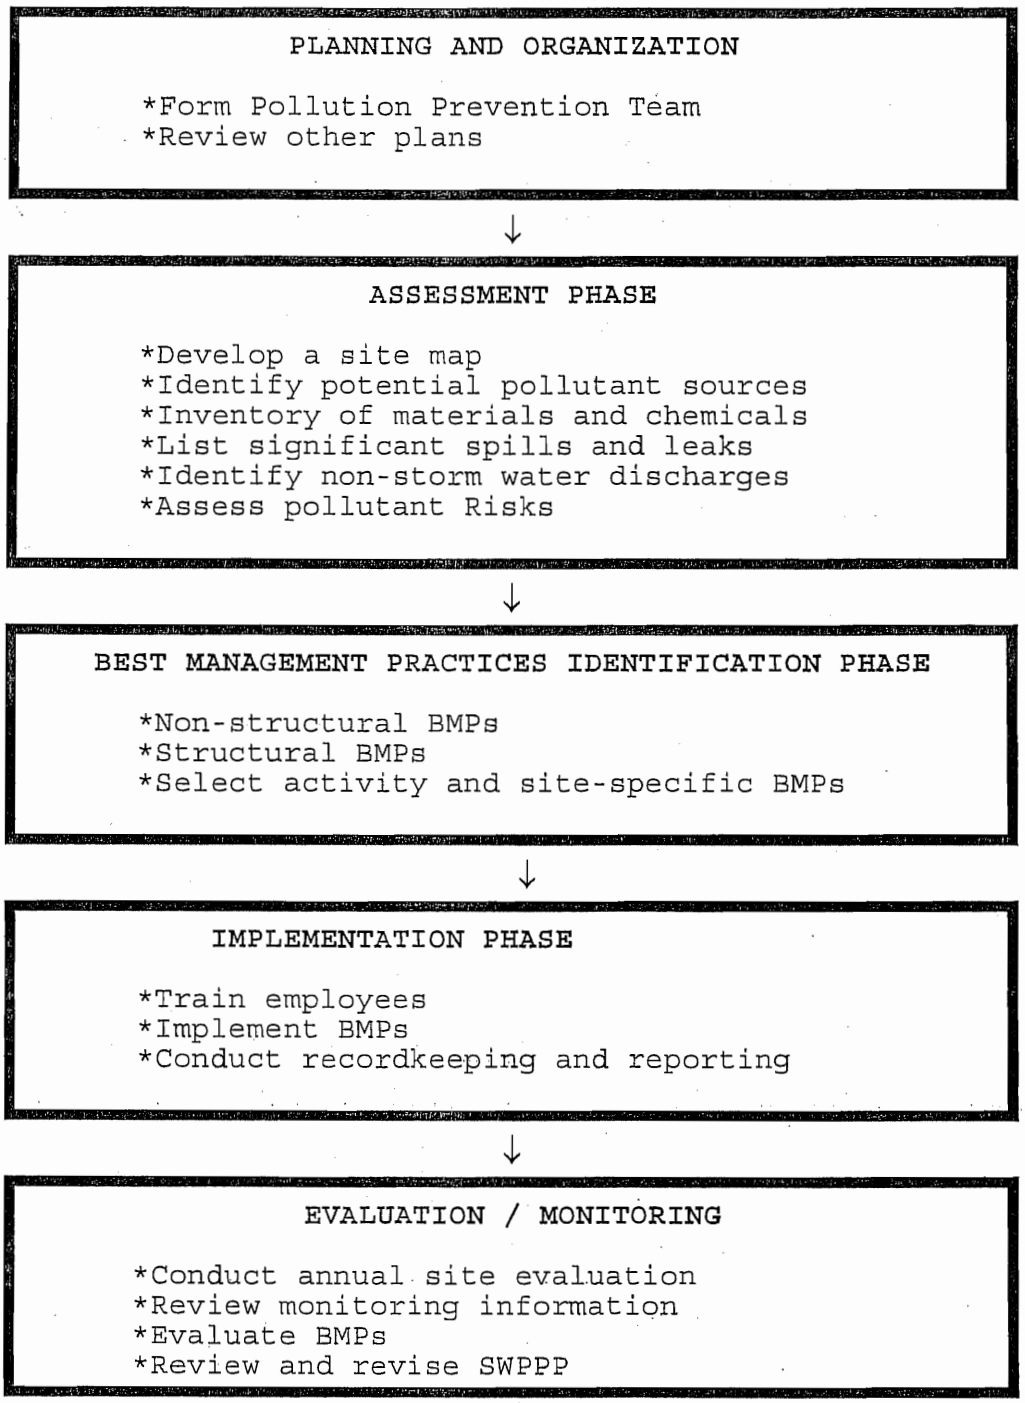
b. *Review Other Requirements and Existing Facility Plans*

The SWPPP may incorporate or reference the appropriate elements of other regulatory requirements. Facility operators should review all local, State, and Federal requirements that impact, complement, or are consistent with the requirements of this General Permit. Facility operators should identify any existing facility plans that contain storm water pollutant control measures or relate to the requirements of this General Permit. As examples, facility operators whose facilities are subject to Federal Spill Prevention Control and Countermeasures' requirements should already have instituted a plan to control spills of certain hazardous materials. Similarly, facility operators whose facilities are subject to air quality related permits and regulations may already have evaluated industrial activities that generate dust or particulates.

4. *Site Map*

The SWPPP shall include a site map. The site map shall be provided on an 8-½ x 11 inch or larger sheet and include notes, legends, and other data as appropriate to ensure that the site map is clear and understandable. If necessary, facility operators may provide the required information on multiple site maps.

TABLE A
FIVE PHASES FOR DEVELOPING AND IMPLEMENTING INDUSTRIAL STORM WATER POLLUTION PREVENTION PLANS



The following information shall be included on the site map:

a. The facility boundaries; the outline of all storm water drainage areas within the facility boundaries; portions of the drainage area impacted by run-on from surrounding areas; and direction of flow of each drainage area, on-site surface water bodies, and areas of soil erosion. The map shall also identify nearby water bodies (such as rivers, lakes, and ponds) and municipal storm drain inlets

where the facility's storm water discharges and authorized non-storm water discharges may be received.

b. The location of the storm water collection and conveyance system, associated points of discharge, and direction of flow. Include any structural control measures that affect storm water discharges, authorized non-storm water discharges, and run-on. Examples of structural control measures are catch basins, berms, detention ponds, secondary containment, oil/water separators, diversion barriers, etc.

c. An outline of all impervious areas of the facility, including paved areas, buildings, covered storage areas, or other roofed structures.

d. Locations where materials are directly exposed to precipitation and the locations where significant spills or leaks identified in Section A.6.a.iv. below have occurred.

e. Areas of industrial activity. This shall include the locations of all storage areas and storage tanks, shipping and receiving areas, fueling areas, vehicle and equipment storage/maintenance areas, material handling and processing areas, waste treatment and disposal areas, dust or particulate generating areas, cleaning and rinsing areas, and other areas of industrial activity which are potential pollutant sources.

5. *List of Significant Materials*

The SWPPP shall include a list of significant materials handled and stored at the site. For each material on the list, describe the locations where the material is being stored, received, shipped, and handled, as well as the typical quantities and frequency. Materials shall include raw materials, intermediate products, final or finished products, recycled materials, and waste or disposed materials.

6. *Description of Potential Pollutant Sources*

a. The SWPPP shall include a narrative description of the facility's industrial activities, as identified in Section A.4.e above, associated potential pollutant sources, and potential pollutants that could be discharged in storm water discharges or authorized non-storm water discharges. At a minimum, the following items related to a facility's industrial activities shall be considered:

i. Industrial Processes

Describe each industrial process, the type, characteristics, and quantity of significant materials used in or resulting from the process, and a description of the manufacturing, cleaning, rinsing, recycling, disposal, or other activities related to the process. Where applicable, areas protected by containment structures and the corresponding containment capacity shall be described.

ii. Material Handling and Storage Areas

Describe each handling and storage area, type, characteristics, and quantity of significant materials handled or stored, description of the shipping, receiving, and loading procedures, and the spill or leak prevention and response procedures. Where applicable, areas protected by containment structures and the corresponding containment capacity shall be described.

iii. Dust and Particulate Generating Activities

Describe all industrial activities that generate dust or particulates that may be deposited within the facility's boundaries and identify their discharge locations; the characteristics of dust and particulate pollutants; the approximate quantity of dust and particulate pollutants that may be deposited within the facility boundaries; and a description of the primary areas of the facility where dust and particulate pollutants would settle.

iv. Significant Spills and Leaks

Describe materials that have spilled or leaked in significant quantities in storm water discharges or non-storm water discharges since April 17, 1994. Include toxic chemicals (listed in 40 CFR, Part 302) that have been discharged to storm water as reported on U.S. Environmental Protection Agency (U.S. EPA) Form R, and oil and hazardous substances in excess of reportable quantities (see 40 Code of Federal Regulations [CFR], Parts 110, 117, and 302).

The description shall include the type, characteristics, and approximate quantity of the material spilled or leaked, the cleanup or remedial actions that have occurred or are planned, the approximate remaining quantity of materials that may be exposed to storm water or non-storm water

discharges, and the preventative measures taken to ensure spill or leaks do not reoccur. Such list shall be updated as appropriate during the term of this General Permit.

v. Non-Storm Water Discharges

Facility operators shall investigate the facility to identify all non-storm water discharges and their sources. As part of this investigation, all drains (inlets and outlets) shall be evaluated to identify whether they connect to the storm drain system.

All non-storm water discharges shall be described. This shall include the source, quantity, frequency, and characteristics of the non-storm water discharges and associated drainage area.

Non-storm water discharges that contain significant quantities of pollutants or that do not meet the conditions provided in Special Conditions D. are prohibited by this General Permit (Examples of prohibited non-storm water discharges are contact and non-contact cooling water, boiler blowdown, rinse water, wash water, etc.). Non-storm water discharges that meet the conditions provided in Special Condition D. are authorized by this General Permit. The SWPPP must include BMPs to prevent or reduce contact of non-storm water discharges with significant materials or equipment.

vi. Soil Erosion

Describe the facility locations where soil erosion may occur as a result of industrial activity, storm water discharges associated with industrial activity, or authorized non-storm water discharges.

b. The SWPPP shall include a summary of all areas of industrial activities, potential pollutant sources, and potential pollutants. This information should be summarized similar to Table B. The last column of Table B, "Control Practices", should be completed in accordance with Section A.8. below.

7. *Assessment of Potential Pollutant Sources*

a. The SWPPP shall include a narrative assessment of all industrial activities and potential pollutant sources as described in A.6. above to determine:

i. Which areas of the facility are likely sources of

pollutants in storm water discharges and authorized non-storm water discharges, and

ii. Which pollutants are likely to be present in storm water discharges and authorized non-storm water discharges. Facility operators shall consider and evaluate various factors when performing this assessment such as current storm water BMPs; quantities of significant materials handled, produced, stored, or disposed of; likelihood of exposure to storm water or authorized non-storm water discharges; history of spill or leaks; and run-on from outside sources.

b. Facility operators shall summarize the areas of the facility that are likely sources of pollutants and the corresponding pollutants that are likely to be present in storm water discharges and authorized non-storm water discharges.

Facility operators are required to develop and implement additional BMPs as appropriate and necessary to prevent or reduce pollutants associated with each pollutant source. The BMPs will be narratively described in Section 8 below.

8. Storm Water Best Management Practices

The SWPPP shall include a narrative description of the storm water BMPs to be implemented at the facility for each potential pollutant and its source identified in the site assessment phase (Sections A.6. and 7. above). The BMPs shall be developed and implemented to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges. Each pollutant and its source may require one or more BMPs. Some BMPs may be implemented for multiple pollutants and their sources, while other BMPs will be implemented for a very specific pollutant and its source.

TABLE B
EXAMPLE
ASSESSMENT OF POTENTIAL POLLUTION SOURCES AND CORRESPONDING BEST MANAGEMENT PRACTICES
SUMMARY

Area	Activity	Pollutant Source	Pollutant	Best Management Practices
Vehicle & Equipment Fueling	Fueling	Spills and leaks during delivery	fuel oil	- Use spill and overflow protection - Minimize run-on of storm water into the fueling area - Cover fueling area - Use dry cleanup methods rather than hosing down area - Implement proper spill prevention control program - Implement adequate preventative maintenance program to preventive tank and line leaks - Inspect fueling areas regularly to detect problems before they occur - Train employees on proper fueling, cleanup, and spill response techniques.
		Spills caused by topping off fuel tanks	fuel oil	
		Hosing or washing down fuel area	fuel oil	
		Leaking storage tanks	fuel oil	
		Rainfall running off fueling area, and rainfall running onto and off fueling area	fuel oil	

The description of the BMPs shall identify the BMPs as (1) existing BMPs, (2) existing BMPs to be revised and implemented, or (3) new BMPs to be implemented. The description shall also include a discussion on the effectiveness of each BMP to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges. The SWPPP shall provide a summary of all BMPs implemented for each pollutant source. This information should be summarized similar to Table B.

Facility operators shall consider the following BMPs for implementation at the facility:

a. Non-Structural BMPs

Non-structural BMPs generally consist of processes, prohibitions, procedures, schedule of activities, etc., that prevent pollutants associated with industrial activity from contacting with storm water discharges and authorized non-storm water discharges. They are considered low technology, cost-effective measures. Facility operators should consider all possible non-structural BMPs options before considering additional structural BMPs (see Section A.8.b. below). Below is a list of non-structural BMPs that should be considered:

i. Good Housekeeping

Good housekeeping generally consist of practical procedures to maintain a clean and orderly facility.

ii. Preventive Maintenance

Preventive maintenance includes the regular inspection and maintenance of structural storm water controls (catch basins, oil/water separators, etc.) as well as other facility equipment and systems.

iii. Spill Response

This includes spill clean-up procedures and necessary clean-up equipment based upon the quantities and locations of significant materials that may spill or leak.

iv. Material Handling and Storage

This includes all procedures to minimize the potential for spills and leaks and to minimize exposure of significant materials to storm water and authorized non-storm water discharges.

v. Employee Training

This includes training of personnel who are responsible for (1) implementing activities identified in the SWPPP, (2) conducting inspections, sampling, and visual observations, and (3) managing storm water. Training should address topics such as spill response, good housekeeping, and material handling procedures, and actions necessary to implement all BMPs identified in the SWPPP. The SWPPP shall identify periodic dates for such training. Records shall be maintained of all training sessions held.

vi. Waste Handling/Recycling

This includes the procedures or processes to handle, store, or dispose of waste materials or recyclable materials.

vii. Recordkeeping and Internal Reporting

This includes the procedures to ensure that all records of inspections, spills, maintenance activities, corrective actions, visual observations, etc., are developed, retained, and provided, as necessary, to the appropriate facility personnel.

viii. Erosion Control and Site Stabilization

This includes a description of all sediment and erosion control activities. This may include the planting and maintenance of vegetation, diversion of run-on and runoff, placement of sandbags, silt screens, or other sediment control devices, etc.

ix. Inspections

This includes, in addition to the preventative maintenance inspections identified above, an inspection schedule of all potential pollutant sources. Tracking and follow-up procedures shall be described to ensure adequate corrective actions are taken and SWPPPs are made.

x. Quality Assurance

This includes the procedures to ensure that all elements of the SWPPP and Monitoring Program are adequately conducted.

b. Structural BMPs

Where non-structural BMPs as identified in Section A.8.a. above are not effective, structural BMPs shall be considered. Structural BMPs generally consist of structural devices that reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges. Below is a list of structural BMPs that should be considered:

i. Overhead Coverage

This includes structures that provide horizontal coverage of materials, chemicals, and pollutant sources from contact with storm water and authorized non-storm water discharges.

ii. Retention Ponds

This includes basins, ponds, surface impoundments, bermed areas, etc. that do not allow storm water to discharge from the facility.

iii. Control Devices

This includes berms or other devices that channel or route run-on and runoff away from pollutant sources.

iv. Secondary Containment Structures

This generally includes containment structures around storage tanks and other areas for the purpose of collecting any leaks or spills.

v. Treatment

This includes inlet controls, infiltration devices, oil/water separators, detention ponds, vegetative swales, etc. that reduce the pollutants in storm water discharges and authorized non-storm water discharges.

9. Annual Comprehensive Site Compliance Evaluation

The facility operator shall conduct one comprehensive site compliance evaluation (evaluation) in each reporting period (July 1-June 30). Evaluations shall be conducted within 8-16 months of each other. The SWPPP shall be revised, as appropriate, and the revisions implemented within 90 days of the evaluation. Evaluations shall include the following:

a. A review of all visual observation records, inspection records, and sampling and analysis results.

b. A visual inspection of all potential pollutant sources for evidence of, or the potential for, pollutants entering the drainage system.

c. A review and evaluation of all BMPs (both structural and non-structural) to determine whether the BMPs are adequate, properly implemented and maintained, or whether additional BMPs are needed. A visual inspection of equipment needed to implement the SWPPP, such as spill response equipment, shall be included.

d. An evaluation report that includes, (i) identification of personnel performing the evaluation, (ii) the date(s) of the evaluation, (iii) necessary SWPPP revisions, (iv) schedule, as required in Section A.10.e, for implementing SWPPP revisions, (v) any incidents of non-compliance and the corrective actions taken, and (vi) a certification that the facility operator is in compliance with this General Permit. If the above certification cannot be provided, explain in the evaluation report why the facility operator is not in compliance with this General Permit. The evaluation report shall be submitted as part of the annual report, retained for at least five years, and signed and certified in accordance with Standard Provisions 9. and 10. of Section C. of this General Permit.

10. *SWPPP General Requirements*

a. The SWPPP shall be retained on site and made available upon request of a representative of the Regional Water Board and/or local storm water management agency (local agency) which receives the storm water discharges.

b. The Regional Water Board and/or local agency may notify the facility operator when the SWPPP does not meet one or more of the minimum requirements of this Section. As requested by the Regional Water Board and/or local agency, the facility operator shall submit an SWPPP revision and implementation schedule that meets the minimum requirements of this section to the Regional Water Board and/or local agency that requested the SWPPP revisions. Within 14 days after implementing the required SWPPP revisions, the facility operator shall provide written certification to the Regional Water Board and/or local agency that the revisions have been implemented.

c. The SWPPP shall be revised, as appropriate, and implemented prior to changes in industrial activities which (i) may significantly increase the quantities of pollutants in storm water discharge, (ii) cause a new area of industrial activity at the facility to be exposed to storm water, or (iii) begin an industrial activity which would introduce a new pollutant source at the facility.

d. Other than as provided in Provisions B.11, B.12, and E.2 of the General Permit, the SWPPP shall be revised and implemented in a timely manner, but in no case more than 90 days after a facility operator determines that the SWPPP is in violation of any requirement(s) of this General Permit.

e. When any part of the SWPPP is infeasible to implement by the deadlines specified in Provision E.2 or Sections A.1, A.9, A.10.c, and A.10.d of this General Permit due to proposed significant structural changes, the facility operator shall submit a report to the Regional Water Board prior to the applicable deadline that (i) describes the portion of the SWPPP that is infeasible to implement by the deadline, (ii) provides justification for a time extension, (iii) provides a schedule for completing and implementing that portion of the SWPPP, and (iv) describes the BMPs that will be implemented in the interim period to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges. Such reports are subject to Regional Water Board approval and/or modifications. Facility operators shall provide written notification to the Regional Water Board within 14 days after the SWPPP revisions are implemented.

f. The SWPPP shall be provided, upon request, to the Regional Water Board. The SWPPP is considered a report that shall be available to the public by the Regional Water Board under Section 308(b) of the Clean Water Act.

SECTION B. MONITORING PROGRAM AND REPORTING REQUIREMENTS

1. *Implementation Schedule*

Each facility operator shall develop a written monitoring program for each facility covered by this General Permit in accordance with the following schedule:

a. Facility operators beginning industrial activities before October 1, 1992 shall develop and implement a monitoring program no later than October 1, 1992. Facility operators beginning operations after October 1, 1992 shall develop and implement a monitoring program when the industrial activities begin.

b. Facility operators that submitted a Notice Of Intent (NOI) pursuant to State Water Resources Control Board (State Water Board) Order No. 91-013-DWQ (as amended by Order No. 92-12) or San Francisco Bay Regional Water Quality Control Board (Regional Water Board) Order No. 92-11 (as amended by Order No. 92-116), shall continue to implement their existing monitoring program and implement any necessary revisions to their monitoring program in a timely manner, but in no case later than August 1, 1997. These facility operators may use the monitoring results conducted in accordance with those expired general permits to satisfy the pollutant/parameter reduction requirements in Section B.5.c., Sampling and Analysis Exemptions and Reduction certifications in Section B.12., and Group Monitoring Sampling credits in B.15.k. For facilities beginning industrial activities after the adoption of this General Permit, the monitoring program shall be developed and implemented when the facility begins the industrial activities.

2. *Objectives*

The objectives of the monitoring program are to:

a. Ensure that storm water discharges are in compliance with the Discharge Prohibitions, Effluent Limitations, and Receiving Water Limitations specified in this General Permit.

b. Ensure practices at the facility to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges are evaluated and revised to meet changing conditions.

c. Aid in the implementation and revision of the SWPPP required by Section A of this General Permit.

d. Measure the effectiveness of best management practices (BMPs) to prevent or reduce pollutants in storm water

discharges and authorized non-storm water discharges. Much of the information necessary to develop the monitoring program, such as discharge locations, drainage areas, pollutant sources, etc., should be found in the Storm Water Pollution Prevention Plan (SWPPP). The facility's monitoring program shall be a written, site-specific document that shall be revised whenever appropriate and be readily available for review by employees or Regional Water Board inspectors.

3. *Non-storm Water Discharge Visual Observations*

a. Facility operators shall visually observe all drainage areas within their facilities for the presence of unauthorized non-storm water discharges;

b. Facility operators shall visually observe the facility's authorized non-storm water discharges and their sources;

c. The visual observations required above shall occur quarterly, during daylight hours, on days with no storm water discharges, and during scheduled facility operating hours[1]. Quarterly visual observations shall be conducted in each of the following periods: January-March, April-June, July-September, and October-December. Facility operators shall conduct quarterly visual observations within 6-18 weeks of each other.

d. Visual observations shall document the presence of any discolorations, stains, odors, floating materials, etc., as well as the source of any discharge. Records shall be maintained of the visual observation dates, locations observed, observations, and response taken to eliminate unauthorized non-storm water discharges and to reduce or prevent pollutants from contacting non-storm water discharges. The SWPPP shall be revised, as necessary, and implemented in accordance with Section A of this General Permit.

4. *Storm Water Discharge Visual Observations*

a. With the exception of those facilities described in Section B.4.d. below, facility operators shall visually

---

[1] "Scheduled facility operating hours" are the time periods when the facility is staffed to conduct any function related to industrial activity, but excluding time periods where only routine maintenance, emergency response, security, and/or janitorial services are performed.

observe storm water discharges from one storm event per month during the wet season (October 1-May 30). These visual observations shall occur during the first hour of discharge and at all discharge locations. Visual observations of stored or contained storm water shall occur at the time of release.

b. Visual observations are only required of storm water discharges that occur during daylight hours that are preceded by at least three (3) working days[2] without storm water discharges and that occur during scheduled facility operating hours.

c. Visual observations shall document the presence of any floating and suspended material, oil and grease, discolorations, turbidity, odor, and source of any pollutants. Records shall be maintained of observation dates, locations observed, observations, and response taken to reduce or prevent pollutants in storm water discharges. The SWPPP shall be revised, as necessary, and implemented in accordance with Section A of this General Permit.

d. Feedlots (subject to Federal effluent limitations guidelines in 40 Code of Federal Regulations [CFR] Part 412) that are in compliance with Sections 2560 to 2565, Article 6, Chapter 15, Title 23, California Code of Regulations, and facility operators with storm water containment facilities shall conduct monthly inspections of their containment areas to detect leaks and ensure maintenance of adequate freeboard. Records shall be maintained of the inspection dates, observations, and any response taken to eliminate leaks and to maintain adequate freeboard.

5. *Sampling and Analysis*

a. Facility operators shall collect storm water samples during the first hour of discharge from (1) the first storm event of the wet season, and (2) at least one other storm event in the wet season. All storm water discharge locations shall be sampled. Sampling of stored or contained storm water shall occur at the time the stored or contained storm water is released. Facility operators that do not collect samples from the first storm event of the wet season are still required to collect samples from two other storm events of the wet season and shall explain in the Annual Report why the first storm event was not sampled.

---

[2] Three (3) working days may be separated by non-working days such as weekends and holidays provided that no storm water discharges occur during the three (3) working days and the non-working days.

b. Sample collection is only required of storm water discharges that occur during scheduled facility operating hours and that are preceded by at least (3) three working days without storm water discharge.

c. The samples shall be analyzed for:

i. Total suspended solids (TSS) pH, specific conductance, and total organic carbon (TOC). Oil and grease (O&G) may be substituted for TOC; and

ii. Toxic chemicals and other pollutants that are likely to be present in storm water discharges in significant quantities. If these pollutants are not detected in significant quantities after two consecutive sampling events, the facility operator may eliminate the pollutant from future sample analysis until the pollutant is likely to be present again; and

iii. Other analytical parameters as listed in Table D (located at the end of this Section). These parameters are dependent on the facility's standard industrial classification (SIC) code. Facility operators are not required to analyze a parameter listed in Table D when the parameter is not already required to be analyzed pursuant to Section B.5.c.i. and ii. or B.6 of this General Permit, and either of the two following conditions are met: (1) the parameter has not been detected in significant quantities from the last two consecutive sampling events, or (2) the parameter is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation of the facilities industrial activities, potential pollutant sources, and SWPPP. Facility operators that do not analyze for the applicable Table D parameters shall certify in the Annual Report that the above conditions have been satisfied.

iv. Other parameters as required by the Regional Water Board.

6. *Facilities Subject to Federal Storm Water Effluent Limitation Guidelines*

Facility operators with facilities subject to Federal storm water effluent limitation guidelines, in addition to the requirements in Section B.5. above, must complete the following:

a. Collect and analyze two samples for any pollutant specified in the appropriate category of 40 CFR Subchapter N. The sampling and analysis exemptions and reductions described in Section B.12. of this General Permit do not apply to these pollutants.

b. Estimate or calculate the volume of storm water discharges from each drainage area;

c. Estimate or calculate the mass of each regulated pollutant as defined in the appropriate category of 40 CFR Subchapter N; and

d. Identify the individual(s) performing the estimates or calculations in accordance with Subsections b. and c. above.

7. *Sample Storm Water Discharge Locations*

a. Facility operators shall visually observe and collect samples of storm water discharges from all drainage areas that represent the quality and quantity of the facility's storm water discharges from the storm event.

b. If the facility's storm water discharges are commingled with run-on from surrounding areas, the facility operator should identify other visual observation and sample collection locations that have not been commingled by run-on and that represent the quality and quantity of the facility's storm water discharges from the storm event.

c. If visual observation and sample collection locations are difficult to observe or sample (e.g., sheet flow, submerged outfalls), facility operators shall identify and collect samples from other locations that represent the quality and quantity of the facility's storm water discharges from the storm event.

d. Facility operators that determine that the industrial activities and BMPs within two or more drainage areas are substantially identical may either (i) collect samples from a reduced number of substantially identical drainage areas, or (ii) collect samples from each substantially identical drainage area and analyze a combined sample from each substantially identical drainage area. Facility operators must document such a determination in the annual report.

8. *Visual Observation and Sample Collection Exceptions*

Facility operators are required to be prepared to collect samples and conduct visual observations at the beginning of the wet season (October 1) and throughout the wet season

until the minimum requirements of Sections B.4. and B.5. are completed with the following exceptions:

a. A facility operator is not required to collect a sample and conduct visual observations in accordance with Section B.4 and Section B.5 due to dangerous weather conditions, such as flooding, electrical storm, etc., when storm water discharges begin after scheduled facility operating hours or when storm water discharges are not preceded by three working days without discharge. Visual observations are only required during daylight hours. Facility operators that do not collect the required samples or visual observations during a wet season due to these exceptions shall include an explanation in the Annual Report why the sampling or visual observations could not be conducted.

b. A facility operator may conduct visual observations and sample collection more than one hour after discharge begins if the facility operator determines that the objectives of this Section will be better satisfied. The facility operator shall include an explanation in the Annual Report why the visual observations and sample collection should be conducted after the first hour of discharge.

9. *Alternative Monitoring Procedures*

Facility operators may propose an alternative monitoring program that meets Section B.2 monitoring program objectives for approval by the Regional Water Board. Facility operators shall continue to comply with the monitoring requirements of this Section and may not implement an alternative monitoring plan until the alternative monitoring plan is approved by the Regional Water Board. Alternative monitoring plans are subject to modification by the Regional Water Boards.

10. *Monitoring Methods*

a. Facility operators shall explain how the facility's monitoring program will satisfy the monitoring program objectives of Section B.2. This shall include:

i. Rationale and description of the visual observation methods, location, and frequency.

ii. Rationale and description of the sampling methods, location, and frequency; and

iii. Identification of the analytical methods and corresponding method detection limits used to detect pollutants in storm water discharges. This shall include justification that the method detection limits are adequate to satisfy the objectives of the monitoring program.

b. All sampling and sample preservation shall be in accordance with the current edition of "Standard Methods for the Examination of Water and Wastewater" (American Public Health Association). All monitoring instruments and equipment (including a facility operator's own field instruments for measuring pH and Electro Conductivity) shall be calibrated and maintained in accordance with manufacturers' specifications to ensure accurate measurements. All laboratory analyses must be conducted according to test procedures under 40 CFR Part 136, unless other test procedures have been specified in this General Permit or by the Regional Water Board. All metals shall be reported as total metals. With the exception of analysis conducted by facility operators, all laboratory analyses shall be conducted at a laboratory certified for such analyses by the State Department of Health Services. Facility operators may conduct their own sample analyses if the facility operator has sufficient capability (qualified employees, laboratory equipment, etc.) to adequately perform the test procedures.

11. *Inactive Mining Operations*
Inactive mining operations are defined in Attachment 1 of this General Permit. Where comprehensive site compliance evaluations, non-storm water discharge visual observations, storm water discharge visual observations, and storm water sampling are impracticable, facility operators of inactive mining operations may instead obtain certification once every three years by a Registered Professional Engineer that an SWPPP has been prepared for the facility and is being implemented in accordance with the requirements of this General Permit. By means of these certifications, the Registered Professional Engineer having examined the facility and being familiar with the provisions of this General Permit shall attest that the SWPPP has been prepared in accordance with good engineering practices. Facility operators of mining operations who cannot obtain a certification because of noncompliance must notify the appropriate Regional Water Board and, upon request, the local agency which receives the storm water discharge.

12. *Sampling and Analysis* Exemptions and Reductions

A facility operator who qualifies for sampling and analysis exemptions, as described below in Section B.12.a.i., or who qualifies for reduced sampling and analysis, as described below in Section B.12.b., must submit the appropriate certifications and required documentation to the Regional Water Boards prior to the wet season (October 1) and recertify as part of the Annual Report submittal. A facility operator that qualifies for either the Regional Water Board or local agency certification programs, as described below in Section B.12.a.ii. and iii., shall submit certification and documentation in accordance with the requirements of those programs. Facility operators who provide certifications in accordance with this Section are still required to comply with all other monitoring program and reporting requirements. Facility operators shall prepare and submit their certifications using forms and instructions provided by the State Water Board, Regional Water Board, or local agency or shall submit their information on a form that contains equivalent information. Facility operators whose facility no longer meets the certification conditions must notify the Regional Water Boards (and local agency) within 30 days and immediately comply with the Section B.5. sampling and analysis requirements. Should a Regional Water Board (or local agency) determine that a certification does not meet the conditions set forth below, facility operators must immediately comply with the Section B.5. sampling and analysis requirements.

a. Sampling and Analysis Exemptions

A facility operator is not required to collect and analyze samples in accordance with Section B.5. if the facility operator meets all of the conditions of one of the following certification programs:

i. No Exposure Certification (NEC)

This exemption is designed primarily for those facilities where all industrial activities are conducted inside buildings and where all materials stored and handled are not exposed to storm water. To qualify for this exemption, facility operators must certify that their facilities meet all of the following conditions:

(1) All prohibited non-storm water discharges have been eliminated or otherwise permitted.

(2) All authorized non-storm water discharges have been identified and addressed in the SWPPP.

(3) All areas of past exposure have been inspected and cleaned, as appropriate.

(4) All significant materials related to industrial activity (including waste materials) are not exposed to storm water or authorized non-storm water discharges.

(5) All industrial activities and industrial equipment are not exposed to storm water or authorized non-storm water discharges.

(6) There is no exposure of storm water to significant materials associated with industrial activity through other direct or indirect pathways such as from industrial activities that generate dust and particulates.

(7) There is periodic re-evaluation of the facility to ensure conditions (1), (2), (4), (5), and (6) above are continuously met. At a minimum, re-evaluation shall be conducted once a year.

ii. Regional Water Board Certification Programs

The Regional Water Board may grant an exemption to the Section B.5. Sampling and Analysis Requirements if it determines a facility operator has met the conditions set forth in a Regional Water Board certification program. Regional Water Board certification programs may include conditions to (1) exempt facility operators whose facilities infrequently discharge storm water to waters of the United States, and (2) exempt facility operators

that demonstrate compliance with the terms and conditions of this General Permit.

iii. Local Agency Certifications

A local agency may develop a local agency certification program. Such programs must be approved by the Regional Water Board. An approved local agency program may either grant an exemption

from the Section B.5. Sampling and Analysis Requirements or reduce the frequency of sampling if it determines that a facility operator has demonstrated compliance with the terms and conditions of this General Permit.

b. Sampling and Analysis Reduction

i. A facility operator may reduce the number of sampling events required to be sampled for the remaining term of this General Permit if the facility operator provides certification that the following conditions have been met:

(1) The facility operator has collected and analyzed samples from a minimum of six storm events from all required drainage areas;

(2) All prohibited non-storm water discharges have been eliminated or otherwise permitted;

(3) The facility operator demonstrates compliance with the terms and conditions of the General Permit for the previous two years (i.e., completed Annual Reports, performed visual observations, implemented appropriate BMPs, etc.);

(4) The facility operator demonstrates that the facility's storm water discharges and authorized non-storm water discharges do not contain significant quantities of pollutants; and

(5) Conditions (2), (3), and (4) above are expected to remain in effect for a minimum of one year after filing the certification.

ii. Unless otherwise instructed by the Regional Water Board, facility operators shall collect and analyze samples from two additional storm events (or one additional storm event when certification filed for the wet season beginning October 1, 2001) during the remaining term of this General Permit in accordance with Table C below. Facility operators shall collect samples of the first

storm event of the wet season. Facility operators that do not collect samples from the first storm event of the wet season shall collect samples from another storm event during the same wet season. Facility operators that do not collect a sample in a required wet season shall collect the sample from another storm event in the next wet season. Facility operators shall explain in the Annual Report why the first storm event of a wet season was not sampled or a sample was not taken from any storm event in accordance with the Table C schedule.

Table C
REDUCED MONITORING SAMPLING SCHEDULE

Facility Operator Filing Sampling Reduction Certification By	Samples Shall be Collected and Analyzed in These Wet Seasons	
	Sample 1	Sample 2
Oct. 1, 1997	Oct. 1, 1997-May 31, 1998	Oct. 1, 1999-May 31, 2000
Oct. 1, 1998	Oct. 1, 1998-May 31, 1999	Oct. 1, 2000-May 31, 2001
Oct. 1, 1999	Oct. 1, 1999-May 31, 2000	Oct. 1, 2001-May 31, 2002
Oct. 1, 2000	Oct. 1, 2000-May 31, 2001	Oct. 1, 2001-May 31, 2002
Oct. 1, 2001	Oct. 1, 2001-May 31, 2002	-

13. *Records*

Records of all storm water monitoring information and copies of all reports (including the Annual Reports) required by this General Permit shall be retained for a period of at least five years. These records shall include:

a. The date, place, and time of site inspections, sampling, visual observations, and/or measurements;

b. The individual(s) who performed the site inspections, sampling, visual observations, and or measurements;

c. Flow measurements or estimates (if required by Section B.6);

d. The date and approximate time of analyses;

e. The individual(s) who performed the analyses;

f. Analytical results, method detection limits, and the analytical techniques or methods used;

g. Quality assurance/quality control records and results;

h. Non-storm water discharge inspections and visual observations and storm water discharge visual observation records (see Sections B.3. and 4.);

i. Visual observation and sample collection exception records (see Section B.5.a, 7.d, 8, and 12.b.ii.);

j. All calibration and maintenance records of on-site instruments used;

k. All Sampling and Analysis Exemption and Reduction certifications and supporting documentation (see Section B.12);

l. The records of any corrective actions and follow-up activities that resulted from the visual observations.

14. *Annual Report*

All facility operators shall submit an Annual Report by July 1 of each year to the Executive Officer of the Regional Water Board responsible for the area in which the facility is located and to the local agency (if requested).

The report shall include a summary of visual observations and sampling results, an evaluation of the visual observation and sampling and analysis results, laboratory reports, the Annual Comprehensive Site Compliance Evaluation Report required in Section A.9., an explanation of why a facility did not implement any activities required by the General Permit (if not already included in the Evaluation Report), and records specified in Section B.13.i. The method detection limit of each analytical parameter shall be included. Analytical results that are less than the method detection limit shall be reported as "less than the method detection limit." The Annual Report shall be signed and certified in accordance with Standard Provisions 9. and 10. of Section C of this General Permit. Facility operators shall prepare and submit their Annual Reports using the annual report forms provided by the State Water Board or Regional Water Board or shall submit their information on a form that contains equivalent information.

15. *Group Monitoring*

Facility operators may participate in group monitoring as described below. A facility operator that participates in group monitoring shall develop and implement a written site-specific SWPPP and monitoring program in accordance with the General Permit and must satisfy any group monitoring requirements. Group monitoring shall be subject to the following requirements:

a. A group monitoring plan (GMP) shall be developed and implemented by a group leader representing a group of

similar facility operators regulated by this General Permit or by a local agency which holds an NPDES permit (local agency permittee) for a municipal separate storm sewer system. GMPs with participants that discharge storm water within the boundaries of a single Regional Water Board shall be approved by that Regional Water Board. GMPs with participants that discharge storm water within the boundaries of multiple Regional Water Boards shall be approved by the State Water Board. The State Water Board and/or Regional Water Board(s) may disapprove a facility's participation in a GMP or require a GMP participant to conduct additional monitoring activities.

b. Each GMP participant shall collect and analyze samples from at least two storm events in accordance with Section B.5. over the five-year period of this General Permit. The two storm event minimum applies to new and existing members. The group leader or local agency permittee shall schedule sampling to meet the following conditions: (i) to evenly distribute the sample collection over the five-year term of this General Permit, and (ii) to collect samples from the two storm events at each participant's facility in different and non-consecutive wet seasons. New participants who join in Years 4 and 5 of this General Permit are not subject to Condition (ii) above. Group leaders shall explain in the annual Group Evaluation Report why any scheduled samples were not collected and reschedule the sampling so that all required samples are collected during the term of this General Permit.

c. The group leader or local agency permittee must have the appropriate resources to develop and implement the GMP. The group leader or local agency permittee must also have the authority to terminate any participant who is not complying with this General Permit and the GMP.

d. The group leader or local agency permittee is responsible for:

   i. Developing, implementing, and revising the GMP;

   ii. Developing and submitting an annual Group Evaluation Report to the State Water Board and/or Regional Water Board by August 1 of each year that includes:

      (1) An evaluation and summary of all group monitoring data,

      (2) An evaluation of the overall performance of the GMP participants in complying with this General Permit and the GMP,

(3) Recommended baseline and site-specific BMPs that should be considered by each participant based upon Items (1) and (2) above, and

(4) A copy of each evaluation report and recommended BMPs as required in Section B.15.d.v. below.

iii. Recommending appropriate BMPs to reduce or prevent pollutants associated with industrial activities in storm water discharges and authorized non-storm water discharges;

iv. Assisting each participant in completing their Annual Comprehensive Site Compliance Evaluation and Annual Report;

v. Conducting a minimum of two on-site inspections of each participant's facility (it is recommended that these inspections be scheduled during the Annual Comprehensive Site Compliance Evaluation) during the term of this General Permit to evaluate the participant's compliance with this General Permit and the GMP, and to recommend any additional BMPs necessary to achieve compliance with this General Permit. Participants that join in Years 4 and 5 shall be scheduled for one evaluation. A copy of the evaluation and recommended BMPs shall be provided to the participants;

vi. Submitting a GMP (or revisions, as necessary), to the appropriate Regional Water Board(s) and State Water Board no later than September 1, 1997 (or August 1 in subsequent years). Once approved, a group leader or local agency permittee shall submit a letter of intent by August 1 of each year to continue the approved GMP. The letter of intent must include a roster of participants, participant's Waste Discharge Identification number (WDID#), updated sampling schedules, and any other revisions to the GMP;

vii. Revising the GMP as instructed by the Regional Water Board or the State Water Board; and

viii. Providing the State Water Board and/or Regional Water Board with quarterly updates of any new or deleted participants and corresponding changes in the sampling and inspection schedule.

e. The GMP shall:

i. Identify the participants of the GMP by name, location, and WDID number;

ii. Include a narrative description summarizing the industrial activities of participants of the GMP and explain why the participants, as a whole, have sufficiently similar industrial activities and BMPs to be covered by a group monitoring plan;

iii. Include a list of typical potential pollutant sources associated with the group participant's facilities and recommended baseline BMPs to prevent or reduce pollutants associated with industrial activity in the storm water discharges and authorized non-storm water discharges;

iv. Provide a five-year sampling and inspection schedule in accordance with Subsections b. and d.v. above.

v. Identify the pollutants associated with industrial activity that shall be analyzed at each participant's facility in accordance with Section B.5. The selection of these pollutants shall be based upon an assessment of each facility's potential pollutant sources and likelihood that pollutants associated with industrial activity will be present in storm water discharges and authorized non-storm water discharges in significant quantities.

f. Sampling and analysis shall be conducted in accordance with the applicable requirements of this Section.

g. Unless otherwise instructed by the Regional Water Board or the State Water Board Executive Director, the GMPs shall be implemented at the beginning of the wet season (October 1).

h. All participants in an approved GMP that have not been selected to sample in a particular wet season are required to comply with all other monitoring program and reporting requirements of this Section including the submittal of an Annual Report by July 1 of each year to the appropriate Regional Water Board.

i. GMP participants subject to Federal storm water effluent limitation guidelines must perform the monitoring described in Section B.6. and submit the results of the monitoring to the appropriate Regional Water Board within the facility operator's Annual Report.

j. GMPs and Group Evaluation Reports should be prepared in accordance with State Water Board (or Regional Water Board) guidance.

k. GMP participants may receive Sampling and Analysis Reduction sampling credit in accordance with the following conditions:

i. Current or prior participants (group participants) of approved GMPs, who have not collected and analyzed samples from six storm events as required in Section B.7.b.i.(1), may substitute credit earned through participation in a GMP for up to four of the six required storm events. Credits for GMP participation shall be calculated as follows:

(1) Credit may only be earned in years of participation where the GMP participant was not scheduled to sample and the GMP was approved.

(2) One credit will be earned for each year of valid GMP participation.

(3) One additional credit may be earned for each year the overall GMP sample collection performance is greater than 75 percent.

ii. GMP participants substituting credit as calculated above shall provide proof of GMP participation and certification that all the conditions in Section B.12.b.i. have been met. GMP participants substituting credit in accordance with Section B.15.k.i.(3) shall also provide GMP sample collection performance documentation.

iii. GMP participants that qualify for Sampling and Analysis Reduction and have already sampled a storm event after October 1, 1997 shall only be required to sample one additional storm event during the remainder of this General Permit in accordance with the "Sample 2" schedule (or "Sample 1" schedule when certification filed for the wet season beginning October 1, 2001) in Table C of this Section.

n. Group leaders shall furnish, within 60 days of receiving a request from the State Water Board or Regional Water Board, any GMP information and documentation necessary to verify the Section B.15.k. sampling credits. Group leaders may also provide this information and documentation to the group participants.

16. *Watershed Monitoring Option*

Regional Water Boards may approve proposals to substitute watershed monitoring for some or all of the requirements of this Section if the Regional Water Board finds that the watershed monitoring will provide substantially similar monitoring information in evaluating facility operator compliance with the requirements of this General Permit.

TABLE D
ADDITIONAL ANALYTICAL PARAMETERS

Subsector	SIC	Activity Represented	Parameters
SECTOR A. TIMBER PRODUCTS			
A1	2421	General Sawmills and Planing Mills	COD;TSS;Zn
A2	2491	Wood Preserving	As;Cu
A3	2411	Log Storage and Handling	TSS
A4	2426	Hardwood Dimension and Flooring Mills	COD;TSS
A4	2429	Special Product Sawmills, Not Elsewhere Classified	COD;TSS
A4	243X	Millwork, Veneer, Plywood, and Structural Wood	COD;TSS
A4	(except 2434--Wood Kitchen Cabinet Manufacturers)		
A4	244X	Wood Containers	COD;TSS
A4	245X	Wood Buildings and Mobile Homes	COD;TSS
A4	2493	Reconstituted Wood Products	COD;TSS
A4	2499	Wood Products, Not Elsewhere Classified	
SECTOR B. PAPER AND ALLIED PRODUCTS MANUFACTURING			
B1	261X	Pulp Mills	
B2	262X	Paper Mills	
B3	263X	Paperboard Mills	COD
B4	265X	Paperboard Containers and Boxes	
B5	267X	Converted Paper and Paperboard Products, Except Containers and Boxes	
SECTOR C. CHEMICAL AND ALLIED PRODUCTS MANUFACTURING			
C1	281X	Industrial Inorganic Chemicals	Al;Fe;N+N
C2	282X	Plastics Materials and Synthetic Resins, Synthetic Rubber, Cellulosic, and Other Manmade Fibers Except Glass	Zn
C3	283X	Drugs	
C4	284X	Soaps, Detergents, and Cleaning Preparations; Perfumes, Cosmetics, and Other Toilet Preparations	N+N;Zn
C5	285X	Paints, Varnishes, Lacquers, Enamels, and Allied Products	
C6	286X	Industrial Organic Chemicals	
C7	287X	Nitrogenous and Phosphatic Basic Fertilizers, Mixed Fertilizer, Pesticides, and Other Agricultural Chemicals	Fe;N+N;Pb;Zn;P
C8	289X	Miscellaneous Chemical Products	
	3952	Inks and Paints, Including China Painting Enamels, India Ink, (limited to list) Drawing Ink, Platinum Paints for Burnt Wood or Leather Work, Paints for China Painting, Artist's Paints, and Artist's Watercolors	
SECTOR D. ASPHALT PAVING/ROOFING MATERIALS MANUFACTURERS AND LUBRICANT MANUFACTURERS			
D1	295X	Asphalt Paving and Roofing Materials	TSS
D2	2992	Lubricating Oils and Greases	

Parameter Names

Al - Aluminum; As - Arsenic; NH_3 - Ammonia; Zn - Zinc; Cd - Cadmium; CN - Cyanide; Hg - Mercury; TSS - Total Suspended Solids; Cu - Copper; Fe - Iron; P - Phosphorus; COD - Chemical Oxygen Demand; Mg - Magnesium; Ag - Silver; Se - Selenium; BOD - Biochemical Oxygen Demand; N + N - Nitrate & Nitrite Nitrogen; Pb - Lead

NA	38XX	Measuring, Analyzing, and Controlling Instruments; Photographic, Medical, and Optical Goods; Watches and Clocks	
NA	357X	Computer and Office Equipment	

Section C: STANDARD PROVISIONS

1. Duty to Comply

The facility operator must comply with all of the conditions of this General Permit. Any General Permit noncompliance constitutes a violation of the Clean Water Act (CWA) and the Porter-Cologne Water Quality Control Act and is grounds for (a) enforcement action for (b) General Permit termination, revocation and reissuance, or modification or (c) denial of a General Permit renewal application.

The facility operator shall comply with effluent standards or prohibitions established under Section 307(a) of the CWA for toxic pollutants within the time provided in the regulations that establish these standards or prohibitions, even if this General Permit has not yet been modified to incorporate the requirement.

2. General Permit Actions

This General Permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by the facility operator for a General Permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any General Permit condition.

If any toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is promulgated under Section 307(a) of the CWA for a toxic pollutant which is present in the discharge and that standard or prohibition is more stringent than any limitation on the pollutant in this General Permit, this General Permit shall be modified or revoked and reissued to conform to the toxic effluent standard or prohibition, and the facility operator so notified.

3. Need to Halt or Reduce Activity not a Defense

It shall not be a defense for a facility operator in an enforcement action that it would have been necessary to halt or reduce the general permitted activity in order to maintain compliance with the conditions of this General Permit.

4. Duty to Mitigate

The facility operator shall take all responsible steps to minimize or prevent any discharge in violation of this General Permit which has a reasonable likelihood of adversely affecting human health or the environment.

5. Proper Operation and Maintenance

The facility operator at all times shall properly operate and maintain any facilities and systems of treatment and control (and related appurtenances) which are installed or used by the facility operator to achieve compliance with the conditions of this General Permit and with the requirements of storm water pollution prevention plans (SWPPPs). Proper operation and maintenance also include adequate laboratory controls and appropriate quality assurance procedures. Proper operation and maintenance may require the operation of backup or auxiliary facilities or similar systems installed by a facility operator when necessary to achieve compliance with the conditions of this General Permit.

6. Property Rights

This General Permit does not convey any property rights of any sort, or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor any infringement of Federal, State, or local laws or regulations.

7. Duty to Provide Information

The facility operator shall furnish the Regional Water Quality Control Board (Regional Water Board), State Water Resources Control Board (State Water Board), U.S. Environmental Protection Agency (U.S. EPA), or local storm water management agency, within a reasonable time specified by the agencies, any requested information to determine compliance with this General Permit. The facility operator shall also furnish, upon request, copies of records required to be kept by this General Permit.

8. Inspection and Entry

The facility operator shall allow the Regional Water Board, State Water Board, U.S. EPA, and local storm water management agency, upon the presentation of credentials and other documents as may be required by law, to:

a. Enter upon the facility operator's premises where a regulated facility or activity is located or conducted or where records must be kept under the conditions of this General Permit;

b. Have access to and copy at reasonable times any records that must be kept under the conditions of this General Permit;

c. Inspect at reasonable times any facilities or equipment (including monitoring and control equipment) that are related to or may impact storm water discharge or authorized non-storm water discharge; and

d. Conduct monitoring activities at reasonable times for the purpose of ensuring General Permit compliance.

9. Signatory Requirements

a. All Notices of Intent (NOIs) submitted to the State Water Board shall be signed as follows:

(1) For a corporation: by a responsible corporate officer. For the purpose of this section, a responsible corporate officer means: (a) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation; or (b) the manager of the facility if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;

(2) For a partnership or sole proprietorship: by a general partner or the proprietor, respectively; or

(3) For a municipality, State, Federal, or other public agency: by either a principal executive officer or ranking elected official. The principal executive officer of a Federal agency includes the chief executive officer of the agency or the senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrators of U.S. EPA).

b. All reports, certifications, or other information required by the General Permit or requested by the Regional Water Board, State Water Board, U.S. EPA, or local storm water management agency shall be signed by a person described above or by a duly authorized representative. A person is a duly authorized representative only if:

(1) The authorization is made in writing by a person described above and retained as part of the SWPPP.

(2) The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of manager, operator, superintendent, or position of equivalent responsibility or an individual or position having overall responsibility for named position.)

(3) If an authorization is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization must be attached to the SWPPP prior to submittal of any reports, certifications, or information signed by the authorized representative.

10. Certification

Any person signing documents under Provision 9. above shall make the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

11. Reporting Requirements

a. Planned changes: The facility operator shall give advance notice to the Regional Water Board and local storm water management agency of any planned physical alteration or additions to the general permitted facility. Notice is required under this provision only when the alteration or addition could significantly change the nature or increase the quantity of pollutants discharged.

b. Anticipated noncompliance: The facility operator will give advance notice to the Regional Water Board and local storm water management agency of any planned changes at the permitted facility which may result in noncompliance with General Permit requirements.

c. Compliance schedules: Reports of compliance or noncompliance with or any progress reports on interim and final requirements contained in any compliance schedule of this General Permit shall be submitted no later than 14 days following each scheduled date.

d. Noncompliance reporting: The facility operator shall report any noncompliance at the time monitoring reports are submitted. The written submission shall contain (1) a description of the noncompliance and its cause; (2) the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and (3) steps taken or planned to reduce and prevent recurrence of the noncompliance.

12. Oil and Hazardous Substance Liability

Nothing in this General Permit shall be construed to preclude the institution of any legal action or relieve the facility operator from any responsibilities, liabilities, or penalties to which the facility operator is or may be subject under Section 311 of the CWA.

13. Severability

The provisions of this General Permit are severable; and if any provision of this General Permit or the application of any provision of this General Permit to any circumstance is held invalid, the application of such provision to other circumstances and the remainder of this General Permit shall not be affected thereby.

14. Reopener Clause

This General Permit may be modified, revoked, and reissued, or terminated for cause due to promulgation of amended regulations, receipt of U.S. EPA guidance concerning regulated activities, judicial decision, or in accordance with 40 CFR 122.62, 122.63, 122.64, and 124.5. This General Permit may be reopened to modify the provisions regarding authorized non-storm water discharges specified in Section D. Special Conditions.

15. Penalties for Violations of General Permit Conditions.

a. Section 309 of the CWA provides significant penalties for any person who violates a General Permit condition

implementing Sections 301, 302, 306, 307 308, 318, or 405 of the CWA, or any General Permit condition or limitation implementing any such section in a General Permit issued under Section 402. Any person who violates any General Permit condition of this General Permit is subject to a civil penalty not to exceed $25,000 per day of such violation, as well as any other appropriate sanction provided by Section 309 of the CWA.

b. The Porter-Cologne Water Quality Control Act also provides for civil and criminal penalties in some cases greater than those under the CWA.

16. Availability

A copy of this General Permit shall be maintained at the facility and be available at all times to the appropriate facility personnel and to Regional Water Board and local agency inspectors.

17. Transfers

This General Permit is not transferable from one facility operator to another facility operator nor may it be transferred from one location to another location. A new facility operator of an existing facility must submit an NOI in accordance with the requirements of this General Permit to be authorized to discharge under this General Permit.

18. Continuation of Expired General Permit

This General Permit continues in force and effect until a new general permit is issued or the State Water Board rescinds the General Permit. Facility operators authorized to discharge under the expiring general permit are required to file an NOI to be covered by the reissued General Permit.

19. Penalties for Falsification of Reports

Section 309(c)(4) of the CWA provides that any person who knowingly makes any false material statement, representation, or certification in any record or other document submitted or required to be maintained under this General Permit, including reports of compliance or noncompliance shall, upon conviction, be punished by a fine of not more than $10,000 or by imprisonment for not more than two years, or by both.

FACILITIES COVERED BY THIS GENERAL PERMIT

Industrial facilities include Federal, State, municipally owned, and private facilities from the following categories:

1. FACILITIES SUBJECT TO STORM WATER EFFLUENT LIMITATIONS GUIDELINES, NEW SOURCE PERFORMANCE STANDARDS, OR TOXIC POLLUTANT EFFLUENT STANDARDS (40 Code of Federal Regulations (CFR) SUBCHAPTER N). Currently, categories of facilities subject to storm water effluent limitations guidelines are Cement Manufacturing (40 CFR Part 411), Feedlots (40 CFR Part 412), Fertilizer Manufacturing (40 CFR Part 418), Petroleum Refining (40 CFR Part 419), Phosphate Manufacturing (40 CFR Part 422), Steam Electric (40 CFR Part 423), Coal Mining (40 CFR Part 434), Mineral Mining and Processing (40 CFR Part 436), Ore Mining and Dressing (40 CFR Part 440), and Asphalt Emulsion (40 CFR Part 443).

2. MANUFACTURING FACILITIES: Standard Industrial Classifications (SICs) 24 (except 2434), 26 (except 265 and 267), 28 (except 283 and 285) 29, 311, 32 (except 323), 33, 3441, and 373.

3. OIL AND GAS/MINING FACILITIES: SICs 10 through 14 including active or inactive mining operations (except for areas of coal mining operations meeting the definition of a reclamation area under 40 CFR 434.11(l) because of performance bond issued to the facility by the appropriate Surface Mining Control and Reclamation Act (SMCRA) authority has been released, or except for area of non-coal mining operations which have been released from applicable State or Federal reclamation requirements after December 17, 1990); oil and gas exploration, production, processing, or treatment operations; or transmission facilities that discharge storm water contaminated by contact with or that has come into contact with any overburden, raw material, intermediate products, finished products, by-products, or waste products located on the site of such operations. Inactive mining operations are mined sites that are not being actively mined but which have an identifiable facility operator. Inactive mining sites do not include sites where mining claims are being maintained prior to disturbances associated with the extraction, beneficiation, or processing of mined material; or sites where minimal activities are undertaken for the sole purpose of maintaining a mining claim.

4. HAZARDOUS WASTE TREATMENT, STORAGE, OR DISPOSAL FACILITIES: Includes those operating under interim status or a general permit under Subtitle C of the Federal Resource, Conservation, and Recovery Act (RCRA).

5. LANDFILLS, LAND APPLICATION SITES, AND OPEN DUMPS: Sites that receive or have received industrial waste from any of

the facilities covered by this General Permit, sites subject to regulation under Subtitle D of RCRA, and sites that have accepted wastes from construction activities (construction activities include any clearing, grading, or excavation that results in disturbance of five acres or more).

6. RECYCLING FACILITIES: SICs 5015 and 5093. These codes include metal scrapyards, battery reclaimers, salvage yards, motor vehicle dismantlers and wreckers, and recycling facilities that are engaged in assembling, breaking up, sorting, and wholesale distribution of scrap and waste material such as bottles, wastepaper, textile wastes, oil waste, etc.

7. STEAM ELECTRIC POWER GENERATING FACILITIES: Includes any facility that generates steam for electric power through the combustion of coal, oil, wood, etc.

8. TRANSPORTATION FACILITIES: SICs 40, 41, 42 (except 4221-25), 43, 44, 45, and 5171 which have vehicle maintenance shops, equipment cleaning operations, or airport deicing operations. Only those portions of the facility involved in vehicle maintenance (including vehicle rehabilitation, mechanical repairs, painting, fueling, and lubrication) or other operations identified herein that are associated with industrial activity.

9. SEWAGE OR WASTEWATER TREATMENT WORKS: Facilities used in the storage, treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated to the disposal of sewage sludge that are located within the confines of the facility with a design flow of one million gallons per day or more or required to have an approved pretreatment program under 40 CFR Part 403. Not included are farm lands, domestic gardens, or lands used for sludge management where sludge is beneficially reused and which are not physically located in the confines of the facility, or areas that are in compliance with Section 405 of the Clean Water Act.

10. MANUFACTURING FACILITIES WHERE INDUSTRIAL MATERIALS, EQUIPMENT, OR ACTIVITIES ARE <u>EXPOSED</u> TO STORM WATER: SICs 20, 21, 22, 23, 2434, 25, 265, 267, 27, 283, 285, 30, 31 (except 311), 323, 34 (except 3441), 35, 36, 37 (except 373), 38, 39, and 4221-4225.

State Water Resources Control Board

Water Quality Order No. 99-08-DWQ

STATE WATER RESOURCES CONTROL BOARD (SWRCB)
ORDER NO. 99 - 08 - DWQ
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES)
GENERAL PERMIT NO. CAS000002

WASTE DISCHARGE REQUIREMENTS (WDRS) FOR DISCHARGES OF STORM WATER RUNOFF ASSOCIATED WITH CONSTRUCTION ACTIVITY

The State Water Resources Control Board finds that:

1. Federal regulations for controlling pollutants in storm water runoff discharges were promulgated by the U.S. Environmental Protection Agency (USEPA) on November 16, 1990 (40 Code of Federal Regulations (CFR) Parts 122, 123, and 124). The regulations require discharges of storm water to surface waters associated with construction activity including clearing, grading, and excavation activities (except operations that result in disturbance of less than five acres of total land area and which are not part of a larger common plan of development or sale) to obtain an NPDES permit and to implement Best Available Technology Economically Achievable (BAT) and Best Conventional Pollutant Control Technology (BCT) to reduce or eliminate storm water pollution.

   On December 8, 1999 federal regulations promulgated by USEPA (40CFR Parts 9, 122, 123, and 124) expanded the NPDES storm water program to include storm water discharges from municipal separate storm sewer systems (MS4s) and construction sites that were smaller than those previously included in the program. Federal regulation 40 CFR § 122.26(b)(15) defines small construction activity as including clearing, grading, and excavating that result in land disturbance of equal to or greater than one acre or less than five acres or is part of a larger common plan of development or sale. Permit applications for small construction activities are due by March 10, 2003.

2. This General Permit regulates pollutants in discharges of storm water associated with construction activity (storm water discharges) to surface waters, except from those areas on Tribal Lands; Lake Tahoe Hydrologic Unit; construction projects which disturb less than one acre, unless part of a larger common plan of development or sale; and storm water discharges which are determined ineligible for coverage under this General Permit by the California Regional Water Quality Control Boards (RWQCBs). Attachment 1 contains addresses and telephone numbers of each RWQCB office.

3. This General Permit does not preempt or supersede the authority of local storm water management agencies to prohibit, restrict, or control storm water discharges to separate storm sewer systems or other watercourses within their jurisdiction, as allowed by State and Federal law.

4. To obtain authorization for proposed storm water discharges to surface waters, pursuant to this General Permit, the landowner (discharger) must submit a Notice of Intent (NOI) with a vicinity map and the appropriate fee to the SWRCB prior to commencement of construction activities. In addition, coverage under this General Permit shall not occur until the applicant develops a Storm Water Pollution Prevention Plan (SWPPP) in accordance with the requirements of Section A of this permit for the project. For proposed construction activity conducted on easements or on nearby property by agreement or permission, or by an owner or lessee of a mineral estate (oil, gas, geothermal, aggregate, precious metals, and/or industrial minerals) entitled to conduct the activities, the entity responsible for the construction activity must submit the NOI and filing fee and shall be responsible for development of the SWPPP.

5. If an individual NPDES Permit is issued to a discharger otherwise subject to this General Permit or if an alternative General Permit is subsequently adopted which covers storm water discharges regulated by this General Permit, the applicability of this General Permit to such discharges is automatically terminated on the effective date of the individual permit or the date of approval for coverage under the subsequent General Permit.

6. This action to adopt an NPDES permit is exempt from the provisions of the California Environmental Quality Act (Public Resources Code Section 21100, et seq.) in accordance with section 13389 of the California Water Code.

7. The SWRCB adopted the California Ocean Plan, and the RWQCBs have adopted and the SWRCB has approved Water Quality Control Plans (Basin Plans). Dischargers regulated by this General Permit must comply with the water quality standards in these Basin Plans and subsequent amendments thereto.

8. The SWRCB finds storm water discharges associated with construction activity to be a potential significant sources of pollutants. Furthermore, the SWRCB finds that storm water discharges associated with construction activities have the reasonable potential to cause or contribute to an excursion above water quality standards for sediment in the water bodies listed in Attachment 3 to this permit.

9. It is not feasible at this time to establish numeric effluent limitations for pollutants in storm water discharges from construction activities. Instead, the provisions of this General Permit require implementation of Best Management Practices (BMPs) to control and abate the discharge of pollutants in storm water discharges.

10. Discharges of non-storm water may be necessary for the completion of certain construction projects. Such discharges include, but are not limited to: irrigation of vegetative erosion control measures, pipe flushing and testing, street cleaning, and dewatering. Such discharges are authorized by this General Permit as long as they (a) do comply with Section A.9 of this General Permit, (b) do not cause or contribute to violation of any water quality standard, (c) do not violate any other provision of this

General Permit, (d) do not require a non-storm water permit as issued by some RWQCBs, and (e) are not prohibited by a Basin Plan. If a non-storm water discharge is subject to a separate permit adopted by a RWQCB, the discharge must additionally be authorized by the RWQCB permit.

11. Following adoption of this General Permit, the RWQCBs shall enforce the provisions herein including the monitoring and reporting requirements.

12. Following public notice in accordance with State and Federal laws and regulations, the SWRCB in a public meeting on June 8, 1998, heard and considered all comments. The SWRCB has prepared written responses to all significant comments.

13. This Order is an NPDES permit in compliance with section 402 of the Clean Water Act (CWA) and shall take effect upon adoption by the SWRCB provided the Regional Administrator of the USEPA has no objection. If the USEPA Regional Administrator objects to its issuance, the General Permit shall not become effective until such objection is withdrawn.

14. This General Permit does not authorize discharges of fill or dredged material regulated by the U.S. Army Corps of Engineers under CWA section 404 and does not constitute a waiver of water quality certification under CWA section 401.

15 The Monitoring Program and Reporting Requirements are modified in compliance with a judgment in the case of San Francisco BayKeeper, et al. v. State Water Resources Control Board. The modifications include sampling and analysis requirements for direct discharges of sediment to waters impaired due to sediment and for pollutants that are not visually detectable in runoff that may cause or contribute to an exceedance of water quality objectives.

16 Storm water discharges associated with industrial activity that are owned or operated by municipalities serving populations less than 100,000 people are no longer exempt from the need to apply for or obtain a storm water discharge permit. A temporary exemption, which was later extended by USEPA, was provided under section 1068(c) of the Intermodal Surface Transportation and Efficiency Act (ISTEA) of 1991. Federal regulation 40 CFR § 122.26(e)(1)(ii) requires the above municipalities to submit permit application by March 10, 2003.

17 This permit may be reopened and modified to include different monitoring requirements for small construction activity than for construction activity over five (5) acres.

IT IS HEREBY ORDERED that all dischargers who file an NOI indicating their intention to be regulated under the provisions of this General Permit shall comply with the following:

A. DISCHARGE PROHIBITIONS:

1. Authorization pursuant to this General Permit does not constitute an exemption to applicable discharge prohibitions prescribed in Basin Plans, as implemented by the nine RWQCBs.

2. Discharges of material other than storm water which are not otherwise authorized by an NPDES permit to a separate storm sewer system (MS4) or waters of the nation are prohibited, except as allowed in Special Provisions for Construction Activity, C.3.

3. Storm water discharges shall not cause or threaten to cause pollution, contamination, or nuisance.

4. Storm water discharges regulated by this General Permit shall not contain a hazardous substance equal to or in excess of a reportable quantity listed in 40 CFR Part 117 and/or 40 CFR Part 302.

B. RECEIVING WATER LIMITATIONS:

1. Storm water discharges and authorized nonstorm water discharges to any surface or ground water shall not adversely impact human health or the environment.

2. The SWPPP developed for the construction activity covered by this General Permit shall be designed and implemented such that storm water discharges and authorized nonstorm water discharges shall not cause or contribute to an exceedance of any applicable water quality standards contained in a Statewide Water Quality Control Plan and/or the applicable RWQCB's Basin Plan.

3. Should it be determined by the discharger, SWRCB, or RWQCB that storm water discharges and/or authorized nonstorm water discharges are causing or contributing to an exceedance of an applicable water quality standard, the discharger shall:

   a. Implement corrective measures immediately following discovery that water quality standards were exceeded, followed by notification to the RWQCB by telephone as soon as possible but no later than 48 hours after the discharge has been discovered. This notification shall be followed by a report within 14-calender days to the appropriate RWQCB, unless otherwise directed by the RWQCB, describing (1) the nature and cause of the water quality standard exceedance; (2) the BMPs currently being implemented; (3) any additional BMPs which will be implemented to

prevent or reduce pollutants that are causing or contributing to the exceedance of water quality standards; and (4) any maintenance or repair of BMPs. This report shall include an implementation schedule for corrective actions and shall describe the actions taken to reduce the pollutants causing or contributing to the exceedance.

b. The discharger shall revise its SWPPP and monitoring program immediately after the report to the RWQCB to incorporate the additional BMPs that have been and will be implemented, the implementation schedule, and any additional monitoring needed.

c. Nothing in this section shall prevent the appropriate RWQCB from enforcing any provisions of this General Permit while the discharger prepares and implements the above report.

C. SPECIAL PROVISIONS FOR CONSTRUCTION ACTIVITY:

1. All dischargers shall file an NOI and pay the appropriate fee for construction activities conducted at each site as required by Attachment 2: Notice of Intent--General Instructions.

2. All dischargers shall develop and implement a SWPPP in accordance with Section A: Storm Water Pollution Prevention Plan. The discharger shall implement controls to reduce pollutants in storm water discharges from their construction sites to the BAT/BCT performance standard.

3. Discharges of non-storm water are authorized only where they do not cause or contribute to a violation of any water quality standard and are controlled through implementation of appropriate BMPs for elimination or reduction of pollutants. Implementation of appropriate BMPs is a condition for authorization of non-storm water discharges. Non-storm water discharges and the BMPs appropriate for their control must be described in the SWPPP. Wherever feasible, alternatives which do not result in discharge of nonstorm water shall be implemented in accordance with Section A.9. of the SWPPP requirements.

4. All dischargers shall develop and implement a monitoring program and reporting plan in accordance with Section B: Monitoring Program and Reporting Requirements.

5. All dischargers shall comply with the lawful requirements of municipalities, counties, drainage districts, and other local agencies regarding discharges of storm water to separate storm sewer systems or other watercourses under their jurisdiction, including applicable requirements in municipal storm water management programs developed to comply with NPDES permits issued by the RWQCBs to local agencies.

6. All dischargers shall comply with the standard provisions and reporting requirements contained in Section C: Standard Provisions.

7. The discharger may terminate coverage for a portion of the project under this General Permit when ownership of a portion of this project has been transferred or when a phase within this multi-phase project has been completed. When ownership has transferred, the discharger must submit to its RWQCB a Change of Information Form (COI) Attachment 4 with revised site map and the name, address and telephone number of the new owner(s). Upon transfer of title, the discharger should notify the new owner(s) of the need to obtain coverage under this General Permit. The new owner must comply with provisions of Sections A. 2. (c) and
B. 2. (b) of this General Permit. To terminate coverage for a portion of the project when a phase has been completed, the discharger must submit to its RWQCB a COI with a revised map that identifies the newly delineated site.

8. The discharger may terminate coverage under this General Permit for a complete project by submitting to its RWQCB a Notice of Termination Form (NOT), and the post-construction BMPs plan according to Section A.10 of this General Permit. Note that a construction project is considered complete only when all portions of the site have been transferred to a new owner; or the following conditions have been met:

   a. There is no potential for construction related storm water pollution,

   b. All elements of the SWPPP have been completed,

   c. Construction materials and waste have been disposed of properly,

   d. The site is in compliance with all local storm water management requirements, and

   e. A post-construction storm water management plan is in place as described in the site's SWPPP.

9. This General Permit expires five years from the date of adoption.

D. REGIONAL WATER QUALITY CONTROL BOARD (RWQCB) AUTHORITIES:

1. RWQCBs shall:

   a. Implement the provisions of this General Permit. Implementation of this General Permit may include, but is not limited to requesting the submittal of SWPPPS, reviewing SWPPPs, reviewing monitoring reports, conducting compliance inspections, and taking enforcement actions.

   b. Issue permits as they deem appropriate to individual dischargers, categories of dischargers, or dischargers in a geographic area. Upon issuance of such permits by a RWQCB, the affected dischargers shall no longer be regulated by this General Permit.

2. RWQCBs may require, on a case-by-case basis, the inclusion of an analysis of potential downstream impacts on receiving waterways due to the permitted construction.

3. RWQCBs may provide information to dischargers on the development and implementation of SWPPPs and monitoring programs and may require revisions to SWPPPs and monitoring programs.

4. RWQCBs may require dischargers to retain records for more than three years.

5. RWQCBs may require additional monitoring and reporting program requirements including sampling and analysis of discharges to water bodies listed in Attachment 3 to this permit. Additional requirements imposed by the RWQCB should be consistent with the overall monitoring effort in the receiving waters.

6. RWQCBs may issue individual NPDES permits for those construction activities found to be ineligible for coverage under this permit.

CERTIFICATION

The undersigned, Administrative Assistant to the Board, does hereby certify that the foregoing is a full, true, and correct copy of an order duly and regularly adopted at a meeting of the State Water Resources Control Board held on August 19, 1999.

AYE:	James M. Stubchaer Mary Jane Forster John W. Brown Arthur G. Baggett, Jr.

Maureen Marché
Administrative Assistant to the Board

SECTION A: STORM WATER POLLUTION PREVENTION PLAN

1. Objectives

A Storm Water Pollution Prevention Plan (SWPPP) shall be developed and implemented to address the specific circumstances for each construction site covered by this General Permit. The SWPPP shall be certified in accordance with the signatory requirements of section C, Standard Provision for Construction Activities (9). The SWPPP shall be developed and amended or revised, when necessary, to meet the following objectives:

a. Identify all pollutant sources including sources of sediment that may affect the quality of storm water discharges associated with construction activity (storm water discharges) from the construction site, and

b. Identify non-storm water discharges, and

c. Identify, construct, implement in accordance with a time schedule, and maintain Best Management Practices (BMPs) to reduce or eliminate pollutants in storm water discharges and authorized nonstorm water discharges from the construction site during construction, and

d. Develop a maintenance schedule for BMPs installed during construction designed to reduce or eliminate pollutants after construction is completed (post-construction BMPs).

e. Identify a sampling and analysis strategy and sampling schedule for discharges from construction activity which discharge directly into water bodies listed on Attachment 3. (Clean Water Act Section 303(d) [303(d)] Water Bodies listed for Sedimentation).

f. For all construction activity, identify a sampling and analysis strategy and sampling schedule for discharges that have been discovered through visual monitoring to be potentially contaminated by pollutants not visually detectable in the runoff.

2. Implementation Schedule

a. For construction activity commencing on or after adoption of this General Permit, the SWPPP shall be developed prior to the start of soil-disturbing activity in accordance with this Section and shall be implemented concurrently with commencement of soil-disturbing activities.

b. Existing permittees engaging in construction activities covered under the terms of the previous General Construction Permit SWPPP (WQ Order No.92-08-DWQ) shall continue to implement their existing SWPPP and shall implement any

necessary revisions to their SWPPP in accordance with this Section of the General Permit in a timely manner, but in no case more than 90-calender days from the date of adoption of this General Permit.

c. For ongoing construction activity involving a change of ownership of property, the new owner shall review the existing SWPPP and amend if necessary, or develop a new SWPPP within 45-calender days.

d. Existing permittees shall revise their SWPPP in accordance with the sampling and analysis modifications prior to August 1, 2001. For ongoing construction activity involving a change of ownership the new owner shall review the existing SWPPP and amend the sampling and analysis strategy, if required, within 45 days. For construction activity commencing after the date of adoption, the SWPPP shall be developed in accordance with the modification language adopted.

3. Availability

The SWPPP shall remain on the construction site while the site is under construction during working hours, commencing with the initial construction activity and ending with termination of coverage under the General Permit.

4. Required Changes

a. The discharger shall amend the SWPPP whenever there is a change in construction or operations which may affect the discharge of pollutants to surface waters, ground waters, or a municipal separate storm sewer system (MS4). The SWPPP shall also be amended if the discharger violates any condition of this General Permit or has not achieved the general objective of reducing or eliminating pollutants in storm water discharges. If the RWQCB determines that the discharger is in violation of this General Permit, the SWPPP shall be amended and implemented in a timely manner, but in no case more than 14-calendar days after notification by the RWQCB. All amendments should be dated and directly attached to the SWPPP.

b. The RWQCB or local agency with the concurrence of the RWQCB may require the discharger to amend the SWPPP.

5. Source Identification

The SWPPP shall include: (a) project information and (b) pollutant source identification combined with an itemization of those BMPs specifically chosen to control the pollutants listed.

a. Project Information

(1) The SWPPP shall include a vicinity map locating the project site with respect to easily identifiable major roadways, geographic features, or landmarks. At a minimum, the map must show the construction site perimeter, the geographic features surrounding the site, and the general topography.

(2) The SWPPP shall include a site map(s) which shows the construction project in detail, including the existing and planned paved areas and buildings.

(a) At a minimum, the map must show the construction site perimeter; existing and proposed buildings, lots, roadways, storm water collection and discharge points; general topography both before and after construction; and the anticipated discharge location(s) where the storm water from the construction site discharges to a municipal storm sewer system or other water body.

(b) The drainage patterns across the project area must clearly be shown on the map, and the map must extend as far outside the site perimeter as necessary to illustrate the relevant drainage areas. Where relevant drainage areas are too large to depict on the map, map notes or inserts illustrating the upstream drainage areas are sufficient.

(c) Temporary on-site drainages to carry concentrated flow shall be selected to comply with local ordinances, to control erosion, to return flows to their natural drainage courses, and to prevent damage to downstream properties.

3. Information presented in the SWPPP may be represented either by narrative or by graphics. Where possible, narrative descriptions should be plan notes. Narrative descriptions which do not lend themselves to plan notes can be contained in a separate document which must be referenced on the plan.

b. Pollutant Source and BMP Identification

The SWPPP shall include a description of potential sources which are likely to add pollutants to storm water discharges or which may result in nonstorm water discharges from the construction site. Discharges originating from off-site which flow across or through areas disturbed by construction that may contain pollutants should be reported to the RWQCB.

The SWPPP shall:

(1) Show drainage patterns and slopes anticipated after major grading activities are completed. Runoff from off-site areas should be prevented from flowing through areas that have been disturbed by construction unless appropriate conveyance systems are in place. The amount of anticipated storm water run-on must be considered to determine the appropriateness of the BMPs chosen. Show all calculations for anticipated storm water run-on, and describe all BMPs implemented to divert off-site drainage described in section A. 5 a. (2) (c) around or through the construction project.

(2) Show the drainage patterns into each on-site storm water inlet point or receiving water. Show or describe the BMPs that will protect operational storm water inlets or receiving waters from contaminated discharges other than sediment discharges, such as, but not limited to: storm water with elevated pH levels from contact with soil amendments such as lime or gypsum; slurry from sawcutting of concrete or asphalt ;washing of exposed aggregate concrete; concrete rinse water; building washing operations; equipment washing operations; minor street washing associated with street delineation; and/or sealing and paving activities occurring during rains.

(3) Show existing site features that, as a result of known past usage, may contribute pollutants to storm water, (e.g., toxic materials that are known to have been treated, stored, disposed, spilled, or leaked onto the construction site). Show or describe the BMPs implemented to minimize the exposure of storm water to contaminated soil or toxic materials.

(4) Show areas designated for the (a) storage of soil or waste, (b) vehicle storage and service areas, (c) construction material loading, unloading, and access areas, (d) equipment storage, cleaning, and maintenance areas.

(5) Describe the BMPs for control of discharges from waste handling and disposal areas and methods of on-site storage and disposal of construction materials and construction waste. Describe the BMPs designed to minimize or eliminate the exposure of storm water to construction materials, equipment, vehicles, waste storage areas, or service areas. The BMPs described shall be in compliance with Federal, State, and local laws, regulations, and ordinances.

(6) Describe all post-construction BMPs for the project, and show the location of each BMP on the map. (Post-construction BMPs consist of permanent features designed to minimize pollutant discharges, including sediment, from the site after construction has been completed.) Also, describe the agency or parties to be the responsible party for long-term maintenance of these BMPs.

(7) Show the locations of direct discharge from the construction site into a Section 303(d) list water body. Show the designated sampling locations in the receiving waters, which represent the prevailing conditions of the water bodies upstream of the construction site discharge and immediately downstream from the last point of discharge.

(8) Show the locations designated for sampling the discharge from areas identified in Section A. 5. b. (2), (3), and (4) and Section A. 5. c. (1) and (2). Samples shall be taken should visual monitoring indicate that there has been a breach, malfunction, leakage, or spill from a BMP which could result in the discharge in storm water of pollutants that would not be visually detectable, or if storm water comes into contact with soil amendments or other exposed materials or contamination and is allowed to be discharged. Describe the sampling procedure, location, and rationale for obtaining the uncontaminated sample of storm water.

c. Additional Information

(1) The SWPPP shall include a narrative description of pollutant sources and BMPs that cannot be adequately communicated or identified on the site map. In addition, a narrative description of preconstruction control practices (if any) to reduce sediment and other pollutants in storm water discharges shall be included.

(2) The SWPPP shall include an inventory of all materials used and activities performed during construction that have the potential to contribute to the discharge of pollutants other than sediment in storm water. Describe the BMPs selected and the basis for their selection to eliminate or reduce these pollutants in the storm water discharges.

(3) The SWPPP shall include the following information regarding the construction site surface area: the size (in acres or square feet), the runoff coefficient before and after construction, and the percentage that is impervious (e.g., paved, roofed, etc.) before and after construction.

(4) The SWPPP shall include a copy of the NOI, and the Waste Discharge Identification (WDID) number. Should a WDID number not be received from the SWRCB at the time construction commences, the discharger shall include proof of mailing of the NOI, e.g., certified mail receipt, copy of check, express mail receipt, etc.

(5) The SWPPP shall include a construction activity schedule which describes all major activities such as mass grading, paving, lot or parcel

improvements at the site and the proposed time frame to conduct those activities.

(6) The SWPPP shall list the name and telephone number of the qualified person(s) who have been assigned responsibility for prestorm, poststorm, and storm event BMP inspections; and the qualified person(s) assigned responsibility to ensure full compliance with the permit and implementation of all elements of the SWPPP, including the preparation of the annual compliance evaluation and the elimination of all unauthorized discharges.

6. Erosion Control

Erosion control, also referred to as "soil stabilization" is the most effective way to retain soil and sediment on the construction site. The most efficient way to address erosion control is to preserve existing vegetation where feasible, to limit disturbance, and to stabilize and revegetate disturbed areas as soon as possible after grading or construction. Particular attention must be paid to large mass-graded sites where the potential for soil exposure to the erosive effects of rainfall and wind is great. Mass graded construction sites may be exposed for several years while the project is being built out. Thus, there is potential for significant sediment discharge from the site to surface waters.

At a minimum, the discharger/operator must implement an effective combination of erosion and sediment control on all disturbed areas during the rainy season. These disturbed areas include rough graded roadways, slopes, and building pads. Until permanent vegetation is established, soil cover is the most cost-effective and expeditious method to protect soil particles from detachment and transport by rainfall. Temporary soil stabilization can be the single-most important factor in reducing erosion at construction sites. The discharger shall consider measures such as: covering with mulch, temporary seeding, soil stabilizers, binders, fiber rolls or blankets, temporary vegetation, permanent seeding, and a variety of other measures.

The SWPPP shall include a description of the erosion control practices, including a time schedule, to be implemented during construction to minimize erosion on disturbed areas of a construction site. The discharger must consider the full range of erosion control BMPs. The discharger must consider any additional site-specific and seasonal conditions when selecting and implementing appropriate BMPs. The above listed erosion control measures are examples of what should be considered and are not exclusive of new or innovative approaches currently available or being developed.

a. The SWPPP shall include:

(1) An outline of the areas of vegetative soil cover or native vegetation onsite which will remain undisturbed during the construction project.

(2) An outline of all areas of soil disturbance including cut or fill areas which will be stabilized during the rainy season by temporary or permanent erosion control measures, such as seeding, mulch, or blankets, etc.

(3) An outline of the areas of soil disturbance, cut, or fill which will be left exposed during any part of the rainy season, representing areas of potential soil erosion where sediment control BMPs are required to be used during construction.

(4) A proposed schedule for the implementation of erosion control measures.

b. The SWPPP shall include a description of the BMPs and control practices to be used for both temporary and permanent erosion control measures.

c. The SWPPP shall include a description of the BMPs to reduce wind erosion at all times, with particular attention paid to stock-piled materials.

7. Stabilization

(1) All disturbed areas of the construction site must be stabilized. Final stabilization for the purposes of submitting a NOT is satisfied when:

-All soil disturbing activities are completed AND EITHER OF THE TWO FOLLOWING CRITERIA ARE MET:

-A uniform vegetative cover with 70 percent coverage has been established OR:

-equivalent stabilization measures have been employed. These measures include the use of such BMPs as blankets, reinforced channel liners, soil cement, fiber matrices, geotextiles, or other erosion resistant soil coverings or treatments.

(2) Where background native vegetation covers less than 100 percent of the surface, such as in arid areas, the 70 percent coverage criteria is adjusted as follows: If the native vegetation covers 50 percent of the ground surface, 70 percent of 50 percent (.70 X .50=.35) would require 35 percent total uniform surface coverage.

8. Sediment Control

The SWPPP shall include a description or illustration of BMPs which will be implemented to prevent a net increase of sediment load in storm water discharge relative to preconstruction levels. Sediment control BMPs are required at appropriate locations along the site perimeter and at all operational internal inlets to the storm drain system at all times during the rainy season. Sediment control practices may include filtration devices and barriers (such as fiber rolls, silt fence, straw bale barriers, and gravel inlet filters) and/or settling devices (such as sediment traps or basins). Effective filtration devices, barriers, and settling devices shall be selected, installed and maintained properly. A proposed schedule for deployment of sediment control BMPs shall be included in the SWPPP. These are the most basic measures to prevent sediment from leaving the project site and moving into receiving waters. Limited exemptions may be authorized by the RWQCB when work on active areas precludes the use of sediment control BMPs temporarily. Under these conditions, the SWPPP must describe a plan to establish perimeter controls prior to the onset of rain.

During the nonrainy season, the discharger is responsible for ensuring that adequate sediment control materials are available to control sediment discharges at the downgrade perimeter and operational inlets in the event of a predicted storm. The discharger shall consider a full range of sediment controls, in addition to the controls listed above, such as straw bale dikes, earth dikes, brush barriers, drainage swales, check dams, subsurface drain, sandbag dikes, fiber rolls, or other controls. At a minimum, the discharger/operator must implement an effective combination of erosion and sediment control on all disturbed areas during the rainy season.

If the discharger chooses to rely on sediment basins for treatment purposes, sediment basins shall, at a minimum, be designed and maintained as follows:

Option 1: Pursuant to local ordinance for sediment basin design and maintenance, provided that the design efficiency is as protective or more protective of water quality than Option 3.

OR

Option 2: Sediment basin(s), as measured from the bottom of the basin to the principal outlet, shall have at least a capacity equivalent to 3,600 cubic feet of storage per acre draining into the sediment basin. The length of the basin shall be more than twice the width of the basin. The length is determined by measuring the distance between the inlet and the outlet; and the depth must not be less than three feet nor greater than five feet for safety reasons and for maximum efficiency.

OR

Option 3: Sediment basin(s) shall be designed using the standard equation:

$As=1.2Q/Vs$

Where: As is the minimum surface area for trapping soil particles of a certain size; Vs is the settling velocity of the design particle size chosen; and Q=C x I x A where Q is the discharge rate measured in cubic feet per second; C is the runoff coefficient; I is the precipitation intensity for the 10-year, 6-hour rain event and A is the area draining into the sediment basin in acres. The design particle size shall be the smallest soil grain size determined by wet sieve analysis, or the fine silt sized (0.01mm) particle, and the Vs used shall be 100 percent of the calculated settling velocity.

The length is determined by measuring the distance between the inlet and the outlet; the length shall be more than twice the dimension as the width; the depth shall not be less than three feet nor greater than five feet for safety reasons and for maximum efficiency (two feet of storage, two feet of capacity). The basin(s) shall be located on the site where it can be maintained on a year-round basis and shall be maintained on a schedule to retain the two feet of capacity;

OR

Option 4: The use of an equivalent surface area design or equation, provided that the design efficiency is as protective or more protective of water quality than Option 3.

A sediment basin shall have a means for dewatering within 7-calendar days following a storm event. Sediment basins may be fenced if safety (worker or public) is a concern.

The outflow from a sediment basin that discharges into a natural drainage shall be provided with outlet protection to prevent erosion and scour of the embankment and channel.

The discharger must consider any additional site-specific and seasonal conditions when selecting and designing sediment control BMPs. The above listed sediment control measures are examples of what should be considered and are not exclusive of new or innovative approaches currently available or being developed.

The SWPPP shall include a description of the BMPs to reduce the tracking of sediment onto public or private roads at all times. These public and private roads shall be inspected and cleaned as necessary. Road cleaning BMPs shall be discussed in the SWPPP and will not rely on the washing of accumulated sediment or silt into the storm drain system.

9. Non-Storm Water Management

Describe all non-storm water discharges to receiving waters that are proposed for the construction project. Non-storm water discharges should be eliminated or reduced to the extent feasible. Include the locations of such discharges and descriptions of all BMPs designed for the control of pollutants in such discharges. Onetime discharges shall be monitored during the time that such discharges are occurring. A qualified person should be assigned the responsibility for ensuring that no materials other than storm water are discharged in quantities which will have an adverse effect on receiving waters or storm drain systems (consistent with BAT/BCT), and the name and contact number of that person should be included in the SWPPP document.

Discharging sediment-laden water which will cause or contribute to an exceedance of the applicable RWQCB's Basin Plan from a dewatering site or sediment basin into any receiving water or storm drain without filtration or equivalent treatment is prohibited.

10. Post-Construction Storm Water Management

The SWPPP shall include descriptions of the BMPs to reduce pollutants in storm water discharges after all construction phases have been completed at the site (Post-Construction BMPs). Post-Construction BMPs include the minimization of land disturbance, the minimization of impervious surfaces, treatment of storm water runoff using infiltration, detention/retention, biofilter BMPs, use of efficient irrigation systems, ensuring that interior drains are not connected to a storm sewer system, and appropriately designed and constructed energy dissipation devices. These must be consistent with all local post-construction storm water management requirements, policies, and guidelines. The discharger must consider site-specific and seasonal conditions when designing the control practices. Operation and maintenance of control practices after construction is completed shall be addressed, including short-and long-term funding sources and the responsible party.

11. Maintenance, Inspection, and Repair

The SWPPP shall include a discussion of the program to inspect and maintain all BMPs as identified in the site plan or other narrative documents throughout the entire duration of the project. A qualified person will be assigned the responsibility to conduct inspections. The name and telephone number of that person shall be listed in the SWPPP document. Inspections will be performed before and after storm events and once each 24-hour period during extended storm events to identify BMP effectiveness and implement repairs or design changes as soon as feasible depending upon field conditions. Equipment, materials, and workers must be available for rapid response to failures and emergencies. All corrective maintenance to BMPs shall be performed as soon as possible after the conclusion of each storm depending upon worker safety.

For each inspection required above, the discharger shall complete an inspection checklist. At a minimum, an inspection checklist shall include:

a. Inspection date.

b. Weather information: best estimate of beginning of storm event, duration of event, time elapsed since last storm, and approximate amount of rainfall (inches).

c. A description of any inadequate BMPs.

d. If it is possible to safely access during inclement weather, list observations of all BMPs: erosion controls, sediment controls, chemical and waste controls, and non-storm water controls. Otherwise, list result of visual inspection at relevant outfall, discharge point, or downstream location and projected required maintenance activities.

e. Corrective actions required, including any changes to SWPPP necessary and implementation dates.

f. Inspectors name, title, and signature.

The dischargers shall prepare their inspection checklists using the inspection checklist form provided by the SWRCB or RWQCB or on forms that contain the equivalent information.

12. Training

Individuals responsible for SWPPP preparation, implementation, and permit compliance shall be appropriately trained, and the SWPPP shall document all training. This includes those personnel responsible for installation, inspection, maintenance, and repair of BMPs. Those responsible for overseeing, revising, and amending the SWPPP shall also document their training. Training should be both formal and informal, occur on an ongoing basis when it is appropriate and convenient, and should include training/workshops offered by the SWRCB, RWQCB, or other locally recognized agencies or professional organizations.

13. List of Contractors/Subcontractors

The SWPPP shall include a list of names of all contractors, (or subcontractors) and individuals responsible for implementation of the SWPPP. This list should include telephone numbers and addresses. Specific areas of responsibility of each subcontractor and emergency contact numbers should also be included.

14. Other Plans

This SWPPP may incorporate by reference the appropriate elements of other plans required by local, State, or Federal agencies. A copy of any requirements incorporated by reference shall be kept at the construction site.

15. Public Access

The SWPPP shall be provided, upon request, to the RWQCB. The SWPPP is considered a report that shall be available to the public by the RWQCB under section 308(b) of the Clean Water Act.

16. Preparer Certification

The SWPPP and each amendment shall be signed by the landowner (discharger) or his representative and include the date of initial preparation and the date of each amendment.

SECTION B: MONITORING PROGRAM AND REPORTING REQUIREMENTS

1. Required Changes

The RWQCB may require the discharger to conduct additional site inspections, to submit reports and certifications, or perform sampling and analysis.

2. Implementation

a. The requirements of this Section shall be implemented at the time of commencement of construction activity (see also Section A. 2. Implementation Schedule). The discharger is responsible for implementing these requirements until construction activity is complete and the site is stabilized.

b. For ongoing construction activity involving a change in ownership of property covered by this General Permit, the new owner must complete a NOI and implement the requirements of this Section concurrent with the change of ownership. For changes of information, the owner must follow instructions in C. 7. Special Provisions for Construction Activity of the General Permit.

3. Site Inspections

Qualified personnel shall conduct inspections of the construction site prior to anticipated storm events, during extended storm events, and after actual storm events to identify areas contributing to a discharge of storm water associated with construction activity. The name(s) and contact number(s) of the assigned inspection personnel shall be listed in the SWPPP. Pre-storm inspections are to ensure that BMPs are properly installed and maintained; post-storm inspections are to assure that the BMPs have functioned adequately. During extended storm events, inspections shall be required each 24-hour period. Best Management Practices (BMPs) shall be evaluated for adequacy and proper implementation and whether additional BMPs are required in accordance with the terms of the General Permit (see language in Section A. 11. Maintenance, Inspection, and Repair). Implementation of nonstorm water discharge BMPs shall be verified and their

effectiveness evaluated. One time discharges of non-storm water shall be inspected when such discharges occur.

4. Compliance Certification

Each discharger or qualified assigned personnel listed by name and contact number in the SWPPP must certify annually that construction activities are in compliance with the requirements of this General Permit and the SWPPP. This Certification shall be based upon the site inspections required in Item 3 of this Section. The certification must be completed by July 1 of each year.

5. Noncompliance Reporting

Dischargers who cannot certify compliance, in accordance with Item 4 of this Section and/or who have had other instances of noncompliance excluding exceedances of water quality standards as defined in section B. 3. Receiving Water Limitations Language, shall notify the appropriate RWQCB within 30 days. Corrective measures should be implemented immediately following discovery that water quality standards were exceeded. The notifications shall identify the noncompliance event, including an initial assessment of any impact caused by the event; describe the actions necessary to achieve compliance; and include a time schedule subject to the modifications by the RWQCB indicating when compliance will be achieved. Noncompliance notifications must be submitted within 30-calendar days of identification of noncompliance.

6. Monitoring Records

Records of all inspections, compliance certifications, and noncompliance reporting must be retained for a period of at least three years from the date generated. With the exception of noncompliance reporting, dischargers are not required to submit these records.

7. Monitoring Program for Sedimentation/Siltation

Dischargers of storm water associated with construction activity that directly enters a water body listed in Attachment 3 shall conduct a sampling and analysis program for the pollutants (sedimentation/siltation or turbidity) causing the impairment. The discharger shall monitor for the applicable parameter. If the water body is listed for sedimentation or siltation, samples should be analyzed for Settleable Solids (ml/l) and Total Suspended Solids (mg/l). Alternatively or in addition, samples may be analyzed for suspended sediment concentration according to ASTM D3977-97. If the water body is listed for turbidity, samples should be analyzed for turbidity (NTU). Discharges that flow through tributaries that are not listed in Attachment 3 or that flow into Municipal Separate Storm Sewer Systems (MS4) are not subject to these sampling and analysis requirements. The sampling and analysis parameters and procedures must be designed to determine whether the BMPs installed and maintained prevent discharges of sediment from contributing to impairment in receiving waters.

Samples shall be collected during the first two hours of discharge from rain events which result in a direct discharge to any water body listed in Attachment 3. Samples shall be collected during daylight hours (sunrise to sunset). Dischargers need not collect more than four (4) samples per month. All samples shall be taken in the receiving waters and shall be representative of the prevailing conditions of the water bodies. Samples shall be collected from safely accessible locations upstream of the construction site discharge and immediately downstream from the last point of discharge.

For laboratory analysis, all sampling, sample preservation, and analyses must be conducted according to test procedures under 40 CFR Part 136. Field samples shall be collected and analyzed according to the specifications of the manufacturer of the sampling devices employed. Portable meters shall be calibrated according to manufacturer's specification. All field and/or laboratory analytical data shall be kept in the SWPPP document, which is to remain at the construction site at all times until a Notice of Termination has been submitted and approved.

8. Monitoring Program for Pollutants Not Visually Detectable in Storm Water

A sampling and analysis program shall be developed and conducted for pollutants which are not visually detectable in storm water discharges, which are or should be known to occur on the construction site, and which could cause or contribute to an exceedance of water quality objectives in the receiving water. Pollutants that should be considered for inclusion in this sampling and analysis program are those identified in Sections A.5.b. and A.5.c.

Construction materials and compounds that are not stored in water-tight containers under a water-tight roof or inside a building are examples of materials for which the discharger may have to implement sampling and analysis procedures. The goal of the sampling and analysis is to determine whether the BMPs employed and maintained on site are effective in preventing the potential pollutants from coming in contact with storm water and causing or contributing to an exceedance of water quality objectives in the receiving waters. Examples of construction sites that may require sampling and analysis include: sites that are known to have contaminants spilled or spread on the ground; sites where construction practices include the application of soil amendments, such as gypsum, which can increase the pH of the runoff; or sites having uncovered stockpiles of material exposed to storm water. Visual observations before, during, and after storm events may trigger the requirement to collect samples. Any breach, malfunction, leakage, or spill observed which could result in the discharge of pollutants to surface waters that *would* not be visually detectable in storm water shall trigger the collection of a sample of discharge. Samples shall be collected at all discharge locations which drain the areas identified by the visual observations and which can be safely accessed. For sites where sampling and analysis is required, personnel trained in water quality sampling procedures shall collect storm water samples. A sufficiently large sample of storm water that has not come in contact with the disturbed soil or the materials stored or used on-site

(uncontaminated sample) shall be collected for comparison with the discharge sample. Samples shall be collected during the first two hours of discharge from rain events that occur during daylight hours and which generate runoff.

The uncontaminated sample shall be compared to the samples of discharge using field analysis or through laboratory analysis. Analyses may include, but are not limited to, indicator parameters such as: pH, specific conductance, dissolved oxygen, conductivity, salinity, and TDS.

For laboratory analysis, all sampling, sample preservation, and analyses must be conducted according to test procedures under 40 CFR Part 136. Field discharge samples shall be collected and analyzed according to the specifications of the manufacturer of the sampling devices employed. Portable meters shall be calibrated according to manufacturer's specification. All field and/or analytical data shall be kept in the SWPPP document, which is to remain at the construction site at all times until a *Notice of* Termination has been submitted and approved.

SECTION C: STANDARD PROVISIONS FOR CONSTRUCTION ACTIVITY

1. Duty to Comply

The discharger must comply with all of the conditions of this General Permit. Any permit noncompliance constitutes a violation of the Clean Water Act (CWA) and the Porter-Cologne Water Quality Control Act and is grounds for enforcement action and/or removal from General Permit coverage.

The discharger shall comply with effluent standards or prohibitions established under Section 307(a) of the CWA for toxic pollutants within the time provided in the regulations that establish these standards or prohibitions, even if this General Permit has not yet been modified to incorporate the requirement.

2. General Permit Actions

This General Permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by the discharger for a General Permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not annul any General Permit condition.

If any toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is promulgated under Section 307(a) of the CWA for a toxic pollutant which is present in the discharge and that standard or prohibition is more stringent than any limitation on the pollutant in this General Permit, this General Permit shall be modified or revoked and reissued to conform to the toxic effluent standard or prohibition and the dischargers so notified.

3. Need to Halt or Reduce Activity Not a Defense

It shall not be a defense for a discharger in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this General Permit.

4. Duty to Mitigate

The discharger shall take all responsible steps to minimize or prevent any discharge in violation of this General Permit, which has a reasonable likelihood of adversely affecting human health or the environment.

5. Proper Operation and Maintenance

The discharger shall at all times properly operate and maintain any facilities and systems of treatment and control (and related appurtenances) which are installed or used by the discharger to achieve compliance with the conditions of this General Permit and with the requirements of Storm Water Pollution Prevention Plans (SWPPP). Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures. Proper operation and maintenance may require the operation of backup or auxiliary facilities or similar systems installed by a discharger when necessary to achieve compliance with the conditions of this General Permit.

6. Property Rights

This General Permit does not convey any property rights of any sort or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor does it authorize any infringement of Federal, State, or local laws or regulations.

7. Duty to Provide Information

The discharger shall furnish the RWQCB, State Water Resources Control Board, or USEPA, within a reasonable time, any requested information to determine compliance with this General Permit. The discharger shall also furnish, upon request, copies of records required to be kept by this General Permit.

8. Inspection and Entry

The discharger shall allow the RWQCB, SWRCB, USEPA, and/or, in the case of construction sites which discharge through a municipal separate storm sewer, an authorized representative of the municipal operator of the separate storm sewer system receiving the discharge, upon the presentation of credentials and other documents as may be required by law, to:

a. Enter upon the discharger's premises at reasonable times where a regulated construction activity is being conducted or where records must be kept under the conditions of this General Permit;

b. Access and copy at reasonable times any records that must be kept under the conditions of this General Permit;

c. Inspect at reasonable times the complete construction site, including any off-site staging areas or material storage areas, and the erosion/sediment controls; and

d. Sample or monitor at reasonable times for the purpose of ensuring General Permit compliance.

9. Signatory Requirements

a. All Notice of Intents (NOIs), Notice of Terminations (NOTs), SWPPPs, certifications, and reports prepared in accordance with this Order submitted to the SWRCB shall be signed as follows:

(1) For a corporation: by a responsible corporate officer. For the purpose of this Section, a responsible corporate officer means: (a) a president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or (b) the manager of the construction activity if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;

(2) For a partnership or sole proprietorship: by a general partner or the proprietor, respectively; or

(3) For a municipality, State, Federal, or other public agency: by either a principal executive officer, ranking elected official, or duly authorized representative. The principal executive officer of a Federal agency includes the chief executive officer of the agency or the senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrator of USEPA).

b. All SWPPPs, reports, certifications, or other information required by the General Permit and/or requested by the RWQCB, SWRCB, USEPA, or the local storm water management agency shall be signed by a person described above or by a duly authorized representative. A person is a duly authorized representative if:

(1) The authorization is made in writing by a person described above and retained as part of the SWPPP; or

(2) The authorization specifies either an individual or a position having responsibility for the overall operation of the construction activity, such as the position of manager, operator, superintendent, or position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position).

c. If an authorization is no longer accurate because a different individual or position has responsibility for the overall operation of the construction activity, a new authorization must be attached to the SWPPP prior to submittal of any reports, information, or certifications to be signed by the authorized representative.

10. Certification

Any person signing documents under Section C, Provision 9 above, shall make the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is, true, accurate, and complete.

I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

11. Anticipated Noncompliance

The discharger will give advance notice to the RWQCB and local storm water management agency of any planned changes in the construction activity which may result in noncompliance with General Permit requirements.

12. Penalties for Falsification of Reports

Section 309(c)(4) of the CWA provides that any person who knowingly makes any false material statement, representation, or certification in any record or other document submitted or required to be maintained under this General Permit, including reports of compliance or noncompliance shall upon conviction, be punished by a fine of not more than $10,000 or by imprisonment for not more than two years or by both.

13. Oil and Hazardous Substance Liability

Nothing in this General Permit shall be construed to preclude the institution of any legal action or relieve the discharger from any responsibilities, liabilities, or penalties to which the discharger is or may be subject to under Section 311 of the CWA.

14. Severability

The provisions of this General Permit are severable; and, if any provision of this General Permit or the application of any provision of this General Permit to any circumstance is held invalid, the application of such provision to other circumstances and the remainder of this General Permit shall not be affected thereby.

15. Reopener Clause

This General Permit may be modified, revoked and reissued, or terminated for cause due to promulgation of amended regulations, receipt of USEPA guidance concerning regulated activities, judicial decision, or in accordance with 40 Code of Federal Regulations (CFR) 122.62, 122.63, 122.64, and 124.5.

16. Penalties for Violations of Permit Conditions

a. Section 309 of the CWA provides significant penalties for any person who violates a permit condition implementing Sections 301, 302, 306, 307, 308, 318, or 405 of the CWA or any permit condition or limitation implementing any such section in a permit issued under Section 402. Any person who violates any permit condition of this General Permit is subject to a civil penalty not to exceed $27,500 per calendar day of such violation, as well as any other appropriate sanction provided by Section 309 of the CWA.

b. The Porter-Cologne Water Quality Control Act also provides for civil and criminal penalties which in some cases are greater than those under the CWA.

17. Availability

A copy of this General Permit shall be maintained at the construction site during construction activity and be available to operating personnel.

18. Transfers

This General Permit is not transferable. A new owner of an ongoing construction activity must submit a NOI in accordance with the requirements of this General Permit to be authorized to discharge under this General Permit. An owner who sells property covered

by this General Permit shall inform the new owner of the duty to file a NOI and shall provide the new owner with a copy of this General Permit.

19. Continuation of Expired Permit

This General Permit continues in force and effect until a new General Permit is issued or the SWRCB rescinds this General Permit. Only those dischargers authorized to discharge under the expiring General Permit are covered by the continued General Permit.

Los Angeles Regional Water Quality Control Board

Resolution No. 98-08

State of California
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION

Resolution No. 98-08

APPROVING BEST MANAGEMENT PRACTICES
FOR
MUNICIPAL STORM WATER AND URBAN RUNOFF MANAGEMENT PROGRAMS
IN
LOS ANGELES COUNTY

(NPDES NO. CAS614001)

WHEREAS, THE CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION FINDS:

1. Pursuant to the requirements of Order No. 96-054, Waste Discharge Requirements for Municipal Storm Water and Urban Runoff Discharges Within the County of Los Angeles (Permit), the Principal Permittee, in consultation with Permittees, has developed a model program for Industrial/Commercial Education. This program must include Best Management Practices (BMPs) to control/minimize the discharge of pollutants to receiving waters.

2. The Permit required the City of Los Angeles to conduct a study on pollutants entering storm drains from street and sidewalk washing operation by: (i) characterizing municipal street washing and sidewalk washing; (ii) assessing the impacts of such activities; and (iii) recommending appropriate BMPs to control any adverse impact. Accordingly, the City of Los Angeles has completed and submitted a final report entitled *A Study of Pollutants Entering Storm Drains from Street and Sidewalk Washing Operations in Los Angeles, California* that includes recommended BMPs for said activities.

3. The Permit also requires that the BMPs be approved by the Regional Board before the Permittees incorporate them into their regulatory programs.

4. The BMPs have been evaluated and are considered appropriate for the respective program/activity.

THEREFORE BE IT RESOLVED THAT:

1. The Best Management Practices contained in the following Attachments are approved:

   a. Attachment 1 -- Industrial/Commercial Program (Site Visit); and

   b. Attachment 2 -- Sidewalk and Street Washing.

2. Permittees consider these BMPs in their regulatory programs in accordance with the provisions of Order No. 96-054.

I, Dennis Dickerson, Executive Officer, do hereby certify that the foregoing is a full, true and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Los Angeles Region, on April 13, 1998.

Dennis A. Dickerson

DENNIS A. DICKERSON
Executive Officer

ATTACHMENT 2

Recommended Best Management Practices
for
Municipal Sidewalk and Street Washing Operations

TYPE OF DISCHARGE	RECOMMENDED BMPS
SIDEWALK WASH WATER	1. Remove trash, debris, and free standing oil/grease spills/leaks (use absorbent material, if necessary) from the area before washing; and 2. Use high-pressure, low volume spray washing using only potable water with no cleaning agents at an average usage of 0.006 gallon per square feet of sidewalk area.
STREET/ALLEY WASH WATER FROM AREAS WITH UNSANITARY CONDITIONS*	Collect and divert wash water to the sanitary sewer - publicly-owned treatment works (POTW). Note: POTW approval may be needed.

* This BMP is only to be applied in areas impacted by transient populations. Each Permittee is required to apply this BMP in areas where the congregation of transient populations can reasonably be expected to result in a significant threat to water quality.

Ms. Paula Higashi
Executive Director
Commission on State Mandates
980 Ninth Street, Suite 300
Sacramento, CA 95814

Re: *Test Claim No. 03-TC-21*

Dear Ms. Higashi:

I am in receipt of a letter dated December 28, 2007 from Elizabeth Miller Jennings, counsel for the State Water Resources Control Board. In this letter, Ms. Jennings inquires as to whether the claimants in the above-referenced test claim or related test claims will be limiting the issues raised in those claims.

Preliminarily, Ms. Jennings states that this office now represents the claimants in Test Claim Nos. 03-TC-04, 03-TC-19, 03-TC-20, and 03-TC-21. As this office has indicated in previous correspondence with the Commission, with respect to Test Claim No. 03-TC-20, this office represents the Cities of Artesia, Azusa, Beverly Hills, Carson, Commerce, Norwalk, Rancho Palos Verdes, Vernon, and Westlake Village. With respect to Test Claim No. 03-TC-21, this office represents the Cities of Bellflower, Covina, Downey, Monterey Park and Signal Hill. With respect to Test Claim Nos. 03-TC-04 and 03-TC-19 filed by the County of Los Angeles, Leonard Kaye of the County continues to represent the County before the Commission, although this office has represented the County in the litigation and certain other matters regarding these claims and may do so in the future.

In her December 28, 2007 letter, Ms. Jennings inquires as to whether any of the claimants intend to limit the issues presented in their test claims. In order to further the orderly consideration of these test claims, please be advised that, with respect to Test Claim No. 03-TC-20, the test claim submitted by this office on or about November 28, 2007 sets forth fully the claims asserted, and those claimants are not limiting their claims in any fashion. With respect to Test Claim

No. 03-TC-21, the cities we represent are pursuing their test claims with respect to the mandates imposed by Parts 4.C, 4.E and 4.F of Los Angeles Regional Water Quality Control Board Order No. 01-182 as set forth on the test claim form, most specifically Parts 4.C.2.a; 4.C.2.b; 4.C.3; 4.E.2.b; 4.E.3; 4.F.5(a)-(c), and 4.F.6(a)-(b).

The cities we represent do not currently intend to pursue a claim that Parts 1 and 2 of Los Angeles Regional Water Quality Control Board Order No. 01-182 have currently created a reimbursable state mandate in that such claim is not currently ripe. This limitation is without prejudice and the cities reserve the right to contend that enforcement of Parts 1 and 2 do create a reimbursable state mandated program at such time when Parts 1 and 2 cause the cities to incur costs that meet the criteria for reimbursement.

We hope that this is of assistance to the Commission and the State Water Resources Control Board. If you have any question, please feel free to contact the undersigned.

Very truly yours,

Howard Gest

Re: *Test Claim Nos. 03-TC-20 and 03-TC-21*

Dear Ms. Higashi:

Pursuant to your request for information dated May 22, 2008, enclosed please find the following:

1. Written authorizations from the claimants in Test Claim Nos. 03-TC-20 and 03-TC-21, authorizing this office to represent the claimants in these proceedings.

2. An original and seven copies of an amended Test Claim form, using the current test claim form, for Test Claim No. 03-TC-21. Pursuant to your request, we have completed Sections 1 through 4, 6 and 8. Also, for your convenience, we have also included Sections 5 and 7. Sections 5 and 7 contain the same written narrative and documentation submitted last November, 2007, by the test claimants in 03-TC-20.

Please contact the undersigned if there are any questions with respect to this submittal. Thank you for your attention in this matter.

Very truly yours,

Howard Gest

BEFORE THE COMMISSION ON STATE MANDATES

IN RE TEST CLAIMS OF THE CITIES OF ARTESIA, AZUSA, BEVERLY HILLS, CARSON, COMMERCE, NORWALK, RANCHO PALOS VERDES, WESTLAKE VILLAGE, AND VERNON *IN RE* TEST CLAIMS OF THE CITIES OF BELLFLOWER, COVINA, DOWNEY, MONTEREY PARK AND SIGNAL HILL	Test Claim No. 03-TC-20 Test Claim No. 03-TC-21 PROOF OF SERVICE

PROOF OF SERVICE

I am employed in Los Angeles County. I am over the age of 18 and not a party to this action. My business address is 624 S. Grand Avenue, 22nd Floor, Los Angeles, California 90017.

On July 29, 2008 I served the foregoing document, described as

AUTHORIZATIONS (Test Claim Nos. 03-TC-20 and 03-TC-21); AMENDED TEST CLAIM FORM (Test Claim No. 03-TC-21)

☐ the original of the document
☒ true copies of the document

in separate sealed envelopes addressed as follows:

See Attached Service List

☒ **BY U.S. MAIL**: I sealed and placed such envelope for collection and mailing to be deposited on the same day at Los Angeles, California. The envelopes were mailed with postage thereon fully prepaid. I am readily familiar with Burhenn & Gest LLP's practice of collection and processing corresponding for mailing. Under this practice, documents are deposited with the U.S. Postal Service on the same day that is stated in the proof of service, with postage fully prepaid at Los Angeles, California in the ordinary course of business.

☐ **BY FEDERAL EXPRESS**: I am familiar with the firm's practice of collecting and processing correspondence for delivery via Federal Express. Under that practice, it would be picked up by Federal Express on that same day at Los Angeles, California and delivered to the parties as listed on this Proof of Service the following business morning.

☐ **BY FACSIMILE**: I caused the above referenced document to be transmitted via facsimile to the parties as listed on this Proof of Service.

☐ **BY PERSONAL SERVICE**: I personally delivered such envelope by hand to the office of the addressee(s).

☐ **STATE**: I declare under penalty of perjury under the laws of the state of California that the above is true and correct.

☒ **FEDERAL**: I declare that I am employed in the office of a member of the bar of this court at whose direction the service was made.

Executed on July 29, 2008 at Los Angeles, California.

Written Narrative

Section 5: WRITTEN NARRATIVE IN SUPPORT OF TEST CLAIM OF THE CITIES OF BELLFLOWER, COVINA, DOWNEY, MONTEREY PARK AND SIGNAL HILL REGARDING MANDATES IMPOSED UNDER AN EXECUTIVE ORDER OF THE CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION, ORDER NUMBER 01-182

This written narrative is submitted on behalf of the Cities of Bellflower, Covina, Downey, Monterey Park and Signal Hill (hereinafter, "Cities") regarding the following mandates contained in California Regional Water Quality Control Board, Los Angeles Region (hereinafter, "RWQCB") Order Number 01-182 ("Order"):

5(A) DESCRIPTION OF NEW ACTIVITIES AND COSTS

1. The New Mandates

The Cities seek a subvention of funds for the following state mandates contained in the Order:

a. Part 4.c.2.a [Inspection of certain commercial facilities to prevent those facilities from discharging waste into waters of the state and to assure compliance with state law], pages 28-31;

b. Part 4.c.2.b [Inspection of industrial facilities to determine compliance with the State's program that regulates discharge of stormwater from industrial facilities, including compliance with State Water Resources Control Board ("State Water Board") permits], page 31;

c. Part 4.E. [Inspection of construction sites to determine those sites' compliance with the State's program that regulates discharge of stormwater from those sites, including compliance with State Water Board permits], pages 42-45;

d. Part 4.F.5.c.3 [Installation and maintenance of trash receptacles at transit stops], pages 48-49.

2. Description of Mandates

a. Part 4.c.2.a [Inspection of certain commercial facilities to prevent those facilities from discharging waste into waters of the state and to assure compliance with state law], Order, pages 28-31

Part 4.C.2.a of the Order provides, in relevant part, as follows:

> Each Permittee shall inspect all facilities in the categories and at a level and frequency as specified in the following subsections.

(a) Commercial Facilities

(1) Restaurants

Frequency of Inspections: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of inspections: Each Permittee, in cooperation with its appropriate department (such as health or public works), shall inspect all restaurants within its jurisdiction to confirm that storm water BMPs are being effectively implemented *in compliance with State law*, County and municipal ordinances, *Regional Board Resolution 98-08*, and the SQMP. At each restaurant, inspectors shall verify that the restaurant operator:

- has received educational materials on storm water pollution prevention practices;
- does not pour oil and grease or oil and grease residue onto a parking lot, street or adjacent catch basin;
- keeps the trash bin area clean and trash bin lids closed, and does not fill trash bins with washout water or any other liquid;
- does not allow illicit discharges, such as discharge of washwater from floormats, floors, porches, parking lots, alleys, sidewalks and street areas (in the immediate vicinity of the establishment), filters or garbage/trash containers;
- removes food waste, rubbish or other materials from parking lot areas in a sanitary manner that does not create a nuisance or discharge to the storm drain.

(2) Automotive Service Facilities

Frequency of Inspections: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of inspections: Each Permittee shall inspect all automotive service facilities within its jurisdiction to confirm that storm water BMPs are effectively implemented in compliance with County and municipal ordinances, *Regional Board Resolution 98-08*, and the

SQMP. At each automotive service facility, inspectors shall verify that each operator:

- maintains the facility area so that it is clean and dry and without evidence of excessive staining;
- implements housekeeping BMPs to prevent spills and leaks;
- properly discharges wastewaters to a sanitary sewer and/or contains wastewaters for transfer to a legal point of disposal
- is aware of the prohibition on discharge of non-storm water to the storm drain;
- properly manages raw and waste materials including proper disposal of hazardous waste;
- protects outdoor work and storage areas to prevent contact of pollutants with rainfall and runoff;
- labels, inspects, and routinely cleans storm drain inlets that are located on the facility's property; and
- trains employees to implement storm water pollution prevention practices.

(3) Retail Gasoline Outlets and Automotive Dealerships

Frequency of Inspection: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of Inspection: Each Permittee shall confirm that BMPs are being effectively implemented at each RGO and automotive dealership within its jurisdiction, in compliance with the SQMP, *Regional Board Resolution 98-08*, and the Stormwater Quality Task Force Best Management Practice Guide for RGOs. At each RGO and automotive dealership, inspectors shall verify that each operator:

- routinely sweeps fuel-dispensing areas for removal of litter and debris, and keeps rags and absorbents ready for use in case of leaks and spills;
- is aware that washdown of facility area to the storm drain is prohibited;

- is aware of design flaws (such as grading that doesn't prevent run-on, or inadequate roof covers and berms), and that equivalent BMPs are implemented;
- inspects and cleans storm drain inlets and catch basins within each facility's boundaries no later than October 1st of each year;
- posts signs close to fuel dispensers, which warn vehicle owners/operators against "topping off" of vehicle fuel tanks and installation of automotive shutoff fuel dispensing nozzles;
- routinely checks outdoor waste receptacle and air/water supply areas, cleans leaks and drips, and ensure that only watertight waste receptacles are used and that lids are closed; and
- trains employees to properly manage hazardous materials and wastes as well as to implement other storm water pollution prevention practices.

(Emphasis added.)

b. Part 4.c.2.b [Inspection of industrial facilities to determine compliance with the State's program that regulates discharge of stormwater from industrial facilities, including compliance with State Water Board permits], Order, page 31

Part 4.C.2.b of the Order provides, in relevant part, as follows:

> Each Permittee shall inspect all facilities in the categories and at a level and frequency as specified in the following subsections.
> . . .
>
> (b) Phase I Facilities
>
> Permittees need not inspect facilities that have been inspected by the Regional Board within the past 24 months. For the remaining Phase I facilities that the Regional Board has not inspected each Permittee shall conduct compliance inspections as specified below.
>
> Frequency of Inspection
>
> Facilities in Tier 1 Categories: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

> Facilities in Tier 2 Categories: Twice during the 5-year term of the permit, provided that the first inspection occurs no later than August 1, 2004. Permittees need not perform additional inspections at those facilities determined to have no risk of exposure of industrial activity to storm water. For those facilities that do have exposure of industrial activities to storm water, a Permittee may reduce the frequency of additional compliance inspections to once every 5 years, provide that the Permittee inspects at least 20% of the facilities in Tier 2 each year.
>
> Level of Inspection: Each Permittee shall confirm that each operator:
>
> - *has a current Waste Discharge Identification (WDID) number* for facilities discharging storm water associated with industrial activity; and that *a Storm Water Pollution Prevention Plan is available on-site*; and
> - is effectively implementing BMPs in compliance with County and municipal ordinances, *Regional Board Resolution 98-08*, and the SQMP.

(Emphasis added.)

c. Part 4.E. [Inspection of construction sites to determine those sites' compliance with the State's program that regulates discharge of stormwater from those sites, including compliance with State Water Board permits], Order, pages 42-45

Part 4.E.2.b of the Order provides, in relevant part, as follows:

> 2. For construction sites one acre or greater, each Permittee shall comply with all conditions in section E.1 above and shall:
>
> . . .
>
> (b) Inspect all construction sites for storm water quality requirements during routine inspections a minimum of once during the wet seasons. The Local SWPPP shall be reviewed for compliance with local codes, ordinances, and permits. For inspected sites that have not adequately implemented their Local SWPPP, a follow-up inspection to ensure compliance will take place within 2 weeks. If compliance has not been attained, the Permittee will take additional actions to achieve compliance (as specified in municipal codes). If compliance has not been achieved, and the site is also covered under a statewide general construction storm water permit, each Permittee shall enforce their

local ordinance requirements, and if non-compliance continues the Regional Board shall be notified for further joint enforcement actions.

Part 4.E.3. of the Order provides, in relevant part, as follows:

3. For sites five acres and greater, each Permittee shall comply with all conditions in Sections E.1 and E.2. and shall:

a) Require, prior to issuing a grading permit for all projects requiring coverage under the state general permit, *proof of a Waste Discharger Identification (WDID) Number for filing a Notice of Intent (NOI) for coverage under the GCASP and a certification that a SWPPP has been prepared by the project developer.* A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs as the State SWPPP.

b) Require *proof of an NOI and a copy of the SWPPP at any time a transfer of ownership* takes place for the entire development or portions of the common plan of development where construction activities are still on-going.

c) Use an effective system to track grading permits issued by each Permittee. To satisfy this requirement, the use of a database or GIS system is encouraged, but not required.

(Emphasis added.)

d. Part 4.F.5.c.3 [Installation and maintenance of trash receptacles at transit stops], Order, pages 48-49.

Part 4.F.5.c.3 of the Order provides, in relevant part, as follows:

5. Storm Drain Operation and Management

. . .

(c) Permittees not subject to a trash TMDL shall:

. . .

(3) Place trash receptacles at all transit stops within its jurisdiction that have shelters no later than August 1, 2002, and at all other transit stops within its jurisdiction no later than February 3, 2003. All trash receptacles shall be maintained as necessary.

3. The inspections of restaurants, automotive service facilities, retail gas stations and automotive dealerships are new programs or higher levels of service mandated by the State

a. The State has had responsibility for regulation of discharges from restaurants, automotive service facilities, retail gas stations and automotive dealerships since 1969

Part 4.C.2.a of the Order requires the Cities to inspect restaurants, automotive service facilities, retail gasoline outlets and automotive dealerships. The purpose of the inspection is to assure that these facilities are implementing programs, known as Best Management Practices ("BMPs"), to prevent the discharge of waste into locations where it will be picked up by stormwater and carried into the rivers and other waters of the state.

Since at least 1969, State agencies have had the responsibility to prevent or regulate the discharge of waste that could be carried into the rivers and other waters of the state. In that year the Legislature adopted the Porter-Cologne Water Quality Act, Water Code §§ 13000 et seq. Under the Porter-Cologne Act, the Legislature imposed on the State Water Board and the regional water quality control boards ("regional boards") responsibility for the coordination and control of water quality. Water Code § 13001.

This responsibility includes the regulation of discharges from any entity that could affect the quality of the water of the state, including inspection of those facilities. Under the Act, any person who discharges "waste" or proposes to discharge "waste" that could affect the quality of the "waters of the state," other than into a community sewer system, must file a report of the discharge with the regional board that has the authority over that discharge. Water Code §§ 13260 and 13263. "Waste" and "waters of the state" are defined broadly. "Waste" includes all waste substances associated with human habitation, or of human or animal origin, or from any producing, manufacturing or processing operation. Water Code § 13050(d). "Waters of the state" means any surface water or groundwater, including saline waters, within the boundaries of the state. Water Code § 13050(e). Upon receipt of the report of discharge, the regional board, after a hearing, issues a permit, known as waste discharge requirements, authorizing or conditioning (including disallowing) the discharge. Water Code § 13263. The regional board is given the authority to require any person to furnish technical and monitoring reports describing any discharge or proposed discharge of waste, and can inspect the facility of any such person to ascertain whether the purpose of the Act are being met. Water Code § 13267(b) and (c). The State Water Board is given this same authority if it will not duplicate the efforts of the Regional Board. *Id.*, subd. (f).

The Porter-Cologne Act contains no exceptions for discharges from restaurants, automotive service facilities, retail gas station, or automobile dealerships. Accordingly, the State, through the State Water Board and the regional water quality control boards, has had the responsibility since 1969 for regulating the discharge or proposed discharge of any waste from these facilities.

b. The purpose of the inspection obligations imposed by the Order is to prevent or minimize the discharge of waste into waters of the state

As set forth above, the purpose of the inspections of restaurants, automotive service facilities, retail gasoline outlets and automotive dealerships is to assure that these facilities are implementing BMPs that will prevent the discharge of waste into locations where it could be carried into rivers and other waters of the state. The restaurant inspections are to assure that oil, grease, trash or waste are not entering areas exposed to stormwater, all to prevent these materials from being picked up by stormwater and then being discharged into waters of the state. The automotive service facility inspections are to assure that materials at these facilities do not come into contact with stormwater or other runoff that would carry these materials into waters of the state. The retail gas outlet and automotive dealership inspections likewise are to assure that fuel, debris and waste does not enter storm drain and catch basins and then enter waters of the state.

These inspections are all tasks for which the State has been responsible since at least 1969. These are all obligations of the State and regional boards under the Porter-Cologne Act since 1969.

c. The Order requires the Cities to conduct these inspections to assure compliance with State law

The Order explicitly requires the Cities to conduct these inspections to assure compliance with State law, including a resolution issued by a state agency, i.e., the RWQCB. The Order specifically provides that inspections of restaurants are to be performed in order to assure that BMPs "are being effectively implemented *in compliance with state law,* County and municipal ordinances, *Regional Board Resolution No. 98-08,* and the SQMP." Order, Part 4.C.2.a(1) (emphasis added). The inspection of automotive service facilities, retail gasoline outlets and automobile dealerships similarly are to confirm that BMPs are being "effectively implemented . . . in compliance with *Regional Board Resolution No. 98-08.* Order, Parts 4.C.2.a(2) and (3) (emphasis added). (A copy of Resolution No. 98-08 is included in Section 7.)

d. These inspection obligations are new programs or higher levels of service.

The obligation to inspect restaurants, automotive service facilities, retail gas outlets and automotive dealerships is a new program or a higher level of service. A "program" within the meaning of Article XIII B, section 6, of the California Constitution is a program that carries out a governmental function of providing services to the public, or laws which, to implement a state policy, impose unique requirements on local governments. *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56. These inspection obligations are such a program; inspections for the purpose of policing

compliance with state law are a uniquely governmental function and are uniquely imposed on the municipalities that are permittees under the Order.[1]

These inspection obligations are also new. A program is "new" if the local governmental entity had not previously been required to institute it. *County of Los Angeles v. Comm'n on State Mandates* (2003) 110 Cal.App.4th 1176, 1189. Here, the Order constitutes both waste discharge requirements issued by the RWQCB and a NPDES municipal stormwater permit issued under the federal Clean Water Act. This is the third such order issued to the Cities. The RWQCB previously issued orders to the Cities in 1991 and 1996. Neither the 1991 nor the 1996 order imposed these inspection obligations. The inspection obligations were imposed by the RWQCB for the first time in the Order issued in 2001.

e. The inspections are not required by the federal Clean Water Act

The federal Clean Water Act imposes certain obligations on the Cities. Under the Clean Water Act, the Cities are required to (i) prohibit non-stormwater discharges into the storm sewers, and (2) reduce the discharge of pollutants in stormwater to the maximum extent practicable. 33 U.S.C. §1342(p). As noted above, the Order itself constitutes both waste discharge requirements and NPDES permit issued under the federal Clean Water Act.

The federal Clean Water Act does not require Cities to inspect restaurants, automotive service facilities, retail gas outlets or automotive dealerships. The federal Clean Water Act regulations set forth those facilities required to be inspected pursuant to the Act. Those facilities are solely municipal landfills, hazardous waste treatment, disposal and recovery facilities, industrial facilities that are subject to section 313 of Title III of the Superfund Amendment and Reauthorization Act of 1986, and industrial facilities that a municipality has determined to be contributing a substantial pollutant loading to the municipal storm sewer system. 40 C.F.R. § 122.26(d)(2)(iv)(C). The federal regulations do not require inspections of restaurants, automotive service facilities, retail gas stations, or automotive dealerships.

Indeed, the 1991 and 1996 orders issued by the RWQCB to these Cities did not contain these inspection obligations. If the federal Clean Water Act had required Cities to inspect restaurants, automotive service facilities, retail gas outlets or automotive dealerships, the RWQCB could not have issued the prior orders without including these

[1] The inspections could also be considered a higher level of service. A "higher level of service" refers to state mandated increases in the services provided by local agencies. *County of Los Angeles*, 43 Cal.3d at 56. A higher level of service exists where the mandate results in an increase in the actual level or quality of governmental services provided. *See San Diego Unified School District v. Comm'n on State Mandates* (2004) 33 Cal.4th 859, 877.

inspections. The RWQCB, however, did issue the prior orders without requiring these inspections.[2]

It is possible that the State Water Board or the RWQCB may argue that, because the Order also constituted a federal NPDES permit, the inspections are federally mandated. This argument would lack merit. An NPDES permit can contain both federal and non-federal requirements. *See City of Burbank v. State Water Resources Control Board* (2005) 35 Cal.4th 613, 618, 628. Where state-mandated activities exceed federal requirements, those mandates constitute a reimbursable state mandate. *See Long Beach Unified School District v State of California* (1990) 225 Cal.App.3d 155, 172-173.

Moreover, a "new program or higher level of service" imposed by the State upon a municipality as a result of a federal law or federal program is not necessarily a "federal mandate." In order to be a federal mandate, the obligation must be imposed upon the municipality by federal law itself. The test for determining whether the "new program or higher level of service" is a state mandate is whether the state has a "true choice" in the matter of implementation, *i.e.*, whether the state freely chose to impose that program on local municipalities as opposed to performing the obligation itself. *See Hayes v. Commission on State Mandates* (1992) 11 Cal.App.4th 1564, 1593-94.

Here, the inspections are not required by federal statute or regulations; they exceed the requirements of the federal Clean Water Act. Here, the State has had the obligation to regulate restaurants, automotive service facilities, retail gas stations and automotive dealerships since 1969. This included the right to inspect such facilities to prevent activities that would result in the discharge of waste that could affect the quality of the waters of the state. Water Code § 13267(c). In 2001, the RWQCB freely chose to shift those inspection obligations to the Cities. Nothing under the federal Clean Water Act required the RWQCB to do so; nothing prevented the RWQCB from continuing to perform these inspections itself.

4. The inspections of industrial facilities that hold State Water Board stormwater permits for compliance with those permits are new programs or higher level of service mandated by the State

a. The Order imposes new inspection obligations that were required to be performed by the State

Part 4.c.2.b requires the cities to inspect industrial facilities to determine those facilities' compliance with the State's program for preventing waste from being discharged from those facilities, including permits issued by the State Water Board. As

[2] Because the current federal regulations were not in effect at the time of the issuance of 1991 order, it could be argued that the 1991 order was issued under a prior set of regulations. The current regulations however, were in existence at the time the 1996 order was issued.

with the inspection of restaurants, gas stations and the other facilities, the requirement to inspect industrial is also a new program, one formerly performed by the State itself.

The Clean Water Act requires certain industrial facilities to have permits for stormwater discharges associated with their industrial activity. 33 U.S.C. § 1342(p)(3); 40 C.F.R. § 122.26(c). These industrial stormwater permits are issued either by the State Water Board or the regional boards. In California, the State Water Board issues a general permit to which industrial facilities can subscribe. Alternatively, an industrial discharger can obtain its own permit from a regional water quality control board. The Order refers to these industrial facilities as "Phase I Facilities." Order, pp. 31, 62.

Under the Porter-Cologne Water Quality Act, the State Water Board and the regional boards have both the authority and the obligation to issue these permits to "Phase I Facilities." Water Code § 13377. The State Water Board has issued these industrial stormwater permits since 1991. (See State Water Board Order No. 91-013-DWQ.) The most current general permit was issued in 1997. See State Water Resources Control Board Order No. 97-03-WQ, a copy of which is included in Section 7.

Significantly, the Legislature has authorized the State Water Board and regional boards to charge these industrial dischargers a fee which is deposited in the State's Waste Discharge Permit Fund and separately accounted for. Water Code § 13260(d)(2)provides in pertinent part:

> (A) Subject to subparagraph (B), any fees collected pursuant to this section shall be deposited in the Waste Discharge Permit Fund, which is hereby created.
>
> (B) Notwithstanding subparagraph (A) the fees collected pursuant to this section from stormwater dischargers that are subject to a general industrial or construction stormwater permit under the National Pollutant Discharge Elimination System (NPDES) shall be separately accounted for in the Waste Discharge Permit Fund.

The Legislature has then directed that a portion of this fee should be spent specifically on inspection of these industrial facilities. "Not less than 50 percent in the Waste Discharge Permit Fund that is separately accounted for . . . is available, upon appropriation by the Legislature, for expenditure by the regional board with jurisdiction over the permitted industry or construction site that generated the fee to carry out the stormwater programs in the region." Water Code § 13260(d)(2)(B)(ii). "Each regional board . . . shall spend not less than 50 percent of that money *solely on stormwater inspection and regulatory compliance issues* associated with industrial and construction stormwater programs." *Id.*, subd.(d)(2)(B)(iii) (emphasis added).

Like the inspections of restaurants, automotive service facilities, retail gas stations and automotive dealerships, the State Water Board and regional boards have had the

authority under the Porter-Cologne Act to regulate these discharges from "Phase I" facilities since 1969, including the authority to inspect these facilities. Water Code §§ 13260, 13263, 13267. The obligation to inspect these "Phase I" industrial facilities that hold the State Board issued stormwater permits has rested with the regional boards since 1991. The State Water Board, in adopting the general industrial permit it issues to these Phase I facilities, stated that "following adoption of this General Permit, *the Regional Water Boards shall enforce its provisions.*" Order No. 97-03-DWQ, Finding 13 (emphasis added).

In 2001, the RWQCB imposed this obligation on the Cities. There is no question that the RWQCB imposed this inspection requirement to assure Phase I facilities' compliance with state law. The inspection required to be performed by the cities is a "compliance inspection." Order, Part 4.2.b. The inspection shall include a determination as to whether the industrial discharger has a waste discharge identification number and a stormwater pollution prevention plan. The waste discharge identification number is a number assigned by the State in conjunction with its permit program. The stormwater pollution prevention plan is a requirement of the state-issued general permit. The inspection is also for the purpose of determining whether the industrial facility is implementing BMPs in compliance with Regional Board Resolution No. 98-08, a resolution of the RWQCB itself.

Accordingly, the inspections of Phase I facilities is a new program or higher level of service imposed on the cities:

(1) The State Board and the regional boards have had authority to regulate and inspect these facilities since 1969. Water Code §§ 13260, 13263, 13267.

(2) The inspection is to determine compliance with the general industrial stormwater permit issued by the State Board. The State Board has specifically provided that the regional board shall enforce the provisions of this permit. State Water Board Order No. 97-03-DWQ, Finding 13.

(3) The State Board and the regional board charge these industrial facilities a fee for this program. Water Code § 13260(d)(2).

(4) The Water Board and the regional boards do not share any of these fees with the cities.

(5) The inspections are compliance inspections to determine compliance with the State Water Board permit, and Regional Board Resolution No. 98-08.

(6) The inspection obligation is new. The RWQCB imposed this obligation on the Cities in 2001. Prior orders did not impose this obligation on the Cities.

b. The obligation to inspect industrial facilities with State-issued stormwater permits is not contained in the federal Clean Water Act

As discussed above, the federal Clean Water Act regulations set forth those facilities required to be inspected pursuant to the Act. Those facilities are municipal landfills, hazardous waste treatment, disposal and recovery facilities, industrial facilities that are subject to section 313 of Title III of the Superfund Amendment and Reauthorization Act of 1986, and industrial facilities that a municipality has determined to be contributing a substantial pollutant loading to the municipal storm sewer system. 40 C.F.R. § 122.26(d)(2)(iv)(C). These regulations do not require inspections of industrial facilities with state-issued stormwater permits.

5. The inspection of construction sites that hold State Board permits for compliance with those permits is a new program mandated by the state

Under the Clean Water Act, the definition of industrial activities includes construction. See 40 C.F.R. § 122.26(b)(14)(x). In 2001, construction sites where activity resulted in the disturbance of greater than five acres of total land area were required to obtain stormwater permits. In 2003 this requirement was expanded to sites where the activities resulted in the disturbance of greater than one acre.

As with the industrial facilities, the State Water Board and the regional boards are charged with issuing these permits. Water Code § 13377. The State Water Board has issued a general construction stormwater permit since 1992. See State Water Resources Control Board Order No. 92-08-DWQ. The most current general construction stormwater permit was issued in 1999. See State Water Resources Control Board Order No. 99-08-DWQ. Like industrial facilities, the State charges a fee for these permits. Like industrial facilities, a portion of that fee is to go to regional boards to be spent "solely on stormwater inspection and regulatory compliance issues associated with industrial and construction stormwater programs." Water Code § 13260(d)(2)(B)(iii).

Like general industrial stormwater permit, the general construction stormwater permit issued by the State Water Board imposes the inspection obligation on the regional boards. State Board Order No. 99-08-DWQ specifically provides that "[f]ollowing adoption of this General Permit, the RWQCBs shall enforce the provisions herein . . . ." State Board Order No. 99-08-DWQ, Finding 11. Part D.1 of that Order further specifically provided that "RWQCBs shall . . . implement the provision of this General Permit. Implementation of this General Permit may include, but is not limited to requesting the submittal of SWPPPs, reviewing SWPPPs, reviewing monitoring reports, conducting *compliance inspections*, and taking enforcement actions." Thus, the specific

responsibility for inspection of construction sites was allocated by the State Water Board to the regional boards, including the RWQCB.

The same analysis that applies the obligation to inspect industrial facilities applies to the obligation to inspect construction sites. Like inspection of the Phase I facilities in 2001, the RWQCB simply shifted this obligation from itself to the cities. The obligation to inspect these construction sites for compliance with the State Water Board's permit is a new program or higher level of service mandated on the Cities:

> (1) The State Water Board and the regional boards have had the authority and obligation to regulate these discharges since 1969. Water Code §§ 13260, 13263 and 13267.
>
> (2) The State Water Resources Board has issued permits to these facilities since 1992. See State Board Order No. 92-08-DWQ.
>
> (3) The State Board orders adopting the general permit imposed the obligation to inspect construction sites on the regional boards. See State Board Order No. 99-08-DWQ, part D.1.
>
> (4) The State Board and the regional boards charge a fee to the owners or developers of these construction sites. Water Code § 13260(d)(2). The Water Boards and the regional boards do not share any of these fees with the Cities.
>
> (5) The inspections are compliance inspections to determine compliance with the State Water Board program and permit.
>
> (6) The obligation is new. The RWQCB imposed the obligation on the Cities in 2001. Prior to 2001, the Cities did not have this obligation.

6. The installation and maintenance of trash receptacles at transit stops are new programs or higher levels of service mandated upon the Cities

Part 4.F.5.c.3. of the Order requires the cities to place trash receptacles at all transit stops within their jurisdiction no later than February 3, 2003. All trash receptacles shall be maintained as necessary. This requirement also constitutes a new program or higher level of service mandated upon the Cities.

As set forth above, a "program" within the meaning of Article XIII B, section 6, of the California Constitution is a program that carries out a governmental function of providing services to the public. *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46, 56. A program is "new" if the local government entity had not previously been required to institute it. *County of Los Angeles v. Comm'n on State Mandates* (2003)

110 Cal.App.4th 1176, 1189. A "higher level of service" refers to state mandated increases in the services provided by local agencies. *County of Los Angeles v. State of California*, 43 Cal.3d at 56. A higher level of service exists where the mandate results in increase in the actual level or quality of governmental services. *See San Diego Unified School District v. Comm'n on State Mandates* (2004) 33 Cal.4th 859, 877.

The obligation to install trash receptacles at all transit stops is a new program or higher level of service. The collection of trash is a program that carries out a governmental function of providing services to the public. The Order directed the cities how and where to collect trash. It resulted in a new program or higher level of service along with a concomitant increase in costs.

Nothing in the federal Clean Water Act requires cities to install trash receptacles at transit stops. Nothing in the federal regulations or the Clean Water Act itself imposes this obligation. Indeed, this obligation is not found in other stormwater permits issued to the cities throughout the state. The fact that it does not exist in other stormwater permits demonstrates that it is not a federal requirement.

The Order mandated that the Cities install and maintain trash receptacles at all transit stops. This is a new program or higher level or service mandated upon the Cities.

7. The State Funding Disclaimers Under Government Code § 17556 Do Not Apply

The seven disclaimers specified in Government Code § 17556 do not apply to the instant test claim, as shown below.

Government Code § 17556(a): "The claim is submitted by a local agency . . . which requested legislative authority for that local agency . . . to implement the Program specified in the statute, and that statute imposes costs upon that local agency . . . requesting the legislative authority." This disclaimer is not applicable because the Cities did not request legislative authority for the Order.

Government Code § 17556(b): "The statute or executive order affirmed for the state that which had been declared existing law or regulation by action of the courts." This disclaimer is not applicable because the Order did not affirm what had been declared existing law or regulation by action of the courts.

Government Code § 17556(c): The statute or executive order implemented a federal law or regulation and resulted in costs mandated by the federal government, unless the statute or executive order mandates costs which exceed the mandate in that federal law or regulation." This disclaimer is not applicable because no federal law or regulation is implemented in the Order, and the Order exceeds that mandated by federal law, as discussed above.

Government Code § 17556(d): "The local agency . . . has the authority to levy service charges, fees or assessments sufficient to pay for the mandated program or increased level of service." This disclaimer is not applicable because the Cities do not have the authority to levy service charges, fees or assessments sufficient to pay for the mandated program or increased level of service.

Government Code § 17556(e): "The statute or executive order provides for offsetting savings to local agencies . . . which result in no net costs to the local agencies . . . , or includes additional revenue that was specifically intended to fund the costs of the State mandate in an amount sufficient to fund the cost of the State mandate." This disclaimer is not applicable as no offsetting savings are provided in the Order and no revenue to fund the implementation of the Order was provided.

Government Code § 17556(f): "The statute or executive order imposed duties which were expressly included in a ballot measure approved by the voters in a Statewide election." This disclaimer is not applicable as the Order does not impose duties imposed by a statewide ballot measure.

Government Code § 17556(g): "The statute created a new crime or infraction, eliminated a crime or infraction, or changed the penalty for a crime or infraction, but only for that portion of the statute relating directly to the enforcement of the crime or infraction." This disclaimer is not applicable as the Order did not create or eliminate a crime or infraction or change the penalty for a crime or infraction.

B. DESCRIPTION OF EXISTING ACTIVITIES AND COSTS THAT ARE MODIFED BY THE MANDATE

Not Applicable. The only possible exception is if the installation and maintenance of trash receptacles is viewed as a modification of the Cities' existing trash collection activities. See the discussion in Section 5(A) above.

C. INCREASED COSTS INCURRED BY THE CLAIMANT DURING THE FISCAL YEAR FOR WHICH THE CLAIM WAS FILED TO IMPLEMENT THE ALLEGED MANDATE:

The actual increased costs incurred by the Cities during the current fiscal year exceeds $1,000.

D: ESTIMATED ANNUAL COSTS THAT WILL BE INCURRED BY THE CLAIMANT TO IMPLEMENT THE ALLEGED MANDATE DURING THE FISCAL YEAR IMMEDIATELY FOLLOWING THE FISCAL YEAR FOR WHICH THE CLAIM WAS FILED:

The actual or estimated increased costs that will be incurred by the Cities during the next fiscal year will exceed $1,000.

E. STATEWIDE ESTIMATE OF INCREASED COSTS THAT ALL LOCAL AGENCIES OR SCHOOL DISTRICTS WILL INCUR TO IMPLEMENT THE ALLEGED MANDATE DURING THE FISCAL YEAR IMMEDIATELY FOLLOWING THE FISCAL YEAR FOR WHICH THE CLAIM WAS FILED:

The mandates in the Order, including those at issue in this test claim, apply to the County of Los Angeles, the Los Angeles Flood Control District, and 84 cities in the County of Los Angeles (except for the trash receptacle obligation, which does not apply to cities subject to a "Trash TMDL".) The increased costs that all the municipalities will incur to implement the mandates during the next fiscal year are not currently known, but will exceed $1,000. It is also not known the number of municipalities outside the County of Los Angeles that are subject to similar mandates.

F. IDENTIFICATION OF FUNDING SOURCES AVAILABLE FOR THIS PROGRAM:

(i) Dedicated state funds

There are no known dedicated state funds available to fund the inspection programs or placement of trash receptacles mandated by the Order.

(ii) Dedicated federal funds

There are no known dedicated federal funds available to fund the inspection programs or of trash receptacles mandated by the Order.

(iii) Other nonlocal agency funds

There are no known nonlocal agency funds available to fund the inspection programs or of trash receptacles mandated by the Order.

(iv) The local agency's general purpose funds

There are no general purpose funds available to fund the inspection programs or installation and maintenance of trash receptacles mandated by the Order without taking those funds from other programs.

(v) Fee authority to offset costs

The State collects fees for inspections but does not share those funds with the Cities. The State Water Board and the RWQCB have in fact received funds from permit fees associated with the General Industrial Permit and the General Construction Permit, fees that were specifically assessed to pay for the costs of implementing the stormwater

permit program. Water Code § 13260(d). The State receives an annual fee of $700 from every industrial facility, plus applicable surcharges (but subject to certain reductions) that is required to have a General Industrial Permit. 23 Cal. Code Reg. § 2200(b)(2)(A). For construction sites required to have a General Construction Permit, the annual fee is $200 plus $20 per acre, up to a maximum of $2,200. 23 Cal. Code Reg. § 2200(b)(3). The State shares none of these fees with the Cities.

G. IDENTIFICATION OF PRIOR MANDATE DETERMINATIONS MADE BY THE BOARD OF CONTROL OR THE COMMISSION ON STATE MANDATES THAT MAY BE RELATED TO THE ALLEGED MANDATE.

The Cities are not aware of any prior mandate determinations made by the Board of Control or the Commission on State Mandates that may be related to these mandates.

Section 6

Declarations

SECTION 6. DECLARATIONS

DECLARATION OF HOWARD GEST

I, HOWARD GEST, hereby declare and state as follows:

1. I am an attorney admitted to practice before all of the courts of the State of California and am a partner in the firm of Burhenn & Gest LLP. Our firm represents the Cities of Bellflower, Covina, Downey, Monterey park and Signal Hill (collectively, "Cities") in the test claim proceeding before the Commission on State Mandates involving Order No. 01-182 (the "Order") issued by the California Regional Water Quality Control Board, Los Angeles Region. On information provided to me by the Cities, I have personal knowledge of the facts set forth in this Declaration and could, if called upon, testify competently thereto.

2. Through my representation of the Cities and other municipalities in Los Angeles County with respect to stormwater issues, including with respect to the requirements of the Order, I am familiar both with the requirements of the Order and the efforts required by the Cities to comply with those requirements.

3. The activities required of the Cities under the Order that the Cities claim constitute a reimbursable state-mandated program include (1) the inspection of restaurants, automotive service facilities and retail gasoline outlets and automobile dealerships, as required by Part 4.C.2.(a) of the Order; (2) the inspection of "Phase I facilities" as required by Part 4.C.2.(b) of the Order; (3) the inspection of constructions sites of one acre in size or greater, and the inspection of construction sites of five acres in size or greater, as required by Part 4.E of the Order; and (4) the placement of trash receptacles at all transit stops within each City's jurisdiction, as required by Part 4.F.5.(c)(3) of the Order.

4. Part 4.C.2.(a) of the Order provides as follows:

2. Inspect Critical Sources

Each Permittee shall inspect all facilities in the categories and at a level and frequency as specified in the following subjections.

(a) Commercial Facilities

(1) Restaurants

Frequency of Inspections: twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of Inspections: Each Permittee, in cooperation with its appropriate department (such as health or public works), shall inspect all restaurants within its jurisdiction to confirm that storm water BMPs are being effectively implemented in compliance with State law, County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP. At each restaurant, inspectors shall verify that the restaurant operator:

- has received educational materials on storm water pollution prevention practices;
- does not pour oil and grease or oil and grease residue onto a parking lot, street or adjacent catch basin;
- keeps the trash bin area clean and trash bin lids closed, and does not fill trash bins with washout water or any other liquid;
- does not allow illicit discharges, such as discharge of washwater from floormats, floors, porches, parking lots, alleys, sidewalks and street areas (in the immediate vicinity of the establishment), filters or garbage/trash containers;
- removes food waste, rubbish or other materials from parking lot areas in a sanitary manner that does not create a nuisance or discharge to the storm drain.

(2) Automotive Service Facilities

Frequency of Inspections: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of Inspections: Each Permittee shall inspect all automotive service facilities within its jurisdiction to confirm that storm water BMPs are effectively implemented in compliance with County and municipal ordinances, Regional

Board Resolution 98-08, and the SQMP. At each automotive service facility, inspectors shall verify that each operator:

- maintains the facility area so that it is clean and dry and without evidence of excessive staining;
- implements housekeeping BMPs to prevent spills and leaks;
- properly discharges wastewaters to a sanitary sewer and/or contains wastewaters for transfer to a legal point of disposal;
- is aware of the prohibition on discharge of non-storm water to the storm drain;
- properly manages raw and waste materials including proper disposal of hazardous waste;
- protects outdoor work and storage areas to prevent contact of pollutants with rainfall and runoff;
- labels, inspects, and routinely cleans storm drain inlets that are located on the facility's property; and
- trains employees to implement storm water pollution prevention practices.

(3) Retail Gasoline Outlets and Automotive Dealerships

Frequency of Inspection: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of Inspection: Each Permittee shall confirm that BMPs are being effectively implemented at each RGO and automotive dealership within its jurisdiction, in compliance with the SQMP, Regional Board Resolution 98-08, and the Stormwater Quality Task Force Best Management Practice Guide for RGOs. At each RGO and automotive dealership, inspectors shall verify that each operator:

- routinely sweeps fuel-dispensing areas for removal of litter and debris, and keeps rags and absorbents ready for use in case of leaks and spills;
- is aware that washdown of facility area to the storm drain is prohibited;
- is aware of design flaws (such as grading that doesn't prevent run-on, or inadequate roof covers and berms), and that equivalent BMPs are implemented;
- inspects and cleans storm drain inlets and catch basins within each facility's boundaries no later than October 1st of each year;
- posts signs close to fuel dispensers which warn vehicle owners/operators against "topping off" of vehicle fuel tanks and installation of automotive shutoff fuel dispensing nozzles;
- routinely checks outdoor waste receptacle and air/water supply areas, cleans leaks and drips, and ensure that only watertight waste receptacles are used and that lids are closed; and

- trains employees to properly manage hazardous materials and wastes as well as to implement other storm water pollution prevention practices.

5. Part 4.C.2.(b) of the Order provides as follows:

(b) Phase I Facilities

Permittees need not inspect facilities that have been inspected by the Regional Board within the past 24 months. For the remaining Phase I facilities that the Regional Board has not inspected each Permittee shall conduct compliance inspections as specified below.

Frequency of Inspection

Facilities in Tier 1 Categories: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Facilities in Tier 2 Categories: Twice during the 5-year term of the permit, provided that the first inspection occurs no later than August 1, 2004. Permittees need not perform additional inspections at those facilities determined to have no risk of exposure of industrial activity to storm water. For those facilities that do have exposure of industrial activities to storm water, a Permittee may reduce the frequency of additional compliance inspections to once every 5 years, provide that the Permittee inspects at least 20% of the facilities in Tier 2 each year.

Level of Inspection: Each Permittee shall confirm that each operator:

- has a current Waste Discharge Identification (WDID) number for facilities discharging storm water associated with industrial activity; and that a Storm Water Pollution Prevention Plan is available on-site; and
- is effectively implementing BMPs in compliance with County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP.

6. Part 4.E.2.(b) of the Order provides as follows:

2. For construction sites one acre or greater, each Permittee shall comply with all conditions in section E.1 above and shall:

(b) Inspect all construction sites for storm water quality requirements during routine inspections a minimum of once during the wet seasons. The Local SWPPP shall be reviewed for compliance with local codes, ordinances, and permits. For inspected sites that have not adequately implemented their Local SWPPP, a follow-up inspection to ensure compliance will take place within 2

weeks. If compliance has not been attained, the Permittee will take additional actions to achieve compliance (as specified in municipal codes). If compliance has not been achieved, and the site is also covered under a statewide general construction storm water permit, each Permittee shall enforce their local ordinance requirements, and if non-compliance continues the Regional Board shall be notified for further joint enforcement actions.

7. Part 4.E.3. of the Order provides, in relevant part, as follows:

3. For sites five acres and greater, each Permittee shall comply with all conditions in Sections E.1 and E.2.

8. Part 4.F.5.(c)(3) of the Order provides as follows:

5. Storm Drain Operation and Management

(c) Permittees not subject to a trash TMDL shall:

(3) Place trash receptacles at all transit stops within its jurisdiction that have shelters no later than August 1, 2002, and at all other transit stops within its jurisdiction no later than February 3, 2003. All trash receptacles shall be maintained as necessary.

9. I am informed and believe, and therefore state, that the costs to be incurred by each of the Cities, or some of them, to comply with the mandates identified in Paragraphs 3-8 hereof during the fiscal year will exceed one thousand dollars ($1,000).

10. I am informed and believe, and therefore state, that the costs to be incurred by each of the Cities, or some of them, to comply with the mandates identified in Paragraphs 3-8 hereof during the next fiscal year are presently unknown, but are estimated to exceed one thousand dollars ($1,000).

11. The Order names a total of 84 cities, the County of Los Angeles and the Los Angeles County Flood Control District as co-permittees. I am informed and believe, and therefore state, that the costs to be incurred collectively by these permittees or some of them to comply with the mandates identified in Paragraphs 3-8 hereof during the next fiscal year are presently unknown, but are estimated to exceed one thousand dollars ($1,000).

12. On information and belief, there are no dedicated state funds to pay for the costs of the mandates identified in Paragraphs 3-8 hereof.

13. On information and belief, there are no dedicated federal funds to pay for the costs of the mandates identified in Paragraphs 3-8 hereof.

14. On information and belief, there are no nonlocal agency funds available to pay for the cost of the mandates identified in Paragraphs 3-8 hereof.

15. On information and belief, the Cities do not have general purpose funds available to pay for the cost of the mandates identified in Paragraphs 3-8 hereof, unless those funds are taken from other programs.

16. On information and belief, the Cities do not have fee authority to levy fees to offset the costs of the mandates identified in Paragraphs 3-8 hereof.

17. Included in Section 7 is a copy of Order No. 01-182. Also included in Section 7 are copies downloaded from the State Water Resources Control Board website of State Water Resources Control Board Water Quality Order No. 97-03-DWQ, relating to discharges of stormwater associated with industrial activities excluding construction activity, State Water Resources Control Board Order No. 99-08-DWQ, relating to discharges of stormwater runoff associated with construction activity, and a copy, downloaded from the Los Angeles Regional Water Quality Control Board website, of Los Angeles Region Water Quality Control Board Order No. 98-08.

I declare under penalty of perjury that the foregoing is true and correct, based on my own knowledge or information and belief.

Executed this 16 day of July, 2008 at Los Angeles, California.

ORDER NO. 01-182
NPDES PERMIT NO. CAS004001
WASTE DISCHARGE REQUIREMENTS
FOR
MUNICIPAL STORM WATER AND URBAN RUNOFF DISCHARGES WITHIN THE COUNTY OF LOS ANGELES, AND THE INCORPORATED CITIES THEREIN, EXCEPT THE CITY OF LONG BEACH

The California Regional Water Quality Control Board, Los Angeles Region (hereinafter referred to as the Regional Board) finds:

A. Existing Permit

The Los Angeles County Flood Control District, the County of Los Angeles, and 84 incorporated cities within the Los Angeles County Flood Control District (see Attachment A, List of Permittees), hereinafter referred to separately as Permittees and jointly as the Discharger, discharge or contribute to discharges of storm water and urban runoff from municipal separate storm sewer systems (MS4s), also called storm drain systems. The discharges flow to water courses within the Los Angeles County Flood Control District and into receiving waters of the Los Angeles Region. These discharges are covered under countywide waste discharge requirements contained in Order No. 96-054 adopted by this Regional Board on July 15, 1996, which replaced Order No. 90-079 adopted by this Regional Board on June 18, 1990. Order No. 96-054 also serves as a National Pollutant Discharge Elimination System (NPDES) permit for the discharge of municipal storm water.

B. Nature of Discharges and Sources of Pollutant

1. Storm water discharges consist of surface runoff generated from various land uses in all the hydrologic drainage basins that discharge into water bodies of the State. The quality of these discharges varies considerably and is affected by the hydrology, geology, land use, season, and sequence and duration of hydrologic events. The primary constituents of concern currently identified by the Los Angeles County Flood Control District Integrated Receiving Water Impacts Report (1994-2000) are cyanide, indicator bacteria, total dissolved solids, turbidity, total suspended solids, nutrients, total aluminum, dissolved cadmium, copper, lead, total mercury, nickel, zinc, bis(2-ethylhexyl)phthalate, polycyclic aromatic hydrocarbons (PAHs), diazinon, and chlorpyrifos.

2. Certain pollutants present in storm water and/or urban runoff may be derived from extraneous sources that Permittees have no or limited jurisdiction over. Examples of such pollutants and their respective sources are: PAHs which are products of internal combustion engine

operation; nitrates; bis (2-ethylhexyl) phthalate and mercury from atmospheric deposition; lead from fuels; copper from brake pad wear; zinc from tire wear; dioxins as products of combustion; and natural-occurring minerals from local geology. However, the implementation of the measures set forth in this Order is intended to reduce the entry of these pollutants into storm water and their discharge to receiving waters.

3. Water quality assessments conducted by the Regional Board identified impairment, or threatened impairment, of beneficial uses of water bodies in the Los Angeles Region. The causes of impairments include pollutants of concern identified in municipal storm water discharges by the County of Los Angeles in the Integrated Receiving Water Impacts Report (1994-2000). Pollutants in storm water can have damaging effects on both human health and aquatic ecosystems.

4. The Los Angeles County Grand Jury, September 2000, completed an investigation into the health risks of swimming near beaches in Los Angeles County and made several recommendations to reduce public health risks (Final Report, Grand Jury, Los Angeles County, 1999-2000). The Grand Jury recommended that the Regional Board consider among other actions: (i) a focus on setting contaminant limits rather than programmatic evaluations, (ii) audit of MS4 Permittee programs; and (iii) clarifying enforcement responsibilities between the State and local governments.

5. Studies and research conducted by other Regional agencies, academic institutions, and universities have also identified storm water and urban runoff as significant sources of pollutants to surface waters in Southern California. See, e.g., *Surface Runoff to the Southern California Bight*, Southern California Coastal Water Research Project, (1992); *Impacts of Urban Runoff on Santa Monica Bay and Surrounding Ocean Waters* (Gersberg, R.M., 1995); *State of the Bay 1998*, Santa Monica Bay Restoration Project; *Storm Water Impact*, In, Southern California Environmental Report Card 1999, Institute of the Environment, University of California, Los Angeles (Stenstrom, M.S., 1999); *Distribution of Anthropogenic and Natural Debris on the Mainland Shelf of Southern California Bight*, Shelly L. Moore and M. James Allen (1999); *The Health Effects of Swimming in Ocean Water Contaminated by Storm Drain Runoff*, Haile, R.W. et al. (1999); *Huntington Beach Closure Investigation Technical Review* (University of Southern California, 2000); *A Regional Survey of the Microbiological Water Quality Along the Shoreline of the Southern California Bight*, Rachel T. Noble *et al.* (2001); *Integrated Receiving Water Impacts Report (1994-2000)*, County of Los Angeles (2001).

6. Development and urbanization increase pollutant load, volume, and discharge velocity. First, natural vegetated pervious ground cover is converted to impervious surfaces such as paved highways, streets, rooftops, and parking lots. Natural vegetated soil can both absorb rainwater and remove pollutants, providing an effective natural purification process. In contrast, pavement and concrete can neither absorb water nor remove pollutants, and thus the natural purification characteristics are

lost. Second, urban development creates new pollution sources as the increased density of human population brings proportionately higher levels of vehicle emissions, vehicle maintenance wastes, municipal sewage waste, pesticides, household hazardous wastes, pet wastes, trash, and other anthropogenic pollutants. Development and urbanization especially threaten environmentally sensitive areas. Such areas have a much lower capacity to withstand pollutant shocks than might be acceptable in the general circumstance. In essence, development that is ordinarily insignificant in its impact on the environment may in a particular sensitive environment become significant. These environmentally sensitive areas designated by the State and/or the County of Los Angeles include Areas of Special Biological Significance (ASBS), water bodies designated as supporting a RARE beneficial use, Significant Natural Areas (SNAs), and Significant Ecological Areas (SEAs).

7. The increased volume, increased velocity, and discharge duration of storm water runoff from developed areas has the potential to greatly accelerate downstream erosion and impair stream habitat in natural drainages. Studies have demonstrated a direct correlation between the degree of imperviousness of an area and the degradation of its receiving waters. Significant declines in the biological integrity and physical habitat of streams and other receiving waters have been found to occur with as little as 10 percent conversion from natural to impervious surfaces. Percentage impervious cover is a reliable indicator and predictor of potential water quality degradation expected from new development. (*Impervious Cover as An Urban Stream Indicator and a Watershed Management Tool*, Schueler, T. and R. Clayton. In: Effects of Water Development and Management on Aquatic Ecosystems (1995), ASCE, New York; Leopold, L. B. (1973), *River Channel Change with Time: An Example*, Geological Society of America Bulletin, v. 84, p. 1845-1860; Hammer, T. R. (1972), *Stream Channel Enlargement Due to Urbanization*, Water Resources Research, v. 8, p. 1530-1540; Booth, D. B. (1991), *Urbanization and the Natural Drainage System--Impacts, Solutions and Prognoses*, The Northwest Environmental Journal, v. 7, p. 93-118; Klein, R. D. (1979), *Urbanization and Stream Quality Impairment*, Water Resources Bulletin, v. 15, p. 948-963; May, C. W., Horner, R. R., Karr, J. R., Mar, B. W., and Welch, E. B., (1997), *Effects of Urbanization on Small Streams in the Puget Sound Lowland Ecoregion*: Watershed Protection Techniques, v. 2, p. 483-494; Morisawa, M. and LaFlure, E, *Hydraulic Geometry, Stream Equilibrium and Urbanization* In Rhodes, D. P. and Williams, G. P. *Adjustments to the Fluvial System* p.333-350. (1979). Dubuque, Iowa: Kendall/Hunt. Tenth Annual Geomorphology Symposia Series; and *The Importance of Imperviousness*: Watershed Protection Techniques, 1(3), Schueler, T. (1994).)

8. The County of Los Angeles has identified as the seven highest priority industrial and commercial critical source types: (i) wholesale trade (scrap recycling, auto dismantling); (ii) automotive repair/parking; (iii) fabricated metal products; (iv) motor freight; (v) chemical and allied products; (vi) automotive dealers/gas stations; (vii) primary metal products (*Critical*

Source Selection and Monitoring Report, Los Angeles County Department of Public Works -Sept 1996). Monitoring conducted by Los Angeles County and the Regional Board demonstrates that the priority industrial sectors and auto repair facilities (one of the commercial sectors) on the list contribute significant concentrations of heavy metals to storm water (*Los Angeles County 1999-2000 Storm Water Monitoring Report*, Los Angeles County Department of Public Works -July 2000; *Compliance Assessment of the Auto Dismantling Industry: Evaluation of the California General Industrial Storm Water Permit*, H. Chang, (2001), 70 pp. California Regional Water Quality Control Board, Los Angeles Region).

9. The discharge of washwaters and contaminated storm water from industries and businesses specified in this Order for inspection by Permittees is an environmental threat and can also adversely impact public health and safety. For example, a review of industrial waste/ pretreatment records performed in 1995 in the County of Los Angeles on illicit discharges indicates that automotive service facilities and food service facilities sometimes discharge polluted washwaters to the MS4. The pollutants of concern in such washwaters include food waste, oil and grease, and toxic chemicals. Other storm water/industrial waste programs in California have reported similar observations. Illicit discharges from automotive service facilities and food service facilities have been identified elsewhere as a major cause of widespread contamination and water quality problems (Washtenaw County Statutory Drainage Board - 1987 Huron River Pollution Abatement Program).

10. Studies indicate that facilities with paved surfaces subject to frequent motor vehicular traffic (such as parking lots and fast food restaurants), or facilities that perform vehicle repair, maintenance, or fueling (automotive service facilities) are potential sources of pollutants of concern in storm water. [References: Pitt *et al*, *Urban Storm Water Toxic Pollutants: Assessment, Sources, and Treatability*, Water Environment Res., 67, 260 (1995); *Results of Retail Gas Outlet and Commercial Parking Lot Storm Water Runoff Study*, Western States Petroleum Association and American Petroleum Institute, (1994); *Action Plan Demonstration Project, Demonstration of Gasoline Fueling Station Best Management Practices*, Final Report, County of Sacramento (1998); *Source Characterization*, R. Pitt, In Innovative Urban Wet-Weather Flow Management Systems (2000) Technomic Press, Field, R *et al*. editors; *Characteristics of Parking Lot Runoff Produced by Simulated Rainfall*, L.L. Tiefenthaler *et al*. Technical Report 343, Southern California Coastal Water Research Project (2001).]

11. Retail Gasoline Outlets (RGOs) are points of convergence for vehicular traffic and are similar to parking lots and urban roads. Studies indicate that storm water discharges from RGOs have high concentrations of hydrocarbons and heavy metals. [*The Quality of Trapped Sediments and Poor Water within Oil-Grit Separators in Suburban MD*, Schueler T. and Shepp D. (1992), and *Concentrations of Selected Constituents in Runoff from Impervious Surfaces in Four Urban Catchments of Different*

Landuse, Rahabal, F.I., and T.J. Gizzard (1995), In Proceedings of the Fourth Biennial Stormwater Research Conference, Florida, pp-42-52]. Pilot studies indicate that treatment control best management practices installed at retail gasoline stations are effective in removing pollutants, reasonable in capital cost, easy to operate, and do not present safety risks [*Rouge River National Wet Weather Demonstration Project, Task Product Memorandum – Evaluation of On-line Media Filters RPO-NPS-TPM59.00*, Wayne County, MI March 1999]. The Regional Board and the San Diego Regional Board have jointly prepared a Technical Report on the applicability of new development BMP design criteria for retail gasoline outlets, (*Retail Gasoline Outlets: New Development Design Standards for Mitigation of Storm Water Impacts*, (June 2001)). Retail Gasoline Outlets in Western U.S. States (such as Washington and Oregon) are already subject to numerical BMP design criteria, as well in other U.S. States.

C. Permit Background

1. The essential components of the Storm Water Management Program, as established by federal regulations [40 CFR 122.26(d)] are: (i) Adequate Legal Authority, (ii) Fiscal Resources, (iii) Storm Water Quality Management Program (SQMP), (Public Information and Participation Program, Industrial/Commercial Facilities Program, Development Planning Program, Development Construction Program, Public Agency Activities Program, Illicit Connection and Illicit Discharges Elimination Program), and (iv) Monitoring and Reporting Program.

2. The Permittees have filed a Report of Waste Discharge (ROWD), dated February 1, 2001, and applied for renewal of their waste discharge requirements that serves as an NPDES permit to discharge wastes to surface waters. The ROWD includes a proposed SQMP and a Monitoring Program. The proposed SQMP contains programs previously approved under Board Order No. 96-054 in the following areas:

   - Public Information and Participation
   - Development Planning
   - Development Construction
   - Public Agency Activities
   - Illicit Connection/Illicit Discharge Elimination Program

   These programs are revised pursuant to the provisions of this Order after adoption.

3. The County of Los Angeles has previously conducted source identification and pollutant characterization consistent with 40 CFR 122.26(d)(1)(ii) and (iii) under its storm water Monitoring Program. The Monitoring Program submitted with the ROWD proposes to advance the assessment of receiving water impacts, identification of sources of pollution, evaluation of Best Management Practices (BMPs), and measurement of long term trends in mass emissions.

4. The Regional Board has reviewed the ROWD and has determined it to be complete under the reapplication policy of MS4s issued by the U.S. Environmental Protection Agency (USEPA) (61 *Fed. Reg.* 41697). The Regional Board finds that the Permittees' proposed SQMP, incorporating the additional and/or revised provisions contained in this Order would meet the minimum requirements of federal regulations.

5. The City of Los Angeles has conducted shoreline and nearshore water quality monitoring off the Santa Monica Bay since the 1950s under the monitoring program for the Hyperion Waste Water Treatment Plant (NPDES No. CA0109991). The monitoring results indicate that effluent from Hyperion's 5-Mile Outfall does not impinge the shoreline, and that elevated bacterial counts are associated with runoff from storm drains and discharges from piers. In 1994, the Regional Board approved the relocation of Hyperion's shoreline stations to implement a bay-wide, regional shoreline-monitoring program associated with storm drain outfalls in the Santa Monica Bay. The City of Los Angeles requested that the shoreline monitoring requirement be incorprated in this Order. The shoreline pathogen monitoring requirements are outlined in the Monitoring Program for this Order.

D. Permit Coverage

1. The requirements in this Order cover all areas within the boundaries of the Permittee municipalities (see Attachment A) over which they have regulatory jurisdiction as well as unincorporated areas in Los Angeles County within the jurisdiction of the Regional Board. The Permittees serve a population of about 9.5 million [Reference: *2000 Census of Population and Housing*, Bureau of the Census, U.S. Department of Commerce (2001)] in an area of approximately 3,100 square miles.

2. Federal, state, regional or local entities within the Permittees' boundaries or in jurisdictions outside the Los Angeles County Flood Control District, and not currently named in this Order, may operate storm drain facilities and/or discharge storm water to storm drains and watercourses covered by this Order. The Permittees may lack legal jurisdiction over these entities under state and federal constitutions. The Regional Board will coordinate with these entities to implement programs that are consistent with the requirements of this Order. The Regional Board will consider such facilities for coverage in 2003 under its NPDES permitting scheme pursuant to USEPA Phase II storm water regulations.

3. Sources of discharges into receiving waters in the County of Los Angeles but in jurisdictions outside its boundary include the following:

   About 84 square miles of unincorporated area in Ventura County, which drain into Malibu Creek and then to Santa Monica Bay,

   About 9 square miles of the City of Thousand Oaks, which also drain into Malibu Creek and then to Santa Monica Bay, and

About 86 square miles of area in Orange County, which drain into Coyote Creek and then into the San Gabriel River.

The Regional Board will ensure that storm water management programs for the areas in Ventura County and the City of Thousand Oaks that drain into Santa Monica Bay are consistent with the requirements of this Order. The Regional Board will coordinate with the Santa Ana Regional Board so that storm water management programs for the areas in Orange County that drain into Coyote Creek are consistent with the requirements of this Order.

4. This permit is intended to develop, achieve, and implement a timely, comprehensive, cost-effective storm water pollution control program to reduce the discharge of pollutants in storm water to the Maximum Extent Practicable (MEP) from the permitted areas in the County of Los Angeles to the waters of the U.S. subject to the Permittees' jurisdiction.

5. Permittees have expressed their intention to work cooperatively to control the contribution of pollutants from one portion of the MS4 to another portion of the system. Permittees may control the contribution of pollutants to the MS4 from non-permittee dischargers such as Caltrans, the U.S. Department of Defense, and other state and federal facilities, through interagency agreements.

E. Federal, State, and Regional Regulations

1. The Water Quality Act of 1987 added Section 402(p) to the federal Clean Water Act (CWA) (33 U.S.C. § 1251-1387). This section requires the USEPA to establish regulations setting forth NPDES requirements for storm water discharges in two phases.

   - The USEPA Phase I storm water regulations were directed at MS4s serving a population of 100,000 or more, including interconnected systems and storm water discharges associated with industrial activities, including construction activities. The Phase I Final Rule was published on November 16, 1990 (55 *Fed. Reg.* 47990).
   - The USEPA Phase II storm water regulations are directed at storm water discharges not covered in Phase I, including small MS4s (serving a population of less than 100,000), small construction projects (one to five acres), municipal facilities with delayed coverage under the Intermodal Surface Transportation Efficiency Act of 1991, and other discharges for which the USEPA Administrator or the State determines that the storm water discharge contributes to a violation of a water quality standard, or is a significant contributor of pollutants to waters of the United States. The Phase II Final Rule was published on December 8, 1999 (64 *Fed. Reg.* 68722).

2. The USEPA published an 'Interim Permitting Approach for Water Quality-Based Effluent Limitations in Storm Water Permits' on August 26, 1996 (61 *Fed. Reg.* 43761). This policy discusses the appropriate kinds of

water quality-based effluent limitations to be included in NPDES storm water permits to provide for the attainment of water quality standards.

3. The USEPA published an Interpretative Policy Memorandum on Reapplication Requirements for MS4 permits on August 9, 1996 (61 *Fed. Reg.* 41697). This policy requires that MS4 reapplication for reissuance for a subsequent five-year permit term contain certain basic information and information for proposed changes and improvements to the storm water management program and monitoring program.

4. The USEPA has entered into a Memorandum of Agreement (MOA) with the U.S. Fish and Wildlife Service and the National Marine Fisheries Service for enhancing coordination regarding the protection of endangered and threatened species under Section 7 of the Endangered Species Act and the CWA's Water Quality Standards and NPDES programs. Among other actions, the MOA establishes a framework for coordination of actions by the USEPA, the Services, and CWA delegated States on CWA permit issuance under Section 402 of the CWA [66 *Fed. Reg.* 11202 - 11217].

5. USEPA regulations at 40 CFR 122.26(d)(2)(iv)(A) and 40 CFR 122.26(d)(2)(iv)(C) require that MS4 permittees implement a program to monitor and control pollutants in discharges to the municipal system from industrial and commercial facilities that contribute a substantial pollutant load to the MS4. The regulations require that permittees establish priorities and procedures for inspection of industrial facilities and priority commercial establishments. This permit, consistent with the USEPA policy, incorporates a cooperative partnership, including the specifications of minimum expectations, between the Regional Board and the Permittees for the inspection of industrial facilities and priority commercial establishments to control pollutants in storm water discharges (58 *Fed. Reg.* 61157).

6. Section 402 (p) of the CWA (33 U.S.C. § 1342(p)) provides that MS4 permits must require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design engineering method and such other provisions as the [EPA] Administrator or the State determines appropriate for the control of such pollutants. The State Water Resources Control Board's (State Board) Office of Chief Counsel (OCC) has issued a memorandum interpreting the meaning of MEP to include technical feasibility, cost and benefit derived with the burden being on the municipality to demonstrate compliance with MEP by showing that a BMP is not technically feasible in the locality or that BMP's costs would exceed any benefit to be derived (dated February 11, 1998).

7. The CWA authorizes the USEPA to permit a state to serve as the NPDES permitting authority in lieu of the USEPA. The State of California has in-lieu authority for an NPDES program. The Porter-Cologne Water Quality Control Act authorizes the State Board, through the Regional Boards, to regulate and control the discharge of pollutants into waters of the State. The State Board entered into a MOA with the USEPA, on

September 22, 1989, to administer the NPDES Program governing discharges to waters of the U.S.

8. Section 303(d) of the CWA requires that the State identify a list of impaired water bodies and develop and implement Total Maximum Daily Loads (TMDLs) for these waterbodies (33 U.S.C. §1313(d)(1)). A TMDL specifies the maximum amount of a pollutant that a water body can receive, still meet applicable water quality standards and protect beneficial uses. The USEPA entered into a consent decree with the Natural Resources Defense Council (NRDC), Heal the Bay, and the Santa Monica BayKeeper on March 22, 1999, under which the Regional Board must adopt all TMDLs for the Los Angeles Region within 13 years from that date. This permit incorporates a provision to implement and enforce approved load allocations for municipal storm water discharges and requires amending the SQMP after pollutants loads have been allocated and approved.

9. Section 6217(g) of the Coastal Zone Act Reauthorization Amendments of 1990 (CZARA) requires coastal states with approved coastal zone management programs to address non-point pollution impacting or threatening coastal water quality. CZARA (16 U.S.C. § 1451-1465) amends the Coastal Zone Management Act of 1972, to address five sources of non-point pollution: agriculture, silviculture, urban, marinas, and hydromodification. This NPDES permit addresses the management measures required for the urban category, with the exception of septic systems. The Regional Board addresses septic systems through the administration of other programs.

10. On May 18, 2000, the USEPA established numeric criteria for priority toxic pollutants for the State of California (California Toxics Rule (CTR)) 65 *Fed. Reg.* 31682 (40 CFR 131.38); for the protection of human health and aquatic life. These apply as ambient water quality criteria for inland surface waters, enclosed bays, and estuaries. The State Board adopted the *Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays, and Estuaries of California (SIP) – 2000*, on March 2, 2000, for implementation of the CTR (State Board Resolution No. 2000-15 as amended by Board Resolution No. 2000-030). This policy requires that discharges comply with TMDL-derived load allocations as soon as possible but no later than 20 years from the effective date of the policy.

11. The State Board adopted a revised Water Quality Control Plan for Ocean Waters of California (Ocean Plan) on July 23, 1997. The Ocean Plan contains water quality objectives which apply to all discharges to the coastal waters of California.

12. The State Board in *In Re*: California Department of Transportation (State Board Order WQ 2001-06), determined that the discharge of storm water to ASBS is subject to the prohibition in the Ocean Plan against the discharge of wastes to an ASBS.

13. The Regional Board adopted an updated Water Quality Control Plan (Basin Plan) for the Los Angeles Region on June 13, 1994, *'Water Quality Control Plan, Los Angeles Region; Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties,'* (1994).' The Basin Plan designates beneficial uses of receiving waters and specifies both narrative and numerical water quality objectives for the receiving waters in Los Angeles County.

14. The Regional Board on September 19, 2001, adopted amendments to the Basin Plan, to incorporate TMDLs for trash in the Los Angeles River (Resolution No. 01-013) and Ballona Creek (Resolution No. 01-014). After approval by the State Board, the Office of Administrative Law, and the USEPA, the TMDLs for trash will be effective and enforceable.

15. The Regional Board on April 13, 1998, approved BMPs for sidewalk rinsing to minimize the discharge of wash waters to the storm drain system (Resolution No. 98-08). By the same resolution, the Regional Board prohibited the discharge of municipal street wash waters to the storm drain system.

16. The Regional Board on April 13, 1998, approved recommended BMPs for industrial/commercial facilities (Resolution No. 98-08).

17. The Regional Board on April 22, 1999, approved a list of BMPs for use in development planning and development construction (Resolution No. 99-03).

18. The Regional Board adopted and approved requirements for new development and significant redevelopment projects in Los Angeles County to control the discharge of storm water pollutants in post-construction storm water, on January 26, 2000, in Board Resolution No. R-00-02. The Regional Board Executive Officer issued the approved Standard Urban Storm Water Mitigation Plans (SUSMPs) on March 8, 2000. The State Board in large part affirmed the Regional Board action and SUSMPs in State Board Order No. WQ 2000-11 issued on October 5, 2000.

- The State Board's Chief Counsel has issued a statewide policy memorandum (dated December 26, 2000), which interprets the Order to provide broad discretion to Regional Boards and identifies potential future areas for inclusion in SUSMPs and the types of evidence and findings necessary. Such areas include ministerial projects, projects in environmentally sensitive areas, and water quality design criteria for RGOs.
- The State Board's Chief Counsel interprets the Order to encourage regional solutions and endorses a mitigation fund or "bank" that may be funded by developers who obtain waivers from the numerical design standards for new development and significant redevelopment.

19. 40 CFR 131.10(a) prohibits states from designating waste transport or waste assimilation as a use for any water of the U.S. Authorizing the

construction of a storm water/ urban runoff treatment facility in a jurisdictional water body would be tantamount to accepting waste assimilation as an appropriate use for that water body. Furthermore, the construction and operation of a pollution control facility in a water body can impact the physical, chemical, and biological integrity as well as the beneficial uses of the water body. Therefore, storm water treatment and/or mitigation in accordance with SUSMPs and any other requirements of this Order must occur prior to the discharge of storm water into a water of the U.S.

20. The Regional Board supports a Watershed Management Approach to address water quality protection in the region. The objective of the Watershed Management Approach should be to provide a comprehensive and integrated strategy towards water resource protection, enhancement, and restoration while balancing economic and environmental impacts within a hydrologically defined drainage basin or watershed. It emphasizes cooperative relationships between regulatory agencies, the regulated community, environmental groups, and other stakeholders in the watershed to achieve the greatest environmental improvements with available resources.

21. To promote a watershed management approach, the County of Los Angeles is divided into six Watershed Management Areas (WMAs) as follows:

Malibu Creek and Rural Santa Monica Bay WMA
Ballona Creek and Urban Santa Monica Bay WMA
Los Angeles River WMA
San Gabriel River WMA
Dominguez Channel/Los Angeles Harbor WMA, and
Santa Clara River WMA

Attachment A shows the list of Permittees under each WMA and some Permittees have expressed an intent to form sub-watershed groups within the WMA to promote regional solutions for the mitigation of storm water discharge pollution.

22. To facilitate compliance with federal regulations, the State Board has issued two statewide general NPDES permits for storm water discharges: one for storm water from industrial sites [NPDES No. CAS000001, General Industrial Activity Storm Water Permit (GIASP)] and the other for storm water from construction sites [NPDES No. CAS000002, General Construction Activity Storm Water Permit (GCASP)]. The GCASP was reissued on August 19, 1999. The GIASP was reissued on April 17, 1997. Facilities discharging storm water associated with industrial activities and construction projects with a disturbed area of five acres or more are required to obtain individual NPDES permits for storm water discharges, or to be covered by a statewide general permit by completing and filing a Notice of Intent (NOI) with the State Board. The USEPA guidance anticipates coordination of the state-administered programs for

industrial and construction activities with the local agency program to reduce pollutants in storm water discharges to the MS4.

The Regional Board is the enforcement authority in the Los Angeles Region for the two statewide general permits regulating discharges from industrial facilities and construction sites, and all NPDES storm water and non-storm water permits issued by the Regional Board. These industrial and construction sites and discharges are also regulated under local laws and regulations.

23. The State Board, on October 28, 1968, adopted Resolution No. 68-16, which established an anti-degradation policy for the State and Regional Boards. This policy restricts the degradation of surface waters and protects waterbodies where existing water quality is higher than is necessary for the protection of beneficial uses.

24. The State Board, on June 17, 1999, adopted Order No. WQ 99-05, which, in a precedential decision, identifies acceptable receiving water limitations language to be included in municipal storm water permits issued by the State and Regional Boards. The receiving water limitations included herein are consistent with the State Board Order, USEPA Policy, and the U.S. Appellate court decision in *Defenders of Wildlife v. Browner* (9th Cir. 1999). The State Board OCC has determined that the federal court decision did not conflict with State Board Order No. WQ 99-05 (memorandum dated October 14, 1999).

25. California Water Code (CWC) § 13263(a) requires that waste discharge requirements issued by the Regional Board shall implement any relevant water quality control plans that have been adopted; shall take into consideration the beneficial uses to be protected and the water quality objectives reasonably required for that purpose; other waste discharges; the need to prevent nuisance; and provisions of CWC § 13241. The Regional Board has considered the requirements of § 13263 and § 13241, and applicable plans, policies, rules, and regulations in developing these waste discharge requirements.

26. CWC § 13370 *et seq.* requires that waste discharge requirements issued by the Regional Boards be consistent with provisions of the federal CWA and its amendments.

27. On March 12, 2001, the U.S. Court of Appeals ruled that it is necessary to obtain a NPDES permit for application of aquatic pesticides to waterways. (*Headwaters, Inc. vs. Talent Irrigation District*, 243 F.3d. 526 (9th Cir. 2001)) This decision is controlling in California for nonagricultural applications of pesticides to waterways. The State Board adopted a general NPDES permit (Order No. 2001-12-DWQ) on July 19, 2001, for public entities that discharge pollutants to waters of the U.S. associated with the application of aquatic pesticides for resource or pest management. Public entities that conduct such activities must seek coverage under the general permit.

F. Implementation

1. The California Environmental Quality Act (CEQA) (Cal. Pub. Resources Code § 21000 *et seq.*) requires that public agencies consider the environmental impacts of the projects they approve for development. CEQA applies to projects that are considered discretionary and does not apply to ministerial projects, which involve the use of established standards or objective measurements. A ministerial project may be made discretionary by adopting local ordinance provisions or imposing conditions to create decision-making discretion in approving the project. In the alternative, Permittees may establish standards and objective criteria administratively for storm water mitigation for ministerial projects. For water quality purposes, the Regional Board considers that all new development and significant redevelopment activity in specified categories, that receive approval or permits from a municipality, are subject to storm water mitigation requirements.

2. The objective of this Order is to protect the beneficial uses of receiving waters in Los Angeles County. To meet this objective, this Order requires that the SQMP specify BMPs that will be implemented to reduce the discharge of pollutants in storm water to the maximum extent practicable. Further, Permittees are to assure that storm water discharges from the MS4 shall neither cause nor contribute to the exceedance of water quality standards and objectives nor create conditions of nuisance in the receiving waters, and that the discharge of non-storm water to the MS4 has been effectively prohibited.

3. The SQMP required in this Order builds upon the programs established in Order Nos. 90-079, and 96-054, consists of the components recommended in the USEPA guidance manual, and was developed with the cooperation of representatives from the regulated community and environmental groups. The SQMP includes provisions that promote customized initiatives, both on a countywide and watershed basis, in developing and implementing cost-effective measures to minimize discharge of pollutants to the receiving water. The various components of the SQMP, taken as a whole rather than individually, are expected to reduce pollutants in storm water and urban runoff to the maximum extent practicable. Provisions of the SQMP are fully enforceable under provisions of this Order.

4. The emphasis of the SQMP is pollution prevention through education, public outreach, planning, and implementation as source control BMPs first and then Structural and Treatment Control BMPs next. Successful implementation of the provisions of the SQMP will require cooperation and coordination of all public agencies in each Permittee's organization, among Permittees, and with the regulated community.

5. The implementation of a Public Information and Participation Program is a critical component of a storm water management program. An informed and knowledgeable community is critical to the success of a storm water management program since it helps insure the following: (i) greater support for the program as the public gains a greater understanding of

the reasons why it is necessary and important, and (ii) greater compliance with the program as the public becomes aware of the personal responsibilities expected of them and others in the community, including the individual actions they can take to protect or improve the quality of area waters.

6. This Order includes a Monitoring Program that incorporates Minimum Levels (MLs) established under the SIP. The SIP's MLs represent the lowest quantifiable concentration for priority toxic pollutants that is measurable with the use of proper method-based analytical procedures and factoring out matrix interference. The SIP's MLs therefore represent the best available science for determining MLs and are appropriate for a storm water monitoring program. The use of MLs allows the detection of toxic priority pollutants at concentrations of concern using recent advances in chemical analytical methods.

7. This Order provides flexibility for Permittees to petition the Regional Board Executive Officer to substitute a BMP under the SQMP with an alternative BMP, if they can provide information and documentation on the effectiveness of the alternative, equal to or greater than the prescribed BMP in meeting the objectives of this Order.

8. This Order contemplates that the Permittees are responsible for considering potential storm water impacts when making planning decisions in order to fulfill the Permittees' CWA requirement to reduce the discharge of pollutants in municipal storm water to the MEP from new development and redevelopment activities. However, the Permittees retain authority to make the final land-use decisions and retain full statutory authority for deciding what land uses are appropriate at specific locations within each Permittee's jurisdiction. This Order and its requirements are not intended to restrict or control local land use decision-making authority.

9. This Order is not intended to prohibit the inspection for or abatement of vectors by the State Department of Health Services or local vector agencies in accordance with Cal. Health and Safety Code § 2270 *et seq.* and §116110 *et seq.* Certain Treatment Control BMPs if not properly designed, operated or maintained may create habitats for vectors (e.g. mosquito and rodents). This Order contemplates that the Permittees will closely cooperate and collaborate with local vector control agencies and the State Department of Health Services for the implementation, operation, and maintenance of Treatment Control BMPs in order to minimize the risk to public health from vector borne diseases.

G. Public Process

1. The Regional Board has notified the Permittees and interested agencies and persons of its intent to issue waste discharge requirements for this discharge, and has provided them with an opportunity to submit their written view and recommendations.

2. The Regional Board, in a public hearing, heard and considered all comments pertaining to the discharge and to the tentative requirements.

3. The Regional Board has conducted public workshops to discuss drafts of the permit. On April 24, 2001, Regional Board staff conducted a workshop outlining the reasoning behind the changes proposed for the new permit and received input from the Permittees and the public regarding those proposed changes. On July 26, 2001, a second public workshop was held at a special Regional Board meeting. The Permittees and the public had another opportunity to express their opinions regarding the proposed changes to the permit in front of the Regional Board members. A significant number of working meetings with the Permittees and other interested parties have occurred throughout the period from the submittal of the ROWD and completion of the tentative draft, in an attempt to incorporate and address all the comments presented.

4. The Los Angeles County Flood Control District, the County of Los Angeles and the other municipalities are co-permittees as defined in 40 CFR 122.26 (b)(1). Los Angeles County Flood Control District will coordinate with the other municipalities and facilitate program implementation. Each Permittee is responsible only for a discharge for which it is the operator.

5. This Order shall serve as a NPDES Permit, pursuant to CWA § 402, or amendments thereto, and shall take effect 50 days from Order adoption provided the Regional Administrator of the USEPA has no objections.

6. The action to adopt an NPDES permit is exempt from the provisions of Chapter 3 of CEQA (Cal. Pub. Resources Code § 21100 *et seq.*), in accordance with CWC § 13389.

7. Pursuant to CWC §13320, any aggrieved party may seek review of this Order by filing a petition with the State Board. A petition must be sent to: State Water Resources Control Board, P.O. Box 100, Sacramento, California, 95812, within 30 days of adoption of the Order by the Regional Board.

8. This Order may be modified or alternatively revoked or reissued prior to its expiration date, in accordance with the procedural requirements of the NPDES program, and the CWC for the issuance of waste discharge requirements.

IT IS HEREBY ORDERED that the Los Angeles County Flood Control District, Los Angeles County, and the Cities of Agoura Hills, Alhambra, Arcadia, Artesia, Azusa, Baldwin Park, Bell, Bellflower, Bell Gardens, Beverly Hills, Bradbury, Burbank, Calabasas, Carson, Cerritos, Claremont, Commerce, Compton, Covina, Cudahy, Culver City, Diamond Bar, Downey, Duarte, El Monte, El Segundo, Gardena, Glendale, Glendora, Hawaiian Gardens, Hawthorne, Hermosa Beach, Hidden Hills, Huntington Park, Industry, Inglewood, Irwindale, La Cañada Flintridge, La Habra Heights, Lakewood, La Mirada, La Puente, La Verne, Lawndale, Lomita, Los Angeles, Lynwood, Malibu, Manhattan Beach, Maywood, Monrovia, Montebello, Monterey Park, Norwalk, Palos Verdes Estates, Paramount, Pasadena, Pico Rivera, Pomona, Rancho Palos Verdes,

Redondo Beach, Rolling Hills, Rolling Hills Estates, Rosemead, San Dimas, San Fernando, San Gabriel, San Marino, Santa Clarita, Santa Fe Springs, Santa Monica, Sierra Madre, Signal Hill, South El Monte, South Gate, South Pasadena, Temple City, Torrance, Vernon, Walnut, West Covina, West Hollywood, Westlake Village, and Whittier, in order to meet the provisions contained in Division 7 of the CWC and regulations adopted thereunder, and the provisions of the CWA, as amended, and regulations and guidelines adopted thereunder, shall comply with the following:

Part 1. DISCHARGE PROHIBITIONS

The Permittees shall effectively prohibit non-storm water discharges into the MS4 and watercourses, except where such discharges:

1. Are covered by a separate individual or general NPDES permit for non-storm water discharges; or
2. Fall within one of the categories below, and meet all conditions when specified by the Regional Board Executive Officer.

a) Category A - Natural flow:

(1) Natural springs and rising ground water;

(2) Flows from riparian habitats or wetlands;

(3) Stream diversions, permitted by the State Board; and

(4) Uncontaminated ground water infiltration [as defined by 40 CFR 35.2005(20)].

b) Category B - Flows from emergency fire fighting activity.

c) Category C - Flows incidental to urban activities:

(1) Reclaimed and potable landscape irrigation runoff;

(2) Potable drinking water supply and distribution system releases (consistent with American Water Works Association guidelines for dechlorination and suspended solids reduction practices);

(3) Drains for foundations, footings, and crawl spaces;

(4) Air conditioning condensate;

(5) Dechlorinated/debrominated swimming pool discharges;

(6) Dewatering of lakes and decorative fountains;

(7) Non-commercial car washing by residents or by non-profit organizations; and

(8) Sidewalk rinsing.

The Regional Board Executive Officer may add or remove categories of non-storm water discharges above. Furthermore, in the event that any of

the above categories of non-storm water discharges are determined to be a source of pollutants by the Regional Board Executive Officer, the discharge will no longer be exempt from this prohibition unless the Permittee implements conditions approved by the Regional Board Executive Officer to ensure that the discharge is not a source of pollutants. Notwithstanding the above, the Regional Board Executive Officer may impose additional prohibitions of non-storm water discharges in consideration of anti-degradation policies and TMDLs.

Part 2. RECEIVING WATER LIMITATIONS

1. Discharges from the MS4 that cause or contribute to the violation of Water Quality Standards or water quality objectives are prohibited.

2. Discharges from the MS4 of storm water, or non-storm water, for which a Permittee is responsible for, shall not cause or contribute to a condition of nuisance.

3. The Permittees shall comply with Part 2.1. and 2.2. through timely implementation of control measures and other actions to reduce pollutants in the discharges in accordance with the SQMP and its components and other requirements of this Order including any modifications. The SQMP and its components shall be designed to achieve compliance with receiving water limitations. If exceedances of Water Quality Objectives or Water Quality Standards (collectively, Water Quality Standards) persist, notwithstanding implementation of the SQMP and its components and other requirements of this permit, the Permittee shall assure compliance with discharge prohibitions and receiving water limitations by complying with the following procedure:

   a) Upon a determination by either the Permittee or the Regional Board that discharges are causing or contributing to an exceedance of an applicable Water Quality Standard, the Permittee shall promptly notify and thereafter submit a Receiving Water Limitations (RWL) Compliance Report (as described in the Program Reporting Requirements, Section I of the Monitoring and Reporting Program) to the Regional Board that describes BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedances of Water Quality Standards. This RWL Compliance Report may be incorporated in the annual Storm Water Report and Assessment unless the Regional Board directs an earlier submittal. The RWL Compliance Report shall include an implementation schedule. The Regional Board may require modifications to the RWL Compliance Report.

   b) Submit any modifications to the RWL Compliance Report required by the Regional Board within 30 days of notification.

   c) Within 30 days following the approval of the RWL Compliance Report, the Permittee shall revise the SQMP and its components and monitoring program to incorporate the approved modified

COA 0046

001326

BMPs that have been and will be implemented, an implementation schedule, and any additional monitoring required.

d) Implement the revised SQMP and its components and monitoring program according to the approved schedule.

4. So long as the Permittee has complied with the procedures set forth above and is implementing the revised SQMP and its components, the Permittee does not have to repeat the same procedure for continuing or recurring exceedances of the same receiving water limitations unless directed by the Regional Board to develop additional BMPs.

Part 3. STORM WATER QUALITY MANAGEMENT PROGRAM (SQMP) IMPLEMENTATION

A. General Requirements

1. Each Permittee shall, at a minimum, implement the SQMP. The SQMP is an enforceable element of this Order. The SQMP shall be implemented no later than February 1, 2002, unless a later date has been specified for a particular provision in this Order.

2. The SQMP shall, at a minimum, comply with the applicable storm water program requirements of 40 CFR 122.26(d)(2). The SQMP and its components shall be implemented so as to reduce the discharges of pollutants in storm water to the MEP.

3. Each Permittee shall implement additional controls, where necessary, to reduce the discharges of pollutants in storm water to the MEP.

4. Permittees that modify the countywide SQMP (i.e., implement additional controls, implement different controls than described in the countywide SQMP, or determine that certain BMPs in the countywide SQMP are not applicable in the area under its jurisdiction), shall develop a local SQMP, no later than August 1, 2002. The local SQMP shall be customized to reflect the conditions in the area under the Permittee's jurisdiction and shall specify activities being implemented under the appropriate elements described in the countywide SQMP.

B. Best Management Practice Implementation

The Permittees shall implement or require the implementation of the most effective combination of BMPs for storm water/urban runoff pollution control. When implemented, BMPs are intended to result in the reduction of pollutants in storm water to the MEP.

C. Revision of the Storm Water Quality Management Program

The Permittees shall revise the SQMP, at the direction of the Regional Board Executive Officer, to incorporate program implementation amendments so as to comply with regional, watershed specific requirements, and/or waste load

allocations developed and approved pursuant to the process for the designation and implementation of Total Maximum Daily Loads (TMDLs) for impaired water bodies.

D. Designation and Responsibilities of the Principal Permittee

The Los Angeles County Flood Control District is hereby designated as the Principal Permittee. As such, the Principal Permittee shall:

1. Coordinate and facilitate activities necessary to comply with the requirements of this Order, but is not responsible for ensuring compliance of any individual Permittee;

2. Coordinate permit activities among Permittees and act as liaison between Permittees and the Regional Board on permitting issues;

3. Provide personnel and fiscal resources for the necessary updates of the SQMP and its components;

4. Provide technical and administrative support for committees that will be organized to implement the SQMP and its components;

5. Convene the Watershed Management Committees (WMCs) constituted pursuant to Part F, below, upon designation of representatives;

6. Implement the Countywide Monitoring Program required under this Order and evaluate, assess and synthesize the results of the monitoring program;

7. Provide personnel and fiscal resources for the collection, processing and submittal to the Regional Board of annual reports and summaries of other reports required under the SQMP; and

8. Comply with the "Responsibilities of the Permittees" in Part 3.E., below.

E. Responsibilities of the Permittees

Each Permittee is required to comply with the requirements of this Order applicable to discharges within its boundaries (see Findings D.1, D.2. and D.3.) and not for the implementation of the provisions applicable to the Principal Permittee or other Permittees. Each Permittee shall, within its geographic jurisdiction:

1. Comply with the requirements of the SQMP and any modifications thereto;

2. Coordinate among its internal departments and agencies, as appropriate, to facilitate the implementation of the requirements of the SQMP applicable to such Permittee in an efficient and cost-effective manner;

3. Designate a technically knowledgeable representative to the appropriate WMC;

4. Participate in intra-agency coordination (e.g. Fire Department, Building and Safety, Code Enforcement, Public Health, etc.) necessary to successfully implement the provisions of this Order and the SQMP.

5. Prepare an annual Budget Summary of expenditures applied to the storm water management program. This summary shall identify the storm water budget for the following year, using estimated percentages and written explanations where necessary, for the specific categories noted below:

   a) Program management
      - Administrative costs

   b) Program Implementation

      Where information is available, provide an estimated percent breakdown of expenditures for the categories below:
      - Illicit connection/illicit discharge
      - Development planning
      - Development construction
      - Construction inspection activities
      - Industrial/Commercial inspection activities
      - Public Agency Activities
        - Maintenance of Structural BMPs and Treatment Control BMPs
        - Municipal Street Sweeping
        - Catch basin clean-up
        - Trash collection
        - Capital costs

   c) Public Information and Participation

   d) Monitoring Program

   e) Miscellaneous Expenditures

6. Each Permittee, in addition to the Budget Summary, shall report any supplemental dedicated budgets for the same categories.

F. Watershed Management Committees (WMCs)

1. Each WMC shall be comprised of a voting representative from each Permittee in the WMA.

2. The WMC's chair and secretary shall be chosen by the WMC upon Order adoption and on an annual basis, thereafter. In the absence of volunteer Permittee(s) for the positions, the Principal Permittee shall assume those roles until the WMC chooses members of the committee for the positions.

3. Each WMC shall:

   a) Facilitate cooperation and exchange of information among Permittees;

b) Establish additional goals and objectives and associated deadlines for the WMA, as the program implementation progresses;

c) Prioritize pollution control efforts based on beneficial use impairment(s), watershed characteristics and analysis of results from studies and the monitoring program;

d) Develop and/or update and monitor the adequate implementation, on an annual basis, of the tasks identified for the WMA;

e) Assess the effectiveness of, prepare revisions for, and recommend appropriate changes to the SQMP and its components;

f) Continue to prioritize the Industrial/Commercial critical sources for investigation, outreach and follow-up; and

g) Meet four times per year and, as necessary.

G. Legal Authority

1. Permittees shall possess the necessary legal authority to prohibit non-storm water discharges to the storm drain system, including, but not limited to:

a) Illicit discharges and illicit connections and require removal of illicit connections;

b) The discharge of wash waters to the MS4 from the cleaning of gas stations, auto repair garages, or other types of automotive service facilities;

c) The discharge of runoff to the MS4 from mobile auto washing, steam cleaning, mobile carpet cleaning, and other such mobile commercial and industrial operations;

d) The discharge of runoff to the MS4 from areas where repair of machinery and equipment which are visibly leaking oil, fluid or antifreeze, is undertaken;

e) The discharge of runoff to the MS4 from storage areas of materials containing grease, oil, or other hazardous substances, and uncovered receptacles containing hazardous materials;

f) The discharge of chlorinated/ brominated swimming pool water and filter backwash to the MS4;

g) The discharge of runoff from the washing of toxic materials from paved or unpaved areas to the MS4;

h) Washing impervious surfaces in industrial/commercial areas that results in a discharge of runoff to the MS4;

i) The discharge of concrete or cement laden wash water from concrete trucks, pumps, tools, and equipment to the MS4; and

j) Dumping or disposal of materials into the MS4 other than storm water, such as:

(1) Litter, landscape debris and construction debris;

(2) Any state or federally banned or unregistered pesticides;

(3) Food and food processing wastes; and

(4) Fuel and chemical wastes, animal wastes, garbage, batteries, and other materials that have potential adverse impacts on water quality.

2. The Permittees shall possess adequate legal authority to:

a) Require persons within their jurisdiction to comply with conditions in Permittees' ordinances, permits, contracts, model programs, or orders (i.e. hold dischargers to its MS4 accountable for their contributions of pollutants and flows);

b) Utilize enforcement mechanisms to require compliance with Permittees ordinances, permits, contracts, or orders;

c) Control pollutants, including potential contribution, in discharges of storm water runoff associated with industrial activities (including construction activities) to its MS4 and control the quality of storm water runoff from industrial sites (including construction sites). This requirement applies to Source Control, and Treatment Control BMPs;

d) Carry out all inspection, surveillance and monitoring procedures necessary to determine compliance and non-compliance with permit conditions, including the prohibition of illicit discharges to the MS4. Permittees must possess authority to enter, sample, inspect, review and copy records, and require regular reports from industrial facilities (including construction sites) discharging polluted or with the potential to discharge polluted storm water runoff into its MS4;

e) Require the use of BMPs to prevent or reduce the discharge of pollutants to MS4s to MEP; and

f) Require that Treatment Control BMPs be properly operated and maintained to prevent the breeding of vectors.

3. Each Permittee shall, no later than November 1, 2002, amend and adopt (if necessary), a Permittee-specific storm water and urban runoff ordinance to enforce all requirements of this permit.

4. Each Permittee shall submit no later than December 2, 2002, a new or updated statement by its legal counsel that the Permittee has obtained all

necessary legal authority to comply with this Order through adoption of ordinances and/or municipal code modifications.

Part 4. SPECIAL PROVISIONS

Maximum Extent Practicable Standard

This permit, and the provisions herein, are intended to develop, achieve, and implement a timely, comprehensive, cost-effective storm water pollution control program to reduce the discharge of pollutants in storm water to the MEP from the permitted areas in the County of Los Angeles to the waters of the State.

A. General Requirements

1. Best Management Practice Substitution

The Regional Board Executive Officer may approve any site-specific BMP substitution upon petition by a Permittee(s), if the Permittee can document that:

a) The proposed alternative BMP or program will meet or exceed the objective of the original BMP or program in the reduction of storm water pollutants; or

b) The fiscal burden of the original BMP or program is substantially greater than the proposed alternative and does not achieve a substantially greater improvement in storm water quality; and,

c) The proposed alternative BMP or program will be implemented within a similar period of time.

B. Public Information and Participation Program (PIPP)

The Principal Permittee shall implement a Public Information and Participation Program (PIPP) that includes, but is not limited to, the requirements listed in this section. The Principal Permittee shall be responsible for developing and implementing the Public Education Program, as described in the SQMP, and shall coordinate with Permittees to implement specific requirements.

The objectives of the PIPP are as follows:

- To measurably increase the knowledge of the target audiences regarding the MS4, the impacts of storm water pollution on receiving waters, and potential solutions to mitigate the problems caused;
- To measurably change the waste disposal and runoff pollution generation behavior of target audiences by encouraging implementation of appropriate solutions; and
- To involve and engage socio-economic groups and ethnic communities in Los Angeles County to participate in mitigating the impacts of storm water pollution.

The Principal Permittee shall convene an advisory committee to provide input and assistance in meeting the goals and objectives of the public education campaign. The advisory committee shall be consulted during the process of developing the PIPP campaign, and shall provide comments and advice during the process of preparing a Request For Proposals for a storm water public education contractor. The committee may participate as a part of a working group that evaluates contractor proposals and other tasks as appropriate. The committee shall be comprised of representatives of the environmental community, Permittee cities, Regional Board staff, and experts in the fields of public education and marketing. The Principal Permittee shall ensure that the committee meets at least once a year.

1. Residential Program

a) "No Dumping" Message

Each Permittee shall mark all storm drain inlets that they own with a legible "no dumping" message. In addition, signs with prohibitive language discouraging illegal dumping must be posted at designated public access points to creeks, other relevant water bodies, and channels no later than February 2, 2004. Signage and storm drain messages shall be legible and maintained as necessary during the term of the permit.

b) Countywide Hotline

The 888-CLEAN-LA hotline will serve as the general public reporting contact for reporting clogged catch basin inlets and illicit discharges/dumping, faded or lack of catch basin stencils, and general storm water management information. Each Permittee may establish its own hotline if preferred. Permittees shall include this information, updated when necessary, in public information, and the government pages of the telephone book, as they are developed or published. The Principal Permittee shall compile a list of the general public reporting contacts from all Permittees and make this information available on the web site (888CleanLA.com) and upon request. Permittees shall provide the Principal Permittee with their reporting contacts no later than March 1, 2002. Permittees are responsible for providing current, updated information to the Principal Permittee.

c) Outreach and Education

(1) The Principal Permittee shall continue to implement the following activities that were components of the first five-year PIPP:

(i) Advertising;

(ii) Media relations;

(iii) Public service announcements;

(iv) "How To" instructional material distributed in a targeted and activity-related manner;

(v) Corporate, community association, environmental organization and entertainment industry tie-ins; and

(vi) Events targeted to specific activities and population subgroups.

(2) The Principal Permittee shall develop a strategy to educate ethnic communities and businesses through culturally effective methods. Details of this strategy should be incorporated into the Public Education Program, and implemented, no later than February 3, 2003.

(3) The Principal Permittee shall enhance the existing outreach efforts to residents and businesses related to the proper disposal of cigarette butts.

(4) Each Permittee shall conduct educational activities within its jurisdiction and participate in countywide events.

(5) The Principal Permittee shall organize Public Outreach Strategy meetings for Permittees on a quarterly basis, beginning no later than May 1, 2002. The Principal Permittee shall provide guidance for Permittees to augment the countywide outreach and education program. Permittees shall coordinate regional and local outreach and education to reduce duplication of efforts. Permittees are encouraged to include other interested parties in the outreach strategy to strengthen and coordinate educational efforts.

(6) The Principal Permittee shall ensure that a minimum of 35 million impressions per year are made on the general public about storm water quality via print, local TV access, local radio, or other appropriate media.

(7) The Principal Permittee, in cooperation with the Permittees, shall provide schools within each School District in the County with materials, including, but not limited to, videos, live presentations, and other information necessary to educate a minimum of 50 percent of all school children (K-12) every 2 years on storm water pollution.

(8) Permittees shall provide the contact information for their appropriate staff responsible for storm water public education activities to the Principal Permittee no later than April 1, 2002 and changes to contact information no later than 30 days after a change occurs.

(9) The Principal Permittee shall develop a strategy to measure the effectiveness of in-school educational programs. The protocol shall include assessment of students' knowledge of storm water pollution problems and

solutions before and after educational efforts are conducted. The protocol shall be developed and submitted to the Regional Board Executive Officer for approval no later than May 1, 2002. It shall be implemented upon approval.

(10) In order to ensure that the PIPP is demonstrably effective in changing the behavior of the public, the Principal Permittee shall develop a behavioral change assessment strategy no later than May 1, 2002. The strategy shall be developed based on sociological data and studies (such as the County Segmentation Study). The Principal Permittee shall submit the assessment strategy to the Regional Board Executive Office for approval. It shall be implemented on approval.

d) Pollutant-Specific Outreach

The Principal Permittee, in cooperation with Permittees, shall coordinate to develop outreach programs that focus on the watershed-specific pollutants listed in Table 1 no later than February 3, 2003. Metals may be appropriately addressed through the Industrial/Commercial Facilities Program. (e.g. distribute education materials on appropriate BMPs for metal waste management to facilities that have been identified as a potential source, such as metal fabricating facilities). Region-wide pollutants may be included in the Principal Permittee's mass media outreach efforts.

Table 1

Watershed	*Target Pollutants for Outreach*
Ballona Creek	Trash, Indicator Bacteria, Metals, PAHs
Malibu Creek	Trash, Nutrients (Nitrogen), Indicator Bacteria, Sediments
Los Angeles River	Trash, Nutrients (Nitrogen), Indicator Bacteria, Metals, Pesticides, PAHs
San Gabriel River	Trash, Nutrients (Nitrogen), Indicator Bacteria, Metals
Santa Clara River	Nutrients (Nitrogen), Coliform
Dominguez Channel	Trash, Indicator Bacteria, PAHs

Each Permittee shall make outreach materials available to the general public and target audiences, such as schools, community groups, contractors and developers, and at appropriate public counters and events. Outreach material shall include information on pollutants, sources of concern, and source abatement measures.

2. Businesses Program

a) Corporate Outreach

The Principal Permittee shall develop and implement a Corporate Outreach program to educate and inform corporate managers about storm water regulations. The program shall target RGOs and restaurant chains. At a minimum, this program shall include:

(1) Conferring with corporate management to explain storm water regulations;

(2) Distribution and discussion of educational material regarding storm water pollution and BMPs, and provide managers with suggestions to facilitate employee compliance with storm water regulations.

Corporate Outreach for all RGOs and restaurant chain corporations shall be conducted not less than twice during the permit term, with the first outreach contact to begin no later than February 3, 2003.

b) Business Assistance Program

The Principal Permittee and Permittees may implement a Business Assistance Program to provide technical resource assistance to small businesses to advise them on BMPs implementation to reduce the discharge of pollutants in storm water runoff. Programs may include:

(1) On-site technical assistance or consultation via telephone to identify and implement storm water pollution prevention methods and best management practices; and

(2) Making available, distributing, and discussing of applicable BMP and educational materials.

C. **Industrial/Commercial Facilities Control Program**

Each Permittee shall require implementation of pollutant reduction and control measures at industrial and commercial facilities, with the objective of reducing pollutants in storm water runoff. Except as specified in other sections of this Order, pollutant reduction and control measures can be used alone or in combination, and can include Structural and Source Control BMPs, and operation and maintenance procedures, which can be applied before, during, and/or after pollution generating activities. At a minimum, the Industrial/Commercial Facilities Control Program shall include requirements to: (1) track, (2) inspect, and (3) ensure compliance at industrial and commercial facilities that are critical sources of pollutants in storm water.

1. Track Critical Sources

a) Each Permittee shall maintain a watershed-based inventory or database of all facilities within its jurisdiction that are critical sources of storm water pollution. Critical sources to be tracked are summarized below and also specified in Attachment B:

(1) Commercial Facilities
- restaurants;
- automotive service facilities; and
- RGOs and automotive dealerships.

(2) USEPA Phase I Facilities (Tier 1 and 2)

(3) Other Federally-mandated Facilities [as specified in 40 CFR 122.26(d)(2)(iv)(C)]
- municipal landfills;
- hazardous waste treatment, disposal, and recovery facilities; and
- facilities subject to SARA Title III (also known as EPCRA).

b) Each Permittee shall include the following minimum fields of information for each industrial and commercial facility:
- name of facility and name of owner/operator;
- address;
- coverage under the GIASP or other individual or general NPDES permits; and
- a narrative description including SIC codes that best reflects the industrial activities at and principal products of each facility.

The Regional Board encourages Permittees to add other fields of information, such as material usage and/or industrial output, and discrepancies between SIC Code designations (as reported by facility operators) and the actual type of industrial activity has the potential to pollute storm water. In addition, the Regional Board recommends use of an automated database system, such as a Geographical Information System (GIS) or Internet-based system; however, this is not required.

c) Each Permittee shall update its inventory of critical sources at least annually. The update may be accomplished through collection of new information obtained through field activities or through other readily available intra-agency informational databases (e.g. business licenses, pretreatment permits, sanitary sewer hook-up permits).

2. Inspect Critical Sources

Each Permittee shall inspect all facilities in the categories and at a level and frequency as specified in the following subsections.

a) Commercial Facilities

(1) Restaurants

Frequency of Inspections: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of Inspections: Each Permittee, in cooperation with its appropriate department (such as health or public works), shall inspect all restaurants within its jurisdiction to confirm that storm water BMPs are being effectively implemented in compliance with State law, County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP. At each restaurant, inspectors shall verify that the restaurant operator:

- has received educational materials on storm water pollution prevention practices;
- does not pour oil and grease or oil and grease residue onto a parking lot, street or adjacent catch basin;
- keeps the trash bin area clean and trash bin lids closed, and does not fill trash bins with washout water or any other liquid;
- does not allow illicit discharges, such as discharge of washwater from floormats, floors, porches, parking lots, alleys, sidewalks and street areas (in the immediate vicinity of the establishment), filters or garbage/trash containers;
- removes food waste, rubbish or other materials from parking lot areas in a sanitary manner that does not create a nuisance or discharge to the storm drain.

(2) Automotive Service Facilities

Frequency of Inspections: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of Inspections: Each Permittee shall inspect all automotive service facilities within its jurisdiction to confirm that storm water BMPs are effectively implemented in compliance with County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP. At each

automotive service facility, inspectors shall verify that each operator:

- maintains the facility area so that it is clean and dry and without evidence of excessive staining;
- implements housekeeping BMPs to prevent spills and leaks;
- properly discharges wastewaters to a sanitary sewer and/or contains wastewaters for transfer to a legal point of disposal;
- is aware of the prohibition on discharge of non-storm water to the storm drain;
- properly manages raw and waste materials including proper disposal of hazardous waste;
- protects outdoor work and storage areas to prevent contact of pollutants with rainfall and runoff;
- labels, inspects, and routinely cleans storm drain inlets that are located on the facility's property; and
- trains employees to implement storm water pollution prevention practices.

(3) Retail Gasoline Outlets and Automotive Dealerships

Frequency of Inspection: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of Inspection: Each Permittee shall confirm that BMPs are being effectively implemented at each RGO and automotive dealership within its jurisdiction, in compliance with the SQMP, Regional Board Resolution 98-08, and the Stormwater Quality Task Force Best Management Practice Guide for RGOs. At each RGO and automotive dealership, inspectors shall verify that each operator:

- routinely sweeps fuel-dispensing areas for removal of litter and debris, and keeps rags and absorbents ready for use in case of leaks and spills;
- is aware that washdown of facility area to the storm drain is prohibited;
- is aware of design flaws (such as grading that doesn't prevent run-on, or inadequate roof covers and berms), and that equivalent BMPs are implemented;
- inspects and cleans storm drain inlets and catch basins within each facility's boundaries no later than October 1st of each year;

- posts signs close to fuel dispensers, which warn vehicle owners/operators against "topping off" of vehicle fuel tanks and installation of automatic shutoff fuel dispensing nozzles;
- routinely checks outdoor waste receptacle and air/water supply areas, cleans leaks and drips, and ensures that only watertight waste receptacles are used and that lids are closed; and
- trains employees to properly manage hazardous materials and wastes as well as to implement other storm water pollution prevention practices.

b) Phase I Facilities

Permittees need not inspect facilities that have been inspected by the Regional Board within the past 24 months. For the remaining Phase I facilities that the Regional Board has not inspected, each Permittee shall conduct compliance inspections as specified below.

Frequency of Inspection

Facilities in Tier 1 Categories: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004, and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Facilities in Tier 2 Categories: Twice during the 5-year term of the permit, provided that the first inspection occurs no later than August 1, 2004. Permittees need not perform additional inspections at those facilities determined to have no risk of exposure of industrial activity to storm water. For those facilities that do have exposure of industrial activities to storm water, a Permittee may reduce the frequency of additional compliance inspections to once every 5 years, provided that the Permittee inspects at least 20% of the facilities in Tier 2 each year.

Level of Inspection: Each Permittee shall confirm that each operator:

- has a current Waste Discharge Identification (WDID) number for facilities discharging storm water associated with industrial activity, and that a Storm Water Pollution Prevention Plan is available on-site, and
- is effectively implementing BMPs in compliance with County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP.

c) Other Federally-mandated Facilities

Frequency of Inspection: Twice during the 5-year term of the Order, provided that the first inspection occurs no later than August 1, 2004 and that there is a minimum interval of one year in between the first compliance inspection and the second compliance inspection.

Level of Inspection: Each Permittee shall confirm that each operator:

- has a current Waste Discharge Identification (WDID) number for facilities discharging storm water associated with industrial activity, and that a Storm Water Pollution Prevention Plan is available on-site, and
- is effectively implementing BMPs in compliance with County and municipal ordinances, Regional Board Resolution 98-08, and the SQMP.

3. Ensure Compliance of Critical Sources

a) **BMP Implementation:** In the event that a Permittee determines that a BMP specified by the SQMP or Regional Board Resolution 98-08 is infeasible at any site, that Permittee shall require implementation of other BMPs that will achieve the equivalent reduction of pollutants in the storm water discharges. Likewise, for those BMPs that are not adequate to achieve water quality objectives, Permittees may require additional site-specific controls, such as Treatment Control BMPs.

b) **Environmentally Sensitive Areas and Impaired Waters:** For critical sources that are in ESAs or that are tributary to CWA § 303(d) impaired water bodies, Permittees shall consider requiring operators to implement additional controls to reduce pollutants in storm water runoff that are causing or contributing to the exceedences of Water Quality Objectives.

c) **Progressive Enforcement:** Each Permittee shall implement a progressive enforcement policy to ensure that facilities are brought into compliance with all storm water requirements within a reasonable time period as specified below.

(1) In the event that a Permittee determines, based on an inspection conducted above, that an operator has failed to adequately implement all necessary BMPs, that Permittee shall take progressive enforcement action which, at a minimum, shall include a follow-up inspection within 4 weeks from the date of the initial inspection.

(2) In the event that a Permittee determines that an operator has failed to adequately implement BMPs after a follow-up inspection, that Permittee shall take further enforcement action as established through authority in its municipal code and ordinances or through the judicial system.

(3) Each Permittee shall maintain records, including inspection reports, warning letters, notices of violations, and other enforcement records, demonstrating a good faith effort to bring facilities into compliance.

d) Interagency Coordination

(1) **Referral of Violations of the SQMP, Regional Board Resolution 98-08, and Municipal Storm Water Ordinances:** A Permittee may refer a violation(s) to the Regional Board provided that that Permittee has made a good faith effort of progressive enforcement. At a minimum, a Permittee's good faith effort must include documentation of:

- Two follow-up inspections; and
- Two warning letters or notices of violation.

(2) **Referral of Violations of the GIASP, including Requirements to File a Notice of Intent:** For those facilities in violation of the GIASP, Permittees may escalate referral of such violations to the Regional Board after one inspection and one written notice to the operator regarding the violation. In making such referrals, Permittees shall include, at a minimum, the following documentation:

- Name of the facility;
- Operator of the facility;
- Owner of the facility;
- Industrial activity being conducted at the facility that is subject to the GIASP; and
- Records of communication with the facility operator regarding the violation, which shall include at least an inspection report and one written notice of the violation.

Permittees shall, at a minimum, make such referrals on a quarterly basis.

(3) **Investigation of Complaints Regarding Facilities – Transmitted by the Regional Board Staff:** Each Permittee shall initiate, within one business day, investigation of complaints (other than non-storm water discharges) regarding facilities within its jurisdiction. The initial investigation shall include, at a minimum, a limited

Inspection of the facility to confirm the complaint to determine if the facility is effectively complying with the SQMP and municipal storm water/urban runoff ordinances, and to oversee corrective action.

(4) **Support of Regional Board Enforcement Actions:** As directed by the Regional Board Executive Officer, Permittees shall support Regional Board enforcement actions by: assisting in identification of current owners, operators, and lessees of facilities; providing staff, when available, for joint inspections with Regional Board inspectors; appearing as witnesses in Regional Board enforcement hearings; and providing copies of inspection reports and other progressive enforcement documentation.

(5) **Participation in a Task Force:** The Permittees, Regional Board, and other stakeholders may form a Storm Water Task Force, the purpose of which is to communicate concerns regarding special cases of storm water violations by industrial and commercial facilities and to develop a coordinated approach to enforcement action.

D. Development Planning Program

The Permittees shall implement a development planning program that will require all Planning Priority development and Redevelopment projects to:

- Minimize impacts from storm water and urban runoff on the biological integrity of Natural Drainage Systems and water bodies in accordance with requirements under CEQA (Cal. Pub. Resources Code § 21100), CWC § 13369, CWA § 319, CWA § 402(p), CWA § 404, CZARA § 6217(g), ESA § 7, and local government ordinances;
- Maximize the percentage of pervious surfaces to allow percolation of storm water into the ground;
- Minimize the quantity of storm water directed to impervious surfaces and the MS4;
- Minimize pollution emanating from parking lots through the use of appropriate Treatment Control BMPs and good housekeeping practices;
- Properly design and maintain Treatment Control BMPs in a manner that does not promote the breeding of vectors; and
- Provide for appropriate permanent measures to reduce storm water pollutant loads in storm water from the development site.

1. Peak Flow Control

The Permittees shall control post-development peak storm water runoff discharge rates, velocities, and duration (peak flow control) in Natural

Drainage Systems (i.e., mimic pre-development hydrology) to prevent accelerated stream erosion and to protect stream habitat. Natural Drainage Systems are located in the following areas:

a) Malibu Creek;

b) Topanga Canyon Creek;

c) Upper Los Angeles River;

d) Upper San Gabriel River;

e) Santa Clara River; and

f) Los Angeles County Coastal streams (see Basin Plan Table 2-1).

The Principal Permittee, in consultation with Permittees shall develop numerical criteria for peak flow control, based on the results of the Peak Discharge Impact Study (see Monitoring Program Section II.I).

Each Permittee shall, no later than February 1, 2005, implement numerical criteria for peak flow control.

A Permittee or group of Permittees may substitute for the countywide peak flow control criteria with a Hydromodification Control Plan (HCP), on approval by the Regional Board, in the following circumstances:

(1) Stream or watershed-specific conditions indicate the need for a different peak flow control criteria, and the alternative numerical criteria is developed through the application of hydrologic modeling and supporting field observations; or

(2) A watershed-wide plan has been developed for implementation of control measures to reduce erosion and stabilize drainage systems on a watershed basis.

2. Standard Urban Storm Water Mitigation Plans (SUSMPs)

a) Each Permittee shall amend codes and ordinances not later than August 1, 2002 to give legal effect to SUSMP changes contained in this Order. Changes to SUSMP requirements shall take effect not later than September 2, 2002.

b) Each Permittee shall require that a single-family hillside home:

(1) Conserve natural areas;

(2) Protect slopes and channels;

(3) Provide storm drain system stenciling and signage;

(4) Divert roof runoff to vegetated areas before discharge unless the diversion would result in slope instability; and

(5) Direct surface flow to vegetated areas before discharge unless the diversion would result in slope instability.

c) Each Permittee shall require that a SUSMP as approved by the Regional Board in Board Resolution No. R 00-02 be implemented for the following categories of developments:

(1) Ten or more unit homes (includes single family homes, multifamily homes, condominiums, and apartments);

(2) A 100,000 or more square feet of impervious surface area industrial/ commercial development;

(3) Automotive service facilities (SIC 5013, 5014, 5541, 7532-7534, and 7536-7539);

(4) Retail gasoline outlets;

(5) Restaurants (SIC 5812);

(6) Parking lots 5,000 square feet or more of surface area or with 25 or more parking spaces; and

(7) Redevelopment projects in subject categories that meet Redevelopment thresholds.

d) Each Permittee shall submit an ESA Delineation Map for its jurisdictional boundary, based on the Regional Board's ESA Definition, no later than June 3, 2002, for approval by the Regional Board Executive Officer in consultation with the California Department of Fish and Game, and the California Coastal Commission.

e) Each Permittee shall require the implementation of SUSMP provisions no later than September 2, 2002, for all projects located in or directly adjacent to or discharging directly to an ESA, where the development will:

(1) Discharge storm water and urban runoff that is likely to impact a sensitive biological species or habitat; and

(2) Create 2,500 square feet or more of impervious surface area.

3. Numerical Design Criteria

The Permittees shall require that post-construction Treatment Control BMPs incorporate, at a minimum, either a volumetric or flow based treatment control design standard, or both, as identified below to mitigate (infiltrate, filter or treat) storm water runoff.

a) Volumetric Treatment Control BMP

(1) The 85th percentile 24-hour runoff event determined as the maximized capture storm water volume for the area, from

the formula recommended in *Urban Runoff Quality Management, WEF Manual of Practice No. 23/ ASCE Manual of Practice No. 87, (1998)*; or

(2) The volume of annual runoff based on unit basin storage water quality volume, to achieve 80 percent or more volume treatment by the method recommended in *California Stormwater Best Management Practices Handbook – Industrial/ Commercial*, (1993); or

(3) The volume of runoff produced from a 0.75 inch storm event, prior to its discharge to a storm water conveyance system; or

(4) The volume of runoff produced from a historical-record based reference 24-hour rainfall criterion for "treatment" (0.75 inch average for the Los Angeles County area) that achieves approximately the same reduction in pollutant loads achieved by the 85th percentile 24-hour runoff event.

b) Flow Based Treatment Control BMP

(1) The flow of runoff produced from a rain event equal to at least 0.2 inches per hour intensity; or

(2) The flow of runoff produced from a rain event equal to at least two times the 85th percentile hourly rainfall intensity for Los Angeles County; or

(3) The flow of runoff produced from a rain event that will result in treatment of the same portion of runoff as treated using volumetric standards above.

4. Applicability of Numerical Design Criteria

The Permittees shall require the following categories of Planning Priority Projects to design and implement post-construction treatment controls to mitigate storm water pollution:

a) Single-family hillside residential developments of one acre or more of surface area;

b) Housing developments (includes single family homes, multifamily homes, condominiums, and apartments) of ten units or more;

c) A 100,000 square feet or more impervious surface area industrial/ commercial development;

d) Automotive service facilities (SIC 5013, 5014, 5541, 7532-7534 and 7536-7539) [5,000 square feet or more of surface area];

e) Retail gasoline outlets [5,000 square feet or more of impervious surface area and with projected Average Daily Traffic (ADT) of 100 or more vehicles]. Subsurface Treatment Control BMPs

which may endanger public safety (i.e., create an explosive environment) are considered not appropriate;

f) Restaurants (SIC 5812) [5,000 square feet or more of surface area];

g) Parking lots 5,000 square feet or more of surface area or with 25 or more parking spaces;

h) Projects located in, adjacent to or discharging directly to an ESA that meet threshold conditions identified above in 2.e; and

i) Redevelopment projects in subject categories that meet Redevelopment thresholds.

5. Not later than March 10, 2003, each Permittee shall require the implementation of SUSMP and post-construction control requirements for the industrial/commercial development category to projects that disturb one acre or more of surface area.

6. Site Specific Mitigation

Each Permittee shall, no later than September 2, 2002, require the implementation of a site-specific plan to mitigate post-development storm water for new development and redevelopment not requiring a SUSMP but which may potentially have adverse impacts on post-development storm water quality, where one or more of the following project characteristics exist:

a) Vehicle or equipment fueling areas;

b) Vehicle or equipment maintenance areas, including washing and repair;

c) Commercial or industrial waste handling or storage;

d) Outdoor handling or storage of hazardous materials;

e) Outdoor manufacturing areas;

f) Outdoor food handling or processing;

g) Outdoor animal care, confinement, or slaughter; or

h) Outdoor horticulture activities.

7. Redevelopment Projects

The Permittees shall apply the SUSMP, or site specific requirements including post-construction storm water mitigation to all Planning Priority Projects that undergo significant Redevelopment in their respective categories.

a) Significant Redevelopment means land-disturbing activity that results in the creation or addition or replacement of 5,000 square

feet or more of impervious surface area on an already developed site.

Where Redevelopment results in an alteration to more than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post development storm water quality control requirements, the entire project must be mitigated. Where Redevelopment results in an alteration to less than fifty percent of impervious surfaces of a previously existing development, and the existing development was not subject to post development storm water quality control requirements, only the alteration must be mitigated, and not the entire development.

b) Redevelopment does not include routine maintenance activities that are conducted to maintain original line and grade, hydraulic capacity, original purpose of facility or emergency redevelopment activity required to protect public health and safety.

c) Existing single family structures are exempt from the Redevelopment requirements.

8. Maintenance Agreement and Transfer

Each Permittee shall require that all developments subject to SUSMP and site specific plan requirements provide verification of maintenance provisions for Structural and Treatment Control BMPs, including but not limited to legal agreements, covenants, CEQA mitigation requirements, and or conditional use permits. Verification at a minimum shall include:

a) The developer's signed statement accepting responsibility for maintenance until the responsibility is legally transferred; and either

b) A signed statement from the public entity assuming responsibility for Structural or Treatment Control BMP maintenance and that it meets all local agency design standards; or

c) Written conditions in the sales or lease agreement, which requires the recipient to assume responsibility for maintenance and conduct a maintenance inspection at least once a year; or

d) Written text in project conditions, covenants and restrictions (CCRs) for residential properties assigning maintenance responsibilities to the Home Owners Association for maintenance of the Structural and Treatment Control BMPs; or

e) Any other legally enforceable agreement that assigns responsibility for the maintenance of post-construction Structural or Treatment Control BMPs.

9. Regional Storm Water Mitigation Program

A Permittee or Permittee group may apply to the Regional Board for approval of a regional or sub-regional storm water mitigation program to substitute in part or wholly SUSMP requirements. Upon review and a determination by the Regional Board Executive Officer that the proposal is technically valid and appropriate, the Regional Board may consider for approval such a program if its implementation will:

a) Result in equivalent or improved storm water quality;

b) Protect stream habitat;

c) Promote cooperative problem solving by diverse interests;

d) Be fiscally sustainable and has secure funding; and

e) Be completed in five years including the construction and start-up of treatment facilities.

Nothing in this provision shall be construed as to delay the implementation of SUSMP requirements, as approved in this Order.

10. Mitigation Funding

The Permittees may propose a management framework, for endorsement by the Regional Board Executive Officer, to support regional or sub-regional solutions to storm water pollution, where any of the following situations occur:

a) A waiver for impracticability is granted;

b) Legislative funds become available;

c) Off-site mitigation is required because of loss of environmental habitat; or

d) An approved watershed management plan or a regional storm water mitigation plan exists that incorporates an equivalent or improved strategy for storm water mitigation.

11. California Environmental Quality Act (CEQA) Document Update

Each Permittee shall incorporate into its CEQA process, with immediate effect, procedures for considering potential storm water quality impacts and providing for appropriate mitigation when preparing and reviewing CEQA documents. The procedures shall require consideration of the following:

a) Potential impact of project construction on storm water runoff;

b) Potential impact of project post-construction activity on storm water runoff;

c) Potential for discharge of storm water from areas from material storage, vehicle or equipment fueling, vehicle or equipment maintenance (including washing), waste handling, hazardous

materials handling or storage, delivery areas or loading docks, or other outdoor work areas;

d) Potential for discharge of storm water to impair the beneficial uses of the receiving waters or areas that provide water quality benefit;

e) Potential for the discharge of storm water to cause significant harm on the biological integrity of the waterways and water bodies;

f) Potential for significant changes in the flow velocity or volume of storm water runoff that can cause environmental harm; and

g) Potential for significant increases in erosion of the project site or surrounding areas.

12. General Plan Update

a) Each Permittee shall amend, revise or update its General Plan to include watershed and storm water quality and quantity management considerations and policies when any of the following General Plan elements are updated or amended: (i) Land Use, (ii) Housing, (iii) Conservation, and (iv) Open Space.

b) Each Permittee shall provide the Regional Board with the draft amendment or revision when a listed General Plan element or the General Plan is noticed for comment in accordance with Cal. Govt. Code § 65350 *et seq.*

13. Targeted Employee Training

Each Permittee shall train its employees in targeted positions (whose jobs or activities are engaged in development planning) regarding the development planning requirements on an annual basis beginning no later than August 1, 2002, and more frequently if necessary. For Permittees with a population of 250,000 or more (2000 U.S. Census), training shall be completed no later than February 3, 2003.

14. Developer Technical Guidance and Information

a) Each Permittee shall develop and make available to the developer community SUSMP (development planning) guidelines immediately.

b) The Principal Permittee in partnership with Permittees shall issue no later than February 2, 2004 a technical manual for the siting and design of BMPs for the development community in Los Angeles County. The technical manual may be adapted from the revised California Storm Water Quality Task Force Best Management Practices Handbooks scheduled for publication in September 2002. The technical manual shall at a minimum include:

(1) Treatment Control BMPs based on flow-based and volumetric water quality design criteria for the purposes of countywide consistency;

(2) Peak Flow Control criteria to control peak discharge rates, velocities and duration;

(3) Expected pollutant removal performance ranges obtained from national databases, technical reports and the scientific literature;

(4) Maintenance considerations; and

(5) Cost considerations.

E. **Development Construction Program**

1. Each Permittee shall implement a program to control runoff from construction activity at all construction sites within its jurisdiction. The program shall ensure the following minimum requirements are effectively implemented at all construction sites:

   a) Sediments generated on the project site shall be retained using adequate Treatment Control or Structural BMPs;

   b) Construction-related materials, wastes, spills, or residues shall be retained at the project site to avoid discharge to streets, drainage facilities, receiving waters, or adjacent properties by wind or runoff;

   c) Non-storm water runoff from equipment and vehicle washing and any other activity shall be contained at the project site; and

   d) Erosion from slopes and channels shall be controlled by implementing an effective combination of BMPs (as approved in Regional Board Resolution No. 99-03), such as the limiting of grading scheduled during the wet season; inspecting graded areas during rain events; planting and maintenance of vegetation on slopes; and covering erosion susceptible slopes.

2. For construction sites one acre and greater, each Permittee shall comply with all conditions in section E.1, above and shall:

   a) Require the preparation and submittal of a Local Storm Water Pollution Prevention Plan (Local SWPPP), for approval prior to issuance of a grading permit for construction projects.

   The Local SWPPP shall include appropriate construction site BMPs and maintenance schedules. (A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs as the State SWPPP). The Local SWPPP must include the rationale used for selecting or rejecting BMPs. The project architect, or engineer of record, or authorized

qualified designee, must sign a statement on the Local SWPPP to the effect:

"As the architect/engineer of record, I have selected appropriate BMPs to effectively minimize the negative impacts of this project's construction activities on storm water quality. The project owner and contractor are aware that the selected BMPs must be installed, monitored, and maintained to ensure their effectiveness. The BMPs not selected for implementation are redundant or deemed not applicable to the proposed construction activity."

The landowner or the landowner's agent shall sign a statement to the effect:

"I certify that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is true, accurate, and complete. I am aware that submitting false and/or inaccurate information, failing to update the Local SWPPP to reflect current conditions, or failing to properly and/or adequately implement the Local SWPPP may result in revocation of grading and/or other permits or other sanctions provided by law."

The Local SWPPP certification shall be signed by the landowner as follows, for a corporation: by a responsible corporate officer which means (a) a president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or (b) the manager of the construction activity if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures; for a partnership or sole proprietorship: by a general partner or the proprietor; or for a municipality or other public agency: by an elected official, a ranking management official (e.g., County Administrative Officer, City Manager, Director of Public Works, City Engineer, District Manager), or the manager of the construction activity if authority to sign Local SWPPPs has been assigned or delegated to the manager in accordance with established agency policy.

b) Inspect all construction sites for storm water quality requirements during routine inspections a minimum of once during the wet season. The Local SWPPP shall be reviewed for compliance with local codes, ordinances, and permits. For inspected sites that have not adequately implemented their Local SWPPP, a follow-up inspection to ensure compliance will take place within 2 weeks. If compliance has not been attained, the Permittee will take additional actions to achieve compliance (as specified in municipal

codes); if compliance has not been achieved, and the site is also covered under a statewide general construction storm water permit, each Permittee shall enforce their local ordinance requirements, and if non-compliance continues the Regional Board shall be notified for further joint enforcement actions.

c) Require, no later than March 10, 2003, prior to issuing a grading permit for all projects less than five acres requiring coverage under a statewide general construction storm water permit, proof of a Waste Discharger Identification (WDID) Number for filing a Notice of Intent (NOI) for permit coverage and a certification that a SWPPP has been prepared by the project developer. A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs as the State SWPPP.

3. For sites five acres and greater, each Permittee shall comply with all conditions in Sections E.1. and E.2. and shall:

a) Require, prior to issuing a grading permit for all projects requiring coverage under the state general permit, proof of a Waste Discharger Identification (WDID) Number for filing a Notice of Intent (NOI) for coverage under the GCASP and a certification that a SWPPP has been prepared by the project developer. A Local SWPPP may substitute for the State SWPPP if the Local SWPPP is at least as inclusive in controls and BMPs as the State SWPPP.

b) Require proof of an NOI and a copy of the SWPPP at any time a transfer of ownership takes place for the entire development or portions of the common plan of development where construction activities are still on-going.

c) Use an effective system to track grading permits issued by each Permittee. To satisfy this requirement, the use of a database or GIS system is encouraged, but not required.

4. GCASP Violation Referrals

a) Referral of violations of the SQMP, Regional Board Resolution 98-08, and municipal storm water ordinances:
A Permittee may refer a violation(s) to the Regional Board provided that the Permittee has made a good faith effort of progressive enforcement. At a minimum, a Permittee's good faith effort must include documentation of:
- Two follow-up inspections within 3 months, and
- Two warning letters or notices of violation.

b) Referral of Violations of GCASP Filing Requirements:
For those projects subject to the GCASP, Permittees shall refer non-filers (i.e., those projects which cannot demonstrate that they have a WDID number) to the Regional Board, within 15 days of

making a determination. In making such referrals, Permittees shall include, at a minimum, the following documentation:

- Project location;
- Developer;
- Estimated project size; and
- Records of communication with the developer regarding filing requirements.

5. Each Permittee shall train employees in targeted positions (whose jobs or activities are engaged in construction activities including construction inspection staff) regarding the requirements of the storm water management program no later than August 1, 2002, and annually thereafter. For Permittees with a population of 250,000 or more (2000 U.S. Census), initial training shall be completed no later than February 3, 2003. Each Permittee shall maintain a list of trained employees.

F. Public Agency Activities Program

Each Permittee shall implement a Public Agency program to minimize storm water pollution impacts from public agency activities. Public Agency requirements consist of:

- Sewage Systems Maintenance, Overflow, and Spill Prevention
- Public Construction Activities Management
- Vehicle Maintenance/Material Storage Facilities/Corporation Yards Management
- Landscape and Recreational Facilities Management
- Storm Drain Operation and Management
- Streets and Roads Maintenance
- Parking Facilities Management
- Public Industrial Activities Management
- Emergency Procedures
- Treatment Feasibility Study

1. Sewage System Maintenance, Overflow, and Spill Prevention

a) Each Permittee shall implement a response plan for overflows of the sanitary sewer system within their respective jurisdiction, which shall consist at a minimum of the following:

(1) Investigation of any complaints received;

(2) Upon notification, immediate response to overflows for containment; and

(3) Notification to appropriate sewer and public health agencies when a sewer overflows to the MS4.

b) In addition to 1.a.1, 1.a.2, and 1.a.3 above, for those Permittees, which own and/or operate a sanitary sewer system, the Permittee shall also implement the following requirements:

(1) Procedures to prevent sewage spills or leaks from sewage facilities from entering the MS4; and

(2) Identify, repair, and remediate sanitary sewer blockages, exfiltration, overflow, and wet weather overflows from sanitary sewers to the MS4.

2. Public Construction Activities Management.

a) Each Permittee shall implement the Development Planning Program requirements (Permit Part 4.D) at public construction projects.

b) Each Permittee shall implement the Development Construction Program requirements (Permit Part 4.E) at Permittee owned construction sites.

c) Each Permittee shall obtain coverage under the GCASP for public construction sites 5 acres or greater (or part of a larger area of development) except that a municipality under 100,000 in population (1990 U.S. Census) need not obtain coverage under a separate permit until March 10, 2003.

d) Each Permittee, no later than March 10, 2003, shall obtain coverage under a statewide general construction storm water permit for public construction sites for projects between one and five acres.

3. Vehicle Maintenance/Material Storage Facilities/Corporation Yards Management.

a) Each Permittee, consistent with the SQMP, shall implement SWPPPs for public vehicle maintenance facilities, material storage facilities, and corporation yards which have the potential to discharge pollutants into storm water.

b) Each Permittee shall implement BMPs to minimize pollutant discharges in storm water including, but not be limited to:

(1) Good housekeeping practices;

(2) Material storage control;

(3) Vehicle leaks and spill control; and

(4) Illicit discharge control.

c) Each Permittee shall implement the following measures to prevent the discharge of pollutants to the MS4:

(1) For existing facilities, that are not already plumbed to the sanitary sewer, all vehicle and equipment wash areas (except for fire stations) shall either be:

(i) Self-contained;

(ii) Equipped with a clarifier;

(iii) Equipped with an alternative pre-treatment device; or

(iv) Plumbed to the sanitary sewer.

(2) For new facilities, or during redevelopment of existing facilities (including fire stations), all vehicle and equipment wash areas shall be plumbed to the sanitary sewer and be equipped with a pre-treatment device in accordance with requirements of the sewer agency.

4. Landscape and Recreational Facilities Management

Each Permittee shall implement the following requirements:

a) A standardized protocol for the routine and non-routine application of pesticides, herbicides (including pre-emergents), and fertilizers;

b) Consistency with State Board's guidelines and monitoring requirements for application of aquatic pesticides to surface waters (WQ Order No. 2001-12-DWQ);

c) Ensure no application of pesticides or fertilizers immediately before, during, or immediately after a rain event or when water is flowing off the area to be applied;

d) Ensure that no banned or unregistered pesticides are stored or applied;

e) Ensure that staff applying pesticides are certified by the California Department of Food and Agriculture, or are under the direct supervision of a certified pesticide applicator;

f) Implement procedures to encourage retention and planting of native vegetation and to reduce water, fertilizer, and pesticide needs;

g) Store fertilizers and pesticides indoors or under cover on paved surfaces or use secondary containment;

h) Reduce the use, storage, and handling of hazardous materials to reduce the potential for spills; and

i) Regularly inspect storage areas.

5. Storm Drain Operation and Management

a) Each Permittee shall designate catch basin inlets within its jurisdiction as one of the following:

Priority A: Catch basins that are designated as consistently generating the highest volumes of trash and/or debris.

Priority B: Catch basins that are designated as consistently generating moderate volumes of trash and/or debris.

Priority C: Catch basins that are designated as generating low volumes of trash and/or debris.

b) Permittees subject to a trash TMDL (Los Angeles River and Ballona Creek WMAs) shall continue to implement the requirements listed below until trash TMDL implementation measures are adopted. Thereafter, the subject Permittees shall implement programs in conformance with the TMDL implementation schedule, which shall include an effective combination of measures such as street sweeping, catch basin cleaning, installation of treatment devices and trash receptacles, or other BMPs. Default requirements include:

(1) Inspection and cleaning of catch basins between May 1 and September 30 of each year;

(2) Additional cleaning of any catch basin that is at least 40% full of trash and/or debris;

(3) Record keeping of catch basins cleaned; and

(4) Recording of the overall quantity of catch basin waste collected.

If the implementation phase for the Los Angeles River and Ballona Creek Trash TMDLs has not begun by October 2003, subject Permittees shall implement the requirements described below in subsection 5(c), until such time programs in conformance with the subject Trash TMDLs are being implemented.

c) Permittees not subject to a trash TMDL shall:

(1) Clean catch basins according to the following schedule:

Priority A: A minimum of three times during the wet season and once during the dry season every year.

Priority B: A minimum of once during the wet season and once during the dry season every year.

Priority C: A minimum of once per year.

In addition to the schedule above, between February 1, 2002 and July 1, 2003, Permittees shall ensure that any catch basin that is at least 40% full of trash and/or debris shall be cleaned out. After July 1, 2003, Permittees shall ensure that any catch basin that is at least 25% full of trash and debris shall be cleaned out.

(2) For any special event that can be reasonably expected to generate substantial quantities of trash and litter, include provisions that require for the proper management of trash and litter generated, as a condition of the special use permit issued for that event. At a minimum, the municipality who issues the permit for the special event shall arrange for either temporary screens to be placed on catch basins or for catch basins in that area to be cleaned out subsequent to the event and prior to any rain event.

(3) Place trash receptacles at all transit stops within its jurisdiction that have shelters no later than August 1, 2002, and at all other transit stops within its jurisdiction no later than February 3, 2003. All trash receptacles shall be maintained as necessary.

d) Each Permittee shall inspect the legibility of the catch basin stencil or label nearest the inlet. Catch basins with illegible stencils shall be recorded and re-stenciled or re-labeled within 180 days of inspection.

e) Each Permittee shall implement BMPs for Storm Drain Maintenance that include:

(1) A program to visually monitor Permittee-owned open channels and other drainage structures for debris at least annually and identify and prioritize problem areas of illicit discharge for regular inspection;

(2) A review of current maintenance activities to assure that appropriate storm water BMPs are being utilized to protect water quality;

(3) Removal of trash and debris from open channel storm drains shall occur a minimum of once per year before the storm season;

(4) Minimize the discharge of contaminants during MS4 maintenance and clean outs; and

(5) Proper disposal of material removed.

6. Streets and Roads Maintenance

a) Each Permittee shall designate streets and/or street segments within its jurisdiction as one of the following:

Priority A: Streets and/or street segments that are designated as consistently generating the highest volumes of trash and/or debris.

Priority B: Streets and/or street segments that are designated as consistently generating moderate volumes of trash and/or debris.

Priority C: Streets and/or street segments that are designated as generating low volumes of trash and/or debris.

b) Each Permittee shall perform street sweeping of curbed streets according to the following schedule:

Priority A: These streets and/or street segments shall be swept at least two times per month.

Priority B: Each Permittee shall ensure that each street and/or street segments is swept at least once per month.

Priority C: These streets and/or street segments shall be swept as necessary but in no case less than once per year.

c) Each Permittee shall require that:

(1) Sawcutting wastes be recovered and disposed of properly and that in no case shall waste be left on a roadway or allowed to enter the storm drain;

(2) Concrete and other street and road maintenance materials and wastes shall be managed to prevent discharge to the MS4; and

(3) The washout of concrete trucks and chutes shall only occur in designated areas and never discharged to storm drains, open ditches, streets or catch basins.

d) Each Permittee shall, no later than August 1, 2002, train their employees in targeted positions (whose interactions, jobs, and activities affect storm water quality) regarding the requirements of the storm water management program to:

(1) Promote a clear understanding of the potential for maintenance activities to pollute storm water; and

(2) Identify and select appropriate BMPs.

For Permittees with a population of 250,000 or more (2000 U.S. Census) training shall be completed no later than February 1, 2003.

7. Parking Facilities Management

Permittee-owned parking lots exposed to storm water shall be kept clear of debris and excessive oil buildup and cleaned no less than 2 times per month and/or inspected no less than 2 times per month to determine if cleaning is necessary. In no case shall a Permittee-owned parking lot be cleaned less than once a month.

8. Public Industrial Activities Management

Each Permittee shall, for any municipal activity considered a discharge of storm water associated with industrial activity, obtain separate coverage under the GIASP except that a municipality under 100,000 in population (1990 U.S. Census) need not file the Notice Of Intent to be covered by said permit until March 10, 2003 (with the exception of power plants, airports, and uncontrolled sanitary landfills).

9. Emergency Procedures

Each Permittee shall repair essential public services and infrastructure in a manner to minimize environmental damage in emergency situations such as: earthquakes, fires, floods, landslides, or windstorms. BMPs shall be implemented to the extent that measures do not compromise public health and safety. After initial emergency response or emergency repair activities have been completed, each Permittee shall implement BMPs and programs as required under this Order.

10. Treatment Feasibility Study

The Permittees in cooperation with the County Sanitation Districts of Los Angeles County shall conduct a study to investigate the possible diversion of dry weather discharges or the use of alternative Treatment Control BMPs to treat flows from their jurisdiction which may impact public health and safety and/or the environment. The Permittees shall collectively review their individual prioritized lists and create a watershed based priority list of drains for potential diversion or treatment and submit the priority listing to the Regional Board Executive Officer, no later than July 1, 2003.

G. Illicit Connections and Illicit Discharges Elimination Program

Permittees shall eliminate all illicit connections and illicit discharges to the storm drain system, and shall document, track, and report all such cases in accordance

with the elements and performance measures specified in the following subsections.

1. General

a) Implementation: Each Permittee must develop an Implementation Program which specifies how each Permittee is implementing revisions to the IC/ID Program of the SQMP. This Implementation Program must be documented, and available for review and approval by the Regional Board Executive Officer, upon request.

b) Tracking: All Permittees shall, no later than February 3, 2003, develop and maintain a listing of all permitted connections to their storm drain system. All Permittees shall map at a scale and in a format specified by the Principal Permittee all illicit connections and discharges on their baseline maps, and shall transmit this information to the Principal Permittee. No later than February 3, 2003, the Principal Permittee shall use this information as well as results of baseline and priority screening for illicit connections (as set forth in subsection 2 below) to start an annual evaluation of patterns and trends of illicit connections and illicit discharges, with the objectives of identifying priority areas for elimination of illicit connections and illicit discharges.

c) Training: All Permittees shall train all targeted employees who are responsible for identification, investigation, termination, cleanup, and reporting of illicit connections and discharges. For Permittees with a population of less than 250,000 (2000 U.S. Census), training shall be completed no later than August 1, 2002. For Permittees with a population of 250,000 or more (2000 U.S. Census), training shall be completed no later than February 3, 2003. Furthermore, all Permittees shall conduct refresher training on an annual basis thereafter.

2. Illicit Connections

a) Screening for Illicit Connections

(1) Field Screening: All Permittees shall field Screen the storm drain system for illicit connections in accordance with the following schedule:

(i) Open channels: No later than February 3, 2003;

(ii) Underground pipes in priority areas: No later than February 1, 2005; and

(iii) Underground pipes with a diameter of 36 inches or greater: No later than December 12, 2006.

Permittees shall report, to the Principal Permittee, on the location and length of open channels or underground pipes that have been Screened *vis a vis* the entire storm drain

network, and on the status of suspected, confirmed, and terminated illicit connections. Permittees shall maintain a list containing all permitted connections and the status of connections under investigation for possible illicit connection.

(2) Permit Screening: No later than December 12, 2006, Permittees shall complete a review of all permitted connections to the storm drain system, to confirm compliance with Part 1 (Discharge Prohibition).

b) Response to Illicit Connections

(1) Investigation: Upon discovery or upon receiving a report of a suspected illicit connection, Permittees shall initiate an investigation within 21 days, to determine the source of the connection, the nature and volume of discharge through the connection, and the responsible party for the connection.

(2) Termination: Upon confirmation of the illicit nature of a storm drain connection, Permittees shall ensure termination of the connection within 180 days, using enforcement authority as needed.

3. Illicit Discharges

a) Abatement and Cleanup: Permittees shall respond, within one business day of discovery or a report of a suspected illicit discharge, with activities to abate, contain, and clean up all illicit discharges, including hazardous substances.

b) Investigation: Permittees shall investigate illicit discharges as soon as practicable (during or immediately following containment and cleanup activities), and shall take enforcement action as appropriate.

Part 5. DEFINITIONS

The following are definitions for terms applicable to this Order:

"Adverse Impact" means a detrimental effect upon water quality or beneficial uses caused by a discharge or loading of a pollutant or pollutants.

"Anti-degradation policies" means the *Statement of Policy with Respect to Maintaining High Quality Water in California* (State Board Resolution No. 68-16) which protects surface and ground waters from degradation. In particular, this policy protects waterbodies where existing quality is higher than that necessary for the protection of beneficial uses including the protection of fish and wildlife propagation and recreation on and in the water.

"Applicable Standards and Limitations" means all State, interstate, and federal standards and limitations to which a "discharge" or a related activity is subject under the CWA, including

"effluent limitations," water quality standards, standards of performance, toxic effluent standards or prohibitions, "best management practices," and pretreatment standards under sections 301, 302, 303, 304, 306, 307, 308, 403 and 404 of CWA.

"Areas of Special Biological Significance (ASBS)" means all those areas of this state as ASBS, listed specifically within the California Ocean Plan or so designated by the State Board which, among other areas, includes the area from Mugu Lagoon to Latigo Point: Oceanwater within a line originating from Laguna Point at 34° 5' 40" north, 119° 6'30" west, thence southeasterly following the mean high tideline to a point at Latigo Point defined by the intersection of the meanhigh tide line and a line extending due south of Benchmark 24; thence due south to a distance of 1000 feet offshore or to the 100 foot isobath, whichever distance is greater; thence northwesterly following the 100 foot isobath or maintaining a 1,000-foot distance from shore, whichever maintains the greater distance from shore, to a point lying due south of Laguna Point thence due north to Laguna Point.

"Authorized Discharge" means any discharge that is authorized pursuant to an NPDES permit or meets the conditions set forth in this Order.

"Automotive Service Facilities" means a facility that is categorized in any one of the following Standard Industrial Classification (SIC) codes: 5013, 5014, 5541, 5511; 7532-7534, or 7536-7539. For inspection purposes, Permittees need not inspect facilities with SIC codes 5013, 5014, 5541, 5511, provided that these facilities have no outside activities or materials that may be exposed to storm water.

"Basin Plan" means the Water Quality Control Plan, Los Angeles Region, Basin Plan for the Coastal Watersheds of Los Angeles and Ventura Counties, adopted by the Regional Board on June 13, 1994 and subsequent amendments.

"Beneficial Uses" means the existing or potential uses of receiving waters in the permit area as designated by the Regional Board in the Basin Plan.

"Best Management Practices (BMPs)" means methods, measures, or practices designed and selected to reduce or eliminate the discharge of pollutants to surface waters from point and nonpoint source discharges including storm water. BMPs include structural and nonstructural controls, and operation and maintenance procedures, which can be applied before, during, and/or after pollution producing activities.

"Commercial Development" means any development on private land that is not heavy industrial or residential. The category includes, but is not limited to: hospitals, laboratories and other medical facilities, educational institutions, recreational facilities, plant nurseries, car wash facilities, mini-malls and other business complexes, shopping malls, hotels, office buildings, public warehouses and other light industrial complexes.

"Construction" means constructing, clearing, grading, or excavation that results in soil disturbance. Construction includes structure teardown. It does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of facility; emergency construction activities required to immediately protect public health and safety; interior remodeling with no outside exposure of construction material or construction waste to storm water; mechanical permit work; or sign permit work.

"Control" means to minimize, reduce, eliminate, or prohibit by technological, legal, contractual or other means, the discharge of pollutants from an activity or activities.

"Dechlorinated/Debrominated Swimming Pool Discharge" means swimming pool discharges which have no measurable chlorine or bromine and do not contain any detergents, wastes, or additional chemicals not typically found in swimming pool water. The term does not include swimming pool filter backwash.

"Development" means any construction, rehabilitation, redevelopment or reconstruction of any public or private residential project (whether single family, multi-unit or planned unit development), industrial, commercial, retail and other non-residential projects, including public agency projects; or mass grading for future construction. It does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of facility, nor does it include emergency construction activities required to immediately protect public health and safety.

"Directly Adjacent" means situated within 200 feet of the contiguous zone required for the continued maintenance, function, and structural stability of the environmentally sensitive area.

"Director" means the Director of a municipality and Person(s) designated by and under the Director's instruction and supervision.

"Discharge" means when used without qualification the "discharge of a pollutant."

"Discharging Directly" means outflow from a drainage conveyance system that is composed entirely or predominantly of flows from the subject property, development, subdivision, or industrial facility, and not commingled with the flows from adjacent lands.

"Discharge of a Pollutant" means: any addition of any "pollutant" or combination of pollutants to "waters of the United States" from any "point source" or, any addition of any pollutant or combination of pollutants to the waters of the "contiguous zone" or the ocean from any point source other than a vessel or other floating craft which is being used as a means of transportation. The term discharge includes additions of pollutants into waters of the United States from: surface runoff which is collected or channeled by man; discharges through pipes, sewers, or other conveyances owned by a State, municipality, or other person which do not lead to a treatment works; and discharges through pipes, sewers, or other conveyances, leading into privately owned treatment works.

"Disturbed Area" means an area that is altered as a result of clearing, grading, and/or excavation.

"Environmentally Sensitive Areas (ESAs)" means an area in which plant or animal life or their habitats are either rare or especially valuable because of their special nature or role in an ecosystem and which would be easily disturbed or degraded by human activities and developments (California Public Resources Code § 30107.5). Areas subject to storm water mitigation requirements are areas designated as Significant Ecological Areas by the County of Los Angeles (*Los Angeles County Significant Areas Study, Los Angeles County Department of Regional Planning (1976)* and amendments); an area designated as a Significant Natural Area by the California Department of Fish and Game's Significant Natural Areas Program, provided that area has been field verified by the Department of Fish and Game; an area listed in the

Basin Plan as supporting the "Rare, Threatened, or Endangered Species (RARE)" beneficial use; and an area identified by a Permittee as environmentally sensitive.

"General Construction Activities Storm Water Permit (GCASP)" means the general NPDES permit adopted by the State Board which authorizes the discharge of storm water from construction activities under certain conditions.

"General Industrial Activities Storm Water Permit (GIASP)" means the general NPDES permit adopted by the State Board which authorizes the discharge of storm water from certain industrial activities under certain conditions.

"Hillside" means property located in an area with known erosive soil conditions, where the development contemplates grading on any natural slope that is 25% or greater and where grading contemplates cut or fill slopes.

"Illicit Connection" means any man-made conveyance that is connected to the storm drain system without a permit, excluding roof drains and other similar type connections. Examples include channels, pipelines, conduits, inlets, or outlets that are connected directly to the storm drain system.

"Illicit Discharge" means any discharge to the storm drain system that is prohibited under local, state, or federal statutes, ordinances, codes, or regulations. The term illicit discharge includes all non storm-water discharges except discharges pursuant to an NPDES permit, discharges that are identified in Part 1, "Discharge Prohibitions" of this order, and discharges authorized by the Regional Board Executive Officer.

"Illicit Disposal" means any disposal, either intentionally or unintentionally, of material(s) or waste(s) that can pollute storm water.

"Industrial/Commercial Facility" means any facility involved and/or used in the production, manufacture, storage, transportation, distribution, exchange or sale of goods and/or commodities, and any facility involved and/or used in providing professional and non-professional services. This category of facilities includes, but is not limited to, any facility defined by the Standard Industrial Classifications (SIC). Facility ownership (federal, state, municipal, private) and profit motive of the facility are not factors in this definition.

"Infiltration" means the downward entry of water into the surface of the soil.

"Inspection" means entry and the conduct of an on-site review of a facility and its operations, at reasonable times, to determine compliance with specific municipal or other legal requirements. The steps involved in performing an inspection include, but are not limited to:

1. Pre-inspection documentation research.;
2. Request for entry;
3. Interview of facility personnel;
4. Facility walk-through.
5. Visual observation of the condition of facility premises;
6. Examination and copying of records as required;
7. Sample collection (if necessary or required);

8. Exit conference (to discuss preliminary evaluation); and,
9. Report preparation, and if appropriate, recommendations for coming into compliance.

In the case of restaurants, a Permittee may conduct an inspection from the curbside, provided that such "curbside" inspection provides the Permittee with adequate information to determine an operator's compliance with BMPs that must be implemented per requirements of this Order, Regional Board Resolution 98-08, County and municipal ordinances, and the SQMP.

"Large Municipal Separate Storm Sewer System (MS4)" means all MS4s that serve a population greater than 250,000 (1990 Census) as defined in 40 CFR 122.26 (b)(4). The Regional Board designated Los Angeles County as a large MS4 in 1990, based on: (i) the U.S. Census Bureau 1990 population count of 8.9 million, and (ii) the interconnectivity of the MS4s in the incorporated and unincorporated areas within the County.

"Local SWPPP" means the Storm Water Pollution Prevention Plan required by the local agency for a project that disturbs one or more acres of land.

"Maximum Extent Practicable (MEP)" means the standard for implementation of storm water management programs to reduce pollutants in storm water. CWA § 402(p)(3)(B)(iii) requires that municipal permits "shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants." See also State Board Order WQ 2000-11 at page 20.

"Method Detection Limit (MDL)" means the minimum concentration of a substance that can be measured and reported with 99 percent confidence that the analyte concentration is greater than zero, as defined in 40 CFR 136, Appendix B.

"Minimum Level (ML)" means the concentration at which the entire analytical system must give a recognizable signal and acceptable calibration point. The ML is the concentration in a sample that is equivalent to the concentration of the lowest calibration standard analyzed by a specific analytical procedure, assuming that all the method specified sample weights, volumes, and processing steps have been followed.

"Municipal Separate Storm Sewer System (MS4)" means a conveyance or system of conveyances (including roads with drainage systems, municipal streets, alleys, catch basins, curbs, gutters, ditches, manmade channels, or storm drains) owned by a State, city, county, town or other public body, that is designed or used for collecting or conveying storm water, which is not a combined sewer, and which is not part of a publicly owned treatment works, and which discharges to Waters of the United States.

"National Pollutant Discharge Elimination System (NPDES)" means the national program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under CWA §307, 402, 318, and 405. The term includes an "approved program."

"Natural Drainage Systems" means unlined or unimproved (not engineered) creeks, streams, rivers or similar waterways.

"New Development" means land disturbing activities; structural development, including construction or installation of a building or structure, creation of impervious surfaces; and land subdivision.

"Non-Storm Water Discharge" means any discharge to a storm drain that is not composed entirely of storm water.

"Nuisance" means anything that meets all of the following requirements: (1) is injurious to health, or is indecent or offensive to the senses, or an obstruction to the free use of property, so as to interfere with the comfortable enjoyment of life or property; (2) affects at the same time an entire community or neighborhood, or any considerable number of persons, although the extent of the annoyance or damage inflicted upon individuals may be unequal; (3) occurs during, or as a result of, the treatment or disposal of wastes.

"Parking Lot" means land area or facility for the parking or storage of motor vehicles used for businesses, commerce, industry, or personal use, with a lot size of 5,000 square feet or more of surface area, or with 25 or more parking spaces.

"Permittee(s)" means Co-Permittees and any agency named in this Order as being responsible for permit conditions within its jurisdiction. Permittees to this Order include the Los Angeles County Flood Control District, Los Angeles County, and the cities of Agoura Hills, Alhambra, Arcadia, Artesia, Azusa, Baldwin Park, Bellflower, Bell Gardens, Beverly Hills, Bradbury, Burbank, Calabasas, Carson, Cerritos, Claremont, Commerce, Compton, Covina, Cudahy, Culver City, Diamond Bar, Downey, Duarte, El Monte, El Segundo, Gardena, Glendale, Glendora, Hawaiian Gardens, Hawthorne, Hermosa Beach, Hidden Hills, Huntington Park, Industry, Inglewood, Irwindale, La Canada Flintridge, La Habra Heights, Lakewood, La Mirada, La Puente, La Verne, Lawndale, Lomita, Los Angeles, Lynwood, Malibu, Manhattan Beach, Maywood, Monrovia, Montebello, Monterey Park, Norwalk, Palos Verdes Estates, Paramount, Pasadena, Pico Rivera, Pomona, Rancho Palos Verdes, Redondo Beach, Rolling Hills, Rolling Hills Estates, Rosemead, San Dimas, San Fernando, San Gabriel, San Marino, Santa Clarita, Santa Fe Springs, Santa Monica, Sierra Madre, Signal Hill, South El Monte, South Gate, South Pasadena, Temple City, Torrance, Vernon, Walnut, West Covina, West Hollywood, Westlake Village, and Whittier.

"Planning Priority Projects" means those projects that are required to incorporate appropriate storm water mitigation measures into the design plan for their respective project. These types of projects include:

1. Ten or more unit homes (includes single family homes, multifamily homes, condominiums, and apartments)
2. A 100,000 or more square feet of impervious surface area industrial/ commercial development (1 ac starting March 2003)
3. Automotive service facilities (SIC 5013, 5014, 5541, 7532-7534, and 7536-7539)
4. Retail gasoline outlets
5. Restaurants (SIC 5812)
6. Parking lots 5,000 square feet or more of surface area or with 25 or more parking spaces

7. Redevelopment projects in subject categories that meet Redevelopment thresholds
8. Projects located in or directly adjacent to or discharging directly to an ESA, which meet thresholds; and
9. Those projects that require the implementation of a site-specific plan to mitigate post-development storm water for new development not requiring a SUSMP but which may potentially have adverse impacts on post-development storm water quality, where the following project characteristics exist:
   a) Vehicle or equipment fueling areas;
   b) Vehicle or equipment maintenance areas, including washing and repair;
   c) Commercial or industrial waste handling or storage;
   d) Outdoor handling or storage of hazardous materials;
   e) Outdoor manufacturing areas;
   f) Outdoor food handling or processing;
   g) Outdoor animal care, confinement, or slaughter; or
   h) Outdoor horticulture activities.

"Pollutants" means those "pollutants" defined in CWA §502(6) (33.U.S.C.§1362(6)); and incorporated by reference into California Water Code §13373.

"Potable Water Distribution Systems Releases" means sources of flows from drinking water storage, supply and distribution systems including flows from system failures, pressure releases, system maintenance, distribution line testing, fire hydrant flow testing; and flushing and dewatering of pipes, reservoirs, vaults, and minor non-invasive well maintenance activities not involving chemical addition(s). It does not include wastewater discharges from activities that occur at wellheads, such as well construction, well development (i.e., aquifer pumping tests, well purging, etc.), or major well maintenance.

"Project" means all development, redevelopment, and land disturbing activities. The term is not limited to "Project" as defined under CEQA (Pub. Resources Code §21065).

"Rain Event" means any rain event greater than 0.1 inch in 24 hours except where specifically stated otherwise.

"Rare, Threatened, or Endangered Species (RARE)" means a beneficial use for waterbodies in the Los Angeles Region, as designated in the Basin Plan (Table 2-1), that supports habitats necessary, at least in part, for the survival and successful maintenance of plant or animal species established under state or federal law as rare, threatened, or endangered.

"Receiving Waters" means all surface water bodies in the Los Angeles Region that are identified in the Basin Plan.

"Redevelopment" means land-disturbing activity that results in the creation, addition, or replacement of 5,000 square feet or more of impervious surface area on an already developed site. Redevelopment includes, but is not limited to: the expansion of a building footprint;

addition or replacement of a structure; replacement of impervious surface area that is not part of a routine maintenance activity; and land disturbing activities related to structural or impervious surfaces. It does not include routine maintenance to maintain original line and grade, hydraulic capacity, or original purpose of facility, nor does it include emergency construction activities required to immediately protect public health and safety.

"Regional Administrator" means the Regional Administrator of the Regional Office of the USEPA or the authorized representative of the Regional Administrator.

"Restaurant" means a facility that sells prepared foods and drinks for consumption, including stationary lunch counters and refreshment stands selling prepared foods and drinks for immediate consumption (SIC Code 5812).

"Retail Gasoline Outlet" means any facility engaged in selling gasoline and lubricating oils.

"Runoff" means any runoff including storm water and dry weather flows from a drainage area that reaches a receiving water body or subsurface. During dry weather it is typically comprised of base flow either contaminated with pollutants or uncontaminated, and nuisance flows.

"Screening" means using proactive methods to identify illicit connections through a continuously narrowing process. The methods may include: performing baseline monitoring of open channels, conducting special investigations using a prioritization approach, analyzing maintenance records for catch basin and storm drain cleaning and operation, and verifying all permitted connections into the storm drains. Special investigation techniques may include: dye testing, visual inspection, smoke testing, flow monitoring, infrared, aerial and thermal photography, and remote control camera operation.

"Sidewalk Rinsing" means pressure washing of paved pedestrian walkways with average water usage of 0.006 gallons per square foot, with no cleaning agents, and properly disposing of all debris collected, as authorized under Regional Board Resolution No. 98-08.

"Significant Ecological Area (SEA)" means an area that is determined to possess an example of biotic resources that cumulatively represent biological diversity, for the purposes of protecting biotic diversity, as part of the Los Angeles County General Plan.[1] Areas are designated as SEAs, if they possess one or more of the following criteria:

1. The habitat of rare, endangered, and threatened plant and animal species.
2. Biotic communities, vegetative associations, and habitat of plant and animal species that are either one of a kind, or are restricted in distribution on a regional basis.
3. Biotic communities, vegetative associations, and habitat of plant and animal species that are either one of a kind or are restricted in distribution in Los Angeles County.

[1] The 61 existing SEAs represent the findings of a study that was completed in 1976 by England and Nelson, Environmental Consultants, as amended through the adoption of a revised Los Angeles County General Plan in 1980. The results of an update study to evaluate existing SEAs within unincorporated Los Angeles County is currently being proposed to the Los Angeles County Planning Commission (*Los Angeles County Significant Ecological Area Update Study 2000, Background Report*, PCR Services Corporation). The *Update Study 2000*, which contains existing and proposed SEA boundaries, can be downloaded from the Los Angeles County Department of Planning website at http://planning.co.la.ca.us/drp_revw.htm#SEA

4. Habitat that at some point in the life cycle of a species or group of species, serves as a concentrated breeding, feeding, resting, migrating grounds and is limited in availability either regionally or within Los Angeles County.
5. Biotic resources that are of scientific interest because they are either an extreme in physical/geographical limitations, or represent an unusual variation in a population or community.
6. Areas important as game species habitat or as fisheries.
7. Areas that would provide for the preservation of relatively undisturbed examples of natural biotic communities in Los Angeles County.
8. Special areas.[2]

"Significant Natural Area (SNA)" means an area defined by the California Department of Fish and Game (DFG), Significant Natural Areas Program, as an area that contains an important example of California's biological diversity. The most current SNA maps, reports, and descriptions can be downloaded from the DFG website at ftp://maphost.dfg.ca.gov/outgoing/wildab/sna/. These areas are identified using the following biological criteria only, irrespective of any administrative or jurisdictional considerations:

1. Areas supporting extremely rare species or habitats.
2. Areas supporting associations or concentrations of rare species or habitats.
3. Areas exhibiting the best examples of rare species and habitats in the state.

"Site" means the land or water area where any facility or activity is physically located or conducted, including adjacent land used in connection with the facility or activity.

"Source Control BMP" means any schedules of activities, prohibitions of practices, maintenance procedures, managerial practices or operational practices that aim to prevent storm water pollution by reducing the potential for contamination at the source of pollution.

"SQMP" means the Los Angeles Countywide Stormwater Quality Management Program.

"State Storm Water Pollution Prevention Plan (State SWPPP)" means a plan as required by a State General Permit, identifying potential pollutant sources and describing the design, placement and implementation of BMP's, to effectively prevent non-stormwater Discharges and reduce Pollutants in Stormwater Discharges during activities covered by the General Permit.

"Storm Water" means storm water runoff, snow melt runoff, and surface runoff and drainage.

"Storm Water Discharge Associated with Industrial Activity" means industrial discharge as defined in 40 CFR 122.26(b)(14).

"Stormwater Quality Management Program" means the Los Angeles Countywide Stormwater Quality Management Program, which includes descriptions of programs, collectively developed by the Permittees in accordance with provisions of the NPDES Permit, to comply with applicable federal and state law, as the same is amended from time to time.

[2] These criteria from the 1976 study have been modified in the *Update Study 2000*.

"Structural BMP" means any structural facility designed and constructed to mitigate the adverse impacts of storm water and urban runoff pollution (e.g. canopy, structural enclosure). The category may include both Treatment Control BMPs and Source Control BMPs.

"SUSMP" means the Los Angeles Countywide Standard Urban Stormwater Mitigation Plan. The SUSMP shall address conditions and requirements of new development.

"Total Maximum Daily Load (TMDL)" means the sum of the individual waste load allocations for point sources and load allocations for nonpoint sources and natural background.

"Toxicity Identification Evaluation (TIE)" means a set of procedures to identify the specific chemical(s) responsible for toxicity. These procedures are performed in three phases (characterization, identification, and confirmation) using aquatic organism toxicity tests.

"Toxicity Reduction Evaluation (TRE)" means a study conducted in a step-wise process to identify the causative agents of effluent or ambient toxicity, isolate the sources of toxicity, evaluate the effectiveness of toxicity control options, and then confirm the reduction in toxicity.

"Treatment" means the application of engineered systems that use physical, chemical, or biological processes to remove pollutants. Such processes include, but are not limited to, filtration, gravity settling, media absorption, biodegradation, biological uptake, chemical oxidation and UV radiation.

"Treatment Control BMP" means any engineered system designed to remove pollutants by simple gravity settling of particulate pollutants, filtration, biological uptake, media absorption or any other physical, biological, or chemical process.

"USEPA Phase I Facilities" means facilities in specified industrial categories that are required to obtain an NPDES permit for storm water discharges, as required by 40 CFR 122.26(c). These categories include:

i. facilities subject to storm water effluent limitation guidelines, new source performance standards, or toxic pollutant effluent standards (40 CFR N)
ii. manufacturing facilities
iii. oil and gas/mining facilities
iv. hazardous waste treatment, storage, or disposal facilities
v. landfills, land application sites, and open dumps
vi. recycling facilities
vii. steam electric power generating facilities
viii. transportation facilities
ix. sewage or wastewater treatment works
x. light manufacturing facilities

"Vehicle Maintenance/Material Storage Facilities/Corporation Yards" means any Permittee owned or operated facility or portion thereof that:

i. Conducts industrial activity, operates equipment, handles materials, and provides services similar to Federal Phase I facilities;
ii. Performs fleet vehicle service/maintenance on ten or more vehicles per day including repair, maintenance, washing, and fueling;

iii. Performs maintenance and/or repair of heavy industrial machinery/equipment ; and
iv. Stores chemicals, raw materials, or waste materials in quantities that require a hazardous materials business plan or a Spill Prevention, Control , and Counter-measures (SPCC) plan.

"Water Quality Standards and Water Quality Objectives" means water quality criteria contained in the Basin Plan, the California Ocean Plan, the National Toxics Rule, the California Toxics Rule, and other state or federally approved surface water quality plans. Such plans are used by the Regional Board to regulate all discharges, including storm water discharges.

"Waters of the State" means any surface water or groundwater, including saline waters, within boundaries of the state.

"Waters of the United States" or "Waters of the U.S." means:

a. All waters that are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide;
b. All interstate waters, including interstate "wetlands";
c. All other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, "wetlands", sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds the use, degradation, or destruction of which would affect or could affect interstate or foreign commerce including any such waters:
    1. Which are or could be used by interstate or foreign travelers for recreational or other purposes;
    2. From which fish or shellfish are or could be taken and sold in interstate or foreign commerce; or
    3. Which are used or could be used for industrial purposes by industries in interstate commerce;
d. All impoundments of waters otherwise defined as waters of the United States under this definition;
e. Tributaries of waters identified in paragraphs (a) through (d) of this definition;
f. The territorial sea; and
g. "Wetlands" adjacent to waters (other than waters that are themselves wetlands) identified in paragraph (a) through (f) of this definition.

Waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of CWA (other than cooling ponds as defined in 40 CFR 423.22(m), which also meet the criteria of this definition) are not waters of the United States. This exclusion applies only to man-made bodies of water which neither were originally created in waters of the United States (such as disposal area in wetlands) nor resulted from the impoundment of waters of the United States. Waters of the United States do not include prior converted cropland. Notwithstanding the determination of an area's status as prior converted cropland by any other federal agency, for the purposes of the CWA, the final authority regarding CWA jurisdiction remains with USEPA.

"Wet Season" means the calendar period beginning October 1 through April 15.

Part 6. STANDARD PROVISIONS

A. Standard Requirements

1. Each Permittee shall comply with all provisions and requirements of this permit.
2. Should a Permittee discover a failure to submit any relevant facts or that it submitted incorrect information in a report, it shall promptly submit the missing or correct information.
3. Each Permittee shall report all instances of non-compliance not otherwise reported at the time monitoring reports are submitted.
4. This Order includes the attached Monitoring and Reporting Program, and SUSMP(Regional Board Resolution No. R00-02), which are a part of the permit and must be complied with in the same manner as with the rest of the requirements in the permit.

B. Regional Board Review

Any formal determination or approval made by the Regional Board Executive Officer pursuant to the provisions of this Order may be reviewed by the Regional Board. A Permittee(s) or a member of the public may request such review upon petition within 30 days of the effective date of the notification of such decision to the Permittee(s) and interested parties on file at the Regional Board..

C. Public Review

1. All documents submitted to the Regional Board in compliance with the terms and conditions of this Order shall be made available to members of the public pursuant to the Freedom of Information Act (5 U.S.C. § 552 (as amended) and the Public Records Act (Cal. Government Code § 6250 *et seq.*).
2. All documents submitted to the Regional Board Executive Officer for approval shall be made available to the public for a 30-day period to allow for public comment.

D. Duty to Comply

1. Each Permittee must comply with all of the terms, requirements, and conditions of this Order. Any violation of this order constitutes a violation of the Clean Water Act, its regulations and the California Water Code, and is grounds for enforcement action, Order termination, Order revocation and reissuance, denial of an application for reissuance; or a combination thereof [40 CFR 122.41(a), CWC § 13261, 13263, 13265, 13268, 13300, 13301, 13304, 13340, 13350].
2. A copy of these waste discharge specifications shall be maintained by each Permittee so as to be available during normal business hours to Permittee employees and members of the public.

3. Any discharge of wastes at any point(s) other than specifically described in this Order is prohibited, and constitutes a violation of the Order.

E. Duty to Mitigate [40 CFR 122.41 (d)]

Each Permittee shall take all reasonable steps to minimize or prevent any discharge that has a reasonable likelihood of adversely affecting human health or the environment.

F. Inspection and Entry [40 CFR 122.41(i), CWC § 13267]

The Regional Board, USEPA, and other authorized representatives shall be allowed:

1. Entry upon premises where a regulated facility is located or conducted, or where records are kept under conditions of this Order;

2. Access to copy any records, at reasonable times, that are kept under the conditions of this Order;

3. To inspect at reasonable times any facility, equipment (including monitoring and control equipment), practices, or operations regulated or required under this Order; and

4. To photograph, sample, and monitor at reasonable times for the purpose of assuring compliance with this Order, or as otherwise authorized by the CWA and the CWC.

G. Proper Operation and Maintenance [40 CFR 122.41 (e), CWC § 13263(f)]

The Permittees shall at all times properly operate and maintain all facilities and systems of treatment (and related appurtenances) that are installed or used by the Permittees to achieve compliance with this Order. Proper operation and maintenance includes adequate laboratory controls, and appropriate quality assurance procedures. This provision requires the operation of backup or auxiliary facilities or similar system that are installed by a Permittee only when necessary to achieve compliance with the conditions of this Order.

H. Signatory Requirements [40 CFR 122.41(k) & 122.22]

Except as otherwise provided in this Order, all applications, reports, or information submitted to the Regional Board shall be signed by the Director of Public Works, City Engineer, or authorized designee and certified as set forth in 40 CFR 122.22.

I. Reopener and Modification [40 CFR 122.41(f) & 122.62]

1. This Order may only be modified, revoked, or reissued, prior to the expiration date, by the Regional Board, in accordance with the procedural requirements of the CWC and CCR Title 23 for the issuance of waste

discharge requirements, 40 CFR 122.62, and upon prior notice and hearing, to:

a) Address changed conditions identified in the required reports or other sources deemed significant by the Regional Board;

b) Incorporate applicable requirements or statewide water quality control plans adopted by the State Board or amendments to the Basin Plan;

c) Comply with any applicable requirements, guidelines, and/or regulations issued or approved pursuant to CWA Section 402(p); and/or,

d) Consider any other federal or state laws or regulations that became effective after adoption of this Order.

2. After notice and opportunity for a hearing, this Order may be terminated or modified for cause, including, but not limited to:

a) Violation of any term or condition contained in this Order;

b) Obtaining this Order by misrepresentation, or failure to disclose all relevant facts; or,

c) A change in any condition that requires either a temporary or permanent reduction or elimination of the authorized discharge.

3. The filing of a request by the Principal Permittee or Permittees for a modification, revocation and re-issuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any condition of this Order.

4. This Order may be modified to make corrections or allowances for changes in the permitted activity listed in this section, following the procedures at 40 CFR 122.63, if processed as a minor modification. Minor modifications may only:

a) Correct typographical errors; or

b) Require more frequent monitoring or reporting by the Permittee.

J. Severability

The provisions of this permit are severable, and if any provision of this permit or the application of any provision of this permit to any circumstance is held invalid, the application of such provision to other circumstances and the remainder of this permit shall not be affected.

K. Duty to Provide Information [40 CFR 122.41(h)]

The Permittees shall furnish, within a reasonable time, any information the Regional Board or USEPA may request to determine whether cause exists for

modifying, revoking and reissuing, or terminating this Order. The Permittees shall also furnish to the Regional Board, upon request, copies of records required to be kept by this Order.

L. Twenty-four Hour Reporting [40 CFR 122.41(l)(6)][3]

1. The Permittees shall report to the Regional Board any noncompliance that may endanger health or the environment. Any information shall be provided orally within 24 hours from the time any Permittee becomes aware of the circumstances. A written submission shall also be provided within five days of the time the Permittee becomes aware of the circumstances. The written submission shall contain a description of the noncompliance and its cause; the period of noncompliance, including exact dates and times and, if the noncompliance has not been corrected, the anticipated time it is expected to continue; and steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance.

2. The Regional Board may waive the required written report on a case-by-case basis.

M. Bypass [40 CFR 122.41(m)][4]

Bypass (the intentional diversion of waste streams from any portion of a treatment facility) is prohibited. The Regional Board may take enforcement action against Permittees for bypass unless:

1. Bypass was unavoidable to prevent loss of life, personal injury or severe property damage. (Severe property damage means substantial physical damage to property, damage to the treatment facilities that causes them to become inoperable, or substantial and permanent loss of natural resources that can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production.);

2. There were no feasible alternatives to bypass, such as the use of auxiliary treatment facilities, retention of untreated waste, or maintenance during normal periods of equipment down time. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass that could occur during normal periods of equipment downtime or preventive maintenance;

3. The Permittee submitted a notice at least ten days in advance of the need for a bypass to the Regional Board; or,

4. Permittees may allow a bypass to occur that does not cause effluent limitations to be exceeded, but only if it is for essential maintenance to

[3] This provision applies to incidents where effluent limitations (numerical or narrative) as provided in this Order or in the Los Angeles County SQMP are exceeded, and which endanger public health or the environment.

[4] This provision applies to the operation and maintenance of storm water controls and BMPs as provided in this Order or in the SQMP.

assure efficient operation. In such a case, the above bypass conditions are not applicable. The Permittee shall submit notice of an unanticipated bypass as required.

N. Upset [40 CFR 122.41(n)][6]

Upset means an exceptional incident in which there is unintentional and temporary noncompliance with technology based permit effluent limitations because of factors beyond the reasonable control of the permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation.

1. A Permittee that wishes to establish the affirmative defense of an upset in an action brought for non compliance shall demonstrate, through properly signed, contemporaneous operating logs, or other relevant evidence that:

   a) An upset occurred and that the Permittee can identify the cause(s) of the upset;

   b) The permitted facility was being properly operated by the time of the upset;

   c) The Permittee submitted notice of the upset as required; and,

   d) The Permittee complied with any remedial measures required.

2. No determination made before an action for noncompliance, such as during administrative review of claims that non-compliance was caused by an upset, is final administrative action subject to judicial review.

3. In any enforcement proceeding, the Permittee seeking to establish the occurrence of an upset has the burden of proof.

O. Property Rights [40 CFR 122.41(g)]

This Order does not convey any property rights of any sort, or any exclusive privilege.

P. Enforcement

1. Violation of any of the provisions of the NPDES permit or any of the provisions of this Order may subject the violator to any of the penalties described herein, or any combination thereof, at the discretion of the prosecuting authority, except that only one kind of penalties may be applied for each kind of violation. The CWA provides the following:

   a) Criminal Penalties for:

[6] *Supra*. See footnote number 3.

(1) Negligent Violations:
The CWA provides that any person who negligently violates permit conditions implementing § 301, 302, 306, 307, 308, 318, or 405 is subject to a fine of not less than $2,500 nor more than $25,000 per day for each violation, or by imprisonment for not more than 1 year, or both.

(2) Knowing Violations:
The CWA provides that any person who knowingly violates permit conditions implementing § 301, 302, 306, 307, 308, 318, or 405 is subject to a fine of not less than $5,000 nor more than $50,000 per day of violation, or by imprisonment for not more than 3 years, or both.

(3) Knowing Endangerment:
The CWA provides that any person who knowingly violates permit conditions implementing § 301, 302, 307, 308, 318, or 405 and who knows at that time that he is placing another person in imminent danger of death or serious bodily injury is subject to a fine of not more than $250,000, or by imprisonment for not more than 15 years, or both.

(4) False Statement:
The CWA provides that any person who knowingly makes any false material statement, representation, or certification in any application, record, report, plan, or other document filed or required to be maintained under the Act or who knowingly falsifies, tampers with, or renders inaccurate, any monitoring device or method required to be maintained under the Act, shall upon conviction, be punished by a fine of not more than $10,000 or by imprisonment for not more than two years, or by both. If a conviction is for a violation committed after a first conviction of such person under this paragraph, punishment shall be by a fine of not more than $20,000 per day of violation, or by imprisonment of not more than four years, or by both. (See CWA § 309(c)(4))

b) Civil Penalties

The CWA provides that any person who violates a permit condition implementing § 301, 302, 306, 307, 308, 318, or 405 is subject to a civil penalty not to exceed $27,500 per day for each violation.

2. The CWC provides that any person who violates a waste discharge requirement provision of the CWC is subject to civil penalties of up to $5,000 per day, $10,000 per day, or $25,000 per day of violation; or when the violation involves the discharge of pollutants, is subject to civil penalties of up to $10 per gallon per day or $25 per gallon per day of violation; or some combination thereof, depending on the violation or combination of violations.

Q. Need to Halt or Reduce Activity not a Defense [40 CFR 122.41(c)]

It shall not be a defense for a Permittee in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this Order.

R. Rescission

Regional Board Order No. 96-054 is hereby rescinded.

S. Expiration

This Order expires on December 12, 2006. The Permittees must submit a Report of Waste Discharges and a proposed Storm Water Quality Management Program in accordance with CCR Title 23 as application for reissuance of waste discharge requirements no later than June 12, 2006.

I, Dennis A. Dickerson, Regional Board Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of an order adopted by the California Regional Water Quality Control Board, Los Angeles Region, on December 13, 2001.

Dennis A. Dickerson
Executive Officer

State Water Resources Control Board

Water Quality Order No. 97-03-DWQ

STATE WATER RESOURCES CONTROL BOARD (STATE WATER BOARD)
WATER QUALITY ORDER NO. 97-03-DWQ
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES)
GENERAL PERMIT NO. CAS000001 (GENERAL PERMIT)

WASTE DISCHARGE REQUIREMENTS (WDRS)
FOR
DISCHARGES OF STORM WATER ASSOCIATED WITH INDUSTRIAL ACTIVITIES
EXCLUDING CONSTRUCTION ACTIVITIES

The State Water Board finds that:

1. Federal regulations for storm water discharges were issued by the U.S. Environmental Protection Agency (U.S. EPA) on November 16, 1990 (40 Code of Federal Regulations [CFR] Parts 122, 123, and 124). The regulations require operators of specific categories of facilities where discharges of storm water associated with industrial activity (storm water) occur to obtain an NPDES permit and to implement Best Available Technology Economically Achievable (BAT) and Best Conventional Pollutant Control Technology (BCT) to reduce or prevent pollutants associated with industrial activity in storm water discharges and authorized non-storm discharges.

2. This General Permit shall regulate storm water discharges and authorized non-storm water discharges from specific categories of industrial facilities identified in Attachment 1, storm water discharges and authorized non-storm water discharges from facilities as designated by the Regional Water Quality Control Boards (Regional Water Boards), and storm water discharges and authorized non-storm water discharges from other facilities seeking General Permit coverage. This General Permit may also regulate storm water discharges and authorized non-storm water discharges from facilities as required by U.S. EPA regulations. This General Permit shall regulate storm water discharges and authorized non-storm water discharges previously regulated by San Francisco Bay Regional Water Board Order, No.92-11 (as amended by Order No. 92-116). This General Permit excludes storm water discharges and non-storm water discharges that are regulated by other individual or general NPDES permits, storm water discharges and non-storm water discharges from construction activities, and storm water discharges and non-storm water discharges excluded by the Regional Water Boards for coverage by this General Permit. Attachment 2 contains the addresses and telephone numbers of each Regional Water Board office.

3. To obtain coverage for storm water discharges and authorized non-storm water discharges pursuant to this General Permit, operators of facilities (facility operators) must submit a Notice of Intent (NOI), in accordance with the Attachment 3

instructions, and appropriate annual fee to the State Water Board. This includes facility operators that have participated in U.S. EPA's group application process.

4. This General Permit does not preempt or supersede the authority of local agencies to prohibit, restrict, or control storm water discharges and authorized non-storm water discharges to storm drain systems or other water-courses within their jurisdictions as allowed by State and Federal law.

5. If an individual NPDES permit is issued to a facility operator otherwise subject to this General Permit or an alternative NPDES general permit is subsequently adopted which covers storm water discharges and/or authorized non-storm water discharges regulated by this General Permit, the applicability of this General Permit to such discharges is automatically terminated on the effective date of the individual NPDES permit or the date of approval for coverage under the subsequent NPDES general permit.

6. Effluent limitations and toxic and effluent standards established in Sections 208(b), 301, 302, 303(d), 304, 306, 307, and 403 of the Federal Clean Water Act (CWA), as amended, are applicable to storm water discharges and authorized non-storm water discharges regulated by this General Permit.

7. This action to adopt an NPDES general permit is exempt from the provisions of the California Environmental Quality Act (Public Resources Code Section 21100, et seq.) in accordance with Section 13389 of the California Water Code.

8. Federal regulations (40 CFR Subchapter N) establish effluent limitations guidelines for storm water discharges from some facilities in ten industrial categories.

9. For facilities which do not have established effluent limitation guidelines for storm water discharges in 40 CFR Subchapter N, it is not feasible at this time to establish numeric effluent limitations. This is due to the large number of discharges and the complex nature of storm water discharges. This is also consistent with the U.S. EPA's August 1, 1996 "Interim Permitting Approach for Water Quality Based Effluent Limitations in Storm Water Permits."

10. Facility operators are required to comply with the terms and conditions of this General Permit. Compliance with the terms and conditions of this General Permit constitutes compliance with BAT/BCT requirements and with requirements to achieve water quality standards. This includes the development and implementation of an effective Storm Water Pollution Prevention Plan (SWPPP) to reduce or prevent pollutants associated with industrial activity in storm water discharges and authorized non-storm water discharges.

11. Best Management Practices (BMPs) to reduce or prevent pollutants associated with industrial activity in storm water discharges and authorized non-storm water discharges are appropriate where numeric effluent limitations are infeasible, and the implementation of BMPs is adequate to achieve compliance with BAT/BCT and with water quality standards.

12. The State Water Board has adopted a Watershed Management Initiative that encourages watershed management throughout the State. This General Permit recognizes the Watershed Management Initiative by supporting the development of watershed monitoring programs authorized by the Regional Water Boards.

13. Following adoption of this General Permit, the Regional Water Boards shall enforce its provisions.

14. Following public notice in accordance with State and Federal laws and regulations, the State Water Board held a public hearing on November 12, 1996 and heard and considered all comments pertaining to this General Permit. A response to all significant comments has been prepared and is available for public review.

15. This Order is an NPDES General Permit in compliance with Section 402 of the CWA and shall take effect upon adoption by the State Water Board.

16. All terms that are defined in the CWA, U.S. EPA storm water regulations and the Porter-Cologne Water Quality Control Act will have the same definition in this General Permit unless otherwise stated.

IT IS HEREBY ORDERED that all facility operators required to be regulated by this General Permit shall comply with the following:

A. DISCHARGE PROHIBITIONS:

1. Except as allowed in Special Conditions (D.1.) of this General Permit, materials other than storm water (non-storm water discharges) that discharge either directly or indirectly to waters of the United States are prohibited. Prohibited non-storm water discharges must be either eliminated or permitted by a separate NPDES permit.

2. Storm water discharges and authorized non-storm water discharges shall not cause or threaten to cause pollution, contamination, or nuisance.

B. EFFLUENT LIMITATIONS:

1. Storm water discharges from facilities subject to storm water effluent limitation guidelines in Federal regulations (40 CFR

Subchapter N) shall not exceed the specified effluent limitations.

2. Storm water discharges and authorized non-storm water discharges regulated by this General Permit shall not contain a hazardous substance equal to or in excess of a reportable quantity listed in 40 CFR Part 117 and/or 40 CFR Part 302.

3. Facility operators covered by this General Permit must reduce or prevent pollutants associated with industrial activity in storm water discharges and authorized non-storm water discharges through implementation of BAT for toxic and non-conventional pollutants and BCT for conventional pollutants. Development and implementation of an SWPPP that complies with the requirements in Section A of the General Permit and that includes BMPs that achieve BAT/BCT constitutes compliance with this requirement.

C. RECEIVING WATER LIMITATIONS:

1. Storm water discharges and authorized non-storm water discharges to any surface or ground water shall not adversely impact human health or the environment.

2. Storm water discharges and authorized non-storm water discharges shall not cause or contribute to an exceedance of any applicable water quality standards contained in a Statewide Water Quality Control Plan or the applicable Regional Water Board's Basin Plan.

3. A facility operator will not be in violation of Receiving Water Limitation C.2. as long as the facility operator has implemented BMPs that achieve BAT/BCT and the following procedure is followed:

   a. The facility operator shall submit a report to the appropriate Regional Water Board that describes the BMPs that are currently being implemented and additional BMPs that will be implemented to prevent or reduce any pollutants that are causing or contributing to the exceedance of water quality standards. The report shall include an implementation schedule. The Regional Water Board may require modifications to the report.

   b. Following approval of the report described above by the Regional Water Board, the facility operator shall revise its SWPPP and monitoring program to incorporate the additional BMPs that have been and will be implemented, the implementation schedule, and any additional monitoring required.

4. A facility operator shall be in violation of this General Permit if he/she fails to do any of the following:

a. Submit the report described above within 60 days after either the facility operator or the Regional Water Board determines that discharges are causing or contributing to an exceedance of an applicable water quality standard;

b. Submit a report that is approved by the Regional Water Board; or

c. Revise its SWPPP and monitoring program as required by the approved report.

D. SPECIAL CONDITIONS

1. Non-Storm Water Discharges

a. The following non-storm water discharges are authorized by this General Permit provided that they satisfy the conditions specified in Paragraph b. below: fire hydrant flushing; potable water sources, including potable water related to the operation, maintenance, or testing of potable water systems; drinking fountain water; atmospheric condensates including refrigeration, air conditioning, and compressor condensate; irrigation drainage; landscape watering; springs; ground water; foundation or footing drainage; and sea water infiltration where the sea waters are discharged back into the sea water source.

b. The non-storm water discharges as provided in Paragraph a. above are authorized by this General Permit if all the following conditions are met:

i. The non-storm water discharges are in compliance with Regional Water Board requirements.

ii. The non-storm water discharges are in compliance with local agency ordinances and/or requirements.

iii. BMPs are specifically included in the SWPPP to (1) prevent or reduce the contact of non-storm water discharges with significant materials or equipment and (2) minimize, to the extent practicable, the flow or volume of non-storm water discharges.

iv. The non-storm water discharges do not contain significant quantities of pollutants.

v. The monitoring program includes quarterly visual observations of each non-storm water discharge and its sources to ensure that BMPs are being implemented and are effective.

vi. The non-storm water discharges are reported and described annually as part of the annual report.

c. The Regional Water Board or its designee may establish additional monitoring programs and reporting requirements for any non-storm water discharge authorized by this General Permit.

d. Discharges from firefighting activities are authorized by this General Permit and are not subject to the conditions of Paragraph b. above.

E. PROVISIONS

1. All facility operators seeking coverage by this General Permit must submit an NOI for each of the facilities they operate. Facility operators filing an NOI after the adoption of this General Permit shall use the NOI form and instructions (Attachment 3) attached to this General Permit. Existing facility operators who have filed an NOI pursuant to State Water Board Order No. 91-013-DWQ (as amended by Order No. 92-12-DWQ) or San Francisco Bay Regional Water Board Order No. 92-11 (as amended by Order No. 92-116) shall submit an abbreviated NOI form provided by the State Water Board. The abbreviated NOI form shall be submitted within 45 days of receipt.

2. Facility operators who have filed an NOI, pursuant to State Water Board Order No. 91-013-DWQ (as amended by Order No. 92-12-DWQ) or San Francisco Bay Regional Water Board Order No. 92-11 (as amended by Order No. 92-116), shall continue to implement their existing SWPPP and shall implement any necessary revisions to their SWPPP in accordance with Section A of this General Permit in a timely manner, but in no case later than August 1, 1997. Facility operators beginning industrial activities after adoption of this General Permit must develop and implement an SWPPP in accordance with Section A of this General Permit when the industrial activities begin.

3. Facility operators who have filed an NOI, pursuant to State Water Board Order No. 91-013-DWQ (as amended by Order No. 92-12-DWQ) or San Francisco Bay Regional Water Board Order No. 92-11 (as amended by Order No. 92-116), shall continue to implement their existing Monitoring Program and shall implement any necessary revisions to their Monitoring Program in accordance with Section B of the General Permit in a timely manner, but in no case later than August 1, 1997. Facility operators beginning industrial activities after adoption of this General Permit must develop and implement a Monitoring Program in

accordance with Section B of this General Permit when industrial activities begin.

4. Facility operators of feedlots as defined in 40 CFR Part 412 that are in full compliance with Section 2560 to Section 2565, Title 23, California Code of Regulations (Chapter 15) will be in compliance with all effluent limitations and prohibitions contained in this General Permit. Facility operators of feedlots that comply with Chapter 15, however, must perform monitoring in compliance with the requirements of Section B.4.d. and B.14. of this General Permit. Facility operators of feedlots must also comply with any Regional Water Board WDRs or NPDES general permit regulating their storm water discharges.

5. All facility operators must comply with lawful requirements of municipalities, counties, drainage districts, and other local agencies regarding storm water discharges and non-storm water discharges entering storm drain systems or other watercourses under their jurisdiction, including applicable requirements in municipal storm water management programs developed to comply with NPDES permits issued by the Regional Water Boards to local agencies.

6. All facility operators must comply with the standard provisions and reporting requirements for each facility covered by this General Permit contained in Section C, Standard Provisions.

7. Facility operators that operate facilities with co-located industrial activities (facilities that have industrial activities that meet more than one of the descriptions in Attachment 1) that are contiguous to one another are authorized to file a single NOI to comply with the General Permit. Storm water discharges and authorized non-storm water discharges from the co-located industrial activities are authorized if the SWPPP and Monitoring Program addresses each co-located industrial activity.

8. Upon reissuance of a successor NPDES general permit by the State Water Board, the facility operators subject to this reissued General Permit may be required to file an NOI.

9. Facility operators may request to terminate their coverage under this General Permit by filing a Notice of Termination (NOT) with the Regional Water Board. The NOT shall provide all documentation requested by the Regional Water Board. The facility operator will be notified when the NOT has been approved. Should the NOT be denied, facility operators are responsible for continued compliance with the requirements of this General Permit.

10. Facility operators who have filed an NOI, pursuant to State Water Board Order No. 91-013-DWQ (as amended by Order No. 92-12) or San Francisco Bay Regional Water Board Order No. 92-11 (as amended by Order No. 92-116) shall:

    a. Complete the 1996-97 activities required by those general permits. These include, but are not limited to, conducting any remaining visual observations, sample collection, annual site inspection, annual report submittal, and (for group monitoring leaders) Group Evaluation Reports; and

    b. Comply with the requirements of this General Permit no later than August 1, 1997.

11. If the Regional Water Board determines that a discharge may be causing or contributing to an exceedance of any applicable water quality standards contained in a Statewide Water Quality Control Plan or the applicable Regional Water Board's Basin Plan, the Regional Water Board may order the facility operator to comply with the requirements described in Receiving Water Limitation C.3. The facility operator shall comply with the requirements within the time schedule established by the Regional Water Board.

12. If the facility operator determines that its storm water discharges or authorized non-storm water discharges are causing or contributing to an exceedance of any applicable water quality standards, the facility operator shall comply with the requirements described in Receiving Water Limitation C.3.

13. State Water Board Order No. 91-013-DWQ (as amended by Order No. 92-12-DWQ) and San Francisco Bay Regional Water Board Order No. 91-011 (as amended by Order No. 92-116) are hereby rescinded.

F. REGIONAL WATER BOARD AUTHORITIES

1. Following adoption of this General Permit, Regional Water Boards shall:

    a. Implement the provisions of this General Permit, including, but not limited to, reviewing SWPPPs, reviewing annual reports, conducting compliance inspections, and taking enforcement actions.

    b. Issue other NPDES general permits or individual NPDES storm water permits as they deem appropriate to individual facility operators, facility operators of specific categories of industrial activities, or facility operators in a watershed or geographic area. Upon issuance of such NPDES permits by a Regional Water Board, the affected facility operator shall no longer

be regulated by this General Permit. Any new NPDES permit issued by the Regional Water Board may contain different requirements than the requirements of this General Permit.

2. Regional Water Boards may provide guidance to facility operators on the SWPPP and the Monitoring Program and reporting implementation.

3. Regional Water Boards may require facility operators to conduct additional SWPPP and Monitoring Program and reporting activities necessary to achieve compliance with this General Permit.

4. Regional Water Boards may approve requests from facility operators whose facilities include co-located industrial activities that are not contiguous within the facilities (e.g., some military bases) to comply with this General Permit under a single NOI. Storm water discharges and authorized non-storm water discharges from the co-located industrial activities and from other sources within the facility that may generate significant quantities of pollutants are authorized provided the SWPPP and Monitoring Program addresses each co-located industrial activity and other sources that may generate significant quantities of pollutants.

CERTIFICATION

The undersigned, Administrative Assistant to the State Water Board, does hereby certify that the foregoing is a full, true, and correct copy of an order duly and regularly adopted at a meeting of the State Water Resources Control Board held on April 17, 1997.

AYE: John P. Caffrey

Administrative Assistant to the Board

SECTION A: STORM WATER POLLUTION PREVENTION PLAN REQUIREMENTS

1. *Implementation Schedule*

A storm water pollution prevention plan (SWPPP) shall be developed and implemented for each facility covered by this General Permit in accordance with the following schedule.

a. Facility operators beginning industrial activities before October 1, 1992 shall develop and implement the SWPPP no later than October 1, 1992. Facility operators beginning industrial activities after October 1, 1992 shall develop and implement the SWPPP when industrial activities begin.

b. Existing facility operators that submitted a Notice of Intent (NOI), pursuant to State Water Resources Control Board (State Water Board) Order No. 91-013-DWQ (as amended by Order No. 92-12) or San Francisco Bay Regional Water Quality Control Board (Regional Water Board) Order No. 92-11 (as amended by Order No. 92-116), shall continue to implement their existing SWPPP and shall implement any necessary revisions to their SWPPP in a timely manner, but in no case later than August 1, 1997.

2. *Objectives*

The SWPPP has two major objectives: (a) to identify and evaluate sources of pollutants associated with industrial activities that may affect the quality of storm water discharges and authorized non-storm water discharges from the facility; and (b) to identify and implement site-specific best management practices (BMPs) to reduce or prevent pollutants associated with industrial activities in storm water discharges and authorized non-storm water discharges. BMPs may include a variety of pollution prevention measures or other low-cost and pollution control measures. They are generally categorized as non-structural BMPs (activity schedules, prohibitions of practices, maintenance procedures, and other low-cost measures) and as structural BMPs (treatment measures, run-off controls, over-head coverage.) To achieve these objectives, facility operators should consider the five phase process for SWPPP development and implementation as shown in Table A.

The SWPPP requirements are designed to be sufficiently flexible to meet the needs of various facilities. SWPPP requirements that are not applicable to a facility should not be included in the SWPPP.

A facility's SWPPP is a written document that shall contain a compliance activity schedule, a description of industrial activities and pollutant sources, descriptions of BMPs, drawings, maps, and relevant copies or references of parts of other plans. The SWPPP shall be revised whenever appropriate and shall be readily available for review by facility employees or Regional Water Board inspectors.

3. *Planning and Organization*

a. *Pollution Prevention Team*

The SWPPP shall identify a specific individual or individuals and their positions within the facility organization as members of a storm water pollution prevention team responsible for developing the SWPPP, assisting the facility manager in SWPPP implementation and revision, and conducting all monitoring program activities required in Section B of this General Permit. The SWPPP shall clearly identify the General Permit related responsibilities, duties, and activities of each team member. For small facilities, storm water pollution prevention teams may consist of one individual where appropriate.

b. *Review Other Requirements and Existing Facility Plans*

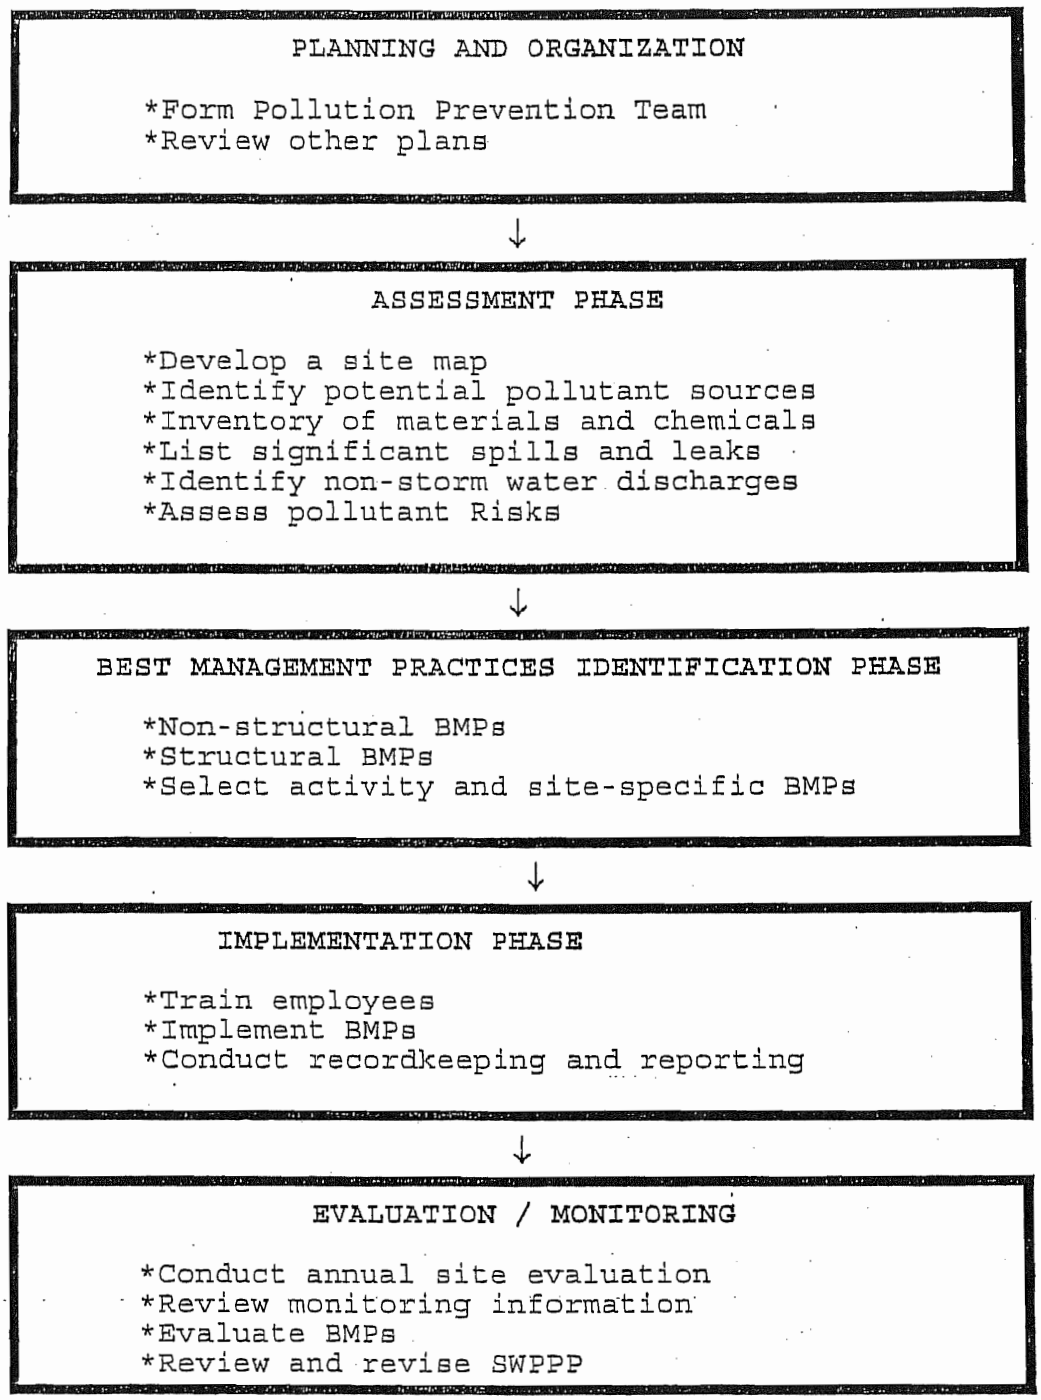
The SWPPP may incorporate or reference the appropriate elements of other regulatory requirements. Facility operators should review all local, State, and Federal requirements that impact, complement, or are consistent with the requirements of this General Permit. Facility operators should identify any existing facility plans that contain storm water pollutant control measures or relate to the requirements of this General Permit. As examples, facility operators whose facilities are subject to Federal Spill Prevention Control and Countermeasures' requirements should already have instituted a plan to control spills of certain hazardous materials. Similarly, facility operators whose facilities are subject to air quality related permits and regulations may already have evaluated industrial activities that generate dust or particulates.

4. *Site Map*

The SWPPP shall include a site map. The site map shall be provided on an 8-½ x 11 inch or larger sheet and include notes, legends, and other data as appropriate to ensure that the site map is clear and understandable. If necessary, facility operators may provide the required information on multiple site maps.

TABLE A

FIVE PHASES FOR DEVELOPING AND IMPLEMENTING INDUSTRIAL STORM WATER POLLUTION PREVENTION PLANS



The following information shall be included on the site map:

a. The facility boundaries; the outline of all storm water drainage areas within the facility boundaries; portions of the drainage area impacted by run-on from surrounding areas; and direction of flow of each drainage area, on-site surface water bodies, and areas of soil erosion. The map shall also identify nearby water bodies (such as rivers, lakes, and ponds) and municipal storm drain inlets

where the facility's storm water discharges and authorized non-storm water discharges may be received.

b. The location of the storm water collection and conveyance system, associated points of discharge, and direction of flow. Include any structural control measures that affect storm water discharges, authorized non-storm water discharges, and run-on. Examples of structural control measures are catch basins, berms, detention ponds, secondary containment, oil/water separators, diversion barriers, etc.

c. An outline of all impervious areas of the facility, including paved areas, buildings, covered storage areas, or other roofed structures.

d. Locations where materials are directly exposed to precipitation and the locations where significant spills or leaks identified in Section A.6.a.iv. below have occurred.

e. Areas of industrial activity. This shall include the locations of all storage areas and storage tanks, shipping and receiving areas, fueling areas, vehicle and equipment storage/maintenance areas, material handling and processing areas, waste treatment and disposal areas, dust or particulate generating areas, cleaning and rinsing areas, and other areas of industrial activity which are potential pollutant sources.

5. *List of Significant Materials*

The SWPPP shall include a list of significant materials handled and stored at the site. For each material on the list, describe the locations where the material is being stored, received, shipped, and handled, as well as the typical quantities and frequency. Materials shall include raw materials, intermediate products, final or finished products, recycled materials, and waste or disposed materials.

6. *Description of Potential Pollutant Sources*

a. The SWPPP shall include a narrative description of the facility's industrial activities, as identified in Section A.4.e above, associated potential pollutant sources, and potential pollutants that could be discharged in storm water discharges or authorized non-storm water discharges. At a minimum, the following items related to a facility's industrial activities shall be considered:

i. Industrial Processes

Describe each industrial process, the type, characteristics, and quantity of significant materials used in or resulting from the process, and a description of the manufacturing, cleaning, rinsing, recycling, disposal, or other activities related to the process. Where applicable, areas protected by containment structures and the corresponding containment capacity shall be described.

ii. Material Handling and Storage Areas

Describe each handling and storage area, type, characteristics, and quantity of significant materials handled or stored, description of the shipping, receiving, and loading procedures, and the spill or leak prevention and response procedures. Where applicable, areas protected by containment structures and the corresponding containment capacity shall be described.

iii. Dust and Particulate Generating Activities

Describe all industrial activities that generate dust or particulates that may be deposited within the facility's boundaries and identify their discharge locations; the characteristics of dust and particulate pollutants; the approximate quantity of dust and particulate pollutants that may be deposited within the facility boundaries; and a description of the primary areas of the facility where dust and particulate pollutants would settle.

iv. Significant Spills and Leaks

Describe materials that have spilled or leaked in significant quantities in storm water discharges or non-storm water discharges since April 17, 1994. Include toxic chemicals (listed in 40 CFR, Part 302) that have been discharged to storm water as reported on U.S. Environmental Protection Agency (U.S. EPA) Form R, and oil and hazardous substances in excess of reportable quantities (see 40 Code of Federal Regulations [CFR], Parts 110, 117, and 302).

The description shall include the type, characteristics, and approximate quantity of the material spilled or leaked, the cleanup or remedial actions that have occurred or are planned, the approximate remaining quantity of materials that may be exposed to storm water or non-storm water

discharges, and the preventative measures taken to ensure spill or leaks do not reoccur. Such list shall be updated as appropriate during the term of this General Permit.

v. Non-Storm Water Discharges

Facility operators shall investigate the facility to identify all non-storm water discharges and their sources. As part of this investigation, all drains (inlets and outlets) shall be evaluated to identify whether they connect to the storm drain system.

All non-storm water discharges shall be described. This shall include the source, quantity, frequency, and characteristics of the non-storm water discharges and associated drainage area.

Non-storm water discharges that contain significant quantities of pollutants or that do not meet the conditions provided in Special Conditions D. are prohibited by this General Permit (Examples of prohibited non-storm water discharges are contact and non-contact cooling water, boiler blowdown, rinse water, wash water, etc.). Non-storm water discharges that meet the conditions provided in Special Condition D. are authorized by this General Permit. The SWPPP must include BMPs to prevent or reduce contact of non-storm water discharges with significant materials or equipment.

vi. Soil Erosion

Describe the facility locations where soil erosion may occur as a result of industrial activity, storm water discharges associated with industrial activity, or authorized non-storm water discharges.

b. The SWPPP shall include a summary of all areas of industrial activities, potential pollutant sources, and potential pollutants. This information should be summarized similar to Table B. The last column of Table B, "Control Practices", should be completed in accordance with Section A.8. below.

7. *Assessment of Potential Pollutant Sources*

a. The SWPPP shall include a narrative assessment of all industrial activities and potential pollutant sources as described in A.6. above to determine:

i. Which areas of the facility are likely sources of

pollutants in storm water discharges and authorized non-storm water discharges, and

ii. Which pollutants are likely to be present in storm water discharges and authorized non-storm water discharges. Facility operators shall consider and evaluate various factors when performing this assessment such as current storm water BMPs; quantities of significant materials handled, produced, stored, or disposed of; likelihood of exposure to storm water or authorized non-storm water discharges; history of spill or leaks; and run-on from outside sources.

b. Facility operators shall summarize the areas of the facility that are likely sources of pollutants and the corresponding pollutants that are likely to be present in storm water discharges and authorized non-storm water discharges.

Facility operators are required to develop and implement additional BMPs as appropriate and necessary to prevent or reduce pollutants associated with each pollutant source. The BMPs will be narratively described in Section 8 below.

8. *Storm Water Best Management Practices*

The SWPPP shall include a narrative description of the storm water BMPs to be implemented at the facility for each potential pollutant and its source identified in the site assessment phase (Sections A.6. and 7. above). The BMPs shall be developed and implemented to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges. Each pollutant and its source may require one or more BMPs. Some BMPs may be implemented for multiple pollutants and their sources, while other BMPs will be implemented for a very specific pollutant and its source.

TABLE B
EXAMPLE
ASSESSMENT OF POTENTIAL POLLUTION SOURCES AND CORRESPONDING BEST MANAGEMENT PRACTICES
SUMMARY

Area	Activity	Pollutant Source	Pollutant	Best Management Practices
Vehicle & Equipment Fueling	Fueling	Spills and leaks during delivery	fuel oil	- Use spill and overflow protection - Minimize run-on of storm water into the fueling area - Cover fueling area - Use dry cleanup methods rather than hosing down area - Implement proper spill prevention control program - Implement adequate preventative maintenance program to preventive tank and line leaks - Inspect fueling areas regularly to detect problems before they occur - Train employees on proper fueling, cleanup, and spill response techniques.
		Spills caused by topping off fuel tanks	fuel oil	
		Hosing or washing down fuel area	fuel oil	
		Leaking storage tanks	fuel oil	
		Rainfall running off fueling area, and rainfall running onto and off fueling area	fuel oil	

The description of the BMPs shall identify the BMPs as (1) existing BMPs, (2) existing BMPs to be revised and implemented, or (3) new BMPs to be implemented. The description shall also include a discussion on the effectiveness of each BMP to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges. The SWPPP shall provide a summary of all BMPs implemented for each pollutant source. This information should be summarized similar to Table B.

Facility operators shall consider the following BMPs for implementation at the facility:

a. Non-Structural BMPs

Non-structural BMPs generally consist of processes, prohibitions, procedures, schedule of activities, etc., that prevent pollutants associated with industrial activity from contacting with storm water discharges and authorized non-storm water discharges. They are considered low technology, cost-effective measures. Facility operators should consider all possible non-structural BMPs options before considering additional structural BMPs (see Section A.8.b. below). Below is a list of non-structural BMPs that should be considered:

i. Good Housekeeping

Good housekeeping generally consist of practical procedures to maintain a clean and orderly facility.

ii. Preventive Maintenance

Preventive maintenance includes the regular inspection and maintenance of structural storm water controls (catch basins, oil/water separators, etc.) as well as other facility equipment and systems.

iii. Spill Response

This includes spill clean-up procedures and necessary clean-up equipment based upon the quantities and locations of significant materials that may spill or leak.

iv. Material Handling and Storage

This includes all procedures to minimize the potential for spills and leaks and to minimize exposure of significant materials to storm water and authorized non-storm water discharges.

v. Employee Training

This includes training of personnel who are responsible for (1) implementing activities identified in the SWPPP, (2) conducting inspections, sampling, and visual observations, and (3) managing storm water. Training should address topics such as spill response, good housekeeping, and material handling procedures, and actions necessary to implement all BMPs identified in the SWPPP. The SWPPP shall identify periodic dates for such training. Records shall be maintained of all training sessions held.

vi. Waste Handling/Recycling

This includes the procedures or processes to handle, store, or dispose of waste materials or recyclable materials.

vii. Recordkeeping and Internal Reporting

This includes the procedures to ensure that all records of inspections, spills, maintenance activities, corrective actions, visual observations, etc., are developed, retained, and provided, as necessary, to the appropriate facility personnel.

viii. Erosion Control and Site Stabilization

This includes a description of all sediment and erosion control activities. This may include the planting and maintenance of vegetation, diversion of run-on and runoff, placement of sandbags, silt screens, or other sediment control devices, etc.

ix. Inspections

This includes, in addition to the preventative maintenance inspections identified above, an inspection schedule of all potential pollutant sources. Tracking and follow-up procedures shall be described to ensure adequate corrective actions are taken and SWPPPs are made.

x. Quality Assurance

This includes the procedures to ensure that all elements of the SWPPP and Monitoring Program are adequately conducted.

b. Structural BMPs

Where non-structural BMPs as identified in Section A.8.a. above are not effective, structural BMPs shall be considered. Structural BMPs generally consist of structural devices that reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges. Below is a list of structural BMPs that should be considered:

i. Overhead Coverage

This includes structures that provide horizontal coverage of materials, chemicals, and pollutant sources from contact with storm water and authorized non-storm water discharges.

ii. Retention Ponds

This includes basins, ponds, surface impoundments, bermed areas, etc. that do not allow storm water to discharge from the facility.

iii. Control Devices

This includes berms or other devices that channel or route run-on and runoff away from pollutant sources.

iv. Secondary Containment Structures

This generally includes containment structures around storage tanks and other areas for the purpose of collecting any leaks or spills.

v. Treatment

This includes inlet controls, infiltration devices, oil/water separators, detention ponds, vegetative swales, etc. that reduce the pollutants in storm water discharges and authorized non-storm water discharges.

9. Annual Comprehensive Site Compliance Evaluation

The facility operator shall conduct one comprehensive site compliance evaluation (evaluation) in each reporting period (July 1-June 30). Evaluations shall be conducted within 8-16 months of each other. The SWPPP shall be revised, as appropriate, and the revisions implemented within 90 days of the evaluation. Evaluations shall include the following:

a. A review of all visual observation records, inspection records, and sampling and analysis results.

b. A visual inspection of all potential pollutant sources for evidence of, or the potential for, pollutants entering the drainage system.

c. A review and evaluation of all BMPs (both structural and non-structural) to determine whether the BMPs are adequate, properly implemented and maintained, or whether additional BMPs are needed. A visual inspection of equipment needed to implement the SWPPP, such as spill response equipment, shall be included.

d. An evaluation report that includes, (i) identification of personnel performing the evaluation, (ii) the date(s) of the evaluation, (iii) necessary SWPPP revisions, (iv) schedule, as required in Section A.10.e, for implementing SWPPP revisions, (v) any incidents of non-compliance and the corrective actions taken, and (vi) a certification that the facility operator is in compliance with this General Permit. If the above certification cannot be provided, explain in the evaluation report why the facility operator is not in compliance with this General Permit. The evaluation report shall be submitted as part of the annual report, retained for at least five years, and signed and certified in accordance with Standard Provisions 9. and 10. of Section C. of this General Permit.

10. *SWPPP General Requirements*

a. The SWPPP shall be retained on site and made available upon request of a representative of the Regional Water Board and/or local storm water management agency (local agency) which receives the storm water discharges.

b. The Regional Water Board and/or local agency may notify the facility operator when the SWPPP does not meet one or more of the minimum requirements of this Section. As requested by the Regional Water Board and/or local agency, the facility operator shall submit an SWPPP revision and implementation schedule that meets the minimum requirements of this section to the Regional Water Board and/or local agency that requested the SWPPP revisions. Within 14 days after implementing the required SWPPP revisions, the facility operator shall provide written certification to the Regional Water Board and/or local agency that the revisions have been implemented.

c. The SWPPP shall be revised, as appropriate, and implemented prior to changes in industrial activities which (i) may significantly increase the quantities of pollutants in storm water discharge, (ii) cause a new area of industrial activity at the facility to be exposed to storm water, or (iii) begin an industrial activity which would introduce a new pollutant source at the facility.

d. Other than as provided in Provisions B.11, B.12, and E.2 of the General Permit, the SWPPP shall be revised and implemented in a timely manner, but in no case more than 90 days after a facility operator determines that the SWPPP is in violation of any requirement(s) of this General Permit.

e. When any part of the SWPPP is infeasible to implement by the deadlines specified in Provision E.2 or Sections A.1, A.9, A.10.c, and A.10.d of this General Permit due to proposed significant structural changes, the facility operator shall submit a report to the Regional Water Board prior to the applicable deadline that (i) describes the portion of the SWPPP that is infeasible to implement by the deadline, (ii) provides justification for a time extension, (iii) provides a schedule for completing and implementing that portion of the SWPPP, and (iv) describes the BMPs that will be implemented in the interim period to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges. Such reports are subject to Regional Water Board approval and/or modifications. Facility operators shall provide written notification to the Regional Water Board within 14 days after the SWPPP revisions are implemented.

f. The SWPPP shall be provided, upon request, to the Regional Water Board. The SWPPP is considered a report that shall be available to the public by the Regional Water Board under Section 308(b) of the Clean Water Act.

SECTION B. MONITORING PROGRAM AND REPORTING REQUIREMENTS

1. *Implementation Schedule*

Each facility operator shall develop a written monitoring program for each facility covered by this General Permit in accordance with the following schedule:

a. Facility operators beginning industrial activities before October 1, 1992 shall develop and implement a monitoring program no later than October 1, 1992. Facility operators beginning operations after October 1, 1992 shall develop and implement a monitoring program when the industrial activities begin.

b. Facility operators that submitted a Notice Of Intent (NOI) pursuant to State Water Resources Control Board (State Water Board) Order No. 91-013-DWQ (as amended by Order No. 92-12) or San Francisco Bay Regional Water Quality Control Board (Regional Water Board) Order No. 92-11 (as amended by Order No. 92-116), shall continue to implement their existing monitoring program and implement any necessary revisions to their monitoring program in a timely manner, but in no case later than August 1, 1997. These facility operators may use the monitoring results conducted in accordance with those expired general permits to satisfy the pollutant/parameter reduction requirements in Section B.5.c., Sampling and Analysis Exemptions and Reduction certifications in Section B.12., and Group Monitoring Sampling credits in B.15.k. For facilities beginning industrial activities after the adoption of this General Permit, the monitoring program shall be developed and implemented when the facility begins the industrial activities.

2. *Objectives*

The objectives of the monitoring program are to:

a. Ensure that storm water discharges are in compliance with the Discharge Prohibitions, Effluent Limitations, and Receiving Water Limitations specified in this General Permit.

b. Ensure practices at the facility to reduce or prevent pollutants in storm water discharges and authorized non-storm water discharges are evaluated and revised to meet changing conditions.

c. Aid in the implementation and revision of the SWPPP required by Section A of this General Permit.

d. Measure the effectiveness of best management practices (BMPs) to prevent or reduce pollutants in storm water

discharges and authorized non-storm water discharges. Much of the information necessary to develop the monitoring program, such as discharge locations, drainage areas, pollutant sources, etc., should be found in the Storm Water Pollution Prevention Plan (SWPPP). The facility's monitoring program shall be a written, site-specific document that shall be revised whenever appropriate and be readily available for review by employees or Regional Water Board inspectors.

3. *Non-storm Water Discharge Visual Observations*

a. Facility operators shall visually observe all drainage areas within their facilities for the presence of unauthorized non-storm water discharges;

b. Facility operators shall visually observe the facility's authorized non-storm water discharges and their sources;

c. The visual observations required above shall occur quarterly, during daylight hours, on days with no storm water discharges, and during scheduled facility operating hours[1]. Quarterly visual observations shall be conducted in each of the following periods: January-March, April-June, July-September, and October-December. Facility operators shall conduct quarterly visual observations within 6-18 weeks of each other.

d. Visual observations shall document the presence of any discolorations, stains, odors, floating materials, etc., as well as the source of any discharge. Records shall be maintained of the visual observation dates, locations observed, observations, and response taken to eliminate unauthorized non-storm water discharges and to reduce or prevent pollutants from contacting non-storm water discharges. The SWPPP shall be revised, as necessary, and implemented in accordance with Section A of this General Permit.

4. *Storm Water Discharge Visual Observations*

a. With the exception of those facilities described in Section B.4.d. below, facility operators shall visually

[1] "Scheduled facility operating hours" are the time periods when the facility is staffed to conduct any function related to industrial activity, but excluding time periods where only routine maintenance, emergency response, security, and/or janitorial services are performed.

observe storm water discharges from one storm event per month during the wet season (October 1-May 30). These visual observations shall occur during the first hour of discharge and at all discharge locations. Visual observations of stored or contained storm water shall occur at the time of release.

b. Visual observations are only required of storm water discharges that occur during daylight hours that are preceded by at least three (3) working days[2] without storm water discharges and that occur during scheduled facility operating hours.

c. Visual observations shall document the presence of any floating and suspended material, oil and grease, discolorations, turbidity, odor, and source of any pollutants. Records shall be maintained of observation dates, locations observed, observations, and response taken to reduce or prevent pollutants in storm water discharges. The SWPPP shall be revised, as necessary, and implemented in accordance with Section A of this General Permit.

d. Feedlots (subject to Federal effluent limitations guidelines in 40 Code of Federal Regulations [CFR] Part 412) that are in compliance with Sections 2560 to 2565, Article 6, Chapter 15, Title 23, California Code of Regulations, and facility operators with storm water containment facilities shall conduct monthly inspections of their containment areas to detect leaks and ensure maintenance of adequate freeboard. Records shall be maintained of the inspection dates, observations, and any response taken to eliminate leaks and to maintain adequate freeboard.

5. *Sampling and Analysis*

a. Facility operators shall collect storm water samples during the first hour of discharge from (1) the first storm event of the wet season, and (2) at least one other storm event in the wet season. All storm water discharge locations shall be sampled. Sampling of stored or contained storm water shall occur at the time the stored or contained storm water is released. Facility operators that do not collect samples from the first storm event of the wet season are still required to collect samples from two other storm events of the wet season and shall explain in the Annual Report why the first storm event was not sampled.

---

[2] Three (3) working days may be separated by non-working days such as weekends and holidays provided that no storm water discharges occur during the three (3) working days and the non-working days.

b. Sample collection is only required of storm water discharges that occur during scheduled facility operating hours and that are preceded by at least (3) three working days without storm water discharge.

c. The samples shall be analyzed for:

i. Total suspended solids (TSS) pH, specific conductance, and total organic carbon (TOC). Oil and grease (O&G) may be substituted for TOC; and

ii. Toxic chemicals and other pollutants that are likely to be present in storm water discharges in significant quantities. If these pollutants are not detected in significant quantities after two consecutive sampling events, the facility operator may eliminate the pollutant from future sample analysis until the pollutant is likely to be present again; and

iii. Other analytical parameters as listed in Table D (located at the end of this Section). These parameters are dependent on the facility's standard industrial classification (SIC) code. Facility operators are not required to analyze a parameter listed in Table D when the parameter is not already required to be analyzed pursuant to Section B.5.c.i. and ii. or B.6 of this General Permit, and either of the two following conditions are met: (1) the parameter has not been detected in significant quantities from the last two consecutive sampling events, or (2) the parameter is not likely to be present in storm water discharges and authorized non-storm water discharges in significant quantities based upon the facility operator's evaluation of the facilities industrial activities, potential pollutant sources, and SWPPP. Facility operators that do not analyze for the applicable Table D parameters shall certify in the Annual Report that the above conditions have been satisfied.

iv. Other parameters as required by the Regional Water Board.

6. *Facilities Subject to Federal Storm Water Effluent Limitation Guidelines*

Facility operators with facilities subject to Federal storm water effluent limitation guidelines, in addition to the requirements in Section B.5. above, must complete the following:

a. Collect and analyze two samples for any pollutant specified in the appropriate category of 40 CFR Subchapter N. The sampling and analysis exemptions and reductions described in Section B.12. of this General Permit do not apply to these pollutants.

b. Estimate or calculate the volume of storm water discharges from each drainage area;

c. Estimate or calculate the mass of each regulated pollutant as defined in the appropriate category of 40 CFR Subchapter N; and

d. Identify the individual(s) performing the estimates or calculations in accordance with Subsections b. and c. above.

7. *Sample Storm Water Discharge Locations*

a. Facility operators shall visually observe and collect samples of storm water discharges from all drainage areas that represent the quality and quantity of the facility's storm water discharges from the storm event.

b. If the facility's storm water discharges are commingled with run-on from surrounding areas, the facility operator should identify other visual observation and sample collection locations that have not been commingled by run-on and that represent the quality and quantity of the facility's storm water discharges from the storm event.

c. If visual observation and sample collection locations are difficult to observe or sample (e.g., sheet flow, submerged outfalls), facility operators shall identify and collect samples from other locations that represent the quality and quantity of the facility's storm water discharges from the storm event.

d. Facility operators that determine that the industrial activities and BMPs within two or more drainage areas are substantially identical may either (i) collect samples from a reduced number of substantially identical

drainage areas, or (ii) collect samples from each substantially identical drainage area and analyze a combined sample from each substantially identical drainage area. Facility operators must document such a determination in the annual report.

8. *Visual Observation and Sample Collection Exceptions*

Facility operators are required to be prepared to collect samples and conduct visual observations at the beginning of the wet season (October 1) and throughout the wet season

until the minimum requirements of Sections B.4. and B.5. are completed with the following exceptions:

a. A facility operator is not required to collect a sample and conduct visual observations in accordance with Section B.4 and Section B.5 due to dangerous weather conditions, such as flooding, electrical storm, etc., when storm water discharges begin after scheduled facility operating hours or when storm water discharges are not preceded by three working days without discharge. Visual observations are only required during daylight hours. Facility operators that do not collect the required samples or visual observations during a wet season due to these exceptions shall include an explanation in the Annual Report why the sampling or visual observations could not be conducted.

b. A facility operator may conduct visual observations and sample collection more than one hour after discharge begins if the facility operator determines that the objectives of this Section will be better satisfied. The facility operator shall include an explanation in the Annual Report why the visual observations and sample collection should be conducted after the first hour of discharge.

9. *Alternative Monitoring Procedures*

Facility operators may propose an alternative monitoring program that meets Section B.2 monitoring program objectives for approval by the Regional Water Board. Facility operators shall continue to comply with the monitoring requirements of this Section and may not implement an alternative monitoring plan until the alternative monitoring plan is approved by the Regional Water Board. Alternative monitoring plans are subject to modification by the Regional Water Boards.

10. *Monitoring Methods*

a. Facility operators shall explain how the facility's monitoring program will satisfy the monitoring program objectives of Section B.2. This shall include:

i. Rationale and description of the visual observation methods, location, and frequency.

ii. Rationale and description of the sampling methods, location, and frequency; and

iii. Identification of the analytical methods and corresponding method detection limits used to detect pollutants in storm water discharges. This shall include justification that the method detection limits are adequate to satisfy the objectives of the monitoring program.

b. All sampling and sample preservation shall be in accordance with the current edition of "Standard Methods for the Examination of Water and Wastewater" (American Public Health Association). All monitoring instruments and equipment (including a facility operator's own field instruments for measuring pH and Electro Conductivity) shall be calibrated and maintained in accordance with manufacturers' specifications to ensure accurate measurements. All laboratory analyses must be conducted according to test procedures under 40 CFR Part 136, unless other test procedures have been specified in this General Permit or by the Regional Water Board. All metals shall be reported as total metals. With the exception of analysis conducted by facility operators, all laboratory analyses shall be conducted at a laboratory certified for such analyses by the State Department of Health Services. Facility operators may conduct their own sample analyses if the facility operator has sufficient capability (qualified employees, laboratory equipment, etc.) to adequately perform the test procedures.

11. *Inactive Mining Operations*
Inactive mining operations are defined in Attachment 1 of this General Permit. Where comprehensive site compliance evaluations, non-storm water discharge visual observations, storm water discharge visual observations, and storm water sampling are impracticable, facility operators of inactive mining operations may instead obtain certification once every three years by a Registered Professional Engineer that an SWPPP has been prepared for the facility and is being implemented in accordance with the requirements of this General Permit. By means of these certifications, the Registered Professional Engineer having examined the facility and being familiar with the provisions of this General Permit shall attest that the SWPPP has been prepared in accordance with good engineering practices. Facility operators of mining operations who cannot obtain a certification because of noncompliance must notify the appropriate Regional Water Board and, upon request, the local agency which receives the storm water discharge.

12. *Sampling and Analysis* Exemptions and Reductions

A facility operator who qualifies for sampling and analysis exemptions, as described below in Section B.12.a.i., or who qualifies for reduced sampling and analysis, as described below in Section B.12.b., must submit the appropriate certifications and required documentation to the Regional Water Boards prior to the wet season (October 1) and recertify as part of the Annual Report submittal. A facility operator that qualifies for either the Regional Water Board or local agency certification programs, as described below in Section B.12.a.ii. and iii., shall submit certification and documentation in accordance with the requirements of those programs. Facility operators who provide certifications in accordance with this Section are still required to comply with all other monitoring program and reporting requirements. Facility operators shall prepare and submit their certifications using forms and instructions provided by the State Water Board, Regional Water Board, or local agency or shall submit their information on a form that contains equivalent information. Facility operators whose facility no longer meets the certification conditions must notify the Regional Water Boards (and local agency) within 30 days and immediately comply with the Section B.5. sampling and analysis requirements. Should a Regional Water Board (or local agency) determine that a certification does not meet the conditions set forth below, facility operators must immediately comply with the Section B.5. sampling and analysis requirements.

a. Sampling and Analysis Exemptions

A facility operator is not required to collect and analyze samples in accordance with Section B.5. if the facility operator meets all of the conditions of one of the following certification programs:

i. No Exposure Certification (NEC)

This exemption is designed primarily for those facilities where all industrial activities are conducted inside buildings and where all materials stored and handled are not exposed to storm water. To qualify for this exemption, facility operators must certify that their facilities meet all of the following conditions:

(1) All prohibited non-storm water discharges have been eliminated or otherwise permitted.

(2) All authorized non-storm water discharges have been identified and addressed in the SWPPP.

(3) All areas of past exposure have been inspected and cleaned, as appropriate.

(4) All significant materials related to industrial activity (including waste materials) are not exposed to storm water or authorized non-storm water discharges.

(5) All industrial activities and industrial equipment are not exposed to storm water or authorized non-storm water discharges.

(6) There is no exposure of storm water to significant materials associated with industrial activity through other direct or indirect pathways such as from industrial activities that generate dust and particulates.

(7) There is periodic re-evaluation of the facility to ensure conditions (1), (2), (4), (5), and (6) above are continuously met. At a minimum, re-evaluation shall be conducted once a year.

ii. Regional Water Board Certification Programs

The Regional Water Board may grant an exemption to the Section B.5. Sampling and Analysis Requirements if it determines a facility operator has met the conditions set forth in a Regional Water Board certification program. Regional Water Board certification programs may include conditions to (1) exempt facility operators whose facilities infrequently discharge storm water to waters of the United States, and (2) exempt facility operators

that demonstrate compliance with the terms and conditions of this General Permit.

iii. Local Agency Certifications

A local agency may develop a local agency certification program. Such programs must be approved by the Regional Water Board. An approved local agency program may either grant an exemption

from the Section B.5. Sampling and Analysis Requirements or reduce the frequency of sampling if it determines that a facility operator has demonstrated compliance with the terms and conditions of this General Permit.

b. Sampling and Analysis Reduction

i. A facility operator may reduce the number of sampling events required to be sampled for the remaining term of this General Permit if the facility operator provides certification that the following conditions have been met:

(1) The facility operator has collected and analyzed samples from a minimum of six storm events from all required drainage areas;

(2) All prohibited non-storm water discharges have been eliminated or otherwise permitted;

(3) The facility operator demonstrates compliance with the terms and conditions of the General Permit for the previous two years (i.e., completed Annual Reports, performed visual observations, implemented appropriate BMPs, etc.);

(4) The facility operator demonstrates that the facility's storm water discharges and authorized non-storm water discharges do not contain significant quantities of pollutants; and

(5) Conditions (2), (3), and (4) above are expected to remain in effect for a minimum of one year after filing the certification.

ii. Unless otherwise instructed by the Regional Water Board, facility operators shall collect and analyze samples from two additional storm events (or one additional storm event when certification filed for the wet season beginning October 1, 2001) during the remaining term of this General Permit in accordance with Table C below. Facility operators shall collect samples of the first

storm event of the wet season. Facility operators that do not collect samples from the first storm event of the wet season shall collect samples from another storm event during the same wet season. Facility operators that do not collect a sample in a required wet season shall collect the sample from another storm event in the next wet season. Facility operators shall explain in the Annual Report why the first storm event of a wet season was not sampled or a sample was not taken from any storm event in accordance with the Table C schedule.

Table C
REDUCED MONITORING SAMPLING SCHEDULE

Facility Operator Filing Sampling Reduction Certification By	Samples Shall be Collected and Analyzed in These Wet Seasons	
	Sample 1	Sample 2
Oct. 1, 1997	Oct. 1, 1997-May 31, 1998	Oct. 1, 1999-May 31, 2000
Oct. 1, 1998	Oct. 1, 1998-May 31, 1999	Oct. 1, 2000-May 31, 2001
Oct. 1, 1999	Oct. 1, 1999-May 31, 2000	Oct. 1, 2001-May 31, 2002
Oct. 1, 2000	Oct. 1, 2000-May 31, 2001	Oct. 1, 2001-May 31, 2002
Oct. 1, 2001	Oct. 1, 2001-May 31, 2002	-

13. *Records*

Records of all storm water monitoring information and copies of all reports (including the Annual Reports) required by this General Permit shall be retained for a period of at least five years. These records shall include:

a. The date, place, and time of site inspections, sampling, visual observations, and/or measurements;

b. The individual(s) who performed the site inspections, sampling, visual observations, and or measurements;

c. Flow measurements or estimates (if required by Section B.6);

d. The date and approximate time of analyses;

e. The individual(s) who performed the analyses;

f. Analytical results, method detection limits, and the analytical techniques or methods used;

g. Quality assurance/quality control records and results;

h. Non-storm water discharge inspections and visual observations and storm water discharge visual observation records (see Sections B.3. and 4.);

i. Visual observation and sample collection exception records (see Section B.5.a, 7.d, 8, and 12.b.ii.);

j. All calibration and maintenance records of on-site instruments used;

k. All Sampling and Analysis Exemption and Reduction certifications and supporting documentation (see Section B.12);

l. The records of any corrective actions and follow-up activities that resulted from the visual observations.

14. *Annual Report*

All facility operators shall submit an Annual Report by July 1 of each year to the Executive Officer of the Regional Water Board responsible for the area in which the facility is located and to the local agency (if requested).

The report shall include a summary of visual observations and sampling results, an evaluation of the visual observation and sampling and analysis results, laboratory reports, the Annual Comprehensive Site Compliance Evaluation Report required in Section A.9., an explanation of why a facility did not implement any activities required by the General Permit (if not already included in the Evaluation Report), and records specified in Section B.13.i. The method detection limit of each analytical parameter shall be included. Analytical results that are less than the method detection limit shall be reported as "less than the method detection limit.". The Annual Report shall be signed and certified in accordance with Standard Provisions 9. and 10. of Section C of this General Permit. Facility operators shall prepare and submit their Annual Reports using the annual report forms provided by the State Water Board or Regional Water Board or shall submit their information on a form that contains equivalent information.

15. *Group Monitoring*

Facility operators may participate in group monitoring as described below. A facility operator that participates in group monitoring shall develop and implement a written site-specific SWPPP and monitoring program in accordance with the General Permit and must satisfy any group monitoring requirements. Group monitoring shall be subject to the following requirements:

a. A group monitoring plan (GMP) shall be developed and implemented by a group leader representing a group of

similar facility operators regulated by this General Permit or by a local agency which holds an NPDES permit (local agency permittee) for a municipal separate storm sewer system. GMPs with participants that discharge storm water within the boundaries of a single Regional Water Board shall be approved by that Regional Water Board. GMPs with participants that discharge storm water within the boundaries of multiple Regional Water Boards shall be approved by the State Water Board. The State Water Board and/or Regional Water Board(s) may disapprove a facility's participation in a GMP or require a GMP participant to conduct additional monitoring activities.

b. Each GMP participant shall collect and analyze samples from at least two storm events in accordance with Section B.5. over the five-year period of this General Permit. The two storm event minimum applies to new and existing members. The group leader or local agency permittee shall schedule sampling to meet the following conditions: (i) to evenly distribute the sample collection over the five-year term of this General Permit, and (ii) to collect samples from the two storm events at each participant's facility in different and non-consecutive wet seasons. New participants who join in Years 4 and 5 of this General Permit are not subject to Condition (ii) above. Group leaders shall explain in the annual Group Evaluation Report why any scheduled samples were not collected and reschedule the sampling so that all required samples are collected during the term of this General Permit.

c. The group leader or local agency permittee must have the appropriate resources to develop and implement the GMP. The group leader or local agency permittee must also have the authority to terminate any participant who is not complying with this General Permit and the GMP.

d. The group leader or local agency permittee is responsible for:

   i. Developing, implementing, and revising the GMP;

   ii. Developing and submitting an annual Group Evaluation Report to the State Water Board and/or Regional Water Board by August 1 of each year that includes:

      (1) An evaluation and summary of all group monitoring data,

      (2) An evaluation of the overall performance of the GMP participants in complying with this General Permit and the GMP,

(3) Recommended baseline and site-specific BMPs that should be considered by each participant based upon Items (1) and (2) above, and

(4) A copy of each evaluation report and recommended BMPs as required in Section B.15.d.v. below.

iii. Recommending appropriate BMPs to reduce or prevent pollutants associated with industrial activities in storm water discharges and authorized non-storm water discharges;

iv. Assisting each participant in completing their Annual Comprehensive Site Compliance Evaluation and Annual Report;

v. Conducting a minimum of two on-site inspections of each participant's facility (it is recommended that these inspections be scheduled during the Annual Comprehensive Site Compliance Evaluation) during the term of this General Permit to evaluate the participant's compliance with this General Permit and the GMP, and to recommend any additional BMPs necessary to achieve compliance with this General Permit. Participants that join in Years 4 and 5 shall be scheduled for one evaluation. A copy of the evaluation and recommended BMPs shall be provided to the participants;

vi. Submitting a GMP (or revisions, as necessary), to the appropriate Regional Water Board(s) and State Water Board no later than September 1, 1997 (or August 1 in subsequent years). Once approved, a group leader or local agency permittee shall submit a letter of intent by August 1 of each year to continue the approved GMP. The letter of intent must include a roster of participants, participant's Waste Discharge Identification number (WDID#), updated sampling schedules, and any other revisions to the GMP;

vii. Revising the GMP as instructed by the Regional Water Board or the State Water Board; and

viii. Providing the State Water Board and/or Regional Water Board with quarterly updates of any new or deleted participants and corresponding changes in the sampling and inspection schedule.

e. The GMP shall:

i. Identify the participants of the GMP by name, location, and WDID number;

ii. Include a narrative description summarizing the industrial activities of participants of the GMP and explain why the participants, as a whole, have sufficiently similar industrial activities and BMPs to be covered by a group monitoring plan;

iii. Include a list of typical potential pollutant sources associated with the group participant's facilities and recommended baseline BMPs to prevent or reduce pollutants associated with industrial activity in the storm water discharges and authorized non-storm water discharges;

iv. Provide a five-year sampling and inspection schedule in accordance with Subsections b. and d.v. above.

v. Identify the pollutants associated with industrial activity that shall be analyzed at each participant's facility in accordance with Section B.5. The selection of these pollutants shall be based upon an assessment of each facility's potential pollutant sources and likelihood that pollutants associated with industrial activity will be present in storm water discharges and authorized non-storm water discharges in significant quantities.

f. Sampling and analysis shall be conducted in accordance with the applicable requirements of this Section.

g. Unless otherwise instructed by the Regional Water Board or the State Water Board Executive Director, the GMPs shall be implemented at the beginning of the wet season (October 1).

h. All participants in an approved GMP that have not been selected to sample in a particular wet season are required to comply with all other monitoring program and reporting requirements of this Section including the submittal of an Annual Report by July 1 of each year to the appropriate Regional Water Board.

i. GMP participants subject to Federal storm water effluent limitation guidelines must perform the monitoring described in Section B.6. and submit the results of the monitoring to the appropriate Regional Water Board within the facility operator's Annual Report.

j. GMPs and Group Evaluation Reports should be prepared in accordance with State Water Board (or Regional Water Board) guidance.

k. GMP participants may receive Sampling and Analysis Reduction sampling credit in accordance with the following conditions:

i. Current or prior participants (group participants) of approved GMPs, who have not collected and analyzed samples from six storm events as required in Section B.7.b.i.(1), may substitute credit earned through participation in a GMP for up to four of the six required storm events. Credits for GMP participation shall be calculated as follows:

(1) Credit may only be earned in years of participation where the GMP participant was not scheduled to sample and the GMP was approved.

(2) One credit will be earned for each year of valid GMP participation.

(3) One additional credit may be earned for each year the overall GMP sample collection performance is greater than 75 percent.

ii. GMP participants substituting credit as calculated above shall provide proof of GMP participation and certification that all the conditions in Section B.12.b.i. have been met. GMP participants substituting credit in accordance with Section B.15.k.i.(3) shall also provide GMP sample collection performance documentation.

iii. GMP participants that qualify for Sampling and Analysis Reduction and have already sampled a storm event after October 1, 1997 shall only be required to sample one additional storm event during the remainder of this General Permit in accordance with the "Sample 2" schedule (or "Sample 1" schedule when certification filed for the wet season beginning October 1, 2001) in Table C of this Section.

n. Group leaders shall furnish, within 60 days of receiving a request from the State Water Board or Regional Water Board, any GMP information and documentation necessary to verify the Section B.15.k. sampling credits. Group leaders may also provide this information and documentation to the group participants.

16. *Watershed Monitoring Option*

Regional Water Boards may approve proposals to substitute watershed monitoring for some or all of the requirements of this Section if the Regional Water Board finds that the watershed monitoring will provide substantially similar monitoring information in evaluating facility operator compliance with the requirements of this General Permit.

NA	38XX	Measuring, Analyzing, and Controlling Instruments; Photographic, Medical, and Optical Goods; Watches and Clocks	
NA	357X	Computer and Office Equipment	

Section C: STANDARD PROVISIONS

1. Duty to Comply

The facility operator must comply with all of the conditions of this General Permit. Any General Permit noncompliance constitutes a violation of the Clean Water Act (CWA) and the Porter-Cologne Water Quality Control Act and is grounds for (a) enforcement action for (b) General Permit termination, revocation and reissuance, or modification or (c) denial of a General Permit renewal application.

The facility operator shall comply with effluent standards or prohibitions established under Section 307(a) of the CWA for toxic pollutants within the time provided in the regulations that establish these standards or prohibitions, even if this General Permit has not yet been modified to incorporate the requirement.

2. General Permit Actions

This General Permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by the facility operator for a General Permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any General Permit condition.

If any toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is promulgated under Section 307(a) of the CWA for a toxic pollutant which is present in the discharge and that standard or prohibition is more stringent than any limitation on the pollutant in this General Permit, this General Permit shall be modified or revoked and reissued to conform to the toxic effluent standard or prohibition, and the facility operator so notified.

3. Need to Halt or Reduce Activity not a Defense

It shall not be a defense for a facility operator in an enforcement action that it would have been necessary to halt or reduce the general permitted activity in order to maintain compliance with the conditions of this General Permit.

4. Duty to Mitigate

The facility operator shall take all responsible steps to minimize or prevent any discharge in violation of this General Permit which has a reasonable likelihood of adversely affecting human health or the environment.

5. Proper Operation and Maintenance

The facility operator at all times shall properly operate and maintain any facilities and systems of treatment and control (and related appurtenances) which are installed or used by the facility operator to achieve compliance with the conditions of this General Permit and with the requirements of storm water pollution prevention plans (SWPPPs). Proper operation and maintenance also include adequate laboratory controls and appropriate quality assurance procedures. Proper operation and maintenance may require the operation of backup or auxiliary facilities or similar systems installed by a facility operator when necessary to achieve compliance with the conditions of this General Permit.

6. Property Rights

This General Permit does not convey any property rights of any sort, or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor any infringement of Federal, State, or local laws or regulations.

7. Duty to Provide Information

The facility operator shall furnish the Regional Water Quality Control Board (Regional Water Board), State Water Resources Control Board (State Water Board), U.S. Environmental Protection Agency (U.S. EPA), or local storm water management agency, within a reasonable time specified by the agencies, any requested information to determine compliance with this General Permit. The facility operator shall also furnish, upon request, copies of records required to be kept by this General Permit.

8. Inspection and Entry

The facility operator shall allow the Regional Water Board, State Water Board, U.S. EPA, and local storm water management agency, upon the presentation of credentials and other documents as may be required by law, to:

a. Enter upon the facility operator's premises where a regulated facility or activity is located or conducted or where records must be kept under the conditions of this General Permit;

b. Have access to and copy at reasonable times any records that must be kept under the conditions of this General Permit;

c. Inspect at reasonable times any facilities or equipment (including monitoring and control equipment) that are related to or may impact storm water discharge or authorized non-storm water discharge; and

d. Conduct monitoring activities at reasonable times for the purpose of ensuring General Permit compliance.

9. Signatory Requirements

a. All Notices of Intent (NOIs) submitted to the State Water Board shall be signed as follows:

(1) For a corporation: by a responsible corporate officer. For the purpose of this section, a responsible corporate officer means: (a) a president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation; or (b) the manager of the facility if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;

(2) For a partnership or sole proprietorship: by a general partner or the proprietor, respectively; or

(3) For a municipality, State, Federal, or other public agency: by either a principal executive officer or ranking elected official. The principal executive officer of a Federal agency includes the chief executive officer of the agency or the senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrators of U.S. EPA).

b. All reports, certifications, or other information required by the General Permit or requested by the Regional Water Board, State Water Board, U.S. EPA, or local storm water management agency shall be signed by a person described above or by a duly authorized representative. A person is a duly authorized representative only if:

(1) The authorization is made in writing by a person described above and retained as part of the SWPPP.

(2) The authorization specifies either an individual or a position having responsibility for the overall operation of the regulated facility or activity, such as the position of manager, operator, superintendent, or position of equivalent responsibility or an individual or position having overall responsibility for named position.)

(3) If an authorization is no longer accurate because a different individual or position has responsibility for the overall operation of the facility, a new authorization must be attached to the SWPPP prior to submittal of any reports, certifications, or information signed by the authorized representative.

10. Certification

Any person signing documents under Provision 9. above shall make the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to ensure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

11. Reporting Requirements

a. Planned changes: The facility operator shall give advance notice to the Regional Water Board and local storm water management agency of any planned physical alteration or additions to the general permitted facility. Notice is required under this provision only when the alteration or addition could significantly change the nature or increase the quantity of pollutants discharged.

b. Anticipated noncompliance: The facility operator will give advance notice to the Regional Water Board and local storm water management agency of any planned changes at the permitted facility which may result in noncompliance with General Permit requirements.

c. Compliance schedules: Reports of compliance or noncompliance with or any progress reports on interim and final requirements contained in any compliance schedule of this General Permit shall be submitted no later than 14 days following each scheduled date.

d. Noncompliance reporting: The facility operator shall report any noncompliance at the time monitoring reports are submitted. The written submission shall contain (1) a description of the noncompliance and its cause; (2) the period of noncompliance, including exact dates and times, and if the noncompliance has not been corrected, the anticipated time it is expected to continue; and (3) steps taken or planned to reduce and prevent recurrence of the noncompliance.

12. Oil and Hazardous Substance Liability

Nothing in this General Permit shall be construed to preclude the institution of any legal action or relieve the facility operator from any responsibilities, liabilities, or penalties to which the facility operator is or may be subject under Section 311 of the CWA.

13. Severability

The provisions of this General Permit are severable; and if any provision of this General Permit or the application of any provision of this General Permit to any circumstance is held invalid, the application of such provision to other circumstances and the remainder of this General Permit shall not be affected thereby.

14. Reopener Clause

This General Permit may be modified, revoked, and reissued, or terminated for cause due to promulgation of amended regulations, receipt of U.S. EPA guidance concerning regulated activities, judicial decision, or in accordance with 40 CFR 122.62, 122.63, 122.64, and 124.5. This General Permit may be reopened to modify the provisions regarding authorized non-storm water discharges specified in Section D. Special Conditions.

15. Penalties for Violations of General Permit Conditions.

a. Section 309 of the CWA provides significant penalties for any person who violates a General Permit condition

implementing Sections 301, 302, 306, 307 308, 318, or 405 of the CWA, or any General Permit condition or limitation implementing any such section in a General Permit issued under Section 402. Any person who violates any General Permit condition of this General Permit is subject to a civil penalty not to exceed $25,000 per day of such violation, as well as any other appropriate sanction provided by Section 309 of the CWA.

b. The Porter-Cologne Water Quality Control Act also provides for civil and criminal penalties in some cases greater than those under the CWA.

16. Availability

A copy of this General Permit shall be maintained at the facility and be available at all times to the appropriate facility personnel and to Regional Water Board and local agency inspectors.

17. Transfers

This General Permit is not transferable from one facility operator to another facility operator nor may it be transferred from one location to another location. A new facility operator of an existing facility must submit an NOI in accordance with the requirements of this General Permit to be authorized to discharge under this General Permit.

18. Continuation of Expired General Permit

This General Permit continues in force and effect until a new general permit is issued or the State Water Board rescinds the General Permit. Facility operators authorized to discharge under the expiring general permit are required to file an NOI to be covered by the reissued General Permit.

19. Penalties for Falsification of Reports

Section 309(c)(4) of the CWA provides that any person who knowingly makes any false material statement, representation, or certification in any record or other document submitted or required to be maintained under this General Permit, including reports of compliance or noncompliance shall, upon conviction, be punished by a fine of not more than $10,000 or by imprisonment for not more than two years, or by both.

FACILITIES COVERED BY THIS GENERAL PERMIT

Industrial facilities include Federal, State, municipally owned, and private facilities from the following categories:

1. FACILITIES SUBJECT TO STORM WATER EFFLUENT LIMITATIONS GUIDELINES, NEW SOURCE PERFORMANCE STANDARDS, OR TOXIC POLLUTANT EFFLUENT STANDARDS (40 Code of Federal Regulations (CFR) SUBCHAPTER N). Currently, categories of facilities subject to storm water effluent limitations guidelines are Cement Manufacturing (40 CFR Part 411), Feedlots (40 CFR Part 412), Fertilizer Manufacturing (40 CFR Part 418), Petroleum Refining (40 CFR Part 419), Phosphate Manufacturing (40 CFR Part 422), Steam Electric (40 CFR Part 423), Coal Mining (40 CFR Part 434), Mineral Mining and Processing (40 CFR Part 436), Ore Mining and Dressing (40 CFR Part 440), and Asphalt Emulsion (40 CFR Part 443).

2. MANUFACTURING FACILITIES: Standard Industrial Classifications (SICs) 24 (except 2434), 26 (except 265 and 267), 28 (except 283 and 285) 29, 311, 32 (except 323), 33, 3441, and 373.

3. OIL AND GAS/MINING FACILITIES: SICs 10 through 14 including active or inactive mining operations (except for areas of coal mining operations meeting the definition of a reclamation area under 40 CFR 434.11(l) because of performance bond issued to the facility by the appropriate Surface Mining Control and Reclamation Act (SMCRA) authority has been released, or except for area of non-coal mining operations which have been released from applicable State or Federal reclamation requirements after December 17, 1990); oil and gas exploration, production, processing, or treatment operations; or transmission facilities that discharge storm water contaminated by contact with or that has come into contact with any overburden, raw material, intermediate products, finished products, by-products, or waste products located on the site of such operations. Inactive mining operations are mined sites that are not being actively mined but which have an identifiable facility operator. Inactive mining sites do not include sites where mining claims are being maintained prior to disturbances associated with the extraction, beneficiation, or processing of mined material; or sites where minimal activities are undertaken for the sole purpose of maintaining a mining claim.

4. HAZARDOUS WASTE TREATMENT, STORAGE, OR DISPOSAL FACILITIES: Includes those operating under interim status or a general permit under Subtitle C of the Federal Resource, Conservation, and Recovery Act (RCRA).

5. LANDFILLS, LAND APPLICATION SITES, AND OPEN DUMPS: Sites that receive or have received industrial waste from any of

the facilities covered by this General Permit, sites subject to regulation under Subtitle D of RCRA, and sites that have accepted wastes from construction activities (construction activities include any clearing, grading, or excavation that results in disturbance of five acres or more).

6. RECYCLING FACILITIES: SICs 5015 and 5093. These codes include metal scrapyards, battery reclaimers, salvage yards, motor vehicle dismantlers and wreckers, and recycling facilities that are engaged in assembling, breaking up, sorting, and wholesale distribution of scrap and waste material such as bottles, wastepaper, textile wastes, oil waste, etc.

7. STEAM ELECTRIC POWER GENERATING FACILITIES: Includes any facility that generates steam for electric power through the combustion of coal, oil, wood, etc.

8. TRANSPORTATION FACILITIES: SICs 40, 41, 42 (except 4221-25), 43, 44, 45, and 5171 which have vehicle maintenance shops, equipment cleaning operations, or airport deicing operations. Only those portions of the facility involved in vehicle maintenance (including vehicle rehabilitation, mechanical repairs, painting, fueling, and lubrication) or other operations identified herein that are associated with industrial activity.

9. SEWAGE OR WASTEWATER TREATMENT WORKS: Facilities used in the storage, treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated to the disposal of sewage sludge that are located within the confines of the facility with a design flow of one million gallons per day or more or required to have an approved pretreatment program under 40 CFR Part 403. Not included are farm lands, domestic gardens, or lands used for sludge management where sludge is beneficially reused and which are not physically located in the confines of the facility, or areas that are in compliance with Section 405 of the Clean Water Act.

10. MANUFACTURING FACILITIES WHERE INDUSTRIAL MATERIALS, EQUIPMENT, OR ACTIVITIES ARE <u>EXPOSED</u> TO STORM WATER: SICs 20, 21, 22, 23, 2434, 25, 265, 267, 27, 283, 285, 30, 31 (except 311), 323, 34 (except 3441), 35, 36, 37 (except 373), 38, 39, and 4221-4225.

State Water Resources Control Board

Water Quality Order No. 99-08-DWQ

STATE WATER RESOURCES CONTROL BOARD (SWRCB)
ORDER NO. 99 - 08 - DWQ
NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES)
GENERAL PERMIT NO. CAS000002

WASTE DISCHARGE REQUIREMENTS (WDRS) FOR DISCHARGES OF STORM WATER RUNOFF ASSOCIATED WITH CONSTRUCTION ACTIVITY

The State Water Resources Control Board finds that:

1. Federal regulations for controlling pollutants in storm water runoff discharges were promulgated by the U.S. Environmental Protection Agency (USEPA) on November 16, 1990 (40 Code of Federal Regulations (CFR) Parts 122, 123, and 124). The regulations require discharges of storm water to surface waters associated with construction activity including clearing, grading, and excavation activities (except operations that result in disturbance of less than five acres of total land area and which are not part of a larger common plan of development or sale) to obtain an NPDES permit and to implement Best Available Technology Economically Achievable (BAT) and Best Conventional Pollutant Control Technology (BCT) to reduce or eliminate storm water pollution.

   On December 8, 1999 federal regulations promulgated by USEPA (40CFR Parts 9, 122, 123, and 124) expanded the NPDES storm water program to include storm water discharges from municipal separate storm sewer systems (MS4s) and construction sites that were smaller than those previously included in the program. Federal regulation 40 CFR § 122.26(b)(15) defines small construction activity as including clearing, grading, and excavating that result in land disturbance of equal to or greater than one acre or less than five acres or is part of a larger common plan of development or sale. Permit applications for small construction activities are due by March 10, 2003.

2. This General Permit regulates pollutants in discharges of storm water associated with construction activity (storm water discharges) to surface waters, except from those areas on Tribal Lands; Lake Tahoe Hydrologic Unit; construction projects which disturb less than one acre, unless part of a larger common plan of development or sale; and storm water discharges which are determined ineligible for coverage under this General Permit by the California Regional Water Quality Control Boards (RWQCBs). Attachment 1 contains addresses and telephone numbers of each RWQCB office.

3. This General Permit does not preempt or supersede the authority of local storm water management agencies to prohibit, restrict, or control storm water discharges to separate storm sewer systems or other watercourses within their jurisdiction, as allowed by State and Federal law.

4. To obtain authorization for proposed storm water discharges to surface waters, pursuant to this General Permit, the landowner (discharger) must submit a Notice of Intent (NOI) with a vicinity map and the appropriate fee to the SWRCB prior to commencement of construction activities. In addition, coverage under this General Permit shall not occur until the applicant develops a Storm Water Pollution Prevention Plan (SWPPP) in accordance with the requirements of Section A of this permit for the project. For proposed construction activity conducted on easements or on nearby property by agreement or permission, or by an owner or lessee of a mineral estate (oil, gas, geothermal, aggregate, precious metals, and/or industrial minerals) entitled to conduct the activities, the entity responsible for the construction activity must submit the NOI and filing fee and shall be responsible for development of the SWPPP.

5. If an individual NPDES Permit is issued to a discharger otherwise subject to this General Permit or if an alternative General Permit is subsequently adopted which covers storm water discharges regulated by this General Permit, the applicability of this General Permit to such discharges is automatically terminated on the effective date of the individual permit or the date of approval for coverage under the subsequent General Permit.

6. This action to adopt an NPDES permit is exempt from the provisions of the California Environmental Quality Act (Public Resources Code Section 21100, et seq.) in accordance with section 13389 of the California Water Code.

7. The SWRCB adopted the California Ocean Plan, and the RWQCBs have adopted and the SWRCB has approved Water Quality Control Plans (Basin Plans). Dischargers regulated by this General Permit must comply with the water quality standards in these Basin Plans and subsequent amendments thereto.

8. The SWRCB finds storm water discharges associated with construction activity to be a potential significant sources of pollutants. Furthermore, the SWRCB finds that storm water discharges associated with construction activities have the reasonable potential to cause or contribute to an excursion above water quality standards for sediment in the water bodies listed in Attachment 3 to this permit.

9. It is not feasible at this time to establish numeric effluent limitations for pollutants in storm water discharges from construction activities. Instead, the provisions of this General Permit require implementation of Best Management Practices (BMPs) to control and abate the discharge of pollutants in storm water discharges.

10. Discharges of non-storm water may be necessary for the completion of certain construction projects. Such discharges include, but are not limited to: irrigation of vegetative erosion control measures, pipe flushing and testing, street cleaning, and dewatering. Such discharges are authorized by this General Permit as long as they (a) do comply with Section A.9 of this General Permit, (b) do not cause or contribute to violation of any water quality standard, (c) do not violate any other provision of this

General Permit, (d) do not require a non-storm water permit as issued by some RWQCBs, and (e) are not prohibited by a Basin Plan. If a non-storm water discharge is subject to a separate permit adopted by a RWQCB, the discharge must additionally be authorized by the RWQCB permit.

11. Following adoption of this General Permit, the RWQCBs shall enforce the provisions herein including the monitoring and reporting requirements.

12. Following public notice in accordance with State and Federal laws and regulations, the SWRCB in a public meeting on June 8, 1998, heard and considered all comments. The SWRCB has prepared written responses to all significant comments.

13. This Order is an NPDES permit in compliance with section 402 of the Clean Water Act (CWA) and shall take effect upon adoption by the SWRCB provided the Regional Administrator of the USEPA has no objection. If the USEPA Regional Administrator objects to its issuance, the General Permit shall not become effective until such objection is withdrawn.

14. This General Permit does not authorize discharges of fill or dredged material regulated by the U.S. Army Corps of Engineers under CWA section 404 and does not constitute a waiver of water quality certification under CWA section 401.

15 The Monitoring Program and Reporting Requirements are modified in compliance with a judgment in the case of San Francisco BayKeeper, et al. v. State Water Resources Control Board. The modifications include sampling and analysis requirements for direct discharges of sediment to waters impaired due to sediment and for pollutants that are not visually detectable in runoff that may cause or contribute to an exceedance of water quality objectives.

16 Storm water discharges associated with industrial activity that are owned or operated by municipalities serving populations less than 100,000 people are no longer exempt from the need to apply for or obtain a storm water discharge permit. A temporary exemption, which was later extended by USEPA, was provided under section 1068(c) of the Intermodal Surface Transportation and Efficiency Act (ISTEA) of 1991. Federal regulation 40 CFR § 122.26(e)(1)(ii) requires the above municipalities to submit permit application by March 10, 2003.

17 This permit may be reopened and modified to include different monitoring requirements for small construction activity than for construction activity over five (5) acres.

IT IS HEREBY ORDERED that all dischargers who file an NOI indicating their intention to be regulated under the provisions of this General Permit shall comply with the following:

A. DISCHARGE PROHIBITIONS:

1. Authorization pursuant to this General Permit does not constitute an exemption to applicable discharge prohibitions prescribed in Basin Plans, as implemented by the nine RWQCBs.

2. Discharges of material other than storm water which are not otherwise authorized by an NPDES permit to a separate storm sewer system (MS4) or waters of the nation are prohibited, except as allowed in Special Provisions for Construction Activity, C.3.

3. Storm water discharges shall not cause or threaten to cause pollution, contamination, or nuisance.

4. Storm water discharges regulated by this General Permit shall not contain a hazardous substance equal to or in excess of a reportable quantity listed in 40 CFR Part 117 and/or 40 CFR Part 302.

B. RECEIVING WATER LIMITATIONS:

1. Storm water discharges and authorized nonstorm water discharges to any surface or ground water shall not adversely impact human health or the environment.

2. The SWPPP developed for the construction activity covered by this General Permit shall be designed and implemented such that storm water discharges and authorized nonstorm water discharges shall not cause or contribute to an exceedance of any applicable water quality standards contained in a Statewide Water Quality Control Plan and/or the applicable RWQCB's Basin Plan.

3. Should it be determined by the discharger, SWRCB, or RWQCB that storm water discharges and/or authorized nonstorm water discharges are causing or contributing to an exceedance of an applicable water quality standard, the discharger shall:

   a. Implement corrective measures immediately following discovery that water quality standards were exceeded, followed by notification to the RWQCB by telephone as soon as possible but no later than 48 hours after the discharge has been discovered. This notification shall be followed by a report within 14-calender days to the appropriate RWQCB, unless otherwise directed by the RWQCB, describing (1) the nature and cause of the water quality standard exceedance; (2) the BMPs currently being implemented; (3) any additional BMPs which will be implemented to

prevent or reduce pollutants that are causing or contributing to the exceedance of water quality standards; and (4) any maintenance or repair of BMPs. This report shall include an implementation schedule for corrective actions and shall describe the actions taken to reduce the pollutants causing or contributing to the exceedance.

b. The discharger shall revise its SWPPP and monitoring program immediately after the report to the RWQCB to incorporate the additional BMPs that have been and will be implemented, the implementation schedule, and any additional monitoring needed.

c. Nothing in this section shall prevent the appropriate RWQCB from enforcing any provisions of this General Permit while the discharger prepares and implements the above report.

C. SPECIAL PROVISIONS FOR CONSTRUCTION ACTIVITY:

1. All dischargers shall file an NOI and pay the appropriate fee for construction activities conducted at each site as required by Attachment 2: Notice of Intent--General Instructions.

2. All dischargers shall develop and implement a SWPPP in accordance with Section A: Storm Water Pollution Prevention Plan. The discharger shall implement controls to reduce pollutants in storm water discharges from their construction sites to the BAT/BCT performance standard.

3. Discharges of non-storm water are authorized only where they do not cause or contribute to a violation of any water quality standard and are controlled through implementation of appropriate BMPs for elimination or reduction of pollutants. Implementation of appropriate BMPs is a condition for authorization of non-storm water discharges. Non-storm water discharges and the BMPs appropriate for their control must be described in the SWPPP. Wherever feasible, alternatives which do not result in discharge of nonstorm water shall be implemented in accordance with Section A.9. of the SWPPP requirements.

4. All dischargers shall develop and implement a monitoring program and reporting plan in accordance with Section B: Monitoring Program and Reporting Requirements.

5. All dischargers shall comply with the lawful requirements of municipalities, counties, drainage districts, and other local agencies regarding discharges of storm water to separate storm sewer systems or other watercourses under their jurisdiction, including applicable requirements in municipal storm water management programs developed to comply with NPDES permits issued by the RWQCBs to local agencies.

6. All dischargers shall comply with the standard provisions and reporting requirements contained in Section C: Standard Provisions.

7. The discharger may terminate coverage for a portion of the project under this General Permit when ownership of a portion of this project has been transferred or when a phase within this multi-phase project has been completed. When ownership has transferred, the discharger must submit to its RWQCB a Change of Information Form (COI) Attachment 4 with revised site map and the name, address and telephone number of the new owner(s). Upon transfer of title, the discharger should notify the new owner(s) of the need to obtain coverage under this General Permit. The new owner must comply with provisions of Sections A. 2. (c) and
B. 2. (b) of this General Permit. To terminate coverage for a portion of the project when a phase has been completed, the discharger must submit to its RWQCB a COI with a revised map that identifies the newly delineated site.

8. The discharger may terminate coverage under this General Permit for a complete project by submitting to its RWQCB a Notice of Termination Form (NOT), and the post-construction BMPs plan according to Section A.10 of this General Permit. Note that a construction project is considered complete only when all portions of the site have been transferred to a new owner; or the following conditions have been met:

   a. There is no potential for construction related storm water pollution,

   b. All elements of the SWPPP have been completed,

   c. Construction materials and waste have been disposed of properly,

   d. The site is in compliance with all local storm water management requirements, and

   e. A post-construction storm water management plan is in place as described in the site's SWPPP.

9. This General Permit expires five years from the date of adoption.

D. REGIONAL WATER QUALITY CONTROL BOARD (RWQCB) AUTHORITIES:

1. RWQCBs shall:

   a. Implement the provisions of this General Permit. Implementation of this General Permit may include, but is not limited to requesting the submittal of SWPPPS, reviewing SWPPPs, reviewing monitoring reports, conducting compliance inspections, and taking enforcement actions.

   b. Issue permits as they deem appropriate to individual dischargers, categories of dischargers, or dischargers in a geographic area. Upon issuance of such permits by a RWQCB, the affected dischargers shall no longer be regulated by this General Permit.

2. RWQCBs may require, on a case-by-case basis, the inclusion of an analysis of potential downstream impacts on receiving waterways due to the permitted construction.

3. RWQCBs may provide information to dischargers on the development and implementation of SWPPPs and monitoring programs and may require revisions to SWPPPs and monitoring programs.

4. RWQCBs may require dischargers to retain records for more than three years.

5. RWQCBs may require additional monitoring and reporting program requirements including sampling and analysis of discharges to water bodies listed in Attachment 3 to this permit. Additional requirements imposed by the RWQCB should be consistent with the overall monitoring effort in the receiving waters.

6. RWQCBs may issue individual NPDES permits for those construction activities found to be ineligible for coverage under this permit.

CERTIFICATION

The undersigned, Administrative Assistant to the Board, does hereby certify that the foregoing is a full, true, and correct copy of an order duly and regularly adopted at a meeting of the State Water Resources Control Board held on August 19, 1999.

AYE:	James M. Stubchaer Mary Jane Forster John W. Brown Arthur G. Baggett, Jr.

Maureen Marché
Administrative Assistant to the Board

SECTION A: STORM WATER POLLUTION PREVENTION PLAN

1. Objectives

A Storm Water Pollution Prevention Plan (SWPPP) shall be developed and implemented to address the specific circumstances for each construction site covered by this General Permit. The SWPPP shall be certified in accordance with the signatory requirements of section C, Standard Provision for Construction Activities (9). The SWPPP shall be developed and amended or revised, when necessary, to meet the following objectives:

a. Identify all pollutant sources including sources of sediment that may affect the quality of storm water discharges associated with construction activity (storm water discharges) from the construction site, and

b. Identify non-storm water discharges, and

c. Identify, construct, implement in accordance with a time schedule, and maintain Best Management Practices (BMPs) to reduce or eliminate pollutants in storm water discharges and authorized nonstorm water discharges from the construction site during construction, and

d. Develop a maintenance schedule for BMPs installed during construction designed to reduce or eliminate pollutants after construction is completed (post-construction BMPs).

e. Identify a sampling and analysis strategy and sampling schedule for discharges from construction activity which discharge directly into water bodies listed on Attachment 3. (Clean Water Act Section 303(d) [303(d)] Water Bodies listed for Sedimentation).

f. For all construction activity, identify a sampling and analysis strategy and sampling schedule for discharges that have been discovered through visual monitoring to be potentially contaminated by pollutants not visually detectable in the runoff.

2. Implementation Schedule

a. For construction activity commencing on or after adoption of this General Permit, the SWPPP shall be developed prior to the start of soil-disturbing activity in accordance with this Section and shall be implemented concurrently with commencement of soil-disturbing activities.

b. Existing permittees engaging in construction activities covered under the terms of the previous General Construction Permit SWPPP (WQ Order No.92-08-DWQ) shall continue to implement their existing SWPPP and shall implement any

necessary revisions to their SWPPP in accordance with this Section of the General Permit in a timely manner, but in no case more than 90-calender days from the date of adoption of this General Permit.

c. For ongoing construction activity involving a change of ownership of property, the new owner shall review the existing SWPPP and amend if necessary, or develop a new SWPPP within 45-calender days.

d. Existing permittees shall revise their SWPPP in accordance with the sampling and analysis modifications prior to August 1, 2001. For ongoing construction activity involving a change of ownership the new owner shall review the existing SWPPP and amend the sampling and analysis strategy, if required, within 45 days. For construction activity commencing after the date of adoption, the SWPPP shall be developed in accordance with the modification language adopted.

3. Availability

The SWPPP shall remain on the construction site while the site is under construction during working hours, commencing with the initial construction activity and ending with termination of coverage under the General Permit.

4. Required Changes

a. The discharger shall amend the SWPPP whenever there is a change in construction or operations which may affect the discharge of pollutants to surface waters, ground waters, or a municipal separate storm sewer system (MS4). The SWPPP shall also be amended if the discharger violates any condition of this General Permit or has not achieved the general objective of reducing or eliminating pollutants in storm water discharges. If the RWQCB determines that the discharger is in violation of this General Permit, the SWPPP shall be amended and implemented in a timely manner, but in no case more than 14-calendar days after notification by the RWQCB. All amendments should be dated and directly attached to the SWPPP.

b. The RWQCB or local agency with the concurrence of the RWQCB may require the discharger to amend the SWPPP.

5. Source Identification

The SWPPP shall include: (a) project information and (b) pollutant source identification combined with an itemization of those BMPs specifically chosen to control the pollutants listed.

a. Project Information

(1) The SWPPP shall include a vicinity map locating the project site with respect to easily identifiable major roadways, geographic features, or landmarks. At a minimum, the map must show the construction site perimeter, the geographic features surrounding the site, and the general topography.

(2) The SWPPP shall include a site map(s) which shows the construction project in detail, including the existing and planned paved areas and buildings.

(a) At a minimum, the map must show the construction site perimeter; existing and proposed buildings, lots, roadways, storm water collection and discharge points; general topography both before and after construction; and the anticipated discharge location(s) where the storm water from the construction site discharges to a municipal storm sewer system or other water body.

(b) The drainage patterns across the project area must clearly be shown on the map, and the map must extend as far outside the site perimeter as necessary to illustrate the relevant drainage areas. Where relevant drainage areas are too large to depict on the map, map notes or inserts illustrating the upstream drainage areas are sufficient.

(c) Temporary on-site drainages to carry concentrated flow shall be selected to comply with local ordinances, to control erosion, to return flows to their natural drainage courses, and to prevent damage to downstream properties.

3. Information presented in the SWPPP may be represented either by narrative or by graphics. Where possible, narrative descriptions should be plan notes. Narrative descriptions which do not lend themselves to plan notes can be contained in a separate document which must be referenced on the plan.

b. Pollutant Source and BMP Identification

The SWPPP shall include a description of potential sources which are likely to add pollutants to storm water discharges or which may result in nonstorm water discharges from the construction site. Discharges originating from off-site which flow across or through areas disturbed by construction that may contain pollutants should be reported to the RWQCB.

The SWPPP shall:

(1) Show drainage patterns and slopes anticipated after major grading activities are completed. Runoff from off-site areas should be prevented from flowing through areas that have been disturbed by construction unless appropriate conveyance systems are in place. The amount of anticipated storm water run-on must be considered to determine the appropriateness of the BMPs chosen. Show all calculations for anticipated storm water run-on, and describe all BMPs implemented to divert off-site drainage described in section A. 5 a. (2) (c) around or through the construction project.

(2) Show the drainage patterns into each on-site storm water inlet point or receiving water. Show or describe the BMPs that will protect operational storm water inlets or receiving waters from contaminated discharges other than sediment discharges, such as, but not limited to: storm water with elevated pH levels from contact with soil amendments such as lime or gypsum; slurry from sawcutting of concrete or asphalt ;washing of exposed aggregate concrete; concrete rinse water; building washing operations; equipment washing operations; minor street washing associated with street delineation; and/or sealing and paving activities occurring during rains.

(3) Show existing site features that, as a result of known past usage, may contribute pollutants to storm water, (e.g., toxic materials that are known to have been treated, stored, disposed, spilled, or leaked onto the construction site). Show or describe the BMPs implemented to minimize the exposure of storm water to contaminated soil or toxic materials.

(4) Show areas designated for the (a) storage of soil or waste, (b) vehicle storage and service areas, (c) construction material loading, unloading, and access areas, (d) equipment storage, cleaning, and maintenance areas.

(5) Describe the BMPs for control of discharges from waste handling and disposal areas and methods of on-site storage and disposal of construction materials and construction waste. Describe the BMPs designed to minimize or eliminate the exposure of storm water to construction materials, equipment, vehicles, waste storage areas, or service areas. The BMPs described shall be in compliance with Federal, State, and local laws, regulations, and ordinances.

(6) Describe all post-construction BMPs for the project, and show the location of each BMP on the map. (Post-construction BMPs consist of permanent features designed to minimize pollutant discharges, including sediment, from the site after construction has been completed.) Also, describe the agency or parties to be the responsible party for long-term maintenance of these BMPs.

(7) Show the locations of direct discharge from the construction site into a Section 303(d) list water body. Show the designated sampling locations in the receiving waters, which represent the prevailing conditions of the water bodies upstream of the construction site discharge and immediately downstream from the last point of discharge.

(8) Show the locations designated for sampling the discharge from areas identified in Section A. 5. b. (2), (3), and (4) and Section A. 5. c. (1) and (2). Samples shall be taken should visual monitoring indicate that there has been a breach, malfunction, leakage, or spill from a BMP which could result in the discharge in storm water of pollutants that would not be visually detectable, or if storm water comes into contact with soil amendments or other exposed materials or contamination and is allowed to be discharged. Describe the sampling procedure, location, and rationale for obtaining the uncontaminated sample of storm water.

c. Additional Information

(1) The SWPPP shall include a narrative description of pollutant sources and BMPs that cannot be adequately communicated or identified on the site map. In addition, a narrative description of preconstruction control practices (if any) to reduce sediment and other pollutants in storm water discharges shall be included.

(2) The SWPPP shall include an inventory of all materials used and activities performed during construction that have the potential to contribute to the discharge of pollutants other than sediment in storm water. Describe the BMPs selected and the basis for their selection to eliminate or reduce these pollutants in the storm water discharges.

(3) The SWPPP shall include the following information regarding the construction site surface area: the size (in acres or square feet), the runoff coefficient before and after construction, and the percentage that is impervious (e.g., paved, roofed, etc.) before and after construction.

(4) The SWPPP shall include a copy of the NOI, and the Waste Discharge Identification (WDID) number. Should a WDID number not be received from the SWRCB at the time construction commences, the discharger shall include proof of mailing of the NOI, e.g., certified mail receipt, copy of check, express mail receipt, etc.

(5) The SWPPP shall include a construction activity schedule which describes all major activities such as mass grading, paving, lot or parcel

improvements at the site and the proposed time frame to conduct those activities.

(6) The SWPPP shall list the name and telephone number of the qualified person(s) who have been assigned responsibility for prestorm, poststorm, and storm event BMP inspections; and the qualified person(s) assigned responsibility to ensure full compliance with the permit and implementation of all elements of the SWPPP, including the preparation of the annual compliance evaluation and the elimination of all unauthorized discharges.

6. Erosion Control

Erosion control, also referred to as "soil stabilization" is the most effective way to retain soil and sediment on the construction site. The most efficient way to address erosion control is to preserve existing vegetation where feasible, to limit disturbance, and to stabilize and revegetate disturbed areas as soon as possible after grading or construction. Particular attention must be paid to large mass-graded sites where the potential for soil exposure to the erosive effects of rainfall and wind is great. Mass graded construction sites may be exposed for several years while the project is being built out. Thus, there is potential for significant sediment discharge from the site to surface waters.

At a minimum, the discharger/operator must implement an effective combination of erosion and sediment control on all disturbed areas during the rainy season. These disturbed areas include rough graded roadways, slopes, and building pads. Until permanent vegetation is established, soil cover is the most cost-effective and expeditious method to protect soil particles from detachment and transport by rainfall. Temporary soil stabilization can be the single-most important factor in reducing erosion at construction sites. The discharger shall consider measures such as: covering with mulch, temporary seeding, soil stabilizers, binders, fiber rolls or blankets, temporary vegetation, permanent seeding, and a variety of other measures.

The SWPPP shall include a description of the erosion control practices, including a time schedule, to be implemented during construction to minimize erosion on disturbed areas of a construction site. The discharger must consider the full range of erosion control BMPs. The discharger must consider any additional site-specific and seasonal conditions when selecting and implementing appropriate BMPs. The above listed erosion control measures are examples of what should be considered and are not exclusive of new or innovative approaches currently available or being developed.

a. The SWPPP shall include:

(1) An outline of the areas of vegetative soil cover or native vegetation onsite which will remain undisturbed during the construction project.

(2) An outline of all areas of soil disturbance including cut or fill areas which will be stabilized during the rainy season by temporary or permanent erosion control measures, such as seeding, mulch, or blankets, etc.

(3) An outline of the areas of soil disturbance, cut, or fill which will be left exposed during any part of the rainy season, representing areas of potential soil erosion where sediment control BMPs are required to be used during construction.

(4) A proposed schedule for the implementation of erosion control measures.

b. The SWPPP shall include a description of the BMPs and control practices to be used for both temporary and permanent erosion control measures.

c. The SWPPP shall include a description of the BMPs to reduce wind erosion at all times, with particular attention paid to stock-piled materials.

7. Stabilization

(1) All disturbed areas of the construction site must be stabilized. Final stabilization for the purposes of submitting a NOT is satisfied when:

-All soil disturbing activities are completed AND EITHER OF THE TWO FOLLOWING CRITERIA ARE MET:

-A uniform vegetative cover with 70 percent coverage has been established OR:

-equivalent stabilization measures have been employed. These measures include the use of such BMPs as blankets, reinforced channel liners, soil cement, fiber matrices, geotextiles, or other erosion resistant soil coverings or treatments.

(2) Where background native vegetation covers less than 100 percent of the surface, such as in arid areas, the 70 percent coverage criteria is adjusted as follows: If the native vegetation covers 50 percent of the ground surface, 70 percent of 50 percent (.70 X .50=.35) would require 35 percent total uniform surface coverage.

8. Sediment Control

The SWPPP shall include a description or illustration of BMPs which will be implemented to prevent a net increase of sediment load in storm water discharge relative to preconstruction levels. Sediment control BMPs are required at appropriate locations along the site perimeter and at all operational internal inlets to the storm drain system at all times during the rainy season. Sediment control practices may include filtration devices and barriers (such as fiber rolls, silt fence, straw bale barriers, and gravel inlet filters) and/or settling devices (such as sediment traps or basins). Effective filtration devices, barriers, and settling devices shall be selected, installed and maintained properly. A proposed schedule for deployment of sediment control BMPs shall be included in the SWPPP. These are the most basic measures to prevent sediment from leaving the project site and moving into receiving waters. Limited exemptions may be authorized by the RWQCB when work on active areas precludes the use of sediment control BMPs temporarily. Under these conditions, the SWPPP must describe a plan to establish perimeter controls prior to the onset of rain.

During the nonrainy season, the discharger is responsible for ensuring that adequate sediment control materials are available to control sediment discharges at the downgrade perimeter and operational inlets in the event of a predicted storm. The discharger shall consider a full range of sediment controls, in addition to the controls listed above, such as straw bale dikes, earth dikes, brush barriers, drainage swales, check dams, subsurface drain, sandbag dikes, fiber rolls, or other controls. At a minimum, the discharger/operator must implement an effective combination of erosion and sediment control on all disturbed areas during the rainy season.

If the discharger chooses to rely on sediment basins for treatment purposes, sediment basins shall, at a minimum, be designed and maintained as follows:

Option 1: Pursuant to local ordinance for sediment basin design and maintenance, provided that the design efficiency is as protective or more protective of water quality than Option 3.

OR

Option 2: Sediment basin(s), as measured from the bottom of the basin to the principal outlet, shall have at least a capacity equivalent to 3,600 cubic feet of storage per acre draining into the sediment basin. The length of the basin shall be more than twice the width of the basin. The length is determined by measuring the distance between the inlet and the outlet; and the depth must not be less than three feet nor greater than five feet for safety reasons and for maximum efficiency.

OR

Option 3: Sediment basin(s) shall be designed using the standard equation:

$As=1.2Q/Vs$

Where: As is the minimum surface area for trapping soil particles of a certain size; Vs is the settling velocity of the design particle size chosen; and Q=C x I x A where Q is the discharge rate measured in cubic feet per second; C is the runoff coefficient; I is the precipitation intensity for the 10-year, 6-hour rain event and A is the area draining into the sediment basin in acres. The design particle size shall be the smallest soil grain size determined by wet sieve analysis, or the fine silt sized (0.01mm) particle, and the Vs used shall be 100 percent of the calculated settling velocity.

The length is determined by measuring the distance between the inlet and the outlet; the length shall be more than twice the dimension as the width; the depth shall not be less than three feet nor greater than five feet for safety reasons and for maximum efficiency (two feet of storage, two feet of capacity). The basin(s) shall be located on the site where it can be maintained on a year-round basis and shall be maintained on a schedule to retain the two feet of capacity;

OR

Option 4: The use of an equivalent surface area design or equation, provided that the design efficiency is as protective or more protective of water quality than Option 3.

A sediment basin shall have a means for dewatering within 7-calendar days following a storm event. Sediment basins may be fenced if safety (worker or public) is a concern.

The outflow from a sediment basin that discharges into a natural drainage shall be provided with outlet protection to prevent erosion and scour of the embankment and channel.

The discharger must consider any additional site-specific and seasonal conditions when selecting and designing sediment control BMPs. The above listed sediment control measures are examples of what should be considered and are not exclusive of new or innovative approaches currently available or being developed.

The SWPPP shall include a description of the BMPs to reduce the tracking of sediment onto public or private roads at all times. These public and private roads shall be inspected and cleaned as necessary. Road cleaning BMPs shall be discussed in the SWPPP and will not rely on the washing of accumulated sediment or silt into the storm drain system.

9. Non-Storm Water Management

Describe all non-storm water discharges to receiving waters that are proposed for the construction project. Non-storm water discharges should be eliminated or reduced to the extent feasible. Include the locations of such discharges and descriptions of all BMPs designed for the control of pollutants in such discharges. Onetime discharges shall be monitored during the time that such discharges are occurring. A qualified person should be assigned the responsibility for ensuring that no materials other than storm water are discharged in quantities which will have an adverse effect on receiving waters or storm drain systems (consistent with BAT/BCT), and the name and contact number of that person should be included in the SWPPP document.

Discharging sediment-laden water which will cause or contribute to an exceedance of the applicable RWQCB's Basin Plan from a dewatering site or sediment basin into any receiving water or storm drain without filtration or equivalent treatment is prohibited.

10. Post-Construction Storm Water Management

The SWPPP shall include descriptions of the BMPs to reduce pollutants in storm water discharges after all construction phases have been completed at the site (Post-Construction BMPs). Post-Construction BMPs include the minimization of land disturbance, the minimization of impervious surfaces, treatment of storm water runoff using infiltration, detention/retention, biofilter BMPs, use of efficient irrigation systems, ensuring that interior drains are not connected to a storm sewer system, and appropriately designed and constructed energy dissipation devices. These must be consistent with all local post-construction storm water management requirements, policies, and guidelines. The discharger must consider site-specific and seasonal conditions when designing the control practices. Operation and maintenance of control practices after construction is completed shall be addressed, including short-and long-term funding sources and the responsible party.

11. Maintenance, Inspection, and Repair

The SWPPP shall include a discussion of the program to inspect and maintain all BMPs as identified in the site plan or other narrative documents throughout the entire duration of the project. A qualified person will be assigned the responsibility to conduct inspections. The name and telephone number of that person shall be listed in the SWPPP document. Inspections will be performed before and after storm events and once each 24-hour period during extended storm events to identify BMP effectiveness and implement repairs or design changes as soon as feasible depending upon field conditions. Equipment, materials, and workers must be available for rapid response to failures and emergencies. All corrective maintenance to BMPs shall be performed as soon as possible after the conclusion of each storm depending upon worker safety.

For each inspection required above, the discharger shall complete an inspection checklist. At a minimum, an inspection checklist shall include:

a. Inspection date.

b. Weather information: best estimate of beginning of storm event, duration of event, time elapsed since last storm, and approximate amount of rainfall (inches).

c. A description of any inadequate BMPs.

d. If it is possible to safely access during inclement weather, list observations of all BMPs: erosion controls, sediment controls, chemical and waste controls, and non-storm water controls. Otherwise, list result of visual inspection at relevant outfall, discharge point, or downstream location and projected required maintenance activities.

e. Corrective actions required, including any changes to SWPPP necessary and implementation dates.

f. Inspectors name, title, and signature.

The dischargers shall prepare their inspection checklists using the inspection checklist form provided by the SWRCB or RWQCB or on forms that contain the equivalent information.

12. Training

Individuals responsible for SWPPP preparation, implementation, and permit compliance shall be appropriately trained, and the SWPPP shall document all training. This includes those personnel responsible for installation, inspection, maintenance, and repair of BMPs. Those responsible for overseeing, revising, and amending the SWPPP shall also document their training. Training should be both formal and informal, occur on an ongoing basis when it is appropriate and convenient, and should include training/workshops offered by the SWRCB, RWQCB, or other locally recognized agencies or professional organizations.

13. List of Contractors/Subcontractors

The SWPPP shall include a list of names of all contractors, (or subcontractors) and individuals responsible for implementation of the SWPPP. This list should include telephone numbers and addresses. Specific areas of responsibility of each subcontractor and emergency contact numbers should also be included.

14. Other Plans

This SWPPP may incorporate by reference the appropriate elements of other plans required by local, State, or Federal agencies. A copy of any requirements incorporated by reference shall be kept at the construction site.

15. Public Access

The SWPPP shall be provided, upon request, to the RWQCB. The SWPPP is considered a report that shall be available to the public by the RWQCB under section 308(b) of the Clean Water Act.

16. Preparer Certification

The SWPPP and each amendment shall be signed by the landowner (discharger) or his representative and include the date of initial preparation and the date of each amendment.

SECTION B: MONITORING PROGRAM AND REPORTING REQUIREMENTS

1. Required Changes

The RWQCB may require the discharger to conduct additional site inspections, to submit reports and certifications, or perform sampling and analysis.

2. Implementation

a. The requirements of this Section shall be implemented at the time of commencement of construction activity (see also Section A. 2. Implementation Schedule). The discharger is responsible for implementing these requirements until construction activity is complete and the site is stabilized.

b. For ongoing construction activity involving a change in ownership of property covered by this General Permit, the new owner must complete a NOI and implement the requirements of this Section concurrent with the change of ownership. For changes of information, the owner must follow instructions in C. 7. Special Provisions for Construction Activity of the General Permit.

3. Site Inspections

Qualified personnel shall conduct inspections of the construction site prior to anticipated storm events, during extended storm events, and after actual storm events to identify areas contributing to a discharge of storm water associated with construction activity. The name(s) and contact number(s) of the assigned inspection personnel shall be listed in the SWPPP. Pre-storm inspections are to ensure that BMPs are properly installed and maintained; post-storm inspections are to assure that the BMPs have functioned adequately. During extended storm events, inspections shall be required each 24-hour period. Best Management Practices (BMPs) shall be evaluated for adequacy and proper implementation and whether additional BMPs are required in accordance with the terms of the General Permit (see language in Section A. 11. Maintenance, Inspection, and Repair). Implementation of nonstorm water discharge BMPs shall be verified and their

effectiveness evaluated. One time discharges of non-storm water shall be inspected when such discharges occur.

4. Compliance Certification

Each discharger or qualified assigned personnel listed by name and contact number in the SWPPP must certify annually that construction activities are in compliance with the requirements of this General Permit and the SWPPP. This Certification shall be based upon the site inspections required in Item 3 of this Section. The certification must be completed by July 1 of each year.

5. Noncompliance Reporting

Dischargers who cannot certify compliance, in accordance with Item 4 of this Section and/or who have had other instances of noncompliance excluding exceedances of water quality standards as defined in section B. 3. Receiving Water Limitations Language, shall notify the appropriate RWQCB within 30 days. Corrective measures should be implemented immediately following discovery that water quality standards were exceeded. The notifications shall identify the noncompliance event, including an initial assessment of any impact caused by the event; describe the actions necessary to achieve compliance; and include a time schedule subject to the modifications by the RWQCB indicating when compliance will be achieved. Noncompliance notifications must be submitted within 30-calendar days of identification of noncompliance.

6. Monitoring Records

Records of all inspections, compliance certifications, and noncompliance reporting must be retained for a period of at least three years from the date generated. With the exception of noncompliance reporting, dischargers are not required to submit these records.

7. Monitoring Program for Sedimentation/Siltation

Dischargers of storm water associated with construction activity that directly enters a water body listed in Attachment 3 shall conduct a sampling and analysis program for the pollutants (sedimentation/siltation or turbidity) causing the impairment. The discharger shall monitor for the applicable parameter. If the water body is listed for sedimentation or siltation, samples should be analyzed for Settleable Solids (ml/l) and Total Suspended Solids (mg/l). Alternatively or in addition, samples may be analyzed for suspended sediment concentration according to ASTM D3977-97. If the water body is listed for turbidity, samples should be analyzed for turbidity (NTU). Discharges that flow through tributaries that are not listed in Attachment 3 or that flow into Municipal Separate Storm Sewer Systems (MS4) are not subject to these sampling and analysis requirements. The sampling and analysis parameters and procedures must be designed to determine whether the BMPs installed and maintained prevent discharges of sediment from contributing to impairment in receiving waters.

Samples shall be collected during the first two hours of discharge from rain events which result in a direct discharge to any water body listed in Attachment 3. Samples shall be collected during daylight hours (sunrise to sunset). Dischargers need not collect more than four (4) samples per month. All samples shall be taken in the receiving waters and shall be representative of the prevailing conditions of the water bodies. Samples shall be collected from safely accessible locations upstream of the construction site discharge and immediately downstream from the last point of discharge.

For laboratory analysis, all sampling, sample preservation, and analyses must be conducted according to test procedures under 40 CFR Part 136. Field samples shall be collected and analyzed according to the specifications of the manufacturer of the sampling devices employed. Portable meters shall be calibrated according to manufacturer's specification. All field and/or laboratory analytical data shall be kept in the SWPPP document, which is to remain at the construction site at all times until a Notice of Termination has been submitted and approved.

8. Monitoring Program for Pollutants Not Visually Detectable in Storm Water

A sampling and analysis program shall be developed and conducted for pollutants which are not visually detectable in storm water discharges, which are or should be known to occur on the construction site, and which could cause or contribute to an exceedance of water quality objectives in the receiving water. Pollutants that should be considered for inclusion in this sampling and analysis program are those identified in Sections A.5.b. and A.5.c.

Construction materials and compounds that are not stored in water-tight containers under a water-tight roof or inside a building are examples of materials for which the discharger may have to implement sampling and analysis procedures. The goal of the sampling and analysis is to determine whether the BMPs employed and maintained on site are effective in preventing the potential pollutants from coming in contact with storm water and causing or contributing to an exceedance of water quality objectives in the receiving waters. Examples of construction sites that may require sampling and analysis include: sites that are known to have contaminants spilled or spread on the ground; sites where construction practices include the application of soil amendments, such as gypsum, which can increase the pH of the runoff; or sites having uncovered stockpiles of material exposed to storm water. Visual observations before, during, and after storm events may trigger the requirement to collect samples. Any breach, malfunction, leakage, or spill observed which could result in the discharge of pollutants to surface waters that *would* not be visually detectable in storm water shall trigger the collection of a sample of discharge. Samples shall be collected at all discharge locations which drain the areas identified by the visual observations and which can be safely accessed. For sites where sampling and analysis is required, personnel trained in water quality sampling procedures shall collect storm water samples. A sufficiently large sample of storm water that has not come in contact with the disturbed soil or the materials stored or used on-site

(uncontaminated sample) shall be collected for comparison with the discharge sample. Samples shall be collected during the first two hours of discharge from rain events that occur during daylight hours and which generate runoff.

The uncontaminated sample shall be compared to the samples of discharge using field analysis or through laboratory analysis. Analyses may include, but are not limited to, indicator parameters such as: pH, specific conductance, dissolved oxygen, conductivity, salinity, and TDS.

For laboratory analysis, all sampling, sample preservation, and analyses must be conducted according to test procedures under 40 CFR Part 136. Field discharge samples shall be collected and analyzed according to the specifications of the manufacturer of the sampling devices employed. Portable meters shall be calibrated according to manufacturer's specification. All field and/or analytical data shall be kept in the SWPPP document, which is to remain at the construction site at all times until a *Notice of* Termination has been submitted and approved.

SECTION C: STANDARD PROVISIONS FOR CONSTRUCTION ACTIVITY

1. Duty to Comply

The discharger must comply with all of the conditions of this General Permit. Any permit noncompliance constitutes a violation of the Clean Water Act (CWA) and the Porter-Cologne Water Quality Control Act and is grounds for enforcement action and/or removal from General Permit coverage.

The discharger shall comply with effluent standards or prohibitions established under Section 307(a) of the CWA for toxic pollutants within the time provided in the regulations that establish these standards or prohibitions, even if this General Permit has not yet been modified to incorporate the requirement.

2. General Permit Actions

This General Permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by the discharger for a General Permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not annul any General Permit condition.

If any toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is promulgated under Section 307(a) of the CWA for a toxic pollutant which is present in the discharge and that standard or prohibition is more stringent than any limitation on the pollutant in this General Permit, this General Permit shall be modified or revoked and reissued to conform to the toxic effluent standard or prohibition and the dischargers so notified.

3. Need to Halt or Reduce Activity Not a Defense

It shall not be a defense for a discharger in an enforcement action that it would have been necessary to halt or reduce the permitted activity in order to maintain compliance with the conditions of this General Permit.

4. Duty to Mitigate

The discharger shall take all responsible steps to minimize or prevent any discharge in violation of this General Permit, which has a reasonable likelihood of adversely affecting human health or the environment.

5. Proper Operation and Maintenance

The discharger shall at all times properly operate and maintain any facilities and systems of treatment and control (and related appurtenances) which are installed or used by the discharger to achieve compliance with the conditions of this General Permit and with the requirements of Storm Water Pollution Prevention Plans (SWPPP). Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures. Proper operation and maintenance may require the operation of backup or auxiliary facilities or similar systems installed by a discharger when necessary to achieve compliance with the conditions of this General Permit.

6. Property Rights

This General Permit does not convey any property rights of any sort or any exclusive privileges, nor does it authorize any injury to private property or any invasion of personal rights, nor does it authorize any infringement of Federal, State, or local laws or regulations.

7. Duty to Provide Information

The discharger shall furnish the RWQCB, State Water Resources Control Board, or USEPA, within a reasonable time, any requested information to determine compliance with this General Permit. The discharger shall also furnish, upon request, copies of records required to be kept by this General Permit.

8. Inspection and Entry

The discharger shall allow the RWQCB, SWRCB, USEPA, and/or, in the case of construction sites which discharge through a municipal separate storm sewer, an authorized representative of the municipal operator of the separate storm sewer system receiving the discharge, upon the presentation of credentials and other documents as may be required by law, to:

a. Enter upon the discharger's premises at reasonable times where a regulated construction activity is being conducted or where records must be kept under the conditions of this General Permit;

b. Access and copy at reasonable times any records that must be kept under the conditions of this General Permit;

c. Inspect at reasonable times the complete construction site, including any off-site staging areas or material storage areas, and the erosion/sediment controls; and

d. Sample or monitor at reasonable times for the purpose of ensuring General Permit compliance.

9. Signatory Requirements

a. All Notice of Intents (NOIs), Notice of Terminations (NOTs), SWPPPs, certifications, and reports prepared in accordance with this Order submitted to the SWRCB shall be signed as follows:

(1) For a corporation: by a responsible corporate officer. For the purpose of this Section, a responsible corporate officer means: (a) a president, secretary, treasurer, or vice president of the corporation in charge of a principal business function, or any other person who performs similar policy or decision-making functions for the corporation, or (b) the manager of the construction activity if authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures;

(2) For a partnership or sole proprietorship: by a general partner or the proprietor, respectively; or

(3) For a municipality, State, Federal, or other public agency: by either a principal executive officer, ranking elected official, or duly authorized representative. The principal executive officer of a Federal agency includes the chief executive officer of the agency or the senior executive officer having responsibility for the overall operations of a principal geographic unit of the agency (e.g., Regional Administrator of USEPA).

b. All SWPPPs, reports, certifications, or other information required by the General Permit and/or requested by the RWQCB, SWRCB, USEPA, or the local storm water management agency shall be signed by a person described above or by a duly authorized representative. A person is a duly authorized representative if:

(1) The authorization is made in writing by a person described above and retained as part of the SWPPP; or

(2) The authorization specifies either an individual or a position having responsibility for the overall operation of the construction activity, such as the position of manager, operator, superintendent, or position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company. (A duly authorized representative may thus be either a named individual or any individual occupying a named position).

c. If an authorization is no longer accurate because a different individual or position has responsibility for the overall operation of the construction activity, a new authorization must be attached to the SWPPP prior to submittal of any reports, information, or certifications to be signed by the authorized representative.

10. Certification

Any person signing documents under Section C, Provision 9 above, shall make the following certification:

"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those persons directly responsible for gathering the information, to the best of my knowledge and belief, the information submitted is, true, accurate, and complete.

I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

11. Anticipated Noncompliance

The discharger will give advance notice to the RWQCB and local storm water management agency of any planned changes in the construction activity which may result in noncompliance with General Permit requirements.

12. Penalties for Falsification of Reports

Section 309(c)(4) of the CWA provides that any person who knowingly makes any false material statement, representation, or certification in any record or other document submitted or required to be maintained under this General Permit, including reports of compliance or noncompliance shall upon conviction, be punished by a fine of not more than $10,000 or by imprisonment for not more than two years or by both.

13. Oil and Hazardous Substance Liability

Nothing in this General Permit shall be construed to preclude the institution of any legal action or relieve the discharger from any responsibilities, liabilities, or penalties to which the discharger is or may be subject to under Section 311 of the CWA.

14. Severability

The provisions of this General Permit are severable; and, if any provision of this General Permit or the application of any provision of this General Permit to any circumstance is held invalid, the application of such provision to other circumstances and the remainder of this General Permit shall not be affected thereby.

15. Reopener Clause

This General Permit may be modified, revoked and reissued, or terminated for cause due to promulgation of amended regulations, receipt of USEPA guidance concerning regulated activities, judicial decision, or in accordance with 40 Code of Federal Regulations (CFR) 122.62, 122.63, 122.64, and 124.5.

16. Penalties for Violations of Permit Conditions

a. Section 309 of the CWA provides significant penalties for any person who violates a permit condition implementing Sections 301, 302, 306, 307, 308, 318, or 405 of the CWA or any permit condition or limitation implementing any such section in a permit issued under Section 402. Any person who violates any permit condition of this General Permit is subject to a civil penalty not to exceed $27,500 per calendar day of such violation, as well as any other appropriate sanction provided by Section 309 of the CWA.

b. The Porter-Cologne Water Quality Control Act also provides for civil and criminal penalties which in some cases are greater than those under the CWA.

17. Availability

A copy of this General Permit shall be maintained at the construction site during construction activity and be available to operating personnel.

18. Transfers

This General Permit is not transferable. A new owner of an ongoing construction activity must submit a NOI in accordance with the requirements of this General Permit to be authorized to discharge under this General Permit. An owner who sells property covered

by this General Permit shall inform the new owner of the duty to file a NOI and shall provide the new owner with a copy of this General Permit.

19. Continuation of Expired Permit

This General Permit continues in force and effect until a new General Permit is issued or the SWRCB rescinds this General Permit. Only those dischargers authorized to discharge under the expiring General Permit are covered by the continued General Permit.

Los Angeles Regional Quality Control Board

Resolution No. 98-08

State of California
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
LOS ANGELES REGION

Resolution No. 98-08

APPROVING BEST MANAGEMENT PRACTICES
FOR
MUNICIPAL STORM WATER AND URBAN RUNOFF MANAGEMENT PROGRAMS
IN
LOS ANGELES COUNTY

(NPDES NO. CAS614001)

WHEREAS, THE CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, LOS ANGELES REGION FINDS:

1. Pursuant to the requirements of Order No. 96-054, Waste Discharge Requirements for Municipal Storm Water and Urban Runoff Discharges Within the County of Los Angeles (Permit), the Principal Permittee, in consultation with Permittees, has developed a model program for Industrial/Commercial Education. This program must include Best Management Practices (BMPs) to control/minimize the discharge of pollutants to receiving waters.

2. The Permit required the City of Los Angeles to conduct a study on pollutants entering storm drains from street and sidewalk washing operation by: (i) characterizing municipal street washing and sidewalk washing; (ii) assessing the impacts of such activities; and (iii) recommending appropriate BMPs to control any adverse impact. Accordingly, the City of Los Angeles has completed and submitted a final report entitled *A Study of Pollutants Entering Storm Drains from Street and Sidewalk Washing Operations in Los Angeles, California* that includes recommended BMPs for said activities.

3. The Permit also requires that the BMPs be approved by the Regional Board before the Permittees incorporate them into their regulatory programs.

4. The BMPs have been evaluated and are considered appropriate for the respective program/activity.

THEREFORE BE IT RESOLVED THAT:

1. The Best Management Practices contained in the following Attachments are approved:

   a. Attachment 1 -- Industrial/Commercial Program (Site Visit); and

   b. Attachment 2 -- Sidewalk and Street Washing.

BMP List Index

Table 1 is an index to all BMP lists and their SIC codes.

ATTACHMENT 2

Recommended Best Management Practices
for
Municipal Sidewalk and Street Washing Operations

TYPE OF DISCHARGE	RECOMMENDED BMPS
SIDEWALK WASH WATER	1. Remove trash, debris, and free standing oil/grease spills/leaks (use absorbent material, if necessary) from the area before washing; and 2. Use high-pressure, low volume spray washing using only potable water with no cleaning agents at an average usage of 0.006 gallon per square feet of sidewalk area.
STREET/ALLEY WASH WATER FROM AREAS WITH UNSANITARY CONDITIONS*	Collect and divert wash water to the sanitary sewer - publicly-owned treatment works (POTW). Note: POTW approval may be needed.

* This BMP is only to be applied in areas impacted by transient populations. Each Permittee is required to apply this BMP in areas where the congregation of transient populations can reasonably be expected to result in a significant threat to water quality.

COMMISSION ON
STATE MANDATES

Ms. Paula Higashi
Executive Director
Commission on State Mandates
980 Ninth Street, Suite 300
Sacramento, CA 95814

Re: *Test Claim No.03-TC-21: Request to Withdraw Certain Portions of Test Claim*

Dear Ms. Higashi:

In response to your letter of September 29, 2008, this letter is to clarify Test Claim No. 03-TC-21 and specifically identify those portions of Permit CAS004001 (Los Angeles Regional Water Quality Control Board Order No. 01-182) (the "Permit"), on which this test claim is based.

Please be advised that claimants base this test claim on the following parts of the Permit: Parts 4.C.2.a; 4.C.2.b; 4.E.; and 4.F.5.c.3.

To the extent that the original test claim alleged other portions of the Permit, claimants request that those portions of the test claim be withdrawn without prejudice. Specifically, claimants request that those portions of the test claim be withdrawn that are based on the following parts of the Permit: Parts 1; 2; 4.C.2.c; 4.F.5.a and b; and 4.F.6. This request to withdraw without prejudice is based on the fact that the claimants have not yet incurred increased costs as a result of these portions of the Permit.

With the withdrawal of these portions of the test claim, it is claimant's intent to proceed with a test claim identical to Test Claim No. 03-TC-20.

Thank you for your attention to this matter. Please contact the

undersigned if you have any questions.

Very truly yours,

Howard Gest

COMMISSION ON
STATE MANDATES

Dear Ms. Higashi:

Re: CSM-03-TC-04, "Transit Trash Receptacles"
CSM-03-TC-19, "Inspection of Industrial/Commercial Facilities"
CSM-03-TC-20, "Waste Discharge Requirements"
CSM-03-TC-21, "Stormwater Pollution Control Requirements"

As requested in your letters referencing the California Regional Water Quality Control Board's Executive Order #01-182 (test claim permit), the Department of Finance (Finance) has reviewed the test claims submitted by the County of Los Angeles and several cities (claimants) asking the Commission on State Mandates (Commission) to determine whether specified costs incurred under the test claim permit are reimbursable state mandated costs. Commencing with specified sections of the test claim permit, as plead in the four test claims referenced above, the claimants have identified the following as new programs or higher levels of service, which they assert are reimbursable state mandates imposed on the local agencies.

1. Identify all transit stops within its jurisdiction except for the Los Angeles River and Ballona Creek Watershed Management areas. (Part 4, F.5.c.3.)

2. Select proper trash receptacle designs and evaluate proper placement of trash receptacles. (Part 4, F.5.c.3.)

3. Design receptacle pad improvement, if needed. (Part 4, F.5.c.3.)

4. Construct and install trash receptacle units. (Part 4, F.5.c.3.)

5. Collect trash and maintain receptacles. (Part 4, F.5.c.3.)

6. Inspect certain commercial facilities to prevent those facilities from discharging waste into waters of the state and to assure compliance with state law. (Part 4, c.2.a.)

7. Inspect industrial facilities to determine compliance with the state's program that regulates discharge of storm water from industrial facilities, including compliance with State Water Resources Control Board's (Water Board) permits. (Part 4, c.2.b.)

8. Inspect construction sites to determine compliance with the state's program that regulates discharge of storm water from those sites, including compliance with the Water Board's permits. (Part 4, E.)

9. Increase street sweeping, catch basin cleaning, installing and maintaining other treatment devices to address trash impacts upon stormwater mitigation systems. (Part 4, F.5.c.3.)

10. Increase costs to comply with new industrial and construction inspection mandates. (Part 4, F.5.c.3.)

11. Increase inspections to be conducted of industrial discharges not currently regulated by the State of California. (Part 4, F.5.c.3.)

As a result of our review, Finance finds that the test claim permit does not impose a reimbursable state mandate on local agencies within the meaning of Section 6 of Article XIII B of the California Constitution. The permit conditions imposed on the local agencies are required by federal laws, and pursuant to the federal mandate exception in subdivision (c) of Section 17556 of the Government Code, the requirements of the permit are not reimbursable programs:

> Subdivision (c): The Commission on State Mandates shall not find costs mandated by the state if the "*statute or executive order imposes a requirement that is mandated by a federal law or regulation and results in costs mandated by the federal government, unless the statute or executive order mandates costs that exceed the mandate in that federal law or regulation. This subdivision applies regardless of whether the federal law or regulation was enacted or adopted prior to or after the date on which the state statute or executive order was enacted or issued.*"

When issuing a permit, the Water Board is acting as an administrator of the federal government and must require the local agencies to apply for a permit under the federal Clean Water Act (CWA) (33 U.S.C. §1342). The federal Environmental Protection Agency has delegated the federal permitting authority to the Water Board as a state-approved National Pollutant Discharge Elimination System (NPDES) permitting program. This authority allows the Water Board to act on behalf of the federal government to develop, administer, and enforce the NPDES program in compliance with Section 402 of the CWA. Pursuant to paragraph (5) of subdivision (a) of Section 402 of the CWA, "*the Administrator shall authorize a State, which he determines has the capability of administering a permit program which will carry out the objectives of this Act, to issue permits for discharges into navigable waters in the jurisdiction of such State.*" This authority is extended to the nine regional boards that are the principal state agencies with the primary responsibility for the coordination and control of water quality under Section 401 of the CWA. In effect, the federal law authorized the Water Board, acting as the administrator, to exercise its federal permitting authority and set the detailed permit conditions specific to the claimants' region complying with the regulations of CWA. (Title 40, Code of Federal Regulations, Section 122, 123.25, and 124 and 33 U.S.C. § 1342(p)(3)(B)). Thus, the requirements of the permit are federally required to comply with the NPDES program. Further, compliance with the requirements is enforceable under the federal CWA (33 U.S.C § 1365).

The Water Board, acting as the federal government, is required to issue a permit to coordinate enforcement efforts of wastewater violations (Title 40 of Code of Federal Regulations, Section 122.44(k)). As stated in paragraph 22, on page 11 of the test claim permit "*...the USEPA*

guidance anticipates coordination of the state-administered program for industrial and construction activities with the local agencies program to reduce pollutant in storm water discharged to the MS4." The Water Board must issue a permit requiring the local agencies to carry out certain activities in order to enforce and regulate dischargers violating municipal ordinances. The permit process begins when the local agency applies for a permit and identifies the practices to be included and enforced.

Subdivisions (a) and (b) of Part 4.c.2 of the test claim permit refer to the permit condition of inspecting facilities under the *Industrial and Commercial Facilities Control Program.* The claimants allege that the permit condition requires the local agencies to inspect the facilities that have state-issued General Industrial and General Construction Stormwater permits, and claim this activity is new for the local agencies and had been the responsibility of the Water Board pursuant to the California Regional Water Quality Control Board Resolution 98-08, the Stormwater Quality Management Plan, and State Water Resources Control Board Order Nos. 97-03-DWQ and 99-08-DWQ. The claimants assert that the Water Board shifted the inspection obligations to the local agencies and imposed reimbursable new programs.

Although these inspections and other permit requirements may result in additional costs to the local agencies, those costs are not reimbursable because the conditions implement federal NPDES permit requirements and do not shift responsibilities from the state to local agencies. The claimants have not identified any state law requiring local agencies to inspect state-issued permit facilities for violating state permitting regulations, or discontinuing the state inspections of state-issued permit facilities. Therefore, Finance concludes that the municipal inspections are federally required for enforcing local ordinances and such a requirement does not shift responsibilities from the state to the local agencies.

Finance contends that the requirements of the test claim permit are federal laws imposed on the local agencies because the federal CWA mandates that local agencies must apply for and receive permits regulating discharges of pollutants from their municipal separate storm sewer systems (MS4) to the waters of the United States. The Water Board acts as the administrator for the federal government in approving these permits (Sections 13370 through 13389 of the Water Code). The local agencies first proposed permit requirements to the Water Board when submitting the application for the test claim permit. Local agencies were then allowed to publicly participate and influence the development, revision, and enforcement of any regulation, standard effluent limitation, and storm water prevention plan or program (Public Process section of the permit and Section 122.1 of Title 40 of the Codes of Federal Regulations). The Water Board approved the permit and the permit became effective when the United States Environmental Protection Agency did not veto the permit.

Additionally, the claimants had discretion over what activities and conditions to include in the permit application. First, the permittee submitted a Storm Water Quality Management Program prevention report with its application. These entities had the option to use "best management practices" to identify alternative practices to reduce pollution in water to the maximum extent practicable, but were required by federal law to include specific practices to be applicable in the particular region (subdivision (p) of Section 402 of the CWA). In some instances, agencies may elect a "rigid" numeric end-of-pipe permit limitation, where the permittee must satisfy specific

effluent limitations rather than implement best management practices. Here, the local agencies prescribed the activities to be included in the permit. The permitting authority allowed the permittees to publicly participate and influence the development, revision, and enforcement of any regulation, standard effluent limitation, and storm water prevention plan or program (Public Process section of the permit and Section 122.1 of Title 40 of the Code of Federal Regulations). As a result, the permit requirements are a downstream result of the local agencies' decision to include the particular activities in the permit. Such requirements are not reimbursable mandates.

Finance notes that the courts have held that increased costs associated with downstream activities of an underlying discretionary action are not reimbursable. Specifically, in *Department of Finance v. Commission on State Mandates (2003) (30 Cal. 4th 727, 745-746),* the court affirmed that where participation in the underlying program is voluntary, the resulting new consequential requirements do not constitute a reimbursable state mandate.

Finance also notes that some local agencies have set fees to be used toward funding the claimed permit activities. Should the Commission decide a reimbursable mandate exists, these fees should be considered as offsetting revenues toward the requirements of the permit.

As required by the Commission's regulations, a "Proof of Service" has been enclosed indicating that the parties included on the mailing list which accompanied your October 29, 2007 letter have been provided with copies of this letter via either United States Mail or, in the case of other state agencies, Interagency Mail Service.

If you have any questions regarding this letter, please contact Carla Castañeda, Principal Program Budget Analyst at (916) 445-3274.

Sincerely,

Diana L. Ducay

COMMISSION ON
STATE MANDATES

Ms. Paula Higashi, Executive Director
Commission on State Mandates
980 Ninth Street, Suite 300
Sacramento, CA 95814

Dear Ms. Higashi:

STORM WATER POLLUTION CONTROL REQUIREMENTS, FILES 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21: RESPONSE TO TEST CLAIMS 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21

The State Water Resources Control Board ("State Water Board") and the Los Angeles Regional Water Quality Control Board ("Los Angeles Water Board") jointly file this opposition to Test Claims 03-TC-04, 03-TC-19, 03-TC-20, and 03-TC-21. All of these test claims arise from a single permit that was issued by the Los Angeles Water Board as Order No. 01-182, Waste Discharge Requirements for Municipal Storm Water and Urban Runoff Discharges within the County of Los Angeles, and the Incorporated Cities therein, Except the City of Long Beach ("the Permit").[1] The requests for reimbursement in the test claims arise almost entirely from two requirements in the Permit and consolidation is therefore proper.

The Permit was issued by the Los Angeles Water Board pursuant to requirements in the federal Clean Water Act ("CWA").[2] The State Water Board and Los Angeles Water Board have been authorized by the United States Environmental Protection Agency ("U.S. EPA") to issue NPDES permits—which are mandated by the CWA—in lieu of issuance of these permits by U.S. EPA. The Permit regulates the discharge of storm water runoff from the municipal separate storm sewer system (MS4) of 84 cities and County of Los Angeles to rivers and the Santa Monica Bay.

The federal Clean Water Act mandates that municipalities must apply for and receive permits regulating discharges of pollutants from their MS4s to waters of the United States. Pursuant to federal regulations, the Permit contains numerous requirements for the cities and County to take actions to reduce the flow of pollutants into the rivers and the Bay, known as Best Management Practices (BMPs). These test claims, filed by 20 cities and the County, seek reimbursement by the State of California for expenses they incur in implementing two of the requirements of the Permit: (1) Inspections of commercial and industrial facilities; and (2) Placement of trash receptacles at transit sites.

[1] The Permit serves as National Pollutant Discharge Elimination System permit (NPDES) No. CAS004001. It was issued by the Los Angeles Water Board on December 13, 2001.

[2] Federal Water Pollution Control Act [FWPCA; 33 U.S.C.A. §§ 1251 et seq.] The federal Act is referred to herein by its popular name, the Clean Water Act ("CWA") and the code sections used are those for the CWA.

In order to obtain reimbursement, the claimants must show that the requirements constitute a new program or higher level of service. They must prove either: (1) the program must carry out a governmental function of providing services to the public, or (2) the requirements, to implement a state policy, impose unique requirements on local governments and do not apply generally to all residents and entities in the state. The claimants must also prove that the costs are mandated on them by the state, rather than by federal law. Finally, they must prove that any additional costs beyond the federal mandate are substantial and not *de minimis*. The claimants do not meet any of these tests.

The Permit as a whole, and including the inspection and trash receptacle provisions, is mandated on the local governments by federal law. The federal mandate applies to many dischargers of storm water, both public and private, and is not unique to local governments. The federal mandate requires that the Permit be issued to the local governments; it is not a question of "shifting" the costs from the state to the local governments. The specific requirements challenged are consistent with the minimum requirements of federal law. Even if the Permit were to be interpreted as going beyond federal law, any additional state requirements are *de minimis*. Moreover, the costs are not subject to reimbursement because the programs were proposed by the cities and County themselves, and because they have the ability to comply with these requirements through charges and fees, and are not required to raise taxes. The U.S. EPA has submitted a letter to the State Water Board dated April 10, 2008, in agreement with this position.[3]

Description of the Test Claims

The test claims focus on two discrete requirements in the Permit: the requirement to inspect certain industrial and commercial facilities that discharge into the MS4 and the requirement for some of the permittees to place and maintain trash receptacles at transit stops.

Industrial and Commercial Facilities Control Program (Part 4.C.)

Test claims 03-TC-19, 03-TC-20, and 03-TC-21 claim subvention for costs of complying with permit requirements to reduce pollutants from industrial and commercial facilities. Test claims 03-TC-19 and 03-TC-20 are limited to Part 4.C.2.a. and b., the requirements to inspect industrial and commercial facilities. Test Claim 03-TC-21 refers broadly to Part 4.C., the entire industrial and commercial facilities control program, but the costs discussed in the test claim are those associated with inspections. (See, Declaration of Richard Montevideo, No. 4.) Therefore, the Boards' analysis of the subvention claims for Part 4.C. is generally limited to the inspection requirements.

Part 4.C. of the Permit requires permittees to implement pollutant reduction and control measures at industrial and commercial facilities within their jurisdictions. Permittees may choose from various pollutant reduction and control measures, alone or in combination and

[3] Letter dated April 10, 2008, from Alexis Strauss, Director, Water Division, U.S. EPA to Tam M. Doduc, Chair, and Dorothy R. Rice, Executive Director, State Water Board, Attachment 3.

before, during, or after the activities that generate pollutants. The permittees are required to track, inspect, and ensure compliance at those facilities that are critical sources of pollutants in storm water.

Critical sources are specified commercial facilities (restaurants and automobile-related businesses), and industrial facilities that are required by federal regulations to obtain their own NPDES storm water permits.

Part 4.C.2.a. and b. contain inspection requirements, which are generally to conduct two inspections of facilities over a 5-year period. The Permit describes what the inspector must look at. (For example, inspectors at restaurants must see if operators pour grease into the street, and gas station inspectors must observe whether fuel-dispensing areas are swept.) The Permit states that for industrial sites, inspection requirements do not apply if the Los Angeles Water Board conducted an inspection of the site within two years.

Trash Receptacle Requirements (Part 4.F.5.c.3)

Test claims 03-TC-04, and 03-TC-20, and 03-TC-21 claim subvention for costs of complying with permit requirements for some of the permittees to place trash receptacles at public transit stops. Claim 03-TC-21 states that it challenges the entirety of the storm drain operation and maintenance and streets and road maintenance requirements, but the only costs in these sections for which it seeks reimbursement are for the placement and maintenance of trash receptacles. The claims are limited to the trash receptacle requirements for those municipalities that are not subject to a separate federal requirement, the "trash TMDL."[4] The requirements are to place trash receptacles at all transit stops and to maintain these receptacles.

Discharge Prohibitions and Receiving Water Limitations (Parts 1 and 2)

Test claim 03-TC-21 appears to claim subvention for costs associated with Parts 1 and 2 of the Permit, which include general prohibitions and requirements to protect water quality. The claim itself fails to specify any particular costs associated with this claim, other than a general study that considers a hypothetical treatment plant. As discussed below, storm water permits are written with the assumption that there will be no treatment plant and the permit certainly does not require one. In any event, there are no signed declarations to support this claim and no estimate of costs to the specific claimants.

Background of Federal Law Requirements for Storm Water Permits

In order to understand the federal mandate that required this permit, some background of the federal law and of MS4s is necessary. In 1972, the federal Clean Water Act was extensively amended to implement a permitting system for all discharges of pollutants from "point sources"

[4] As will be explained below, the Los Angeles Water Board has also adopted a federally-mandated total maximum daily load ("TMDL") for the deposition of trash into rivers and the Bay. The claimants do not claim subvention for the trash receptacle requirements for those cities and portions of the County subject to the TMDL, presumably conceding that those requirements are not reimbursable.

to waters of the United States.[5] The permits are issued pursuant to the national pollutant discharge elimination system, and are known as "NPDES permits." The 1972 amendments allowed U.S. EPA to authorize states to issue these permits.[6] California was the first state in the nation to obtain such authorization. In order to obtain this authorization, the California Legislature amended the Water Code, finding that the state should implement the federal law in order to avoid direct regulation by the federal government.[7] The California legislature mandated that California's permit program must ensure consistency with federal law.[8] The Water Boards are the state agencies charged with implementing the federal program.[9] The State Water Board incorporates the U.S. EPA regulations for implementing the federal permit program.[10] Therefore, both the CWA and U.S. EPA regulations are applicable to the permit program in California.[11] In California, permits to allow discharges into state waters are termed "waste discharge requirements."[12] The term "waste discharge requirements" is equivalent to the term "permit" in the CWA, when the waste discharge requirements are issued to comply with the CWA.[13] Thus, waste discharge requirements that the Water Boards issue to comply with the CWA are NPDES permits under federal law. When the Los Angeles Water Board, a state agency, adopts an NPDES permit in lieu of U.S. EPA, it must adopt as stringent a permit as the federal agency would have.[14]

The discharge of pollutants from point sources to waters of the United States is illegal, except in compliance with an NPDES permit.[15] In 1973, U.S. EPA issued regulations that exempted certain types of discharges it determined were administratively infeasible to regulate, including storm water runoff. The reason that such regulation is difficult, as will be more fully explained below, is that storm water runoff generally is not subjected to any treatment. Instead, it simply runs off urban streets, into gutters and drainage ways, and flows directly into streams, lakes, and the ocean.[16] This exemption was overruled in *Natural Resources Defense Council v. Costle* (1977) 568 F.2d 1369, which held that the exemption was illegal, and ordered U.S. EPA

[11] The permits *may* also include additional state requirements. (C.C.R., tit. 23, § 2235.3; *City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613.)

[12] Wat. Code, § 13263.

[13] Wat. Code, § 13374.

[14] CWA § 402(b).

[15] CWA § 301(a). In general, "navigable waters" or "waters of the United States," includes all surface waters, such as rivers, lakes, bays and the ocean. (CWA § 502.)

[16] The chief traditional categories of discharges subject to NPDES permits are industrial process wastewater and sanitary sewer effluent. Both of these discharges are typically processed in a treatment plant before they are discharged to surface waters.

to require NPDES permits for storm water runoff. In *Costle*, the court suggested innovative methods for permitting, including using general permits for numerous sources and issuing permits that "proscribe industry practices that aggravate the problem of point source Pollution."[17] Where permits proscribe actions that dischargers must implement, these requirements are commonly called "best management practices" ("BMPs").

Despite the *Costle* decision, U.S. EPA had not adopted regulations implementing a permitting program for storm water runoff by 1987. That year, Congress amended the CWA, specifically requiring storm water permits for industrial and municipal storm water runoff.[18] The amendments require NPDES permits for "[a] discharge from a municipal separate storm sewer system ["MS4"] serving a population of 250,000 or more."[19] The CWA contains three provisions specific to permits for MS4s: (1) Permits may be issued on a system- or jurisdiction-wide basis; (2) Permits must include a requirement to effectively prohibit non-storm water discharges into storm sewers; and (3) Permits must require controls to reduce the discharge of pollutants to the maximum extent practicable ("MEP").[20] In describing the controls that permits must include, the statute states that the controls shall include: "management practices, control techniques and system, design and engineering methods, and such other provisions as the [permit writer] determines appropriate for the control of such pollutants."[21] Thus, the federal law mandates that permits issued to MS4s must require management practices[22] that will result in reducing pollutants to the MEP. The state is required, by federal law, to select the BMPs.[23]

In 1990, U.S. EPA adopted regulations to implement section 402(p).[24] The regulations define which entities need to apply for permits and also the information they must include in permit applications. The regulations define "industrial activity" to include numerous categories of manufacturing, construction, and other typically private enterprises.[25] The regulations define MS4s as storm sewer systems operated by numerous public agencies, including cities, counties, states, and the federal government.[26] While both industrial activities and MS4s must

[18] CWA § 402(p).

[19] CWA § 402(p)(2)(C). U.S. EPA defines municipal separate storm sewer systems (MS4s) that serve a population over 250,000 as "large" MS4s. The population of the County of Los Angeles is approximately 9.5 million. (Permit, D.1.)

[20] CWA § 402(p)(B).

[21] *Ibid.*

[22] These are commonly referred to as "best management practices," or "BMPs."

[23] *NRDC v. USEPA* (9th Cir. 1992) 966 F.2d 1292.

[24] Vol. 55, Federal Register (Fed.Reg.) 47990 and following.

[25] 40 C.F.R. § 122.26(b)(14).

[26] 40 C.F.R. § 122.26(b)(8).

obtain permits, the requirements in the industrial permits must be more stringent than in MS4 permits.[27]

In order to obtain coverage under an NPDES permit, as required by the CWA, entities seeking coverage file an application with the permitting authority and the permitting authority holds a public hearing on contested permits.[28] U.S. EPA regulations specify the information that applicants for MS4 permits must include in their applications.[29] For large and medium MS4s, the application requirements are extensive.[30] Some of the application requirements relevant to these Test Claims are: management programs including procedures to control pollution resulting from construction activities (at § 122.26(d)(1)(v)), legal authority to control the contribution of pollutants associated with industrial activity (at § 122.26(d)(2)(i)(A)), programs to control illicit discharges to the MS4 (at § 122.26(d)(1)(v)), and conducting inspections to determine compliance with permit conditions (at § 122.26(d)(2)(i)(F)). The permit applicants must propose management programs that the permitting authority will consider in adopting the permit.[31] The management programs must address oversight of discharges into the system from the general population and from industrial and construction activities within its jurisdiction, and also maintenance and control activities by the permittees.[32]

Most NPDES permits are largely comprised of numeric limitations for pollutants. Compliance is measured by sampling the treated effluent, which is discharged from a treatment plant into surface waters. These permits are written assuming that an engineered treatment plant can be built and operated to obtain a specified effluent. Storm water permits, on the other hand, usually require dischargers to implement BMPs that will result in lessening the pollutants in the runoff, since without a treatment plant the pollutants can flow directly into surface waters. Storm water permits apply to several types of entities—industries, construction, and municipalities—and all usually mandate BMPs. For municipalities that operate MS4s, the BMPs require the municipalities take actions that will lessen the incidence of pollutants *entering* storm drains by regulating the *behavior and practices* of the municipalities, their residents, and their businesses.[33]

U.S. EPA has issued regulations and guidance documents that discuss the types of BMPs that must be included in storm water permits in order to reduce the discharge of pollutants in storm

---

[27] *Defenders of Wildlife v. Browner* (9th Cir. 1999) 191 F.3rd 1159. The differences between municipal and industrial permits are complicated, but are relevant to the question whether this permit addresses a uniquely governmental program, and are therefore discussed in more detail below.

[28] CWA § 402(b)(3).

[29] 40 C.F.R. § 122.26(a)(4). The U.S. EPA regulations have varied requirements depending on the size of the population served by the MS4. A "large" MS4 serves a population of 250,000 or more. (40 C.F.R. § 122.26(b)(4).) Los Angeles County and the 84 cities regulated by this permit far exceed the minimum population for a large MS4.

[30] 40 C.F.R. § 122.26(d).

[31] 40 C.F.R. § 122.26(d)(2)(iv).

[32] *Ibid.*

[33] There may also be engineered solutions, and there are some in Los Angeles, but it is important to keep in mind that there is no single engineered storm sewer treatment plant as there is for sanitary sewage.

water to the "maximum extent practicable." Numerous guidance documents point to inspections of businesses and proper trash collection as important parts of an effective BMP program.[34] U.S. EPA has issued an MS4 Program Evaluation Guide, which includes a lengthy process for conducting inspections of businesses. This Guide makes clear that inspections of businesses are mandatory:

> Inspections
> Most effective industrial/commercial inspection programs maintain a complete facility inventory and group them according to priorities established by the permittee. An inspection frequency is determined based on priority, and a database is used to manage such information as inspection findings, enforcement actions, and required follow-up activities. Many permittees use and cross-train existing staff to perform industrial/commercial inspections, but some permittees may need to maintain an exclusive stormwater inspector due to a potentially large number of high-priority facilities. There should be an inspection standard operating procedure that has been formalized and documented. It should include a checklist to be used during the inspection and possibly a report format. Inspectors should be aware of federal, state, and local stormwater regulations that may apply to industrial/commercial facilities. Inspectors should be familiar with various types of BMPs commonly used at the types of facilities typically found in the permit area and should be able to educate facility operators about such BMPs. In addition, inspectors should understand and use the permittee's established enforcement escalation response plan to gain compliance as necessary. The inspection staff should be proficient in the enforcement escalation procedure and should properly document all enforcement actions accordingly. Inspections should be used not only to identify non-compliance issues, but as an opportunity to educate facility operators about proper stormwater BMPs.[35]

The Guide also states that MS4 programs must address trash and litter.[36]

Adoption of the Los Angeles MS4 Permit

Starting in 1990, pursuant to the CWA amendments of 1987, the Los Angeles Water Board issued storm water permits to the County of Los Angeles and to the cities therein.[37] Without such a permit, the cities would be discharging pollutants in violation of federal law.[38] The permit

[37] For reasons not relevant to this matter, one city—Long Beach—has a separate permit. The current permit covers 84 cities.

[38] CWA §§ 301(a), 402(p)(3)(B).

that is the subject of these test claims is the third such permit, and was adopted December 13, 2001.[39] It is largely comprised of requirements to implement BMPs, most of which were proposed by the permittees.[40] The County and thirty-two of the cities challenged numerous aspects of the permit and the process by which it was issued, culminating in a court of appeal decision upholding the permit in its entirety.[41]

On February 1, 2001, the County, on behalf of all permittees,[42] submitted a Report of Waste Discharge (permit application), including a Stormwater Quality Management Plan (SQMP). The SQMP constituted the permittees' proposal for the BMPs that would be required in the permit.[43] (Permit C.) The permit that was ultimately adopted was based on the SQMP, with some revisions and additions necessary to meet minimum federal requirements. (*Id.*) The SQMP prepared by the County included several proposed BMPs that relate to inspections of commercial and industrial facilities and placement and maintenance of trash receptacles:

> (1) Municipalities must conduct site visits to industrial and commercial facilities, including automotive service businesses and restaurants, which must include, "a site walk-through to verify for, at a minimum, evidence of BMP implementation," and shall revisit facilities and take enforcement where illicit discharges are found;[44]
>
> (2) Municipalities will maintain a database of automotive and food service facilities, including whether they have "NPDES stormwater permit coverage;"[45] and
>
> (3) Municipalities must minimize trash from entering recreational water bodies,[46] remove trash from open channels;[47] and control litter and debris in streets.[48]

The SQMP included detailed requirements for municipalities to implement at construction sites, including inspections by the municipality.[49] The SQMP proposed that all municipalities be

[39] NPDES permits generally expire after 5 years, and must be reissued thereafter.

[40] A single permit applies to the County and 84 cities. Thus, while some entities may disagree with some provisions, other entities will agree and the entire group may propose permit terms that some cities oppose. The entire group submits a single proposed storm water management plan.

[41] *County of Los Angeles v. State Water Resources Control Board* (2006) 143 Cal.App.4th 985; referred to hereafter as *County of Los Angeles*.

[42] All permittees include the County and 84 cities. The County and the 21 cities that filed these Test Claims participated jointly with the application and permitting procedures with the remaining 63 cities who did not file Test Claims.

[43] The SQMP is several hundred pages. Relevant sections are attached; the entire SQMP is available should the Commission request it.

required to collect trash along open channels and encourage voluntary trash collection in natural stream channels.[50] The SQMP contains an Illicit Connection and Illicit Discharge Elimination Program, which includes education of inspectors employed by the permittees who will investigate businesses.[51]

Following adoption of the permit and a petition to the State Water Resources Control Board ("State Water Board"), the County, 32 cities,[52] the Los Angeles County Flood Control District and industry groups representing builders filed suit challenging numerous provisions in the Permit. The Superior Court upheld the Permit, and the Court of Appeal affirmed the judgment in its entirety.[53] First, the court held that the permit as a whole "imposes reasonable pollutant discharge requirements." Because the minimum federal requirement is that the permit require the municipalities to reduce pollutants to the maximum extent practicable, the court clearly determined that the permit's requirement are MEP. In its discussion of the consideration of costs to the municipalities, the court found that the permit did not exceed any federal requirements:

> "The permit explicitly states it is intended to provide a cost-effective storm water pollution program to the maximum extent possible. The permit applies the same cost-effective analysis to efforts to reduce the flow of pollutants into receiving waters. Moreover, the [Los Angeles Water Board] in its finding referred to a report specifying how the 'maximum extent practicable' requirement includes considerations of costs and benefits."[54]

The court also discussed various cost analysis reports and U.S. EPA Guidance. It rejected the claim that the permit's requirements exceeded the federal mandatory standard. The court specifically upheld the inspection requirements, stating: "there is federal regulatory authority that required [the Los Angeles Water Board] to consider imposing the inspection requirements."

Several of the permittees filed these test claims with the Commission on State Mandates. The Commission rejected the claims, basing its determination on Government Code section 17516, subdivision (c), which exempted Water Board permits from the requirements to reimburse state-mandated local funds. That action also resulted in a Court of Appeal decision finding that subdivision to be unconstitutional and remanding to the Commission to determine the test claims.[55] In its decision, the court stated that the Commission must address factual issues

regarding the requirements to conduct inspections and to place and maintain trash receptacles constitute state or federal mandates.

Following *Commission on State Mandates*, each of the four test claims was re-filed without any revisions.[56] All of the test claims are based upon requirements in the permit. Test Claim 03-TC-04 was filed by the County of Los Angeles, and challenges the requirement to place trash receptacles at transit stops.[57] Test Claim 03-TC-19 was filed by the County of Los Angeles, and challenges the requirements to inspect industrial and commercial businesses.[58] Test Claim 03-TC-20 was filed by nine cities[59] and challenges the requirements for trash receptacles and inspections, and the general requirements for a construction program.[60] Test Claim 03-TC-21 was re-filed by ten cities[61] and challenges the following permit requirements: discharge prohibitions, receiving water limitations, industrial program, construction program, storm drain program, and street and road maintenance[62]. While Test Claims 03-TC-20 and 03-TC-21 appear to assert broader requests for reimbursement, they address in detail only the requirements for inspections and trash receptacles, and these are the only requirements that the court in *Commission on State Mandates* stated were subject to the test claims.[63] In light of the absence of the necessary information for such claims and the court's remand, we assume that any claims additional to the inspections and trash receptacles are not valid claims.

In addition to the litigation over this permit, cities made similar arguments against an MS4 permit adopted by the Santa Ana Regional Water Quality Control Board. In a published decision, an appellate court in that case made additional findings applicable to the arguments in this matter[64]. It found that there was no evidence to support an argument that the permit "exceeded federal requirements." This finding is important because the cities in *Rancho Cucamonga* had argued that a ground for overturning that permit was that it used the same provisions as had

---

[56] The State Water Board and Los Angeles Water Board received several Notices of Complete Test Filing: a letter dated October 16, 2007, stated 03-TC-21 was complete; a letter dated October 29, 2007, stated that 03-TC-04 was complete; a letter dated October 29, 2007, stated that 03-TC-19 was complete; and a letter dated December 12, 2007, stated 03-TC-20 was complete. On December 21, 2007, the Commission extended time to respond to all four test claims until April 21, 2008.

[60] 03-TC-20 challenges Permit Part 4.C.2.a. and b., 4.E, and 4.F.5.C.3.

[61] The cities that filed the test claim are Arcadia, Baldwin Park, Bellflower, Cerritos, Covina, Downey, Monterey Park, Pico Rivera, Signal Hill, South Pasadena, and West Covina.

[62] 03-TC-21 challenges Permit Parts 1, 2, 4.C, 4.E, 4.F.5 and 6. In a letter dated January 18, 2008, sent to the Commission from Howard Gest, he states that the cities he represents, which include five of the cities that filed the claim, "do not currently intend to pursue a claim" as to Parts 1 and 2, but that the limitation is "without prejudice." In light of the fact that Mr. Gest apparently does not represent all of the cities that filed the claim and the limited nature of this limitation, we will address Parts 1 and 2 and ask the Commission to determine that these parts do not create a reimbursable mandate.

[63] 150 Cal.App.4th 898, 903.

[64] *City of Rancho Cucamonga v. Regional Water Quality Control Board*, 135 Cal.App.4th 1377.

been crafted for other permittees, including the Los Angeles MS4 permit. The *Rancho Cucamonga* court specifically addressed inspection requirements, holding that federal law, either expressly or by implication, required NPDES permittees to perform inspections for illicit discharge prevention and detection, including inspection of industrial facilities and construction sites. Because the Los Angeles MS4 permit is based on BMPs and courts have determined that it is consistent with MEP, it is necessarily no more stringent than required by federal law.

State Mandate Law

Article XIIIB, Section 6 of the California Constitution requires subvention of funds to reimburse local governments for state-mandated programs in specified situations. There are several exceptions and limitations to the subvention requirements that provide bases for the Commission to determine that the Test Claims are not subject to subvention. Article XIIIB, Section 6 provides: "Whenever the Legislature or any state agency mandates a new program or higher level of service on any local government, the State shall provide a subvention of funds to reimburse that local government for the costs of the program or increased level of service."

Implementing statutes clarify that no subvention of funds is required if: (1) the mandate imposes a requirement that is mandated by a federal law or regulation and results in costs mandated by the federal government, unless the statute or executive order mandates costs that exceed the mandate in that federal law or regulation (Govt. Code, § 17556(c)); or (2) the local agency has the authority to levy service charges, fees, or assessments sufficient to pay (Govt. Code, § 17556(d)); or (3) the local agency proposed the mandate (Govt. Code, § 17556(a)). Each of these exceptions to subvention applies to these Test Claims. All of the mandates for which the Test Claims seek reimbursement are mandated by federal law or regulation. The County and cities can assess fees for all of the costs incurred. The claimants themselves, as part of the group of the County and 84 cities who applied for the permit, proposed most of the specific requirements challenged.

Numerous judicial decisions have further defined limitations on the requirements for subvention of funds. Specifically, subvention is only required if expenditure of tax monies is required, and not if the costs can be reallocated or paid for with fees.[65] In addition, reimbursement to local agencies is required only for the costs involved in carrying out functions peculiar to government, not for expenses incurred by local agencies as an incidental impact of laws that apply generally to all state residents and entities. Laws of general application are not entitled to subvention.[66] The fact that a requirement may single out local governments is not dispositive; where local agencies are required to perform the same functions as private industry, no subvention is required.[67]

[66] *County of Los Angeles v. State of California* (1987) 43 Cal.3d 46.

[67] *City of Richmond v. Commission on State Mandates* (1998) 64 Cal.App.4th 1190.

The Permit is not subject to subvention; it meets each of these exceptions. The requirements that are the subject of the claims are part of permits that meet, but do not exceed, the minimum federal requirements. The federal mandate is specifically directed at the municipalities and not at the state in general. The costs for the programs can be paid for by levying service charges, including charges to companies for conducting their businesses, fees for collection of refuse, fees for transit services, and fees especially enacted for storm water programs.[68] Compliance with NPDES permits, and specifically with storm water permits, is required by private industry also. In fact, the requirements for industrial and construction entities are more stringent than for government dischargers. In addition, the government requirements apply to all governmental entities that operate MS4s, including state and federal facilities; local government is not singled out. The local agencies can assess fees to perform the required tasks; tax monies are not required. Finally, to the extent that any portion of the claims would otherwise qualify for subvention, they are *de minimis* and therefore do not qualify.

In its remand, the court stated that the most significant issue is "whether the two obligations in question constitute federal or state mandates" and that these present factual issues for the Commission to decide.[69] The court pointed to four cases that the Commission stated would apply in making this determination.[70] Each case is discussed below:

City of Sacramento v. State of California (1990) 50 Cal.3d 51: The court held that application of unemployment insurance law to state and local agencies was not subject to subvention. In discussing whether the requirement was a federal mandate, the court held that the issue is whether compliance with the federal law was "mandatory" or "optional," which is based on the following factors: "A determination in each case must depend on such factors as the nature and purpose of the federal program; whether its design suggests an intent to coerce; when state and/or local participation began; the penalties, if any, assessed for withdrawal or refusal to participate or comply; and any other legal and practical consequences of nonparticipation, noncompliance, or withdrawal."[71]

Hayes v. Commission on State Mandates (1992) 11 Cal.App.4th 1564: The court considered claims for subvention for a special education mandate. It concluded that, although the program was a federal mandate, the state had freely chosen to shift the costs to local governments and that subvention was proper. The court held that the test for whether there is a federal mandate is whether compliance with federal requirements is "a matter of true choice," in other words whether participation in the federal program is "truly voluntary."[72] The court listed the significant factual determinations: "In our view the determination whether certain costs were imposed upon a local agency by a federal mandate must focus upon the local agency which is ultimately

[68] The claimants refer to limitations on assessing services fees under California law. The referenced law concerns only the percent of voters who must approve the assessment. In fact, the largest entity subject to the permit, the City of Los Angeles, has successfully adopted such an assessment.

[69] *Commission on State Mandates*, 150 Cal.App.4th 898, 918.

[70] *Id.*, at 919.

[71] 50 Cal.3d 51, 76.

[72] 11 Cal.App.4th 1564, 1582.

forced to bear the costs and how those costs came to be imposed upon that agency. If the state freely chose to impose the costs upon the local agency as a means of implementing a federal program then the costs are the result of a reimbursable state mandate regardless whether the costs were imposed upon the state by the federal government."[73]

Long Beach Unified School District v. State of California (1990) 225 Cal.App.3rd 155: The court held that subvention does apply where actions are mandated by the state, which go beyond the federal constitution or case law. Because federal law clearly would not have required steps for de-segregation where there was no finding of segregation, subvention applied.

San Diego Unified School District v. Commission on State Mandates (2004) 33 Cal.4th 859: A school district sought subvention of funds to conduct expulsion hearings. The federal law made expulsions discretionary, but where expulsions occurred, the federal law mandated certain hearing procedures. The state law mandated expulsions whenever firearms were involved, and made all other expulsions discretionary. It also mandated some hearing procedures in addition to the federal requirements. The Supreme Court held that for firearms expulsions, the state mandated a higher level of service, and that all hearing costs for these expulsions were reimbursable, even those attributable to procedures mandated by federal law. It also held that no hearing costs are reimbursable for expulsions that are discretionary under state law. Even if the hearing procedures are mandated by state law, the court found they are incidental to federal due process requirements and are *de minimis* and therefore not reimbursable. In determining that any additional state-mandated hearing costs were *de minimis*, the court found that the state reasonably set forth requirements that were intended to implement the federal hearing requirements: "challenged state rules or procedures that are intended to implement an applicable federal law-and whose costs are, in context, *de minimis*-should be treated as part and parcel of the underlying federal mandate."[74]

The Claims do not Qualify for Subvention

The Programs are Federal Mandates that Apply Directly to Local Governments; the State has not Shifted the Burden; and the Mandates do not Exceed Federal Law

The challenged provisions are mandated by federal law. Two appellate courts have determined that the provisions in this permit constitute MEP—the minimum requirements mandated by federal law. The court in *Los Angeles* has determined that the Permit is cost-effective and based on the MEP standard. The court in *Rancho Cucamonga* found that a very similar permit met the MEP standard and did not exceed the minimum federal standard. That case specifically stated that the requirement to conduct inspections reflected MEP. The federal law specifically requires that permits be issued to the local governments that operate MS4s and that permits must require programs and actions that will result in reducing the pollutants that discharge from the MS4 to waters of the United States to the maximum extent practicable. The permit is a federal mandate on the local governments. It is the local governments that must apply for and obtain a permit. Without the permit, the cities are discharging pollutants in violation of federal

[73] *Id.* at 1593-4.

[74] 33 Cal.4th 859, 889.

law.[75] If the Water Boards had not been authorized to issue the permit in lieu of U.S. EPA, that federal agency would have issued a similar permit directly to the local governments.

The claimants contend that the Los Angeles Water Board exercised discretion to impose requirements beyond those required by federal law because the Los Angeles Water Board had a choice in establishing the mandated programs and "[t]he [Water Boards] cannot point to any provisions of the Clean Water Act or related regulations that require the programs at issue in this claim."[76] The fact that some discretion is exercised in implementing a federal program does not mean that subvention is required. The court in *Hayes* explained that, where the state has some discretion in mandating the program but ultimately the factual situation requires some type of mandate, there is a federal mandate:

> "The remaining question is whether the state's participation in the federal program was a matter of "true choice" or was "truly voluntary." The alternatives were to participate in the federal program and obtain federal financial assistance and the procedural protections accorded by the act, or to decline to participate and face a barrage of litigation with no real defense and ultimately be compelled to accommodate the educational needs of handicapped children in any event. We conclude that so far as the state is concerned the Education of the Handicapped Act constitutes a federal mandate."[77]

The central issue before the Commission is whether the requirements to conduct inspections and to place trash receptacles at bus and train stops exceed the federal mandate for MS4 permits. As to the inspections, the claimants appear to concede that federal law specifically requires MS4s to conduct inspections of industrial facilities and construction sites, but claim that the Los Angeles Water Board could have conducted all of the inspections and instead exercised its discretion to "shift" the responsibility to the claimants. They base this contention on a permit issued by the State Water Board to industrial facilities[78] and contend that permit obligates the Regional Water Boards, including Los Angeles, to conduct inspections. Therefore, they claim, the Los Angeles Water Board has shifted that responsibility to the municipalities. They also contend that the federal law does not specify that restaurants and automobile-related businesses must be inspected. As to the trash receptacles, they claim that the federal law does not specify this particular BMP.

In order to evaluate these contentions, some more detailed discussion of the storm water permitting scheme established by U.S. EPA is necessary. Of particular importance are: the process of selecting BMPs that are included in MS4 permits; the obligation of MS4s to regulate discharges from businesses into their systems, including discharges that are simultaneously regulated by separate NPDES permits; the process for selecting which businesses to regulate; and the requirement for MS4s to conduct inspections.

[78] Order No. 97-03-DWQ; http://www.waterboards.ca.gov/stormwtr/docs/induspmt.pdf

The Process for Selecting BMPs

The chief argument regarding trash receptacles is that the federal law does not specify this particular BMP and that, therefore, it exceeds federal law. The claimants appear to rely on *Hayes* to argue that the exercise of any discretion in selecting requirements automatically results in a reimbursable state mandate. As discussed above, however, the federal law specifically requires that the Water Boards prescribe the BMPs that the MS4 must implement. This issue was addressed succinctly in *Rancho Cucamonga*:

> In creating a permit system for dischargers from municipal storm sewers, Congress intended to implement actual programs. [Cite to *NRDC, supra*.] The Clean Water Act authorizes the imposition of permit conditions, including: "management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants." [Cite to CWA § 402(p)(3)(B)(iii).] The Act authorizes states to issue permits with conditions necessary to carry out its provisions. [Cite to § 402(a)(1).] The permitting agency has discretion to decide what practices, techniques, methods and other provisions are appropriate and necessary to control the discharge of pollutants. [Cite to *NRDC*.] That is what the Regional Board has created in the 2002 permit."[79]

Because the federal mandate requires the Water Boards to choose specific BMPs that are included in MS4 permits as requirements, the "discretion" exercised in selecting those BMPs is necessarily a part of the federal mandate. It is not comparable to the discretion that the courts in *Hayes* or *San Diego* spoke of, where the state truly had a "free choice." The Los Angeles Water Board was mandated by federal law to select BMPs that would result in compliance with the federal MEP standard. "The [Water Board] must comply with federal law requiring detailed conditions for NPDES permits."[80] This is completely different from the state discretion exercised in *San Diego*, where the state law compelled expulsions for bringing firearms to school, while the federal law clearly did not mandate such expulsions. Therefore, it is clear that the mere exercise of discretion in selecting BMPs, does not create a reimbursable mandate.

It is conceivable that an MS4 permit issued in California could require practices that exceed the federal requirement of MEP. It is clear, however, that inspection requirements do not exceed MEP. That issue has been specifically ruled on by *Rancho Cucamonga* and there are federal regulations, discussed below, that require these inspections. The claimants allege, however, that there is no similar requirement for the placement of trash receptacles at transit stops. The trash receptacle requirements in the Permit are different for those cities subject to a "trash TMDL" than for other cities. The Los Angeles Water Board has adopted TMDLs for some of the water bodies that receive discharges from MS4s subject to the permit. As required by the TMDL and federal law, the permit contains specific provisions for permittees that are subject to the trash TMDLs. The claimants do not seek subvention for those requirements. For

[79] *Rancho Cucamonga, supra*, at 1389.

[80] *Ibid.*

permittees not subject to a trash TMDL, the permit requires they implement BMPs to reduce trash entering the MS4s, including placing trash receptacles at all transit stops that have shelters by August 1, 2002, and at all other transit stops by February 3, 2003, and that they maintain trash receptacles as necessary. (Permit, Part 4.F.5.c.3.)

The requirements regarding trash receptacles are found in the section of the Permit concerning public agency activities. (Part 4.F.) This section imposes BMPs concerning sewage treatment overflows, construction by public agencies, storm drain maintenance and operation, and municipal construction projects. In other words, these are BMPs concerning the municipalities' own activities, as opposed to its regulation of discharges into its system by others. U.S. EPA storm water regulations address BMP requirements for the MS4s' maintenance and operation of the storm sewer system. Specifically, the MS4s' plan must include maintenance activities and schedules, including a "description of practices for operating and maintaining public streets, roads and highways and procedures for reducing the impact on receiving waters of discharges from municipal storm sewer systems. . ."[81] As early as 1993, the Executive Officer of the Los Angeles Water Board directed all of the cities regulated by the permit to "increase cleaning frequency of and number of roadside trash receptacles in areas where needed."[82]

The requirements to control the release of trash into MS4s and surface waters are at the heart of the storm water program. "Storm sewer waters carry suspended metals, sediments, algae-promoting nutrients (nitrogen and phosphorus), *floatable trash*, used motor oil, raw sewage, pesticides, and other toxic contaminants into streams, rivers, lakes, and estuaries across the United States."[83] In carrying out the federal mandate to select BMPs, the decision to require trash receptacles at transit stops is a reasonable, practicable, and cost-effective method to reduce trash in storm water runoff. The claimants have not, and cannot, explain how such a requirement exceeds the federal standard of actions that reflect the "maximum extent practicable." The Permit also allows individual permittees to substitute BMPs for specific requirements in the Permit.[84]

At bottom, the trash receptacle requirements reflect the federal requirement to reduce pollutants from the MS4 to the maximum extent practicable. It is federal law that animates the requirement and federal law that mandates specificity in describing the BMPs.

The Role of MS4s in Regulating Discharges from Industrial and Commercial Activities

The claimants allege that because the Water Boards have a role in directly regulating businesses within the jurisdiction of MS4s, and therefore conduct inspections at such sites, that the requirements in the Permit for the MS4s to conduct inspections reflect a decision to shift the costs of a federal mandate from the state to local government. The court in *Hayes* discussed

[81] 40 C.F.R. § 122.26(d)(2)(iv)(A)(3).

[82] Letter dated June 17, 1993, from Robert P. Ghirelli to Thomas A. Tidemanson. Attachment 34.

[83] *Environmental Defense Center v. U.S. EPA* (9th Cir. 2003) 344 F.3d 832, 841; emphasis added.

[84] Permit, Part 4.A.1.

this issue. There, the mandate was to the state generally, and the state government decided to shift the cost for implementing special education to local school districts. Here, there is no general mandate addressed to the entire state. Instead, the federal law clearly required that municipalities that operate MS4s must obtain and comply with a permit. The state does not operate the MS4; the mandate is directed to the municipalities.

In addition to the requirements for permits issued to municipalities, the Water Boards are also mandated to issue permits to entities that discharge storm water "associated with industrial activity."[85] As part of its responsibilities for its in lieu program, the State Boards must administer and enforce all of its permits.[86] The State Water Board has issued permits for industrial and construction discharges of storm water, and the Los Angeles Water Board administers those permits within its jurisdiction. Therefore, the Los Angeles Water Board does conduct inspections at businesses in Los Angeles County to ensure compliance with the state permits. In addition, the MS4 Permit requires the permittees also to conduct inspections. This approach, which may result in two different entities inspecting the same businesses to review storm water practices, was specifically envisioned and required by U.S. EPA in adopting its storm water regulations.[87]

In promulgating its regulations for MS4s and industrial dischargers, U.S. EPA made clear its intent to require industrial facilities that discharge into municipal storm sewers to obtain their own NPDES permits and *also* to require MS4s to regulate and be liable for these same discharges. In 1990, U.S. EPA adopted the regulations that spell out the federal mandates for MS4s to develop and implement plans for regulation of industrial facilities. In its Preamble to the regulations, it explained that MS4 permits "are expected to require that controls be placed on storm water discharges associated with industrial activity which discharge through the municipal system." It presented the rationale for this dual regulatory approach:

> "[U.S. EPA] believes that municipal operators of large and medium municipal systems have an important role in source identification and the development of pollutant controls for industries that discharge storm water through municipal separate storm sewer systems is appropriate. Under the CWA, large and medium municipalities are responsible for reducing pollutants in discharges from municipal separate storm sewers to the [MEP]. Because storm water from industrial facilities may be a major contributor of pollutants to municipal separate storm sewer systems, municipalities are obligated to develop controls for storm water discharges associated with industrial activity through their system in their storm water management program."[88]

---

[85] CWA § 402(p)(2)(B).

[86] CWA § 402(b).

[87] In fact, the Los Angeles Water Board acted to lessen any duplication of effort and costs to the municipal permittees by exempting them from inspection requirements if the same facility has been inspected by the Board.

[88] Vol. 55, Federal Register (Fed.Reg.), at 48009.

Thus, U.S. EPA specifically mandated that industrial facilities were to be subject to permits issued directly to them by the Water Boards and also through MS4 permits, where municipalities must regulate the facilities: "Dischargers of storm water associated with industrial activity through municipal separate storm sewer systems will be subject to municipal management programs that address such discharges as well as to an individual or general NPDES permit for those discharges."[89]

Requirements for MS4s to Conduct Inspections

The federal regulations also specifically require local storm water agencies, as part of their responsibilities under NPDES permits, to conduct inspections.[90] Throughout the federal law, there are numerous requirements for entities that discharge pollutants to waters of the United States to monitor and inspect their facilities and their effluent.[91] The claimants are the dischargers of pollutants into surface waters; as part of their permit allowing these dischargers, they must conduct inspections. The Los Angeles Water Board is charged with administering and enforcing the permit. Its policing responsibilities may also include inspecting the facilities and waters it regulates, but that does not mean it is shifting its responsibilities when it properly mandates inspections by MS4s.

The Process of Selecting Which Businesses MS4s Must Regulate

The claimants contend that federally mandated inspections do not include restaurants, automotive service facilities, retail gasoline outlets, or automotive dealerships. Instead, they claim that the federal mandate is limited to municipal landfills, hazardous waste sites, industrial facilities listed under the federal Superfund law, and industrial facilities that the permittees themselves determined are contributing substantial pollutants to their systems.

They base this contention on the U.S. EPA's regulations for MS4 applications. The federal regulation states that the storm water management plan that MS4s must submit must address the municipalities' enforcement against pollutants from "municipal landfills, hazardous waste treatment, disposal and recovery facilities, industrial facilities that are subject to section 313 of title III of [the federal Superfund law], and *industrial facilities that the municipal permit applicant determines are contributing a substantial pollutant loading to the municipal storm sewer system.*"[92] The claim is essentially that, after MS4s submitted their first application for a permit, which was required by the U.S. EPA regulations in 1990,[93] and listed any industrial facilities they deemed to be contributors of substantial pollutant loading, the federal law did not mandate any further actions, regardless of whether new information or monitoring might reveal such

[89] *Id.* at 48058.

[90] 40 C.F.R. § 122.26(d)(2)(iv)(C). While the U.S. EPA regulations are phrased as "application requirements," wherein the MS4 must propose the various BMPs that will achieve MEP, these requirements must be included in the mandatory storm water management program. (*Los Angeles, supra,* 143 Cal.App.4th 985, 993.)

[91] See, e.g. CWA § 402(b)(2)(B); 40 C.F.R. § 122.44(i).

[92] 40 C.F.R. § 122.26(d)(2)(iv)(C); emphasis added.

[93] Vol. 55, Fed.Reg. 47990.

contributors. This is not a reasonable reading of the federal regulation. In adopting this regulation, U.S. EPA acknowledged that this initial selection by MS4s was only a starting point and that the mandate was to follow where information and monitoring led:

> "The object of [the requirements in 122.26(d)(2)(iv)(C)] is initially to set priorities for monitoring requirements. Then, if the situation requires controls can be developed and instituted. . . . the selection of facilities is only a means of setting priorities for facilities for the development of municipal plans. ¶ EPA agrees. . . that there will be other facilities that are significant sources of pollutants and should be addressed by municipalities as soon as possible under management programs."

As early as 1993, the Executive Officer of the Los Angeles Water Board directed all of the cities regulated by the permit to implement facility inspections of "auto repair shops, auto body shops, auto parts and accessory shops, gasoline stations, and restaurants."[94] The letter noted that the BMPs listed therein constitute the minimum required for area-wide implementation, and that the list "is not an additional requirement, but incorporates BMPs already proposed by some permittees." Thus, it appears that the inspection requirements were, in fact, proposed by permittees.[95] In any event, MEP is not limited to the sources and controls proposed by the permittees. U.S. EPA Guidance documents make clear that MEP requires an iterative process, where municipalities assess sources, conduct investigations, and improve their programs.[96]

The Local Governments have the Authority to Levy Service Charges, Fees, or Assessments to Pay for the Programs

The County and cities need not spend tax monies to comply with the Permit. They can and do adopt fees from their residents and businesses that fund their storm water programs. The City of Los Angeles (the largest entity covered by the permit, and which has not filed any test claims) adopted a fee ordinance, based on property assessments, for implementation of the program. All of the municipalities have the ability to charge fees to businesses to cover inspection costs. The cities' trash collection responsibilities, which include placement of trash receptacles, are also paid for through existing fees. Moreover, the trash receptacle requirements that are the subject of the Test Claims are limited to public transit stops. Any additional costs associated with trash removal at these transit stops, a service cities already provide, could be borne by transit users through higher transit fees.

The cities and the County have failed to show that they must use tax monies to pay for these requirements. It is also clear that any "additional" costs that could conceivably be considered additional to the federal mandate would be *de minimis* and would not require payment from tax monies. For example, it is assumed that most cities routinely place trash receptacles at bus stops. In fact, the claimants make no allegation of any increased costs from this requirement;

[94] Letter dated June 17, 1993, from Robert P. Ghirelli to Thomas A. Tidemanson. Attachment 34.

[95] The issue of proposals by the permittees is discussed below.

[96] See, e.g. U.S. EPA document on Evaluating the Effectiveness of Municipal Storm Water Programs.

instead, they conflate any costs by listing "estimated trash receptacles, catch basin, and/or other treatment devices – capital and installation costs."[97]

The Local Governments Applied for the Permit and Proposed the Programs

The County and cities bound by the permit requested the mandate and the Permit allows alternatives in the manner of compliance. The County and cities jointly applied for the permit and proposed a management plan that is consistent with many of the requirements in the permit. Relevant portions of the Report of Waste Discharge that the County submitted are attached. The entire Report of Waste Discharge is available upon request. It is clear from these attachments, which include not only proposed programs but a draft permit, that many of the programs subject to the claims—including regulation of industrial and commercial sites, and specifically restaurants and automobile-service businesses—were proposed in the permittees' original plan submitted in February 2001. For example, the permittees proposed that the permit prohibit discharge of wash waters from gas stations, auto repair garages, and other automotive service facilities.[98] In addition, the permittees proposed a requirement that they "visit" automotive service and food service facilities every two years, and that they "revisit" facilities and take enforcement action if there is evidence of continuing illicit discharges.[99] The permittees submitted a lengthy list of proposed BMPs that site inspectors should look for during site visits.[100] Whether the term is "site visit" or "inspection," it is clear that the permittees proposed the mandate. The permittees also proposed that the permit mandate trash collection alongside, or in improved open channels.[101]

The permit was issued upon the joint request of all of the petitioners, with the County acting as the lead. Where the County and 84 cities apply for a single area-wide permit, the permit writer obviously is not required to write separate requirements for each entity and the County may be presumed to speak for the whole.

The Programs are not Mandates Peculiar to Government

Finally, the NPDES permit program, and the storm water requirements specifically, are not peculiar to local government. Industrial and construction facilities must also obtain NPDES storm water permits. These permits, however, are more stringent than municipal permits because the federal law requires that they meet more stringent technology-based standards and that they attain strict compliance with water quality standards in receiving waters.[102] As such, the only difference between the municipal storm water program and other storm water requirements is that federal law provides separate, more lax requirements for the municipalities.

---

[97] Claim 03-TC-21, at p.2.

[98] Report of Waste Discharge at R0000026.

[99] *Id.* at R0000031.

[100] *Id.* at R0000273 – R0000360.

[101] *Id.* at R0000036.

[102] *Defenders of Wildlife v. Browner, supra.*

The Water Boards' implementation of federal law reflects this dichotomy and the fact that the municipalities receive their own permit, as required by CWA section 402(p)(3)(B) does not change the fact that storm water permit requirements are not peculiar to local government.

It is the municipalities who operate MS4s and who discharge pollutants to surface waters. It is the municipalities who must obtain permits and comply with those permits. Similarly, industrial dischargers who discharge storm water runoff to waters of the United States must also obtain and comply with permits. The state is not the discharger (except in those situations where state agencies operate MS4s, such as the Department of Transportation, where they are themselves subject to permits), and the state is not uniquely shifting a new program or higher level of service onto municipalities.[103]

Discussion of Test Claims that were not Substantiated

Development Construction Program (Part 4.E)

Test claim 03-TC-21 claims subvention of costs for the development construction program. It did not, however, include any substantiation of this claim.

Public Agency Activities Program (Part 4.F.5 and 6)

Test claims 03-TC-04, 03-TC-20, and 03-TC-21 claim subvention for portions of the public agency activities program. Test claim 03-TC-21 claims subvention for the all requirements concerning storm drain operation and streets and roads maintenance, while test claims 03-TC-04 and 03-TC-20 are limited to the requirements to place trash receptacles at transit stops and to maintain these receptacles. Test claim 03-TC-21, however, did not include any substantiation of this claim, apart from the discussion of trash receptacles, above.

Discharge Prohibitions and Receiving Water Limitations (Parts 1 and 2)

Test claim 03-TC-21 challenges the discharges prohibitions and receiving water limitations in the Permit. Parts 1 and 2 contain the basic prohibitions and requirements for attaining compliance with water quality standards through an iterative process. The whole of the claim is that, "if enforced and read to literarily [*sic*] to require the City to prevent any and all exceedances from urban runoff of all water quality standards or water quality objectives" the costs would be excessive. The court in *County of Los Angeles, supra,* rejected this exaggeration of the permit's terms and found the requirements to be entirely reasonable. In addition, the *Rancho Cucamonga* and *Building Industry Association* both upheld identical provisions and found them to be reasonable and to be consistent with the minimum federal standard of MEP.

[103] The State Water Board issues a separate permit to the Department of Transportation, for both its municipal activities (roads and freeways) and its industrial facilities (construction and maintenance yards). The permit is available at http://www.waterboards.ca.gov/stormwtr/docs/caltrans/caltranspmt.pdf.

Conclusion

For all the reasons set forth above, the Test Claims must be dismissed. The Permit requirements have already been upheld by the courts as reflecting the federal Clean Water Act's requirements for municipal storm water permitting. The permit in its entirety, including the Test Claim provisions, reflects the federally mandated, federal minimum standard of reducing pollutants to the "maximum extent practicable." Further, the cities can pay for any costs associated with the requirements by levying service charges or fees. Finally, to the extent that any portion of the claims would otherwise qualify for subvention, they are *de minimis* and therefore do not warrant subvention.

I certify and declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct and that this document was executed on April 18, 2008, at Sacramento, California.

Interested Persons List

PROOF OF SERVICE

I, JEANNETTE L. BASHAW, declare that I am over 18 years of age and not a party to the within action. I am employed in Sacramento County at 1001 I Street, 22nd Floor, Sacramento, California 95814. My mailing address is P.O. Box 100, Sacramento, CA 95812-0100. On this date, I served the within documents:

LETTER TO COMMISSION ON STATE MANDATES DATED APRIL 18, 2008, REGARDING STORM WATER POLLUTION CONTROL REQUIREMENTS, FILES 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21: RESPONSE TO TEST CLAIMS 03-TC-04, 03-TC-19, 03-TC-20, 03-TC-21

	BY FACSIMILE: I caused a true and correct copy of the document to be transmitted by a facsimile machine compliant with rule 2003 of the California Rules of Court to the offices of the addresses at the telephone numbers shown on the service list.
X	**BY HAND DELIVERY:** I caused a true and correct copy of the document(s) to be hand-delivered to the person(s) as shown.
	BY OVERNIGHT MAIL TO ALL PARTIES LISTED: I am readily familiar with my employer's practice for the collection and processing of overnight mail packages. Under that practice, packages would be deposited with an overnight mail carrier that same day, with overnight delivery charges thereon fully prepaid, in the ordinary course of business.
X	**BY FIRST CLASS MAIL TO ALL PARTIES LISTED:** I am readily familiar with my employer's practice for the collection and processing of mail. Under that practice, envelopes would be deposited with the U.S. Postal Service that same day, with first class postage thereon fully prepaid, in the ordinary course of business. I am aware that on motion of the party served, service is presumed invalid if the postal cancellation date or postage meter date is more than one day after the date of deposit for mailing shown in this proof of service.

By placing a true copy thereof in separate, sealed envelopes addressed to:

See Exhibit A attached hereto and made a part hereof.

I certify and declare under penalty of perjury under the laws of the State of California that the foregoing is true and correct and that this document was executed on April 18, 2008, at Sacramento, California.

Jeannette L. Bashaw

CWA § 301

Effective:[See Text Amendments]

United States Code Annotated Currentness
Title 33. Navigation and Navigable Waters (Refs & Annos)
Chapter 26. Water Pollution Prevention and Control (Refs & Annos)
Subchapter III. Standards and Enforcement (Refs & Annos)
§ 1311. Effluent limitations

(a) Illegality of pollutant discharges except in compliance with law

Except as in compliance with this section and sections 1312, 1316, 1317, 1328, 1342, and 1344 of this title, the discharge of any pollutant by any person shall be unlawful.

(b) Timetable for achievement of objectives

In order to carry out the objective of this chapter there shall be achieved--

(1)(A) not later than July 1, 1977, effluent limitations for point sources, other than publicly owned treatment works, (i) which shall require the application of the best practicable control technology currently available as defined by the Administrator pursuant to section 1314(b) of this title, or (ii) in the case of a discharge into a publicly owned treatment works which meets the requirements of subparagraph (B) of this paragraph, which shall require compliance with any applicable pretreatment requirements and any requirements under section 1317 of this title; and

(B) for publicly owned treatment works in existence on July 1, 1977, or approved pursuant to section 1283 of this title prior to June 30, 1974 (for which construction must be completed within four years of approval), effluent limitations based upon secondary treatment as defined by the Administrator pursuant to section 1314(d)(1) of this title; or,

(C) not later than July 1, 1977, any more stringent limitation, including those necessary to meet water quality standards, treatment standards, or schedules of compliance, established pursuant to any State law or regulations (under authority preserved by section 1370 of this title) or any other Federal law or regulation, or required to implement any applicable water quality standard established pursuant to this chapter.

(2)(A) for pollutants identified in subparagraphs (C), (D), and (F) of this paragraph, effluent limitations for categories and classes of point sources, other than publicly owned treatment works, which (i) shall require application of the best available technology economically achievable for such category or class, which will result in reasonable further progress toward the national goal of eliminating the discharge of all pollutants, as determined in accordance with regulations issued by the Administrator pursuant to section 1314(b)(2) of this title, which such effluent limitations shall require the elimination of discharges of all pollutants if the Administrator finds, on the basis of information available to him (including information developed pursuant to section 1325 of this title), that such elimination is technologically and economically achievable for a category or class of point sources as determined in accordance with regulations issued by the Administrator pursuant to section 1314(b)(2) of this title, or (ii) in the case of the introduction of a pollutant into a publicly owned treatment works which meets the requirements of subparagraph (B) of this paragraph, shall require compliance with any applicable pretreatment requirements and any other requirement under section 1317 of this title;

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

(B) Repealed. Pub.L. 97-117, § 21(b), Dec. 29, 1981, 95 Stat. 1632.

(C) with respect to all toxic pollutants referred to in table 1 of Committee Print Numbered 95-30 of the Committee on Public Works and Transportation of the House of Representatives compliance with effluent limitations in accordance with subparagraph (A) of this paragraph as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under section 1314(b) of this title, and in no case later than March 31, 1989;

(D) for all toxic pollutants listed under paragraph (1) of subsection (a) of section 1317 of this title which are not referred to in subparagraph (C) of this paragraph compliance with effluent limitations in accordance with subparagraph (A) of this paragraph as expeditiously as practicable, but in no case later than three years after the date such limitations are promulgated under section 1314(b) of this title, and in no case later than March 31, 1989;

(E) as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under section 1314(b) of this title, and in no case later than March 31, 1989, compliance with effluent limitations for categories and classes of point sources, other than publicly owned treatment works, which in the case of pollutants identified pursuant to section 1314(a)(4) of this title shall require application of the best conventional pollutant control technology as determined in accordance with regulations issued by the Administrator pursuant to section 1314(b)(4) of this title; and

(F) for all pollutants (other than those subject to subparagraphs (C), (D), or (E) of this paragraph) compliance with effluent limitations in accordance with subparagraph (A) of this paragraph as expeditiously as practicable but in no case later than 3 years after the date such limitations are established, and in no case later than March 31, 1989.

(3)(A) for effluent limitations under paragraph (1)(A)(i) of this subsection promulgated after January 1, 1982, and requiring a level of control substantially greater or based on fundamentally different control technology than under permits for an industrial category issued before such date, compliance as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under section 1314(b) of this title, and in no case later than March 31, 1989; and

(B) for any effluent limitation in accordance with paragraph (1)(A)(i), (2)(A)(i), or (2)(E) of this subsection established only on the basis of section 1342(a)(1) of this title in a permit issued after February 4, 1987, compliance as expeditiously as practicable but in no case later than three years after the date such limitations are established, and in no case later than March 31, 1989.

(c) Modification of timetable

The Administrator may modify the requirements of subsection (b)(2)(A) of this section with respect to any point source for which a permit application is filed after July 1, 1977, upon a showing by the owner or operator of such point source satisfactory to the Administrator that such modified requirements (1) will represent the maximum use of technology within the economic capability of the owner or operator; and (2) will result in reasonable further progress toward the elimination of the discharge of pollutants.

(d) Review and revision of effluent limitations

Any effluent limitation required by paragraph (2) of subsection (b) of this section shall be reviewed at least every five years and, if appropriate, revised pursuant to the procedure established under such paragraph.

(e) All point discharge source application of effluent limitations

Effluent limitations established pursuant to this section or section 1312 of this title shall be applied to all point sources of discharge of pollutants in accordance with the provisions of this chapter.

(f) Illegality of discharge of radiological, chemical, or biological warfare agents, high-level radioactive waste, or

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

medical waste

Notwithstanding any other provisions of this chapter it shall be unlawful to discharge any radiological, chemical, or biological warfare agent, any high-level radioactive waste, or any medical waste, into the navigable waters.
(g) Modifications for certain nonconventional pollutants

(1) General authority

The Administrator, with the concurrence of the State, may modify the requirements of subsection (b)(2)(A) of this section with respect to the discharge from any point source of ammonia, chlorine, color, iron, and total phenols (4AAP) (when determined by the Administrator to be a pollutant covered by subsection (b)(2)(F) of this section) and any other pollutant which the Administrator lists under paragraph (4) of this subsection.

(2) Requirements for granting modifications

A modification under this subsection shall be granted only upon a showing by the owner or operator of a point source satisfactory to the Administrator that--

(A) such modified requirements will result at a minimum in compliance with the requirements of subsection (b)(1)(A) or (C) of this section, whichever is applicable;

(B) such modified requirements will not result in any additional requirements on any other point or nonpoint source; and

(C) such modification will not interfere with the attainment or maintenance of that water quality which shall assure protection of public water supplies, and the protection and propagation of a balanced population of shellfish, fish, and wildlife, and allow recreational activities, in and on the water and such modification will not result in the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable risk to human health or the environment because of bioaccumulation, persistency in the environment, acute toxicity, chronic toxicity (including carcinogenicity, mutagenicity or teratogenicity), or synergistic propensities.

(3) Limitation on authority to apply for subsection (c) modification

If an owner or operator of a point source applies for a modification under this subsection with respect to the discharge of any pollutant, such owner or operator shall be eligible to apply for modification under subsection (c) of this section with respect to such pollutant only during the same time period as he is eligible to apply for a modification under this subsection.

(4) Procedures for listing additional pollutants

(A) General authority

Upon petition of any person, the Administrator may add any pollutant to the list of pollutants for which modification under this section is authorized (except for pollutants identified pursuant to section 1314(a)(4) of this title, toxic pollutants subject to section 1317(a) of this title, and the thermal component of discharges) in accordance with the provisions of this paragraph.

(B) Requirements for listing

(i) Sufficient information

The person petitioning for listing of an additional pollutant under this subsection shall submit to the Administrator sufficient information to make the determinations required by this subparagraph.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

(ii) Toxic criteria determination

The Administrator shall determine whether or not the pollutant meets the criteria for listing as a toxic pollutant under section 1317(a) of this title.

(iii) Listing as toxic pollutant

If the Administrator determines that the pollutant meets the criteria for listing as a toxic pollutant under section 1317(a) of this title, the Administrator shall list the pollutant as a toxic pollutant under section 1317(a) of this title.

(iv) Nonconventional criteria determination

If the Administrator determines that the pollutant does not meet the criteria for listing as a toxic pollutant under such section and determines that adequate test methods and sufficient data are available to make the determinations required by paragraph (2) of this subsection with respect to the pollutant, the Administrator shall add the pollutant to the list of pollutants specified in paragraph (1) of this subsection for which modifications are authorized under this subsection.

(C) Requirements for filing of petitions

A petition for listing of a pollutant under this paragraph--

(i) must be filed not later than 270 days after the date of promulgation of an applicable effluent guideline under section 1314 of this title;

(ii) may be filed before promulgation of such guideline; and

(iii) may be filed with an application for a modification under paragraph (1) with respect to the discharge of such pollutant.

(D) Deadline for approval of petition

A decision to add a pollutant to the list of pollutants for which modifications under this subsection are authorized must be made within 270 days after the date of promulgation of an applicable effluent guideline under section 1314 of this title.

(E) Burden of proof

The burden of proof for making the determinations under subparagraph (B) shall be on the petitioner.

(5) Removal of pollutants

The Administrator may remove any pollutant from the list of pollutants for which modifications are authorized under this subsection if the Administrator determines that adequate test methods and sufficient data are no longer available for determining whether or not modifications may be granted with respect to such pollutant under paragraph (2) of this subsection.

(h) Modification of secondary treatment requirements

The Administrator, with the concurrence of the State, may issue a permit under section 1342 of this title which modifies the requirements of subsection (b)(1)(B) of this section with respect to the discharge of any pollutant from a publicly owned treatment works into marine waters, if the applicant demonstrates to the satisfaction of the Administrator that--

(1) there is an applicable water quality standard specific to the pollutant for which the modification is requested, which has been identified under section 1314(a)(6) of this title;

(2) the discharge of pollutants in accordance with such modified requirements will not interfere, alone or in

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

combination with pollutants from other sources, with the attainment or maintenance of that water quality which assures protection of public water supplies and the protection and propagation of a balanced, indigenous population of shellfish, fish, and wildlife, and allows recreational activities, in and on the water;

(3) the applicant has established a system for monitoring the impact of such discharge on a representative sample of aquatic biota, to the extent practicable, and the scope of such monitoring is limited to include only those scientific investigations which are necessary to study the effects of the proposed discharge;

(4) such modified requirements will not result in any additional requirements on any other point or nonpoint source;

(5) all applicable pretreatment requirements for sources introducing waste into such treatment works will be enforced;

(6) in the case of any treatment works serving a population of 50,000 or more, with respect to any toxic pollutant introduced into such works by an industrial discharger for which pollutant there is no applicable pretreatment requirement in effect, sources introducing waste into such works are in compliance with all applicable pretreatment requirements, the applicant will enforce such requirements, and the applicant has in effect a pretreatment program which, in combination with the treatment of discharges from such works, removes the same amount of such pollutant as would be removed if such works were to apply secondary treatment to discharges and if such works had no pretreatment program with respect to such pollutant;

(7) to the extent practicable, the applicant has established a schedule of activities designed to eliminate the entrance of toxic pollutants from nonindustrial sources into such treatment works;

(8) there will be no new or substantially increased discharges from the point source of the pollutant to which the modification applies above that volume of discharge specified in the permit;

(9) the applicant at the time such modification becomes effective will be discharging effluent which has received at least primary or equivalent treatment and which meets the criteria established under section 1314(a)(1) of this title after initial mixing in the waters surrounding or adjacent to the point at which such effluent is discharged.

For the purposes of this subsection the phrase "the discharge of any pollutant into marine waters" refers to a discharge into deep waters of the territorial sea or the waters of the contiguous zone, or into saline estuarine waters where there is strong tidal movement and other hydrological and geological characteristics which the Administrator determines necessary to allow compliance with paragraph (2) of this subsection, and section 1251(a)(2) of this title. For the purposes of paragraph (9), "primary or equivalent treatment" means treatment by screening, sedimentation, and skimming adequate to remove at least 30 percent of the biological oxygen demanding material and of the suspended solids in the treatment works influent, and disinfection, where appropriate. A municipality which applies secondary treatment shall be eligible to receive a permit pursuant to this subsection which modifies the requirements of subsection (b)(1)(B) of this section with respect to the discharge of any pollutant from any treatment works owned by such municipality into marine waters. No permit issued under this subsection shall authorize the discharge of sewage sludge into marine waters. In order for a permit to be issued under this subsection for the discharge of a pollutant into marine waters, such marine waters must exhibit characteristics assuring that water providing dilution does not contain significant amounts of previously discharged effluent from such treatment works. No permit issued under this subsection shall authorize the discharge of any pollutant into saline estuarine waters which at the time of application do not support a balanced indigenous population of shellfish, fish and wildlife, or allow recreation in and on the waters or which exhibit ambient water quality below applicable water quality standards adopted for the protection of public water supplies, shellfish, fish and wildlife or recreational activities or such other standards necessary to assure support and protection of such uses. The prohibition contained in the preceding sentence shall apply without regard to the presence or absence of a causal relationship between such characteristics and the applicant's current or proposed discharge. Notwithstand-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ing any other provisions of this subsection, no permit may be issued under this subsection for discharge of a pollutant into the New York Bight Apex consisting of the ocean waters of the Atlantic Ocean westward of 73 degrees 30 minutes west longitude and northward of 40 degrees 10 minutes north latitude.

(i) Municipal time extensions

(1) Where construction is required in order for a planned or existing publicly owned treatment works to achieve limitations under subsection (b)(1)(B) or (b)(1)(C) of this section, but (A) construction cannot be completed within the time required in such subsection, or (B) the United States has failed to make financial assistance under this chapter available in time to achieve such limitations by the time specified in such subsection, the owner or operator of such treatment works may request the Administrator (or if appropriate the State) to issue a permit pursuant to section 1342 of this title or to modify a permit issued pursuant to that section to extend such time for compliance. Any such request shall be filed with the Administrator (or if appropriate the State) within 180 days after February 4, 1987. The Administrator (or if appropriate the State) may grant such request and issue or modify such a permit, which shall contain a schedule of compliance for the publicly owned treatment works based on the earliest date by which such financial assistance will be available from the United States and construction can be completed, but in no event later than July 1, 1988, and shall contain such other terms and conditions, including those necessary to carry out subsections (b) through (g) of section 1281 of this title, section 1317 of this title, and such interim effluent limitations applicable to that treatment works as the Administrator determines are necessary to carry out the provisions of this chapter.

(2)(A) Where a point source (other than a publicly owned treatment works) will not achieve the requirements of subsections (b)(1)(A) and (b)(1)(C) of this section and--

(i) if a permit issued prior to July 1, 1977, to such point source is based upon a discharge into a publicly owned treatment works; or

(ii) if such point source (other than a publicly owned treatment works) had before July 1, 1977, a contract (enforceable against such point source) to discharge into a publicly owned treatment works; or

(iii) if either an application made before July 1, 1977, for a construction grant under this chapter for a publicly owned treatment works, or engineering or architectural plans or working drawings made before July 1, 1977, for a publicly owned treatment works, show that such point source was to discharge into such publicly owned treatment works,

and such publicly owned treatment works is presently unable to accept such discharge without construction, and in the case of a discharge to an existing publicly owned treatment works, such treatment works has an extension pursuant to paragraph (1) of this subsection, the owner or operator of such point source may request the Administrator (or if appropriate the State) to issue or modify such a permit pursuant to such section 1342 of this title to extend such time for compliance. Any such request shall be filed with the Administrator (or if appropriate the State) within 180 days after December 27, 1977, or the filing of a request by the appropriate publicly owned treatment works under paragraph (1) of this subsection, whichever is later. If the Administrator (or if appropriate the State) finds that the owner or operator of such point source has acted in good faith, he may grant such request and issue or modify such a permit, which shall contain a schedule of compliance for the point source to achieve the requirements of subsections (b)(1)(A) and (C) of this section and shall contain such other terms and conditions, including pretreatment and interim effluent limitations and water conservation requirements applicable to that point source, as the Administrator determines are necessary to carry out the provisions of this chapter.

(B) No time modification granted by the Administrator (or if appropriate the State) pursuant to paragraph (2)(A) of this subsection shall extend beyond the earliest date practicable for compliance or beyond the date of any extension granted to the appropriate publicly owned treatment works pursuant to paragraph (1) of this subsection,

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

but in no event shall it extend beyond July 1, 1988; and no such time modification shall be granted unless (i) the publicly owned treatment works will be in operation and available to the point source before July 1, 1988, and will meet the requirements of subsections (b)(1)(B) and (C) of this section after receiving the discharge from that point source; and (ii) the point source and the publicly owned treatment works have entered into an enforceable contract requiring the point source to discharge into the publicly owned treatment works, the owner or operator of such point source to pay the costs required under section 1284 of this title, and the publicly owned treatment works to accept the discharge from the point source; and (iii) the permit for such point source requires that point source to meet all requirements under section 1317(a) and (b) of this title during the period of such time modification.

(j) Modification procedures

(1) Any application filed under this section for a modification of the provisions of--

(A) subsection (b)(1)(B) of this section under subsection (h) of this section shall be filed not later that [FN1] the 365th day which begins after December 29, 1981, except that a publicly owned treatment works which prior to December 31, 1982, had a contractual arrangement to use a portion of the capacity of an ocean outfall operated by another publicly owned treatment works which has applied for or received modification under subsection (h) of this section, may apply for a modification of subsection (h) of this section in its own right not later than 30 days after February 4, 1987, and except as provided in paragraph (5);

(B) subsection (b)(2)(A) of this section as it applies to pollutants identified in subsection (b)(2)(F) of this section shall be filed not later than 270 days after the date of promulgation of an applicable effluent guideline under section 1314 of this title or not later than 270 days after December 27, 1977, whichever is later.

(2) Subject to paragraph (3) of this section, any application for a modification filed under subsection (g) of this section shall not operate to stay any requirement under this chapter, unless in the judgment of the Administrator such a stay or the modification sought will not result in the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable risk to human health or the environment because of bioaccumulation, persistency in the environment, acute toxicity, chronic toxicity (including carcinogenicity, mutagenicity, or teratogenicity), or synergistic propensities, and that there is a substantial likelihood that the applicant will succeed on the merits of such application. In the case of an application filed under subsection (g) of this section, the Administrator may condition any stay granted under this paragraph on requiring the filing of a bond or other appropriate security to assure timely compliance with the requirements from which a modification is sought.

(3) Compliance requirements under subsection (g)

(A) Effect of filing

An application for a modification under subsection (g) of this section and a petition for listing of a pollutant as a pollutant for which modifications are authorized under such subsection shall not stay the requirement that the person seeking such modification or listing comply with effluent limitations under this chapter for all pollutants not the subject of such application or petition.

(B) Effect of disapproval

Disapproval of an application for a modification under subsection (g) of this section shall not stay the requirement that the person seeking such modification comply with all applicable effluent limitations under this chapter.

(4) Deadline for subsection (g) decision

An application for a modification with respect to a pollutant filed under subsection (g) of this section must be approved or disapproved not later than 365 days after the date of such filing; except that in any case in which a

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

petition for listing such pollutant as a pollutant for which modifications are authorized under such subsection is approved, such application must be approved or disapproved not later than 365 days after the date of approval of such petition.

(5) Extension of application deadline

(A) In general

In the 180-day period beginning on October 31, 1994, the city of San Diego, California, may apply for a modification pursuant to subsection (h) of this section of the requirements of subsection (b)(1)(B) of this section with respect to biological oxygen demand and total suspended solids in the effluent discharged into marine waters.

(B) Application

An application under this paragraph shall include a commitment by the applicant to implement a waste water reclamation program that, at a minimum, will--

(i) achieve a system capacity of 45,000,000 gallons of reclaimed waste water per day by January 1, 2010; and

(ii) result in a reduction in the quantity of suspended solids discharged by the applicant into the marine environment during the period of the modification.

(C) Additional conditions

The Administrator may not grant a modification pursuant to an application submitted under this paragraph unless the Administrator determines that such modification will result in removal of not less than 58 percent of the biological oxygen demand (on an annual average) and not less than 80 percent of total suspended solids (on a monthly average) in the discharge to which the application applies.

(D) Preliminary decision deadline

The Administrator shall announce a preliminary decision on an application submitted under this paragraph not later than 1 year after the date the application is submitted.

(k) Innovative technology

In the case of any facility subject to a permit under section 1342 of this title which proposes to comply with the requirements of subsection (b)(2)(A) or (b)(2)(E) of this section by replacing existing production capacity with an innovative production process which will result in an effluent reduction significantly greater than that required by the limitation otherwise applicable to such facility and moves toward the national goal of eliminating the discharge of all pollutants, or with the installation of an innovative control technique that has a substantial likelihood for enabling the facility to comply with the applicable effluent limitation by achieving a significantly greater effluent reduction than that required by the applicable effluent limitation and moves toward the national goal of eliminating the discharge of all pollutants, or by achieving the required reduction with an innovative system that has the potential for significantly lower costs than the systems which have been determined by the Administrator to be economically achievable, the Administrator (or the State with an approved program under section 1342 of this title, in consultation with the Administrator) may establish a date for compliance under subsection (b)(2)(A) or (b)(2)(E) of this section no later than two years after the date for compliance with such effluent limitation which would otherwise be applicable under such subsection, if it is also determined that such innovative system has the potential for industrywide application.

(*l*) Toxic pollutants

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Other than as provided in subsection (n) of this section, the Administrator may not modify any requirement of this section as it applies to any specific pollutant which is on the toxic pollutant list under section 1317(a)(1) of this title.

(m) Modification of effluent limitation requirements for point sources

(1) The Administrator, with the concurrence of the State, may issue a permit under section 1342 of this title which modifies the requirements of subsections (b)(1)(A) and (b)(2)(E) of this section, and of section 1343 of this title, with respect to effluent limitations to the extent such limitations relate to biochemical oxygen demand and pH from discharges by an industrial discharger in such State into deep waters of the territorial seas, if the applicant demonstrates and the Administrator finds that--

(A) the facility for which modification is sought is covered at the time of the enactment of this subsection by National Pollutant Discharge Elimination System permit number CA0005894 or CA0005282;

(B) the energy and environmental costs of meeting such requirements of subsections (b)(1)(A) and (b)(2)(E) of this section and section 1343 of this title exceed by an unreasonable amount the benefits to be obtained, including the objectives of this chapter;

(C) the applicant has established a system for monitoring the impact of such discharges on a representative sample of aquatic biota;

(D) such modified requirements will not result in any additional requirements on any other point or non-point source;

(E) there will be no new or substantially increased discharges from the point source of the pollutant to which the modification applies above that volume of discharge specified in the permit;

(F) the discharge is into waters where there is strong tidal movement and other hydrological and geological characteristics which are necessary to allow compliance with this subsection and section 1251(a)(2) of this title;

(G) the applicant accepts as a condition to the permit a contractural [FN2] obligation to use funds in the amount required (but not less than $250,000 per year for ten years) for research and development of water pollution control technology, including but not limited to closed cycle technology;

(H) the facts and circumstances present a unique situation which, if relief is granted, will not establish a precedent or the relaxation of the requirements of this chapter applicable to similarly situated discharges; and

(I) no owner or operator of a facility comparable to that of the applicant situated in the United States has demonstrated that it would be put at a competitive disadvantage to the applicant (or the parent company or any subsidiary thereof) as a result of the issuance of a permit under this subsection.

(2) The effluent limitations established under a permit issued under paragraph (1) shall be sufficient to implement the applicable State water quality standards, to assure the protection of public water supplies and protection and propagation of a balanced, indigenous population of shellfish, fish, fauna, wildlife, and other aquatic organisms, and to allow recreational activities in and on the water. In setting such limitations, the Administrator shall take into account any seasonal variations and the need for an adequate margin of safety, considering the lack of essential knowledge concerning the relationship between effluent limitations and water quality and the lack of essential knowledge of the effects of discharges on beneficial uses of the receiving waters.

(3) A permit under this subsection may be issued for a period not to exceed five years, and such a permit may be renewed for one additional period not to exceed five years upon a demonstration by the applicant and a finding by the Administrator at the time of application for any such renewal that the provisions of this subsection are met.

(4) The Administrator may terminate a permit issued under this subsection if the Administrator determines that there has been a decline in ambient water quality of the receiving waters during the period of the permit even if

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

a direct cause and effect relationship cannot be shown: *Provided*, That if the effluent from a source with a permit issued under this subsection is contributing to a decline in ambient water quality of the receiving waters, the Administrator shall terminate such permit.

(n) Fundamentally different factors

(1) General rule

The Administrator, with the concurrence of the State, may establish an alternative requirement under subsection (b)(2) of this section or section 1317(b) of this title for a facility that modifies the requirements of national effluent limitation guidelines or categorical pretreatment standards that would otherwise be applicable to such facility, if the owner or operator of such facility demonstrates to the satisfaction of the Administrator that--

(A) the facility is fundamentally different with respect to the factors (other than cost) specified in section 1314(b) or 1314(g) of this title and considered by the Administrator in establishing such national effluent limitation guidelines or categorical pretreatment standards;

(B) the application--

(i) is based solely on information and supporting data submitted to the Administrator during the rulemaking for establishment of the applicable national effluent limitation guidelines or categorical pretreatment standard specifically raising the factors that are fundamentally different for such facility; or

(ii) is based on information and supporting data referred to in clause (i) and information and supporting data the applicant did not have a reasonable opportunity to submit during such rulemaking;

(C) the alternative requirement is no less stringent than justified by the fundamental difference; and

(D) the alternative requirement will not result in a non-water quality environmental impact which is markedly more adverse than the impact considered by the Administrator in establishing such national effluent limitation guideline or categorical pretreatment standard.

(2) Time limit for applications

An application for an alternative requirement which modifies the requirements of an effluent limitation or pretreatment standard under this subsection must be submitted to the Administrator within 180 days after the date on which such limitation or standard is established or revised, as the case may be.

(3) Time limit for decision

The Administrator shall approve or deny by final agency action an application submitted under this subsection within 180 days after the date such application is filed with the Administrator.

(4) Submission of information

The Administrator may allow an applicant under this subsection to submit information and supporting data until the earlier of the date the application is approved or denied or the last day that the Administrator has to approve or deny such application.

(5) Treatment of pending applications

For the purposes of this subsection, an application for an alternative requirement based on fundamentally different factors which is pending on February 4, 1987, shall be treated as having been submitted to the Administrator on the 180th day following February 4, 1987. The applicant may amend the application to take into account the provisions of this subsection.

(6) Effect of submission of application

An application for an alternative requirement under this subsection shall not stay the applicant's obligation to

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

comply with the effluent limitation guideline or categorical pretreatment standard which is the subject of the application.

(7) Effect of denial

If an application for an alternative requirement which modifies the requirements of an effluent limitation or pretreatment standard under this subsection is denied by the Administrator, the applicant must comply with such limitation or standard as established or revised, as the case may be.

(8) Reports

By January 1, 1997, and January 1 of every odd-numbered year thereafter, the Administrator shall submit to the Committee on Environment and Public Works of the Senate and the Committee on Transportation and Infrastructure of the House of Representatives a report on the status of applications for alternative requirements which modify the requirements of effluent limitations under section 1311 or 1314 of this title or any national categorical pretreatment standard under section 1317(b) of this title filed before, on, or after February 4, 1987.

(o) Application fees

The Administrator shall prescribe and collect from each applicant fees reflecting the reasonable administrative costs incurred in reviewing and processing applications for modifications submitted to the Administrator pursuant to subsections (c), (g), (i), (k), (m), and (n) of this section, section 1314(d)(4) of this title, and section 1326(a) of this title. All amounts collected by the Administrator under this subsection shall be deposited into a special fund of the Treasury entitled "Water Permits and Related Services" which shall thereafter be available for appropriation to carry out activities of the Environmental Protection Agency for which such fees were collected.

(p) Modified permit for coal remining operations

(1) In general

Subject to paragraphs (2) through (4) of this subsection, the Administrator, or the State in any case which the State has an approved permit program under section 1342(b) of this title, may issue a permit under section 1342 of this title which modifies the requirements of subsection (b)(2)(A) of this section with respect to the pH level of any pre-existing discharge, and with respect to pre-existing discharges of iron and manganese from the remined area of any coal remining operation or with respect to the pH level or level of iron or manganese in any pre-existing discharge affected by the remining operation. Such modified requirements shall apply the best available technology economically achievable on a case-by-case basis, using best professional judgment, to set specific numerical effluent limitations in each permit.

(2) Limitations

The Administrator or the State may only issue a permit pursuant to paragraph (1) if the applicant demonstrates to the satisfaction of the Administrator or the State, as the case may be, that the coal remining operation will result in the potential for improved water quality from the remining operation but in no event shall such a permit allow the pH level of any discharge, and in no event shall such a permit allow the discharges of iron and manganese, to exceed the levels being discharged from the remined area before the coal remining operation begins. No discharge from, or affected by, the remining operation shall exceed State water quality standards established under section 1313 of this title.

(3) Definitions

For purposes of this subsection--

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

(A) Coal remining operation

The term "coal remining operation" means a coal mining operation which begins after February 4, 1987 at a site on which coal mining was conducted before August 3, 1977.

(B) Remined area

The term "remined area" means only that area of any coal remining operation on which coal mining was conducted before August 3, 1977.

(C) Pre-existing discharge

The term "pre-existing discharge" means any discharge at the time of permit application under this subsection.

(4) Applicability of strip mining laws

Nothing in this subsection shall affect the application of the Surface Mining Control and Reclamation Act of 1977 [30 U.S.C.A. § 1201 et seq.] to any coal remining operation, including the application of such Act to suspended solids.

References in Text

The Surface Mining Control and Reclamation Act of 1977, referred to in subsec. (p)(4), is Pub.L. 95-87, Aug. 3, 1977, 91 Stat. 445, as amended, which is classified generally to chapter 25 (section 1201 et seq.) of Title 30, Mineral Lands and Mining. For complete classification of this Act to the Code, see Short Title note set out under section 1201 of Title 30 and Tables.

Amendments

1995 Amendments. Subsec. (n)(8). Pub.L. 104-66, § 2021(b), substituted "By January 1, 1997, and January 1 of every odd-numbered year thereafter, the Administrator shall submit to the Committee on Environment and Public Works of the Senate and the Committee on Transportation and Infrastructure" for "Every 6 months after February 4, 1987, the Administrator shall submit to the Committee on Environment and Public Works of the Senate and the Committee on Public Works and Transportation".

1994 Amendments. Subsec. (j)(1). Pub.L. 103-431, § (2)(1), inserted ", and except as provided in paragraph (5)" before the semicolon at the end of subpar. (A).

Subsec. (j)(5). Pub.L. 103-431, § 2(2), added par. (5).

1988 Amendments. Subsec. (f). Pub.L. 100-688, § 3202(b), substituted ", any high-level radioactive waste, or any medical waste," for "or high-level radioactive waste".

1987 Amendments. Subsec. (b)(2)(C). Pub.L. 100-4, § 301(a), struck out "not later than July 1, 1984," preceding "with respect" and inserted "as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under section 1314(b) of this title, and in no case later than March 31, 1989" after "of this paragraph".

Subsec. (b)(2)(D). Pub.L. 100-4, § 301(b), substituted "as expeditiously as practicable, but in no case later than three years after the date such limitations are promulgated under section 1314(b) of this title, and in no case later than March 31, 1989" for "not later than three years after the date such limitations are established".

Subsec. (b)(2)(E). Pub.L. 100-4, § 301(c), substituted "as expeditiously as practicable but in no case later than three years after the date such limitations are promulgated under section 1314(b) of this title, and in no case later than March 31, 1989, compliance with" for "not later than July 1, 1984,".

Subsec. (b)(2)(F). Pub.L. 100-4, § 301(d), substituted "as expeditiously as practicable but in no case" for "not" and "and in no case later than March 31, 1989" for "or not later than July 1, 1984, whichever is later, but in no case later than July 1, 1987".

Subsec. (b)(3). Pub.L. 100-4, § 301(e), added par. (3).

Subsec. (g)(1). Pub.L. 100-4, § 302(a), substituted provision authorizing the Administrator to modify the requirements of subsec. (b)(2)(A) of this section with respect to discharge from any point source of ammonia, chlorine, color, iron, and total phenols and other pollutants which the Administrator lists under par. (4) for provision authorizing the Administrator to modify the requirements of subsec. (b)(2)(A) of this section with respect to discharge of any pollutant, other than pollutants identified pursuant to section 1314(a)(4) of this title, toxic

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

pollutants subject to section 1317(a) of this title, and the thermal component of discharges and designated provision relating to requirements for granting modifications, including subpars. (A) to (C), as par. (2).

Subsec. (g)(2). Pub.L. 100-4, § 302(a), designated provision relating to requirements for granting modifications, including subpars. (A) to (C), formerly contained in par. (1) as par. (2). Former par. (2) redesignated as (3).

Pub.L. 100-4, § 302(d)(2), realigned subpars. (A) to (C) with subpar. (A) of par. (4).

Subsec. (g)(3). Pub.L. 100-4, § 302(a), redesignated former par. (2) as (3).

Pub.L. 100-4, § 302(d)(1), inserted paragraph heading "Limitation on authority to apply for subsection (c) modification" and aligned par. (3) with par. (4).

Subsec. (g)(4), (5). Pub.L. 100-4, § 302(b), added pars. (4) and (5).

Subsec. (h)(2). Pub.L. 100-4, § 303(a), substituted "the discharge of pollutants in accordance with such modified requirements will not interfere, alone or in any combination with pollutants from other sources," for "such modified requirements will not interfere".

Subsec. (h)(3). Pub.L. 100-4, § 303(b)(1), inserted ", and the scope of such monitoring is limited to include only those scientific investigations which are necessary to study the effects of the proposed discharge" after "extent practicable".

Subsec. (h)(6). Pub.L. 100-4, § 303(c), added par. (6) and redesignated former par. (6) as (7).

Subsec. (h)(7). Pub.L. 100-4, § 303(c), redesignated former par. (6) as (7). Former par. (7) redesignated (8).

Subsec. (h)(8). Pub.L. 100-4, § 303(c), (d)(1), redesignated former par. (7) as (8) and substituted a semicolon for a period at the end thereof.

Subsec. (h)(9). Pub.L. 100-4, § 303(d)(1), added par. (9).

Subsec. (h). Pub.L. 100-4, § 303(d)(2), in provision following par. (9) inserted provision defining "primary or equivalent treatment" for purposes of par. (9).

Pub.L. 100-4, § 303(e), in provision following par. (9) inserted provision placing limitations on issuance of permits for discharge of a pollutant into marine waters and saline estuarine waters and prohibiting issuance of a permit for discharge of a pollutant into the New York Bight Apex.

Subsec. (i)(1). Pub.L. 100-4, § 304(a), substituted "February 4, 1987" for "December 27, 1977".

Subsec. (j)(1)(A). Pub.L. 100-4, § 303(f), inserted provision relating to application for ocean discharge modification.

Subsec. (j)(2). Pub.L. 100-4, § 302(c)(1), substituted "Subject to paragraph (3) of this section, any" for "Any".

Subsec. (j)(3), (4). Pub.L. 100-4, § 302(c)(2), added pars. (3) and (4).

Subsec. (k). Pub.L. 100-4, § 305, substituted "two years after the date for compliance with such effluent limita-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

tion which would otherwise be applicable under such subsection" for "July 1, 1987" and inserted "or (b)(2)(E)" after "(b)(2)(A)" in two places.

Subsec. (l). Pub.L. 100-4, § 306(b), substituted "Other than as provided in subsection (n) of this section, the" for "The".

Subsecs. (n), (o). Pub.L. 100-4, § 306(a), added subsecs. (n) and (o).

Subsec. (p). Pub.L. 100-4, § 307, added subsec. (p).

1983 Amendments. Subsec. (m). Pub.L. 97-440 added subsec. (m).

1981 Amendments. Subsec. (b)(2)(B). Pub.L. 97-117, § 21(b), struck out subpar. (B), which required that, not later than July 1, 1983, compliance by all publicly owned treatment works with the requirements in section 1281(g)(2)(A) of this title be achieved.

Subsec. (h). Pub.L. 97-117, § 22(a) to (c), struck out in provision preceding par. (1) "in an existing discharge" following "discharge of any pollutant", struck out par. (8), which required the applicant to demonstrate to the satisfaction of the Administrator that any funds available to the owner of such treatment works under subchapter II of this chapter be used to achieve the degree of effluent reduction required by section 1281(b) and (g)(2)(A) of this title or to carry out the requirements of this subsection, and inserted in provision following par. (7) a further provision that a municipality which applies secondary treatment be eligible to receive a permit which modifies the requirements of subsec. (b)(1)(B) of this section with respect to the discharge of any pollutant from any treatment works owned by such municipality into marine waters and that no permit issued under this subsection authorize the discharge of sewage sludge into marine waters.

Subsec. (i)(1), (2)(B). Pub.L. 97-117, § 21(a), substituted "July 1, 1988," for "July 1, 1983," wherever appearing. Par. (2)(B) contained a reference to "July 1, 1983;" which was changed to "July 1, 1988;" as the probable intent of Congress in that reference to July 1, 1983, was to the outside date for compliance for a point source other than a publicly owned treatment works and subpar. (B) allows a time extension for such a point source up to the date granted in an extension for a publicly owned treatment works, which date was extended to July 1, 1988, by Pub.L. 97-117.

Subsec. (j)(1)(A). Pub.L. 97-117, § 22(d), substituted "that the 365th day which begins after December 29, 1981" for "than 270 days after December 27, 1977".

1977 Amendments. Subsec. (b)(2)(A). Pub.L. 95-217, § 42(b), substituted "for pollutants identified in subparagraphs (C), (D), and (F) of this paragraph" for "not later than July 1, 1983".

Subsec. (b)(2)(C) to (F). Pub.L. 95-217, § 42(a), added subpars. (C) to (F).

Subsec. (g). Pub.L. 95-217, § 43, added subsec. (g).

Subsec. (h). Pub.L. 95-217, § 44, added subsec. (h).

Subsec. (i). Pub.L. 95-217, § 45, added subsec. (i).

Subsec. (j). Pub.L. 95-217, § 46, added subsec. (j).

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Subsec. (k). Pub.L. 95-217, § 47, added subsec. (k).

Subsec. (*l*). Pub.L. 95-217, § 53(c), added subsec. (*l*).

Change of Name

Any reference in any provision of law enacted before Jan. 4, 1995, to the Committee on Public Works and Transportation of the House of Representatives treated as referring to the Committee on Transportation and Infrastructure of the House of Representatives, see section 1(a)(9) of Pub.L. 104-14, set out as a note preceding section 21 of Title 2, The Congress.

Effective and Applicability Provisions

1987 Acts. Section 302(e) of Pub.L. 100-4 provided that:

"(1) General Rule.--Except as provided in paragraph (2), the amendments made by this section [amending subsecs. (g) and (j) of this section] shall apply to all requests for modifications under section 301(g) of the Federal Water Pollution Control Act [subsec. (g) of this section] pending on the date of the enactment of this Act [Feb. 4, 1987] and shall not have the effect of extending the deadline established in section 301(j)(1)(B) of such Act [subsec. (j)(1)(B) of this section].

"(2) Exception.--The amendments made by this section [amending subsecs. (g) and (j) of this section] shall not affect any application for a modification with respect to the discharge of ammonia, chlorine, color, iron, or total phenols (4AAP) under section 301(g) of the Federal Water Pollution Control Act [subsec. (g) of this section] pending on the date of the enactment of this Act [Feb. 4, 1987]; except that the Administrator must approve or disapprove such application not later than 365 days after the date of such enactment [Feb. 4, 1987]."

Section 303(b)(2) of Pub.L. 100-4 provided that: "The amendment made by subsection (b) [amending subsec. (h)(3) of this section] shall only apply to modifications and renewals of modifications which are tentatively or finally approved after the date of the enactment of this Act [Feb. 4, 1987]."

Section 303(g) of Pub.L. 100-4 provided that: "The amendments made by subsections (a) [amending subsec. (h)(2) of this section], (c) [enacting subsec. (h)(6) of this section and redesignating former subsec. (h)(6) and (7) as (h)(7) and (8)], (d) [enacting subsec. (h)(9) of this section and inserting provision defining primary and equivalent treatment in provision following subsec. (h)(9)], and (e) [inserting provision relating to issuance of permit to discharge pollutants into marine waters in provision following subsec. (h)(9)] of this section shall not apply to an application for a permit under section 301(h) of the Federal Water Pollution Control Act [subsec. (h) of this title] which has been tentatively or finally approved by the Administrator before the date of the enactment of this Act [Feb. 4, 1987]; except that such amendments shall apply to all renewals of such permits after such date of enactment."

Section 304(b) of Pub.L. 100-4 provided that: "The amendment made by subsection (a) [amending subsec. (i)(1) of this section] shall not apply to those treatment works which are subject to a compliance schedule established before the date of the enactment of this Act [Feb. 4, 1987] by a court order or a final administrative order."

1981 Acts. Section 22(e) of Pub.L. 97-117 provided that: "The amendments made by this section [amending

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

subsecs. (h) and (j)(1)(A) of this section] shall take effect on the date of enactment of this Act [Dec. 29, 1981], except that no applicant, other than the city of Avalon, California, who applies after the date of enactment of this Act for a permit pursuant to subsection (h) of section 301 of the Federal Water Pollution Control Act [subsec. (h) of this section] which modifies the requirements of subsection (b)(1)(B) of section 301 of such Act [subsec. (b)(1)(B) of this section] shall receive such permit during the one-year period which begins on the date of enactment of this Act."

Phosphate Fertilizer Effluent Limitation

Amendment by section 306(a), (b) of Pub.L. 100-4 not to be construed (A) to require the Administrator to permit the discharge of gypsum or gypsum waste into the navigable waters, (B) to affect the procedures and standards applicable to the Administrator in issuing permits under section 1342(a)(1)(B) of this title, and (C) to affect the authority of any State to deny or condition certification under section 1314 of this title with respect to the issuance of permits under section 1342(a)(1)(B) of this title, see section 306(c) of Pub.L. 100-4, set out as a note under 33 U.S.C.A. § 1342.

Territorial Sea and Contiguous Zone of United States

For extension of territorial sea and contiguous zone of United States, see Proc. No. 5928 and Proc. No. 7219, respectively, set out as notes under 43 U.S.C.A. § 1331.

Deadlines for Regulations for Certain Toxic Pollutants

Section 301(f) of Pub.L. 100-4 provided that: "The Administrator shall promulgate final regulations establishing effluent limitations in accordance with sections 301(b)(2)(A) and 307(b)(1) of the Federal Water Pollution Control Act [subsec. (b)(2)(A) of this section and section 1317(b)(1) of this title] for all toxic pollutants referred to in table 1 of Committee Print Numbered 95-30 of the Committee on Public Works and Transportation of the House of Representatives which are discharged from the categories of point sources in accordance with the following table:

"Category	Date by which the final regulation shall be promulgated
"Organic chemicals and plastics and synthetic fibers.....	.....
	December 31, 1986.
"Pesticides.....	.....
	December 31, 1986."

[Any reference in any provision of law enacted before Jan. 4, 1995, to the Committee on Public Works and Transportation of the House of Representatives treated as referring to the Committee on Transportation and Infrastructure of the House of Representatives, see section 1(a)(9) of Pub.L. 104-14, set out as a note preceding section 21 of Title 2, The Congress.]

Discharges From Point Sources in United States Virgin Islands Attributable to Manufacture of Rum; Exemption From Federal Water Pollution Control Requirements; Conditions

Pub. L. 98-67, Title II, § 214(g), Aug. 5, 1983, 97 Stat. 393, provided that:

"Any discharge from a point source in the United States Virgin Islands in existence on the date of the enactment of this subsection [Aug. 5, 1983] which discharge is attributable to the manufacture of rum (as defined in paragraphs (3) of section 7652(c) of the Internal Revenue Code of 1954 [section 7652(c)(3) of Title 26, Internal Revenue Code]) shall not be subject to the requirements of section 301 [this section] (other than toxic pollutant discharges), section 306 [section 1316 of this title] or section 403 [section 1343 of this title] of the Federal Water Pollution Control Act if--

"(1) such discharge occurs at least one thousand five hundred feet into the territorial sea from the line of ordinary low water from that portion of the coast which is in direct contact with the sea, and

"(2) the Governor of the United States Virgin Islands determines that such discharge will not interfere with the attainment or maintenance of that water quality which shall assure protection of public water supplies, and the protection and propagation of a balanced population of shellfish, fish, and wildlife, and allow recreational activities, in and on the water and will not result in the discharge of pollutants in quantities which may reasonably be anticipated to pose an unacceptable risk to human health or the environment because of bioaccumulation, persistency in the environment, acute toxicity, chronic toxicity (including carcinogenicity, mutagenicity, or teratogenicity), or synergistic propensities."

Certain Municipal Compliance Deadlines Unaffected; Exception

Section 21(a) of Pub.L. 97-117 provided in part that: "The amendment made by this subsection [amending subsec. (i)(1) and (2)(B) of this section] shall not be interpreted or applied to extend the date for compliance with section 301(b)(1)(B) or (C) of the Federal Water Pollution Control Act [subsec. (b)(1)(B) or (C) of this section] beyond schedules for compliance in effect as of the date of enactment of this Act [Dec. 29, 1981], except in cases where reductions in the amount of financial assistance under this Act [Pub.L. 97-117, see Short Title of 1981 Amendment set out under section 1251 of this title] or changed conditions affecting the rate of construction beyond the control of the owner or operator will make it impossible to complete construction by July 1, 1983."

1. Construction with other laws

In the definitional scheme of the Administrative Procedure Act, sections 551 et seq. and 701 et seq. of Title 5, discharge standards under this chapter are "rules," not "orders," and the process is "rule making," not "adjudication"; accordingly, the procedures set forth in section 554 of Title 5 are inapplicable. Hercules, Inc. v. Environmental Protection Agency, C.A.D.C.1978, 598 F.2d 91, 194 U.S.App.D.C. 172. Administrative Law And Procedure 442; Environmental Law 183

References in legislative history to regulation of ocean dumping under section 1343 of this title setting forth special criteria for ocean disposal of pollutants may be interpreted as standing for the proposition that this chapter, not the Marine Protection, Research, and Sanctuaries Act of 1972, section 1401 et seq. of this title, regulates outfalls and territorial seas, rather than for proposition that section 1343 of this title and not this section requiring public treatment works to apply secondary treatment techniques regulates outfalls and the territorial seas. Pacific Legal Foundation v. Quarles, C.D.Cal.1977, 440 F.Supp. 316, affirmed 614 F.2d 225, certiorari denied 101 S.Ct. 88, 449 U.S. 825, 66 L.Ed.2d 29. Environmental Law 173

2. Purpose

Environmental Protection Agency's (EPA) inclusion of effluent limitations for suspended solids in its coal remining subcategory was not arbitrary or capricious; effluent limitations for solids was not inconsistent with the purpose of Clean Water Act (CWA) and would provide sufficient incentives for remining abandoned mine lands. Citizens Coal Council v. U.S. E.P.A., C.A.6 2006, 447 F.3d 879. Environmental Law 186

This chapter was enacted in an effort by Congress to deal with the regulatory problems that had hindered efforts to control water pollution. Hercules, Inc. v. Environmental Protection Agency, C.A.D.C.1978, 598 F.2d 91, 194 U.S.App.D.C. 172. Environmental Law 165

In this chapter, Congress intended to control both the discharge of pollutants directly into navigable waters and the discharge of pollutants into nonnavigable tributaries which flow into the navigable waters. U.S. v. Saint Bernard Parish, E.D.La.1984, 589 F.Supp. 617. Environmental Law 173

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

This chapter is broad and remedial, and is intended to restore and maintain natural chemical, physical and biological integrity of nation's waters and to eliminate discharge of pollutants into navigable waters by 1985. U. S. v. Velsicol Chemical Corp., W.D.Tenn.1976, 438 F.Supp. 945. Environmental Law 165

3. Retroactive effect

Permitting scheme established by administrative rule promulgated by the Environmental Protection Agency (EPA) under the Clean Water Act (CWA) to regulate the emission of water pollutants by concentrated animal feeding operations (CAFO), requiring that every CAFO owner or operator either apply for a permit, and comply with the effluent limitations contained in the permit, or affirmatively demonstrate that no permit was needed because there was no potential to discharge, exceeded statutory authority granted by the CWA to regulate and control the actual discharge of pollutants; the CWA gave the EPA the authority to regulate only actual discharges, not potential discharges and not point sources themselves. Waterkeeper Alliance, Inc. v. U.S. E.P.A., C.A.2 2005, 399 F.3d 486. Environmental Law 196

Amendments adopted in 1977 to this chapter which required best available technology limitations for discharges of toxic substances are not to operate retroactively so as to possibly retract any variance previously issued to an industry which happened to be discharging toxic substances. Appalachian Power Co. v. Train, C.A.4 1980, 620 F.2d 1040. Environmental Law 168

Shopping plaza owner did not violate Clean Water Act (CWA) by failing to obtain National Pollution Discharge Elimination System (NPDES) permit for stormwater discharge from parking lot, since discharge had been left unregulated before CWA Phase II regulations went into effect, and neither Environmental Protection Agency (EPA) nor state agency had exercised residual designation authority to require permit. Conservation Law Foundation v. Hannaford Bros. Co., D.Vt.2004, 327 F.Supp.2d 325, affirmed 139 Fed.Appx. 338, 2005 WL 1712899. Environmental Law 196

Clean Water Act (CWA) complaint failed to state claim upon which relief could be granted where discharge alleged in complaint was derived from continued leaching from pre-1954 disposal of chromium-bearing waste. Interfaith Community Organization v. AlliedSignal, Inc., D.N.J.1996, 928 F.Supp. 1339. Environmental Law 673

"Upset" defense available under federal and state regulations for exceptional incidents was not available to alleged water polluter for violations of discharge permit effluent limitations prior to August 13, 1979 in action under the Federal Water Pollution Control Act [33 U.S.C.A. § 1251 et seq.], as regulations providing upset defense became effective on that date. Student Public Interest Research Group of New Jersey, Inc. v. P.D. Oil & Chemical Storage, Inc., D.N.J.1986, 627 F.Supp. 1074.

4. State regulation or control

Environmental Protection Agency (EPA), based on its statutory obligations under Clean Water Act (CWA), was required to give notice to public and afford it opportunity to comment on issues relevant to its determination that new definition of "zones of deposit" would reasonably ensure compliance with Alaska's water quality standards, although certification of the National Pollutant Discharge Elimination System (NPDES) general permit was vested with Alaska Department of Environmental Conservation (ADEC); EPA sought opinion of ADEC when determining that new definition would ensure compliance with Alaska's water quality standards. Natural Resources Defense Council v. U.S. E.P.A., C.A.9 2002, 279 F.3d 1180. Environmental Law 220

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Environmental Protection Agency's (EPA's) approval of provision of Kentucky's water quality antidegradation rules under the Clean Water Act (CWA), pursuant to which approval of a publicly owned treatment works (POTW) regional facility plan met the requirements for an antidegradation review, was not arbitrary and capricious, although procedure did not require a show of public necessity as mandated by the CWA, where EPA reviewed relevant regulations and determined that the components designed for a development of a regional facility plan in Kentucky met the required decision making process under the CWA, and was in fact the equivalent of an antidegradation review. Kentucky Waterways Alliance v. Johnson, W.D.Ky.2006, 426 F.Supp.2d 612. Environmental Law 191

Cornerstone of the Clean Water Act is that the discharge of any pollutant from a point source into navigable waters of the United States is unlawful unless the discharge is made according to the terms of an National Pollutant Discharge Elimination System (NPDES) permit obtained from either the United States Environmental Protection Agency (EPA) or from an authorized state agency. Hiebenthal v. Meduri Farms, D.Or.2002, 242 F.Supp.2d 885. Environmental Law 196

The United States Supreme Court's decision in City of Milwaukee v. Illinois did not fatally undermine authority of previous decision of the Court of Appeals for the Seventh Circuit concerning whether this chapter preempted state regulation of water pollution caused by out-of-state dischargers and district courts remain bound by controlling courts of appeals' determinations on the point unless and until the latter are reversed or clearly repudiated. People of State of Ill. v. Lever Bros. Co., N.D.Ill.1981, 530 F.Supp. 293. Courts 96(4)

5. Power of court

Federal courts lack authority to impose more stringent effluent limitations under federal common law than those imposed by the agency charged by Congress with administering this chapter. City of Milwaukee v. Illinois and Michigan, U.S.Ill.1981, 101 S.Ct. 1784, 451 U.S. 304, 68 L.Ed.2d 114, on remand 731 F.2d 403. Environmental Law 170

This chapter preempted federal common law of public nuisance in area of interstate water pollution, at least to extent of displacing authority of district court to impose more stringent effluent limitations upon sewer systems than those promulgated pursuant to this section. Matter of Oswego Barge Corp., C.A.2 (N.Y.) 1981, 664 F.2d 327, rehearing denied 673 F.2d 47. Environmental Law 170

While federal court has no authority to direct Administrator of Environmental Protection Agency to grant permit for demonstration sewage disposal project, court does have authority to direct Administrator to consider fully application on merits and Administrator has no discretion to reject, out of hand, such applications; neither does Administrator have discretion to impose arbitrary geographical limitations which were never intended by Congress. RITE--Research Improves Environment, Inc. v. Costle, C.A.5 (Fla.) 1981, 650 F.2d 1312. Environmental Law 196

6. Rules and regulations

Environmental Protection Agency (EPA) regulations, which provide that National Pollution Discharge Elimination System (NPDES) permit may not be issued if the imposition of conditions would not insure compliance with the applicable water quality requirements of all affected states, were a reasonable exercise of EPA's authority. Arkansas v. Oklahoma, U.S.1992, 112 S.Ct. 1046, 503 U.S. 91, 117 L.Ed.2d 239, on remand 962 F.2d 996. Environmental Law 197

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Environmental Protection Agency's (EPA) performance standard for froth-flotation mill operations, rather than regulatory definition of "fill material," governed permit for the discharge of process wastewater from a froth-flotation mill into a body of water protected by the Clean Water Act; "fill material" regulation did not contain an implied exception to the requirements of performance standards for froth-flotation mill discharges whenever a proposed discharge would meet the regulatory definition of "fill material," and more specific regulation concerning froth-flotation mill operations was not submerged by later enacted general regulation covering "fill material." Southeast Alaska Conservation Council v. U.S. Army Corps of Engineers, C.A.9 (Alaska) 2007, 486 F.3d 638. Environmental Law 196

Permitting scheme established by administrative rule promulgated by the Environmental Protection Agency (EPA) under the Clean Water Act (CWA) to regulate the emission of water pollutants by concentrated animal feeding operations violated the CWA's public participation requirements and was otherwise arbitrary and capricious under the Administrative Procedure Act; although the preamble to the rule indicated that the EPA expected that the permitting authority would make the information available to the public upon request, the rule provided no assurance that the EPA's expectations would be satisfied. Waterkeeper Alliance, Inc. v. U.S. E.P.A., C.A.2 2005, 399 F.3d 486. Environmental Law 196; Environmental Law 218

Settlement agreement between the Environmental Protection Agency and environmental groups, relating to program for developing and promulgating toxic waste discharge regulations under this chapter, did not impermissibly infringe on Agency discretion, given that agreement did not prescribe substantive outcome and was not product of judicially imposed program but, in fact, was embodied in decree with Environmental Protection Agency consent. Citizens for a Better Environment v. Gorsuch, C.A.D.C.1983, 718 F.2d 1117, 231 U.S.App.D.C. 79, certiorari denied 104 S.Ct. 2668, 467 U.S. 1219, 81 L.Ed.2d 373; rehearing denied 104 S.Ct. 3573, 468 U.S. 1204, 82 L.Ed.2d 872. Compromise And Settlement 7.1

Under subsec. (h) of this section, which allows municipalities to apply for variance from minimum sewage treatment standard and which authorizes Administrator of Environmental Protection Agency to issue a permit with respect to the discharge of any pollutant in an "existing discharge" from a treatment plant, regulation promulgated by Administrator which allowed permit applications based on either the "current discharge" or an "improved discharge" was proper, in that while Congress was silent as to whether permits based on improved discharges were allowed, purpose of subsec. (h) of this section, that of allowing treatment plants that can discharge into marine waters and meet certain environmental standards to receive a permit, is served by allowing treatment plants that have planned improvements to apply for permits. Natural Resources Defense Council, Inc. v. U. S. Environmental Protection Agency, C.A.D.C.1981, 656 F.2d 768, 211 U.S.App.D.C. 179. Environmental Law 201

Environmental Protection Agency did not fail to comply with Administrative Procedure Act, sections 551 et seq. and 701 et seq. of Title 5, on asserted ground that final regulations governing discharge of organic pesticide-manufacturing pollutants into navigable waters were so different from interim final regulations that the interims were not notice of Agency's decision to consolidate rather than expand categories and to limit regulations or its determination as to treatability, in that changes were clearly signaled in interim regulations. BASF Wyandotte Corp. v. Costle, C.A.1 1979, 598 F.2d 637, certiorari denied 100 S.Ct. 1063, 444 U.S. 1096, 62 L.Ed.2d 784. Environmental Law 186

Prohibition that, with named exceptions, discharge of any pollutant by any person shall be unlawful is central to this entire chapter and requires no promulgation. American Frozen Food Institute v. Train, C.A.D.C.1976, 539

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

F.2d 107, 176 U.S.App.D.C. 105. Environmental Law ⚿ 175

Army Corps of Engineers acted impermissibly when it adopted Clean Water Act (CWA) regulations in 1986 and thereafter which eliminated the upstream or landward component of ordinary high water mark (OHWM) jurisdiction; in its 1975 regulations, the applicable limit of the Corps' jurisdiction was the perceptible OHWM caused by the upstream or landward flow from navigable water, but by 2000, it was the perceptible OHWM caused by the flow of water toward navigable waters, a reinterpretation of the jurisdictional significance of an OHWM which was an invalid extension of the Corps' jurisdiction. U.S. v. RGM Corp., E.D.Va.2002, 222 F.Supp.2d 780, vacated. Environmental Law ⚿ 173

Army Corps of Engineers was given authority over wetlands pursuant to the Clean Water Act as early as July 25, 1975 when regulations were published stating that waters of the United States included fresh water wetlands, even though certain regulations clarifying the Corps' responsibilities under the Clean Water Act did not go into effect until 1986. Slagle v. U.S. By and Through Baldwin, D.Minn.1992, 809 F.Supp. 704. Environmental Law ⚿ 118

Regulations adopted by United States Environmental Protection Agency to interpret and enforce policies of this chapter are aimed at carrying out this chapter even if promulgated since enactment of W.S.A. 147.04 et seq., authorizing State Department of Natural Resources to implement a Wisconsin Pollution Discharge Elimination System program, and as such are binding on State under W.S.A. 147.021 providing that rules promulgated by DNR pursuant to WPDES program relating to effluent limitations "shall comply with and not exceed" requirements of this chapter and regulations adopted pursuant thereto. Niagara of Wisconsin Paper Corp. v. Wisconsin Dept. of Natural Resources, Wis.1978, 268 N.W.2d 153, 84 Wis.2d 32. Environmental Law ⚿ 183

7. Mandatory nature of section

Clean Water Act's requirement that all discharges covered by statute have appropriate permit is unconditional and absolute. Hudson River Fishermen's Ass'n v. Arcuri, S.D.N.Y.1994, 862 F.Supp. 73. Environmental Law ⚿ 196

8. Persons subject to limitations

Clean Water Act requires Forest Service to comply with all state water quality requirements. Marble Mountain Audubon Soc. v. Rice, C.A.9 (Cal.) 1990, 914 F.2d 179. Environmental Law ⚿ 188

Environmental Protection Agency has been authorized by this section, after orchestrating a process of study, proposal, notice and comment, to issue two sets of progressively more stringent regulations precisely limiting the effluent discharges of every "category [or] class of [existing] point sources," i.e., generally, every industry that pollutes the nation's waters. Weyerhaeuser Co. v. Costle, C.A.D.C.1978, 590 F.2d 1011, 191 U.S.App.D.C. 309. Environmental Law ⚿ 183

1977 effluent standards of this chapter apply to publicly owned sewage treatment plants which have not received federal grants under this chapter. State Water Control Bd. v. Train, C.A.4 (Va.) 1977, 559 F.2d 921. Environmental Law ⚿ 179

Where defendants never obtained or applied for a permit, any discharge of pollutants by them would be unlawful under this chapter even though no effluent standards were applicable to them. U.S. v. Frezzo Bros., Inc.,

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

E.D.Pa.1978, 461 F.Supp. 266, affirmed 602 F.2d 1123, certiorari denied 100 S.Ct. 1020, 444 U.S. 1074, 62 L.Ed.2d 756, post-conviction relief denied 491 F.Supp. 1339, reversed 642 F.2d 59, on remand 546 F.Supp. 713. Environmental Law ⚷ 743

9. Pollutants subject to limitation

Chemical pesticide, antimycin, applied intentionally and aimed at eliminating a pestilent fish species, in accordance with a Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) label, and with no residue or unintended effect was not "waste" and thus not a "pollutant" for the purposes of the Clean Water Act and not subject to the CWA's permit requirements. Fairhurst v. Hagener, C.A.9 (Mont.) 2005, 422 F.3d 1146. Environmental Law ⚷ 196

There was sufficient evidence that pollutants were contained in waters discharged from mill to support defendants' convictions for knowingly discharging pollutants without having obtained permit; environmental consultant for asbestos-removal project at mill testified that defendant was present at pre-project meeting where there was discussion about how all the drains at mill led to bay, and worker saw asbestos going down the drains and he testified that defendant told him not to worry about the asbestos that they were washing down the drains because "it'll go down to the bottom of the ocean--or bottom of the bay." U.S. v. Technic Services, Inc., C.A.9 (Alaska) 2002, 314 F.3d 1031. Environmental Law ⚷ 743

Environmental Protection Agency's classification of settleable solids as nonconventional pollutant and thus subject to BAT standards was both reasonable and permissible construction of Clean Water Act, where Congress had not designated settleable solids as either conventional or toxic pollutant. Rybachek v. U.S. E.P.A., C.A.9 1990, 904 F.2d 1276. Environmental Law ⚷ 186

Under this chapter, Environmental Protection Agency had no jurisdiction to require electric-generating plant to remove pollutants which entered plant through its intake stream. Appalachian Power Co. v. Train, C.A.4 1976, 545 F.2d 1351. Environmental Law ⚷ 212

Despite developer's claim that there was inadequate evidentiary support to sustain a finding that his canal excavations violated this section the lower court properly found that the discharge of "sediment" from the developer's dredging amounted to a violation of this section's prohibition against the discharge of a "pollutant". Weiszmann v. District Engineer, U. S. Army Corps of Engineers, C.A.5 (Fla.) 1976, 526 F.2d 1302, on remand 545 F.Supp. 721. Environmental Law ⚷ 206

Ditches that coastal landowners' dug on their tract of land were "point sources" under the Clean Water Act (CWA), so as to be subject to discharge permit requirements, where ditches served to channel and collect stormwater and other pollutants that were subsequently discharged into waters of the United States. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law ⚷ 175

Genuine issues of material fact as to whether fecal coliform, a pollutant, traveled from coastal landowners' tract of land to water covered by the Clean Water Act (CWA), and as to whether alleged increase in fecal coliform levels in such navigable water was related to landowners' ditching activities, precluded summary judgment in citizen suit under CWA. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Federal Civil Procedure ⚷ 2498.3

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Wastewater flowing from piles of spent mushroom substrate (SMS), waste generated by the mushroom industry, would be "pollutant," in context of the Clean Water Act (CWA) and Pennsylvania Clean Streams Law (PCSL); state, after testing wastewater, concluded that it was "extremely polluted," and independent consultants hired by neighboring property owners concluded that the wastewater contained high levels of ammonia, total dissolved solids, and other pollutants, in excess of state and federal water quality standards, although mushroom waste processor had implemented vegetation boundaries. Reynolds v. Rick's Mushroom Service, Inc., E.D.Pa.2003, 246 F.Supp.2d 449. Environmental Law 175

Acid mine drainage flowing into creeks and containing high concentrations of aluminum, cadmium, copper, zinc, iron and sulfuric acid was "pollutant" for which Clean Water Act's (CWA) National Pollutant Discharge Elimination System (NPDES) required permit, regardless of historical levels of pollution. Beartooth Alliance v. Crown Butte Mines, D.Mont.1995, 904 F.Supp. 1168. Environmental Law 178

Water itself is not pollutant; therefore, simply moving water from one place to another does not constitute discharge of pollutant under Clean Water Act (CWA). Bettis v. Town of Ontario, N.Y., W.D.N.Y.1992, 800 F.Supp. 1113. Environmental Law 175

City violated Clean Water Act by discharging chlorine and alum floc into reservoir on navigable river, as result of adding chlorine and alum to water pumped from another river, without first obtaining a pollution emissions permit; chlorine residual, when discharged into navigable waters, was a "pollutant" within meaning of the Act, even though its intended use was beneficial, and alum sludge or floc was also a pollutant. Hudson River Fishermen's Ass'n v. City of New York, S.D.N.Y.1990, 751 F.Supp. 1088, affirmed 940 F.2d 649. Environmental Law 206

Discharge of raw sewage into river from privately owned septic system violated the Clean Water Act, in absence of permit. Friends of Sakonnet v. Dutra, D.R.I.1990, 738 F.Supp. 623. Environmental Law 206

10. Discharge of pollutant or fill

The evidence was sufficient to establish that defendant discharged pollutants into a creek, as element of offense of violating Clean Water Act by discharging and causing to be discharged pollutants into waters of the United States without a permit; even if defendant only ran heavy equipment in the creek bed, had log structures constructed in creek, and moved gravel and other materials during the periods of the year when the section of the creek he impacted was dry due to the operation of an irrigation diversion structure upstream, he still deposited pollutants in the creek, and the evidence supported a determination that defendant created a situation in which pollutants, including disturbed and moved materials and log structures, remained in the creek when the water was flowing. U.S. v. Moses, C.A.9 (Idaho) 2007, 2007 WL 2215954.

Army Corps of Engineers' failure to obtain a certificate of waiver prior to discharging dredged material in navigable waters from the Puerto Rico Environmental Quality Board in violation of Puerto Rico law and the Clean Water Act was not the proximate cause under Puerto Rico law of landowners' alleged damages caused by dredged material being blown onto their property after Corps deposited it on a nearby beach. Montijo-Reyes v. U.S., C.A.1 (Puerto Rico) 2006, 436 F.3d 19. United States 78(10)

Inasmuch as discharges of groundwater derived from coal bed methane (CBM) extraction process altered river's water quality, those discharges caused "pollution" as defined by Clean Water Act (CWA). Northern Plains Resource Council v. Fidelity Exploration and Development Co., C.A.9 (Mont.) 2003, 325 F.3d 1155, certiorari

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

denied 124 S.Ct. 434, 540 U.S. 967, 157 L.Ed.2d 312, on subsequent appeal 185 Fed.Appx. 679, 2006 WL 1722474. Environmental Law ⚿ 178

Environmental Protection Agency (EPA) was not required by Clean Water Act (CWA) to take enforcement action against all illegal discharges of pollutants, and therefore its issuance of permit to mine operator was not mandated by statute and did not support request for attorney fees, under catalyst theory, of environmental groups that had sued to compel EPA to act. Bravos v. E.P.A., C.A.10 (N.M.) 2003, 324 F.3d 1166, 190 A.L.R. Fed. 643. Environmental Law ⚿ 716

There was sufficient evidence that there was no national pollutant discharge elimination system (NPDES) permit in place to support conviction for knowingly discharging pollutants without having obtained permit, in connection with asbestos remediation project at closed pulp mill; representative of Environmental Protection agency (EPA) testified that, although owner of pulp mill had NPDES permit for discharge of pollutants, permit remained in effect only until mill closed, that defendant itself had not obtained NPDES permit, and that general stormwater permit issued to mill owner did not cover discharge of asbestos. U.S. v. Technic Services, Inc., C.A.9 (Alaska) 2002, 314 F.3d 1031. Environmental Law ⚿ 743

For purposes of Clean Water Act's (CWA) definition of "discharge of a pollutant" to mean "any addition of any pollutant to navigable waters from any point source," the transfer of water containing pollutants from one body of water to another, distinct body of water is an "addition," and thus a "discharge" that demands National Pollutant Discharge Elimination System (NPDES) permit. Catskill Mountains Chapter of Trout Unlimited, Inc. v. City of New York, C.A.2 (N.Y.) 2001, 273 F.3d 481, on remand 207 F.Supp.2d 3, adhered to on reconsideration 451 F.3d 77, certiorari denied 127 S.Ct. 1373.

Defendants' conduct in severing 250-ton concrete and rebar block from stern of ferrous concrete barge and dumping it into bay, severing approximately one hundred pieces of rebar and attached concrete from barge's stern and dropping it into lagoon, and conducting sandblasting operations on floating barge that projected sand and paint chip residue into bay constituted discharge of pollutant from point source, and thus violated Clean Water Act, in that barge was "floating craft" expressly included within definition of "point source." U.S. v. West Indies Transport, Inc., C.A.3 (Virgin Islands) 1997, 127 F.3d 299, certiorari denied 118 S.Ct. 700, 522 U.S. 1052, 139 L.Ed.2d 644, denial of post-conviction relief affirmed 60 Fed.Appx. 412, 2003 WL 1564255. Environmental Law ⚿ 206

Environmental Protection Agency's (EPA's) approval of provisions of Kentucky's water quality antidegradation rules under the Clean Water Act (CWA), which permitted discharges with increased pollutant loadings of less than 20%, was not arbitrary and capricious, where EPA reviewed more than 60 possible discharge dilution scenarios, and checked past permit procedures and approvals, in determining that 20% increase in pollutants would result only in de minimis effect on water quality. Kentucky Waterways Alliance v. Johnson, W.D.Ky.2006, 426 F.Supp.2d 612. Environmental Law ⚿ 191

County was not "discharger" of pollution into waters of United States, and could not be held liable under Clean Water Act (CWA), for stormwater runoff from state highway owned, maintained, operated, and controlled by state. Jones v. E.R. Snell Contractor, Inc., N.D.Ga.2004, 333 F.Supp.2d 1344, affirmed 120 Fed.Appx. 786, 2004 WL 2157261, certiorari denied 125 S.Ct. 1735, 544 U.S. 962, 161 L.Ed.2d 603. Environmental Law ⚿ 226

Environmental organization that brought citizen's suit against timber companies and Environmental Protection

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Agency (EPA) properly alleged that company employed unpermitted conduits to discharge stormwater and pollutants from logging activities into creek, as required to state claim under Clean Water Act (CWA); complaint averred that company's culverts and drainage ditches on logging sites constituted discharge "point sources" for which National Pollutant Discharge Elimination System (NPDES) permit was required. Environmental Protection Information Center v. Pacific Lumber Co., N.D.Cal.2004, 301 F.Supp.2d 1102, motion to certify denied 2004 WL 838160. Environmental Law 206

Navigable-in-fact waters that were directly adjacent to coastal landowners' tract of land and which were classified by State of North Carolina as "SA" water, indicating that they were saltwater of high quality suitable for production and harvesting of shellfish for human consumption, were traditional navigable waters, i.e., "waters of the United States," and thus subject to pollution discharge permit and fill discharge permit requirements of the Clean Water Act (CWA); waters at issue included a sound and a saltwater estuarine creek that flowed into the sound. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law 125; Environmental Law 126; Environmental Law 173

Sediment, consisting of sand and dirt, that was discharged into waters covered by the Clean Water Act (CWA) by coastal landowners' ditching activities constituted discharge of "pollutant" into waters of the United States, for which landowners were required to obtain discharge permit under the CWA. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law 196

Fruit processor's discharge of water, produced in process of drying fruit, to irrigate fields, was not a discharge from a point source, as required to support Clean Water Act (CWA) citizen suit against processor, although processor allegedly applied wastewater to its fields in excess of crops' actual absorption of water. Hiebenthal v. Meduri Farms, D.Or.2002, 242 F.Supp.2d 885. Environmental Law 175

Property owners' use of earth-moving equipment to excavate, move and deposit dirt, rocks and other indigenous materials on property was "discharge of pollutant," not "incidental fallback," and thus owners were required to obtain permit under Clean Water Act (CWA). U.S. v. Sartori, S.D.Fla.1999, 62 F.Supp.2d 1362. Environmental Law 196

Marina owners' dumping of fill on natural marshlands of hook-like peninsula extending into waters within the national park violated the Clean Water Act, although owners' construction of docks and filling in of shoreline did not. U.S. v. Schmitt, E.D.N.Y.1998, 999 F.Supp. 317, affirmed 28 Fed.Appx. 63, 2002 WL 108564. Environmental Law 136; Navigable Waters 43(2)

Discharges of Acid mine drainage into navigable creeks without valid National Pollutant Discharge Elimination System (NPDES) permits violated Clean Water Act (CWA), even though mining company had applied to state for Montana Pollutant Discharge Elimination System (MPDES) storm water permit. Beartooth Alliance v. Crown Butte Mines, D.Mont.1995, 904 F.Supp. 1168. Environmental Law 206

Environmental organizations alleging that solid waste, wrecked or discarded equipment, garbage, rock, sand, and dirt were and continued to be discharged from abandoned construction site into creek, which was tributary of navigable waterway, without any permit stated valid cause of action under the Clean Water Act against owners of site. Hudson River Fishermen's Ass'n v. Arcuri, S.D.N.Y.1994, 862 F.Supp. 73. Environmental Law 196

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Property owner violated Clean Water Act by constructing feeder ditches and basins and discharging "fill," which was defined pollutant, into areas that district court had found to be subject to jurisdiction of Act, without obtaining permit required by Act. Leslie Salt Co. v. U.S., N.D.Cal.1992, 820 F.Supp. 478, affirmed in part 55 F.3d 1388, certiorari denied 116 S.Ct. 407, 516 U.S. 955, 133 L.Ed.2d 325. Environmental Law 136

Town's alleged diversion of natural stream and resultant flooding which damaged landowners' property and alleged fraud in connection with sale of subdivision lots to landowners did not constitute violations of Clean Water Act (CWA); there was no indication that any pollutants were discharged either into stream or from stream into another body of water, and alleged fraud actions suggested state claims, not federal ones. Bettis v. Town of Ontario, N.Y., W.D.N.Y.1992, 800 F.Supp. 1113. Waters And Water Courses 78

Filling in and grading or changing of the bottom elevations of stream constituted "discharge of a pollutant" under the Clean Water Act and discharge of "fill" under Army Corps of Engineers regulations. U.S. v. Zanger, N.D.Cal.1991, 767 F.Supp. 1030. Environmental Law 196; Environmental Law 136

Sewage spills from city's wastewater collection system were violations of the terms of city's National Pollutant Dischage Elimination System (NPDES) permits, and therefore of the Clean Water Act, and were also violations of California Water Code; furthermore, most spills also violated Clean Water Act prohibitions on unpermitted discharges. U.S. People of State of California ex rel. California Regional Water Quality Control Bd. v. City of Los Angeles, C.D.Cal.2002, 2002 WL 31915814, Unreported. Environmental Law 206

11. Waters into which discharge prohibited

Creek that defendant rerouted and reshaped constituted a water of the United States, for purposes of the Clean Water Act prohibition against discharging and causing to be discharged pollutants into waters of the United States without a permit; although, due to an irrigation diversion structure installed upstream of section of creek that defendant altered, water only flowed in that section for about two months per year during spring runoff, the creek was a tributary of a river that qualified as a water of the United States. U.S. v. Moses, C.A.9 (Idaho) 2007, 2007 WL 2215954. Environmental Law 196

River and pond were two distinct "waters of the United States," within meaning of the Clean Water Act (CWA) and, thus, proposed transfer of water from river through skiing facility's snowmaking pipes to pond, resulting in transfer of pollutants, constituted addition of pollutants to pond from point source requiring National Pollutant Discharge Elimination System (NPDES) permit; although water was hydrologically connected by flow down from pond to river, water could not flow naturally from river up to pond, river undisputedly contained pollutants not found in pond, and water would be subject to private control during passage through pipes. Dubois v. U.S. Dept. of Agriculture, C.A.1 (N.H.) 1996, 102 F.3d 1273, certiorari denied 117 S.Ct. 2510, 521 U.S. 1119, 138 L.Ed.2d 1013. Environmental Law 196; Environmental Law 173

Where prior to 1968 privately owned city area was not a wetland and exhibited none of characteristics associated with wetland, where area's subsequent wetland characteristics resulted entirely as inadvertent, unintended by-product of Army Corps of Engineers' river dredging activity, and where area, which once provided city residents with many benefits, was now devoid of wildlife and was not conducive to recreation or other significant use, area was not a protected wetland under this chapter. U.S. v. City of Fort Pierre, S.D., C.A.8 (S.D.) 1984, 747 F.2d 464. Environmental Law 128

Wetlands on defendants' properties were "waters of the United States" for purposes of the Clean Water Act

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

(CWA), and therefore Government had jurisdiction to bring action alleging that defendants' unauthorized dredging and filling of those wetlands violated CWA; there was a significant nexus between the wetlands and a traditional navigable-in-fact water, since defendants' activities diminished the wetlands' ability to store water and filter or trap sediment, affecting the chemical, physical, and biological integrity of a navigable river. U.S. v. Cundiff, W.D.Ky.2007, 2007 WL 957346. Environmental Law 136

Given uncertain state of law as to whether Clean Water Act applies to isolated wetlands, counsel for defendant charged with illegally discharging fill material into wetlands without permit did not render ineffective assistance in failing to preserve issue of applicability of Act to isolated wetlands. U.S. v. Suarez, D.Guam 1994, 846 F.Supp. 892. Criminal Law 641.13(2.1)

Clean Water Act prohibition against discharge of pollutants into navigable waters does not apply to excavation or dredging activities occurring on wetlands. Salt Pond Associates v. U.S. Army Corps of Engineers, D.Del.1993, 815 F.Supp. 766. Environmental Law 175; Environmental Law 136

Lake which was hydrologically connected to a river which fed into a second lake, from which a second river emptied into the Mississippi River, was a tributary of waters used in interstate commerce and thus was "waters of the United States," as was adjacent wetland. Slagle v. U.S. By and Through Baldwin, D.Minn.1992, 809 F.Supp. 704. Navigable Waters 1(6); Environmental Law 128

Winds of 41 miles per hour were not "strong winds" as contemplated by regulation excluding tides affected by strong winds such as those accompanying hurricane or other intense storm from definition of high tide line for purposes of landward limit of Clean Water Act jurisdiction in tidal waters. U.S. v. Malibu Beach, Inc., D.N.J.1989, 711 F.Supp. 1301. Environmental Law 173

Party unlawfully "discharges pollutant" in violation of the Clean Water Act when, inter alia, he unlawfully dumps fill dirt on wetlands without permit. Matter of Alameda County Assessor's Parcel Nos. 537-801-2-4 and 537-850-9, N.D.Cal.1987, 672 F.Supp. 1278. Environmental Law 196

Discharge of waste materials, including methylene chloride, trichloroethane, and toluene into ditch on property, which flowed from there into a brook and ultimately into a navigable water, without discharge permit, violated the Clean Water Act. U.S. v. Ottati & Goss, Inc., D.N.H.1985, 630 F.Supp. 1361. Environmental Law 206

Canal that was six miles long, 100 to 150 feet wide, and over six feet deep, that was integrally linked with waters that fed directly into gulf outlet of the Mississippi river, and that was a tributary of adjacent wetlands, fell within definition of "waters of the United States" under this chapter, even though there were pumps between the canal and the adjacent wetlands that controlled the flow of water to the wetlands. U.S. v. Saint Bernard Parish, E.D.La.1984, 589 F.Supp. 617. Environmental Law 173

Since defendants' wetlands were adjacent to river which even if nontidal had not been shown to have a flow less than five cubic feet per minute, fill was not placed above "headwaters" as defined in regulation, and thus the pollution of fill in wetlands by defendant constituted a series of violations of this chapter, which began in or about 1977 and ended in or about March 1982. U.S. v. Lambert, M.D.Fla.1984, 589 F.Supp. 366. Environmental Law 136

In Rhode Island, a municipal corporation may not acquire prescriptive right to deposit sewage in waters of Narragansett Bay and expense of avoiding discharge of sewage is no defense to an order to abate pollution. U. S. v.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

City of Providence, D.C.R.I.1980, 492 F.Supp. 602. Environmental Law ⚷ 210; Environmental Law ⚷ 176

Where marina operator caused fill to be placed into the Hudson River without first obtaining a permit, the marina operator violated this section which prohibits discharge of any pollutant into navigable waters. U. S. v. Alleyne, S.D.N.Y.1978, 454 F.Supp. 1164. Environmental Law ⚷ 136

That defendant might discharge polluted waters through conveyances owned by another party did not remove defendant's actions from scope of this chapter, where defendant knew or should have known that city sewers, into which it discharged pollutants, led directly into Mississippi River; this was sufficient to constitute a discharge into "waters of the United States" within purview of this chapter. U. S. v. Velsicol Chemical Corp., W.D.Tenn.1976, 438 F.Supp. 945. Environmental Law ⚷ 175

With respect to marina being constructed on Bald Head island, lying at mouth of the Cape Fear river, Brunswick County, North Carolina, approximately ten acres of salt meadow wetlands, which were within disposal site and which were subject to periodic inundation by tides, constituted "waters of the United States" so as to be subject to requirements of this chapter. Conservation Council of North Carolina v. Costanzo, E.D.N.C.1975, 398 F.Supp. 653, affirmed 528 F.2d 250. Environmental Law ⚷ 128

Discharges of sand, rock, biological and dredged material by means of a dragline and bulldozer into mangrove wetlands at site of apartment-hotel-condominium complex being developed by plaintiff at Vacia Talega near San Juan, Puerto Rico, constituted violations of this section. P. F. Z. Properties, Inc. v. Train, D.C.D.C.1975, 393 F.Supp. 1370. Environmental Law ⚷ 136

Scope of control of this chapter must extend to all pollutants which are discharged into any waterway, including normally dry arroyos, where any water which might flow therein could reasonably end up in any body of water, to which or in which there is some public interest, including underground waters. U. S. v. Phelps Dodge Corp., D.C.Ariz.1975, 391 F.Supp. 1181. Environmental Law ⚷ 175; Environmental Law ⚷ 173

Disposal of chemical wastes into underground waters which have not been alleged to flow into or otherwise affect surface water does not constitute "discharge of a pollutant" within this chapter; this chapter does not apply to subsurface wells. U. S. v. GAF Corp., S.D.Tex.1975, 389 F.Supp. 1379. Environmental Law ⚷ 173

Pond formed from old gravel mining pit and subterranean groundwater that flows through it were "tributaries" within meaning of regulation extending National Pollutant Discharge Elimination System (NPDES) permit requirement to all wetlands adjacent to navigable or interstate waters and their tributaries. Northern California River Watch v. City of Healdsburg, N.D.Cal.2004, 2004 WL 201502, Unreported, affirmed 457 F.3d 1023. Environmental Law ⚷ 196

12. Groundwater discharges

Any pollutants that enter surface waters either directly or through groundwater are subject to regulation by national pollutant discharge elimination system (NPDES) permit, as Clean Water Act's (CWA) goal is to protect quality of surface waters. Williams Pipe Line Co. v. Bayer Corp., S.D.Iowa 1997, 964 F.Supp. 1300. Environmental Law ⚷ 196; Environmental Law ⚷ 175

Allegations that refinery discharged pollutants into soils and groundwater beneath refinery which then made

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

their way to creek through groundwater stated cause of action under Clean Water Act; Act's preclusion of discharge of pollutant into navigable waters included such discharge which reached navigable waters through groundwater. Sierra Club v. Colorado Refining Co., D.Colo.1993, 838 F.Supp. 1428. Environmental Law 673

13. Effluent limitations--Generally

With respect to existing point sources under this chapter, 1983 effluent limitations are to be set by regulation and not on an individual basis during the permit issuance process, and this section authorizes 1977 limitations as well as the 1983 limitations to be set by regulation, so long as some allowance is made for variation in individual plants. E. I. du Pont de Nemours & Co. v. Train, U.S.Va.1977, 97 S.Ct. 965, 430 U.S. 112, 51 L.Ed.2d 204. Environmental Law 184

Provision of administrative rule promulgated by the Environmental Protection Agency (EPA) under the Clean Water Act (CWA) to regulate the emission of water pollutants by concentrated animal feeding operations allowing permitting authorities to issue permits without reviewing the terms of nutrient management plans violated statutory provisions of CWA requiring permitting authorities to assure compliance with all effluent limitations and standards for land applications of manure, litter, and process waste water, and was otherwise arbitrary and capricious under the Administrative Procedure Act (APA). Waterkeeper Alliance, Inc. v. U.S. E.P.A., C.A.2 2005, 399 F.3d 486. Environmental Law 196

Environmental Protection Agency (EPA), in promulgating whole effluent toxicity (WET) test methods for discharges, adequately accounted for failure to establish detection limits, as required under Clean Water Act (CWA); since WET testing was biological and experimental method, rather than instrumental, detection limit concepts were inapplicable. Edison Elec. Institute v. E.P.A., C.A.D.C.2004, 391 F.3d 1267, 364 U.S.App.D.C. 60. Environmental Law 207

Under provisions of Clean Water Act requiring Environmental Protection Agency to establish effluent limitations for categories and classes of point sources, and requiring Agency to designate category or categories of sources to which pretreatment standards apply, agency need not account for all possible differences among plants and may fix single-pretreatment standard. Reynolds Metals Co. v. U.S.E.P.A., C.A.4 1985, 760 F.2d 549. Environmental Law 183

Application of objective stated in Pub.L. 89-298, Title III, § 301, Oct. 27, 1965, 79 Stat. 1089, that State of Indiana, prior to construction of harbor project, shall furnish assurance satisfactory to Secretary of Army that water and air pollution sources will be controlled to maximum extent feasible in order to minimize any adverse effects on public recreational areas in general vicinity of Burns Harbor to pollutant discharge elimination system permit does not result in adoption of standard more stringent than applicable standards under this section. Porter County Chapter of Izaak Walton League of America, Inc. v. Costle, C.A.7 1978, 571 F.2d 359, certiorari denied 99 S.Ct. 115, 439 U.S. 834, 58 L.Ed.2d 130. Environmental Law 250; Environmental Law 170

Environmental Protection Agency's promulgation of effluent limitations on existing sources was a reasonable exercise of congressionally delegated power, despite contention that under this chapter effluent limitations on existing sources could be imposed only by permit issuer. American Petroleum Institute v. E.P.A., C.A.10 1976, 540 F.2d 1023, certiorari denied 97 S.Ct. 1340, 430 U.S. 922, 51 L.Ed.2d 601. Environmental Law 184

Plainly expressed purpose of Congress to require nationally uniform interim limitations upon like sources of pol-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

lution would be defeated if the Administrator did not have authority to issue "effluent limitations" under this chapter. American Frozen Food Institute v. Train, C.A.D.C.1976, 539 F.2d 107, 176 U.S.App.D.C. 105. Environmental Law ⚿ 183

This section is a source of authority to promulgate effluent limitations independent of the permit-issuing process. American Meat Institute v. E.P.A., C.A.7 1975, 526 F.2d 442.

Environmental organization satisfied Clean Water Act's (CWA) prerequisite to citizen suit to enforce effluent standard or limitation, which required them to allege violation of such standard or limitation, when they alleged in their complaint that state officials discharged pollutants or industrial stormwater without National Pollutant Discharge Elimination System (NPDES) permit. Northwest Enviromental Defense Center v. Brown, D.Or.2007, 476 F.Supp.2d 1188. Environmental Law ⚿ 226

For purposes of Clean Water Act (CWA), "effluent limitation" is measurement and restriction of end-of-pipe discharge, whereas "state water quality standard" is not direct measurement of pollutant discharge, but is measurement of surrounding ocean and is expressed in narrative and numerical form. Save Our Bays and Beaches v. City and County of Honolulu, D.Hawai'i 1994, 904 F.Supp. 1098. Environmental Law ⚿ 183

"Effluent standard or limitation," violations of which are actionable under the citizen suit provision of the Clean Water Act, includes effluent standards or limits prescribed in National Pollution Discharge Elimination System (NPDES) permits and, additionally, violations of terms contained in NPDES permits are generally enforceable of their own accord in citizen suits. Citizens for a Better Environment-California v. Union Oil Co. of California, N.D.Cal.1994, 861 F.Supp. 889, affirmed 83 F.3d 1111, as amended , certiorari denied 117 S.Ct. 789, 519 U.S. 1101, 136 L.Ed.2d 731. Environmental Law ⚿ 226

Discharge permit effluent limitations imposed to achieve water quality standards which have been adopted control waterway discharge, even if those permit limitations are stricter than general technology-based effluent limitations, in action under the Federal Water Pollution Control Act [33 U.S.C.A. § 1251 et seq.]. Student Public Interest Research Group of New Jersey, Inc. v. P.D. Oil & Chemical Storage, Inc., D.N.J.1986, 627 F.Supp. 1074.

"Effluent limitations," for purposes of this chapter, is a measurement of pollutant discharge; it is measured at the source. Niagara of Wisconsin Paper Corp. v. Wisconsin Dept. of Natural Resources, Wis.1978, 268 N.W.2d 153, 84 Wis.2d 32. Environmental Law ⚿ 183

14. ---- Heat discharge, effluent limitations

Term "effluent limitations", defined in this chapter, includes restrictions on discharges of heat or controls of thermal component of any discharge. U. S. Steel Corp. v. Train, C.A.7 (Ill.) 1977, 556 F.2d 822. Environmental Law ⚿ 186

Environmental Protection Agency thermal backfit requirements in regulations establishing limitations on discharge of heat from steam electric-generating plants into navigable waters were invalid, in that they relied upon figures which did not indicate whether regulations would result in reasonable further progress toward eliminating water pollution. Appalachian Power Co. v. Train, C.A.4 1976, 545 F.2d 1351. Environmental Law ⚿ 186

15. ---- Internal waste streams, effluent limitations

Clean Water Act authorizes Environmental Protection Agency (EPA) to impose effluent limitations on internal

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

waste streams of National Pollutant Discharge Elimination System (NPDES) permittee when such limitations would be impracticable to monitor at point of discharge into waters of United States. Public Service Co. of Colorado, Fort St. Vrain Station v. U.S. E.P.A., C.A.10 1991, 949 F.2d 1063. Environmental Law 197

16. ---- Pesticide, effluent limitations

In promulgating regulations governing discharge of pollutants into navigable waters by the pesticide industry, decision of Environmental Protection Agency that plants which both manufacture and formulate pesticides must meet limits for manufacturing plants with no credit for any discharge from formulation process was not unreasonable. BASF Wyandotte Corp. v. Costle, C.A.1 1979, 598 F.2d 637, certiorari denied 100 S.Ct. 1063, 444 U.S. 1096, 62 L.Ed.2d 784. Environmental Law 186

17. ---- Miscellaneous effluent limitations

In issuing permit to mining company for use of lake as a disposal site, Corps of Engineers (Corps) violated the Clean Water Act (CWA), even though mine's discharge facially met regulatory definition of "fill material"; discharge would violate effluent limitations and performance standards applicable to mining company's froth-flotation mill. Southeast Alaska Conservation Council v. U.S. Army Corps of Engineers, C.A.9 (Alaska) 2007, 479 F.3d 1148. Environmental Law 196

Environmental Protection Agency (EPA) did not violate *Chevron* or act arbitrarily or capriciously in promulgating, pursuant to Clean Water Act (CWA), rule establishing effluent limitation guidelines for reclamation areas at coal mining sites in the arid Western United States; EPA's determination that alternative controls were appropriate for the new subcategory of reclamation areas was based on several reasons supported in the administrative record, namely that sediment was a natural component of runoff in western watersheds, sediment was typically the only parameter of concern in runoff in western alkaline reclamation areas, 'best management practices" (BMPs) were proven to be effective at controlling sediment, and computer modeling procedures could accurately predict sediment runoff conditions, and EPA sufficiently demonstrated that continued use of current effluent limitations for settleable solids and pH was infeasible, and that replacing them with BMPs was supported by the record and was not arbitrary and capricious. Citizens Coal Council v. U.S. E.P.A., C.A.6 2006, 447 F.3d 879. Environmental Law 186

Genuine issues of material fact existed as to whether abandoned mine shaft was the source of polluted water flowing through a tunnel to a navigable waterway, precluding summary judgment for environmental groups in their citizen suit alleging that mine owner violated Clean Water Act (CWA) by discharging pollutants without a permit; experts did not agree on whether pollutants coming from the shaft were ever discharged into the navigable waterway. Sierra Club v. El Paso Gold Mines, Inc., C.A.10 (Colo.) 2005, 421 F.3d 1133, corrected, rehearing granted in part, certiorari denied 126 S.Ct. 1653, 164 L.Ed.2d 411. Federal Civil Procedure 2498.3

Environmental Protection Agency (EPA) did not act arbitrarily or capriciously in its proposed Clean Water Act rules governing effluent standards for bleached papergrade kraft (BPK) subcategory of pulp and paper mill processes, by setting monthly maximum effluent limitation at 95th percentile of distribution of monthly measurements rather than 99th percentile; agency explained that purpose of setting monthly average limitations at lower level was to ensure that mills achieved long-term average effluent levels. National Wildlife Federation v. E.P.A., C.A.D.C.2002, 286 F.3d 554, 351 U.S.App.D.C. 42, rehearing en banc denied , supplemented 351 F.3d 1157, 359 U.S.App.D.C. 13. Environmental Law 186

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Water pollution effluent limitations imposed on iron and steel manufacturing industry should have been established on net, rather than gross, basis, and any individual point source was entitled to adjustment in effluent limitation applicable to it if it could show that its inability to meet limitation was attributable to significant amounts of pollutants in intake water. American Iron and Steel Institute v. E.P.A., C.A.3 1975, 526 F.2d 1027, amended 560 F.2d 589, certiorari denied 98 S.Ct. 1467, 435 U.S. 914, 55 L.Ed.2d 505. Environmental Law 186

The effect of winter temperatures on anaerobic and aerobic lagoons, and the effect of summer weather on aerobic lagoons, did not render 1977 limitations on discharges of BOD5 and TSS by slaughterhouses and packinghouses unattainable, and with the exception of the TSS limitation for complex slaughterhouses, the 1977 and 1983 limitations were based on a reasoned analysis supported by the record. American Meat Institute v. E.P.A., C.A.7 1975, 526 F.2d 442. Environmental Law 186

Environmental Protection Agency's (EPA's) approval of provisions of Kentucky's water quality antidegradation rules under the Clean Water Act (CWA), which permitted a new or expanding non-domestic discharger to a high quality water to accept permit limits that were no more than one-half of the water quality-based effluent limitations that would have been allowed at standard design conditions, was not arbitrary and capricious, where EPA reviewed past permits, to determine how often facilities had been permitted to expand and estimate the potential number of expansions that could occur in the future, in finding that the provision preserved almost all remaining assimilative capacity, and would not result in a significant degradation of high quality waters. Kentucky Waterways Alliance v. Johnson, W.D.Ky.2006, 426 F.Supp.2d 612. Environmental Law 197

Genuine issue of material fact as to whether testing method employed by zinc mine operator to measure turbidity was equivalent to that required by its National Pollutant Discharge Elimination System (NPDES) permit precluded summary judgment in action against operator under Clean Water Act for failing to collect 24-hour composite sample for turbidity. Adams v. Teck Cominco Alaska, Inc., D.Alaska 2006, 414 F.Supp.2d 925. Federal Civil Procedure 2498.3

18. Downstream state requirements

Placing limits on affected state's direct participation in permitting decision concerning the granting of NPDES permit to discharge effluent into interstate waterways did not constrain Environmental Protection Agency's (EPA) authority to require that point source comply with downstream water quality standards. Arkansas v. Oklahoma, U.S.1992, 112 S.Ct. 1046, 503 U.S. 91, 117 L.Ed.2d 239, on remand 962 F.2d 996. Environmental Law 193

Clean Water Act requires point sources to comply with the federally approved water quality standards of affected downstream states. State of Okl. v. E.P.A., C.A.10 1990, 908 F.2d 595, certiorari granted 111 S.Ct. 1412, 499 U.S. 946, 113 L.Ed.2d 465, reversed 112 S.Ct. 1046, 503 U.S. 91, 117 L.Ed.2d 239, on remand 962 F.2d 996. Environmental Law 193

19. Best available technology economically achievable

Term "best technology economically achievable" with respect to 1983 existing source effluent limitations under this section does not refer to any individual plant. E. I. du Pont de Nemours & Co. v. Train, U.S.Va.1977, 97 S.Ct. 965, 430 U.S. 112, 51 L.Ed.2d 204. Environmental Law 184

Environmental Protection Agency (EPA) acted reasonably in choosing as best available technology for beef and

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

cattle concentrated animal feeding operations (CAFOs) an option requiring that groundwater-related requirements be implemented, as necessary, on a case-by-case basis, rather than uniformly imposed, when promulgating rule under the Clean Water Act (CWA) to regulate the emission of water pollutants by CAFOs; studies showed that variability in topography, climate, distance to surface water, and geologic facts influenced whether and how pollutant discharges at a particular site entered surface water via groundwater, and EPA's final economic analysis showed a nearly six-fold increase in the number of beef, dairy, and heifer CAFOs projected to close were the option requiring uniform, rather than case-by-case implementation, adopted. Waterkeeper Alliance, Inc. v. U.S. E.P.A., C.A.2 2005, 399 F.3d 486. Environmental Law 186

In determining economic achievability of technology, Environmental Protection Agency must consider "cost" of meeting BAT limitations, but need not compare such cost with benefits of effluent reduction in promulgating regulations under Clean Water Act; EPA has considerable discretion in weighing technology's costs, which are less important factors than in setting BPT limitations. Rybachek v. U.S. E.P.A., C.A.9 1990, 904 F.2d 1276. Environmental Law 184

Pursuant to Federal Water Pollution Control Act Amendments of 1972, § 301(b)(2)(F), 33 U.S.C.A. § 1311(b)(2)(F), requiring that Environmental Protection Agency promulgate best available technology economically achievable-based effluent limitation guidelines applicable to nonconventional pollutants not later than July 1, 1987, Agency was authorized to impose best available technology economically achievable limitation on nonconventional pollutants until such guidelines were promulgated. American Petroleum Institute v. E.P.A., C.A.5 1986, 787 F.2d 965. Environmental Law 186

Since the Environmental Protection Agency had previously disclosed its methodology for establishing the best available technology economically achievable for the nonferrous metals manufacturing industry, and since it was foreseeable that the agency's pretreatment standards for existing sources would be the same as the BAT, the agency did not fail to provide adequate notice on the PSES. Kennecott v. U.S.E.P.A., C.A.4 1985, 780 F.2d 445, certiorari denied 107 S.Ct. 67, 479 U.S. 814, 93 L.Ed.2d 25. Environmental Law 186

Although the 1983 best available technology economically achievable effluent guidelines can be based on information from a single model plant, the study must demonstrate the effectiveness of the required technology. Association of Pacific Fisheries v. E.P.A., C.A.9 1980, 615 F.2d 794. Environmental Law 184

In determining effluent limitations, for existing water pollution sources, to be employed by 1983, under language of this section requiring best available technology economically achievable, Environmental Protection Agency could look to best performer in industry and even assess technologies that had not been applied as long as record demonstrated that there was reasonable basis to believe that technology might be available by 1983. Tanners' Council of America, Inc. v. Train, C.A.4 1976, 540 F.2d 1188. Environmental Law 184

No formal cost-benefit analysis is required in determining the "best available" 1983 technology in setting effluent limitations, though the Administrator is to take cost into consideration. American Meat Institute v. E.P.A., C.A.7 1975, 526 F.2d 442. Environmental Law 184

20. Best practicable control technology currently available

Although Congress, sought to do more than simply have Environmental Protection Agency, in promulgating best practicable technology regulations, relocate the same amount of effluent discharge, it did not prohibit Agency from requiring relocation of that discharge where environmental benefits of such a relocation have been demon-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

strated. Association of Pacific Fisheries v. E.P.A., C.A.9 1980, 615 F.2d 794. Environmental Law 184

Pollution control under a permit issued under this chapter for discharge of pollutants must not only require application of best practicable control technology currently available but must also meet any more stringent standard established pursuant to any other federal law or regulation. Porter County Chapter of Izaak Walton League of America, Inc. v. Costle, C.A.7 1978, 571 F.2d 359, certiorari denied 99 S.Ct. 115, 439 U.S. 834, 58 L.Ed.2d 130. Environmental Law 197

Selecting technology already in place in some plants for best practicable control technology currently available (BPCTCA) and thereafter performing a cost-benefit analysis on technology selected through challenged procedure was all that Environmental Protection Agency was required to do under this chapter and, hence it was irrelevant that Agency selected BPCTCA by visualizing a control technology that would achieve desired effluent limitations. American Iron and Steel Institute v. E.P.A., C.A.3 1977, 568 F.2d 284. Environmental Law 184

Under this section requiring point sources of pollution to utilize the best practicable control technology currently available, Environmental Protection Agency cannot impose a higher standard without violating this section. Marathon Oil Co. v. E.P.A., C.A.9 1977, 564 F.2d 1253. Environmental Law 184

Where applicable "best practicable control technology" has not already been determined, appropriate inquiry for Environmental Protection Agency, in National Pollutant Discharge Elimination System permit proceedings, would be not what constitutes best practicable technology for particular source for which permit is sought, but what constitutes best practicable technology for category and class of point sources of which source in question is member. U. S. Steel Corp. v. Train, C.A.7 (Ill.) 1977, 556 F.2d 822. Environmental Law 220

Term "practicable" within subsec. (b)(1)(A) of this section providing that 1977 existing plant guidelines are to be determined by the use of the best practicable control technology currently available is intended to limit the use of available technology only where additional technology necessary to achieve a marginal level of effluent reduction is wholly out of proportion to the cost realized. CPC Intern., Inc. v. Train, C.A.8 1976, 540 F.2d 1329, certiorari denied 97 S.Ct. 1646, 430 U.S. 966, 52 L.Ed.2d 357. Environmental Law 184

21. Technology transfer

To determine that technology from one industry can be applied to another, agency must show that the transfer technology is available outside the industry, determine that the technology is transferable to the industry and make a reasonable prediction that the technology if used in the industry will be capable of removing the increment required by the effluent standards. Kennecott v. U.S.E.P.A., C.A.4 1985, 780 F.2d 445, certiorari denied 107 S.Ct. 67, 479 U.S. 814, 93 L.Ed.2d 25. Environmental Law 184

22. Compliance deadline--Generally

Mandatory compliance deadline contained in this chapter requires point sources to achieve effluent limitations based on best practicable control technology or state law, not merely to be in process of achieving them; this chapter does not allow deadline to be met simply by beginning action on schedule of compliance which will eventually result in achieving limitations based on best possible technology or state regulations. U. S. Steel Corp. v. Train, C.A.7 (Ill.) 1977, 556 F.2d 822. Environmental Law 184

This chapter entails an entirely new approach to water pollution control by setting forth the goal of completely

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

eliminating all discharges of pollutants into the nation's waters by 1985 or as soon thereafter as may be. American Frozen Food Institute v. Train, C.A.D.C.1976, 539 F.2d 107, 176 U.S.App.D.C. 105. Environmental Law 165

National Pollutant Discharge Elimination System permit of municipal owner-operator of sewage treatment works did not extend municipality's deadline for abiding by secondary-treatment standards rather than interim standards after July 1, 1983; Clean Water Act Amendments established that EPA had no authority to extend secondary-treatment standard deadlines beyond July 1, 1983, applicable provisions of permit itself established that municipality was to meet secondary-treatment standards by July 1, 1983, and even if requirement that municipality comply with secondary-treatment standards after July 1, 1983, were not clearly stated in permit, NPDES permit was to be governed by regulatory parameters set down by Congress and interpretation of EPA plan. U.S. v. City of Hoboken, D.N.J.1987, 675 F.Supp. 189. Environmental Law 185

To violate a national pollutant discharge elimination system permit is to violate the Federal Water Pollution Control Act. Chesapeake Bay Foundation v. Bethlehem Steel Corp., D.C.Md.1985, 608 F.Supp. 440. Environmental Law 206

Water Supply and Pollution Control Commission's certification to United States Environmental Protection Agency that proposed sewage treatment facility would comply with applicable state and federal law governing water quality standards and effluent discharge limitations was proper, in view of fact that this section did not require that treatment facility be fully operational by July 1, 1977, and Commission's representation that treatment facility would be in compliance with phase in schedule established by Commission not later than July 1, 1977, was not disputed. Town of Sutton v. Water Supply and Pollution Control Commission, N.H.1976, 355 A.2d 867, 116 N.H. 154. Environmental Law 196

Goal of the permit system under National Pollutant Discharge Elimination System is a limitation of discharge of point source pollutants into navigable waters by the best practicable water pollution control technology currently available by July 1, 1977 and the best available technology economically achievable by July 1, 1983. U. S. Steel Corp. v. Illinois Pollution Control Bd., Ill.App. 2 Dist.1977, 367 N.E.2d 327, 9 Ill.Dec. 893, 52 Ill.App.3d 1. Environmental Law 196

23. ---- Extension, compliance deadline

Industrial plant operators were not denied substantive due process by Environmental Protection Agency's failure to promulgate toxic waste water limitation regulations with sufficient lead time for compliance; Agency's postdeadline enforcement policy provided adequate time extension for industry members that would not have sufficient time to install technology required to meet limitations. Chemical Mfrs. Ass'n v. U.S. E.P.A., C.A.5 1989, 870 F.2d 177, decision clarified on rehearing 885 F.2d 253, certiorari denied 110 S.Ct. 1936, 495 U.S. 910, 109 L.Ed.2d 299. Constitutional Law 4323; Environmental Law 186; Constitutional Law 4327

Interpretation by Administrator of Environmental Protection Agency of subsec. (h) of this section, which allows municipalities to apply for variance from minimum sewage treatment standard, to allow the granting of permits under such subsection based on improved discharges, was not impermissible on ground that it necessarily required unauthorized extensions of the July 1, 1977 deadline for achievement of secondary treatment, in that a period of noncompliance was assumed in the subsection itself, and Administrator's regulations did not encourage noncompliance. Natural Resources Defense Council, Inc. v. U. S. Environmental Protection Agency,

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

C.A.D.C.1981, 656 F.2d 768, 211 U.S.App.D.C. 179. Environmental Law ⚷ 201

This section does not authorize extensions regarding water quality based effluent limitations or more stringent state or federal requirements. U. S. v. Homestake Min. Co., C.A.8 (S.D.) 1979, 595 F.2d 421.

Environmental Protection Agency had authority to extend July 1, 1977, best practicable technology compliance deadline in National Pollutant Discharge Elimination System permit. Monongahela Power Co. v. Environmental Protection Agency, C.A.4 1978, 586 F.2d 318. Environmental Law ⚷ 203

Congress intended the procedure outlined in this chapter to be the exclusive avenue of relief from the dictates of a mandatory and unconditional July 1, 1977, deadline for industrial discharges to comply with effluent limitations for point sources requiring the application of the best practicable control technology currently available; thus, the July 1, 1977, deadline cannot be waived by the courts, and to the extent that noncompliance occurs despite good-faith efforts as defined in this chapter, relief is available only by a discretionary extension of the deadline by the Administrator. Republic Steel Corp. v. Costle, C.A.6 1978, 581 F.2d 1228, certiorari denied 99 S.Ct. 1219, 440 U.S. 909, 59 L.Ed.2d 457. Environmental Law ⚷ 203

The Environmental Protection Agency has no authority to extend in National Pollutant Discharge Elimination System permit the July 1, 1977 date fixed in this chapter for conformity with effluent limitations for point sources. Bethlehem Steel Corp. v. Train, C.A.3 1976, 544 F.2d 657, certiorari denied 97 S.Ct. 1666, 430 U.S. 975, 52 L.Ed.2d 369. Environmental Law ⚷ 201

Neither the Environmental Protection Agency nor its state agent had authority to extend secondary treatment deadlines or grant permits to discharge at less than secondary levels beyond statutory deadline; accordingly, provisions in 1985 consent order between city and state agency which purportedly lowered effluent limitations for city's water treatment plant were of no effect after statutory compliance deadline. Hawaii's Thousand Friends v. City and County of Honolulu, D.Hawai'i 1993, 821 F.Supp. 1368. Environmental Law ⚷ 185; Environmental Law ⚷ 201

Effluent discharge limitations and deadlines imposed upon publicly owned sewage treatment plants by this chapter would not be extended until federal funds authorized to assist municipalities were available to municipalities, in view of fact that plain meaning of this section required strict adherence to limitations and deadlines, regardless of federal funding, and in view of fact that Congress had notice that authorized federal funds might be insufficient to complete assigned tasks and was urged to provide for extension of deadlines, but saw fit not to do so. State Water Control Bd. v. Train, E.D.Va.1976, 424 F.Supp. 146, affirmed 559 F.2d 921. Environmental Law ⚷ 201

Respondent pulp mill operator's schedule of compliance with this subchapter, as contained in respondent's National Pollutant Discharge Elimination System permit, could not be carried out in the absence of final standards applicable to its discharges; the permit's footnote f gave respondent the irrevocable right to complete appeal of Environmental Protection Agency guidelines before the standards in the permit were final, and EPA's failure to meet the timetables for guideline issuance necessarily excused respondent from the compliance schedule dependent upon the guidelines; the compliance schedule was deferred until the guidelines were final after appeal. ITT Rayonier, Inc. v. State, Dept. of Ecology, Wash.1978, 586 P.2d 1155, 91 Wash.2d 682, amended 593 P.2d 1308, 91 Wash.2d 682. Environmental Law ⚷ 197

24. Conformance

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Water Quality Act did not require that Environmental Protection Agency recognize affirmative "upset defense" to noncompliance with water quality-based limits as it does for noncompliance with technology based permit limitations when there is an exceptional incident in which there is a temporary and unintentional noncompliance with permit effluence limitations because of factors beyond the reasonable control of the permittee. Natural Resources Defense Council, Inc. v. U.S.E.P.A., C.A.D.C.1988, 859 F.2d 156, 273 U.S.App.D.C. 180. Environmental Law ⚿ 208

Environmental Protection Agency's (EPA's) approval of provision of Kentucky's water quality antidegradation rules under the Clean Water Act (CWA), pursuant to which coal mining discharges were subject to regulation under the Surface Mining Control and Reclamation Act (SMCRA), and were not subject to antidegradation review, was not arbitrary and capricious, where Kentucky procedure for approving coal mining discharge permits was consistent with language of the CWA, and the Court agrees with the EPA. Kentucky Waterways Alliance v. Johnson, W.D.Ky.2006, 426 F.Supp.2d 612. Environmental Law ⚿ 196

Neither "upset" nor "bypass" defense was available to violator of pollutant discharge permit where language authorizing defenses was not included in its permits. U.S. v. Allegheny Ludlum Corp., W.D.Pa.2000, 118 F.Supp.2d 615.

It was violation of Federal Water Pollution Control Act for towns to exceed effluent limitations imposed by National Pollutant Discharge Elimination System permit, notwithstanding their contention that they had intended to conform to permit but that nonconformance was unavoidable to prevent loss of life or severe property damage. U.S. v. Town of Lowell, Ind., N.D.Ind.1985, 637 F.Supp. 254. Environmental Law ⚿ 197

25. Variances

Legislative history of amendment to the Clean Water Act prohibiting modification of standards for toxic pollutants did not show an unambiguous congressional intent to forbid all fundamentally different factor variances with respect to toxic materials, so that, grant of fundamentally different factor variances with respect to toxic pollutants does not threaten to frustrate the goals and operation of the statutory scheme of the Clean Water Act set up by Congress. Chemical Mfrs. Ass'n v. Natural Resources Defense Council, Inc., U.S.1985, 105 S.Ct. 1102, 470 U.S. 116, 84 L.Ed.2d 90. Environmental Law ⚿ 202

In passing 1977 amendments to this section it could not be said that Congress implicitly approved court of appeals' reading of variance provision applicable to 1987 "best available technology economically achievable" effluent limitations as applying as well to the 1977 "best practicable control technology currently available" standard since although the decision was discussed in a document prepared for House Committee on Public Works, the document merely noted that at the time there was a conflict in circuit courts over validity of variance provision and in no way indicated that subject decision was the correct interpretation, consequently, although economic capability is a ground under this section for a variance from the 1987 "best available technology economically achievable" standard for effluent limitations, economic capability is not a necessary condition of a variance with regard to the 1977 "best practicable control technology currently available" standard for effluent limitations from categories of point sources. E.P.A. v. National Crushed Stone Ass'n, U.S.1980, 101 S.Ct. 295, 449 U.S. 64, 66 L.Ed.2d 268, on remand 643 F.2d 163. Environmental Law ⚿ 184

Environmental Protection Agency did not contravene Clean Water Act by limiting miners' ability to obtain variances because of its classification of settleable solids as toxic pollutant indicator; although BAT limitations for nonconventional pollutants were normally subject to modification under Act, modification for settleable solids

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

would be unavailable because of their status as an indicator in toxic pollutants; however, miners might still apply for fundamentally different factors (FDF) variance. Rybachek v. U.S. E.P.A., C.A.9 1990, 904 F.2d 1276. Environmental Law ⚷ 203; Environmental Law ⚷ 202

Since receiving water quality is clearly excluded in setting of generic "best practicable technology" limitations under this chapter, it must also be excluded in determining whether to grant variance from those general limitations. Appalachian Power Co. v. U.S. E.P.A., C.A.4 1982, 671 F.2d 801. Environmental Law ⚷ 203; Environmental Law ⚷ 184

Subsec. (h) of this section, which allows municipalities to apply for variance from minimum sewage treatment standard, is not restricted in application only to discharge as located on the west coast and island jurisdictions, in that nothing in language of the subsection limits availability of a variance, and in amending this chapter Congress amended a law of general application, and thus the amendment was also a provision of general application. Natural Resources Defense Council, Inc. v. U. S. Environmental Protection Agency, C.A.D.C.1981, 656 F.2d 768, 211 U.S.App.D.C. 179. Environmental Law ⚷ 201

Provision of 1977 amendments to this chapter that the Administrator of the Environmental Protection Agency may not modify any requirement as it applies to specific pollutants which are on the toxic pollutant list does not apply to best practicable technology variances. Appalachian Power Co. v. Train, C.A.4 1980, 620 F.2d 1040. Environmental Law ⚷ 203

Environmental Protection Agency's variance clause for 1977 "best practicable" water pollution regulations must parallel the statutory variance clause for 1983 "best available" regulations, i.e., the clause must allow consideration of the factors used for setting "best practicable" for each industrial subcategory, in order to allow particular paper mill operators to seek a variance from regulations that, as a whole, demand more of them than the EPA may demand of the industry. Weyerhaeuser Co. v. Costle, C.A.D.C.1978, 590 F.2d 1011, 191 U.S.App.D.C. 309. Environmental Law ⚷ 203

Provisions for variances are appropriate to regulatory process under this chapter, particularly in case of regulations having presumptive applicability throughout nation. Appalachian Power Co. v. Train, C.A.4 1976, 545 F.2d 1351. Environmental Law ⚷ 201

Environmental Protection Agency's (EPA's) approval of provision of Kentucky's water quality antidegradation rules under the Clean Water Act (CWA), pursuant to which discharges subject to storm water general permits were not subject to antidegradation review, was not arbitrary and capricious, where EPA took important economic and social interests into consideration and found that Kentucky had right to exercise its discretion when assigning or renewing general permits, and that any potential storm water discharges under the general permit would be a de minimis lowering of the water quality. Kentucky Waterways Alliance v. Johnson, W.D.Ky.2006, 426 F.Supp.2d 612. Environmental Law ⚷ 191; Environmental Law ⚷ 196

26. Monitored discharge

Each infringement upon permit limitation is violation of Federal Water Pollution Control Act even if defendant monitored its discharge more than required under its permit. Public Interest Research Group of New Jersey v. Star Enterprise, D.N.J.1991, 771 F.Supp. 655, amendment denied. Environmental Law ⚷ 206

27. Exemptions or exclusions

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Sugar cane farm's discharge of water resulting from rainfall into lake was "agricultural stormwater discharge" within meaning of Clean Water Act (CWA) exemption, even if stormwater was pumped into lake rather than flowing there naturally, and thus any pollutants originating on farm that were thereby discharged into lake via rainwater did not require a National Pollutant Discharge Elimination System (NPDES) permit. Fishermen Against Destruction of Environment, Inc. v. Closter Farms, Inc., C.A.11 (Fla.) 2002, 300 F.3d 1294, rehearing and rehearing en banc denied 52 Fed.Appx. 489, 2002 WL 31415798. Environmental Law 175; Environmental Law 196

Environmental Protection Agency's explanation of substantial ambiguities arising from, on one hand, publication of appendix in code of federal regulations to enumerate industrial subcategories exempted from regulation pursuant to consent decree permitting EPA to exclude certain categories from regulation under clean water standards if there is adequate justification, which appendix listed "bright dipping" as one of these subcategories, and, on the other hand, promulgation of electroplating and metal finishing standards making bright dipping a type of chemical etching subject to categoral pretreatment standards for both electroplating and metal finishing, that the appendix referred only to combined waste stream formula and was intended to apply only to plants that emit streams containing two or more regulated pollutants, provided coherent result which was sufficiently rational to preclude court from substituting its judgment for that of the agency. Modine Mfg. Corp. v. Kay, C.A.3 1986, 791 F.2d 267. Environmental Law 682

Since purpose and effect of landowners' land-clearing activities in a wetlands area, which constituted a discharge of a pollutant into the waters of the United States, was to bring an area of the navigable waters into a use to which it was not previously subject, the land-clearing activities were not exempt farming activities and therefore engaging in those activities without a dredge-and-fill permit was a violation of this section. Avoyelles Sportsmen's League, Inc. v. Marsh, C.A.5 (La.) 1983, 715 F.2d 897. Environmental Law 137

District court properly found that petitioners' mushroom composting operation was not agricultural activity but was manufacturing in nature, and therefore that pollution that resulted from petitioners' conduct was not exempted from criminal sanctions for willfully and negligently discharging pollutants into waterways of the United States. U.S. v. Frezzo Bros., Inc., C.A.3 (Pa.) 1983, 703 F.2d 62, certiorari denied 104 S.Ct. 106, 464 U.S. 829, 78 L.Ed.2d 109. Environmental Law 743

Agricultural and silvicultural activities, construction activity, and mining activities are not exempt from enforcement regulations under this chapter; such activities may involve discharges from both point and nonpoint sources, and those from point sources are subject to regulation. U. S. v. Earth Sciences, Inc., C.A.10 (Colo.) 1979, 599 F.2d 368. Environmental Law 175

Existence of uniform national effluent limitations is not a necessary precondition for incorporating into the National Pollutant Discharge Elimination System program pollution from agricultural, silvicultural, and storm water runoff point sources; technological or administrative infeasibility of such limitations may result in adjustments in permit programs but does not authorize Administrator to exclude relevant point sources from program. Natural Resources Defense Council, Inc. v. Costle, C.A.D.C.1977, 568 F.2d 1369, 186 U.S.App.D.C. 147. Environmental Law 175; Environmental Law 196

Environmental Protection Agency is not permitted to exempt pollutants from point source limitations established under this chapter. American Iron and Steel Institute v. E.P.A., C.A.3 1977, 568 F.2d 284. Environmental Law 175

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Discharge of stormwater from ditches alongside logging roads in state forest did not require National Pollutant Discharge Elimination System (NPDES) permit under statute governing effluent limitations. Northwest Environmental Defense Center v. Brown, D.Or.2007, 476 F.Supp.2d 1188. Environmental Law ⚷ 196

Property owners were not entitled to exemption from Army Corps of Engineers permit for construction of dikes and levees in wetland area for harvesting forest products, promoting upland soil conservation, or construction of stock pond; property owners constructed dikes and levees for purpose of bringing wetlands under cultivation, a use to which the site was not previously subject. U.S. v. Larkins, W.D.Ky.1987, 657 F.Supp. 76, affirmed 852 F.2d 189, rehearing denied, certiorari denied 109 S.Ct. 1131, 489 U.S. 1016, 103 L.Ed.2d 193. Environmental Law ⚷ 137

City was not entitled to be relieved from strictures of amended consent decree specifying dates upon which wastewater treatment plant would become operable and would comply with effluent quality standards of national pollutant discharge elimination system permit, despite its claim of impossibility of compliance, especially since city was unable to state when, if ever, it would comply. U. S. v. City of Providence, D.C.R.I.1980, 492 F.Supp. 602. Federal Civil Procedure ⚷ 2397.4

28. Discharge of radioactive waste

Legislative history of this chapter making it unlawful to discharge pollutants into navigable waters without permit and defining term "pollutants" to include radioactive materials showed congressional intention not to alter the control of the Atomic Energy Commission, succeeded in this capacity by the Nuclear Regulatory Commission, with respect to the discharge of source, by-product and special nuclear materials, and the Administrator properly disclaimed any authority to regulate discharge of these three types of radioactive materials covered by the Atomic Energy Act, section 2011 et seq. of Title 42. Train v. Colorado Public Interest Research Group, Inc., U.S.Colo.1976, 96 S.Ct. 1938, 426 U.S. 1, 48 L.Ed.2d 434. Environmental Law ⚷ 485

The Nuclear Regulatory Commission has no discretion to consider whether to permit prohibited discharge of high-level radioactive waste into navigable waters. Susquehanna Valley Alliance v. Three Mile Island Nuclear Reactor, C.A.3 (Pa.) 1980, 619 F.2d 231, certiorari denied 101 S.Ct. 893, 449 U.S. 1096, 66 L.Ed.2d 824. Environmental Law ⚷ 484; Environmental Law ⚷ 196

29. Toxic pollutants

Language of provision of the Clean Water Act prohibiting the Environmental Protection Agency from modifying effluent limitations insofar as toxic materials are concerned did not foreclose EPA's view of the statute as allowing it to issue fundamentally different factor variances with respect to toxic pollutants and that interpretation was permissible. Chemical Mfrs. Ass'n v. Natural Resources Defense Council, Inc., U.S.1985, 105 S.Ct. 1102, 470 U.S. 116, 84 L.Ed.2d 90. Environmental Law ⚷ 202

30. Compatible pollutants

Within meaning of federal regulations setting forth general pretreatment standards of effluent discharges from new plants in independent rendering industry under this chapter "compatible pollutants" are those which treatment facilities are designed to remove and may be introduced into public treatment works subject to certain limitations while "incompatible pollutants" are not treatable and must be reduced to levels identified by this chapter. National Renderers Ass'n v. E.P.A., C.A.8 1976, 541 F.2d 1281. Environmental Law ⚷ 181

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

31. Environmental impact statement

Even if this section requiring public treatment works to apply secondary treatment techniques were not applicable to ocean pollution, environmental impact statement for alleged national policy against disposal of sludge into ocean would not be necessary. Pacific Legal Foundation v. Quarles, C.D.Cal.1977, 440 F.Supp. 316, affirmed 614 F.2d 225, certiorari denied 101 S.Ct. 88, 449 U.S. 825, 66 L.Ed.2d 29. Environmental Law ⚿ 595(6)

32. Jurisdiction

City's claims challenging criteria under which Environmental Protection Agency rejected its application for federal funds for its project to eliminate completely discharge of city's wastewater effluent into bay by routing effluent from expanded wastewater treatment plan into spray irrigation system that would spread wastewater over agricultural land instead of discharging it into bayou, could not be classified as money claims as that term is understood in Tucker Act jurisprudence, so that district court, rather than Claims Court, was proper forum for suit to be heard. Sarasota, Florida v. E.P.A., C.A.11 (Fla.) 1986, 799 F.2d 674. Federal Courts ⚿ 1139

Court of Appeals had jurisdiction to review challenged regulations implementing subsec. (h) of this section, which allows municipality to apply for variance from minimum sewage treatment standard, pursuant to section 1369(b) of this title, which allows review of action by Administrator of Environmental Protection Agency "in approving or promulgating any effluent limitation," where such regulations as a practical matter restricted discharge of sewage by limiting availability of a variance to a class of applicants which did not include all coastal municipalities, in that such regulations were "effluent limitations" under section 1369(b) of this title. Natural Resources Defense Council, Inc. v. U. S. Environmental Protection Agency, C.A.D.C.1981, 656 F.2d 768, 211 U.S.App.D.C. 179. Environmental Law ⚿ 641

Even if this section authorized extensions with regard to more stringent limitations necessary to meet state water quality standards, district court was without authority to determine extension question and, by doing so without remanding matter to Environmental Protection Agency, district court not only preempted fact-finding function of the Agency, but also invaded its primary jurisdiction. U. S. v. Homestake Min. Co., C.A.8 (S.D.) 1979, 595 F.2d 421.

Under the significant nexus test as defined by Justice Kennedy in his concurrence in *Rapanos v. United States,* party seeking to invoke jurisdiction under the Clean Water Act (CWA) must present evidence that the wetlands in question possess a significant nexus to waters that are or were navigable in fact or that could reasonably be so made. U.S. v. Cundiff, W.D.Ky.2007, 2007 WL 957346. Environmental Law ⚿ 128

Property adjacent to neighboring tributaries of navigable water and with significant nexus to waters of United States was subject to Clean Water Act (CWA) jurisdiction. Carabell v. U.S. Army Corps of Engineers, E.D.Mich.2003, 257 F.Supp.2d 917, affirmed 391 F.3d 704, rehearing en banc denied , certiorari granted 126 S.Ct. 415, 163 L.Ed.2d 316, miscellaneous rulings 126 S.Ct. 617, 163 L.Ed.2d 502, miscellaneous rulings 126 S.Ct. 1295, 163 L.Ed.2d 1147, vacated and remanded 126 S.Ct. 2208, 165 L.Ed.2d 159, on remand 2007 WL 470555. Environmental Law ⚿ 173

District court had jurisdiction over claim alleging unpermitted discharges of pollutants in violation of Clean Water Act. Sierra Club v. Colorado Refining Co., D.Colo.1993, 838 F.Supp. 1428. Environmental Law ⚿ 641

District court had jurisdiction over wet weather combined sewer overflow standards established in proposed Na-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

tional Pollutant Discharge Elimination System (NPDES) permits including time and manner in which parties had to deal with wet weather flow violations where at time dry weather issues were resolved, parties entered into consent judgment which reserved district court jurisdiction over wet weather combined sewer overflow issues. U.S. v. State of Mich., E.D.Mich.1991, 777 F.Supp. 1365. Federal Civil Procedure ⚷ 2397.6

Timely assertion of jurisdiction by United States Army Corps of Engineers, especially insofar as its jurisdiction was claimed under this section, precluded finding that United States Army Corps of Engineers had surrendered its regulatory jurisdiction over areas of shoreline property shoreward beyond the mean high-water line. Leslie Salt Co. v. Froehlke, N.D.Cal.1974, 403 F.Supp. 1292, supplemented 412 F.Supp. 1096, reversed in part , modified in part 578 F.2d 742. Environmental Law ⚷ 173

Where Administrator failed to carry out his statutory duty to establish effluent limitations, there could be no violation of effluent limitations under this chapter, and, in absence of such violation and where it was not claimed that defendant was otherwise in violation of this chapter, federal district court had no jurisdiction of enforcement action by Administrator. U. S. v. GAF Corp., S.D.Tex.1975, 389 F.Supp. 1379. Environmental Law ⚷ 634; Environmental Law ⚷ 206

Court of Federal Claims lacked jurisdiction over landowner's claim that 220.85 acres were illegally exacted by the government when landowner was required to dedicate those acres as a wetland and wildlife habitat pursuant to Clean Water Act permit, because the Army Corps of Engineers violated appropriations act by expending funds for wetland delineation based upon 1989 manual; although appropriations act might have been violated through the expenditure of the funds, it was not through that specific misapplication of the statute that the property was "exacted" from the landowner. Norman v. U.S., Fed.Cl.2003, 56 Fed.Cl. 255, affirmed 429 F.3d 1081, certiorari denied 126 S.Ct. 2288, 164 L.Ed.2d 813. Federal Courts ⚷ 1085

The Court of Appeals lacked subject matter jurisdiction over action seeking declaratory and injunctive relief to compel the United States Forest Service to remove or treat timber, pursuant to the National Forest Management Act, the Clean Water Act, the Endangered Species Act, and the Administrative Procedure Act (APA), absent assertions by plaintiffs that Service failed to take some discrete agency action that it was required to take. Grant School Dist. No. 3 v. Dombeck, C.A.9 (Or.) 2005, 126 Fed.Appx. 823, 2005 WL 660677, Unreported. Declaratory Judgment ⚷ 203; Environmental Law ⚷ 700

Refusal by district office of the Army Corps of Engineers to assert jurisdiction over pond formed from old gravel mining pit, on ground that pit was not "waters of the United States," did not preclude District Court from exercising jurisdiction over environmental group's citizen suit under the Clean Water Act against city, alleging that city discharged pollutants from its waste-treatment facility into a pond which then drained via an aquifer into nearby river without permit required under the National Pollutant Discharge Elimination System (NPDES); district office's decision and investigation preceding it were not thorough, and office was biased against environmental group. Northern California River Watch v. City of Healdsburg, N.D.Cal.2004, 2004 WL 201502, Unreported, affirmed 457 F.3d 1023. Environmental Law ⚷ 682

33. Ripeness

Issue of validity of exclusion of economic capability as a ground for variance from 1977 "best practicable control technology currently available" standard of effluent limitations for point sources was ripe for judicial review prior to application of the regulation to a particular discharger's request for a variance, as issue involved only a question of law, failure to review the matter would cause hardship to both sides, variance clause was an integral

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

part of the challenged regulations and one court of appeals had held the variance provision invalid while another had upheld it. E.P.A. v. National Crushed Stone Ass'n, U.S.1980, 101 S.Ct. 295, 449 U.S. 64, 66 L.Ed.2d 268, on remand 643 F.2d 163. Environmental Law ⚷ 662

Landowners' motion for preliminary injunction to enjoin potential future prosecution for Clean Water Act violations did not present "case or controversy" under Article III, as their claims were based on contingent future events and were thus not "ripe"; there was no certainty that government would bring enforcement action, that Department of Justice would authorize criminal proceedings, or that grand jury would return indictment against landowners. Hartford Associates v. U.S., D.N.J.1992, 792 F.Supp. 358, appeal dismissed 981 F.2d 1247. Federal Courts ⚷ 13.15

34. Limitations

Where alleged violation of Clean Water Act (CWA), which was premised on discharge of polluted water without permit, had not ceased before filing of initial complaint but had ceased at time of amendment, amended complaint related back, for purpose of associational standing inquiry, to date of initial complaint. Building and Const. Trades Council of Buffalo, New York and Vicinity v. Downtown Development, Inc., C.A.2 (N.Y.) 2006, 448 F.3d 138. Environmental Law ⚷ 652

Alleged discharge of fill materials into wetlands was not "continuing violation" while adverse effects of fill continued but, rather, limitations period ran from date of discharge for purposes of civil enforcement action under Clean Water Act (CWA); defendant developer was not presently discharging pollutants and, thus, no present or continuing violation existed for limitations purposes, even though continuing impact existed from developer's past violations. U.S. v. Telluride Co., D.Colo.1995, 884 F.Supp. 404, reversed 146 F.3d 1241. Limitation Of Actions ⚷ 58(1)

35. Persons liable--Generally

Public utility director, as an "individual," was a "person" subject to criminal liability under the Clean Water Act for violation of national pollutant discharge elimination system permit. U.S. v. Brittain, C.A.10 (Okla.) 1991, 931 F.2d 1413. Environmental Law ⚷ 743

An indirect discharger cannot be held liable under prohibited discharge standard of pretreatment regulations promulgated under this chapter unless it is by cause of a publicly owned treatment work's permit violation or sludge problem, and causation requirement is satisfied if an indirect discharge is both the cause of and significantly contributes to the POTW's permit violation. National Ass'n of Metal Finishers v. E.P.A., C.A.3 1983, 719 F.2d 624, certiorari granted 104 S.Ct. 2167, 466 U.S. 957, 80 L.Ed.2d 551, reversed on other grounds 105 S.Ct. 1102, 470 U.S. 116, 84 L.Ed.2d 90. Environmental Law ⚷ 206

Manager of wastewater treatment facility exercised sufficient actual control over operations of facility and had sufficient personal involvement in decision to discharge effluent into Mississippi sound to be individually liable for Clean Water Act (CWA) violations; manager held himself out as being in ultimate control, corresponded with authorities and attended meetings and hearings on behalf of facility, and signed letters to gulf coast authority regarding facility's compliance with court orders. U.S. v. Gulf Park Water Co., Inc., S.D.Miss.1997, 972 F.Supp. 1056. Corporations ⚷ 336

Cause of action for violation of Clean Water Act (CWA) and Rivers and Harbors Act (RHA), to extent injunct-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ive relief is sought, survives death of violator and may be maintained against violator's estate, though civil penalties do not survive violator's death. U.S. v. Lambert, S.D.W.Va.1996, 915 F.Supp. 797. Abatement And Revival ⚷ 55(1)

Even if compliance with Johnston Amendment is prerequisite to indictment for Clean Water Act violations and even if Army Corps of Engineers failed to comply, landowners could only raise noncompliance as defense to any indictment which government might secure; such noncompliance would not preclude government from pursuing enforcement action. Hartford Associates v. U.S., D.N.J.1992, 792 F.Supp. 358, appeal dismissed 981 F.2d 1247. Environmental Law ⚷ 743

National Pollutant Discharge Elimination System (NPDES) permit holder's failure to include results of monitoring of particular pollutants in its monthly discharge monitoring reports violated the terms of its consent decree with state environmental agency, and thus violated the Clean Water Act; there was no indication that state agency agreed to permit holder's request for modification of permit. Natural Resources Defense Council, Inc. v. Loewengart & Co., Inc., M.D.Pa.1991, 776 F.Supp. 996. Federal Civil Procedure ⚷ 2397.6

Owner of private septic system, providing service to residential development, was liable under Clean Water Act for discharge of raw sewage into river caused by failure of system. Friends of Sakonnet v. Dutra, D.R.I.1990, 738 F.Supp. 623. Environmental Law ⚷ 206

Municipal owner-operator of sewage treatment work was liable under Clean Water Act for violations of National Pollutant Discharge Elimination permit effluent limitations that were established through copies of discharge monitoring reports filed by municipality. U.S. v. City of Hoboken, D.N.J.1987, 675 F.Supp. 189. Environmental Law ⚷ 206

Defendant steelmaker's discharged monitoring reports, submitted as required by national pollutant discharge elimination system program, established its liability for violation of conditions of state and local permits, issued pursuant to Federal Water Pollution Control Act, limiting discharges into navigable waters; however, genuine issues of material fact existed as to whether 57 incidents of noncompliance could be excused as upsets. Chesapeake Bay Foundation v. Bethlehem Steel Corp., D.C.Md.1985, 608 F.Supp. 440. Federal Civil Procedure ⚷ 2498.3; Environmental Law ⚷ 230

Defendants could not escape liability for willfully or negligently discharging pollutants into navigable waters without a permit on ground of regulation providing exemption for pollution from agricultural activities, where defendants were not aware of the regulation and never claimed that they relied thereon when they made decision to pollute creek. U. S. v. Frezzo Bros., Inc., E.D.Pa.1982, 546 F.Supp. 713, affirmed 703 F.2d 62, certiorari denied 104 S.Ct. 106, 464 U.S. 829, 78 L.Ed.2d 109. Environmental Law ⚷ 743

Provision of this section to effect that it is unlawful for a person to discharge pollution without obtaining a permit and complying with its terms does not impose liability on local government officials for a third party's failure to obtain permit or to comply with its environment standards. Love v. New York State Dept. of Environmental Conservation, S.D.N.Y.1981, 529 F.Supp. 832. Environmental Law ⚷ 206

Chapter 12 debtors, who purchased llama ranch on which pond had been constructed, were not liable for Clean Water Act (CWA) violations allegedly committed in conjunction with construction of pond by dredging slough and deposit of dredge materials near banks of wetland, as they did not own land when pond was constructed, they did not order the work done or pay for the work, they did not specify how, when, or where the work would

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

be done, they did not select who would do the work, and they did not provide plans for the work. In re Carsten, Bkrtcy.D.Mont.1997, 211 B.R. 719. Environmental Law ⚷ 136

36. ---- Intent to pollute, persons liable

With exception of purely jurisdictional elements, mens rea of knowledge applies to each element of Clean Water Act (CWA) offenses of knowingly discharging pollutant from point source into navigable water of United States without permit, and knowingly operating source in violation of pretreatment standard; those CWA violations do not fall into judicially created exception for "public welfare offenses," under which some regulatory crimes do not require showing of mens rea. U.S. v. Ahmad, C.A.5 (Tex.) 1996, 101 F.3d 386, rehearing and suggestion for rehearing en banc denied 108 F.3d 335. Environmental Law ⚷ 743

Evidence in support of misdemeanor counts of discharging pollutants into waters of United States was sufficient to link discharges to willful or negligent conduct on part of defendant who had primary operational responsibility for wastewater treatment plant. U.S. v. Brittain, C.A.10 (Okla.) 1991, 931 F.2d 1413. Environmental Law ⚷ 756

This chapter does not prohibit only intentional discharges of pollutants; regulatory provisions of this chapter are written without regard to intentionality, making the person responsible for the discharge of any pollutant strictly liable. U. S. v. Earth Sciences, Inc., C.A.10 (Colo.) 1979, 599 F.2d 368. Environmental Law ⚷ 206

Facility operator's statements in notice of intent (NOI) and storm water pollution prevention plan (SWPPP) documents, which were submitted to obtain National Pollutant Discharge Elimination System (NPDES) permit coverage, could not serve as sole basis for holding operatory liable under Clean Water Act (CWA) for unpermitted point source discharges. Environmental Protection Information Center v. Pacific Lumber Co., N.D.Cal.2006, 430 F.Supp.2d 996. Environmental Law ⚷ 230

Clean Water Act (CWA) imposes strict liability for violation of permit requirement for discharge of dredged or fill material into navigable waters; "no discharge" provision was written without regard to intentionality, making person responsible for discharge of any pollutant strictly liable. U.S. v. Lambert, S.D.W.Va.1996, 915 F.Supp. 797. Environmental Law ⚷ 136; Environmental Law ⚷ 206

The liability imposed for permit violations under this chapter is a variety of strict liability where neither fault nor intent is relevant to determination thereof. U.S. v. Saint Bernard Parish, E.D.La.1984, 589 F.Supp. 617. Environmental Law ⚷ 206

So long as defendants dumped pollutants into a navigable stream without a permit, their view as to legality of their actions was irrelevant; this section does not require the government to prove that defendants specifically intended to violate this section. U. S. v. Frezzo Bros., Inc., E.D.Pa.1982, 546 F.Supp. 713, affirmed 703 F.2d 62, certiorari denied 104 S.Ct. 106, 464 U.S. 829, 78 L.Ed.2d 109. Environmental Law ⚷ 743

37. Persons entitled to sue

Allegations of environmental organization's complaint, that individual members of organization used two rivers for recreation and that at least one member had been injured by discharges into the rivers, satisfied "injury in fact" requirement for representational standing to sue Oregon officials and timber companies under Clean Water Act (CWA) for discharging stormwater into rivers from ditches alongside logging roads in state forests without

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

National Pollutant Discharge Elimination System (NPDES) permits. Northwest Enviromental Defense Center v. Brown, D.Or.2007, 476 F.Supp.2d 1188. Environmental Law 652

Members of shellfish growers and environmental associations adequately alleged injury in fact, resulting from coastal landowners' alleged actions of violating the Clean Water Act (CWA) and contaminating shellfish beds and surrounding waters with their ditching activities, so as to support finding that associations had representational standing to maintain suit under CWA; members alleged they used area at issue, and that their recreational, aesthetic, and economic interests in area had been impaired or threatened as result of landowners' ditching activities. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law 652

Non-profit sport fishing associations had standing under Clean Water Act (CWA) to bring suit on behalf of their members for damages arising from city's use of tunnel to transfer drinking water from reservoir into trout stream without discharge permit; members of each association testified that discharge had interfered with their enjoyment of fishing creek, both aesthetically and in their ability to fish safely, and decision in associations' favor, requiring city to reduce turbidity of water flowing through tunnel, would redress their injuries. Catskill Mountains Chapter of Trout Unlimited, Inc. v. City of New York, N.D.N.Y.2003, 244 F.Supp.2d 41, affirmed in part and remanded 451 F.3d 77, certiorari denied 127 S.Ct. 1373. Environmental Law 652

Citizen plaintiffs under Clean Water Act (CWA) lacked standing to enforce receiving water quality limitations included in national pollutant discharge elimination system (NPDES) permits which had not been translated into end-of-pipe effluent limitations, even though permits contained specific water quality standards imposing "quantitative," rather than "narrative," conditions, and explicitly allowed dischargers to escape liability for violations caused by others. Save Our Bays and Beaches v. City and County of Honolulu, D.Hawai'i 1994, 904 F.Supp. 1098. Environmental Law 656

38. Intervention

Trial court erred in denying citizens leave to intervene in Environmental Protection Agency's (EPA's) Clean Water Act action since Act expressly provides for intervention as of right; however, error was harmless inasmuch as commencing enforcement action was discretionary rather than mandatory duty in the first instance and hence, ultimately settling action also was within EPA's discretion. U.S. E.P.A. v. City of Green Forest, Ark., C.A.8 (Ark.) 1990, 921 F.2d 1394, rehearing denied, certiorari denied 112 S.Ct. 414, 502 U.S. 956, 116 L.Ed.2d 435. Environmental Law 657; Environmental Law 690

In action brought by the United States under former section 1160 of this title [now covered by this chapter] to abate discharges of taconite tailings into Lake Superior by a company located in Minnesota, the State of Michigan was entitled to intervene as plaintiff as of right since it had interest in the action in its capacity as parens patriae, charged with representation of its citizens' recreational, aesthetic and property interests, since the possibility of binding judgment or of inconsistent or excessive litigation demonstrated that ability of State to protect its interest might be impaired or impeded if it were not allowed to intervene, and since the representation of the State's interest by United States might be inadequate. U. S. v. Reserve Mining Co., D.C.Minn.1972, 56 F.R.D. 408. Federal Civil Procedure 338

39. Burden of proof

Clean Water Act does not establish a prescribed statutory maximum penalty in prosecution for discharging a

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

pollutant without a permit in violation of Act, and thus, number of days on which Act was violated, which is a sentencing factor under Act, is not required under *Apprendi* to be proven beyond a reasonable doubt. U.S. v. Chemetco, Inc., C.A.7 (Ill.) 2001, 274 F.3d 1154. Sentencing And Punishment ⚷ 973

To establish violation of the Clean Water Act, the United States need only show that: it has jurisdiction over the subject waters; defendants discharged or placed fill in those waters; and defendants did so without a permit from the Army Corps of Engineers. U.S. v. Zanger, N.D.Cal.1991, 767 F.Supp. 1030. Environmental Law ⚷ 136

Burden is on alleged water polluter charged with violating the Federal Water Pollution Control Act [33 U.S.C.A. § 1251 et seq.] to demonstrate that each of its discharge permit violations satisfy all requirements of federal and state "upset" regulations excepting discharge permit violations in exceptional incidents. Student Public Interest Research Group of New Jersey, Inc. v. P.D. Oil & Chemical Storage, Inc., D.N.J.1986, 627 F.Supp. 1074.

To establish a violation of this section prohibiting discharge of any pollutant into waters of the United States except in compliance with permit specifying conditions of discharge or analogous state law, plaintiffs must prove that defendants have discharged pollutants from a point source into navigable waters and that such discharge does not comply with a permit condition. State of Mich. v. City of Allen Park, E.D.Mich.1980, 501 F.Supp. 1007. Environmental Law ⚷ 206

Criminal prosecution for violating the Clean Water Act (CWA) did not require government to prove that defendant's discharges caused a degradation of aquatic resources. U.S. v. Phillips, C.A.9 (Mont.) 2004, 87 Fed.Appx. 650, 2004 WL 193258, Unreported, certiorari denied 125 S.Ct. 479, 543 U.S. 980, 160 L.Ed.2d 358. Environmental Law ⚷ 743

40. Deference to administrative interpretation

On a question of statutory interpretation involving legislation enacted with the Environmental Protection Agency's advice and cooperation, Agency's view of the legislative intent concerning its ongoing efforts deserves some deference. Hercules, Inc. v. Environmental Protection Agency, C.A.D.C.1978, 598 F.2d 91, 194 U.S.App.D.C. 172. Statutes ⚷ 219(6.1)

41. Injunction

Preliminary injunction against construction was warranted in environmental organization's action under Clean Water Act (CWA) and National Environmental Policy Act (NEPA), challenging Army Corps of Engineers' issuance of permit for private developer to construct 66 road crossings over federally owned waters as part of planned residential development in desert parcel; substantial questions existed whether Corps had applied too narrow scope of review in looking only at waters and immediately adjacent areas, since waters, though composing only five percent of parcel, were not isolated from rest of parcel but were scattered across it. Save Our Sonoran, Inc. v. Flowers, C.A.9 (Ariz.) 2005, 408 F.3d 1113. Environmental Law ⚷ 701

Permanent injunction prohibiting developer from discharging any stormwater runoff as violation of Clean Water Act (CWA) was unenforceable "obey the law" injunction in absence of operative command capable of enforcement; injunction did not indicate whether developer was to stop rain from falling, build retention pond to control stormwater discharges, or construct water treatment plant. Hughey v. JMS Development Corp., C.A.11 (Ga.) 1996, 78 F.3d 1523, rehearing and suggestion for rehearing en banc denied 89 F.3d 857, certiorari denied 117 S.Ct. 482, 519 U.S. 993, 136 L.Ed.2d 377. Environmental Law ⚷ 700

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

The 1981 amendments to Clean Water Act, which extended time which publicly owned water treatment works had to comply with Act [Federal Water Pollution Control Act Amendments of 1972, § 301(i), as amended, 33 U.S.C.A. § 1311(i)], applied only to public works whose funding was reduced pursuant to 1981 amendments or which could not comply with Act due to changed circumstances beyond their control so that municipality which did not come within either category, and which continued to discharge pollutants into stream beyond expiration date of permits, was properly enjoined for violating Act. Franklin Tp. Sewerage Authority v. Middlesex County Utilities Authority, C.A.3 (N.J.) 1986, 787 F.2d 117, certiorari denied 107 S.Ct. 109, 479 U.S. 828, 93 L.Ed.2d 57. Environmental Law ⚿ 700

Environmental Protection Agency and courts retain equitable discretion to determine whether and to what extent fines and injunctive sanctions should be imposed for violations brought about by good-faith inability to comply with 1977 deadline of this chapter. State Water Control Bd. v. Train, C.A.4 (Va.) 1977, 559 F.2d 921. Environmental Law ⚿ 223; Environmental Law ⚿ 700

Although town officials, by failing to issue stop order may have encouraged illegal discharge of pollution into pond and stream that traversed plaintiffs' land, that would not warrant injunctive relief against town and officials under provision of this section making it unlawful to discharge pollution without obtaining permit and complying with its terms. Love v. New York State Dept. of Environmental Conservation, S.D.N.Y.1981, 529 F.Supp. 832. Environmental Law ⚿ 700

United States was entitled to order requiring city to remove fill material placed in wetlands and to refrain from future discharge of fill material into wetlands in absence of permit where fill was discharged in violation of 1972 amendments to this chapter and Department of Army Corps of Engineers properly followed its own regulations before requesting city to remove fill. Parkview Corp. v. Department of Army, Corps of Engineers, Chicago Dist., E.D.Wis.1980, 490 F.Supp. 1278. Environmental Law ⚿ 136

42. Contempt

City which provided no justifiable excuse for its failure to comply with amended consent decree, which set specific date upon which waterwaste treatment plant would comply with effluent quality standards of national pollutant discharge elimination system permit, was in contempt of the decree and would be allowed 90 days to demonstrate compliance with decree. U. S. v. City of Providence, D.C.R.I.1980, 492 F.Supp. 602. Contempt ⚿ 20

43. Review of Administrator's action

See Notes of Decisions under section 1369 of this title.

Total maximum daily loads (TMDLs) for pollutants established by the Environmental Protection Agency (EPA) under section 1313 of the Clean Water Act (CWA) did not constitute effluent limitations or other limitations "under section 1311" and, thus, the Court of Appeals lacked subject-matter jurisdiction for direct review of EPA's approval and establishment of the TMDLs. Friends of Earth v. U.S. E.P.A., C.A.D.C.2003, 333 F.3d 184, 357 U.S.App.D.C. 63, transferred to 346 F.Supp.2d 182, reversed and remanded 446 F.3d 140, 371 U.S.App.D.C. 1, certiorari denied 127 S.Ct. 1121, 166 L.Ed.2d 907. Environmental Law ⚿ 186; Environmental Law ⚿ 192; Federal Courts ⚿ 1134

Determination of the Administrator of the Environmental Protection Agency that § 301(g) of the Clean Water

ATTACHMENT NO. 2

CWA § 402

Effective: December 21, 2000

United States Code Annotated Currentness
Title 33. Navigation and Navigable Waters (Refs & Annos)
Chapter 26. Water Pollution Prevention and Control (Refs & Annos)
Subchapter IV. Permits and Licenses (Refs & Annos)
§ 1342. National pollutant discharge elimination system

(a) Permits for discharge of pollutants

(1) Except as provided in sections 1328 and 1344 of this title, the Administrator may, after opportunity for public hearing, issue a permit for the discharge of any pollutant, or combination of pollutants, notwithstanding section 1311(a) of this title, upon condition that such discharge will meet either (A) all applicable requirements under sections 1311, 1312, 1316, 1317, 1318, and 1343 of this title, or (B) prior to the taking of necessary implementing actions relating to all such requirements, such conditions as the Administrator determines are necessary to carry out the provisions of this chapter.

(2) The Administrator shall prescribe conditions for such permits to assure compliance with the requirements of paragraph (1) of this subsection, including conditions on data and information collection, reporting, and such other requirements as he deems appropriate.

(3) The permit program of the Administrator under paragraph (1) of this subsection, and permits issued thereunder, shall be subject to the same terms, conditions, and requirements as apply to a State permit program and permits issued thereunder under subsection (b) of this section.

(4) All permits for discharges into the navigable waters issued pursuant to section 407 of this title shall be deemed to be permits issued under this subchapter, and permits issued under this subchapter shall be deemed to be permits issued under section 407 of this title, and shall continue in force and effect for their term unless revoked, modified, or suspended in accordance with the provisions of this chapter.

(5) No permit for a discharge into the navigable waters shall be issued under section 407 of this title after October 18, 1972. Each application for a permit under section 407 of this title, pending on October 18, 1972, shall be deemed to be an application for a permit under this section. The Administrator shall authorize a State, which he determines has the capability of administering a permit program which will carry out the objective of this chapter to issue permits for discharges into the navigable waters within the jurisdiction of such State. The Administrator may exercise the authority granted him by the preceding sentence only during the period which begins on October 18, 1972, and ends either on the ninetieth day after the date of the first promulgation of guidelines required by section 1314(i)(2) of this title, or the date of approval by the Administrator of a permit program for such State under subsection (b) of this section, whichever date first occurs, and no such authorization to a State shall extend beyond the last day of such period. Each such permit shall be subject to such conditions as the Administrator determines are necessary to carry out the provisions of this chapter. No such permit shall issue if the Administrator objects to such issuance.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

(b) State permit programs

At any time after the promulgation of the guidelines required by subsection (i)(2) of section 1314 of this title, the Governor of each State desiring to administer its own permit program for discharges into navigable waters within its jurisdiction may submit to the Administrator a full and complete description of the program it proposes to establish and administer under State law or under an interstate compact. In addition, such State shall submit a statement from the attorney general (or the attorney for those State water pollution control agencies which have independent legal counsel), or from the chief legal officer in the case of an interstate agency, that the laws of such State, or the interstate compact, as the case may be, provide adequate authority to carry out the described program. The Administrator shall approve each such submitted program unless he determines that adequate authority does not exist:

(1) To issue permits which--

(A) apply, and insure compliance with, any applicable requirements of sections 1311, 1312, 1316, 1317, and 1343 of this title;

(B) are for fixed terms not exceeding five years; and

(C) can be terminated or modified for cause including, but not limited to, the following:

(i) violation of any condition of the permit;

(ii) obtaining a permit by misrepresentation, or failure to disclose fully all relevant facts;

(iii) change in any condition that requires either a temporary or permanent reduction or elimination of the permitted discharge;

(D) control the disposal of pollutants into wells;

(2)(A) To issue permits which apply, and insure compliance with, all applicable requirements of section 1318 of this title; or

(B) To inspect, monitor, enter, and require reports to at least the same extent as required in section 1318 of this title;

(3) To insure that the public, and any other State the waters of which may be affected, receive notice of each application for a permit and to provide an opportunity for public hearing before a ruling on each such application;

(4) To insure that the Administrator receives notice of each application (including a copy thereof) for a permit;

(5) To insure that any State (other than the permitting State), whose waters may be affected by the issuance of a permit may submit written recommendations to the permitting State (and the Administrator) with respect to any permit application and, if any part of such written recommendations are not accepted by the permitting State, that the permitting State will notify such affected State (and the Administrator) in writing of its failure to so accept such recommendations together with its reasons for so doing;

(6) To insure that no permit will be issued if, in the judgment of the Secretary of the Army acting through the Chief of Engineers, after consultation with the Secretary of the department in which the Coast Guard is operat-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ing, anchorage and navigation of any of the navigable waters would be substantially impaired thereby;

(7) To abate violations of the permit or the permit program, including civil and criminal penalties and other ways and means of enforcement;

(8) To insure that any permit for a discharge from a publicly owned treatment works includes conditions to require the identification in terms of character and volume of pollutants of any significant source introducing pollutants subject to pretreatment standards under section 1317(b) of this title into such works and a program to assure compliance with such pretreatment standards by each such source, in addition to adequate notice to the permitting agency of (A) new introductions into such works of pollutants from any source which would be a new source as defined in section 1316 of this title if such source were discharging pollutants, (B) new introductions of pollutants into such works from a source which would be subject to section 1311 of this title if it were discharging such pollutants, or (C) a substantial change in volume or character of pollutants being introduced into such works by a source introducing pollutants into such works at the time of issuance of the permit. Such notice shall include information on the quality and quantity of effluent to be introduced into such treatment works and any anticipated impact of such change in the quantity or quality of effluent to be discharged from such publicly owned treatment works; and

(9) To insure that any industrial user of any publicly owned treatment works will comply with sections 1284(b), 1317, and 1318 of this title.

(c) Suspension of Federal program upon submission of State program; withdrawal of approval of State program; return of State program to Administrator

(1) Not later than ninety days after the date on which a State has submitted a program (or revision thereof) pursuant to subsection (b) of this section, the Administrator shall suspend the issuance of permits under subsection (a) of this section as to those discharges subject to such program unless he determines that the State permit program does not meet the requirements of subsection (b) of this section or does not conform to the guidelines issued under section 1314(i)(2) of this title. If the Administrator so determines, he shall notify the State of any revisions or modifications necessary to conform to such requirements or guidelines.

(2) Any State permit program under this section shall at all times be in accordance with this section and guidelines promulgated pursuant to section 1314(i)(2) of this title.

(3) Whenever the Administrator determines after public hearing that a State is not administering a program approved under this section in accordance with requirements of this section, he shall so notify the State and, if appropriate corrective action is not taken within a reasonable time, not to exceed ninety days, the Administrator shall withdraw approval of such program. The Administrator shall not withdraw approval of any such program unless he shall first have notified the State, and made public, in writing, the reasons for such withdrawal.

(4) Limitations on partial permit program returns and withdrawals.

A State may return to the Administrator administration, [FN1] and the Administrator may withdraw under paragraph (3) of this subsection approval, of--

(A) a State partial permit program approved under subsection (n)(3) of this section only if the entire permit program being administered by the State department or agency at the time is returned or withdrawn; and

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

(B) a State partial permit program approved under subsection (n)(4) of this section only if an entire phased component of the permit program being administered by the State at the time is returned or withdrawn.

(d) Notification of Administrator

(1) Each State shall transmit to the Administrator a copy of each permit application received by such State and provide notice to the Administrator of every action related to the consideration of such permit application, including each permit proposed to be issued by such State.

(2) No permit shall issue (A) if the Administrator within ninety days of the date of his notification under subsection (b)(5) of this section objects in writing to the issuance of such permit, or (B) if the Administrator within ninety days of the date of transmittal of the proposed permit by the State objects in writing to the issuance of such permit as being outside the guidelines and requirements of this chapter. Whenever the Administrator objects to the issuance of a permit under this paragraph such written objection shall contain a statement of the reasons for such objection and the effluent limitations and conditions which such permit would include if it were issued by the Administrator.

(3) The Administrator may, as to any permit application, waive paragraph (2) of this subsection.

(4) In any case where, after December 27, 1977, the Administrator, pursuant to paragraph (2) of this subsection, objects to the issuance of a permit, on request of the State, a public hearing shall be held by the Administrator on such objection. If the State does not resubmit such permit revised to meet such objection within 30 days after completion of the hearing, or, if no hearing is requested within 90 days after the date of such objection, the Administrator may issue the permit pursuant to subsection (a) of this section for such source in accordance with the guidelines and requirements of this chapter.

(e) Waiver of notification requirement

In accordance with guidelines promulgated pursuant to subsection (i)(2) of section 1314 of this title, the Administrator is authorized to waive the requirements of subsection (d) of this section at the time he approves a program pursuant to subsection (b) of this section for any category (including any class, type, or size within such category) of point sources within the State submitting such program.

(f) Point source categories

The Administrator shall promulgate regulations establishing categories of point sources which he determines shall not be subject to the requirements of subsection (d) of this section in any State with a program approved pursuant to subsection (b) of this section. The Administrator may distinguish among classes, types, and sizes within any category of point sources.

(g) Other regulations for safe transportation, handling, carriage, storage, and stowage of pollutants

Any permit issued under this section for the discharge of pollutants into the navigable waters from a vessel or other floating craft shall be subject to any applicable regulations promulgated by the Secretary of the department in which the Coast Guard is operating, establishing specifications for safe transportation, handling, carriage, storage, and stowage of pollutants.

(h) Violation of permit conditions; restriction or prohibition upon introduction of pollutant by source not previ-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ously utilizing treatment works

In the event any condition of a permit for discharges from a treatment works (as defined in section 1292 of this title) which is publicly owned is violated, a State with a program approved under subsection (b) of this section or the Administrator, where no State program is approved or where the Administrator determines pursuant to section 1319(a) of this title that a State with an approved program has not commenced appropriate enforcement action with respect to such permit, may proceed in a court of competent jurisdiction to restrict or prohibit the introduction of any pollutant into such treatment works by a source not utilizing such treatment works prior to the finding that such condition was violated.

(i) Federal enforcement not limited

Nothing in this section shall be construed to limit the authority of the Administrator to take action pursuant to section 1319 of this title.

(j) Public information

A copy of each permit application and each permit issued under this section shall be available to the public. Such permit application or permit, or portion thereof, shall further be available on request for the purpose of reproduction.

(k) Compliance with permits

Compliance with a permit issued pursuant to this section shall be deemed compliance, for purposes of sections 1319 and 1365 of this title, with sections 1311, 1312, 1316, 1317, and 1343 of this title, except any standard imposed under section 1317 of this title for a toxic pollutant injurious to human health. Until December 31, 1974, in any case where a permit for discharge has been applied for pursuant to this section, but final administrative disposition of such application has not been made, such discharge shall not be a violation of (1) section 1311, 1316, or 1342 of this title, or (2) section 407 of this title, unless the Administrator or other plaintiff proves that final administrative disposition of such application has not been made because of the failure of the applicant to furnish information reasonably required or requested in order to process the application. For the 180-day period beginning on October 18, 1972, in the case of any point source discharging any pollutant or combination of pollutants immediately prior to such date which source is not subject to section 407 of this title, the discharge by such source shall not be a violation of this chapter if such a source applies for a permit for discharge pursuant to this section within such 180-day period.

(*l*) Limitation on permit requirement

(1) Agricultural return flows

The Administrator shall not require a permit under this section for discharges composed entirely of return flows from irrigated agriculture, nor shall the Administrator directly or indirectly, require any State to require such a permit.

(2) Stormwater runoff from oil, gas, and mining operations

The Administrator shall not require a permit under this section, nor shall the Administrator directly or indirectly require any State to require a permit, for discharges of stormwater runoff from mining operations or oil and gas

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

exploration, production, processing, or treatment operations or transmission facilities, composed entirely of flows which are from conveyances or systems of conveyances (including but not limited to pipes, conduits, ditches, and channels) used for collecting and conveying precipitation runoff and which are not contaminated by contact with, or do not come into contact with, any overburden, raw material, intermediate products, finished product, byproduct, or waste products located on the site of such operations.

(m) Additional pretreatment of conventional pollutants not required

To the extent a treatment works (as defined in section 1292 of this title) which is publicly owned is not meeting the requirements of a permit issued under this section for such treatment works as a result of inadequate design or operation of such treatment works, the Administrator, in issuing a permit under this section, shall not require pretreatment by a person introducing conventional pollutants identified pursuant to section 1314(a)(4) of this title into such treatment works other than pretreatment required to assure compliance with pretreatment standards under subsection (b)(8) of this section and section 1317(b)(1) of this title. Nothing in this subsection shall affect the Administrator's authority under sections 1317 and 1319 of this title, affect State and local authority under sections 1317(b)(4) and 1370 of this title, relieve such treatment works of its obligations to meet requirements established under this chapter, or otherwise preclude such works from pursuing whatever feasible options are available to meet its responsibility to comply with its permit under this section.

(n) Partial permit program

(1) State submission

The Governor of a State may submit under subsection (b) of this section a permit program for a portion of the discharges into the navigable waters in such State.

(2) Minimum coverage

A partial permit program under this subsection shall cover, at a minimum, administration of a major category of the discharges into the navigable waters of the State or a major component of the permit program required by subsection (b) of this section.

(3) Approval of major category partial permit programs

The Administrator may approve a partial permit program covering administration of a major category of discharges under this subsection if--

(A) such program represents a complete permit program and covers all of the discharges under the jurisdiction of a department or agency of the State; and

(B) the Administrator determines that the partial program represents a significant and identifiable part of the State program required by subsection (b) of this section.

(4) Approval of major component partial permit programs

The Administrator may approve under this subsection a partial and phased permit program covering administration of a major component (including discharge categories) of a State permit program required by subsection (b) of this section if--

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

(A) the Administrator determines that the partial program represents a significant and identifiable part of the State program required by subsection (b) of this section; and

(B) the State submits, and the Administrator approves, a plan for the State to assume administration by phases of the remainder of the State program required by subsection (b) of this section by a specified date not more than 5 years after submission of the partial program under this subsection and agrees to make all reasonable efforts to assume such administration by such date.

(o) Anti-backsliding

(1) General prohibition

In the case of effluent limitations established on the basis of subsection (a)(1)(B) of this section, a permit may not be renewed, reissued, or modified on the basis of effluent guidelines promulgated under section 1314(b) of this title subsequent to the original issuance of such permit, to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit. In the case of effluent limitations established on the basis of section 1311(b)(1)(C) or section 1313(d) or (e) of this title, a permit may not be renewed, reissued, or modified to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit except in compliance with section 1313(d)(4) of this title.

(2) Exceptions

A permit with respect to which paragraph (1) applies may be renewed, reissued, or modified to contain a less stringent effluent limitation applicable to a pollutant if--

(A) material and substantial alterations or additions to the permitted facility occurred after permit issuance which justify the application of a less stringent effluent limitation;

(B)(i) information is available which was not available at the time of permit issuance (other than revised regulations, guidance, or test methods) and which would have justified the application of a less stringent effluent limitation at the time of permit issuance; or

(ii) the Administrator determines that technical mistakes or mistaken interpretations of law were made in issuing the permit under subsection (a)(1)(B) of this section;

(C) a less stringent effluent limitation is necessary because of events over which the permittee has no control and for which there is no reasonably available remedy;

(D) the permittee has received a permit modification under section 1311(c), 1311(g), 1311(h), 1311(i), 1311(k), 1311(n), or 1326(a) of this title; or

(E) the permittee has installed the treatment facilities required to meet the effluent limitations in the previous permit and has properly operated and maintained the facilities but has nevertheless been unable to achieve the previous effluent limitations, in which case the limitations in the reviewed, reissued, or modified permit may reflect the level of pollutant control actually achieved (but shall not be less stringent than required by effluent guidelines in effect at the time of permit renewal, reissuance, or modification).

Subparagraph (B) shall not apply to any revised waste load allocations or any alternative grounds for trans-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

lating water quality standards into effluent limitations, except where the cumulative effect of such revised allocations results in a decrease in the amount of pollutants discharged into the concerned waters, and such revised allocations are not the result of a discharger eliminating or substantially reducing its discharge of pollutants due to complying with the requirements of this chapter or for reasons otherwise unrelated to water quality.

(3) Limitations

In no event may a permit with respect to which paragraph (1) applies be renewed, reissued, or modified to contain an effluent limitation which is less stringent than required by effluent guidelines in effect at the time the permit is renewed, reissued, or modified. In no event may such a permit to discharge into waters be renewed, reissued, or modified to contain a less stringent effluent limitation if the implementation of such limitation would result in a violation of a water quality standard under section 1313 of this title applicable to such waters.

(p) Municipal and industrial stormwater discharges

(1) General rule

Prior to October 1, 1994, the Administrator or the State (in the case of a permit program approved under this section) shall not require a permit under this section for discharges composed entirely of stormwater.

(2) Exceptions

Paragraph (1) shall not apply with respect to the following stormwater discharges:

(A) A discharge with respect to which a permit has been issued under this section before February 4, 1987.

(B) A discharge associated with industrial activity.

(C) A discharge from a municipal separate storm sewer system serving a population of 250,000 or more.

(D) A discharge from a municipal separate storm sewer system serving a population of 100,000 or more but less than 250,000.

(E) A discharge for which the Administrator or the State, as the case may be, determines that the stormwater discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

(3) Permit requirements

(A) Industrial discharges

Permits for discharges associated with industrial activity shall meet all applicable provisions of this section and section 1311 of this title.

(B) Municipal discharge

Permits for discharges from municipal storm sewers--

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

(i) may be issued on a system- or jurisdiction-wide basis;

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.

(4) Permit application requirements

(A) Industrial and large municipal discharges

Not later than 2 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraphs (2)(B) and (2)(C). Applications for permits for such discharges shall be filed no later than 3 years after February 4, 1987. Not later than 4 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(B) Other municipal discharges

Not later than 4 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraph (2)(D). Applications for permits for such discharges shall be filed no later than 5 years after February 4, 1987. Not later than 6 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(5) Studies

The Administrator, in consultation with the States, shall conduct a study for the purposes of--

(A) identifying those stormwater discharges or classes of stormwater discharges for which permits are not required pursuant to paragraphs (1) and (2) of this subsection;

(B) determining, to the maximum extent practicable, the nature and extent of pollutants in such discharges; and

(C) establishing procedures and methods to control stormwater discharges to the extent necessary to mitigate impacts on water quality.

Not later than October 1, 1988, the Administrator shall submit to Congress a report on the results of the study described in subparagraphs (A) and (B). Not later than October 1, 1989, the Administrator shall submit to Congress a report on the results of the study described in subparagraph (C).

(6) Regulations

Not later than October 1, 1993, the Administrator, in consultation with State and local officials, shall issue regulations (based on the results of the studies conducted under paragraph (5)) which designate stormwater dis-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

charges, other than those discharges described in paragraph (2), to be regulated to protect water quality and shall establish a comprehensive program to regulate such designated sources. The program shall, at a minimum, (A) establish priorities, (B) establish requirements for State stormwater management programs, and (C) establish expeditious deadlines. The program may include performance standards, guidelines, guidance, and management practices and treatment requirements, as appropriate.

(q) Combined sewer overflows

(1) Requirement for permits, orders, and decrees

Each permit, order, or decree issued pursuant to this chapter after December 21, 2000 for a discharge from a municipal combined storm and sanitary sewer shall conform to the Combined Sewer Overflow Control Policy signed by the Administrator on April 11, 1994 (in this subsection referred to as the "CSO control policy").

(2) Water quality and designated use review guidance

Not later than July 31, 2001, and after providing notice and opportunity for public comment, the Administrator shall issue guidance to facilitate the conduct of water quality and designated use reviews for municipal combined sewer overflow receiving waters.

(3) Report

Not later than September 1, 2001, the Administrator shall transmit to Congress a report on the progress made by the Environmental Protection Agency, States, and municipalities in implementing and enforcing the CSO control policy.

References in Text

This chapter, referred to in subsec. (q), originally read "this Act", meaning the Federal Water Pollution Control Act, June 30, 1948, c. 758, 62 Stat. 1155, which is classified principally to this chapter. See Tables for complete classification.

Amendments

2000 Amendments. Subsec. (q). Pub.L. 106-554, § 1(a)(4) [Div. B, Title I, § 112(a)], added subsec. (q).

1995 Amendments. Pub.L. 104-66, § 2021(e)(2), redesignated section 404(c) of Pub.L. 100-4 as section 404(d) of Pub.L. 100-4.

1992 Amendments. Subsec. (p)(1). Pub.L. 102-580, § 364(1), substituted "October 1, 1994" for "October 1, 1992".

Subsec. (p)(6). Pub.L. 102-580, § 364(2), substituted "October 1, 1993" for "October 1, 1993".

1987 Amendments. Subsec. (a)(1). Pub.L. 100-4, § 404(c), as redesignated by section 2021(e)(2) of Pub.L. 104-66, inserted "(A)" after "either" and "(B)" after "1343 of this title,".

Subsec. (c)(1). Pub.L. 100-4, § 403(b)(2), substituted "as to those discharges" for "as to those navigable waters".

Subsec. (c)(4). Pub.L. 100-4, § 403(b)(1), added par. (4).

Subsec. (l). Pub.L. 100-4, § 401, inserted subsection heading "Limitation on permit requirement", designated existing provision as par. (1), and in par. (1) as so designated, inserted paragraph heading "Agricultural return flows", added par. (2), and aligned pars. (1) and (2).

Subsec. (m). Pub.L. 100-4, § 402, added subsec. (m).

Subsec. (n). Pub.L. 100-4, § 403(a), added subsec. (n).

Subsec. (o). Pub.L. 100-4, § 404(a), added subsec. (o).

Subsec. (p). Pub.L. 100-4, § 405, added subsec. (p).

1977 Amendments. Subsec. (a)(5). Pub.L. 95-217, § 50, substituted "section 1314(i)(2)" for "section 1314(h)(2)".

Subsec. (b). Pub.L. 95-217, § 50, substituted in the material preceding par. (1) "subsection (i)(2) of section 1314" for "subsection (h)(2) of section 1314".

Subsec. (b)(8). Pub.L. 95-217, § 54(c)(1), added reference to the identification in terms of character and volume of pollutants of any significant source introducing pollutants subject to pretreatment standards under section

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

1317(b) of this title into treatment works and programs to assure compliance with pretreatment standards by each source.

Subsec. (c)(1), (2). Pub.L. 95-217, § 50, substituted "section 1314(i)(2)" for "section 1314(h)(2)".

Subsec. (d)(2). Pub.L. 95-217, § 65(b), added provision requiring that, whenever the Administrator objects to the issuance of a permit under subsec. (d)(2) of this section, the written objection contain a statement of the reasons for the objection and the effluent limitations and conditions which the permit would include if it were issued by the Administrator.

Subsec. (d)(4). Pub.L. 95-217, § 65(a), added par. (4).

Subsec. (e). Pub.L. 95-217, § 50, substituted "subsection (i)(2) of section 1314" for "subsection (h)(2) of section 1314".

Subsec. (h). Pub.L. 95-217, § 66, substituted "where no State program is approved or where the Administrator determines pursuant to section 1319(a) of this title that a State with an approved program has not commenced appropriate enforcement action with respect to such permit," for "where no State program is approved,".

Subsec. (*l*). Pub.L. 95-217, § 33(c), added subsec. (*l*).

Transfer of Functions

Enforcement functions of Administrator or other official of the Environmental Protection Agency under this section relating to compliance with national pollutant discharge elimination system permits with respect to preconstruction, construction, and initial operation of transportation system for Canadian and Alaskan natural gas were transferred to the Federal Inspector, Office of Federal Inspector for the Alaska Natural Gas Transportation System, until the first anniversary of the date of initial operation of the Alaska Natural Gas Transportation System, see Reorg.Plan No. 1 of 1979, §§ 102(a), 203(a), 44 F.R. 33663, 33666, 93 Stat. 1373, 1376, effective July 1, 1979, set out in Appendix 1 to Title 5, Government Organization and Employees.

Stormwater Permit Requirements

Pub.L. 102-240, Title I, § 1068, Dec. 18, 1991, 105 Stat. 2007, provided that:

"(a) General rule.--Notwithstanding the requirements of sections 402(p)(2)(B), (C), and (D) of the Federal Water Pollution Control Act [subsec. (p)(2)(B), (C), and (D) of this section], permit application deadlines for stormwater discharges associated with industrial activities from facilities that are owned or operated by a municipality shall be established by the Administrator of the Environmental Protection Agency (hereinafter in this section referred to as the 'Administrator') pursuant to the requirements of this section.

"(b) Permit applications.--

"(1) Individual applications.--The Administrator shall require individual permit applications for discharges described in subsection (a) on or before October 1, 1992; except that any municipality that has participated in a timely part I group application for an industrial activity discharging stormwater that is denied such participation in a group application or for which a group application is denied shall not be required to submit an

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

individual application until the 180th day following the date on which the denial is made.
"(2) **Group applications.**--With respect to group applications for permits for discharges described in subsection (a), the Administrator shall require--

"(A) part I applications on or before September 30, 1991, except that any municipality with a population of less than 250,000 shall not be required to submit a part I application before May 18, 1992; and
"(B) part II applications on or before October 1, 1992, except that any municipality with a population of less than 250,000 shall not be required to submit a part II application before May 17, 1993.

"(c) **Municipalities with less than 100,000 population.**--The Administrator shall not require any municipality with a population of less than 100,000 to apply for or obtain a permit for any stormwater discharge associated with an industrial activity other than an airport, powerplant, or uncontrolled sanitary landfill owned or operated by such municipality before October 1, 1992, unless such permit is required by section 402(p)(2)(A) or (E) of the Federal Water Pollution Control Act [subsec. (p)(2)(A) or (E) of this section].

"(d) **Uncontrolled sanitary landfill defined.**--For the purposes of this section, the term 'uncontrolled sanitary landfill' means a landfill or open dump, whether in operation or closed, that does not meet the requirements for run-on and run-off controls established pursuant to subtitle D of the Solid Waste Disposal Act [section 6941 et seq. of Title 42, The Public Health and Welfare].

"(e) **Limitation on statutory construction.**--Nothing in this section shall be construed to affect any application or permit requirement, including any deadline, to apply for or obtain a permit for stormwater discharges subject to section 402(p)(2)(A) or (E) of the Federal Water Pollution Control Act [subsec. (p)(2)(A) or (E) of this section].

"(f) **Regulations.**--The Administrator shall issue final regulations with respect to general permits for stormwater discharges associated with industrial activity on or before February 1, 1992."

Phosphate Fertilizer Effluent Limitation

Section 306(c) of Pub.L. 100-4 provided that:

"(1) **Issuance of permit.**--As soon as possible after the date of the enactment of this Act [Feb. 4, 1987], but not later than 180 days after such date of enactment [Feb. 4, 1987], the Administrator shall issue permits under section 402(a)(1)(B) of the Federal Water Pollution Control Act [subsec. (a)(1)(B) of this section] with respect to facilities--

"(A) which were under construction on or before April 8, 1974, and
"(B) for which the Administrator is proposing to revise the applicability of the effluent limitation established under section 301(b) of such Act [section 1311(b) of this title] for phosphate subcategory of the fertilizer manufacturing point source category to exclude such facilities.

"(2) **Limitations on statutory construction.**--Nothing in this section shall be construed--

"(A) to require the Administrator to permit the discharge of gypsum or gypsum waste into the navigable waters,
"(B) to affect the procedures and standards applicable to the Administrator in issuing permits under section

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

402(a)(1)(B) of the Federal Water Pollution Control Act [subsec. (a)(1)(B) of this section], and

"(C) to affect the authority of any State to deny or condition certification under section 401 of such Act [section 1341 of this title] with respect to the issuance of permits under section 402(a)(1)(B) of such Act [subsec. (a)(1)(B) of this section]."

Log Transfer Facilities

Section 407 of Pub.L. 100-4 provided that:

"**(a) Agreement.**--The Administrator and Secretary of the Army shall enter into an agreement regarding coordination of permitting for log transfer facilities to designate a lead agency and to process permits required under sections 402 and 404 of the Federal Water Pollution Control Act [this section and section 1344 of this title], where both such sections apply, for discharges associated with the construction and operation of log transfer facilities. The Administrator and Secretary are authorized to act in accordance with the terms of such agreement to assure that, to the maximum extent practicable, duplication, needless paperwork and delay in the issuance of permits, and inequitable enforcement between and among facilities in different States, shall be eliminated.

"**(b) Applications and permits before October 22, 1985.**--Where both of sections 402 and 404 of the Federal Water Pollution Control Act [this section and section 1344 of this title] apply, log transfer facilities which have received a permit under section 404 of such Act [section 1344 of this title] before October 22, 1985, shall not be required to submit a new application for a permit under section 402 of such Act [this section]. If the Administrator determines that the terms of a permit issued on or before October 22, 1985, under section 404 of such Act [section 1344 of this title] satisfies the applicable requirements of sections 301, 302, 306, 307, 308, and 403 of such Act [sections 1311, 1312, 1316, 1317, 1318, and 1343 of this title] a separate application for a permit under section 402 of such Act [this section] shall not thereafter be required. In any case where the Administrator demonstrates, after an opportunity for a hearing, that the terms of a permit issued on or before October 22, 1985, under section 404 of such Act [section 1344 of this title] do not satisfy the applicable requirements of sections 301, 302, 306, 307, 308, and 403 of such Act [sections 1311, 1312, 1316, 1317, 1318, and 1343 of this title], modifications to the existing permit under section 404 of such Act [section 1344 of this title] to incorporate such applicable requirements shall be issued by the Administrator as an alternative to issuance of a separate new permit under section 402 of such Act [this section].

"**(c) Log transfer facility defined.**--For the purposes of this section, the term 'log transfer facility' means a facility which is constructed in whole or in part in waters of the United States and which is utilized for the purpose of transferring commercially harvested logs to or from a vessel or log raft, including the formation of a log raft."

Allowable Delay in Modifying Existing Approved State Permit Programs to Conform to 1977 Amendment

Section 54(c)(2) of Pub.L. 95-217 provided that any State permit program approved under this section before Dec. 27, 1977, which required modification to conform to the amendment made by section 54(c)(1) of Pub.L. 95-217, which amended subsec. (b)(8) of this section, not be required to be modified before the end of the one year period which began on Dec. 27, 1977, unless in order to make the required modification a State must amend or enact a law in which case such modification not be required for such State before the end of the two year period which began on Dec. 27, 1977.

1. Construction

Language of this section will be given a common sense interpretation in harmony with the discernible intent of Congress. National Wildlife Federation v. Gorsuch, D.C.D.C.1982, 530 F.Supp. 1291, reversed on other grounds 693 F.2d 156, 224 U.S.App.D.C. 41. Environmental Law ⚿ 167

2. Construction with other laws

Clean Water Act requires that permits issued by Environmental Protection Agency (EPA) allowing discharge of effluent into interstate waterway comply with requirements for permit issued under approved state plan and with section of Clean Water Act which appears to prohibit issuance of federal permit over objection of affected state unless compliance with affected state's water quality requirements can be insured. Arkansas v. Oklahoma, U.S.1992, 112 S.Ct. 1046, 503 U.S. 91, 117 L.Ed.2d 239, on remand 962 F.2d 996. Environmental Law ⚿ 196

Purported tension between flexible approach to water quality problems presented by combined stormwater-sewer systems taken by Combined Sewer Overflow Control (CSO) Policy and allegedly rigid mandates imposed by total maximum daily loads (TMDLs) required by Clean Water Act (CWA) for waters not achieving water quality standards did not provide basis for interpreting term "daily," as used in CWA provision requiring TMDLs, to mean timeframe other than daily; subsequent amendments to CWA requiring permits for discharges from combined systems to conform to CSO Policy did not provide context in which phrase "total maximum daily load" had to be read, and nothing in CSO Policy validated interpreting "daily" to mean something else. Friends of Earth, Inc. v. E.P.A., C.A.D.C.2006, 446 F.3d 140, 371 U.S.App.D.C. 1, certiorari denied 127 S.Ct. 1121, 166 L.Ed.2d 907. Environmental Law ⚿ 192

Environmental Protection Agency's (EPA's) regulation of storm water discharges from inactive mines under provision of Clean Water Act (CWA) requiring permit for any storm water discharge associated with industrial activity did not conflict with Surface Mining Control and Regulation Act's (SMCRA's) Abandoned Mine Lands (AML) program and was not arbitrary and capricious. American Min. Congress v. U.S. E.P.A., C.A.9 1992, 965 F.2d 759. Environmental Law ⚿ 170

Statute dealing with state assumption of the NPDES permit program does not require that citizen suit provisions of Clean Water Act be extended to the states; statute governing assumption by states does not require that states copy the federal minimum public participation requirements. Natural Resources Defense Council, Inc. v. U.S.E.P.A., C.A.D.C.1988, 859 F.2d 156, 273 U.S.App.D.C. 180. Environmental Law ⚿ 226

Pub.L. 89-298, Title III, § 301, Oct. 27, 1965, 79 Stat. 1089, providing that State of Indiana, prior to construction of harbor project, shall furnish assurance satisfactory to Secretary of Army that water and air pollution sources will be controlled to maximum extent feasible in order to minimize any adverse effects on public recreational areas in general vicinity of Burns Harbor has no application to Environmental Protection Agency or to National Pollutant Discharge Elimination System permit issued under this section. Porter County Chapter of Izaak Walton League of America, Inc. v. Costle, C.A.7 1978, 571 F.2d 359, certiorari denied 99 S.Ct. 115, 439 U.S. 834, 58 L.Ed.2d 130. Environmental Law ⚿ 250; Environmental Law ⚿ 170

Even if issuance of National Pollutant Discharge Elimination System (NPDES) permit by state, pursuant to Clean Water Act (CWA), constituted "major federal action" within meaning of NEPA, Environmental Protection Agency (EPA) was not required to perform NEPA analysis before sewage pipeline project could go forward, ab-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

sent showing that project would necessitate issuance of new permit to sewage authority. Citizens Alert Regarding the Environment v. U.S. E.P.A., D.D.C.2003, 259 F.Supp.2d 9, affirmed 102 Fed.Appx. 167, 2004 WL 1336644. Environmental Law ⚷ 595(6)

Under CERCLA, county and cities were not liable for property owner's response costs, associated with stormwater discharges from storm drains that they owned/maintained; county and cities had, and complied with, National Pollution Discharge Elimination System (NPDES) permits, which authorized discharges of stormwater containing pollutants, and no pre-permit releases of contaminants were shown to have occurred. Carson Harbor Village, Ltd. v. Unocal Corp., C.D.Cal.2003, 287 F.Supp.2d 1118, affirmed 433 F.3d 1260. Environmental Law ⚷ 445(1)

Reporting provisions and financial penalties found in this section providing for changes in permits and enforcement of more stringent controls over discharges even during life of an existing permit in cases where circumstances have changed since issuance of original permit act as sufficient deterrent to undesirable activities and would make application of penalties under section 1321 of this title governing discharge of hazardous substances redundant and wholly unnecessary. Manufacturing Chemists Ass'n v. Costle, W.D.La.1978, 455 F.Supp. 968. Environmental Law ⚷ 223; Environmental Law ⚷ 457

Under CERCLA, county and cities were not liable for property owner's response costs, associated with stormwater discharges from storm drains that they owned/maintained; county and cities had, and complied with, National Pollution Discharge Elimination System (NPDES) permits, which authorized discharges of stormwater containing pollutants, and no pre-permit releases of contaminants were shown to have occurred. Carson Harbor Village Ltd. v. Unocal Corp., C.D.Cal.2003, 2003 WL 22005933, Unreported, amended and superseded 287 F.Supp.2d 1118, affirmed 433 F.3d 1260. Environmental Law ⚷ 445(1)

3. Rules and regulations

Environmental Protection Agency's (EPA's) regulation of discharges from inactive mines under the Clean Water Act (CWA) provision authorizing EPA to require permit for any storm water discharge "associated with industrial activity" was consistent with statute's plain language and was reasonable. American Min. Congress v. U.S. E.P.A., C.A.9 1992, 965 F.2d 759. Environmental Law ⚷ 196

4. Temporary nature of permits

This chapter establishes series of steps which impose progressively stricter standards until final elimination of all pollutant discharges is achieved, but purity is not to be achieved or required instantaneously, and thus permitting interim discharge of pollutants is in accordance with comprehensive regulatory scheme of this chapter. Committee for Consideration of Jones Falls Sewage System v. Train, C.A.4 (Md.) 1976, 539 F.2d 1006. Environmental Law ⚷ 165

5. Pollutants or facilities requiring permit

Dam used to collect acid mine drainage from abandoned mine site was subject to Clean Water Act's National Pollutant Discharge Elimination System (NPDES) permit requirement; admission that drainage was collected in dam reservoir and, from time to time, passed over spillway or through a valve into river and another reservoir conclusively established discharge of pollutant from mine facility within meaning of Act. Committee To Save Mokelumne River v. East Bay Mun. Utility Dist., C.A.9 (Cal.) 1993, 13 F.3d 305, certiorari denied 115 S.Ct.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

198, 513 U.S. 873, 130 L.Ed.2d 130. Environmental Law ⚿ 178

Concentrated animal feeding operation that violates the Clean Water Act by discharging without permit remains in continuing state of violation until it either obtains National Pollutant Discharge Elimination System (NPDES) permit or no longer meets definition of point source. Carr v. Alta Verde Industries, Inc., C.A.5 (Tex.) 1991, 931 F.2d 1055, rehearing denied. Environmental Law ⚿ 206

Hydro-electric facility's movement of pollutants already in water was not "addition of pollutants" to navigable waters so as to require permit under National Pollutant Discharge Elimination System. National Wildlife Federation v. Consumers Power Co., C.A.6 (Mich.) 1988, 862 F.2d 580. Environmental Law ⚿ 196

Tennessee Valley Authority was not required to obtain state permit for reconstruction and operation of dam and flume on navigable river from State Water Quality Control Board, where water affected by dam was only "polluted" by changes in its physical and chemical properties occurring while it flowed through riverbed between dam and power plant, and there was no claim that any pollutants as defined in this chapter were added to river water by diversion into or through flume. U.S. ex rel. Tennessee Valley Authority v. Tennessee Water Quality Control Bd., C.A.6 (Tenn.) 1983, 717 F.2d 992, certiorari denied 104 S.Ct. 1909, 466 U.S. 937, 80 L.Ed.2d 458. Environmental Law ⚿ 196

Where Environmental Protection Agency's construction of this chapter's requirement for regulation of water quality changes caused by dams under National Pollutant Discharge Elimination System was made contemporaneously with passage of this chapter and was subsequently consistently adhered to and where Congress, during major revision of this chapter, did not object to the Agency's characterization of dams as nonpoint sources, federal district court in action for declaration that Administrator of the Agency had nondiscretionary duty to require dam operators to apply for pollutant discharge permits erred in failing to give enough deference to Agency's construction of this chapter. National Wildlife Federation v. Gorsuch, C.A.D.C.1982, 693 F.2d 156, 224 U.S.App.D.C. 41. Statutes ⚿ 219(6.1)

Discharges of a compost runoff from a holding tank were not from agricultural point sources within meaning of applicable regulation and therefore discharge of such pollutants into navigable waters did not require a permit, assuming the pollution was agricultural. U.S. v. Frezzo Bros., Inc., C.A.3 (Pa.) 1981, 642 F.2d 59, on remand 546 F.Supp. 713. Environmental Law ⚿ 175

Steel company's discharge of "chemical wastes" into deep well could properly be regulated by National Pollutant Discharge Elimination System permit-granting authorities. U. S. Steel Corp. v. Train, C.A.7 (Ill.) 1977, 556 F.2d 822. Environmental Law ⚿ 175

In the absence of an actual addition of any pollutant to navigable waters from any point, there is no point source discharge, no statutory violation, no statutory obligation of point sources to comply with Environmental Protection Agency (EPA) regulations for point source discharges, and no statutory obligation of point sources to seek or obtain an National Pollutant Discharge Elimination System (NPDES) permit in the first instance. Environmental Protection Information Center v. Pacific Lumber Co., N.D.Cal.2007, 469 F.Supp.2d 803. Environmental Law ⚿ 196; Environmental Law ⚿ 206

Ditches that coastal landowners' dug on their tract of land were "point sources" under the Clean Water Act (CWA), so as to be subject to discharge permit requirements, where ditches served to channel and collect stormwater and other pollutants that were subsequently discharged into waters of the United States. North Carolina

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law ⚷ 175

Genuine issues of material fact as to whether fecal coliform, a pollutant, traveled from coastal landowners' tract of land to water covered by the Clean Water Act (CWA), and as to whether alleged increase in fecal coliform levels in such navigable water was related to landowners' ditching activities, precluded summary judgment in citizen suit under CWA. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Federal Civil Procedure ⚷ 2498.3

Fruit processor's discharge of water, produced in process of drying fruit, to irrigate fields, was not a discharge from a point source, as required to support Clean Water Act (CWA) citizen suit against processor, although processor allegedly applied wastewater to its fields in excess of crops' actual absorption of water. Hiebenthal v. Meduri Farms, D.Or.2002, 242 F.Supp.2d 885. Environmental Law ⚷ 175

Pesticides, when used for their intended purpose, were not a "pollutant" within meaning of Clean Water Act (CWA), and thus township residents failed to state CWA claim against township based on township's application of pesticides for mosquito control in wetland areas without state or national pollutant discharge elimination system (SPDES or NPDES) permits, absent allegations that the pesticides used in the township's spraying program were used other than in the manner in which they were intended and as approved by the Environmental Protection Agency (EPA). Altman v. Town of Amherst, N.Y., W.D.N.Y.2001, 190 F.Supp.2d 467, vacated 47 Fed.Appx. 62, 2002 WL 31132139. Environmental Law ⚷ 175; Environmental Law ⚷ 196

Clean Water Act's (CWA) National Pollutant Discharge Elimination System (NPDES) program does not apply to discharges to groundwater, even if that groundwater is hydrologically connected to surface water. Umatilla Waterquality Protective Ass'n, Inc. v. Smith Frozen Foods, Inc., D.Or.1997, 962 F.Supp. 1312. Environmental Law ⚷ 175

National Pollutant Discharge Elimination System (NPDES) permit was not required for runoff from hillside from which lake fill material was cut, as such was storm water which was not covered by NPDES permits at time that project was authorized. Coeur D'Alene Lake v. Kiebert, D.Idaho 1992, 790 F.Supp. 998. Environmental Law ⚷ 196

Environmental Protection Agency had authority over in-stream treatment upon construction and disposal of coal mining waste or spoil material so that it could lawfully object to and prohibit fills and ponds on the grounds that discharges did not comply with Clean Water Act and that Secretary of Army had ceded to EPA control of fill material not used for primary purpose of replacing aquatic area with dry land or of changing bottom elevation of water body. West Virginia Coal Ass'n v. Reilly, S.D.W.Va.1989, 728 F.Supp. 1276, affirmed 932 F.2d 964. Environmental Law ⚷ 136

NPDES permit is required in particular situation when pollutant is added to navigable waters from point source. National Wildlife Federation v. Consumers Power Co., W.D.Mich.1987, 657 F.Supp. 989, reversed 862 F.2d 580. Environmental Law ⚷ 196

This section which provides that discharge of pollutants without permit is violation of this chapter did not apply to hog farm, which was closed, "no discharge" system. Higbee v. Starr, E.D.Ark.1984, 598 F.Supp. 323, affirmed 782 F.2d 1048. Environmental Law ⚷ 175

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

In enacting this chapter, Congress did not intend that only the definitional list of pollutants, strictly interpreted, be controlled under the National Pollution Discharge Elimination System Program and that all other problems subsumed under the broader definition of pollution, i.e., man-made or man-induced alteration of chemical, physical, biological and radiological integrity of water, be relegated to other programs under this chapter and other federal and state laws whether emitted from a point source and whether amenable to technological control and effluent monitoring. National Wildlife Federation v. Gorsuch, D.C.D.C.1982, 530 F.Supp. 1291, reversed on other grounds 693 F.2d 156, 224 U.S.App.D.C. 41. Environmental Law 175

To discharge heated water and waste into Atlantic ocean from nuclear power facility a utility would need both a permit from Water Supply and Pollution Control Commission and a finding from site evaluation committee that the discharge would not adversely affect water quality. Society for Protection of New Hampshire Forests v. Site Evaluation Committee, N.H.1975, 337 A.2d 778, 115 N.H. 163. Electricity 8.7(2); Environmental Law 196

The State of Ohio having been granted interim authority to issue permits for discharges into navigable waters, any discharge of pollutant into the waters within the jurisdiction of Ohio must be pursuant to permit issued by the state. State v. Republic Steel Corp., Ohio Mun.1973, 311 N.E.2d 911, 38 Ohio Misc. 43, 67 O.O.2d 232. Environmental Law 196

Operation of drainage basin system required national pollutant discharge elimination system permit from Department of Ecology, even though such drainage system substantially reduced amount of pollutants flowing into body of navigable water. Pedersen v. Washington State Dept. of Transp., Wash.App.1980, 611 P.2d 1293, 25 Wash.App. 781, review denied. Environmental Law 196

6. State permits--Generally

Environmental Protection Agency (EPA) erred, when granting State of Maine permitting authority, under the Clean Water Act (CWA), with regard to regulation of pollutant discharges, in exempting from that authority two Indian tribe-owned facilities, located on tribal lands, which discharged pollutants into territorial waters of the tribes, even if such discharge had no substantial effect on non-members; environmental regulation was not an internal tribal matter within the meaning of the Maine Settlement Acts. Maine v. Johnson, C.A.1 2007, 498 F.3d 37. Indians 211

By the contemplation of minimum federal standards, Congress, in this chapter, did not intend to relegate the states to the status of enforcement agents for the executive branch of the federal government. Mianus River Preservation Committee v. Administrator, Environmental Protection Agency, C.A.2 (Conn.) 1976, 541 F.2d 899. Environmental Law 165

Although National Pollutant Discharge Elimination System (NPDES) permit that state issued to sewage authority allegedly contained deficiencies, which were made apparent by pipeline sewage project, exception to Clean Water Act (CWA) provision exempting actions taken by Environmental Protection Agency (EPA), under CWA, from NEPA requirements, did not apply, so as to require EPA to perform NEPA analysis before project could go forward; permit was issued by state, not EPA, and neither state nor EPA had obligation to comply with NEPA before permit was issued. Citizens Alert Regarding the Environment v. U.S. E.P.A., D.D.C.2003, 259 F.Supp.2d 9, affirmed 102 Fed.Appx. 167, 2004 WL 1336644. Environmental Law 595(6)

State pollution discharge permit issued under the National Pollutant Discharge Elimination System (SPDES Per-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

mit) prohibits only discharges of pollutants which it expressly restricts and only when they are discharged in excess of the levels permitted in the permit; thus discharge of pollutant never referenced in permit cannot form the basis of a permit violation. Atlantic States Legal Foundation, Inc. v. Eastman Kodak Co., W.D.N.Y.1992, 809 F.Supp. 1040, affirmed 12 F.3d 353, as amended , certiorari denied 115 S.Ct. 62, 513 U.S. 811, 130 L.Ed.2d 19. Environmental Law ⚿ 196

City's obtaining a permit under state statute, not related to discharge of pollutants, prior to adding chlorine and alum to water pumped into reservoir on a navigable river would not abrogate need for a federal permit under the Clean Water Act. Hudson River Fishermen's Ass'n v. City of New York, S.D.N.Y.1990, 751 F.Supp. 1088, affirmed 940 F.2d 649. Environmental Law ⚿ 196

Although Interstate Sanitation Commission's regulations set forth their own effluent standards separate from federal standards, enforcement of ISC regulations could be had through Clean Water Act in precisely the same manner as federal standards were enforced, where ISC's regulatory standards were set forth in National Pollutant Discharge Elimination System permits issued by state of New Jersey as designated permit authority, in accordance with the Act; such permits made ISC's standards enforceable NPDES restrictions, and violation of standards constituted violation of Act. U.S. v. City of Hoboken, D.N.J.1987, 675 F.Supp. 189. Environmental Law ⚿ 197

Water quality-based limitations in discharge permit imposed by state, which were more stringent than otherwise applicable technology-based federally imposed limitation in discharge permit, controlled permittee's discharge into waterway, for purposes of the Federal Water Pollution Control Act [33 U.S.C.A. § 1251 et seq.]. Student Public Interest Research Group of New Jersey, Inc. v. P.D. Oil & Chemical Storage, Inc., D.N.J.1986, 627 F.Supp. 1074.

Congress created in the National Pollution Discharge Elimination Systems program established by this section, a system of concurrent state-federal jurisdiction, with leading role granted to the Environmental Protection Agency to set the parameters of state's authority, to determine minimum standards for regulation, to oversee state's implementation of program and to step in where, in administrator's judgment it is necessary, but Congress intended Agency to use that extensive authority sparingly and only where necessary to preserve integrity of national effort to cleanse nation's waters. U. S. v. Cargill, Inc., D.C.Del.1981, 508 F.Supp. 734. Environmental Law ⚿ 216; Environmental Law ⚿ 165

Issuance of national pollutant discharge elimination system permits by a state is basically state matter, which is merely subject to minimum federal requirements. Chesapeake Bay Foundation, Inc. v. Virginia State Water Control Bd., E.D.Va.1978, 453 F.Supp. 122. Environmental Law ⚿ 196

National Pollutant Discharge Elimination System permit established by this section was not intended to preempt the authority of state to issue permits for discharge into navigable waters within a state but rather to induce the cooperation of the states in the establishment of a program to be administered by the states within certain federal guidelines with regard to uniform national standards. State v. Republic Steel Corp., Ohio Mun.1973, 311 N.E.2d 911, 38 Ohio Misc. 43, 67 O.O.2d 232. States ⚿ 18.31

7. ---- Approval of State program, state permits

Decision to transfer its permitting power under the National Pollution Discharge Elimination System (NPDES) to state officials, once the Environmental Protection Agency (EPA) determined that each of the nine statutory re-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

quirements for transfer was satisfied, was not decision committed to discretion of the EPA, such that transfer application did not trigger the Endangered Species Act's (ESA's) consultation and no-jeopardy requirements and compel the EPA to consult with agencies designated by the Secretaries of Commerce and of the Interior to ensure that proposed transfer of permitting authority was not likely to jeopardize any endangered or threatened species. National Ass'n of Home Builders v. Defenders of Wildlife, U.S.2007, 127 S.Ct. 2518. Environmental Law 537

United States Environmental Protection Agency remains dominant agency for achieving purposes and goals of this chapter even if a state permit program has been approved. U. S. v. Epstein, C.A.D.C.1979, 608 F.2d 1, 197 U.S.App.D.C. 207.

Environmental Protection Agency Administrator's approval of the Illinois water pollution program, without his prior promulgation of guidelines regarding citizen participation in the state enforcement process, violated the terms of this chapter. Citizens for a Better Environment v. E.P.A., C.A.7 1979, 596 F.2d 720. Environmental Law 205

Only the most egregious flouting of federal requirements in the context of an individual permit would authorize the Environmental Protection Agency to revoke a state agency's delegated National Pollutant Discharge Elimination System authority under this chapter on the basis of the state agency's handling of a single permit. Save the Bay, Inc. v. Administrator of Environmental Protection Agency, C.A.5 (Miss.) 1977, 556 F.2d 1282, rehearing denied 560 F.2d 1023. Environmental Law 216

8. ---- Administrator's objections to issuance, state permits

Environmental Protection Agency regulation allowing regional administrator to veto a proposed state-issued NPDES permit if, in absence of formally promulgated effluent limitations, the proposed permit fails in the judgment of administrator to comport with Clean Water Act or regulations promulgated thereunder was within authority of the EPA. Natural Resources Defense Council, Inc. v. U.S.E.P.A., C.A.D.C.1988, 859 F.2d 156, 273 U.S.App.D.C. 180. Environmental Law 196

Without finding a fundamental difference as to any factor or combination of factors considered by the Environmental Protection Agency in setting effluent limitations for pulp mills discharging into navigable waters, the California State Water Resources Control Board could not, consistently with this section, grant variances to pulp mills on basis of receiving water quality. Crown Simpson Pulp Co. v. Costle, C.A.9 1981, 642 F.2d 323, certiorari denied 102 S.Ct. 596, 454 U.S. 1053, 70 L.Ed.2d 588. Environmental Law 202

No permit to discharge effluents into navigable waters may be issued where United States Environmental Protection Agency objects on the ground that issuance would be outside lines of requirements of this chapter. Cleveland Elec. Illuminating Co. v. E.P.A., C.A.6 1979, 603 F.2d 1. Environmental Law 196

Administrator's veto of permit issued by State of Washington to paper company for discharge of sulphite wastes into waters of Puget Sound was ineffectual where it was based on an ad hoc determination of what constituted the best practicable technology for the plant and not on uniform effluent limitations standards expressed as best practicable technology on an industrywide basis; Administrator could not rely on interim guidance documents allegedly providing technical data approximating best practicable technology values which would have been applicable had effluent limitation guidelines for pulp and paper point sources been timely issued in the form of regulations. State of Wash. v. U.S. Environmental Protection Agency, C.A.9 (Wash.) 1978, 573 F.2d 583. Envir-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

onmental Law ⚿ 196

Environmental Protection Agency has limited review powers over issuance of proposed permit submitted by state pursuant to state's own National Pollution Discharge Elimination System permit program under this section. Ford Motor Co. v. U.S. E.P.A., C.A.6 1977, 567 F.2d 661. Environmental Law ⚿ 222

Ninety-day period of this section within which Administrator was required to determine that state permit program met demands of this chapter should have alerted petitioner to expect action by Administrator on or about ninetieth day, as against contention of petitioner, whose petition for review was untimely, that he had no official notice of Administrator's action until publication. Peabody Coal Co. v. Train, C.A.6 1975, 518 F.2d 940. Environmental Law ⚿ 195

Environmental Protection Agency's failure to object to state's decision to issue National Pollutant Discharge Elimination System (NPDES) permit cannot be classified as "major federal action" that would trigger NEPA analysis. Citizens Alert Regarding the Environment v. U.S. E.P.A., D.D.C.2003, 259 F.Supp.2d 9, affirmed 102 Fed.Appx. 167, 2004 WL 1336644. Environmental Law ⚿ 595(3)

Environmental Protection Agency's (EPA's) letter stating that state permit under National Pollutant Discharge Elimination System could not issue "under Section 301(i)(2) variance until the 301(i)(1) variance" for city's publicly owned treatment works has been approved satisfied statutory requirement to state why EPA objects to issuance of permit as outside guidelines and requirements of Clean Water Act; EPA was not required to set forth text or interpretation of statute governing request for modification permit where point source will not achieve statutory requirements. U.S. v. City of Menominee, Mich., W.D.Mich.1989, 727 F.Supp. 1110. Environmental Law ⚿ 220

9. ---- Veto, state permits

States which are affected by another state's discharge of effluent into a waterway may not block issuance of discharge permit but must apply to Environmental Protection Agency (EPA) administrator, who has discretion to disapprove permit if he concludes that discharges will have undue impact on interstate waters. Arkansas v. Oklahoma, U.S.1992, 112 S.Ct. 1046, 503 U.S. 91, 117 L.Ed.2d 239, on remand 962 F.2d 996. Environmental Law ⚿ 220

Promulgation by the Environmental Protection Agency of effluent limitation guidelines is not precondition for the veto by a regional administrator of the Environmental Protection Agency of a discharge permit issued by state which has assumed the NPDES program. Natural Resources Defense Council, Inc. v. U.S.E.P.A., C.A.D.C.1988, 859 F.2d 156, 273 U.S.App.D.C. 180. Environmental Law ⚿ 196

Environmental Protection Agency (EPA) did not have override authority over Ohio Environmental Protection Agency's (OEPA) approval of mine operator's emergency bypass plan, to bypass operator's normally used treatment facilities when evacuating from mine water containing higher levels of minerals than normally occur in natural waterways in area around mine, on ground that West Virginia waters would be affected by the pumping; EPA failed to produce sufficient evidence to support its contention that West Virginia waters would be unduly affected, West Virginia had not challenged evacuation to EPA, and EPA's override authority in interstate impact situation extended only to disapproval of state issued permits and challenge in this case would be to proposed evacuation plan and not to operator's National Pollution Discharge Elimination System (NPDES) permit. Southern Ohio Coal Co. v. Office of Surface Min. Reclamation and Enforcement, Dept. of Interior, S.D.Ohio 1993,

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

831 F.Supp. 1324, stay granted 1993 WL 642401, reversed 20 F.3d 1418, rehearing and suggestion for rehearing en banc denied, certiorari denied 115 S.Ct. 316, 513 U.S. 927, 130 L.Ed.2d 278. Environmental Law 222

10. ---- Waiver, state permits

Alleged inaction of Environmental Protection Agency (EPA) after sending letter objecting to state permit under National Pollutant Discharge Elimination System did not waive objection; statute governing waiver concerned EPA's waiver of power to object to state-proposed permits before issuance. U.S. v. City of Menominee, Mich., W.D.Mich.1989, 727 F.Supp. 1110. Environmental Law 220

11. ---- Review, state permits

Court of Appeals lacked jurisdiction to review issue of whether Environmental Protection Agency (EPA), after granting State of Maine permitting authority, under the Clean Water Act (CWA) and the Maine "Settlement Acts," with regard to regulation of pollutant discharges, retained authority to review State-issued permits in light of a general trust relationship between the federal government and two Indian tribes; issue was not yet ripe for review, since EPA had not objected to any State permit. Maine v. Johnson, C.A.1 2007, 498 F.3d 37. Environmental Law 662

This chapter does not imply a federal right of action for persons attacking state's issuance of permit for advanced wastewater treatment plant. District of Columbia v. Schramm, C.A.D.C.1980, 631 F.2d 854, 203 U.S.App.D.C. 272. Environmental Law 226

Court would defer to New Jersey Department of Environmental Protection determination that discharge permit held by manufacturer of electroplated copper circuit foil imposed limitation on bioassay effluent, particularly in light of wording of permit itself. Public Interest Research Group of New Jersey v. Yates Industries, Inc., D.N.J.1991, 790 F.Supp. 511. Environmental Law 682

This chapter does not explicitly provide a federal cause of action in favor of persons seeking to challenge a state agency's decisions regarding National Pollutant Discharge Elimination System permit applications. Chesapeake Bay Foundation, Inc. v. Virginia State Water Control Bd., E.D.Va.1980, 495 F.Supp. 1229, motion denied 501 F.Supp. 821. Environmental Law 226

12. Compliance with permits

Evidence supported finding that National Pollution Discharge Elimination System (NPDES) permit covered combined sewer overflow (CSO) outfalls, even though CSO's were not separately listed in permit and permit lacked effluent limitations for CSO's as required by regulations under Clean Water Act (CWA); CSO's were listed generally as permitted activity under permit, permit required city to work toward upgrading system to separate sewage and storm water, permit's author indicated CSO's were covered, and state and federal environmental agencies approved permit despite clear existence of CSO's. Northwest Environmental Advocates v. City of Portland, C.A.9 (Or.) 1995, 56 F.3d 979, rehearing and suggestion for rehearing en banc denied 74 F.3d 945, certiorari denied 116 S.Ct. 2550, 518 U.S. 1018, 135 L.Ed.2d 1069. Environmental Law 196

Polluters may discharge pollutants not specifically listed in permits under state or national pollutant discharge elimination system (SPDES) (NPDES), so long as they comply with appropriate reporting requirements and abide by new limitations when imposed on such pollutants. Atlantic States Legal Foundation, Inc. v. Eastman

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Kodak Co., C.A.2 (N.Y.) 1993, 12 F.3d 353, as amended , certiorari denied 115 S.Ct. 62, 513 U.S. 811, 130 L.Ed.2d 19. Environmental Law 196

Clean Water Act deals with unfortunate inevitability of pollution, shifts costs from third parties to polluters by allowing pollution only pursuant to permit, and explicitly protects legitimate interests of those discharging permissible quantities of pollutants under valid permits. Sierra Club v. U.S. E.P.A., C.A.9 (Ariz.) 1993, 995 F.2d 1478. Environmental Law 196

As regards provision of subsec. (k) of this section stating that "Compliance with a permit issued pursuant to this section shall be deemed compliance [with the statutory standards] * * * except any standard imposed under [section 1317] for a toxic pollutant injurious to human health," the phrase "injurious to human health" refers to toxic substances that would injure humans in relatively small quantities, not substances creating a human health hazard in the amount presently being discharged. Hercules, Inc. v. Environmental Protection Agency, C.A.D.C.1978, 598 F.2d 91, 194 U.S.App.D.C. 172. Environmental Law 196

Legislative history clearly shows that Congress intended that the National Pollution Discharge Elimination System permit be the only means by which a discharger of pollutant may escape total prohibition of discharges from point sources found in this chapter. Natural Resources Defense Council, Inc. v. Costle, C.A.D.C.1977, 568 F.2d 1369, 186 U.S.App.D.C. 147. Environmental Law 196

Cornerstone of the Clean Water Act is that the discharge of any pollutant from a point source into navigable waters of the United States is unlawful unless the discharge is made according to the terms of an National Pollutant Discharge Elimination System (NPDES) permit obtained from either the United States Environmental Protection Agency (EPA) or from an authorized state agency. Hiebenthal v. Meduri Farms, D.Or.2002, 242 F.Supp.2d 885. Environmental Law 196

Inability of Air Force base to comply absolutely with pollutant discharge permit did not excuse it from doing anything to reduce its effluent discharges; it would be required to come as close as possible to limits set in permit. Public Interest Research Group of New Jersey, Inc. v. Rice, D.N.J.1991, 774 F.Supp. 317. Environmental Law 208

Burden is on plaintiff to comply with Clean Water Act, not on Environmental Protection Agency (EPA) to insure compliance. U.S. v. City of Menominee, Mich., W.D.Mich.1989, 727 F.Supp. 1110. Environmental Law 205

Holders of National Pollutant Discharge Elimination System permit were bound to employ best practical control technology currently available in meeting requirements of permit, and whether they complied with terms of their application or project specifications did not excuse them from fulfilling conditions of permit. Pymatuning Water Shed Citizens for a Hygienic Environment v. Eaton, W.D.Pa.1980, 506 F.Supp. 902, affirmed 644 F.2d 995. Environmental Law 197

Provision of this section granting immunity from suit for discharge made pursuant to application extended to enforcement actions by the Administrator under section 1319 of this title. Committee for Consideration of Jones Falls Sewage System v. Train, D.C.Md.1975, 387 F.Supp. 526. Environmental Law 221

This section, which provides that " * * * Until December 31, 1974, in any case where a permit for a discharge has been applied for pursuant to this section, but final administrative disposition of such application has not been

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

made, such discharge shall not be a violation of * * * the Act of March 3, 1899, unless the Administrator or other plaintiff proves that final administrative disposition of such application has not been made because of the failure of the applicant to furnish information reasonably required or requested in order to process the application" was intended to have a prospective effect only and was not intended to apply to pending litigation. U. S. v. Consolidation Coal Co., N.D.W.Va.1973, 354 F.Supp. 173. Navigable Waters 3

This section providing that compliance with National Pollutant Discharge Elimination System permit shall be deemed in compliance with specified sections of this chapter except any standard imposed for a toxic pollutant injurious to human health does not mean that only those toxic pollutants injurious to human health could be subsequently incorporated into a permit holder's permit after the permit is issued and all other toxic pollutants standards subsequently adopted could not be incorporated into permit if they were not injurious to human health. U. S. Steel Corp. v. Illinois Pollution Control Bd., Ill.App. 2 Dist.1977, 367 N.E.2d 327, 9 Ill.Dec. 893, 52 Ill.App.3d 1. Environmental Law 198

13. Availability of permits

Clean Water Act's (CWA) zero discharge standard for stormwater runoff from construction activities in absence of National Pollutant Discharge Elimination System (NPDES) permit did not apply to developer when compliance was factually impossible due to fact that Georgia Environmental Protection Division was only agency authorized to issue NPDES permits for stormwater runoff but did not offer any such permits at time in question; developer also was in good faith compliance with local pollution control requirements that substantially mirrored proposed NPDES discharge standards, and discharges at issue were minimal. Hughey v. JMS Development Corp., C.A.11 (Ga.) 1996, 78 F.3d 1523, rehearing and suggestion for rehearing en banc denied 89 F.3d 857, certiorari denied 117 S.Ct. 482, 519 U.S. 993, 136 L.Ed.2d 377. Environmental Law 206

14. Extension of time

Sewer authority, which never asserted it was engaged in any construction which would have achieved NPDES limitation under Clean Water Act [Federal Water Pollution Control Act Amendments of 1972, § 101 et seq., as amended, 33 U.S.C.A. § 1251 et seq.] and which never sought federal financial assistance for that construction, was not entitled to extension of time to comply with its NPDES permit. Stoddard v. Western Carolina Regional Sewer Auth., C.A.4 (S.C.) 1986, 784 F.2d 1200. Environmental Law 201

15. Violations

In Clean Water Act (CWA) case, assessment of actual number of violations and civil penalties with respect to claimed violations of National Pollutant Discharge Elimination System (NPDES) permit effluent limitations and deadlines to construct and operate capital improvement project for wastewater treatment plant was more appropriately dealt with at later date than in ruling on motion for partial summary judgment on those claims; environmental groups seeking penalties had filed more definite statement with respect to another claim that was related to the other two, and it was appropriate to wait to make assessments until after all possible violations had been conclusively established as to each count in complaint in order to avoid any double counting of violations. Sierra Club, Hawaii Chapter v. City and County of Honolulu, D.Hawai'i 2007, 486 F.Supp.2d 1185. Federal Civil Procedure 2553

Residents of village located near mouth of river, who obtained their drinking water and food from river, failed to show that there were ongoing violations of National Pollutant Discharge Elimination System permit's daily cad-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

mium discharge limit on part of corporation engaged in business of zinc mining, where there was no evidence that same inadequately addressed source of trouble was causing violations. Adams v. Teck Cominco Alaska, Inc., D.Alaska 2005, 396 F.Supp.2d 1095. Environmental Law ⚷ 206

Discharge of pollutants into creek in absence of permit constituted violation of Clean Water Act for each day that such material remained in creek. Hudson River Fishermen's Ass'n v. Arcuri, S.D.N.Y.1994, 862 F.Supp. 73. Environmental Law ⚷ 206

Surface water discharge permit holder is responsible for terms of its discharge permit and violations of permit are unlawful. Public Interest Research Group of New Jersey v. Yates Industries, Inc., D.N.J.1991, 757 F.Supp. 438, reconsideration granted in part 790 F.Supp. 511. Environmental Law ⚷ 196

16. Defenses

National Pollutant Discharge Elimination System permittee violated permit's daily cadmium discharge limit; permittee's sampling error claim was not a viable defense to reported violation of permit. Adams v. Teck Cominco Alaska, Inc., D.Alaska 2005, 396 F.Supp.2d 1095. Environmental Law ⚷ 208

Stipulated Consent Order (SCO) issued by state, pertaining to limitations upon discharge of processing waste by seafood company, did not insulate company from liability in action alleging Clean Water Act (CWA) violations, since SCO was not considered by state to be equivalent of National Pollution Discharge Elimination System (NPDES) permit. Oregon State Public Interest Research Group, Inc. v. Pacific Coast Seafoods Co., D.Or.2005, 361 F.Supp.2d 1232. Environmental Law ⚷ 226

Holder of National Pollutant District Elimination System permit could not assert "upset" in defense following discharge of untreated water due to its failure to notify agency of violations within 24 hours. Public Interest Research Group of New Jersey v. U.S. Metals Refining Co., D.N.J.1987, 681 F.Supp. 237. Environmental Law ⚷ 208

Violations of permit limitations for nearly every day during approximately two and one-half month period were not exceptional or temporary and, therefore, were not "upsets," which would be excused violations of clean water standards. Chesapeake Bay Foundation, Inc. v. Bethlehem Steel Corp., D.Md.1987, 652 F.Supp. 620. Environmental Law ⚷ 208

Nuclear generating facility's violations of federal and state water pollution permits were not excused by Environmental Protection Agency's "upset" regulation regarding exceptional incidents in which there was unintentional and temporary noncompliance because of factors beyond reasonable control of permittee where noncompliance with effluent limitations of permits were clearly not temporary. Student Public Interest Research Group of New Jersey, Inc. v. Jersey Cent. Power & Light Co., D.N.J.1986, 642 F.Supp. 103. Environmental Law ⚷ 208; Environmental Law ⚷ 485

17. Authority of Environmental Protection Agency

Environmental Protection Agency (EPA) did not err in giving State of Maine permitting authority, under the Clean Water Act (CWA) and the Maine "Settlement Acts," with regard to 19 facilities which discharged pollutants into territorial waters of two Indian tribes. Maine v. Johnson, C.A.1 2007, 498 F.3d 37. Environmental Law ⚷ 196

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Environmental Protection Agency's (EPA) decision to transfer Clean Water Act (CWA) pollution permitting program for Arizona to that State was arbitrary and capricious, in violation of the Administrative Procedure Act (APA), in that it was internally inconsistent and inadequately explained; EPA relied on legally contradictory positions, during the administrative proceedings, regarding its obligations to consult regarding effect of a permitting transfer on listed species. Defenders of Wildlife v. U.S. Environmental Protection Agency, C.A.9 2005, 420 F.3d 946, rehearing en banc denied 450 F.3d 394, certiorari granted 127 S.Ct. 852, 166 L.Ed.2d 681, miscellaneous rulings 2007 WL 957193, certiorari granted 127 S.Ct. 853, 166 L.Ed.2d 681, miscellaneous rulings 2007 WL 957194. Environmental Law 220; Environmental Law 537

Clean Water Act (CWA) granted Environmental Protection Agency (EPA) authority to impose pollution control requirements, even to extent of requiring cities to regulate their residents, as condition of issuing requisite storm water discharge permit. City of Abilene v. U.S. E.P.A., C.A.5 2003, 325 F.3d 657, rehearing en banc denied 71 Fed.Appx. 443, 2003 WL 21418155. Environmental Law 197

Environmental Protection Agency (EPA) is not prohibited from requiring, under Clean Water Act, that municipal storm-sewer discharges strictly comply with state water-quality standards, but has discretion to determine appropriate pollution controls. Defenders of Wildlife v. Browner, C.A.9 (Cal.) 1999, 191 F.3d 1159, opinion amended on denial of rehearing 197 F.3d 1035. Environmental Law 197

18. Jurisdiction

Conditions set forth in state-issued National Pollutant Discharge Elimination System (NPDES) permit, which was approved by Environmental Protection Agency (EPA), qualified as "an effluent standard or limitation under this chapter," within meaning of citizen-suit provision of Clean Water Act (CWA), and federal court thus had jurisdiction over property's owner's CWA claims against owner of adjoining property, alleging violations of state-issued permit. Parker v. Scrap Metal Processors, Inc., C.A.11 (Ga.) 2004, 386 F.3d 993, rehearing and rehearing en banc denied 125 Fed.Appx. 979, 2004 WL 2806000. Environmental Law 226

District court had jurisdiction over implementation of wet weather combined sewer overflow standards established in proposed National Pollutant Discharge Elimination System (NPDES) permit based on preeminence of federal law in regulating and remedying pollution. U.S. v. State of Mich., E.D.Mich.1991, 777 F.Supp. 1365. Environmental Law 634

19. Stay of order

Salmon farms did not establish that they would suffer irreparable harm unless granted stay pending appeal challenging order and injunction which prevented them from depositing new year-class of fish into the water, pursuant to Clean Water Act (CWA), inasmuch as farms' economic performance was trumped by their duty to operate in compliance with requirements of CWA and court's rulings aimed at securing that compliance. U.S. Public Interest Research Group v. Atlantic Salmon of Maine, LLC., D.Me.2003, 273 F.Supp.2d 126. Environmental Law 705

Massachusetts was not entitled to order staying for 120 days an order imposing sewer moratorium on some residential, commercial, and industrial sewer connections within area served by Massachusetts District Commission systems, in Clean Water Act litigation relating to pollution in Boston Harbor; Commonwealth sought stay while it appointed independent commission to determine whether selected landfill site was environmentally suitable and to evaluate alternative sites and technologies but Commonwealth did not produce facts in support of its op-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

position to selected site which it had previously approved. U.S. v. Metropolitan Dist. Com'n, D.Mass.1991, 761 F.Supp. 209, affirmed 930 F.2d 132. Action 68

20. Sovereign immunity

Congress did not waive national government's sovereign immunity from liability for civil fines imposed by state for past violations of Clean Water Act (CWA) or Resource Conservation and Recovery Act (RCRA). U.S. Dept. of Energy v. Ohio, U.S.Ohio 1992, 112 S.Ct. 1627, 503 U.S. 607, 118 L.Ed.2d 255, on remand 965 F.2d 1401. United States 125(9)

41. Discharge without permit, federal permits

Mining company was not entitled to National Pollution Discharge Elimination System (NPDES) permit under Clean Water Act (CWA) in connection with new copper mine, even though permit was conditioned on company partially remediating discharge from another mine, where creek was already impaired by excess of copper pol-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

lutant, permit allowed company to discharge additional amounts of dissolved copper into creek, and there was no indication of any compliance schedule that would bring creek within water quality standards. Friends of Pinto Creek v. U.S. E.P.A., C.A.9 2007, 504 F.3d 1007. Environmental Law ⚿ 196

Factual issue raised by owners and operators of abandoned mine facility concerning historical level of pollution compared to current level of pollution emanating from facility was not material to resolution of Clean Water Act claim that owners and operators were discharging pollutants into reservoir and river without National Pollutant Discharge Elimination System (NPDES) permit in violation of Clean Water Act and, therefore, any question as to that issue did not preclude summary judgment on issue of liability. Committee To Save Mokelumne River v. East Bay Mun. Utility Dist., C.A.9 (Cal.) 1993, 13 F.3d 305, certiorari denied 115 S.Ct. 198, 513 U.S. 873, 130 L.Ed.2d 130. Federal Civil Procedure ⚿ 2498.3

Skeet and trap club's operation of shooting range on state property without pollution discharge permit did not violate Clean Water Act (CWA), where club ceased operating range eighteen months before suit was filed, state instructed club that it would not authorize reopening of range until it was physically reconfigured to ensure that no lead shot could reach areas protected by CWA, and state repeatedly rejected plans that did not comply with CWA. Potomac Riverkeeper, Inc. v. National Capital Skeet and Trap Club, Inc., D.Md.2005, 388 F.Supp.2d 582. Environmental Law ⚿ 196

County was not "discharger" of pollution into waters of United States, and could not be held liable under Clean Water Act (CWA), for stormwater runoff from state highway owned, maintained, operated, and controlled by state. Jones v. E.R. Snell Contractor, Inc., N.D.Ga.2004, 333 F.Supp.2d 1344, affirmed 120 Fed.Appx. 786, 2004 WL 2157261, certiorari denied 125 S.Ct. 1735, 544 U.S. 962, 161 L.Ed.2d 603. Environmental Law ⚿ 226

Clean Water Act (CWA) does not require Environmental Protection Agency (EPA) to regulate all stormwater discharges, nor does it require EPA to use National Pollution Discharge Elimination System (NPDES) permits to regulate those discharges EPA does designate for regulation. Conservation Law Foundation v. Hannaford Bros. Co., D.Vt.2004, 327 F.Supp.2d 325, affirmed 139 Fed.Appx. 338, 2005 WL 1712899. Environmental Law ⚿ 196

Clean Water Act's requirement [33 U.S.C.A. § 1342] that all discharges covered by statute must have national pollution discharge elimination system permit is unconditional and absolute; any discharge except pursuant to permit is illegal. U.S. v. Tom-Kat Development, Inc., D.C.Alaska 1985, 614 F.Supp. 613. Environmental Law ⚿ 196

42. Conduit for pollutants, federal permits

Environmental organization that brought citizen's suit against timber companies and Environmental Protection Agency (EPA) properly alleged that company employed unpermitted conduits to discharge stormwater and pollutants from logging activities into creek, as required to state claim under Clean Water Act (CWA); complaint averred that company's culverts and drainage ditches on logging sites constituted discharge "point sources" for which National Pollutant Discharge Elimination System (NPDES) permit was required. Environmental Protection Information Center v. Pacific Lumber Co., N.D.Cal.2004, 301 F.Supp.2d 1102, motion to certify denied 2004 WL 838160. Environmental Law ⚿ 206

Once person creates conduit for pollutants, no further act is necessary to violate Clean Water Act, regardless of

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

whether conduit meets technical permit requirements; if permit coverage is required for conduit and it is not obtained, conduit is in continual violation of Act. Molokai Chamber of Commerce v. Kukui (Molokai), Inc., D.Hawai'i 1995, 891 F.Supp. 1389. Environmental Law ⚿ 206

43. Persons required to obtain permits, federal permits

Owners and operators of oil and gas sites were exempted under Energy Policy Act from National Pollutant Discharge Elimination System (NPDES) general permit requirements for uncontaminated storm water discharges from construction activities, and thus organizations representing owners and operators did not have standing under Clean Water Act (CWA) to challenge validity of general permit as applied to uncontaminated discharges. Texas Independent Producers and Royalty Owners Ass'n v. E.P.A., C.A.7 2006, 435 F.3d 758. Environmental Law ⚿ 652

Water management district's pumping station, which moved water from navigable body of water, which contained pollutants, into another distinct body of navigable water into which water would not have otherwise flowed, was point source which added pollutants, within meaning of Clean Water Act (CWA), and thus national pollution discharge elimination system (NPDES) permit was required. Miccosukee Tribe of Indians of Florida v. South Florida Water Management Dist., C.A.11 (Fla.) 2002, 280 F.3d 1364, rehearing and rehearing en banc denied 45 Fed.Appx. 880, 2002 WL 1424348, certiorari granted in part 123 S.Ct. 2638, 539 U.S. 957, 156 L.Ed.2d 655, vacated 124 S.Ct. 1537, 541 U.S. 95, 158 L.Ed.2d 264, rehearing denied 124 S.Ct. 2198, 541 U.S. 1057, 158 L.Ed.2d 758, miscellaneous rulings 124 S.Ct. 2926, 542 U.S. 934, 159 L.Ed.2d 809, miscellaneous rulings 125 S.Ct. 242, 543 U.S. 805, 160 L.Ed.2d 7. Environmental Law ⚿ 175; Environmental Law ⚿ 196

Under this chapter, federal agencies are required to obtain state discharge permits, however, Army Corps of Engineers is not required to obtain discharge permits from the State of Minnesota either under the state's National Pollutant Discharge Elimination System program, which has been approved by the Environmental Protection Agency, or under the Minnesota disposal system, which has not been authorized by federal law and has not been submitted to the Agency for approval. State of Minn. by Spannaus v. Hoffman, C.A.8 (Minn.) 1976, 543 F.2d 1198, certiorari denied 97 S.Ct. 1672, 430 U.S. 977, 52 L.Ed.2d 373. Environmental Law ⚿ 196

Evidence supported conclusion that city violated Clean Water Act by discharging raw sewage into local bodies of water without permit from Environmental Protection Agency (EPA). Hawaii's Thousand Friends, Life of Land, Inc. v. City and County of Honolulu, D.Hawai'i 1992, 806 F.Supp. 225. Environmental Law ⚿ 230

State transportation department and Federal Highway Administration (FHwA) were not required to obtain National Pollutant Discharge Elimination System (NPDES) permit to allow runoff from stripping of hillside to go into lake, despite allegations that such runoff violated conditions in Clean Water Act § 404 permit; only § 404 permit was required for placement of fill in lake and failure to comply with conditions of § 404 permit would not give rise to need for additional permit. Coeur D'Alene Lake v. Kiebert, D.Idaho 1992, 790 F.Supp. 998. Environmental Law ⚿ 136; Environmental Law ⚿ 196

Postal Service did not violate National Pollutant Discharge Elimination System (NPDES) section of Clean Water Act in proposed construction of mail processing facility on site which contained wetlands, even though Postal Service did not comply with permit procedures, but did address concerns in its amended assessment and, as design plan changes resulted in decision not to construct in wetland area, Postal Service did not need to obtain permit. City of Waltham v. U.S. Postal Service, D.Mass.1992, 786 F.Supp. 105, affirmed 11 F.3d 235. Environ-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

mental Law 206; Environmental Law 196

Under Michigan law, both counties that operated sewage disposal facilities and municipalities responsible for sewage discharges, rather than counties alone, were proper National Pollutant Discharge Elimination System permittees under Clean Water Act; construction of new facilities and creation of indebtedness for that construction could only be accomplished by voluntary agreement between counties and municipalities under state law. U.S. v. State of Mich., E.D.Mich.1991, 781 F.Supp. 1230. Environmental Law 196; Environmental Law 179

Discharger of pollutant could not escape liability for failing to satisfy its responsibility under Clean Water Act for obtaining national pollutant discharge elimination system permit by asserting that Pennsylvania Department of Environmental Resources was party charged with duty of complying with Act. Wiconisco Creek Watershed, Ass'n v. Kocher Coal Co., M.D.Pa.1986, 646 F.Supp. 177. Environmental Law 206

44. Failure to obtain permit, federal permits

Under the Clean Water Act, discharges of dredged or fill materials into waters of the United States, regulated under § 404, did not require § 402 permit, and, thus, city could not as matter of law be found liable for failure to obtain § 402 for local dredging project, despite contention by community group that adequate environmental safeguards were absent unless §§ 402 and 404 both applied. Canada Community Imp. Soc., Inc. v. City of Michigan City, Ind., N.D.Ind.1990, 742 F.Supp. 1025. Environmental Law 196; Environmental Law 136

Where defendants alleged that there was no requirement that National Pollutant Discharge Elimination System permit be obtained in advance of actual construction, and there was no allegation that defendants had failed or refused to comply with terms and conditions of any permit so required nor was there any indication that required permit would not be issued, failure to obtain permit for proposed rail commuter terminal did not render Secretary of Transportation's decision to provide $240,000,000 grant to city for construction of tunnel in violation of this chapter. Philadelphia Council of Neighborhood Organizations v. Coleman, E.D.Pa.1977, 437 F.Supp. 1341, motion denied 451 F.Supp. 114, affirmed 578 F.2d 1375. Environmental Law 180

45. Issuance by Administrator, federal permits

Environmental Protection Agency (EPA) was not required by Clean Water Act (CWA) to take enforcement action against all illegal discharges of pollutants, and therefore its issuance of permit to mine operator was not mandated by statute and did not support request for attorney fees, under catalyst theory, of environmental groups that had sued to compel EPA to act. Bravos v. E.P.A., C.A.10 (N.M.) 2003, 324 F.3d 1166, 190 A.L.R. Fed. 643. Environmental Law 716

Vesting of initial decision on applications for effluent limitation permits by operators of offshore oil platforms and onshore facility in the Regional Administrator, who asked for further hearings before the administrative law judge and reviewed matter prior to issuance of initial license, did not violate due process, contrary to claim of applicants that the Administrator's review of draft permits which he originally issued did violate due process. Marathon Oil Co. v. E.P.A., C.A.9 1977, 564 F.2d 1253. Constitutional Law 4323

46. Discretion of Administrator, federal permits

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Environmental Protection Agency (EPA) established substantive controls for municipal storm water discharges required by amendments to Clean Water Act as result of administrator's discretion to determine which controls were necessary. Natural Resources Defense Council, Inc. v. U.S. E.P.A., C.A.9 1992, 966 F.2d 1292. Environmental Law ⚷ 175

Environmental Protection Agency's (EPA's) exemption from permit requirements under Clean Water Act storm water discharge rule for uncontaminated runoff from mining, oil, and gas facilities was not arbitrary and capricious; conference report gave administrator discretion to determine when contamination had occurred with respect to overburden, raw materials, waste products, and other items. Natural Resources Defense Council, Inc. v. U.S. E.P.A., C.A.9 1992, 966 F.2d 1292. Environmental Law ⚷ 176

Use of word "may" in this section providing that the Administrator may issue permit for discharge of any pollutant means only that the Administrator has the discretion either to issue permit or to leave pollutant discharger subject to total proscription of section 1311 of this title making discharge of any pollutant by any person unlawful except as provided in section 1311 of this title. Natural Resources Defense Council, Inc. v. Costle, C.A.D.C.1977, 568 F.2d 1369, 186 U.S.App.D.C. 147. Environmental Law ⚷ 196

The Administrator of Environmental Protection Agency did not have latitude under section 407 of this title or this section to exempt categories of "point" sources, such as uncontaminated storm runoff from storm sewers, silvicultural activities and irrigation return flow from "point" sources when the flow is from less than 3,000 acres, from the permit requirements pursuant to the National Pollutant Discharge Elimination System. Natural Resources Defense Council, Inc. v. Train, D.C.D.C.1975, 396 F.Supp. 1393, affirmed 568 F.2d 1369, 186 U.S.App.D.C. 147. Environmental Law ⚷ 201

47. Factors considered, federal permits

Environmental groups' claim that copper discharge from diversion channels and cutoff walls to be built in connection with proposed new copper mine had to be considered in determining whether to issue National Pollution Discharge Elimination System (NPDES) permit under Clean Water Act (CWA) was timely raised and should not have been deemed forfeited, but it should have been considered by Environmental Protection Agency's (EPA) Appeals Board, even though groups did not raise additional sources in first comment period for permit, where total maximum daily load (TMDL) for copper discharges had not been established before end of initial comment period, and groups raised claims during comment period after TMDL was performed. Friends of Pinto Creek v. U.S. E.P.A., C.A.9 2007, 504 F.3d 1007. Environmental Law ⚷ 222

No grounds existed warranting reconsideration of determination that presence of pollutants in interbasin transfer was an "addition" of pollutant so as to trigger Clean Water Act's (CWA's) permit requirements; federal regulation of interbasin water transfers would not lead to the termination of those transfers in contravention of the rights explicitly reserved to the states. Catskill Mountains Chapter of Trout Unlimited, Inc. v. City of New York, C.A.2 (N.Y.) 2006, 451 F.3d 77, certiorari denied 127 S.Ct. 1373. Environmental Law ⚷ 708

Environmental Protection Agency (EPA) had an independent duty, under section 7 of Endangered Species Act (ESA), to insure its decision, to transfer Clean Water Act (CWA) pollution permitting program for Arizona to that State, was not likely to jeopardize protected species or adversely modify their habitat, and therefore EPA erred in concluding it was required to disregard impact of the transfer on listed species; transfer decision was within EPA's decision-making authority, and would trigger consultation requirement inasmuch as it would be a cause of harm resulting from loss of consultation. Defenders of Wildlife v. U.S. Environmental Protection

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Agency, C.A.9 2005, 420 F.3d 946, rehearing en banc denied 450 F.3d 394, certiorari granted 127 S.Ct. 852, 166 L.Ed.2d 681, miscellaneous rulings 2007 WL 957193, certiorari granted 127 S.Ct. 853, 166 L.Ed.2d 681, miscellaneous rulings 2007 WL 957194. Environmental Law 537

In determining whether to issue permits allowing operators of underground coal mines to discharge water from their mines, any failure on part of Environmental Protection Agency to consider potential impact of other planned mines was not error, for opening of mines in consideration did not represent a practical commitment to others. Webb v. Gorsuch, C.A.4 1983, 699 F.2d 157. Environmental Law 604(5)

In issuing National Pollutant Discharge Elimination System permit to pipe company, it was appropriate for the Environmental Protection Agency to rely principally upon its own "personalized", "best practicable technology", as established in consent decree negotiated in suit brought by Agency against applicant for permit. State of Ala. ex rel. Baxley v. Environmental Protection Agency, C.A.5 (Ala.) 1977, 557 F.2d 1101. Environmental Law 220

Check dams and sediment traps that were constructed in ditches on coastal landing tract in effort to reduce discharge of pollutants into bodies of water were "point sources" under the Clean Water Act (CWA), and thus dams and traps were subject to CWA discharge permit requirements; testimony indicated that check dams on tract had been completely buried by sediment and that sediment had been discharged from dams and traps into waters of the United States. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law 175

Downstream state's color standard was "relevant factor" that Environmental Protection Agency was entitled to consider when it determined that discharge levels contained in permit issued by upstream state would have undue impact on interstate waters and when it assumed permitting authority in connection with waste-water discharge in upstream state, in that dispute did not involve common-law nuisance for which law of point source state was to be applied. Champion Intern. Corp. v. U.S. E.P.A., W.D.N.C.1987, 652 F.Supp. 1398. Environmental Law 193

Ocean discharge criteria must be satisfied before Department of Environmental Protection (DEP) can issue national pollutant discharge elimination system permit, even though criteria are not included in Environmental Protection Agency's (EPA) list of regulatory sections applicable to all states. Matter of Issuance of a Permit by Dept. of Environmental Protection to Ciba-Geigy Corp., N.J.1990, 576 A.2d 784, 120 N.J. 164. Environmental Law 196

48. Exclusions, federal permits

Environmental Protection Agency's (EPA's) rules excluding various types of light industry and construction sites of less than five acres from application of Clean Water Act storm water discharge rule were arbitrary and capricious absent support in record for assumption that industrial activity or light industry would take place indoors and generate minimal amounts of particles and emissions. Natural Resources Defense Council, Inc. v. U.S. E.P.A., C.A.9 1992, 966 F.2d 1292. Environmental Law 175

Timber harvesting activities and timber companies' use of logging roads fell within silvicultural exemption promulgated by Environmental Protection Agency (EPA), such that discharge of stormwater from ditches alongside logging roads in state forest did not require National Pollutant Discharge Elimination System (NPDES) permit pursuant to Clean Water Act (CWA) provision relating to stormwater discharges associated with industrial activ-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ity. Northwest Enviromental Defense Center v. Brown, D.Or.2007, 476 F.Supp.2d 1188. Environmental Law 201

Shopping plaza owner did not violate Clean Water Act (CWA) by failing to obtain National Pollution Discharge Elimination System (NPDES) permit for stormwater discharge from parking lot, since discharge had been left unregulated before CWA Phase II regulations went into effect, and neither Environmental Protection Agency (EPA) nor state agency had exercised residual designation authority to require permit. Conservation Law Foundation v. Hannaford Bros. Co., D.Vt.2004, 327 F.Supp.2d 325, affirmed 139 Fed.Appx. 338, 2005 WL 1712899. Environmental Law 196

49. State conditions or limitations, federal permits

Administrator, in National Pollutant Discharge Elimination System permit proceedings, had no authority to consider applicant's challenges to validity of state water quality standards, but was required to include in permit any more stringent state limitations, including those necessary to meet state water quality standards. U. S. Steel Corp. v. Train, C.A.7 (Ill.) 1977, 556 F.2d 822. Environmental Law 197

50. Determination of effluent limitations, federal permits

When Environmental Protection Agency (EPA) has not yet issued national effluent guidelines for category of point sources, EPA is authorized under the Clean Water Act (CWA) to develop such limitations in a National Pollutant Discharge Elimination System (NPDES) permit on a case-by-case basis. American Min. Congress v. U.S. E.P.A., C.A.9 1992, 965 F.2d 759. Environmental Law 197

Where numeric effluent limitations are infeasible, point of discharge permits may proscribe industry practices which aggravate problems of point source pollution as well as require monitoring and reporting of effluent levels contrary to claim that any limitations must be issued in terms of a numerical effluent standard. Natural Resources Defense Council, Inc. v. Costle, C.A.D.C.1977, 568 F.2d 1369, 186 U.S.App.D.C. 147. Environmental Law 197

Under this section relating to National Pollutant Discharge Elimination System permit proceedings, Environmental Protection Agency has power to set limitations for pollutant discharge permits lower than those that would result from use of arbitrary multiplier contained in Agency's own guidelines for industry. U. S. Steel Corp. v. Train, C.A.7 (Ill.) 1977, 556 F.2d 822. Environmental Law 197

Discharge of selenium in excess of numeric standard set forth in oil refinery's interim National Pollution Discharge Elimination System (NPDES) permit was sufficient to prove violation of permit; although permit stated that limits were intended to be "a cap on current performance," showing of change in current performance was not necessary to prove violation, where purpose of "current performance" language was only to show how numeric standard was derived and how water board might choose to exercise its enforcement authority. California Public Interest Research Group v. Shell Oil Co., N.D.Cal.1993, 840 F.Supp. 712. Environmental Law 206

51. Army refuse permits, federal permits

Permit, granted by the Department of the Army in 1948, which authorized taconite processing company to construct a steel sheet pile dock and to deposit tailings from its ore processing mill into Lake Superior, was valid as it related to possible impediments in navigation, but did not sanction the continued dumping of refuse matter in-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

to Lake Superior. Reserve Mining Co. v. Environmental Protection Agency, C.A.8 (Minn.) 1975, 514 F.2d 492, modified on other grounds 529 F.2d 181, on remand 408 F.Supp. 1212, on remand 412 F.Supp..705, on remand 417 F.Supp. 789. Environmental Law ⚷ 196; Navigable Waters ⚷ 25

52. Environmental impact statements, federal permits

Since temporary landfill project to dispose of Los Angeles waste water treatment plant's sludge product was a condition of National Pollutant Discharge Elimination System permit, which included compliance schedule requiring Los Angeles to gradually abandon its practice of discharging sludge into the ocean, it came within exemptions to environmental impact statement requirement for compliance schedules in NPDES old source permits, notwithstanding contention that in issuing permit the Environmental Protection Agency anticipated a decision belonging to the grant process, namely, decisions to provide financial aid for a particular project of construction and equipment modification. Kilroy v. Quarles, C.A.9 (Cal.).1980, 614 F.2d 225, certiorari denied 101 S.Ct. 88, 449 U.S. 825, 66 L.Ed.2d 29. Environmental Law ⚷ 595(6)

53. Agreements to obtain permit, federal permits

Agreement entered into between Environmental Protection Agency and Department of Energy permitting breeder reactor project to commence site preparation activities but prohibiting project from making any point source discharges of waste water until project obtained National Pollution Discharge Elimination System permit was a legally binding agreement, since it contained effluent limitation and was judicially enforceable by citizens and states, it was binding and could be enforced within executive branch, and Environmental Protection Agency could redress violations of agreement by refusing to issue the permit. Natural Resources Defense Council, Inc. v. Zeller, C.A.11 (Ga.) 1982, 688 F.2d 706. Environmental Law ⚷ 485; Environmental Law ⚷ 196

54. Public hearings, federal permits--Generally

National Pollutant Discharge Elimination System permit was issued in full compliance with public participation requirement even though the Environmental Protection Agency incorporated into the permit the same limitations contained in consent decree negotiated in Agency suit against applicant where adequate public participation was afforded and the consent decree merely served as the starting point of the permit proceedings and the effluent limitations contained in the consent decree were negotiated with the intention of complying with this chapter. State of Ala. ex rel. Baxley v. Environmental Protection Agency, C.A.5 (Ala.) 1977, 557 F.2d 1101. Environmental Law ⚷ 220

55. ---- Necessity, public hearings, federal permits

The Environmental Protection Agency did not err in not holding an adjudicatory hearing on issues raised in request for such hearing with respect to extension of permit for discharge of sewage into the Pacific Ocean, where request did not raise material issues of fact pertinent to the question of whether the permit should be extended. Costle v. Pacific Legal Foundation, U.S.Cal.1980, 100 S.Ct. 1095, 445 U.S. 198, 63 L.Ed.2d 329, rehearing denied 100 S.Ct. 2177, 446 U.S. 947, 64 L.Ed.2d 804. Environmental Law ⚷ 220

Environmental Protection Agency (EPA) acted within its authority in denying Puerto Rico Aqueduct and Sewer Authority (PRASA) evidentiary hearing to contest resolution of National Pollution Discharge Elimination System (NPDES) proceedings in which PRASA was denied relief from secondary treatment requirements concerning its publicly owned treatment work (POTW), where PRASA's studies failed to draw direct conclusions, re-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

quired by regulations, regarding future impacts respecting its facility under stressed waters analysis. Puerto Rico Aqueduct and Sewer Authority v. U.S. E.P.A., C.A.1 1994, 35 F.3d 600, certiorari denied 115 S.Ct. 1096, 513 U.S. 1148, 130 L.Ed.2d 1065. Health ⚷ 374

Clean Water Act requires promotion of public participation in process of issuing permits for discharge, in form of notice and opportunity for hearing, at both federal and state level, and public notice and opportunity to comment in rule-making proceedings is mandated by the Administrative Procedure Act. Natural Resources Defense Council, Inc. v. U.S.E.P.A., C.A.D.C.1988, 859 F.2d 156, 273 U.S.App.D.C. 180. Administrative Law And Procedure ⚷ 394; Environmental Law ⚷ 220

The Administrator of the Environmental Protection Agency was required to conduct a hearing for purpose of allowing parties challenging pollutant discharge permits issued by the EPA to Alaska gold miners to present evidence on effluent limitations for arsenic and mercury and on appropriate monitoring requirements. Trustees for Alaska v. E.P.A., C.A.9 1984, 749 F.2d 549. Environmental Law ⚷ 228

56. ---- Rules and regulations, public hearings, federal permits

Regulations which the Environmental Protection Agency promulgated to implement congressional policy of "opportunity for public hearing" with respect to issuance, denial of modification of permit for discharge of pollutants into navigable waters, under which hearing is to be held if regional administrator finds a significant degree of public interest in proposed permit and, after determination is made, adjudicatory hearing is to be granted if request for hearing sets forth material issues of fact, were valid and the Agency is not required to hold a public hearing on every permit action unless it can show that the material facts supporting this action "are not subject to dispute". Costle v. Pacific Legal Foundation, U.S.Cal.1980, 100 S.Ct. 1095, 445 U.S. 198, 63 L.Ed.2d 329, rehearing denied 100 S.Ct. 2177, 446 U.S. 947, 64 L.Ed.2d 804. Environmental Law ⚷ 220

Regulations requiring that objections to issuance of National Pollution Discharge Elimination System (NPDES) permit be raised during public comment period are intended to alert Environmental Protection Agency (EPA) to potential problems with draft permit and to ensure that it has opportunity to address those problems before permit becomes final. Adams v. U.S. E.P.A., C.A.1 1994, 38 F.3d 43. Environmental Law ⚷ 220

Regulations issued by the Environmental Protection Agency pursuant to this chapter, were not sufficient to satisfy Agency duty to establish guidelines regarding public participation in state National Pollutant Discharge Elimination System enforcement process. Citizens for a Better Environment v. E.P.A., C.A.7 1979, 596 F.2d 720. Environmental Law ⚷ 205

57. Form and content of permit, federal permits

In issuing case-by-case National Pollutant Discharge Elimination System permits establishing effluent standards for toxic and conventional pollutants, prior to implementation of national, industry-wide standards, on best professional judgment basis, EPA does not have unlimited discretion in establishing permit effluent limitations; rather, EPA's own regulations implementing statutory authorization for issuance of permits enumerates statutory factors that must be considered in writing permits. Natural Resources Defense Council, Inc. v. U.S. E.P.A., C.A.9 1988, 863 F.2d 1420. Environmental Law ⚷ 197

This chapter required the Administrator of the Environmental Protection Agency to include in gold placer mining pollutant discharge permits whatever effluent limitations it determined were necessary to achieve Alaskan

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

water quality standards. Trustees for Alaska v. E.P.A., C.A.9 1984, 749 F.2d 549. Environmental Law ⚷ 197

This chapter merely requires that point of discharge permits be in compliance with section 1311 of this title and as a result the use of area or general permits is allowed. Natural Resources Defense Council, Inc. v. Costle, C.A.D.C.1977, 568 F.2d 1369, 186 U.S.App.D.C. 147. Environmental Law ⚷ 196

Provision of this chapter requiring Regional Administrator, in National Pollutant Discharge Elimination System permit proceedings, to put state limitations in permit, is not limited to restrictions based on water quality standards, but extends to any more stringent limitation adopted by state; administrator has no authority to inquire into whether limitations adopted by state were necessary to achieve water quality standards. U. S. Steel Corp. v. Train, C.A.7 (Ill.) 1977, 556 F.2d 822. Environmental Law ⚷ 197

Department of Environmental Protection (DEP) must determine whether final permit under national pollutant discharge elimination system permit satisfies ocean discharge criteria and must state in both draft and final permit whether finding is based on regulatory criteria to determine whether there is unreasonable degradation of marine environment or on presumption of no unreasonable degradation. Matter of Issuance of a Permit by Dept. of Environmental Protection to Ciba-Geigy Corp., N.J.1990, 576 A.2d 784, 120 N.J. 164. Environmental Law ⚷ 196

58. Conditions of permit, federal permits

Environmental Protection Agency (EPA) requirement for National Pollution Discharge Elimination System (NPDES) permit that discharge of effluent from Arkansas sewage treatment plant comply with Oklahoma's water quality standards was reasonable exercise of agency's statutory discretion; discharge into Illinois River would travel through Arkansas and over Oklahoma border. Arkansas v. Oklahoma, U.S.1992, 112 S.Ct. 1046, 503 U.S. 91, 117 L.Ed.2d 239, on remand 962 F.2d 996. Environmental Law ⚷ 197

Conditions imposed on storm water discharge permits issued to cities under Clean Water Act (CWA) were not arbitrary or capricious, even if it was inevitable that pollutants discharged by third parties would enter storm sewer system; permit expressly exempted cities from liability for third-party discharges. City of Abilene v. U.S. E.P.A., C.A.5 2003, 325 F.3d 657, rehearing en banc denied 71 Fed.Appx. 443, 2003 WL 21418155. Environmental Law ⚷ 197

Regulation prohibiting National Pollution Discharge Elimination System permittee from bypassing any portion of treatment facility, even when effluent limitations were not exceeded, was authorized by Clean Water Act and consistent with Act's policies. Natural Resources Defense Council, Inc. v. U.S. E.P.A., C.A.D.C.1987, 822 F.2d 104, 261 U.S.App.D.C. 372. Environmental Law ⚷ 186

Environmental Protection Agency has authority to impose a sewer hookup moratorium or diversion to land treatment as a condition of the national pollution discharge elimination system permit issued to a municipal sewage treatment facility; characterizing diversion to land treatment as best practical waste treatment technology, a standard not applicable to municipal systems not receiving federal grants until 1983, does not automatically bring it outside scope of agency authority to impose permit conditions necessary to assure compliance with effluent limitations. Montgomery Environmental Coalition v. Costle, C.A.D.C.1980, 646 F.2d 568, 207 U.S.App.D.C. 233. Environmental Law ⚷ 197

This section, which does not purport to address question of permit modification but allows permitholder an ab-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

solute defense if he can demonstrate compliance with his permit unless standard sought to be enforced is a toxic pollutant standard relating to human health, did not prohibit Environmental Protection Agency from including in permit allowing steel manufacturer to discharge certain pollutants in wastewater from its integrated steel-manufacturing facility a condition that permit would be modified to reflect subsequently adopted more stringent toxic pollutant standards. Inland Steel Co. v. E.P.A., C.A.7 1978, 574 F.2d 367. Environmental Law ⚿ 197

Environmental Protection Agency in writing a formal upset provision in an effluent permit is free to place burden on permit holder of producing relevant data and proving that upset could not have been prevented. Marathon Oil Co. v. E.P.A., C.A.9 1977, 564 F.2d 1253. Environmental Law ⚿ 208

Under this chapter when no effluent limitations or guidelines are yet available with respect to a particular class or category of point source, National Pollutant Discharge Elimination System permits are to be issued upon such conditions as Administrator determines are necessary to carry out provisions of this chapter. U. S. Steel Corp. v. Train, C.A.7 (Ill.) 1977, 556 F.2d 822. Environmental Law ⚿ 197

Administrator, as incident to his power to issue permits authorizing discharge of pollutants into surface waters, did not have authority to place conditions in such permits controlling disposal of wastes into deep wells. Exxon Corp. v. Train, C.A.5 (Ala.) 1977, 554 F.2d 1310. Environmental Law ⚿ 197

Water and sewer authority did not violate terms and conditions of its National Pollutant Discharge Elimination System (NPDES) permit by failing to install odor controlled carbon filters on vents located on Park Service property, and thus odor control could not be enforced by means of citizen suit under Clean Water Act (CWA), despite contentions that odor control was implied condition of permit's maintenance and operations (M & O) clause, and that authority had duty to Park Service to install and maintain filters, where permit did not refer to authority's duty to Park Service, or explicitly require authority to install carbon filters or odor control. American Canoe Ass'n, Inc. v. District of Columbia Water and Sewer Authority, D.D.C.2004, 306 F.Supp.2d 30, dismissed 2004 WL 2091485. Environmental Law ⚿ 196; Environmental Law ⚿ 197

As long as there exists a practical land disposal method for water treatment plant's pollutants, the Environmental Protection Agency need not evaluate the alternative of deep ocean dumping when it formulates conditions for a National Pollutant Discharge Elimination System permit or when it authorizes a grant of federal funds to develop a project designed to achieve compliance with this chapter. Pacific Legal Foundation v. Quarles, C.D.Cal.1977, 440 F.Supp. 316, affirmed 614 F.2d 225, certiorari denied 101 S.Ct. 88, 449 U.S. 825, 66 L.Ed.2d 29. Environmental Law ⚿ 604(6)

59. Termination or modification, federal permits

Regional Water Quality Control Board's cease-and-desist order, providing deferred compliance schedule for selenium discharges as part of settlement with oil company to avoid state enforcement action, did not effectively modify terms of oil company's National Pollution Discharge Elimination System (NPDES) permit so as to preclude citizen suit to enforce effluent standards under Clean Water Act (CWA), but rather was merely exercise of state's prosecutorial discretion; language of order did not purport to modify NPDES permit, procedural requirements for formal modification of NPDES permits were not followed, and CWA expressly precluded modification of NPDES permit to allow less stringent effluent limitations than in previous permit. Citizens for a Better Environment-California v. Union Oil Co. of California, C.A.9 (Cal.) 1996, 83 F.3d 1111, as amended , certiorari denied 117 S.Ct. 789, 519 U.S. 1101, 136 L.Ed.2d 731. Environmental Law ⚿ 198

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

"Technical mistakes," such as would permit Court of Appeals to disturb Environmental Protection Agency's denial of petition to modify waste discharge permit, include only clerical or computer errors, mathematical mistakes and the like; term cannot be interpreted to refer to any erroneous findings of technical fact. Texas Mun. Power Agency v. Administrator of U.S. E.P.A., C.A.5 1988, 836 F.2d 1482. Administrative Law And Procedure 785; Environmental Law 682

"For cause", as used in this section giving Administrator authority to issue permits that can be terminated or modified for cause including but not limited to change in any condition that requires either temporary or permanent reduction or elimination of permitted discharge, does not refer only to conduct of permitholder and in fact seems broad enough to cover adoption of more stringent toxic pollutant standards, and thus this section does not limit Administrator's authority to modify permits to reflect subsequently adopted more stringent toxic pollutant standards. Inland Steel Co. v. E.P.A., C.A.7 1978, 574 F.2d 367. Environmental Law 198

If effluent limitations in a federally issued permit proved to be unreasonable or cannot be met for cause beyond the control of the permittee, permit may be revised. CPC Intern., Inc. v. Train, C.A.8 1976, 540 F.2d 1329, certiorari denied 97 S.Ct. 1646, 430 U.S. 966, 52 L.Ed.2d 357. Environmental Law 198

Informal and unilateral action such as letters from the state Environmental Protection Agency to a National Pollution Discharge Elimination System permittee were insufficient to modify conditions of NPDES permit. U.S. v. Ohio Edison Co., N.D.Ohio 1989, 725 F.Supp. 928. Environmental Law 198

Designation of substances as hazardous is a change in circumstances that gives rise to allowable changes in permits and enforcement of more stringent controls over discharges even during life of an existing permit in cases where circumstances have changed since issuance of original permit, but new limitations must be issued and implemented in a manner which is reasonable and fair, and which attempts to cause as little economic inconvenience to dischargers whose permits are being revised as possible under circumstances. Manufacturing Chemists Ass'n v. Costle, W.D.La.1978, 455 F.Supp. 968. Environmental Law 198; Environmental Law 432

60. Anticipatory breach, federal permits

Principle of anticipatory breach, a contract concept, is contrary to statutory scheme of Clean Water Act (CWA), which provides for modification of National Pollutant Discharge Elimination System (NPDES) permits issued under state programs, so as to allow revisions to obligations prior to effective date of those obligations. Upper Chattahoochee Riverkeeper Fund, Inc. v. City of Atlanta, N.D.Ga.1996, 953 F.Supp. 1541. Environmental Law 198

61. Restrictions or prohibitions, federal permits

Requirement in storm water discharge permits issued to Texas home-rule cities under Clean Water Act (CWA), that cities ensure that they had legal authority to implement permit conditions, was not arbitrary or capricious; there was no evidence that cities lacked authority to implement permits or that any Texas statute precluded implementation. City of Abilene v. U.S. E.P.A., C.A.5 2003, 325 F.3d 657, rehearing en banc denied 71 Fed.Appx. 443, 2003 WL 21418155. Environmental Law 197

Court-imposed ban on new sewer hookups to Boston Harbor discharge system until Massachusetts legislature gave to Massachusetts Water Resources Authority right to acquire suitable landfill site was reasonable remedy for violation of Clean Water Act, even though new commission was created to propose alternative to Authority's

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

preferred site within four months, and even though construction did not need to start at landfill for 17 months. U.S. v. Metropolitan Dist. Com'n, C.A.1 (Mass.) 1991, 930 F.2d 132. Environmental Law ⚷ 695

Order imposing ban on some new sewer hookups as part of Boston Harbor cleanup was authorized by Federal Clean Water Act. U.S. v. Metropolitan Dist. Com'n, D.Mass.1991, 761 F.Supp. 206, modification denied 761 F.Supp. 209, affirmed 930 F.2d 132. Environmental Law ⚷ 176

62. Administrative review, federal permits

By failing to identify with sufficient clarity and specificity its objections, the Michigan Department of Environmental Quality procedurally defaulted at the administrative appeals level its objections to the actions of Administrator of Environmental Protection Agency (EPA) in issuing, under the Federal Water Pollution Control Act, a National Pollutant Discharge Elimination System permit to a wastewater treatment facility; instead of explaining to the Environmental Appeals Board why the Region's detailed responses to its comments were clearly erroneous, Michigan simply repackaged its comments and EPA's response as unmediated appendices to its petition to the Board. Michigan Dept. of Environmental Quality v. U.S. E.P.A., C.A.6 2003, 318 F.3d 705. Environmental Law ⚷ 222

Opponent of National Pollution Discharge Elimination System (NPDES) permit under Clean Water Act, and other participants in public comment period, submitted statements which satisfied threshold requirement of materiality, as required to preserve issues for administrative review, regarding Environmental Protection Agency's (EPA's) compliance with Ocean Discharge Criteria (ODC) by alerting EPA to their concern that EPA had not adequately complied with mandates of ODC when it issued draft permit allowing discharge of effluent from proposed municipal wastewater treatment facility; opponent specifically referred to ODC, challenged design and location of outfall and accuracy of information presented by engineers regarding outfall, questioned whether dilution calculations were correct, and raised concerns as to detrimental impact on beaches, shellfish and other marine life. Adams v. U.S. E.P.A., C.A.1 1994, 38 F.3d 43. Environmental Law ⚷ 222

63. First Amendment

Public education requirements imposed by Environmental Protection Agency (EPA) on cities as condition of issuing Clean Water Act (CWA) storm water discharge permits, did not violate cities' First Amendment rights; cities were given legitimate choice of accepting permits with such requirements or permits with more stringent numeric effluent limitations. City of Abilene v. U.S. E.P.A., C.A.5 2003, 325 F.3d 657, rehearing en banc denied 71 Fed.Appx. 443, 2003 WL 21418155. Constitutional Law ⚷ 1590; Environmental Law ⚷ 197

64. Tenth Amendment

Environmental Protection Agency's (EPA's) requirement that cities set up pollution control programs, as condition of issuing Clean Water Act (CWA) storm water discharge permits, did not violate Tenth Amendment, even if programs required cities to regulate their residents according to federal standards; cities were given legitimate choice of accepting regulatory programs or numeric effluent limitations. City of Abilene v. U.S. E.P.A., C.A.5 2003, 325 F.3d 657, rehearing en banc denied 71 Fed.Appx. 443, 2003 WL 21418155. Environmental Law ⚷ 197; States ⚷ 4.16(1)

CWA § 502

Effective: August 8, 2005

United States Code Annotated Currentness
Title 33. Navigation and Navigable Waters (Refs & Annos)
Chapter 26. Water Pollution Prevention and Control (Refs & Annos)
Subchapter V. General Provisions
§ 1362. Definitions

Except as otherwise specifically provided, when used in this chapter:

(1) The term "State water pollution control agency" means the State agency designated by the Governor having responsibility for enforcing State laws relating to the abatement of pollution.

(2) The term "interstate agency" means an agency of two or more States established by or pursuant to an agreement or compact approved by the Congress, or any other agency of two or more States, having substantial powers or duties pertaining to the control of pollution as determined and approved by the Administrator.

(3) The term "State" means a State, the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, American Samoa, the Commonwealth of the Northern Mariana Islands, and the Trust Territory of the Pacific Islands.

(4) The term "municipality" means a city, town, borough, county, parish, district, association, or other public body created by or pursuant to State law and having jurisdiction over disposal of sewage, industrial wastes, or other wastes, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 1288 of this title.

(5) The term "person" means an individual, corporation, partnership, association, State, municipality, commission, or political subdivision of a State, or any interstate body.

(6) The term "pollutant" means dredged spoil, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt and industrial, municipal, and agricultural waste discharged into water. This term does not mean (A) "sewage from vessels or a discharge incidental to the normal operation of a vessel of the Armed Forces" within the meaning of section 1322 of this title; or (B) water, gas, or other material which is injected into a well to facilitate production of oil or gas, or water derived in association with oil or gas production and disposed of in a well, if the well used either to facilitate production or for disposal purposes is approved by authority of the State in which the well is located, and if such State determines that such injection or disposal will not result in the degradation of ground or surface water resources.

(7) The term "navigable waters" means the waters of the United States, including the territorial seas.

(8) The term "territorial seas" means the belt of the seas measured from the line of ordinary low water along that portion of the coast which is in direct contact with the open sea and the line marking the seaward limit of inland

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

waters, and extending seaward a distance of three miles.

(9) The term "contiguous zone" means the entire zone established or to be established by the United States under article 24 of the Convention of the Territorial Sea and the Contiguous Zone.

(10) The term "ocean" means any portion of the high seas beyond the contiguous zone.

(11) The term "effluent limitation" means any restriction established by a State or the Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters, the waters of the contiguous zone, or the ocean, including schedules of compliance.

(12) The term "discharge of a pollutant" and the term "discharge of pollutants" each means (A) any addition of any pollutant to navigable waters from any point source, (B) any addition of any pollutant to the waters of the contiguous zone or the ocean from any point source other than a vessel or other floating craft.

(13) The term "toxic pollutant" means those pollutants, or combinations of pollutants, including disease-causing agents, which after discharge and upon exposure, ingestion, inhalation or assimilation into any organism, either directly from the environment or indirectly by ingestion through food chains, will, on the basis of information available to the Administrator, cause death, disease, behavioral abnormalities, cancer, genetic mutations, physiological malfunctions (including malfunctions in reproduction) or physical deformations, in such organisms or their offspring.

(14) The term "point source" means any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. This term does not include agricultural stormwater discharges and return flows from irrigated agriculture.

(15) The term "biological monitoring" shall mean the determination of the effects on aquatic life, including accumulation of pollutants in tissue, in receiving waters due to the discharge of pollutants (A) by techniques and procedures, including sampling of organisms representative of appropriate levels of the food chain appropriate to the volume and the physical, chemical, and biological characteristics of the effluent, and (B) at appropriate frequencies and locations.

(16) The term "discharge" when used without qualification includes a discharge of a pollutant, and a discharge of pollutants.

(17) The term "schedule of compliance" means a schedule of remedial measures including an enforceable sequence of actions or operations leading to compliance with an effluent limitation, other limitation, prohibition, or standard.

(18) The term "industrial user" means those industries identified in the Standard Industrial Classification Manual, Bureau of the Budget, 1967, as amended and supplemented, under the category of "Division D--Manufacturing" and such other classes of significant waste producers as, by regulation, the Administrator deems appropriate.

(19) The term "pollution" means the man-made or man-induced alteration of the chemical, physical, biological, and radiological integrity of water.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

(20) The term "medical waste" means isolation wastes; infectious agents; human blood and blood products; pathological wastes; sharps; body parts; contaminated bedding; surgical wastes and potentially contaminated laboratory wastes; dialysis wastes; and such additional medical items as the Administrator shall prescribe by regulation.

(21) Coastal recreation waters

(A) In general

The term "coastal recreation waters" means--

(i) the Great Lakes; and

(ii) marine coastal waters (including coastal estuaries) that are designated under section 1313(c) of this title by a State for use for swimming, bathing, surfing, or similar water contact activities.

(B) Exclusions

The term "coastal recreation waters" does not include--

(i) inland waters; or

(ii) waters upstream of the mouth of a river or stream having an unimpaired natural connection with the open sea.

(22) Floatable material

(A) In general

The term "floatable material" means any foreign matter that may float or remain suspended in the water column.

(B) Inclusions

The term "floatable material" includes--

(i) plastic;

(ii) aluminum cans;

(iii) wood products;

(iv) bottles; and

(v) paper products.

(23) Pathogen indicator

The term "pathogen indicator" means a substance that indicates the potential for human infectious disease.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

(24) Oil and gas exploration and production

The term "oil and gas exploration, production, processing, or treatment operations or transmission facilities" means all field activities or operations associated with exploration, production, processing, or treatment operations, or transmission facilities, including activities necessary to prepare a site for drilling and for the movement and placement of drilling equipment, whether or not such field activities or operations may be considered to be construction activities.

2005 Acts. House Conference Report No. 109-190, see 2005 U.S. Code Cong. and Adm. News, p. 448.

Statement by President, see 2005 U.S. Code Cong. and Adm. News, p. S17.

Amendments

2005 Amendments. Par. (24). Pub.L. 109-58, § 323, added par. (24).

2000 Amendments. Pars. (21) to (23). Pub.L. 106-284, § 5, added pars. (21) to (23).

1996 Amendments. Par. (6)(A). Pub.L. 104-106, § 325(c)(3), substituted "sewage from vessels or a discharge incidental to the normal operation of a vessel of the Armed Forces" for "sewage from vessels".

1988 Amendments. Par. (20). Pub.L. 100-688, § 3202(a), added par. (20).

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

1987 Amendments. Par. (3). Pub.L. 100-4, § 502(a), inserted "the Commonwealth of the Northern Mariana Islands," after "Samoa,".

Par. (14). Pub.L. 100-4, § 503, inserted "agricultural stormwater discharges and" after "does not include".

1977 Amendments. Par. (14). Pub.L. 95-217 added provision that the term "point source" does not include return flows from irrigated agriculture.

Termination of Trust Territory of the Pacific Islands

For termination of Trust Territory of the Pacific Islands, see note set out preceding 48 U.S.C.A. § 1681.

Territorial Sea and Contiguous Zone of United States

For extension of territorial sea and contiguous zone of United States, see Proc. No. 5928 and Proc. No. 7219, respectively, set out as notes under 43 U.S.C.A. § 1331.

Term "Point Source" to Include Landfill Leachate Collection System

Section 507 of Pub.L. 100-4 provided that: "For purposes of the Federal Water Pollution Control Act [this chapter], the term 'point source' includes a landfill leachate collection system."

Schedule of compliance 19
Tributaries, navigable waters 10
Wetlands, navigable waters 11

1. Constitutionality

In enacting the Clean Water Act, Congress did not unconstitutionally delegate its legislative authority to the Army Corps of Engineers by allowing the Corps to define "waters of the United States" as including "wetlands," and to define "wetlands" as encompassing land that is not "wet" in the ordinary sense of the word, notwithstanding that violations of the Act may incur criminal penalties. U.S. v. Mills, N.D.Fla.1993, 817 F.Supp. 1546, affirmed 36 F.3d 1052, certiorari denied 115 S.Ct. 1966, 514 U.S. 1112, 131 L.Ed.2d 856. Constitutional Law 2419; Environmental Law 116

2. Person

Language in both Clean Water Act (CWA) and Resource Conservation and Recovery Act (RCRA) defined "person" for purposes of entire section in which term occurs so that inclusion of United States as "person" occurs only in clauses subjecting United States to suit. U.S. Dept. of Energy v. Ohio, U.S.Ohio 1992, 112 S.Ct. 1627, 503 U.S. 607, 118 L.Ed.2d 255, on remand 965 F.2d 1401. Environmental Law 428; Environmental Law 175; Environmental Law 353

Fuels division director at naval air station was "person" subject to criminal enforcement provisions of Clean Water Act (CWA), and thus, director was properly convicted of discharging pollutant into surface water of United States in violation of CWA. U.S. v. Curtis, C.A.9 (Alaska) 1993, 988 F.2d 946, certiorari denied 114 S.Ct. 177, 510 U.S. 862, 126 L.Ed.2d 137. Environmental Law 743; United States 52

Public utility director, as an "individual," was a "person" subject to criminal liability under the Clean Water Act for violation of national pollutant discharge elimination system permit. U.S. v. Brittain, C.A.10 (Okla.) 1991, 931 F.2d 1413. Environmental Law 743

Massachusetts Bay Transportation Authority was a "person" within meaning of this chapter prohibiting discharge of oil and hazardous substances into navigable waters and was subject to civil penalties for causing oil spills into navigable waters. U. S. v. Massachusetts Bay Transp. Authority, C.A.1 (Mass.) 1980, 614 F.2d 27. Environmental Law 223; Environmental Law 177

Municipality which owned and operated sewage collection and treatment plants was a "person" within meaning of the Clean Water Act (CWA), so as to allow United States to bring action against municipality under the Act for alleged violation of its National Pollutant Discharge Elimination System (NPDES) permit issued by state department of environmental resources. U.S. v. Municipality of Penn Hills, W.D.Pa.1998, 6 F.Supp.2d 432. Environmental Law 206

"Citizen suit" and accompanying provisions of Clean Water Act (CWA) and Resource Conservation and Recovery Act (RCRA) waived Indian tribe's sovereign immunity in citizen suit brought by environmental organizations against tribe in its capacity as operator of landfill; term "person," as used in relevant sections of Acts, un-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

equivocally included Indian tribes. Atlantic States Legal Foundation v. Salt River Pima-Maricopa Indian Community, D.Ariz.1993, 827 F.Supp. 608. Indians ⚷ 235

3. Pollutant--Generally

Clean Water Act's definition of pollutant, while broad, is not unduly vague in light of fact that discharged liquid had been used as cleaning agent for undergoing storage tank and had a strong petroleum odor and a dirty, oily appearance; ordinary person should have understood that petroleum-based, sludge-like substance was industrial waste within meaning of Act. U.S. v. Eidson, C.A.11 (Fla.) 1997, 108 F.3d 1336, certiorari denied 118 S.Ct. 248, 522 U.S. 899, 139 L.Ed.2d 177, certiorari denied 118 S.Ct. 578, 522 U.S. 1004, 139 L.Ed.2d 416. Environmental Law ⚷ 177

Fact that toxicity is an attribute of pollutants rather than a pollutant itself does not preclude use of toxicity as measure to regulate effluents that are pollutants. Natural Resources Defense Council, Inc. v. U.S.E.P.A., C.A.D.C.1988, 859 F.2d 156, 273 U.S.App.D.C. 180. Environmental Law ⚷ 183

Expressed goal of Congress, to eliminate "the discharge of pollutants," did not necessarily require expansive construction of term "pollutant," which Congress specifically defined in this chapter. National Wildlife Federation v. Gorsuch, C.A.D.C.1982, 693 F.2d 156, 224 U.S.App.D.C. 41. Environmental Law ⚷ 175

Employment of broad generic terms in defining "pollutant" in this section was an expression of congressional intent to encompass at a minimum what was covered by section 407 of this title, which in turn bars the discharge of all foreign substances outside the scope of its exception. U.S. v. Hamel, C.A.6 (Mich.) 1977, 551 F.2d 107. Environmental Law ⚷ 175

4. ---- Particular substances, pollutant

Groundwater derived from extraction of coal bed methane (CBM) was "pollutant" within the meaning of, and subject to regulation under, Clean Water Act (CWA), inasmuch as such water qualified as "industrial waste" under statutory definition of "pollutant," in that it was unwanted byproduct from production of methane gas for commercial sale, water was also "produced water," in that it was brought up from coal seams underlying basin to extract methane gas but did not fall within CWA's exemption for water derived from gas extraction disposed of in well, and conclusion that CBM groundwater was pollutant was consistent with CWA's definition of "pollution," given that its discharge altered water quality of river into which it was discharged. Northern Plains Resource Council v. Fidelity Exploration and Development Co., C.A.9 (Mont.) 2003, 325 F.3d 1155, certiorari denied 124 S.Ct. 434, 540 U.S. 967, 157 L.Ed.2d 312, on subsequent appeal 185 Fed.Appx. 679, 2006 WL 1722474. Environmental Law ⚷ 178

Natural materials released by mussels during commercial harvest were not "pollutants" under Clean Water Act (CWA), notwithstanding inclusion of "biological materials" in list of pollutants covered by statute, and thus discharge of such materials did not contravene CWA; shells and natural byproducts of living mussels were result of natural biological processes, not waste product of transforming human process, and CWA specified that living shellfish were to be protected under statute. Association to Protect Hammersley, Eld, and Totten Inlets v. Taylor Resources, Inc., C.A.9 (Wash.) 2002, 299 F.3d 1007. Environmental Law ⚷ 175

Uranium mill tailings are not "pollutants" for purposes of Clean Water Act (CWA) and hence are not subject to Environmental Protection Agency's (EPA) national pollutant discharge elimination system (NPDES) permit re-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

quirements. Waste Action Project v. Dawn Min. Corp., C.A.9 (Wash.) 1998, 137 F.3d 1426. Environmental Law ⚷ 178; Environmental Law ⚷ 196

Produced water from oil drilling waste treatment facility discharged into bay was "chemical wastes" or "industrial waste" within definition of "pollutant" subject to ban on discharges under Clean Water Act (CWA), in light of definition's specific exclusion of produced water under limited circumstances of approved well injection, in light of Environmental Protection Agency's (EPA) recognition of citizens' right to sue coastal oil well operators for discharging produced water without permit and reference to produced water as "pollutant" in permits for other types of oil well operators, and in light of fact that several components of produced wastes are listed as toxic or conventional pollutants in other EPA regulations. Sierra Club, Lone Star Chapter v. Cedar Point Oil Co. Inc., C.A.5 (Tex.) 1996, 73 F.3d 546, certiorari denied 117 S.Ct. 57, 519 U.S. 811, 136 L.Ed.2d 20. Environmental Law ⚷ 177

Landowners' discharge of fill materials into wetlands constituted discharge of "pollutants" into water within meaning of Clean Water Act; term "pollutant" includes dredged soil, rock, and sand, which are constituents of fill material used by landowners, which included concrete rubble and cinder block. U.S. v. Pozsgai, C.A.3 (Pa.) 1993, 999 F.2d 719, rehearing denied, certiorari denied 114 S.Ct. 1052, 510 U.S. 1110, 127 L.Ed.2d 373. Environmental Law ⚷ 175

"Shotcrete," a combination of sand and cement produced when its dry components are fed into a hopper and driven under pressure through hose to nozzle where they are mixed with water, is a "pollutant" under Clean Water Act, for purposes of offense of discharging pollutant without a permit. U.S. v. Schallom, C.A.4 (W.Va.) 1993, 998 F.2d 196, certiorari denied 114 S.Ct. 277, 510 U.S. 902, 126 L.Ed.2d 228. Environmental Law ⚷ 743

Through operation of canon expressio unius est exclusio alterius upon provision of this section defining pollutant as not meaning "water, gas, or other material which is injected into a well to facilitate production of oil or gas * * * ", listed materials are "pollutants" when injected into wells under any other circumstances. U. S. Steel Corp. v. Train, C.A.7 (Ill.) 1977, 556 F.2d 822. Environmental Law ⚷ 175

Sediment, consisting of sand and dirt, that was discharged into waters covered by the Clean Water Act (CWA) by coastal landowners' ditching activities constituted discharge of "pollutant" into waters of the United States, for which landowners were required to obtain discharge permit under the CWA. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law ⚷ 196

Fruit processor's discharge of water, produced in process of drying fruit, to irrigate fields, was not a discharge from a point source, as required to support Clean Water Act (CWA) citizen suit against processor, although processor allegedly applied wastewater to its fields in excess of crops' actual absorption of water. Hiebenthal v. Meduri Farms, D.Or.2002, 242 F.Supp.2d 885. Environmental Law ⚷ 175

Effluent from sewage treatment plants is "pollutant" under Clean Water Act (CWA). U.S. v. Gulf Park Water Co., Inc., S.D.Miss.1997, 972 F.Supp. 1056. Environmental Law ⚷ 176

Manure-laden water used as fertilizer by defendants was "pollutant," for purposes of determining whether Clean Water Act violation had occurred. Concerned Area Residents for The Environment v. Southview Farm, W.D.N.Y.1993, 834 F.Supp. 1410. Environmental Law ⚷ 175

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Water itself is not pollutant; therefore, simply moving water from one place to another does not constitute discharge of pollutant under Clean Water Act (CWA). Bettis v. Town of Ontario, N.Y., W.D.N.Y.1992, 800 F.Supp. 1113. Environmental Law 175

Dirt, rock, bricks, sheet metal and other debris deposited by defendant, or at his direction, along shoreline area constituted a "pollutant" under Clean Water Act. Hanson v. U.S., E.D.Tex.1989, 710 F.Supp. 1105. Environmental Law 175

Dead fish and fish remains which power plant discharged into lake along with its turbine generating water constituted "pollutants" for purposes of the Clean Water Act. National Wildlife Federation v. Consumers Power Co., W.D.Mich.1987, 657 F.Supp. 989, reversed 862 F.2d 580. Environmental Law 175

Just as elements such as nitrogen and phosphorous, entirely natural and harmless under most circumstances, are considered pollutants when added to water because they contribute to biological oxygen demand, the entrainment and solution of naturally occurring atmospheric gases in water caused by operation of a dam and resulting in supersaturation lethal to aquatic life is a "pollutant" for purpose of this chapter. National Wildlife Federation v. Gorsuch, D.C.D.C.1982, 530 F.Supp. 1291, reversed on other grounds 693 F.2d 156, 224 U.S.App.D.C. 41. Environmental Law 175

Fill material dumped and spread on defendant's property for construction of a road constituted a "pollutant" under this chapter. U. S. v. Weisman, M.D.Fla.1980, 489 F.Supp. 1331. Environmental Law 175

Pesticides endrin and heptachlor fell within purview of "pollutants" as defined in this section. U. S. v. Velsicol Chemical Corp., W.D.Tenn.1976, 438 F.Supp. 945. Environmental Law 175

5. Pollution

Requirement, under Clean Water Act's (CWA) definition of "pollution," that physical, biological, or chemical integrity of water be a "man-induced" alteration refers to effect of discharge on receiving water; it does not require that discharged water be altered by man. Northern Plains Resource Council v. Fidelity Exploration and Development Co., C.A.9 (Mont.) 2003, 325 F.3d 1155, certiorari denied 124 S.Ct. 434, 540 U.S. 967, 157 L.Ed.2d 312, on subsequent appeal 185 Fed.Appx. 679, 2006 WL 1722474. Environmental Law 175

Under the federal Clean Water Act's definition of "pollution," man-induced alteration of streamflow level is "pollution." State, Dept. of Ecology v. Public Utility Dist. No. 1 of Jefferson County, Wash.1993, 849 P.2d 646, 121 Wash.2d 179, certiorari granted 114 S.Ct. 55, 510 U.S. 810, 126 L.Ed.2d 25, affirmed 114 S.Ct. 1900, 511 U.S. 700, 128 L.Ed.2d 716. Environmental Law 175

6. Navigable waters--Generally

Clean Water Act's definition of "navigable waters" as "the waters of the United States, including the territorial seas" does not refer to water in general; rather, term includes only relatively permanent, standing or flowing bodies of water. (Per Justice Scalia with the Chief Justice and two Justices joining and one Justice concurring in the judgment.) Rapanos v. U.S., U.S.2006, 126 S.Ct. 2208, 165 L.Ed.2d 159, on remand 2007 WL 470555. Environmental Law 173

Terms "navigable waters" and "waters of the United States," as used in the Clean Water Act provisions prohibiting discharge of pollutants into such waters without a permit, are not limited to traditional definition of navig-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

able waters, namely, interstate waters that are navigable in fact or readily susceptible of being rendered so. (Per Justice Scalia with the Chief Justice and two Justices joining and one Justice concurring in the judgment.) Rapanos v. U.S., U.S.2006, 126 S.Ct. 2208, 165 L.Ed.2d 159, on remand 2007 WL 470555. Environmental Law 196

Remand for new criminal trial, as opposed to judgments of acquittal, was appropriate remedy for district court's erroneous definition of "navigable water" in criminal proceedings brought pursuant to the Clean Water Act (CWA); the district court erroneously defined "navigable water" and made it clear to the parties far in advance of trial that it would continue to use its erroneous definition throughout the case, and, that decision deprived the government of any incentive to present evidence that might have cured any resulting insufficiency. U.S. v. Robison, C.A.11 (Ala.) 2007, 2007 WL 3087419. Criminal Law 1181.5(3.1)

To implement Clean Water Act's mandate to restore and maintain chemical, physical, and biological integrity of nation's waters, Congress chose to define waters covered by Act broadly, and navigable waters under Act reach to the full extent permissible under Constitution; term "navigable" as used in Act is of limited import and Act regulates waters that would not be deemed navigable under classical understanding of term. U.S. v. Eidson, C.A.11 (Fla.) 1997, 108 F.3d 1336, certiorari denied 118 S.Ct. 248, 522 U.S. 899, 139 L.Ed.2d 177, certiorari denied 118 S.Ct. 578, 522 U.S. 1004, 139 L.Ed.2d 416. Environmental Law 173

Congress wanted to give the term "navigable waters" as used in this section the broadest possible constitutional interpretation. U. S. v. Byrd, C.A.7 (Ind.) 1979, 609 F.2d 1204. See, also, Leslie Salt Co. v. Froehlke, C.A.Cal.1978, 578 F.2d 742; U.S. v. Saint Bernard Parish, E.D.La.1984, 589 F.Supp. 617; U.S. v. Robinson, M.D.Fla.1983, 570 F.Supp. 1157. Environmental Law 173

Congress intended that the term "waters of the United States" within the Clean Water Act be interpreted as broadly as constitutionally possible under the commerce clause. U.S. v. Zanger, N.D.Cal.1991, 767 F.Supp. 1030. Environmental Law 173; Environmental Law 123

Terms "navigable waters" and "waters of the United States" within this chapter are not void for vagueness. U. S. v. Oxford Royal Mushroom Products, Inc., E.D.Pa.1980, 487 F.Supp. 852. Environmental Law 166

This section's definition of navigable waters as "waters of the United States, including the territorial seas", determines the scope of regulatory jurisdiction not only for Corps of Engineers under this chapter, but also for the Environmental Protection Agency and Coast Guard under other provisions of this chapter. State of Wyoming v. Hoffman, D.C.Wyo.1977, 437 F.Supp. 114. Navigable Waters 2

6a. ---- Continuous flow, navigable waters

A relatively continuous flow of water is a necessary, though not adequate, condition for qualification as a "water of the United States" that is subject to the Clean Water Act. (Per Justice Scalia with the Chief Justice and two Justices joining and one Justice concurring in the judgment.) Rapanos v. U.S., U.S.2006, 126 S.Ct. 2208, 165 L.Ed.2d 159, on remand 2007 WL 470555. Environmental Law 173

7. ---- Navigability in fact, navigable waters

Under *Rapanos v. United States*, a fractured opinion from the Supreme Court, test set forth by Justice Kennedy in a concurring opinion for the definition of navigable waters under the Clean Water Act (CWA), specifically,

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

that water can only be "navigable" under the CWA if it possesses a significant nexus to waters that are or were navigable in fact or that could reasonably be so was the least far-reaching, and thus the controlling rule of the case. U.S. v. Robison, C.A.11 (Ala.) 2007, 2007 WL 3087419. Courts ⚷ 90(2)

Term "navigable waters of the United States," as used in this chapter, does not require navigability in fact. U. S. v. Oxford Royal Mushroom Products, Inc., E.D.Pa.1980, 487 F.Supp. 852. Environmental Law ⚷ 173

Expression "navigable waters" effectively excludes from consideration any concept of navigability, in law or in fact. U. S. v. GAF Corp., S.D.Tex.1975, 389 F.Supp. 1379. Environmental Law ⚷ 173

8. ---- Canals, navigable waters

Irrigation canals were "waters of the United States," and thus subject to Clean Water Act (CWA), even though canals were separated from natural streams by system of closed waste gates, where canals exchanged water with number of natural streams and at least one lake, and leaks from canals into local creeks had occurred in past. Headwaters, Inc. v. Talent Irrigation Dist., C.A.9 (Or.) 2001, 243 F.3d 526. Environmental Law ⚷ 173

Ditches and canals, as well as streams and creeks, can be "waters of the United States" under Clean Water Act. U.S. v. Eidson, C.A.11 (Fla.) 1997, 108 F.3d 1336, certiorari denied 118 S.Ct. 248, 522 U.S. 899, 139 L.Ed.2d 177, certiorari denied 118 S.Ct. 578, 522 U.S. 1004, 139 L.Ed.2d 416. Environmental Law ⚷ 173

Waters of nonnavigable, man-made mosquito canals, which emptied into a bayou arm of Tampa Bay, were "waters of the United States" within this chapter. U.S. v. Holland, M.D.Fla.1974, 373 F.Supp. 665. Environmental Law ⚷ 128; Environmental Law ⚷ 173

8a. ---- Channels, navigable waters

Because channels and conduits that carry intermittent flows of water are included in definition of "point source," under Clean Water Act, which prohibits discharge of pollutants from point sources to navigable waters, such ditches, channels, and conduits are generally not "waters of the United States" and thus not "navigable waters" under the Act. (Per Justice Scalia with the Chief Justice and two Justices joining and one Justice concurring in the judgment.) Rapanos v. U.S., U.S.2006, 126 S.Ct. 2208, 165 L.Ed.2d 159, on remand 2007 WL 470555. Environmental Law ⚷ 173; Environmental Law ⚷ 175

9. ---- Rivers and streams, navigable waters

Although term "navigable waters," under Clean Water Act, includes only relatively permanent, standing or flowing bodies of water, term does not necessarily exclude streams, rivers, or lakes that might dry up in extraordinary circumstances, such as drought, nor does term necessarily exclude seasonal rivers, which contain continuous flow during some months of the year but no flow during dry months. (Per Justice Scalia with the Chief Justice and two Justices joining and one Justice concurring in the judgment.) Rapanos v. U.S., U.S.2006, 126 S.Ct. 2208, 165 L.Ed.2d 159, on remand 2007 WL 470555. Environmental Law ⚷ 173

River and pond were two distinct "waters of the United States," within meaning of the Clean Water Act (CWA) and, thus, proposed transfer of water from river through skiing facility's snowmaking pipes to pond, resulting in transfer of pollutants, constituted addition of pollutants to pond from point source requiring National Pollutant Discharge Elimination System (NPDES) permit; although water was hydrologically connected by flow down from pond to river, water could not flow naturally from river up to pond, river undisputedly contained pollutants

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

not found in pond, and water would be subject to private control during passage through pipes. Dubois v. U.S. Dept. of Agriculture, C.A.1 (N.H.) 1996, 102 F.3d 1273, certiorari denied 117 S.Ct. 2510, 521 U.S. 1119, 138 L.Ed.2d 1013. Environmental Law ⚷ 196; Environmental Law ⚷ 173

Waters of unnamed tributary, which was contaminated by spill from oil pipeline, which was flowing small amount at time of spill, and which flowed, at least during times of significant rainfall, into major river, were "navigable waters" within meaning of this chapter even if the stream, at time of the spill, was not discharging water continuously into a river navigable in traditional sense, and thus the discharge violated this chapter. U. S. v. Texas Pipe Line Co., C.A.10 (Okla.) 1979, 611 F.2d 345. Environmental Law ⚷ 173

Stream which supported trout and beaver and which was used for agricultural irrigation, with the resulting agricultural products sold in interstate commerce, was covered by the definition of navigable waters under this chapter, despite fact that the stream was not navigable in fact and was not used to transport goods or materials. U. S. v. Earth Sciences, Inc., C.A.10 (Colo.) 1979, 599 F.2d 368. Environmental Law ⚷ 173

Genuine issue of material fact existed as to whether streams in dispute had significant nexus to water quality of navigable water, precluding summary judgment on claim under Clean Water Act (CWA) alleging discharge of sediment, as pollutant, into navigable water without securing National Pollutant Discharge Elimination System (NPDES) permit. Environmental Protection Information Center v. Pacific Lumber Co., N.D.Cal.2007, 469 F.Supp.2d 803. Federal Civil Procedure ⚷ 2498.3

Intermittent stream was one of the "waters of the United States" within scope of the Clean Water Act where it was or could be used for recreational purposes, had been used for commercial fishing and was a tributary of other waters of the United States. U.S. v. Zanger, N.D.Cal.1991, 767 F.Supp. 1030. Environmental Law ⚷ 173; Environmental Law ⚷ 126

Aberjona River falls within definition of "navigable waters" for purposes of 1972 amendments to this chapter. U. S. v. D'Annolfo, D.C.Mass.1979, 474 F.Supp. 220. Navigable Waters ⚷ 1(6)

10. ---- Tributaries, navigable waters

Stream located on property owned by defendant owner of property on which scrap metal business was operated, which was tributary of river, was "navigable water" or "water of the United States," within meaning of Clean Water Act (CWA). Parker v. Scrap Metal Processors, Inc., C.A.11 (Ga.) 2004, 386 F.3d 993, rehearing and rehearing en banc denied 125 Fed.Appx. 979, 2004 WL 2806000. Environmental Law ⚷ 173

Brook into which defendant's employees discharged waste slurry from asbestos removal project qualified as "waters of the United States" under Clean Water Act, notwithstanding defendant's claim that brook was "municipal separate storm sewer" which was part of municipal "waste treatment system" excluded from Act's coverage; brook was not owned or operated by public body, as required for it to be "municipal separate storm sewer," nor was it man-made, as required to fall within "waste treatment system" exclusion, but rather brook was natural tributary of creek that was undisputed navigable waterway, even though, in some places, it had been channeled into underground pipes to make room for development. U.S. v. TGR Corp., C.A.2 (Conn.) 1999, 171 F.3d 762, 160 A.L.R. Fed. 789. Environmental Law ⚷ 173; Environmental Law ⚷ 743

Congress did not intend to exclude tributaries that flow intermittently from "waters of the United States" under Clean Water Act as pollutants need not reach interstate bodies of water immediately or continuously to inflict

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

serious environmental damage; as long as tributary would flow into navigable body of water during significant rainfall, it is capable of spreading environmental damage and thus is a "water of the United States." U.S. v. Eidson, C.A.11 (Fla.) 1997, 108 F.3d 1336, certiorari denied 118 S.Ct. 248, 522 U.S. 899, 139 L.Ed.2d 177, certiorari denied 118 S.Ct. 578, 522 U.S. 1004, 139 L.Ed.2d 416. Environmental Law 173

Navigable-in-fact waters that were directly adjacent to coastal landowners' tract of land and which were classified by State of North Carolina as "SA" water, indicating that they were saltwater of high quality suitable for production and harvesting of shellfish for human consumption, were traditional navigable waters, i.e., "waters of the United States," and thus subject to pollution discharge permit and fill discharge permit requirements of the Clean Water Act (CWA); waters at issue included a sound and a saltwater estuarine creek that flowed into the sound. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law 125; Environmental Law 126; Environmental Law 173

Ditches flowing into coastal landing tract's onsite lake were tributaries of "waters of the United States" subject to pollution discharge permit and fill discharge permit requirements of the Clean Water Act (CWA); lake itself was considered water of the United States. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law 126; Environmental Law 173

Clean Water Act (CWA) does not give Army Corps of Engineers jurisdiction over wetlands which are merely adjacent to non-navigable tributaries of navigable waters. FD & P Enterprises, Inc. v. U.S. Army Corps of Engineers, D.N.J.2003, 239 F.Supp.2d 509.

Tributary of actually navigable waterway was itself "navigable water of the United States" within meaning of Clean Water Act, even though it flowed through underground pipeline on its way to waterway. California Sportfishing Protection Alliance v. Diablo Grande, Inc., E.D.Cal.2002, 209 F.Supp.2d 1059.

Tributary of navigable waterway was "water of United States" under Clean Water Act, and thus Army Corps of Engineers had jurisdiction to prosecute landowner for discharging pollutants during unauthorized excavation adjacent to tributary, even though tributary itself and wetlands surrounding it were not navigable in fact and did not connect with navigable waterway for at least 235 miles; pollutants would eventually reach waters affecting interstate commerce. U.S. v. Buday, D.Mont.2001, 138 F.Supp.2d 1282. Environmental Law 173; Environmental Law 743

11. ---- Wetlands, navigable waters

Only those wetlands with a continuous surface connection to bodies that are waters of the United States, pursuant to the Clean Water Act, in their own right, so that there is no clear demarcation between "waters" and wetlands, are adjacent to such waters and covered by the Act; wetlands with only an intermittent, physically remote hydrologic connection to waters of the United States lack the necessary connection to covered waters to establish the significant nexus required for coverage under the Act. (Per Justice Scalia with the Chief Justice and two Justices joining and one Justice concurring in the judgment.) Rapanos v. U.S., U.S.2006, 126 S.Ct. 2208, 165 L.Ed.2d 159, on remand 2007 WL 470555. Environmental Law 128

Wetlands drained by ditch that ran into nonnavigable creek that ran into nonnavigable river, which in turn ran into navigable river, were "waters of the United States," for purposes of Clean Water Act, and thus could not be filled without first obtaining permit from Army Corps of Engineers, despite contentions that filling in tract of

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

wetlands in question did not have measurable effect on navigable river, and that broad definition of "wetlands" employed by Corps infringed on state's power. U.S. v. Gerke Excavating, Inc., C.A.7 (Wis.) 2005, 412 F.3d 804, rehearing and rehearing en banc denied , vacated 126 S.Ct. 2964, 165 L.Ed.2d 947, on remand 464 F.3d 723. Environmental Law 136

Evidence did not support conclusion of Environmental Protection Agency's (EPA) Chief Judicial Officer, that small area which would occasionally fill with water was subject to regulation as possibly affecting interstate commerce, based on its alleged attractiveness to migratory water fowl; only testimony as to presence of water fowl applied to 50-acre area on other side of tract of land, on which birds were seen, which differed from area in question by bordering a stream, adjoining large wetland, and having no source of moisture other than rainfall. Hoffman Homes, Inc. v. Administrator, U.S. E.P.A., C.A.7 1993, 999 F.2d 256. Environmental Law 150

Land supported wetland vegetation "under normal circumstances," within meaning of Clean Water Act definition of wetlands, regardless of fact that wetlands were man-made; phrase "under normal circumstances" was meant to exclude those areas which were not aquatic, but which experienced abnormal presence of aquatic vegetation. Leslie Salt Co. v. U.S., C.A.9 (Cal.) 1990, 896 F.2d 354, certiorari denied 111 S.Ct. 1089, 498 U.S. 1126, 112 L.Ed.2d 1194, on remand 820 F.Supp. 478. Environmental Law 128

Low lying land areas where water sometimes stands and where vegetation requiring moist conditions grows but located miles from a navigable waterway were not "wetlands" within the meaning of this chapter. U.S. v. Riverside Bayview Homes, Inc., C.A.6 (Mich.) 1984, 729 F.2d 391, certiorari granted 105 S.Ct. 1166, 469 U.S. 1206, 84 L.Ed.2d 318, reversed 106 S.Ct. 455, 474 U.S. 121, 88 L.Ed.2d 419. Environmental Law 128

Vernal pond on gun club's property did not constitute "navigable waters" of the United States for purposes of Clean Water Act (CWA) under standard of Justice Kennedy's concurrence in *Rapanos v. U.S.*, notwithstanding proximity of river to pond and seasonal flooding of area, where data from testing was inconclusive as to effect of lead from shooting range on river. Simsbury-Avon Preservation Soc., LLC v. Metacon Gun Club, Inc., D.Conn.2007, 472 F.Supp.2d 219. Environmental Law 173

Evidence that property on which landowner, without obtaining a permit, built road was a wetland adjacent to a navigable water within the meaning of the Clean Water Act (CWA), was sufficient to establish that Corps of Engineers had jurisdiction to require restoration of that wetland; three government experts established 46 sample points at the site which provided evidence which met the criteria of the 1987 Corps of Engineers Wetlands Delineation Manual and Corps memoranda interpreting the Manual. U.S. v. Bailey, D.Minn.2007, 516 F.Supp.2d 998. Environmental Law 150

Wetlands that were adjacent to a traditional navigable water were "waters of the United States," subject to pollution discharge permit and fill discharge permit requirements of the Clean Water Act (CWA). North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law 173

Wetlands adjacent to nonnavigable tributary of traditional navigable water were "waters of the United States" subject to pollution discharge permit and fill discharge permit requirements of the Clean Water Act (CWA), since bodies of water were hydrologically connected, such that discharges into adjacent wetlands could move downstream, degrading quality of navigable water. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law 128; Environmental Law 173

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Doctrine of primary jurisdiction precluded judicial review of United States Army Corps of Engineers' determination that property on which fish ponds were being constructed was a "wetland" or "water of the United States" within meaning of Clean Water Act. Fercom Aquaculture Corp. v. U.S., E.D.Mo.1990, 740 F.Supp. 736. Administrative Law And Procedure 228.1; Environmental Law 664

Wetlands at beach were adjacent to waters of United States for purposes of Clean Water Act's requirement that permit be obtained to fill on property; pool on property was subject to ebb and flow of tide, wetlands were adjacent to that pool, and wetlands were separated from navigable inlet only by beach dunes and sand. U.S. v. Malibu Beach, Inc., D.N.J.1989, 711 F.Supp. 1301. Environmental Law 136

Administrative record established that tract of land was durationally inundated or saturated, was supportive of vegetation dependent on or adapted to saturated soils, and contained saturated soils, and thus was "wetlands" subject to jurisdiction of Army Corps of Engineers; Corps conducted soil and photo analysis, collected field data, and consulted aerial photographs in reaching its conclusion. Stoeco Development, Ltd. v. Department of the Army Corps of Engineers of U.S., D.N.J.1988, 701 F.Supp. 1075, appeal dismissed 879 F.2d 860, appeal dismissed 879 F.2d 861. Environmental Law 150

Soil analysis by expert in charge of training Army Corps of Engineers personnel in use of soil analysis for wetland identification, which analysis revealed that area impounded by dikes and levees and area lying southwest thereof contained hydric soil, was strong, but not conclusive, indicator that impoundment in southwest areas were "wetlands," for purpose of determining whether construction of dikes and levees violated Clean Water Act; given glacial pace at which soil types change and fact that recent changes in land use are not reflected by soil analysis, corroborative finding of wetland vegetation was required. U.S. v. Larkins, W.D.Ky.1987, 657 F.Supp. 76, affirmed 852 F.2d 189, rehearing denied, certiorari denied 109 S.Ct. 1131, 489 U.S. 1016, 103 L.Ed.2d 193. Evidence 571(6)

The Army Corps of Engineers had jurisdiction over a tract of land under section 301 of the Clean Water Act, making it illegal to discharge fill into "navigable waters" unless such discharge is in compliance with the Act, even though the land was not natural wetland, where various acts of state and local authorities, including construction of a highway and a storm sewage system, had changed the character of the tract into an artificial wetland and the Corps had not created the wetland. Track 12, Inc. v. District Engineer, U.S. Army Corps of Engineers, St. Paul, Minn., D.C.Minn.1985, 618 F.Supp. 448. Environmental Law 128

Wetlands are part of the "waters of the United States," and therefore are subject to strictures of this chapter. Florida Wildlife Federation v. Goldschmidt, S.D.Fla.1981, 506 F.Supp. 350. Environmental Law 128

Under this chapter, Congress intended to protect waters of the United States in a plenary, geographic sense, and wetlands were specifically included within such protection. U. S. v. Weisman, M.D.Fla.1980, 489 F.Supp. 1331. Environmental Law 128; Environmental Law 173

Jurisdiction over "waters of the United States" extends well beyond the mean high-water mark to marsh wetlands which are regularly or periodically inundated. Conservation Council of North Carolina v. Costanzo, E.D.N.C.1975, 398 F.Supp. 653, affirmed 528 F.2d 250. Navigable Waters 36(3)

12. ---- Miscellaneous waters, navigable waters

Phrase "waters of the United States," which defines term "navigable waters" in the Clean Water Act, does not

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

include channels through which water flows intermittently or ephemerally, or channels that periodically provide drainage for rainfall. (Per Justice Scalia with the Chief Justice and two Justices joining and one Justice concurring in the judgment.) Rapanos v. U.S., U.S.2006, 126 S.Ct. 2208, 165 L.Ed.2d 159, on remand 2007 WL 470555. Environmental Law 173

District court's erroneous instruction that a continuous or intermittent flow into a navigable-in-fact body of water would be sufficient to bring creek within the reach of the Clean Water Act (CWA) was not harmless error, requiring remand in criminal proceedings brought pursuant to the CWA; although expert testified that in his opinion there was a continuous uninterrupted flow between the creek in question and river that was navigable-in-fact water, he did not testify as to any "significant nexus" between creek and the river and the government did not present any evidence about the possible chemical, physical, or biological effect that the creek may have on the river, and, there was also no evidence presented of any actual harm suffered by the river. U.S. v. Robison, C.A.11 (Ala.) 2007, 2007 WL 3087419. Criminal Law 1172.1(3)

Creek that defendant rerouted and reshaped constituted a water of the United States, for purposes of the Clean Water Act prohibition against discharging and causing to be discharged pollutants into waters of the United States without a permit; although, due to an irrigation diversion structure installed upstream of section of creek that defendant altered, water only flowed in that section for about two months per year during spring runoff, the creek was a tributary of a river that qualified as a water of the United States. U.S. v. Moses, C.A.9 (Idaho) 2007, 2007 WL 2215954. Environmental Law 196

Drainage ditch that wastewater disposal business dumped industrial wastewater into was tributary of Tampa Bay and, thus, was "water of the United States" under Clean Water Act; violator discharged pollutants into storm sewer that was part of storm drainage system designed to discharge storm water into bay, and during heavy rainfall and high tide water from drainage ditch that storm sewer emptied into flowed into drainage canal and emptied into creek that was tributary to bay. U.S. v. Eidson, C.A.11 (Fla.) 1997, 108 F.3d 1336, certiorari denied 118 S.Ct. 248, 522 U.S. 899, 139 L.Ed.2d 177, certiorari denied 118 S.Ct. 578, 522 U.S. 1004, 139 L.Ed.2d 416. Environmental Law 173

Clean Water Act is broad statute reaching waters and wetlands that are not navigable or even directly connected to navigable waters, but neither Act nor interpretive regulations of Environmental Protection Agency (EPA) assert authority over groundwaters merely on basis that they may be hydrologically connected with surface waters. Village of Oconomowoc Lake v. Dayton Hudson Corp., C.A.7 (Wis.) 1994, 24 F.3d 962, certiorari denied 115 S.Ct. 322, 513 U.S. 930, 130 L.Ed.2d 282. Environmental Law 123; Environmental Law 173

Seasonal ponding in pits formerly used for salt production constituted "other waters" within Army Corps of Engineers' jurisdiction under Clean Water Act. Leslie Salt Co. v. U.S., C.A.9 (Cal.) 1990, 896 F.2d 354, certiorari denied 111 S.Ct. 1089, 498 U.S. 1126, 112 L.Ed.2d 1194, on remand 820 F.Supp. 478. Environmental Law 127

National Pollutant Discharge Elimination System permit regulating discharge of pollutants from oil and gas operations in Gulf of Mexico that covered only discharges in waters seaward beyond three mile belt of territorial seas, "navigable waters," did not require state certification, although Florida claimed its maritime boundaries extended three marine leagues under the Submerged Lands Act. Natural Resources Defense Council, Inc. v. U.S. E.P.A., C.A.9 1988, 863 F.2d 1420. Environmental Law 196

Jurisdiction of the Army Corps of Engineers under this chapter extends at least to waters which are no longer

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

subject to tidal inundation because of dikes without regard to the location of historic tidal water lines in their unobstructed, natural state. Leslie Salt Co. v. Froehlke, C.A.9 (Cal.) 1978, 578 F.2d 742. Environmental Law 173

Vernal pond on gun club's property did not have continuous surface connection with river, and pond thus did not constitute "navigable waters" of the United States for purposes of Clean Water Act (CWA) under standard of *Rapanos v. U.S.* plurality, notwithstanding proximity of river to pond and seasonal flooding of area, inasmuch as any surface connection was not continuous. Simsbury-Avon Preservation Soc., LLC v. Metacon Gun Club, Inc., D.Conn.2007, 472 F.Supp.2d 219. Environmental Law 128

Non-profit environmental organization demonstrated that hydrologic connection existed between navigable water and streams in question, as required on claim under Clean Water Act (CWA) alleging discharge of sediment, as pollutant, into navigable water without securing National Pollutant Discharge Elimination System (NPDES) permit, on evidence that lumber companies' geographic information system (GIS) maps demonstrated hydrological connection between each of streams in dispute and navigable water. Environmental Protection Information Center v. Pacific Lumber Co., N.D.Cal.2007, 469 F.Supp.2d 803. Environmental Law 206

On-site lake on coastal tract of land, which was connected to traditional navigable water by a pond outlet drainage way, was water of the United States subject to pollution discharge permit and fill discharge permit requirements of the Clean Water Act (CWA); any pollutant or fill material discharged into lake could reach navigable water via the drainage way and degrade quality of traditional navigable water. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law 127; Environmental Law 173

Ditches on tract of land that flowed into nonnavigable tributary of traditional navigable water were "waters of the United States," subject to pollution discharge permit and fill discharge permit requirements of Clean Water Act (CWA). North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law 126; Environmental Law 173

Water and sewer utility was liable under Clean Water Act (CWA), where utility discharged treated wastewater from its facility into bayous that eventually reached Mississippi sound without a national pollutant discharge elimination system (NPDES) permit. U.S. v. Gulf Park Water Co., Inc., S.D.Miss.1997, 972 F.Supp. 1056. Environmental Law 206

Manmade ponds did not constitute "navigable waters" within meaning of Clean Water Act (CWA); Environmental Protection Agency's (EPA's) definition of navigable waters included only "natural" ponds. Washington Wilderness Coalition v. Hecla Min. Co., E.D.Wash.1994, 870 F.Supp. 983. Environmental Law 173

Tidal creeks connected to river, which was navigable water of the United States traversing landowner's property, were navigable waters. U. S. v. Weisman, M.D.Fla.1980, 489 F.Supp. 1331. Navigable Waters 1(6)

This chapter and regulations promulgated thereunder are applicable to the nonnavigable waters of the Commonwealth of Puerto Rico, despite contention that such waters are areas of purely local concern and that federal regulation of areas is inapplicable under Puerto Rican Federal Relations Act, section 731 et seq. of Title 48. Com. of Puerto Rico v. Alexander, D.C.D.C.1977, 438 F.Supp. 90. Territories 18

Legal definition of "navigable waters" or "waters of the United States", within scope of this chapter, includes

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

any waterway within United States and also normally dry arroyos through which water may flow, where such water will ultimately end up in public waters such as a river or stream, tributary to a river or stream, lake, reservoir, bay, gulf, sea or ocean either within or adjacent to the United States. U. S. v. Phelps Dodge Corp., D.C.Ariz.1975, 391 F.Supp. 1181. Environmental Law 173

13. ---- Regulations, navigable waters

Army Corps of Engineers exceeded its congressional authorization under Clean Water Act when it promulgated regulation defining "waters of the United States," as used in Act, to include intrastate waters which need not have anything to do with navigable or interstate waters and whose use, degradation, or destruction could affect interstate or foreign commerce; therefore, regulation was invalid. U.S. v. Wilson, C.A.4 (Md.) 1997, 133 F.3d 251. Environmental Law 173

This section's definition of navigable waters as "waters of the United States, including the territorial seas", determines the scope of regulatory jurisdiction not only for Corps of Engineers under this chapter, but also for the Environmental Protection Agency and Coast Guard under other provisions of this chapter. State of Wyoming v. Hoffman, D.C.Wyo.1977, 437 F.Supp. 114. Navigable Waters 2

Regulations of United States Army Corps of Engineers which further define "navigable waters of the United States" as extending landward to the mean higher high-water line for Pacific Coast purposes is a reasonable interpretation of congressional definition "waters of the United States" in this section. Leslie Salt Co. v. Froehlke, N.D.Cal.1974, 403 F.Supp. 1292, supplemented 412 F.Supp. 1096, reversed in part , modified in part 578 F.2d 742. Environmental Law 173

Secretary of the Army and Chief of the Army Corps of Engineers are without authority to amend or change this section's definition of navigable waters and they acted unlawfully and in derogation of their responsibilities under this chapter by adopting regulation which defined navigable waters as those which had been, are, or may be, used for interstate or foreign commerce. Natural Resources Defense Council, Inc. v. Callaway, D.C.D.C.1975, 392 F.Supp. 685. Environmental Law 173; Environmental Law 123

14. Effluent limitation

"Effluent limitation" under specified sections of this chapter is a term of art in the context of this chapter, and is a set of standards restricting the quantities of pollutants that enterprises in a given industry may discharge. Crown Simpson Pulp Co. v. Costle, C.A.9 1979, 599 F.2d 897, rehearing denied , reversed on other grounds 100 S.Ct. 1093, 445 U.S. 193, 63 L.Ed.2d 312, on remand 642 F.2d 323. Environmental Law 183

15. Discharge of pollutant

Operation of dam to produce hydroelectricity raises potential for "discharge" within meaning of Clean Water Act (CWA), triggering statutory requirement of state certification that laws protecting water quality standards will not be violated. S.D. Warren Co. v. Maine Bd. of Environmental Protection, U.S.Me.2006, 126 S.Ct. 1843, 164 L.Ed.2d 625. Environmental Law 196

The evidence was sufficient to establish that defendant discharged pollutants into a creek, as element of offense of violating Clean Water Act by discharging and causing to be discharged pollutants into waters of the United States without a permit; even if defendant only ran heavy equipment in the creek bed, had log structures con-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

structed in creek, and moved gravel and other materials during the periods of the year when the section of the creek he impacted was dry due to the operation of an irrigation diversion structure upstream, he still deposited pollutants in the creek, and the evidence supported a determination that defendant created a situation in which pollutants, including disturbed and moved materials and log structures, remained in the creek when the water was flowing. U.S. v. Moses, C.A.9 (Idaho) 2007, 2007 WL 2215954.

Regulatory exemption for agricultural stormwater discharges contained in rule promulgated by the Environmental Protection Agency (EPA) under the Clean Water Act (CWA) to regulate the emission of water pollutants by concentrated animal feeding operations did not violate the CWA. Waterkeeper Alliance, Inc. v. U.S. E.P.A., C.A.2 2005, 399 F.3d 486. Environmental Law 196

Sidecasting, which involves deposit of dredged or excavated material from a wetland back into that same wetland, constitutes discharge of a pollutant under the Clean Water Act; even though sidecasting results in no net increase in the amount of material present in the wetland, it amounts to addition of a pollutant that was not present before. U.S. v. Deaton, C.A.4 (Md.) 2000, 209 F.3d 331. Environmental Law 175

Landowners' wetlands filling activities constituted discharge of pollutants into "water" within meaning of Clean Water Act. U.S. v. Pozsgai, C.A.3 (Pa.) 1993, 999 F.2d 719, rehearing denied, certiorari denied 114 S.Ct. 1052, 510 U.S. 1110, 127 L.Ed.2d 373. Environmental Law 175; Environmental Law 173

Placer mining is subject to regulation by Environmental Protection Agency under Clean Water Act, which charges EPA with developing comprehensive programs to prevent, reduce or eliminate pollution of navigable waters and which prevents the discharge of any pollutant by any person except in compliance with Act; words "navigable waters" are defined simply as waters of United States, and include placer mine discharge into nearby streams and rivers; also placer mining discharges "pollutants" within meaning of Act, which includes dredged soil rock, sand and cellular dirt, even if material discharged originally comes from streambed itself, since resuspension of material may be interpreted as addition of pollutant. Rybachek v. U.S. E.P.A., C.A.9 1990, 904 F.2d 1276. Environmental Law 178

Landowners' removal of vegetation in wetlands area and redeposit of the material constituted a "discharge" within meaning of this section and the material discharged into the wetlands was "fill material" subject to regulation of Army Corps of Engineers under this section; furthermore, removal of the vegetation constituted "dredging" since the vegetation was part of the wetlands. Avoyelles Sportsmen's League, Inc. v. Marsh, C.A.5 (La.) 1983, 715 F.2d 897. Environmental Law 136

In action challenging Army Corps of Engineers' installation and operation of hydroelectric generator at dam, district court did not err in holding that operation of dam did not result in "discharge of pollutant" as that term is defined in par. (12) of this section, since discharge of pollutant requires addition of pollutant from point source, and neither term applied to soil erosion or oxygen content of water. State of Mo. ex rel. Ashcroft v. Department of the Army, C.A.8 (Mo.) 1982, 672 F.2d 1297. Environmental Law 175

Whether the discharge of a particular substance defined as a "pollutant" in this chapter constitutes the discharge of a "pollutant" under this chapter does not depend upon the purpose for which the discharge is made. Minnehaha Creek Watershed Dist. v. Hoffman, C.A.8 (Minn.) 1979, 597 F.2d 617. Environmental Law 175

Real estate developer's point source discharges violated the Clean Water Act, where developer did not have appropriate stormwater discharge permit, its inadequate system for managing erosion helped create gullies that

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

deepened over time despite subsequent efforts at mitigation, and it left behind piles of dredged sand and gravel that the storm water carried into protected waters. Center for Biological Diversity v. Marina Point Development Associates, C.D.Cal.2006, 434 F.Supp.2d 789, amended 2006 WL 2403937. Environmental Law ⚷ 206

County was not "discharger" of pollution into waters of United States, and could not be held liable under Clean Water Act (CWA), for stormwater runoff from state highway owned, maintained, operated, and controlled by state. Jones v. E.R. Snell Contractor, Inc., N.D.Ga.2004, 333 F.Supp.2d 1344, affirmed 120 Fed.Appx. 786, 2004 WL 2157261, certiorari denied 125 S.Ct. 1735, 544 U.S. 962, 161 L.Ed.2d 603. Environmental Law ⚷ 226

Addition of materials such as sand and sediment to covered waters caused by coastal landowners' ditching activities constituted "discharge" within meaning of Clean Water Act (CWA), which prohibited discharge of pollutants into waters of the United States without permit. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law ⚷ 196

Clean Water Act's (CWA) National Pollutant Discharge Elimination System (NPDES) program does not apply to discharges to groundwater, even if that groundwater is hydrologically connected to surface water. Umatilla Waterquality Protective Ass'n, Inc. v. Smith Frozen Foods, Inc., D.Or.1997, 962 F.Supp. 1312. Environmental Law ⚷ 175

Pollution of creek and river caused by cattle grazing constituted "discharge" into navigable waters within meaning of Clean Water Act (CWA) section requiring state certification prior to issuance of federal permit for any activity resulting in discharge into navigable waters and, thus, state certification was required before Forest Service issued cattle grazing permits. Oregon Natural Desert Ass'n v. Thomas, D.Or.1996, 940 F.Supp. 1534, reversed 172 F.3d 1092, certiorari denied 120 S.Ct. 397, 528 U.S. 964, 145 L.Ed.2d 310. Environmental Law ⚷ 196

Pursuant to indemnity provision in connection with corporate asset purchase, providing that buyer assumed seller's liability for "the discharge at or by the [plant] of industrial products, waste or other materials into the air, streams, lakes, rivers or otherwise," buyer assumed seller's CERCLA liability based on benzine contamination of soil at plant, even though transaction pre-dated CERCLA, and despite buyer's claim that "discharge into" connoted only operational discharges from plant into air or body of water beyond plant's boundaries; drafters were charged with knowledge of statutory definitions of "discharge" and, interchangeably, "disposal," in Clean Water Act and Resource Conservation and Recovery Act (RCRA), which were directly known to parties, it was reasonable to conclude that drafters relied on RCRA's definition of "disposal," given provision's use of term "waste," but not "pollutants," and under court's construction of provision read with "at," and one of court's readings with term "by," events occurring within plant's boundaries were covered. City of Toledo v. Beazer Materials and Services, Inc., N.D.Ohio 1995, 912 F.Supp. 1051, reversed 103 F.3d 128. Indemnity ⚷ 33(6)

Act of "discharging of a pollutant," within meaning of Clean Water Act (CWA), occurred when lot owner utilized dump trucks, bulldozers and other equipment to place rock-pit fill, manure fill, silt, organic debris and other fill material on lots. U.S. v. Banks, S.D.Fla.1995, 873 F.Supp. 650, affirmed 115 F.3d 916, certiorari denied 118 S.Ct. 852, 522 U.S. 1075, 139 L.Ed.2d 752, rehearing denied 118 S.Ct. 1341, 523 U.S. 1041, 140 L.Ed.2d 501. Environmental Law ⚷ 175

Filling wetland is "discharge of a pollutant into navigable waters of the United States," and therefore, is prohibited by Clean Water Act (CWA) without permit. Fox Bay Partners v. U.S. Corps of Engineers, N.D.Ill.1993, 831

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

F.Supp. 605. Environmental Law ⚿ 196; Environmental Law ⚿ 136

Property owner's construction of concrete bulkhead and tide gate on bird refuge violated Clean Water Act in light of "recapture" provisions of Act that precluded defenses for maintenance of existing structures if activities caused change in use from wetlands to nonwetlands, and in light of facts that tide gate was new construction rather than maintenance of existing gate, and that installation of gate caused discharge of pollutants from side-casting and redeposit of excavated wetlands and from pouring of concrete. Leslie Salt Co. v. U.S., N.D.Cal.1992, 820 F.Supp. 478, affirmed in part 55 F.3d 1388, certiorari denied 116 S.Ct. 407, 516 U.S. 955, 133 L.Ed.2d 325. Environmental Law ⚿ 137

Town's alleged diversion of natural stream and resultant flooding which damaged landowners' property and alleged fraud in connection with sale of subdivision lots to landowners did not constitute violations of Clean Water Act (CWA); there was no indication that any pollutants were discharged either into stream or from stream into another body of water, and alleged fraud actions suggested state claims, not federal ones. Bettis v. Town of Ontario, N.Y., W.D.N.Y.1992, 800 F.Supp. 1113. Waters And Water Courses ⚿ 78

City violated Clean Water Act by discharging chlorine and alum floc into reservoir on navigable river, as result of adding chlorine and alum to water pumped from another river, without first obtaining a pollution emissions permit; chlorine residual, when discharged into navigable waters, was a "pollutant" within meaning of the Act, even though its intended use was beneficial, and alum sludge or floc was also a pollutant. Hudson River Fishermen's Ass'n v. City of New York, S.D.N.Y.1990, 751 F.Supp. 1088, affirmed 940 F.2d 649. Environmental Law ⚿ 206

Term "navigable waters," as used in Clean Water Act's definition of "discharge of pollutant" [33 U.S.C.A. § 1362(12)], did not include groundwater; thus, citizens' suit could not be maintained against federal government based on Coast Guard's release of contaminants into the ground, even though contaminants eventually were discharged into bay. Kelley for and on Behalf of People of State of Mich. v. U.S., W.D.Mich.1985, 618 F.Supp. 1103. Environmental Law ⚿ 226; Environmental Law ⚿ 173

Term "navigable waters," as used in Clean Water Act's definition of "discharge of pollutant" [33 U.S.C.A. § 1362(12)], did not include groundwater; thus, citizens' suit could not be maintained against federal government based on Coast Guard's release of contaminants into the ground, even though contaminants eventually were discharged into bay. Kelley for and on Behalf of People of State of Mich. v. U.S., W.D.Mich.1985, 618 F.Supp. 1103. Environmental Law ⚿ 226; Environmental Law ⚿ 173

Fill placed in wetlands on defendants' property was a "discharge of a pollutant" within purview of this chapter. U.S. v. Lambert, M.D.Fla.1984, 589 F.Supp. 366. Environmental Law ⚿ 175

For purpose of this chapter, a "discharge of a pollutant" occurred when defendant utilized dump trucks and bulldozers to deposit and spread fill material into wetlands adjacent to navigable water without benefit of Army Corps of Engineer's permit and defendants also violated this chapter when they discharged wet cement on top of the fill to create a patio for a house trailer. U.S. v. Robinson, M.D.Fla.1983, 570 F.Supp. 1157. Environmental Law ⚿ 175

Although operation of hydroelectric generator at dam involved discharge of several thousand cubic feet per second of water into river channel below dam, and associated rise and fall of water level in river dislodged and carried away silt and other material defined as "pollutants" under this section, such did not constitute "runoff of

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

a pollutant" within meaning of section, and thus operation of generator was not subject to state and local water quality laws under this chapter. State of Mo., ex rel. Ashcroft v. Department of Army, Corps of Engineers, W.D.Mo.1980, 526 F.Supp. 660, affirmed 672 F.2d 1297. Environmental Law 175

The term "discharge" comprehends any addition of any pollutant to navigable waters from any point source and, though not limited to intentional or foreseen direct additions, extends to the indirect and accidental or unintentional such as might result by an act of God upon an enclosed processing facility, the structure of which would appear to preclude the possibility of the addition of process pollutants to navigable waters. SED, Inc. v. City of Dayton, S.D.Ohio 1981, 519 F.Supp. 979. Environmental Law 175

Disposal of chemical wastes into underground waters which have not been alleged to flow into or otherwise affect surface water does not constitute "discharge of a pollution" within this chapter; this chapter does not apply to subsurface wells. U. S. v. GAF Corp., S.D.Tex.1975, 389 F.Supp. 1379. Environmental Law 173

As applied to storm water runoff systems, word "addition" in par. (12) of this section and section 1342 of this title requiring a permit for addition of any pollutant to navigable waters means a discharge into navigable waters, not an increase in amount of pollutant introduced into the system. Pedersen v. Washington State Dept. of Transp., Wash.App.1980, 611 P.2d 1293, 25 Wash.App. 781, review denied. Environmental Law 196

16. Point source--Generally

Depressions, rills, and gullies that had formed along ditches on coastal landing tract as result of landowners' active and purposeful ditching of tract were "point sources" under the Clean Water Act (CWA), so as to support finding that they were subject to CWA discharge permit requirements. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law 175

Concept of "point source," for purposes of Clean Water Act (CWA), embraces broadest possible definition of any identifiable conveyance from which pollutants might enter waters of United States; as such, bulldozers, backhoes, draglines and other earthmoving equipment are all point sources under CWA. U.S. v. Lambert, S.D.W.Va.1996, 915 F.Supp. 797. Environmental Law 175

Designation as "nonpoint source" of pollution under Clean Water Act (CWA) is limited to uncollected runoff water which is difficult to ascribe to single polluter. Beartooth Alliance v. Crown Butte Mines, D.Mont.1995, 904 F.Supp. 1168. Environmental Law 175

Term "point source," within meaning of Clean Water Act (CWA) section defining discharge of pollutant as addition of any pollutant to navigable waters from any point source, includes bulldozers, dump trucks and other equipment used to place dredged or fill material in waters of United States. U.S. v. Banks, S.D.Fla.1995, 873 F.Supp. 650, affirmed 115 F.3d 916, certiorari denied 118 S.Ct. 852, 522 U.S. 1075, 139 L.Ed.2d 752, rehearing denied 118 S.Ct. 1341, 523 U.S. 1041, 140 L.Ed.2d 501. Environmental Law 175

Essence of point source discharge under par. (14) of this section is that discharge be from "discernible, confined, and discrete conveyance," which has nothing to do with intent of operators or reasonableness of existing collection system, and though it may result from such natural phenomena as rainfall and gravity, surface runoff of contaminated waters, once channeled or collected, constitutes discharge by "point source," for purposes of such paragraph. O'Leary v. Moyer's Landfill, Inc., E.D.Pa.1981, 523 F.Supp. 642. Environmental Law 175

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

If plaintiff environmental groups' proof brought proposed dam and/or its turbines within provision of this section defining point source of pollution, project would be held to be such, despite failure of administrator to arrive at a similar conclusion. South Carolina Wildlife Federation v. Alexander, D.C.S.C.1978, 457 F.Supp. 118. Environmental Law 175

While discharge facility which was being constructed by electric utility and which called for intersection of a surfing site by walls of a transit basin came within literal definition of a "source" within this section, it could not be considered a "source" and, hence, could not be considered a "new source" so as to require Environmental Protection Agency to prepare an environmental impact statement prior to issuance of a permit under National Pollutant Discharge Elimination System, where the facility was merely the proposed method of controlling an existing source of pollution from the generating plants maintained by the utility and, as a method of control, could not also have been the source. Mahelona v. Hawaiian Elec. Co., Inc., D.C.Hawai'i 1976, 418 F.Supp. 1328. Environmental Law 595(3); Environmental Law 595(4)

17. ---- Particular point sources

Debris and construction equipment on property on which scrap metal business was operated qualified as a "point source" under the Clean Water Act (CWA), for purpose of claim of CWA violation asserted against owner of property by plaintiff owner of adjoining property; piles of debris collected water, which then flowed into a nearby stream, and it did not matter whether erosion gullies from which the water flowed into the stream were constructed by defendants. Parker v. Scrap Metal Processors, Inc., C.A.11 (Ga.) 2004, 386 F.3d 993, rehearing and rehearing en banc denied 125 Fed.Appx. 979, 2004 WL 2806000. Environmental Law 175

Use of bulldozers and tractors to pull large metal prongs through soil, in deep ripping wetlands, comes within Clean Water Act's (CWA) broad definition of "point source." Borden Ranch Partnership v. U.S. Army Corps of Engineers, C.A.9 (Cal.) 2001, 261 F.3d 810, certiorari granted 122 S.Ct. 2355, 536 U.S. 903, 153 L.Ed.2d 178, affirmed 123 S.Ct. 599, 537 U.S. 99, 154 L.Ed.2d 508. Environmental Law 175

Defendants' conduct in severing 250-ton concrete and rebar block from stern of ferrous concrete barge and dumping it into bay, severing approximately one hundred pieces of rebar and attached concrete from barge's stern and dropping it into lagoon, and conducting sandblasting operations on floating barge that projected sand and paint chip residue into bay constituted discharge of pollutant from point source, and thus violated Clean Water Act, in that barge was "floating craft" expressly included within definition of "point source." U.S. v. West Indies Transport, Inc., C.A.3 (Virgin Islands) 1997, 127 F.3d 299, certiorari denied 118 S.Ct. 700, 522 U.S. 1052, 139 L.Ed.2d 644, denial of post-conviction relief affirmed 60 Fed.Appx. 412, 2003 WL 1564255. Environmental Law 206

Vehicles used to spread liquid manure generated as part of large dairy farm were each a "point source" under Clean Water Act; manure was collected into vehicles and discharged into fields from which manure flowed into navigable waters. Concerned Area Residents for Environment v. Southview Farm, C.A.2 (N.Y.) 1994, 34 F.3d 114, certiorari denied 115 S.Ct. 1793, 514 U.S. 1082, 131 L.Ed.2d 721. Environmental Law 175

Culvert running under railroad at boundary of landfill connecting two portions of a marsh was a "point source" for discharge of pollutants within meaning of Clean Water Act even if culvert did not "add" pollutants to navigable waters. Dague v. City of Burlington, C.A.2 (Vt.) 1991, 935 F.2d 1343, certiorari granted in part 112 S.Ct. 964, 502 U.S. 1071, 117 L.Ed.2d 130, reversed in part 112 S.Ct. 2638, 505 U.S. 557, 120 L.Ed.2d 449, on remand 976 F.2d 801. Environmental Law 175

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Cattle feedlot was point source as defined by the Clean Water Act; feedlot had in past and might in future discharge pollutants into navigable waters as result of rain that would not amount to a 25-year, 24-hour storm event. Carr v. Alta Verde Industries, Inc., C.A.5 (Tex.) 1991, 931 F.2d 1055, rehearing denied.

Deep injection wells utilized by steel companies for disposal of unwanted byproduct liquid waste containing ammonia and hazardous chemicals did not fall within exemption from requirements of Hazardous and Solid Waste Amendments of Resource Conservation and Recovery Act for point sources required to have discharge permits under Clean Water Act. Inland Steel Co. v. E.P.A., C.A.7 1990, 901 F.2d 1419, rehearing denied. Environmental Law 430

Pipes or spillways through which water flows from reservoir through dam into downstream river fall within definition of "point source" within purview of regulation of water quality changes caused by dams under National Pollutant Discharge Elimination System. National Wildlife Federation v. Gorsuch, C.A.D.C.1982, 693 F.2d 156, 224 U.S.App.D.C. 41. Environmental Law 175

A point source of pollution may be present where miners design spoil piles from discharged overburden such that, during periods of precipitation, erosion of spoil pile walls results in discharge into a navigable body of water by means of ditches, gullies and similar conveyances, even if miners have done nothing beyond mere collection of rock and other materials. Sierra Club v. Abston Const. Co., Inc., C.A.5 (Ala.) 1980, 620 F.2d 41. Environmental Law 178

Discharges of sodium cyanide-sodium hydroxide leachate solution from a reserve sump used in gold leaching operations, which discharges were caused by flaws in the construction or inadequate size to handle the fluids utilized, were discharges from a "point source" under this chapter. U. S. v. Earth Sciences, Inc., C.A.10 (Colo.) 1979, 599 F.2d 368. Environmental Law 178

Unpaved logging roads, as sources of sediment that was discharged via inboard ditches to stream crossing culverts, ditch relief culverts, and cross drain culverts, and rolling dips, could be point source under Clean Water Act (CWA), although those road features were best management practice (BMPs) in compliance with California Forest Practice Rules which had been designed to disperse storm water on hillside in order to promote natural filtration and lessen runoff; points of failure can be point sources when device or system designed to channel or diffuse runoff failed and instead channels runoff into navigable water. Environmental Protection Information Center v. Pacific Lumber Co., N.D.Cal.2007, 469 F.Supp.2d 803. Environmental Law 175

Ditches that coastal landowners' dug on their tract of land were "point sources" under the Clean Water Act (CWA), so as to be subject to discharge permit requirements, where ditches served to channel and collect stormwater and other pollutants that were subsequently discharged into waters of the United States. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law 175

Check dams and sediment traps that were constructed in ditches on coastal landing tract in effort to reduce discharge of pollutants into bodies of water were "point sources" under the Clean Water Act (CWA), and thus dams and traps were subject to CWA discharge permit requirements; testimony indicated that check dams on tract had been completely buried by sediment and that sediment had been discharged from dams and traps into waters of the United States. North Carolina Shellfish Growers Ass'n v. Holly Ridge Associates, LLC., E.D.N.C.2003, 278 F.Supp.2d 654, 357 N.C. 1429. Environmental Law 175

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

System designed to prevent discharge of pollutants from spent mushroom substrate (SMS) would be a "point source," in context of Clean Water Act (CWA) and Pennsylvania Clean Streams Law (PCSL), where system leaked and resulted in discharge of polluted wastewater into navigable water. Reynolds v. Rick's Mushroom Service, Inc., E.D.Pa.2003, 246 F.Supp.2d 449. Environmental Law 175

Salmon farm operator's offshore net pens were "concentrated aquatic animal production facilities" (CAAPF), and thus were "point sources," within meaning of Clean Water Act (CWA); release of pollutants from pens into bay constituted identifiable, discernible, confined, and discrete emission or conveyance into water. U.S. Public Interest Research Group v. Atlantic Salmon of Maine, LLC., D.Me.2002, 215 F.Supp.2d 239. Environmental Law 175

Bulldozer used by defendant to spread waste, specifically screw press rejects, into lake was "point source" under the Clean Water Act (CWA), prohibiting discharge of pollutants from point source into navigable waters of the United States. Colvin v. U.S., C.D.Cal.2001, 181 F.Supp.2d 1050. Environmental Law 175

Pipeline's facility on which operation of above-ground tanks had resulted in petroleum release into swamp was "point source" under Clean Water Act (CWA). Williams Pipe Line Co. v. Bayer Corp., S.D.Iowa 1997, 964 F.Supp. 1300. Environmental Law 177

Secondary lead smelting plant was "point source" subject to Clean Water Act's (CWA) reporting and disclosure requirements, even though wastewater generated by plant was treated at publicly-owned treatment works (POTW) before it was discharged into river, such that plant did not discharge pollutants directly into navigable waters. RSR Corp. v. Browner, S.D.N.Y.1996, 924 F.Supp. 504, affirmed 1997 WL 134413, vacated. Environmental Law 207

For purposes of motion to dismiss for failure to state claim, allegations of complaint were sufficient to establish that mining company's tailing ponds were each "point source" within meaning of Clean Water Act (CWA), despite claim that ponds were merely areas of low topography into which tailing from mineral processing activities had been deposited and through which water could percolate; tailings ponds were point sources, as they collected and channeled contaminated water into discrete conveyance. Washington Wilderness Coalition v. Hecla Min. Co., E.D.Wash.1994, 870 F.Supp. 983. Environmental Law 175

Defendant who placed vials of human blood in river bulkhead was properly convicted for violating provision of Clean Water Act making it an offense for any person to discharge pollutant into navigable waters from a point source; defendant himself could be found to be a "point source," and even if he was not, rocks forming bulkhead came within definition of "point source." U.S. v. Villegas, E.D.N.Y.1991, 784 F.Supp. 6, affirmed in part , reversed in part 3 F.3d 643, certiorari denied 114 S.Ct. 2764, 512 U.S. 1245, 129 L.Ed.2d 878. Environmental Law 743

Culvert through which water flowed from city landfill into adjacent wetland constituted "point source," within meaning of provisions prohibiting discharge of pollutant into waters of United States from any "point source" unless authorized under Clean Water Act, even though city did not own land on which culvert was located. Dague v. City of Burlington, D.Vt.1989, 732 F.Supp. 458. Environmental Law 196

Hazardous waste overflows from lagoon of owner of hazardous waste storage site into nearby stream without permit constituted discharge of pollutants to navigable waters from a "point source" within meaning of Clean Water Act of 1977, even though owner did not intend that the discharges take place. Fishel v. Westinghouse

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Elec. Corp., M.D.Pa.1986, 640 F.Supp. 442. Environmental Law ⚿ 175

Bulldozers and dump trucks used to dump and spread fill material for construction of road on wetlands were "point sources of pollution" within meaning of this chapter. U. S. v. Weisman, M.D.Fla.1980, 489 F.Supp. 1331. Environmental Law ⚿ 175

National Pollutant Discharge Elimination System requirements did pertain to piped diversion of river water into another body of water. Del-Aware Unlimited, Inc. v. Com., Dept. of Environmental Resources, Pa.Cmwlth.1986, 508 A.2d 348, 96 Pa.Cmwlth. 361, appeal denied 523 A.2d 1132, 514 Pa. 644. Environmental Law ⚿ 175

18. ---- Particular nonpoint sources

Human being was not "point source" subject to criminal liability under Clean Water Act; Act was at best ambiguous as to whether "point source" applied to human being, and rule of lenity required that ambiguity be resolved in defendant's favor. U.S. v. Plaza Health Laboratories, Inc., C.A.2 (N.Y.) 1993, 3 F.3d 643, certiorari denied 114 S.Ct. 2764, 512 U.S. 1245, 129 L.Ed.2d 878. Environmental Law ⚿ 743; Environmental Law ⚿ 736

Environmental Protection Agency's (EPA) approval of West Virginia's antidegradation procedures under Clean Water Act (CWA), which stated that nonpoint sources would be deemed in compliance if best management practices were installed and maintained, although degradation of Tier 2 waters from point sources might occur after Tier 2 review, was reasonable; EPA reasonably concluded that best management practices for nonpoint source pollution would be "achieved," as required by EPA regulations, if those practices were "installed and maintained," as required by West Virginia's procedures. Ohio Valley Environmental Coalition v. Horinko, S.D.W.Va.2003, 279 F.Supp.2d 732. Environmental Law ⚿ 191

Building from which some trash had allegedly fallen into river, and into which rain water allegedly leaked and passed into river through runoff, was not "point source" within meaning of Clean Water Act. Hudson Riverkeeper Fund, Inc. v. Harbor at Hastings Associates, S.D.N.Y.1996, 917 F.Supp. 251. Environmental Law ⚿ 175

Diffuse runoff of farmer's liquid manure application was not "point source" discharge, and thus not covered by Clean Water Act; evidence showed only that liquid flowed to and through lowest areas of field without ever being "collected" by human activity. Concerned Area Residents for the Environment v. Southview Farm, W.D.N.Y.1993, 834 F.Supp. 1422, reversed 34 F.3d 114, certiorari denied 115 S.Ct. 1793, 514 U.S. 1082, 131 L.Ed.2d 721. Environmental Law ⚿ 175

Uncollected surface runoff may, but does not necessarily, constitute discharge from a point source within this chapter. U. S. v. Oxford Royal Mushroom Products, Inc., E.D.Pa.1980, 487 F.Supp. 852. Environmental Law ⚿ 175

19. Schedule of compliance

Modifications of originally planned upgrades at water pollution control plants (WCPC) pursuant to revised phosphorus control plan made originally planned tunnel, filters, and step-feed system unnecessary to comply with phosphorus effluent limitation and, thus, such upgrades were not remedial measures "leading to compliance" with effluent limitation, and failure to complete upgrades therefore did not violate "schedule of compliance"

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

within meaning of Clean Water Act (CWA). Upper Chattahoochee Riverkeeper Fund, Inc. v. City of Atlanta, N.D.Ga.1996, 953 F.Supp. 1541. Environmental Law ⚿ 206

20. Evidence

Corps of Engineers' use of facultative plants as an indicator of hydrophytic vegetation did not render unreliable, for purposes of action under the Clean Water Act (CWA), expert's opinion that the wetlands extended to the lake; presence of hydrophytic vegetation was only one of three criteria used to define wetlands and Corps' use of other criteria ensured that its methods were reliable, and in any case, 1987 Corps of Engineers Wetlands Delineation Manual, which permitted use of facultative plants to identify wetlands, was entitled to deference. U.S. v. Bailey, D.Minn.2007, 516 F.Supp.2d 998. Environmental Law ⚿ 148

United States Code Annotated Currentness
Title 33. Navigation and Navigable Waters (Refs & Annos)
Chapter 26. Water Pollution Prevention and Control (Refs & Annos)
Subchapter I. Research and Related Programs (Refs & Annos)
§ 1251. Congressional declaration of goals and policy

(a) Restoration and maintenance of chemical, physical and biological integrity of Nation's waters; national goals for achievement of objective

The objective of this chapter is to restore and maintain the chemical, physical, and biological integrity of the Nation's waters. In order to achieve this objective it is hereby declared that, consistent with the provisions of this chapter--

(1) it is the national goal that the discharge of pollutants into the navigable waters be eliminated by 1985;

(2) it is the national goal that wherever attainable, an interim goal of water quality which provides for the protection and propagation of fish, shellfish, and wildlife and provides for recreation in and on the water be achieved by July 1, 1983;

(3) it is the national policy that the discharge of toxic pollutants in toxic amounts be prohibited;

(4) it is the national policy that Federal financial assistance be provided to construct publicly owned waste treatment works;

(5) it is the national policy that areawide waste treatment management planning processes be developed and implemented to assure adequate control of sources of pollutants in each State;

(6) it is the national policy that a major research and demonstration effort be made to develop technology necessary to eliminate the discharge of pollutants into the navigable waters, waters of the contiguous zone, and the oceans; and

(7) it is the national policy that programs for the control of nonpoint sources of pollution be developed and implemented in an expeditious manner so as to enable the goals of this chapter to be met through the control of both point and nonpoint sources of pollution.

(b) Congressional recognition, preservation, and protection of primary responsibilities and rights of States

It is the policy of the Congress to recognize, preserve, and protect the primary responsibilities and rights of States to prevent, reduce, and eliminate pollution, to plan the development and use (including restoration, preservation, and enhancement) of land and water resources, and to consult with the Administrator in the exercise of his authority under this chapter. It is the policy of Congress that the States manage the construction grant pro-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

gram under this chapter and implement the permit programs under sections 1342 and 1344 of this title. It is further the policy of the Congress to support and aid research relating to the prevention, reduction, and elimination of pollution, and to provide Federal technical services and financial aid to State and interstate agencies and municipalities in connection with the prevention, reduction, and elimination of pollution.

(c) Congressional policy toward Presidential activities with foreign countries

It is further the policy of Congress that the President, acting through the Secretary of State and such national and international organizations as he determines appropriate, shall take such action as may be necessary to insure that to the fullest extent possible all foreign countries shall take meaningful action for the prevention, reduction, and elimination of pollution in their waters and in international waters and for the achievement of goals regarding the elimination of discharge of pollutants and the improvement of water quality to at least the same extent as the United States does under its laws.

(d) Administrator of Environmental Protection Agency to administer chapter

Except as otherwise expressly provided in this chapter, the Administrator of the Environmental Protection Agency (hereinafter in this chapter called "Administrator") shall administer this chapter.

(e) Public participation in development, revision, and enforcement of any regulation, etc.

Public participation in the development, revision, and enforcement of any regulation, standard, effluent limitation, plan, or program established by the Administrator or any State under this chapter shall be provided for, encouraged, and assisted by the Administrator and the States. The Administrator, in cooperation with the States, shall develop and publish regulations specifying minimum guidelines for public participation in such processes.

(f) Procedures utilized for implementing chapter

It is the national policy that to the maximum extent possible the procedures utilized for implementing this chapter shall encourage the drastic minimization of paperwork and interagency decision procedures, and the best use of available manpower and funds, so as to prevent needless duplication and unnecessary delays at all levels of government.

(g) Authority of States over water

It is the policy of Congress that the authority of each State to allocate quantities of water within its jurisdiction shall not be superseded, abrogated or otherwise impaired by this chapter. It is the further policy of Congress that nothing in this chapter shall be construed to supersede or abrogate rights to quantities of water which have been established by any State. Federal agencies shall co-operate with State and local agencies to develop comprehensive solutions to prevent, reduce and eliminate pollution in concert with programs for managing water resources.

Codifications

The Federal Water Pollution Control Act, comprising this chapter, was originally enacted by Act June 30, 1948, c. 758, 62 Stat. 1155, and amended by Acts July 17, 1952, c. 927, 66 Stat. 755; July 9, 1956, c. 518, 70 Stat. 498; June 25, 1959, Pub.L. 86-70, 73 Stat. 141; July 12, 1960, Pub.L. 86-624, 74 Stat. 411; July 20, 1961, Pub.L. 87-88, 75 Stat. 204; Oct. 2, 1965, Pub.L. 89-234, 79 Stat. 903; Nov. 3, 1966, Pub.L. 89-753, 80 Stat. 1246; Apr. 3, 1970, Pub.L. 91-224, 84 Stat. 91; Dec. 31, 1970, Pub.L. 91-611, 84 Stat. 1818; July 9, 1971, Pub.L. 92-50, 85 Stat. 124; Oct. 13, 1971, Pub.L. 92-137, 85 Stat. 379; Mar. 1, 1972, Pub.L. 92-240, 86 Stat. 47, and was formerly classified first to section 466 et seq. of this title and later to section 1151 et seq. of this title. The Act is shown herein, however, as having been added by Pub.L. 92-500 without reference to such intervening amendments because of the extensive amendment, reorganization, and expansion of the Act's provisions by Pub.L. 92-500.

Amendments

1987 Amendments. Subsec. (a)(7). Pub.L. 100-4 added par. (7).

1977 Amendments. Subsec. (b). Pub.L. 95-217, § 26(b), added provisions expressing Congressional policy that the States manage the construction grant program under this chapter and implement the permit program under sections 1342 and 1344 of this title.

Subsec. (g). Pub.L. 95-217, § 5(a), added subsec. (g).

Savings Provisions

Section 4 of Pub.L. 92-500 provided that:

"(a) No suit, action, or other proceeding lawfully commenced by or against the Administrator or any other officer or employee of the United States in his official capacity or in relation to the discharge of his official duties under the Federal Water Pollution Control Act as in effect immediately prior to the date of enactment of this Act [Oct. 18, 1972] shall abate by reason of the taking effect of the amendment made by section 2 of this Act [which enacted this chapter]. The court may, on its own motion or that of any party made at any time within twelve months after such taking effect, allow the same to be maintained by or against the Administrator or such officer or employee.

"(b) All rules, regulations, orders, determinations, contracts, certifications, authorizations, delegations or other

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

actions duly issued, made, or taken by or pursuant to the Federal Water Pollution Control Act as in effect immediately prior to the date of enactment of this Act [Oct. 18, 1972], and pertaining to any functions, powers, requirements, and duties under the Federal Water Pollution Control Act as in effect immediately prior to the date of enactment of this Act [Oct. 18, 1972], shall continue in full force and effect after the date of enactment of this Act [Oct. 18, 1972] until modified or rescinded in accordance with the Federal Water Pollution Control Act as amended by this Act [this chapter].

"(c) The Federal Water Pollution Control Act as in effect immediately prior to the date of enactment of this Act [Oct. 18, 1972] shall remain applicable to all grants made from funds authorized for the fiscal year ending June 30, 1972, and prior fiscal years, including any increases in the monetary amount of any such grant which may be paid from authorizations for fiscal years beginning after June 30, 1972, except as specifically otherwise provided in section 202 of the Federal Water Pollution Control Act as amended by this Act [section 1282 of this title] and in subsection (c) of section 3 of this Act."

Severability of Provisions

Section 512 of Act June 30, 1948, c. 758, Title V, as added Oct. 18, 1972, Pub.L. 92-500, § 2, 86 Stat. 894, provided that: "If any provision of this Act [this chapter], or the application of any provision of this Act [this chapter] to any person or circumstance, is held invalid, the application of such provision to other persons or circumstances, and the remainder of this Act [this chapter], shall not be affected thereby."

Short Title

2002 Amendments. Pub.L. 107-303, § 1(a), Nov. 27, 2002, 116 Stat. 2355, provided that: "This Act [enacting 33 U.S.C.A. § 1271a, amending 33 U.S.C.A. §§ 1254, 1266, 1268, 1270, 1285, 1290, 1324, 1329, 1330 and 1375, enacting provisions set out as notes under this section, 31 U.S.C.A. § 1113 and 33 U.S.C.A. § 1254, and repealing provisions set out as a note under 20 U.S.C.A. § 50] may be cited as the 'Great Lakes and Lake Champlain Act of 2002'."

Pub.L. 107-303, Title I, § 101, Nov. 27, 2002, 116 Stat. 2355, provided that: "This Title [enacting 33 U.S.C.A. § 1271a, and amending 33 U.S.C.A. § 1268] may be cited as the 'Great Lakes Legacy Act of 2002'."

Pub.L. 107-303, Title II, § 201, Nov. 27, 2002, 116 Stat. 2358, provided that: "This Title [amending 33 U.S.C.A. § 1270] may be cited as the 'Daniel Patrick Moynihan Lake Champlain Basin Program Act of 2002'."

2000 Amendments. Pub.L. 106-457, Title VI, § 601, Nov. 7, 2000, 114 Stat. 1975, provided that: "This title [enacting section 1300 of this title] may be cited as the 'Alternative Water Sources Act of 2000'."

Pub.L. 106-457, Title V, § 501, Nov. 7, 2000, 114 Stat. 1973, provided that: "This title [enacting section 1273 of this title] may be cited as the 'Lake Pontchartrain Basin Restoration Act of 2000'."

Pub.L. 106-457, Title IV, § 401, Nov. 7, 2000, 114 Stat. 1973, provided that: "This title [amending section 1269 of this title] may be cited as the 'Long Island Sound Restoration Act'."

Pub.L. 106-457, Title II, § 201, Nov. 7, 2000, 114 Stat. 1967, provided that: "This title [amending section 1267 of this title and enacting provisions set out as a note under section 1267 of this title] may be cited as the

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

'Chesapeake Bay Restoration Act of 2000'."

Pub.L. 106-284, § 1, Oct. 10, 2000, 114 Stat. 870, provided that: "This Act [enacting sections 1346 and 1375a of this title and amending sections 1254, 1313, 1314, 1362, and 1377 of this title] may be cited as the 'Beaches Environmental Assessment and Coastal Health Act of 2000'."

1994 Amendments. Pub.L. 103-431, § 1, Oct. 31, 1994, 108 Stat. 4396, provided that: "This Act [amending section 1311 of this title] may be cited as the 'Ocean Pollution Reduction Act'."

1990 Amendments. Pub.L. 101-596, § 1, Nov. 16, 1990, 104 Stat. 3000, provided that: "This Act [enacting sections 1269 and 1270 and amending sections 1268 and 1324 of this title, and enacting note provisions under this section and section 1270 of this title] may be cited as the 'Great Lakes Critical Programs Act of 1990'."

Pub.L. 101-596, Title II, § 201, Nov. 16, 1990, 104 Stat. 3004, provided that: "This part [enacting section 1269 and amending section 1416 of this title] may be cited as the 'Long Island Sound Improvement Act of 1990'."

Pub.L. 101-596, Title III, § 301, Nov. 16, 1990, 104 Stat. 3006, provided that: "This title [enacting section 1270 and amending section 1324(d)(2) of this title and enacting note provision under section 1270 of this title] may be cited as the 'Lake Champlain Special Designation Act of 1990'."

1988 Amendments. Pub.L. 100-653, Title X, § 1001, Nov. 14, 1988, 102 Stat. 3835, provided that: "This title [amending section 1330(a)(2)(B) of this title and enacting provisions set out as notes under section 1330 of this title] may be cited as the 'Massachusetts Bay Protection Act of 1988'."

1987 Amendments. Section 1(a) of Pub.L. 100-4 provided that: "This Act [enacting sections 1254a, 1267, 1268, 1281b, 1329, 1330, 1377, 1381, 1382, 1383, 1384, 1385, 1386, 1387, and 1414a of this title, amending sections 1251, 1254, 1256, 1262, 1281, 1282, 1283, 1284, 1285, 1287, 1288, 1291, 1311, 1312, 1313, 1314, 1317, 1318, 1319, 1321, 1322, 1324, 1342, 1344, 1345, 1361, 1362, 1365, 1369, 1375, and 1376 of this title, and enacting provisions set out as notes under sections 1251, 1284, 1311, 1317, 1319, 1330, 1342, 1345, 1362, 1375, and 1414a of this title and section 1962d-20 of Title 42, The Public Health and Welfare] may be cited as the 'Water Quality Act of 1987'."

1981 Amendments. Pub.L. 97-117, § 1, Dec. 29, 1981, 95 Stat. 1623, provided that: "This Act [enacting sections 1298, 1299, and 1313a of this title, amending sections 1281 to 1285, 1287, 1291, 1292, 1296, 1311, and 1314 of this title, and enacting provisions set out as notes under sections 1311 and 1375 of this title] may be cited as the 'Municipal Wastewater Treatment Construction Grant Amendments of 1981'."

1977 Amendments. Section 1 of Pub.L. 95-217 provided: "That this Act [enacting sections 1281a, 1294 to 1296, and 1297 of this title, amending sections 1251, 1252, 1254 to 1256, 1259, 1262, 1263, 1281, 1282 to 1288, 1291, 1292, 1311, 1314, 1315, 1317 to 1319, 1321 to 1324, 1328, 1341, 1342, 1344, 1345, 1362, 1364, 1375, and 1376 of this title, enacting provisions set out as notes under sections 1251, 1284, 1286, 1314, 1321, 1342, 1344, and 1376 of this title, and amending a provision set out as a note under this section] may be cited as the 'Clean Water Act of 1977'."

1972 Acts. Section 519, formerly section 518, of Act June 30, 1948, c. 758, Title V, as added Oct. 18, 1972, Pub.L. 92-500, § 2, 86 Stat. 896, amended Dec. 27, 1977, Pub.L. 95-217, § 2, 91 Stat. 1566, and renumbered Feb. 4, 1987, Pub.L. 100-4, Title V, § 506, 101 Stat. 76, provided that: "This Act [enacting this chapter] may be

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

cited as the 'Federal Water Pollution Control Act' (commonly referred to as the Clean Water Act)."

Section 1 of Pub.L. 92-500 provided: "That this Act [enacting this chapter, amending section 24 of Title 12, Banks and Banking, sections 633 and 636 of Title 15, Commerce and Trade, and section 711 of former Title 31, Money and Finance, and enacting provisions set out as notes under this section and sections 1281 and 1361 of this title] may be cited as the 'Federal Water Pollution Control Act Amendments of 1972'."

Standards

For provisions relating to the responsibility of the head of each Executive agency for compliance with applicable pollution control standards, see Ex. Ord. No. 12088, Oct. 13, 1978, 43 F.R. 47707, set out as a note under section 4321 of Title 42, The Public Health and Welfare.

Seafood Processing Study; Submittal of Results to Congress Not Later Than January 1, 1979

Pub.L. 95-217, § 74, Dec. 27, 1977, 91 Stat. 1609, provided that the Administrator of the Environmental Protection Agency conduct a study to examine the geographical, hydrological, and biological characteristics of marine waters to determine the effects of seafood processes which dispose of untreated natural wastes into such waters and to include in this study an examination of technologies which may be used in such processes to facilitate the use of the nutrients in these wastes or to reduce the discharge of such wastes into the marine environment and to submit the result of this study to Congress not later than Jan. 1, 1979.

Oversight Study

Section 5 of Pub.L. 92-500 authorized the Comptroller General of the United States to conduct a study and review of the research, pilot, and demonstration programs related to prevention and control of water pollution conducted, supported, or assisted by any Federal agency pursuant to any federal law or regulation and assess conflicts between these programs and their coordination and efficacy, and to report to Congress thereon by Oct. 1, 1973.

International Trade Study

Section 6 of Pub.L. 92-500 provided that:

"(a) The Secretary of Commerce, in cooperation with other interested Federal agencies and with representatives of industry and the public, shall undertake immediately an investigation and study to determine--

"(1) the extent to which pollution abatement and control programs will be imposed on, or voluntarily undertaken by, United States manufacturers in the near future and the probable short- and long-range effects of the costs of such programs (computed to the greatest extent practicable on an industry-by-industry basis) on (A) the production costs of such domestic manufacturers, and (B) the market prices of the goods produced by them;

"(2) the probable extent to which pollution abatement and control programs will be implemented in foreign industrial nations in the near future and the extent to which the production costs (computed to the greatest extent practicable on an industry-by-industry basis) of foreign manufacturers will be affected by the costs of

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

such programs;
"(3) the probable competitive advantage which any article manufactured in a foreign nation will likely have in relation to a comparable article made in the United States if that foreign nation--

"(A) does not require its manufacturers to implement pollution abatement and control programs,
"(B) requires a lesser degree of pollution abatement and control in its programs, or
"(C) in any way reimburses or otherwise subsidizes its manufacturers for the costs of such program;
"(4) alternative means by which any competitive advantage accruing to the products of any foreign nation as a result of any factor described in paragraph (3) may be (A) accurately and quickly determined, and (B) equalized, for example, by the imposition of a surcharge or duty, on a foreign product in an amount necessary to compensate for such advantage; and
"(5) the impact, if any, which the imposition of a compensating tariff of other equalizing measure may have in encouraging foreign nations to implement pollution and abatement control programs.

"(b) The Secretary shall make an initial report to the President and Congress within six months after the date of enactment of this section [Oct. 18, 1972] of the results of the study and investigation carried out pursuant to this section and shall make additional reports thereafter at such times as he deems appropriate taking into account the development of relevant data, but not less than once every twelve months."

International Agreements

Section 7 of Pub.L. 92-500 provided that: "The President shall undertake to enter into international agreement to apply uniform standards of performance for the control of the discharge and emission of pollutants from new sources, uniform controls over the discharge and emission of toxic pollutants, and uniform controls over the discharge of pollutants into the ocean. For this purpose the President shall negotiate multilateral treaties, conventions, resolutions, or other agreements, and formulate, present, or support proposals at the United Nations and other appropriate international forums."

National Policies and Goal Study

Section 10 of Pub.L. 92-500 authorized the President to make a full and complete investigation and study of all national policies and goals established by law to determine what the relationship should be between these policies and goals, taking into account the resources of the Nation, and to report the results of his investigation and study together with his recommendations to Congress not later than two years after Oct. 18, 1972.

Efficiency Study

Section 11 of Pub.L. 92-500 authorized the President, by utilization of the General Accounting Office, to conduct a full and complete investigation and study of ways and means of most effectively using all of the various resources, facilities, and personnel of the Federal Government in order to most efficiently carry out the provisions of this chapter and to report the results of his investigation and study together with his recommendations to Congress not later than two hundred and seventy days after Oct. 18, 1972.

Sex Discrimination

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Section 13 of Pub.L. 92-500 provided that: "No person in the United States shall on the ground of sex be excluded from participation in, be denied the benefits of, or be subjected to discrimination under any program or activity receiving Federal Assistance under this Act [see Short Title note above], the Federal Water Pollution Control Act [this chapter], or the Environmental Financing Act [set out as a note under section 1281 of this title]. This section shall be enforced through agency provisions and rules similar to those already established, with respect to racial and other discrimination, under title VI of the Civil Rights Act of 1964 [section 2000d et seq. of Title 42, The Public Health and Welfare]. However, this remedy is not exclusive and will not prejudice or cut off any other legal remedies available to a discriminatee."

Prevention, Control, and Abatement of Environmental Pollution at Federal Facilities

Ex. Ord. No. 12088, Oct. 13, 1978, 43 F.R. 47707, set out as a note under section 4321 of Title 42, The Public Health and Welfare, provides for the prevention, control, and abatement of environmental pollution at federal facilities.

National Shellfish Indicator Program

Pub.L. 102-567, Title III, § 308, Oct. 29, 1992, 106 Stat. 4286, as amended Pub.L. 105-362, Title II, § 201(b), Nov. 10, 1998, 112 Stat. 3282, provided that:

"(a) **Establishment of a research program.**--The Secretary of Commerce, in cooperation with the Secretary of Health and Human Services and the Administrator of the Environmental Protection Agency, shall establish and administer a 5-year national shellfish research program (hereafter in this section referred to as the 'Program') for the purpose of improving existing classification systems for shellfish growing waters using the latest technological advancements in microbiology and epidemiological methods. Within 12 months after the date of enactment of this Act [Oct. 29, 1992], the Secretary of Commerce, in cooperation with the advisory committee established under subsection (b) and the Consortium, shall develop a comprehensive 5-year plan for the Program which shall at a minimum provide for--

"(1) an environmental assessment of commercial shellfish growing areas in the United States, including an evaluation of the relationships between indicators of fecal contamination and human enteric pathogens;
"(2) the evaluation of such relationships with respect to potential health hazards associated with human consumption of shellfish;
"(3) a comparison of the current microbiological methods used for evaluating indicator bacteria and human enteric pathogens in shellfish and shellfish growing waters with new technological methods designed for this purpose;
"(4) the evaluation of current and projected systems for human sewage treatment in eliminating viruses and other human enteric pathogens which accumulate in shellfish;
"(5) the design of epidemiological studies to relate microbiological data, sanitary survey data, and human shellfish consumption data to actual hazards to health associated with such consumption; and
"(6) recommendations for revising Federal shellfish standards and improving the capabilities of Federal and State agencies to effectively manage shellfish and ensure the safety of shellfish intended for human consumption.

"(b) **Advisory committee.**--(1) For the purpose of providing oversight of the Program on a continuing basis, an

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

advisory committee (hereafter in this section referred to as the 'Committee') shall be established under a memorandum of understanding between the Interstate Shellfish Sanitation Conference and the National Marine Fisheries Service.

"(2) The Committee shall--

"(A) identify priorities for achieving the purpose of the Program;
"(B) review and recommend approval or disapproval of Program work plans and plans of operation;
"(C) review and comment on all subcontracts and grants to be awarded under the Program;
"(D) receive and review progress reports from the Consortium and program subcontractors and grantees; and
"(E) provide such other advice on the Program as is appropriate.

"(3) The Committee shall consist of at least ten members and shall include--

"(A) three members representing agencies having authority under State law to regulate the shellfish industry, of whom one shall represent each of the Atlantic, Pacific, and Gulf of Mexico shellfish growing regions;
"(B) three members representing persons engaged in the shellfish industry in the Atlantic, Pacific, and Gulf of Mexico shellfish growing regions (who shall be appointed from among at least six recommendations by the industry members of the Interstate Shellfish Sanitation Conference Executive Board), of whom one shall represent the shellfish industry in each region;
"(C) three members, of whom one shall represent each of the following Federal agencies: the National Oceanic and Atmospheric Administration, the Environmental Protection Agency, and the Food and Drug Administration; and
"(D) one member representing the Shellfish Institute of North America.

"(4) The Chairman of the Committee shall be selected from among the Committee members described in paragraph (3)(A).

"(5) The Committee shall establish and maintain a subcommittee of scientific experts to provide advice, assistance, and information relevant to research funded under the Program, except that no individual who is awarded, or whose application is being considered for, a grant or subcontract under the Program may serve on such subcommittee. The membership of the subcommittee shall, to the extent practicable, be regionally balanced with experts who have scientific knowledge concerning each of the Atlantic, Pacific, and Gulf of Mexico shellfish growing regions. Scientists from the National Academy of Sciences and appropriate Federal agencies (including the National Oceanic and Atmospheric Administration, Food and Drug Administration, Centers for Disease Control, National Institutes of Health, Environmental Protection Agency, and National Science Foundation) shall be considered for membership on the subcommittee.

"(6) Members of the Committee and its scientific subcommittee established under this subsection shall not be paid for serving on the Committee or subcommittee, but shall receive travel expenses as authorized by section 5703 of title 5, United States Code [section 5703 of Title 5, Government Organization and Employees].

"(c) **Contract with consortium.**--Within 30 days after the date of enactment of this Act [Oct. 29, 1992], the Secretary of Commerce shall seek to enter into a cooperative agreement or contract with the Consortium under which the Consortium will--

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

"(1) be the academic administrative organization and fiscal agent for the Program;
"(2) award and administer such grants and subcontracts as are approved by the Committee under subsection (b);
"(3) develop and implement a scientific peer review process for evaluating grant and subcontractor applications prior to review by the Committee;
"(4) in cooperation with the Secretary of Commerce and the Committee, procure the services of a scientific project director;
"(5) develop and submit budgets, progress reports, work plans, and plans of operation for the Program to the Secretary of Commerce and the Committee; and
"(6) make available to the Committee such staff, information, and assistance as the Committee may reasonably require to carry out its activities.

"(d) **Authorization of appropriations.**--(1) Of the sums authorized under section 4(a) of the National Oceanic and Atmospheric Administration Marine Fisheries Program Authorization Act (Public Law 98-210; 97 Stat. 1409) [section 4(a) of Pub.L. 98-210, Dec. 6, 1983, 97 Stat. 1409, which is not classified to the Code], there are authorized to be appropriated to the Secretary of Commerce $5,200,000 for each of the fiscal years 1993 through 1997 for carrying out the Program. Of the amounts appropriated pursuant to this authorization, not more than 5 percent of such appropriation may be used for administrative purposes by the National Oceanic and Atmospheric Administration. The remaining 95 percent of such appropriation shall be used to meet the administrative and scientific objectives of the Program.

"(2) The Interstate Shellfish Sanitation Conference shall not administer appropriations authorized under this section, but may be reimbursed from such appropriations for its expenses in arranging for travel, meetings, workshops, or conferences necessary to carry out the Program.

"(e) **Definitions.**--As used in this section, the term--

"(1) 'Consortium' means the Louisiana Universities Marine Consortium; and
"(2) 'shellfish' means any species of oyster, clam, or mussel that is harvested for human consumption."

Definition of "Administrator"

Section 1(d) of Pub.L. 100-4 provided that: "For purposes of this Act [see Short Title of 1987 Amendment note set out above], the term 'Administrator' means the Administrator of the Environmental Protection Agency."

Limitation on Payments

Section 2 of Pub.L. 100-4 provided that: "No payments may be made under this Act [see Short Title of 1987 Amendment note set out above] except to the extent provided in advance in appropriation Acts."

Contiguous Zone of United States

For extension of contiguous zone of United States, see Proc. No. 7219, set out as a note under 43 U.S.C.A. § 1331.

EXECUTIVE ORDERS

EXECUTIVE ORDER NO. 11548

Ex. Ord. No. 11548, July 20, 1970, 35 F.R. 11677, which related to the delegation of Presidential functions, was superseded by Ex. Ord. No. 11735, Aug. 3, 1973, 38 F.R. 21243, set out as a note under section 1321 of this title.

EXECUTIVE ORDER NO. 11742

<Oct. 23, 1973, 38 F.R. 29457>

Delegation of Functions to Secretary of State Respecting Negotiation of International Agreements Relating to Enhancement of Environment

Under and by virtue of the authority vested in me by section 301 of title 3 of the United States Code and as President of the United States, I hereby authorize and empower the Secretary of State, in coordination with the Council on Environmental Quality, the Environmental Protection Agency, and other appropriate Federal agencies, to perform, without the approval, ratification, or other action of the President, the functions vested in the President by Section 7 of the Federal Water Pollution Control Act Amendments of 1972 (Public Law 92-500; 86 Stat. 898) with respect to international agreements relating to the enhancement of the environment.

RICHARD NIXON.

1. Constitutionality

To satisfy standing requirement of Article III in citizen suit under the Clean Water Act (CWA), plaintiff must show (1) actual or threatened injury, (2) "fairly traceable" to the defendant's action, and (3) likely redress if plaintiff prevails in the lawsuit. Lockett v. E.P.A., C.A.5 (La.) 2003, 319 F.3d 678. Environmental Law ⚿ 650; Environmental Law ⚿ 651

Congress did not unconstitutionally delegate its legislative authority to Army Corps of Engineers by allowing Corps' to define "waters of the United States" within meaning of Clean Water Act to include wetlands adjacent to navigable waters. Mills v. U.S., C.A.11 (Fla.) 1994, 36 F.3d 1052, certiorari denied 115 S.Ct. 1966, 514 U.S. 1112, 131 L.Ed.2d 856. Constitutional Law ⚿ 62(10); Environmental Law ⚿ 116

This chapter is constitutional. U. S. v. Ashland Oil & Transp. Co., C.A.6 (Ky.) 1974, 504 F.2d 1317.

Claim brought by landowner, seeking to halt runoff onto land from methane production activities, sought punitive damages against state agency officials for their alleged failure to enforce Clean Water Act (CWA) and federal constitution, and thus district court maintained subject matter jurisdiction over claim to extent that it applied to officials in their individual capacities, notwithstanding Eleventh Amendment restrictions on claims against state officials. Swartz v. Beach, D.Wyo.2002, 229 F.Supp.2d 1239. Federal Courts ⚿ 269

United States Army Corps of Engineers did not exceed its authority under Clean Water Act by regulating intrastate isolated wetlands as "waters of the United States." U.S. v. Hallmark Const. Co., N.D.Ill.1998, 14 F.Supp.2d 1069. Environmental Law ⚿ 128

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

The Army Corps of Engineers reasonably interpreted the statutory term "waters of the United States," within the meaning of the Clean Water Act (CWA), to include intrastate waters that provide a habitat for migratory birds; the Commerce Clause power, and thus, the Clean Water Act, was broad enough to extend the Corps' jurisdiction to local waters which might provide habitat to migratory birds and endangered species. Solid Waste Agency of Northern Cook County v. U.S. Army Corps of Engineers, N.D.Ill.1998, 998 F.Supp. 946, affirmed 191 F.3d 845, certiorari granted 120 S.Ct. 2003, 529 U.S. 1129, 146 L.Ed.2d 954, reversed 121 S.Ct. 675, 531 U.S. 159, 148 L.Ed.2d 576, on remand 6 Fed.Appx. 364, 2001 WL 312372. Commerce 52.10; Environmental Law 525; Environmental Law 123

Federal regulatory control over navigable waters for the purposes of this chapter is not unconstitutional. Leslie Salt Co. v. Froehlke, N.D.Cal.1974, 403 F.Supp. 1292, supplemented 412 F.Supp. 1096, reversed in part , modified in part 578 F.2d 742. Navigable Waters 3

Term "waters of the United States", as used in this chapter, is not vague and indefinite on theory that it fails to give fair warning of conduct that it makes criminal and thus is in violation of due process clause of U.S.C.A. Const.Amend. 5. U. S. v. Phelps Dodge Corp., D.C.Ariz.1975, 391 F.Supp. 1181. Constitutional Law 4509(1); Navigable Waters 3

2. Power of Congress

Congress has power to regulate activities such as dredging and filling which cause water pollution, and Congress is not limited by "navigable waters" test in its authority to control pollution under U.S.C.A. Const. Art. 1, § 8, cl. 3. U.S. v. Holland, M.D.Fla.1974, 373 F.Supp. 665.

3. Purpose

Clean water is not the only purpose of the Clean Water Act; so is the preservation of primary state responsibility for ordinary land-use decisions. (Per Justice Scalia with the Chief Justice and two Justices joining and one Justice concurring in the judgment.) Rapanos v. U.S., U.S.2006, 126 S.Ct. 2208, 165 L.Ed.2d 159, on remand 2007 WL 470555. Environmental Law 165

Congress' intent in enacting this chapter was to establish an all-encompassing program of water pollution and regulation. City of Milwaukee v. Illinois and Michigan, U.S.Ill.1981, 101 S.Ct. 1784, 451 U.S. 304, 68 L.Ed.2d 114, on remand 731 F.2d 403.

This chapter provides comprehensive program for controlling and abating water pollution. Train v. City of New York, U.S.Dist.Col.1975, 95 S.Ct. 839, 420 U.S. 35, 43 L.Ed.2d 1. Environmental Law 165

Environmental Protection Agency (EPA) had discretion to accept state certification of proposed discharge permit under Clean Water Act beyond 60-day limitation; regulatory provision authorized longer period upon finding that unusual circumstances required additional time, and legislative intent was to encourage state certification to protect nation's waterways through dual federal and state permitting process. Ackels v. U.S. E.P.A., C.A.9 1993, 7 F.3d 862. Environmental Law 220.

Clean Water Act is not statute designed to provide protection to industrial employees who work with hazardous substances, but, rather, objective of Act is to restore and maintain chemical, physical, and biological integrity of nation's waters. U.S. v. Borowski, C.A.1 (Mass.) 1992, 977 F.2d 27. Environmental Law 165

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

It is intent of Clean Water Act [33 U.S.C.A. § 1251 et seq.] to cover, as much as possible, all waters of the United States instead of just some. Quivira Min. Co. v. U.S.E.P.A., C.A.10 1985, 765 F.2d 126, certiorari denied 106 S.Ct. 791, 474 U.S. 1055, 88 L.Ed.2d 769.

Clean Water Act expresses congressional insistence on eliminating water pollution within short time span through use of uniform effluent limitations imposed on industry-wide basis. Reynolds Metals Co. v. U.S.E.P.A., C.A.4 1985, 760 F.2d 549. Environmental Law ⚿ 183

This chapter was designed to regulate to fullest extent possible those sources emitting pollution into rivers, streams and lakes; the touchstone of the regulatory scheme is that those needing to use waters for waste distribution must seek and obtain a permit to discharge that waste, with quantity and quality of discharge regulated. U. S. v. Earth Sciences, Inc., C.A.10 (Colo.) 1979, 599 F.2d 368. Environmental Law ⚿ 196

Intent of the drafters of this chapter was to rely on the Environmental Protection Agency's ingenuity backed up by comprehensive system under this chapter of administrative rule making and stiff penalties, to force each industry on its own to develop the technology necessary to achieve aspiring goal under this chapter of eliminating the discharge of pollutants into the nation's navigable waters within the short span of 13 years. Weyerhaeuser Co. v. Costle, C.A.D.C.1978, 590 F.2d 1011, 191 U.S.App.D.C. 309. Environmental Law ⚿ 184

Overall intention of Congress in enacting this chapter was to eliminate or to reduce as much as possible all water pollution throughout the United States. Quarles Petroleum Co., Inc. v. U. S., Ct.Cl.1977, 551 F.2d 1201, 213 Ct.Cl. 15. Environmental Law ⚿ 165

This chapter was intended to extend its jurisdiction to the constitutional limit. State of Minn. by Spannaus v. Hoffman, C.A.8 (Minn.) 1976, 543 F.2d 1198, certiorari denied 97 S.Ct. 1672, 430 U.S. 977, 52 L.Ed.2d 373. Environmental Law ⚿ 165

Ultimate objective of this chapter is to eliminate completely the discharge of pollution into navigable waters by 1985. American Paper Institute v. Train, C.A.D.C.1976, 543 F.2d 328, 177 U.S.App.D.C. 181, certiorari dismissed 97 S.Ct. 398, 429 U.S. 967, 50 L.Ed.2d 335. Navigable Waters ⚿ 3

This chapter was designed to enlist aid of states in fighting water pollution and, through state action, to achieve final objective of purity of waters. Committee for Consideration of Jones Falls Sewage System v. Train, C.A.4 (Md.) 1976, 539 F.2d 1006.

Congress, in enacting this chapter intended to require step-by-step improvement in quality of discharged effluent, rather than a zig-zag course with total purity demanded forthwith only to be succeeded by varying stages of impurity. Stream Pollution Control Bd. of State of Ind. v. U.S. Steel Corp., C.A.7 (Ind.) 1975, 512 F.2d 1036. Environmental Law ⚿ 183

Central purpose of Clean Water Act is to restore and maintain chemical, physical, and biological integrity of the nation's waters. Natural Resources Defense Council, Inc. v. Texaco Refining and Marketing, Inc., D.Del.1992, 800 F.Supp. 1, affirmed in part , reversed in part 2 F.3d 493. Environmental Law ⚿ 165

Purpose of Clean Water Act was to achieve compliance with new standards and not simply compensate for injuries caused by existing practices; Congress intended to actually change existing practices and to coerce polluters by providing that injunctions and sanctions were among the federal and state enforcement mechanisms to

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

which all polluters, including federal facilities, must submit. Metropolitan Sanitary Dist. of Greater Chicago v. U.S. Dept. of Navy, N.D.Ill.1989, 722 F.Supp. 1565, on reconsideration in part 737 F.Supp. 51. Environmental Law 205; Environmental Law 165; Environmental Law 700

This chapter focuses primarily on technological control of pollution at its source rather than on achievement of water quality standards for receiving waters. Pacific Legal Foundation v. Quarles, C.D.Cal.1977, 440 F.Supp. 316, affirmed 614 F.2d 225, certiorari denied 101 S.Ct. 88, 449 U.S. 825, 66 L.Ed.2d 29. Environmental Law 188; Environmental Law 184

This chapter was enacted to prevent entry of pollutants into navigable waters and to control pollution at its source before it endangers coastal environment. P. F. Z. Properties, Inc. v. Train, D.C.D.C.1975, 393 F.Supp. 1370. Navigable Waters 3

This chapter, in its amended form, was designed to deal with all facets of recapturing and preserving the biological integrity of the nation's water by creating a web of complex interrelated regulatory programs. U.S. v. Holland, M.D.Fla.1974, 373 F.Supp. 665. Environmental Law 165

Ultimate objective of the Federal Water Pollution Control Act is the total elimination of discharge of pollutants into the nation's navigable waters. Rayle Coal Co. v. Chief, Div. of Water Resources, State Dept. of Natural Resources, W.Va.1990, 401 S.E.2d 682, 184 W.Va. 549. Environmental Law 165

4. Construction

Federal Energy Regulatory Commission's (FERC) interpretation of Clean Water Act (CWA) is not entitled to deference. California Trout, Inc. v. F.E.R.C., C.A.9 2002, 313 F.3d 1131, certiorari denied 124 S.Ct. 85, 540 U.S. 818, 157 L.Ed.2d 36. Statutes 219(6.1)

This chapter is to be given a reasonable interpretation which is not parsed and dissected with the meticulous technicality applied in testing other statutes and instruments. Environmental Defense Fund, Inc. v. Costle, C.A.D.C.1981, 657 F.2d 275, 211 U.S.App.D.C. 313. Environmental Law 167

In construing this chapter, the guiding star is the intent of Congress to improve and preserve the quality of the nation's waters and all issues must be viewed in light of such intent. Kennecott Copper Corp. v. E.P.A., C.A.10 1979, 612 F.2d 1232. Environmental Law 167

Any interpretation of this chapter that operates to deny the Environmental Protection Agency the power to set nationally effective effluent standards would be a clear refusal to follow the intent of the Congress and a gross misinterpretation of this chapter itself. American Frozen Food Institute v. Train, C.A.D.C.1976, 539 F.2d 107, 176 U.S.App.D.C. 105. Environmental Law 183

The Clean Water Act is entitled to broad construction to implement its objective of protecting human health, welfare, and environment. U.S. v. Aluminum Co. of America, E.D.Tex.1993, 824 F.Supp. 640. Environmental Law 167

In administering and enforcing the Clean Water Act, the Environmental Protection Agency (EPA) and the Army Corps of Engineers share responsibility; Corps has nondiscretionary duty to regulate discharge of dredged or fill materials by issuing permits after applying guidelines established by the EPA and has authority to enforce permit violations, while EPA holds ultimate responsibility for wetlands protection, has authority to seek penalties

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

for unpermitted discharges of pollutants into United States waters and, after consultation with the Corps, can block or overrule Corps' decision to issue permit. Orange Environment, Inc. v. County of Orange, S.D.N.Y.1993, 811 F.Supp. 926. Environmental Law 136; Environmental Law 145

5. Construction with other laws

Section of the Outer Continental Shelf Lands Act (OCSLA) stating that Department of Interior's regulations shall include provisions for the suspension of any operation if there is a threat of seriousharmto the human environment did not authorize suspension of lease contracts giving oil companies rights to explore for and develop oil off the North Carolina coast pursuant to report of panel created by the subsequently enacted Outer Banks Protection Act (OBPA), where the Department of the Interior had determined that oil companies' exploration plan fully complied with the OCSLA, as no new requirement was incorporated into the contracts. Mobil Oil Exploration and Producing Southeast, Inc. v. U.S., U.S.2000, 120 S.Ct. 2423, 530 U.S. 604, 147 L.Ed.2d 528, on remand 236 F.3d 1313, rehearing denied. Mines And Minerals 5.1(5)

Clean Water Act(CWA) and Oil Pollution Act (OPA) are not so broad as to permit federal government to impose regulations over tributaries that are neither themselves navigable nor truly adjacent to navigable waters. In re Needham, C.A.5 (La.) 2003, 354 F.3d 340. Environmental Law 173; Environmental Law 437

Interagency Coordination Agreement (ICA) executed by United States Army Corps of Engineers and other federal, state, and local agencies, which sought to coordinate federal regulation of soil erosion and sediment flows under Clean Water Act's permit regime with the work of various federal- and local-level agencies, did not amount to agency action by which "rights or obligations have been determined" or from which "legal consequences will flow" under second prong of the *Bennett* test, and so did not constitute final agency action under the Administrative Procedure Act (APA); ICA established only procedural framework under which Corps intended to operate, it expressly provided that Corps retained right to make final decisions regarding opinions, actions, or findings within Corps' jurisdiction, and it imposed no new legal requirements on regulated parties, nor altered in any way the legal regime to which such parties were subject, and Corps did not use ICA to leverage its regulatory authority beyond that provided for by statute. Home Builders Ass'n of Greater Chicago v. U.S. Army Corps of Engineers, C.A.7 (Ill.) 2003, 335 F.3d 607. Environmental Law 661

In action brought by environmental organizations, seeking to preliminarily enjoin golf course development in riparian area containing bald eagle habitat, language within Endangered Species Act (ESA) governing "adverse impacts" to individual species was improper benchmark for assessing irreparable harm in event that injunction were not to be granted, since action was brought under Clean Water Act (CWA) and National Environmental Policy Act (NEPA), not ESA; issue of whether development would harm individual animals was irrelevant to assessment of whether project would have adverse impact on aquatic ecosystem as whole. Greater Yellowstone Coalition v. Flowers, C.A.10 (Wyo.) 2003, 321 F.3d 1250, on subsequent appeal 359 F.3d 1257. Environmental Law 701

Endangered Species Act does not, by its terms, enlarge the jurisdiction of the Corps of Engineers under the Clean Water Act; however, it imposes on agencies a mandatory obligation to consider the environmental impacts of the projects that they authorize or fund. Riverside Irr. Dist. v. Andrews, C.A.10 (Colo.) 1985, 758 F.2d 508. Environmental Law 536

In light of past compliance issues, injunction was warranted in United States' action under Clean Water Act (CWA) against the Government of the Virgin Islands, under which any future contracts for sewer repairs re-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

quired by amended consent decree had to comply with competitive bidding requirements of Virgin Islands law, unless there was valid reason to bypass them and all applicable rules and regulations were followed to the letter, and under which the Government of the Virgin Islands was required to comply with other provisions of Virgin Islands Code, file reports with court for contracts in excess of $250,000, promptly repair any new sewer system breakdowns resulting in sewage bypasses, and hire private contractor to operate and maintain specified waste water collection system and pump station for at least 18 months. U.S. v. Government of Virgin Islands, D.Virgin Islands 2003, 248 F.Supp.2d 420, affirmed in part, vacated in part and remanded 363 F.3d 276. Environmental Law 700

Fifth Amendment takings claim brought under § 1983 by landowner against state Department of Environmental Quality (DEQ) and gas company, seeking to halt runoff onto land from methane production activities, was predicated upon independent constitutional violation, not upon violations of Clean Water Act (CWA) also alleged by landowner, and thus takings claim was not precluded under *National Sea Clammers* doctrine, notwithstanding comprehensive enforcement scheme of CWA. Swartz v. Beach, D.Wyo.2002, 229 F.Supp.2d 1239. Civil Rights 1310; Eminent Domain 266

Hydroelectric facilities subject to the Federal Power Act are also subject to federal water pollution control laws and those laws are not preempted by the Federal Power Act. National Wildlife Federation v. Consumers Power Co., W.D.Mich.1987, 657 F.Supp. 989, reversed 862 F.2d 580. Environmental Law 175

This chapter preempted the provisions of sections 407, 411 and 412 of this title. U. S. v. M/V Big Sam, E.D.La.1979, 480 F.Supp. 290, affirmed in part, reversed in part on other grounds 681 F.2d 432, rehearing denied 693 F.2d 451, certiorari denied 103 S.Ct. 3112, 462 U.S. 1132, 77 L.Ed.2d 1367.

General demarcation line between jurisdiction of this chapter and of the Marine Protection, Research, and Sanctuaries Act of 1972, section 1401 et seq. of this title, with exceptions of pipes or outfalls, was the three-mile limit of the territorial seas. Pacific Legal Foundation v. Quarles, C.D.Cal.1977, 440 F.Supp. 316, affirmed 614 F.2d 225, certiorari denied 101 S.Ct. 88, 449 U.S. 825, 66 L.Ed.2d 29. Environmental Law 514; Environmental Law 164

In enacting this chapter, it was intent of Congress that provisions of section 407 of this title remain in effect as part of its overall water pollution control scheme. U. S. v. Consolidation Coal Co., N.D.W.Va.1973, 354 F.Supp. 173. Navigable Waters 3

The New York Harbor Act, section 441 et seq. of this title, was not impliedly repealed by this chapter. U. S. v. Vulcan Materials Co., D.C.N.J.1970, 320 F.Supp. 1378. Navigable Waters 3

6. Common law

Federal common law of nuisance in area of water pollution is entirely preempted by more comprehensive scope of this chapter and Marine Protection, Research, and Sanctuaries Act of 1972, section 1401 et seq. of this title. Middlesex County Sewerage Authority v. National Sea Clammers Ass'n, U.S.N.J.1981, 101 S.Ct. 2615, 453 U.S. 1, 69 L.Ed.2d 435. Nuisance 60; Environmental Law 170; Environmental Law 520

This chapter has displaced any federal common law of nuisance, at least as applied to claims of State of Illinois against City of Milwaukee with respect to discharges of untreated sewage into Lake Michigan and claims related to overflows from the Milwaukee sewage system. City of Milwaukee v. Illinois and Michigan, U.S.Ill.1981, 101

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

S.Ct. 1784, 451 U.S. 304, 68 L.Ed.2d 114, on remand 731 F.2d 403. Environmental Law ⚿ 170

Application of federal common law to abate public nuisance in interstate or navigable waters is not inconsistent with this chapter. Illinois v. City of Milwaukee, Wis., U.S.1972, 92 S.Ct. 1385, 406 U.S. 91, 31 L.Ed.2d 712. Nuisance ⚿ 59

Maritime law was preempted by enactment of this chapter to extent that it afforded a damage remedy for pollution of navigable waters based on a common-law nuisance theory. Conner v. Aerovox, Inc., C.A.1 (Mass.) 1984, 730 F.2d 835, certiorari denied 105 S.Ct. 1747, 470 U.S. 1050, 84 L.Ed.2d 812. Environmental Law ⚿ 170

State courts are free to apply state nuisance law more rigidly in regard to water pollution, but federal courts may not, in local intrastate controversies, turn to body of federal common law governing public nuisances in one state which infringe upon environmental rights of another state so as to impose stricter standards than provided by statutes. Committee for Consideration of Jones Falls Sewage System v. Train, C.A.4 (Md.) 1976, 539 F.2d 1006. Federal Courts ⚿ 433

Plaintiffs' common-law causes of action against United States Fish and Wildlife Service and regional director alleging breach of public trust and breach of fiduciary duty to protect waters and fish and wildlife of Lake Champlain region failed to state a claim; even assuming that private citizens had standing to challenge federal agency's actions under common-law theories asserted by plaintiffs, subject matter was entirely preempted by federal statutes. Elliott v. U.S. Fish and Wildlife Service, D.Vt.1991, 769 F.Supp. 588. Fish ⚿ 11; Game ⚿ 6; States ⚿ 18.33

7. State regulation or control

Clean Water Act sections providing that state's authority to allocate quantities of water within its jurisdiction could not be superseded, abrogated, or otherwise impaired by the Act and that nothing in the Act could be construed as impairing or affecting state's right or jurisdiction with respect to state's waters, did not exclude water quantity issues from direct regulation under federally controlled water quality standards authorized in Clean Water Act; sections preserved state's authority to allocate water quantity as between users, but did not limit scope of water pollution controls that could be imposed on users who had obtained, pursuant to state law, water allocation. PUD No. 1 of Jefferson County v. Washington Dept. of Ecology, U.S.Wash.1994, 114 S.Ct. 1900, 511 U.S. 700, 128 L.Ed.2d 716. Environmental Law ⚿ 171

Florida Oil-Spill Prevention and Pollution Control Act, Laws Fla.1970, c. 70-244, providing for the state's recovery of cleanup costs and imposing strict, no-fault liability on waterfront oil-handling facilities and ships destined for or leaving such facilities for any oil-spill damage to the state or private persons, does not, per se, invade a regulatory area preempted by this chapter. Askew v. American Waterways Operators, Inc., U.S.Fla.1973, 93 S.Ct. 1590, 411 U.S. 325, 36 L.Ed.2d 280, rehearing denied 93 S.Ct. 2746, 412 U.S. 933, 37 L.Ed.2d 162, on remand. States ⚿ 18.31

Environmental Protection Agency (EPA) did not err in giving State of Maine permitting authority, under the Clean Water Act (CWA) and the Maine "Settlement Acts," with regard to 19 facilities which discharged pollutants into territorial waters of two Indian tribes. Maine v. Johnson, C.A.1 2007, 498 F.3d 37. Environmental Law ⚿ 196

State law could not create exemption from requirements of Clean Water Act (CWA) for discharges of ground-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

water derived from extraction of coal bed methane (CBM), inasmuch as CWA did not give either Environmental Protection Agency (EPA) or state authority to create such exemptions. Northern Plains Resource Council v. Fidelity Exploration and Development Co., C.A.9 (Mont.) 2003, 325 F.3d 1155, certiorari denied 124 S.Ct. 434, 540 U.S. 967, 157 L.Ed.2d 312, on subsequent appeal 185 Fed.Appx. 679, 2006 WL 1722474. Environmental Law ⚿ 178; Environmental Law ⚿ 201

Even if denial of a nationwide permit is considered an impairment of state's authority to allocate water, Army Corps of Engineers acted within its authority in denying nationwide permit based on its determination that depletion in water flow resulting from increased consumptive use of water would adversely affect the critical habitat of the whooping crane. Riverside Irr. Dist. v. Andrews, C.A.10 (Colo.) 1985, 758 F.2d 508. Environmental Law ⚿ 536; Environmental Law ⚿ 196

New Jersey township's prohibition of "floating homes" was not preempted by this chapter. Bass River Associates v. Mayor, Tp. Com'r, Planning Bd. of Bass River Tp., C.A.3 (N.J.) 1984, 743 F.2d 159.

Statement in this section, that it is policy of Congress that state authority to allocate quantities of water within its jurisdiction shall not be superseded, abrogated, or otherwise impaired by this chapter, was not intended to take precedence over legitimate and necessary water quality considerations. National Wildlife Federation v. Gorsuch, C.A.D.C.1982, 693 F.2d 156, 224 U.S.App.D.C. 41. Environmental Law ⚿ 171

In considering this chapter, Congress carefully constructed legislative scheme that imposed major responsibility for control of water pollution on the states. District of Columbia v. Schramm, C.A.D.C.1980, 631 F.2d 854, 203 U.S.App.D.C. 272. Environmental Law ⚿ 165

Varied topographies and climates in country called for varied water quality solutions, and Congress placed primary authority for establishing water quality standards with states. Mississippi Commission on Natural Resources v. Costle, C.A.5 (Miss.) 1980, 625 F.2d 1269. Environmental Law ⚿ 188

Under Hawai'i frustration of purpose doctrine, tenant's obligation to comply with environmental standards was foreseeable to the parties at the time that they entered into lease, and thus, compliance with those standards did not excuse tenant's obligation under the lease; lease explicitly required tenant to comply with all present and future laws, including those concerning water pollution, hazardous wastes, and environmental contamination, and tenant and its assignee were subject to, and presumptively aware of, the provisions of the Clean Water Act from the commencement of their tenure on the land. Lindner v. Meadow Gold Dairies, Inc., D.Hawai'i 2007, 2007 WL 2320669. Landlord And Tenant ⚿ 199.5

State law claims of negligence, private nuisance, and trespass brought by private landowners against corporate landowner and biosolids recycling company, stemming from dispersal of by-product from wastewater treatment facilities, did not implicate substantial federal question under Clean Water Act (CWA), and thus were not preempted; elements of private landowners' nuisance, trespass, and negligence claims were well-settled under Virginia common law and subject to CWA savings clause. Wyatt v. Sussex Surry, LLC, E.D.Va.2007, 482 F.Supp.2d 740. Negligence ⚿ 205; States ⚿ 18.15; Trespass ⚿ 16

Performance of regionalized analysis of "minimal adverse environmental effects" that nationwide permits (NWPs) under Clean Water Act (CWA) would have on environment was not arbitrary, capricious, or abuse of discretion; United States Army Corps of Engineers, in essence, reasonably concluded that questions necessitating technical certainty should be developed at local level, not national level, by setting baseline that was low and

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

more protective of navigable waters of United States against discharge of pollutants. National Ass'n of Home Builders v. U.S. Army Corps of Engineers, D.D.C.2006, 453 F.Supp.2d 116. Environmental Law ⚷ 136

Environmental Protection Agency's (EPA's) approval of provisions of Kentucky's water quality antidegradation rules under the Clean Water Act (CWA), which set forth effluent limitations for pollutants commonly found in the wastewater from domestic sewage facilities, and permitted a new and expanding domestic sewage discharger to be issued a discharge permit without having to undergo further antidegradation review, was not arbitrary and capricious, where EPA reviewed Kentucky's procedures and found that offering the discharger an option of stringent effluent limitations or antidegradation review was consistent with the CWA and EPA regulations because the ultimate goal was to minimize the water quality effects of the discharge. Kentucky Waterways Alliance v. Johnson, W.D.Ky.2006, 426 F.Supp.2d 612. Environmental Law ⚷ 191; Environmental Law ⚷ 196

Scheme of federal regulation emanating from Safe Drinking Water Act (SDWA) did not actually conflict with New York Department of Environmental Conservation (DEC) regulatory scheme governing underground liquid petroleum gas (LPG) storage, and thus state regulations would not be preempted; state's requirement of sonar surveys for LPG storage permits did not impede federal objective of protecting underground sources of drinking water, and State Pollutant Discharge Elimination System (SPDES) permit program, as authorized by Clean Water Act (CWA), was intended to complement SDWA. Bath Petroleum Storage, Inc. v. Sovas, N.D.N.Y.2004, 309 F.Supp.2d 357, appeal dismissed 155 Fed.Appx. 23, 2005 WL 3086669. Environmental Law ⚷ 351; States ⚷ 18.31

Environmental Protection Agency's (EPA) approval of West Virginia's antidegradation procedures under Clean Water Act (CWA), which gave the state discretion in certain circumstances to determine whether particular waters were overall of high quality, was reasonable; when water segment either did not support minimum fishable/swimable uses, or when water segment did not have assimilative capacity remaining for some parameters, it was consistent with EPA's regulations to permit discretion the state to determine whether such waters were overall of high quality. Ohio Valley Environmental Coalition v. Horinko, S.D.W.Va.2003, 279 F.Supp.2d 732. Environmental Law ⚷ 191

Clean Water Act (CWA) did not bar Oklahoma city from asserting Arkansas law nuisance claim against poultry business that disposed of poultry waste, containing phosphorus, at Arkansas city's wastewater treatment plant, although wastewater treatment plant had Clean Water Act (CWA) permit authorizing discharge of phosphorus. City of Tulsa v. Tyson Foods, Inc., N.D.Okla.2003, 258 F.Supp.2d 1263, vacated pursuant to settlement. States ⚷ 18.91; Waters And Water Courses ⚷ 196

There is rebuttable presumption that water quality standards promulgated by states should be protective of fishable/swimmable use that Clean Water Act (CWA) seeks to achieve. Kansas Natural Resource Council, Inc. v. Whitman, D.Kan.2003, 255 F.Supp.2d 1208. Environmental Law ⚷ 188; Environmental Law ⚷ 229

Clean Water Act leaves regulation of irrigation return flows and agricultural runoff to the states, regardless of the quality of the water used to irrigate the fields. Hiebenthal v. Meduri Farms, D.Or.2002, 242 F.Supp.2d 885. Environmental Law ⚷ 175

Effluent standard or limitation under Clean Water Act (CWA) includes effluent standard or limitation established by state to further goals of CWA. Swartz v. Beach, D.Wyo.2002, 229 F.Supp.2d 1239. Environmental Law ⚷ 183

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Equitable claim by owners of private septic system against homeowners using system, relating to liability under state water pollution law for discharging raw sewage into river, was not preempted by the Clean Water Act; equitable suit would not change liability of system owners under Clean Water Act, nor would it affect owners' responsibility to erect new septic system if ordered to do so, but rather would merely determine whether homeowners had obligation to indemnify, partially or fully, system owners for their expenses. Friends of Sakonnet v. Dutra, D.R.I.1990, 738 F.Supp. 623. Indemnity ⚷ 68; States ⚷ 18.15

Statutory powers of Hackensack Meadowlands Development Commission were not preempted by United States Environmental Protection Agency and United States Army Corps of Engineers under Clean Water Act, such that underlying legislative presumption for tax sharing under Hackensack Meadowland Reclamation and Development Act was rendered invalid or nugatory; although both federal agencies played preemptive role in development of wetlands, upland acreage in district remained for development, and in any event no more than 800 acres of wetlands had been realistically developable through HMDC approval process, irrespective of preemptive land use control of federal agencies. Township of North Bergen v. Borough of Teterboro, N.J.Super.L.1991, 604 A.2d 216, 254 N.J.Super. 704. Municipal Corporations ⚷ 53

State Water Quality Control Board could set limitations on waste discharges from station's private secondary sewage treatment plant equal to federal limitations imposed on municipal sewage treatment facilities. Southern California Edison Co. v. State Water Resources Control Bd., Cal.App. 4 Dist.1981, 172 Cal.Rptr. 306, 116 Cal.App.3d 751. Environmental Law ⚷ 176

Town oil spillage ordinance, which required that persons unloading fuel or oil from vessels obtain permit, give advance notice of unloading and pay into special fund to provide for cleaning costs resulting from oil spillage, did not impose undue burden upon interstate commerce, was not inconsistent with this chapter and did not impermissibly infringe on federal admiralty jurisdiction. Mobil Oil Corp. v. Town of Huntington, N.Y.Sup.1975, 380 N.Y.S.2d 466, 85 Misc.2d 800. Admiralty ⚷ 4; Commerce ⚷ 61(1)

In enactment of federal water pollution legislation there was strong policy and intention not only to preserve to states the right to adopt standards more stringent than federal standards but also to insure that abatement activities of states would continue for public benefit. Metropolitan Sanitary Dist. of Greater Chicago v. U. S. Steel Corp., Ill.App. 1 Dist.1975, 332 N.E.2d 426, 30 Ill.App.3d 360, certiorari denied 96 S.Ct. 1482, 424 U.S. 976, 47 L.Ed.2d 746. Environmental Law ⚷ 165

Suit against city, State Department of Natural Resources and county regional planning commission, seeking to enjoin the building of sewerage disposal plant pursuant to this chapter, was not subject to dismissal on ground of federal preemption. Kegonsa Joint Sanitary Dist. v. City of Stoughton, Wis.1979, 274 N.W.2d 598, 87 Wis.2d 131. States ⚷ 18.61

Federal preemption doctrine did not apply to preclude state's action where the Washington State Department of Ecology was imposing state water quality standards on federal license applicants as part of its federally mandated role in a comprehensive federal scheme embodied in the Clean Water Act; state's certification of a federal applicant must assure compliance with water quality standards under the Act. State, Dept. of Ecology v. Public Utility Dist. No. 1 of Jefferson County, Wash.1993, 849 P.2d 646, 121 Wash.2d 179, certiorari granted 114 S.Ct. 55, 510 U.S. 810, 126 L.Ed.2d 25, affirmed 114 S.Ct. 1900, 511 U.S. 700, 128 L.Ed.2d 716. Environmental Law ⚷ 171; States ⚷ 18.31

8. Interstate compacts

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Mere fact of congress' approval of interstate compact relating to certain navigable waterway did not limit congressional authority to thereafter enact this chapter, even though this chapter affected state water rights in manner inconsistent with the compact. Riverside Irr. Dist. v. Andrews, D.C.Colo.1983, 568 F.Supp. 583, affirmed 758 F.2d 508. States 6

8a. Interagency agreements

Association of home builders could not prevail in its facial challenge to Interagency Coordination Agreement (ICA) executed by United States Army Corps of Engineers and other federal, state, and local agencies, which sought to coordinate federal regulation of soil erosion and sediment flows under Clean Water Act's (CWA) permit regime with the work of various federal- and local-level agencies; although association asserted that CWA's implementing regulations did not authorize Corps to execute joint-procedures agreements with local agencies, one regulation specifically stated that district engineer could take into account controls imposed under local programs, and so it was impossible for association to maintain that there was no set of circumstances under which coordination with local authorities was permissible. Home Builders Ass'n of Greater Chicago v. U.S. Army Corps of Engineers, C.A.7 (Ill.) 2003, 335 F.3d 607. Environmental Law 196

9. Use attainability analysis

Clean Water Act requirement to perform use attainability analysis (UAA) arises from state's choice to submit a use designation to Environmental Protection Agency (EPA) that does not include a use specified under Clean Water Act, and state need not present any evidence in support of a decision not to downgrade a water body by eliminating certain designated uses. Kelso v. Rybachek, Alaska 1996, 912 P.2d 536. Environmental Law 189

10. Remedial measures

Choice of contractor made by Government of the Virgin Islands (GVI) in purported attempt to remedy wastewater system problems in accordance with court order entered in United States government's Clean Water Act enforcement action against GVI was not entitled to deference, in view of district court's findings that negotiation of contract was fraught with political influence and possibly corruption, and GVI's failure to provide adequate justification for declaring state of emergency that allowed it to award contracts by negotiation rather than competitive bidding. U.S. v. Government of Virgin Islands, C.A.3 (Virgin Islands) 2004, 363 F.3d 276. Territories 25

Landowners seeking to invalidate permit to be issued to company by Army Corps of Engineers under Clean Water Act (CWA) for construction of sewer line failed to demonstrate cognizable injury to themselves as result of issuance, as required for proper standing to bring claim; asserted threatened injury was remote, not imminent, and its occurrence was improperly predicated on surmise that Corps would make specific decision, which court could not forecast. Crutchfield v. U.S. Army Corps. of Engineers, E.D.Va.2002, 230 F.Supp.2d 687. Environmental Law 656

Claim brought by landowner, seeking to halt runoff onto land from methane production activities, sought prospective injunctive relief against state agency to prevent continuing violations of Clean Water Act (CWA) and federal constitution, and thus district court maintained subject matter jurisdiction over claim under *Ex parte Young* doctrine, notwithstanding Eleventh Amendment restrictions on claims against state officials. Swartz v. Beach, D.Wyo.2002, 229 F.Supp.2d 1239. Federal Courts 269; Federal Courts 272

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

While potential effectiveness of remedial relief under Clean Water Act was questionable where developers abandoned construction site and there was little likelihood of renewal of activity by current owner, appropriate remedial measures which might be necessary or required so that property would be administered in accordance with environmental protection laws could be reconsidered should any new activity be initiated. Hudson River Fishermen's Ass'n v. Arcuri, S.D.N.Y.1994, 862 F.Supp. 73. Environmental Law ⚷ 695

Minor amount of spraying of insecticides directly over rivers, bays, sound, and ocean surrounding New York City as part of a prevention program did not violate the Clean Water Act (CWA). No Spray Coalition, Inc. v. City of New York, S.D.N.Y.2002, 2002 WL 31682387, Unreported, vacated 351 F.3d 602, on remand 2005 WL 1354041. Environmental Law ⚷ 206

11. Mootness

Voluntary conduct of defendant Government of the Virgin Islands (GVI) in terminating contract with company for repairing and restoring Virgin Islands' wastewater system did not render moot plaintiff United States's motion for injunction against performance of such contract, in Clean Water Act enforcement action; contract was terminated just five days after United States moved to invalidate it, and just two days before District Court's hearing on the motion, governor gave only general reason for its termination, and GVI continued to defend validity and soundness of contract. U.S. v. Government of Virgin Islands, C.A.3 (Virgin Islands) 2004, 363 F.3d 276. Environmental Law ⚷ 663; Environmental Law ⚷ 700

Case arising from city's disagreement with Environmental Protection Agency's (EPA) approval of water quality standards set by Indian tribe recognized as state under Clean Water Act (CWA) was not mooted by agreement among city, EPA, New Mexico, and tribe concerning new National Pollution Discharge Elimination System (NPDES) permit for city, given that agreement failed to mention case, that EPA's regulations and tribe's revised water quality standards were still in effect, and that parties still disagreed about whether EPA's approval of standards was lawful and whether EPA's regulations were consistent with CWA. City of Albuquerque v. Browner, C.A.10 (N.M.) 1996, 97 F.3d 415, certiorari denied 118 S.Ct. 410, 522 U.S. 965, 139 L.Ed.2d 314. Environmental Law ⚷ 663

Corporation's ceasing operations did not render environmental organization's claim for injunctive relief under Water Pollution Control Act Amendments moot, where corporation proved at most that recommencement of its operations would require sizeable investment in new equipment, and not that such recommencement could not be done, particularly in that corporation could stipulate to consent decree at no prejudice to itself if cessation of operations was permanent. Sierra Club v. Hanna Furnace Corp., W.D.N.Y.1985, 636 F.Supp. 527. Injunction ⚷ 22

12. Jurisdiction

Agreement by Government of the Virgin Islands (GVI) to enter amended consent decree with United States government, in Clean Water Act enforcement action, amounted to GVI's consent to suit to enforce such decree, which remedied violations of federal statute, and remedial order entered by District Court, requiring GVI to perform or refrain from performing certain acts, was reasonable exercise of court's equitable powers to enforce federal decree to which GVI had consented. U.S. v. Government of Virgin Islands, C.A.3 (Virgin Islands) 2004, 363 F.3d 276. Federal Courts ⚷ 1023

Compliance by Army Corps of Engineers with the Clean Water Act (CWA) is subject to judicial review. North

FEDERAL REGULATIONS

ATTACHMENT NO. 5

40 C.F.R. § 122.26

C

Effective: June 12, 2006

Code of Federal Regulations Currentness
Title 40. Protection of Environment
Chapter I. Environmental Protection Agency (Refs & Annos)
Subchapter D. Water Programs
Part 122. EPA Administered Permit Programs: The National Pollutant Discharge Elimination System (Refs & Annos)
Subpart B. Permit Application and Special Npdes Program Requirements

→§ 122.26 Storm water discharges (applicable to State NPDES programs, see § 123.25).

(a) Permit requirement.

(1) Prior to October 1, 1994, discharges composed entirely of storm water shall not be required to obtain a NPDES permit except:

(i) A discharge with respect to which a permit has been issued prior to February 4, 1987;

(ii) A discharge associated with industrial activity (see § 122.26(a)(4));

(iii) A discharge from a large municipal separate storm sewer system;

(iv) A discharge from a medium municipal separate storm sewer system;

(v) A discharge which the Director, or in States with approved NPDES programs, either the Director or the EPA Regional Administrator, determines to contribute to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States. This designation may include a discharge from any conveyance or system of conveyances used for collecting and conveying storm water runoff or a system of discharges from municipal separate storm sewers, except for those discharges from conveyances which do not require a permit under paragraph (a)(2) of this section or agricultural storm water runoff which is exempted from the definition of point source at § 122.2.

The Director may designate discharges from municipal separate storm sewers on a system-wide or jurisdiction-wide basis. In making this determination the Director may consider the following factors:

(A) The location of the discharge with respect to waters of the United States as defined at 40 CFR 122.2.

(B) The size of the discharge;

(C) The quantity and nature of the pollutants discharged to waters of the United States; and

(D) Other relevant factors.

(2) The Director may not require a permit for discharges of storm water runoff from the following:

(i) Mining operations composed entirely of flows which are from conveyances or systems of conveyances (including but not limited to pipes, conduits, ditches, and channels) used for collecting and conveying precipitation runoff and which are not contaminated by contact with or that have not come into contact with, any overburden, raw material, intermediate products, finished product, byproduct, or waste products located on the site of such operations, except in accordance with paragraph (c)(1)(iv) of this section.

(ii) All field activities or operations associated with oil and gas exploration, production, processing, or treatment operations or transmission facilities, including activities necessary to prepare a site for drilling and for the movement and placement of drilling equipment, whether or not such field activities or operations may be considered to be construction activities, except in accordance with para-

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

graph (c)(1)(iii) of this section. Discharges of sediment from construction activities associated with oil and gas exploration, production, processing, or treatment operations or transmission facilities are not subject to the provisions of paragraph (c)(1)(iii)(C) of this section.

Note to paragraph (a)(2)(ii): EPA encourages operators of oil and gas field activities or operations to implement and maintain Best Management Practices (BMPs) to minimize discharges of pollutants, including sediment, in storm water both during and after construction activities to help ensure protection of surface water quality during storm events. Appropriate controls would be those suitable to the site conditions and consistent with generally accepted engineering design criteria and manufacturer specifications. Selection of BMPs could also be affected by seasonal or climate conditions.

(3) Large and medium municipal separate storm sewer systems.

(i) Permits must be obtained for all discharges from large and medium municipal separate storm sewer systems.

(ii) The Director may either issue one system-wide permit covering all discharges from municipal separate storm sewers within a large or medium municipal storm sewer system or issue distinct permits for appropriate categories of discharges within a large or medium municipal separate storm sewer system including, but not limited to: all discharges owned or operated by the same municipality; located within the same jurisdiction; all discharges within a system that discharge to the same watershed; discharges within a system that are similar in nature; or for individual discharges from municipal separate storm sewers within the system.

(iii) The operator of a discharge from a municipal separate storm sewer which is part of a large or medium municipal separate storm sewer system must either:

(A) Participate in a permit application (to be a permittee or a co-permittee) with one or more other operators of discharges from the large or medium municipal storm sewer system which covers all, or a portion of all, discharges from the municipal separate storm sewer system;

(B) Submit a distinct permit application which only covers discharges from the municipal separate storm sewers for which the operator is responsible; or

(C) A regional authority may be responsible for submitting a permit application under the following guidelines:

(1) The regional authority together with co-applicants shall have authority over a storm water management program that is in existence, or shall be in existence at the time part 1 of the application is due;

(2) The permit applicant or co-applicants shall establish their ability to make a timely submission of part 1 and part 2 of the municipal application;

(3) Each of the operators of municipal separate storm sewers within the systems described in paragraphs (b)(4)(i), (ii), and (iii) or (b)(7)(i), (ii), and (iii) of this section, that are under the purview of the designated regional authority, shall comply with the application requirements of paragraph (d) of this section.

(iv) One permit application may be submitted for all or a portion of all municipal separate storm sewers within adjacent or interconnected large or medium municipal separate storm sewer systems. The Director may issue one system-wide permit covering all, or a portion of all municipal separate storm sewers in adjacent or interconnected large or medium municipal separate storm sewer systems.

(v) Permits for all or a portion of all discharges from large or medium municipal separate storm sewer systems that are issued on a system-wide,

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

jurisdiction-wide, watershed or other basis may specify different conditions relating to different discharges covered by the permit, including different management programs for different drainage areas which contribute storm water to the system.

(vi) Co-permittees need only comply with permit conditions relating to discharges from the municipal separate storm sewers for which they are operators.

(4) Discharges through large and medium municipal separate storm sewer systems. In addition to meeting the requirements of paragraph (c) of this section, an operator of a storm water discharge associated with industrial activity which discharges through a large or medium municipal separate storm sewer system shall submit, to the operator of the municipal separate storm sewer system receiving the discharge no later than May 15, 1991, or 180 days prior to commencing such discharge: the name of the facility; a contact person and phone number; the location of the discharge; a description, including Standard Industrial Classification, which best reflects the principal products or services provided by each facility; and any existing NPDES permit number.

(5) Other municipal separate storm sewers. The Director may issue permits for municipal separate storm sewers that are designated under paragraph (a)(1)(v) of this section on a system-wide basis, jurisdiction-wide basis, watershed basis or other appropriate basis, or may issue permits for individual discharges.

(6) Non-municipal separate storm sewers. For storm water discharges associated with industrial activity from point sources which discharge through a non-municipal or non-publicly owned separate storm sewer system, the Director, in his discretion, may issue: a single NPDES permit, with each discharger a co-permittee to a permit issued to the operator of the portion of the system that discharges into waters of the United States; or, individual permits to each discharger of storm water associated with industrial activity through the non-municipal conveyance system.

(i) All storm water discharges associated with industrial activity that discharge through a storm water discharge system that is not a municipal separate storm sewer must be covered by an individual permit, or a permit issued to the operator of the portion of the system that discharges to waters of the United States, with each discharger to the non-municipal conveyance a co-permittee to that permit.

(ii) Where there is more than one operator of a single system of such conveyances, all operators of storm water discharges associated with industrial activity must submit applications.

(iii) Any permit covering more than one operator shall identify the effluent limitations, or other permit conditions, if any, that apply to each operator.

(7) Combined sewer systems. Conveyances that discharge storm water runoff combined with municipal sewage are point sources that must obtain NPDES permits in accordance with the procedures of § 122.21 and are not subject to the provisions of this section.

(8) Whether a discharge from a municipal separate storm sewer is or is not subject to regulation under this section shall have no bearing on whether the owner or operator of the discharge is eligible for funding under title II, title III or title VI of the Clean Water Act. See 40 CFR part 35, subpart I, appendix A(b)H.2.j.

(9)(i) On and after October 1, 1994, for discharges composed entirely of storm water, that are not required by paragraph (a)(1) of this section to obtain a permit, operators shall be required to obtain a NPDES permit only if:

(A) The discharge is from a small MS4 required to be regulated pursuant to § 122.32;

(B) The discharge is a storm water discharge associated with small construction activity pur-

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

suant to paragraph (b)(15) of this section;

(C) The Director, or in States with approved NPDES programs either the Director or the EPA Regional Administrator, determines that storm water controls are needed for the discharge based on wasteload allocations that are part of "total maximum daily loads" (TMDLs) that address the pollutant(s) of concern; or

(D) The Director, or in States with approved NPDES programs either the Director or the EPA Regional Administrator, determines that the discharge, or category of discharges within a geographic area, contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

(ii) Operators of small MS4s designated pursuant to paragraphs (a)(9)(i)(A), (a)(9)(i)(C), and (a)(9)(i)(D) of this section shall seek coverage under an NPDES permit in accordance with §§ 122.33 through 122.35. Operators of non-municipal sources designated pursuant to paragraphs (a)(9)(i)(B), (a)(9)(i)(C), and (a)(9)(i)(D) of this section shall seek coverage under an NPDES permit in accordance with paragraph (c)(1) of this section.

(iii) Operators of storm water discharges designated pursuant to paragraphs (a)(9)(i)(C) and (a)(9)(i)(D) of this section shall apply to the Director for a permit within 180 days of receipt of notice, unless permission for a later date is granted by the Director (see § 124.52(c) of this chapter).

(b) Definitions.

(1) Co-permittee means a permittee to a NPDES permit that is only responsible for permit conditions relating to the discharge for which it is operator.

(2) Illicit discharge means any discharge to a municipal separate storm sewer that is not composed entirely of storm water except discharges pursuant to a NPDES permit (other than the NPDES permit for discharges from the municipal separate storm sewer) and discharges resulting from fire fighting activities.

(3) Incorporated place means the District of Columbia, or a city, town, township, or village that is incorporated under the laws of the State in which it is located.

(4) Large municipal separate storm sewer system means all municipal separate storm sewers that are either:

(i) Located in an incorporated place with a population of 250,000 or more as determined by the 1990 Decennial Census by the Bureau of the Census (Appendix F of this part); or

(ii) Located in the counties listed in appendix H, except municipal separate storm sewers that are located in the incorporated places, townships or towns within such counties; or

(iii) Owned or operated by a municipality other than those described in paragraph (b)(4)(i) or (ii) of this section and that are designated by the Director as part of the large or medium municipal separate storm sewer system due to the interrelationship between the discharges of the designated storm sewer and the discharges from municipal separate storm sewers described under paragraph (b)(4)(i) or (ii) of this section. In making this determination the Director may consider the following factors:

(A) Physical interconnections between the municipal separate storm sewers;

(B) The location of discharges from the designated municipal separate storm sewer relative to discharges from municipal separate storm sewers described in paragraph (b)(4)(i) of this section;

(C) The quantity and nature of pollutants discharged to waters of the United States;

(D) The nature of the receiving waters; and

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

(E) Other relevant factors; or

(iv) The Director may, upon petition, designate as a large municipal separate storm sewer system, municipal separate storm sewers located within the boundaries of a region defined by a storm water management regional authority based on a jurisdictional, watershed, or other appropriate basis that includes one or more of the systems described in paragraph (b)(4)(i), (ii), (iii) of this section.

(5) Major municipal separate storm sewer outfall (or "major outfall") means a municipal separate storm sewer outfall that discharges from a single pipe with an inside diameter of 36 inches or more or its equivalent (discharge from a single conveyance other than circular pipe which is associated with a drainage area of more than 50 acres); or for municipal separate storm sewers that receive storm water from lands zoned for industrial activity (based on comprehensive zoning plans or the equivalent), an outfall that discharges from a single pipe with an inside diameter of 12 inches or more or from its equivalent (discharge from other than a circular pipe associated with a drainage area of 2 acres or more).

(6) Major outfall means a major municipal separate storm sewer outfall.

(7) Medium municipal separate storm sewer system means all municipal separate storm sewers that are either:

(i) Located in an incorporated place with a population of 100,000 or more but less than 250,000, as determined by the 1990 Decennial Census by the Bureau of the Census (Appendix G of this part); or

(ii) Located in the counties listed in appendix I, except municipal separate storm sewers that are located in the incorporated places, townships or towns within such counties; or

(iii) Owned or operated by a municipality other than those described in paragraph (b)(7)(i) or (ii) of this section and that are designated by the Director as part of the large or medium municipal separate storm sewer system due to the interrelationship between the discharges of the designated storm sewer and the discharges from municipal separate storm sewers described under paragraph (b)(7)(i) or (ii) of this section. In making this determination the Director may consider the following factors:

(A) Physical interconnections between the municipal separate storm sewers;

(B) The location of discharges from the designated municipal separate storm sewer relative to discharges from municipal separate storm sewers described in paragraph (b)(7)(i) of this section;

(C) The quantity and nature of pollutants discharged to waters of the United States;

(D) The nature of the receiving waters; or

(E) Other relevant factors; or

(iv) The Director may, upon petition, designate as a medium municipal separate storm sewer system, municipal separate storm sewers located within the boundaries of a region defined by a storm water management regional authority based on a jurisdictional, watershed, or other appropriate basis that includes one or more of the systems described in paragraphs (b)(7) (i), (ii), (iii) of this section.

(8) Municipal separate storm sewer means a conveyance or system of conveyances (including roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains):

(i) Owned or operated by a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to waters of the United States;

(ii) Designed or used for collecting or conveying storm water;

(iii) Which is not a combined sewer; and

(iv) Which is not part of a Publicly Owned Treatment Works (POTW) as defined at 40 CFR 122.2.

(9) Outfall means a point source as defined by 40 CFR 122.2 at the point where a municipal separate storm sewer discharges to waters of the United States and does not include open conveyances connecting two municipal separate storm sewers, or pipes, tunnels or other conveyances which connect segments of the same stream or other waters of the United States and are used to convey waters of the United States.

(10) Overburden means any material of any nature, consolidated or unconsolidated, that overlies a mineral deposit, excluding topsoil or similar naturally-occurring surface materials that are not disturbed by mining operations.

(11) Runoff coefficient means the fraction of total rainfall that will appear at a conveyance as runoff.

(12) Significant materials includes, but is not limited to: raw materials; fuels; materials such as solvents, detergents, and plastic pellets; finished materials such as metallic products; raw materials used in food processing or production; hazardous substances designated under section 101(14) of CERCLA; any chemical the facility is required to report pursuant to section 313 of title III of SARA; fertilizers; pesticides; and waste products such as ashes, slag and sludge that have the potential to be released with storm water discharges.

(13) Storm water means storm water runoff, snow melt runoff, and surface runoff and drainage.

(14) Storm water discharge associated with industrial activity means the discharge from any conveyance that is used for collecting and conveying storm water and that is directly related to manufacturing, processing or raw materials storage areas at an industrial plant. The term does not include discharges from facilities or activities excluded from the NPDES program under this part 122. For the categories of industries identified in this section, the term includes, but is not limited to, storm water discharges from industrial plant yards; immediate access roads and rail lines used or traveled by carriers of raw materials, manufactured products, waste material, or by-products used or created by the facility; material handling sites; refuse sites; sites used for the application or disposal of process waste waters (as defined at part 401 of this chapter); sites used for the storage and maintenance of material handling equipment; sites used for residual treatment, storage, or disposal; shipping and receiving areas; manufacturing buildings; storage areas (including tank farms) for raw materials, and intermediate and final products; and areas where industrial activity has taken place in the past and significant materials remain and are exposed to storm water. For the purposes of this paragraph, material handling activities include storage, loading and unloading, transportation, or conveyance of any raw material, intermediate product, final product, by-product or waste product. The term excludes areas located on plant lands separate from the plant's industrial activities, such as office buildings and accompanying parking lots as long as the drainage from the excluded areas is not mixed with storm water drained from the above described areas. Industrial facilities (including industrial facilities that are federally, State, or municipally owned or operated that meet the description of the facilities listed in paragraphs (b)(14)(i) through (xi) of this section) include those facilities designated under the provisions of paragraph (a)(1)(v) of this section. The following categories of facilities are considered to be engaging in "industrial activity" for purposes of paragraph (b)(14):

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

(i) Facilities subject to storm water effluent limitations guidelines, new source performance standards, or toxic pollutant effluent standards under 40 CFR subchapter N (except facilities with toxic pollutant effluent standards which are exempted under category (xi) in paragraph (b)(14) of this section);

(ii) Facilities classified as Standard Industrial Classifications 24 (except 2434), 26 (except 265 and 267), 28 (except 283), 29, 311, 32 (except 323), 33, 3441, 373;

(iii) Facilities classified as Standard Industrial Classifications 10 through 14 (mineral industry) including active or inactive mining operations (except for areas of coal mining operations no longer meeting the definition of a reclamation area under 40 CFR 434.11(1) because the performance bond issued to the facility by the appropriate SMCRA authority has been released, or except for areas of non-coal mining operations which have been released from applicable State or Federal reclamation requirements after December 17, 1990) and oil and gas exploration, production, processing, or treatment operations, or transmission facilities that discharge storm water contaminated by contact with or that has come into contact with, any overburden, raw material, intermediate products, finished products, byproducts or waste products located on the site of such operations; (inactive mining operations are mining sites that are not being actively mined, but which have an identifiable owner/operator; inactive mining sites do not include sites where mining claims are being maintained prior to disturbances associated with the extraction, beneficiation, or processing of mined materials, nor sites where minimal activities are undertaken for the sole purpose of maintaining a mining claim);

(iv) Hazardous waste treatment, storage, or disposal facilities, including those that are operating under interim status or a permit under subtitle C of RCRA;

(v) Landfills, land application sites, and open dumps that receive or have received any industrial wastes (waste that is received from any of the facilities described under this subsection) including those that are subject to regulation under subtitle D of RCRA;

(vi) Facilities involved in the recycling of materials, including metal scrapyards, battery reclaimers, salvage yards, and automobile junkyards, including but limited to those classified as Standard Industrial Classification 5015 and 5093;

(vii) Steam electric power generating facilities, including coal handling sites;

(viii) Transportation facilities classified as Standard Industrial Classifications 40, 41, 42 (except 4221-25), 43, 44, 45, and 5171 which have vehicle maintenance shops, equipment cleaning operations, or airport deicing operations. Only those portions of the facility that are either involved in vehicle maintenance (including vehicle rehabilitation, mechanical repairs, painting, fueling, and lubrication), equipment cleaning operations, airport deicing operations, or which are otherwise identified under paragraphs (b)(14) (i)-(vii) or (ix)-(xi) of this section are associated with industrial activity;

(ix) Treatment works treating domestic sewage or any other sewage sludge or wastewater treatment device or system, used in the storage treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated to the disposal of sewage sludge that are located within the confines of the facility, with a design flow of 1.0 mgd or more, or required to have an approved pretreatment program under 40 CFR part 403. Not included are farm lands, domestic gardens or lands used for sludge management where sludge is beneficially reused and which are not physically located in the confines of the facility, or areas that are in compliance with section 405 of the CWA;

(x) Construction activity including clearing, grading and excavation, except operations that result in the disturbance of less than five acres of total land area. Construction activity also includes the dis-

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

turbance of less than five acres of total land area that is a part of a larger common plan of development or sale if the larger common plan will ultimately disturb five acres or more;

(xi) Facilities under Standard Industrial Classifications 20, 21, 22, 23, 2434, 25, 265, 267, 27, 283, 285, 30, 31 (except 311), 323, 34 (except 3441), 35, 36, 37 (except 373), 38, 39, and 4221-25;

(15) Storm water discharge associated with small construction activity means the discharge of storm water from:

(i) Construction activities including clearing, grading, and excavating that result in land disturbance of equal to or greater than one acre and less than five acres. Small construction activity also includes the disturbance of less than one acre of total land area that is part of a larger common plan of development or sale if the larger common plan will ultimately disturb equal to or greater than one and less than five acres. Small construction activity does not include routine maintenance that is performed to maintain the original line and grade, hydraulic capacity, or original purpose of the facility. The Director may waive the otherwise applicable requirements in a general permit for a storm water discharge from construction activities that disturb less than five acres where:

(A) The value of the rainfall erosivity factor ("R" in the Revised Universal Soil Loss Equation) is less than five during the period of construction activity. The rainfall erosivity factor is determined in accordance with Chapter 2 of Agriculture Handbook Number 703, Predicting Soil Erosion by Water: A Guide to Conservation Planning With the Revised Universal Soil Loss Equation (RUSLE), pages 21-64, dated January 1997. The Director of the Federal Register approves this incorporation by reference in accordance with 5 U.S.C 552(a) and 1 CFR part 51. Copies may be obtained from EPA's Water Resource Center, Mail Code RC4100, 1200 Pennsylvania Ave., NW., Washington, DC 20460. A copy is also available for inspection at the U.S. EPA Water Docket, 1200 Pennsylvania Ave., NW., Washington, DC 20460, or the Office of the Federal Register, 800 N. Capitol Street N.W. Suite 700, Washington, DC. An operator must certify to the Director that the construction activity will take place during a period when the value of the rainfall erosivity factor is less than five; or

(B) Storm water controls are not needed based on a "total maximum daily load" (TMDL) approved or established by EPA that addresses the pollutant(s) of concern or, for non-impaired waters that do not require TMDLs, an equivalent analysis that determines allocations for small construction sites for the pollutant(s) of concern or that determines that such allocations are not needed to protect water quality based on consideration of existing in-stream concentrations, expected growth in pollutant contributions from all sources, and a margin of safety. For the purpose of this paragraph, the pollutant(s) of concern include sediment or a parameter that addresses sediment (such as total suspended solids, turbidity or siltation) and any other pollutant that has been identified as a cause of impairment of any water body that will receive a discharge from the construction activity. The operator must certify to the Director that the construction activity will take place, and storm water discharges will occur, within the drainage area addressed by the TMDL or equivalent analysis.

(ii) Any other construction activity designated by the Director, or in States with approved NPDES programs either the Director or the EPA Regional Administrator, based on the potential for contribution to a violation of a water quality standard or for significant contribution of pollutants to waters of the United States.

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

Exhibit 1 to § 122.26(b)(15).--Summary of Coverage of "Storm Water Discharges Associated with Small Construction Activity" Under the NPDES Storm Water Program

Automatic Designation: Required Nationwide Coverage	. Construction activities that result in a land disturbance of equal to or greater than one acre and less than five acres. . Construction activities disturbing less than one acre if part of a larger common plan of development or sale with a planned disturbance of equal to or greater than one acre and less than five acres. (see § 122.26(b)(15)(i).)
Potential Designation: Optional Evaluation and Designation by the NPDES Permitting Authority or EPA Regional Administrator.	. Construction activities that result in a land disturbance of less than one acre based on the potential for contribution to a violation of a water quality standard or for significant contribution of pollutants. (see § 122.26(b)(15)(ii).)
Potential Waiver: Waiver from Requirements as Determined by the NPDES Permitting Authority.	Any automatically designated construction activity where the operator certifies: (1) A rainfall erosivity factor of less than five, or (2) That the activity will occur within an area where controls are not needed based on a TMDL or, for non-impaired waters that do not require a TMDL, an equivalent analysis for the pollutant(s) of concern. (see § 122.26(b)(15)(i).)

(16) Small municipal separate storm sewer system means all separate storm sewers that are:

(i) Owned or operated by the United States, a State, city, town, borough, county, parish, district, association, or other public body (created by or pursuant to State law) having jurisdiction over disposal of sewage, industrial wastes, storm water, or other wastes, including special districts under State law such as a sewer district, flood control district or drainage district, or similar entity, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under section 208 of the CWA that discharges to waters of the United States.

(ii) Not defined as "large" or "medium" municipal separate storm sewer systems pursuant to paragraphs (b)(4) and (b)(7) of this section, or designated under paragraph (a)(1)(v) of this section.

(iii) This term includes systems similar to separate storm sewer systems in municipalities, such as sys-

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

tems at military bases, large hospital or prison complexes, and highways and other thoroughfares. The term does not include separate storm sewers in very discrete areas, such as individual buildings.

(17) Small MS4 means a small municipal separate storm sewer system.

(18) Municipal separate storm sewer system means all separate storm sewers that are defined as "large" or "medium" or "small" municipal separate storm sewer systems pursuant to paragraphs (b)(4), (b)(7), and (b)(16) of this section, or designated under paragraph (a)(1)(v) of this section.

(19) MS4 means a municipal separate storm sewer system.

(20) Uncontrolled sanitary landfill means a landfill or open dump, whether in operation or closed, that does not meet the requirements for runon or runoff controls established pursuant to subtitle D of the Solid Waste Disposal Act.

(c) Application requirements for storm water discharges associated with industrial activity and storm water discharges associated with small construction activity--

(1) Individual application. Dischargers of storm water associated with industrial activity and with small construction activity are required to apply for an individual permit or seek coverage under a promulgated storm water general permit. Facilities that are required to obtain an individual permit, or any discharge of storm water which the Director is evaluating for designation (see 124.52(c) of this chapter) under paragraph (a)(1)(v) of this section and is not a municipal storm sewer, shall submit an NPDES application in accordance with the requirements of § 122.21 as modified and supplemented by the provisions of this paragraph.

(i) Except as provided in § 122.26(c)(1)(ii)-(iv), the operator of a storm water discharge associated with industrial activity subject to this section shall provide:

(A) A site map showing topography (or indicating the outline of drainage areas served by the outfall(s) covered in the application if a topographic map is unavailable) of the facility including: each of its drainage and discharge structures; the drainage area of each storm water outfall; paved areas and buildings within the drainage area of each storm water outfall, each past or present area used for outdoor storage or disposal of significant materials, each existing structural control measure to reduce pollutants in storm water runoff, materials loading and access areas, areas where pesticides, herbicides, soil conditioners and fertilizers are applied, each of its hazardous waste treatment, storage or disposal facilities (including each area not required to have a RCRA permit which is used for accumulating hazardous waste under 40 CFR 262.34); each well where fluids from the facility are injected underground; springs, and other surface water bodies which receive storm water discharges from the facility;

(B) An estimate of the area of impervious surfaces (including paved areas and building roofs) and the total area drained by each outfall (within a mile radius of the facility) and a narrative description of the following: Significant materials that in the three years prior to the submittal of this application have been treated, stored or disposed in a manner to allow exposure to storm water; method of treatment, storage or disposal of such materials; materials management practices employed, in the three years prior to the submittal of this application, to minimize contact by these materials with storm water runoff; materials loading and access areas; the location, manner and frequency in which pesticides, herbicides, soil conditioners and fertilizers are applied; the location and a description of existing structural and nonstructural control measures to reduce pollutants in storm water runoff; and a description of the treatment the storm water receives, including the ultimate disposal of any solid or fluid

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

wastes other than by discharge;

(C) A certification that all outfalls that should contain storm water discharges associated with industrial activity have been tested or evaluated for the presence of non-storm water discharges which are not covered by a NPDES permit; tests for such non-storm water discharges may include smoke tests, fluorometric dye tests, analysis of accurate schematics, as well as other appropriate tests. The certification shall include a description of the method used, the date of any testing, and the on-site drainage points that were directly observed during a test;

(D) Existing information regarding significant leaks or spills of toxic or hazardous pollutants at the facility that have taken place within the three years prior to the submittal of this application;

(E) Quantitative data based on samples collected during storm events and collected in accordance with § 122.21 of this part from all outfalls containing a storm water discharge associated with industrial activity for the following parameters:

(1) Any pollutant limited in an effluent guideline to which the facility is subject;

(2) Any pollutant listed in the facility's NPDES permit for its process wastewater (if the facility is operating under an existing NPDES permit);

(3) Oil and grease, pH, BOD5, COD, TSS, total phosphorus, total Kjeldahl nitrogen, and nitrate plus nitrite nitrogen;

(4) Any information on the discharge required under § 122.21(g)(7)(vi) and (vii);

(5) Flow measurements or estimates of the flow rate, and the total amount of discharge for the storm event(s) sampled, and the method of flow measurement or estimation; and

(6) The date and duration (in hours) of the storm event(s) sampled, rainfall measurements or estimates of the storm event (in inches) which generated the sampled runoff and the duration between the storm event sampled and the end of the previous measurable (greater than 0.1 inch rainfall) storm event (in hours);

(F) Operators of a discharge which is composed entirely of storm water are exempt from the requirements of § 122.21(g)(2), (g)(3), (g)(4), (g)(5), (g)(7)(iii), (g)(7)(iv), (g)(7)(v), and (g)(7)(viii); and

(G) Operators of new sources or new discharges (as defined in § 122.2 of this part) which are composed in part or entirely of storm water must include estimates for the pollutants or parameters listed in paragraph (c)(1)(i)(E) of this section instead of actual sampling data, along with the source of each estimate. Operators of new sources or new discharges composed in part or entirely of storm water must provide quantitative data for the parameters listed in paragraph (c)(1)(i)(E) of this section within two years after commencement of discharge, unless such data has already been reported under the monitoring requirements of the NPDES permit for the discharge. Operators of a new source or new discharge which is composed entirely of storm water are exempt from the requirements of § 122.21 (k)(3)(ii), (k)(3)(iii), and (k)(5).

(ii) An operator of an existing or new storm water discharge that is associated with industrial activity solely under paragraph (b)(14)(x) of this section or is associated with small construction activity solely under paragraph (b)(15) of this section, is exempt from the requirements of § 122.21(g) and paragraph (c)(1)(i) of this section. Such operator shall provide a narrative description of:

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

(A) The location (including a map) and the nature of the construction activity;

(B) The total area of the site and the area of the site that is expected to undergo excavation during the life of the permit;

(C) Proposed measures, including best management practices, to control pollutants in storm water discharges during construction, including a brief description of applicable State and local erosion and sediment control requirements;

(D) Proposed measures to control pollutants in storm water discharges that will occur after construction operations have been completed, including a brief description of applicable State or local erosion and sediment control requirements;

(E) An estimate of the runoff coefficient of the site and the increase in impervious area after the construction addressed in the permit application is completed, the nature of fill material and existing data describing the soil or the quality of the discharge; and

(F) The name of the receiving water.

(iii) The operator of an existing or new discharge composed entirely of storm water from an oil or gas exploration, production, processing, or treatment operation, or transmission facility is not required to submit a permit application in accordance with paragraph (c)(1)(i) of this section, unless the facility:

(A) Has had a discharge of storm water resulting in the discharge of a reportable quantity for which notification is or was required pursuant to 40 CFR 117.21 or 40 CFR 302.6 at anytime since November 16, 1987; or

(B) Has had a discharge of storm water resulting in the discharge of a reportable quantity for which notification is or was required pursuant to 40 CFR 110.6 at any time since November 16, 1987; or

(C) Contributes to a violation of a water quality standard.

(iv) The operator of an existing or new discharge composed entirely of storm water from a mining operation is not required to submit a permit application unless the discharge has come into contact with, any overburden, raw material, intermediate products, finished product, byproduct or waste products located on the site of such operations.

(v) Applicants shall provide such other information the Director may reasonably require under § 122.21(g)(13) of this part to determine whether to issue a permit and may require any facility subject to paragraph (c)(1)(ii) of this section to comply with paragraph (c)(1)(i) of this section.

(2) [Reserved]

(d) Application requirements for large and medium municipal separate storm sewer discharges. The operator of a discharge from a large or medium municipal separate storm sewer or a municipal separate storm sewer that is designated by the Director under paragraph (a)(1)(v) of this section, may submit a jurisdiction-wide or system-wide permit application. Where more than one public entity owns or operates a municipal separate storm sewer within a geographic area (including adjacent or interconnected municipal separate storm sewer systems), such operators may be a coapplicant to the same application. Permit applications for discharges from large and medium municipal storm sewers or municipal storm sewers designated under paragraph (a)(1)(v) of this section shall include;

(1) Part 1. Part 1 of the application shall consist of;

(i) General information. The applicants' name, address, telephone number of contact person, ownership status and status as a State or local government entity.

(ii) Legal authority. A description of existing legal authority to control discharges to the municipal

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

separate storm sewer system. When existing legal authority is not sufficient to meet the criteria provided in paragraph (d)(2)(i) of this section, the description shall list additional authorities as will be necessary to meet the criteria and shall include a schedule and commitment to seek such additional authority that will be needed to meet the criteria.

(iii) Source identification.

(A) A description of the historic use of ordinances, guidance or other controls which limited the discharge of non-storm water discharges to any Publicly Owned Treatment Works serving the same area as the municipal separate storm sewer system.

(B) A USGS 7.5 minute topographic map (or equivalent topographic map with a scale between 1:10,000 and 1:24,000 if cost effective) extending one mile beyond the service boundaries of the municipal storm sewer system covered by the permit application. The following information shall be provided:

(1) The location of known municipal storm sewer system outfalls discharging to waters of the United States;

(2) A description of the land use activities (e.g. divisions indicating undeveloped, residential, commercial, agricultural and industrial uses) accompanied with estimates of population densities and projected growth for a ten year period within the drainage area served by the separate storm sewer. For each land use type, an estimate of an average runoff coefficient shall be provided;

(3) The location and a description of the activities of the facility of each currently operating or closed municipal landfill or other treatment, storage or disposal facility for municipal waste;

(4) The location and the permit number of any known discharge to the municipal storm sewer that has been issued a NPDES permit;

(5) The location of major structural controls for storm water discharge (retention basins, detention basins, major infiltration devices, etc.); and

(6) The identification of publicly owned parks, recreational areas, and other open lands.

(iv) Discharge characterization.

(A) Monthly mean rain and snow fall estimates (or summary of weather bureau data) and the monthly average number of storm events.

(B) Existing quantitative data describing the volume and quality of discharges from the municipal storm sewer, including a description of the outfalls sampled, sampling procedures and analytical methods used.

(C) A list of water bodies that receive discharges from the municipal separate storm sewer system, including downstream segments, lakes and estuaries, where pollutants from the system discharges may accumulate and cause water degradation and a brief description of known water quality impacts. At a minimum, the description of impacts shall include a description of whether the water bodies receiving such discharges have been:

(1) Assessed and reported in section 305(b) reports submitted by the State, the basis for the assessment (evaluated or monitored), a summary of designated use support and attainment of Clean Water Act (CWA) goals (fishable and swimmable waters), and causes of nonsupport of designated uses;

(2) Listed under section 304(l)(1)(A)(i), section 304(l)(1)(A)(ii), or section 304(l)(1)(B) of the CWA that is not expec-

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

ted to meet water quality standards or water quality goals;

(3) Listed in State Nonpoint Source Assessments required by section 319(a) of the CWA that, without additional action to control nonpoint sources of pollution, cannot reasonably be expected to attain or maintain water quality standards due to storm sewers, construction, highway maintenance and runoff from municipal landfills and municipal sludge adding significant pollution (or contributing to a violation of water quality standards);

(4) Identified and classified according to eutrophic condition of publicly owned lakes listed in State reports required under section 314(a) of the CWA (include the following: A description of those publicly owned lakes for which uses are known to be impaired; a description of procedures, processes and methods to control the discharge of pollutants from municipal separate storm sewers into such lakes; and a description of methods and procedures to restore the quality of such lakes);

(5) Areas of concern of the Great Lakes identified by the International Joint Commission;

(6) Designated estuaries under the National Estuary Program under section 320 of the CWA;

(7) Recognized by the applicant as highly valued or sensitive waters;

(8) Defined by the State or U.S. Fish and Wildlife Services's National Wetlands Inventory as wetlands; and

(9) Found to have pollutants in bottom sediments, fish tissue or biosurvey data.

(D) Field screening. Results of a field screening analysis for illicit connections and illegal dumping for either selected field screening points or major outfalls covered in the permit application. At a minimum, a screening analysis shall include a narrative description, for either each field screening point or major outfall, of visual observations made during dry weather periods. If any flow is observed, two grab samples shall be collected during a 24 hour period with a minimum period of four hours between samples. For all such samples, a narrative description of the color, odor, turbidity, the presence of an oil sheen or surface scum as well as any other relevant observations regarding the potential presence of non-storm water discharges or illegal dumping shall be provided. In addition, a narrative description of the results of a field analysis using suitable methods to estimate pH, total chlorine, total copper, total phenol, and detergents (or surfactants) shall be provided along with a description of the flow rate. Where the field analysis does not involve analytical methods approved under 40 CFR part 136, the applicant shall provide a description of the method used including the name of the manufacturer of the test method along with the range and accuracy of the test. Field screening points shall be either major outfalls or other outfall points (or any other point of access such as manholes) randomly located throughout the storm sewer system by placing a grid over a drainage system map and identifying those cells of the grid which contain a segment of the storm sewer system or major outfall. The field screening points shall be established using the following guidelines and criteria:

(1) A grid system consisting of perpendicular north-south and east-west lines spaced 1/4 mile apart shall be overlaid on a map of the municipal storm sewer system, creating a series of cells;

(2) All cells that contain a segment of the

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

storm sewer system shall be identified; one field screening point shall be selected in each cell; major outfalls may be used as field screening points;

(3) Field screening points should be located downstream of any sources of suspected illegal or illicit activity;

(4) Field screening points shall be located to the degree practicable at the farthest manhole or other accessible location downstream in the system, within each cell; however, safety of personnel and accessibility of the location should be considered in making this determination;

(5) Hydrological conditions; total drainage area of the site; population density of the site; traffic density; age of the structures or buildings in the area; history of the area; and land use types;

(6) For medium municipal separate storm sewer systems, no more than 250 cells need to have identified field screening points; in large municipal separate storm sewer systems, no more than 500 cells need to have identified field screening points; cells established by the grid that contain no storm sewer segments will be eliminated from consideration; if fewer than 250 cells in medium municipal sewers are created, and fewer than 500 in large systems are created by the overlay on the municipal sewer map, then all those cells which contain a segment of the sewer system shall be subject to field screening (unless access to the separate storm sewer system is impossible); and

(7) Large or medium municipal separate storm sewer systems which are unable to utilize the procedures described in paragraphs (d)(1)(iv)(D) (1) through (6) of this section, because a sufficiently detailed map of the separate storm sewer systems is unavailable, shall field screen no more than 500 or 250 major outfalls respectively (or all major outfalls in the system, if less); in such circumstances, the applicant shall establish a grid system consisting of north-south and east-west lines spaced 1/4 mile apart as an overlay to the boundaries of the municipal storm sewer system, thereby creating a series of cells; the applicant will then select major outfalls in as many cells as possible until at least 500 major outfalls (large municipalities) or 250 major outfalls (medium municipalities) are selected; a field screening analysis shall be undertaken at these major outfalls.

(E) Characterization plan. Information and a proposed program to meet the requirements of paragraph (d)(2)(iii) of this section. Such description shall include: the location of outfalls or field screening points appropriate for representative data collection under paragraph (d)(2)(iii)(A) of this section, a description of why the outfall or field screening point is representative, the seasons during which sampling is intended, a description of the sampling equipment. The proposed location of outfalls or field screening points for such sampling should reflect water quality concerns (see paragraph (d)(1)(iv)(C) of this section) to the extent practicable.

(v) Management programs.

(A) A description of the existing management programs to control pollutants from the municipal separate storm sewer system. The description shall provide information on existing structural and source controls, including operation and maintenance measures for structural controls, that are currently being implemented. Such controls may include, but are not limited to: Procedures to control pollution resulting from construction activities; floodplain management controls; wetland protection measures;

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

best management practices for new subdivisions; and emergency spill response programs. The description may address controls established under State law as well as local requirements.

(B) A description of the existing program to identify illicit connections to the municipal storm sewer system. The description should include inspection procedures and methods for detecting and preventing illicit discharges, and describe areas where this program has been implemented.

(vi) Fiscal resources.

(A) A description of the financial resources currently available to the municipality to complete part 2 of the permit application. A description of the municipality's budget for existing storm water programs, including an overview of the municipality's financial resources and budget, including overall indebtedness and assets, and sources of funds for storm water programs.

(2) Part 2. Part 2 of the application shall consist of:

(i) Adequate legal authority. A demonstration that the applicant can operate pursuant to legal authority established by statute, ordinance or series of contracts which authorizes or enables the applicant at a minimum to:

(A) Control through ordinance, permit, contract, order or similar means, the contribution of pollutants to the municipal storm sewer by storm water discharges associated with industrial activity and the quality of storm water discharged from sites of industrial activity;

(B) Prohibit through ordinance, order or similar means, illicit discharges to the municipal separate storm sewer;

(C) Control through ordinance, order or similar means the discharge to a municipal separate storm sewer of spills, dumping or disposal of materials other than storm water;

(D) Control through interagency agreements among coapplicants the contribution of pollutants from one portion of the municipal system to another portion of the municipal system;

(E) Require compliance with conditions in ordinances, permits, contracts or orders; and

(F) Carry out all inspection, surveillance and monitoring procedures necessary to determine compliance and noncompliance with permit conditions including the prohibition on illicit discharges to the municipal separate storm sewer.

(ii) Source identification. The location of any major outfall that discharges to waters of the United States that was not reported under paragraph (d)(1)(iii)(B)(1) of this section. Provide an inventory, organized by watershed of the name and address, and a description (such as SIC codes) which best reflects the principal products or services provided by each facility which may discharge, to the municipal separate storm sewer, storm water associated with industrial activity;

(iii) Characterization data. When "quantitative data" for a pollutant are required under paragraph (d)(2)(iii)(A)(3) of this section, the applicant must collect a sample of effluent in accordance with § 122.21(g)(7) and analyze it for the pollutant in accordance with analytical methods approved under part 136 of this chapter. When no analytical method is approved the applicant may use any suitable method but must provide a description of the method. The applicant must provide information characterizing the quality and quantity of discharges covered in the permit application, including:

(A) Quantitative data from representative outfalls designated by the Director (based on information received in part 1 of the application, the Director shall designate between five and

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

ten outfalls or field screening points as representative of the commercial, residential and industrial land use activities of the drainage area contributing to the system or, where there are less than five outfalls covered in the application, the Director shall designate all outfalls) developed as follows:

(1) For each outfall or field screening point designated under this subparagraph, samples shall be collected of storm water discharges from three storm events occurring at least one month apart in accordance with the requirements at § 122.21(g)(7) (the Director may allow exemptions to sampling three storm events when climatic conditions create good cause for such exemptions);

(2) A narrative description shall be provided of the date and duration of the storm event(s) sampled, rainfall estimates of the storm event which generated the sampled discharge and the duration between the storm event sampled and the end of the previous measurable (greater than 0.1 inch rainfall) storm event;

(3) For samples collected and described under paragraphs (d)(2)(iii)(A)(1) and (A)(2) of this section, quantitative data shall be provided for: the organic pollutants listed in Table II; the pollutants listed in Table III (toxic metals, cyanide, and total phenols) of appendix D of 40 CFR part 122, and for the following pollutants:

Total suspended solids (TSS)

Total dissolved solids (TDS)

COD

BOD_5

Oil and grease

Fecal coliform

Fecal streptococcus

pH

Total Kjeldahl nitrogen

Nitrate plus nitrite

Dissolved phosphorus

Total ammonia plus organic nitrogen

Total phosphorus

(4) Additional limited quantitative data required by the Director for determining permit conditions (the Director may require that quantitative data shall be provided for additional parameters, and may establish sampling conditions such as the location, season of sample collection, form of precipitation (snow melt, rainfall) and other parameters necessary to insure representativeness);

(B) Estimates of the annual pollutant load of the cumulative discharges to waters of the United States from all identified municipal outfalls and the event mean concentration of the cumulative discharges to waters of the United States from all identified municipal outfalls during a storm event (as described under § 122.21(c)(7)) for BOD_5, COD, TSS, dissolved solids, total nitrogen, total ammonia plus organic nitrogen, total phosphorus, dissolved phosphorus, cadmium, copper, lead, and zinc. Estimates shall be accompanied by a description of the procedures for estimating constituent loads and concentrations, including any modelling, data analysis, and calculation methods;

(C) A proposed schedule to provide estimates for each major outfall identified in either paragraph (d)(2)(ii) or (d)(1)(iii)(B)(1) of this sec-

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

tion of the seasonal pollutant load and of the event mean concentration of a representative storm for any constituent detected in any sample required under paragraph (d)(2)(iii)(A) of this section; and

(D) A proposed monitoring program for representative data collection for the term of the permit that describes the location of outfalls or field screening points to be sampled (or the location of instream stations), why the location is representative, the frequency of sampling, parameters to be sampled, and a description of sampling equipment.

(iv) Proposed management program. A proposed management program covers the duration of the permit. It shall include a comprehensive planning process which involves public participation and where necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and such other provisions which are appropriate. The program shall also include a description of staff and equipment available to implement the program. Separate proposed programs may be submitted by each coapplicant. Proposed programs may impose controls on a systemwide basis, a watershed basis, a jurisdiction basis, or on individual outfalls. Proposed programs will be considered by the Director when developing permit conditions to reduce pollutants in discharges to the maximum extent practicable. Proposed management programs shall describe priorities for implementing controls. Such programs shall be based on:

(A) A description of structural and source control measures to reduce pollutants from runoff from commercial and residential areas that are discharged from the municipal storm sewer system that are to be implemented during the life of the permit, accompanied with an estimate of the expected reduction of pollutant loads and a proposed schedule for implementing such controls. At a minimum, the description shall include:

(1) A description of maintenance activities and a maintenance schedule for structural controls to reduce pollutants (including floatables) in discharges from municipal separate storm sewers;

(2) A description of planning procedures including a comprehensive master plan to develop, implement and enforce controls to reduce the discharge of pollutants from municipal separate storm sewers which receive discharges from areas of new development and significant redevelopment. Such plan shall address controls to reduce pollutants in discharges from municipal separate storm sewers after construction is completed. (Controls to reduce pollutants in discharges from municipal separate storm sewers containing construction site runoff are addressed in paragraph (d)(2)(iv)(D) of this section;

(3) A description of practices for operating and maintaining public streets, roads and highways and procedures for reducing the impact on receiving waters of discharges from municipal storm sewer systems, including pollutants discharged as a result of deicing activities;

(4) A description of procedures to assure that flood management projects assess the impacts on the water quality of receiving water bodies and that existing structural flood control devices have been evaluated to determine if retrofitting the device to provide additional pollutant removal from storm water is feasible;

(5) A description of a program to monitor pollutants in runoff from operating or closed municipal landfills or other treatment, storage or disposal facilities for municipal waste, which shall identify priorit-

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

ies and procedures for inspections and establishing and implementing control measures for such discharges (this program can be coordinated with the program developed under paragraph (d)(2)(iv)(C) of this section); and

(6) A description of a program to reduce to the maximum extent practicable, pollutants in discharges from municipal separate storm sewers associated with the application of pesticides, herbicides and fertilizer which will include, as appropriate, controls such as educational activities, permits, certifications and other measures for commercial applicators and distributors, and controls for application in public right-of-ways and at municipal facilities.

(B) A description of a program, including a schedule, to detect and remove (or require the discharger to the municipal separate storm sewer to obtain a separate NPDES permit for) illicit discharges and improper disposal into the storm sewer. The proposed program shall include:

(1) A description of a program, including inspections, to implement and enforce an ordinance, orders or similar means to prevent illicit discharges to the municipal separate storm sewer system; this program description shall address all types of illicit discharges, however the following category of non-storm water discharges or flows shall be addressed where such discharges are identified by the municipality as sources of pollutants to waters of the United States: water line flushing, landscape irrigation, diverted stream flows, rising ground waters, uncontaminated ground water infiltration (as defined at 40 CFR 35.2005(20)) to separate storm sewers, uncontaminated pumped ground water, discharges from potable water sources, foundation drains, air conditioning condensation, irrigation water, springs, water from crawl space pumps, footing drains, lawn watering, individual residential car washing, flows from riparian habitats and wetlands, dechlorinated swimming pool discharges, and street wash water (program descriptions shall address discharges or flows from fire fighting only where such discharges or flows are identified as significant sources of pollutants to waters of the United States);

(2) A description of procedures to conduct on-going field screening activities during the life of the permit, including areas or locations that will be evaluated by such field screens;

(3) A description of procedures to be followed to investigate portions of the separate storm sewer system that, based on the results of the field screen, or other appropriate information, indicate a reasonable potential of containing illicit discharges or other sources of non-storm water (such procedures may include: sampling procedures for constituents such as fecal coliform, fecal streptococcus, surfactants (MBAS), residual chlorine, fluorides and potassium; testing with fluorometric dyes; or conducting in storm sewer inspections where safety and other considerations allow. Such description shall include the location of storm sewers that have been identified for such evaluation);

(4) A description of procedures to prevent, contain, and respond to spills that may discharge into the municipal separate storm sewer;

(5) A description of a program to promote, publicize, and facilitate public reporting of the presence of illicit discharges or water quality impacts associated with discharges from municipal separate storm sewers;

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

(6) A description of educational activities, public information activities, and other appropriate activities to facilitate the proper management and disposal of used oil and toxic materials; and

(7) A description of controls to limit infiltration of seepage from municipal sanitary sewers to municipal separate storm sewer systems where necessary;

(C) A description of a program to monitor and control pollutants in storm water discharges to municipal systems from municipal landfills, hazardous waste treatment, disposal and recovery facilities, industrial facilities that are subject to section 313 of title III of the Superfund Amendments and Reauthorization Act of 1986 (SARA), and industrial facilities that the municipal permit applicant determines are contributing a substantial pollutant loading to the municipal storm sewer system. The program shall:

(1) Identify priorities and procedures for inspections and establishing and implementing control measures for such discharges;

(2) Describe a monitoring program for storm water discharges associated with the industrial facilities identified in paragraph (d)(2)(iv)(C) of this section, to be implemented during the term of the permit, including the submission of quantitative data on the following constituents: Any pollutants limited in effluent guidelines subcategories, where applicable; any pollutant listed in an existing NPDES permit for a facility; oil and grease, COD, pH, BOD_5, TSS, total phosphorus, total Kjeldahl nitrogen, nitrate plus nitrite nitrogen, and any information on discharges required under § 122.21(g)(7)(vi) and (vii).

(D) A description of a program to implement and maintain structural and non-structural best management practices to reduce pollutants in storm water runoff from construction sites to the municipal storm sewer system, which shall include:

(1) A description of procedures for site planning which incorporate consideration of potential water quality impacts;

(2) A description of requirements for nonstructural and structural best management practices;

(3) A description of procedures for identifying priorities for inspecting sites and enforcing control measures which consider the nature of the construction activity, topography, and the characteristics of soils and receiving water quality; and

(4) A description of appropriate educational and training measures for construction site operators.

(v) Assessment of controls. Estimated reductions in loadings of pollutants from discharges of municipal storm sewer constituents from municipal storm sewer systems expected as the result of the municipal storm water quality management program. The assessment shall also identify known impacts of storm water controls on ground water.

(vi) Fiscal analysis. For each fiscal year to be covered by the permit, a fiscal analysis of the necessary capital and operation and maintenance expenditures necessary to accomplish the activities of the programs under paragraphs (d)(2) (iii) and (iv) of this section. Such analysis shall include a description of the source of funds that are proposed to meet the necessary expenditures, including legal restrictions on the use of such funds.

(vii) Where more than one legal entity submits an application, the application shall contain a description of the roles and responsibilities of each legal entity and procedures to ensure effective coordination.

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

(viii) Where requirements under paragraph (d)(1)(iv)(E), (d)(2)(ii), (d)(2)(iii)(B) and (d)(2)(iv) of this section are not practicable or are not applicable, the Director may exclude any operator of a discharge from a municipal separate storm sewer which is designated under paragraph (a)(1)(v), (b)(4)(ii) or (b)(7)(ii) of this section from such requirements. The Director shall not exclude the operator of a discharge from a municipal separate storm sewer identified in appendix F, G, H or I of part 122, from any of the permit application requirements under this paragraph except where authorized under this section.

(e) Application deadlines. Any operator of a point source required to obtain a permit under this section that does not have an effective NPDES permit authorizing discharges from its storm water outfalls shall submit an application in accordance with the following deadlines:

(1) Storm water discharges associated with industrial activity.

(i) Except as provided in paragraph (e)(1)(ii) of this section, for any storm water discharge associated with industrial activity identified in paragraphs (b)(14)(i) through (xi) of this section, that is not part of a group application as described in paragraph (c)(2) of this section or that is not authorized by a storm water general permit, a permit application made pursuant to paragraph (c) of this section must be submitted to the Director by October 1, 1992;

(ii) For any storm water discharge associated with industrial activity from a facility that is owned or operated by a municipality with a population of less than 100,000 that is not authorized by a general or individual permit, other than an airport, powerplant, or uncontrolled sanitary landfill, the permit application must be submitted to the Director by March 10, 2003.

(2) For any group application submitted in accordance with paragraph (c)(2) of this section:

(i) Part 1.

(A) Except as provided in paragraph (e)(2)(i)(B) of this section, part 1 of the application shall be submitted to the Director, Office of Wastewater Enforcement and Compliance by September 30, 1991;

(B) Any municipality with a population of less than 250,000 shall not be required to submit a part 1 application before May 18, 1992.

(C) For any storm water discharge associated with industrial activity from a facility that is owned or operated by a municipality with a population of less than 100,000 other than an airport, powerplant, or uncontrolled sanitary landfill, permit applications requirements are reserved.

(ii) Based on information in the part 1 application, the Director will approve or deny the members in the group application within 60 days after receiving part 1 of the group application.

(iii) Part 2.

(A) Except as provided in paragraph (e)(2)(iii)(B) of this section, part 2 of the application shall be submitted to the Director, Office of Wastewater Enforcement and Compliance by October 1, 1992;

(B) Any municipality with a population of less than 250,000 shall not be required to submit a part 1 application before May 17, 1993.

(C) For any storm water discharge associated with industrial activity from a facility that is owned or operated by a municipality with a population of less than 100,000 other than an airport, powerplant, or uncontrolled sanitary landfill, permit applications requirements are reserved.

(iv) Rejected facilities.

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

(A) Except as provided in paragraph (e)(2)(iv)(B) of this section, facilities that are rejected as members of the group shall submit an individual application (or obtain coverage under an applicable general permit) no later than 12 months after the date of receipt of the notice of rejection or October 1, 1992, whichever comes first.

(B) Facilities that are owned or operated by a municipality and that are rejected as members of part 1 group application shall submit an individual application no later than 180 days after the date of receipt of the notice of rejection or October 1, 1992, whichever is later.

(v) A facility listed under paragraph (b)(14) (i)-(xi) of this section may add on to a group application submitted in accordance with paragraph (e)(2)(i) of this section at the discretion of the Office of Water Enforcement and Permits, and only upon a showing of good cause by the facility and the group applicant; the request for the addition of the facility shall be made no later than February 18,1992; the addition of the facility shall not cause the percentage of the facilities that are required to submit quantitative data to be less than 10%, unless there are over 100 facilities in the group that are submitting quantitative data; approval to become part of group application must be obtained from the group or the trade association representing the individual facilities.

(3) For any discharge from a large municipal separate storm sewer system;

(i) Part 1 of the application shall be submitted to the Director by November 18, 1991;

(ii) Based on information received in the part 1 application the Director will approve or deny a sampling plan under paragraph (d)(1)(iv)(E) of this section within 90 days after receiving the part 1 application;

(iii) Part 2 of the application shall be submitted to the Director by November 16, 1992.

(4) For any discharge from a medium municipal separate storm sewer system;

(i) Part 1 of the application shall be submitted to the Director by May 18, 1992.

(ii) Based on information received in the part 1 application the Director will approve or deny a sampling plan under paragraph (d)(1)(iv)(E) of this section within 90 days after receiving the part 1 application.

(iii) Part 2 of the application shall be submitted to the Director by May 17, 1993.

(5) A permit application shall be submitted to the Director within 180 days of notice, unless permission for a later date is granted by the Director (see § 124.52(c) of this chapter), for:

(i) A storm water discharge that the Director, or in States with approved NPDES programs, either the Director or the EPA Regional Administrator, determines that the discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States (see paragraphs (a)(1)(v) and (b)(15)(ii) of this section);

(ii) A storm water discharge subject to paragraph (c)(1)(v) of this section.

(6) Facilities with existing NPDES permits for storm water discharges associated with industrial activity shall maintain existing permits. Facilities with permits for storm water discharges associated with industrial activity which expire on or after May 18, 1992 shall submit a new application in accordance with the requirements of 40 CFR 122.21 and 40 CFR 122.26(c) (Form 1, Form 2F, and other applicable Forms) 180 days before the expiration of such permits.

(7) The Director shall issue or deny permits for discharges composed entirely of storm water under this section in accordance with the following schedule:

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

(i)(A) Except as provided in paragraph (e)(7)(i)(B) of this section, the Director shall issue or deny permits for storm water discharges associated with industrial activity no later than October 1, 1993, or, for new sources or existing sources which fail to submit a complete permit application by October 1, 1992, one year after receipt of a complete permit application;

(B) For any municipality with a population of less than 250,000 which submits a timely Part I group application under paragraph (e)(2)(i)(B) of this section, the Director shall issue or deny permits for storm water discharges associated with industrial activity no later than May 17, 1994, or, for any such municipality which fails to submit a complete Part II group permit application by May 17, 1993, one year after receipt of a complete permit application;

(ii) The Director shall issue or deny permits for large municipal separate storm sewer systems no later than November 16, 1993, or, for new sources or existing sources which fail to submit a complete permit application by November 16, 1992, one year after receipt of a complete permit application;

(iii) The Director shall issue or deny permits for medium municipal separate storm sewer systems no later than May 17, 1994, or, for new sources or existing sources which fail to submit a complete permit application by May 17, 1993, one year after receipt of a complete permit application.

(8) For any storm water discharge associated with small construction activities identified in paragraph (b)(15)(i) of this section, see § 122.21(c)(1). Discharges from these sources require permit authorization by March 10, 2003, unless designated for coverage before then.

(9) For any discharge from a regulated small MS4, the permit application made under § 122.33 must be submitted to the Director by:

(i) March 10, 2003 if designated under § 122.32(a)(1) unless your MS4 serves a jurisdiction with a population under 10,000 and the NPDES permitting authority has established a phasing schedule under § 123.35(d)(3) (see § 122.33(c)(1)); or

(ii) Within 180 days of notice, unless the NPDES permitting authority grants a later date, if designated under § 122.32(a)(2) (see § 122.33(c)(2)).

(f) Petitions.

(1) Any operator of a municipal separate storm sewer system may petition the Director to require a separate NPDES permit (or a permit issued under an approved NPDES State program) for any discharge into the municipal separate storm sewer system.

(2) Any person may petition the Director to require a NPDES permit for a discharge which is composed entirely of storm water which contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

(3) The owner or operator of a municipal separate storm sewer system may petition the Director to reduce the Census estimates of the population served by such separate system to account for storm water discharged to combined sewers as defined by 40 CFR 35.2005(b)(11) that is treated in a publicly owned treatment works. In municipalities in which combined sewers are operated, the Census estimates of population may be reduced proportional to the fraction, based on estimated lengths, of the length of combined sewers over the sum of the length of combined sewers and municipal separate storm sewers where an applicant has submitted the NPDES permit number associated with each discharge point and a map indicating areas served by combined sewers and the location of any combined sewer overflow discharge point.

(4) Any person may petition the Director for the designation of a large, medium, or small municipal

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

separate storm sewer system as defined by paragraph (b)(4)(iv), (b)(7)(iv), or (b)(16) of this section.

(5) The Director shall make a final determination on any petition received under this section within 90 days after receiving the petition with the exception of petitions to designate a small MS4 in which case the Director shall make a final determination on the petition within 180 days after its receipt.

(g) Conditional exclusion for "no exposure" of industrial activities and materials to storm water. Discharges composed entirely of storm water are not storm water discharges associated with industrial activity if there is "no exposure" of industrial materials and activities to rain, snow, snowmelt and/or runoff, and the discharger satisfies the conditions in paragraphs (g)(1) through (g)(4) of this section. "No exposure" means that all industrial materials and activities are protected by a storm resistant shelter to prevent exposure to rain, snow, snowmelt, and/or runoff. Industrial materials or activities include, but are not limited to, material handling equipment or activities, industrial machinery, raw materials, intermediate products, by-products, final products, or waste products. Material handling activities include the storage, loading and unloading, transportation, or conveyance of any raw material, intermediate product, final product or waste product.

(1) Qualification. To qualify for this exclusion, the operator of the discharge must:

(i) Provide a storm resistant shelter to protect industrial materials and activities from exposure to rain, snow, snow melt, and runoff;

(ii) Complete and sign (according to § 122.22) a certification that there are no discharges of storm water contaminated by exposure to industrial materials and activities from the entire facility, except as provided in paragraph (g)(2) of this section;

(iii) Submit the signed certification to the NPDES permitting authority once every five years;

(iv) Allow the Director to inspect the facility to determine compliance with the "no exposure" conditions;

(v) Allow the Director to make any "no exposure" inspection reports available to the public upon request; and

(vi) For facilities that discharge through an MS4, upon request, submit a copy of the certification of "no exposure" to the MS4 operator, as well as allow inspection and public reporting by the MS4 operator.

(2) Industrial materials and activities not requiring storm resistant shelter. To qualify for this exclusion, storm resistant shelter is not required for:

(i) Drums, barrels, tanks, and similar containers that are tightly sealed, provided those containers are not deteriorated and do not leak ("Sealed" means banded or otherwise secured and without operational taps or valves);

(ii) Adequately maintained vehicles used in material handling; and

(iii) Final products, other than products that would be mobilized in storm water discharge (e.g., rock salt).

(3) Limitations.

(i) Storm water discharges from construction activities identified in paragraphs (b)(14)(x) and (b)(15) are not eligible for this conditional exclusion.

(ii) This conditional exclusion from the requirement for an NPDES permit is available on a facility-wide basis only, not for individual outfalls. If a facility has some discharges of storm water that would otherwise be "no exposure" discharges, individual permit requirements should be adjusted accordingly.

(iii) If circumstances change and industrial materials or activities become exposed to rain, snow, snow melt, and/or runoff, the conditions for this exclusion no longer apply. In such cases, the dis-

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

charge becomes subject to enforcement for unpermitted discharge. Any conditionally exempt discharger who anticipates changes in circumstances should apply for and obtain permit authorization prior to the change of circumstances.

(iv) Notwithstanding the provisions of this paragraph, the NPDES permitting authority retains the authority to require permit authorization (and deny this exclusion) upon making a determination that the discharge causes, has a reasonable potential to cause, or contributes to an instream excursion above an applicable water quality standard, including designated uses.

(4) Certification. The no exposure certification must require the submission of the following information, at a minimum, to aid the NPDES permitting authority in determining if the facility qualifies for the no exposure exclusion:

(i) The legal name, address and phone number of the discharger (see § 122.21(b));

(ii) The facility name and address, the county name and the latitude and longitude where the facility is located;

(iii) The certification must indicate that none of the following materials or activities are, or will be in the foreseeable future, exposed to precipitation:

(A) Using, storing or cleaning industrial machinery or equipment, and areas where residuals from using, storing or cleaning industrial machinery or equipment remain and are exposed to storm water;

(B) Materials or residuals on the ground or in storm water inlets from spills/leaks;

(C) Materials or products from past industrial activity;

(D) Material handling equipment (except adequately maintained vehicles);

(E) Materials or products during loading/unloading or transporting activities;

(F) Materials or products stored outdoors (except final products intended for outside use, e.g., new cars, where exposure to storm water does not result in the discharge of pollutants);

(G) Materials contained in open, deteriorated or leaking storage drums, barrels, tanks, and similar containers;

(H) Materials or products handled/stored on roads or railways owned or maintained by the discharger;

(I) Waste material (except waste in covered, non-leaking containers, e.g., dumpsters);

(J) Application or disposal of process wastewater (unless otherwise permitted); and

(K) Particulate matter or visible deposits of residuals from roof stacks/vents not otherwise regulated, i.e., under an air quality control permit, and evident in the storm water outflow;

(iv) All "no exposure" certifications must include the following certification statement, and be signed in accordance with the signatory requirements of § 122.22: "I certify under penalty of law that I have read and understand the eligibility requirements for claiming a condition of "no exposure" and obtaining an exclusion from NPDES storm water permitting; and that there are no discharges of storm water contaminated by exposure to industrial activities or materials from the industrial facility identified in this document (except as allowed under paragraph (g)(2)) of this section. I understand that I am obligated to submit a no exposure certification form once every five years to the NPDES permitting authority and, if requested, to the operator of the local MS4 into which this facility discharges (where applicable). I understand that I must allow the NPDES permitting authority, or MS4 operator where the discharge is into the local MS4, to perform inspections to confirm the condition of no exposure and to

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

make such inspection reports publicly available upon request. I understand that I must obtain coverage under an NPDES permit prior to any point source discharge of storm water from the facility. I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based upon my inquiry of the person or persons who manage the system, or those persons directly involved in gathering the information, the information submitted is to the best of my knowledge and belief true, accurate and complete. I am aware there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."

ATTACHMENT NO. 6

40 C.F.R. § 122.44

C

Effective: April 11, 2007

Code of Federal Regulations Currentness
Title 40. Protection of Environment
Chapter I. Environmental Protection Agency (Refs & Annos)
Subchapter D. Water Programs
Part 122. EPA Administered Permit Programs: The National Pollutant Discharge Elimination System (Refs & Annos)
Subpart C. Permit Conditions

→§ 122.44 Establishing limitations, standards, and other permit conditions (applicable to State NPDES programs, see § 123.25).

In addition to the conditions established under § 122.43(a), each NPDES permit shall include conditions meeting the following requirements when applicable.

(a)(1) Technology-based effluent limitations and standards based on: effluent limitations and standards promulgated under section 301 of the CWA, or new source performance standards promulgated under section 306 of CWA, on case-by-case effluent limitations determined under section 402(a)(1) of CWA, or a combination of the three, in accordance with § 125.3 of this chapter. For new sources or new dischargers, these technology based limitations and standards are subject to the provisions of § 122.29(d) (protection period).

(2) Monitoring waivers for certain guideline-listed pollutants.

(i) The Director may authorize a discharger subject to technology-based effluent limitations guidelines and standards in an NPDES permit to forego sampling of a pollutant found at 40 CFR Subchapter N of this chapter if the discharger has demonstrated through sampling and other technical factors that the pollutant is not present in the discharge or is present only at background levels from intake water and without any increase in the pollutant due to activities of the discharger.

(ii) This waiver is good only for the term of the permit and is not available during the term of the first permit issued to a discharger.

(iii) Any request for this waiver must be submitted when applying for a reissued permit or modification of a reissued permit. The request must demonstrate through sampling or other technical information, including information generated during an earlier permit term that the pollutant is not present in the discharge or is present only at background levels from intake water and without any increase in the pollutant due to activities of the discharger.

(iv) Any grant of the monitoring waiver must be included in the permit as an express permit condition and the reasons supporting the grant must be documented in the permit's fact sheet or statement of basis.

(v) This provision does not supersede certification processes and requirements already established in existing effluent limitations guidelines and standards.

(b)(1) Other effluent limitations and standards under sections 301, 302, 303, 307, 318, and 405 of CWA. If any applicable toxic effluent standard or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is promulgated under section 307(a) of CWA for a toxic pollutant and that standard or prohibition is more stringent than any limitation on the pollutant in the permit, the Director shall institute proceedings under these regulations to modify or revoke and reissue the permit to conform to the toxic effluent standard or prohibition. See also § 122.41(a).

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

(2) Standards for sewage sludge use or disposal under section 405(d) of the CWA unless those standards have been included in a permit issued under the appropriate provisions of subtitle C of the Solid Waste Disposal Act, Part C of Safe Drinking Water Act, the Marine Protection, Research, and Sanctuaries Act of 1972, or the Clean Air Act, or under State permit programs approved by the Administrator. When there are no applicable standards for sewage sludge use or disposal, the permit may include requirements developed on a case-by-case basis to protect public health and the environment from any adverse effects which may occur from toxic pollutants in sewage sludge. If any applicable standard for sewage sludge use or disposal is promulgated under section 405(d) of the CWA and that standard is more stringent than any limitation on the pollutant or practice in the permit, the Director may initiate proceedings under these regulations to modify or revoke and reissue the permit to conform to the standard for sewage sludge use or disposal.

(3) Requirements applicable to cooling water intake structures under section 316(b) of the CWA, in accordance with part 125, subparts I, J, and N of this chapter.

(c) Reopener clause: For any permit issued to a treatment works treating domestic sewage (including "sludge-only facilities"), the Director shall include a reopener clause to incorporate any applicable standard for sewage sludge use or disposal promulgated under section 405(d) of the CWA. The Director may promptly modify or revoke and reissue any permit containing the reopener clause required by this paragraph if the standard for sewage sludge use or disposal is more stringent than any requirements for sludge use or disposal in the permit, or controls a pollutant or practice not limited in the permit.

(d) Water quality standards and State requirements: any requirements in addition to or more stringent than promulgated effluent limitations guidelines or standards under sections 301, 304, 306, 307, 318, and 405 of CWA necessary to:

(1) Achieve water quality standards established under section 303 of the CWA, including State narrative criteria for water quality.

(i) Limitations must control all pollutants or pollutant parameters (either conventional, non-conventional, or toxic pollutants) which the Director determines are or may be discharged at a level which will cause, have the reasonable potential to cause, or contribute to an excursion above any State water quality standard, including State narrative criteria for water quality.

(ii) When determining whether a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above a narrative or numeric criteria within a State water quality standard,. the permitting authority shall use procedures which account for existing controls on point and nonpoint sources of pollution, the variability of the pollutant or pollutant parameter in the effluent, the sensitivity of the species to toxicity testing (when evaluating whole effluent toxicity), and where appropriate, the dilution of the effluent in the receiving water.

(iii) When the permitting authority determines, using the procedures in paragraph (d)(1)(ii) of this section, that a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above the allowable ambient concentration of a State numeric criteria within a State water quality standard for an individual pollutant, the permit must contain effluent limits for that pollutant.

(iv) When the permitting authority determines, using the procedures in paragraph (d)(1)(ii) of this section, that a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above the numeric criterion for whole effluent toxicity, the permit

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

must contain effluent limits for whole effluent toxicity.

(v) Except as provided in this subparagraph, when the permitting authority determines, using the procedures in paragraph (d)(1)(ii) of this section, toxicity testing data, or other information, that a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above a narrative criterion within an applicable State water quality standard, the permit must contain effluent limits for whole effluent toxicity. Limits on whole effluent toxicity are not necessary where the permitting authority demonstrates in the fact sheet or statement of basis of the NPDES permit, using the procedures in paragraph (d)(1)(ii) of this section, that chemical-specific limits for the effluent are sufficient to attain and maintain applicable numeric and narrative State water quality standards.

(vi) Where a State has not established a water quality criterion for a specific chemical pollutant that is present in an effluent at a concentration that causes, has the reasonable potential to cause, or contributes to an excursion above a narrative criterion within an applicable State water quality standard, the permitting authority must establish effluent limits using one or more of the following options:

(A) Establish effluent limits using a calculated numeric water quality criterion for the pollutant which the permitting authority demonstrates will attain and maintain applicable narrative water quality criteria and will fully protect the designated use. Such a criterion may be derived using a proposed State criterion, or an explicit State policy or regulation interpreting its narrative water quality criterion, supplemented with other relevant information which may include: EPA's Water Quality Standards Handbook, October 1983, risk assessment data, exposure data, information about the pollutant from the Food and Drug Administration, and current EPA criteria documents; or

(B) Establish effluent limits on a case-by-case basis, using EPA's water quality criteria, published under section 304(a) of the CWA, supplemented where necessary by other relevant information; or

(C) Establish effluent limitations on an indicator parameter for the pollutant of concern, provided:

(1) The permit identifies which pollutants are intended to be controlled by the use of the effluent limitation;

(2) The fact sheet required by § 124.56 sets forth the basis for the limit, including a finding that compliance with the effluent limit on the indicator parameter will result in controls on the pollutant of concern which are sufficient to attain and maintain applicable water quality standards;

(3) The permit requires all effluent and ambient monitoring necessary to show that during the term of the permit the limit on the indicator parameter continues to attain and maintain applicable water quality standards; and

(4) The permit contains a reopener clause allowing the permitting authority to modify or revoke and reissue the permit if the limits on the indicator parameter no longer attain and maintain applicable water quality standards.

(vii) When developing water quality-based effluent limits under this paragraph the permitting authority shall ensure that:

(A) The level of water quality to be achieved by limits on point sources estab-

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

lished under this paragraph is derived from, and complies with all applicable water quality standards; and

(B) Effluent limits developed to protect a narrative water quality criterion, a numeric water quality criterion, or both, are consistent with the assumptions and requirements of any available wasteload allocation for the discharge prepared by the State and approved by EPA pursuant to 40 CFR 130.7.

(2) Attain or maintain a specified water quality through water quality related effluent limits established under section 302 of CWA;

(3) Conform to the conditions to a State certification under section 401 of the CWA that meets the requirements of § 124.53 when EPA is the permitting authority. If a State certification is stayed by a court of competent jurisdiction or an appropriate State board or agency, EPA shall notify the State that the Agency will deem certification waived unless a finally effective State certification is received within sixty days from the date of the notice. If the State does not forward a finally effective certification within the sixty day period, EPA shall include conditions in the permit that may be necessary to meet EPA's obligation under section 301(b)(1)(C) of the CWA;

(4) Conform to applicable water quality requirements under section 401(a)(2) of CWA when the discharge affects a State other than the certifying State;

(5) Incorporate any more stringent limitations, treatment standards, or schedule of compliance requirements established under Federal or State law or regulations in accordance with section 301(b)(1)(C) of CWA;

(6) Ensure consistency with the requirements of a Water Quality Management plan approved by EPA under section 208(b) of CWA;

(7) Incorporate section 403(c) criteria under Part 125, Subpart M, for ocean discharges;

(8) Incorporate alternative effluent limitations or standards where warranted by "fundamentally different factors," under 40 CFR Part 125, Subpart D;

(9) Incorporate any other appropriate requirements, conditions, or limitations (other than effluent limitations) into a new source permit to the extent allowed by the National Environmental Policy Act, 42 U.S.C. 4321 et seq. and section 511 of the CWA, when EPA is the permit issuing authority. (See § 122.29(c)).

(e) Technology-based controls for toxic pollutants. Limitations established under paragraphs (a), (b), or (d) of this section, to control pollutants meeting the criteria listed in paragraph (e)(1) of this section. Limitations will be established in accordance with paragraph (e)(2) of this section. An explanation of the development of these limitations shall be included in the fact sheet under § 124.56(b)(1)(i).

(1) Limitations must control all toxic pollutants which the Director determines (based on information reported in a permit application under § 122.21(g)(7) or in a notification under § 122.42(a)(1) or on other information) are or may be discharged at a level greater than the level which can be achieved by the technology-based treatment requirements appropriate to the permittee under § 125.3(c) of this chapter; or

(2) The requirement that the limitations control the pollutants meeting the criteria of paragraphs (e)(1) of this section will be satisfied by:

(i) Limitations on those pollutants; or

(ii) Limitations on other pollutants which, in the judgment of the Director, will provide treatment of the pollutants under paragraph (e)(1) of this section to the levels required by § 125.3(c).

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

(f) Notification level. A "notification level" which exceeds the notification level of § 122.42(a)(1)(i), (ii), or (iii), upon a petition from the permittee or on the Director's initiative. This new notification level may not exceed the level which can be achieved by the technology-based treatment requirements appropriate to the permittee under § 125.3(c).

(g) Twenty-four hour reporting. Pollutants for which the permittee must report violations of maximum daily discharge limitations under § 122.41(1)(6)(ii)(C) (24-hour reporting) shall be listed in the permit. This list shall include any toxic pollutant or hazardous substance, or any pollutant specifically identified as the method to control a toxic pollutant or hazardous substance.

(h) Durations for permits, as set forth in § 122.46.

(i) Monitoring requirements. In addition to § 122.48, the following monitoring requirements:

(1) To assure compliance with permit limitations, requirements to monitor:

(i) The mass (or other measurement specified in the permit) for each pollutant limited in the permit;

(ii) The volume of effluent discharged from each outfall;

(iii) Other measurements as appropriate including pollutants in internal waste streams under § 122.45(i); pollutants in intake water for net limitations under § 122.45(f); frequency, rate of discharge, etc., for noncontinuous discharges under § 122.45(e); pollutants subject to notification requirements under § 122.42(a); and pollutants in sewage sludge or other monitoring as specified in 40 CFR Part 503; or as determined to be necessary on a case-by-case basis pursuant to section 405(d)(4) of the CWA.

(iv) According to test procedures approved under 40 CFR Part 136 for the analyses of pollutants or another method is required under 40 CFR subchapters N or O. In the case of pollutants for which there are no approved methods under 40 CFR Part 136 or otherwise required under 40 CFR subchapters N or O, monitoring must be conducted according to a test procedure specified in the permit for such pollutants.

(2) Except as provided in paragraphs (i)(4) and (i)(5) of this section, requirements to report monitoring results shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the discharge, but in no case less than once a year. For sewage sludge use or disposal practices, requirements to monitor and report results shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the sewage sludge use or disposal practice; minimally this shall be as specified in 40 CFR part 503 (where applicable), but in no case less than once a year.

(3) Requirements to report monitoring results for storm water discharges associated with industrial activity which are subject to an effluent limitation guideline shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the discharge, but in no case less than once a year.

(4) Requirements to report monitoring results for storm water discharges associated with industrial activity (other than those addressed in paragraph (i)(3) of this section) shall be established on a case-by-case basis with a frequency dependent on the nature and effect of the discharge. At a minimum, a permit for such a discharge must require:

(i) The discharger to conduct an annual inspection of the facility site to identify areas contributing to a storm water discharge associated with industrial activity and evaluate whether measures to reduce pollutant loadings identified in a storm water pollution prevention plan

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

are adequate and properly implemented in accordance with the terms of the permit or whether additional control measures are needed;

(ii) The discharger to maintain for a period of three years a record summarizing the results of the inspection and a certification that the facility is in compliance with the plan and the permit, and identifying any incidents of noncompliance;

(iii) Such report and certification be signed in accordance with § 122.22; and

(iv) Permits for storm water discharges associated with industrial activity from inactive mining operations may, where annual inspections are impracticable, require certification once every three years by a Registered Professional Engineer that the facility is in compliance with the permit, or alternative requirements.

(5) Permits which do not require the submittal of monitoring result reports at least annually shall require that the permittee report all instances of noncompliance not reported under § 122.41(l) (1), (4), (5), and (6) at least annually.

(j) Pretreatment program for POTWs. Requirements for POTWs to:

(1) Identify, in terms of character and volume of pollutants, any Significant Industrial Users discharging into the POTW subject to Pretreatment Standards under section 307(b) of CWA and 40 CFR part 403.

(2)(i) Submit a local program when required by and in accordance with 40 CFR part 403 to assure compliance with pretreatment standards to the extent applicable under section 307(b). The local program shall be incorporated into the permit as described in 40 CFR part 403. The program must require all indirect dischargers to the POTW to comply with the reporting requirements of 40 CFR part 403.

(ii) Provide a written technical evaluation of the need to revise local limits under 40 CFR 403.5(c)(1), following permit issuance or reissuance.

(3) For POTWs which are "sludge-only facilities," a requirement to develop a pretreatment program under 40 CFR Part 403 when the Director determines that a pretreatment program is necessary to assure compliance with Section 405(d) of the CWA.

(k) Best management practices (BMPs) to control or abate the discharge of pollutants when:

(1) Authorized under section 304(e) of the CWA for the control of toxic pollutants and hazardous substances from ancillary industrial activities;

(2) Authorized under section 402(p) of the CWA for the control of storm water discharges;

(3) Numeric effluent limitations are infeasible; or

(4) The practices are reasonably necessary to achieve effluent limitations and standards or to carry out the purposes and intent of the CWA.

Note to paragraph (k)(4): Additional technical information on BMPs and the elements of BMPs is contained in the following documents: Guidance Manual for Developing Best Management Practices (BMPs), October 1993, EPA No. 833/B-93- 004, NTIS No. PB 94-178324, ERIC No. W498); Storm Water Management for Construction Activities: Developing Pollution Prevention Plans and Best Management Practices, September 1992, EPA No. 832/R-92-005, NTIS No. PB 92- 235951, ERIC No. N482); Storm Water Management for Construction Activities, Developing Pollution Prevention Plans and Best Management Practices: Summary Guidance, EPA No. 833/R-92-001, NTIS No. PB 93-223550; ERIC No. W139; Storm Water Management for Industrial Activities, Developing Pollution Prevention Plans and Best Management Prac-

tices, September 1992; EPA 832/R-92-006, NTIS No. PB 92-235969, ERIC No. N477; Storm Water Management for Industrial Activities, Developing Pollution Prevention Plans and Best Management Practices: Summary Guidance, EPA 833/R-92-002, NTIS No. PB 94-133782; ERIC No. W492. Copies of those documents (or directions on how to obtain them) can be obtained by contacting either the Office of Water Resource Center (using the EPA document number as a reference) at (202) 260-7786; or the Educational Resources Information Center (ERIC) (using the ERIC number as a reference) at (800) 276-0462. Updates of these documents or additional BMP documents may also be available. A list of EPA BMP guidance documents is available on the OWM Home Page at http://www.epa.gov/owm. In addition, States may have BMP guidance documents.

These EPA guidance documents are listed here only for informational purposes; they are not binding and EPA does not intend that these guidance documents have any mandatory, regulatory effect by virtue of their listing in this note.

(l) Reissued permits.

(1) Except as provided in paragraph (l)(2) of this section when a permit is renewed or reissued, interim effluent limitations, standards or conditions must be at least as stringent as the final effluent limitations, standards, or conditions in the previous permit (unless the circumstances on which the previous permit was based have materially and substantially changed since the time the permit was issued and would constitute cause for permit modification or revocation and reissuance under § 122.62.)

(2) In the case of effluent limitations established on the basis of Section 402(a)(1)(B) of the CWA, a permit may not be renewed, reissued, or modified on the basis of effluent guidelines promulgated under section 304(b) subsequent to the original issuance of such permit, to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit.

(i) Exceptions--A permit with respect to which paragraph (l)(2) of this section applies may be renewed, reissued, or modified to contain a less stringent effluent limitation applicable to a pollutant, if--

(A) Material and substantial alterations or additions to the permitted facility occurred after permit issuance which justify the application of a less stringent effluent limitation;

(B)(1) Information is available which was not available at the time of permit issuance (other than revised regulations, guidance, or test methods) and which would have justified the application of a less stringent effluent limitation at the time of permit issuance; or

(2) The Administrator determines that technical mistakes or mistaken interpretations of law were made in issuing the permit under section 402(a)(1)(b);

(C) A less stringent effluent limitation is necessary because of events over which the permittee has no control and for which there is no reasonably available remedy;

(D) The permittee has received a permit modification under section 301(c), 301(g), 301(h), 301(i), 301(k), 301(n), or 316(a); or

(E) The permittee has installed the treatment facilities required to meet the effluent limitations in the previous permit and has properly operated and maintained the facilities but has nevertheless been unable to achieve the previous effluent limitations, in which case the limitations in the reviewed, reissued, or modified permit may

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

reflect the level of pollutant control actually achieved (but shall not be less stringent than required by effluent guidelines in effect at the time of permit renewal, reissuance, or modification).

(ii) Limitations. In no event may a permit with respect to which paragraph (l)(2) of this section applies be renewed, reissued, or modified to contain an effluent limitation which is less stringent than required by effluent guidelines in effect at the time the permit is renewed, reissued, or modified. In no event may such a permit to discharge into waters be renewed, issued, or modified to contain a less stringent effluent limitation if the implementation of such limitation would result in a violation of a water quality standard under section 303 applicable to such waters.

(m) Privately owned treatment works. For a privately owned treatment works, any conditions expressly applicable to any user, as a limited copermittee, that may be necessary in the permit issued to the treatment works to ensure compliance with applicable requirements under this part. Alternatively, the Director may issue separate permits to the treatment works and to its users, or may require a separate permit application from any user. The Director's decision to issue a permit with no conditions applicable to any user, to impose conditions on one or more users, to issue separate permits, or to require separate applications, and the basis for that decision, shall be stated in the fact sheet for the draft permit for the treatment works.

(n) Grants. Any conditions imposed in grants made by the Administrator to POWs under sections 201 and 204 of CWA which are reasonably necessary for the achievement of effluent limitations under section 301 of CWA.

(o) Sewage sludge. Requirements under section 405 of CWA governing the disposal of sewage sludge from publicly owned treatment works or any other treatment works treating domestic sewage for any use for which regulations have been established, in accordance with any applicable regulations.

(p) Coast Guard. When a permit is issued to a facility that may operate at certain times as a means of transportation over water, a condition that the discharge shall comply with any applicable regulations promulgated by the Secretary of the department in which the Coast Guard is operating, that establish specifications for safe transportation, handling, carriage, and storage of pollutants.

(q) Navigation. Any conditions that the Secretary of the Army considers necessary to ensure that navigation and anchorage will not be substantially impaired, in accordance with § 124.59 of this chapter.

(r) Great Lakes. When a permit is issued to a facility that discharges into the Great Lakes System (as defined in 40 CFR 132.2), conditions promulgated by the State, Tribe, or EPA pursuant to 40 CFR part 132.

(s) Qualifying State, Tribal, or local programs.

(1) For storm water discharges associated with small construction activity identified in § 122.26(b)(15), the Director may include permit conditions that incorporate qualifying State, Tribal, or local erosion and sediment control program requirements by reference. Where a qualifying State, Tribal, or local program does not include one or more of the elements in this paragraph (s)(1), then the Director must include those elements as conditions in the permit. A qualifying State, Tribal, or local erosion and sediment control program is one that includes:

(i) Requirements for construction site operators to implement appropriate erosion and sediment control best management practices;

(ii) Requirements for construction site operators to control waste such as discarded building materials, concrete truck washout, chemicals, litter, and sanitary waste at the construction site.

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

that may cause adverse impacts to water quality;

(iii) Requirements for construction site operators to develop and implement a storm water pollution prevention plan. (A storm water pollution prevention plan includes site descriptions, descriptions of appropriate control measures, copies of approved State, Tribal or local requirements, maintenance procedures, inspection procedures, and identification of non-storm water discharges); and

(iv) Requirements to submit a site plan for review that incorporates consideration of potential water quality impacts.

(2) For storm water discharges from construction activity identified in § 122.26(b)(14)(x), the Director may include permit conditions that incorporate qualifying State, Tribal, or local erosion and sediment control program requirements by reference. A qualifying State, Tribal or local erosion and sediment control program is one that includes the elements listed in paragraph (s)(1) of this section and any additional requirements necessary to achieve the applicable technology-based standards of "best available technology" and "best conventional technology" based on the best professional judgment of the permit writer.

STATE STATUTES

ATTACHMENT NO. 7

GOV. CODE, § 17516(c)

Effective:[See Text Amendments]

West's Annotated California Codes Currentness
Government Code (Refs & Annos)
Title 2. Government of the State of California
Division 4. Fiscal Affairs (Refs & Annos)
Part 7. State-Mandated Local Costs (Refs & Annos)
Chapter 2. General Provisions (Refs & Annos)
§ 17516. Executive order

"Executive order" means any order, plan, requirement, rule, or regulation issued by any of the following:

(a) The Governor.

(b) Any officer or official serving at the pleasure of the Governor.

(c) Any agency, department, board, or commission of state government.

"Executive order" does not include any order, plan, requirement, rule, or regulation issued by the State Water Resources Control Board or by any regional water quality control board pursuant to Division 7 (commencing with Section 13000) of the Water Code. It is the intent of the Legislature that the State Water Resources Control Board and regional water quality control boards will not adopt enforcement orders against publicly owned dischargers which mandate major waste water treatment facility construction costs unless federal financial assistance and state financial assistance pursuant to the Clean Water Bond Act of 1970 and 1974, is simultaneously made available. "Major" means either a new treatment facility or an addition to an existing facility, the cost of which is in excess of 20 percent of the cost of replacing the facility.

GOV. CODE, § 17556(c)

C

Effective: January 1, 2007

West's Annotated California Codes Currentness
Government Code (Refs & Annos)
Title 2. Government of the State of California
Division 4. Fiscal Affairs (Refs & Annos)
Part 7. State-Mandated Local Costs (Refs & Annos)
Chapter 4. Identification and Payment of Costs Mandated by the State (Refs & Annos)
Article 1. Commission Procedure (Refs & Annos)
→ **§ 17556. Findings; costs not mandated upon certain conditions**

The commission shall not find costs mandated by the state, as defined in Section 17514, in any claim submitted by a local agency or school district, if, after a hearing, the commission finds any one of the following:

(a) The claim is submitted by a local agency or school district that requested legislative authority for that local agency or school district to implement the program specified in the statute, and that statute imposes costs upon that local agency or school district requesting the legislative authority. A resolution from the governing body or a letter from a delegated representative of the governing body of a local agency or school district that requests authorization for that local agency or school district to implement a given program shall constitute a request within the meaning of this subdivision.

(b) The statute or executive order affirmed for the state a mandate that had been declared existing law or regulation by action of the courts.

(c) The statute or executive order imposes a requirement that is mandated by a federal law or regulation and results in costs mandated by the federal government, unless the statute or executive order mandates costs that exceed the mandate in that federal law or regulation. This subdivision applies regardless of whether the federal law or regulation was enacted or adopted prior to or after the date on which the state statute or executive order was enacted or issued.

(d) The local agency or school district has the authority to levy service charges, fees, or assessments sufficient to pay for the mandated program or increased level of service.

(e) The statute, executive order, or an appropriation in a Budget Act or other bill provides for offsetting savings to local agencies or school districts that result in no net costs to the local agencies or school districts, or includes additional revenue that was specifically intended to fund the costs of the state mandate in an amount sufficient to fund the cost of the state mandate.

(f) The statute or executive order imposes duties that are necessary to implement, reasonably within the scope of, or expressly included in, a ballot measure approved by the voters in a statewide or local election. This subdivision applies regardless of whether the statute or executive order was enacted or adopted before or after the date on which the ballot measure was approved by the voters.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

(g) The statute created a new crime or infraction, eliminated a crime or infraction, or changed the penalty for a crime or infraction, but only for that portion of the statute relating directly to the enforcement of the crime or infraction.

NOTES OF DECISIONS

Ability to collect, water districts 3
Authority, water districts 2
Validity 1
Water districts--Authority 2
Water districts--Authority - Ability to collect 3

1. Validity

This section prohibiting commission on state mandates from finding costs mandated by State if it finds that local government has authority to levy service charges, fees, or assessments sufficient to pay for mandated program or increased level of service is facially constitutional under state constitutional provision requiring State to provide subvention of funds to reimburse local government for costs of state-mandated new program or higher level of service; considered in its context, section effectively and properly construes term "costs" in constitutional provision as excluding expenses that are recoverable from sources other than taxes. County of Fresno v. State of California (1991) 280 Cal.Rptr. 92, 53 Cal.3d 482, 808 P.2d 235. Taxation 3237

2. Water districts--Authority

Water district statute on its face authorized local water districts to levy fees sufficient to pay costs involved with state regulation amendment increasing level of purity required for use of reclaimed wastewater in irrigation, and thus, regulation did not trigger entitlement to reimbursement of local water districts from state for costs of complying with state-mandated increase in purity requirements. Connell v. Superior Court (App. 3 Dist. 1997) 69 Cal.Rptr.2d 231, 59 Cal.App.4th 382, review denied. States 111

3. ---- Ability to collect, water districts

Statute precluding state reimbursement of local agency for cost of program or level of service mandated by state if local agency has "authority" to level sufficient fees is triggered if local agency has power or right to levy fees sufficient to cover costs of state-mandated program, regardless of practical ability of local agency to collect sufficient fees in light of surrounding economic circumstances. Connell v. Superior Court (App. 3 Dist. 1997) 69 Cal.Rptr.2d 231, 59 Cal.App.4th 382, review denied. States 111

West's Annotated California Codes Currentness
Water Code (Refs & Annos)
Division 7. Water Quality (Refs & Annos)
Chapter 4. Regional Water Quality Control (Refs & Annos)
Article 4. Waste Discharge Requirements (Refs & Annos)

→§ 13263. Discharge requirements; considerations by regional board; review of requirements; notice of requirements; no vested right; master reclamation permit

(a) The regional board, after any necessary hearing, shall prescribe requirements as to the nature of any proposed discharge, existing discharge, or material change in an existing discharge, except discharges into a community sewer system, with relation to the conditions existing in the disposal area or receiving waters upon, or into which, the discharge is made or proposed. The requirements shall implement any relevant water quality control plans that have been adopted, and shall take into consideration the beneficial uses to be protected, the water quality objectives reasonably required for that purpose, other waste discharges, the need to prevent nuisance, and the provisions of Section 13241.

(b) A regional board, in prescribing requirements, need not authorize the utilization of the full waste assimilation capacities of the receiving waters.

(c) The requirements may contain a time schedule, subject to revision in the discretion of the board.

(d) The regional board may prescribe requirements although no discharge report has been filed.

(e) Upon application by any affected person, or on its own motion, the regional board may review and revise requirements. All requirements shall be reviewed periodically.

(f) The regional board shall notify in writing the person making or proposing the discharge or the change therein of the discharge requirements to be met. After receipt of the notice, the person so notified shall provide adequate means to meet the requirements.

(g) No discharge of waste into the waters of the state, whether or not the discharge is made pursuant to waste discharge requirements, shall create a vested right to continue the discharge. All discharges of waste into waters of the state are privileges, not rights.

(h) The regional board may incorporate the requirements prescribed pursuant to this section into a master recycling permit for either a supplier or distributor, or both, of recycled water.

(i) The state board or a regional board may prescribe general waste discharge requirements for a category of discharges if the state board or that regional board finds or determines that all of the following criteria apply to the discharges in that category:

(1) The discharges are produced by the same or similar operations.

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

(2) The discharges involve the same or similar types of waste.

(3) The discharges require the same or similar treatment standards.

(4) The discharges are more appropriately regulated under general discharge requirements than individual discharge requirements.

(j) The state board, after any necessary hearing, may prescribe waste discharge requirements in accordance with this section.

1/4 . Preemption

Regional water quality control board may not consider economic factors as justification for imposing pollutant restrictions in wastewater discharge permit which are less stringent than applicable federal standards, despite statute directing board to take such factors into consideration, because the federal constitutional supremacy clause requires state law to yield to federal law. City of Burbank v. State Water Resources Control Bd. (2005) 26 Cal.Rptr.3d 304, 35 Cal.4th 613, 108 P.3d 862, rehearing denied. Environmental Law ⚿ 197; States ⚿ 18.31

1/2 . Due process

Due process did not require that operators of dairy receive hearing before issuance of cleanup and abatement order, as order did not impose criminal or civil penalties, did not shut down dairy or prevent its operation, but merely prohibited discharge of polluted water, required compliance inspections, and called for modifications of waste water distribution system, hearing procedures provided for in water quality control act minimized risk of erroneous deprivation of dairy operators' interest, order was issued only after water quality control board employee observed unlawful discharges from dairy, and requiring preorder hearing would delay remedial action and exacerbate dangerous situation. Machado v. State Water Resources Control Bd. (App. 3 Dist. 2001) 109 Cal.Rptr.2d 116, 90 Cal.App.4th 720, as modified. Constitutional Law ⚿ 4323; Environmental Law ⚿ 210

1. Construction with other laws

California Integrated Waste Management Act (CIWMA) provision prohibiting local bans on land application of biosolids did not conflict with California's Water Code, or with the Federal Clean Water Act. City of Los Angeles v. County of Kern, C.D.Cal.2007, 509 F.Supp.2d 865. States ⚿ 18.31

That Water Pollution Control Act adopted as an amendment to Water Code made no change in Fish & G.C. §

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

5650 forbidding water pollution, and was passed at same time as legislative addition to Fish & G.C. § 5651 whereby department of fish and game was directed to report chronic water pollution violations to regional boards created by water pollution control act indicated that civil proceedings against violators under water pollution control act were intended to supplement, not supplant, criminal proceedings under water pollution § 5650 of Fish and Game Code. People v. Union Oil Co. (App. 2 Dist. 1968) 74 Cal.Rptr. 78, 268 Cal.App.2d 566. Nuisance 60

1.5. Construction with federal law

California Regional Water Quality Control Board (Regional Board), considering whether to approve power plant's modification project and issue permit under the National Pollutant Discharge Elimination System (NPDES), acted within its discretion in finding that once-through cooling was the best technology available (BTA) for minimizing adverse environmental impact of point sources' cooling water intake structures under Clean Water Act (CWA), and that benefits of alternatives were wholly disproportionate to their cost. Voices of Wetlands v. California State Water Resources Control Bd. (App. 6 Dist. 2007) 69 Cal.Rptr.3d 487, 157 Cal.App.4th 1268, modified on denial of rehearing, review filed. Environmental Law 186

Substantial evidence supported trial court's factual determination that California Regional Water Quality Control Board (Regional Board), considering whether to approve power plant's modification project and issue permit under the National Pollutant Discharge Elimination System (NPDES), did not adopt mitigation plan as a substitute for the best technology available (BTA) for minimizing adverse environmental impact of point sources' cooling water intake structures under Clean Water Act (CWA), but instead considered mitigation plan only for its relevance in monetizing environmental impacts and benefits. Voices of Wetlands v. California State Water Resources Control Bd. (App. 6 Dist. 2007) 69 Cal.Rptr.3d 487, 157 Cal.App.4th 1268, modified on denial of rehearing, review filed. Environmental Law 186

Requirements contained in municipal storm sewer permit issued by regional water quality control board were not overly prescriptive and did not illegally dictate the manner of compliance; the federal Clean Water Act authorized imposition of permit conditions, and the permitting agency had discretion to decide what practices, techniques, methods, and other provisions were appropriate and necessary to control the discharge of pollutants. City of Rancho Cucamonga v. Regional Water Quality Control Bd.-Santa Ana Region (App. 4 Dist. 2006) 38 Cal.Rptr.3d 450, 135 Cal.App.4th 1377, as modified. Environmental Law 197

Municipal storm sewer permit issued by regional water quality control board did not violate Clean Air Act by failing to include "safe harbor" provisions providing that, if permitee was in full compliance with permit conditions, it could not be found in violation of Clean Water Act; there was no statutory right to a "safe harbor" provision to be included as a term of the permit, and, in any event, such protection was already included in the Act. City of Rancho Cucamonga v. Regional Water Quality Control Bd.-Santa Ana Region (App. 4 Dist. 2006) 38 Cal.Rptr.3d 450, 135 Cal.App.4th 1377, as modified. Environmental Law 197

Provision of California State Water Resources Control Board's implementation policy for priority pollutant criteria under Clean Water Act, stating that dischargers would be deemed out of compliance with an effluent limitation if the concentration of priority pollutant in monitoring sample was greater than the effluent limitation and greater than or equal to the reported "minimum level" (ML), was ambiguous, where provision appeared to give ML's, the lowest level of concentration in a sample that could be accurately quantified, the same legal effect as the effluent limitations when the ML was higher than the effluent limitation. WaterKeepers Northern California

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

v. State Water Resources Control Bd. (App. 1 Dist. 2002) 126 Cal.Rptr.2d 389, 102 Cal.App.4th 1448. Environmental Law ⚿ 206

Provision of California State Water Resources Control Board's implementation policy for priority pollutant criteria under Clean Water Act, stating that dischargers would be deemed out of compliance with an effluent limitation if the concentration of priority pollutant in monitoring sample was greater than the effluent limitation and greater than or equal to the reported "minimum level" (ML), was to be interpreted narrowly, giving effect to ML's, the lowest level of concentration in a sample that could be accurately quantified, only for purposes of defining reporting requirements and providing a guideline for enforcement by Regional Water Quality Control Boards, and not for purposes of permit-compliance determinations. WaterKeepers Northern California v. State Water Resources Control Bd. (App. 1 Dist. 2002) 126 Cal.Rptr.2d 389, 102 Cal.App.4th 1448. Environmental Law ⚿ 206; Environmental Law ⚿ 207

2. Discharge requirements, generally

Landowners claiming that treatment and discharge of effluent into river caused natural vegetation growth that increased risk of flooding of their lands were not entitled to damages or injunctive relief against city and community services district on theories of private and public nuisance or inverse condemnation; landowners had not alleged violation of any standards imposed in National Pollutant Discharge Elimination System (NPDES) permit, neither city nor district were responsible for maintaining riverbed, there was evidence of other causes contributing to growth of vegetation, vegetative clearing would have necessitated involvement of nonparties, any damages claimed were speculative, and it was not shown that city or district had acted unreasonably. Jordan v. City of Santa Barbara (App. 2 Dist. 1996) 54 Cal.Rptr.2d 340, 46 Cal.App.4th 1245, review denied. Eminent Domain ⚿ 2.27(1); Eminent Domain ⚿ 300; Municipal Corporations ⚿ 835; Waters And Water Courses ⚿ 96

Requirements for discharge of waste from property may be established by a regional water quality control board even though a regional water control plan has not been adopted, but when a plan has been adopted, discharge requirements must implement plan. Hampson v. Superior Court for Inyo County (App. 4 Dist. 1977) 136 Cal.Rptr. 722, 67 Cal.App.3d 472. Waters And Water Courses ⚿ 196

The powers of the state water resources control board and the regional water quality control boards are not so limited and they not only can, but must consider the effects of a proposed discharge upon all aspects of the environment. 57 Op.Atty.Gen. 19, 1-16-74.

Under former § 13064, regional quality control board does not have authority to prescribe requirements which restrict the volume of flow of a discharge, or which prohibits a discharge, of sewage or industrial waste; however, the board may prescribe requirements that become more or less onerous as volume of discharge increases or decreases. 48 Op.Atty.Gen. 85, 9-7-66.

A regional water quality control board had power to enforce prohibition against waste discharge that was prescribed pursuant to former § 13054.3. 48 Op.Atty.Gen. 85, 9-7-66.

It is the responsibility of the water pollution control boards to prevent or eliminate pollution and nuisance by the issuance and enforcement of waste discharge requirements. 27 Op.Atty.Gen. 217 (1956).

Under the statute which provided that regional water pollution control boards should prescribed requirements as

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

to nature of discharge with relation to conditions existing in disposal area, boards might have formulated sewage and industrial waste disposal requirements by describing discharge characteristics or by describing discharge in terms of condition to be maintained in regional waters or other disposal areas or by both. 16 Op.Atty.Gen. 203 (1950).

The regional water quality control boards, as provided in former § 13040 et seq., had primary responsibility for the control of water pollution, nuisance, and in obtaining coordinated action in water quality control; hence, these boards had authority to prescribe requirements for the indirect discharge of industrial wastes within its region which was causing or threatened to cause pollution or nuisance. Op.Leg.Counsel, 1967 A.J. 6115.

3. Sewage

Regional water quality control board orders prohibiting, inter alia, discharge of untreated sewage and further connections to sewage treatment facilities, was reasonable exercise of state's police power. Morshead v. California Regional Water Quality Control Bd. (App. 1 Dist. 1975) 119 Cal.Rptr. 586, 45 Cal.App.3d 442. Environmental Law ⚿ 176

The San Francisco Bay regional water quality control board does not have authority to prohibit discharge of sewage from certain subsurface septic tank disposal systems connected with individual residences in San Geronimo Valley, Marin County. 48 Op.Atty.Gen. 85, 9-7-66.

Regional water pollution control boards might, under §§ 13053, 13054, establish requirements as to sewer well discharges without regard to Health & S.C. § 4458, absolutely prohibiting certain sewer wells, but no ruling of such boards was a limitation on powers or rights of cities, counties, state agencies or persons as set forth in § 13001 (repealed. See, now § 13002). 19 Op.Atty.Gen. 192 (1952).

Under the statute which provided that regional water pollution control boards were to prescribe requirements as to nature of discharge with relation to conditions existing in sewage or industrial waste disposal areas, regional boards must establish discharge requirements for privately operated sewage disposal devices such as septic tanks and cesspools, but requirements might be prescribed in advance and might merely prescribe that compliance be had with local health ordinances of such prescribed satisfactory standards. 16 Op.Atty.Gen. 112 (1950).

Former § 13054.3, as amended in 1967, authorized a regional quality control board to prescribe same type of requirements which it was authorized under existing law to prescribe, which should be applicable to all indirect discharge of sewage from family dwellings within a designated area, as specified. Op.Leg.Counsel, 1967 A.J. 4365.

Language in former §§ 13054, 13054.1, authorized regional board to prescribe requirements for the indirect discharge of sewage as well as the direct discharge of sewage. Op.Leg.Counsel, 1967, A.J. 4365.

Distinction was drawn within the language of former §§ 13054, 13054.1 between "disposal area" and "receiving waters," a distinction that could only relate to difference between discharging of sewage on the ground "an indirect discharge" or discharging directly into the receiving waters "a direct discharge", and no modifying restrictive language appeared in either section with respect to the type of discharge which a regional board was authorized to regulate. Op.Leg.Counsel, 1967, A.J. 4365.

4. Mining wastes

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

Under the Dickey Water Pollution Act, §§ 13000 to 13064, drainage of water from inoperative or abandoned mining operations, consisting of outflows from mine tunnels and shafts of water that has leached through ore dumps and tailings constitutes a discharge of industrial waste, and a regional water pollution control board has jurisdiction, to extent that such water contains harmful materials which, but for mining operations, would not be present at all or in amounts now found. 26 Op.Atty.Gen. 88 (1955).

5. Natural source of waste

Regional water pollution control board has no authority to regulate discharge of waste entering the region through natural streams, but may regulate discharges entering through drainage canals, except where the canals are operated by the state of California or by the United States. 43 Op.Atty.Gen. 317, 6-23-64.

6. Dischargers

When fee in land on which an abandoned mine was located was owned separately from mineral rights, both owner of fee and owner of mineral rights were "waste dischargers" within former § 13054, upon whom waste discharge requirements should have been imposed in respect to harmful drainage from abandoned mine. 26 Op.Atty.Gen. 88 (1955).

7. Beneficial use

Const. Art. 1, § 25, does not require the Los Angeles regional water quality control board to recognize fish and aquatic life as beneficial use of the Los Angeles-Long Beach Inner Harbor in establishing waste discharge requirements pursuant to this section. 51 Op.Atty.Gen. 92, 5-7-68.

8. Underground areas

In light of subsequent legislation, a regional water quality control board has authority under Porter-Cologne Water Quality Control Act to prohibit direct or indirect discharge of industrial waste into underground areas or strata. 58 Op.Atty.Gen. 531, 7-25-75.

Regional water quality control board does not have authority to prohibit sewage discharge or industrial waste into underground areas or strata, unless discharge is made directly into underground water. 48 Op.Atty.Gen. 85, 9-7- 66.

9. Environmental impact statements

Water Resources Control Board's refusal to prepare and consider environmental impact report prior to disapproving landfill operator's revised waste discharge requirements (WDRs) for expanded use of landfill under Porter-Cologne Water Quality Act did not conflict with any prior judicial order or decision rendered by Court of Appeal or superior court in connection with challenge to Board's earlier order approving operator's WDRs. Main San Gabriel Basin Watermaster v. State Water Resources Control Bd. (App. 2 Dist. 1993) 16 Cal.Rptr.2d 288, 12 Cal.App.4th 1371, review denied. Environmental Law ⚿ 595(6)

Fact that parties challenging Water Resources Control Board's earlier approval of landfill operator's application for revised waste discharge requirements (WDRs) in prior proceedings argued that preparation and consideration of environmental impact report (EIR) was necessary before approval of application did not mandate that Board prepare and consider EIR prior to its subsequent disapproval of application. Main San Gabriel Basin Watermas-

ter v. State Water Resources Control Bd. (App. 2 Dist. 1993) 16 Cal.Rptr.2d 288, 12 Cal.App.4th 1371, review denied. Environmental Law ⚿ 595(6)

Landfill operator was not deprived of fair and impartial hearing and opportunity to present evidence for agency's consideration by Water Resources Control Board's disapproving its application for revised waste discharge requirements (WDRs) without first preparing and considering environmental impact report; record memorialized years of scrutiny by Board and regional water control board of revised WDRs for expansion of operator's nonhazardous solid waste landfill and operator was free to challenge Board's exercise of discretion under standards of Porter-Cologne Water Quality Act. Main San Gabriel Basin Watermaster v. State Water Resources Control Bd. (App. 2 Dist. 1993) 16 Cal.Rptr.2d 288, 12 Cal.App.4th 1371, review denied. Environmental Law ⚿ 595(6)

Water Resources Control Board was not required under any provision of Environmental Quality Act (EQA) or under Environmental Quality Act Guidelines to prepare and consider environmental impact report (EIR) prior to disapproving on merits landfill operator's revised waste discharge requirements; requirement of EIR is not triggered under EQA unless public agency proposes to carry out or approve project which may have significant effect on environment, and so EQA does not apply to projects which public agency rejects or disapproves. Main San Gabriel Basin Watermaster v. State Water Resources Control Bd. (App. 2 Dist. 1993) 16 Cal.Rptr.2d 288, 12 Cal.App.4th 1371, review denied. Environmental Law ⚿ 595(6)

Under § 13389 providing that neither state board nor regional board shall be required to comply with the Environmental Quality Act prior to adoption of any waste discharge requirement, regional water quality control board properly prescribed by order waste discharge requirements for city without preparation of environmental impact report. Pacific Water Conditioning Ass'n , Inc. v. City Council of City of Riverside (App. 4 Dist. 1977) 140 Cal.Rptr. 812, 73 Cal.App.3d 546. Environmental Law ⚿ 595(6)

10. Regulation by other agencies

Extraction of minerals from stream beds may result in industrial waste within meaning of Dickey Water Pollution Act and fact that discharger of industrial waste holds license from California Debris Commission or lease from State Lands Commission does not exempt him from requirements established by Water Pollution Control Board. 32 Op.Atty.Gen. 139 (1958).

11. Exemptions

Even though waste discharge resolution of regional water quality control board authorized executive officer of board to make initial determination as to whether landowner had met prerequisites for an exemption, board could not relinquish its right and duty to overrule such preliminary determination if it determined that to grant an exemption would constitute a modification of water control plan or waste discharge requirement included in that plan. Hampson v. Superior Court for Inyo County (App. 4 Dist. 1977) 136 Cal.Rptr. 722, 67 Cal.App.3d 472. Waters And Water Courses ⚿ 196

12. Orders

Regional water quality control board's order requiring nuclear generating station to remove pollutants entering its generating station through its ocean water intake valve rather than regulating only those pollutants which it actually added to the water was insufficient in that the board's findings did not include factual evidence support-

© 2008 Thomson/West. No Claim to Orig. US Gov. Works.

ing a conclusion of gross limitations were necessary to protect any specific beneficial uses of the ocean. Southern California Edison Co. v. State Water Resources Control Bd. (App. 4 Dist. 1981) 172 Cal.Rptr. 306, 116 Cal.App.3d 751. Environmental Law 212

13. Economic factors

When imposing more stringent pollutant restrictions in a wastewater discharge permit than those required by federal law, a regional water quality control board may take into account the economic effects of doing so. City of Burbank v. State Water Resources Control Bd. (2005) 26 Cal.Rptr.3d 304, 35 Cal.4th 613, 108 P.3d 862, rehearing denied. Environmental Law 197

13.5. Admissibility of evidence

California Regional Water Quality Control Board (Regional Board), considering whether to approve power plant's modification project and issue permit under the National Pollutant Discharge Elimination System (NPDES), was not required to admit into evidence environmental group's submitted rebuttal letter, where letter was untimely as direct written testimony, letter exceeded scope of issues before the Regional Board, and environmental group was able to offer far more extensive and effective evidence and analysis through other means. Voices of Wetlands v. California State Water Resources Control Bd. (App. 6 Dist. 2007) 69 Cal.Rptr.3d 487, 157 Cal.App.4th 1268, modified on denial of rehearing, review filed. Environmental Law 228

14. Sufficiency of evidence

Substantial evidence supported regional water quality control board's findings in issuing municipal storm sewer permit; board adopted recommendations of its staff, which were based on previous permits and other reports, and which established that board did not simply copy similar permit for other counties. City of Rancho Cucamonga v. Regional Water Quality Control Bd.-Santa Ana Region (App. 4 Dist. 2006) 38 Cal.Rptr.3d 450, 135 Cal.App.4th 1377, as modified. Environmental Law 230

Chapter 5.5. Compliance with the Provisions of the Federal Water Pollution Control Act as Amended in 1972 (Refs & Annos)

§ 13370. Legislative findings and declaration

The Legislature finds and declares as follows:

(a) The Federal Water Pollution Control Act (33 U.S.C. Sec. 1251 et seq.), as amended, provides for permit systems to regulate the discharge of pollutants and dredged or fill material to the navigable waters of the United States and to regulate the use and disposal of sewage sludge.

(b) The Federal Water Pollution Control Act, as amended, provides that permits may be issued by states which are authorized to implement the provisions of that act.

(c) It is in the interest of the people of the state, in order to avoid direct regulation by the federal government of persons already subject to regulation under state law pursuant to this division, to enact this chapter in order to authorize the state to implement the provisions of the Federal Water Pollution Control Act and acts amendatory thereof or supplementary thereto, and federal regulations and guidelines issued pursuant thereto, provided, that the state board shall request federal funding under the Federal Water Pollution Control Act for the purpose of carrying out its responsibilities under this program.

FEDERAL COURT DECISIONS

ATTACHMENT NO. 15

Defenders of Wildlife v. Browner (9th Cir. 1999) 191 F.3rd 1159

▷

Defenders of Wildlife v. Browner
C.A.9 (Cal.),1999.

United States Court of Appeals,Ninth Circuit.
DEFENDERS OF WILDLIFE and The Sierra Club, Petitioners,
v.
Carol M. BROWNER, in her official capacity as Administrator of the United States Environmental Protection Agency, Respondent.
City of Tempe, Arizona; City of Tucson, Arizona; City of Mesa, Arizona; Pima County, Arizona; and City of Phoenix, Arizona, Intervenors-Respondents.
No. 98-71080.

Argued and Submitted Aug. 11, 1999.
Decided Sept. 15, 1999.

Environmental organizations sought review of Environmental Protection Agency (EPA) decision to issue National Pollution Discharge Elimination System (NPDES) permits to five municipalities, for their separate storm sewers, without requiring numeric limitations to ensure compliance with state water-quality standards. The Court of Appeals, Graber, Circuit Judge, held that: (1) organizations had standing; (2) municipal storm-sewer discharges did not have to strictly comply with state water-quality standards; but (3) EPA had discretion to require that municipal discharges comply with such standards.

Petition denied.

Petition to Review a Decision of the Environmental Protection Agency. EPA No. 97-3.

Before: NOONAN, THOMPSON, and GRABER, Circuit Judges.

GRABER, Circuit Judge:
Petitioners challenge the Environmental Protection Agency's (EPA) decision to issue National Pollution Discharge Elimination System (NPDES) permits to five municipalities, for their separate storm sewers, without requiring numeric limitations to ensure compliance with state water-quality standards. Petitioners sought administrative review of the decision within the EPA, which the Environmental Appeals Board (EAB) denied. This timely petition for review ensued. For the reasons that follow, we deny the petition.

FACTUAL AND PROCEDURAL BACKGROUND

Title 26 U.S.C. § 1342(a)(1) authorizes the EPA to issue NPDES permits, thereby allowing entities to discharge some pollutants. In 1992 and 1993, the cities of Tempe, Tucson, Mesa, and Phoenix, Arizona, and Pima County, Arizona (Intervenors), submitted applications for NPDES permits. The EPA prepared draft permits for public comment; those draft permits did not attempt to ensure compliance with Arizona's water-quality standards.

Petitioner Defenders of Wildlife objected to the permits, arguing that they must contain numeric limitations to ensure strict compliance with state water-quality standards. The State of Arizona also objected.

Thereafter, the EPA added new requirements:

> To ensure that the permittee's activities achieve timely compliance with applicable water quality standards (Arizona Administrative Code, Title 18, Chapter 11, Article 1), the permittee shall implement the [Storm Water Management Program], monitoring, reporting and other requirements of this permit in accordance with the time frames established in the [Storm Water Management Program] referenced in Part I.A.2, and elsewhere in the permit. This timely implementation of the requirements of this permit shall constitute a schedule of compliance authorized by Arizona Administrative Code, section R18-11-121(C).

The Storm Water Management Program included a number of structural environmental controls, such as storm-water detention basins, retention basins, and infiltration ponds. It also included programs to remove illegal discharges.

With the inclusion of those "best management practices," the EPA determined that the permits ensured compliance with state water-quality standards. The

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Arizona Department of Environmental Quality agreed:

> The Department has reviewed the referenced municipal NPDES storm-water permit pursuant to Section 401 of the Federal Clean Water Act to ensure compliance with State water quality standards. We have determined that, based on the information provided in the permit, and the fact sheet, adherence to provisions and requirements set forth in the final municipal permit, will protect the water quality of the receiving water.

On February 14, 1997, the EPA issued final NPDES permits to Intervenors. Within 30 days of that decision, Petitioners requested an evidentiary hearing with the regional administrator. *See*40 C.F.R. § 124.74. Although Petitioners requested a hearing, they conceded that they raised only a legal issue and that a hearing was, in fact, unnecessary. Specifically, Petitioners raised only the legal question whether the Clean Water Act (CWA) requires numeric limitations to ensure strict compliance with state water-quality standards; they did not raise the factual question whether the management practices that the EPA chose would be effective.

***1162** On June 16, 1997, the regional administrator summarily denied Petitioners' request. Petitioners then filed a petition for review with the EAB. *See*40 C.F.R. § 124.91(a). On May 21, 1998, the EAB denied the petition, holding that the permits need not contain numeric limitations to ensure strict compliance with state water-quality standards. Petitioners then moved for reconsideration, *see*40 C.F.R. § 124.91(i), which the EAB denied.

JURISDICTION

[1][2] Title 33 U.S.C. § 1369(b)(1)(F) authorizes "any interested person" to seek review in this court of an EPA decision "issuing or denying any permit under section 1342 of this title." "Any interested person" means any person that satisfies the injury-in-fact requirement for Article III standing. *See Natural Resources Defense Council, Inc. v. EPA,* 966 F.2d 1292, 1297 (9th Cir.1992) [*NRDC II*]. It is undisputed that Petitioners satisfy that requirement. Petitioners allege that "[m]embers of Defenders and the Club use and enjoy ecosystems affected by storm water discharges and sources thereof governed by the above-referenced permits," and no other party disputes those facts. *See Lujan v. Defenders of Wildlife,* 504 U.S. 555, 565-66, 112 S.Ct. 2130, 119 L.Ed.2d 351 (1992) ("[A] plaintiff claiming injury from environmental damage must use the area affected by the challenged activity."); *see also NRDC II,* 966 F.2d at 1297 ("NRDC claims, inter alia, that [the] EPA has delayed unlawfully promulgation of storm water regulations and that its regulations, as published, inadequately control storm water contaminants. NRDC's allegations ... satisfy the broad standing requirement applicable here.").

Intervenors argue, however, that they were not parties when this action was filed and that this court cannot redress Petitioners' injury without them. Their real contention appears to be that they are indispensable parties under Federal Rule of Civil Procedure 19. We need not consider that contention, however, because in fact Intervenors have been permitted to intervene in this action and to present their position fully. In the circumstances, Intervenors have suffered no injury.

DISCUSSION

A. *Standard of Review*

The Administrative Procedures Act (APA), 5 U.S.C. §§ 701-06, provides our standard of review for the EPA's decision to issue a permit. *See American Mining Congress v. EPA,* 965 F.2d 759, 763 (9th Cir.1992). Under the APA, we generally review such a decision to determine whether it was "arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law." 5 U.S.C. § 706(2)(A).

On questions of statutory interpretation, we follow the approach from *Chevron U.S.A. Inc. v. Natural*

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Resources Defense Council, Inc., 467 U.S. 837, 104 S.Ct. 2778, 81 L.Ed.2d 694 (1984). *See NRDC II*, 966 F.2d at 1297 (so holding). In *Chevron*, 467 U.S. at 842-44, 104 S.Ct. 2778, the Supreme Court devised a two-step process for reviewing an administrative agency's interpretation of a statute that it administers. *See also Bicycle Trails Council of Marin v. Babbitt*, 82 F.3d 1445, 1452 (9th Cir.1996) ("The Supreme Court has established a two-step process for reviewing an agency's construction of a statute it administers."). Under the first step, we employ "traditional tools of statutory construction" to determine whether Congress has expressed its intent unambiguously on the question before the court. *Chevron*, 467 U.S. at 843 n. 9, 104 S.Ct. 2778. "If the intent of Congress is clear, that is the end of the matter; for the court, as well as the agency, must give effect to the unambiguously expressed intent of Congress." *Id.* at 842-43, 104 S.Ct. 2778 (footnote omitted). If, instead, Congress has left a gap for the administrative agency to fill, we proceed to step two. *See id.* at 843, 104 S.Ct. 2778. At step two, we must uphold the administrative regulation unless it is "arbitrary, capricious, or manifestly contrary to the statute." *Id.* at 844, 104 S.Ct. 2778.

***1163** B. *Background*

The CWA generally prohibits the "discharge of any pollutant," 33 U.S.C. § 1311(a), from a "point source" into the navigable waters of the United States. *See*33 U.S.C. § 1362(12)(A). An entity can, however, obtain an NPDES permit that allows for the discharge of some pollutants. *See*33 U.S.C. § 1342(a)(1).

[3] Ordinarily, an NPDES permit imposes effluent limitations on such discharges. *See*33 U.S.C. § 1342(a)(1) (incorporating effluent limitations found in 33 U.S.C. § 1311). First, a permit-holder "shall ... achiev [e] ... effluent limitations ... which shall require the application of the best practicable control technology [BPT] currently available." 33 U.S.C. § 1311(b)(1)(A). Second, a permit-holder *shall...achiev[e]...any more stringent limitation*, including those *necessary to meet water quality standards*, treatment standards or schedules of compliance, established pursuant to any State law or regulations (under authority preserved by section 1370 of this title)." 33 U.S.C. § 1311(b)(1)(C) (emphasis added). Thus, although the BPT requirement takes into account issues of practicability, *see Rybachek v. EPA*, 904 F.2d 1276, 1289 (9th Cir.1990), the EPA also "is under a specific obligation to require that level of effluent control which is needed to implement existing water quality standards without regard to the limits of practicability,"*Oklahoma v. EPA*, 908 F.2d 595, 613 (10th Cir.1990) (internal quotation marks omitted), *rev'd on other grounds sub nom. Arkansas v. Oklahoma*, 503 U.S. 91, 112 S.Ct. 1046, 117 L.Ed.2d 239 (1992). *See also Ackels v. EPA*, 7 F.3d 862, 865-66 (9th Cir.1993) (similar).

The EPA's treatment of storm-water discharges has been the subject of much debate. Initially, the EPA determined that such discharges generally were exempt from the requirements of the CWA (at least when they were uncontaminated by any industrial or commercial activity). *See*40 C.F.R. § 125.4 (1975).

The Court of Appeals for the District of Columbia, however, invalidated that regulation, holding that "the EPA Administrator does not have authority to exempt categories of point sources from the permit requirements of § 402 [33 U.S.C. § 1342]." *Natural Resources Defense Council, Inc. v. Costle*, 568 F.2d 1369, 1377 (D.C.Cir.1977). "Following this decision, [the] EPA issued proposed and final rules covering storm water discharges in 1980, 1982, 1984, 1985 and 1988. These rules were challenged at the administrative level and in the courts." *American Mining Congress*, 965 F.2d at 763.

Ultimately, in 1987, Congress enacted the Water Quality Act amendments to the CWA. *See NRDC II*, 966 F.2d at 1296 ("Recognizing both the environmental threat posed by storm water runoff and [the] EPA's problems in implementing regulations,

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Congress passed the Water Quality Act of 1987 containing amendments to the CWA.") (footnotes omitted). Under the Water Quality Act, from 1987 until 1994,[FN1] most entities discharging storm water did not need to obtain a permit. *See*33 U.S.C. § 1342(p).

> FN1. As enacted, the Water Quality Act extended the exemption to October 1, 1992. Congress later amended the Act to change that date to October 1, 1994. *See*Pub.L. No. 102-580.

Although the Water Quality Act generally did not require entities discharging storm water to obtain a permit, it did require such a permit for discharges "with respect to which a permit has been issued under this section before February 4, 1987,"33 U.S.C. § 1342(p)(2)(A); discharges "associated with industrial activity," 33 U.S.C. § 1342(p)(2)(B); discharges from a "municipal separate sewer system serving a population of [100,000] or more,"33 U.S.C. § 1342(p)(2)(C) & (D); and "[a] discharge for which the Administrator ... determines that the stormwater discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States,"33 U.S.C. § 1342(p)(2)(E).

***1164** When a permit is required for the discharge of storm water, the Water Quality Act sets two different standards:

(A) Industrial discharges

> Permits for discharges associated with industrial activity shall meet all applicable provisions of this section *and section 1311* of this title.

(B) Municipal discharge

> Permits for discharges from municipal storm sewers-
>
> (i) may be issued on a system or jurisdiction-wide basis;
>
> (ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and
>
> (iii) *shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator ... determines appropriate for the control of such pollutants.*

33 U.S.C. § 1342(p)(3) (emphasis added).

C. *Application of Chevron*

[4] The EPA and Petitioners argue that the Water Quality Act is ambiguous regarding whether Congress intended for municipalities to comply strictly with state water-quality standards, under 33 U.S.C. § 1311(b)(1)(C). Accordingly, they argue that we must proceed to step two of *Chevron* and defer to the EPA's interpretation that the statute does require strict compliance. *See Zimmerman v. Oregon Dep't of Justice*, 170 F.3d 1169, 1173 (9th Cir.1999) ("At step two, we must uphold the administrative regulation unless it is arbitrary, capricious, or manifestly contrary to the statute.") (citation and internal quotation marks omitted), *cert. denied*,531 U.S. 1189, 121 S.Ct. 1186, 149 L.Ed.2d 103, 68 USLW 3129 (1999).

Intervenors and *amici*, on the other hand, argue that the Water Quality Act expresses Congress' intent unambiguously and, thus, that we must stop at step one of *Chevron*. *See, e.g., National Credit Union Admin. v. First Nat'l Bank & Trust Co.*, 522 U.S. 479, 118 S.Ct. 927, 938-39, 140 L.Ed.2d 1 (1998) ("Because we conclude that Congress has made it clear that the *same* common bond of occupation must unite each member of an occupationally defined federal credit union, we hold that the NCUA's contrary interpretation is impermissible under the first step of *Chevron*.") (emphasis in original); *Sierra Club v. EPA*, 118 F.3d 1324, 1327 (9th Cir.1997) ("Congress has spoken clearly on the

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

subject and the regulation violates the provisions of the statute. Our inquiry ends at the first prong of *Chevron.*"). We agree with Intervenors and *amici:* For the reasons discussed below, the Water Quality Act unambiguously demonstrates that Congress did not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C). That being so, we end our inquiry at the first step of the *Chevron* analysis.

[5][6] "[Q]uestions of congressional intent that can be answered with 'traditional tools of statutory construction' are still firmly within the province of the courts" under *Chevron. NRDC II,* 966 F.2d at 1297 (citation omitted). "Using our 'traditional tools of statutory construction,' *Chevron,* 467 U.S. at 843 n. 9, 104 S.Ct. 2778, 81 L.Ed.2d 694, when interpreting a statute, we look first to the words that Congress used." *Zimmerman,* 170 F.3d at 1173 (alterations, citations, and internal quotation marks omitted). "Rather than focusing just on the word or phrase at issue, we look to the entire statute to determine Congressional intent." *Id.* (alterations, citations, and internal quotation marks omitted).

As is apparent, Congress expressly required *industrial* storm-water discharges to comply with the requirements of 33 U.S.C. § 1311. *See*33 U.S.C. § 1342(p)(3)(A) ("Permits for discharges associated with industrial activity *shall meet all applicable provisions of* this section and *section 1311* of this title.") (emphasis added). By incorporation, then, industrial***1165** storm-water discharges "*shall...achiev[e]...any more stringent limitation,* including those necessary to meet water quality standards, treatment standards or schedules of compliance, established pursuant to any State law or regulation (under authority preserved by section 1370 of this title)." 33 U.S.C. § 1311(b)(1)(C) (emphasis added); *see also* Sally A. Longroy, *The Regulation of Storm Water Runoff and its Impact on Aviation,* 58 J. Air. L. & Com. 555, 565-66 (1993) ("Congress further *singled out* industrial storm water dischargers, all of which are on the high-priority schedule, and requires them to satisfy all provisions of section 301 of the CWA [33 U.S.C. § 1311].... Section 301 further mandates that NPDES permits include requirements that receiving waters meet water quality based standards.") (emphasis added). In other words, industrial discharges must comply strictly with state water-quality standards.

Congress chose not to include a similar provision for municipal storm-sewer discharges. Instead, Congress required municipal storm-sewer discharges "to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator ... determines appropriate for the control of such pollutants." 33 U.S.C. § 1342(p)(3)(B)(iii).

[7] The EPA and Petitioners argue that the difference in wording between the two provisions demonstrates ambiguity. That argument ignores precedent respecting the reading of statutes. Ordinarily, "[w]here Congress includes particular language in one section of a statute but omits it in another section of the same Act, it is generally presumed that Congress acts intentionally and purposely in the disparate inclusion or exclusion." *Russello v. United States,* 464 U.S. 16, 23, 104 S.Ct. 296, 78 L.Ed.2d 17 (1983) (citation and internal quotation marks omitted); *see also United States v. Hanousek,* 176 F.3d 1116, 1121 (9th Cir.1999) (stating the same principle), *petition for cert. filed,*68 USLW 3138 (Aug. 23, 1999). Applying that familiar and logical principle, we conclude that Congress' choice to require industrial storm-water discharges to comply with 33 U.S.C. § 1311, but not to include the same requirement for municipal discharges, must be given effect. When we read the two related sections together, we conclude that 33 U.S.C. § 1342(p)(3)(B)(iii) does not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C).

Application of that principle is significantly strengthened here, because 33 U.S.C. § 1342(p)(3)(B)*is not merely silent* regarding whether

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

municipal discharges must comply with 33 U.S.C. § 1311. Instead, § 1342(p)(3)(B)(iii)*replaces* the requirements of § 1311 with the requirement that municipal storm-sewer dischargers "reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator ... determines appropriate for the control of such pollutants." 33 U.S.C. § 1342(p)(3)(B)(iii). In the circumstances, the statute unambiguously demonstrates that Congress did not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C).

Indeed, the EPA's and Petitioners' interpretation of 33 U.S.C. § 1342(p)(3)(B)(iii) would render that provision superfluous, a result that we prefer to avoid so as to give effect to all provisions that Congress has enacted. *See Government of Guam ex rel. Guam Econ. Dev. Auth. v. United States,* 179 F.3d 630, 634 (9th Cir.1999) ("This court generally refuses to interpret a statute in a way that renders a provision superfluous."), *as amended,*1999 WL 604218 (9th Cir. Aug.12, 1999). As all parties concede, § 1342(p)(3)(B)(iii) creates a lesser standard than § 1311. Thus, if § 1311 continues to apply to municipal storm-sewer discharges,***1166** the more stringent requirements of that section always would control.

Contextual clues support the plain meaning of § 1342(p)(3)(B)(iii), which we have described above. The Water Quality Act contains other provisions that undeniably exempt certain discharges from the permit requirement altogether (and therefore from § 1311). For example, "[t]he Administrator shall not require a permit under this section for discharges composed entirely of return flows from irrigated agriculture." 33 U.S.C. § 1342(*l*)(1). Similarly, a permit is not required for certain storm-water runoff from oil, gas, and mining operations. *See*33 U.S.C. § 1342(*l*)(2). Read in the light of those provisions, Congress' choice to exempt municipal storm-sewer discharges from strict compliance with § 1311 is not so unusual that we should hesitate to give effect to the statutory text, as written.

Finally, our interpretation of § 1342(p)(3)(B)(iii) is supported by this court's decision in *NRDC II.*There, the petitioner had argued that "the EPA has failed to establish substantive controls for municipal storm water discharges as required by the 1987 amendments." *NRDC II,* 966 F.2d at 1308. This court disagreed with the petitioner's interpretation of the amendments:

> Prior to 1987, municipal storm water dischargers were subject to the same substantive control requirements as industrial and other types of storm water. In the 1987 amendments, *Congress retained the existing, stricter controls for industrial storm water dischargers but prescribed new controls for municipal storm water discharge.*

Id. (emphasis added). The court concluded that, under 33 U.S.C. § 1342(p)(3)(B)(iii), "*Congress did not mandate a minimum standards approach.* " *Id.* (emphasis added). The question in *NRDC II* was not whether § 1342(p)(3)(B)(iii) required strict compliance with state water-quality standards, *see*33 U.S.C. § 1311(b)(1)(C). Nonetheless, the court's holding applies equally in this action and further supports our reading of 33 U.S.C. § 1342(p).

In conclusion, the text of 33 U.S.C. § 1342(p)(3)(B), the structure of the Water Quality Act as a whole, and this court's precedent all demonstrate that Congress did not require municipal storm-sewer discharges to comply strictly with 33 U.S.C. § 1311(b)(1)(C).

D. *Required Compliance with 33 U.S.C. § 1311(b)(1)(C)*

[8] We are left with Intervenors' contention that the EPA may not, under the CWA, require strict compliance with state water-quality standards, through numerical limits or otherwise. We disagree.

Although Congress did not require municipal

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

storm-sewer discharges to comply strictly with § 1311(b)(1)(C), § 1342(p)(3)(B)(iii) states that "[p]ermits for discharges from municipal storm sewers ... shall require *...such other provisions as the Administrator ... determines appropriate for the control of such pollutants.*" (Emphasis added.) That provision gives the EPA discretion to determine what pollution controls are appropriate. As this court stated in *NRDC II,* "Congress gave the administrator discretion to determine what controls are necessary.... NRDC's argument that the EPA rule is inadequate cannot prevail in the face of the clear statutory language." 966 F.2d at 1308.

Under that discretionary provision, the EPA has the authority to determine that ensuring strict compliance with state water-quality standards is necessary to control pollutants. The EPA also has the authority to require less than strict compliance with state water-quality standards. The EPA has adopted an interim approach, which "uses best management practices (BMPs) in first-round storm water permits ... to provide for the attainment of water quality standards." The EPA applied that approach to the permits at issue here. Under 33 U.S.C. § 1342(p)(3)(B)(iii), the EPA's choice to include***1167** either management practices or numeric limitations in the permits was within its discretion. *See NRDC II,* 966 F.2d at 1308 ("Congress did not mandate a minimum standards approach or specify that [the] EPA develop minimal performance requirements."). In the circumstances, the EPA did not act arbitrarily or capriciously by issuing permits to Intervenors.

Texas Cities Coalition on Stormwater; Texas Counties Storm Water Coalition, Petitioners,
v.
United States Environmental Protection Agency, Respondent,
Natural Resources Defense Council, Inc., Respondent-Intervenor.
Nos. 00-70014, 00-70734, 00-70822.

Argued and Submitted Dec. 3, 2001.
Filed Sept. 15, 2003.

Environmental, municipal, and industry groups brought petitions for review of Environmental Protection Agency (EPA) rule mandating that discharges from small municipal storm sewers and construction sites be subject to National Pollutant Discharge Elimination System (NPDES) permitting requirements. On denial of rehearing, the Court of Appeals, James R. Browning, Circuit Judge, held that: (1) EPA had authority to impose rule; (2) rule did not violate the Tenth Amendment; (3) rule improperly failed to provide for review of notices of intent and public participation in NPDES permitting process; (4) EPA's failure to designate industrial sources of storm water pollution for permitting requirements was not arbitrary and capricious; (5) challenge to rule's exclusion of forest roads was not time-barred; (6) forestry trade association lacked standing to challenge rule; (7) EPA properly consulted with state and local officials; (8) sites subject to rule were properly designated; and (9) EPA properly retained authority to designate future sources of storm water pollution for regulation.

Petitions for review granted in part and denied in part.

Tallman, Circuit Judge, filed opinion concurring in part and dissenting in part, and would have granted petition for rehearing.

Opinion, 319 F.3d 398, vacated.

Environmental Protection Agency (EPA) interpretation of rule promulgated under Clean Water Act (CWA), whereby EPA would require that discharges from small municipal storm sewers and construction sites be subject to National Pollutant Discharge Elimination System (NPDES) permitting requirements, was reasonable, and thus EPA acted within its statutory mandate in formulating permit program under rule; even though permitting was not included on statutory list of elements for EPA's comprehensive program to regulate small sewer systems, list was non-exclusive, and statutory language requiring imposition of permits for "municipal storm sewers" was reasonably interpreted to extend to small systems. Federal Water Pollution Control Act Amendments of 1972, § 402(p)(6), 33 U.S.C.A. § 1342(p)(6).

The crucial proscribed element under the Tenth Amendment, as to federal government's ability to have states implement federal programs, is coercion; the residents of the State or municipality must retain the ultimate decision as to whether or not the State or municipality will comply with the federal regulatory program, but as long as the alternative to implementing a federal regulatory program does not offend the Constitution's guarantees of federalism, the fact that the alternative is difficult, expensive, or otherwise unappealing is insufficient to establish a Tenth Amendment violation. U.S.C.A. Const.Amend. 10.

On Petition for Review of an Order of the Environmental Protection Agency. EPA No. Clean Water 40 CFR.

Before BROWNING, REINHARDT, and TALLMAN, Circuit Judges.

Opinion by Judge JAMES R. BROWNING; Partial Concurrence and Partial Dissent by Judge TALLMAN.

ORDER AND OPINION

ORDER

The opinion and dissent filed in this case on January 14, 2003, and published at 319 F.3d 398 are vacated. They are replaced by the Opinion and Dissent filed today.

With the filing of the new Opinion and Dissent, the panel has voted to deny the petitions for rehearing and the petition for rehearing en banc. (Judge Tallman would grant the petition for rehearing filed by ***840** the Environmental Protection Agency.) The full court has been advised of the new Opinion, new Dissent, and petition for rehearing en banc. No judge has requested a vote on the petition for rehearing en banc. Fed. R.App. P. 35.

The petitions for rehearing and the petition for rehearing en banc are DENIED. The clerk is instructed not to accept for filing any new petitions for rehearing or petitions for rehearing en banc in this case.

Each party shall bear its own costs in this appeal.

OPINION

JAMES R. BROWNING, Circuit Judge.

Petitioners challenge a rule issued by the United States Environmental Protection Agency pursuant to the Clean Water Act, 33 U.S.C. §§ 1251-1387, to control pollutants introduced into the nation's waters by storm sewers.

Storm sewers drain rainwater and melted snow from developed areas into water bodies that can handle the excess flow. Draining stormwater picks up a variety of contaminants as it filters through soil and over pavement on its way to sewers. Sewers are also used on occasion as an easy (if illicit) means for the direct discharge of unwanted contaminants. Since storm sewer systems generally channel collected runoff into federally protected water bodies, they are subject to the controls of the Clean Water Act.

In October of 1999, after thirteen years in process, the Environmental Protection Agency ("EPA") promulgated a final administrative rule (the "Phase II Rule"[FN1] or "the Rule") under § 402(p) of the Clean Water Act, 33 U.S.C. § 1342(p), mandating that discharges from small municipal separate storm sewer systems and from construction sites between one and five acres in size be subject to the permitting requirements of the National Pollutant Discharge Elimination System ("NPDES"), 33 U.S.C. §§ 1311(a), 1342. EPA preserved authority to regulate other harmful stormwater discharges in the future.

> FN1. The "Phase II Rule" reviewed here is the product of the second stage of EPA's two-phase stormwater rulemaking effort. The "Phase I Rule," governing larger-scale stormwater discharges, was issued in 1990 and reviewed by this court in *Natural Res. Def. Council v. EPA*, 966 F.2d 1292 (9th Cir.1992).

In the three cases consolidated here, petitioners and intervenors challenge the Phase II Rule on twenty-two constitutional, statutory, and procedural grounds. We remand three aspects of the Rule con-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

cerning the issuance of notices of intent under the Rule's general permitting scheme, and a fourth aspect concerning the regulation of forest roads. We affirm the Rule against all other challenges.

I.

BACKGROUND

A. The Problem of Stormwater Runoff

Stormwater runoff is one of the most significant sources of water pollution in the nation, at times "comparable to, if not greater than, contamination from industrial and sewage sources."[FN2] Storm sewer waters carry suspended metals, sediments, algae-promoting nutrients (nitrogen and phosphorus), floatable trash, used motor oil, raw sewage, pesticides, and other toxic contaminants into streams, rivers, lakes, ***841** and estuaries across the United States.[FN3] In 1985, three-quarters of the States cited urban stormwater runoff as a major cause of waterbody impairment, and forty percent reported construction site runoff as a major cause of impairment.[FN4] Urban runoff has been named as the foremost cause of impairment of surveyed ocean waters.[FN5] Among the sources of stormwater contamination are urban development, industrial facilities, construction sites, and illicit discharges and connections to storm sewer systems.[FN6]

FN2. Richard G. Cohn-Lee and Diane M. Cameron, *Urban Stormwater Runoff Contamination of the Chesapeake Bay: Sources and Mitigation,* THE ENVIRONMENTAL PROFESSIONAL, Vol. 14, p. 10, at 10 (1992); *see also Natural Res. Def. Council,* 966 F.2d at 1295 (citing a study by the Nationwide Urban Runoff Program).

FN3. Regulation for Revision of the Water Pollution Control Program Addressing Storm Water, 64 Fed. Reg. 68,722, 68,724, 68,727 (Dec. 8, 1999) (codified at 40 C.F.R. pts. 9, 122, 123, and 124).

FN4. *Id.* at 68,726.

FN5. *Id.*

FN6. *Id.* at 68,725-31.

B. Stormwater and the Clean Water Act

Congress enacted the Clean Water Act in 1948 to "restore and maintain the chemical, physical, and biological integrity of the Nation's waters." 33 U.S.C. § 1251(a) (originally codified as the Federal Water Pollution Control Act, 62 Stat. 1155). The Clean Water Act prohibits the discharge of pollutants from a "point source"[FN7] into the waters of the United States without a permit issued under the terms of the National Pollutant Discharge Elimination System, 33 U.S.C. §§ 1311(a), 1342, which requires dischargers to comply with technology-based pollution limitations (generally according to the "best available technology economically achievable," or "BAT" standard). 33 U.S.C. § 1311(b)(2)(A). NPDES permits are issued by EPA or by States that have been authorized by EPA to act as NPDES permitting authorities. 33 U.S.C. § 1342(a)-(b). The permitting authority must make copies of all NPDES permits and permit applications available to the public, 33 U.S.C. §§ 1342(j), 1342(b)(3); state permitting authorities must provide EPA notice of each permit application, 33 U.S.C. § 1342(b)(4); and a permitting authority must provide an opportunity for a public hearing before issuing any permit, 33 U.S.C. §§ 1342(a)(1), 1342(b)(3); *cf.* 33 U.S.C. § 1251(e) (requiring public participation).

FN7. A point source is "any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

floating craft, from which pollutants are or may be discharged." 33 U.S.C. § 1362(14).

[1][2] Storm sewers are established point sources subject to NPDES permitting requirements. *Natural Res. Def. Council v. Costle,* 568 F.2d 1369, 1379 (D.C.Cir.1977) (holding unlawful EPA's exemption of stormwater discharges from NPDES permitting requirements); *Natural Res. Def. Council v. EPA,* 966 F.2d 1292, 1295 (9th Cir.1992).FN8 In 1987, to better regulate pollution conveyed by stormwater runoff, Congress enacted Clean Water Act § 402(p), 33 U.S.C. § 1342(p), "Municipal and Industrial Stormwater Discharges." Sections 402(p)(2) and 402(p)(3) mandate NPDES permits for stormwater discharges "associated with industrial activity," discharges from large and medium-sized municipal storm sewer systems, and certain other discharges. Section 402(p)(4) sets out a timetable for promulgation of the first of a ***842** two-phase overall program of stormwater regulation. *Id.* at § 1342(p)(2)-(4); *Natural Res. Def. Council,* 966 F.2d at 1296. In 1990, pursuant to § 402(p)(4), EPA issued the Phase I Rule regulating large discharge sources.FN9

FN8. Diffuse runoff, such as rainwater that is not channeled through a point source, is considered nonpoint source pollution and is not subject to federal regulation. *Oregon Natural Desert Ass'n v. Dombeck,* 172 F.3d 1092, 1095 (9th Cir.1998).

FN9. National Pollutant Discharge Elimination System Permit Application Regulations for Stormwater Discharges, 55 Fed. Reg. 47,990 (Nov. 16, 1990) (codified at 40 C.F.R. pt. 122-124). The Phase I rule was challenged in this court in *Natural Res. Def. Council,* 966 F.2d at 1292. We held, *inter alia,* that EPA must impose deadlines for permit approvals, *id.* at 1300, that EPA's decision to regulate construction sites only over five acres in size was arbitrary and capricious, *id.* at 1306, and that EPA did not act capriciously in defining "municipal," *id.* at 1304, or in placing differently-sized municipalities on different permitting schedules, *id.* at 1301.

C. The Phase II Stormwater Rule

In Clean Water Act § 402(p), Congress also directed a second stage of stormwater regulation by ordering EPA to identify and address sources of pollution not covered by the Phase I Rule. Section 402(p)(1) placed a temporary moratorium (expiring in 1994) on the permitting of other stormwater discharges pending the results of studies mandated in § 402(p)(5) to identify the sources and pollutant content of such discharges and to establish procedures and methods to control them as "necessary to mitigate impacts on water quality." 33 U.S.C. § 1342(p)(5). Section 402(p)(6) required that EPA establish "a comprehensive program to regulate" these stormwater discharges "to protect water quality," following the studies mandated in § 402(p)(5) and consultation with state and local officials. *Id.* at § 1342(p)(6).

EPA proposed the Phase II Rule in January of 1998.FN10 In October, 1999, Congress passed legislation precluding EPA from promulgating the new Rule until EPA submitted an additional report to Congress supporting certain anticipated aspects of the Rule.FN11 EPA was also required to publish its report in the Federal Register for public comment. Pub. L. No. 106-74, § 431(c), 113 Stat. at 1097. Later that month, EPA submitted the required ("Appropriations Act") study and promulgated the Rule.FN12

FN10. Proposed Regulations for Revision of the Water Pollution Control Program Addressing Storm Water Discharges, 63 Fed. Reg. 1536 (proposed Jan. 9, 1998).

FN11. Pub. L. No. 106-74, § 431(a), 113 Stat. 1047, 1096 (1999) ("Appropriations, 2000-Department of Veterans Affairs and Housing and Urban Development, and Independent Agencies").

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

FN12. Regulations for Revision of the Water Pollution Control Program Addressing Storm Water Discharges, 64 Fed. Reg. 68,722 (Dec. 8, 1999) (codified at 40 C.F.R. pts. 9, 122, 123, and 124).

Under the Phase II Rule, NPDES permits are required for discharges from small municipal separate storm sewer systems ("small MS4s") and stormwater discharges from construction activity disturbing between one and five acres ("small construction sites"). 40 C.F.R. §§ 122.26(a)(9)(i)(A)-(B). Small MS4s may seek permission to discharge by submitting an individualized set of best-management plans in six specified categories, *id.* at § 122.34, either in the form of an individual permit application, or in the form of a notice of intent to comply with a general permit. *Id.* at § 122.33(b). Small MS4s may also seek permission to discharge through an alternative process, under which a permit may be sought without requiring the operator to regulate third parties, *id.* at §§ 122.33(b)(2)(ii), 122.26(d).[FN13] Small construction sites may ***843** apply for individual NPDES permits or seek coverage under a promulgated general permit. *Id.* at § 122.26(c). EPA also preserved authority to regulate other categories of harmful stormwater discharges on a regional, as-needed basis. *Id.* at § 122.26(a)(9)(i)(C)-(D).

FN13. The Rule also allows a small MS4 to be regulated under an individual NPDES permit covering a nearby large or medium MS4, with provisions adapted to address the small MS4. 40 C.F.R. § 122.33(b)(3).

D. Facial Challenges to the Phase II Rule

The Rule was challenged in the Fifth, Ninth, and D.C. Circuits in three separate actions ultimately consolidated before the Ninth Circuit.

The Texas Cities Coalition on Stormwater and the Texas Counties Stormwater Coalition (collectively, "the Municipal Petitioners") assert that EPA lacked authority to require permitting, that its promulgation of the Rule was procedurally defective, that the Rule establishes categories that are arbitrary and capricious, and that the Rule impermissibly requires municipalities to regulate their own citizens in contravention of the Tenth Amendment and to communicate a federally mandated message in contravention of the First Amendment. The Natural Resources Defense Council ("NRDC") intervened on behalf of EPA.

Environmental Defense Center, joined by petitioner-intervenor NRDC ("the Environmental Petitioners"), asserts that the regulations fail to meet minimum Clean Water Act statutory requirements because they constitute a program of impermissible self-regulation, fail to provide required avenues of public participation, and neglect to address stormwater runoff associated with forest roads and other significant sources of runoff pollution.

The American Forest & Paper Association ("AF&PA") and the National Association of Home Builders ("the Industrial Petitioners") assert that promulgation of the Rule was procedurally defective and violated the Regulatory Flexibility Act, that EPA's retention of authority to regulate future sources of runoff pollution is *ultra vires,* and that the decision to regulate discharge from construction sites one to five acres in size is arbitrary and capricious. NRDC again intervened on behalf of EPA.

We have jurisdiction pursuant to section 509(b)(1) of the Clean Water Act, 33 U.S.C. § 1369(b)(1) (assigning review of EPA effluent and permitting regulations to the Federal Courts of Appeals).

II.

DISCUSSION

A. The Permit Requirements

[3] The Municipal Petitioners' primary contention is that the Phase II Rule compels small MS4s to regu-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

late citizens as a condition of receiving a permit to operate, and that EPA lacks both statutory and constitutional authority to impose such a requirement. Because we avoid considering constitutionality if an issue may be resolved on narrower grounds, *Greater New Orleans Broadcasting Ass'n v. United States,* 527 U.S. 173, 184, 119 S.Ct. 1923, 144 L.Ed.2d 161 (1999), we first ask whether the Phase II Rule is supported by statutory authority.

1. Statutory Authority

[4] The Municipal Petitioners assert that the statutory command in Clean Water Act § 402(p)(6) that EPA develop a "comprehensive program to regulate" small MS4s did not authorize a program based on NPDES permits. Petitioners argue that because § 402(p)(6) explicitly indicates elements that the program may *844 contain (performance standards, guidelines, etc.) without mentioning "permits," Congress must have intended that the program exclude permitting.FN14

> FN14. The text of that section reads: "Not later than October 1, 1993, [EPA], in consultation with state and local officials, shall issue regulations (based on the results of the studies conducted under paragraph (5)) which designate stormwater discharges, other than those discharges described in paragraph (2), to be regulated to protect water quality and shall establish a comprehensive program to regulate such designated sources. The program shall, at a minimum, (A) establish priorities, (B) establish requirements for State stormwater management programs, and (C) establish expeditious deadlines. The program may include performance standards, guidelines, guidance, and management practices and treatment requirements, as appropriate." 33 U.S.C. § 1342(p)(6).

The fact that "permitting" is not included on a statutory list of elements that the program "may" include is not determinative, because the list is manifestly nonexclusive. The only constraints are that the § 402(p)(6) regulations be based on the § 402(p)(5) studies, that they be issued in consultation with state and local officials, and that-"at a minimum"-they establish priorities, requirements for state stormwater management programs, and expeditious deadlines, and constitute a comprehensive program "to protect water quality." 33 U.S.C. § 1342(p)(6). EPA was free to adopt any regulatory program, including a permitting program, that included these elements. *See Chevron, U.S.A. v. Natural Res. Def. Council,* 467 U.S. 837, 842-43, 104 S.Ct. 2778, 81 L.Ed.2d 694 (1984) (deference to an agency's reasonable interpretation is required unless Congress expressed its intent unambiguously). It is more reasonable to interpret congressional silence about permits as an indication of EPA's flexibility not to use them than as an outright prohibition.FN15

> FN15. The lesser category of "permits" may also be implied by the inclusion of "performance standards" in the list of possible program features.

The Municipal Petitioners further contend that their interpretation is supported by the structure of § 402(p), which expressly requires permits for large and medium sized MS4s in a separate section, § 402(p)(3)(B).FN16 However, as EPA counters, the language in § 402(p)(3) requiring permits for municipal storm sewers may be interpreted to apply both to Phase I *and* Phase II MS4s. Moreover, as respondent-intervenor NRDC notes, the mere existence of the § 402(p)(1) permitting moratorium, designed to apply only to Phase II dischargers, necessarily implies that EPA has the authority to require permits from these sources after the 1994 expiration of the moratorium.

> FN16. "Where Congress includes particular language in one section of a statute but omits it in another section of the same Act, it is generally presumed that Congress acts intentionally and purposely in the disparate

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> inclusion or exclusion." *Bates v. United States,* 522 U.S. 23, 29-30, 118 S.Ct. 285, 139 L.Ed.2d 215 (1997).

Since there would have been no need to establish a permitting moratorium for these sources if the sources could *never* be subject to permitting requirements, petitioners' interpretation violates the bedrock principle that statutes not be interpreted to render any provision superfluous. *See Burrey v. Pacific Gas & Elec. Co.,* 159 F.3d 388, 394 (9th Cir.1998). EPA's interpretation of its mandate under § 402(p)(6) was reasonable and EPA acted within its statutory authority in formulating the Phase II Rule as a permitting program.

2. The Tenth Amendment

The Municipal Petitioners contend that the Phase II Rule on its face compels ***845** operators of small MS4s to regulate third parties in contravention of the Tenth Amendment. We conclude that the Rule does not violate the Tenth Amendment, because it directs no unconstitutional coercion.

The Phase II Rule contemplates several avenues through which a small MS4 may obtain permission to discharge. First, if the NPDES Permitting Authority overseeing the small MS4 has issued an applicable general permit, the small MS4 may submit a notice of intent wherein the small MS4 agrees to comply with the terms of the general permit and specifies plans for implementing six "Minimum Measures" designed to protect water quality. 40 C.F.R. §§ 122.33(b)(1), 122.34(d)(1)(i), 122.34(b). Second, the small MS4 may apply for an individual permit under 40 C.F.R. § 122.34, which would again require compliance with the six Minimum Measures. *Id.* at §§ 122.33(b)(2)(i), 122.34(a), 122.34(b). Third, under an "Alternative Permit" option, the small MS4 may apply for an individualized permit under 40 C.F.R. § 122.26(d), the permitting program established by the Phase I Rule for large and medium-sized MS4s. *Id.* at §§ 122.33(b)(2)(ii), 122.26(d).[FN17]

> FN17. The Phase II Rule also allows a small MS4 to be regulated under an NPDES permit covering a nearby large or medium-sized MS4, with provisions adapted to address the small MS4. 40 C.F.R. § 122.33(b)(3).

[5] The Minimum Measures mentioned above require small MS4s to implement programs for: (1) conducting public education and outreach on stormwater impacts, *id.* at § 122.34(b)(1); (2) engaging public participation in the development of stormwater management programs, *id.* at § 122.34(b)(2); (3) detecting and eliminating illicit discharges to the MS4, *id.* at § 122.34(b)(3); (4) reducing pollution to the MS4 from construction activities disturbing one acre or more, *id.* at § 122.34(b)(4); (5) minimizing water quality impacts from development and redevelopment activities that disturb one acre or more, *id.* at § 122.34(b)(5); and (6) preventing or reducing pollutant runoff from municipal activities, *id.* at § 122.34(b)(6).[FN18]

> FN18. The Municipal Petitioners argue that the Minimum Measures exceed EPA's statutory authority under § 402(p) of the Clean Water Act. We disagree. The list of elements for a regulatory program that appears in § 402(p)(6) is nonexclusive, and EPA's adoption of the Minimum Measures represents a permissible interpretation of its authority under § 402(p)(6). *See Chevron,* 467 U.S. at 843-44, 104 S.Ct. 2778.

The Municipal Petitioners argue that EPA is not entitled to *Chevron* deference, and that the Minimum Measures must be rejected absent a clear statement of congressional intent that EPA enact the Minimum Measures. The Municipal Petitioners argue that this clear statement requirement arises because there are "significant constitutional questions" about the permissibility of the Minimum Measures under the Tenth Amendment, and because the Minimum Measures alter "the federal-state framework by permitting federal encroachment upon a traditional state power." *Solid Waste Agency of N. Cook*

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

County v. Army Corps of Eng'rs, 531 U.S. 159, 173, 121 S.Ct. 675, 148 L.Ed.2d 576 (2001).

As we explain, because the Phase II Rule includes at least one alternative to the Minimum Measures, *i.e.*, the option of seeking a permit under 40 C.F.R. § 122.26(d), the Minimum Measures do not present significant Tenth Amendment problems demanding a clear statement of congressional intent. Nor does the Phase II Rule alter the federal-state balance. To the contrary, the option of seeking a permit under 40 C.F.R. § 122.26(d) maintains precisely the same federal-state balance as existed prior to the Phase II Rule. *See, e.g., Natural Res. Def. Council v. EPA,* 966 F.2d 1292 (9th Cir.1992) (reviewing Phase I Rule); *Natural Res. Def. Council v. Costle,* 568 F.2d 1369, 1379 (D.C.Cir.1977) (denying EPA authority to exempt MS4s from regulation under the Clean Water Act). Furthermore, even if a clear statement of congressional intent were necessary, § 402(p) of the Clean Water Act is replete with clear statements that Congress intended EPA to require MS4s either to obtain NPDES permits or to stop discharging stormwater.

***846** The Municipal Petitioners contend that the measures regulating illicit discharges, small construction sites, and development activities unconstitutionally compel small MS4 operators to regulate third parties, *i.e.*, upstream dischargers. The Illicit Discharge Detection and Elimination measure requires that a permit seeker prohibit non-stormwater discharges to the MS4 and implement appropriate enforcement procedures. 40 C.F.R. § 122.34(b)(3)(ii)(B).[FN19] The Construction Site Stormwater Runoff Control measure requires a permit seeker to implement and enforce a program to reduce stormwater pollutants from small construction sites. *Id.* at §§ 122.34(b)(4)(i)-(ii).[FN20] It mandates erosion and sedimentation controls, site plan reviews that take account of water quality impacts, site inspections, and the consideration of public comment, and requires that construction site operators implement erosion, sedimentation, and waste management best management practices. *Id.* The Post-Construction/New Development measure requires permit seekers to address post-construction runoff from new development and redevelopment projects disturbing one acre or more. *Id.* at § 122.34(b)(5)(ii)(B).[FN21]

FN19. This subsection provides that permit seekers must, "[t]o the extent allowable under State, Tribal, or local law, effectively prohibit, through ordinance or other regulatory mechanism, non-stormwater discharges into your storm sewer systems and implement appropriate enforcement procedures and actions...."40 C.F.R. § 122.34(b)(3)(ii)(B).

FN20. This subsection provides that permit seekers "must develop, implement, and enforce a program to reduce pollutants in any storm water runoff to your small MS4 from construction activities that result in a land disturbance of greater than or equal to one acre.... [The] program must include the development and implementation of, at a minimum: (A) An ordinance or other regulatory mechanism to require erosion and sediment controls, as well as sanctions to ensure compliance, to the extent allowable under State, Tribal, or local law; (B) Requirements for construction site operators to implement appropriate erosion and sediment control best management practices; (C) Requirements for construction site operators to control waste such as discarded building materials, concrete truck washout, chemicals, litter, and sanitary waste at the construction site that may cause adverse impacts to water quality; (D) Procedures for site plan review which incorporate consideration of potential water quality impacts; (E) Procedures for receipt and consideration of information submitted by the public, and (F) Procedures for site inspection and enforcement control measures." 40 C.F.R. §§ 122.34(b)(4)(i)-(ii).

FN21. This subsection provides that permit

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> seekers must "[u]se an ordinance or other regulatory mechanism to address post-construction runoff from new development and redevelopment projects [disturbing one acre or more] to the extent allowable under State, Tribal or local law." 40 C.F.R. §§ 122.34(b)(5)(ii)(B).

Noting that most MS4s are operated by municipal governments, and that "[t]he drainage of a city in the interest of the public health and welfare is one of the most important purposes for which the police power can be exercised,"*New Orleans Gaslight Co. v. Drainage Comm'n,* 197 U.S. 453, 460, 25 S.Ct. 471, 49 L.Ed. 831 (1905), the Municipal Petitioners argue that requiring operators of small MS4s to implement "through ordinance or other regulatory mechanism" the regulations required by the Minimum Measures contravenes the Tenth Amendment. *See, e.g., New York v. United States,* 505 U.S. 144, 188, 112 S.Ct. 2408, 120 L.Ed.2d 120 (1992).

EPA counters that the Phase II Rule does not violate the Tenth Amendment because operators of small MS4s may opt to avoid the Minimum Measures by seeking a permit under the Alternative Permit ***847** option, 40 C.F.R. § 122.33(b)(2)(ii).[FN22]

> FN22. EPA and NRDC also argue that the Minimum Measures are facially constitutional, and that the Phase II Rule presents no Tenth Amendment difficulties because operators of small MS4s may avoid stormwater regulation entirely by electing not to discharge stormwater into federal waters in the first place. In light of our holding with regard to the Alternative Permit option, we do not consider these arguments.

[6][7][8] Under the Tenth Amendment, "the Federal Government may not compel States to implement, by legislation or executive action, federal regulatory programs." *Printz v. United States,* 521 U.S. 898, 925, 117 S.Ct. 2365, 138 L.Ed.2d 914 (1997); *see also New York,* 505 U.S. at 188, 112 S.Ct. 2408. Similarly, the federal government may not force the States to regulate third parties in furtherance of a federal program. *See Reno v. Condon,* 528 U.S. 141, 151, 120 S.Ct. 666, 145 L.Ed.2d 587 (2000) (upholding a federal statutory scheme because it "does not require the States in their sovereign capacity to regulate their own citizens"). These protections extend to municipalities. *See, e.g., Printz* 521 U.S. at 931 n. 15, 117 S.Ct. 2365.

[9][10] However, while the federal government may not *compel* them to do so, it may *encourage* States and municipalities to implement federal regulatory programs. *See New York,* 505 U.S. at 166-68, 112 S.Ct. 2408. For example, the federal government may make certain federal funds available only to those States or municipalities that enact a given regulatory regime. *See, e.g., South Dakota v. Dole,* 483 U.S. 203, 205-08, 107 S.Ct. 2793, 97 L.Ed.2d 171 (1987) (upholding federal statute conditioning state receipt of federal highway funds on state adoption of minimum drinking age of twenty-one). The crucial proscribed element is coercion; the residents of the State or municipality must retain "the ultimate decision" as to whether or not the State or municipality will comply with the federal regulatory program. *New York,* 505 U.S. at 168, 112 S.Ct. 2408. However, as long as "the alternative to implementing a federal regulatory program does not offend the Constitution's guarantees of federalism, the fact that the alternative is difficult, expensive or otherwise unappealing is insufficient to establish a Tenth Amendment violation." *City of Abilene v. EPA,* 325 F.3d 657, 662 (5th Cir.2003).

[11] With the Phase II Rule, EPA gave the operators of small MS4s a choice: either implement the regulatory program spelled out by the Minimum Measures described at 40 C.F.R. § 122.34(b), or pursue the Alternative Permit option and seek a permit under the Phase I Rule as described at 40 C.F.R. § 122.26(d). Thus, unless § 122.26(d) itself offends the Constitution's guarantees of federalism, the Phase II Rule does not violate the Tenth Amendment.

Pursuing a permit under the Alternative Permit op-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

tion does require permit seekers, in their application for a permit to discharge, to propose management programs that address substantive concerns similar to those addressed by the Minimum Measures. *See*40 C.F.R. § 122.26(d). However, § 122.26(d) lists the requirements for an *application* for a permit to discharge, not the requirements of the permit itself. Therefore, nothing in § 122.26(d) requires the operator of an MS4 to implement a federal regulatory program in order to receive a permit to discharge, because nothing in § 122.26(d) specifies the contents of the permit that will result from the application process.

City of Abilene, 325 F.3d 657, provides a helpful illustration. The cities of Abilene and Irving, Texas, have populations between 100,000 and 250,000, and so were ***848** required to apply for permits under the Phase I Rule, 40 C.F.R. § 122.26(d). *City of Abilene,* 325 F.3d at 659-60. Under § 122.26(d) the cities were required to submit proposed stormwater management programs. *Id.* at 660. They negotiated the terms of those programs with EPA, and EPA eventually presented the cities with proposed management permits that contained conditions requiring the implementation of stormwater regulatory programs, and potentially requiring the regulation of third parties. *Id.* But, as the Fifth Circuit noted, this did not mean that the cities had no choice but to implement a federal regulatory program. Instead:

> The Cities filed comments objecting to those conditions, and negotiations continued until the EPA offered the Cities the option of pursuing numeric end-of-pipe permits, which would have required the Cities to satisfy specific effluent limitations rather than implement management programs. The Cities declined this offer, electing to continue negotiations on the management permits.

Id. The Fifth Circuit rejected the cities' contention that the resulting permits violated the Tenth Amendment by requiring the cities to regulate third parties according to federal standards. *Id.* at 661-63. Because the cities chose to pursue the management permits despite the fact that EPA provided them with an option for obtaining permits that would not have involved implementing a management program or regulating third parties, no unconstitutional coercion occurred. *Id.* at 663. The ultimate decision to implement the federal program remained with the cities.

Any operator of a small MS4 that wishes to avoid the Minimum Measures may seek a permit under § 122.26(d), and, as *City of Abilene* demonstrates, nothing in § 122.26(d) will compel the operator of a small MS4 to implement a federal regulatory program or regulate third parties, because § 122.26(d) specifies application requirements, not permit requirements. Therefore, by presenting the option of seeking a permit under § 122.26(d), the Phase II Rule avoids any unconstitutional coercion. The Municipal Petitioners' claim that the Phase II Rule violates the Tenth Amendment therefore fails.

3. The First Amendment and the Minimum Measures

The Municipal Petitioners contend that the Public Education and Illicit Discharge Minimum Measures compel municipalities to deliver EPA's political message in violation of the First Amendment. The Phase II Rule's "Public Education and Outreach" Minimum Measure directs regulated small MS4s to "distribute educational materials to the community ... about the impacts of stormwater discharges on water bodies and the steps the public can take to reduce pollutants in stormwater runoff." 40 C.F.R. § 122.34(b)(1)(i). The "Illicit Discharge Detection and Elimination" measure requires regulated small MS4s to "[i]nform public employees, businesses, and the general public of hazards associated with illegal discharges and improper disposal of waste." 40 C.F.R. § 122.34(b)(3)(ii)(D).

[12] The Municipal Petitioners argue that the First Amendment prohibits EPA from compelling small MS4s to communicate messages that they might not otherwise wish to deliver. They further contend that EPA's interpretation of § 402(p) as authorizing

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

these Measures does not warrant *Chevron* deference because it raises serious constitutional issues, but that even if deference were given, the resulting rule is unconstitutional because neither Congress nor EPA may dictate the speech of MS4s. They contend that municipalities are protected by the First Amendment, ***849** *Pacific Gas & Elec. v. Public Utilities Comm'n,* 475 U.S. 1, 8, 106 S.Ct. 903, 89 L.Ed.2d 1 (1986) ("Corporations and other associations, like individuals, contribute to the [discourse] that the First Amendment seeks to foster...."), which applies as much to compelled statements of "fact" as to those of "opinion." *Riley v. Nat'l Fed. of the Blind,* 487 U.S. 781, 797-98, 108 S.Ct. 2667, 101 L.Ed.2d 669 (1988).

We conclude that the purpose of the challenged provisions is legitimate and consistent with the regulatory goals of the overall scheme of the Clean Water Act, *cf. Glickman v. Wileman Bros. & Elliott, Inc.,* 521 U.S. 457, 476, 117 S.Ct. 2130, 138 L.Ed.2d 585 (1997), and does not offend the First Amendment.[FN23] The State may not constitutionally require an individual to disseminate an ideological message, *Wooley v. Maynard,* 430 U.S. 705, 713, 97 S.Ct. 1428, 51 L.Ed.2d 752 (1977), but requiring a provider of storm sewers that discharge into national waters to educate the public about the impacts of stormwater discharge on water bodies and to inform affected parties, including the public, about the hazards of improper waste disposal falls short of compelling such speech.[FN24] These broad requirements do not dictate a specific message. They require appropriate educational and public information activities that need not include any specific speech at all. A regulation is facially unconstitutional only when every possible reading compels it, *Meinhold v. U.S. Dep't of Def.,* 34 F.3d 1469, 1476 (9th Cir.1994),[FN25] but this is clearly not the case here.

FN23. We decline to address two further arguments raised by EPA: first, that municipalities do not receive full First Amendment protections, under *Muir v. Alabama Educational Television Commission,* 688 F.2d 1033, 1038 n. 12 (5th Cir.1982) (*en banc*) ("Government expression, being unprotected by the First Amendment, may be subject to legislative limitation which would be impermissible if sought to be applied to private expression ...."), and *Aldrich v. Knab,* 858 F.Supp. 1480, 1491 (W.D.Wash.1994) (holding that "unlike private broadcasters, the state itself does not enjoy First Amendment rights"), and second, that even if the First Amendment were fully applicable, the Phase II regulations would satisfy them because MS4s may avoid the compulsion to speak by seeking a permit under the Alternative option, 40 C.F.R. § 122.26(d)(2)(iv), rather than under the Minimum Measures.

FN24. As a subsidiary matter, we note that it also falls short of compelling the MS4 to "regulate" third parties in contravention of the Tenth Amendment. Dispensing information to facilitate public awareness about safe disposal of toxic materials constitutes "encouragement," not regulation.

FN25. "When the constitutional validity of a statute or regulation is called into question, it is a cardinal rule that courts must first determine whether a construction is possible by which the constitutional problem may be avoided." *Meinhold,* 34 F.3d at 1476.

As in *Zauderer v. Office of Disciplinary Counsel of the Sup. Ct. of Ohio,* 471 U.S. 626, 105 S.Ct. 2265, 85 L.Ed.2d 652 (1985), where the Supreme Court upheld certain disclosure requirements in attorney advertising, "[t]he interests at stake in this case are not of the same order as those discussed in *Wooley* [invalidating a law requiring that drivers display the motto 'Live Free or Die' on New Hampshire license plates] ... and *Barnette* [forbidding the requirement that public school students salute the flag because the State may not impose on the individual

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

'a ceremony so touching matters of opinion and political attitude']." *Id.* at 651. EPA has not attempted to "prescribe what shall be orthodox in politics, nationalism, religion, or other matters of opinion or force citizens to confess by word or act their faith therein." *West Virginia State Bd. of Ed. v. Barnette,* 319 U.S. 624, 642, 63 S.Ct. 1178, 87 L.Ed. 1628 (1943).

***850** Informing the public about safe toxin disposal is non-ideological; it involves no "compelled recitation of a message" and no "affirmation of belief." *PruneYard Shopping Ctr. v. Robins,* 447 U.S. 74, 88, 100 S.Ct. 2035, 64 L.Ed.2d 741 (1980) (upholding state law protecting petitioning in malls and noting that "*Barnette* is inapposite because it involved the compelled recitation of a message containing an affirmation of belief"). It does not prohibit the MS4 from stating its own views about the proper means of managing toxic materials, or even about the Phase II Rule itself. Nor is the MS4 prevented from identifying its dissemination of public information as required by federal law, or from making available federally produced informational materials on the subject and identifying them as such.

Even if such a loosely defined public information requirement could be read as compelling speech, the regulation resembles another regulation that the Supreme Court has held permissible. In *Glickman,* 521 U.S. 457, 117 S.Ct. 2130, 138 L.Ed.2d 585, the Court upheld a generic advertising assessment promulgated by the Department of Agriculture on behalf of California tree fruit growers because the order was consistent with an overall regulatory program that did not abridge protected speech:

> Three characteristics of the regulatory scheme at issue distinguish it from laws that we have found to abridge the freedom of speech protected by the First Amendment. First, the marketing orders impose no restraint on the freedom of any producer to communicate any message to any audience. Second, they do not compel any person to engage in any actual or symbolic speech. Third, they do not compel the producers to endorse or to finance any political or ideological views. Indeed, since all of the respondents are engaged in the business of marketing California nectarines, plums, and peaches, it is fair to presume that they agree with the central message of the speech that is generated by the generic program.

Id. at 469-70, 117 S.Ct. 2130 (footnotes omitted). Here, as in *Glickman,* the Phase II regulations impose no restraint on the freedom of any MS4 to communicate any message to any audience. They do not compel any specific speech, nor do they compel endorsement of political or ideological views. And since all permittees are engaged in the handling of stormwater runoff that must be conveyed in reasonably unpolluted form to national waters, it is similarly fair to presume that they will agree with the central message of a public safety alert encouraging proper disposal of toxic materials.[FN26] The Phase II regulation departs only from the second element in the *Glickman* analysis, because the public information requirement may compel a ***851** regulated party to engage in some speech at some time; but unlike the offensive messages in *Maynard* and *Barnette* (and even the inoffensive advertising messages at issue in *Glickman*) that speech is not specified by the regulation.[FN27]

> FN26. In its most recent treatment of compelled speech, the Supreme Court held that a generic advertising campaign violated free speech where the message was specific and antagonistic to the preferred advertising message of the plaintiff, and the regulation compelling participation was not part of a broader regulatory apparatus already constraining the plaintiff's autonomy in the relevant arena. *United States Dep't. of Agriculture v. United Foods,* 533 U.S. 405, 410-17, 121 S.Ct. 2334, 150 L.Ed.2d 438 (2001). The court distinguished this advertising program from the one in *Glickman* on the latter point: "[t]he program sustained in *Glick-*

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

man differs from the one under review in a most fundamental respect. In *Glickman* the mandated assessments for speech were ancillary to a more comprehensive program restricting market autonomy." *Id.* at 411, 121 S.Ct. 2334. Although the Phase II Rule is not an advertising or marketing regulation, it constitutes a "comprehensive program" restricting the autonomy of MS4s in the relevant arena of controlling toxic discharges to storm sewers that drain to U.S. waters.

FN27. In deciding the similar question of whether a regulation impermissibly compelled speech by requiring manufacturers of mercury-containing products to inform consumers how to dispose safely of the toxic material, the Second Circuit held that "mandated disclosure of accurate, factual, commercial information does not offend the core First Amendment values of promoting efficient exchange of information or protecting individual liberty interests." *Nat'l Elec. Mfrs. Ass'n v. Sorrell,* 272 F.3d 104, 114 (2d Cir.2001). What speech may follow from the Phase II directive will not be "commercial" in the same sense that manufacturer labeling is, but it will be similar in substance to *Sorrell* to the extent that it informs the public how to dispose safely of toxins. We think the policy considerations underlying the commercial speech treatment of labeling requirements, *see, e.g.,* the Federal Cigarette Labeling and Advertising Act, 15 U.S.C. §§ 1333-39, apply similarly in the context of the market-participant municipal storm sewer provider.

The public information requirement does not impermissibly compel speech, and nothing else in the Phase II Rule offends the First Amendment.[FN28] The Rule does not compel a recitation of a specific message, let alone an affirmation of belief. To the extent MS4s are regulated by the public information requirement, the regulation is consistent with the overall regulatory program of the Clean Water Act and the responsibilities of point source dischargers.

FN28. The Alternative option contains a public education requirement that is similar but even less specific, and therefore even less burdensome, than the requirements in the Minimum Measures. *See* § 122.26(d)(2)(iv)(B)(6) (requiring permit seekers to propose programs to counter illicit discharges, including a "description of educational activities, public information activities, and other appropriate activities to facilitate the proper management and disposal of used oil and toxic materials").

4. Notice and Comment on the Alternative Permit Option

The Municipal Petitioners contend that, in adopting the Alternative Permit option, EPA did not comply with the minimum notice and comment procedures required in informal rulemaking by the Administrative Procedures Act ("APA"), 5 U.S.C. § 553. The APA requires an agency to publish notice of a proposed rulemaking that includes "either the terms or substance of the proposed rule or a description of the subjects and issues involved." *Id.* at § 553(b)(3).

[13] We have held that a "final regulation that varies from the proposal, even substantially, will be valid as long as it is 'in character with the original proposal and a logical outgrowth of the notice and comments.' " *Hodge v. Dalton,* 107 F.3d 705, 712 (9th Cir.1997). In determining whether notice was adequate, we consider whether the complaining party should have anticipated that a particular requirement might be imposed. The test is whether a new round of notice and comment would provide the first opportunity for interested parties to offer comments that could persuade the agency to modify its rule. *Am. Water Works Ass'n v. EPA,* 40 F.3d

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

1266, 1274 (D.C.Cir.1994).

The Municipal Petitioners argue that the Alternative Permit option is not a logical outgrowth of EPA's proposed rule because, although numerous alternatives were discussed in the Preamble to the proposed rule, 63 Fed. Reg. at 1554-1557, the Alternative Permit option eventually adopted was not. EPA counters that the proposed rule included a supplementary alternative permitting system based on concepts similar to those in the Minimum ***852** Measures, including "simplified individual permit application requirements."[FN29] EPA contends that the Alternative Permit option was a logical outgrowth of the comments it received on the proposal expressing concern that the Minimum Measures might violate the Tenth Amendment. 64 Fed. Reg. at 68,765.

> FN29. Municipal Petitioners concede that "simplified individual permit application requirements" were discussed, but they contend that the permit requirements discussed are not sufficiently similar to those promulgated to establish a logical outgrowth.

[14] The Alternative Permit option passes the *Hodge* test. The proposed rule suggested an individualized permitting option to be developed in response to comments during the notice and comment period. The Alternative option contains no elements that were not part of the original rule, even if they are configured differently in the final rule. Petitioners had, and took, their opportunity to object to the aspects of the Rule that they did not support in their comments on the Minimum Measures.

B. The General Permit Option and Notices of Intent

The Environmental Petitioners contend that the general permitting scheme of the Phase II Rule allows regulated small MS4s to design stormwater pollution control programs without adequate regulatory and public oversight, and that it contravenes the Clean Water Act because it does not require EPA to review the content of dischargers' notices of intent and does not contain express requirements for public participation in the NPDES permitting process.

In reviewing a federal administrative agency's interpretation of a statute it administers, we first determine whether Congress has expressed its intent unambiguously on the question before the court. *See Chevron,* 467 U.S. 837, 842-44, 104 S.Ct. 2778, 81 L.Ed.2d 694 ("If the intent of Congress is clear, that is the end of the matter; for the court, as well as the agency, must give effect to the unambiguously expressed intent of Congress."). "If, instead, Congress has left a gap for the administrative agency to fill, we proceed to step two. At step two, we must uphold the administrative regulation unless it is arbitrary, capricious, or manifestly contrary to the statute." *Defenders of Wildlife v. Browner,* 191 F.3d 1159, 1162,*amended by*197 F.3d 1035 (9th Cir.1999) (citations and internal quotations omitted).

[15] We conclude that the Phase II General Permit option violates the Clean Water Act's requirement that permits for discharges "require controls to reduce the discharge of pollutants to the maximum extent practicable,"33 U.S.C. § 1342(p)(3)(B)(iii). We also conclude that the Phase II General Permit option violates the Clean Water Act because it does not contain express requirements for public participation in the NPDES permitting process. We remand these aspects of the Phase II Rule.[FN30]

> FN30. EPA argues that the Environmental Petitioner's challenge is not ripe for review because "the question of whether some general permit somewhere might fail to assure that pollutants are reduced to the maximum extent practicable is not ripe for review." But we are not addressing the merits of any specific permit. Rather, the question before us "is purely one of statutory interpretation that would not benefit from

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> further factual development of the issues presented." *Whitman v. American Trucking,* 531 U.S. 457, 479, 121 S.Ct. 903, 149 L.Ed.2d 1 (2001). Specifically, we are addressing whether EPA, in promulgating the Phase II Rule, has accomplished the substantive controls for municipal stormwater that Congress mandated in § 402(p) of the Clean Water Act. As we held in *Natural Resources Defense Council v. EPA,* 966 F.2d at 1296-97, 1308, this question is ripe for review.

853** ***1. Phase II General Permits and Notices of Intent

Primary responsibility for enforcement of the requirements of the Clean Water Act is vested in the Administrator of the EPA. 33 U.S.C. § 1251(d); *see also*33 U.S.C. § 1361(a) ("The Administrator [of EPA] is authorized to prescribe such regulations as are necessary to carry out his functions under this chapter."). The Clean Water Act renders illegal any discharge of pollutants not specifically authorized by a permit. 33 U.S.C. § 1311(a) ("Except in compliance with this section and [other sections detailing permitting requirements] of this title, the discharge of any pollutant by any person shall be unlawful."). Under the Phase II Rule, dischargers may apply for an individualized permit with the relevant permitting authority, or may file a "Notice of Intent" ("NOI") to seek coverage under a "general permit." 40 C.F.R. § 122.33(b).

A general permit is a tool by which EPA regulates a large number of similar dischargers. Under the traditional general permitting model, each general permit identifies the output limitations and technology-based requirements necessary to adequately protect water quality from a class of dischargers. Those dischargers may then acquire permission to discharge under the Clean Water Act by filing NOIs, which embody each discharger's agreement to abide by the terms of the general permit. Because the NOI represents no more than a formal acceptance of terms elaborated elsewhere, EPA's approach does not require that permitting authorities review an NOI before the party who submitted the NOI is allowed to discharge. General permitting has long been recognized as a lawful means of authorizing discharges. *Natural Res. Def. Council v. Costle,* 568 F.2d 1369 (D.C.Cir.1977).

The Phase II general permitting scheme differs from the traditional general permitting model. The Clean Water Act requires EPA to ensure that operators of small MS4s "reduce the discharge of pollutants to the maximum extent practicable." 33 U.S.C. § 1342(p)(3)(B). To ensure that operators of small MS4s achieve this "maximum extent practicable" standard, the Phase II Rule requires that each NOI contain information on an individualized pollution control program that addresses each of the six general criteria specified in the Minimum Measures; thus, according to the Phase II Rule, submitting an NOI and implementing the Minimum Measures it contains "constitutes compliance with the standard of reducing pollutants to the 'maximum extent practicable.' " 40 C.F.R. § 122.34(a).

Because a Phase II NOI establishes what the discharger will do to reduce discharges to the "maximum extent practicable," the Phase II NOI crosses the threshold from being an item of procedural correspondence to being a substantive component of a regulatory regime. The text of the Rule itself acknowledges that a Phase II NOI is a permit application that is, at least in some regards, functionally equivalent to a detailed application for an individualized permit. *See, e.g.,*40 C.F.R. § 122.34(d)(1) ("In your permit application (either a notice of intent for coverage under a general permit or an individual permit application), you must identify and submit to your NPDES permitting authority the following information...."). For this reason, EPA rejected the possibility of providing a "form NOI" to Phase II permittees, explaining that "[w]hat will be required on an MS4's NOI ... is more extensive than what is usually required on ***854** an NOI, so a 'form' NOI for MS4s may be impractical." 64 Fed. Reg. at 68,764.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

2. Failure to Regulate

The Environmental Petitioners argue that, by allowing NPDES authorities to grant dischargers permits based on unreviewed NOIs, the Rule creates an impermissible self-regulatory system.[FN31] Petitioners contend the Rule impermissibly fails to require that the permitting authority review an NOI to assure compliance with Clean Water Act standards, including the standard that municipal stormwater pollution be reduced to "the maximum extent practicable." 33 U.S.C. § 1342(p)(3)(B)(iii). *See*40 C.F.R. § 123.35 (setting out requirements for permitting authorities, but not requiring review of NOI); 64 Fed. Reg. at 68,764 ("EPA disagrees that formal approval or disapproval by the permitting authority is needed").

> FN31. Petitioners suggest that EPA should be held to the standard it espoused to procure judicial approval for the Phase I program. In 1991, responding to NRDC's assertion that the Phase I Rule failed to set "hard criteria" for review of MS4 stormwater programs, EPA responded that "inadequate proposals will result in the denial of permit applications." Respondent's Brief at 67, *Natural Res. Def. Council v. EPA,* 966 F.2d 1292 (9th Cir.1992) (Nos. 91-70200, 91-70176, & 90-70671). Petitioners contend that this court relied on that representation in ruling for EPA on that issue. *Natural Res. Def. Council v. EPA,* 966 F.2d at 1308 n. 17 ("Individual NPDES permit writers ... will decide whether application proposals are adequate:...").

EPA maintains that the Phase II permit system is fully consistent with the authorizing statute. It contends that § 402(p)(6) granted EPA flexibility in designing the Phase II "comprehensive program," and notes that while the statute does not require general permits, neither does it preclude them. EPA contends that Congress delegated the task of designing the program to EPA, and that EPA reasonably adopted a "flexible version" of the NPDES permit program to suit the unique needs of the Phase II program. It disputes that the general permit program creates "paper tigers," especially since EPA, States, and citizens may initiate enforcement actions. Finally, EPA argues that the Rule does not create a self-regulatory program, but that even if it did, nothing in § 402(p)(6) precludes such a program.

Reviewing the Phase II Rule under the first step of *Chevron,* we note that the plain language of § 402(p) of the Clean Water Act, 33 U.S.C. § 1342(p), expresses unambiguously Congress's intent that EPA issue no permits to discharge from municipal storm sewers unless those permits "require controls to reduce the discharge of pollutants to the maximum extent practicable."

Phase II general permits will likely impose requirements that ensure that operators of small MS4s comply with many of the standards of the Clean Water Act. Thus, general permits issued under Phase II will ordinarily contain numerous substantive requirements, just as did the permits issued under Phase I. *See*40 C.F.R. §§ 123.35 & 123.35(a) ("§ 123.35 As the NPDES Permitting Authority for regulated small MS4s, what is my role? (a) You must comply with the requirements for all NPDES permitting authorities under Parts 122, 123, 124 and 125 of this chapter."); *see also*40 C.F.R. § 122.28 (outlining requirements for NPDES authorities issuing general permits). And every operator of a small MS4 who files an NOI under Phase II "must comply with other applicable NPDES permit requirements, standards, and conditions established in ***855** the ... general permit." *See*40 C.F.R. §§ 122.34 & 122.34(f).

[16] However, while each Phase II general permit will likely ensure that operators of small MS4s comply with certain standards of the Clean Water Act, they will not "require controls to reduce the discharge of pollutants to the maximum extent practicable." According to the Phase II Rule, the operator of a small MS4 has complied with the re-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

quirement of reducing discharges to the "maximum extent practicable" when it implements its stormwater management program, *i.e.*, when it implements its Minimum Measures. 40 C.F.R. § 122.34(a); *see also*64 Fed. Reg. at 68753 (stating EPA's anticipation that limitations more stringent that the minimum control measures "will be unnecessary"). Nothing in the Phase II regulations requires that NPDES permitting authorities review these Minimum Measures to ensure that the measures that any given operator of a small MS4 has decided to undertake will *in fact* reduce discharges to the maximum extent practicable.[FN32]

> FN32. That the Rule allows a permitting authority to review an NOI is not enough; every permit must comply with the standards articulated by the Clean Water Act, and unless every NOI issued under a general permit is reviewed, there is no way to ensure that such compliance has been achieved.

The regulations do require NPDES permitting authorities to provide operators of small MS4s with "menus" of management practices to assist in implementing their Minimum Measures, *see*40 C.F.R. § 123.35(g), but again, nothing requires that the combination of items that the operator of a small MS4 selects from this "menu" will have the combined effect of reducing discharges to the maximum extent practicable.

Nor is the availability of citizen enforcement actions a substitute for EPA's enforcement responsibility, especially because, as discussed below, the Rule does not require that NOIs be publicly available. Absent review on the front end of permitting, the general permitting regulatory program loses meaning even as a procedural exercise.

*See*40 C.F.R. § 123.35 ("As the NPDES Permitting Authority for regulated small MS4s, what is my role?"). Therefore, under the Phase II Rule, nothing prevents the operator of a small MS4 from misunderstanding or misrepresenting its own stormwater situation and proposing a set of minimum measures for itself that would reduce discharges by far less than the maximum extent practicable.

In fact, under the Phase II Rule, in order to receive the protection of a general permit, the operator of a small MS4 needs to do nothing more than decide for itself what reduction in discharges would be the maximum practical reduction. No one will review that operator's decision to make sure that it was reasonable, or even good faith.[FN33] Therefore, as the Phase II Rule stands, EPA would allow permits to issue that would do less than *require* controls to reduce the discharge of pollutants to the maximum extent practicable.[FN34] *See**856 64 Fed. Reg. at 68753 (explaining that the minimum control measures will protect water quality if they are "properly implemented"). We therefore must reject this aspect of the Phase II Rule as contrary to the clear intent of Congress. *Cf. Natural Res. Def. Council*, 966 F.2d at 1305 (rejecting as arbitrary and capricious a permitting system that allowed regulated industrial stormwater dischargers to "self-report" whether they needed permit coverage).

> FN33. EPA identifies no other general permitting program that leaves the choice of substantive pollution control requirements to the regulated entity, and we are not persuaded by the analogy it urges to the traditional model of general permitting (where NOIs routinely are not reviewed), because, as we have noted, the Phase II general permit model is substantially dissimilar.

> FN34. In its petition for rehearing, EPA argues for the first time that because the regulations require NPDES Permitting Authorities to include in general permits "any additional measures necessary" to ensure that the maximum extent practicable standard is met, 40 C.F.R. §§ 123.35(h)(1), 123.35(f) (incorporating by reference the "maximum extent practicable" requirement of 40 C.F.R. §§ 122.34(a)), 122.34(f) (requiring small MS4s to comply with additional measures), the Phase II Rule en-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

sures that discharges will be reduced to the maximum extent practicable.

The trouble with EPA's reasoning is that the Phase II Rule defines the "maximum extent practicable" standard in such a way that no "additional measures" will ever be necessary under § 123.35(h)(1). While a Permitting Authority may impose additional measures, nothing compels it to do so because, merely by implementing the best management practices that the operator of a small MS4 has chosen for itself, that small MS4 will already have met the "maximum extent practicable" standard. *See*40 C.F.R. § 122.34(a).

Involving regulated parties in the development of individualized stormwater pollution control programs is a laudable step consistent with the directive to consult with state and local authorities in the development of the § 402(p)(6) comprehensive program. But EPA is still required to ensure that the individual programs adopted are consistent with the law. Our holding should not prevent the Phase II general permitting program from proceeding mostly as planned. Our holding does not preclude regulated parties from designing aspects of their own stormwater management programs, as contemplated under the Phase II Rule. However, stormwater management programs that are designed by regulated parties must, in every instance, be subject to meaningful review by an appropriate regulating entity to ensure that each such program reduces the discharge of pollutants to the maximum extent practicable. We therefore remand this aspect of the Rule.

3. Public Participation

The Environmental Petitioners contend that the Phase II Rule fails to provide for public participation as required by the Clean Water Act, because the public receives neither notice nor opportunity for hearing regarding an NOI. The EPA replies on the one hand by arguing that NOIs are not "permits" and therefore are not subject to the public availability and public hearing requirements of the Clean Water Act, and on the other hand by arguing that the combination of the public involvement minimum measure, 40 C.F.R. § 122.34(b)(2), the Federal Freedom of Information Act, 5 U.S.C. § 552, and state freedom of information acts would fulfill any such requirements if NOIs were permits.

Reviewing the Phase II Rule under *Chevron* step one, we conclude that clear Congressional intent requires that NOIs be subject to the Clean Water Act's public availability and public hearings requirements. The Clean Water Act requires that "[a] copy of each permit application and each permit issued under [the NPDES permitting program] shall be available to the public,"33 U.S.C. § 1342(j), and that the public shall have an opportunity for a hearing before an permit application is approved, 33 U.S.C. § 1342(a)(1). Congress identified public participation rights as a critical means of advancing the goals of the Clean Water Act in its primary statement of the Act's approach and philosophy. *See*33 U.S.C. § 1251(e); *see also Costle v. Pacific Legal Found.*, 445 U.S. 198, 216, 100 S.Ct. 1095, 63 L.Ed.2d 329 (1980) (noting the "general policy of encouraging public participation is applicable to the administration of the NPDES permit program"). EPA has acknowledged that technical issues relating to the issuance of NPDES permits should be decided in "the most open, accessible forum possible,***857** and at a stage where the [permitting authority] has the greatest flexibility to make appropriate modifications to the permit." 44 Fed. Reg. 32,854, 32,885 (June 7, 1979).

As we noted above, under the Phase II Rule it is the NOIs, and not the general permits, that contain the substantive information about how the operator of a small MS4 will reduce discharges to the maximum extent practicable. Under the Phase II Rule, NOIs are functionally equivalent to the permit applications Congress envisioned when it created the Clean Water Act's public availability and public hearing requirements. Thus, if the Phase II Rule does not make NOIs "available to the public," and does not provide for public hearings on NOIs, the Phase II Rule violates the clear intent of Congress.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

EPA's first argument-that NOIs are not subject to the public availability and public hearings requirements of the Clean Water Act-therefore fails.

We therefore reject the Phase II Rule as contrary to the clear intent of Congress insofar as it does not provide for public hearings on NOIs as required by 33 U.S.C. § 1342(a)(1). However, Congress has not directly addressed the question of what would constitute an NOI being "available to the public" as required by 33 U.S.C. § 1342(j). Under *Chevron* step two, we must defer to EPA's interpretation of "available to the public" unless it is arbitrary, capricious, or manifestly contrary to the statute.

[17] EPA argues that the NOIs are "available to the public" as a result of the combined effects of the public participation minimum measures, and of federal and state freedom of information acts. This argument is unconvincing. First, the public participation Minimum Measure only requires dischargers to design a program minimally consistent with State, Tribal, and local requirements. 40 C.F.R. § 122.34(b)(2). Second, the federal Freedom of Information Act only applies to documents that are actually in EPA's possession, not to documents that are in the possession of state or tribal NPDES authorities, *see*40 C.F.R. § 2 (providing EPA's policy for releasing documents under the federal Freedom of Information Act), and nothing in the Phase II Rule provides that EPA obtain possession of every NOI that is submitted to a NPDES permitting authority. *See*40 C.F.R. § 123.41(a) (making information provided to state NPDES authorities available to EPA only *upon request*). Thus, under the Phase II Rule, NOIs will only "be available to the public" subject to the vagaries of state and local freedom of information acts. We conclude that EPA's interpretation of 33 U.S.C. § 1342(j), as embodied in the provisions of the Phase II Rule providing for the public availability of NOIs, is manifestly contrary to the Clean Water Act, which contemplates greater scope, greater certainty, and greater uniformity of public availability than the Phase II Rule provides. We therefore reject this aspect of the Phase II

FN35

FN35. EPA argues for the first time in its petition for rehearing that NOIs will be publicly available under 40 C.F.R. § 122.34(g)(2). Addressing operators of regulated small MS4s, this section provides: "You must make your records, including a description of your storm water management program, available to the public at reasonable times during regular business hours." While this section does seem to provide for the public availability of a small MS4's records, we are troubled that nothing in EPA's initial briefs indicated that EPA considered NOIs to be subject to this section. We normally defer to an agency's interpretations of its own regulations, but we may decline to defer to the *post hoc* rationalizations of appellate counsel. *See, e.g., Martin v. Occupational Safety and Health Review Commission,* 499 U.S. 144, 150, 156, 111 S.Ct. 1171, 113 L.Ed.2d 117 (1991). If EPA intends this section to provide for the public availability of NOIs-for example because it intends NOIs to be among the records subject to this section-it may clarify on remand.

***858** In sum, we conclude that EPA's failure to require review of NOIs, which are the functional equivalents of permits under the Phase II General Permit option, and EPA's failure to make NOIs available to the public or subject to public hearings contravene the express requirements of the Clean Water Act. We therefore vacate those portions of the Phase II Rule that address these procedural issues relating to the issuance of NOIs under the Small MS4 General Permit option, and remand so that EPA may take appropriate action to comply with the Clean Water Act.

C. Failure to Designate

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

We reject the Environmental Petitioners' contention that EPA's failure to designate for Phase II regulation serious sources of stormwater pollution, including certain industrial ("Group A") sources and forest roads, was arbitrary and capricious. *See Marsh v. Oregon Natural Res. Council,* 490 U.S. 360, 378, 109 S.Ct. 1851, 104 L.Ed.2d 377 (1989).FN36

> FN36. Agency determinations based on the record are reviewed under the "arbitrary and capricious" standard. 5 U.S.C. § 706(2)(A). The standard is narrow and the reviewing court may not substitute its judgment for that of the agency. *Marsh,* 490 U.S. at 378, 109 S.Ct. 1851. However, the agency must articulate a rational connection between the facts found and the conclusions made. *Washington v. Daley,* 173 F.3d 1158, 1169 (9th Cir.1999). The reviewing court must determine whether the decision was based on a consideration of the relevant factors and whether there has been a clear error of judgment. *Marsh,* 490 U.S. at 378, 109 S.Ct. 1851. The court may reverse under the "arbitrary and capricious" standard only if the agency:

has relied on factors which Congress has not intended it to consider, entirely failed to consider an important aspect of the problem, offered an explanation for its decision that runs counter to the evidence before the agency, or is so implausible that it could not be ascribed to a difference in view or the product of agency expertise.
Motor Vehicle Mfrs. Ass'n, 463 U.S. at 43, 103 S.Ct. 2856.

1. "Group A" Facilities

In addition to the small MS4s and construction sites ultimately designated for regulation under the Phase II Rule, EPA evaluated a variety of other point-source discharge categories for potential Phase II regulation. One group of dischargers (referred to as the "Group A" facilities) included sources that "are very similar, or identical" to regulated stormwater discharges associated with industrial activity that were not designated for Phase I regulation for administrative reasons unrelated to their environmental impacts.FN37 64 Fed. Reg. at 68,779. EPA estimates that Group A includes approximately 100,000 facilities, including auxiliary facilities and secondary activities ("*e.g.,* maintenance of construction equipment and vehicles, local trucking for an unregulated facility such as a grocery store,"*id.*) and facilities intentionally omitted from Phase I designation ("*e.g.,* publicly owned treatment works with a design flow of less than 1 million gallons per day, landfills that have not received industrial waste,"*id.*).

> FN37. EPA explains that the Group A facilities were not regulated with the other Phase I sources because EPA used Standard Industrial Classification Index (SIC) codes in defining the universe of regulated industrial activities: "By relying on SIC codes, a classification system created to identify industries rather than environmental impacts from these industries [sic] discharges, some types of storm water discharges that might otherwise be considered 'industrial' were not included in the existing NPDES storm water program." 64 Fed. Reg. at 68,779.

***859** The Environmental Petitioners contend that EPA should have designated the Group A facilities for categorical Phase II regulation after finding (1) that stormwater discharges from these facilities are the same as those from the industrial sources regulated under Phase I, and (2) that such discharges may cause "adverse water quality impacts." *Id.* Petitioners argue that these findings, and EPA's failure to provide individualized analysis regarding whether any specific source category within Group A requires regulation, render EPA's decision not to regulate any of these sources under the Rule arbitrary and capricious. They maintain that EPA's "line-drawing," which regulates some pollution sources but leaves nearly identical sources unregu-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

lated without any persuasive rationale, is necessarily arbitrary and capricious. *See Natural Res. Def. Council,* 966 F.2d at 1306 (EPA's decision not to regulate construction sites smaller than five acres was arbitrary when EPA provided no data to justify the five-acre threshold and admitted that unregulated sites could have significant water quality impacts).

Petitioners argue that § 402(p)(6) at least required EPA to make findings with respect to individual Group A categories, and that data collected from Phase I permit applications could be used to evaluate the pollutant potential of the identical Group A sources. They contend that these findings should have sufficed as a basis for designating at least some Group A sources, and that EPA's conclusion that it lacked adequate nationwide data upon which to designate any of these sources is not supported by the record evidence. Comparing EPA's identification of the serious polluting potential of some of these sources with its statutory mandate under § 402(p)(6) "to protect water quality," they argue that EPA fails even the forgiving standard of arbitrary and capricious review in that it has "offered an explanation for its decision that runs counter to the evidence before [it]" and "is so implausible that it could not be ascribed to a difference in view or the product of agency expertise." *See Motor Vehicle Mfrs.,* 463 U.S. at 43, 103 S.Ct. 2856.

EPA maintains that it considered Group A facilities' similarity to already regulated sources as only one of several criteria that it used in designating sources for regulation under Phase II, 64 Fed. Reg. at 68,780, and that sources that appear "similarly situated" under one criterion are not necessarily similarly situated under all. EPA asserts that nothing in § 402(p)(6) implied a responsibility to make individualized findings regarding each Group A subcategory, and it maintains that it simply lacked sufficient data to support nationwide designation of the Group A facilities. EPA notes that, after failing to receive requested comment providing such data, it proposed instead "to protect water quality" by allowing regional regulation of problem Group A facilities under the residual designation authority. EPA contends that agencies must be afforded deference in determining the data necessary to support regulatory decisionmaking and that it reasonably determined the quantum of data it would need to support the designation of additional sources on a nationwide basis. *See Sierra Club v. EPA,* 167 F.3d 658, 662 (D.C.Cir.1999).

[18] We conclude that sufficient evidence supports EPA's decision not to designate Group A sources on a nationwide basis, and instead to establish local and regional designation authority to account for these sources and protect water quality. Although we are troubled by the purely administrative basis for the distinction between facilities regulated under the Phase I Rule and the Group A facilities ***860** that remain unregulated under Phase II,[FN38] EPA's choice of the Phase I standard for designation is not the issue before us. Before us is whether EPA acted arbitrarily in declining to designate the Group A sources on a nationwide basis under the Phase II Rule, and we cannot say that it did.

> FN38. As discussed in footnote 37, Group A facilities were not regulated with other Phase I industrial sources based on a government coding system used to distinguish different types of industry (without reference to their similar environmental impacts). *See*64 Fed. Reg. at 68,779.

EPA has articulated a rational connection between record facts indicating insufficient data to categorically regulate Group A facilities and its corresponding conclusion not to do so, and we defer to that decision. *See Washington v. Daley,* 173 F.3d 1158, 1169 (9th Cir.1999). In the text of the Rule, EPA explains that the process behind its decision not to nationally designate Group A sources for Phase II regulation focused not only on the likelihood of contamination from a source category, but also on the sufficiency of national data about each category and whether pollution concerns were adequately addressed by existing environmental regu-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

lations.[FN39] We cannot say that EPA relied on factors Congress had not intended it to consider, that it failed to consider an important aspect of the problem, or that its rationale is implausible. *See Motor Vehicle Mfrs.*, 463 U.S. at 43, 103 S.Ct. 2856. Nor did EPA's decision run counter to the evidence before it. *Id.* The Environmental Petitioners allege that its decision not to regulate Group A facilities runs counter to evidence that similar sources are highly polluting, but as EPA considered evidence beyond those similarities that persuaded it not to regulate, we cannot say that EPA's decision is unsupported by the record. Nothing in § 402(p)(6) unambiguously requires EPA to evaluate the Group A source categories individually, and we defer to EPA's interpretation of the statute it is charged with administering. *See Royal Foods Co. v. RJR Holdings*, 252 F.3d 1102, 1106 (9th Cir.2001).

> FN39. "In identifying potential categories of sources for designation in today's notice, EPA considered designation of discharges from Group A and Group B facilities. EPA applied three criteria to each potential category in both groups to determine the need for designation: (1) The likelihood for exposure of pollutant sources included in that category, (2) whether such sources were adequately addressed by other environmental programs, and (3) whether sufficient data were available at this time on which to make a determination of potential adverse water quality impacts for the category of sources. As discussed previously, EPA searched for applicable nationwide data on the water quality impacts of such categories of facilities...."
> "EPA's application of the first criterion showed that a number of Group A and B sources have a high likelihood of exposure of pollutants.... Application of the second criterion showed that some categories were likely to be adequately addressed by other programs."
> "After application of the third criterion, availability of nationwide data on the various storm water discharge categories, EPA concluded that available data would not support any such nationwide designations. While such data could exist on a regional or local basis, EPA believes that permitting authorities should have flexibility to regulate only those categories of sources contributing to localized water quality impairments.... If sufficient regional or nationwide data become available in the future, the permitting authority could at that time designate a category of sources or individual sources on a case-by-case basis." 64 Fed. Reg. at 68,780.

2. Forest Roads

The Environmental Petitioners also contend that EPA arbitrarily failed to regulate forest roads under the Rule despite clear evidence in the record documenting the need for stormwater pollution control ***861** of drainage from these roads. Petitioners again contend that this agency action is arbitrary, because EPA has offered an explanation for its decision that runs counter to the evidence before it.

Petitioners point to EPA's own conclusion that forest roads "are considered to be the major source of erosion from forested lands, contributing up to 90 percent of the total sediment production from forestry operations."[FN40] They note that both unimproved forest roads and construction sites create large expanses of non-vegetated soil subject to stormwater erosion, and argue that construction site data thus also support regulation of forest roads. Petitioners observe that EPA has cited no contrary evidence indicating that forest roads are not sources of stormwater pollutant discharges to U.S. waters, and they argue that Phase II regulation is necessary "to protect water quality," because proper planning and road design can minimize erosion and prevent stream sedimentation. Petitioners note that this court has previously held that, in the absence of such "supportable facts," EPA is not entitled to the usual assumption that it has "rationally exercised the duties delegated to it by Congress." *Natural Res. Def. Council*, 966 F.2d at 1305.

> FN40. *Guidance Specifying Management*

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Measures For Sources of Nonpoint Pollution in Coastal Waters, EPA guidance paper 840-B-93-001c (Jan. 1993), *available at* http://www.epa.gov/owow/nps/mmgi/index.html (last visited Sept. 18, 2002) ("Coastal Waters").

[19] EPA's response is that we have no jurisdiction to hear this challenge, chiefly because, it believes, the challenge is time-barred by Clean Water Act § 509(b)(1), 33 U.S.C. § 1369(b)(1) (providing that "application for review shall be made within 120 days from the date of [agency action]"). EPA promulgated silviculture regulations in 1976 that exclude from NPDES permit requirements certain silvicultural activities that EPA determined constitute non-point source activities, including "surface drainage, or road construction and maintenance from which there is natural runoff." 40 C.F.R. § 122.27(b)(1).[FN41] EPA asserts that the exclusion applies to forest roads in general, not only to "construction" and "maintenance"-an assertion disputed by Petitioners-and that any challenge to the decision not to regulate forest roads should have been brought within 120 days of the promulgation of that rule. *See*33 U.S.C. § 1369(b)(1).

FN41. The provision provides in full as follows:

Silvicultural point source means any discernible, confined and discrete conveyance related to rock crushing, gravel washing, log sorting, or log storage facilities which are operated in connection with silvicultural activities and from which pollutants are discharged into waters of the United States. The term does not include non-point source silvicultural activities such as nursery operations, site preparation, reforestation and subsequent cultural treatment, thinning, prescribed burning, pest and fire control, harvesting operations, surface drainage, or road construction and maintenance from which there is natural runoff. However, some of these activities (such as stream crossing for roads) may involve point source discharges of dredged or fill material which may require a CWA section 404 permit (See 33 CFR 209.120 and part 233).
40 C.F.R. § 122.27(b)(1).

EPA's argument might be more persuasive if Petitioners' contention could be understood essentially as a direct challenge to the 1976 silviculture regulations, but this is not the case. Even were we to assume that EPA exempted forest roads from NPDES permit requirements in 1976 under 40 C.F.R. § 122.27(b)(1), that would not resolve the question whether EPA should have addressed forest roads in its "comprehensive program ... to protect ***862** water quality" under § 402(p)(6), because § 402(p)(6) was not enacted until 1987. Petitioners challenge EPA's decision not to regulate under the new portion of the statute, not the decision not to regulate under other provisions that were in effect earlier.

EPA argues in the alternative that Petitioners should have sought judicial review when EPA considered amending § 122.27(b)(1)-to delete the language that it asserts renders forest roads non-point sources-but then determined not to make the amendment. However, we are aware of no statute or legal doctrine providing that a party's failure to challenge an agency's decision *not* to amend its rules in one proceeding deprives the party of the right to challenge, in a contemporaneous proceeding, the promulgation of an entire new rule which could have, but did not, provide the full relief the party seeks. Assuming that EPA is correct that § 122.27(b)(1) defines forest roads as non-point sources, both the Phase II Rule proceedings and the proceedings in which the proposed amendment to § 122.27(b)(1) was considered and rejected were proper proceedings in which to raise the issue whether discharges from forest roads should be regulated. Petitioners chose to raise the issue in their comments to the proposed Phase II Rule, because they believed that Clean Water Act § 402(p)(6) mandates the regulation of forest roads. They did not lose their right to challenge the final Phase II Rule's failure to regulate forest roads simply because they did not also raise a challenge to EPA's

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

failure to adopt an amendment to § 122.27(b)(1) that the agency initially proposed. (We note, incidentally, that it appears that even a successful challenge to § 122.27(b)(1) would likely not have achieved the objective the Environmental Petitioners sought: it would only have allowed case-by-case coverage for forest roads, and not for overall coverage.)

[20] Finally, EPA suggests that Petitioners' comments during the Phase II rulemaking process were too short to create jurisdiction in this court to hear this challenge. However, EPA exaggerates the slightness of those comments, which comprised two paragraphs, with footnotes, stating objections and providing support. We also agree with Petitioners that EPA was aware of the forest road sedimentation problem at the time of the rulemaking.[FN42] Indeed, EPA responded to the comments without disputing that the problem is serious. 3 EPA, *Response to Public Comments* 8 (Oct. 29, 1999). Rather, the agency relied on 40 C.F.R. § 122.27(b)(1), indicating that it was barred from acting under the Phase II Rule by § 122.27(b)(1).

> FN42. Nonpoint Source Pollution: The Nation's Largest Water Quality Problem, EPA841-F-96-004A ("Pointer # 1") ("The latest *National Water Quality Inventory* indicates that agriculture is the leading contributor to water quality impairments, degrading 60 percent of the impaired river miles and half of the impaired lake acreage surveyed by states, territories, and tribes.").

EPA does not seriously address the merits of Petitioners' objections to the Rule in its brief to this court. Instead, EPA relies almost entirely on its assertion that we lack jurisdiction to decide this question. It does, however, strongly imply that its failure to adopt its own proposed amendment in the proceeding pertaining to § 122.27(b)(1) relieves it of its obligation to consider including forest roads in the Phase II Rule proceedings. We reject any such contention. Petitioners' assertion that § 402(p)(6) requires that the Phase II Rule contain provisions regulating forest roads necessitates a response from EPA on the merits.

***863** Having concluded that the objections of the Environmental Petitioners are not time-barred, and that we have jurisdiction to hear them, but that EPA failed to consider those objections on the merits, we remand this issue to the EPA, so that it may consider in an appropriate proceeding Petitioners' contention that § 402(p)(6) requires EPA to regulate forest roads. EPA may then either accept Petitioners' arguments in whole or in part, or reject them on the basis of valid reasons that are adequately set forth to permit judicial review.

D. AF&PA's Standing

The American Forestry & Paper Association (AF&PA), a national trade association representing the forest, pulp, paperboard, and wood products industry, is one of the two Industry Petitioners asserting the remaining claims.[FN43] Before considering these challenges, however, we consider whether AF&PA has standing to raise them.

> FN43. The Municipal Petitioners join in asserting the "regulatory basis" claim at Part II(F)(1).

EPA argues that AF&PA lacks standing because it cannot show that it represents entities that suffer a cognizable injury under the Phase II Rule as promulgated. EPA argues that the interests of AF&PA entities might have supported standing had EPA decided to regulate forest roads as Phase II stormwater dischargers, but since EPA declined to do so, none of AF&PA's members are currently subject to the Rule. AF&PA contends that its members have a cognizable legal interest in the Rule because they risk becoming subject to regulation at any future time under the continuing designation authority.

[21] We agree that AF&PA lacks standing. A claimant meeting Article III standing requirements must show that "(1) it has suffered an 'injury in

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

fact' ...; (2) the injury is fairly traceable to the challenged action of the defendant; and (3) it is likely, as opposed to merely speculative, that the injury will be redressed by a favorable decision." *Friends of the Earth v. Laidlaw Envtl. Servs. (TOC),* 528 U.S. 167, 180-81, 120 S.Ct. 693, 145 L.Ed.2d 610 (2000). Standing requires an injury that is "actual or imminent, not 'conjectural or hypothetical.' " *Lujan v. Defenders of Wildlife,* 504 U.S. 555, 560, 112 S.Ct. 2130, 119 L.Ed.2d 351 (1992). AF&PA's interest in avoiding future regulation of forest roads is not actually or imminently threatened by any potential result in this case. No ripe claim about misuse of the residual authority to regulate forest road discharge, or any other kind of discharge, is before the court. Should members of AF&PA become subject to Phase II regulation through subsequent administrative action, it will have standing to challenge those actions at that time. In the meanwhile, we proceed to the merits of the remaining claims on behalf of AF&PA's co-petitioner, the National Association of Home Builders, which has established its standing to raise them.

E. Consultation with State and Local Officials

The Industry Petitioners contend that EPA failed to consult with the States on the Phase II Rule as required by § 402(p)(5), which instructs EPA to conduct studies "in consultation with the States," and § 402(p)(6), which instructs the Administrator to issue regulations based on these studies "in consultation with State and local officials." 33 U.S.C. §§ 1342(p)(5)-(6). We conclude that EPA satisfied its statutory duty of consultation. *See Marsh,* 490 U.S. at 378, 109 S.Ct. 1851.

***864** Petitioners concede several instances in which EPA circulated drafts of the Phase II Rule to state and local authorities, but argue that these consultations were meaningless because (1) the reports were circulated too far in advance of the actual rulemaking, (2) the rulemaking wrongfully proceeded based on other sources of input, (3) standard APA notice and comment procedures could not suffice because Congress must have intended something more when it added the consultation requirements to the language of § 402, and (4) consultation at the final stage of rulemaking was inadequate because comment was sought on the final report only after it had been submitted to Congress and the Phase II Rule had been promulgated. Petitioners provide examples of state feedback that allegedly went unheeded by EPA in its promulgation of the final Rule.

EPA maintains that it consulted extensively with States and localities in developing the Phase II Rule, discharging its obligations under §§ 402(p)(5) & (6). EPA contends that the comments Petitioners cite as unheeded by EPA demonstrate that EPA *did* consult with States concerning the Rule, even if some States did not concur in EPA's ultimate conclusion, and that the final rule adopted a good measure of the flexibility sought by state representatives. EPA argues that Industry Petitioners cannot complain that consultation was inadequate simply because it did not result in the adoption of Petitioners' preferred views.

EPA also disputes Petitioners' allegation that while EPA did comply with the terms of the 1999 Appropriations Act (requiring EPA to defend the proposed Phase II Rule before Congress and then publish the final report for public comment), it demonstrated its failure to adequately consult by publishing the report for public comment *after* the Phase II Rule had been formally promulgated, rendering any subsequent public comment meaningless. EPA counters that these actions do not indicate that it failed to satisfy Congress's directive that it consult with state and local officials, because EPA had engaged in extensive consultation before Congress requested the Appropriations Act report, and Congress did not require further consultation when it conditioned promulgation of the Rule only on the submission of this final report. EPA claims that while Congress required it to publish the report after its submission, public comment on the report was not required before promulgation, and that the

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

statutory deadline structure rendered any other interpretation impossible.

[22] We conclude that the overall record indicates EPA met its statutory duty of consultation. A draft of the first report was circulated to States, EPA regional offices, the Association of State and Interstate Water Pollution Control Administrators ("ASIWPCA"), and other stakeholders in November, 1993, and was revised based on comments received. EPA established the Urban Wet Weather Flows Federal Advisory Committee ("FACA Committee"), balancing membership between EPA's various outside stakeholder interests, including representatives from States, municipalities, Tribes, commercial and industrial sectors, agriculture, and environmental and public interest groups. 64 Fed. Reg. 68,724. The 32 members of the Phase II FACA Subcommittee, reflecting the same balance of interests, met fourteen times over three years and state and municipal representatives provided substantial input regarding the draft reports, the ultimate Phase II Rule, and the supporting data.[FN44] *Id.* EPA ***865** instituted the Phase II Subcommittee meetings in addition to the standard APA notice and comment procedures, which EPA also followed.

> FN44. NRDC argues that this claim is not only meritless for the reasons stated by EPA, but also frivolous, since industry petitioner National Association of Home Builders, as a member of the FACA Phase II Subcommittee, participated in and affirmed that such consultation took place.

The fact that the Rule did not conform to Petitioners' hopes and expectations does not bear on whether EPA adequately consulted state and local officials. Although required to consult with States and localities, EPA was free to chart the substantive course it saw fit. EPA was not required to consult with States on the Appropriations Act report. Even if EPA should have sought further comment at that late stage, failure to do so does not outweigh the evidence demonstrating extensive consultation and cooperation with local authorities on development of the Rule.

F. Designation of Certain Small MS4s and Construction Sites

The Industry Petitioners contend that, in designating certain small MS4s and construction sites for regulation under the Phase II Rule, EPA failed to adhere to the statutorily required regulatory basis and misinterpreted record evidence. We disagree.

1. Regulatory Basis

The Industry Petitioners and the Municipal Petitioners contend that EPA violated the statutory command to base the Phase II regulations on § 402(p)(5) studies. We review EPA's interpretation of its statutory authority under the *Chevron* standard, 467 U.S. at 842-44, 104 S.Ct. 2778, and affirm.

Petitioners argue that the studies mandated by § 402(p)(5) were intended to provide the sole substantive basis for the "comprehensive program" envisioned in § 402(p)(6), but that EPA also (and thus improperly) based its designation of small MS4s and construction sites on (1) public comment received in the aftermath of judicial invalidation of the scope of construction sites regulated by the Phase I Rule,[FN45] and (2) additional research discussed in the Preamble to the Phase II Rule.[FN46]

> FN45. *See Natural Res. Def. Council,* 966 F.2d at 1306 (remanding EPA's decision to regulate only construction sites disturbing more than five acres, after EPA had initially proposed to regulate all sites disturbing more than one acre).
>
> FN46. The Industry Petitioners contend that EPA lacked authority to issue the Phase II regulation of construction sites based on a process EPA itself characterized as "separate and distinct" from the development of the Report to Congress. 64

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> Fed. Reg. at 68,732. They add that the Phase II Rule was not "based on" the 1999 Report ultimately requested by Congress in the Appropriations Act, since EPA's report in response was released on the very day that the final Phase II Rule was published.

EPA contends that the statute did not require it to base its designations exclusively on the § 402(p)(5) studies, and that it was in fact required to take account of information from other sources in promulgating the regulations. It argues that it based the Phase II Rule on conclusions reported in the § 402(p)(5) studies, but then appropriately supported these results with data described in the additional study requested by Congress in the Appropriations Act, comments submitted during the statutorily required notice-and-comment process, and other available information. To read the authorizing statute as limiting reliance to the § 402(p)(5) studies, EPA claims, would preclude it from relying on recommendations received through the separate, post-study requirement to "consult with State and local officials" under ***866** § 402(p)(6), and through the notice and comment process mandated by the APA, 5 U.S.C. § 553(b).

Respondent-intervenor NRDC adds that the Phase II Rule is consistent with the § 402(p)(5) studies reported in 1995, and moreover, that the Industry Petitioners lack standing to raise the "regulatory basis" claim because they cannot show the requisite injury. *See Friends of the Earth,* 528 U.S. at 180-81, 120 S.Ct. 693.

a. Standing. Industry Petitioners[FN47] contend that they have suffered injury in fact, because their members are now either automatically regulated by the permitting requirements or subject to future regulation (under the residual authority, discussed below) that otherwise would not have been authorized, and that this is a direct result of EPA's failure to adhere to the framework of the 1995 Report, which allegedly would have precluded these aspects of the Rule. NRDC contends that the Industry Petitioners lack standing because they cannot show that being subject to NPDES permitting is the causal result of the procedural injury they urge, and because they cannot base standing on hypothetical injury that may arise in the future.

> FN47. Since we have already determined that AF & PA lacks standing to raise any of its claims, *see* Section D above, this discussion pertains to the remaining Industry Petitioner, National Association of Home Builders.

NRDC argues that the injuries Petitioners allege are not consistent with the guidelines laid out in *Friends of the Earth,* 528 U.S. at 180-81, 120 S.Ct. 693. It insists that Petitioners' only possible claims of injury from the alleged "regulatory basis" violation are purported harm to members caused by the final Phase II Rule itself or harm to members caused by EPA's alleged failure to provide adequate notice of future regulatory requirements in the 1995 Report. However, NRDC contends that Petitioners have not suffered the requisite injury, because they had actual notice that EPA might regulate small construction sites, 63 Fed. Reg. at 1583, and they can show no chain of causation linking their alleged injury from the Rule itself to the actions challenged here.

NRDC's causation argument is complex. Although the Petitioners purport to challenge EPA's failure to follow all of the 1995 Report's recommendations in the final Phase II Rule, NRDC contends, they are really challenging the subsequent proceedings through which EPA developed the final Rule. Even if there were some unlawful variance between the 1995 report and final rule, NRDC continues, the cause of that variance would have been some failure to abide by rulemaking standards during administrative proceedings that produced the text of the final Rule-not EPA's attention to sources of input other than the 1995 Report. NRDC maintains that these intervening acts of rulemaking (e.g., Phase II Subcommittee activities and the notice-and-comment process) break the requisite chain of causation between EPA's alleged failure to adhere

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

to recommendations in the 1995 report and the flaws Petitioners allege in the Phase II Rule, which NRDC claims would have been due to "purportedly unlawful EPA decisions on the merits during the subsequent administrative proceedings." *See Northside Sanitary Landfill v. Thomas,* 804 F.2d 371, 381-84 (7th Cir.1986) (finding no standing to challenge EPA statements concerning the fate of a hazardous waste facility when subsequent state administrative acts, not EPA comments, would determine the facility's actual fate).

[23] We note that NRDC's standing arguments apply equally to the Municipal Petitioners, who can also assert only the ***867** harms resulting to members from the Rule itself or from a lack of notice, and that we are thus not only considering the standing of the Industry Petitioners but also that of the Municipal Petitioners to raise the "regulatory basis" claim.[FN48] That established, we find standing for both.

> FN48. Although the issue of Municipal Petitioners' standing has not been raised by the parties, we are obliged to consider it to determine whether the case-or-controversy requirement of Article III is satisfied. *See, e.g., Boeing Co. v. Van Gemert,* 444 U.S. 472, 488 n. 4, 100 S.Ct. 745, 62 L.Ed.2d 676 (1980); *Juidice v. Vail,* 430 U.S. 327, 331, 97 S.Ct. 1211, 51 L.Ed.2d 376 (1977).

NRDC essentially argues that petitioners lack standing because (1) they cannot show that being subject to NPDES permitting is the causal result of the procedural injury they urge, (2) they cannot claim any actual notice injury from the alleged procedural wrong because notice was actually given, and (3) they cannot claim standing based on hypothetical injury that may (or may not) arise from future regulation under the residual authority. We can readily agree with the latter two contentions. As discussed above, the "actual injury" requirement of Article III standing precludes judicial consideration of exactly the kind of hypothetical harm the Industry Petitioners allege may follow from use of Phase II authority for future designations of regional sources. *Friends of the Earth,* 528 U.S. at 180-81, 120 S.Ct. 693. If future Phase II designations cause identifiable injury to Petitioners, they will then be free to pursue that ripe claim. And because EPA clearly issued notice to all regulated parties that they may be subject to regulation under the proposed rule, 63 Fed. Reg. at 1568 (MS4s) and 1582 (construction), petitioners cannot show injury from lack of actual notice.

However, NRDC's causation argument is less persuasive. NRDC correctly argues that the petitioners cannot establish a definite chain of causation between the EPA's alleged failure to limit their regulatory basis to the § 402(p)(5) studies and the fact that they now must obtain permits. But this will almost always be true of petitions challenging an agency's failure to abide by statutory procedural requirements. Because all administrative decisionmaking following an alleged procedural irregularity could always be considered an intervening factor breaking the chain of causation, NRDC's interpretation of the requisite chain of causation would dubiously shield administrative decisions from procedural review.

For this reason, we have held that the failure of an administrative agency to comply with procedural requirements in itself establishes sufficient injury to confer standing, even though the administrative result might have been the same had proper procedure been followed. *City of Davis v. Coleman,* 521 F.2d 661, 671 (9th Cir.1975) (agency's failure to comply with National Environmental Policy Act's procedural requirements constituted injury sufficient to support standing of a geographically related plaintiff regardless of potentially similar regulatory outcome). In *City of Davis,* we noted that the standing inquiry represents "a broad test, but because the nature and scope of environmental consequences are often highly uncertain before study we think it an appropriate test." *Id.* A plaintiff who shows that a causal relation is "probable" has standing, even if the chain cannot be definitively established. *John-*

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

son v. Stuart, 702 F.2d 193, 195-96 (9th Cir.1983) (school students and their parents had standing to challenge a statute that limited the texts that might be selected for teaching, even ***868** though it could not be shown whether any specific book had been rejected under this statute or for other reasons).

The Supreme Court has also acknowledged that standing may be established by harm resulting indirectly from the challenged acts, *Warth v. Seldin,* 422 U.S. 490, 504-05, 95 S.Ct. 2197, 45 L.Ed.2d 343 (1975), and that causation may be established if the plaintiff shows a good probability that, absent the challenged action, the alleged harm would not have occurred, *Arlington Heights v. Metro. Hous. Dev. Corp.,* 429 U.S. 252, 262-64, 97 S.Ct. 555, 50 L.Ed.2d 450 (1977).

Thus, although the petitioners cannot show with certainty that the alleged "regulatory basis" violation caused them to be wrongfully subjected to Phase II permitting requirements, we hold that they have alleged a procedural injury sufficient to support their standing to bring the claim.

b. Merits. Although we resolve the standing issue in favor of the petitioners, we nevertheless affirm the Rule against their claim that EPA violated procedural constraints implied by the authorizing statute, § 402(p)(6).

Congress intended EPA to use all sources of information in developing a comprehensive program to protect water quality to the maximum extent practicable. The statute unambiguously required EPA to base its regulations both on the § 402(p)(5) studies and on consultation with state and local officials. Congress enacted § 402 with full knowledge that EPA would also be required to take account of public comments during the notice and comment phase of administrative rulemaking prescribed by the APA.[FN49]

FN49. Even if the statute *were* ambiguous, we would defer to EPA's reasonable interpretation. *Chevron,* 467 U.S. at 843-44, 104 S.Ct. 2778.

2. MS4s in Urbanized Areas

The Municipal Petitioners contend that the designation of small MS4s for Phase II regulation according to Census Bureau defined areas of population density ("urbanized areas") is arbitrary and capricious. They argue that EPA has not established that the Census Bureau's designation of urbanized areas is correlated with actual levels of pollution runoff in stormwater, and that EPA adopted the designations simply for administrative convenience. We affirm, because the record reflects a reasoned basis for EPA's decision. *See Marsh,* 490 U.S. at 378, 109 S.Ct. 1851.

Conceding that the Preamble cites studies purporting to establish "a high correlation between the degree of development/urbanization and adverse impacts on receiving waters due to stormwater,"64 Fed. Reg. at 68,751, the Municipal Petitioners nevertheless contend that the record contains no "demonstrably correlated, *quantified* basis on which EPA may reasonably have concluded that any particular population, or any population density, *per se* establishes that all urban areas having that same characteristic in gross are necessarily appropriate for inclusion as Phase II sources." Pointing to *Leather Industries of America v. EPA,* 40 F.3d 392, 401 (D.C.Cir.1994) (rejecting as arbitrary EPA's regulation of pollutant levels in the absence of data supporting a relationship between the caps and level of risk), Petitioners argue that EPA simply assumed the relationship Congress contemplated it would establish by the § 402(p)(5) studies.

EPA responds that it extensively documented the relationship between urbanization and harmful water quality impacts from stormwater runoff, pointing to its findings that the degree of surface imperviousness in an area directly corresponds ***869** to the degree of harmful downstream pollution from stormwater runoff, 64 Fed. Reg. at 68,724-27, and that it articulated a rational connection between these record facts and its decision to designate

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

small MS4s serving areas of high population density ("urbanized areas") to protect water quality.

[24] We treat EPA's decision with great deference because we are reviewing the agency's technical analysis and judgments, based on an evaluation of complex scientific data within the agency's technical expertise. *See Baltimore Gas & Elec. Co. v. NRDC,* 462 U.S. 87, 103, 103 S.Ct. 2246, 76 L.Ed.2d 437 (1983); *see also Chem. Mfrs. Ass'n v. EPA,* 919 F.2d 158, 167 (D.C.Cir.1990) ("It is not the role of courts to 'second-guess the scientific judgments of the EPA....' "). We conclude that the record supports EPA's choice.

The statute simply called upon EPA to "designate stormwater discharges," other than those designated in Phase I, "to be regulated to protect water quality." 33 U.S.C. § 1342(p)(6). EPA did so, based on record evidence showing a compelling and widespread correlation between urban stormwater runoff and deleterious impacts on water quality. Petitioners' assertion that EPA failed to establish a "quantified" basis for its designation is inapposite. The statute did not require EPA to establish with pinpoint precision a numeric population threshold within urbanized areas that would justify regulation under Phase II. In areas implicating technical expertise and judgment, courts do not require "perfect stud[ies]" or data. *Sierra Club,* 167 F.3d at 662. EPA satisfied the *Leather Industries* standard by adopting a threshold consistent with the criterion of "protecting water quality," and did not assume, but instead sufficiently documented, the relationship between urbanization and harmful stormwater discharge.

3. Small Construction Sites

Industry and Municipal Petitioners also argue that EPA's decision to regulate under Phase II all construction sites disturbing between one and five acres of land ("small construction sites") is arbitrary and unsupported by the record. We do not agree. *See Marsh,* 490 U.S. at 378, 109 S.Ct. 1851.

a. Record Evidence. Municipal Petitioners claim that EPA arrived at the one-acre standard based not on factual findings in the record but instead as a reaction to the earlier Ninth Circuit remand of the Phase I five-acre designation. They allege that the one-acre standard is no more based on supporting data than the rejected five-acre standard, and is thus quantitatively arbitrary.

Industry Petitioners argue that EPA's findings do not support regulation of *all* small construction sites, but indicate only that small construction sites, taken cumulatively, may cause effects similar to large sites in a given area. They contend that EPA's conclusion that adverse effects are possible under certain circumstances cannot support categorical designation of all small construction sites nationwide, and that the Rule is arbitrary because (1) it is based on an analysis that fails to take account of the frequency of negative impacts, (2) it fails to take account of acknowledged factors that determine whether small construction activities cumulatively cause harm (such as the degree of development in a watershed at any given time), and (3) EPA has acknowledged that the actual water quality impact of construction sites of all sizes varies widely from area to area depending on climatological, geological, geographical,***870** and hydrological influences.FN50

> FN50. The Industrial Petitioners argue that although the Phase I authorizing statute required EPA to regulate all sources associated with "industrial activity," Congress expressly directed that the Phase II regulatory program be focused on sources that require regulation "to protect water quality." They assert that because EPA's rule ignores the variability of water quality impacts nationwide, the Rule is not appropriately targeted on the protection of water quality.

Industry Petitioners further contend that the record does not support the designation of small sites, because almost all of the technical papers EPA relied

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

on focused on larger sites or failed to take account of size,[FN51] and because the lack of an adequate factual basis for nationwide regulation of small sites makes the Phase II Rule arbitrary and capricious. *Am. Petroleum Inst. v. EPA,* 216 F.3d 50, 58 (D.C.Cir.2000) (invalidating a solid waste rule because EPA "failed to provide a rational explanation for its decision" declining to exclude oilbearing waste waters from the statutory definition of solid waste).

> FN51. Petitioners heavily critique two studies relied on by EPA that dealt specifically with the water quality impacts of small construction sites, noting that one concludes it is impossible to generalize about the impacts of small sites, Lee H. MacDonald, *Technical Justification for Regulating Construction Sites 1-5 Acres in Size,* July 22, 1997, and that the other merely concludes that small sites "can have" significant effects if erosion controls are not implemented, David W. Owens, et al., *Soil Erosion from Small Construction Sites.* Petitioners contend that the latter study was managed with no erosion controls, intentionally producing worst-case sediment runoff and unreasonable estimates of actual sediment yields for small sites nationwide. EPA vigorously defends the studies.

EPA maintains that construction sites regulated under the Phase II Rule degrade water quality across the United States and that the administrative record unambiguously documents that harm. EPA disputes Petitioners' assertion that it failed to establish the need to regulate small sites nationwide, but also contends that it is not required to base every administrative decision on a precise quantitative analysis. *See Sierra Club,* 167 F.3d at 662 ("EPA typically has wide latitude in determining the extent of data-gathering necessary to solve a problem.").

EPA also disputes petitioners' assertions that data from studies involving larger construction sites are irrelevant to the Phase II Rule. EPA explains that discharges of sediment due to erosion are the result of the interaction of several factors including soils, slope, precipitation, and vegetation:

For construction sites that are one acre or more, none of the environmental factors contributing to sediment discharges is dependent on the size of the site disturbed. A one-acre site can have the same combination of soils, slope, degree of disturbance and precipitation as a 100-acre site, and consequently can lose soil at the same rate ... and discharge sediments in the same concentrations ... as a 100-acre site.

EPA contends that it is thus reasonable to extrapolate data about small sites from studies of larger ones-and that such an extrapolation may even be forgiving, since small sites are currently less likely to have effective erosion and sedimentation control plans.[FN52]

> FN52. NRDC adds that notwithstanding the clear interest of the National Association of Home Builders ("NAHB," one of the Industry Petitioners), NAHB's multi-year participation in the FACA Phase II Subcommittee Small Construction and No-Exposure Sites Work Group, and NAHB's own submission of detailed comments on the proposed Rule, NAHB failed to enter into the administrative record any study contradicting the proposition that small construction sites cause water quality problems. NRDC points to the record's showing that NAHB had itself proposed that regulation of construction sites of two acres or greater was appropriate, and contends that this is thus not a dispute over whether small construction sites should be regulated on a nationwide basis, but instead a technical disagreement over whether EPA should establish a one-acre threshold or a different threshold on a similar small scale.

*871 Indeed, EPA argues that although adverse water quality impacts of small construction sites have

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

been widely recognized, effective local erosion and sedimentation control programs have not been adopted in many areas.[FN53] Though not all watersheds are currently adversely effected by small construction sites,[FN54] EPA notes that the Phase II Rule acts "to protect water quality" both remedially and preventively, and argues that it need not quantify the cumulative effects of discharges from these sites or identify all watersheds that are currently harmed before acting to limit pollution from small sites.[FN55]

FN53. Whitney Brown and Deborah Caraco, *Controlling Stormwater Runoff Discharges from Small Construction Sites: A National Review,* Task 5 Final Report submitted by the Center for Watershed Protection to the EPA Office of Wastewater Management, March 1997, IP E.R. 633, 643.

FN54. EPA adds that operators of small sites in areas unlikely to suffer adverse impacts may apply for a permit waiver if little or no rainfall is expected during the period of construction (the "rainfall erosivity waiver") or if regulation is unnecessary based on a location-specific evaluation of water quality (the "water quality waiver"). 64 Fed. Reg. at 68,776.

FN55. EPA also implies permission to regulate for potential cumulative impacts of small sites from the past directive of this court. When the Phase I industrial discharge regulations were challenged, we found no record data to support that rule's exemption of construction activities on less than five acres and held that small sites did not categorically qualify for a *de minimis* exemption because "even small construction sites can have a significant impact on local water quality." *Natural Res. Def. Council,* 966 F.2d at 1306.

[25] We reverse under the arbitrary and capricious standard only if the agency has relied on factors Congress did not intend it to consider, entirely failed to consider an important aspect of the problem, offered an explanation for its decision contrary to the evidence before the agency, or is so implausible that it could not be ascribed to a difference in view or the product of agency expertise. *Motor Vehicle Mfrs. Ass'n,* 463 U.S. at 43, 103 S.Ct. 2856. Petitioners' contention that EPA relied on factors Congress did not intend it to consider was rejected in our earlier discussion of the regulatory basis challenge. They submit no evidence that EPA failed to consider an important aspect of the problem. We cannot say that EPA's designation of small construction sites is implausible (especially given the support of twenty-some-odd studies of sedimentation from construction sites that EPA reviewed in promulgating the challenged regulations, 64 Fed. Reg. 68,728-31). We could remand this aspect of the Rule only if, as the petitioners urge, EPA's explanation for its decision to regulate small construction sites were contrary to the record evidence, and it is not.

Petitioners' primary contention is that evidence in the record suggests it is not possible to provide an explicit, quantitative link between small construction sites and an adverse effect on water quality. But even if this were so, EPA's decision to regulate preventively small construction sites "to protect water quality" is not inconsistent with the record. Petitioners contend that EPA's reliance on data from studies of large construction sites is insufficient to support EPA's designation of small sites, but EPA has adequately supported its contention that experts can reasonably ***872** extrapolate projected water quality impacts from large to small sites. We apply the substantial evidence standard when reviewing the factual findings of an agency, *Dickinson v. Zurko,* 527 U.S. 150, 156-58, 119 S.Ct. 1816, 144 L.Ed.2d 143 (1999),[FN56] and find it satisfied here.

FN56. The "substantial evidence" standard requires a showing of such relevant evid-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> ence as a reasonable mind might accept as adequate to support a conclusion. *Edlund v. Massanari,* 253 F.3d 1152, 1156 (9th Cir.2001).

Moreover, EPA is not required to conduct the "perfect study." *Sierra Club,* 167 F.3d at 662. We defer to an agency decision not to invest the resources necessary to conduct the perfect study, and we defer to a decision to use available data unless there is no rational relationship between the means EPA uses to account for any imperfections in its data and the situation to which those means are applied. *Id.; Am. Iron & Steel Inst. v. EPA,* 115 F.3d 979, 1004 (D.C.Cir.1997). The record indicates a reasoned basis for EPA's decision that regulating small construction sites was necessary "to protect water quality" as required by § 402(p)(6).

[26] ***b. Waivers.*** Industry Petitioners further contend that EPA's allowance of regulatory waivers for small construction sites not likely to cause adverse water quality impacts inappropriately supplements the permitting regulations.

Petitioners argue that EPA has the burden of establishing a comprehensive program to control sources as necessary to protect water quality, and that shifting the burden to individual contractors, businesses, and homeowners to prove they do not harm water quality falls short of meeting this statutory obligation. Citing *National Mining Association v. Babbitt,* 172 F.3d 906, 910 (D.C.Cir.1999), they argue that EPA's rebuttable regulatory presumption of water quality impact from small construction activity is unreasonable because the agency has established no scientific likelihood that any given small site will affect water quality. EPA defends the waiver approach as fair and efficient, and argues that the Industrial Petitioners are confusing arguments about the limits of presumptions in evidentiary hearings conducted under the APA.[FN57]

> FN57. EPA further argues that even if the waiver provision were properly characterized as an evidentiary presumption, it should be sustained because the record demonstrates that the presumed fact of the water quality impact of small sites is more likely true than not.

EPA is correct; the Phase II Rule creates no presumption applicable to an evidentiary hearing, and a regulation creating exemptions by waiver is reviewed under the familiar arbitrary and capricious standard. The use of waivers to allow permit exemptions for small sites unlikely to cause adverse impacts is reasonable under that standard.

[27] ***c. Consistency.*** Industry Petitioners also argue that EPA's decision to regulate all small construction sites under the Phase II Rule is arbitrary and capricious because EPA applied a different standard in regulating small construction projects than it applied to other potential sources of stormwater runoff subject to Phase II regulation.

Petitioners contend that EPA decided not to designate other potential sources identified in the § 402(p)(5) studies because it determined that there are not "sufficient data ... available at this time on which to make a determination of potential adverse water quality impacts for the category of sources." 64 Fed. Reg. at 68,780. Petitioners contend this standard should have been applied to small construction sites as well, but EPA opted to ***873** regulate these sources despite an alleged lack of coherent data on small site impacts as a general category.

EPA counters, once again, that it did have adequate data to regulate small construction sites. It contends that construction sites of all sizes have greater erosion rates than almost any other land use, and thus are not similarly situated to the potential polluters that EPA chose not to regulate at this time.FN58 These sources include secondary industrial activities (for example, maintenance of construction equipment or local trucking for an unregulated facility such as a grocery store) and other unregulated commercial activities (for example, car and truck rental facilities).64 Fed. Reg. at 68,779. EPA reports that it decided not to categorically reg-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ulate these potential sources based both on available data about water quality impacts and on the extent to which potentially adverse water quality impacts are mitigated by existing regulations to which these sources are already subject. *Id.* at 68,780.

> FN58. EPA notes that the Phase II Rule empowers regional permitting authorities to regulate local sources of these types known to be responsible for harmful water quality impacts via the continuing "residual designation" authority (an aspect of the Rule that Petitioners also challenge).

We find no error. *See Marsh,* 490 U.S. at 378, 109 S.Ct. 1851. EPA acted reasonably in designating all small construction sites for Phase II regulation, and Industry Petitioners point to no record evidence that the nature of pollutant contributions from small construction site discharge is sufficiently similar to pollutants from the non-regulated sources to support the analogy they seek to draw. *New Orleans Channel 20 v. FCC,* 830 F.2d 361, 366 (D.C.Cir.1987) (an agency does not act irrationally when it treats parties differently, unless the parties are similarly situated). Sufficient evidence supports EPA's conclusion that small construction sites are not similar enough to these "other sources" to support petitioner's challenge.

G. Continuing ("Residual") Designation Authority

The Industry Petitioners argue that EPA acted improperly in retaining authority to designate future sources of stormwater pollution for Phase II regulation as needed to protect federal waters. We disagree.

The Phase II Rule preserves authority for EPA and authorized States to designate currently unregulated stormwater dischargers as requiring permits under the Rule if future circumstances indicate that they warrant regulation "to protect water quality" under the terms of § 402(p)(6). 40 C.F.R. § 122.26(a)(9). In the Phase II Preamble, EPA explains this aspect of the Rule:

Under today's rule, EPA and authorized States continue to exercise the authority to designate remaining unregulated discharges composed entirely of stormwater for regulation on a case-by-case basis.... Individual sources are subject to regulation if EPA or the State, as the case may be, determines that the stormwater discharge from the source contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States. This standard is based on the text of section CWA 402(p). In today's rule, EPA believes, as Congress did in drafting section CWA 402(p)(2)(E), that individual instances of stormwater discharge might warrant special regulatory attention, but do not fall neatly into a discrete, predetermined category. Today's rule preserves the regulatory authority***874** to subsequently address a source (or category of sources) of stormwater discharges of concern on a localized or regional basis.

64 Fed. Reg. 68,781. The text of the Rule requires a discharger to obtain a permit if the NPDES permit authority determines that "stormwater controls are needed for the discharge based on wasteload allocations that are part of 'total maximum daily loads' (TMDLs[FN59]) that address the pollutant(s) of concern" or that "the discharge, or category of discharges within a geographic area, contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States."40 C.F.R. §§ 122.26(a)(9)(i)(C)-(D).

> FN59. TMDLs are pollutant loading limits established by NPDES permitting authorities under the Clean Water Act for waters that do not meet a water quality standard due to the presence of a pollutant. *See*33 U.S.C. § 1313(d).

1. Statutory Authority

The Industry Petitioners contend that this "residual" designation authority, which would allow a NPDES permitting authority to require at any future time a

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

permit from any stormwater discharge not already regulated, is *ultra vires*. Although they concede that Congress authorized case-by-case designation in § 402(p)(2)(E),[FN60] they argue that this authority attached only during the permitting moratorium that ended in 1994, prior to the Phase II rulemaking. They object that EPA has impermissibly designated a category of "not yet identified" sources and preserved authority to regulate them on a case-by-case basis indefinitely into the future.[FN61]

FN60. This section enables a NPDES permitting authority to designate for regulation: "[a] discharge for which the Administrator or the State, as the case may be, determines that the stormwater discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States." 33 U.S.C. § 1342(p)(2)(E).

FN61. Notably, Industry Petitioner NAHB itself took the position during Phase II Subcommittee proceedings that the power to designate additional sources survived the promulgation of the Phase II Rule. In a 1996 comment letter to EPA, NAHB asserted its understanding that "[t]he permitting authority still reserves the right to designate additional sources if they are shown to be a contributor of water quality impairment." NRDC Supplemental Excerpts of Record at 58.

[28] Petitioners contend that § 402(p)(6)[FN62] cannot rescue the residual authority because it does not authorize case-by-case identification of discharges to be regulated, and that Congress, had it intended otherwise, would have included language in § 402(p)(6) similar to the case-by-case authority explicitly granted in § 402(p)(2)(E).[FN63] They also contend that ***875** continuing authority to designate sources based on waste load allocations that are part of TMDLs exceeds the scope of authority in § 402(p)(2), which nowhere mentions TMDLs. Finally, they argue that the categorical designation authorized by § 402(p)(6) is only permissible when based on the § 402(p)(5) studies and carried out in consultation with state and local authorities, but that the Rule allows future designations based on agency discretion unaccompanied by adequate demonstration that the source itself is a significant threat to water quality.

FN62. The full text of § 402(p)(6), which specifically authorizes the Phase II program, reads: "Not later than October 1, 1993, the Administrator, in consultation with State and local officials, shall issue regulations (based on the results of the studies conducted under paragraph (5)) which designate stormwater discharges, other than those discharges described in paragraph (2), to be regulated to protect water quality and shall establish a comprehensive program to regulate such designated sources. The program shall, at a minimum, (A) establish priorities, (B) establish requirements for State stormwater management programs, and (C) establish expeditious deadlines. The program may include performance standards, guidelines, guidance, and management practices and treatment requirements, as appropriate." 33 U.S.C. § 1342(p)(6).

FN63. Petitioners further argue that even if EPA could preserve the case-by-case authority conferred in § 402(p)(2)(E), that section confers authority only to regulate "a discharge" determined to threaten water quality, not a category of discharges. However, we agree with respondent-intervenor NRDC's argument that § 402(p)(2)(E) does not preclude EPA from designating entire categories of sources. Petitioners' argument follows from its reliance on the fact that § 402(p)(2)(E) refers to "discharge" in the singular rather than the plural to conclude that EPA may only designate sources meeting the §

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> 402(p)(2)(E) description on a case-by-case basis. But all five of the § 402(p)(2)(5) categories refer to "discharge" in the singular, even in reference to discharges clearly intended for categorical regulation, like "a discharge from a municipal separate storm sewer system serving a population of 250,000 or more." 33 U.S.C. § 1342(p)(2)(C). The error in petitioners' interpretation is exposed by 1 U.S.C. § 1, which provides that "[i]n determining the meaning of any Act of Congress, unless the context indicates otherwise-words importing the singular include and apply to several persons, parties, or things."

EPA counters that § 402(p)(6) authorized the designation, made on the basis of statutorily required sources of input and in consultation with the States, of a third class of discharges to be identified on location-specific bases by the NPDES permitting authority. EPA contends that Petitioners mistake the source of its authority for continuing designations as arising only from § 402(p)(2), discounting the full scope of its authority under § 402(p)(6). EPA argues that it permissibly interpreted § 402(p)(6) as allowing the residual designation authority because its language does not expressly preclude it, and because such authority is consistent with (and arguably required by) that section's mandate to establish a "comprehensive program" to protect water quality from adverse stormwater discharges. EPA maintains that the structure of § 402(p) reflects "Congress' intent to assure regulation of all problematic stormwater discharges as expeditiously as reasonably possible-not to limit EPA to a one-time-only opportunity to designate discharges for regulation."

[29] We review EPA's interpretation of the statute it administers with deference, *Royal Foods Co.*, 252 F.3d at 1106, and affirm this aspect of the Phase II Rule as a legitimate exercise of regulatory authority conferred by § 402(p). The residual designation authority is grounded both on § 402(p)(6), which broadly authorizes a comprehensive program to protect water quality, and on § 402(p)(2)(5), which authorizes case-by-case designation of certain polluters and categories of polluters.

While not a blank check, § 402(p)(6) authorizes a comprehensive program that allows regional designation of polluting discharges that compromise water quality locally, even if they have not been established as compromising water quality nationally at the time Phase II was promulgated. In allowing continuing designation authority, EPA permissibly designated a third category of dischargers subject to Phase II regulation-those established locally as polluting U.S. waters-following all required studies and consultation with state and local officials. EPA reasonably determined that discharges other than those from small MS4s and construction sites were likely to require regulation "to protect water quality" in satisfaction of the § 402(p)(6) mandate. EPA reasonably determined that, although it lacked sufficient data to support nationwide, categorical***876** designation of these sources, particularized data might support their designations on a more localized basis. EPA reasonably interpreted § 402(p)(6) as authorizing regional designation of sources and regional source categories, based on water quality standards including TMDLs.

Petitioners' § 402(p)(2)(5) argument (that EPA could not draw support for the residual designation authority from § 402(p)(2)(5) because such authority expired in 1994) is contradicted by the plain language of the statute. Respondent-intervenor NRDC correctly notes that § 402(p)(1) sets forth a permitting moratorium for stormwater discharges prior to 1994, and that § 402(p)(2) exempts certain categories of sources from that permitting moratorium, including those to be regulated on a case-by-case basis under § 402(p)(2)(5). Specifically, the statute provides that the 1994 date "shall not apply" to the five categories of discharges listed in § 402(p)(2). The termination of a moratorium that "shall not apply" to the continuing designation authority under § 402(p)(2)(5) cannot rescind EPA's authority to reg-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ulate sources in that category. Nothing in § 402(p) suggests that authority to designate these sources ends at any time, and EPA remains free to designate § 402(p)(2)(E) dischargers.

Finally, although Petitioners may be legitimately concerned that a permitting authority may designate a source without adequately establishing its eligibility, this issue must be addressed in the context of an actual case or controversy. Whether a NPDES authority may impose permitting requirements on a discharger without an adequate finding of polluting activity is not yet ripe for judicial review. *Thomas v. Anchorage Equal Rights Comm'n,* 220 F.3d 1134, 1141 (9th Cir.2000) ("A concrete factual situation is necessary to delineate the boundaries of what conduct the government may or may not regulate.").

2. Nondelegation Doctrine

[30] Industry Petitioners contend that EPA's interpretation of § 402(p) to allow the residual designation authority must be rejected because it would render the statute unconstitutional under the nondelegation doctrine. We deny petitioners' claim, both because it is not properly raised and because it rests on an interpretation explicitly overturned by the United States Supreme Court.

Petitioners base their contention on *American Trucking Ass'ns, v. EPA,* 175 F.3d 1027, 1034 (D.C.Cir.1999),[FN64] in which the D.C. Circuit remanded a regulation under the nondelegation doctrine because, although EPA had applied reasonable factors in establishing the air quality standards in question, the agency had articulated no "intelligible principle" to channel its application of these factors. *Id.* Petitioners argue that if § 402(p) authorizes a NPDES permitting authority to require Phase II permitting of any stormwater source deemed to be a "significant contributor" of pollutants to U.S. waters, then that grant of authority likewise constitutes an unconstitutional delegation of legislative authority because-as did the *American Trucking* delegation-it "leaves [EPA] free to pick any point" at which a regulatory burden will attach. *Id.* at 1037.

> FN64. This case was reversed in relevant part by the Supreme Court in *Whitman v. Am. Trucking Ass'ns,* 531 U.S. 457, 476, 121 S.Ct. 903, 149 L.Ed.2d 1 (2001).

However, in reversing *American Trucking,* the Supreme Court rejected the notion that an agency has the power to interpret a statute so as to either save it from being, or transform it into, an unconstitutional delegation. ***877***Whitman v. Am. Trucking Ass'ns,* 531 U.S. 457, 473, 121 S.Ct. 903, 149 L.Ed.2d 1 (2001). Whether a statute delegates legislative power "is a question for the courts, and an agency's [interpretation] has no bearing upon the answer." *Id.* Petitioner's argument to the contrary rests on the very reasoning in *American Trucking* that was overturned in *Whitman.* The relevant question is not whether EPA's interpretation is unconstitutional, but whether the statute itself is unconstitutional-a challenge Industry Petitioners do not raise.

But even if the challenge were properly raised, § 402(p) would, like the Clean Air Act standard-setting provision at issue in *Whitman,* survive constitutional review. The Supreme Court has upheld against nondelegation attacks many similar statutes establishing nonquantitative standards. *Am. Power & Light Co. v. SEC,* 329 U.S. 90, 104, 67 S.Ct. 133, 91 L.Ed. 103 (1946) (upholding statute giving SEC authority to modify corporate structures so that they are not "unduly or unnecessarily complicate[d]" and do not "unfairly or inequitably distribute voting power among security holders"); *Yakus v. United States,* 321 U.S. 414, 419-20, 423-27, 64 S.Ct. 660, 88 L.Ed. 834 (1944) (upholding statute giving agency power to set prices that "will be generally fair and equitable"). In *Yakus,* the Court held that a statutory command to "effectuate the purposes" of the overall statutory scheme withstood scrutiny. *Id.* Section 402(p)(6)'s directive "to protect water quality" summarizes the central purpose of the Clean Water Act, "to restore and maintain the chemical,

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

physical, and biological integrity of the Nation's waters,"33 U.S.C. § 1251(a). It establishes a determinate criterion of the kind the Supreme Court upheld in *Yakus* and *American Power & Light.*

3. Notice and Comment

[31] Industry Petitioners also contend that, to the extent it allows the designation of entire categories of sources, rather than individual sources, the residual designation authority violates the APA, 5 U.S.C. § 553(b)(3), because EPA did not provide public notice that it was considering such a rule. *Ober v. EPA,* 84 F.3d 304, 315 (9th Cir.1996) (invalidating EPA rule where it deviated from proposal); *Shell Oil Co. v. EPA,* 950 F.2d 741, 746-47 (D.C.Cir.1991). Petitioners contend that while the proposed rule would have allowed case-by-case designation where an authority "determines that the discharge contributes to a violation,"63 Fed. Reg. at 1635 (proposing 40 C.F.R. § 122.26(a)(9)(i)(D)), the final rule authorizes case-by-case designation where "the discharge, or category of discharges within a geographic area, contributes to a violation,"40 C.F.R. § 122.26(a)(9)(i)(D).

EPA notes that it had proposed to promulgate continuing designation authority in some form, and points to elements in the proposed rule that explicitly envision the categorical designation of sources at the local/watershed level.[FN65]

> FN65. "[T]oday's proposal would encourage [voluntary] control of stormwater discharges ... unless the discharge (or category of discharges) is individually or locally designated as described in the following section. The necessary data to support designation could be available on a local, regional, or watershed basis and would allow the NPDES permitting authority to designate a category of sources or individual sources on a case-by-case basis. If sufficient nationwide data [becomes] available in the future, EPA could at that time designate additional categories of industrial or commercial sources on a national basis. EPA requests comment on the three-pronged analysis used to assess the need to designate additional industrial or commercial sources and invites suggestions regarding watershed-based designation." 63 Fed. Reg. at 1588.

*878 According to the "logical outgrowth" standard, a final regulation must be "in character with the original proposal and a logical outgrowth of the notice and comments." *Hodge,* 107 F.3d at 712. EPA emphasized that it was considering continuing designations based on watershed data rather than designating these sources on a national basis, and invited comment regarding this proposal. 63 Fed. Reg. at 1536. This supports the necessary relationship between the proposed and final rule.

H. Regulatory Flexibility Act

The Industry Petitioners contend that the Phase II Rule will impose substantial compliance costs on their members and other small entities, but that EPA failed to conduct the analysis required by the Regulatory Flexibility Act ("RFA"), 5 U.S.C. §§ 601-11. They argue that EPA seeks to excuse its noncompliance by falsely certifying that the Rule does not have a significant impact on a substantial number of small entities. 64 Fed. Reg. at 68,800. We are not persuaded.

[32] The RFA requires a federal agency to prepare a regulatory flexibility analysis and an assessment of the economic impact of a proposed rule on small business entities, 5 U.S.C. § 604, unless the agency certifies that the proposed rule will not have a "significant economic impact on a substantial number of small entities" and provides a factual basis for that certification, *id.* at § 605; *N.W. Mining Ass'n v. Babbitt,* 5 F.Supp.2d 9, 15-16 (D.D.C.1998).

EPA did certify that the Phase II Rule would not

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

yield "significant impacts," 64 Fed. Reg. at 68,800, but Petitioners contend this certification is erroneous because (1) EPA treats as "not significant" costs that are in fact significant, and (2) EPA failed to account for the entire universe of small entities affected (including small home construction contractors) and all significant costs to those entities. They urge that the failure to consider a significant segment of the affected small entity community requires invalidation of the Rule, citing *North Carolina Fisheries Ass'n v. Daley,* 27 F.Supp.2d 650, 659 (E.D.Va.1998) (certification failed to comply with RFA where agency ignored several categories of affected small entities), and *Northwest Mining,* 5 F.Supp.2d at 15 (RFA was violated where improper definition of small entity excluded analysis of affected entities).

EPA maintains that its certification was appropriate, and, moreover, that it has already voluntarily followed the additional RFA procedures that the Industry Petitioners now request. EPA argues that Petitioners have incorrectly specified the costs that the small entities they represent will bear, referring erroneously to EPA's total annual compliance costs estimates for all entities, rather than to costs estimated for small entities as defined under the RFA. EPA maintains that it did consider economic impacts on small home construction contractors who might be denied discharge permits, and that it evaluated the annual costs of Phase II compliance associated with any land disturbance between one and five acres. 64 Fed. Reg. at 68,800-01.

Respondent-intervenor NRDC contends that Petitioners' reliance on measures of the aggregate impact of the Rule on small entities to determine compliance with the threshold test under the RFA fails as a matter of law because aggregate measures are not consistent with the statutory language setting out that test. NRDC notes that the plain language of § 605(b) sets out a three-component test indicating that EPA need not perform a regulatory flexibility analysis if it finds that the proposed ***879** rule will not have: (1) "a significant economic impact" on (2) "a substantial number" of (3) "small entities." 5 U.S.C. § 605(b). NRDC contends that EPA satisfied the statutory test, and that Petitioners' interpretation, which rewrites the test to omit the "substantial number" component, is erroneous.

[33] We believe NRDC correctly interprets the statute, *Marsh,* 490 U.S. at 378, 109 S.Ct. 1851, and that EPA reasonably certified that the Phase II Rule would not have a significant economic impact in compliance with the Regulatory Flexibility Act. We also conclude that, even if EPA had failed to properly comply with the procedural requirements of the RFA, its actual assessment of the Rule's economic impacts renders any defective compliance harmless error. In granting relief under RFA § 611, a court may order an agency "to take corrective action consistent with" the RFA and APA, including remand to the agency, 5 U.S.C. § 611(a)(4)(A), but EPA has already conducted the economic analyses Petitioners seek when it convened the "Small Business Advocacy Review Panel" before publishing notice of the proposed rule. 64 Fed. Reg. at 68,801. That Panel evaluated the Rule and considered the comments of small entities on a number of issues, consistent with the procedures described in RFA § 603. *Id.* Appendix 5 of EPA's preamble to the proposed rule explained provisions that had been designed to minimize impacts on small entities, based on advice and recommendations from the Panel. 63 Fed. Reg. 1615, 64 Fed. Reg. 68,811. Modifications for small entities included alternative compliance and reporting mechanisms responsive to the resources of small entities, simplified procedures, performance rather than design standards, and waivers.

Any hypothetical noncompliance would thus have been harmless, since the available remedy would simply require performance of the economic assessments that EPA actually made. Like the Notice and Comment process required in administrative rulemaking by the APA, the analyses required by RFA are essentially procedural hurdles; after considering the relevant impacts and alternatives, an administrative agency remains free to regulate as it sees fit.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

We affirm the Rule against this challenge.[FN66]

FN66. Our consideration of the issue at all may be gratuitous, since petitioners failed to submit timely comment disputing the adequacy of EPA's consideration of economic impacts on small businesses proposed at 63 Fed. Reg. at 1605-07. *United States v. L.A. Tucker Truck Lines*, 344 U.S. 33, 37, 73 S.Ct. 67, 97 L.Ed. 54 (1952) ("[C]ourts should not topple over administrative decisions unless the administrative body not only has erred but has erred against objection made at the time appropriate under its practice.").

III.

CONCLUSION

We conclude that the EPA's failure to require review of NOIs, which are the functional equivalents of permits under the Phase II General Permit option, and its failure to make NOIs available to the public or subject to public hearings contravene the express requirements of the Clean Water Act. We therefore remand these aspects of the Small MS4 General Permit option so that EPA may take appropriate action to comply with the Clean Water Act. We also remand so that EPA may consider in an appropriate proceeding the Environmental Petitioners' contention that § 402(p)(6) requires EPA to regulate forest roads. We affirm all other aspects of the Phase II Rule against the statutory, administrative, and constitutional challenges raised in this action.

***880** Petitions for Review GRANTED IN PART and DENIED IN PART.

TALLMAN, Circuit Judge, concurring in part and dissenting in part:

I concur in most of the majority's opinion, but I dissent from Section II.B, which remands the Phase II Rule because its system of general permits is "arbitrary and capricious." I believe EPA's design of a system of general permits supported by notices of intent was a reasonable exercise of EPA's administrative discretion. We must give deference to EPA's interpretation of the laws it is charged with enforcing, so long as EPA's reading of those laws is permissible. Because EPA acted reasonably in designing a National Pollutant Discharge Elimination System ("NPDES") based on general permits and supported by NOIs, I respectfully dissent from the court's decision to remand this portion of the Phase II Rule.

I

As the majority concedes, we evaluate EPA's interpretation of the Clean Water Act with deference. Majority Op. 13796. If Congress's intent is unclear as to whether a system of general permits supplemented by NOIs is allowed, we simply ask "whether EPA's interpretation is permissible." *Ober v. Whitman,* 243 F.3d 1190, 1193 (9th Cir.2001).

II

As an initial matter, then, we must ask if Congress was clear in its intent concerning the propriety of a system of general permits augmented by NOIs.

Five legislative commands guide this inquiry. First, 33 U.S.C. § 1342(p)(6) charges EPA with creating a system to regulate stormwater discharges. Plainly, nothing in this section speaks to whether EPA may utilize a general permit approach in regulating stormwater discharge.

Second, 33 U.S.C. § 1311(a) makes it illegal to discharge pollutants "except as in compliance" with several sections of the Clean Water Act. Again, nothing in this section addresses whether EPA may make use of general permits reinforced by NOIs.

Third, 33 U.S.C. § 1342 in general (as opposed to the limited charge in section 1342(p)(6) discussed above) authorizes EPA to issue NPDES permits, provided that the permits satisfy several conditions. But nothing in section 1342 prohibits the use of a

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

system of general permits.

Fourth, the Clean Water Act mandates that "a copy of each permit application and each permit issued under" the NPDES permitting program be made available to the public for inspection and photocopying. 33 U.S.C. § 1342(j). The Act does not elaborate on this naked requirement. There is no explanation of the manner in which NPDES permits and applications are to be made publicly available. Nor does the Act define what constitutes a "permit" that would trigger these requirements.

And fifth, the Clean Water Act authorizes the issuance of an NPDES "permit" "after opportunity for public hearing." 33 U.S.C. § 1342(a)(1). The Act does not provide a definition of "permit," nor does it further detail what triggers the requirement of a public hearing.

In short, the Clean Water Act fails to address the propriety of a general permit system, or whether NOIs ought to be considered "permits." Therefore, we should uphold EPA's creation of a system of general permits buttressed by NOIs so long as it is "permissible." *See* ***881** *Chevron, U.S.A., Inc. v. Natural Resources Defense Council,* 467 U.S. 837, 843-44, 104 S.Ct. 2778, 81 L.Ed.2d 694 (1984). Our duty to defer to EPA in such a situation is based on sound policy. Given the overwhelming challenge and complexity of the programs administered by federal agencies today, it is sensible to trust agencies with the design of those programs so long as the programs are reasonable interpretations of congressional mandates.

The central issues regarding EPA's general permit system are whether the Clean Water Act allows such a system and whether NOIs should be considered "permits." The resolution of these issues requires a complicated weighing of policies (e.g., administrative streamlining vs. robust inquiry) that is precisely what agencies are designed to do and courts are without the resources or expertise to do. "[I]f the statute is silent or ambiguous with respect to the specific issue, the question for the court is whether the agency's answer is based on a permissible construction." *Chevron,* 467 U.S. at 843, 104 S.Ct. 2778.

III

The Phase II Rule promulgates a system of general permits. EPA contemplated that these general permits will be issued on a watershed basis, with individual stormwater dischargers then filing NOIs to operate under general permits. The federal regulations implementing this system repeatedly emphasize that "[t]he use of general permits, instead of individual permits, reduces the administrative burden of permitting authorities, while also limiting the paperwork burden on regulated parties." 64 Fed. Reg. 68,722, 68,737, 68,762 (Dec. 8, 1999).

The use of a general permit system for the administration of the NPDES system has been considered and approved before. In *NRDC v. Costle,* 568 F.2d 1369 (D.C.Cir.1977), the District of Columbia Circuit considered a challenge to EPA's regulations under the Federal Water Pollution Control Act, which was the precursor to the Clean Water Act. In *Costle,* EPA sought approval of its design for the NPDES system. EPA had issued regulations exempting broad categories of point sources from the requirement that an NPDES permit be obtained before discharging into federal waters. Part of EPA's rationale in creating the exempted categories was that otherwise EPA would be overwhelmed by the administrative burden of issuing NPDES permits. *Id.* at 1377-79. The *Costle* court affirmed the lower court's rejection of these exemptions because the legislation in question plainly required that all point sources obtain some kind of NPDES permit. *Id.* But in rejecting EPA's regulations, the *Costle* court discussed the options available to EPA in promulgating an NPDES system that was considerate of the enormous burden such a system could impose on EPA. *Id.* at 1380-81. In particular, the court recommended "the use of area or general permits. *The Act allows such techniques.* Area-wide regulation is one well-established means of coping with administrat-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ive exigency." *Id.* at 1381 (emphasis added).

Against this backdrop, EPA's creation of a general permit system was entirely permissible. And if the creation of a general permit system is permissible, then it does not matter whether NOIs are given a public airing.

The majority contends that the general permit system prevents EPA from fulfilling its duty to make sure that municipalities do not discharge pollutants in violation of the Clean Water Act. The majority reasons that by failing to require EPA review of NOIs, the Rule fails to ensure that a regulated MS4's stormwater pollution control program will satisfy the Clean Water Act requirement that the MS4 "reduce*882 discharges to the maximum extent practicable." Majority Op. 855. But the majority's analysis ignores the effects of the general permit. By filing an NOI, a discharger obligates itself to comply with the limitations and controls imposed by the general permit under which it intends to operate. EPA mandates that all permits (including general permits) condition their issuance on satisfaction of pollution limitations imposed by the Clean Water Act. 40 C.F.R. § 122.44. In particular, EPA requires permits to satisfy the restrictions imposed by Clean Water Act section 307(a). *Id.* at § 122.44(b)(1). Therefore, the *general permit* imposes the obligations with which the discharger must comply (including applicable Clean Water Act standards), and EPA's decision not to review every NOI is not a failure to insure compliance with the Clean Water Act.

The majority also objects to EPA's general permit system because it fails to allow for sufficient public participation in the NOIs. Majority Op. 856-858. The majority's position fails to give deference to EPA and imposes the majority's own wishes instead. EPA would have been justified in creating a system entirely reliant on general or area permits. Its imposition of NOIs is an indulgence to certain policy prerogatives, namely public involvement and the collection of additional information. But the power to create a general permit system necessarily implies the power to require subordinate steps for NOIs that do not quite reach the level of inquiry associated with actual permits.

IV

We function as an adjudicator of disputes, not as a policy-making body. Where an agency promulgates rules after a deliberative process, it is incumbent upon us to respect the agency's decisions or else risk trivializing the function of that agency. In this case, EPA made a permissible decision to create a general permit program supported by NOIs. Therefore, I respectfully dissent from Section II.B of the majority's opinion.

Natural Resources Defense Council v. Costle (1977) 568 F.2d 1369

Natural Resources Defense Council, Inc. v. Costle, C.A.D.C.,1977.

United States Court of Appeals,District of Columbia Circuit.
NATURAL RESOURCES DEFENSE COUNCIL, INC.[FN*]

FN* For convenience the court will refer to this case hereafter as NRDC v. Costle (Runoff Point Sources).

v.

Douglas M. COSTLE, Administrator, Environmental Protection Agency, et al., National Forest Products Association, Appellant.
NATURAL RESOURCES DEFENSE COUNCIL, INC., etc.

v.

Douglas M. COSTLE, Administrator, Environmental Protection Agency, et al., National Milk Producers Federation, Appellant.
NATURAL RESOURCES DEFENSE COUNCIL, INC., etc.

v.

Douglas M. COSTLE, Administrator, and Environmental Protection Agency, et al., Appellants.
NATURAL RESOURCES DEFENSE COUNCIL, INC.

v.

Douglas M. COSTLE, Administrator, Environmental Protection Agency, Colorado River Water Conservation District, Appellant.
Nos. 75-2056, 75-2066, 75-2067 and 75-2235.

Argued Dec. 3, 1976.
Decided Nov. 16, 1977.

The National Resources Defense Council, Inc. challenged authority of the Environmental Protection Agency Administrator to exempt categories of point sources from permit requirements of the Federal Water Pollution Control Act Amendments of 1972. The United States District Court for the District of Columbia, Thomas A. Flannery, J., 396 F.Supp. 1393, granted summary judgment to the NRDC and the Administrator and others appealed. The Court of Appeals, Leventhal, Circuit Judge, held that: (1) legislative history shows that National Pollution Discharge Elimination System permit is the only means by which discharger may escape total prohibition of discharges from point sources found in FWPCA; (2) national effluent limitations need not be uniform as precondition for NPDES program to include pollution from agricultural, silvicultural, and storm runoff point sources, and while technological or administrative infeasibility of such limitations may warrant adjustments in permit program it does not authorize Administrator to exclude relevant point sources; (3) where numeric effluent limitations are infeasible, permit conditions may proscribe industry practices that aggravate problems of point source pollution as well as require monitoring and reporting of effluent level; and (4) a number of administrative devices, including general or area permits are available to aid EPA in practical administration of NPDES program, and FWPCA, however tight in some respects, leaves some leeway to EPA in interpretation of that statute and affords agency some means to consider matters of feasibility.

Affirmed in accordance with opinion.

MacKinnon, Circuit Judge, filed a concurring opinion.

It is not what court thinks that is generally appropriate to regulatory process, but what Congress intended.

**1370 **148 Syllabus by the Court*

The National Resources Defense Council, Inc. (NRDC) challenged the authority of the EPA Administrator to exempt categories of point sources from the permit requirements of s 402 of the Federal Water Pollution Control Act Amendments of 1972, 33 U.S.C. s 1342 (Supp. V 1975). On appeal from a grant of summary judgment to NRDC, held:

1. The legislative history makes clear that Congress intended the National Pollution Discharge Elimination System (NPDES) permit to be the only means by which a discharger may escape the total prohibition of discharges from point sources found in FWPCA s 301(a), 33 U.S.C. s 1311(a) (Supp. V 1975).

2. It is not necessary that national effluent limitations be uniform as a precondition for the NPDES program to include pollution from agricultural, silvicultural, and storm water runoff point sources. The technological or administrative infeasibility ***1371 **149** of such limitations may warrant adjustments in the permit program, but it does not authorize the Administrator to exclude the relevant point source from the NPDES program.

3. Where numeric effluent limitations are infeasible, permit conditions may proscribe industry practices that aggravate the problems of point source pollution as well as require monitoring and reporting of effluent levels.

4. A number of administrative devices, including general or area permits, are available to aid EPA in the practical administration of the NPDES program.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

The FWPCA, however tight in some respects, leaves some leeway to EPA in the interpretation of that statute and, in that regard, affords the agency some means to consider matters of feasibility.

Appeals from the United States District Court for the District of Columbia (D.C. Civil 1629-73).

Irvin B. Nathan, Washington, D. C., with whom Burton J. Mallinger, Washington, D. C., was on the brief, for appellant in No. 75-2056.

Quinn, Atty., Environmental Protection Agency, Washington, D. C., were on the brief for appellants in No. 75-2067.

Christopher D. Williams, Washington D. C., with whom Kenneth Balcomb and Robert L. McCarty, Washington, D. C., were on the brief for appellant in No. 75-2235.

J. G. Speth, Washington, D. C., for appellee.

Theodore O. Torve, Asst. Atty. Gen., State of Washington, Olympia, Wash., filed a brief on behalf of the State of Washington as amicus curiae urging reversal in No. 75-2056.

Richard E. Schwartz, Jefferson City, Mo., filed a brief on behalf of Iron and Steel Institute, as amicus curiae urging reversal in No. 75-2067.

John L. Hill, Atty. Gen., State of Texas, and David M. Kendall, Jr., First Asst. Atty. Gen., State of Texas, Austin, Tex., filed a brief on behalf of State of Texas as amicus curiae urging reversal in No. 75-2067.

Before BAZELON, Chief Judge, and LEVENTHAL and MacKINNON, Circuit Judges.

Opinion for the Court filed by LEVENTHAL, Circuit Judge.

Concurring Opinion filed by MacKINNON, Circuit Judge.LEVENTHAL, Circuit Judge:

In 1972 Congress passed the Federal Water Pollution Control Act Amendments (hereafter referred to as the "FWPCA" or the "Act" [FN1]). It was a dramatic response to accelerating environmental degradation of rivers, lakes and streams in this country. The Act's stated goal is to eliminate the discharge of pollutants into the Nation's waters by 1985. This goal is to be achieved through the enforcement of the strict timetables and technology-based effluent limitations established by the Act.

> FN1.33 U.S.C. ss 1251-1376 (Supp. V 1975). Although characterized in the official title as "amendments", the 1972 FWPCA actually substitutes its provisions for those of the pre-1972 Federal Water Pollution Control Act as amended, id. ss 1151-1175 (1970).

The FWPCA sets up a permit program, the National Pollutant Discharge Elimination System (NPDES), as the primary means of enforcing the Act's effluent limitations.[FN2] At issue in this case is the authority***1372 **150** of the Administrator of the Environmental Protection Agency to make exemptions from this permit component of the FWPCA.

> FN2. This case deals with s 402 of the FWPCA, 33 U.S.C. s 1342 (Supp. V 1975), which sets out the permitting authority of the EPA Administrator as well as that of the states under EPA-approved state permit programs. The Secretary of the Army also has a permitting authority in certain circumstances. Under s 404 of the FWPCA, 33 U.S.C. s 1344 (Supp. V 1975), he may issue permits for the discharge of dredged or fill material into navigable waters.

Section 402 of the FWPCA, 33 U.S.C. s 1342 (Supp. V 1975), provides that under certain circumstances the EPA Administrator "may . . . issue a permit for the discharge of any pollutant" notwith-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

standing the general proscription of pollutant discharges found in s 301 of the Act.33 U.S.C. s 1311 (Supp. V 1975). The discharge of a pollutant is defined in the FWPCA as "any addition of any pollutant to navigable waters from any point source" or "any addition of any pollutant to the waters of the contiguous zone or the ocean from any point source other than a vessel or floating craft."33 U.S.C. s 1362(12) (Supp. V 1975). In 1973 the EPA Administrator issued regulations that exempted certain categories of "point sources" of pollution from the permit requirements of s 402.[FN3] The Administrator's purported authority to make such exemptions turns on the proper interpretation of s 402.

FN3.40 C.F.R. s 125.4 (1975). See 38 Fed.Reg. 18000-04 (1973).

A "point source" is defined in s 502(14) as "any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged."[FN4]

FN4.33 U.S.C. s 1362(14) (Supp. V 1975).

The 1973 regulations exempted discharges from a number of classes of point sources from the permit requirements of s 402, including all silvicultural point sources; all confined animal feeding operations below a certain size; all irrigation return flows from areas of less than 3,000 contiguous acres or 3,000 noncontiguous acres that use the same drainage system; all nonfeedlot, nonirrigation agricultural point sources; and separate storm sewers containing only storm runoff uncontaminated by any industrial or commercial activity.[FN5] The EPA's ***1373 **151** rationale for these exemptions is that in order to conserve the Agency's enforcement resources for more significant point sources of pollution, it is necessary to exclude these smaller sources of pollutant discharges from the permit program.

FN5.40 C.F.R. s 125.4 (1975):

The following do not require an NPDES permit:

(f) Uncontrolled discharges composed entirely of storm runoff when these discharges are uncontaminated by any industrial or commercial activity, unless the particular storm runoff discharge has been identified by the Regional Administrator, the State water pollution control agency or an interstate agency as a significant contributor of pollution. (It is anticipated that significant contributors of pollution will be identified in connection with the development of plans pursuant to section 303(e) of the Act. This exclusion applies only to separate storm sewers. Discharges from combined sewers and bypass sewers are not excluded.)

(j) Discharges of pollutants from agricultural and silvicultural activities, including irrigation return flow and runoff from orchards, cultivated crops, pastures, rangelands, and forest lands, except that this exclusion shall not apply to the following:

(1) Discharges from animal confinement facilities, if such facility or facilities contain, or at any time during the previous 12 months contained, for a total of 30 days or more, any of the following types of animals at or in excess of the number listed for each type of animal:

(i) 1,000 slaughter and feeder cattle;

(ii) 700 mature dairy cattle (whether milkers or dry cows);

(iii) 2,500 swine weighing over 55 pounds;

(iv) 10,000 sheep;

(v) 55,000 turkeys;

(vi) If the animal confinement facility has continuous overflow watering, 100,000 laying hens and broilers;

(vii) If the animal confinement facility has liquid manure handling systems, 30,000 laying hens and broilers;

(viii) 5,000 ducks;

(2) Discharges from animal confinement

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

facilities, if such facility or facilities contain, or any time during the previous 12 months contained for a total of 30 days or more, a combination of animals such that the sum of the following numbers is 1,000 or greater: the number of slaughter and feeder cattle multiplied by 1.0, plus the number of mature dairy cattle multiplied by 1.4, plus the number of swine weighing over 55 pounds multiplied by 0.4, plus the number of sheep multiplied by 0.1;

(3) Discharges from aquatic animal production facilities;

(4) Discharges of irrigation return flow (such as tailwater, tile drainage, surfaced ground water flow or bypass water), operated by public or private organizations or individuals, if: (1) There is a point source of discharge (e. g., a pipe, ditch, or other defined or discrete conveyance, whether natural or artificial) and; (2) the return flow is from land areas of more than 3,000 contiguous acres, or 3,000 non-contiguous acres which use the same drainage system; and

(5) Discharges from any agricultural or silvicultural activity which have been identified by the Regional Administrator or the Director of the State water pollution control agency or interstate agency as a significant contributor of pollution.

The National Resources Defense Council, Inc. (NRDC) sought a declaratory judgment that the regulations are unlawful under the FWPCA. Specifically, NRDC contended that the Administrator does not have authority to exempt any class of point source from the permit requirements of s 402. It argued that Congress in enacting ss 301, 402 of the FWPCA intended to prohibit the discharge of pollutants from all point sources unless a permit had been issued to the discharger under s 402 or unless the point source was explicitly exempted from the permit requirements by statute. The District Court granted NRDC's motion for summary judgment. It held that the FWPCA does not authorize the Administrator to exclude any class of point sources from the permit program.NRDC v. Train, 396 F.Supp. 1393 (D.D.C.1975). The EPA has appealed to this court. It is joined on appeal by a number of defendant-intervenors, National Forest Products Association (NFPA), National Milk Producers Federation (NMPF), and the Colorado River Conservation District.[FN6]

FN6. Briefs as amicus curiae were filed by the American Iron and Steel Institute, the State of Texas, and the State of Washington, Department of Natural Resources.

This case thus presents principally a question of statutory interpretation. EPA also argues that even if Congress intended to include the pertinent categories in the permit program, the regulations exempting them should be upheld on a doctrine of administrative infeasibility, i. e., the regulations should be upheld as a deviation from the literal terms of the FWPCA that is necessary to permit the Agency to realize the principal objectives of the Act.

I. LEGISLATIVE HISTORY

The principal purpose of the FWPCA is "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters."[FN7]The Act's ultimate objective, to eliminate the discharge of pollutants into navigable waters by 1985, is to be achieved by means of two intermediate steps. As of July 1, 1977, all point sources other than publicly owned treatment works were to have achieved effluent limitations that require application of the "best practicable control technology." [FN8]These same point sources must reduce their effluent discharges by July 1, 1983, to meet limitations determined by application of the "best available technology economically achievable" for each category of point source.[FN9]

FN7.33 U.S.C. s 1251(a) (Supp. V 1975).

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

FN8.33 U.S.C. s 1311(b)(1)(A) (Supp. V 1975).

FN9.Id.s 1311(b)(2)(A).

The technique for enforcing these effluent limitations is straightforward. Section 301(a) of the FWPCA provides:
Except as in compliance with this section and sections 302, 306, 307, 318, 402, and 404 of this Act, the discharge of any pollutant by any person shall be unlawful.[FN10]

FN10.Id.s 1311(a).

Appellants concede that if the regulations are valid, it must be because they are authorized***1374 **152** by s 402; none of the other sections listed in s 301(a) afford grounds for relieving the exempted point sources from the prohibition of s 301. [FN11]

FN11. Section 302, 33 U.S.C. s 1312 (Supp. V 1975), permits the Administrator to set water quality related effluent limitations or control strategies where technology-based limitations are inadequate. Section 306, 33 U.S.C. s 1316 (Supp. V 1975), instructs the EPA Administrator to promulgate standards of performance for new sources of pollution constructed after those standards are proposed. Section 307, 33 U.S.C. s 1317 (Supp. V 1975), gives the EPA Administrator the authority to issue generally applicable effluent standards with respect to toxic substances and to require pretreatment of some pollutants before their introduction into treatment works. By virtue of s 318, 33 U.S.C. s 1328 (Supp. V 1975), the Administrator may "permit the discharge of a specific pollutant or pollutants under controlled conditions associated with an approved aquaculture project under Federal or State supervision."Section 404, 33 U.S.C. s 1344 (Supp. V 1975), gives the Secretary of the Army authority to issue permits for the discharge of dredged or fill material into the navigable waters at specified disposal sites.

Section 402 provides in relevant part that the Administrator may, after opportunity for public hearing, issue a permit for the discharge of any pollutant, or combination of pollutants, notwithstanding section 301(a), upon condition that such discharge will meet either all applicable requirements under sections 301, 302, 306, 307, 308, and 403 of this Act, or prior to the taking of the necessary implementing actions relating to all such requirements, such conditions as the Administrator determines are necessary to carry out the provisions of this Act.

The NPDES permit program established by s 402 is central to the enforcement of the FWPCA. It translates general effluent limitations into the specific obligations of a discharger. As this court noted in NRDC v. Train, 166 U.S.App.D.C. 312, 315, 510 F.2d 692, 695 (1975), the Act "relies primarily on a permit program for the achievement of effluent limitations . . . to attain its goals."The comments in floor debates of Senator Muskie, the leading Congressional sponsor of the Act, makes this clear.[FN12]

FN12."The Administrator of the Environmental Protection Agency is authorized to regulate discharge of pollutants through the use of an expanded permit program."117 Cong.Rec. 38800 (1971) (Senator Muskie) (emphasis added), reprinted in 2 Environmental Policy Div., Congressional Reference Serv., A Legislative History of the Water Pollution Control Act Amendments of 1972, at 1259 (Senate Public Works Comm. Print 1973) (hereinafter cited as Legislative History).

The appellants argue that s 402 not only gives the Administrator the discretion to grant or refuse a permit, but also gives him the authority to exempt classes of point sources from the permit require-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ments entirely. They argue that this interpretation is supported by the legislative history of s 402 and the fact that unavailability of this exemption power would place unmanageable administrative burdens on the EPA.

[1] Putting aside for the moment the appellants' administrative infeasibility argument, we agree with the District Court that the legislative history makes clear that Congress intended the NPDES permit to be the only means by which a discharger from a point source may escape the total prohibition of s 301(a). This intention is evident in both Committee Reports. In discussing s 301 the House Report stressed:

Any discharge of a pollutant without a permit issued by the Administrator under section 318, or by the Administrator or the State under section 402 or by the Secretary of the Army under section 404 is unlawful. Any discharge of a pollutant not in compliance with the conditions or limitations of such a permit is also unlawful.[FN13]

> FN13. H.Rep.No.92-911, 92d Cong., 2d Sess. 100 (1972), reprinted in Legislative History at 787.

The Senate Report echoed this interpretation:

(Section 301) clearly establishes that the discharge of pollutants is unlawful. Unlike its predecessor program which permitted the discharge of certain amounts of pollutants under the conditions described above, this legislation would clearly establish that no one has the right *1375 **153 to pollute that pollution continues because of technological limits, not because of any inherent rights to use the nation's waterways for the purpose of disposing of wastes.

The program proposed by this Section will be implemented through permits issued in Section 402. The Administrator will have the capability and the mandate to press technology and economics to achieve those levels of effluent reduction which he believes to be practicable in the first instance and attainable in the second.[FN14]

> FN14. S.Rep.No.92-414, 92d Cong., 1st Sess. 42 (1971), reprinted in Legislative History at 1460; U.S.Code Cong. & Admin.News 1972, pp. 3668, 3709.

[2] The EPA argues that since s 402 provides that "the Administrator may . . . issue a permit for the discharge of any pollutant" (emphasis added), he is given the discretion to exempt point sources from the permit requirements altogether. This argument, as to what Congress meant by the word "may" in s 402, is insufficient to rebut the plain language of the statute and the committee reports. We say this with due awareness of the deference normally due "the construction of a new statute by its implementing agency."NRDC v. Train, 166 U.S.App.D.C. at 326, 510 F.2d at 706; see Zuber v. Allen, 396 U.S. 168, 192, 90 S.Ct. 314, 24 L.Ed.2d 345 (1969); Udall v. Tallman, 380 U.S. 1, 16, 85 S.Ct. 792, 13 L.Ed.2d 616 (1965). The use of the word "may" in s 402 means only that the Administrator has discretion either to issue a permit or to leave the discharger subject to the total proscription of s 301. This is the natural reading, and the one that retains the fundamental logic of the statute.

Under the EPA's interpretation the Administrator would have broad discretion to exempt large classes of point sources from any or all requirements of the FWPCA. This is a result that the legislators did not intend. Rather they stressed that the FWPCA was a tough law that relied on explicit mandates to a degree uncommon in legislation of this type. A statement of Senator Jennings Randolph of West Virginia, Chairman of the Senate Committee responsible for the Act, is illustrative.

I stress very strongly that Congress has become very specific on the steps it wants taken with regard to environmental protection. We have written into law precise standards and definite guidelines on how the environment should be protected. We have done more than just provide broad directives for administrators to follow. . . .

In the past, too many of our environmental laws have contained vague generalities. What we are at-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

tempting to do now is provide laws that can be administered with certainty and precision. I think that is what the American people expect that we do.[FN15]

> FN15.117 Cong.Rec. 38805 (1971), reprinted in Legislative History at 1272. See also the comments of Senator Montoya on the original Senate bill.
> Your committee has placed before you a tough bill. This body and this Nation would not have it be otherwise. Our legislation contains an important principle of psychology: Men seldom draw the best from themselves unless pressed by circumstances and deadlines. This bill contains deadlines and it imposes rather tough standards on industry, municipalities, and all other sources of pollution. Only under such conditions are we likely to press the technological threshold of invention into new and imaginative developments that will allow us to meet the objectives stated in our bill.
> 117 Cong.Rec. 38808 (1971), reprinted in Legislative History at 1278.

There are innumerable references in the legislative history to the effect that the Act is founded on the "basic premise that a discharge of pollutants without a permit is unlawful and that discharges not in compliance with the limitations and conditions for a permit are unlawful."[FN16]Even when infeasibility arguments were squarely raised, ***1376 ****154** the legislature declined to abandon the permit requirement.[FN17] We stand by our previous interpretation of the Act's scheme for the enforcement of effluent limitations:

> FN16.118 Cong.Rec. 10215 (1972) (Rep. Clausen), reprinted in Legislative History at 378. See, e. g., H.R.Rep.No.92-911 92d Cong., 2d Sess. 100 (1972), reprinted in Legislative History at 787; S.Rep.No.92-414; 92d Cong., 1st Sess. 42-43 (1971), reprinted in Legislative History at 1460-61; 118 Cong.Rec. 10661 (1972) (Rep. Podell), reprinted in Legislative History at 574.
>
> FN17. The House rejected an amendment designed to avoid the problems of including irrigation return flows in the permit program. Congressman Teno Roncalio of Wyoming offered an amendment on the floor of the House that would have explicitly exempted irrigated agriculture from the NPDES permit program.
> Mr. RONCALIO. . . .
> I offer my amendment so that a serious omission to H.R. 11896 can be corrected before we end up with a law that would be virtually impossible to enforce. My amendment would specifically exempt irrigated agriculture from sections 301(a), 302 and 304 of the Federal Water Pollution Control Act.
> I think my colleagues will agree that the type of salinity problems created by irrigation runoff are simply not as alarming as the more common pollutants discharged by industrial and municipal facilities. Substantial salinity concentrations have little effect on recreational use of water or its suitability for the propagation of fish.
> My amendment is necessary, Mr. Chairman, because at the present time we could not enforce pollution control on irrigation systems. It is virtually impossible to trace pollutants to specific irrigation lands, making these pollutants a nonpoint source in most cases. Second, we do not have the technology to deal with irrigation runoff (as contrasted to industrial pollution) and if we begin making laws to control something that cannot be handled with our given technological knowledge, we will be doing many thousand farmers and ranchers a great disservice. In fact, we will be doing the Federal Government a great disservice

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> if we actually pass a Federal water pollution control bill that cannot be fully enforced.
> 118 Cong.Rec. 10764-65 (1972), reprinted in Legislative History at 651. The amendment was rejected.

After dates set forth in (s 301(b)), a person must obtain a permit and comply with its terms in order to discharge any pollutant. The conditions of the permit must assure that any discharge complies with the applicable requirements of numerous sections including the effluent limitations of section 301(b).
NRDC v. Train, 166 U.S.App.D.C. at 316, 510 F.2d at 696 (emphasis added; footnotes omitted).

We also note that all the Supreme Court decisions referring to s 402 view the permit as the only means by which a point source polluter can avoid the ban on discharges found in s 301. Strictly speaking these expressions may be dicta, for they do not touch directly on the interpretation of s 402. But they are at least a considered reading of what the Act appears to mean.

In Train v. Colorado Public Interest Research Group, Inc., 426 U.S. 1, 96 S.Ct. 1938, 48 L.Ed.2d 434 (1976), Justice Marshall characterized the enforcement scheme of the FWPCA as follows:
(E)ffluent limitations are enforced through a permit program. The discharge of "pollutants" into water is unlawful without a permit issued by the Administrator of the EPA or, if a State has developed a program that complies with the FWPCA, by the State. . . .

Id. at 7, 96 S.Ct. at 1941 (footnote omitted).

In EPA v. State Water Resources Control Board, 426 U.S. 200, 96 S.Ct. 2022, 48 L.Ed.2d 578 (1976), the issue was whether federal installations were subject to state NPDES programs. Justice White's majority opinion describes NPDES at 205, 96 S.Ct. at 2025 (footnote omitted):
Under NPDES, it is unlawful for any person to discharge a pollutant without obtaining a permit and complying with its terms. An NPDES permit serves to transform generally applicable effluent limitations and other standards including those based on water quality into the obligations (including a timetable for compliance) of the individual discharger, and the Amendments provide for direct administrative and judicial enforcement of permits.

In E. I. du Pont de Nemours v. Train, 430 U.S. 112, 97 S.Ct. 965, 51 L.Ed.2d 204 (1977), the Court held that under FWPCA the EPA can set uniform effluent limitations through industry-wide regulations rather than develop them on an individual basis during the permit issuance process. But the Court, per Justice Stevens, clearly indicated***1377 **155** that those limitations were translated into obligations of the discharger through their inclusion in an NPDES permit.Id. at 119-20, 97 S.Ct. 965.

The wording of the statute, legislative history, and precedents are clear: the EPA Administrator does not have authority to exempt categories of point sources from the permit requirements of s 402. Courts may not manufacture for an agency a revisory power inconsistent with the clear intent of the relevant statute. In holding that the FPC does not have authority to exempt the rates of small producers from regulation under the Natural Gas Act, the Supreme Court observed:
It is not the Court's role . . . to overturn congressional assumptions embedded into the framework of regulation established by the Act. This is a proper task for the Legislature where the public interest may be considered from the multifaceted points of view of the representational process.

FPC v. Texaco, Inc., 417 U.S. 380, 400, 94 S.Ct. 2315, 2327, 41 L.Ed.2d 141 (1974).

II. ADMINISTRATIVE INFEASIBILITY

The appellants have stressed in briefs and at oral argument the extraordinary burden on the EPA that will be imposed by the above interpretation of the

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

scope of the NPDES program. The spectre of millions of applications for permits is evoked both as part of appellants' legislative history argument that Congress could not have intended to impose such burdens on the EPA and as an invitation to this court to uphold the regulations as deviations from the literal terms of the FWPCA necessary to permit the agency to realize the general objectives of that act. During oral argument we asked for supplemental briefs so that the appellants could expand on their infeasibility arguments. We consider EPA's infeasibility contentions in turn.

A. Uniform National Effluent Limitations

EPA argues that the regulatory scheme intended under Titles III and IV of the FWPCA requires, first, that the Administrator establish national effluent limitations [FN18] and, second, that these limitations be incorporated in the individual permits of dischargers. EPA argues that the establishment of such limitations is simply not possible with the type of point sources involved in the 1973 regulations, which essentially involve the discharge of runoff i. e., wastewaters generated by rainfall that drain over terrain into navigable waters, picking up pollutants along the way.

> FN18. See FWPCA s 502(11), 33 U.S.C. s 1362(11) (Supp. V 1975):
> The term "effluent limitation" means any restriction established by a State or the Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters, the waters of the contiguous zone, or the ocean, including schedules of compliance.

There is an initial question, to what extent point sources are involved in agricultural, silvicultural, and storm sewer runoff. The definition of point source in s 502(14), including the concept of a "discrete conveyance", suggests that there is room here for some exclusion by interpretation. We discuss this issue subsequently. Meanwhile, we assume that even taking into account what are clearly point sources, there is a problem of infeasibility which the EPA properly opens for discussion.

EPA contends that certain characteristics of runoff pollution make it difficult to promulgate effluent limitations for most of the point sources exempted by the 1973 regulations:
The major characteristic of the pollution problem which is generated by runoff . . . is that the owner of the discharge point . . . has no control over the quantity of the flow or the nature and amounts of the pollutants picked up by the runoff. The amount of flow obviously is unpredictable because it results from the duration and intensity of the rainfall event, the topography, the type of ground cover and the saturation point of the land due to any previous ***1378 **156** rainfall. Similar factors affect the types of pollutants which will be picked up by that runoff, including the type of farming practices employed, the rate and type of pesticide and fertilizer application, and the conservation practices employed . . .
An effluent limitation must be a precise number in order for it to be an effective regulatory tool; both the discharger and the regulatory agency need to have an identifiable standard upon which to determine whether the facility is in compliance. That was the principal of the passage of the 1972 Amendments.

Federal Appellants' Memorandum on "Impossibility" at 7-8 (footnote omitted). Implicit in EPA's contentions is the premise that there must be a uniform effluent limitation prior to issuing a permit. That is not our understanding of the law.

In NRDC v. Train, we described the interrelationship of the effluent limitations and the NPDES permit program, 166 U.S.App.D.C. at 327, 510 F.2d at 707 (footnotes omitted):
The Act relies on effluent limitations on individual point sources as the "basis of pollution prevention and elimination." . . . Section 301(b) contains a

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

broad description of phase one and phase two effluent limitations, to be achieved by July 1, 1977 and July 1, 1983, respectively. The limitations established under section 301(b) are to be imposed upon individual point sources through permits issued under the National Pollutant Discharge Elimination System (NPDES) established by section 402. Those permits are to contain schedules which will assure phased compliance with the effluent limitations no later than the final dates set forth in section 301(b). Section 304(b) calls for the publication of regulations containing guidelines for effluent limitations for classes and categories of point sources. These guidelines are intended to assist in the establishment of section 301(b) limitations that will provide uniformity in the permit conditions imposed on similar sources within the same category by diverse state and federal permit authorities.

As noted in NRDC v. Train, the primary purpose of the effluent limitations and guidelines was to provide uniformity among the federal and state jurisdictions enforcing the NPDES program and prevent the "Tragedy of the Commons" [FN19] that might result if jurisdictions can compete for industry and development by providing more liberal limitations than their neighboring states.166 U.S.App.D.C. at 329, 510 F.2d at 709. The effluent limitations were intended to create floors that had to be respected by state permit programs.

> FN19. As one commentator has recently written:
>
> The Tragedy of the Commons arises in noncentralized decisionmaking under conditions in which the rational but independent pursuit by each decisionmaker of its own self-interest leads to results that leave all decisionmakers worse off than they would have been had they been able to agree collectively on a different set of policies.
>
> Stewart, Pyramids of Sacrifice? Problems of Federalism in Mandating State Implementation of National Environmental Policy, 86 Yale L.J. 1196, 1211 (1977). The classic account of the Tragedy of the Commons can be found in Hardin, The Tragedy of the Commons, 162 Science 1243 (1968). Hardin makes the point in the context of sheep-grazing. Put simply, even over-simply, Hardin shows that if no one is authorized to set limits to preserve open pasture land as a whole, allowing sheep to graze on that land may lead to serious overgrazing, as each herdsman thinks only of his own advantage. The solution lies in some mandate, from above or by agreement, with sanctions to compel conformance.

But in NRDC v. Train it was also recognized that permits could be issued before national effluent limitations were promulgated and that permits issued subsequent to promulgation of uniform effluent limitations could be modified to take account of special characteristics of subcategories of point sources.

Prior to the promulgation of effluent limitations under section 301, the director of a state program is instructed merely to impose such terms and conditions in each permit as he determines are necessary to carry out the provisions of the Act. Once ***1379 **157** an effluent limitation is established, however, the state director and the regional EPA Administrator are required to apply the specified, uniform effluent limitations, modified only as necessary to take account of fundamentally different factors pertaining to particular point sources within a given class or category. Any variation in the uniform limitations adopted for specific dischargers must be approved by the Administrator.

166 U.S.App.D.C. at 330, 510 F.2d at 710 (footnotes omitted).

Another passage in NRDC v. Train touches on the infeasibility problem. We noted that "(t)he statutory framework is not so tightly drawn as to require guidelines for each and every class and category of point source regardless of the need for uniform

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

guidelines or to mandate that all guidelines be published prior to December 31 (1974) regardless of their quality or the burden that task would place upon the agency."Id. at 320-21, 510 F.2d at 710-11. In that case this court fully appreciated that technological and administrative constraints might prevent the Administrator from developing guidelines and corresponding uniform numeric effluent limitations for certain point sources anytime in the near future. The Administrator was deemed to have the burden of demonstrating that the failure to develop the guidelines on schedule was due to administrative or technological infeasibility.166 U.S.App.D.C. at 333, 510 F.2d at 713.Yet the underlying teaching was that technological or administrative infeasibility was a reason for adjusting court mandates to the minimum extent necessary to realize the general objectives of the Act.[FN20] It is a number of steps again to suggest that these problems afford the Administrator the authority to exempt categories of point sources from the NPDES program entirely.

> FN20. In NRDC v. Train, this court stated:
> A federal equity court may exercise its discretion to give or withhold its mandate in furtherance of the public interest, including specifically the interest in effectuating the congressional objective incorporated in regulatory legislation. We think the court may forebear the issuance of an order in those cases where it is convinced by the official involved that he has in good faith employed the utmost diligence in discharging his statutory responsibilities. The sound discretion of an equity court does not embrace enforcement through contempt of a party's duty to comply with an order that calls him "to do an impossibility."
> 166 U.S.App.D.C. at 333, 510 F.2d at 713 (footnotes omitted). For reasons stated in this opinion, we conclude that to require the EPA Administrator to include silvicultural, agricultural, and storm sewer point sources in the NPDES program is not to require him "to do an impossibility."

With time, experience, and technological development, more point sources in the categories that EPA has now classed as exempt may be amenable to national effluent limitations achieved through end-of-pipe technology or other means of pollution control. EPA has noted its own success with runoff from mining operations:

EPA has found that in the area of runoff from mining operations, there is sufficient predictability because of a longer history of regulation and the relatively confined nature of the operations that numerical limitations can be established. Thus, consistent with EPA's position stated earlier that it will expand the permit program where its capability of establishing effluent limitations allows, appropriate limitations have been created and the permit program expanded.

Federal Appellants' Memorandum on "Impossibility" at 8.

[3] In sum, we conclude that the existence of uniform national effluent limitations is not a necessary precondition for incorporating into the NPDES program pollution from agricultural, silvicultural, and storm water runoff point sources. The technological or administrative infeasibility of such limitations may result in adjustments in the permit programs, as will be seen, but it does not authorize the Administrator to exclude the relevant point source from the NPDES program.

B. Alternative Permit Conditions under s 402(a)

EPA contends that even if it is possible to issue permits without national effluent limitations,***1380 **158** the special characteristics of point sources of runoff pollution make it infeasible to develop restrictions on a case-by-case basis. EPA's implicit premise is that whether limitations are promulgated on a class or individual source basis, it is still necessary to articulate any limitation in terms of a numerical effluent standard. That is not our under-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

standing.

[4] Section 402 provides that a permit may be issued upon condition "that such discharge will meet either all applicable requirements under sections 301, 302, 306, 307, 308 and 403 of this Act, or prior to taking of necessary implementing actions relating to all such requirements, such conditions as the Administrator determines are necessary to carry out the provisions of this Act."33 U.S.C. s 1342(a) (Supp. V 1975) (emphasis added). This provision gives EPA considerable flexibility in framing the permit to achieve a desired reduction in pollutant discharges. The permit may proscribe industry practices that aggravate the problem of point source pollution.[FN21]

> FN21. That Congress did not regard numeric effluent limitations as the only permissible limitation on a discharger is supported by s 302(a) of the Act, 33 U.S.C. s 1312(a) (Supp. V 1975):
> Whenever, in the judgment of the Administrator, discharges of pollutants from a point source or group of point sources, with the application of effluent limitations required under (s 301(b) of the Act), would interfere with the attainment or maintenance of that water quality in a specific portion of the navigable waters which shall assure protection of public water supplies, agricultural and industrial uses, and the protection and propagation of a balanced population of shellfish, fish and wildlife, and allow recreational activities in and on the water, effluent limitations (including alternative effluent control strategies) for such point source or sources shall be established which can reasonably be expected to contribute to the attainment or maintenance of such water quality.
> The emphasis has been added.

EPA's counsel caricatures the matter by stating that recognition of any such authority would give EPA the power "to instruct each individual farmer on his farming practices."Federal Appellants Memorandum on "Impossibility" at 12. Any limitation on a polluter forces him to modify his conduct and operations. For example, an air polluter may have a choice of installing scrubbers, burning different fuels or reducing output. Indeed, the authority to prescribe limits consistent with the best practicable technology may be tantamount to prescribing that technology. Of course, when alternative techniques are available, Congress intended to give the discharger as much flexibility as possible in choosing his mode of compliance. See, e. g., H.Rep.No.92-911, 92d Cong., 2d Sess. 107, reprinted in Legislative History at 794. We only indicate here that when numerical effluent limitations are infeasible, EPA may issue permits with conditions designed to reduce the level of effluent discharges to acceptable levels. This may well mean opting for a gross reduction in pollutant discharge rather than the fine-tuning suggested by numerical limitations. But this ambitious statute is not hospitable to the concept that the appropriate response to a difficult pollution problem is not to try at all.

It may be appropriate in certain circumstances for the EPA to require a permittee simply to monitor and report effluent levels; EPA manifestly has this authority.[FN22] Such permit conditions might be desirable where the full extent of the pollution problem is not known.

> FN22. FWPCA s 402(a)(3), (b)(2)(B), 33 U.S.C. s 1342(a)(3), (b)(2)(B) (Supp. V 1975). EPA concedes that it has this authority. Federal Appellants' Memorandum on "Impossibility" at 14.

C. General Permits

Finally, EPA argues that the number of permits involved in the absence of an exemption authority will simply overwhelm the Agency. Affidavits filed with the District Court indicate, for example, that the number of silviculture point sources may be over 300,000 and that there are approximately 100,000 separate storm sewer point sources.[FN23]

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

We are and must be sensitive to ***1381 **159** EPA's concerns of an intolerable permit load. But the District Court and the various parties have suggested devices to mitigate the burden to accommodate within a practical regulatory scheme Congress's clear mandate that all point sources have permits. All that is required is that EPA makes full use of its interpretational authority. The existence of a variety of options belies EPA's infeasibility arguments.

> FN23. Affidavit of William H. McCredie, Director, Industrial Forestry, of the NFPA; Affidavit of Walter G. Gilbert, Chief of the Municipal Operations Branch, Municipal Waste Water Systems Div., EPA Office of Air and Water Programs.

[5] Section 402 does not explicitly describe the necessary scope of a NPDES permit. The most significant requirement is that the permit be in compliance with limitation sections of the Act described above. As a result NRDC and the District Court have suggested the use of area or general permits. The Act allows such techniques. Area-wide regulation is one well-established means of coping with administrative exigency. An instance is area pricing for natural gas producers, which the Supreme Court upheld in Permian Basin Area Rate Cases, 390 U.S. 747, 88 S.Ct. 1344, 20 L.Ed.2d 312 (1968).[FN24] A more dramatic example is the administrative search warrant, which may be issued on an area basis despite the normal Fourth Amendment requirement of probable cause for searching specific premises. Camara v. Municipal Court, 387 U.S. 523, 87 S.Ct. 1727, 18 L.Ed.2d 930 (1967).

> FN24. In Permian Basin the Supreme Court observed:
> The Commission has asserted, and the history of producer regulation has confirmed, that the ultimate achievement of the Commission's regulatory purposes may easily depend upon the contrivance of more expeditious administrative methods. The Commission believes that the elements of such methods may be found in area proceedings."(C)onsiderations of feasibility and practicality are certainly germane" to the issues before us. . . . We cannot, in these circumstances, conclude that Congress has given authority inadequate to achieve with reasonable effectiveness the purposes for which it has acted.
> 390 U.S. at 777, 88 S.Ct. at 1365.

In response to the District Court's order, EPA promulgated regulations that make use of the general permit device.42 Fed.Reg. 6846-53 (Feb. 4, 1977). The general permit is addressed to a class of point source dischargers, subject to notice and opportunity for public hearing in the geographical area covered by the permit. Although we do not pass on the validity of the February, 1977, regulations, they serve to dilute an objection of wholesale infeasibility.[FN25]

> FN25. It is also of some, albeit limited, significance that the House Committee on Government Operations found EPA's administrative problems with applying the permit program to animal feedlots "grossly exaggerated." It was of the opinion that the Administrator did not have authority to exempt point sources from the NPDES program. H.Rep.No.93-1012, 93d Cong., 2d Sess. 15-30 (1974).

Our approach is not fairly subject to the criticism that it elevates form over substance that the end result will look very much like EPA's categorical exemption. It is the function of the courts to require agencies to comply with legislative intent when that intent is clear, and to leave it to the legislature to make adjustments when the result is counterproductive.[FN26] At the same time, where intent on an issue is unclear,***1382 **160** we are instructed to afford the administering agency the flexibility necessary to achieve the general objectives of the Act.Weinberger v. Bentex Pharmaceuticals, Inc., 412 U.S. 645, 653,93 S.Ct. 2448,37 L.Ed.2d 235 (1973); United States v. Southwestern Cable Co., 392 U.S. 157, 177-78, 88 S.Ct. 1994, 20 L.Ed.2d

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

1001 (1968); Permian Basin Area Rate Cases, 390 U.S. 747, 780, 88 S.Ct. 1344, 20 L.Ed.2d 312 (1968). These lines of authority conjoin in our approach. We insist, as the Act insists, that a permit is necessary; the Administrator has no authority to exempt point sources from the NPDES program. But we concede necessary flexibility in the shaping of the permits that is not inconsistent with the clear terms of the Act.

> FN26. The Supreme Court recently reiterated this instruction in Union Electric Co. v. EPA, 427 U.S. 246, 96 S.Ct. 2518, 49 L.Ed.2d 474 (1976). There the Court held that the EPA Administrator could not consider claims of technological or economic infeasibility when approving state implementation plans under the Clean Air Act Amendments of 1970, 42 U.S.C. ss 1857a-1857l (1970). Such claims were held only to be cognizable by the states in the plan design stage or by the Administrator when drawing up compliance orders. Justice Marshall, writing for the Court, emphasized that federal courts are not to ignore clear expressions of Congressional intent in order to accommodate claims of technological or economic infeasibility.
> Allowing such claims to be raised by appealing the Administrator's approval of an implementation plan . . . would frustrate congressional intent. It would permit a proposed plan to be struck down as infeasible before it is given a chance to work, even though Congress clearly contemplated that some plans would be infeasible when proposed. And it would permit the Administrator or a federal court to reject a State's legislative choices in regulating air pollution, even though Congress plainly left with the States, so long as the national standards were met, the power to determine which sources would be burdened by regulation and to what extent. Technology forcing is a concept somewhat new to our national experience and it necessarily entails certain risks. But Congress considered those risks in passing the 1970 Amendments and decided that the dangers posed by uncontrolled air pollution made them worth taking. Petitioner's theory would render that considered legislative judgment a nullity, and that is a result we refuse to reach.
> 427 U.S. at 268-69, 96 S.Ct. at 2531 (footnote omitted). See also Wilderness Society v. Morton, 156 U.S.App.D.C. 121, 171, 479 F.2d 842, 892 (1973), cert. denied, 411 U.S. 917, 93 S.Ct. 1550, 36 L.Ed.2d 309 (quoting United States v. City and County of San Francisco, 310 U.S. 16, 31-32, 60 S.Ct. 749, 84 L.Ed. 1050 (1940): " 'We cannot accept the contention that administrative rulings such as those relied on can thwart the plain purpose of a valid law.' ")

There is also a very practical difference between a general permit and an exemption. An exemption tends to become indefinite: the problem drops out of sight, into a pool of inertia, unlikely to be recalled in the absence of crisis or a strong political protagonist. In contrast, the general or area permit approach forces the Agency to focus on the problems of specific regions and requires that the problems of the region be reconsidered at least every five years, the maximum duration of a permit.[FN27]

> FN27.33 U.S.C. s 1342(a)(3), (b)(1)(B) (Supp. V 1975).

D. Other Interpretational Powers

[6] Many of the intervenor-appellants appear to argue that the District Court should be reversed because the categories exempted by EPA are nonpoint sources and are not, in fact, point sources.[FN28]We agree with the District Court "that the power to define point and nonpoint sources is vested in EPA and should be reviewed by

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

the court only after opportunity for full agency review and examination."396 F.Supp. at 1396. The only issue precisely confronted by all the parties and properly framed for our consideration is whether the Administrator has authority to exempt point sources from the NPDES program. We also think that we should, for similar reasons, not consider at this time the appropriate definition of "discharge of any pollutant" as used in s 402. The American Iron and Steel Institute as amicus curiae has pressed upon us the argument that the term "discharge" as used in s 402 was intended to encompass only "volitional flows" that add pollutants to navigable waters. Most forms of runoff, it is argued, do not involve volitional flows.

> FN28. This appears to be the position of the Colorado River Water Conservation District and the NFPA with respect to silvicultural activities, and NMPF, less obviously, with respect to small dairy farms. We would put in the same category EPA's contention that the exempt categories are best handled under the areawide waste treatment management planning process of s 208 of the FWPCA, 33 U.S.C. s 1288 (Supp. V 1975). By its terms that section is concerned with areawide waste treatment plans that identify and control "agriculturally and silviculturally related non-point sources of pollution."Id.s 1288(b)(2)(F).

[7] We assume that FWPCA, however tight in some respects, leaves some leeway to EPA in the interpretation of that statute, and in that regard affords the Agency some means to consider matters of feasibility. However, for reasons already noted, we do not consider these particular contentions as to interpretation on the merits.

III. CONCLUSION

[8] As the Supreme Court recently stated in a FWPCA case, "(t)he question . . .is**161 *1383 not what a court thinks is generally appropriate to the regulatory process, it is what Congress intended . . ."E. I. du Pont de Nemours & Co. v. Train, 430 U.S. 112, 138, 97 S.Ct. 965, 980, 51 L.Ed.2d 204 (1977). We find a plain Congressional intent to require permits in any situation of pollution from point sources. We also discern an intent to give EPA flexibility in the structure of the permits, in the form of general or area permits. We are aware that Congress hoped that more of the NPDES permit program would be administered by the states at this point.[FN29] But it also made provision for continuing EPA administration. Imagination conjoined with determination will likely give EPA a capability for practicable administration. If not, the remedy lies with Congress.

> FN29. See, e. g., 118 Cong.Rec. 10235 (1972) (Rep. Ichord) reprinted in Legislative History at 428.

So ordered.

MacKINNON, Circuit Judge, concurring:

I concur in the very sound and practical construction set forth in the foregoing opinion. Any person concerned with the actual application and enforcement of laws would necessarily be concerned by the application of the relevant legislation to all point sources in agriculture and particularly to irrigated agriculture. Concern would also lie in the congressional admission that present technology is inadequate to enable our citizens to meet the standards and deadlines the Act imposes; in passing the law, Congress was relying on the future "invention (of) new and imaginative developments that will allow us to meet the objectives of our bill."[FN1]In gambling parlance, Congress in enacting the law was "betting on the come." It is relying on our citizens in the near future to develop the complex technology to meet all the law's standards and objectives on time. The difficulty with that approach is that the hopes of Congress in this respect, like that of any gambler, might not be realized. The agency in this case, however, has shown that it takes a realistic view of both the situation and the

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

task of meeting the difficult requirements and objectives of the Act. I sincerely hope that the ability of the agency to issue section 402 permits including general area permits [FN2] will permit it to meet the present and future compliance problems posed by the Act in a practical way.

FN1. Comments of Senator Montoya, 117 Cong.Rec. 38808 (1971), quoted in court's opinion at 12, reprinted in Legislative History at 1278.

FN2. As an example, an area permit with appropriate conditions and modifications could issue for the agricultural point sources within the Grand River Irrigation District, or the watershed of the Roaring Fork River and tributaries, etc.

NRDC v. USEPA (9th Cir. 1992) 966 F.2d 1292

Natural Resources Defense Council, Inc. v. U.S. E.P.A. C.A.9,1992.

United States Court of Appeals,Ninth Circuit.
NATURAL RESOURCES DEFENSE COUNCIL, INC., Petitioner,
v.
UNITED STATES ENVIRONMENTAL PROTECTION AGENCY, Respondent,
Battery Council International, et al., Respondents-Intervenors.
Nos. 90-70671, 91-70200.

Argued and Submitted Oct. 9, 1991.
Decided June 4, 1992.

Environmental group sought review of Environmental Protection Agency's (EPA's) Clean Water Act storm water discharge rule. The Court of Appeals, Ferguson, Senior Circuit Judge, held that: (1) the EPA's failure to include deadlines for permit approval or denial and compliance consistent with Clean Water Act was arbitrary and capricious, although injunctive relief was not warranted; (2) EPA's definition of municipal separate storm sewer serving a population was not arbitrary and capricious; and (3) EPA rule excluding various types of light industry and construction sites of less than five acres from application of rule was arbitrary and capricious.

Petition for review granted in part and denied in part.

O'Scannlain, Circuit Judge, filed an opinion concurring in part and dissenting in part.

Daniel S. Goodman, U.S. Dept. of Justice, Washington, D.C., for respondent.

*1295 Petition for Review of a Rule Promulgated by the Environmental Protection Agency.

Before PREGERSON, FERGUSON, and O'SCANNLAIN, Circuit Judges.

FERGUSON, Senior Circuit Judge:
The Natural Resources Defense Council ("NRDC") challenges aspects of the Environmental Protection Agency's ("EPA") recent Clean Water Act storm water discharge rule.[FN1] NRDC argues that the deadlines contained in the rule and the scope of its coverage are unlawful under section 402(*l*), (p) of the Clean Water Act, 33 U.S.C. § 1342(*l*), (p). We grant partial relief.

FN1. National Pollutant Discharge Elimination System Permit Application Regulations for Storm Water Discharges, 55 Fed.Reg. 47,990 (1990) (to be codified at 40 C.F.R. § 122.26); National Pollutant Discharge Elimination System Permit Application Regulations for Storm Water Discharges; Application Deadline for Group Applications, 56 Fed.Reg. 12,098 (1991) (to be codified at 40 C.F.R. § 122.26(e)).

I. BACKGROUND

In 1972 Congress enacted significant amendments to the Clean Water Act ("CWA"),[FN2] 33 U.S.C. §§ 1251-1387 (1988), "to restore and maintain the chemical, physical, and biological integrity of the Nation's waters." 33 U.S.C. § 1251(a). One major focus of the CWA is the control of "point source" pollution. A "point source" is "any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel ... from which pollutants are or may be discharged." 33 U.S.C. § 1362(14). The CWA also established the National Pollutant Discharge Elimination System ("NPDES"), requiring permits for any discharge of pollutants from a point source pursuant to section 402 of the CWA, 33 U.S.C. § 1342. The CWA empowers EPA or an authorized state to conduct an NPDES permitting program. 33 U.S.C. § 1342(a)-(b). Under the program, as long as the permit issued contains conditions that implement the requirements of the CWA, the EPA may issue a permit for discharge of any pollutant. 33 U.S.C. § 1342(a)(1).

FN2. The Act is popularly known as the Clean Water Act or the Federal Water Pollution Control Act. 33 U.S.C. § 1251. For more back-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ground on the CWA, see *EPA v. State Water Resources Control Bd.*, 426 U.S. 200, 202-09, 96 S.Ct. 2022, 2023-26, 48 L.Ed.2d 578 (1976); *Sierra Club v. Union Oil of California*, 813 F.2d 1480, 1483 (9th Cir.1987), *vacated on other grounds*, 485 U.S. 931, 108 S.Ct. 1102, 99 L.Ed.2d 264 (1988); and *Natural Resources Defense Council v. Train*, 510 F.2d 692, 695-97 (D.C. Cir.1975).

This case involves runoff from diffuse sources that eventually passes through storm sewer systems and is thus subject to the NPDES permit program. *See* National Pollutant Discharge Elimination System Permit Application Regulations for Storm Water Discharges; Application Deadlines, 56 Fed.Reg. 56,548 (1991). One recent study concluded that pollution from such sources, including runoff from urban areas, construction sites, and agricultural land, is now a leading cause of water quality impairment. 55 Fed.Reg. at 47,991.[FN3]

FN3. The Nationwide Urban Runoff Program (NURP) conducted from 1978 through 1983 found that urban runoff from residential, commercial and industrial areas produces a quantity of suspended solids and chemical oxygen demand that is equal to or greater than that from secondary treatment sewage plants. 55 Fed.Reg. at 47,991. A significant number of samples tested exceeded water quality criteria for one or more pollutants. *Id.* at 47,992. Urban runoff is adversely affecting 39% to 59% of the harvest-limited shellfish beds in the waters off the East Coast, West Coast and in the Gulf of Mexico. 56 Fed.Reg. at 56,548.

A. Efforts to Regulate Storm Water Discharge.

Following the enactment of the CWA amendments in 1972, EPA promulgated NPDES permit regulations exempting a number of classes of point sources, including uncontaminated storm water discharge, on the basis of "administrative infeasibility," i.e., the extraordinary administrative burden imposed on EPA should it have to issue permits for possibly millions of point sources of runoff. *Natural Resources Defense Council v. Costle*, 568 F.2d 1369, 1372 & n. 5, 1377 (D.C.Cir.1977). NRDC ***1296** challenged the exemptions. Relying on the language of the statute, its legislative history and precedent, the D.C. Circuit held that the EPA Administrator did not have the authority to create categorical exemptions from regulation. *Id.* at 1379. However, the court acknowledged the agency's discretion to shape permits in ways "not inconsistent with the clear terms of the Act." *Id.* at 1382.

Following this litigation, EPA promulgated regulations covering storm water discharges in 1979, 1980 and 1984. 56 Fed.Reg. 56,548. NRDC challenged various aspects of these rules both at the administrative level as well as in the courts.

Recognizing both the environmental threat posed by storm water runoff[FN4] and EPA's problems in implementing regulations,[FN5] Congress passed the Water Quality Act of 1987[FN6] containing amendments to the CWA ("the 1987 amendments"), portions of which set up a new scheme for regulation of storm water runoff. Section 402(p), as amended, established deadlines by which certain storm water dischargers must apply for permits, the EPA or states must act on permits and dischargers must implement their permits. *See* Appendix A. The Act also set up a moratorium on permitting requirements for most storm water discharges, which ends on October 1, 1992. There are five exceptions that are required to obtain permits before that date:

FN4. *See* 132 Cong. Rec. 32,381 (1986).

FN5. Senator Stafford, speaking in favor of the conference report for the Water Quality Act, noted that "EPA should have developed this program long ago. Unfortunately, it did not. The conference substitute provides a short grace period during which EPA and the States generally may not require permits for municipal separate storm sewers." 132 Cong. Rec. 32,381 (1986). Senator Chafee stated "[t]he Agency has been unable to move forward with a [storm water discharge control] program, because the current law did not give enough guidance to the Agency. This provision provides

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

such guidance, and I expect EPA to move rapidly to implement this control program." 133 Cong. Rec. 1,264 (1987).

FN6. Pub.L. No. 100-4, 101 Stat. 7 (1987) (codified as amended in scattered sections of 33 U.S.C.).

(A) A discharge with respect to which a permit has been issued under this section before February 4, 1987.
(B) A discharge associated with industrial activity.
(C) A discharge from a municipal separate storm sewer system serving a population of 250,000 or more.
(D) A discharge from a municipal separate storm sewer system serving a population of 100,000 or more but less than 250,000.
(E) A discharge for which the Administrator or the State, ... determines that the storm water discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to the waters of the United States.

CWA § 402(p)(2); 33 U.S.C. § 1342(p)(2).

Section 402(p) also outlines an incremental or "phase-in" approach to issuance of storm water discharge permits. The purpose of this approach was to allow EPA and the states to focus their attention on the most serious problems first. 133 Cong.Rec. 991 (1987). Section 402(p) requires EPA to promulgate rules regulating permit application procedures in a staggered fashion.

Responding to the 1987 amendments requiring the EPA to issue permit application requirements for storm water discharges associated with industrial activities and large municipalities, the EPA issued final rules on November 16, 1990, almost two years after its deadline ("the November 1990 rule"). 55 Fed.Reg. at 47,990. EPA issued amended rules on March 21, 1991 ("the March 1991 rule"). 56 Fed.Reg. at 12,098. It is to portions of these rules that NRDC objects.

B. Jurisdiction.

We have jurisdiction pursuant to CWA § 509(b)(1), 33 U.S.C. § 1369(b)(1). Section 509(b)(1) describes six types of actions by the EPA administrator that are subject to review in the court of appeals. Although the parties do not specify the section upon which they rely, § 509(b)(1)(F), 33 U.S.C. § 1369(b)(1)(F) allows the court to review ***1297** the issuance or denial of a permit under CWA § 402, 33 U.S.C. § 1342. The court also has the power to review rules that regulate the underlying permit procedures. *NRDC v. EPA,* 656 F.2d 768, 775 (D.C.Cir.1981); *cf. E.I. DuPont de Nemours & Co. v. Train,* 430 U.S. 112, 136, 97 S.Ct. 965, 979, 51 L.Ed.2d 204 (1977). NRDC filed timely petitions for review of the final rules at issue here pursuant to CWA § 509(b)(1), 33 U.S.C. 1369(b)(1).

C. Standing.

Any "interested person" may seek review of designated actions of the EPA Administrator. 33 U.S.C. § 1369(b)(1). This court has held that the injury-in-fact rule for standing of *Sierra Club v. Morton,* 405 U.S. 727, 733, 92 S.Ct. 1361, 1365, 31 L.Ed.2d 636 (1972) covers the "interested person" language. *Trustees for Alaska v. EPA,* 749 F.2d 549, 554 (9th Cir.1984) (adopting the analysis in *Montgomery Environmental Coalition v. Costle,* 646 F.2d 568, 578 (D.C.Cir.1980)). A petitioner under *Sierra Club* must suffer adverse affects to her economic interests or "[a]esthetic and environmental well-being." *Sierra Club,* 405 U.S. at 734, 92 S.Ct. at 1366. Intervenors are various industry and trade groups subject to regulation under the rules at issue. NRDC claims, inter alia, that EPA has delayed unlawfully promulgation of storm water regulations and that its regulations, as published, inadequately control storm water contaminants. NRDC's allegations and the potential economic impact of the rules on the intervenors satisfy the broad standing requirement applicable here.

II. DISCUSSION

A. Standard of Review.

5 U.S.C. § 706(2)(A) (1988) authorizes the court to "set aside agency action ... found to be ... arbitrary, capri-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

cious, an abuse of discretion, or otherwise not in accordance with law." Under this standard a court must find a "rational connection between the facts found and the choice made." *Sierra Pacific Indus.*, 866 F.2d 1099, 1105 (9th Cir.1989) (citing *Motor Vehicle Mfrs. Ass'n v. State Farm Mut. Auto. Ins. Co.*, 463 U.S. 29, 43, 103 S.Ct. 2856, 2866, 77 L.Ed.2d 443 (1983)). The court must decide whether the agency considered the relevant factors and whether there has been a clear error of judgment. *Citizens to Preserve Overton Park, Inc. v. Volpe*, 401 U.S. 402, 416, 91 S.Ct. 814, 823, 28 L.Ed.2d 136 (1971).

On questions of statutory construction, courts must carry out the unambiguously expressed intent of Congress. If a statute is "silent or ambiguous with respect to the specific issue, the question for the court is whether the agency's answer is based on a permissible construction of the statute." *Chevron U.S.A. Inc. v. Natural Resources Defense Council Inc.*, 467 U.S. 837, 843, 104 S.Ct. 2778, 2782, 81 L.Ed.2d 694 (1984). Congress may leave an explicit gap, thus delegating legislative authority to an agency subject to the arbitrary and capricious standard. *Id.* at 843-44, 104 S.Ct. at 2781-82. If legislative delegation is implicit, courts must defer to an agency's statutory interpretation as long as it is reasonable. *Id.* at 844, 104 S.Ct. at 2782. This is because an agency has technical expertise as well as the authority to reconcile conflicting policies. *See id.* Nevertheless, questions of congressional intent that can be answered with "traditional tools of statutory construction" are still firmly within the province of the courts. *INS v. Cardoza-Fonseca*, 480 U.S. 421, 447-48, 107 S.Ct. 1207, 1221, 94 L.Ed.2d 434 (1987).

B. EPA's Extension of Statutory Deadlines.

1. *Background.*

NRDC challenges EPA's extension of certain statutory deadlines in the November 1990 and March 1991 rules. The statutory scheme calls for EPA to consider permit applications from the most serious sources of pollutants first: industrial dischargers and large municipal separate storm sewer systems ("large systems").[FN7] The statute required EPA to establish regulations***1298** for permit application requirements for these two groups by February 4, 1989; to receive applications for permits one year later, February 4, 1990; and to approve or deny the permits by February 4, 1991. Permittees may be given up to three years to comply with their permits. CWA § 402(p)(4)(A), 33 U.S.C. § 1342(p)(4)(A). Medium sized municipal separate storm sewer systems ("medium systems") (those serving a population of 100,000 or more but less than 250,000) are on a similar schedule, except that the deadlines are two years later. CWA § 402(p)(4)(B), 33 U.S.C. § 1342(p)(4)(B). The temporary statutory exemption for all storm water sources expires on October 1, 1992. CWA § 402(p)(1), 33 U.S.C. § 1342(p)(1). EPA states that discharges from municipal separate storm sewer systems serving a population of under 100,000 are to be regulated after that date.

FN7. Large municipal systems are those serving a population of 250,000 or more. § 402(p)(2)(C).

The EPA rules at issue changed the statutory deadlines as follows:

Deadlines pursuant to CWA § 402(p)[8]			**EPA Deadlines**[9]
Discharge type	Deadline to issue rules	Deadline for application and approval of permits	Application deadlines

EPA Application Deadlines for "Industrial Activity" Dischargers

Individual	*Group*
due 11/18/91	Part 1-9/30/91; Part 2-10/1/92

FN8. Since NRDC filed this action, Congress has passed certain legislation affecting some of the deadlines at issue. Congress ratified the date of September 30, 1991 for part 1 of group applications for industrial dischargers. *See* Dire Emergency Supplemental Appropriations Act of 1991, Pub.L. No. 102-27, § 307, 105 Stat. 130, 152 (1991).

Section 1068 of the Intermodal Surface Transportation Efficiency Act of 1991 ("ISTEA") clarifies the deadlines for storm water discharges associated with industrial activity from facilities owned or operated by a municipality. Pub.L. No. 102-240, § 1068, 105 Stat.1914, 2007 (1991). ISTEA deadlines are being reviewed in a separate case. Nothing in this opinion should be viewed as requiring EPA to comply with deadlines that have been altered or superseded by the ISTEA.

FN9. *See*55 Fed.Reg. at 48,071-722 (to be codified at 40 C.F.R. § 122.26(e)); 67 Fed.Reg. at 12,100 (to be codified at 40 C.F.R. § 122.26(e)(2)(iii)). EPA changed certain of these deadlines after this case was submitted. These changes are the subject of a separate case.

The EPA rules at issue set no date for final approval or denial of applications from municipal or industrial dischargers, nor for compliance by these regulated entities. *See*55 Fed.Reg. at 48,072.

As the chart illustrates, EPA made other elaborations on the statutory scheme in addition to extending the deadlines. Medium and large municipal systems and industrial dischargers are now subject to a two-part application process. 55 Fed.Reg. at 48,072. The November 1990 rules allow industrial dischargers to apply for either individual or group permits. *Id.* at 48,066-***1299** 67. The March 1991 rules further extended the deadline for part 1 of the group industrial discharger permits to September 30, 1991.[FN10] 56 Fed.Reg. at 12,098. A final rule published on April 2, 1992 extended the deadline for the part 2 group application for industrial dischargers from May 18, 1992 to October 1, 1992. 57 Fed.Reg. at 11,394. The EPA rules at issue contain neither deadlines for final EPA or state approval of permits nor deadlines for compliance with the permit terms.

FN10. NRDC initially claimed that this extension was unlawful because it was granted without proper notice and comment. However, Congress approved this extended deadline in a supplemental appropriations bill. Dire Emer-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

> gency Supplemental Appropriations Act of 1991, Pub.L. No. 102-27 § 307, 105 Stat. 130, 152 (1991). This Act moots the procedural and substantive challenge to this extended deadline.

Seeking to compel the EPA to conform to the statutory scheme, NRDC asks this court:

a) to declare unlawful EPA's failure to issue certain of the storm water permitting regulations by February 4, 1989 and EPA's extension of certain statutory deadlines;

b) to enjoin EPA from granting future extensions of the deadlines;

c) to compel EPA to include deadlines for permit approval or denial and permit compliance consistent with the statute; and

d) to compel EPA to require that medium and small municipal systems meet the same deadlines as large systems.

2. *Discussion.*

a. Request for Declaratory Relief.

NRDC asks the court to (1) declare unlawful EPA's failure to issue storm water permitting regulations by February 4, 1989; and (2) declare unlawful EPA's extension of deadlines for submission of permit applications by large and medium systems and individual industrial dischargers.

[1] A request for declaratory relief in a challenge to an agency action is ripe for review if the action at issue is final and the questions involved are legal ones. *Public Util. Dist. No. 1 v. Bonneville Power Admin.*, 947 F.2d 386, 390 n. 1 (9th Cir.1991) (citations omitted), *cert. denied*,503 U.S. 1004, 112 S.Ct. 1759, 118 L.Ed.2d 422 (1992). Here, the agency regulations are final. *See*55 Fed.Reg. at 47,990,56 Fed.Reg. at 12,096. The question of whether the EPA is bound by the statutory scheme set by Congress is a legal one. The request for declaratory relief is therefore ripe for consideration by this court.

[2] The granting of declaratory relief "rests in the sound discretion of the [ ] court exercised in the public interest." 10A Charles A. Wright, Arthur R. Miller & Mary K. Kane, *Federal Practice & Civil Procedure* § 2759, at 645 (1983). The guiding principles are whether a judgment will clarify and settle the legal relations at issue and whether it will afford relief from the uncertainty and controversy giving rise to the proceedings. *McGraw-Edison Co. v. Preformed Line Products Co.*, 362 F.2d 339, 342 (9th Cir.) (citing Borchard, *Declaratory Judgments* 299 (2d ed. 1941)), *cert. denied*,385 U.S. 919, 87 S.Ct. 229, 17 L.Ed.2d 143 (1966). A court declaration delineates important rights and responsibilities and can be "a message not only to the parties but also to the public and has significant educational and lasting importance." *Bilbrey by Bilbrey v. Brown*, 738 F.2d 1462, 1471 (9th Cir.1984). Because of the importance of the interests and the principles at stake, we grant declaratory relief.

[3] EPA does not have the authority to ignore unambiguous deadlines set by Congress. *Delaney v. EPA*, 898 F.2d 687, 691 (9th Cir.), *cert. denied*,498 U.S. 998, 111 S.Ct. 556, 112 L.Ed.2d 563 (1990). In arguing against injunctive relief, EPA points to cases recognizing factors indicating that equitable relief may be inappropriate. *See, e.g., In re Barr Laboratories, Inc.*, 930 F.2d 72, 74 (D.C.Cir.) (agency's choice of priorities is an important factor in considering whether to grant equitable relief), *cert. denied*,502 U.S. 906, 112 S.Ct. 297, 116 L.Ed.2d 241 (1991); *Natural Resources Defense Council v. Train*, 510 F.2d 692, 712 (D.C.Cir.1975) (court may need to give ***1300** agency some leeway due to budgetary commitments or technological problems); *Environmental Defense Fund v. Thomas*, 627 F.Supp. 566, 569-70 (D.D.C.1986) (EPA's good faith is a factor). None of these factors militates against an award of declaratory relief. They do not grant an executive agency the authority to bypass explicit congressional deadlines. The deadlines are not aspirational-Congress set them and expected compliance. *See*132 Cong.Rec. 32,381-82 (remarks of Senator Stafford, commenting on EPA delay and the establishment of statutory deadlines as "outside dates.") This court must uphold adherence to the law, and cannot condone the failure of an execut-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ive agency to conform to express statutory requirements. For these reasons, we grant NRDC's request for declaratory relief. EPA's failure to abide by the statutory deadlines is unlawful.

b. Request for Injunction.

NRDC asks the Court to enjoin the EPA from further extensions for permit applications from municipal and industrial dischargers. Injunctions are an extraordinary remedy issued at a court's discretion when there is a compelling need. 11 Charles A. Wright & Arthur R. Miller, *Federal Practice & Procedure* § 2942, at 365, 368-69 (1973). We decline to enjoin the EPA on discretionary grounds.

[4] Injunctive relief could involve extraordinary supervision by this court. Injunctive relief may be inappropriate where it requires constant supervision. *Id.* at 376. At issue are deadlines for the three major categories of dischargers, each of which has a two-part application. The permitting process will go on for several years. While recognizing the importance of the interests involved, we nevertheless decline to engage in the active management of such a remedy.

[5] In this situation, we must operate on the assumption that an agency will follow the dictates of Congress and the court. As noted above, the EPA does not have the authority to predicate future rules or deadlines in disagreement with this opinion. *See Allegheny General Hosp. v. NLRB,* 608 F.2d 965, 970 (3rd Cir.1979). We presume that the EPA will duly perform its statutory duties. *See Upholstered Furniture Action Council v. California Bureau of Home Furnishing,* 442 F.Supp. 565, 568 (E.D.Cal.1977) (three judge court). Because we decline to take on potentially extensive supervision of the EPA, Congress may need to find other ways to ensure compliance if the agency is recalcitrant.

c. Deadlines for Permit Approval and Compliance.

NRDC requests that the court compel EPA to revise the rules to include deadlines for permit approval or denial and permit compliance consistent with the statute. Section 402(p)(4)(A) calls for the EPA to issue or deny permits for industrial and large municipalities by February 4, 1991, which is one year after the applications are submitted, and states that "[a]ny such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of the issuance of such permit." CWA § 402(p)(4)(A), 33 U.S.C. § 1342(p)(4)(A). The statute sets out a similar schedule for medium municipalities, except that the deadlines are two years later. CWA § 402(p)(4)(B), 33 U.S.C. § 1342(p)(4)(B).

[6] The regulations promulgated by the EPA contain neither final approval deadlines nor compliance deadlines for industrial dischargers or medium and large municipalities. 55 Fed.Reg. at 48,072. By failing to regulate final approval and compliance, EPA has omitted a key component of the statutory scheme. To ensure adherence to the statutory time frame, especially in the face of deadlines already missed, the regulated community must be informed of these deadlines. EPA's failure to include these important deadlines is an arbitrary and capricious exercise of its responsibility to issue regulations pursuant to the statute.

We see no need for additional delay while supplemental regulations are issued. Given the extraordinary delays already encountered, EPA must avoid further delay. ***1301** The regulations should inform the regulated community of the statute's outside dates for compliance.FN11 *See* CWA § 402(p)(4)(A)-(B), 33 U.S.C. § 1342(p)(4)(A)-(B).

> FN11. In addition, pursuant to the statute, compliance deadlines applicable to each facility shall be contained in its permit.

d. Timeline for Small and Medium Systems.

[7] The parties disagree on when small systems (those serving a population of less than 100,000) should be regulated. As noted above, the temporary statutory exemption for all storm water sources expires on October 1, 1992. The statute requires EPA to establish a comprehensive program to regulate point sources subject to the moratorium, such as small municipalities, by that date.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

CWA § 401(p)(1), (6), 33 U.S.C. § 1342(p)(1), (6).

Pointing to a perceived statutory gap, NRDC argues that small systems should be subject to the same permitting schedule applicable to medium systems, to assure that they are regulated when the permitting moratorium ends on October 1, 1992. However, the plain language of the statute prohibits this. Section 402(p)(1) forbids requiring a permit for entities not listed as exceptions (such as small municipalities) before October 1, 1992. Yet the deadline for part 1 of the application for medium systems is currently May 18, 1992. 55 Fed.Reg. at 48,072.

Even if NRDC is correct that EPA is not proceeding so that regulations will be in place on October 1, 1992, we cannot ignore the plain language of the statute by adopting NRDC's solution. The CWA does not require regulation of such systems prior to expiration of the moratorium. We therefore reject NRDC's proposal that small systems be put on the same schedule as medium ones.

[8] NRDC asks the court to put the medium systems on the same schedule as the large systems, in order to achieve closer compliance with the timeline set out in § 402(p)(4)(B). However, EPA's current schedule for medium systems, although delayed, is still within the statutory scheme in its relation to the schedule for large systems. That is, Congress placed the medium systems on a staggered permitting schedule to start two years after the large systems and industrial users. The EPA schedule now has medium municipal system applications due six months after the applications for the large municipal systems. 55 Fed.Reg. at 48,072. For this reason, the current deadline for medium municipalities does not appear to be unreasonable despite the unlawful delay.

C. Exclusion of Certain Sources from Regulation.

1. *Definition of "Municipal Separate Storm Sewer System."*

Section 402(p) refers to "municipal separate storm sewer system[s] serving a population" of a specified size. CWA § 402(p)(2)(C), (D), 33 U.S.C. § 1342(p)(2)(C), (D). NRDC contends that EPA's definition of this term violates the plain language of the statute, fails to take into account the statutory definition of the word "municipality" and is arbitrary and capricious because the agency considered improper factors when it defined the term. All of this, according to NRDC, results in an impermissible narrowing of the municipalities covered by the first two rounds of permitting.

The 1987 amendments to the CWA did not contain definitions of "municipal" or "separate storm sewer system," but the CWA amendments enacted in 1972 defined "municipality" as follows:
[e]xcept as otherwise specifically provided, when used in this chapter: .... (4) The term "municipality" means a city, town, borough, county, parish, district, association, or other public body created by or pursuant to State law and having jurisdiction over disposal of sewage, industrial wastes, or other wastes, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved***1302** management agency under section 1288 of this title [33 U.S.C. § 1288].

33 U.S.C. § 1362.

In the November 1990 regulations, the EPA defined "municipal separate storm sewer" as: "a conveyance or system of conveyances ... [o]wned or operated by a State, city, town, borough, county, parish, district, association or other public body...."55 Fed.Reg. at 48,065 (to be codified at 40 C.F.R. § 122.26(b)(8)). This definition echoes the language of 33 U.S.C. § 1362(4). However, when defining large and medium municipal separate storm sewer *systems serving a population* of a specified size, EPA brought in other factors. 55 Fed.Reg. at 48,064 (to be codified at 40 C.F.R. § 122.26(b)(4), (7)). EPA defines medium and large separate storm sewer systems using two main categories:

1) separate storm sewer systems located in an incorporated place with the requisite population, and

2) separate storm sewer systems located in unincorporated, urbanized portions of counties containing the requisite population (as listed in Appendices H and I to the rule), excluding those municipal separate sewers

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

located in incorporated places, townships or towns within such counties.[FN12] 55 Fed.Reg. at 48,064. NRDC opposes this definition for municipal separate storm sewer systems for the reasons explained below.

> FN12. The rule also permits the Administrator to include certain other systems as part of a medium or large system due to the physical interconnections between the systems, their locations, or certain other factors. *See*40 C.F.R. § 122.26(b)(4)(iii), (iv) and (b)(7)(iii), (iv).

First, NRDC argues that according to the definitional section cited above and principles of statutory construction, general definitions apply wherever the defined term appears elsewhere in the law. *See*33 U.S.C. § 1362 ("[e]xcept as otherwise specifically provided" the definitions apply throughout the act); *Sierra Club v. Clark,* 755 F.2d 608, 613 (8th Cir.1985). NRDC argues that the scope of the statutory definition of "municipality" in 33 U.S.C. § 1362(4) and the scope of the phrase "municipal separate storm sewer system serving a population" are the same. NRDC thus proposes that the correct definition is a system of conveyances owned or operated by the full range of entities described at 33 U.S.C. § 1362(4), (cities, towns, etc.) with populations within the ranges designated at § 402(p)(2), i.e., 250,000 or more for large systems and between 100,000 and 250,000 for medium systems.

However, we do not believe that the entire phrase used in the act, "municipal separate storm sewer system serving a population of [a specified size]" can be equated with the term "municipality" in the manner that NRDC proposes. The act contains no definition of either "system" or "serving a population." The word "system" is particularly ambiguous in the context of storm sewers.[FN13] We therefore agree with EPA that there is no single, plain meaning for the disputed words.

> FN13. Storm sewers located within the boundaries of a city might be part of a state highway system, a flood control district, or a system operated by the state or county. *See*55 Fed.Reg. at 48,041.

Because the term is ambiguous, we must look first to whether Congress addressed the issue in another way. *See Abourezk v. Reagan,* 785 F.2d 1043, 1053 (D.C.Cir.1986) (" [i]f the court finds that Congress had a specific intent ..., the court stops there and enforces that intent regardless of the agency's interpretation") (citing *Chevron U.S.A. Inc. v. Natural Resources Defense Council Inc.,* 467 U.S. 837, 842-43 & n. 9, 104 S.Ct. 2778, 2781 & n. 9, 81 L.Ed.2d 694 (1984)), *aff'd by an equally divided court,*484 U.S. 1, 108 S.Ct. 252, 98 L.Ed.2d 1 (1987). The legislative history is not illuminating. Although it explains that a purpose of the permitting scheme was to attack the most serious sources of discharge first,[FN14] this general goal is not helpful in discerning the specific meaning of "municipal separate storm sewer system serving a population." Without clear guidance from Congress, we turn to the agency's justifications***1303** for its choices in the face of NRDC's objections.

> FN14. *See, e.g.,*133 Cong. Rec. 991 (1987) (statement of Rep. Stangeland).

NRDC claims that EPA's definition is arbitrary and capricious because EPA considered improper factors, including its own work load, the incorporation status of municipalities, and urban density. "[A]n agency rule would be arbitrary and capricious if the agency has relied on factors which Congress has not intended it to consider, entirely failed to consider an important aspect of the problem, offered an explanation for its decision that runs counter to the evidence before the agency, or is so implausible that it could not be ascribed to a difference in view or the product of agency expertise." *Motor Vehicle Mfrs. Ass'n v. State Farm Mut. Auto Ins.,* 463 U.S. 29, 43, 103 S.Ct. 2856, 2866, 77 L.Ed.2d 443 (1983).

EPA's final definition took into account many issues and concerns of the regulated community. *See*55 Fed.Reg. at 48,039. EPA considered eight different options for defining large and medium municipal separate storm sewer systems. 55 Fed.Reg. at 48,038-43. EPA considered focusing on ownership or operation of a system by an incorporated place, but found that this approach did not take into account systems operated by

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

flood control districts, state transportation systems, or concerns relating to watershed management. It instead fashioned a multi-faceted approach. This choice of approach is not unreasonable.

NRDC challenges EPA's consideration of incorporation as a factor. It claims that limiting regulation to incorporated places of the appropriate size excludes portions of 378 counties that contain over 100,000 people. NRDC essentially contends that because counties are a type of municipality, storm water conveyances in all counties with populations over 100,000 should come within the definition of either medium or large municipal separate storm sewer systems. We have already rejected NRDC's claim that the definition of regulated "systems" must include conveyances in all "municipalities."

EPA's use of incorporation as a factor is not arbitrary and capricious or inconsistent with the statute. The agency proceeded on the reasonable assumption that cities possess the police powers needed effectively to control land use within their borders. *See*55 Fed.Reg. at 48,039, 48,043. The first major category within the definition of regulated "systems," municipal separate storm sewers located within incorporated places having the requisite population, is reasonable.

NRDC questions EPA's second major category, which covers storm sewers located in unincorporated urbanized areas of counties with the designated population, but excludes conveyances located in incorporated places with populations under 100,000 within those counties. The exclusion, however, has a legitimate statutory basis. The statute prohibits EPA from requiring permits for systems serving under 100,000 persons prior to October 1, 1992. CWA § 402(p)(1), 33 U.S.C. § 1342(p)(1). EPA reasonably concluded that conveyances within small incorporated places should be considered parts of small systems limited to those incorporated places, rather than parts of larger systems serving whole counties. EPA's definition attempts to capture population centers of over 100,000 (by including urbanized, unincorporated areas) without violating the congressional stricture against regulation of areas with populations under 100,000 (thus excluding incorporated areas of less than 100,000 within a county).

In arriving at its definition of "municipal separate storm sewer systems serving" a designated population, EPA investigated numerous options and considered comments from a range of viewpoints. We find "a rational connection between the facts found and the choices made." *Motor Vehicle Mfrs. Ass'n,* 463 U.S. at 43, 103 S.Ct. at 2866.

NRDC objects to EPA's use of 1980 census data and EPA's definition of urban density. While it appears that NRDC has solid arguments as to why it would be preferable to use 1990 census figures and adopt its method of determining urban density, our role is not to determine whether EPA has chosen the best among all possible***1304** methods. We can only determine if its choices are rational. EPA chose the 1980 census data because it was the most widely available decennial census data at the time of rule formulation and promulgation. Neither this choice nor its use of the Census Bureau's definition of urbanized area is arbitrary and capricious.

EPA took agency work load into account in arriving at its definition. 55 Fed.Reg. at 48,039. NRDC objects on the basis that Congress considered the issue of work load when it developed the "phase-in" approach and allowed permit applications on a system- or jurisdiction-wide basis. However, this broad congressional scheme does not prohibit further consideration of EPA's work load as one among many factors in its attempt to fashion a workable program.

[9] In summary, NRDC's argument that the phrase "municipal separate storm sewer system serving a population" has the plain meaning NRDC proposes is not persuasive. Although EPA's definition in the face of the statute's ambiguity is complex, if not convoluted, it is not arbitrary and capricious, and we therefore reject NRDC's request that the definition be declared invalid.

2. *EPA Exemption for Light Industry.*

[10] NRDC challenges the portion of the EPA rule excluding various types of "light industry" from the definition of "discharge associated with industrial activity."

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Under CWA § 402(p)(2)(B), a "discharge associated with industrial activity" is an exception to the permit moratorium. In the November rule, EPA modified the statutory scheme by drawing distinctions among light and heavy industry and considering actual exposure to industrial materials. Although the statute does not define "associated with industrial activity," the EPA definition excludes industries it considers more comparable to retail, commercial or service industries. The excluded categories are manufacturers of pharmaceuticals, paints, varnishes, lacquers, enamels, machinery, computers, electrical equipment, transportation equipment, glass products, fabrics, furniture, paper board, food processors, printers, jewelry, toys and tobacco products. 55 Fed.Reg. at 48,008. These types of facilities need apply for permits only if certain work areas or actual materials are exposed to storm water. *Id.* EPA justifies these exemptions on the assumption that most of the activity at these types of manufacturers takes place indoors, and that emissions from stacks, use of unhoused manufacturing equipment, outside material storage or disposal, and generation of large amounts of dust and particles will all be minimal. 55 Fed.Reg. at 48,008.

Thus, EPA considers actual exposure to certain materials or stormwater for the light industry categories, but does not consider actual exposure for the other industrial categories. After careful review of the statutory language and the record, we conclude that this distinction is impermissible.

We note that the language "discharges associated with industrial activity" is very broad. The operative word is "associated." It is not necessary that storm water be contaminated or come into direct contact with pollutants; only association with any type of industrial activity is necessary.

There is a brief discussion of the issue in the legislative history: "[a] discharge is associated with industrial activity if it is directly related to manufacturing, processing or raw materials storage areas at an industrial plant. Discharges which do not meet this definition include those discharges associated with parking lots and administrative and employee buildings." 133 Cong.Rec. 985 (1987); *see also*132 Cong.Rec. 31,968 (1986) (same). EPA argues that the words "directly related" indicate Congress's intent to require permits for only those materials that come in contact with industrial materials. *See*55 Fed.Reg. at 48,007. However, the examples given-parking lots and administrative buildings-indicate that the intent was to exclude only those facilities or parts of a facility that are completely non-industrial.

EPA's definition follows the language quoted above: "Storm water discharge associated with industrial activity means the ***1305** discharge from any conveyance which is used for collecting and conveying stormwater and which is directly related to manufacturing, processing or raw materials storage areas at an industrial plant." 40 C.F.R. § 122.26(b)(14). EPA applies this definition differently depending on type of industry. EPA bases its regulation of industrial activity on Standard Industrial Classification ("SIC") categories. For most of the industrial SIC categories (identified at 40 C.F.R. § 122.26(b)(i-x)), the EPA definition includes all stormwater discharges from plant yards, access roads and rail lines, material handling sites, storage and disposal sites, shipping and receiving areas, and manufacturing buildings. 40 C.F.R. § 122.26(b)(14). However, for the "light industry" categories identified in 40 C.F.R. § 122.26(b)(14)(xi), stormwater must be actually exposed to raw materials, by-products, waste, etc., before permitting is required.

EPA justifies this difference on the ground that for "light industry," industrial activity will take place indoors, and that generation of large amounts of particles and emissions will be minimal. There is nothing in the record submitted to the Court however, which supports this assumption. *See, e.g.,*55 Fed.Reg. at 48,008. Without supportable facts, we are unable to rely on our usual assumption that the EPA has rationally exercised the duties delegated to it by Congress. To exempt these industries from the normal permitting process based on an unsubstantiated assumption about the this group of facilities is arbitrary and capricious.

In addition, by designating these light industries as a group that need only apply for permits if actual exposure occurs, EPA impermissibly alters the statutory

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

scheme. The statute did set up a similar approach for oil, gas, and mining industries. However, no other classes of industrial activities are subject to the more lenient "actual exposure" test. To require actual exposure entirely shifts the burden in the permitting scheme. Most industrial facilities will have to apply for permits and show the EPA or state that they are in compliance. Light industries will be relieved from applying for permits unless actual exposure occurs. The permitting scheme then will work only if these facilities self-report, or the EPA searches out the sources and shows that exposure is occurring. We do not know the likelihood of either self-reporting or EPA inspection and monitoring of light industries, and the regulations appear to contemplate neither for these industries. For this reason, the proposed regulation is also arbitrary and capricious.

In conclusion, we hold that the rule for light industries is arbitrary and capricious, vacate the rule, and remand for further proceedings.

3. *Exclusion of Construction Sites of Less than Five Acres.*

[11] NRDC challenges the exemption for construction sites of less than five acres. EPA concedes that the construction industry should be subject to storm water permitting because at a high level of intensity, construction is equivalent to other regulated industrial activities. 55 Fed.Reg. at 48,033. Construction sites can pollute with soil sediments, phosphorus, nitrogen, nutrients from fertilizers, pesticides, petroleum products, construction chemicals and solid wastes. *Id.* EPA states that such substances can be toxic to aquatic organisms, and affect water used for drinking and recreation. *Id.*

Following its characterization of construction sites as suitable for regulation, EPA defined its task as determining "an acreage limit [ ] appropriate for identifying sites that amount are (sic) to industrial activity." 55 Fed.Reg. at 48,036. EPA originally proposed regulations that exempted operations that disturb less than one acre of land and are not part of a common plan of development or sale. 55 Fed.Reg. at 48,035-36. In response to comments by the regulated community about the administrative burden presented by the regulation, EPA increased the exemption to five acres. 55 Fed.Reg. at 48,036. EPA also noted that larger sites will involve heavier equipment for removing vegetation and bedrock than smaller sites. *Id.* at 48,036.

***1306** We find that EPA's rationale for increasing the limit from one to five acres inadequate and therefore arbitrary and capricious. EPA cites no information to support its perception that construction activities on less than five acres are non-industrial in nature.

[12] EPA also claims agency power, inherent in statutory schemes, to make categorical exemptions when the result is *de minimis*. *Alabama Power Co. v. Costle*, 636 F.2d 323, 360 (D.C.Cir.1979). However, if construction activity is industrial in nature, and EPA concedes that it is, EPA is not free to create exemptions from permitting requirements for such activity. *See Natural Resources Defense Council, Inc. v. Costle*, 568 F.2d 1369, 1377 (D.C.Cir.1977) (once Congress has delineated an area that requires permits, EPA is not free to create exemptions).

Further, we find the *de minimis* principle inapplicable here. The *de minimis* exemption is only available where a regulation would "yield a gain of trivial or no value." *Alabama Power Co., supra*, at 361. Because of the lack of data, we cannot know whether exempting sites of less than five acres will indeed have only a *de minimis* effect.

The *de minimis* concept is based on the principle that the law does not concern itself with trifling matters. *Id.* at 360. We question its applicability in a situation such as this where the gains from application of the statute are being weighed against administrative burdens to the regulated community. *See id.* at 360-361 (implied authority to make cost-benefit decisions must derive from statute, and not general *de minimis* doctrine).

Further, EPA's claim that the five-acre exemption is *de minimis* is contradicted by the admission that even small construction sites can have a significant impact on local water quality. The EPA acknowledges that "[o]ver a

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

short period of time, construction sites can contribute more sediment to streams than was previously deposited over several decades." 55 Fed.Reg. at 48,033. Without data supporting the expanded exemption, we owe no deference to EPA's line-drawing. We thus hold that EPA's choice of a five-acre limit is arbitrary and capricious, invalidate that portion of the rule exempting construction sites of five acres or less from permitting requirements, and remand for further proceedings.

4. *Exemption for oil and gas activities.*

The 1987 amendments created an exemption from the permit requirement for uncontaminated runoff from mining, oil and gas facilities. *See* Appendix, CWA § 402(*l*)(2), 33 U.S.C. §§ 1342(*l*)(2). Section 402(*l*)(2) states that a permit is not required for discharges of storm water runoff from mining, oil or gas operations composed entirely of flows from conveyance systems used for collecting precipitation runoff and "which are not contaminated by contact with, or do not come into contact with any overburden, raw material, intermediate products, finished product, byproduct, or waste products". NRDC claims that the November 1990 rule sets up an impermissible standard for determining contamination at oil and gas facilities. The relevant portion of the rule states that at these facilities, an operator is not required to submit a permit application unless the facility has had a discharge of a reportable quantity FN15 since November 1987, or contributes to a violation of a water quality standard. 55 Fed.Reg. 48,067 (to be codified at 40 C.F.R. § 122.26(c)(1)(iii)). A facility which has had a release of oil or a hazardous substance in excess of RQs since ***1307** 1987 must submit a permit application. *Id.*; 55 Fed.Reg. at 48,029-30.

> FN15. "Reportable Quantities" (RQs) are not effluent guidelines setting up permissible limits for pollutants. Rather, they are quantities the discharge of which "may be harmful to the public health or welfare of the United States." CWA § 311(b)(4), 33 U.S.C. § 1321(b)(4). EPA has established RQs for a large number of substances, pursuant to both CWA section 311, 33 U.S.C. § 1321, and the Comprehensive Environmental Response, Compensation and Liability Act ("CERCLA") section 102, 42 U.S.C. § 9602. *See*40 C.F.R. Parts 110, 117, 302. The operator of any vessel or facility which releases the RQ of any substance must immediately notify the National Response Center. *See, e.g.*,40 C.F.R. § 110.10.

NRDC claims that oil and gas operations should be subject to the stricter standards which apply to mining operations.[FN16] It also objects to EPA's use of RQs as the only test for contamination of runoff from oil and gas storm water dischargers, claiming it is inconsistent with the legislative history. We conclude that the legislative history does not support NRDC's position.

> FN16. Operators of mines must submit permit applications whenever storm water discharges come into contact with overburden, waste products, etc. 40 C.F.R. § 122.26(c)(1)(iv).

The conference report states:

[P]ermits are not required where stormwater runoff is diverted around mining operations or oil and gas operations and does not come in contact with overburden, raw material, product, or process wastes. In addition, where stormwater runoff is not contaminated by contact with such materials, *as determined by the administrator,* permits are also not required. With respect to oil or grease or hazardous substances, the determination of whether stormwater is "contaminated by contact with" such materials, *as established by the Administrator,* shall take into consideration whether these materials are present in such stormwater runoff in excess of reportable quantities under section 311 of the Clean Water Act ..., or in the case of mining operations, above natural background levels.

H.R.Rep. No. 1004, 99th Cong., 2d Sess., at 151 (emphasis added).

[13] Thus, the EPA Administrator has discretion to determine whether or not storm water runoff at an oil, gas or mining operation is contaminated with two types of materials: (1) overburden, raw material, product, or process wastes and (2) oil, grease or hazardous substances.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

The report sets out factors for the Administrator to consider in determining contamination for the latter group of pollutants.

NRDC first claims that because section 402(*l*)(2) treats oil, gas and mining together, the EPA rule must do the same. NRDC's second objection is based on its interpretation of the language in the conference report. Because the conference report lists RQs as only one factor to be taken into consideration, NRDC insists EPA cannot make it the only factor to measure contamination for oil and gas facilities.

Both of these arguments must fail in light of the conference report, which gives the Administrator discretion to determine when contamination has occurred with respect to the substances listed in the statute, i.e., overburden, raw materials, waste products, etc. *See* CWA § 402(*l*)(2). The conference report states that the Administrator shall take certain factors into account, but the report is clear that the determination of whether storm water is contaminated is within the Administrator's discretion.

NRDC argues that the remarks of certain congressmen during congressional debate show that the mining, oil, and gas exemptions were to apply only if the discharges were entirely free of contaminants. We find these examples less persuasive than the clear language of the conference report. Moreover, in light of the discretion granted the Administrator in the conference report, we cannot say that the rule as promulgated is an arbitrary and capricious exercise of that discretion.

NRDC also contends that Congress intended that EPA consider reportable quantities only in determining if a discharge is contaminated with oil, grease, or hazardous substances. Other pollutants, according to NRDC, must be found to contaminate the discharge if they exceed background levels.

EPA did not, in fact, limit itself to reportable quantities in determining which oil or gas facilities must apply for a permit. The rule requires a permit for any facility which "[c]ontributes to a violation of a water quality standard." 40 C.F.R. § 122.26(c)(1)(iii)(C). This requirement addresses contamination with substances other than oil and hazardous substances. We find no support in the statute or the legislative history for NRDC's claim that, with respect***1308** to these substances, levels above background must be considered "contamination." The conference report quoted above requires consideration of background levels of any pollutant only with respect to mining operations.

D. Lack of Controls for Municipal Storm Water Discharge.

[14] NRDC contends that EPA has failed to establish substantive controls for municipal storm water discharges as required by the 1987 amendments. Because Congress gave the administrator discretion to determine what controls are necessary, NRDC's argument fails.

Prior to 1987, municipal storm water dischargers were subject to the same substantive control requirements as industrial and other types of storm water. In the 1987 amendments, Congress retained the existing, stricter controls for industrial storm water dischargers but prescribed new controls for municipal storm water discharge. CWA § 402(p)(3)(A), (B), 33 U.S.C. § 1342(p)(3)(A)-(B). The Act states that permits for discharges from municipal storm sewers:

(i) may be issued on a system- or jurisdiction-wide basis;

(ii) shall include a requirement to effectively prohibit non-storm water discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, *and such other provisions as the Administrator or the State determines appropriate for the control of such pollutants.*

Section 402(p)(3)(B), 33 U.S.C. § 1342(p)(3)(B) (emphasis added).

NRDC charges that the EPA regulations accomplish neither of the goals above, i.e., they do not effectively

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

prohibit non-storm water discharges nor do they require the controls described in ¶ (iii), above. NRDC argues that Congress granted the moratorium precisely to give EPA the opportunity to develop new, substantive standards for storm water control of municipal sources and instead EPA wrote vague regulations containing no minimum criteria or performance standards.FN17 However, the language in ¶ (iii), above, requires the Administrator or a state to design controls. Congress did not mandate a minimum standards approach or specify that EPA develop minimal performance requirements. NRDC also claims that the testing requirements are inadequate because there is only limited sampling at a limited number of sites. However, we must defer to EPA on matters such as this, where EPA has supplied a reasoned explanation of its choices. *See*55 Fed.Reg. at 48,049.

> FN17. The requirements for permit applications are set forth at 40 C.F.R. § 122.26(d). Individual NPDES permit writers (EPA or state officials) will decide whether application proposals are adequate. Applicants must submit information on source control methods and estimate the annual pollutant load reduction to be achieved from their proposed management programs, but they are not required to achieve any specified level of reduction of any pollutants. *See*55 Fed.Reg. at 48,070-71.

NRDC's argument that the EPA rule is inadequate cannot prevail in the face of the clear statutory language and our standard of review. Congress could have written a statute requiring stricter standards, and it did not. We therefore reject NRDC's argument that EPA's storm water control regulations fail to comply with the statute.FN18

> FN18. We base our holding on NRDC's challenge to the regulations at issue. Whether a specific permit complies with the requirements of section 402(p)(3)(B) would, of course, be another matter not controlled by this decision.

E. Lack of Notice and Comment on the Approval of Part 1 of Industrial Group Storm Water Applications.

NRDC objects to the lack of opportunity for notice and comment before EPA approval of part 1 of group applications for industrial dischargers. Each member of a proposed group must submit part 1 of the application.FN19 If EPA approves part 1, only ***1309** a small subset of the member facilities need submit part 2 of the application. 55 Fed.Reg. at 48,072 (to be codified at 40 C.F.R. 122.26(e)(2)). NRDC claims that because approval of part 1 waives the requirement of filing part 2 for most members of a group, EPA's decision on part 1 is equivalent to a "rule" requiring notice and comment from the public. The issue thus presented is whether EPA's decision on a part 1 group permit application is a "rule" as defined in 5 U.S.C. § 551(4) (1988) FN20 requiring public notice and opportunity to comment under 5 U.S.C. § 553 (1988), or is otherwise subject to the notice and comment requirement.

> FN19. Part I must include the identity of the group's participants, a description of the participants' industrial activities, a list of significant materials exposed to precipitation and the identity of the subset of the group's members who will submit quantitative data in part 2 of the application. 55 Fed.Reg. at 48,067.

> FN20. A rule means "the whole or part of an agency statement of general or particular applicability and future effect designed to implement, interpret, or prescribe law or policy or describing the organization, procedure, or practice requirements of an agency...." 5 U.S.C. § 551(4).

[15] NRDC argues that approval or disapproval of a part 1 application requires public comment because it has "general applicability" pursuant to 5 U.S.C. § 551(4) and because it will have a "palpable effect" in that it will relieve the majority of entities in the group from submitting data in part 2 of the application. NRDC cites *NRDC v. EPA,* 683 F.2d 752 (3rd Cir.1982) and *Council of Southern Mountains, Inc. v. Donovan,* 653 F.2d 573 (D.C.Cir.1981) in support of its argument. Both cases involved the postponement of regulations. *See NRDC,* 683 F.2d at 753-54, 764 (indefinite postponement of effective date of final amendments to regu-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

lations dealing with the discharge of toxic pollutants requires notice and comment because it has a substantial impact on the public and the industry); *Council of Southern Mountains, Inc.*, 653 F.2d at 575, 580 n. 28 (deferral of implementation of regulations requiring coal operators to supply life-saving equipment ordinarily would require notice and comment because it has a "palpable effect" upon the industry and the public).

We find these cases to be distinguishable. Both involve the postponement of rules of general applicability to an entire industry, or to a large class of pollutants. In contrast, although the part 1 application process will relieve some entities from the need to furnish further data, the decision is specific to a particular permit application and approval of a preliminary application will not implement, interpret or prescribe any general law or policy pursuant to 5 U.S.C. § 551(4). Rulemaking ordinarily involves "broad judgments, legislative in nature rather than the resolution of a particular dispute of facts." *Washington Utilities & Transportation Com'n v. Federal Communication Commission*, 513 F.2d 1142, 1160 (9th Cir.1975), *cert. denied*,423 U.S. 836, 96 S.Ct. 62, 46 L.Ed.2d 54 (1975). The decision to approve a part 1 permit application, although it may affect a large number of applicants, is nevertheless focused on a specific factual question: whether the application adequately designates a representative smaller group subject to the more extensive data gathering requirements in part 2 of the application. *See*55 Fed.Reg. at 48,028. Because the decision involves a discrete, factual issue, the better view is that it is neither a rule nor otherwise subject to the notice and comment requirement.

Because approval of a part 1 application is essentially a factual determination, we hold that EPA's group permit application process for industrial dischargers is not invalid by its failure to provide for notice and comment.

III. CONCLUSION

In summary, we grant and deny relief as follows:

1. *"Deadlines" issue.* We grant the request for declaratory relief and deny the request for injunctive relief. We deny the request to place small, medium and large municipalities on the same permitting schedule. We hold that EPA's failure to include deadlines for permit approval or denial and compliance consistent with CWA § 402(p) is arbitrary and capricious.

2. *Exclusion of Sources from Regulation.* We uphold the definition of "municipal***1310** separate storm sewers serving a population." We hold that the exemption for construction sites of less than five acres is arbitrary and capricious and remand for further proceedings. Based on the record before us, we vacate that portion of the rule regulating "light industry" and remand for further proceedings.

3. *Other issues.* We uphold the rule as to oil and gas operations and storm water control. We further hold that EPA approval of part 1 of a group application for an industrial discharger is not a rule requiring notice and comment from the public.

Petition for Review GRANTED IN PART and DENIED IN PART.

APPENDIX A

CWA § 402, 33 USCA § 1342

(*l*) Limitation on permit requirement

....

(2) Stormwater runoff from oil, gas, and mining operations

The Administrator shall not require a permit under this section, nor shall the Administrator directly or indirectly require any State to require a permit, for discharges of stormwater runoff from mining operations or oil and gas exploration, production, processing, or treatment operations or transmission facilities, composed entirely of flows which are from conveyances or systems of conveyances (including but not limited to pipes, conduits, ditches, and channels) used for collecting and conveying precipitation runoff and which are not con-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

taminated by contact with, or do not come into contact with, any overburden, raw material, intermediate products, finished product, byproduct, or waste products located on the site of such operations.

....

(p) Municipal and industrial stormwater discharges

(1) General rule

Prior to October 1, 1992, the Administrator or the State (in the case of a permit program approved under this section) shall not require a permit under this section for discharges composed entirely of stormwater.

(2) Exceptions

Paragraph (1) shall not apply with respect to the following stormwater discharges:
(A) A discharge with respect to which a permit has been issued under this section before February 4, 1987.
(B) A discharge associated with industrial activity.
(C) A discharge from a municipal separate storm sewer system serving a population of 250,000 or more.
(D) A discharge from a municipal separate storm sewer system serving a population of 100,000 or more but less than 250,000 .
(E) A discharge for which the Administrator or the State, as the case may be, determines that the stormwater discharge contributes to a violation of a water quality standard or is a significant contributor of pollutants to waters of the United States.

(3) Permit requirements

(A) Industrial discharges

Permits for discharges associated with industrial activity shall meet all applicable provisions of this section and section 1311 of this title.

(B) Municipal discharge

Permits for discharges from municipal storm sewers-

(i) may be issued on a system- or jurisdiction-wide basis;

(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and

(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable, including management practices, control techniques and system, design and engineering methods, and such other provisions as the Administrator or ***1311** the State determines appropriate for the control of such pollutants.

(4) Permit application requirements

(A) Industrial and large municipal discharges

Not later than 2 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraphs (2)(B) and (2)(C). Applications for permits for such discharges shall be filed no later than 3 years after February 4, 1987. Not later than 4 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(B) Other municipal discharges

Not later than 4 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraph (2)(D). Applications for permits for such discharges shall be filed no later than 5 years after February 4, 1987. Not later than 6 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(5) Studies

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

The Administrator, in consultation with the States, shall conduct a study for the purposes of-

(A) identifying those stormwater discharges or classes of stormwater discharges for which permits are not required pursuant to paragraphs (1) and (2) of this subsection;

(B) determining, to the maximum extent practicable, the nature and extent of pollutants in such discharges; and

(C) establishing procedures and methods to control stormwater discharges to the extent necessary to mitigate impacts on water quality.

Not later than October 1, 1988, the Administrator shall submit to Congress a report on the results of the study described in subparagraphs (A) and (B). Not later than October 1, 1989, the Administrator shall submit to Congress a report on the results of the study described in subparagraph (C).

(6) Regulations

Not later than October 1, 1992, the Administrator, in consultation with State and local officials, shall issue regulations (based on the results of the studies conducted under paragraph (5)) which designate stormwater discharges, other than those discharges described in paragraph (2), to be regulated to protect water quality and shall establish a comprehensive program to regulate such designated sources. The program shall, at a minimum, (A) establish priorities, (B) establish requirements for State stormwater management programs, and (C) establish expeditious deadlines. The program may include performance standards, guidelines, guidance, and management practices and treatment requirements, as appropriate.

O'SCANNLAIN, Circuit Judge, concurring in part and dissenting in part:

I concur in Parts I, II.A, II.C.1, II.C.4, II.E, and much of Part II.B of the majority opinion. I dissent from Part II.B.2.c, directing EPA to issue supplemental regulations. I dissent also from Parts II.C.2 and II.C.3, in which the court invalidates EPA's exclusion of storm water discharges from certain light industrial and small construction sites from the definition of "discharges associated with industrial activity." Finally, I concur in the result, but not the reasoning, of Part II.D, holding that EPA has not acted unlawfully by failing to include specific control requirements in the permit application regulations.

***1312** I

The majority holds that EPA has violated statutory requirements by failing to set dates for approval of, and compliance with, permits as part of its permit application program. *Ante* at 1300. Despite the holding in Part II.B.2.b that injunctive relief is inappropriate (with which I agree), the majority in Part II.B.2.c orders EPA to issue supplemental regulations setting such deadlines immediately.

I am not convinced that the statute requires EPA to set these deadlines as part of the permit application process. The provision at issue reads, in relevant part:

(4) Permit application requirements

(A) Industrial and large municipal discharges

Not later than 2 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraphs (2)(B) and (2)(C). Applications for permits for such discharges shall be filed no later than 3 years after February 4, 1987. Not later than 4 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expeditiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

(B) Other municipal discharges

Not later than 4 years after February 4, 1987, the Administrator shall establish regulations setting forth the permit application requirements for stormwater discharges described in paragraph (2)(D). Applications for permits for such discharges shall be filed no later than 5 years after February 4, 1987. Not later than 6 years after February 4, 1987, the Administrator or the State, as the case may be, shall issue or deny each such permit. Any such permit shall provide for compliance as expedi-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

tiously as practicable, but in no event later than 3 years after the date of issuance of such permit.

CWA § 402(p)(4); 33 U.S.C. § 1342(p)(4) (1988).

While the statute establishes a time line EPA must follow, it does not, in my view, require that EPA include the deadline for permit approval in the permit application regulations. I agree that, given EPA's past delays and the fact that the statutory dates for issuance or denial of permits are now long past, it is appropriate for this court to declare that the statute requires EPA to issue or deny permits within one year of the application deadline. I do not, however, see that any purpose is served by requiring EPA to issue supplemental regulations setting out these deadlines, and I doubt our authority to do so.

With respect to compliance deadlines, the statute contemplates that such deadlines will be set in individual permits as they are issued. *See* CWA § 402(p)(4)(A), (B) ("Any such permit shall provide for compliance...."). Each permit must contain a compliance deadline, which may not exceed three years from the date of issuance. Nothing in the statute requires EPA to establish compliance deadlines now, before any permits have been issued. Accordingly, in my view, NRDC's challenge to the lack of compliance deadlines in EPA's current regulations is premature. I therefore dissent from Part II.B.2.c of the majority opinion.

II

I dissent also from Parts II.C.2 and II.C.3. In my view, EPA's definition of "discharge associated with industrial activity" is a reasonable construction of an ambiguous statute, entitled to deference. While my colleagues acknowledge that we may not overturn an agency rule that represents a "permissible construction" of a statute, *ante* at 1297 (quoting *Chevron, U.S.A., Inc. v. NRDC*, 467 U.S. 837, 843, 104 S.Ct. 2778, 2781, 81 L.Ed.2d 694 (1984)), they fail to apply that axiom.

A

EPA's rule excludes from the permitting requirement certain light industry facilities at which "areas where material handling equipment or activities, raw materials, intermediate*1313 products, final products, waste materials, byproducts, or industrial machinery" are not exposed to storm water. *See*40 C.F.R. § 122.26(b)(14). EPA determined that discharges from such facilities do not fall within the definition of "discharges associated with industrial activity." In my view, this determination was reasonable.

The majority concedes that the statute does not define "discharge associated with industrial activity." *Ante* at 1304. The operative phrase, as my colleagues note, is "associated with." *See id.* For purposes of evaluating the light industry exemption, I concede that manufacturing falls within the generally accepted meaning of "industrial activity," and that many of the facilities exempted by the EPA rule are manufacturers. Nonetheless, that concession does not compel the conclusion that discharges from such facilities are "associated with industrial activity."

The majority concludes, without explanation, that the phrase "discharges associated with industrial activity" is "very broad." *Ante* at 1304. Neither the plain meaning of the term "associated" nor the legislative history of the statute support this conclusion. "Associated with" means closely related to or connected with. *See Webster's Ninth New Collegiate Dictionary* 110 (1986). To the extent it casts any light on the subject, the legislative history supports a narrow reading of the phrase "associated with." Four members of the House, in the course of floor debates on the measure both before and after President Reagan's veto, explained that:

[a] discharge is associated with industrial activity if it is *directly related to manufacturing, processing or raw materials storage areas* at an industrial plant. Discharges which do not meet this definition include those discharges associated with parking lots and administrative and employee buildings.

133 Cong.Rec. 985 (1987) (statement of Rep. Hammerschmidt) (emphasis added).[FN1] The underscored language suggests that Congress intended to regulate only discharges directly related to certain activities at indus-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

trial facilities. EPA's interpretation, that discharges are "directly related" to these activities only if storm water may reasonably be expected to come into contact with them before its discharge, is eminently logical.

> FN1. This statement was repeated verbatim by Reps. Stangeland and Snyder. 133 Cong. Rec. at 991-92; 132 Cong. Rec. at 31,959, 31,964 (1986). Rep. Rowland offered a slight variation on the theme:

One of the discharge categories is "a discharge associated with an industrial activity." A discharge is not considered to be associated with industrial activity unless it is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant. Such discharges include [sic] those from parking lots and administrative areas and employee buildings.

132 Cong. Rec. at 31,968. Rep. Rowland apparently misspoke; he probably meant, like the other legislators who addressed the topic, to say "[s]uch discharges *do not* include" those from parking lots.

The majority opinion interprets the exclusion of parking lots as an expression of congressional intent "to exclude only those facilities or parts of a facility that are completely nonindustrial." *Ante* at 1304. My colleagues' reliance on the second sentence of the statement quoted above to establish this intent, however, is misplaced. The sentence relied on cannot assist us in our search for the meaning of "associated with" because it employs that very term. Moreover, it does not pretend to establish an exhaustive list of areas excluded from regulation. Legislators listed discharges from parking lots and administrative and employee buildings as *among those* not directly related to industrial activity; no one suggested that *only* discharges associated with those structures were to be excluded.

EPA's definition is consistent with the plain words of the statute and, to the extent any intent is discernible, the congressional intent. EPA has defined the term "storm water discharge associated with industrial activity" to cover only those discharges reasonably expected to come into contact with industrial activities. A large number of facilities automatically fall within EPA's definition and are required to *1314 apply for permits. Because facilities falling within certain specified classifications under the Standard Industrial Classification manual generally conduct their operations entirely indoors, minimizing the likelihood of contact with storm water, EPA has not automatically included them within the regulations. However, these facilities *are* required to apply for permits if "areas where material handling equipment or activities, raw materials, intermediate products, final products, waste materials, byproducts, or industrial machinery at these facilities are exposed to storm water." 40 C.F.R. § 122.26(b)(14). If a storm water discharge is in fact directly related to or associated with the industrial activity carried on at a facility falling within the light industry category, the facility must obtain a permit.[FN2]

> FN2. Thus, nothing turns on the assumption, attacked by my colleagues as unsupported by the record, *ante* at 1304, that industrial activities at this category of facilities will take place largely indoors. Where the assumption does not hold true, the permit requirement applies with full force. I also note that NRDC has pointed us to no evidence undermining EPA's assumption.

Unlike my colleagues, I decline to assume that EPA will not carry out its responsibility to identify and to require permits of facilities where industrial activities are in fact exposed to storm water, or that such facilities will ignore their statutory duty to apply for permits. Should that occur, a lawsuit challenging EPA's failure to enforce its regulations might well be in order. An unsubstantiated suspicion that EPA may not vigorously enforce its regulations, however, does not make those regulations arbitrary or capricious.

In my view, the statute's treatment of oil and gas facilities supports EPA's reading of the term "associated with industrial activity." Congress specifically exempted from the permit requirement discharges from oil and gas facilities and mining operations which have not come in contact with raw materials, finished products, or waste products. CWA § 402(*l*)(2). This section indicates a congressional intent to exempt uncontaminated discharges which have not come into contact with "industrial activities" from regulation. For oil, gas, and

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

mining operations, Congress in this section supplied a specific, and quite limited, definition of "industrial activities." For other facilities, that definition was left to the discretion of EPA, which has adopted a much broader definition, encompassing contact with such things as industrial machinery and materials handling equipment. *See*40 C.F.R. § 122.26(b)(14).

I do not mean to suggest that the majority's construction of the statute is untenable. It may even be preferable to the reading chosen by the agency. Nonetheless, in my view the statute is ambiguous and the legislative history does not demonstrate any clear congressional intent. The question before this court, therefore, is not whether "the agency construction was the only one it permissibly could have adopted" or even whether it is the "reading the court would have reached if the question initially had arisen in a judicial proceeding." *Chevron, U.S.A. v. NRDC,* 467 U.S. 837, 843 n. 11, 104 S.Ct. 2778, 2782 n. 11, 81 L.Ed.2d 694 (1984). We need only inquire if the agency's construction is a permissible one. *Id.* at 843, 104 S.Ct. at 2781. EPA's definition falls well within permissible bounds, and should be upheld.

B

Although the issue is closer, I also am not persuaded that EPA's exemption for construction sites under five acres should be struck down. EPA has not conceded that "construction activity is industrial in nature." *Ante* at 1306. In the preamble to its final rule, EPA noted that "Construction activity *at a high level of intensity is comparable to other activity that is traditionally viewed as industrial,* such as natural resource extraction." [FN3] 55 Fed.Reg. 48,033 (1990) (emphasis added). EPA explained that it was "attempting to focus [regulation] only on those construction activities***1315** that *resemble* industrial activity." 55 Fed.Reg. at 48,035 (emphasis added).

> FN3. EPA did admit that "[e]ven small construction sites may have a significant negative impact on water quality in localized areas,"55 Fed.Reg. at 48,033. In the absence of any indication of what EPA meant by "small," however, that statement does not undermine EPA's exemption of sites under five acres.

Neither NRDC nor the majority point to anything in the statute or the legislative history that would require the agency to define "industrial activity" as including all construction operations. Accordingly, I believe deference is due EPA's definition, provided it is not arbitrary, capricious, or manifestly contrary to the statute. *Chevron, U.S.A.,* 467 U.S. at 844, 104 S.Ct. at 2782.

In trying to determine when construction should be treated as industrial activity, EPA considered a number of possible approaches. *See*55 Fed.Reg. at 48,035. Exempting construction that would be completed within a certain designated time frame was deemed inappropriate, because the work could be both intensive and expansive but nonetheless take place over a short period of time. Basing the limit on quantity of soil removed was also rejected as not relating to the amount of land surface disturbed. EPA finally settled on the surface area disturbed by the construction project as a feasible and appropriate mechanism for "identifying sites that are [sic] amount to industrial activity." 55 Fed.Reg. at 48,036.

Having determined that not all construction amounts to industrial activity, and that the appropriate basis for differentiation is land area disturbed, EPA then had to determine where to draw the line. Initially, EPA proposed to exempt all construction operations disturbing less than one acre of land; as well as single family residential projects disturbing less than five acres. 53 Fed.Reg. 49,431 (1988). In the final rule, however, EPA adopted a five-acre minimum for all construction projects. 55 Fed.Reg. 48,066 (1990); 40 C.F.R. § 122.26(b)(14)(x).

Admittedly, the final rule contains little in the way of justification for treating two-acre sites differently than five-acre ones, but that does not necessarily make it arbitrary and capricious. Line-drawing is often difficult. NRDC was apparently willing to accept EPA's proposed one-acre/five-acre rule. Although NRDC now challenges the blanket five-acre rule, it offers no evidence that sites excluded from the permitting requirement constitute "industrial activity." In such absence of any evid-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ence in the record undermining EPA's conclusion on an issue squarely within its expertise, I believe the rule must be upheld.[FN4]

FN4. Because I conclude that the rule falls within the permissible bounds of the statutory definition of "discharges associated with industrial activity," I need not consider the applicability of the *de minimis* exception.

III

Finally, while I concur in the result reached by the majority in Part II.D, rejecting NRDC's claim that EPA has unlawfully failed to require substantive controls on municipal discharges, I disagree with the majority's reasoning. In my view, NRDC's claim is premature, and we should decline to address its merits.

NRDC contends that the 1987 amendments require EPA to establish substantive controls for municipal storm water discharges. In support of this argument, NRDC relies on CWA § 402(p)(3)(B), 33 U.S.C. § 1342(p)(3)(B), which provides:
Permits for discharges from municipal storm sewers-

* * * * * *
(ii) shall include a requirement to effectively prohibit non-stormwater discharges into the storm sewers; and
(iii) shall require controls to reduce the discharge of pollutants to the maximum extent practicable....

This section refers only to *permits,* and says nothing about permit applications. Because EPA has yet to issue any permits, NRDC's claim on this point is premature. In the absence of any indication to the contrary, we must assume that any permit issued will comply with all applicable statutory requirements. The statute does not require that EPA detail the substantive controls to be imposed when establishing permit application requirements. Accordingly, I would reject NRDC's claim without *1316 reaching the issue of the Administrator's discretion in selecting those controls.

IV

In sum, I join much of my colleagues' opinion. However, I would not require EPA to issue supplemental regulations detailing the time line for issuance of and compliance with permits, and I would uphold EPA's definition of "discharge associated with industrial activity." Finally, I would reject NRDC's claim that EPA is required to detail control measures in the permit application regulations on the grounds that the statute requires control measures only in the permits themselves.

STATE COURT DECISIONS

ATTACHMENT NO. 19

City of Burbank v. State Water Resources Control Bd. (2005) 35 Cal.4th 613

H

City of Burbank v. State Water Resources Control Bd.
Cal.,2005.

Supreme Court of California
CITY OF BURBANK, Plaintiff and Appellant,
v.
STATE WATER RESOURCES CONTROL BOARD et al., Defendants and Appellants.
City of Los Angeles, Plaintiff and Respondent,
v.
State Water Resources Control Board et al., Defendants and Appellants.
Nos. S119248, B151175, B152562.

April 4, 2005.
Rehearing Denied June 29, 2005.[FN*]

FN* Brown, J., did not participate therein.

Background: Cities filed petitions for writs of mandate challenging pollutant limitations in wastewater discharge permits issued by regional water quality control boards. The Superior Court, Los Angeles County, Nos. BS060957 and BS060960,Dzintra I. Janavs, J., set aside permits. Regional board and state water resources control board appealed. The Court of Appeal consolidated the cases and reversed. The Supreme Court granted review, superseding the opinion of the Court of Appeal.

Holdings: The Supreme Court, Kennard, J., held that:
(1) regional board may not consider economic factors as justification for imposing pollutant restrictions in wastewater discharge permit which are less stringent than applicable federal standards, and
(2) when imposing more stringent pollutant restrictions that those required by federal law, regional board may take economic factors into account.

Judgment of Court of Appeal affirmed, and matter remanded.

Brown, J., filed concurring opinion.

Opinion, 4 Cal.Rptr.3d 27, superseded.

*618 **864** Federal law establishes national water quality standards but allows the states to enforce their own water quality laws so long as they comply with federal standards. Operating within this federal-state framework, California's nine Regional Water Quality Control Boards establish water quality policy. They also issue permits for the discharge of treated wastewater; these permits specify the maximum allowable concentration of chemical pollutants in the discharged wastewater.

The question here is this: When a regional board issues a permit to a wastewater treatment facility, must the board take into account the facility's costs of complying with the board's restrictions on pollutants in the wastewater to be discharged? The trial court ruled that California law required a regional board to weigh the economic burden on the facility against the expected environmental benefits of reducing pollutants in the wastewater discharge. The Court of Appeal disagreed. On petitions by the municipal operators of three wastewater treatment facilities, we granted review.

We reach the following conclusions: Because both California law and federal law require regional boards to comply with federal clean water standards, and because the supremacy clause of the United States Constitution requires state law to yield to federal law, a regional board, when issuing a wastewater discharge permit, may not consider economic factors to justify imposing pollutant restrictions that are *less stringent* than the applicable federal standards require. When, however, a regional board is considering whether to make the pollutant restrictions in a wastewater discharge permit *more stringent* than federal law requires, California law allows the board to take into account economic **865** factors, including the wastewater discharger's cost of compliance. We remand this case for further proceedings to determine whether the pollutant limitations in the permits challenged here meet or exceed federal standards.

*619 I. STATUTORY BACKGROUND

The quality of our nation's waters is governed by a "complex statutory and regulatory scheme ... that implicates both federal and state administrative responsibilities." (*PUD No. 1 of Jefferson County v. Washington Department of Ecology* (1994) 511 U.S. 700, 704, 114 S.Ct. 1900, 128 L.Ed.2d 716.) We first discuss California law, then federal law.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

A. California Law

In California, the controlling law is the Porter-Cologne Water Quality Control Act (Porter-Cologne Act), which was enacted in 1969. (Wat.Code, § 13000 et seq., added by Stats.1969, ch. 482, § 18, p. 1051.) FN1 Its goal is "to attain the highest water ***307** quality which is reasonable, considering all demands being made and to be made on those waters and the total values involved, beneficial and detrimental, economic and social, tangible and intangible."(§ 13000.) The task of accomplishing this belongs to the State Water Resources Control Board (State Board) and the nine Regional Water Quality Control Boards; together the State Board and the regional boards comprise "the principal state agencies with primary responsibility for the coordination and control of water quality."(§ 13001.) As relevant here, one of those regional boards oversees the Los Angeles region (the Los Angeles Regional Board). FN2

FN1. Further undesignated statutory references are to the Water Code.

FN2. The Los Angeles water region "comprises all basins draining into the Pacific Ocean between the southeasterly boundary, located in the westerly part of Ventura County, of the watershed of Rincon Creek and a line which coincides with the southeasterly boundary of Los Angeles County from the ocean to San Antonio Peak and follows thence the divide between San Gabriel River and Lytle Creek drainages to the divide between Sheep Creek and San Gabriel River drainages."(§ 13200, subd. (d).)

Whereas the State Board establishes statewide policy for water quality control (§ 13140), the regional boards "formulate and adopt water quality control plans for all areas within [a] region" (§ 13240). The regional boards' water quality plans, called "basin plans," must address the beneficial uses to be protected as well as water quality objectives, and they must establish a program of implementation. (§ 13050, subd. (j).) Basin plans must be consistent with "state policy for water quality control."(§ 13240.)

B. Federal Law

[1] In 1972, Congress enacted amendments (Pub.L. No. 92-500 (Oct. 18, 1972) 86 Stat. 816) to the Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.), which, as amended in 1977, is commonly known as the Clean *620 Water Act. The Clean Water Act is a "comprehensive water quality statute designed 'to restore and maintain the chemical, physical, and biological integrity of the Nation's waters.' "(*PUD No. 1 of Jefferson County v. Washington Dept. of Ecology, supra,* 511 U.S. at p. 704, 114 S.Ct. 1900, quoting 33 U.S.C. § 1251(a).) The Act's national goal was to eliminate by the year 1985 "the discharge of pollutants into the navigable waters" of the United States. (33 U.S.C. § 1251(a)(1).) To accomplish this goal, the Act established "effluent limitations," which are restrictions on the "quantities, rates, and concentrations of chemical, physical, biological, and other constituents"; these effluent limitations allow the discharge of pollutants only when the water has been satisfactorily treated to conform with federal water quality standards. (33 U.S.C. §§ 1311, 1362(11).)

Under the federal Clean Water Act, each state is free to enforce its own water quality laws so long as its effluent limitations are not "less stringent" than those set out in the Clean Water Act. (33 U.S.C. § 1370.) This led the California Legislature in 1972 to amend the state's Porter-Cologne Act "to ensure consistency with the requirements for state programs implementing the Federal Water Pollution Control Act."(§ 13372.)

**866 Roughly a dozen years ago, the United States Supreme Court, in *Arkansas v. Oklahoma* (1992) 503 U.S. 91, 112 S.Ct. 1046, 117 L.Ed.2d 239, described the distinct roles of the state and federal agencies in enforcing water quality: "The

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Clean Water Act anticipates a partnership between the States and the Federal Government, animated by a shared objective: 'to restore and maintain the chemical, physical, and biological integrity of the Nation's waters.' 33 U.S.C. § 1251(a). Toward ***308** this end, [the Clean Water Act] provides for two sets of water quality measures. 'Effluent limitations' are promulgated by the [Environmental Protection Agency (EPA)] and restrict the quantities, rates, and concentrations of specified substances which are discharged from point sources.[FN3] See §§ 1311, 1314. '[W]ater quality standards' are, in general, promulgated by the States and establish the desired condition of a waterway. See § 1313. These standards supplement effluent limitations 'so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.' *EPA v. California ex rel. State Water Resources Control Bd.*, 426 U.S. 200, 205, n. 12, 96 S.Ct. 2022, 2025, n. 12, 48 L.Ed.2d 578 (1976).

> FN3. A "point source" is "any discernable, confined and discrete conveyance" and includes "any pipe, ditch, channel ... from which pollutants ... may be discharged." (33 U.S.C. § 1362(14).)

***621** "The EPA provides States with substantial guidance in the drafting of water quality standards. See generally 40 CFR pt. 131 (1991) (setting forth model water quality standards). Moreover, [the Clean Water Act] requires, *inter alia*, that state authorities periodically review water quality standards and secure the EPA's approval of any revisions in the standards. If the EPA recommends changes to the standards and the State fails to comply with that recommendation, the Act authorizes the EPA to promulgate water quality standards for the State. 33 U.S.C. § 1313(c)." (*Arkansas v. Oklahoma, supra*, 503 U.S. at p. 101, 112 S.Ct. 1046.)

Part of the federal Clean Water Act is the National Pollutant Discharge Elimination System (NPDES), "[t]he primary means" for enforcing effluent limitations and standards under the Clean Water Act. (*Arkansas v. Oklahoma, supra*, 503 U.S. at p. 101, 112 S.Ct. 1046.) The NPDES sets out the conditions under which the federal EPA or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law. (§ 13374.)

With this federal and state statutory framework in mind, we now turn to the facts of this case.

II. FACTUAL BACKGROUND

This case involves three publicly owned treatment plants that discharge wastewater under NPDES permits issued by the Los Angeles Regional Board.

The City of Los Angeles owns and operates the Donald C. Tillman Water Reclamation Plant (Tillman Plant), which serves the San Fernando Valley. The City of Los Angeles also owns and operates the Los Angeles-Glendale Water Reclamation Plant (Los Angeles-Glendale Plant), which processes wastewater from areas within the City of Los Angeles and the independent cities of Glendale and Burbank. Both the Tillman Plant and the Los Angeles-Glendale Plant discharge wastewater directly into the Los Angeles River, now a concrete-lined flood control channel that runs through the City of Los Angeles, ending at the Pacific Ocean. The State Board and the Los Angeles Regional Board consider the Los Angeles River to be a navigable water of the United States for purposes of the federal Clean Water Act.

The third plant, the Burbank Water Reclamation Plant (Burbank Plant), is owned and operated by the City of Burbank,***309** serving residents and businesses within that city. The Burbank Plant discharges wastewater into the Burbank Western Wash, which drains into the Los Angeles River.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

*622 All three plants, which together process hundreds of millions of gallons of sewage **867 each day, are tertiary treatment facilities; that is, the treated wastewater they release is processed sufficiently to be safe not only for use in watering food crops, parks, and playgrounds, but also for human body contact during recreational water activities such as swimming.

In 1998, the Los Angeles Regional Board issued renewed NPDES permits to the three wastewater treatment facilities under a basin plan it had adopted four years earlier for the Los Angeles River and its estuary. That 1994 basin plan contained general narrative criteria pertaining to the existing and potential future beneficial uses and water quality objectives for the river and estuary.[FN4] The narrative criteria included municipal and domestic water supply, swimming and other recreational water uses, and fresh water habitat. The plan further provided: "All waters shall be maintained free of toxic substances in concentrations that are toxic to, or that produce detrimental physiological responses in human, plant, animal, or aquatic life." The 1998 permits sought to reduce these narrative criteria to specific numeric requirements setting daily maximum limitations for more than 30 pollutants present in the treated wastewater, measured in milligrams or micrograms per liter of effluent.[FN5]

FN4. This opinion uses the terms "narrative criteria" or descriptions, and "numeric criteria" or effluent limitations. Narrative criteria are broad statements of desirable water quality goals in a water quality plan. For example, "no toxic pollutants in toxic amounts" would be a narrative description. This contrasts with numeric criteria, which detail specific pollutant concentrations, such as parts per million of a particular substance.

FN5. For example, the permits for the Tillman and Los Angeles-Glendale Plants limited the amount of fluoride in the discharged wastewater to 2 milligrams per liter and the amount of mercury to 2.1 micrograms per liter.

The Cities of Los Angeles and Burbank (Cities) filed appeals with the State Board, contending that achievement of the numeric requirements would be too costly when considered in light of the potential benefit to water quality, and that the pollutant restrictions in the NPDES permits were unnecessary to meet the narrative criteria described in the basin plan. The State Board summarily denied the Cities' appeals.

Thereafter, the Cities filed petitions for writs of administrative mandate in the superior court. They alleged, among other things, that the Los Angeles Regional Board failed to comply with sections 13241 and 13263, part of California's Porter-Cologne Act, because it did not consider the economic burden on the Cities in having to reduce substantially the pollutant content of their discharged wastewater. They also alleged that compliance with the pollutant restrictions set out in the NPDES permits issued by the regional *623 board would greatly increase their costs of treating the wastewater to be discharged into the Los Angeles River. According to the City of Los Angeles, its compliance costs would exceed $50 million annually, representing more than 40 percent of its entire budget for operating its four wastewater treatment plants and its sewer system; the City of Burbank estimated its added costs at over $9 million annually, a nearly 100 percent increase above its $9.7 million annual budget for wastewater treatment.

***310 The State Board and the Los Angeles Regional Board responded that sections 13241 and 13263 do not require consideration of costs of compliance when a regional board issues a NPDES permit that restricts the pollutant content of discharged wastewater.

The trial court stayed the contested pollutant restrictions for each of the three wastewater treatment plants. It then ruled that sections 13241 and 13263 of California's Porter-Cologne Act required a re-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

gional board to consider costs of compliance not only when it adopts a basin or water quality plan but also when, as here, it issues an NPDES permit setting the allowable pollutant content of a treatment plant's discharged wastewater. The court found no evidence that the Los Angeles Regional Board had considered economic factors at either stage. Accordingly, the trial court granted the Cities' petitions for writs of mandate, and it ordered the Los Angeles Regional Board to vacate the contested restrictions on pollutants in the wastewater discharge permits issued to the three municipal plants here and to conduct hearings **868 to consider the Cities' costs of compliance before the board's issuance of new permits. The Los Angeles Regional Board and the State Board filed appeals in both the Los Angeles and Burbank cases.[FN6]

FN6. Unchallenged on appeal and thus not affected by our decision are the trial court's rulings that (1) the Los Angeles Regional Board failed to show how it derived from the narrative criteria in the governing basin plan the specific numeric pollutant limitations included in the permits; (2) the administrative record failed to support the specific effluent limitations; (3) the permits improperly imposed daily maximum limits rather than weekly or monthly averages; and (4) the permits improperly specified the manner of compliance.

The Court of Appeal, after consolidating the cases, reversed the trial court. It concluded that sections 13241 and 13263 require a regional board to take into account "economic considerations" when it adopts water quality standards in a basin plan but not when, as here, the regional board sets specific pollutant restrictions in wastewater discharge permits intended to satisfy those standards. We granted the Cities' petition for review.

*624 III. DISCUSSION

A. Relevant State Statutes

The California statute governing the issuance of *wastewater permits* by a regional board is section 13263, which was enacted in 1969 as part of the Porter-Cologne Act. (See 26 Cal.Rptr.3d pp. 306-307, 108 P.3d p. 865,*ante.*) Section 13263 provides in relevant part: "*The regional board,* after any necessary hearing, *shall prescribe requirements as to the nature of any proposed discharge* [of wastewater]. *The requirements* shall implement any relevant water quality control plans that have been adopted, and *shall take into consideration* the beneficial uses to be protected, the water quality objectives reasonably required for that purpose, other waste discharges, the need to prevent nuisance, and *the provisions of Section 13241.*"(§ 13263, subd. (a), italics added.)

Section 13241 states: "Each regional board shall establish such water quality objectives in water quality control plans as in its judgment will ensure the reasonable protection of beneficial uses and the prevention of nuisance; however, it is recognized that it may be possible for the quality of water to be changed to some degree without unreasonably affecting beneficial uses. Factors to be considered by a regional board in establishing water quality objectives shall include, but not necessarily be limited to, all of the following:

***311 "(a) Past, present, and probable future beneficial uses of water.

"(b) Environmental characteristics of the hydrographic unit under consideration, including the quality of water available thereto.

"(c) Water quality conditions that could reasonably be achieved through the coordinated control of all factors which affect water quality in the area.

"(d) *Economic considerations.*

"(e) The need for developing housing within the region.

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

"(f) The need to develop and use recycled water." (Italics added.)

The Cities here argue that section 13263's express reference to section 13241 requires the Los Angeles Regional Board to consider section 13241's listed factors, notably "[e]conomic considerations," before issuing NPDES permits requiring specific pollutant reductions in discharged effluent or treated wastewater.

[2] ***625** Thus, at issue is language in section 13263 stating that when a regional board "prescribe[s] requirements as to the nature of any proposed discharge" of treated wastewater it must "take into consideration" certain factors including "the provisions of Section 13241." According to the Cities, this statutory language requires that a regional board make an independent evaluation of the section 13241 factors, including "economic considerations," before restricting the pollutant content in an NPDES permit. This was the view expressed in the trial court's ruling. The Court of Appeal rejected that view. It held that a regional board need consider the section 13241 factors only when it adopts a basin or water quality plan, but not when, as in this case, it issues a wastewater discharge ****869** permit that sets specific numeric limitations on the various chemical pollutants in the wastewater to be discharged. As explained below, the Court of Appeal was partly correct.

B. Statutory Construction

[3] When construing any statute, our task is to determine the Legislature's intent when it enacted the statute "so that we may adopt the construction that best effectuates the purpose of the law." (*Hassan v. Mercy American River Hospital* (2003) 31 Cal.4th 709, 715, 3 Cal.Rptr.3d 623, 74 P.3d 726; *Esberg v. Union Oil Co.* (2002) 28 Cal.4th 262, 268, 121 Cal.Rptr.2d 203, 47 P.3d 1069.) In doing this, we look to the statutory language, which ordinarily is "the most reliable indicator of legislative intent." (*Hassan, supra,* at p. 715, 3 Cal.Rptr.3d 623, 74 P.3d 726.)

As mentioned earlier, our Legislature's 1969 enactment of the Porter-Cologne Act, which sought to ensure the high quality of water in this state, predated the 1972 enactment by Congress of the precursor to the federal Clean Water Act. Included in California's original Porter-Cologne Act were sections 13263 and 13241. Section 13263 directs regional boards, when issuing wastewater discharge permits, to take into account various factors, including those set out in section 13241. Listed among the section 13241 factors is "[e]conomic considerations." (§ 13241, subd. (d).) The plain language of sections 13263 and 13241 indicates the Legislature's intent in 1969, when these statutes were enacted, that a regional board consider the cost of compliance when setting effluent limitations in a wastewater discharge permit.

Our construction of sections 13263 and 13241 does not end with their plain statutory language, however. We must also analyze them in the context of the statutory scheme of which they are a part. *****312**(*State Farm Mutual Automobile Ins. Co. v. Garamendi* (2004) 32 Cal.4th 1029, 1043, 12 Cal.Rptr.3d 343, 88 P.3d 71.) Like sections 13263 and 13241, section 13377 is part of the Porter-Cologne Act. But unlike the former two statutes, section 13377 was ***626** not enacted until 1972, shortly after Congress, through adoption of the Federal Water Pollution Control Act Amendments, established a comprehensive water quality policy for the nation.

[4] Section 13377 specifies that wastewater discharge permits issued by California's regional boards must meet the federal standards set by federal law. In effect, section 13377 forbids a regional board's consideration of any economic hardship on the part of the permit holder if doing so would result in the dilution of the requirements set by Congress in the Clean Water Act. That act prohibits the discharge of pollutants into the navigable waters of the United States unless there is compliance with federal law (33 U.S.C. § 1311(a)), and publicly op-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

erated wastewater treatment plants such as those before us here must comply with the act's clean water standards, regardless of cost (see *id.*, §§ 1311(a), (b)(1)(B) & (C), 1342(a)(1) & (3)). Because section 13263 cannot authorize what federal law forbids, it cannot authorize a regional board, when issuing a wastewater discharge permit, to use compliance costs to justify pollutant restrictions that do not comply with federal clean water standards.[FN7] Such a construction of section 13263 would not only be inconsistent with federal law, it would also be inconsistent with the Legislature's ****870** declaration in section 13377 that all discharged wastewater must satisfy federal standards.FN8 This was also the conclusion of the Court of Appeal. Moreover, under the federal Constitution's supremacy clause (art. VI), a state law that conflicts with federal law is " 'without effect.' " (*Cipollone v. Liggett Group, Inc.* (1992) 505 U.S. 504, 516, 112 S.Ct. 2608, 120 L.Ed.2d 407; *Dowhal v. SmithKline Beecham Consumer Healthcare* (2004) 32 Cal.4th 910, 923, 12 Cal.Rptr.3d 262, 88 P.3d 1.) To comport with the principles of federal supremacy, California law cannot authorize this ***627** state's regional boards to allow the discharge of pollutants into the navigable waters of the United States in concentrations *****313** that would exceed the mandates of federal law.

FN7. The concurring opinion misconstrues both state and federal clean water law when it describes the issue here as "whether the Clean Water Act prevents or prohibits the regional water board from considering economic factors to justify pollutant restrictions *that meet the clean water standards in more cost-effective and economically efficient ways.*" (Conc. Opn. of Brown, J., *post,* 26 Cal.Rptr.3d p. 314, 108 P.3d at p. 871, some italics added.) This case has nothing to do with meeting federal standards in more cost effective and economically efficient ways. State law, as we have said, allows a regional board to consider a permit holder's compliance cost to *relax* pollutant concentrations, as measured by numeric standards, for pollutants in a wastewater discharge permit. (§§ 13241 & 13263.) Federal law, by contrast, as stated above in the text, "prohibits the discharge of pollutants into the navigable waters of the United States unless there is compliance with federal law (33 U.S.C. § 1311(a)), and publicly operated wastewater treatment plants such as those before us here must comply with the [federal] act's *clean water standards, regardless of cost* (see *id.*, §§ 1311(a), (b)(1)(B) & (C), 1342(a)(1) & (3))." (Italics added.)

FN8. As amended in 1978, section 13377 provides for the issuance of waste discharge permits that comply with federal clean water law "together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance." We do not here decide how this provision would affect the cost-consideration requirements of sections 13241 and 13263 when more stringent effluent standards or limitations in a permit are justified for some reason independent of compliance with federal law.

Thus, in this case, whether the Los Angeles Regional Board should have complied with sections 13263 and 13241 of California's Porter-Cologne Act by taking into account "economic considerations," such as the costs the permit holder will incur to comply with the numeric pollutant restrictions set out in the permits, depends on whether those restrictions meet or exceed the requirements of the federal Clean Water Act. We therefore remand this matter for the trial court to resolve that issue.

C. Other Contentions

The Cities argue that requiring a regional board at

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

the wastewater discharge permit stage to consider the permit holder's cost of complying with the board's restrictions on pollutant content in the water is consistent with federal law. In support, the Cities point to certain provisions of the federal Clean Water Act. They cite section 1251(a)(2) of title 33 United States Code, which sets, as a national goal "*wherever attainable,*" an interim goal for water quality that protects fish and wildlife, and section 1313(c)(2)(A) of the same title, which requires consideration, among other things, of waters' "*use and value* for navigation" when revising or adopting a "water quality standard." (Italics added.) These two federal statutes, however, pertain not to permits for wastewater discharge, at issue here, but to establishing water quality standards, not at issue here. Nothing in the federal Clean Water Act suggests that a state is free to disregard or to weaken the federal requirements for clean water when an NPDES permit holder alleges that compliance with those requirements will be too costly.

[5] At oral argument, counsel for amicus curiae National Resources Defense Council, which argued on behalf of California's State Board and regional water boards, asserted that the federal Clean Water Act incorporates state water policy into federal law, and that therefore a regional board's consideration of economic factors to justify greater pollutant concentration in discharged wastewater would conflict with the federal act even if the specified pollutant restrictions were not less stringent than those required under federal law. We are not persuaded. The federal Clean Water Act reserves to the states significant aspects of water quality policy (33 U.S.C. § 1251(b)), and it specifically grants the states authority to "enforce any effluent limitation" that is not "*less stringent* " than the federal standard (*id.* § 1370, italics added). It does not prescribe or restrict the factors that a state may consider when exercising this reserved authority, and thus it does not prohibit ***628** a state-when imposing effluent limitations that are *more stringent* than required by federal law-from taking into account the economic effects of doing so.

Also at oral argument, counsel for the Cities asserted that if the three municipal wastewater treatment facilities ceased releasing their treated wastewater into the concrete channel that makes up the Los Angeles River, it would (other than during the rainy season) contain no water at all, and thus would not be a "navigable water" of the ****871** United States subject to the Clean Water Act. (See *Solid Waste Agency v. United States Army Corps of Engineers* (2001) 531 U.S. 159, 172, 121 S.Ct. 675, 148 L.Ed.2d 576 ["The term 'navigable' has at least the import of showing us what Congress had in mind as its authority for enacting the CWA: its traditional jurisdiction over waters that were or had been navigable in fact or which could reasonably be so made."].) It is unclear when the Cities first raised this issue. The Court of Appeal did not discuss it in its opinion, and the Cities did not seek rehearing on this ground. (See *****314**Cal. Rules of Court, rule 28(c)(2).) Concluding that the issue is outside our grant of review, we do not address it.

CONCLUSION

Through the federal Clean Water Act, Congress has regulated the release of pollutants into our national waterways. The states are free to manage their own water quality programs so long as they do not compromise the federal clean water standards. When enacted in 1972, the goal of the Federal Water Pollution Control Act Amendments was to *eliminate* by the year 1985 the discharge of pollutants into the nation's navigable waters. In furtherance of that goal, the Los Angeles Regional Board indicated in its 1994 basin plan on water quality the intent, insofar as possible, to remove from the water in the Los Angeles River toxic substances in amounts harmful to humans, plants, and aquatic life. What is not clear from the record before us is whether, in limiting the chemical pollutant content of wastewater to be discharged by the Tillman, Los Angeles-Glendale, and Burbank wastewater treatment facilities, the Los Angeles Regional Board acted only to implement requirements of the federal Clean Water Act or instead imposed pollutant limitations that

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

exceeded the federal requirements. This is an issue of fact to be resolved by the trial court.

DISPOSITION

We affirm the judgment of the Court of Appeal reinstating the wastewater discharge permits to the extent that the specified numeric limitations on chemical pollutants are necessary to satisfy federal Clean Water Act requirements for treated wastewater. The Court of Appeal is directed to remand this ***629** matter to the trial court to decide whether any numeric limitations, as described in the permits, are "more stringent" than required under federal law and thus should have been subject to "economic considerations" by the Los Angeles Regional Board before inclusion in the permits.

WE CONCUR: GEORGE, C.J., BAXTER, WERDEGAR, CHIN, and MORENO, JJ.Concurring Opinion by BROWN, J.

I write separately to express my frustration with the apparent inability of the government officials involved here to answer a simple question: How do the federal clean water standards (which, as near as I can determine, are the state standards) prevent the state from considering economic factors? The majority concludes that because "the supremacy clause of the United States Constitution requires state law to yield to federal law, a regional board, when issuing a wastewater discharge permit, may not consider economic factors to justify imposing pollutant restrictions that are *less stringent* than applicable federal standards require." (Maj. opn., *ante,* 26 Cal.Rptr.3d at p. 306, 108 P.3d at p. 864.) That seems a pretty self-evident proposition, but not a useful one. The real question, in my view, is whether the Clean Water Act prevents or prohibits the regional water board from considering economic factors to justify pollutant restrictions that *meet* the clean water standards in more cost-effective and economically efficient ways. I can see no reason why a federal law-which purports to be an example of cooperative federalism-would decree such a result. I do not think the majority's reasoning is at fault here. Rather, the agencies involved seemed to have worked hard to make this simple question impenetrably obscure.

A brief review of the statutory framework at issue is necessary to understand my concerns.

***315 **872 I. Federal Law

"In 1972, Congress enacted the Federal Water Pollution Control Act (33 U.S.C. § 1251 et seq.), commonly known as the Clean Water Act (CWA) [Citation.] ... [¶] Generally, the CWA 'prohibits the discharge of any pollutant except in compliance with one of several statutory exceptions. [Citation.]' ... The most important of those exceptions is pollution discharge under a valid NPDES [National Pollution Discharge Elimination System] permit, which can be issued either by the Environmental Protection Agency (EPA), or by an EPA-approved state permit program such as California's. [Citations.] NPDES permits are valid for five years. [Citation.] [¶] Under the CWA's NPDES permit program, the states are required to develop *water quality standards.* [Citations.] A water quality standard 'establish[es] the desired condition of a waterway.' [Citation.] A water quality standard for any ***630** given waterway, or 'water body,' has two components: (1) the designated beneficial uses of the water body and (2) the *water quality criteria* sufficient to protect those uses. [Citations.] [¶] Water quality criteria can be either *narrative* or *numeric.* [Citation.]" (*Communities for a Better Environment v. State Water Resources Control Bd.* (2003) 109 Cal.App.4th 1089, 1092-1093, 1 Cal.Rptr.3d 76.)

With respect to satisfying water quality standards, "a polluter must comply with *effluent limitations.* The CWA defines an effluent limitation as 'any restriction established by a State or the [EPA] Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources into navigable waters, the waters of the contiguous

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

zone, or the ocean, including schedules of compliance.' [Citation.] 'Effluent limitations are a means of *achieving* water quality standards.' [Citation.] [¶] NPDES permits establish effluent limitations for the polluter. [Citations.] CWA's NPDES permit system provides for a two-step process for the establishing of effluent limitations. First, the polluter must comply with *technology-based effluent limitations,* which are limitations based on the best available or practical technology for the reduction of water pollution. [Citations.] [¶] Second, the polluter must also comply with more stringent *water quality-based effluent limitations* (WQBEL's) where applicable. In the CWA, Congress 'supplemented the "technology-based" effluent limitations with "water quality-based" limitations "so that numerous point sources, despite individual compliance with effluent limitations, may be further regulated to prevent water quality from falling below acceptable levels.' " [Citation.] [¶] The CWA makes WQBEL's applicable to a given polluter whenever WQBEL's are 'necessary to meet water quality standards, treatment standards, or schedules of compliance, established pursuant to any State law or regulations....' [Citations.] Generally, NPDES permits must conform to state water quality laws insofar as the state laws impose more stringent pollution controls than the CWA. [Citations.] Simply put, WQBEL's implement water quality standards." (*Communities for a Better Environment v. State Water Resources Control Bd., supra,* 109 Cal.App.4th at pp. 1093-1094, 1 Cal.Rptr.3d 76, fns. omitted.)

This case involves water quality-based effluent limitations. As set forth above, "[u]nder the CWA, states have the primary role in promulgating water quality standards." (*Piney Run Preservation Ass'n v. Commrs. of Carroll Co.* (4th Cir.2001) 268 F.3d 255, 265, fn. 9.)"Under the CWA, the water quality standards referred to in section 301 [see 33 U.S.C. § 1311] are primarily the states' handiwork."***316** (*American Paper Institute, Inc. v. U.S. Envtl. Protection Agency* (D.C.Cir.1993) 996 F.2d 346, 349(*American Paper*).) In fact, upon the 1972 passage of the CWA, "[s]tate water quality standards in effect at the time ... were deemed to be the initial water quality benchmarks for CWA purposes.... The states were to revisit and, if *631 necessary, revise those initial standards at least once every three years." (*American Paper,* at p. 349.) Therefore, "once a water quality standard has been promulgated, section 301 of the CWA requires all NPDES permits for point sources to incorporate discharge limitations necessary to satisfy that standard." (*American Paper,* at p. 350.) Accordingly, it appears that in most instances, **873 state water quality standards are identical to the federal requirements for NPDES permits.

II. State Law

In California, pursuant to the Porter-Cologne Water Quality Control Act (Wat.Code, § 13000 et seq.; Stats.1969, ch. 482, § 18, p. 1051; hereafter Porter-Cologne Act), the regional water quality control boards establish water quality standards-and therefore federal requirements for NPDES permits-through the adoption of water quality control plans (basin plans). The basin plans establish water quality objectives using enumerated factors-including economic factors-set forth in Water Code section 13241.

In addition, as one court observed: "The Porter-Cologne Act ... established nine regional boards to prepare water quality plans (known as basin plans) and issue permits governing the discharge of waste. (Wat.Code, §§ 13100, 13140, 13200, 13201, 13240, 13241, 13243.) The Porter-Cologne Act identified these permits as 'waste discharge requirements,' and provided that the waste discharge requirements must mandate compliance with the applicable regional water quality control plan. (Wat.Code, §§ 13263, subd. (a), 13377, 13374.)[¶] Shortly after Congress enacted the Clean Water Act in 1972, the California Legislature added Chapter 5.5 to the Porter-Cologne Act, for the purpose of adopting the necessary federal requirements to ensure it would obtain EPA approval to issue NPDES permits. (Wat.Code, § 13370, subd. (c).) As part of these

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

amendments, the Legislature provided that the state and regional water boards 'shall, as required or authorized by the [Clean Water Act], issue waste discharge requirements ... which apply and ensure compliance with all applicable provisions [of the Clean Water Act], together with any more stringent effluent standards or limitations necessary to implement water quality control plans, or for the protection of beneficial uses, or to prevent nuisance.' (Wat.Code, § 13377.) Water Code section 13374 provides that '[t]he term "waste discharge requirements" as referred to in this division is the equivalent of the term "permits" as used in the [Clean Water Act].' [¶] California subsequently obtained the required approval to issue NPDES permits. [Citation.] Thus, the waste discharge requirements issued by the regional water boards ordinarily also serve as NPDES permits under federal law. (Wat.Code, § 13374.)" (*Building Industry Assn. of San Diego County v. State Water Resources Control Bd.* (2004) 124 Cal.App.4th 866, 875, 22 Cal.Rptr.3d 128.)

***632** Applying this federal-state statutory scheme, it appears that throughout this entire process, the Cities of Burbank and Los Angeles (Cities) were unable to have economic factors considered because the Los Angeles Regional Water Quality Control Board (Board)-the body responsible to enforce the statutory framework-failed to comply with its statutory mandate.

*****317** For example, as the trial court found, the Board did not consider costs of compliance when it initially established its basin plan, and hence the water quality standards. The Board thus failed to abide by the statutory requirement set forth in Water Code section 13241 in establishing its basin plan. Moreover, the Cities claim that the initial narrative standards were so vague as to make a serious economic analysis impracticable. Because the Board does not allow the Cities to raise their economic factors in the permit approval stage, they are effectively precluded from doing so. As a result, the Board appears to be playing a game of "gotcha" by allowing the Cities to raise economic considerations when it is not practical, but precluding them when they have the ability to do so.

Moreover, the Board acknowledges that it has neglected other statutory provisions that might have provided an additional opportunity to air these concerns. As set forth above, pursuant to the CWA, "[t]he states were to revisit and, if necessary, revise those initial standards at least once every three years-a process commonly known as triennial review. [Citation.] Triennial reviews consist of public hearings in which current water quality standards are examined to assure that they 'protect the public health or welfare, enhance the quality of water and serve the purposes' of the Act. [Citation.] Additionally, the CWA ****874** directs states to consider a variety of competing policy concerns during these reviews, including a waterway's 'use and value for public water supplies, propagation of fish and wildlife, recreational purposes, and agricultural, industrial, and other purposes.'"(*American Paper, supra,* 996 F.2d at p. 349.)

According to the Cities, "[t]he last time that the narrative water quality objective for toxicity contained in the Basin Plan was reviewed and modified was 1994." The Board does not deny this claim. Accordingly, the Board has failed its duty to allow public discussion-including economic considerations-at the required intervals when making its determination of proper water quality standards.

What is unclear is why this process should be viewed as a contest. State and local agencies are presumably on the same side. The costs will be paid by taxpayers and the Board should have as much interest as any other agency in fiscally responsible environmental solutions.

***633** Our decision today arguably allows the Board to continue to shirk its statutory duties. The majority holds that when read together, Water Code sections 13241, 13263, and 13377 do not allow the Board to consider economic factors when issuing NPDES permits to satisfy federal CWA require-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

ments. (Maj. opn., *ante,* 26 Cal.Rptr.3d at pp. 311-312, 108 P.3d at pp. 869-870.) The majority then bifurcates the issue when it orders the Court of Appeal "to remand this matter to the trial court to decide whether any numeric limitations, as described in the permits, are 'more stringent' than required under federal law and thus should have been subject to 'economic considerations' by the Los Angeles Regional Board before inclusion in the permits." (*Id.* at p. 314, 108 P.3d at p. 871.)

The majority overlooks the feedback loop established by the CWA, under which federal standards are linked to state-established water quality standards, including narrative water quality criteria. (See 33 U.S.C. § 1311(b)(1)(C); 40 C.F.R. § 122.44(d)(1) (2004).) Under the CWA, NPDES permit requirements include the state narrative criteria, which are incorporated into the Board's basin plan under the description "no toxins in toxic amounts." As far as I can determine, NPDES permits***318 designed to achieve this narrative criteria (as well as designated beneficial uses) will usually implement the state's basin plan, while satisfying federal requirements as well.

If federal water quality standards are typically identical to state standards, it will be a rare instance that a state exceeds its own requirements and economic factors are taken into consideration.[FN1] In light of the Board's initial failure to consider costs of compliance and its repeated failure to conduct required triennial reviews, the result here is an unseemly bureaucratic bait-and-switch that we should not endorse. The likely outcome of the majority's decision is that the Cities will be economically burdened to meet standards imposed on them in a highly questionable manner.[FN2] In these times of tight fiscal budgets, it is difficult to imagine imposing additional financial burdens on municipalities without at least allowing them to present alternative views.

FN1. (But see *In the Matter of the Petition of City and County of San Francisco, San Francisco Baykeeper et al.* (Order No. WQ 95-4, Sept. 21, 1995) 1995 WL 576920.)

FN2. Indeed, given the fact that "water quality standards" in this case are composed of broadly worded components (i.e., a narrative criteria and "designated beneficial uses of the water body"), the Board possessed a high degree of discretion in setting NPDES permit requirements. Based on the Board's past performance, a proper exercise of this discretion is uncertain.

Based on the facts of this case, our opinion today appears to largely retain the status quo for the Board. If the Board can actually demonstrate that only the precise limitations at issue here, implemented in only one way, will achieve the desired water standards, perhaps its obduracy is justified. That case has yet to be made.

*634 Accordingly, I cannot conclude that the majority's decision is wrong. The analysis **875 may provide a reasonable accommodation of conflicting provisions. However, since the Board's actions "make me wanna holler and throw up both my hands,"[FN3] I write separately to set forth my concerns and concur in the judgment-*dubitante*.[FN4]

FN3. Marvin Gaye (1971) "Inner City Blues."

FN4. I am indebted to Judge Berzon for this useful term. (See *Credit Suisse First Boston Corp. v. Grunwald* (9th Cir.2005) 400 F.3d 1119 (conc. opn. of Berzon, J.).)

City of Rancho Cucamonga v. Regional Water Quality Control Bd.-Santa Ana Region
Cal.App. 4 Dist.,2006.

Court of Appeal, Fourth District, Division 2, California.
CITY OF RANCHO CUCAMONGA, Plaintiff and Appellant,
v.
REGIONAL WATER QUALITY CONTROL BOARD-SANTA ANA REGION et al., Defendants and Respondents;
County of San Bernardino et al., Real Parties in Interest and Respondents.
No. E037079.

Jan. 26, 2006.
As Modified Feb. 27, 2006.

Background: Cities filed petitions for writs of mandate to challenge the procedure by which municipal storm sewer permit was issued by regional water quality control board, the conditions imposed by permit, and the expense of permit requirements. The Superior Court, San Bernardino County, No. RCV 071613, Shahla Sabet, J., sustained without leave to amend the demurrer of State Water Resources Control Board to entire action, sustained demurrer as to four causes of action and granted motion to strike of the regional board, and denied petition for writ of mandate. City appealed.

Holdings: The Court of Appeal, Gaut, J., held that:
(1) State Water Resources Control Board was not a proper party in lawsuit;
(2) regional water quality control board could move to strike less than all causes of action;
(3) substantial evidence supported regional water quality control board's findings in issuing permit; and
(4) permit requirements were not overly prescriptive.

Affirmed.

***1379** OPINION

GAUT, J.

1. *Introduction*

This case involves environmental regulation of municipal storm sewers that carry excess water runoff to the Santa Ana River as it passes through San Bernardino County on its way to the Pacific Ocean. Federal and state laws impose regulatory controls on storm sewer discharges. Municipalities are required to obtain and comply with a federal regulatory permit limiting the quantity and quality of water runoff that can be discharged from these storm sewer systems.

In this instance, the Regional Water Quality Control Board for the Santa Ana Region (the Regional Board) conducted public hearings and then issued a comprehensive 66-page municipal storm sewer permit governing 18 local ***1380** public entities. Two permittees, the City of Rancho Cucamonga and the City of Upland, among others, filed an administrative appeal with the State Water Resources Control Board (the State Board.) The State Board summarily dismissed the appeal. The Cities of Rancho Cucamonga and Upland [FN1] then filed a petition for writ of mandate and complaint against the State

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Board and the Regional Board.

FN1. Upland is not a party to this appeal.

The trial court sustained without leave to amend the demurrer of the State Board to the entire action. It sustained the demurrer as to four causes of action and granted the motion to strike of the Regional Board. After a hearing, the trial court denied the petition for writ of mandate.

Both procedurally and substantively, the City of Rancho Cucamonga challenges the conditions imposed by the NPDES [FN2] Permit and Waste Discharge Requirements (the 2002 permit). It contends the procedure by which the 2002 permit was adopted was not legal, that the 2002 permit's conditions are not appropriate for the area, and that the permit's requirements are too expensive. Because we conclude the permit was properly adopted and its conditions and requirements are appropriate, we reject these contentions.

FN2. The National Pollutant Discharge Elimination System.

2. *The National Pollutant Discharge Elimination System*

California cases have repeatedly explained the complicated web of federal and state laws and regulations concerning water pollution, especially storm sewer discharge into the public waterways. (*City of Burbank v. State Water Resources Control Bd.* (2005) 35 Cal.4th 613, 619-621, 26 Cal.Rptr.3d 304, 108 P.3d 862(*Burbank*); *Building Industry Assn. of San Diego County v. State Water Resources Control Board* (2004) 124 Cal.App.4th 866, 872-875, 22 Cal.Rptr.3d 128(*Building Industry*); *Communities for a Better Environment v. State Water Resources Control Board* (2003) 109 Cal.App.4th 1089, 1092-1094, 1 Cal.Rptr.3d 76(*Communities*); **453*WaterKeepers Northern California v. State Water Resources Control Board* (2002) 102 Cal.App.4th 1448, 1451-1453, 126 Cal.Rptr.2d 389(*WaterKeepers*)).

For purposes of this case, the important point is described by the California Supreme Court in *Burbank:* "Part of the federal Clean Water Act [33 U.S.C. § 1251 et seq.] is the National Pollutant Discharge Elimination System (NPDES), '[t]he primary means' for enforcing effluent limitations and standards under the Clean Water Act. *1381(*Arkansas v. Oklahoma* [(1992) 503 U.S. 91, 101, 112 S.Ct. 1046, 117 L.Ed.2d 239.]) The NPDES sets out the conditions under which the federal EPA or a state with an approved water quality control program can issue permits for the discharge of pollutants in wastewater. (33 U.S.C. § 1342(a) & (b).) In California, wastewater discharge requirements established by the regional boards are the equivalent of the NPDES permits required by federal law. (§ 13374.)" (*Burbank, supra,* 35 Cal.4th at p. 621, 26 Cal.Rptr.3d 304, 108 P.3d 862.)

California's Porter-Cologne Act (Wat.Code, § 13000 et seq.) establishes a statewide program for water quality control. Nine regional boards, overseen by the State Board, administer the program in their respective regions. (Wat.Code, §§ 13140, 13200 et seq., 13240, and 13301.) Water Code sections 13374 and 13377 authorize the Regional Board to issue federal NPDES permits for five-year periods. (33 U.S.C. § 1342, subd. (b)(1)(B).)

As discussed more fully in part 6 below, the state-issued NPDES permits are subject to the informal hearing procedures set forth for administrative adjudications. (Gov.Code, § 11445.10 et seq.; Cal.Code Regs., tit. 23, § 647 et seq.) The issuance of permits is specifically excluded from the procedures for administrative regulations and rulemaking. (Gov.Code, §§ 11340 et seq., 11352.)

3. *Factual and Procedural Background*

The Regional Board issued the first NPDES permit for San Bernardino County in 1990. The principal permittee was the San Bernardino Flood Control District (the District). The 1990 permit required the permittees to develop and implement pollution con-

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

trol measures, using "best management practices" and monitoring programs, to eliminate illegal discharges and connections, and to obtain any necessary legal authority to do so. The management programs could be existing or new.

In 1993, the District developed the NPDES Drain Area Management Program (DAMP).

The second NPDES permit was issued in 1996 and was based on the Report of Waste Discharge (ROWD) prepared by the principal permittee and co-permittees, including Rancho Cucamonga. The 1996 permit proposed extending the existing program, which included inspections of industrial and commercial sources; policies for development and redevelopment; better public education; and implementation of a monitoring program. It offered a commitment to reduce pollutants to the "maximum extent practicable."

In 2000, the permittees submitted another ROWD to renew their NPDES permit. The 2000 ROWD proposed continuing to implement and develop water quality management and monitoring programs.

***1382** Based on the 2000 ROWD, the Regional Board staff created five successive drafts of the 2002 permit, incorporating written comments by Rancho Cucamonga and others and comments made during two public workshops. Some of the comments addressed the economic considerations of anticipated prohibitive compliance costs.

The notice of the public hearing to consider adoption of the 2002 permit hearing ****454** announced: "relevant Regional Board files are incorporated into the record;" the governing procedures were those for an informal hearing procedure as set forth in "Title 23, California Code of Regulations, Section 647 et seq.;" and "Hearings before the Regional Water Board are not conducted pursuant to Government Code section 11500 et seq.," the alternative formal hearing procedure for administrative adjudication. The notice was mailed to all permittees. The accompanying "fact sheet," which was publicly circulated, offered further information about the conduct and nature of the hearing and the legal and factual grounds for the Regional Board's recommendation to adopt the 2002 permit.

The informal public hearing was conducted on April 26, 2002. Neither Rancho Cucamonga nor any of the permittees objected to the form or substance of the hearing. Ultimately, after a staff presentation and testimony, including a statement from Rancho Cucamonga's counsel, the Regional Board adopted the 2002 permit. After the State Board dismissed their administrative appeal, Rancho Cucamonga and Upland filed the instant action.

The operative pleading is the second amended petition for writ of mandate and complaint. The petition alleges that the State Board and the Regional Board acted illegally and in excess of their jurisdiction in developing, adopting and implementing the 2002 permit. Based on 26 pages of general allegations, the petition asserts eight causes of action, alleging the State Board and the Regional Board violated sections 13241, 13263, and 13360 of the Water Code (the Porter-Cologne Act); the California Environmental Quality Act (Pub. Resources Code, § 21000 et seq.); the California Administrative Procedure Act (Gov.Code, §§ 11340-11529); the California Constitution; and the Federal Clean Water Act; and seeking declaratory and injunctive relief.

The State Board successfully opposed the action on demurrer. The Regional Board eliminated four causes of action, the fourth, fifth, seventh, and eighth by demurrer and motion to strike. On the remaining four causes of action, the trial court found in favor of the Regional Board.

***1383** 4. *State Board's Demurrer*

[1] Rancho Cucamonga maintains the trial court should not have sustained the demurrer of the State Board without leave to amend because the State Board is the ultimate authority on state-issued NPDES permits, and, therefore, was properly joined as

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

a party: "Because the State Board has for all intents and purposes adopted the rules and policies of general application upon which the Permit is based, it is clearly a proper party to this action."

The difficulty with Rancho Cucamonga's theory of liability against the State Board is, to quote Gertrude Stein about the City of Oakland, "There is no there there." (Gertrude Stein, *Everybody's Autobiography.*) In other words, Rancho Cucamonga's allegations against the State Board lack any substance. Instead, Rancho Cucamonga launches an unspecific attack on the State Board without identifying any particular problems. The petition makes the unexceptional allegation that the State Board formulates general water control policy which it implements and enforces through regional boards. It also alleges the State Board has not complied with the Administrative Procedure Act but it does not identify any objectionable policies or how there is no compliance. Instead the petition complains about a State Board letter directing that all NPDES permits follow consistent principles regarding Standard Urban Storm Water Mitigation ****455** Plans. Additionally, the petition maintains the 2002 permit included new reporting requirements and increased costs of compliance.

But the foregoing allegations did not articulate any improper State Board conduct. The 2002 permit, issued by the Regional Board and not by the State Board, is not subject to formal rule-making procedures. (Gov.Code, § 11352, subd. (b).) The State Board's letter, explaining a precedential decision concerning mitigation plans, is not an example of formal rule-making. (Gov.Code, § 11425.60, subd. (b).) By dismissing Rancho Cucamonga's administrative appeal concerning the 2002 permit, the State Board declined to become involved and the Regional Board's decision to issue the permit became final and subject to judicial review. (*People ex rel Cal. Regional Wat. Quality Control Bd. v. Barry* (1987) 194 Cal.App.3d 158, 177, 239 Cal.Rptr. 349.) But the State Board was not made a proper party by reason of its dismissal of the administrative appeal.

Furthermore, even if Rancho Cucamonga had identified any cognizable claim against the State Board, it would have been barred by the 30-day statute of limitations for challenging an improperly adopted State Board regulation or order. (Wat.Code, § 13330; Gov.Code, § 11350.)

***1384** We hold the trial court properly sustained without leave to amend the State Board's demurrer to the second amended petition for writ of mandate and complaint.

5. Standard of Review for Petition for Writ of Mandate

[2] In deciding a petition for writ of mandate, the trial court exercises its independent judgment. (Code Civ. Proc., § 1094.5, subd. (c); Wat.Code, § 13330, subd. (d); *Building Industry, supra,* 124 Cal.App.4th at p. 879, 22 Cal.Rptr.3d 128.) But, "[i]n exercising its independent judgment, a trial court must afford a strong presumption of correctness concerning the administrative findings, ... Because the trial court ultimately must exercise its own independent judgment, that court is free to substitute its own findings after first giving due respect to the agency's findings." (*Fukuda v. City of Angels* (1999) 20 Cal.4th 805, 817-818, 85 Cal.Rptr.2d 696, 977 P.2d 693(*Fukuda*).)

[3][4] On appeal, the reviewing court determines whether substantial evidence supports the trial court's factual determinations. (*Fukuda, supra,* 20 Cal.4th at p. 824, 85 Cal.Rptr.2d 696, 977 P.2d 693; *Building Industry, supra,* 124 Cal.App.4th at p. 879, 22 Cal.Rptr.3d 128.) The trial court's legal determinations receive a de novo review with consideration being given to the agency's interpretations of its own statutes and regulations. (*Building Industry, supra,* at p. 879, 22 Cal.Rptr.3d 128; *Nasha L.L.C. v. City of Los Angeles* (2004) 125 Cal.App.4th 470, 482, 22 Cal.Rptr.3d 772.)

6. Rancho Cucamonga's Objections to the Administrative Record and Lack of Notice

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

[5] The notice of the administrative hearing for adoption of the 2002 permit included the statement that the Regional Board's files would be incorporated as part of the record. Before trial on the writ petition, Rancho Cucamonga attempted to raise an omnibus objection to the entire administrative record and a specific objection to four documents, three studies about marine pollution and one economic study. The trial court ruled the objections had been waived by not making them before or at the time of the hearing. Applying the presumption of administrative regularity, we affirm the trial court's evidentiary ruling. **456(*Mason v. Office of Administrative Hearings* (2001) 89 Cal.App.4th 1119, 1131, 108 Cal.Rptr.2d 102.)

The reasons given by Rancho Cucamonga as to why the trial court should have sustained its objections to all or part of the administrative record are that it did not waive its objections to the record because Rancho Cucamonga did not know the hearing was adjudicative; the Regional Board did not provide *1385 notice of an informal hearing (Gov.Code, § 11445.30); and Rancho Cucamonga never had an opportunity to object to the administrative record.

[6] As noted previously, Government Code section 11352, subdivision (b), makes the issuance of an NPDES permit exempt from the rulemaking procedures of the Administrative Procedure Act. Permit issuance is a quasi-judicial, not a quasi-legislative, rule-making proceeding: "The exercise of discretion to grant or deny a license, permit or other type of application is a quasi-judicial function." (*Sommerfield v. Helmick* (1997) 57 Cal.App.4th 315, 320, 67 Cal.Rptr.2d 51; *City of Santee v. Superior Court* (1991) 228 Cal.App.3d 713, 718, 279 Cal.Rptr. 22.)

Instead, the Regional Board correctly followed the administrative adjudication procedures (Gov.Code, § 11445.10 et seq.) and the companion regulations at California Code of Regulations, Title 23, sections 647-648.8 for informal adjudicative public hearings. These procedures were announced in the notice of hearing which also stated that Government Code section 11500 et seq., governing formal administrative adjudication hearings, would not apply, thus satisfying Government Code section 11445.30 requiring notice of an informal hearing procedure. At the time of the hearing, Rancho Cucamonga did not object to the informal procedure. Rancho Cucamonga's effort to argue that federal notice requirements (40 C.F.R. § 124.8, subd. (b)(6)(ii) (2005)) should also have been followed fails because this involved a state-issued NPDES permit adopted according to California procedures.

Because Rancho Cucamonga was given notice that the hearing on the permit would proceed as an informal administrative adjudication, it cannot successfully argue it was relieved of the obligation to object to the administrative record at the time of the hearing. An informal administrative adjudication contemplates liberality in the introduction of evidence. (Cal. Code Regs., tit. 23, §§ 648, subd. (d) and 648.5.1.) If Rancho Cucamonga wished to object to the informal hearing procedures, including the liberal introduction of evidence, it should have raised its objections as provided by statute and regulation before or at the time of the hearing (Gov.Code, §§ 11445.30, 11445.40, and 11445.50; Cal. Code Regs., tit. 23, § 648.7); not a year later in the subsequent civil proceeding.

7. *Economic Considerations for Issuance of NPDES Permit*

Rancho Cucamonga's next assignment of error is that the Regional Board failed to consider the economic impact of the requirements of the 2002 permit by not conducting a cost-benefit analysis. Rancho Cucamonga relies on the California Supreme Court's *Burbank* opinion, in which the court held: "When ... a regional board is considering whether to make the pollutant restrictions in a wastewater discharge permit *more stringent* than federal law *1386 requires, California law allows the board to take into account economic factors, including the wastewater discharger's cost of compliance."

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

Burbank, supra, 35 Cal.4th at p. 618, 26 Cal.Rptr.3d 304, 108 P.3d 862.) Rancho Cucamonga contends that the 2002 permit exceeds federal requirements and that, therefore, this case should be remanded for a consideration of **457 economic factors. (See *ibid.;* Wat.Code, § 13241, subd. (d).)

The two problems with this argument are the trial court found there was no evidence that the 2002 permit exceeded federal requirements and Rancho Cucamonga does not explain now how it does so. There was also evidence that the 2002 permit was based on a fiscal analysis and a cost-benefit analysis. In the absence of the foundational predicate and in view of evidence that cost was considered, Rancho Cucamonga's contention on this point fails.

[7] We also reject Rancho Cucamonga's related procedural argument that the Regional Board's motion to strike was impermissible as piecemeal adjudication. (*Regan Roofing v. Superior Court* (1994) 24 Cal.App.4th 425, 432-436, 29 Cal.Rptr.2d 413,*Lilienthal & Fowler v. Superior Court* (1993) 12 Cal.App.4th 1848, 1851-1855, 16 Cal.Rptr.2d 458.) It is well recognized a court may strike all or part of a pleading as it did in this instance. (Code Civ. Proc., §§ 431.10 and 436; *PH II, Inc. v. Superior Court* (1995) 33 Cal.App.4th 1680, 1682-1683, 40 Cal.Rptr.2d 169.)

8. *Substantial Evidence*

[8] Rancho Cucamonga also challenges the trial court's independent factual determination that sufficient evidence supports the findings of the Regional Board. Rancho Cucamonga's main contention is that the 2002 permit was not distinctively crafted for San Bernardino County but, instead, copied a similar permit for other counties without identifying any particular water quality impairment in San Bernardino County caused by the permittees. In other words, no evidence in the record supports issuance of the 2002 permit and the trial court did not identify any such evidence in its statement of decision.

One problem with Rancho Cucamonga's foregoing argument is that the Clean Water Act requires an NPDES permit to be issued for *any* storm sewer discharge, whether there is any actual impairment in a particular region. (33 U.S.C. § 1342; *Communities, supra,* 109 Cal.App.4th at pp. 1092-1093, 1 Cal.Rptr.3d 76.) Therefore, Rancho Cucamonga's contention that the permit fails to identify impaired water bodies in the region is beside the point.

In its statement of decision, the trial court discussed the inadequacy of the arguments and evidence cited by Rancho Cucamonga and concluded: "The San Bernardino Permit is based in part on the Basin Plan for this region. It is *1387 also based on the permittees' own reports and monitoring within this region.... It incorporates the permittees' management program, which is unique to these cities and county." The trial court included a citation to the 1993 DAMP report's "Geographic Description of the Drainage Area," which discusses the specific conditions present in San Bernardino County.

On appeal, Rancho Cucamonga faults the trial court for not presenting a more detailed description of the evidence supporting the issuance of the permit. We do not think the trial court, or this court, must bear that burden.

[9] First, "[a]n agency may ... rely upon the opinion of its staff in reaching decisions, and the opinion of staff has been recognized as constituting substantial evidence. (*Coastal Southwest Dev. Corp. v. California Coastal Zone Conservation Com.* (1976) 55 Cal.App.3d 525, 535-536, 127 Cal.Rptr. 775.)" (*Browning-Ferris Industries v. City Council* (1986) 181 Cal.App.3d 852, 866, 226 Cal.Rptr. 575.) Here the Regional Board adopted the recommendation of its staff in issuing the permit. And, as the record shows, the staff's recommendation was based on the previous 1990 and 1996 permits, the 1993 DAMP **458 report and the 2000 ROWD, the permittees' application for renewal of the 1996 permit, as well as more general water quality factors. The evidence

© 2008 Thomson/West. No Claim to Orig. U.S. Govt. Works.

contradicts Rancho Cucamonga's assertion, that "the Regional Board simply copied verbatim the NPDES Permit for North Orange County, a coastal region with markedly different water quality conditions and problems."

As part of the trial court's consideration of the petition for writ of mandate, Rancho Cucamonga and the Regional Board directed the court to review specific items of evidence contained in the administrative record. In its opposing brief, the Regional Board offered a detailed account of the evidence supporting the issuance of the permit. The trial court indicated it had reviewed the parties' submissions before ruling. It discussed the evidence at the hearing on the petition and referred to it in its statement of decision. (*Lala v. Maiorana* (1959) 166 Cal.App.2d 724, 731, 333 P.2d 862.) Rancho Cucamonga had the burden of showing the Board abused its discretion or its findings were not supported by the facts. (*Building Industry, supra,* 124 Cal.App.4th at pp. 887-888, 22 Cal.Rptr.3d 128.) To the extent it attempted to do so at the trial court level, it was not successful.

This court has independently reviewed the record with particular attention to the evidence as emphasized by the parties. We do not, however, find it incumbent upon us or the trial court to review the many thousands of pages submitted on appeal and identify the particular evidence that constitutes substantial evidence. Instead, we deem the trial court's findings sufficient and not affording any grounds for reversal. (*Building Industry, supra,* 124 Cal.App.4th at p. 888, 22 Cal.Rptr.3d 128; see ***1388***Weisz Trucking Co., Inc. v. Emil R. Wohl Construction* (1970) 13 Cal.App.3d 256, 264, 91 Cal.Rptr. 489, citing *Perry v. Jacobsen* (1960) 184 Cal.App.2d 43, 50, 7 Cal.Rptr. 177.)

9. *Safe Harbor Provision*
